Response: We appreciate the many comments of support received for this aspect of the model. In particular, we appreciate that commenters agree with our desire to simplify the attribution process, maintain higher TEAM participant volume, and incentivize engagement between total cost of care or shared savings model participants and TEAM participants to foster more integrated, patient-centered approach to care.

We believe by allowing model overlap, this encourages provides participating in TEAM and shared savings or total cost of care models or programs to engage collaboratively and strengthen care coordination for aligned beneficiaries. We also believe that by allowing TEAM participants and shared savings or total cost of care model or program participants to retain savings generated in their respective models, we are eliminating the risk of these participants forming an adversarial relationship.

Comment: We received some responses from commenters who

⁹⁴² Shadow bundles are claims data for services, supplies, and their associated payments grouped into discrete procedural- and/or condition-specific episodes of care. Episodes are constructed based on a consistent set of rules for ACO-attributed beneficiaries who meet the criteria to trigger an episode. Target prices are incorporated to measure performance and provide opportunity for sharing savings with providers.

opposed our proposed policy to allow model overlap between TEAM participants and total cost of care participants. Commenters mentioned that allowing model overlap could create confusion or duplication of effort, and place substantial administrative burdens on hospitals and the clinicians and staff. Other commenters mentioned that allowing overlap between TEAM and existing advanced alternative payment models, such as total cost of care models or shared savings models, is contrary to the philosophy of a total cost of care model and may disrupt ongoing initiatives, particularly if not all providers within an umbrella ACO must participate.

Response: We recognize that participants in total cost of care or shared savings models will have their own ongoing initiatives and strategies; however, we do not see TEAM as disrupting these efforts. By allowing TEAM episodes to overlap with a total cost of care or shared savings model, we are eliminating confusion over who is attributed, and therefore responsible, for the episode and encouraging coordination between TEAM participant and total cost of care or shared savings model participant by creating a shared goal of caring for the aligned beneficiary.

Comment: We sought comment on prohibiting aligned beneficiaries from full-risk population-based care relationships (for example, Shared Savings Program Enhanced Track or ACO REACH) from being in an episode in TEAM and we received responses from some commenters supporting this concept citing that these total cost of care or shared savings participants are already bearing full risk for any TEAM episodes initiated for their aligned population. Several commenters mention that requiring these participants to participate could avoid unnecessary complexity, duplication of efforts and confusion regarding how CMS will recognize these Medicare beneficiaries under these different types of accountable care models. A commenter suggested that allowing an opt-out would create an additional incentive for participation in two-sided risk total cost of care models and recognize that these entities are already accountable for cost and health outcomes for their population.

Response: We appreciate that these commenters want to acknowledge that full-risk model or program participants have taken on the greatest amount of risk for their aligned populations. CMS's goal is to create the ability for TEAM

participants to engage and collaborate with other model or program participants through TEAM overlap policy, not to be a drain on resources or to elicit confusion. In fact, CMS learned from prior model experience that by excluding certain models or programs and by setting rules in which savings was not retained by both participants caused significant confusion and frustration. Specifically, when considering full risk models or programs, we expect these participants likely have experience in population-based care and are invested in the concept of value-based care. As such, we expect these participants to be able to manage their populations of aligned beneficiaries will coordinating effectively with TEAM participants on any overlap using their resources, when needed, to ensure smooth care coordination for their aligned beneficiaries.

Comment: A commenter suggested to allow total cost of care participants the ability to opt-out of mandatory participation for total cost of care participants who are actively managing episodes through another mechanism, such as a shadow bundle or different kind of focused care intervention.

Response: We acknowledge that total cost of care or shared savings model participants will have other initiatives they operate to support focused care intervention. However, for CMS to monitor total cost of care or shared savings participants to ensure they are actively utilizing another mechanism, such as a shadow bundle, CMS would have to create and operate an audit and election process which would be a significant drain on CMS resources to establish. Additionally, creating an audit or election process would be an administrative challenge for TEAM participants who moved in and out of model participation based on their varying interventions and strategies.

Comment: We received some comments that asked for clarity regarding how TEAM episodes would impact a total cost of care model's expenditures. Specifically, commenters asked if the TEAM target price or FFS expenditures would be used in total cost of care model expenditures used to calculate model shared savings and benchmarks. A commenter stated that using FFS expenditures instead of the TEAM target price would avoid being a source of friction across programs, allowing ACOs to clearly understand and track their performance throughout the performance period.

Response: CMS can confirm that FFS expenditures, not the TEAM target price, will be used in other model savings calculations. These expenditures represent the actual claims billed for services furnished to the aligned beneficiary.

Comment: Regarding our request on supplemental data to provide a total cost of care or shared savings model participant with the ability to utilize episodes to improve care coordination and reduce cost, a couple of commenters made requests for additional data elements. Additionally, commenters also requested that existing data initiatives provided by CMS, such as Shadow Bundles data, were not discontinued. A commenter requested that CMS include a data flag representing ACO assignment within the raw claims files that would be provided to a TEAM participant. Another commenter requested that CMS continue to provide shadow bundles data on all clinical episode categories currently offered (which includes the 34 BPCI Advanced clinical episode categories).

Response: CMS appreciates these comments and the desire to use data provided to TEAM participants to identify model overlap and use it to benefit engagement with shared savings or total cost of care model participants.

As CMS develops the structure of the raw claims files that will be provided on a regular basis to TEAM participants, we will explore the ability to add model overlap assignment information when feasible. This aligns with how model overlap is represented in raw claims files in prior and existing models such as CJR and BPCI Advanced.

Regarding shadow bundles data, CMS is currently committed to sharing this data on a regular basis. We are also exploring options for how to continue to make this data or similar available once the BPCI Advanced model ends.

After consideration of the public comments we received, we are finalizing our proposals for model overlap to allow overlap between shared savings or total cost of care model or program participants with TEAM episodes. This includes allowing both TEAM participant and total cost of care model or program participant to retain savings generated from their perspective performance in their model or program without recoupment.

(a) Considerations for Notification Process for Shared Savings or Total Cost of Care Model

In the proposed rule we stated that prior model experience has shown that it can be challenging for model participants to understand in real time whether a beneficiary's episode will be excluded, and we know that prior recoupment policies created friction between episode model participants and total cost of care model participants. We recognized the importance of coordination between a TEAM participant and total cost of care participant to ensure the beneficiary has continuous care moving beyond the structure of an episode. In order to accommodate a smooth transition for the aligned beneficiary, we considered, but did not propose there be a notification process required of the TEAM participant to ensure they are alerting the total cost of care participant of their aligned beneficiary's episode during the anchor hospitalization or anchor procedure. This notification process would allow the total cost of care participant the time to deploy their resources (for example, care coordination staff) and be prepared as the patient discharges from their anchor hospitalization or anchor procedure. However, we recognized that identifying beneficiaries aligned to a total cost of care participant may be challenging because it would require timely access to beneficiary alignment list for total cost of care participants and would increase burden to implement a notification process. We sought comment on ways to implement a notification process for shared savings or total cost of care participants that would be used to alert a shared savings or total cost of care participant that one of their aligned beneficiaries has initiated an episode in TEAM.

In the proposed rule we stated that total cost of care models (that is, ACOs) use their market's Health Information Exchange (HIE) to provide admission, discharge, and transfer (ADT) alerts. Others use less automated processes including fax or telephone to provide the alert. We recognized there is variation in the capabilities and sophistication of HIEs nationally and we recognized there is an increased administrative burden on participants when providing a telephonic or fax alert. Additionally, we recognized that there is variation in the timeframe in which these alerts can be issued based on the mechanism in which they are provided. We sought comment on what timeframe should be required to issue a notification and what process(es) should

be used to provide a notification without causing undue burden on the TEAM participant, including both the processes cited previously or other processes not mentioned. We also sought comment on how broader use of ADT data exchange between TEAM participants and ACOs could improve care coordination, including any perceived barriers to better ADT exchange, and opportunities to improve ADT exchange, and how CMS could address these barriers and opportunities.

The following is a summary of comments and our responses to those comments received related to the notification process for shared savings or total cost of care model for which we sought comment.

Comment: A couple of commenters requested that TEAM participants be required to embed ACO beneficiary rosters into their electronic health records system to allow for better identification of aligned beneficiaries by the TEAM participant and to facilitate smoother communication between ACO and TEAM participant. One of these commenters recommended making this a requirement by the second year of TEAM, thus allowing time for the TEAM participant to fully integrate the ACO rosters into their electronic system after model launch.

Response: Although we acknowledge there would be benefits to a TEAM participant by having quick and immediate access to ACO alignment information in their EHR, making this a requirement could put undue financial and administrative burden on participants. In the final rule, we are not requiring TEAM participants to make any modifications or enhancements to their EHR; however, we encourage participants to consider how they can use their resources, including the data provided through TEAM participation, to enhance their ability to identify aligned beneficiaries.

Comment: We received a few comments supporting the concept of a beneficiary notification, but commenters asked that CMS hold the responsibility of contacting and notifying total cost of care or shared savings model participants rather than put the responsibility on the TEAM participant. A commenter mentioned that a required notification process is an administratively burdensome requirement that takes hospitals already limited resources away from more important patient care matters. A couple of other commenters mentioned that CMS has the greatest access to timely data and is already receives notifications from hospitals as part of

eligibility checks and thus is best positioned to identify and provide the beneficiary notification.

Response: We appreciate receiving support for this policy and acknowledge the commenter's desire for CMS to own the responsibility of providing beneficiary notifications to total cost of care or shared savings model participants would alleviate administrative burden on TEAM participants. However, a key reason for requiring a beneficiary notification is to force connection and communication between TEAM participant and total cost of care or shared savings model. This forced connection means that information on the beneficiary is shared and both participants have an opportunity to collaborate on the beneficiary's immediate and long-term care. To have CMS stand as the intermediary and provide the notification takes away this required interaction, which could diminish the effectiveness of providing the notification and allowing for collaboration and coordination of the patient's care. As such, CMS will not take on the responsibility of providing the beneficiary notification to a total cost of care or shared savings model participant.

Comment: A commenter expressed concern over the time requirement of the notification and encouraged CMS to select a healthy time frame that ACOs and TEAM participants can comply with.

Response: The purpose in providing a beneficiary notification to a total cost of care or shared savings model participant is to ensure strong care coordination to ensure the best care for the beneficiary and allow the total cost of care or shared savings model participant the ability to deploy their own resources or be involved in the patient's care following discharge from the anchor hospitalization or anchor procedure. In order to effectively accomplish this, notification should occur by the time the patient discharges from their anchor hospitalization or anchor procedure to provide the patient with the warm hand off for ongoing care coordination.

Comment: A commenter who opposed the proposed requirement of beneficiary notification between a TEAM participant and total cost of care or shared savings model participant encouraging CMS to consider the extreme administrative burden it would place on participants.

Response: We acknowledge that providing a beneficiary notification to a total cost of care or shared savings participant adds a level of additional administrative effort on behalf of the

TEAM participant, especially if the notification cannot be delivered electronically and requires a telephonic or fax notification. However, CMS believe the effort is outweighed by the benefit of alerting a total cost of care or shared savings model participant to which a beneficiary is aligned. The TEAM participant may benefit from leveraging their resources and support in ensuring the best outcomes for the patient.

Comment: We received some comments supporting the idea of a notification from a TEAM participant to a beneficiary's aligned total cost of care or shared savings model or program. Commenters mention that notifications such as ADT are relied upon to trigger a chain of action including timely post-discharge follow-up to reduce readmissions and decrease the number of patients going back to the emergency department unnecessarily.

Response: We appreciate the support received from commenters and agree that a beneficiary notification can serve to not only create opportunity for engagement between TEAM participant and shared savings or total cost of care participant, but also to create a smoother transition from episode back into longitudinal care and improve patient outcomes, such as avoiding unnecessary readmissions or emergency department visits.

Comment: We received a comment urging CMS to mandate that hospitals cannot participate in TEAM unless they provide admission, discharge, and transfer (ADT) notifications to community-based primary care physicians. This commenter states that the current lack of ADT notifications from hospitals is not a technological issue, but rather a behavioral issue that CMS could influence. They also state that ADT notifications are an essential part of ensuring appropriate transitions of care and are critical in helping ensure patients are able to have a longitudinal primary care relationship with their care team after an acute care episode, we urge CMS to mandate that hospitals cannot participate in TEAM unless they provide ADT notifications.

Response: We appreciate that this commenter considers the use of ADT notifications an essential part of care coordination and we agree that a beneficiary notification is an important step supporting and preparing for the patient's long-term care prior to leaving their anchor hospitalization or anchor procedure. We recognize there are many factors that influence the ability to transmit an ADT, including sophisticated HIE, market dynamics, hospital-specific resources, and

technological capabilities, etc. However, the technology used to support a beneficiary notification is merely meant to assist in the action of providing the notification and should not deter a hospital from successfully making a notification to a beneficiary's aligned total cost of care or shared savings model or program.

Comment: A commenter in support of a beneficiary notification requested that CMS increase access to ADT alerting. This commenter specially mentioned that third-party vendors often offer notification services at a very high cost to ACOs and that although HIEs may be a more beneficial data source, they are not ever present or functional everywhere.

Response: CMS recognizes that there are many factors that impact how a hospital delivers a beneficiary notification to a total cost of care or shared savings model or program—whether the notification be electronic, by fax, telephonic, etc. We also acknowledge that there are costs associated by engaging a third-party vendor to support notification. CMS believes communication should be going on in value-based care and not be dependent on having a certain kind of technology. We view technology as merely an assist to support a beneficiary notification and do not consider technology or third-party vendors as a requirement to deliver a beneficiary notification to a total cost of care or shared savings model or program.

However, because we as an agency understand the need to improve the alerting process as it stands now, CMS has an outstanding Request for Information (RFI) where we are seeking feedback on the ADT process. We hope to use information gathered to identify where we can improve the alert process making it less burdensome and more useful for participants across models and programs.

We thank commenters for their input on beneficiary notifications and will address these comments, along with further proposals, in future notice and rulemaking.

(b) Accounting for Beneficiary Overlap With New CMS Models and Programs

We acknowledge there may be new models or programs that could have overlap with TEAM. This could occur because a beneficiary may trigger an episode in TEAM while being aligned to a new CMS model or program or because a TEAM participant also participates in another CMS model or program. We would plan to assess each new model to determine if the structure of payment and savings calculation are

subject to the current proposed overlap policy or if there would be a need to bring forward any additional overlap requirements to account for the new model.

f. Health Equity

(1) Background

In the proposed rule we stated that consistent with President Biden's Executive Order 13985 on "Advancing Racial Equity and Support for Underserved Communities Through the Federal Government," and Executive Order 14091 on "Further Advancing Racial Equity and Support for Underserved Communities Through the Federal Government," CMS has made advancing health equity the first pillar in its Strategic Plan.^{943 944} We define health equity as the attainment of the highest level of health for all people, where everyone has a fair and just opportunity to attain their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identity, socioeconomic status, geography, preferred language, and other factors that affect access to care and health outcomes. We work to advance health equity by designing, implementing, and operationalizing policies and programs that support health for all the people served by our programs, eliminating avoidable differences in health outcomes experienced by people who are disadvantaged or underserved, and providing the care and support that our beneficiaries need to thrive.⁹⁴⁵

Disparities in access to surgical care by race/ethnicity, insurance status, income, and geography are well-documented, including disparities in the progression to surgery once surgical indication is determined and disparities in receipt of optimal surgical care.⁹⁴⁶ Research has also highlighted disparities in readmissions rates following surgical intervention, indicating opportunities to tailor

Disparities in Surgical Access: A Systematic Literature Review, Conceptual Model, and Evidence Map. *J Am Coll Surg*. 2019;228(3):276–298. doi:10.1016/j.jamcollsurg.2018.12.028 <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6391739/> <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6391739/>.

readmission-focused interventions to specific sites of care, such as safety net hospitals, to improve surgical outcomes.^{947 948} For Medicare beneficiaries, higher health-related social need is also associated with a higher risk of complications, length of stay, 30-day readmission, and mortality following surgery.⁹⁴⁹ Accordingly, there are opportunities to improve disparities in surgical outcomes by transforming infrastructure and care delivery processes, particularly for hospitals that serve higher proportions of historically underserved populations.

In this section, we discussed proposals for identifying safety net hospitals and rural hospitals within TEAM, and the associated flexibilities for TEAM participants meeting these definitions. We sought comment on the proposed safety net hospital and rural hospital definitions for TEAM, proposed model flexibilities for participants meeting each of these definitions, and the alternatives discussed.

(2) Identification of Safety Net Hospitals

(a) Background

In the proposed rule, we stated that a the goals of CMS's health equity pillar is to evaluate policies to determine how we can support safety net providers, partner with providers in underserved communities, and ensure care is accessible to those who need it.⁹⁵⁰ There are also opportunities to engage more safety net providers in CMS Innovation Center models to increase the diversity of Medicare beneficiaries reached by models.⁹⁵¹ Although various approaches exist to identify "safety net providers," this term is commonly used to refer to health care providers that furnish a substantial share of services to

uninsured and low-income patients.⁹⁵² As such, safety net providers, including acute care hospitals, play a crucial role in the advancement of health equity by making essential services available to the uninsured, underinsured, and other populations that face barriers to accessing healthcare, including people from racial and ethnic minority groups, the LGBTQ+ community, rural communities, and members of other historically disadvantaged groups. Whether located in urban centers or geographically isolated rural areas, safety net hospitals are often the sole providers in their communities of specialized services such as burn and trauma units, neonatal care and inpatient psychiatric facilities.⁹⁵³ They also frequently partner with local health departments and other institutions to sponsor programs that address homelessness, food insecurity and other social determinants of health, and offer culturally and linguistically appropriate care to their patients.

Because they serve many low-income and uninsured patients, safety net hospitals may experience greater financial challenges compared to other hospitals. Among the factors that negatively impact safety net hospital finances, MedPAC has pointed specifically to the greater share of patients insured by public programs, which MedPAC stated typically pay lower rates for the same services than commercial payers; the increased costs associated with treating low-income patients, whose conditions may be complicated by social determinants of health, such as homelessness and food insecurity, and the provision of higher levels of uncompensated care.⁹⁵⁴

In its June 2022 Report to Congress, MedPAC expressed concern over the financial position of safety net hospitals.⁹⁵⁵ The Commission noted that the limited resources of many safety net hospitals may make it difficult for them to compete with other hospitals for labor and technology, and observed

that "[t]his disadvantage, in turn, could lead to difficulty maintaining quality of care and even to hospital closure."⁹⁵⁶ Other research shows that the closure of a safety net hospital can have ripple effects within the community, making it more difficult for disadvantaged patients to access care and shifting uncompensated care costs onto neighboring facilities.^{957 958}

Given the critical importance of safety net hospitals to the communities they serve, we considered different safety net hospital definitions to identify the best way to represent providers serving historically underserved populations in TEAM and/or provide flexibilities to those deemed as safety net providers. In the following section, we discuss multiple methodological options for identifying safety net providers in TEAM.

(b) Methodological Considerations

(i) CMS Innovation Center Strategy Refresh Safety Net Definition

In the proposed rule, we stated that CMS Innovation Center's Strategy Refresh developed a definition of safety net providers to monitor the percent of safety net facilities participating in CMS Innovation Center models. The CMS Innovation Center's Strategy Refresh defined safety net hospitals as short-term hospitals and critical access hospitals (CAHs) that serve above a baseline threshold of beneficiaries with dual eligibility or Part D Low-Income Subsidy (LIS), as a proxy for low-income status.⁹⁵⁹ Under the CMS Innovation Center's Strategy Refresh definition, hospitals are identified as safety net when their patient mix of beneficiaries with dual eligibility or Part D LIS exceeds the 75th percentile threshold for all congruent facilities who bill Medicare.

To calculate the hospital-level proportions of beneficiaries with dual eligibility and Part D LIS, a one-year or multiple-year retrospective baseline (for example, weighted three-year average) for each measure could be calculated for each TEAM participant. We would then determine the 75th percentile threshold for each measure separately based on the distribution of the two proportions (beneficiaries with dual eligibility or Part D LIS) for all PPS hospitals who bill

Medicare. TEAM participants with proportions that meet or exceed the determined threshold for either dual eligibility or Part D LIS will be considered as a safety net hospital for the purposes of TEAM.

We considered that we could make safety net determinations based on the CMS Innovation Center's Strategy Refresh's definition using the described approach as of the model start date and hold the determinations constant for TEAM's duration. Alternatively, we considered calculating the hospital-level proportions of beneficiaries with dual eligibility and Part D LIS and the corresponding 75th percentile threshold for each measure annually, using a single year or rolling multiple-year weighted average of data from all PPS hospitals who bill Medicare. We could make redeterminations of safety net qualification under TEAM annually. This annual approach could mean that TEAM participants' safety net hospital qualifications could vary over the model's duration.

(ii) Medicare Safety Net Index (MSNI)

Another approach to identify safety net hospitals we considered was to use MedPAC's Safety Net Index (SNI), which is calculated as the sum of—(1) the share of the hospital's Medicare volume associated with low-income beneficiaries; (2) the share of its revenue spent on uncompensated care; and (3) an indicator of how dependent the hospital is on Medicare. MSNI is calculated at the hospital level using data from CMS cost reports for each hospital.⁹⁶⁰

For the share of the hospital's Medicare volume associated with low-income beneficiaries, MedPAC's definition of low-income beneficiaries includes all those who are dually eligible for full or partial Medicaid benefits, and those who do not qualify for Medicaid benefits in their states but who receive the Part D LIS because they have limited assets and an income below 150 percent of the Federal poverty level. Collectively, MedPAC refers to this population as "LIS beneficiaries" because those who receive full or partial Medicaid benefits are automatically eligible to receive the LIS. MedPAC states that its intent in defining low-income beneficiaries in this manner is to reduce the effect of variation in states' Medicaid policies on

the share of beneficiaries whom MedPAC considers low-income, but to allow for appropriate variation across states based on the share of beneficiaries who are at or near the Federal poverty level. To calculate the LIS ratio for a hospital for a given fiscal year, we considered using the number of inpatient discharges of Medicare beneficiaries who are also LIS beneficiaries, using the most recent MedPAR claims for the discharge information, divided by the total number of inpatient discharges of Medicare beneficiaries.

For the share of a hospital's revenue spent on uncompensated care, we considered using the ratio of uncompensated care costs to total operating hospital revenue from the most recent available audited cost report data.⁹⁶¹ For further discussion on how this ratio could be calculated using audited cost report, please refer to 88 FR 26658.

For the indicator of how dependent a hospital is on Medicare, MedPAC's recommendation is to use one-half of the Medicare share of total inpatient days. In calculating the Medicare share of total inpatient days for a hospital, we considered using the most recent available audited cost report data. For further information on how the numerator and denominator could be determined to calculate the indicator of how dependent a hospital is on Medicare from audited cost report data, please refer to 88 FR 26658.

Using the sum of the three indicators as described, we considered that each TEAM participant could be assigned an SNI score, where a higher value means that a participant has either a high Medicare share of services, a high share of its Medicare patients with low incomes, and/or a high share of its revenue spent on uncompensated care.

To apply the Medicare Safety Net Index (MSNI) to identify safety net hospital participants in TEAM, we considered calculating the MSNI for TEAM participants using a one-year or multiple-year baseline period (for example, a three-year average). We considered setting a threshold to identify safety net providers with TEAM based on the distribution of scores for all PPS hospitals that bill Medicare (for example, providers with scores in the 75th percentile of SNI scores could be considered safety net providers). We considered making safety net determinations based on the described

approach as of the model start date and hold the determinations constant for TEAM's duration. Alternatively, we considered calculating the SNI and corresponding threshold annually using a one-year or multiple-year moving average and make redeterminations of safety net designations annually. This annual approach could mean that TEAM participant safety net qualifications for TEAM could vary over the model's duration.

(iii) Area Deprivation Index

In the proposed rule, we stated that an approach to identifying safety net hospitals could be to use area-level indices. This approach could potentially better target policies to address the social determinants of health as well as address the lack of community resources that may increase risk of poor health outcomes and risk of disease in the population. In a recent environmental scan, the Office of the Assistant Secretary for Planning and Evaluation (ASPE) suggested that an area-level index could be used to prioritize communities for funding and other assistance to improve social determinants of health (SDOH)—such as affordable housing, availability of food stores, and transportation infrastructure. Although ASPE concluded that none of the existing area-level indices identified in the environmental scan were ideal, they concluded that the area deprivation index (ADI) was one of the best available choices when selecting an index for addressing health-related social needs or social determinants of health.⁹⁶²

The ADI was developed through research supported by the National Institutes of Health (NIH) with the goal of quantifying and comparing social disadvantage across geographic neighborhoods. It is a composite measure derived through a combination of 17 input variables—including measures of income, education, employment, and housing quality—from the American Community Survey (ACS) 5-year estimate datasets.⁹⁶³ Each neighborhood is assigned an ADI value from 1 to 100 (corresponding to percentile), where a higher value means that a neighborhood is more deprived. The ADI measure is intended to capture local socioeconomic factors correlated with medical disparities and

⁹⁶⁰ MedPAC. "March 2023 Report to Congress: Medicare Payment Policy, Chapter 3". <https://www.medpac.gov/document/chapter-3-hospital-inpatient-and-outpatient-services-march-2023-report/><https://www.medpac.gov/document/chapter-3-hospital-inpatient-and-outpatient-services-march-2023-report/>.

⁹⁶¹ The most recent available cost report data for this purpose generally lags 4 years behind the rulemaking year (for example, FY 2020 cost report data are available for this FY 2024 proposed rule.)

⁹⁶² Report: "Landscape of Area-Level Deprivation Measures and Other Approaches to Account for Social Risk and Social Determinants of Health in Health Care Payments." Accessed at <https://aspe.hhs.gov/reports/area-level-measures-account-sdox> on September 27, 2022.

⁹⁶³ <https://www.neighborhoodatlas.medicine.wisc.edu/>.

underservice. Several peer reviewed research studies demonstrate that neighborhood-level factors for those residing in disadvantaged neighborhoods also have a relationship to worse health outcomes for these residents.^{964 965 966}

Medicare already uses ADI to assess underserved beneficiary populations in the Shared Savings Program, and ADI is also used in CMS Innovation Center models. In the CY 2023 PFS final rule, CMS adopted a policy to provide eligible Accountable Care Organizations (ACOs) with an option to receive advanced investment payments (87 FR 69778). Advance investment payments are intended to encourage low-revenue ACOs that are inexperienced with risk to participate in the Shared Savings Program and to provide additional resources to such ACOs in order to support care improvement for underserved beneficiaries (87 FR 69845 through 69849). The risk-factors based (using ADI) scores assigned to the beneficiaries assigned to the ACO form the basis for determining the quarterly advanced investment payment to the ACO. For additional detail, please see the quarterly payment amount calculation methodology at 42 CFR 425.630(f)(2).

To use ADI to identify safety net hospitals for TEAM, we considered assigning episodes an ADI value based on the beneficiary's address found in the Common Medicare Environment (CME) file. Episodes meeting an established national ADI percentile threshold (for example, ADI >80) could be classified as high-ADI episodes, and a distribution of the proportion of high-ADI episodes could be constructed. We considered that those TEAM participants that fell above an established threshold of high-ADI episodes (for example, 75th percentile) could be classified as safety net hospitals. For PY 1, the proportion of high-ADI episodes and its

corresponding distribution could be determined based on a single-year or multiple-year retrospective baseline (for example, three-year average). Those TEAM participants that met or exceeded the determined threshold would be designated as safety net. We could hold these designations constant for TEAM's duration or recalculate the proportion of high-ADI episodes annually (using a one-year or multiple-year moving average) and make safety net redeterminations based on an updated threshold on an annual basis. This annual approach could mean that TEAM participants' safety net qualifications for TEAM could vary over the model's duration.

(c) Methodology for Identifying Safety Net Hospitals

We considered the previously mentioned methods for identifying safety net hospitals and we proposed to use the CMS Innovation Center's Strategy Refresh definition for identifying safety net hospitals within TEAM. Use of the CMS Innovation Center's Strategy Refresh's safety net definition allows for a consistent and streamlined approach to how the CMS Innovation Center plans to monitor safety net participation with CMS Innovation Center models. Further, the definition uses two recognized measures of social risk to identify hospitals serving a higher proportion of beneficiaries that may face barriers to receiving or accessing care.

Beneficiaries with dual eligibility are considered a vulnerable group for several reasons including the nature of dual eligibility requirements, a higher proclivity for experiencing chronic conditions, and an increased likelihood of mental health diagnosis.^{967 968} In its 2016 "Report to Congress Social Risk Factors and Performance Under Medicare's Value-Based Purchasing Programs," the Office of the Assistant Secretary for Planning and Evaluation (ASPE) found that dual eligibility status was the strongest predictor of poor outcomes of quality measures among multiple social risk factors examined.⁹⁶⁹ TEAM's proposed approach to identify safety net hospitals is also similar to other approaches used in CMS Innovation Center models. For example,

⁹⁶⁷ https://www.cms.gov/Medicare-Medicaid-Coordination/Medicare-and-Medicaid-Coordination/Medicare-Medicaid-Coordination-Office/Downloads/MMCO_Factsheet.pdf.

⁹⁶⁸ https://www.cms.gov/Medicare-Medicaid-Coordination/Medicare-and-Medicaid-Coordination/Medicare-Medicaid-Coordination-Office/Downloads/NationalProfile_2012.pdf.

⁹⁶⁹ <https://aspe.hhs.gov/reports/report-congress-social-risk-factors-performance-under-medicare-value-based-purchasing-programs>.

BPCI Advanced identifies safety net hospitals by tabulating the proportion of episodes with fully or partially dual eligible beneficiaries; if a hospital exceeded a 60 percent threshold of episodes based on the previous model year, then they would be considered a safety net hospital.⁹⁷⁰

While dual eligibility status does not fully capture all aspects of social risk, the incorporation of the proportion of patients with Part D LIS as a proxy for income into TEAM's proposed safety net definition broadens the range of possible beneficiary social risk factors used to make safety net hospital designations under the model. In its 2017 report on "Accounting for Social Risk Factors in Medicare Payment," the National Academies found that accounting for dual eligibility alone may not be sufficient to capture all social risk factors, and the incorporation of multiple measures may help to better characterize overall social risk.⁹⁷¹ We sought comment on our proposal to identify safety net hospitals using the CMS Innovation Center's Strategy Refresh's definition in TEAM at § 512.505.

The following is a summary of the public comments received on the proposed definition of safety net hospitals in TEAM and our responses to these comments:

Comment: A commenter recommended CMS should use its authority to create a federal designation of essential health systems to target funding and other support across CMS programs, rather than creating a safety net hospital definition limited to TEAM.

Response: The proposed definition of safety net hospital, as defined and finalized in this section of the preamble of the final rule, is specific to the purposes of TEAM. Creating a standard federal designation for essential health system is not within the scope of this rule.

Comment: A commenter supported the use of the Hospital Value Based Purchasing Program's health equity adjustment (HEA) methodology to acknowledge socioeconomic inequities that differentially affect hospitals, especially safety net hospitals, by assigning additional points to hospitals that treat a greater proportion of patients who are dually eligible for Medicare and Medicaid and recommend TEAM to consider a similar approach.

Response: We thank the commenter for their suggestion and agree that the approach aims to reward hospitals that serve higher proportions of dual-eligible patients for providing excellent care. TEAM recognizes safety net hospitals may need additional policies to protect them from significant financial risk given they typically have less resources and care for a higher proportion of underserved beneficiaries. TEAM includes provisions that allow safety net hospitals to participate in value-based care, with lower risks and rewards. In particular, TEAM will allow safety net hospitals to participate in Track 1 for the first three performance years of the model, as discussed in section X.A.3.a.(3) of the preamble of this final rule, which removes their exposure to downside risk. TEAM also recognizes differences in quality measure performance for safety net hospitals, and other hospitals that may elect to participate in Track 2, by adjusting their CQS adjustment percentage for negative reconciliation amounts by 15 percent, which further limits their financial risk, as discussed in section X.A.3.d.(5)(g) of the preamble of this final rule. We will take into consideration a health equity adjustment approach, and if warranted, would propose in future notice and comment rulemaking.

Comment: A few commenters supported the proposed definition of safety net hospitals using the CMS Innovation Center's Strategy Refresh's definition. A commenter supported the use of the CMS Innovation Center's definition because CMS conducted extensive stakeholder roundtables on the safety net definition, which led the CMS Innovation Center to use the Medicare Part D LIS indicator and dual-eligibility ratio. A few commenters noted their appreciation for TEAM's safety net definition because it recognizes the challenges of providing care to low-income Medicare beneficiaries. Several commenters noted that TEAM's proposed definition for safety net hospital would not fully capture the full range of hospitals within the safety net as it does not reflect data from all payers or the degree of patients without health insurance served by a hospital. A commenter suggested that a broader definition of safety net that more closely aligns with community need would be more appropriate to identify hospitals that care for the most vulnerable populations. A commenter suggested that the proposed TEAM definition would prioritize smaller hospitals and would miss several large essential hospitals that have long played a safety

net role in their communities. A commenter noted that dual eligibility and qualification for the Part D LIS subsidy may be highly correlated, which may affect a hospital's qualification as a safety net participant under TEAM.

Response: We thank the commenters for sharing their support and concerns regarding TEAM's proposed safety net definition. We recognize that there are multiple approaches to identifying a safety net hospital for TEAM. The CMS Innovation Center definition reflects one measure of a hospital's patient mix through use of the percentage of beneficiaries that are dually eligible, and a proxy measure for the degree of low-income beneficiaries that are furnished services at a given facility. As discussed in this section of the preamble of the final rule, these measures have been shown to be associated with lower access to care and worse health outcomes. The use of the CMS Innovation Center safety net definition within TEAM would align with the broader use of the safety net definition in monitoring safety net participation across CMS Innovation Center models.

We acknowledge that measurement of community need could provide insights into the characteristics of a service area of a given hospital; however, the lack of readily available standardized data on community need across all possible TEAM participants beyond area-based indices could pose a challenge to incorporating the concept of community need into TEAM's safety net hospital definition.

To clarify a commenter's concern about the possible high degree of correlation between the two measures used in the proposed safety net definition under TEAM, the proposed safety net definition would allow a TEAM participant to qualify as a safety net hospital under TEAM should it exceed the 75th percentile of either measure based on the distribution of these measures from all hospitals billing Medicare.

Comment: A few commenters recommended against use of a safety net definition for TEAM that uses area-level indices, such as the ADI, due to shortcomings in measure design. A commenter advised against ADI as it does not capture patient-level social risk factors and only measures social risk factor data at the geographic level, specifically the characteristics of the hospital's geographic location. A commenter noted that an area-based index using a hospital's geographic location may not be a good proxy for determining whether a TEAM hospital should be considered a safety net

hospital because patients may be transient. A commenter stated that while neighborhood factors are important determinants of health outcomes and spending, the lack of standardization in calculating the ADI score has made the measure overly dependent on median housing value and may disadvantage certain neighborhoods in large urban areas.

Response: We thank commenters for raising concerns of using ADI as a possible way to define a safety net hospital under TEAM. We recognize that ADI as an area-based index has several valid uses for identifying a geographic measure of neighborhood disadvantage at the census block group level. We are aware of potential concerns that have been raised how the lack of standardization of ADI variables may make the ADI primarily a function of a subset of variables included in calculation of the ADI.⁹⁷² Due to the concerns raised by commenters, we are not finalizing the use of ADI in determining safety net status for TEAM participants at this time as we feel use of the CMS Innovation Center's safety net provider definition is most appropriate for reasons discussed throughout this section. However, in response to commenters, we will assess the use of standardization in calculating ADI for target price risk adjustment purposes and may propose updates to our risk adjustment methodology in future rulemaking.

Comment: A couple commenters recommended against use of the MSNI as it favors hospitals with high Medicare volume and does not incorporate Medicaid volume into its formula. A commenter noted that MSNI favors hospitals with higher Medicare volume because of the weight the Medicare share of inpatient days has in the MSNI formula. A commenter noted that use of the MSNI could discourage hospitals from expanding access to care as hospitals that serve more Medicaid beneficiaries and patients without health insurance will have a lower share of Medicare inpatient days even if they continue to serve the same number of Medicare beneficiaries. A commenter also noted that neither the MSNI nor the ADI would accurately reflect the broad patient mix of safety net hospitals if used in TEAM's safety net definition.

Response: We thank commenters for raising concerns about the potential use of MSNI in determining safety net status under TEAM. Due to the concerns

⁹⁷² Petterson S. Deciphering the Neighborhood Atlas Area Deprivation Index: the consequences of not standardizing. Health Aff Sch. 2023;1(5):qxad063. Published 2023 Nov 3. doi:10.1093/haschl/qxad063.

raised by commenters, we are not finalizing the use of MSNI in determining safety net status for TEAM participants at this time as we feel use of the CMS Innovation Center's safety net provider definition is most appropriate for reasons discussed throughout this section.

Comment: Many commenters found that the proposed TEAM definition does not account for the degree to which a hospital serves Medicaid beneficiaries and patients without health insurance. Several commenters suggested that the safety net definition under TEAM should account for the degree to which a hospital serves Medicaid beneficiaries. A commenter stated that the proposed TEAM safety net definition would adequately account for care provided to low-income Medicare beneficiaries but that low Medicare beneficiary volumes should not be a barrier to qualify as a safety net under TEAM for hospitals that otherwise serve large low-income populations. A few commenters noted that the proposed definition does not account for the financial difficulties of hospitals that treat a high number of Medicaid-eligible patients but may not have a relatively high volume of Medicare and Medicaid dually eligible patients. A commenter noted that a hospital's overall payer mix would be more useful in identifying facility-level characteristics that would influence the hospital's ability to fund infrastructure and investments for value-based care arrangements.

Response: We thank commenters for their recommendations on potentially incorporating measures of the degree to which a TEAM participant serves Medicaid beneficiaries or patients without health insurance in determining safety net status. We acknowledge that this type of data could provide a more comprehensive view of the payer mix of a given hospital. However, as we do not have access to this type of standardized data for all possible TEAM participants, it would be challenging to incorporate both measures as part of TEAM's safety net definition at this time. The CMS Innovation Center safety net definition reflects one measure of a hospital's patient mix through use of the percentage of beneficiaries that are dually eligible, and a proxy measure for the degree of low-income beneficiaries that are furnished services at a given facility.

Comment: Some commenters recommended that TEAM's safety net definition should consider the degree of uncompensated care provided by a hospital. These commenters suggested several existing measures related to uncompensated care that could be used

in TEAM's safety net definition. A few commenters recommended that the disproportionate patient percentage (DPP), which captures a hospital's proportion of Medicaid and low-income Medicare patients, would be an appropriate measure of uncompensated care as it has long been used in Medicare's Disproportionate Share Hospital (DSH) program. A couple commenters suggested use of the Medicare uncompensated care payment factor (UCPF), which is a measure of a hospital's share of uncompensated care costs relative to all hospitals' uncompensated costs, as it can be used to identify the costs of care delivered to uninsured individuals. A few commenters recommended use of the deemed DSH hospital designation as it could identify hospitals that are statutorily required to receive Medicaid DSH payments because they serve a high share of Medicaid and low-income patients. A commenter expressed that the TEAM safety net definition could continue to use the Medicare-Medicaid dual eligibility and Part D LIS criteria but should add uncompensated care as a percentage of a hospital's total costs as a third eligibility criterion.

Response: We thank commenters for their suggestions on the range of measures related to DSH and uncompensated care payments that could be used in TEAM's safety net definition. In its June 2022 Report, MedPAC raised concerns about whether these payments appropriately target safety net hospitals.⁹⁷³ We do not feel that it would be appropriate to use measures related to DSH or uncompensated care payments in TEAM's safety net definition as we feel that the CMS Innovation Center Strategy safety net definition use of dual eligibility and Part D LIS eligibility criteria is most appropriate in identifying TEAM participants as safety net participants. As discussed in this section, these two criteria have been shown to be associated with lower access to care and worse health outcomes.

Comment: A commenter recommended that participation in the 340B Program be considered a criterion for designating TEAM participants as safety net hospitals.

Response: Section 340B of the Public Health Service Act (340B) allows participating hospitals and other providers to purchase certain covered outpatient drugs or biologicals from manufacturers at discounted prices. We

feel that using the HRSA-administrated 340B Drug Pricing Program participation alone would be insufficient to identify safety net hospitals under TEAM. Only certain types of hospitals are eligible to be covered entities in the 340B Drug Pricing Program.⁹⁷⁴ Therefore, using 340B Drug Pricing Program eligibility for determining safety net hospital status under TEAM could restrict the types of eligible TEAM participants that could be considered safety net for the purposes of TEAM. The 340B Program also focuses on the purchasing of certain covered outpatient drugs or biologicals, which is not fully aligned with the inpatient focus of TEAM episodes at this time. Use of the CMS Innovation Center safety net definition would allow all TEAM participants to be considered for safety net hospital eligibility for the purposes of TEAM.

Comment: A few commenters requested that safety net determinations for TEAM be done at the beginning of the model and be held constant for the duration of the model. A couple commenters highlighted that participants require time for financial planning within the context of a model that creates financial uncertainty for participating providers, highlighting that a shift between tracks for eligible safety net TEAM participants could undermine the participant's success in the model.

Response: We thank the commenters for their perspectives on when safety net determinations should be made and whether they should be held for the duration of the model. We acknowledge the potential challenges that changing safety net determinations in each model year could create in a TEAM participant's ability to adequately plan for the model and that having a consistent designation for model's performance period may be beneficial. However, we do not believe holding the safety net determination for the duration of the model would create a sustainable, long-term policy, especially if TEAM could meet criteria to be expanded, as permitted under section 1115A(c) of the Act. Further, holding safety net determinations constant limits a TEAM participant's access to participating in different participation tracks in TEAM. As discussed in section X.A.3.a.(3) of

⁹⁷⁴ Section 340B(a)(4) of the Public Health Service Act considers the following types of hospitals as covered entities that can participate in the 340B Drug Pricing Program: children's hospitals, critical access hospitals, disproportionate, share hospitals, free standing cancer hospitals, rural referral centers, and sole community hospitals. For further information, refer to <https://www.hrsa.gov/opa/eligibility-and-registration>.

⁹⁷³ https://www.medpac.gov/wp-content/uploads/2022/06/Jun22_MedPAC_Report_to_Congress_v2_SEC.pdf.

the preamble of this final rule and finalized at § 512.520(b)(3) and (4), TEAM participants must satisfy the definition of safety net hospital at the time of participation track request for participation in Track 1 or Track 2.

After consideration of public comments, we received, we are finalizing as proposed our proposed definition of safety net hospital under TEAM at § 512.505.

(3) Identification of Rural Hospitals

(a) Background

Americans who live in rural areas of the nation make up about 20 percent of the United States (U.S.) population, and they often experience shorter life expectancy, higher all-cause mortality, higher rates of poverty, fewer local doctors, and greater distances to travel to see health care providers, compared to their urban and suburban counterparts.⁹⁷⁵ The health care inequities that many rural Americans face raise serious concerns that the trend for poor health care access and worse outcomes overall in rural areas will continue unless the potential causes of such health care inequities are addressed. Barriers such as workforce shortages can impact health care access in rural communities and can lead to unmet health needs, delays in receiving appropriate care, inability to get preventive services, financial burdens, and preventable hospitalizations.⁹⁷⁶

Hospitals in rural areas often face other unique challenges. Rural hospitals may be the only source of healthcare services for beneficiaries living in rural areas, and beneficiaries have limited alternatives. Rural hospitals may also be in areas with fewer providers including fewer physicians and PAC facilities, rural hospitals may have more limited options in coordinating care and reducing spending while maintain quality of care under a value-based care arrangement. We believe that urban hospitals may not have similar concerns as they are often in areas with many other providers and have greater opportunity to develop efficiencies.

(b) Definition of Rural Hospital

We did not propose to include any geographically rural areas for TEAM based on the proposed CBSAs as defined in 89 FR 36394 through 36412. However, some hospitals in the

proposed CBSAs for TEAM may be considered rural for other reasons, such as being reclassified as rural under the Medicare wage index regulations or being designated a rural referral center (RRC).

For the purposes of TEAM, we proposed a rural hospital to mean an IPPS hospital that is located in a rural area as defined under § 412.64 of this chapter; is located in a rural census tract defined under § 412.103(a)(1) of this chapter; has reclassified as a rural hospital under § 412.103 of this chapter, or is designated a rural referral center (RRC) under § 412.96 of this chapter. This definition would be an expanded version of the rural hospital definition used by the CJR model as defined in 42 CFR 510.

For PY 1, we proposed that rural designations under TEAM would be based on the TEAM participant's rural classification as of the model start date. We recognized that rural designations and rural reclassification requests in accordance with § 412.103 may occur over on a rolling basis over the course of the model and can take several months to be reviewed and approved by CMS. We proposed that TEAM participants that receive an approved rural designation under the criteria defined in the preceding paragraph or an approved rural reclassification in accordance with § 412.103 must notify CMS at least 60 calendar days prior to the start of a model's performance year for CMS to consider classifying the TEAM participant as rural under the model for the following performance year. We proposed that model rural designations will occur only once at the beginning of each model performance year regardless of when a TEAM participant's rural classification may change within a given performance year.

We proposed that if a TEAM participant's classification is no longer rural pursuant to § 412.103 or any other criteria previously qualifying them as rural as defined earlier in this section, the TEAM participant must notify CMS in a manner chosen by CMS within 60 calendar days of receipt of this designation change. We proposed that TEAM participants would continue to receive the flexibilities for rural hospitals as described in 89 FR 36392 through 36394 through the remainder of the performance year in which the redesignation occurs, but the TEAM participant would no longer qualify for rural hospital flexibilities at the start of the next performance year.

We sought comment on our proposal to identify rural hospitals in this section. We did not propose to include a measure of hospital rurality within our

risk adjustment model as described in 89 FR 36433 through 36435 but sought comments on whether inclusion of this risk adjustor would be warranted.

The following is a summary of public comments received on the proposed definition of a rural hospital under TEAM and our responses to these comments:

Comment: MedPAC noted that the proposed definition would encompass a large share of hospitals and recommended that rural hospitals should be defined as those located in geographically rural areas and not those that have been reclassified as rural or RRCs. MedPAC commented that nearly one-third of hospitals have gone through rural reclassifications and that TEAM should avoid a rural definition that could fuel reclassifications and should instead focus on a geographically based rural definition.

Response: We thank MedPAC for noting the large share of hospitals that would be included in the definition. Our proposed inclusion of hospitals that were reclassified as a rural hospital under § 412.103 of this chapter or is designated a rural referral center (RRC) under § 412.96 of this chapter in TEAM's rural definition was to consider a broader set of hospitals that are considered rural and to align with the rural definition used under the CJR model (42 CFR 510). Consistent use of a rural definition across CMS Innovation Center models and CMS programs can potentially provide continuity in a participant's rural classification across models and programs. However, in the context of a mandatory model, we understand that a narrower and rural definition based strictly on geographic area could prevent creating an incentive for a hospital to seek rural reclassification given the flexibilities offered to rural hospitals under TEAM.

Comment: A commenter recommended that CMS not reclassify hospitals as rural during the middle of TEAM's performance period as changes in rural classifications were viewed as a challenge in the BPCI Advanced model.

Response: We thank the commenters for their concern regarding the potential challenges of changing rural classifications over the model performance period. We acknowledge that determining a participant's rural status under TEAM at the beginning of the model performance period and maintaining it throughout the model performance period may provide a hospital with an understanding of their model track for the duration of the model, giving them the ability to plan accordingly. However, we do not

⁹⁷⁵ Rural Health Research Gateway. (2018). Rural Communities: Age, Income, and Health Status. <https://www.ruralhealthresearch.org/assets/2200-8536/rural-communities-age-income-health-status-recap.pdf>.

⁹⁷⁶ Healthy People 2020 (n.d.) Access to Health Services. <https://www.healthypeople.gov/2020/topics-objectives/topic/Access-to-Health-Services>.

believe holding the rural hospital classification for the duration of the model would create a sustainable, long-term policy, especially if TEAM could meet criteria to be expanded, as permitted under section 1115A(c) of the Act. Further, holding rural hospital classifications constant may limit a TEAM participant's access to participating in different participation tracks in TEAM, specifically Track 2. As discussed in section X.A.3.a.(3) of the preamble of this final rule and finalized at § 512.520(b)(3) and (4), TEAM participants must satisfy the definition of rural hospital at the time of participation track request for participation in Track 2.

Comment: A commenter suggested that some hospitals may be just outside an applicable rural zone and that CMS should consider a policy that would allow these hospitals to request a change in their designation.

Response: We understand that a hospital may wish to request a change in their rural designation under TEAM. Any definition chosen will have participants on the margin of the definition. The rural definition under TEAM must be applied consistently across all TEAM participants and allowing for such change requests could increase operational complexity of the model and would not allow for a consistent and standard definition of rurality to be applied across all TEAM participants.

After consideration of public comments, we received, we are finalizing our proposed definition of rural hospital under TEAM with slight modification to remove hospitals that have reclassified as a rural hospital under § 412.103 and hospitals that are a rural referral center (RRC) as given this term under § 412.96. For the purposes of TEAM, a rural hospital means an IPPS hospital that is located in a rural area as defined under § 412.64 of this chapter or is located in a rural census tract defined under § 412.103(a)(1) of this chapter as defined at § 512.505.

(4) Beneficiary Social Risk Adjustment

In recent years there has been a push for Medicare and other payers to include beneficiary social risk adjustment into financial methodologies that determine health care payments.⁹⁷⁷ It is believed that the inclusion of beneficiary social risk adjustment may provide more resources to providers who care for underserved beneficiaries

to offset the additional costs often attributed to SDOH. In other words, patients with limited resources or access to care may require more spending from providers to achieve equitable outcomes. Beneficiary social risk adjustment has been limited in previous episode-based payment models. The BPCI Advanced and CJR models included beneficiary social risk adjustment for beneficiary dual eligibility status, yet that single adjuster alone may not be sufficient in capturing spending differences for beneficiary social risk. Findings from the CJR model's 5th Annual Report found that, during the baseline period, historically underserved populations generally had higher episode payments, used more institutional post-acute care, had higher rates of emergency department use and readmissions, and received elective LEJRs at a lower rate than their reference populations.⁹⁷⁸

There is significant literature and research surrounding the inclusion of social risk adjustment in health care payments, especially given the varying social risk adjustment indicators available.^{979 980 981} In a recent environmental scan, ASPE indicated that area-level deprivation indices tend to have the broadest coverage across the entire range of social risk factors. According to ASPE's report, area-level deprivation indices are, by definition, measured for geographic areas, which presents challenges in including them in payment models because a provider's patients are unlikely to be representative of the population of the geographic area in which the provider is located.⁹⁸²

⁹⁸² Landscape of Area-Level Deprivation Measures and Other Approaches to Account for Social Risk and Social Determinants of Health in Health Care Payments. (2022). Office of the Assistant Secretary for Planning and Evaluation.

Several CMS Innovation Center initiatives incorporate (or may incorporate) beneficiary social risk adjustment into their financial calculations or determining payment amounts, including the ACO REACH model, the Enhancing Oncology Model (EOM), the Making Care Primary (MCP) model, and the Guiding an Improved Dementia Experience (GUIDE) model. To avoid relying on a single indicator that may not be representative of the beneficiaries a provider cares for, these models incorporate multiple social risk indicators. Specifically, these models take into account one or more of the following indicators in their risk adjustment models: state and national ADI, Medicare Part D Low-Income Subsidy (LIS), and dually eligible beneficiaries enrolled in both Medicare and Medicaid. Factoring in multiple indices may avoid challenges when an underserved beneficiary lives in higher cost-of-care area or beneficiaries that have difficulty accessing care. For example, incorporating both state and national ADI allows the for the risk adjustment model to capture national and local socioeconomic factors correlated with medical disparities and underservice, while including the LIS measure will capture socioeconomic challenges that could affect a beneficiary's ability to access care. For these reasons, and to align with other CMS Innovation Center models, we proposed to incorporate and equally weight three social risk indicators in TEAM's target price methodology, see 89 FR 36433 through 36435, specifically state and national ADI indicators, the Medicare Part D LIS indicator, and dual-eligibility status for Medicare and Medicaid. We believe that including these social risk indicators would ensure TEAM participants that serve disproportionately high numbers of underserved beneficiaries are not inadvertently penalized when setting TEAM target prices.

We sought comment on the proposed beneficiary social risk adjusters for TEAM and whether there were beneficiary social risk indicators we should consider in TEAM's target price methodology.

The following is a summary of public comments received on the beneficiary social risk adjustment indicators under TEAM and our responses to these comments. For further comments and responses related to the risk adjustment methodology, please see section

⁹⁷⁷ Adjusting Medicare payments for social risk to better support social needs. (2021). [Dataset]. In Forefront Group. <https://doi.org/10.1377/forefront.20210526.933567>.

X.A.3.d.(4) of the preamble of this final rule.

Comment: A few commenters supported the inclusion of social risk adjustment in the model's target pricing methodology. A commenter noted that inclusion of these adjustments can ensure that facilities that disproportionately serve underserved populations, such as communities of color and rural communities, are not penalized under the model given their higher investment needs due to higher levels of social risk. A commenter stated that failing to adjust for social risk variables could unfairly penalize hospitals and clinicians for serving more complex and underserved populations, and that adjusting for these factors could ensure a more accurate and fair assessment of quality. A commenter noted that the current proposal to use dual eligibility, Part D LIS status, or living in an area with a high ADI would not appropriately demonstrate a patient's social risk. A commenter recommended that TEAM take a cautious approach to social risk adjustment to ensure beneficiary needs are not excessively adjusted and potentially masked.

Response: We thank commenters for their support about the inclusion of social risk adjusters into TEAM's target price methodology and commenters for raising potential concerns about inclusions of such variables. In the proposed rule, we noted that the social risk adjustment variable was chosen so that it can account for multiple potential markers of beneficiary social risk. Using Medicare/Medicaid dual eligibility status, LIS status, and living in areas in the top percentiles of either the national or state level ADI allows CMS to utilize existing indicators of social risk together and capture safety-net populations through multiple means. If dual-eligibility status has not been identified prior to the episode occurring, the ADI marker may still be able to identify the beneficiary at a higher social risk. Additionally, we proposed to enforce sign restrictions to avoid negative coefficients for the beneficiary social risk adjuster, meaning that the adjustment to the preliminary or reconciliation target prices would only happen if the coefficient on the beneficiary social risk adjustment variable is positive. We would not be able to enforce the sign restrictions if additional variables for social risk were separately added to the model.

As indicated above in section X.A.3.d.(4) of this final rule, CMS is also finalizing the addition of safety net status of the hospital as a risk-adjuster to all episode types to address concerns

about providers that primarily care for beneficiaries with dual-eligibility or LIS status. We believe the inclusion of the provider's safety net status will strengthen the risk adjustment model and appropriately set target prices for providers that serve economically distressed counties. While CMS is not including all the risk adjusters tested in BPCI Advanced to maintain the simplicity required for hospitals without experience in value-based care to participate in TEAM, the updated risk adjustment model does take more patient-level and hospital level factors into account.

Comment: A couple commenters suggested that rural status should be considered as a risk adjuster to support rural providers in taking on risk and to acknowledge the disparities that exist in rural settings.

Response: We acknowledge the comments regarding the inclusion of provider-level risk adjusters for rural/urban status. As part of the Lasso regression analysis to identify risk adjusters as described in section X.A.3.d.(4) of the preamble of this final rule, CMS found that the variables for patients treated at rural hospitals were not selected by the Lasso model for any of the episode categories. Therefore, risk adjusters for rural status will not be included. However, rural hospitals will have additional flexibilities in TEAM, such as opting for Track 2 of the model which has a lower level of risk sharing (5 percent stop-loss/stop-gain).

Comment: Each of the following sociodemographic variables were proposed by a commenter: age, disability status, educational level, preferred language, and socioeconomic status. A couple commenters recommended including patient-level health-related social need (HRNS) variables for risk adjustment such as housing instability, experiencing homelessness, food insecurity, financial needs, transportation problems, and interpersonal safety. A couple commenters suggested that Z codes related to social determinants of health (SDOH) and HRSNs could be used for risk adjustment purposes.

Response: We thank commenters for their suggestions on additional measures that could be considered to risk adjust for a beneficiary's levels of social risk, including the potential use of Z codes to identify SDOH-related variables.

As described in section X.A.3.d.(4) in the preamble of this final rule, the updated risk adjustment methodology for TEAM includes age brackets as a demographic variable for all TEAM episodes. We also note that the updated

risk adjustment methodology will incorporate a measure of disability as the original reasons for Medicare enrollment for the LEJR episode as it was found to be statistically significant in the Lasso regression analysis. We recognize that there are additional measures of disability status that could be considered in exploration of future risk adjustment methodologies under TEAM should standardized and sufficient data be available across TEAM participants. Based on the results of the Lasso regression analysis to identify risk adjusters for TEAM episodes, we are not considering any other demographic factors—such as educational level, preferred language, and socioeconomic status—at this time but could consider them in future analyses that may lead to proposed adjustments in TEAM's risk adjustment methodology prior to the start of TEAM's performance period.

We appreciate commenters' recommendations on additional variables related to HRSNs that could be considered in the risk adjustment methodology. Given variability in the use of Z codes to capture HRSN data, we would be concerned about the availability of standardized data across TEAM beneficiaries to meaningfully incorporate such measures into TEAM's risk adjustment methodology. The proposed beneficiary-level social risk variable included in TEAM's risk adjustment variable incorporates measures that have been shown to be correlated with a beneficiary's level of social risk as described in section X.A.3.d.(4) in the preamble of this final rule. In the absence of consistently available HRSN data at the beneficiary-level, we consider that the beneficiary-level social risk variable captures the degree of beneficiary's social risk and avoids potential overcontrolling of social risk variables within the risk adjustment models. We could consider further exploration of the recommended HRSN-related risk adjusters should TEAM adjust its risk adjustment methodology through notice and comment rulemaking.

Comment: A commenter recommended to continue using the BPCI Advanced and CJR risk adjustment methodology but to include LIS status and ADI to more accurately capture the social risk experienced by a beneficiary in TEAM's risk adjustment methodology.

Response: We appreciate the commenter's suggestion on expanding upon existing risk adjustment methodologies to incorporate measures of social risk. The updated risk adjustment methodology as described in section X.A.3.d.(4) in the preamble of

this final rule more closely resembles the CJR and BPCI Advanced models with the additional risk adjusters that were selected based on statistical analyses and maintains the goal of a simple risk adjustment model for TEAM.

Comment: A commenter cautioned CMS in using the ADI as a measure of social risk as research has demonstrated that ADI is weakly correlated with self-reported social needs and with health care costs and may mask inequities in communities where there are high levels of wealth disparities. Another commenter recommended that CMS develop guardrails so that hospitals that receive higher reimbursement because of ADI factors should be required to make their services more accessible to Medicaid and dually eligible enrollees. A commenter suggested that beneficiary-level social risk factors should be used to better capture beneficiary-level disadvantage since beneficiaries living in high ADI area could have considerable social risk. A commenter suggested that use of ADI in risk adjustment could cause harm to providers in high-cost living areas by boosting the risk scores of healthy beneficiaries in low-cost living areas. A commenter supported the use of ADI as it creates a multi-dimensional picture of the social drivers of health within a community but may mask differences within a census block. A couple of commenters recommended CMS to consider using patient-level data in combination with similar indices to the ADI, like the Centers for Disease Control and Prevention's (CDC) Social Vulnerability Index (SVI), which includes data on race, ethnicity, and disability.

Response: We thank commenters for raising potential concerns around the use of ADI as one variable to determine the beneficiary social risk variable in risk adjustment. One benefit of ADI as a measure of social risk is that it measures several factors of socioeconomic position across the domains of education, income, home values, employment, and household information. The geographic level of an area-based index or indicator will inherently be a limitation in the use of any area-based measure, including potentially masking differences below the geographic unit of analysis. We believe ADI's use of census blocks groups provides an appropriate unit of geography by which to assess social risk for the purposes of risk adjustment under TEAM. We acknowledge that more granular beneficiary-level data on HRSNs could theoretically provide a more accurate assessment of an

individual beneficiary's level of social risk compared to an area-based index; however, because HRSN data may be inconsistently available at the beneficiary level, we do not think that such adjusters would be appropriate to use for risk adjustment under TEAM at this time. We are aware of potential concerns that have been raised how the lack of standardization of ADI variables may make the ADI primarily a function of a subset of variables included in calculation of the ADI.⁹⁸³ While we think that the use of ADI is appropriate as one way to capture a beneficiary's level of social, we will continue to explore whether standardization of the ADI variables would be appropriate for the purposes of TEAM's risk adjustment approach and would propose any such changes in future rulemaking.

As described in section X.A.3.d.(4) in the preamble of this final rule, we also note that the construction of the beneficiary social risk variable in TEAM's risk adjustment methodology represents the union of three different potential markers of beneficiary social risk: national-level ADI, state-level ADI, and dual eligibility status. While we acknowledge concerns that the ADI could mask differences in levels of deprivation lower than the census block, we believe that the use of national- and state-level ADIs would help mitigate potential concerns on the validity of the measure of social risk as it incorporates relative measures of deprivation at national scale and within a given state. Similarly, as dual eligibility status has been shown to be associated with a beneficiary's level of social risk, we feel that allowing three ways in which a beneficiary's level of social risk could be accounted for in risk adjustment is appropriate.

We disagree with the recommendation that TEAM participants that receive higher payment because of ADI factors alone should be encouraged to expand access to certain patient populations. The use of ADI in risk adjustment is done for target pricing, and performance against the risk-adjusted target price and quality measure benchmarks across all episodes in accordance with the participation track of the TEAM participant collectively determine the NPRA. Therefore, the influence of ADI performance alone on payment would not be an appropriate determination of whether a participant should be encouraged to expand access to services

to Medicaid or dually eligible beneficiaries, nor would such an incentive structure be within the direct scope of TEAM.

We appreciate the suggestion for CMS to consider use of the SVI as a potential way to identify beneficiary-level social risk for the purposes of team. The SVI provides a ranking of social vulnerability, or the resilience of communities when confronted by external stresses on human health and incorporates 15 variables across 4 themes: socioeconomic status, household composition and disability, racial/ethnic minority status, and language.⁹⁸⁴ The SVI is not as granular as ADI as ADI uses census block groups and SVI uses census tracts. SVI uses the American Community Survey (ACS) 5-year estimates, and the SVI accordingly inherits the limitations and timing of this source data. For these reasons, we did not propose SVI as potential risk adjuster because we did not feel it would have been appropriate to use SVI in place of the ADI for the purposes of risk adjustment under TEAM.

Comment: A commenter supported the use of dual eligibility status as a risk adjuster as research has shown that dual eligibility status is correlated with other measures of social drivers of health; however, the commenter also suggested that Medicaid eligibility may be a more comprehensive reflection of underserved populations for some hospitals given the variation in Medicaid eligibility across states.

Response: We thank the commenters for their support of using dual eligibility as a possible proxy for social risk under TEAM's risk adjustment methodology and for the suggestion to consider Medicaid eligibility. Given TEAM is a Medicare-based model, we feel that dual eligibility is an appropriate proxy for social risk that reflects both Medicare and Medicaid eligibility.

Comment: A commenter noted that CMS should continue to advance standardization of SDOH data in the context of social risk adjustment to explore ways to modify target prices to better account for historical underutilization.

Response: We appreciate the commenter's suggestion that standardization of SDOH data could help more easily incorporate measures of social risk into target price risk methodologies under team. As described in section X.A.3.d.(4) in the preamble of this final rule, we have identified statistically meaningful risk adjusters, including measures related to

⁹⁸³ Petterson S., Deciphering the Neighborhood Atlas Area Deprivation Index: the consequences of not standardizing. Health Aff Sch. 2023;1(5):qxad063. Published 2023 Nov 3. doi:10.1093/haschl/qxad063.

⁹⁸⁴ https://www.atsdr.cdc.gov/placeandhealth/svi/at-a-glance_svi.html.

social risk, that can be reliably measured across TEAM participants and episodes to ensure that data is available to the extent possible for risk adjustment.

We refer readers to section X.A.3.d.(4) in the preamble of this final rule for the comprehensive list of risk adjustment variables, including those related to social risk, that will be included in TEAM's pricing methodology.

(5) Health Equity Plans and Reporting

(a) Health Equity Plans

We believe it is important for TEAM participants to identify and monitor where disparities exist in their TEAM beneficiary population, and to use the data that they collect to implement evidence-based strategies aimed at addressing the identified health disparities and advancing health equity. To further align with other CMS Innovation Center models and promote health equity, we proposed that TEAM participants can voluntarily submit to CMS, in a form and manner and by the date(s) specified by CMS, a health equity plan for the first performance year. This proposal to make submission of a health equity plan voluntary in PY 1 recognized that constructing a health equity plan may require significant time and effort by the TEAM participant. Beginning in PY 2, we proposed that TEAM participants would be required to submit a health equity plan in a form and manner and by the date(s) specified by CMS. Beginning in PY 2 for those TEAM participants that voluntarily submitted a health equity plan in PY 1 and beginning in PY 3 for those TEAM participants that first reported a health equity plan in PY 2, we proposed that the TEAM participant would submit updates to their previously submitted health equity plans in a form and manner and by date(s) specified by CMS.

We proposed that the health equity plans submitted in all performance years would include the following elements:

- Identifies health disparities. We proposed to define "health disparities" as preventable differences in the burden of disease, injury, violence, or opportunities to achieve optimal health, health quality, or health outcomes that are experienced by one or more "underserved communities"⁹⁸⁵ within the TEAM participant's population of TEAM beneficiaries that the participant will aim to reduce. We proposed to define "underserved communities" as

populations sharing a particular characteristic, as well as geographic communities, that have been systematically denied a full opportunity to participate in aspects of economic, social, and civic life.⁹⁸⁶ We proposed that the data sources used to inform the identification of health disparities should also be noted in the plan.

- Identifies health equity goals and describes how the TEAM participant will use the health equity goals to monitor and evaluate progress in reducing the identified health disparities. We proposed to define "health equity goals" as targeted outcomes relative to the health equity plan performance measures for the first PYs and all subsequent PYs.

- Describes the health equity plan intervention strategy. We proposed to define "health equity plan intervention strategy" as the initiative(s) the TEAM participant will create and implement to reduce the identified health disparities.

- Identifies health equity plan performance measure(s), the data sources used to construct the health equity plan performance measures, and an approach to monitor and evaluate the health equity plan performance measures. We proposed to define "health equity plan performance measure(s)" as one or more quantitative metrics that the TEAM participant will use to measure changes in health disparities arising from the health equity plan interventions.

We solicited comment on the proposed voluntary health equity plan submission in PY 1 and mandatory health equity plan submission in PY 2 and all following performance years as proposed in § 512.563. We also solicited comment on whether TEAM participants should be required to submit a health equity plan in PY 2 and for all subsequent performance years if a TEAM participant submits a health equity plan to CMS for another CMS Innovation Center model in the same performance year, or if the TEAM participant should be required to submit a health equity plan that is specific to TEAM and the TEAM participant's population of TEAM beneficiaries. We also solicited comment on the proposed elements of the health equity plan.

The following is a summary of comments we received on health equity plans under TEAM and our responses:

Comment: Some commenters expressed their support for TEAM's inclusion of a health equity plan. A commenter found the definition of health disparities to be broadly defined

and requested that CMS narrow the scope of the health equity plan to focus on racial/ethnic, socioeconomic, or similar demographic disparities in key process or outcomes measures central to surgical care. A couple commenters requested that CMS allow hospitals to choose their own area of focus, population and/or process or outcome indicators in their action plan that are related to just one procedure. A commenter recommended that TEAM participants should be required or incentivized to reduce disparities in readmission rates, patient safety indicators, or PROMs. Another commenter raised a concern that requirements to close health equity gaps are well-intentioned, but CMS should consider protections and incentives to specifically encourage inclusion of vulnerable populations as incentives to close health equity gaps could inadvertently cause participants to adversely select beneficiaries.

Response: We thank commenters for their support of the proposed health equity plans under TEAM and for raising some concerns about the proposed components of the plan. The intent of the health equity plan under TEAM is to allow the TEAM participant flexibility to identify health equity goals and interventions that are most appropriate for their context and then work to improve identified health disparities. We agree that TEAM participants should be able to choose their own area of focus within the health equity plan as long as the participant's health equity plan meets all stated requirements. While we recognize that focusing on improving disparities in readmission rates, patient safety indicators, or PROMs may be appropriate for many TEAM participants, we believe that allowing for more contextually specific health equity goals is most appropriate for TEAM participants and will allow for alignment with other relevant health equity work in which the TEAM participant may be engaged. We acknowledge the concern that incentivizing improvements in health equity gaps could potentially lead to adverse selection in that a hospital could theoretically choose to furnish services to healthier patients to improve measures related to the TEAM's participant chosen health equity goals. However, given that payments under TEAM are not tied to performance on the health equity plan, we do not feel there is a significant likelihood that this adverse selection would occur solely as a result of a health equity plan under TEAM.

⁹⁸⁵ [https://www.cms.gov/priorities/innovation/key-concepts/health-equity#:~:text=\(Source3A CMS\),underservedpopulations\(AdaptedfromCDC\).](https://www.cms.gov/priorities/innovation/key-concepts/health-equity#:~:text=(Source3A CMS),underservedpopulations(AdaptedfromCDC).)

⁹⁸⁶ <https://www.federalregister.gov/d/2021-01753/> p-6.

Comment: A couple commenters suggested that the health equity plan should be voluntary for the entirety of TEAM's performance period, while another commenter recommended that health equity plans should be mandatory for all performance years as CMS has already piloted these plans on a voluntary basis in other initiatives. A commenter had concerns that requiring the plan from the start may lead to a less thorough plan and recommended that the health equity plan should start in PY 2, or at a minimum delay the plan to PY 2 for participants in Tracks 1 and 2, to allow providers new to value-based care the opportunity to build infrastructure for addressing disparities in the hospital's service area.

Response: We thank reviewers for their comments on the timing of when health equity plans should be implemented and mandatory under TEAM. We acknowledge that developing and implementing a health equity plan under TEAM may require additional time for a TEAM participant to identify and quantify health disparities appropriate for TEAM's health equity plan and then develop a plan to address them. Accordingly, we believe that voluntary reporting for all model performance years would be appropriate to give sufficient time for TEAM participants interested in developing a TEAM-specific health equity plan, including those that are newer to value-based care, to develop a comprehensive TEAM health equity plan that meets all stated components.

Comment: A few commenters expressed concern over the increased burden of creating and implementing a standalone health equity plan for TEAM. A couple commenters recommended that CMS streamline requirements with other health equity plan requirements in other CMS quality reporting programs. A couple commenters raised concerns that the requirement of a TEAM health equity plan is significantly different from the Hospital Commitment to Health Equity (HCHE) requirement under the Hospital Inpatient Quality Reporting Program beginning in CY 2023, which requires a hospital to attest to five domains that demonstrate a hospital's commitment to health equity, as it will increase administrative burden and could shift the focus to meeting regulatory requirements at the expense of meaningful action to improve health disparities. A commenter expressed concern that CMS is requiring a standalone health equity plan for TEAM whereas the Joint Commission (TJC) requires hospitals to submit a health equity plan. A few commenters

suggested CMS should allow overlap of health equity plans if a TEAM participant is also participating in a CMS Innovation Center model that requires a health equity plan to decrease burden. A commenter noted that health equity plans should be tailored to a specific model to align with the identified needs of the model's beneficiaries and that equity plans from other CMS Innovation Center models should not be used for the purposes of TEAM.

Response: We thank commenters for raising concerns around the potential duplication and differences in requirements across different health equity plan and reporting requirements under CMS programs. We disagree that having a health equity plan under TEAM would shift focus away from meaningful action to improve observed TEAM-related disparities as the plan would serve as an accountability mechanism for TEAM participants to identify disparities, work to improve them, and monitor progress against their stated health equity goals. We recognize that a TEAM participant may already report on health equity work under CMS' Hospital Inpatient Quality Reporting Program, such as through the required HCHE measure (87 FR 49191 through 49201), and other CMS Innovation Center models. However, we feel that TEAM's proposed health equity plan requirements are more appropriate to establishing and advancing specific health equity goals related to TEAM's proposed clinical focus areas than what is required under the HCHE measure in the Hospital Inpatient Quality Reporting Program. We agree with the commenter that health equity plans should be tailored to specific models to align with the identified needs of the model's target beneficiaries. We believe that voluntary reporting of health equity plans for all performance years would allow TEAM participants interested in developing and implementing a health equity plan the flexibility to appropriately focus their goals and interventions to areas of clinical focus most relevant to TEAM.

Comment: A commenter suggested that CMS should add an element to TEAM's health equity plan in future years on community engagement to better understand how TEAM participants are seeking input on model implementation and investing in structures and opportunities to partner with patients, caregivers, and communities with the greatest health inequities.

Response: We thank the commenter for highlighting that community engagement is an important aspect of

advancing health equity goals. Given that TEAM's proposed health equity plan requirements allow TEAM participants that voluntarily submit a health equity plan to tailor health equity interventions to the specific needs of their identified beneficiaries, TEAM participants would be able to focus on community engagement strategies that support the improvement of health equity goals should the TEAM participant find it an appropriate intervention strategy for their context.

Comment: A commenter expressed concern that CAHs or safety net hospitals may have limited data available to sufficiently identify inequities and track performance. A commenter recommend that CMS consider providing technical assistance to safety net and rural providers, who may not have sufficient data analytics capacity to determine disparities experienced by the hospital's patient population.

Response: We thank the commenters for raising these concerns as we are aware of the different contexts in which rural and safety net hospitals operate. As part of the implementation of TEAM, we will consider if there are opportunities to provide technical assistance on data analytics for health equity for safety net and rural hospitals in TEAM.

Comment: A commenter recommended that CMS issue additional guidance on how accountability and enforcement of these plans will address health disparities. A commenter expressed concern that CMS has not defined clear guidelines and criteria for assessment of the health equity plans.

Response: We thank the commenters for raising concerns about how TEAM participants would be assessed and held accountable on health equity plans for TEAM. As part of the implementation of TEAM, CMS will provide further sub-regulatory guidance on how CMS will review and provide feedback on TEAM participants' health equity plans for those participants that voluntarily submit a health equity plan.

After consideration of the public comments we received, we are finalizing our proposal of voluntary health equity plan submission for all following performance years in a form and manner and by date(s) specified by CMS as defined in § 512.563(a). A health equity plan voluntarily submitted by a TEAM participant must include all proposed elements and must be specific to TEAM and the TEAM participant's population of TEAM beneficiaries as defined in § 512.563(a).

(b) Demographic Data Collection and Reporting

We recognize disparities exist for beneficiaries in the health care system, including those receiving episodic care. Health care disparities highlight the importance of data collection and analysis that includes race, ethnicity, language, disability, sexual orientation, gender identity, and sex characteristics or other demographics by health care facilities. Such data are necessary for integration of health equity in quality programs, because the data permits stratification by patient subpopulation.^{987 988} Stratified data can produce meaningful measures that can be used to expose health disparities, develop focused interventions to reduce them, and monitor performance to ensure interventions to improve care do not have unintended consequences for certain patients.⁹⁸⁹ Furthermore, quality programs are carried out with well-known and widely used standardized procedures including but not limited to root cause analysis, plan-do-study-act (PDSA) cycles, health care failure mode effects analysis, and fishbone diagrams. These approaches are common in the health care industry to uncover the causes of problems, show the potential causes of a specific event, test a change that is being implemented, prevent failure by correcting a process proactively, and identify possible causes of a problem and soft ideas into useful categories, respectively.^{990 991 992 993} Adding a health equity prompt to these

standardized procedures integrates a health equity lens within the quality structure and cues considerations of the patient subpopulations who receive care and services from a hospital.⁹⁹⁴

To align with other CMS efforts, we proposed that TEAM participants could voluntarily report to CMS demographic data of TEAM beneficiaries pursuant to 42 CFR 403.1110(b) in PY 1. Beginning in PY 2 and all subsequent performance years, we proposed that TEAM participants would be required to report demographic data of TEAM beneficiaries to CMS in a form and manner and by a date specified by CMS. We proposed that demographic data would also be required to conform to USCDI version 2 data standards, at a minimum. Collection of this data could provide synergies with goals articulated in the health equity plans of TEAM participants. Further, this demographic data reporting would allow CMS to gain more nuanced understanding of the expanded demographics of TEAM beneficiaries—including data on race, ethnicity, language, disability, sexual orientation, gender identity, sex characteristics, and other demographics—to monitor and evaluate the model.

We proposed that the TEAM participant would be required make a reasonable effort to collect demographic data from all TEAM beneficiaries beginning in PY 2; however, we recognized that this may require additional administrative effort to collect this data or identify TEAM beneficiaries that may elect to not provide this data. We recognized that CEHRT may help to reduce administrative burden once EHR platforms have been programmed to capture and exchange the types of demographic data elements of interest. We also recognized that this demographic data may already be reported to CMS for other CMS initiatives.

We sought comment on the proposed voluntary reporting of demographic data of TEAM beneficiaries in PY 1 and the proposed mandatory reporting of demographic data of TEAM beneficiaries beginning in PY 2 and all following performance years. We wished to minimize the reporting burden on TEAM participants to ensure sufficient time and effort is spent adjusting to the requirements of a mandatory model, and we sought comments on how reporting of this

⁹⁹⁴ Sivashanker, K., & Gandhi, T.K. (2020). Advancing Safety and Equity Together. *New England Journal of Medicine*, 382(4), 301–303. <https://doi.org/10.1056/nejmp1911700>.

demographic data could minimize burden and if it could be collected from existing data sources.

The following is a summary of the public comments received on the proposed demographic data reporting requirements under TEAM and our responses:

Comment: Some commenters supported the proposal to collect and report demographic data under TEAM as it would provide a comprehensive understanding of health disparities, enabling targeted actions to promote health equity. A commenter supported the voluntary reporting in PY 1 followed by mandatory reporting in all other TEAM performance years.

Response: We thank commenters for their overall support of the proposed demographic data collection and reporting for TEAM beneficiaries as well as support for voluntary demographic data reporting in PY 1 followed by mandatory reporting beginning in PY 2 and for all following performance years. After a consideration of the full range of comments summarized in this section of the preamble of the final rule, we feel that allowing voluntary collection and reporting of demographic data for TEAM beneficiaries for all performance year would be most appropriate.

Comment: A few commenters supported use of USCDI standards for the demographic data reporting requirement under TEAM. A commenter recommended that CMS align coding and documentation requirements for the demographic data reporting under TEAM with national standards, like the USCDI version 3. A commenter appreciated CMS' interest in collecting more robust demographic data but was concerned that variation in data collection processes may result in data that does not confirm to USCDI version 2 standards, recommending that hospitals should have more flexibility in data collection standards. A commenter recommended that claims or QRDA 1 submissions would provide sufficient demographic information to meet the data reporting requirement and cautioned against requiring a separate data submission. A couple commenters recognized that demographic data reporting under TEAM would help to advance health equity goals but cautioned about requiring data collection when federal standards for collecting data are undergoing significant changes, and that attention should first be on data structuring instead of reporting.

Response: We thank commenters for suggestions related to how the proposed demographic data reporting requirements under TEAM could align

with existing data standards. We believe that it is important that demographic data reported under TEAM follow adopted standards to allow for aggregation and comparability across the model. USCDI standards provide an appropriate national standard given their adoption by ONC. As raised by commenters, we acknowledge that TEAM participants may have different data collection and reporting capabilities that align with existing USCDI standards. We disagree with commenters concerns that demographic data collection and reporting should not occur due to changing national standards. ONC has adopted USCDI version 3 (45 CFR 170.213(b)) which will become the baseline USCDI standard adopted in 45 CFR 170.213 on January 1, 2026, upon the expiration of USCDI v1. While we proposed that TEAM participants that report TEAM beneficiary demographic data would need to use USCDI version 2 at a minimum, we feel that a minimum of USCDI version 3 for the purposes of TEAM would be appropriate given that the USCDI version 3 would be the minimum standard adopted in 45 CFR 170.213 at the beginning of TEAM's performance period. We feel that it would be important to standardize the demographic data elements to the minimum of USCDI version 3 to ensure that we will have standardized data that can be aggregated from those TEAM participants that voluntarily report the data to better understand the demographics of TEAM beneficiaries to help advance the model's health equity goals. The current CMS Innovation Center Enhancing Oncology Model (EOM) has required use of USCDI version 3 standards in their collection and reporting of beneficiary sociodemographic data.⁹⁹⁵

We do not agree that QRDA-1 or claims-reported demographic data would align with the intended goals of advancing health equity under TEAM. Given that QRDA-1 is a framework for reporting patient-level data about quality measures, we feel that using this framework would not fully capture the required demographic data elements for all TEAM beneficiaries. Similarly, demographic data reported through standard Medicare claims forms does not provide the range of demographic information we hope to obtain on TEAM beneficiaries to help advance the health equity goals of TEAM and the Innovation Center.

⁹⁹⁵ <https://www.cms.gov/priorities/innovation/innovation-models/enhancing-oncology-model#part>.

Comment: A couple commenters also recommended that CMS should use existing tools for data collection, including HL7 and FHIR standards, or work with EHR vendors so this data could be requested via Application Programming Interfaces (API) from EHRs. A commenter recommended that the reporting of demographic data should be voluntary until it can be reported in an automatic fashion.

Response: We appreciate the comments recommended the use of tools, like HL7 and FHIR standards, to help facilitate the reporting of demographic data of TEAM beneficiaries. We recognize that ONC adopted the HL7 FHIR US Core Implementation Guide (IG) Standard for Trial Use version 6.1.0 at 45 CFR 170.215(b)(1)(ii), which provides the latest consensus-based capabilities aligned with the USCDI version 3 data elements for FHIR APIs. However, TEAM participants may have varying abilities to access and use these tools to automate voluntary reporting of demographic data required under TEAM. CMS may explore automated solutions in the future that are leveraging certified technology used by providers to reduce the burden of the demographic data reporting required under TEAM. While we are finalizing the voluntary reporting of TEAM beneficiary demographic data, we disagree in principle that reporting should be voluntary until automation is feasible as waiting for automation could limit the period in which TEAM participants may voluntarily report the demographic data of TEAM beneficiaries.

Comment: A few commenters also cautioned that CMS should address patient privacy and data protection to ensure the protection of demographic data, including educating both providers and patients on how this data collection affects care and existing requirements of Health Insurance Portability and Accountability Act (HIPAA).

Response: We appreciate commenters' concerns about patient privacy and data protection as it relates to the proposed requirements for demographic data reporting under TEAM. We acknowledge that TEAM beneficiaries may not wish to disclose some or all of the demographic data elements reportable under TEAM with their TEAM participant or CMS. For those TEAM participants that choose to voluntarily report demographic data, we would expect that TEAM participants would attempt to ask every TEAM beneficiary for these demographic data elements, but TEAM participants would

not be penalized should a TEAM beneficiary choose not to disclose some or all the requested information. For those TEAM participants that choose to voluntarily report demographic data, TEAM demographic data reporting requirements would not affect any existing obligations under privacy and security laws for patient information. We also appreciate the recommendation on how CMS could provide support to TEAM participants on demographic data collection efforts. We may consider developing resources on these topics as part of TEAM's implementation.

Comment: A couple commenters requested clarification on whether the demographic data would be reported at the beneficiary-level or in aggregate.

Response: For those TEAM participants that choose to voluntarily report the demographic data, we clarify that demographic data would need to be reported at the TEAM beneficiary-level for all TEAM beneficiaries that are willing to share some or all of the requested information.

Comment: A couple commenters requested CMS to clarify the required demographics and demographic groups. A commenter requested clarification on the definitions of disability and sex characteristics, recommending that CMS align definitions with existing requirements.

Response: As discussed in the proposed rule at 89 FR 36451, we would expect TEAM participants that voluntarily report TEAM beneficiary demographic data to consider reporting the following data elements: race, ethnicity, sex, gender identity, sexual orientation, preferred language, and disability status. We will provide further sub-regulatory guidance on the specifics of demographic data reporting and definitions for reportable data elements. We expect that definitions for race, ethnicity, sex, gender identity, sexual orientation, preferred language, disability status, and other possible data elements would align with the definitions under USCDI version 3, as USCDI version 3 will be the minimum USCDI standard adopted in 45 CFR 170.213 at the beginning of TEAM's performance period.

We clarify that sex characteristics as referenced in the proposed rule refers to sex as defined under USCDI version 3.⁹⁹⁶

⁹⁹⁶ <https://www.healthit.gov/isp/taxonomy/term/731/uscdi-v3>.

There are multiple ways that disability status can be captured under USCDI. TEAM could use six well-tested questions endorsed by the Office of the Assistant Secretary for Planning and Evaluation and the CDC, among others, to support meeting the Affordable Care Act requirements under Section 4302 to collect standardized demographic data.⁹⁹⁷ These questions align with the data elements defined under USCDI version 3 disability status assessment, which should be measured through assessment of a patient's physical, cognitive, intellectual, or psychiatric disabilities (for example, vision, hearing, memory, activities of daily living).⁹⁹⁸ The disability status data element as defined under USCDI version 3 includes assessments related to hearing status; vision status; difficulty with concentration, memory, or decision-making due to a physical, mental or emotional condition; difficulty walking or climbing stairs; difficulty dressing or bathing, and difficulty doing errands alone due to a physical, mental, or emotional condition.

Comment: A commenter recommended that CMS not apply penalties for errors or incompleteness in data.

Response: We acknowledge that TEAM beneficiaries may not wish to disclose some, all, or none of the demographic data elements reportable under TEAM with their TEAM participant or CMS. For those TEAM participants that voluntarily collect and report demographic data, we would expect that TEAM participants ask every TEAM beneficiary for these demographic data elements, but TEAM participants would not receive a penalty should a beneficiary choose not to disclose some or all the requested information.

Comment: A commenter suggested that CMS should pay separately for data collection. A commenter suggested that CMS stratify all measures by patient-level factors, such as demographics, and that CMS consider adopting upside-only incentives to close measure gaps. A commenter recommended that CMS provide upfront payments to support data collection infrastructure.

Response: We thank commenters for their suggestions on how financial

incentives could potentially improve the reporting of demographic data and improve the closing of health disparities in measures. We did seek comments on possible infrastructure payments for qualifying safety net TEAM participants that could support data infrastructure (see 89 FR 36452 through 36453) but are not finalizing any infrastructure payments in this final rule. Further, we did not propose to require the stratification of quality measure data by the demographic characteristics of TEAM beneficiaries, and we are therefore not able to consider upside-only incentives based on TEAM participants' performance on stratified quality measures.

After a review of public comments, we are finalizing our proposal for voluntary demographic data collection and reporting for all following performance years in a form and manner and by date(s) specified by CMS as described in § 512.563(c). We are finalizing that all demographic data collected for TEAM beneficiaries is to be reported at the beneficiary level as described in § 512.563(c). We will provide further sub-regulatory guidance on the demographic data elements and their definitions that can be voluntarily collected from TEAM beneficiaries and reported by TEAM participants.

(c) Health-Related Social Needs Data Reporting

The CMS Innovation Center is charged with testing innovations that improve quality and reduce the cost of health care. There is strong evidence that non-clinical drivers of health are the largest contributor to health outcomes and are associated with increased health care utilization and costs.⁹⁹⁹ ¹⁰⁰⁰ These individual-level, adverse social conditions that negatively impact a person's health or healthcare are referred to as "health-related social needs" or HRSNs. CMS aims to expand the collection, reporting, and analysis of standardized HRSNs data in its efforts to drive quality improvement, reduce health disparities, and better understand and address the unmet social needs of patients. Standardizing HRSN screening

and referral as a practice can inform larger, community-wide efforts to ensure the availability of and access to community services that are responsive to the needs of Medicare beneficiaries. While screening for HRSN is an important step to identify the unmet HRSNs of patients, it is also critical for providers to build referral relationships with community-based organizations and other social service organizations that can more directly support patients identified to have unmet HRSNs. Relationships with community-based organizations should include collaboration to identify available funding sources to support service provision to address unmet HRSNs, as needed.

While more common nationally, HRSN screening is not uniform across geography or health care setting. A literature review of national surveys measuring prevalence of HRSN screening found that 56–77 percent of health care payers and/or delivery organizations screened for HRSNs.¹⁰⁰¹ The review also found that almost half of state Medicaid agencies have established managed care contracting requirements for HRSN screening in Medicaid.¹⁰⁰² Despite screening proliferation and generally positive views toward screening among both patients and health care providers, implementation of screening and referral policies for beneficiaries of CMS programs with similar health—and even demographic—profiles may be inconsistent, potentially exacerbating disparities in the comprehensiveness and quality of care.

To help facilitate alignment of HRSN screening within inpatient settings, beginning in 2024, the Hospital Inpatient Quality Reporting (IQR) Program began mandatory reporting of a Screening for Social Drivers of Health (SDOH–1) measure (CMIT ID #1664), the proportion of admitted adults screened for five HRSNs, and a Screen Positive Rate for Social Drivers of Health (SDOH–2) measure (CMIT ID #1662), the percentage of screened admitted adults that screened positive

for one or more HRSNs. The measures reflect screening for five HRSNs: housing instability, food insecurity, transportation needs, utility difficulties, and interpersonal safety. The CMS Innovation Center Strategy Refresh also established a goal to require all new models to collect and report demographic and social determinants of health (SDOH) data in support of broader system transformation that support goals of advancing health equity.

We proposed that beginning in PY 1, TEAM participants would be required to screen attributed TEAM beneficiaries for at least four HRSN domains—such as but not limited to food insecurity, housing instability, transportation needs, and utilities difficulty—because we believe these areas are most pertinent for the TEAM beneficiary population. We also considered requiring TEAM participants to screen on a standardized set of HRSN domains.

We also proposed that TEAM participants would need to report aggregated HRSN screening data and screened-positive data for each HRSN domain for TEAM beneficiaries that received screening to CMS in a form and manner and by date(s) specified by CMS beginning in PY 1 and for all following performance years. As part of this reporting to CMS, we also proposed that TEAM participants would report on policies and procedures for referring beneficiaries to community-based organizations, social service agencies, or similar organizations that may support patients in accessing services to address unmet social needs.

We recognize TEAM participants may already report some of this HRSN screening data through other CMS initiatives and requiring reporting of aggregated HRSN screening data in TEAM may be redundant. For example, the Hospital IQR Program will begin mandatory reporting beginning with the CY 2024 reporting period/FY 2026 payment determination of two evidence-based measures related to HRSN screening: the Screening for Social Drivers of Health measure and the Screen Positive Rate for Social Drivers of Health measure (87 FR 49201 through 49220). We therefore sought comment on reporting processes that would streamline reporting of aggregated HRSN screening data for attributed TEAM beneficiaries, including potential use of the Hospital IQR Program measures related to HRSN screening.

We also sought comment on how the reporting of aggregated HRSN screening data could incorporate data on referrals of beneficiaries screening positive for HRSNs to community-based

organizations and other organizations helping to address beneficiaries' HRSNs.

The following is a summary of comments we received related to HRSN screening and data reporting requirements under TEAM and our responses:

Comment: Several commenters supported the HRSN screening requirement under TEAM as it could help advance health equity goals. However, many commenters recommended that we should align HRSN screening and data reporting requirements under TEAM with the existing HRSN requirements currently required under the Hospital IQR Program as this would reduce burden. A commenter specifically noted that differing standards with misaligned requirements could create an undue burden and confusion within the large body of work already underway at both the hospital and community levels to align and work toward existing HRSN goals. Another commenter stated that health equity data should be collected at the hospital level like how we proposed to evaluate the PSI 90 measure at the hospital level under TEAM (se 89 FR 36421). A commenter suggested that CMS should minimize provider burden on the collection of HRSN data by aligning with national data standards and only requiring reporting of aggregated HRSN screening and screened positive data. A commenter suggested that TEAM participants should be able to report HRSN screening data submitted through other CMS Innovation Center models to fulfill the TEAM requirements. A commenter recommended not requiring HRSN data collection under TEAM as some patients do not respond to these questions when screened.

Response: We thank commenters for their support of the proposed HRSN screening data reporting requirements under TEAM and for raising their suggestions on ways in which the collection and reporting of HRSN screening data could minimize burden on TEAM participants. We agree that standardization of the HRSN data requirements under TEAM with existing CMS programs that require HRSN screening and are applicable to TEAM participants could help to reduce burden under TEAM and minimize confusion with existing efforts at hospital and community levels to gain alignment around HRSN-related goals and interventions. We do not agree that TEAM should not consider requiring the collection of HRSN screening due to some patients choosing not to report this data when screened. As discussed in this section in the preamble of this

final rule, HRSN screening is an important step to identify non-clinical drivers of a beneficiary's health and working to improve unmet social needs can support improvements in a beneficiary's overall health. We acknowledge that TEAM beneficiaries would have the right to refuse responding to questions related to HRSNs asked by TEAM participants without penalty to the TEAM participant.

We agree with the many commenters suggested that TEAM should align with the existing SDOH-1 and SDOH-2 measure reporting requirements under the Hospital IQR Program to minimize burden of reporting HRSN at the aggregated TEAM participant level. Specification of these two measures enable a consistent HRSN screening and screened-positive definition for five HRSN domains, as well as data that is aggregated and comparable at the hospital level. Given that we would permit voluntary reporting of aggregated HRSN screening data at the hospital level for TEAM participants using the Hospital IQR Program SDOH-1 and SDOH-2 measures, we do not feel that it would be necessary to allow participants to report HRSN data from other CMS Innovation Center models. Standardizing to the SDOH-1 and SDOH-2 measures in the Hospital IQR Program would ensure consistent reporting across all TEAM participants that voluntarily report this data.

While we agree that use of Hospital IQR Program would provide us with an understanding of HRSN screening and screened-positive data aggregated at the TEAM participant level, we also think that it would be important to gain more granular data on HRSN screening and screened-positive data for TEAM beneficiaries specifically. As TEAM participants would already collect and report the aggregated hospital-level data through the SDOH-1 and SDOH-2 measures in the Hospital IQR Program, we would want to consider ways in which TEAM participants could abstract data on HRSN screening and screened-positive data for TEAM beneficiaries to gain more granular information that could help advance TEAM's health equity goals. The proposal for beneficiary-level HRSN screening and screened-positive data for TEAM beneficiaries for a future performance year could undergo future notice and comment rulemaking.

Comment: A few commenters suggested that TEAM should require the collection of the same five HRSNs (housing instability, food insecurity, transportation needs, utility difficulties, and interpersonal safety) as required in

the Hospital IQR Program to reduce burden. A couple commenters suggested that hospitals should select domains they wish to screen to tailor screening questions base on community needs. A commenter suggested including a measure of economic insecurity. A commenter suggested that CMS should identify a short list of the most essential HRSNs to standardize across models.

Response: We thank commenters for their perspectives on which HRSN domains should be screened and reported under TEAM. We agree that alignment with the HRSNs domains under the Hospital IQR Program SDOH-1 and SDOH-2 measures would be appropriate and would reduce administrative burden by aligning with existing requirements of other programs in which TEAM participants participate. As these measures have gone through notice and comment rulemaking, we feel that they would reflect an essential set of HRSNs for which TEAM participants should screen. Use of these measures also aligns with CMS Innovation Center priorities in incorporating HRSN screening into all new models. We acknowledge that HRSN can be context-specific and that hospitals may perceive benefits to screening for additional HRSNs beyond the five included in the SDOH-1 and SDOH-2 measures. However, we feel that it is important to obtain standardized HRSN data from all TEAM participants that voluntarily report this data.

Comment: A commenter recommended mandatory HRSN data reporting based on voluntary reporting of HRSN data from patients beginning in Model Year 2.

Response: We thank the commenter for their recommendation on the mandatory nature of reporting beginning in PY 1 of TEAM. While we recognize that TEAM participants will be prepared to report data through the Hospital IQR Program in PY 1 because the SDOH-1 and SDOH-2 measures are required to be reported by all IPPS hospitals as of CY 2024, we feel that voluntary reporting of this aggregated data to TEAM would be appropriate.

Comment: A commenter expressed concern about the clinical settings in which TEAM participants would be required to conduct screening given that some episodes may be initiated in settings like an ambulatory surgical center, and asked if HRSN screening should be conducted for all patients in the event they could trigger a TEAM episode at some point. A commenter noted that providers are at varying stages of HRSN data collection efforts and that the required reporting manner

under TEAM could be incompatible with current hospital-level systems and processes.

Response: We thank commenters for raising concerns about the clinical settings in which TEAM participants would be excepted to screen for HRSNs. We expect that TEAM participants would align their screening procedures in applicable clinical settings, so they meet requirements under the SDOH-1 and SDOH-2 measure specifications (87 FR 49201 through 49220) under the Hospital IQR Program. As the SDOH-1 and SDOH-2 measures are required to be reported by all IPPS hospitals as of CY24, we feel that TEAM participants would have sufficient capabilities to collect and voluntarily report the required HRSN screening and screened-positive data beginning in PY 1 of TEAM's performance period.

Comment: A couple commenters suggested that CMS should provide TEAM participants with educational resources that help clinicians explain to patients why HRSN data are being requested and how they will be used to help foster a foundation of trust between patient and providers. A commenter suggested that CMS should publish technical information to facilitate TEAM participants to configure their data systems and EMRs. Another commenter suggested that CMS provide resources to providers to help clinicians identify interventions as patients screen positive for different HRSNs.

Response: We appreciate the commenters suggestions on technical and educational resources that could support TEAM participants in HRSN screening and data reporting. We encourage TEAM participants to review resources available for reporting the SDOH-1 and SDOH-2 measures under the Hospital IQR Program given our alignment with those measure for the purposes of HSRN data reporting under TEAM. We will also consider the feasibility of developing other technical resources on the topics raised by commenters during TEAM's implementation.

Comment: A few commenters suggested that CMS should pay separately for HSRN screening and data collection, such as providing a monthly fee to deliver enhanced wraparound services or upside-only incentives to close observed gaps in social needs data.

Response: We thank commenters for their recommendations on potential of upside-only incentives for HRSN screening and closing HRSN gaps under TEAM. CMS could consider these recommendations in future notice and comment rulemaking for TEAM.

Comment: A commenter expressed concern over CMS setting specific thresholds for HRSN screening and referral rates since there is variability in staff capacity and resources to conduct HRSN screenings.

Response: We thank the commenter for raising this concern around screening thresholds. We currently do not envision that TEAM participants will be assessed against a specific threshold for HRSN screening, and HRSN screening will not be factored into TEAM payment adjustments.

Comment: A commenter supported the proposal for TEAM participants to report on policies and procedures for referring patients screening positive for HRSN to community-based organizations as it is essential to build referral relationships with community-based organizations and other social service organizations that have the history, expertise, and relationships to directly support patients identified to have unmet HRSNs. A commenter noted that TEAM should consider how primary care clinicians can facilitate access to culturally responsive care and support responding to HRSNs. A commenter noted their support for the HRSN data collection and reporting requirements but noted that many clinicians and staff experience data collection fatigue and anxiety when they lack resources to assist patients that screen positive for HRSNs. A couple commenters expressed concern that the proposed referral requirements may be excessively burdensome for TEAM participants to meet as participants may not have relationships with referral organizations or that organizations for referrals may not exist in some communities.

Response: We thank commenters for expressing support and raising concerns about the proposed requirements for TEAM participants to report on policies and procedures they have in place for referring beneficiaries screening positive for select HRSNs to community-based organizations. While we recognize that the availability of referral organizations may vary across TEAM participants, we think that allowing TEAM participants to voluntarily report either existing policies or a plan for developing policies and procedures for referring HRSN screened-positive patients, can help develop more specific strategies, relationships with external organizations, or approaches to be responsive to identified HRSNs of Medicare beneficiaries served by TEAM participants. TEAM participants would not be penalized based on the content of their HRSN referral policy and procedures voluntary reporting, but we

feel that reporting in this area is an important accountability mechanism to help TEAM participants think beyond HRSN screening and identify the range of provider or organizational relationships, including those with primary care providers, that could help improve identified HRSNs of Medicare beneficiaries served by TEAM participants.

After a review of public comments, we are finalizing our proposal that all TEAM participants can voluntarily report HRSN screening and screened-positive using the SDOH-1 and SDOH-2 measures under the Hospital IQR Program beginning in PY 1 for all other performance years as described in § 512.563(b). We are also finalizing our proposal that TEAM participants that voluntarily report the HRSN data can voluntarily report on referral policies and procedures for screened-positive beneficiaries in a form and manner and by date(s) specified by CMS beginning in PY 1 and for all other performance years as described in § 512.563(b).

(6) Other Considerations

In addition to the preceding health equity proposals, we sought comment on possibly providing upfront infrastructure payments to qualified safety net hospital participants to further support safety net hospitals in the transformation of care delivery. Subject to certain limitations, these funds could be available to cover approved expenses aimed at supporting beneficiaries with unmet health and social needs. Payment could support Health Information Technology (health IT)/Electronic Health Records (EHR) enhancements, to the extent they involve population health analytics, support care coordination with other providers within and across care settings, and support referrals to address HRSNs (such as closed loop community-based organization referrals). Participants might also use the infrastructure payment to fund the upfront expenses involved in recruiting dedicated staff (for example, care managers). Participants could distribute or use infrastructure payments received under this model in accordance with existing law or the terms of applicable waivers. Such funds would ensure the infrastructure of safety net hospitals could support the transformational goals of the model and would not come out of the Medicare Parts A and B Trust Funds.

We believe that transformation of acute care delivery in underserved areas is fundamental to addressing persistent disparities and engaging safety net hospitals may broaden the landscape of

clinicians focusing on value-based care. We would need to consider the amount of the infrastructure payment, which may include a standard fixed funding component and a variable component that depends on the size of the population served by the safety net hospital participant. We would also need to define a specific set of parameters and formula to calculate the infrastructure payment for each qualifying TEAM participant and sought feedback on the set of parameters we could consider using.

We sought feedback from hospitals and health IT vendors for estimates on the potential upfront start-up costs of health IT investments for safety net hospitals, such as new health information exchange capabilities, solutions to provide patients with access to their health data (for instance, patient portals), capabilities to capture patient-reported outcomes, event notification systems, and community referral capacity. Should we decide to provide such payments, we also expect the infrastructure improvement would require financial investment on the part of the participant, clinicians, and other payer partners, including those on the commercial side.

The goal of the infrastructure payment would be to assist safety net hospital participants, many of whom have less access to capital, participate in and be successful in this model. CMS recognizes that start-up and ongoing annual operating costs could vary greatly between participants for various reasons, including those related to the experience, size, and funding available to the participant.

Past CMS Innovation Center models have proven the utility of infrastructure payments in certain circumstances, which may or may not apply to TEAM. These models include the ACO Investment Model (AIM), a CMS Innovation Center model that tested the effects of making advanced payments to certain ACOs participating in the Shared Savings Program to assist them in transforming care by funding infrastructure investments or staffing. AIM ACOs overwhelmingly used these funds to invest in health IT systems and care management staff and to cover administrative and program compliance costs. At the start of the model, many AIM ACOs lacked the capacity and knowledge to implement population health initiatives, to manage claims-based analytics, and to coordinate practice management. The demonstrated Medicare savings by AIM ACOs suggest that financial accountability with upfront investments can succeed in allowing under-resourced clinicians

serving underserved areas to deliver care more efficiently and afford them more flexibility in how they meet beneficiaries' needs without increasing Medicare spending.

To receive an infrastructure payment, we could consider the following requirements and sought comment on any changes: (1) require TEAM participants to be a safety net hospital, as defined by section X.A.3.f.(2)(c) of the preamble of this final rule. The TEAM participant would also submit a detailed plan that describes their intended use of the funds and how those funds would support the goals of the model and improve the care of underserved beneficiaries.

With respect to use of funds for technology investments that involve implementing, acquiring, or upgrading health IT, the hospital would also be required to ensure such technology is certified under the ONC Health IT Certification Program or utilizes nationally recognized, consensus-based standards adopted under section 3004 of the PHSAs,¹⁰⁰³ where such criteria or standards are available for the health IT-related activity. Use of these standards and certification criteria ensure that technology investments would support interoperability across systems. Should we make an infrastructure payment to a safety net hospital, we would need to monitor the spending of infrastructure payments to prevent funds from being misdirected and ensure they are used for activities that constitute a permitted use of the funds (for example, health IT/EHR enhancements to the extent those involve population health analytics and support for referrals to address HRSNs, in addition to costs associated with recruiting and hiring dedicated staff). In addition to the initial plan of anticipated spending, should a safety net hospital participant receive upfront funds, they could also be required to submit annual reports (in a standardized format specified by CMS) that includes an itemization of how infrastructure payments were actually spent during the performance year, including expenditure categories, the dollar amounts spent on the various categories, any changes to the spend plan, and such other information as may be specified by CMS. This itemization could include expenditures not identified or anticipated in the submitted spend plan and any amounts remaining unspent.

¹⁰⁰³ For more information ONC Health IT Certification Criteria, see <https://www.healthit.gov/topic/certification-ehrs/certification-criteria>. For standards and implementation specifications adopted under PHSAs section 3004, see 45 CFR part 170, subpart B.

Any infrastructure payments that are spent for unauthorized purposes or are unspent at the end of a specified timeframe, that is, 3 years, must be repaid to CMS.

Should safety net hospital participants receive such payments, they would be required to retain adequate records to ensure that we have the information necessary to conduct appropriate monitoring and oversight of the use of infrastructure payments (for example, invoices, receipts, and other supporting documentation of disbursements). CMS would need to conduct audits on a percentage of funding recipients annually to monitor and assess a safety net hospital participant's use of infrastructure funds and participant compliance related to such payments. To encourage speedy resolution of noncompliance and provide an added safeguard against abuse, if CMS determines that a participant has spent infrastructure funds on an identified prohibited use, has unspent funds at the end of the designated eligible spending period, otherwise fails to comply with infrastructure requirements, and/or meets any of the grounds for termination, CMS may require repayment equal to the amount of any infrastructure funds spent on a prohibited use.

As mandatory model, one consideration in potentially implementing an infrastructure payment for qualifying safety net hospital TEAM participants is the long-term scalability of the model. With the goal of longer-term expansion of TEAM, inclusion of a one-time infrastructure payment for qualifying safety net hospitals as part of model design could present challenges to the financial sustainability of the model. Accordingly, the potential objectives and benefits of the infrastructure payment would need to be considered against the feasibility of implementing this model feature should the model be expanded.

We sought comment on the considerations surrounding provision of infrastructure payments and their utility in the acute care setting, including how to identify participants most likely to benefit. We also sought comment on how best to ensure the integrity of such payments in supporting the goal of addressing known health disparities among the episode categories we proposed to test via TEAM. We also sought comment on the proposed methodology and/or parameters that could be used in a formula to determine the infrastructure payment amounts for qualifying TEAM participants.

Comment: Commenters provided many recommendations related to possible infrastructure payments under TEAM.

Response: We greatly appreciate the wide range of suggestions on which TEAM participants would benefit the most from infrastructure payments, the scope and intended use of the payment, ensuring integrity and accountability for the payments, and how payments could be determined. We will continue to consider how infrastructure payments under TEAM could help support participants to strengthen health equity data reporting and improve identified health disparities related to TEAM.

We are expeditiously conducting an in-depth review of the comments we received. This review will help to inform and guide our future rulemaking and other actions in this area.

g. Financial Arrangements

(1) Background

We believe it is necessary to provide TEAM participants with flexibilities that could support their performance in TEAM and allow for greater support for the needs of beneficiaries. These flexibilities are outlined in this section and include the ability to engage in financial arrangements to share a TEAM participant's reconciliation payment amounts and repayment amounts. Such flexibilities would allow TEAM participants to share all or some of the TEAM participant's reconciliation payment amount or repayment amount. Finally, we believe that TEAM participants caring for beneficiaries may want to offer beneficiary incentives to encourage adherence to recommended treatment and beneficiary engagement in recovery. These financial and beneficiary incentives may help a TEAM participant reach their quality and efficiency goals for the model. They may also benefit beneficiaries and the Medicare Trust Fund if the TEAM participant improves the quality and efficiency of care that results in reductions in hospital readmissions, complications, days in acute care, and mortality, while beneficiary recovery continues uninterrupted or accelerates.

(2) Overview of TEAM Financial Arrangements

We believe that TEAM participants may wish to enter into financial arrangements with certain providers and suppliers participating in TEAM activities to share their reconciliation payment amount or repayment amount resulting from participation in TEAM. Allowing these types of financial arrangements would allow the

alignment of financial incentives of those providers and suppliers participating in TEAM activities to improve quality of care, drive equitable outcomes, and reduce Medicare spending through improved beneficiary care transitions and reduced fragmentation following select episodes of care. We expect that TEAM participants would identify key providers and suppliers caring for beneficiaries in the surrounding communities, and then could establish partnerships with these individuals and entities to promote accountability for the quality, cost, and overall care for beneficiaries, including managing and coordinating care; encouraging investment in infrastructure, enabling technologies, and redesigning care processes for high quality and efficient service delivery; and carrying out other obligations or duties under TEAM. These providers and suppliers may invest substantial time and other resources in these activities, yet they would not be the direct recipients of any reconciliation payment amounts or repayment amounts as they are not the risk bearing entity and do not directly participate in TEAM. Therefore, we believe it is possible that a TEAM participant that may receive a reconciliation payment amount or repayment amount may want to enter into financial arrangements with other providers or suppliers to share this reconciliation payment amount or repayment amount with the TEAM participant. It is a requirement that all financial relationships established between TEAM participants and providers or suppliers for purposes of TEAM comply with all applicable laws and regulations, including the applicable fraud and abuse laws and all applicable payment and coverage requirements in the finalized policy.

As discussed in section X.A.3.g.(9) of the preamble of this final rule, CMS has made the determination that the Anti-Kickback Statute (AKS) Safe Harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)) is available to protect certain remuneration finalized in this section when arrangements with eligible providers and suppliers are in compliance with the requirements established in the final rule and the conditions of the safe harbor for CMS-sponsored model arrangements established at 42 CFR 1001.952(ii).

We recognize that there are numerous arrangements that TEAM participants may wish to enter other than the financial arrangements described in the proposed regulations for which safe harbor protection may be extended that could be beneficial to TEAM

participants. For example, TEAM participants may choose to engage with organizations that are neither providers nor suppliers to assist with matters such as data analysis; local provider and supplier engagement; care redesign planning and implementation; beneficiary outreach; beneficiary care coordination and management; monitoring TEAM participants' compliance with the model's terms and conditions; or other model-related activities. Such organizations may play important roles in a TEAM participant's plans to implement the model based on the experience these organizations may bring, such as prior experience with episode-based payment models, care coordination expertise, familiarity with a particular locale, or knowledge of bundled data. We require all relationships established between TEAM participants and these organizations for purposes of the model would be those permitted only under existing law and regulation, including any relationships that would include the TEAM participant's sharing of the reconciliation payment amount or repayment amount, and must comply with all applicable laws and regulations. We require these relationships to be solely based on the level of engagement of the organization's resources to directly support the TEAM participants' model implementation.

(3) TEAM Collaborators

As proposed, TEAM is a two-sided financial risk model, and the TEAM participant would bear sole financial risk for any repayment amount to CMS in the absence of financial arrangements. However, given the incentive to reduce episode spending to earn a reconciliation payment amount, as described in section X.A.3.d.(5)(j) of the preamble of this final rule, a TEAM participant may want to engage in financial arrangements with providers and suppliers or participants in Medicare ACO initiatives who are making contributions to the TEAM participant's performance in the model. Such arrangements would allow the TEAM participant to share reconciliation payment amounts or repayment amounts with individuals and entities that have a role in the TEAM participant's performance in the model. We proposed at (89 FR 36454) to use the term "TEAM collaborator" to refer to these individuals and entities.

Because TEAM participants would be accountable for spending and quality during the anchor hospitalization or anchor procedure and the 30-day post discharge period, as described in section X.A.3.b.(5) of the preamble of this final

rule, providers and suppliers other than the TEAM participant may furnish services to the beneficiary during the model performance period. As such, for purposes of the Federal Anti-Kickback Statute Safe Harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)), we proposed at § 512.505 that the following types of providers and suppliers that are Medicare-enrolled and eligible to participate in Medicare or entities that are participating in a Medicare ACO initiative may be TEAM collaborators:

- Skilled Nursing Facility (SNF).
- Home Health Agency (HHA).
- Long-Term Care Hospital (LTCH).
- Inpatient Rehabilitation Facility (IRF).
- Physician.
- Nonphysician practitioner.
- Therapist in a private practice.
- Comprehensive Outpatient Rehabilitation Facility (CORF).
- Provider or supplier of outpatient therapy services.
- Physician Group Practice (PGP).
- Hospital.
- Critical Access Hospital (CAH).
- Non-physician provider group practice (NPPGP).
- Therapy group practice (TGP).
- Medicare ACO.

We sought comment on the proposed definition of TEAM collaborators and any additional Medicare-enrolled providers or suppliers, such as Rural Emergency hospitals, Rural Health Clinics, and Federally Qualified Health Centers, that should be included in this definition.

The following is a summary of the public comments received on this proposal and our response to those comments.

Comment: Several commenters encouraged expanding the types of entities allowed as Team collaborators to include drug or device manufacturers to facilitate value-based contracts, which they stated are essential for addressing rising healthcare costs.

Commenters also recommended offering APM participants flexibility in post-acute care (PAC) payments, allowing them to negotiate rates and create partnerships with PAC providers. They stated this flexibility should extend to home health services, enabling providers to negotiate different rates for home care that better address patient needs.

In addition to flexibility for PAC payment arrangements, commenters also called for greater latitude for participants to create new payment and downstream risk arrangements with medical and community-based providers.

Response: Thank you for your valuable recommendations. We appreciate your insights on expanding the types of entities allowed as Team collaborators and offering flexibility in post-acute care payments. Your suggestions on allowing greater latitude for new payment and downstream risk arrangements are noted. We will take them into consideration in future rulemaking.

Comment: Many commenters had input and feedback on the proposed list of providers and suppliers eligible to be a TEAM collaborator.

A commenter noted that while Medicare hospice services are included in the TEAM episode of care, hospice providers are not listed as eligible TEAM collaborators. They request clarification on whether this exclusion is intentional and, if so, the reasons behind it. They acknowledge that post-discharge use of hospice services in the 30-day episode is rare but urge CMS to consider including hospice providers as eligible collaborators.

Additional recommendations included Registered Dietitian Nutritionists (RDNs) and Rural Emergency Hospitals (REHs) as TEAM collaborators. Finally, there is a strong encouragement for CMS to consider the role of medical technology and device manufacturers as collaborators, potentially offering incentives for innovative technologies that improve outcomes and generate savings.

Other commenters stated that, while LTCHs are listed as eligible to be TEAM collaborators, they have concerns that TEAM participants might limit collaboration with certain post-acute care providers, such as LTCHs, which could restrict patient freedom of choice in selecting their post-acute care provider. To address this, these commenters suggested that CMS require or incentivize hospitals to collaborate with all interested LTCHs and other post-acute care providers to ensure patient access and choice.

Response: Thank you for your comments regarding the inclusion of various providers and entities as TEAM collaborators in the proposed model. We appreciate your detailed feedback and suggestions.

While Medicare hospice services are included in the TEAM episode of care, hospice providers were not initially listed as eligible TEAM collaborators. We acknowledge your request for clarification on this exclusion. Given the rarity of post-discharge hospice use within the 30-day episode, this exclusion was based on the minimal impact these providers might have on the overall performance of TEAM.

However, we recognize the importance of providing comprehensive care options and will consider your suggestion to include hospice providers as eligible TEAM collaborators to enhance patient access and choice in future iterations of rulemaking.

In addition, we appreciate the recommendations to include Registered Dietitian Nutritionists (RDNs) and Rural Emergency Hospitals (REHs) as TEAM collaborators. Both RDNs and REHs can play significant roles in improving patient outcomes and managing care transitions. We appreciate the commenters' suggestion to consider the role of medical technology and device manufacturers as collaborators. Innovative technologies have the potential to improve outcomes and generate savings. While these entities are not traditional care providers, their inclusion as collaborators could incentivize the adoption of advanced technologies that support the clinical aims of TEAM. We will explore the feasibility of including medical technology and device manufacturers as TEAM collaborators, potentially offering incentives for innovative technologies that enhance care quality and efficiency, in future rulemaking.

We understand the commenters' concerns regarding potential limitations on collaboration with certain post-acute care providers, such as Long-Term Care Hospitals (LTCHs). TEAM aims to ensure patient freedom of choice in selecting their post-acute care provider. We will consider strategies to require or incentivize hospitals to collaborate with all interested LTCHs and other post-acute care providers, ensuring that patient access and choice are maintained and enhanced in future rulemaking.

The feedback is invaluable as we refine TEAM to ensure it meets its goals of improving care quality, enhancing patient access, and reducing costs. We will carefully consider these recommendations in future rulemaking.

Comment: Another commenter emphasized the importance of managing total cost of care and coordinating care across the patient's care team, stating that the proposed model primarily addresses unit price without focusing on utilization, lacking clear incentives for physicians and others directly involved in patient care. This commenter also suggested that TEAM participation should include anesthesiologists and non-hospital entities in financial arrangements.

Response: We recognize the importance of managing total cost of care and ensuring comprehensive care coordination across the patient's care

team. The commenters' insights on addressing both unit price and utilization are valuable, and we will consider these factors to enhance the model's incentives for physicians and other care providers involved in patient care. We also appreciate the detailed feedback regarding the inclusion of anesthesiologists and non-hospital entities in TEAM financial arrangements. We will take it into consideration in future rulemaking.

Comment: Another commenter stated appreciation for the opportunity to provide input on the definition of TEAM collaborators and noted the inclusion of nonphysician practitioners as potential collaborators. They requested CMS clarify and define which providers are considered nonphysician practitioners for this model, referencing page 43617 of the **Federal Register** for the Medicare Program's Alternative Payment Model Updates and the Increasing Organ Transplant Access (IOTA) Model Proposed Rule. Specifically, they asked for clarification on whether RDNs (Registered Dietitian Nutritionists) would be considered TEAM collaborators.

Response: We thank the commenter for highlighting the need for clarity regarding nonphysician practitioners in TEAM and appreciate the reference to page 43617 of the **Federal Register** for the Medicare Program's Alternative Payment Model Updates and the Increasing Organ Transplant Access (IOTA) Model Proposed Rule.

Similar to what was proposed under IOTA, at proposed § 512.505, we proposed that for purposes of TEAM that a nonphysician practitioner means one of the following: A physician assistant who satisfies the qualifications set forth at § 410.74(a)(2)(i) and (ii) of this chapter; A nurse practitioner who satisfies the qualifications set forth at § 410.75(b) of this chapter; A clinical nurse specialist who satisfies the qualifications set forth at § 410.76(b) of this chapter; A certified registered nurse anesthetist (as defined at § 410.69(b) of this chapter); A clinical social worker (as defined at § 410.73(a) of this chapter); A registered dietician or nutrition professional (as defined at § 410.134 of this chapter).

The commenters' feedback is invaluable as we work to refine these definitions and ensure comprehensive inclusion in future rulemaking cycles.

Comment: A commenter expressed concerns, stating the model's definition of a TEAM collaborator is narrow, and urged CMS to reconsider the current TEAM proposal design and seek more feedback before implementation.

Response: We acknowledge the concerns about the TEAM collaborator definition. This input is crucial in shaping a well-balanced and successful model and we will take it into consideration in future rulemaking.

After consideration of the public comments received, we are finalizing the proposal for the model definition of TEAM collaborators as proposed at § 512.505.

(4) Sharing Arrangements

(a) General

Similar to the CJR Model (42 CFR 510.500), we proposed at (89 FR 36454) that certain financial arrangements between a TEAM participant and a TEAM collaborator be termed "sharing arrangements." For purposes of the Federal Anti-Kickback Statute Safe Harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)), we proposed that a sharing arrangement would be to share reconciliation payment amounts or repayment amounts. Where a payment from a TEAM participant to a TEAM collaborator is made pursuant to a sharing arrangement, we proposed to define that payment as a "gainsharing payment," which is discussed in section X.A.3.g.(4)(c) of the preamble of this final rule. Where a payment from a TEAM collaborator to a TEAM participant is made pursuant to a sharing arrangement, we proposed to define that payment as an "alignment payment," which is discussed in section X.A.3.g.(4)(c) of the preamble of this final rule. As proposed, a TEAM participant must not make a gainsharing payment or receive an alignment payment except in accordance with a sharing arrangement. As discussed in section X.A.3.g.(4)(b) of the preamble of this final rule, we proposed that a sharing arrangement must comply with all other applicable laws and regulations, including the applicable fraud and abuse laws and all applicable payment and coverage requirements. We proposed that the TEAM participant and TEAM collaborator must document this agreement in writing, and, per monitoring and compliance guidelines (§ 512.590), we proposed that it must be made available to CMS upon request.

We proposed that the TEAM participant must develop, maintain, and use a set of written policies for selecting individuals and entities to be TEAM collaborators. To safeguard against potentially fraudulent or abusive practices, we proposed that the selection criteria determined by the TEAM participant must include the quality of care delivered by the potential

TEAM collaborator. Moreover, we proposed that the selection criteria could not be based directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, or any individual affiliated with a TEAM participant, TEAM collaborator, or collaboration agent. We proposed that, in addition to including quality of care in their selection criteria, TEAM participants must also consider selection of TEAM collaborators based on criteria that include the anticipated contribution to the performance of the TEAM participant in the model by the potential TEAM collaborator to ensure that the selection of TEAM collaborators takes into consideration the likelihood of their future performance.

Finally, we proposed that if a TEAM participant enters a sharing arrangement, its compliance program must include oversight of sharing arrangements and compliance with the applicable requirements of the model. We believe that requiring oversight of sharing arrangements to be included in the compliance program provides a program integrity safeguard.

We sought comment about all provisions described in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met.

We received no comments on these proposals and therefore are finalizing these proposals as proposed in our regulation at § 512.505.

(b) Requirements

At (89 FR 36455), we proposed several requirements for sharing arrangements to help ensure that their sole purpose is to create financial alignment between TEAM participants and TEAM collaborators toward the goals of the model while maintaining adequate program integrity safeguards. We proposed that the sharing arrangement must be in writing, signed by the parties, and entered into before care is furnished to TEAM beneficiaries under the sharing arrangement. In addition, we proposed that participation in a sharing arrangement must be voluntary and without penalty for nonparticipation. It is important that providers and suppliers rendering items and services to beneficiaries during the model performance period have the freedom to provide medically necessary items and services to beneficiaries without any requirement that they participate in a sharing arrangement to

safeguard beneficiary freedom of choice, access to care, and quality of care. We proposed that a sharing arrangement must set out the mutually agreeable terms for the financial arrangement between the parties to guide and reward model care redesign for future performance toward model goals, rather than reflect the results of model performance years that have already occurred and where the financial outcome of the sharing arrangement terms would be known before signing.

We proposed that the sharing arrangement must require the TEAM collaborator and its employees, contractors, and subcontractors to comply with certain requirements that are important for program integrity under the arrangement. We note that, as proposed, the terms contractors and subcontractors include collaboration agents as defined later in this section. We proposed that a sharing arrangement must require all of the individuals and entities party to the arrangement to comply with the applicable provisions of this final rule, including proposed requirements regarding beneficiary notifications, at proposed § 512.582(b), access to records and record retention, at proposed § 512.586, and participation in any evaluation, monitoring, compliance, and enforcement activities performed by CMS or its designees, at proposed § 512.590 because these individuals and entities all would play a role in model care redesign and they would be part of financial arrangements under the model as proposed. We proposed that the sharing arrangement must also require all individuals and entities party to the arrangement who are providers or suppliers to comply with the applicable Medicare provider enrollment requirement at § 424.500, including having a valid and active TIN or NPI, during the term of the sharing arrangement. This proposed requirement helps ensure that these individuals and entities have the required enrollment relationship with CMS under the Medicare program, although we note that they are not responsible for complying with requirements that do not apply to them. Finally, the sharing arrangement as proposed must require individuals and entities to comply with all other applicable laws and regulations.

We proposed that the sharing arrangement must not pose a risk to beneficiary access, beneficiary freedom of choice, or quality of care so that financial relationships between TEAM participants and TEAM collaborators do not negatively impact beneficiary protections under the model. The sharing arrangement as proposed must

require the TEAM collaborator to have a compliance program that includes oversight of the sharing arrangement and compliance with the requirements of the model, just as we proposed requiring TEAM participants to have a compliance program that covers oversight of the sharing arrangement for this purpose as a program integrity safeguard. We sought comment on the anticipated effect of the proposed compliance program requirement for TEAM collaborators, particularly with regard to individual physicians and nonphysician practitioners, small PGPs, NPPGPs, and TGPs and whether alternative compliance program requirements for all or a subset of TEAM collaborators should be adopted to mitigate any effect of the proposal that could make participation as a TEAM collaborator infeasible for any provider, supplier, or other entity on the proposed list of types of TEAM collaborators.

It is necessary that TEAM participants have adequate oversight over sharing arrangements to ensure that all arrangements meet the applicable requirements and to help provide program integrity safeguards. Therefore, we proposed that the board or other governing body of the TEAM participant have responsibility for overseeing the TEAM participant's participation in the model, its arrangements with TEAM collaborators, its payment of gainsharing payments, its receipt of alignment payments, and its use of beneficiary incentives in the model. Additionally, we proposed that the TEAM participant and TEAM collaborator must document this agreement in writing and, as part of the model's monitoring and compliance activities as proposed in (§ 512.590), we proposed that this agreement must be made available to CMS upon request.

For purposes of sharing arrangements under the model, we proposed at § 512.505 to define TEAM activities to be activities related to promoting accountability for the quality, cost, and overall care for TEAM beneficiaries and performance in the model, including managing and coordinating care; encouraging investment in infrastructure and redesigned care processes for high quality and efficient service delivery; or carrying out any other obligation or duty under the model. In addition to the quality of care provided during episodes, we believe the activities that would fall under this proposed definition encompass the totality of activities upon which it would be appropriate for sharing arrangements under the model to be based in order to value the contributions of providers, suppliers, and other entities toward meeting the performance

goals of the model. We sought comment on the proposed definition of TEAM activities as an inclusive and comprehensive framework for capturing direct care and care redesign that contribute to performance toward model goals.

We proposed that the written agreement memorializing a sharing arrangement must specify the following parameters of the arrangement:

- The purpose and scope of the sharing arrangement.
- The identities and obligations of the parties, including specified TEAM activities and other services to be performed by the parties under the sharing arrangement.
- The date of the sharing arrangement.
- Management and staffing information, including type of personnel or contractors that will be primarily responsible for carrying out TEAM activities.
- The financial or economic terms for payment, including the following:
 - ++ Eligibility criteria for a gainsharing payment.
 - ++ Eligibility criteria for an alignment payment.
 - ++ Frequency of gainsharing or alignment payment.
 - ++ Methodology and accounting formula for determining the amount of a gainsharing payment that is solely based on quality of care and the provision of TEAM activities.
 - ++ Methodology and accounting formula for determining the amount of an alignment payment.

Finally, we proposed to require that the terms of the sharing arrangement must not induce the TEAM participant, TEAM collaborator, or any employees, contractors, or subcontractors of the TEAM participant or TEAM collaborator to reduce or limit medically necessary services to any beneficiary or restrict the ability of a TEAM collaborator to make decisions in the best interests of its patients, including the selection of devices, supplies, and treatments. These requirements as proposed are to ensure that the quality of care for beneficiaries is not negatively affected by sharing arrangements under the model.

The proposals for the requirements for sharing arrangements under the model are included in proposed § 512.565. We sought comment on all of the requirements set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met.

We solicited comments on the above proposed policy. The following is a

summary of the public comments received on this proposal and our response to those comments.

Comment: A few commenters highlighted the importance of requiring hospitals to pass on savings generated by the model to physicians leading patient care, ensuring fair financial distribution and better alignment with incentives. Commenters emphasized that savings should result from improved efficiencies, not just cost-cutting measures that could compromise patient care, and stated concerns about financial arrangements rewarding providers for using cheaper, but potentially inappropriate, products.

Commenters also suggested that clinically relevant specialties be integrated into TEAM leadership and governance to ensure appropriate care and savings based on genuine improvements. Additionally, commenters called for physicians to have adequate resources and flexibility to deliver quality outcomes without being at risk for uncontrollable costs or outcomes.

Commenters noted that hospitals will need to invest in preparing sharing agreements with TEAM collaborators, on top of other model requirements such as developing health equity plans. The commenters stated that success under TEAM should offset the costs of participation not covered by the model.

Finally, commenters recommended for mandatory shared savings agreements between acute care hospitals and surgeons, as previous models like CJR have seen limited voluntary participation in such agreements, despite their potential to enhance savings and care quality.

Response: We appreciate the commenters' thoughtful comments regarding the financial arrangements and sharing agreements within TEAM. We appreciate the emphasis on the importance of fair financial distribution and alignment of incentives to ensure high-quality patient care.

TEAM's proposed financial arrangements, similar to the CJR Model, are designed to promote accountability and encourage providers and suppliers to collaborate on improving care quality while reducing costs. These proposed arrangements, termed "sharing arrangements," allow for the sharing of reconciliation payment amounts and repayment amounts, fostering financial alignment between TEAM participants and TEAM collaborators.

Under the proposed sharing arrangements, TEAM participants can enter into financial agreements with TEAM collaborators to share savings (gainsharing payments) or losses

(alignment payments) resulting from their performance in the model. These arrangements must comply with all applicable laws and regulations, including fraud and abuse laws, and must be documented in writing. As proposed, this documentation must be made available to CMS upon request as part of our monitoring and compliance activities.

We proposed that the TEAM participant must develop, maintain, and use a set of written policies for selecting individuals and entities to be TEAM collaborators. To safeguard against potentially fraudulent or abusive practices as proposed, the selection criteria for TEAM collaborators must include the quality of care delivered and the anticipated contribution to the TEAM participant's performance in the model. Additionally, as proposed, the selection criteria cannot be based on the volume or value of referrals or business generated between the parties. We proposed that sharing arrangements must be voluntary and without penalty for nonparticipation, in order to allow providers and suppliers the freedom to provide medically necessary items and services to beneficiaries without any requirement that they participate in a sharing arrangement and therefore, to safeguard beneficiary freedom of choice, access to care, and quality of care. Additionally, as proposed, sharing arrangements must not induce the reduction or limitation of medically necessary services. As proposed, the terms of these arrangements must also ensure that TEAM collaborators have the ability to make decisions in the best interests of their patients. We recognize the need for adequate oversight of sharing arrangements to ensure compliance with the model's requirements. Therefore, TEAM participants must have a compliance program that includes oversight of sharing arrangements.

We appreciate the suggestion to integrate clinically relevant specialties into TEAM leadership and governance. Ensuring that clinicians have adequate resources and flexibility to deliver quality outcomes is crucial. The model is designed to incentivize genuine improvements in care efficiency and quality, rather than cost-cutting measures.

We acknowledge the recommendation for mandatory shared savings agreements between acute care hospitals and surgeons. TEAM aims to foster voluntary collaboration rather than mandatory agreements; however, we will consider this feedback in future comment and rulemaking.

We understand that hospitals may need to invest in preparing sharing agreements and developing health equity plans. We anticipate that the efficiencies and improvements achieved under TEAM will offset these participation costs.

Comment: Commenters requested flexibility in requirements for TEAM sharing arrangements and urged CMS to allow tailoring of compliance expectations based on the specific circumstances of each arrangement. Commenters stated that this flexibility is crucial to encourage participation from a diverse range of collaborators, including small physician group practices and non-physician providers, without imposing undue compliance burdens.

Response: We appreciate the commenters' comments on adding flexibility to the proposed requirements for TEAM sharing arrangements.

The proposed requirements for TEAM sharing arrangements are designed to protect beneficiary access, beneficiary freedom of choice, and quality of care so that financial relationships between TEAM participants and TEAM collaborators do not negatively impact beneficiary protections under the model. Additionally, TEAM sharing arrangement requirements safeguard against potentially fraudulent or abusive practices. Therefore, we believe these requirements to be necessary, and we finalize them as proposed.

We thank the commenters for their engagement and commitment to enhancing TEAM. We will continue to evaluate the TEAM sharing arrangement requirements, in order to ensure they offer the protections as intended, and whether modifications are necessary in future comment and rulemaking.

After consideration of the public comments received, we are finalizing our proposals for the model sharing arrangements requirements as proposed at § 512.565.

(c) Gainsharing Payment and Alignment Payment Conditions and Limitations

We proposed at (89 FR 36456) several conditions and limitations for gainsharing payments and alignment payments as program integrity protections for the payments to and from TEAM collaborators. We proposed to require that gainsharing payments be derived solely from a TEAM participant's reconciliation payment amounts, internal costs savings, or both; that they be distributed on an annual basis, not more than once per CY; that they not be a loan, advance payment, or payment for referrals or other business; and that they be clearly identified as a

gainsharing payment at the time they are paid.

We believe that gainsharing payment eligibility for TEAM collaborators should be conditioned on two requirements—(1) quality of care criteria; and (2) the provision of TEAM activities. With respect to the first requirement, we proposed that to be eligible to receive a gainsharing payment, the TEAM collaborator must meet quality of care criteria during the performance year for which the TEAM participant earned a reconciliation payment amount that comprises the gainsharing payment. We proposed that this quality of care criteria be included in the sharing arrangement and be mutually agreed upon by the TEAM participant and TEAM collaborator. With regard to the second requirement, we proposed that, to be eligible to receive a gainsharing payment, or to be required to make an alignment payment, a TEAM collaborator other than a PGP, NPPGP, or TGP must have directly furnished a billable item or service to a TEAM beneficiary during the same performance year for which the TEAM participant earned a reconciliation payment amount or repayment amount. For purposes of this proposed requirement, we consider a hospital, CAH or post-acute care provider to have “directly furnished” a billable service if one of these entities billed for an item or service for a TEAM beneficiary in the performance year for which the TEAM participant earned a reconciliation payment amount or repayment amount. The phrase “episode,” as proposed, refers to all Part A and B items and services described in section X.A.3.b.(5) (excluding the items and services described in section X.A.3.b.(5)(a)) of the preamble of this final rule that are furnished to a beneficiary described in section X.A.3.b.(5)(b) of the preamble of this final rule, during the time period that begins with the beneficiary's admission to an anchor hospitalization or the date of the anchor procedure, as applicable, and ends on the 30th day of either the date of discharge from the anchor hospitalization or the date of service for the anchor procedure. These proposed requirements ensure that there is a required relationship between eligibility for a gainsharing payment and the direct care for TEAM beneficiaries during an episode for these TEAM collaborators. We believe the provision of direct care is essential to the implementation of effective care redesign, and the proposed requirement provides a safeguard against payments to TEAM collaborators other than a PGP, NPPGP, or TGP that are unrelated to

direct care for TEAM beneficiaries during the model's performance year.

We proposed to establish similar requirements for PGPs, NPPGPs and TGPs; however, these proposed requirements take into account that these entities do not themselves directly furnish billable services. We proposed that to be eligible to receive a gainsharing payment or required to make an alignment payment for a given performance year, a PGP, NPPGP or TGP must have billed for an item or service that was rendered by one or more members of the PGP, NPPGP or TGP to a TEAM beneficiary during the episode that is attributed to the same performance year for which the TEAM participant earned a reconciliation payment amount or repayment amount. Like the proposal for TEAM collaborators that are not PGPs, these proposals also require a link between the TEAM collaborator that is the PGP, NPPGP or TGP and the provision of items and services to beneficiaries during the episode by PGP, NPPGP or TGP members.

Moreover, we further proposed that, because PGPs, NPPGPs and TGPs do not directly furnish items and services to beneficiaries, in order to be eligible to receive a gainsharing payment or be required to make an alignment payment, for a given performance year the PGP, NPPGP or TGP must have contributed to TEAM activities and been clinically involved in the care of beneficiaries during an episode that is attributed to the same performance year for which the TEAM participant earned a reconciliation payment amount or repayment amount that comprises the gainsharing payment.

We proposed that the amount of any gainsharing payments must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities. We considered whether this methodology could substantially, rather than solely, be based on quality of care and the provision of TEAM activities, but ultimately determined that basing the methodology solely on these two elements creates a model safeguard where gainsharing aligns directly with the model goal of quality of care and with TEAM activities. We proposed that the gainsharing methodology may take into account the amount of such TEAM activities provided by a TEAM collaborator relative to other TEAM collaborators. We emphasize that, as proposed, financial arrangements may not be conditioned directly or indirectly on the volume or value of referrals or business otherwise generated by,

between or among TEAM participants, any TEAM collaborator, any collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, or collaboration agent so that the sole purpose of the arrangement is to align the financial incentives of the TEAM participant and TEAM collaborators toward the model. However, we believe that accounting for the relative amount of TEAM activities by TEAM collaborators in the determination of gainsharing payments does not undermine this objective. Rather, the requirement as proposed allowed flexibility in the determination of gainsharing payments where the amount of a TEAM collaborator's provision of TEAM activities (including direct care) to beneficiaries during a performance year may contribute to the TEAM participant's reconciliation payment amount that may be available for making a gainsharing payment.

Greater contributions of TEAM activities by one TEAM collaborator versus another TEAM collaborator that result in greater differences in the funds available for gainsharing payments may be appropriately valued in the methodology used to make gainsharing payments to those TEAM collaborators in order to reflect these differences in TEAM activities among TEAM collaborators.

However, we do not believe it would be appropriate to allow the selection of TEAM collaborators or the opportunity to make or receive a gainsharing payment or an alignment payment to take into account the amount of TEAM activities provided by a potential or actual TEAM collaborator relative to other potential or actual TEAM collaborators because these financial relationships are not to be based directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, or collaboration agent. Specifically, with respect to the selection of TEAM collaborators or the opportunity to make or receive a gainsharing payment or an alignment payment, we do not believe that the amount of model activities provided by a potential or actual TEAM collaborator relative to other potential or actual TEAM collaborators could be taken into consideration by the TEAM participant without a significant risk that the financial arrangement in those instances could be based directly or indirectly on the volume or value of referrals or

business generated by, between or among the parties. Similarly, if the methodology for determining alignment payments was allowed to take into account the amount of TEAM activities provided by a TEAM collaborator relative to other TEAM collaborators, there would be a significant risk that the financial arrangement could directly account for the volume or value of referrals or business generated by, between or among the parties and, therefore, we proposed that the methodology for determining alignment payments may not directly take into account the volume or value of referrals or business generated by, between or among the parties.

We sought comment on this proposal, where any gainsharing payments must be determined in accordance with a methodology that is based on quality of care and the provision of TEAM activities. We also sought comment on whether the methodology must be based solely on these two elements, or if, alternately, the methodology must be based substantially on these two elements. We sought comment on this proposal for gainsharing payments, where the methodology could take into account the amount of TEAM activities provided by a TEAM collaborator relative to other TEAM collaborators. We were particularly interested in comments about whether this standard would provide sufficient additional flexibility in the gainsharing payment methodology to allow the financial reward of TEAM collaborators commensurate with their level of effort that achieves model goals. In addition, we were interested in comment on whether additional safeguards or a different standard is needed to allow for greater flexibility to provide certain performance-based payments consistent with the goals of program integrity, protecting against abuse and ensuring the goals of the model are met.

We proposed that for each performance year, the aggregate amount of all gainsharing payments that are derived from a reconciliation payment amount by the TEAM participant must not exceed the amount of the reconciliation payment amount. In accordance with the prior discussion, no entity or individual, whether a party to a sharing arrangement or not, may condition the opportunity to make or receive gainsharing payments or to make or receive alignment payments on the volume or value of referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, or any individual or entity affiliated with a TEAM

participant, TEAM collaborator, or collaboration agent. We proposed that a TEAM participant must not make a gainsharing payment to a TEAM collaborator that is subject to any action for noncompliance by CMS or any other federal or state entity or subject to noncompliance with any other federal or state laws or regulations, or for the provision of substandard care to beneficiaries or other integrity problems. Finally, we proposed that the sharing arrangement must require the TEAM participant to recover any gainsharing payment that contained funds derived from a CMS overpayment on a reconciliation payment amount or was based on the submission of false or fraudulent data. These requirements provide program integrity safeguards for gainsharing under sharing arrangements.

With respect to alignment payments, we proposed that alignment payments from a TEAM collaborator to a TEAM participant may be made at any interval that is agreed upon by both parties. We proposed that alignment payments must not be issued, distributed, or paid prior to the calculation by CMS of the repayment amount, and cannot be assessed in the absence of a repayment amount. We also proposed that TEAM participants must not receive any amounts under a sharing arrangement from a TEAM collaborator that are not alignment payments.

We also proposed certain limitations on alignment payments that are consistent with the CJR model. In the proposed policy, for a performance year, the aggregate amount of all alignment payments received by the TEAM participant from all of the TEAM participant's TEAM collaborators must not exceed 50 percent of the repayment amount. Given that the TEAM participant would be responsible for developing and coordinating care redesign strategies in response to its TEAM participation, we believe it is important that the TEAM participant retain a significant portion of its responsibility for repayment amounts. In addition, in the proposed policy, the aggregate amount of all alignment payments from a TEAM collaborator to the TEAM participant for a TEAM collaborator other than an ACO may not be greater than 25 percent of the TEAM participant's repayment amount. The aggregate amount of all alignment payments from a TEAM collaborator to the TEAM participant for a TEAM collaborator that is an ACO may not be greater than 50 percent of the TEAM participant's repayment amount, in the proposed policy.

We sought comment on our proposed aggregate and individual TEAM collaborator limitations on alignment payments.

We proposed that all gainsharing payments and any alignment payments must be administered by the TEAM participant in accordance with GAAP and Government Auditing Standards (The Yellow Book). Additionally, we proposed that all gainsharing payments and alignment payments must be made by check, electronic funds transfer, or another traceable cash transaction. We made this proposal to mitigate the administrative burden that the electronic fund transfer (EFT) requirement would place on the financial arrangements between certain TEAM participants and TEAM collaborators, especially individual physicians and nonphysician practitioners and small PGPs, NPPGPs or TGP which could discourage participation of those suppliers as TEAM collaborators. We sought comment on the effect of this proposal.

The proposals for the conditions and restrictions on gainsharing payments, alignment payments, and internal cost savings under the model were included in proposed § 512.56. We sought comment about all of the conditions and restrictions set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of TEAM are met.

The following is a summary of the public comments received on these proposals and our response to those comments.

Comment: A few commenters emphasized that financial incentives could enhance patient care, throughput, and patient experiences. Commenters made recommendations including equitably distributing shared savings among physicians and clinical staff involved in surgical episodes, establishing performance parameters at the specialty level, and embracing clinical integration with an upside/downside approach to redistributing incentives.

Response: We thank the commenters for the valuable recommendations. We appreciate these insights and agree that financial incentives can impact patient care, throughput and care transitions, and patient experiences, and believe that as proposed, TEAM financial incentives will enhance these crucial elements.

We proposed two requirements for gainsharing payment eligibility for TEAM collaborators. The first proposed requirement is quality of care criteria,

wherein to be eligible to receive a gainsharing payment, the TEAM collaborator must meet quality of care criteria, as included in the sharing arrangement and mutually agreed upon by the TEAM participant and TEAM collaborator, during the performance year where the TEAM participant earned a reconciliation payment amount that comprises the gainsharing payment.

The second proposed requirement is that to be eligible to receive a gainsharing payment or make an alignment payment, a TEAM collaborator must have directly furnished a billable item or service to a TEAM beneficiary (or, in the case of a PGP, NPPGP or TGP, must have billed for an item or service that was rendered by one or more members of the PGP, NPPGP or TGP) during the same performance year where the TEAM participant earned a reconciliation payment amount or repayment amount. These proposed requirements entail that the amount of any gainsharing payments must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities. By ensuring there is a relationship between eligibility for a gainsharing payment and criteria for quality of care and the direct care for TEAM beneficiaries during an episode, we believe that crucial elements such as patient care, throughput and care transitions, and patient experiences for TEAM beneficiaries will be enhanced.

We also appreciate the commenters' suggestions related to the equitable distribution of shared savings, establishment of performance parameters at the specialty level, and ability to embrace clinical integration with an upside/downside approach. We believe that the proposed requirements that the amount of gainsharing payments be determined solely based on quality of care and provision of TEAM activities will create an equitable and fair approach to distributing gainsharing payments and establishing performance parameters through quality of care criteria. Additionally, we feel the proposed requirement that to be eligible for both gainsharing and alignment payments, the TEAM collaborator must have furnished a billable item or service allows the opportunity for appropriate and objective gainsharing payment and alignment payments for TEAM collaborators.

We are finalizing this proposal as proposed and without modification. We appreciate these comments and will continue to explore opportunities to further enhance the financial incentive requirements through future comment and rulemaking.

Comment: A commenter recommended that CMS allow PGPs to participate in TEAM through gainsharing agreements with the participating ACHs. The commenter suggested that this would allow for PGPs to contribute their knowledge and patient management skills, to better integrate the care that beneficiaries receive.

Response: We thank the commenter for the suggestion that PGPs should be able to participate in TEAM through gainsharing agreements with the participating ACHs. We acknowledged in the proposed rule that because TEAM participants would be accountable for quality during the anchor hospitalization or anchor procedure and the 30-day post discharge period, providers and suppliers other than the TEAM participant may furnish services to the Medicare beneficiary during the model performance period. As such, we proposed to allow TEAM participants to engage in financial arrangements with TEAM collaborators. PGPs are one such Medicare-enrolled provider type meeting the definition of a TEAM collaborator and, therefore, can engage in gainsharing with a TEAM participant. CMS believes that the TEAM collaborator term as proposed is broad enough to capture all provider/supplier types that may furnish services to the Medicare beneficiary during the model performance period, including PGPs.

Comment: A few commenters supported CMS' proposal to allow gainsharing in TEAM but expressed concern regarding the proposed 50 percent cap on shared losses. The commenters recommended that CMS remove the 50 percent cap on shared losses in order to reduce administrative burden for providers, strengthen integration between ACOs and specialists, and maintain consistency with prior bundled payment models like CJR and BPCI Advanced.

Response: We thank the commenters for their suggestions regarding the proposed 50 percent cap on shared losses. CMS believes, however, that given that the TEAM participant would be responsible for developing and coordinating care redesign strategies in response to its TEAM participation, it is important that the TEAM participant retain a significant portion of its responsibility for repayment amounts. With that said, we believe that the 50 percent cap on shared losses supports CMS' goal. However, we will consider this recommendation in future comment and rulemaking.

Comment: A commenter expressed concern that the proposed TEAM gainsharing policy does not tie

gainsharing agreements to volume, and it would make it more difficult for TEAM participants to link the size of the gainsharing payment to the partnering organizations' level of involvement in TEAM.

Response: We thank the commenter for their concern regarding the proposed gainsharing policy. As proposed, the TEAM gainsharing methodology may take into account the amount of such TEAM activities provided by a TEAM collaborator relative to other TEAM collaborators, however it should not be based fully on volume of referrals. CMS believes this proposed requirement allows flexibility in the determination of gainsharing payments to TEAM collaborators, who have differing contributions to TEAM activities. We understand that this may result in greater differences in the funds available for gainsharing payments, and believe, as proposed, allows for gainsharing payments to be made appropriately, without tying them directly or indirectly to volume or value of referrals. We are finalizing the policy on gainsharing arrangements as proposed. However, we will continue to review this policy and will take your comments into consideration in future comment and rulemaking cycles.

Comment: A commenter proposed that CMS determine the financial arrangements between the initiating hospital, surgeon, primary care physician and other post-acute providers, and that CMS require the participating ACH to pass the shared savings generated in TEAM to the physicians.

Response: We thank the commenter for their recommendation regarding the distribution of TEAM reconciliation payment and repayment amounts. As proposed, CMS has a direct relationship with the TEAM participant and does not have a relationship with the other providers and suppliers that may be furnishing services to beneficiaries during a TEAM performance period. As such, under this proposal, CMS believes that the TEAM participant, as the risk bearing entity should determine the methodology used to identify key providers and suppliers providing care to an aligned beneficiary and establish financial arrangements as an incentive. In addition, CMS believes that the commenters recommendation that CMS identify a TEAM participant's financial arrangements creates a high level of operational burden. This policy, as proposed, provides TEAM participants the ability to identify financial arrangements in a manner that is most beneficial to the TEAM participants and the downstream providers and

suppliers, rather than CMS determining those arrangements on behalf of the participant and downstream providers and suppliers. CMS believes that the gainsharing policy that is proposed aligns with the gainsharing policies of previous CMS Innovation Center bundled payment models, where the participant receives the payment or repayment amount, and can choose the methodology, within the requirements of the model, to distribute the payment and repayment amounts with other providers and suppliers, who are not the risk bearing entity. We are finalizing this policy as proposed. We will take this comment into consideration in future rulemaking cycles.

Comment: A commenter suggested that CMS should require hospitals participating in TEAM to gainshare incentives with downstream participants in order to provide required incentives to providers, who might otherwise not receive incentives depending on the financial arrangements of the TEAM participant.

Response: We thank the commenter for the suggestion and concern regarding proper incentives for TEAM collaborators. CMS does not believe that TEAM participants should be required to gainshare with TEAM collaborators, because TEAM collaborators are not the risk bearing entity. We believe that the goal of the TEAM gainsharing policy should be to offer TEAM participants the opportunity and enough flexibility to identify key providers and suppliers caring for aligned beneficiaries, and then establish partnerships with these individuals and entities to promote accountability for the quality, cost, and overall care for beneficiaries, including managing and coordinating care; encouraging investment in infrastructure, enabling technologies, and redesigning care processes for high quality and efficient service delivery; and carrying out other obligations or duties under TEAM. We are finalizing this policy as proposed. We will take this recommendation into consideration in future rulemaking cycles.

Comment: A commenter expressed concerns with CMS' proposal on gainsharing requirements. Specifically, the commenter suggested that CMS should permit gainsharing payments to be based substantially, rather than solely, on quality of care and the provisions of TEAM activities. The commenter believes that this would provide the appropriate flexibility for TEAM participants to construct their gainsharing agreements.

Response: We thank the commenter for their concern and suggestion to the proposed policy. CMS believes that

there must be a model safeguard in place to ensure that gainsharing aligns directly with the TEAM goals of quality of care, and engagement in TEAM activities. We believe that in order for this model safeguard to be in place, gainsharing payments must be based solely on the quality of care and the provisions of TEAM activities. We are finalizing the policy as proposed and will take this commenters suggestion into account in future rulemaking.

Comment: A commenter expressed concerns over CMS' proposed policy of limiting gainsharing payments to TEAM collaborators so that the aggregate payment amount cannot exceed that year's reconciliation payment amount, where the Composite Quality Score is incorporated into the reconciliation payment amount. The commenter suggests that hospitals participating in TEAM need the flexibility to construct their gainsharing programs in their own ways. As such, the commenter stated that TEAM participants should limit aggregate gainsharing payments to the pre-quality adjusted reconciliation amount.

Response: We thank the commenter for their concern and their suggestion to allow TEAM participants to gainshare payments to TEAM collaborators, where the Composite Quality Score is not incorporated into the reconciliation payment amount. In the proposed policy, the reconciliation payment made to the TEAM participant would include the Composite Quality Score adjustment, and this payment amount would be the one that the TEAM participant could share with a TEAM collaborator. As such, CMS believes that the proposed policy that the aggregate gainsharing payments to TEAM collaborators cannot exceed that year's reconciliation payment amount (from CMS), where the composite quality score is incorporated into the reconciliation payment amount, is acceptable because this reconciliation amount paid to the TEAM participant would already include the Composite Quality Score adjustment.

Comment: A commenter recommended that the CMS Innovation Center must allow participants to develop and execute separate gainsharing arrangements with physicians (or physician practices) that are tied to the individual episodes for which the hospital is assuming performance-based risk, by performing reconciliation separately for each episode, not at the enterprise level.

Response: We thank the commenter for their recommendation. We considered whether the gainsharing methodology could substantially, rather

than solely, be based on quality of care and the provision of TEAM activities, but ultimately determined that basing the methodology solely on these two elements creates a model safeguard where gainsharing aligns directly with the model goal of quality of care and with TEAM activities. The gainsharing methodology as proposed may take into account the amount of such TEAM activities provided by a TEAM collaborator relative to other TEAM collaborators. While we emphasize that financial arrangements may not be conditioned directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among TEAM participants, any TEAM collaborator, any collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, or collaboration agent so that their sole purpose is to align the financial incentives of the TEAM participant and TEAM collaborators toward the model, we believe that accounting for the relative amount of TEAM activities by TEAM collaborators in the determination of gainsharing payments does not undermine this objective. Rather, the proposed requirement allows flexibility in the determination of gainsharing payments where the amount of a TEAM collaborator's provision of TEAM activities (including direct care) to beneficiaries during a performance year may contribute to the TEAM participant's reconciliation payment amount that may be available for making a gainsharing payment. Greater contributions of TEAM activities by one TEAM collaborator versus another TEAM collaborator that result in greater differences in the funds available for gainsharing payments may be appropriately valued in the methodology used to make gainsharing payments to those TEAM collaborators in order to reflect these differences in TEAM activities among TEAM collaborators.

However, we do not believe it would be appropriate to allow the selection of TEAM collaborators or the opportunity to make or receive a gainsharing payment or an alignment payment to take into account the amount of TEAM activities provided by a potential or actual TEAM collaborator relative to other potential or actual TEAM collaborators because these financial relationships are not to be based directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, or

any individual or entity affiliated with a TEAM participant, TEAM collaborator, or collaboration agent. Specifically, with respect to the selection of TEAM collaborators or the opportunity to make or receive a gainsharing payment or an alignment payment, we do not believe that the amount of model activities provided by a potential or actual TEAM collaborator relative to other potential or actual TEAM collaborators could be taken into consideration by the TEAM participant without a significant risk that the financial arrangement in those instances could be based directly or indirectly on the volume or value of referrals or business generated by, between or among the parties. Similarly, if the methodology for determining alignment payments was allowed to take into account the amount of TEAM activities provided by a TEAM collaborator relative to other TEAM collaborators, there would be a significant risk that the financial arrangement could directly account for the volume or value of referrals or business generated by, between or among the parties. Therefore, we proposed that the methodology for determining alignment payments may not directly take into account the volume or value of referrals or business generated by, between or among the parties. After consideration of the public comments we received, we are finalizing our proposals as proposed for the model gainsharing payment and alignment payment conditions and limitations without modification in our regulation at § 512.56.

(d) Documentation Requirements

To ensure the integrity of the sharing arrangements, we proposed at (89 FR 36458) that TEAM participants must meet a variety of documentation requirements for these arrangements. Specifically, we proposed that the TEAM participant must—

- Document the sharing arrangement contemporaneously with the establishment of the arrangement;
- Maintain accurate current and historical lists of all TEAM collaborators, including TEAM collaborator names and addresses; update such lists on at least a quarterly basis; and publicly report the current and historical lists of TEAM collaborators on a web page on the TEAM participant's website; and
- Maintain and require each TEAM collaborator to maintain contemporaneous documentation with respect to the payment or receipt of any gainsharing payment or alignment payment that includes at a minimum the—

- ++ Nature of the payment (gainsharing payment or alignment payment);
- ++ Identity of the parties making and receiving the payment;
- ++ Date of the payment;
- ++ Amount of the payment;
- ++ Date and amount of any recoupment of all or a portion of a TEAM collaborator's gainsharing payment; and
- ++ Explanation for each recoupment, such as whether the TEAM collaborator received a gainsharing payment that contained funds derived from a CMS overpayment of a reconciliation payment amount or was based on the submission of false or fraudulent data.

In addition, we proposed that the TEAM participant must keep records for all of the following:

- Its process for determining and verifying its potential and current TEAM collaborators' eligibility to participate in Medicare if the TEAM collaborator is a Medicare-enrolled provider or supplier.
- A description of current health information technology, including systems to track reconciliation payment amounts and repayment amounts.
- Its plan to track gainsharing payments and alignment payments.

Finally, we proposed that the TEAM participant must retain and provide access to and must require each TEAM collaborator to retain and provide access to, the required documentation as discussed in section X.A.3.j. of the preamble of this final rule and 42 CFR 1001.952(ii).

The proposals for the requirements for documentation of sharing arrangements under the model are included in § 512.565. We sought comment about all of the requirements set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met.

We solicited public comment on our proposal regarding the requirements for documentation of sharing arrangements. We received no comments on these proposals and therefore are finalizing these proposals as proposed in our regulation at § 512.565.

(5) Distribution Arrangements

(a) General

Similar to the CJR model, we proposed at (89 FR 36458) that certain financial arrangements between TEAM collaborators and other individuals or entities called "collaboration agents" be termed "distribution arrangements." A

collaboration agent is an individual or entity that is not a TEAM collaborator and that is a PGP, NPPGP, or TGP member that has entered into a distribution arrangement with the same PGP, NPPGP, or TGP in which he or she is an owner or employee. For purposes of the Federal Anti-Kickback Statute Safe Harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)), we proposed that a distribution arrangement is a financial arrangement between a TEAM collaborator that is a PGP, NPPGP or TGP and a collaboration agent for the sole purpose of sharing a gainsharing payment received by the PGP, NPPGP or TGP. Where a payment from a TEAM collaborator to a collaboration agent is made pursuant to a TEAM distribution arrangement, we proposed to define that payment as a "distribution payment." As proposed, a collaboration agent may only make a distribution payment in accordance with a distribution arrangement which complies with the provisions of this proposed model and all other applicable laws and regulations, including the fraud and abuse laws.

Like our proposal for gainsharing payments, we proposed that the amount of any distribution arrangements must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities. We considered whether this methodology could substantially, rather than solely, be based on quality of care and the provision of TEAM activities, but ultimately determined that basing the methodology solely on these two elements creates a model safeguard where gainsharing aligns directly with the model goal of quality of care and with TEAM activities.

The proposals for the general provisions for distribution arrangements under the model are included in proposed § 512.568. We sought comment about all of the provisions set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met.

We solicited public comment on our proposal regarding the requirements for general distribution arrangements. We received no comments on these proposals and therefore are finalizing these proposals as proposed in our regulation at § 512.568.

(b) Requirements

We proposed at (89 FR 36458) several specific requirements for distribution arrangements as a program integrity

safeguard to help ensure that their sole purpose is to create financial alignment between TEAM collaborators and collaboration agents and performance toward TEAM goals. These proposed requirements largely parallel those proposed in section X.A.3.g.(4) of the preamble of this final rule for sharing arrangements and gainsharing payments based on similar reasoning for these two types of arrangements and payments. We proposed that all distribution arrangements must be in writing and signed by the parties, contain the effective date of the agreement, and be entered into before care is furnished to TEAM beneficiaries under the distribution arrangement. Furthermore, we proposed that participation must be voluntary and without penalty for nonparticipation, and the distribution arrangement must require the collaboration agent to comply with all applicable laws and regulations.

We sought comment on this proposal, where any distribution payments must be determined in accordance with a methodology that is based on quality of care and the provision of TEAM activities. We also sought comment on whether the methodology must be based solely on these two elements, or if the methodology must be based substantially on these two elements. Additionally, and also like our proposal for gainsharing payments, we proposed that the opportunity to make or receive a distribution payment must not be conditioned directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, or collaboration agent. We proposed more flexible standards for the determination of the amount of distribution payments from PGPs, NPPGPs and TGP members allowing TEAM collaborators and collaboration agents to create tailored distribution payments that supports the individual structure of their arrangement.

We note that for distribution payments made by a PGP to PGP members, by NPPGPs to NPPGP members, or TGPs to TGP members, the proposed requirement that the amount of any distribution payments must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities may be more limiting in how a PGP, NPPGP or TGP pays its members than is allowed under existing law. However, we believe quality of care is an important facet of episode-based payment models and making this a

requirement for distribution payment supports greater emphasis on quality of care improvement in TEAM. Further this is consistent with the BPCI Advanced model that required their Net Payment Reconciliation Amount (NPRA) Shared Payments and Partner Distribution Payments to achieve quality performance targets to receive these payments.

We sought comment on this proposal and specifically whether there are additional safeguards or a different standard is needed to allow for greater flexibility in calculating the amount of distribution payments that would avoid program integrity risks and whether additional or different safeguards are reasonable, necessary, or appropriate for the amount of distribution payments from a PGP to its members, a NPPGP to its members or a TGP to its members.

Similar to our proposed requirements for sharing arrangements for those TEAM collaborators that furnish or bill for items and services, we proposed that a collaboration agent is eligible to receive a distribution payment only if the collaboration agent furnished or billed for an item or service rendered to a beneficiary during an episode that occurred during the same performance year for which the TEAM participant accrued the internal cost savings or earned a reconciliation payment amount that comprises the gainsharing payment being distributed. We note that, as proposed, all individuals and entities that fall within our proposed definition of collaboration agent may either directly furnish or bill for items and services rendered to beneficiaries. This proposal ensures that, there is the same required relationship between direct care for beneficiaries during a performance year and distribution payment eligibility that we require for gainsharing payment eligibility. We believe this requirement as proposed provides a safeguard against payments to collaboration agents that are unrelated to direct care for beneficiaries during the performance year.

We further proposed that with respect to the distribution of any gainsharing payment received by an ACO, PGP, NPPGP or TGP, the total amount of all distribution payments in a performance year must not exceed the amount of the gainsharing payment received by the TEAM collaborator from the TEAM participant for that performance year. Like gainsharing and alignment payments, we proposed that all distribution payments must be made by check, electronic funds transfer, or another traceable cash transaction. Under the proposal, the collaboration agent must retain the ability to make

decisions in the best interests of the beneficiary, including the selection of devices, supplies, and treatments. Finally, under the proposal, the distribution arrangement must not induce the collaboration agent to reduce or limit medically necessary items and services to any Medicare beneficiary or reward the provision of items and services that are medically unnecessary.

We proposed that the TEAM collaborator must maintain contemporaneous documentation regarding distribution arrangements in accordance with proposed § 512.586, including—

- The relevant written agreements;
- The date and amount of any distribution payment(s);
- The identity of each collaboration agent that received a distribution payment; and
- A description of the methodology and accounting formula for determining the amount of any distribution payment.

We proposed that the TEAM collaborator may not enter into a distribution arrangement with any individual or entity that has a sharing arrangement with the same TEAM participant. This proposal ensures that the proposed separate limitations on the total amount of gainsharing payment and distribution payment to PGPs, NPPGPs, TGP, physicians, and nonphysician practitioners that are solely based on quality of care and the provision of TEAM activities are not exceeded in absolute dollars by a PGP, NPPGP, TGP, physician, or nonphysician practitioner's participation in both a sharing arrangement and distribution arrangement for the care of the same TEAM beneficiaries during the performance year. Allowing both types of arrangements for the same individual or entity for care of the same beneficiary during the performance year could also allow for duplicate counting of the individual or entity's same contribution toward model goals and provision of TEAM activities in the methodologies for both gainsharing and distribution payments, leading to financial gain for the individual or entity that is disproportionate to the contribution toward model goals and provision of TEAM activities by that individual or entity. However, we recognize there could be instances where an individual or entity could have distribution arrangements with multiple TEAM collaborators. For example, a physician may practice with and have reassigned their Medicare billing rights to multiple PGPs, and those PGPs may each be TEAM collaborators. We sought comment on allowing an individual or

entity to have distribution arrangements with multiple TEAM collaborators and whether there are additional program integrity safeguards that should be established in those scenarios. Finally, we proposed that the TEAM collaborator must retain and provide access to and must require collaboration agents to retain and provide access to, the required documentation in accordance with § 512.586.

The proposals for requirements for distribution arrangements under the model were included in proposed § 512.568. We sought comment about all of the proposed requirements set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met. In addition, we sought comment on how the regulation of the financial arrangements under this proposal may interact with how these or similar financial arrangements are regulated under the Medicare Shared Savings Program.

We solicited public comment on our proposal regarding the requirements for distribution arrangements. We received no comments on these proposals and are finalizing these proposals as proposed in our regulation at § 512.568.

(6) Downstream Distribution Arrangements

(a) General

We proposed at (89 FR 36460) that TEAM allow for certain financial arrangements within an ACO between a PGP and its members. Specifically, we proposed that certain financial arrangements between a collaboration agent that is both a PGP, NPPGP, or TGP and an ACO participant and other individuals termed "downstream collaboration agents" be termed a "downstream distribution arrangement." A downstream distribution arrangement, as proposed, is a financial arrangement between a collaboration agent that is both a PGP, NPPGP, or TGP and an ACO participant and a downstream collaboration agent for the sole purpose of sharing a distribution payment received by the PGP, NPPGP, or TGP. A downstream collaboration agent, as proposed, is an individual who is not a TEAM collaborator or a collaboration agent and who is a PGP member, a NPPGP member, or a TGP member that has entered into a downstream distribution arrangement with the same PGP, NPPGP, or TGP in which he or she is an owner or employee, and where the PGP, NPPGP, or TGP is a collaboration

agent. Where a payment from a collaboration agent to a downstream collaboration agent is made pursuant to a downstream distribution arrangement, we proposed to define that payment as a "downstream distribution payment." As proposed, a collaboration agent may only make a downstream distribution payment in accordance with a downstream distribution arrangement which complies with the requirements of this section and all other applicable laws and regulations, including the fraud and abuse laws.

We sought comment about all of the provisions set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of TEAM are met.

We solicited public comment on our proposal regarding the downstream distribution arrangements. We received no comments on these proposals and are finalizing these proposals as proposed in our regulation at § 512.570.

(b) Requirements

We proposed at (89 FR 36460) several specific requirements for downstream distribution arrangements as a program integrity safeguard to help ensure that their sole purpose is to create financial alignment between collaboration agents that are PGPs, NPPGPs, or TGPs which are also ACO participants and downstream collaboration agents toward the goals of the TEAM to improve the quality and efficiency of episodes. These requirements as proposed largely parallel those proposed for sharing and distribution arrangements at proposed § 512.565 and § 512.568 and gainsharing and distribution payments at proposed § 512.565 and § 512.568 based on similar reasoning for these types of arrangements and payments. We proposed that all downstream distribution arrangements must be in writing and signed by the parties, contain the effective date of the agreement, and entered into before care is furnished to TEAM beneficiaries under the downstream distribution arrangement. Furthermore, we proposed that participation must be voluntary and without penalty for nonparticipation, and the downstream distribution arrangement must require the downstream collaboration agent to comply with all applicable laws and regulations.

Like our proposals for gainsharing and distribution payments, we proposed that the opportunity to make or receive a downstream distribution payment must not be conditioned directly or indirectly on the volume or value of

referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent. We proposed the amount of any downstream distribution payments from an NPPGP to an NPPGP member or from a TGP to a TGP member must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities and that may take into account the amount of such TEAM activities provided by a downstream collaboration agent relative to other downstream collaboration agents. We believe that the amount of a downstream collaboration agent's provision of TEAM activities (including direct care) to TEAM beneficiaries during episodes may contribute to the TEAM participant's internal cost savings and reconciliation payment amount that may be available for making a gainsharing payment to the TEAM collaborator that is then shared through a distribution payment to the collaboration agent with which the downstream collaboration agent has a downstream distribution arrangement. Greater contributions of TEAM activities by one downstream collaboration agent versus another downstream collaboration agent that result in different contributions to the distribution payment made to the collaboration agent with which the downstream collaboration agents both have a downstream distribution arrangement may be appropriately valued in the methodology used to make downstream distribution payments to those downstream collaboration agents.

Similar to our proposed requirements for distribution arrangements for those TEAM collaborators that are PGPs, we proposed that a downstream collaboration agent is eligible to receive a downstream distribution payment only if the PGP billed for an item or service furnished by the downstream collaboration agent to a TEAM beneficiary during an episode that was attributed to the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount that comprise the gainsharing payment from which the ACO made the distribution payment to the PGP that is an ACO participant. This proposal ensures that there is the same required relationship between direct care for TEAM

beneficiaries during episodes and downstream distribution payment eligibility that we require for gainsharing and distribution payment eligibility. We believe this proposed requirement provides a safeguard against payments to downstream collaboration agents that are unrelated to direct care for TEAM beneficiaries during episodes.

We further proposed that the total amount of all downstream distribution payments made to downstream collaboration agents must not exceed the amount of the distribution payment received by the collaboration agent (that is, the PGP, NPPGP, or TGP that is an ACO participant) from the ACO that is a TEAM collaborator. Like gainsharing, alignment, and distribution payments, we proposed that all downstream distribution payments must be made by check, electronic funds transfer, or another traceable cash transaction. As proposed, the downstream collaboration agent must retain the ability to make decisions in the best interests of the patient, including the selection of devices, supplies, and treatments. The distribution arrangement must not induce a downstream collaboration agent to reduce or limit medically necessary items and services to any Medicare beneficiary or reward the provision of items and services that are medically unnecessary.

We proposed that the PGP, NPPGP, or TGP must maintain contemporaneous documentation regarding downstream distribution arrangements in accordance with proposed § 512.586, including all of the following:

- The relevant written agreements.
- The date and amount of any downstream distribution payment(s).
- The identity of each downstream collaboration agent that received a downstream distribution payment.
- A description of the methodology and accounting formula for determining the amount of any downstream distribution payment.

We proposed that the PGP, NPPGP, or TGP may not enter into a downstream distribution arrangement with any PGP, NPPGP, or TGP member who has a sharing arrangement with a TEAM participant or distribution arrangement with the ACO the PGP, NPPGP, or TGP is a participant in. This proposal ensures that the proposed separate limitations on the total amount of gainsharing payment, distribution payment, and downstream distribution payment to PGP, NPPGP, or TGP members that are solely based on quality of care and the provision of TEAM activities are not exceeded in absolute dollars by a PGP, NPPGP, or

TGP member's participation in more than one type of arrangement for the care of the same TEAM beneficiaries during episodes. Allowing more than one arrangement for the same PGP, NPPGP, or TGP member for the care of the same TEAM beneficiaries during episodes could also allow for duplicate counting of the PGP, NPPGP, or TGP member's effort in TEAM activities in the methodologies for the different payments. Finally, we proposed that the PGP, NPPGP, or TGP must retain and provide access to, and must require downstream collaboration agents to retain and provide access to, the required documentation in accordance with § 512.586.

We sought comment about all of the requirements, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of TEAM are met.

The following is a summary of the public comments received on this proposal and our response to those comments.

Comment: Commenters expressed concerns about TEAM's penalties based on Medicare spending, noting that hospitals may incur costs from unaffiliated providers. They expressed concerns that hospitals might consolidate services to control costs, potentially leading to higher prices. They suggested upfront infrastructure investments for safety net providers and financial support for preparation and ongoing costs. Additionally, they urged CMS to cover upfront costs for medication supplies to avoid barriers to participation and reduce health inequities.

Response: We appreciate the detailed feedback on TEAM. CMS recognizes the complexity and potential financial implications for hospitals, particularly concerning relationships with unaffiliated providers and the risk of increased consolidation. To address these concerns, CMS will explore options to provide upfront infrastructure investments, especially for safety net providers, and consider mechanisms to support both initial and ongoing operational costs. Furthermore, we acknowledge the importance of covering upfront costs for medication supplies to ensure equitable participation. These insights are invaluable in refining TEAM to balance cost control with high-quality care and accessibility. We will take this comment into consideration in future rulemaking.

Comment: A commenter expressed concerns that downstream participants are only subject to penalties without being eligible for savings, incentive

payments or involvement in identifying appropriate post-acute discharge placements. They believe that downstream participants could be unfairly penalized for issues they are not involved in. The commenter suggests that hospitals should be required to share incentives with downstream participants and include them in TEAM strategy and pre-discharge placement decisions to address this imbalance.

Response: We appreciate the comments raised regarding the participation of downstream participants in the incentive and penalty structures in TEAM. We have carefully considered the suggestion to mandate that hospitals share incentives with downstream participants and involve them in pre-discharge placement decisions. However, we believe our current approach effectively addresses these issues while maintaining the integrity and goals of TEAM.

Our proposal includes several specific requirements for downstream distribution arrangements designed to ensure financial alignment and safeguard against potential abuses. Key elements of our proposed approach include:

1. **Written and Signed Agreements:** All downstream distribution arrangements must be documented in writing, signed by all parties, and established before care is furnished to TEAM beneficiaries. This ensures transparency and accountability.

2. **Voluntary Participation:** Participation in these arrangements is entirely voluntary, and there are no penalties for non-participation. This respects the autonomy of downstream participants while promoting collaboration.

3. **Quality-Based Payments:** The methodology for downstream distribution payments is based solely on the quality of care and the provision of TEAM activities, not on the volume or value of referrals. This focus on quality ensures that patient care remains the primary consideration.

4. **Documentation and Compliance:** We require rigorous documentation of all agreements, payments, and methodologies to ensure compliance with all applicable laws and regulations. This includes maintaining records of the relevant agreements, payment details, and the formulas used to determine payment amounts.

5. **Safeguards Against Abuse:** The arrangements include safeguards to prevent the reduction of medically necessary services or the provision of unnecessary services. Payments are

made through traceable transactions, ensuring financial transparency.

6. **Contribution-Based Payments:** The amount of downstream distribution payments is tied to the downstream collaboration agent's contributions to TEAM activities, which may vary based on their involvement in direct care for TEAM beneficiaries. This ensures that payments reflect actual contributions to patient care and program goals.

7. **Consistent Performance Year Attribution:** To receive downstream distribution payments, the PGP must have billed for services furnished by the downstream collaboration agent during an episode attributed to the same performance year. This aligns payments with the specific period of care delivery, ensuring relevance and accuracy.

By adhering to these structured requirements, we aim to foster a collaborative environment that rewards quality care and ensures the appropriate distribution of incentives. Our proposed approach balances the need for financial alignment with the imperative to protect program integrity and avoid potential abuses. While we recognize the importance of involving downstream participants in incentive structures, our proposed safeguards and requirements provide a robust framework that supports the goals of TEAM without compromising on these critical principles.

After consideration of the public comments received, we are finalizing these proposals as proposed in our regulation at § 512.570.

(7) TEAM Beneficiary Incentives

We believe it is necessary and appropriate to provide additional flexibilities to TEAM participants for purposes of testing the model, to give TEAM participants additional access to the tools necessary to improve beneficiaries' quality of care, drive equitable outcomes, and reduce Medicare spending through improved beneficiary care transitions and reduced fragmentation during episodes of care. As proposed at (89 FR 36461), TEAM participants may choose to provide in-kind patient engagement incentives to beneficiaries in an episode, which may include but not be limited to items of technology, subject to the following conditions consistent with 42 CFR 510.515.

As discussed in section X.A.3.g.(9) of the preamble of this final rule, we stated that if the proposed beneficiary incentives are finalized, we would expect to make a determination that the Anti-Kickback Statute Safe Harbor for CMS-sponsored model patient incentives (42 CFR 1001.952(ii)) would

be made available. This Safe Harbor will protect the beneficiary incentives proposed in this section when the incentives are offered in compliance with the requirements established in the final rule and the conditions for use of the Anti-Kickback Statute Safe Harbor set out at 42 CFR 1001.952(ii).

As stated previously, TEAM participants may choose to provide in-kind engagement incentives, which may include but not be limited to items of technology, to TEAM beneficiaries in an episode, subject to the following proposed conditions. We proposed at (89 FR 36461) that the incentive must be provided directly by the TEAM participant or by an agent of the TEAM participant under their direction and control to the TEAM beneficiary during an episode. Additionally, we proposed that the item or service provided must be reasonably connected to the TEAM beneficiary's medical care and be a preventive care item or service or an item of service that advances a clinical goal, as described in section X.A.3.g.(7)(b) of the preamble of this final rule, by engaging the TEAM beneficiary in better managing their own health. We sought comment on the proposed conditions for TEAM beneficiary incentives, as outlined in 512.575. Specifically, we sought comment on whether these proposed conditions are reasonable, and whether additional conditions are appropriate to further engage TEAM beneficiaries in their own healthcare management while preventing fraud or abuse.

The following is a summary of the public comments received on this proposal and our response to those comments.

Comment: Many commenters supported the proposed beneficiary incentives aimed at encouraging adherence to recommended treatments and improving patient engagement in recovery. The commenters highlighted the benefits of such incentives in managing health, preventing disease development, and addressing health-related social needs, such as transportation to medical appointments. These incentives are seen as particularly beneficial for historically underserved populations by directly supporting chronic care management and promoting equitable outcomes.

Additionally, commenters suggested that beneficiary incentives in the model should align with its clinical aims. Commenters suggested that CMS consider adding flexibilities for TEAM participants to provide limited financial assistance, such as cost-sharing for non-opioid prescriptions, to further promote adherence to drug regimens, reduce

opioid misuse, adhere to care plans and reduce complications. Commenters also recommend that TEAM participants seek direct input from beneficiaries on needed items or services to advance shared clinical goals.

Response: We appreciate the feedback and support regarding the proposed beneficiary incentives. We appreciate the recognition of these incentives' potential to enhance adherence to recommended treatments, manage health conditions, and address health-related social needs, particularly for historically underserved populations.

We value the suggestion to add flexibilities for TEAM participants to provide limited financial assistance, such as cost-sharing for non-opioid prescriptions. This aligns with our goal of promoting adherence to drug regimens and care plans while reducing the risk of opioid misuse and potential complications. We will consider this recommendation and its alignment with the clinical aims of TEAM.

Additionally, we acknowledge the importance of seeking direct input from beneficiaries on needed items or services that would advance shared clinical goals. We will explore mechanisms to incorporate beneficiary feedback to ensure that the incentives provided meet their specific needs and enhance their engagement in care.

The commenters' insights are valuable as we refine TEAM to achieve better health outcomes and equitable care for all beneficiaries. We are finalizing this proposal without modification; however, we will take these recommendations into consideration in future rulemaking.

Comment: A commenter supported the proposed beneficiary incentives designed to encourage adherence to recommended treatments and promote beneficiary engagement in recovery.

Response: We appreciate the commenter's support of the proposed beneficiary incentives aimed at encouraging adherence to recommended treatments and promoting beneficiary engagement in recovery. We appreciate the commenter's feedback and will continue to develop strategies that enhance patient participation and improve health outcomes.

After consideration of the public comments received, we are finalizing our proposals for the TEAM beneficiary incentives as proposed in our regulation at § 512.575. Therefore, as discussed in section X.A.3.g.(9) of the preamble of this final rule and since these proposed beneficiary incentives are finalized, we are making the determination that the Anti-Kickback Statute Safe Harbor for CMS-sponsored model patient

incentives (42 CFR 1001.952(ii)) is available. This Safe Harbor will protect the beneficiary incentives finalized in this section when the incentives are offered in compliance with the requirements established in the final rule and the conditions for use of the Anti-Kickback Statute Safe Harbor set out at 42 CFR 1001.952(ii).

(a) Technology Provided to a TEAM Beneficiary

In some cases, items or services involving technology may be useful as beneficiary engagement incentives that can advance a clinical goal of TEAM by engaging a beneficiary in managing their health during the 30 days following discharge from the anchor hospitalization or anchor procedure.

However, we believe specific enhanced safeguards are necessary for these items and services to prevent abuse, and our proposals are consistent with the CJR model policies (80 FR 73437).

Specifically, we proposed at (89 FR 36461) that items or services involving technology provided to a beneficiary may not exceed \$1,000 in retail value for any TEAM beneficiary in any episode (per episode), and that items or services involving technology provided to a TEAM beneficiary must be the minimum necessary to advance a clinical goal as discussed in this section for a TEAM beneficiary in an episode. We proposed additional enhanced requirements for items of technology exceeding \$75 in retail value as an additional safeguard against misuse of these items as beneficiary engagement incentives. Specifically, we proposed that these items of technology that exceed \$75 in retail value remain the property of the TEAM participant and be retrieved from the TEAM beneficiary at the end of the episode. As proposed, the TEAM participant must document all retrieval attempts, including the ultimate date of retrieval. We understand that TEAM participants may not always be able to retrieve these items after the episode ends, such as when a TEAM beneficiary dies or moves to another geographic area. Therefore, in cases when the item of technology is not able to be retrieved, we proposed that the TEAM participant must determine why the item was not retrievable and if it was determined that the item was used inappropriately (if it were sold, for example) preventing future beneficiary incentives for that TEAM beneficiary. Following this proposed process, the documentation of diligent, good faith attempts to retrieve items of technology will be deemed to meet the retrieval requirement.

Our proposals for enhanced requirements for technology provided to TEAM beneficiaries as beneficiary engagement incentives under TEAM are included in proposed § 512.575. We sought comment on our proposed requirements for beneficiary engagement incentives that involve technology. Additionally, we sought comment on the types of technology that may be useful to advance the goals of the model. We welcomed comment on additional or alternative program integrity safeguards for this type of beneficiary engagement incentive, including whether the financial thresholds proposed in this section are reasonable, necessary, and appropriate.

The following is a summary of the public comments received on this proposal and our response to those comments.

Comment: A commenter stated their belief that TEAM incentives for innovative and effective medical technology can significantly benefit patients with comorbidities or risk factors. These incentives would enable hospitals to enhance monitoring and management throughout surgical episodes, leading to more efficient care.

Response: We appreciate the commenter's insight regarding the impact of TEAM incentives for innovative medical technology, especially for patients with comorbidities or other risk factors. CMS acknowledges that such incentives can play a crucial role in improving monitoring and management throughout surgical episodes. We are committed to integrating these considerations into future models to support hospitals in providing efficient, high-quality care. This feedback helps us ensure that our programs effectively address the needs of diverse patient populations and enhance overall care outcomes.

After consideration of the public comments we received, we are finalizing our proposals for technology provided to a TEAM beneficiary as proposed in our regulation at § 512.575.

(b) Clinical Goals of TEAM

As discussed in section X.A.3.b. of the preamble of this final rule, the proposed episodes are broadly defined to include most Part A and Part B items and services furnished during episodes of care that extend 30 days following discharge from the anchor hospitalization or anchor procedure that begins the episode. Therefore, we believe that in-kind beneficiary engagement incentives may appropriately be provided for managing acute conditions arising from episodes, as well as chronic conditions if the

condition is likely to have been affected by care during the episode or when substantial services are likely to be provided for the chronic condition during the episode. We proposed at (89 FR 36462) to allow TEAM participants to offer in-kind beneficiary engagement incentives, where such incentives must be closely related to the provision of high-quality care and advance a clinical goal for a TEAM beneficiary and should not serve as inducements for TEAM beneficiaries to seek care from the TEAM participants or other specific suppliers and providers. We proposed that beneficiary incentives must advance one of the following clinical goals of TEAM:

- Beneficiary adherence to drug regimens.
- Beneficiary adherence to a care plan.
- Reduction of readmissions and complications resulting from treatment during the episode.
- Management of chronic diseases and conditions that may be affected by treatment for the TEAM clinical condition.

Our proposals for beneficiary engagement incentives are included in § 512.575. We sought comment on our proposed clinical goals of TEAM, as well as whether the advancement of additional or different clinical goals through beneficiary engagement incentives may better advance the overarching goals of TEAM while maintaining appropriate program integrity safeguards.

We received no comments on these proposals and are finalizing these proposals as proposed without modification in our regulation at § 512.575.

(c) Documentation of Beneficiary Engagement Incentives

As a program safeguard against misuse of beneficiary engagement incentives under TEAM, we proposed that TEAM participants must maintain documentation of items and services furnished as beneficiary engagement incentives that exceed \$25 in retail value including items of technology. In addition, we proposed at (89 FR 36462) to require that the documentation established contemporaneously with the provision of the items and services must include at least the following:

- The date the incentive is provided.
- The incentive and estimated value of the item or service.
- The identity of the beneficiary to whom the item or service was provided.

We further proposed that the documentation regarding items of technology exceeding \$75 in retail that

are required to be retrieved from the beneficiary at the end of an episode must also include contemporaneous documentation of any attempt to retrieve technology. In instances where the item of technology is not able to be retrieved, we proposed that the TEAM participant must determine why it is not retrievable, and if the item were misappropriated (if it were sold, for example), then further steps must be taken to ensure that TEAM beneficiary does not receive further TEAM beneficiary incentives. Following this proposed process, documented, diligent, good faith attempts to retrieve items of technology will be deemed to meet the retrieval requirement.

Finally, we proposed that the TEAM participant must retain and provide access to the required documentation in accordance with § 512.586.

We sought comment on our proposed documentation requirements, including whether additional or different documentation requirements may provide better program integrity safeguards.

The following is a summary of the public comments received on this proposal and our response to those comments.

Comment: Several commenters express concerns that the enhanced documentation requirements for items of technology exceeding \$75 in retail value will be burdensome for TEAM participants. They highlight that the requirement for TEAM participants to determine why an item was not retrievable may be impractical or impossible to meet. Commenters suggest CMS finalize the regulation without this requirement and consider raising the cost threshold above \$75 for enhanced requirements. Additionally, some commenters are concerned that these documentation requirements could disincentivize the provision of beneficiary incentives and place an undue burden on both providers and patients. They recommend increasing the minimum retail value price threshold for items requiring documentation and retrieval to reduce administrative overhead and the burden on patients and caregivers.

Response: We thank the commenter for their feedback regarding the enhanced documentation requirements for beneficiary incentives, particularly for items of technology exceeding \$75 in retail value. We understand the concerns about the potential burdens these requirements may place on TEAM participants, providers, and patients.

We have carefully considered the suggestion to finalize § 512.575 without the requirement to determine why an

item was not retrievable and to raise the cost threshold above \$75 for enhanced requirements. We also have considered the recommendation to increase the minimum retail value price threshold for items requiring documentation and retrieval to reduce administrative overhead.

However, these requirements are in alignment with other CMS policies, such as those found in CJR, on cost thresholds for beneficiary incentives. We understand it is important to reduce burden and remove barriers to using such incentives. Our goal is to ensure that beneficiary incentives effectively support patient care and engagement without imposing unnecessary burdens on providers or patients. We are finalizing this policy as proposed. However, we appreciate these insights and will take them into account in future rulemaking cycles, as we continue to refine TEAM's documentation requirements to strike the right balance between program integrity and practical implementation.

Comment: A commenter recommended that CMS add a non-scored PI measure to record participation in the data collection process of the Insights Measure reporting. This would incentivize hospitals and providers to contribute, helping ONC gain statistically useful and meaningful data. It is the commenter's opinion that including a Yes/No measure for provider participation in the Insights Measures program would likely encourage behavior that helps HHS achieve its goals.

Response: We thank the commenter for this valuable recommendation. We appreciate these insights on adding a non-scored PI measure to record participation in the data collection process of the Insights Measure reporting. The suggestion to include a Yes/No measure for provider participation to incentivize cooperation and help achieve HHS goals is noted. We will take it into consideration in future rulemaking.

Comment: A commenter suggested that beyond the proposed documentation requirements, CMS should establish data collection mandates to test the effectiveness of incentives on healthcare outcomes like hospital readmissions and patient experience, specifically beneficiary adherence to care plans. They recommended that this data be analyzed by demographic groups to design more effective incentive programs, especially for underserved populations.

Response: We appreciate the commenter's suggestion to enhance data

collection to assess the effectiveness of TEAM incentives on healthcare outcomes and patient experience. We agree that such data, especially when analyzed by demographic groups, is crucial for informing and refining beneficiary incentive programs. CMS is committed to exploring ways to incorporate these recommendations to better serve all populations, particularly those that are underserved. We are finalizing this proposal as proposed. However, in future rulemaking cycles and as we continue to refine the model, we will consider the inclusion of additional data collection requirements to measure the impact of incentives on hospital readmissions, adherence to care plans, and other health outcomes. This feedback is valuable in helping us improve the design and implementation of TEAM to achieve equitable and high-quality care for all beneficiaries. We will take this comment into consideration in future rulemaking.

After consideration of the public comments we received, we are finalizing our proposals for the documentation of beneficiary engagement incentives as proposed in our regulation at § 512.575.

(8) Enforcement Authority

OIG authority is not limited or restricted by the provisions of the model, including the authority to audit, evaluate, investigate, or inspect the TEAM participant, TEAM collaborators, collaboration agents, downstream collaboration agents, or any other person or entity or their records, data, or information, without limitations. Additionally, as proposed, no model provisions limit or restrict the authority of any other Government Agency to do the same.

The proposals for enforcement authority under the model are included in § 512.150(e). We sought comment about all of the requirements set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met.

We received no comments on these proposals. These proposals are finalized at § 512.150(e).

(9) Fraud and Abuse Waiver and OIG Safe Harbor Authority

Under section 1115A(d)(1) of the Act, the Secretary may waive such requirements of Titles XI and XVIII and of sections 1902(a)(1), 1902(a)(13), 1903(m)(2)(A)(iii) of the Act, and certain provisions of section 1934 of the Act as may be necessary solely for purposes of

carrying out section 1115A of the Act with respect to testing models described in section 1115A(b) of the Act.

For this model and consistent with the authority under section 1115A(d)(1) of the Act, the Secretary may consider issuing waivers of certain fraud and abuse provisions in sections 1128A, 1128B, and 1877 of the Act. No fraud or abuse waivers are being issued in this document; fraud and abuse waivers, if any, would be set forth in separately issued documentation. Any such waiver would apply solely to TEAM and could differ in scope or design from waivers granted for other programs or models. Thus, notwithstanding any provision of this final rule, TEAM participants, TEAM collaborators, collaboration agents, and downstream collaboration agents must comply with all applicable laws and regulations, except as explicitly provided in any such separately documented waiver issued pursuant to section 1115A(d)(1) of the Act specifically for TEAM.

At proposed § 512.576, we proposed to make the Federal Anti-Kickback Statute Safe Harbor for CMS-sponsored model arrangements available to protect remuneration furnished in TEAM in the form of the sharing arrangement's gainsharing payments and alignment payments, the distribution arrangement's distribution payments, and the downstream distribution arrangement's distribution payments provided that all of the financial arrangements associated with such payment meet all safe harbor requirements set forth in 42 CFR 1001.952(ii), proposed § 512.565, proposed § 512.568, and proposed § 512.570. We considered, but did not propose, adopting an alternative approach in which the availability of the safe harbor for a specific type of financial arrangement would only be conditioned on compliance with the specific requirements for that type of financial arrangement and the compliance of the other financial arrangements associated with such payment would not implicate the availability of the safe harbor. For example, we considered, but did not propose, an alternative proposal making the availability of the safe harbor for the sharing arrangement's gainsharing payments only conditioned on compliance with the requirements associated with that type of financial arrangement and not also conditioned on the compliance of a downstream financial arrangement associated with such payment.

In the proposed rule at (89 FR 36463), we considered not allowing use of the safe harbor provisions. However, we

decided that use of the safe harbor will encourage the goals of the model. We believe that a successful model requires integration and coordination among TEAM participants and other health care providers and suppliers. We believe the use of the safe harbor will encourage and improve beneficiary experience of care and coordination of care among providers and suppliers. We also believe this safe harbor offers flexibility for innovation and customization. The safe harbor allows for emerging arrangements that reflect up-to-date understandings in medicine, science, and technology.

We sought comment on this proposal, including that the Anti-Kickback Statute Safe Harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)(1)) and CMS-sponsored model patient incentives (42 CFR 1001.952(ii)(2)) be available to TEAM participants and TEAM collaborators, collaboration agents, and downstream collaboration agents. After reviewing the public comments, we are finalizing that, in addition to or in lieu of a waiver of certain fraud and abuse provisions in sections 1128A and 1128B of the Act, the Anti-Kickback Statute (AKS) Safe Harbor for CMS-sponsored model arrangements and CMS-sponsored model patient incentives (42 CFR 1001.952(ii)(1) and 42 CFR 1001.952(ii)(2)) is available to protect remuneration exchanged pursuant to certain financial arrangements and patient incentives that may be permitted under the final rule. Specifically, in this final rule, we have determined that the CMS-sponsored models safe harbor is available to protect the following financial arrangements and incentives: the TEAM sharing arrangement's gainsharing payments and alignment payments, the distribution arrangement's distribution payments with TEAM collaborators and collaboration agents, the downstream distribution arrangements and downstream distribution payments with collaboration agents and downstream collaboration agents, and TEAM beneficiary incentives. We summarize and respond to public comments received on this proposal below.

The following is a summary of the public comments received on this proposal and our response to those comments.

Comment: Many commenters urge CMS to ensure that TEAM's policies align with the physician self-referral law and Anti-Kickback Statute (AKS) Safe Harbor related to arrangements that facilitate value-based health care delivery and payment finalized in 2020. There is a call for greater clarity and

education on the types of arrangements and flexibilities allowed under these exceptions and safe harbor, as providers are uncertain about compliance, risking penalties or exclusion from federal programs.

Commenters emphasized the need for CMS and the Office of Inspector General (OIG) to provide fraud and abuse waivers and clear guidance to support TEAM participants and collaborators. Commenters noted the complexity of applying the fraud and abuse legal framework to new models like TEAM and recommended maximum security for participants to minimize compliance risks. A commenter stated that modernizing legal barriers, such as the Anti-Kickback Statute and physician self-referral law, is necessary to permit value-based contracts for drugs and devices structured as product/service guarantees or risk-sharing arrangements.

Response: We thank the commenter for this feedback regarding the alignment of TEAM's policies with the physician self-referral law exceptions and Anti-Kickback Statute (AKS) Safe Harbor related to the arrangements that facilitate value-based health care delivery and payment, as well as the concerns about compliance and the preparation required for TEAM. No fraud and abuse waivers are being issued for TEAM and we believe we have provided clarity in this final rule for participants to meet the requirements of an applicable exception under the physician self-referral law and an applicable AKS safe harbor. We appreciate these comments and suggestions for ensuring clear guidance and support for TEAM participants and collaborators.

After consideration of the public comments we received, we are finalizing our proposals as proposed in our regulation at § 521.576 for TEAM participants, TEAM collaborators, collaboration agents, and downstream collaboration agents to comply with all applicable laws and regulations, except as explicitly provided in any such separately documented waiver issued pursuant to section 1115A(d)(1) of the Act specifically for TEAM without modification. We again note that no fraud and abuse waivers are being finalized in this rule.

h. Waivers of Medicare Program Requirements

(1) Overview

We believe it may be necessary and appropriate to provide flexibilities to hospitals participating in TEAM, as well as other providers and suppliers that furnish services to beneficiaries in

episodes. The purpose of such flexibilities would be to increase episode quality, decrease episode spending or internal costs, or both of providers and suppliers, resulting in better, more coordinated care for beneficiaries and improved financial efficiencies for Medicare, providers, and beneficiaries. These possible additional flexibilities could include use of our waiver authority under section 1115A of the Act, which provides authority for the Secretary to waive such requirements of title XVIII of the Act as may be necessary solely for purposes of carrying out section 1115A of the Act with respect to testing models described in section 1115A(b) of the Act. This provision affords broad authority for the Secretary to waive statutory Medicare program requirements as necessary to carry out the provisions of section 1115A of the Act.

As we have stated elsewhere in section X.A.2.c. of the preamble of this final rule, our previous and current efforts in testing episode payment models have led us to believe that models where entities bear financial responsibility for total Medicare spending for episodes of care hold the potential to incentivize the most substantial improvements in episode quality and efficiency. As discussed in section X.A.3.a.(3) of the preamble of this final rule, we proposed that TEAM participants participating in Track 1 of this model be eligible for reconciliation payment amounts based on spending and quality performance in PY 1. TEAM participants in Track 2 would be eligible for repayment amounts and reconciliation payment amounts starting in PY 2, while TEAM participants in Track 3 are eligible for repayment amounts and reconciliation payment amounts starting in PY 1. We believe that where TEAM participants bear financial accountability for excess episode spending beyond the reconciliation target price while high quality care is valued, they will have an increased incentive to coordinate care furnished by the hospital and other providers and suppliers throughout the episode to improve the quality and efficiency of care. With these incentives present, there may be a reduced likelihood of over-utilization of services that could otherwise result from waivers of Medicare program rules. Given these circumstances, waivers of certain program rules for providers and suppliers furnishing services to TEAM beneficiaries may be appropriate to offer more flexibility than under existing Medicare rules for such providers and suppliers, so that they may provide

appropriate, efficient care for beneficiaries. An example of such a program rule that could be waived to potentially allow more efficient inpatient episodes would be the 3-day inpatient hospital stay requirement prior to a covered skilled nursing facility (SNF) stay for beneficiaries who could appropriately be discharged to a SNF after less than a 3-day inpatient hospital stay. This type of waiver was implemented in a range of previous and existing CMS initiatives, including various episode-based payment models and accountable care initiatives.

We welcomed comments on possible waivers under section 1115A of the Act of certain Medicare program rules beyond those specifically discussed in the proposed rule that might be necessary to test this model. We will consider the comments that were received during the public comment period and may make future proposals regarding program rule waivers during the course of the model test if we determine that the additional flexibilities afforded by these waivers would be appropriate and beneficial to the model test. We were especially interested in comments explaining how such waivers could provide providers and suppliers with additional flexibilities that are not permitted under existing Medicare rules to increase quality of care and reduce unnecessary episode spending, but that could be appropriately used in the context of TEAM where TEAM participants bear full responsibility for total episode spending.

The following is a summary of the public comments we received on additional waivers of Medicare program rules beyond those specifically discussed in the proposed rule and our responses to those comments:

Comment: Many commenters suggested that we consider additional Medicare policy waivers beyond those which we proposed or considered for TEAM.

A few commenters suggested that we waive patient cost-sharing for certain services provided to TEAM beneficiaries. A couple of commenters cited the precedent for waiving patient-cost sharing in ACO REACH, indicating that this provision could improve access for patients with health-related social needs (HRSNs). A commenter suggested that we waive co-pays for telehealth visits.

A couple commenters recommended that we consider coverage of transportation costs for medical care.

A commenter suggested that we waive the requirement for physician physical certification of an outpatient physical

therapy plan of care for TEAM beneficiaries. The commenter indicated that this requirement imposes an administrative burden on physical therapists and physicians and represents a barrier to initiating care. The commenter suggested that CMS accept the presence of an order or referral on file and the delivery of a physical therapy plan of care to the treating physician as satisfying the requirement for physician review of the plan of care, removing the requirement for a physician signature.

A commenter recommended that we include a waiver which would authorize nurse practitioners to order cardiac rehabilitation, noting the precedent for such a waiver in the ACO Realizing Equity, Access, and Community Health (REACH) and the planned States Advancing All-Payer Equity Approaches and Development (AHEAD) Models. The commenter cited CABG as a qualifying condition for cardiac rehabilitation and suggested that permitting nurse practitioners to order cardiac rehabilitation for TEAM beneficiaries would contribute to care coordination efforts under TEAM and improve access to cardiac rehabilitation.

A commenter recommended that TEAM episodes which do not qualify toward the compliance threshold for the IRF “60 Percent Rule”—that is, episodes that do not fall under the 13 conditions listed in § 412.29(b)(2) which must encompass at least 60 percent of an IRF’s total inpatient population in order for the IRF to be classified for Medicare IRF payment—be excluded from an IRF’s “60 Percent Rule” calculations altogether. The commenter indicated that the incentive for TEAM participants to reduce costs would eliminate the need for the “60 Percent Rule” to limit utilization and suggested that not waiving this rule for TEAM beneficiaries could limit the provision of IRF services as deemed appropriate by the TEAM participant.

A commenter recommended that we consider waiving the initiation of care regulations for home health, specifically requesting that therapy staff be permitted to initiate home health services in situations where both therapy and nursing are required under the home health plan of care. The commenter suggested that waiving this requirement under TEAM could promote access to care and care coordination.

A commenter requested that we include waivers in TEAM that match the waivers offered under the Medicare Advantage (MA) Value-Based Insurance Design (VBID) Model.

A commenter requested that we offer a waiver allowing TEAM participants the flexibility to negotiate alternative payment rates and structures with PAC providers.

A commenter requested that we consider flexible options for organizations to provide insurance coverage for home health services including increased custodial home health aides, home care, home nursing, and home therapy.

A commenter suggested that CMS cover up to two weeks of respite care for patients whose condition necessitates medication and pain management but does not allow for intensive therapies.

A commenter suggested that we consider increased coverage of daily wound care in situations where receiving such care would allow patients to return home rather than staying in a hospital or institutional PAC setting.

A commenter encouraged us to consider potential episode-specific waivers for TEAM. The commenter suggested that waivers should be focused on enabling participants to provide stable transitions of care and timely post-discharge follow-up.

Response: We thank the commenters for their suggestions for additional waivers and appreciate the information provided on the potential benefits of these waivers for TEAM participants and beneficiaries. As discussed in the proposed rule, we will consider the comments we received during the public comment period and our early model implementation experience, including experience in specific episodes, and may propose additional waivers for TEAM in future rulemaking.

Comment: A few commenters requested that CMS offer a waiver of beneficiary inducements to allow TEAM participants to conduct pre-surgical home visits. These commenters suggested that allowing such home visits before surgery would permit participants to proactively assess a patient’s home environment and potentially make structural modifications, thereby improving the patient’s chances of successful recovery at home. A couple of the commenters suggested that a beneficiary inducements waiver could reduce reliance on inpatient or SNF settings that present high costs and infection risk. A commenter offered the inclusion of a beneficiary inducement waiver in the Guiding an Improved Dementia Experience (GUIDE) Model as an example.

Response: We thank the commenters for their recommendation to include a beneficiary inducement waiver for pre-

surgical home visits. We recognize the potential benefit to beneficiaries of environmental assessment and modification prior to surgery. However, we feel that this potential benefit must be balanced against the protection of beneficiary freedom of choice through the restriction of beneficiary inducements as defined in section 1128A(i)(6) of the Act. At this time and considering the clinical episodes proposed under TEAM and the precedents set in BPCI Advanced and CJR, we do not believe that the potential benefits of waiving beneficiary inducement rules outweigh the potential harms. We will monitor patient outcomes and PAC utilization throughout the model test and may consider additional waivers in future rulemaking.

Comment: Some commenters sought greater standardization of waivers and their requirements across models. A few commenters recommended that CMS establish a core standard set of waivers across all Medicare APMs. These commenters suggested that standardizing waiver offerings across models could ease administrative and compliance burdens and thereby motivate greater waiver utilization. A commenter recommended that CMS use the same guidelines for the SNF 3-day rule waiver under TEAM as are used in the corresponding waiver under MSSP, suggesting that consistent guidelines would benefit participants.

Response: We thank the commenters for their suggestions to establish a standard set of waivers across CMS APMs and to standardize waiver usage requirements across models. We recognize the administrative burden of billing for Medicare program waivers and the benefit of consistency for providers participating in multiple payment models either concurrently or successively. The proposed TEAM waivers of the SNF 3-day rule and the geographic site requirements and originating site requirements were included in the proposed rule with this consistency in mind. TEAM is designed to build upon progress made and lessons learned from BPCI Advanced and CJR in value-based care for Medicare beneficiaries undergoing surgery. We recognize that many TEAM participants will have experience coordinating and delivering care—including telehealth and SNF services—under these models. Thus, we proposed provisions for the applicable waivers in TEAM that we expect will be familiar to providers with experience in BPCI Advanced and/or CJR. Still, in recognition of the expected range of value-based care and APM experience

among TEAM participants and consistent with learning system offerings in BPCI Advanced and CJR, we plan to provide informational support to TEAM participants, including support geared toward new or less experienced participants, regarding model provisions such as Medicare policy waivers.

We also note that internal efforts at CMS are underway to identify, analyze, and compare Medicare payment policy waiver utilization across models. In line with the intention of offering such flexibilities to APM participants under section 1115A of the Act, we share the goal of facilitating providers' use of the proposed waivers to deliver efficient and high-quality care to beneficiaries. As stated in the proposed rule at 89 FR 36463, we will consider public comments on the proposed waivers and may make future proposals regarding program rule waivers during the course of the model test.

Comment: A few commenters requested that CMS further expand the waivers offered to TEAM participants in general.

Response: We thank the commenters for their suggestions. We plan to monitor utilization, spending, quality, and outcome trends throughout the model test and may consider additional waivers in future rulemaking.

Comment: A commenter suggested that we consider providing coverage for counseling services for patients and their families.

Response: We thank the commenter for the suggestion to cover counseling services for patients and their families. We direct the commenter's attention to the scope of included services under TEAM as defined in § 512.525(e) to include all Medicare Part A and B items and services except as excluded under § 512.525(f). Thus, Medicare Part B services included and covered in TEAM episodes would include certain counseling and mental health services, including family counseling if the main purpose is to help with the beneficiary's treatment.

We address the Medicare programmatic waivers we proposed in the proposed rule in the following sections. We decline at this time to waive any additional Medicare programmatic requirements. We will review the information provided by the commenters and our early model experience and may consider waiving additional requirements during the course of the model test.

Specific program rules for which we proposed waivers under TEAM to support provider and supplier efforts to increase quality and decrease episode spending and for which we invited

comments are included in the sections that follow. We proposed that these waivers of program rules would apply to the care of beneficiaries who are in episodes at the time when the waiver is used to bill for a service that is furnished to the beneficiary, even if the episode is later cancelled as described in section X.A.3.b.(5)(e) of the preamble of this final rule. Finally, we proposed that if a service is found to have been billed and paid by Medicare under circumstances only allowed by a program rule waiver for a beneficiary not in TEAM at the time the service was furnished, CMS would recover payment for that service from the provider or supplier who was paid, and require that provider and supplier to repay the beneficiary for any coinsurance previously collected.

(2) Post-Discharge Home Visits and Homebound Requirement

We expect that the broadly defined episodes with a duration of 30 days following an anchor hospitalization or anchor procedure discharge, as discussed in section X.A.3.b. of the preamble of this final rule, would result in TEAM participants redesigning care by increasing care coordination and management of beneficiaries following discharge from an anchor hospitalization or anchor procedure. This result would require TEAM participants to pay close attention to any underlying medical conditions that could be affected by the anchor hospitalization or anchor procedure and improving coordination of care across care settings and providers. Beneficiaries may have mobility limitations during certain episodes following discharge to their home or place of residence that may interfere with their ability to travel easily to physicians' offices or other health care settings. Increasing beneficiary adherence to and engagement with recommended treatment and follow-up care following discharge from the hospital or PAC setting would be important to high quality episode care. Evidence exists to support the use of home visits among Medicare beneficiaries in improving clinical outcomes and reducing readmissions following hospital discharge.^{1004 1005} In

¹⁰⁰⁴ Nabagiez, J.P., Shariff, M.A., Khan, M.A., Molloy, W.J., & McGinn, J.T. (2013). Physician assistant home visit program to reduce hospital readmissions. *The Journal of Thoracic and Cardiovascular Surgery*, 145(1), 225–233. <https://doi.org/10.1016/j.jtcvs.2012.09.047>.

¹⁰⁰⁵ Hall, M.L., Esposito, G., Pekmezaris, R., Lesser, M., Moravick, D., Jahn, L., Blendenman, R., Akerman, M., Nouryan, C., & Hartman, A.R. (2014). Cardiac surgery nurse practitioner home visits prevent coronary artery bypass graft readmissions.

addition, we believe the financial incentives in TEAM would encourage hospitals to closely examine the most appropriate PAC settings for beneficiaries, taking into consideration beneficiary choice and location of beneficiary home or place of residence, so that the clinically appropriate setting of the lowest acuity is recommended following discharge from the anchor hospitalization or anchor procedure. We expect that all these considerations would lead to greater interest on the part of hospitals and other providers and suppliers caring for TEAM beneficiaries in furnishing services to beneficiaries in their home or place of residence. Such services could include visits by licensed clinicians other than physicians and nonphysician practitioners.

In order for Medicare to pay for home health services, a beneficiary must be determined to be "home-bound" Specifically, sections 1835(a) and 1814(a) of the Act require that a physician certify (and recertify) that in the case of home health services under the Medicare home health benefit, such services are or were required because the individual is or was "confined to the home" and needs or needed skilled nursing care on an intermittent basis, or physical or speech therapy or has or had a continuing need for occupational therapy. A beneficiary is considered to be confined to the home if the beneficiary has a condition, due to an illness or injury, that restricts his or her ability to leave home except with the assistance of another individual or the aid of a supportive device (that is, crutches, a cane, a wheelchair or a walker) or if the beneficiary has a condition such that leaving his or her home is medically contraindicated. While a beneficiary does not have to be bedridden to be considered confined to the home, the condition of the beneficiary must be such that there exists a normal inability to leave home and leaving the home requires a considerable and taxing effort by the beneficiary. Absent this condition, it would be expected that the beneficiary could typically get the same services in an outpatient or other setting. Thus, the homebound requirement provides a way to help differentiate between patients that require medical care at home versus patients who could more appropriately receive care in a less costly outpatient setting. Additional information regarding the homebound requirement is available in the Medicare Benefit Manual (Pub 100–02); Chapter 7, "Home

The Annals of Thoracic Surgery, 97(5), 1488–1495. <https://doi.org/10.1016/j.athoracsur.2013.12.049>.

Health Services,” Section 30.1.1, “Patient Confined to the Home.”

We considered whether a waiver of the homebound requirement would be appropriate under TEAM. Waiving the homebound requirement would allow additional beneficiaries to receive home health care services in their home or place of residence. As previously discussed, physician certification that a beneficiary meets the homebound requirement is a prerequisite for Medicare coverage of home health services, and waiving the homebound requirement could result in lower episode spending in some instances. For example, if a beneficiary is allowed to have home health care visits, even if the beneficiary is not considered homebound, the beneficiary may avoid a hospital readmission. All other requirements for the Medicare home health benefit would remain unchanged. Thus, under such a waiver, only beneficiaries who otherwise meet all program requirements to receive home health services would be eligible for coverage of home health services without being homebound.

However, we did not propose to waive the homebound requirement under TEAM for several reasons. Based on the typical clinical course of beneficiaries after certain surgical procedures, we believe that many beneficiaries would meet the homebound requirement for home health services immediately following discharge from the anchor hospitalization or following discharge to their home or place of residence from a SNF that furnished PAC services immediately following the hospital discharge, so they could receive medically necessary home health services under existing program rules. Home health agencies (HHAs) are paid a national, standardized 30-day period payment rate if a period of care meets a certain threshold of home health visits. 30-day periods of care that do not meet the visit threshold are paid a per-visit payment rate for the discipline providing care. For those TEAM beneficiaries who could benefit from home visits by a licensed clinician for purposes of assessment and monitoring of their clinical condition, care coordination, and improving adherence with treatment but who are not homebound, we do not believe that paying for these visits as home health services under Medicare is necessary or appropriate, especially given that Medicare payments for home health services are set based on the clinical care furnished to beneficiaries who are truly homebound. Finally, in other CMS episode payment models, such as BPCI

Advanced and CJR, we have not waived the homebound requirement for home health services.

In the BPCI Advanced and CJR models, we have provided a waiver of the “incident to” rule to allow a physician or nonphysician practitioner participating in care redesign under a participating provider to bill for services furnished to a beneficiary who does not qualify for Medicare coverage of home health services as set forth under § 409.42 where the services are furnished in the beneficiary’s home during the episode after the beneficiary’s discharge from an acute care hospital. The “incident to” rule is set forth in § 410.26(b)(5), which requires services and supplies furnished incident to the service of a physician or other practitioner must be provided under the direct supervision (as defined at § 410.32(b)(3)(ii)) of a physician or other practitioner.

In the BPCI Advanced and CJR models, the waiver is available only for services that are furnished by licensed clinical staff under the general supervision (as defined at § 410.32(b)(3)(i)) of a physician (or other practitioner), or other qualified health care professional, and who are allowed by law, regulation, and facility policy to perform or assist in the performance of a specific professional service, but do not individually report that professional service. While the services may be furnished by licensed clinical staff, they must be billed by the physician (or other practitioner) or participant to which the supervising physician has reassigned their billing rights in accordance with CMS instructions using a Healthcare Common Procedures Coding System (HCPCS) G-code created by CMS specifically for the BPCI Advanced or CJR model. In the case of the incident to waiver under BPCI Advanced, the waiver allows physician and nonphysician practitioners to furnish the services up to 13 home visits during each 90-day clinical episode. In the case of the incident to waiver under CJR, the waiver allows physician and nonphysician practitioners to furnish the services up to 9 home visits during each 90-day clinical episode. All other Medicare coverage and payment criteria must be met for both BPCI Advanced and CJR models.

We considered waiving the “incident to” rule set forth in § 410.26(b)(5) for TEAM, similar to the BPCI Advanced and CJR models, however, we reviewed this specific waiver utilization and found that there was very low uptake in these models. While waiving the “incident to” rule set forth in § 410.26(b)(5) could be beneficial in

furnishing services to beneficiaries in their home or place of residence, we believe there has been a greater shift towards telemedicine as a modality for post-discharge follow-up, especially after the COVID-19 public health emergency which drove greater adoption and standard practice of telehealth services. Evidence suggests that telemedicine post-discharge visits were effective, safe, and did not negatively affect health care utilization as compared to in-person visits.^{1006 1007} For these reasons, we did not propose to waive the “incident to” rule set forth in § 410.26(b)(5) for TEAM, but we sought comment if we should waive the “incident to” rule set forth in § 410.26(b)(5), if we should consider modifications or alternatives to this waiver, and how we could make this waiver beneficial to TEAM participants and beneficiaries.

The following is a summary of the public comments we received on the homebound requirement, the “incident to” rule, and other provisions related to the home health waivers that we considered, and our responses to those comments:

Comment: Some commenters requested that we waive the Medicare requirement that beneficiaries must be homebound in order for Medicare to cover home health services. Some of the commenters cited the experiences of ACOs which have been permitted to provide home health services covered by Medicare to beneficiaries who do not meet the homebound requirements, suggesting that these home visits can benefit patients beyond those that are homebound.

Response: We thank the commenters for their requests. We acknowledge the potential benefits of home health services for some patients who are not homebound. However, we believe that it is necessary to consider these potential benefits in light of clinical expectations and existing payment structures as described in the proposed rule at 89 FR 36464. First, we expect that the typical clinical course of beneficiaries after certain surgical procedures will result in many TEAM beneficiaries meeting the homebound requirement immediately following hospital discharge. Second,

¹⁰⁰⁶ Harkey, K., Kaiser, N., Zhao, J., Gutnik, B., Kelz, R.R., Matthews, B.D., & Reinke, C.E. (2023). Utilization of telemedicine to provide post-discharge care: A comparison of pre-pandemic vs. pandemic care. *The American Journal of Surgery*, 226(2), 163–169. <https://doi.org/10.1016/j.amjsurg.2023.03.007>.

¹⁰⁰⁷ Grauer, A., Cornelius, T., Abdalla, M., Moise, N., Kronish, I.M., & Ye, S. (2023). Impact of early telemedicine follow-up on 30-Day hospital readmissions. *PLOS ONE*, 18(5), e0282081. <https://doi.org/10.1371/journal.pone.0282081>.

we recognize that home health agencies (HHAs) are paid for their services based on standardized rates—either per 30-day period or per visit depending on volume—which are calculated based on care provided to patients who are homebound. Thus, we do not feel it is necessary or appropriate for Medicare to pay for home health services for TEAM beneficiaries who are not homebound. We will monitor utilization and payment trends throughout the model test and may consider additional home health waivers in future rulemaking.

Comment: Many commenters requested that we provide a post-discharge home visit waiver that would waive the direct supervision requirement for “incident to” services as defined in § 410.26(b)(5), thereby permitting the provision of home health services to TEAM beneficiaries by a wider range of health care professionals. Many commenters specifically requested that we provide these flexibilities through a Post-Discharge Home Visits waiver as offered in BPCI Advanced. Some commenters cited the Care Management Home Visit waiver offered in the Next Generation ACO Model. A commenter further requested that any potential home health waivers include coverage of home health services delivered electronically or in a community setting outside of a patient’s home. A commenter cited a shift from institutional to home-based PAC services as a motivating factor in increasing home health care access.

Response: We thank the commenters for their recommendations and acknowledge the additional care management flexibility afforded to providers through a waiver of the direct supervision requirement for “incident to” services. However, we are not convinced that there is a need for such a waiver in TEAM. As discussed in the preamble of the proposed rule at 89 FR 36465, a review of “incident to” waiver utilization in BPCI Advanced and CJR—the most direct precedents for TEAM—indicated very low uptake of this waiver in these models. Further, while we acknowledge a shift from institutional to home-based PAC, we also recognize a shift toward telemedicine and away from home health for post-discharge follow-up and acknowledge evidence that telemedicine post-discharge visits were effective, safe, and did not negatively affect health care utilization compared to in-person visits, as cited in the preamble of the proposed rule at 89 FR 36465. We thus maintain that there is not sufficient evidence to suggest the necessity of a post-discharge home visit or “incident to” waiver in TEAM. However, we will monitor post-

discharge care utilization and outcomes throughout the model test and may consider such a waiver in future rulemaking.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to maintain the existing Medicare requirements for home health services, including the requirement that the beneficiary be homebound, when home health services are furnished to TEAM beneficiaries.

(3) Telehealth

As discussed in the previous section, we expect that the proposed TEAM design features would lead to greater interest on the part of hospitals and other providers and suppliers caring for TEAM beneficiaries in furnishing services to beneficiaries in their home or place of residence, including physicians’ professional services. TEAM would create new incentives for comprehensive episode care management for beneficiaries, including early identification and intervention regarding changes in health status following discharge from the anchor hospitalization or anchor procedures. Given that we are not waiving the “incident to” rule set forth in § 410.26(b)(5) for TEAM, we understand that TEAM participants may still want to engage physicians in furnishing timely visits to homebound or non-homebound TEAM beneficiaries in their homes or places of residence to address concerning symptoms or observations raised by beneficiaries themselves, clinicians furnishing home health services, or licensed clinicians furnishing post-discharge home visits, while physicians committed to TEAM care redesign may not be able to revise their practice patterns to meet this home visit need for TEAM beneficiaries.

Under section 1834(m) of the Act, Medicare pays for telehealth services furnished by a physician or practitioner under certain conditions even though the physician or practitioner is not in the same location as the beneficiary. The telehealth services must be furnished to a beneficiary located in one of the eight types of originating sites specified in section 1834(m)(4)(C)(ii) of the Act and the site must satisfy at least one of the requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act. Generally, for Medicare payment to be made for telehealth services under the Medicare Physician Fee Schedule several conditions must be met, as set forth under § 410.78(b). Specifically, the service must be on the Medicare list of telehealth services and meet all of the

following other requirements for payment:

- The service must be furnished via an interactive telecommunications system.
- The service must be furnished to an eligible telehealth individual.
- The individual receiving the services must be in an eligible originating site.

When all of these conditions are met, Medicare pays a facility fee to the originating site and provides separate payment to the distant site practitioner for the service. Section 1834(m)(4)(F)(i) of the Act defines Medicare telehealth services to include professional consultations, office visits, office psychiatry services, and any additional service specified by the Secretary, when furnished via a telecommunications system. For the list of approved Medicare telehealth services, see the CMS website at <https://www.cms.gov/medicare/coverage/telehealth/list-services>. Under section 1834(m)(4)(F)(ii) of the Act, CMS has an annual process to consider additions to and deletions from the list of telehealth services. We do not include any services as telehealth services when Medicare does not otherwise make a separate payment for them.

Some literature suggests the benefits of telehealth technologies that enable health care providers to deliver care to patients in locations remote from providers are being increasingly used to complement face-to-face patient-provider encounters to increase access to care, especially in rural or underserved areas.¹⁰⁰⁸ In these cases, the use of remote access technologies may improve the accessibility and timeliness of needed care, increase communication between providers and patients, enhance care coordination, and improve the efficiency of care. We note that certain professional services that are commonly furnished remotely using telecommunications technology are paid under the same conditions as in-person physicians’ services, and thus do not require a waiver to be considered as telehealth services. Such services that do not require the patient to be present in person with the practitioner when they are furnished are covered and paid in the same way as services delivered without the use of telecommunications technology when the practitioner is in person at the medical facility furnishing care to the patient.

In other CMS episode-based payment models, such as the BPCI Advanced and

¹⁰⁰⁸ Gajarawala, S.N., & Pelkowski, J.N. (2021). Telehealth benefits and barriers. The Journal for Nurse Practitioners, 17(2), 218–221. <https://doi.org/10.1016/j.nurpra.2020.09.013>.

CJR models, participants were permitted to use telehealth waivers that applied to two provisions:

- CMS waived the geographic site requirements under 1834(m)(4)(C)(i)(I) through (III) of the Act which allowed telehealth services to be furnished to eligible telehealth individuals when they are located at one of the eight originating sites at the time the service is furnished via a telecommunications system but without regard to the site meeting one of the geographic site requirements.

- CMS waived the originating site requirements under section 1834(m)(4)(C)(ii)(I) through (VIII) of the Act which allowed the eligible telehealth individual to not be in an originating site when the otherwise eligible individual is receiving telehealth services in their home or place of residence.

These telehealth waivers allowed providers and suppliers furnishing services to model beneficiaries to utilize telemedicine for beneficiaries that are not classified as rural and allowed the greatest degree of efficiency and communication between providers and suppliers and beneficiaries by allowing beneficiaries to receive telehealth services at their home or place of residence. We believe similar telehealth waivers would be essential to maximize the opportunity to improve the quality of care and efficiency for episodes of care in TEAM.

Specifically, like the telehealth waivers in the BPCI Advanced and CJR models, we proposed to waive the geographic site requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act that limit telehealth payment to services furnished within specific types of geographic areas or in an entity participating in a federal telemedicine demonstration project approved as of December 31, 2000. Waiver of this requirement would allow beneficiaries located in any region to receive services related to the episode to be furnished via telehealth, as long as all other Medicare requirements for telehealth services are met. Any service on the list of Medicare approved telehealth services and reported on a claim that is not excluded from the proposed episode definition (see section X.A.3.b. of the

preamble of this final rule) could be furnished to a TEAM beneficiary, regardless of the beneficiary's geographic location. Under TEAM, this waiver would support care coordination and increasing timely access to high quality care for all TEAM beneficiaries, regardless of geography. Additionally, we proposed for TEAM waiving the originating site requirements of section 1834(m)(4)(C)(ii)(I)–(VIII) of the Act that specify the particular sites at which the eligible telehealth individual must be located at the time the service is furnished via a telecommunications system. Specifically, we proposed to waive the requirement only when telehealth services are being furnished in the TEAM beneficiary's home or place of residence during the episode. Any service on the list of Medicare approved telehealth services that is not excluded from the proposed episode definition (see section X.A.3.b.(5)(a) of the preamble of this final rule) could be furnished to a TEAM beneficiary in their home or place of residence, unless the service's HCPCS code descriptor precludes delivering the service in the home or place of residence. For example, subsequent hospital care services could not be furnished to beneficiaries in their home since those beneficiaries would not be inpatients of the hospital.

The existing set of codes used to report evaluation and management (E/M) visits are extensively categorized and defined by the setting of the service, and the codes describe the services furnished when both the patient and the practitioner are located in that setting. Section 1834(m) of the Act provides for particular conditions under which Medicare can make payment for office visits when a patient is located in a health care setting (the originating sites authorized by statute) and the eligible practitioner is located elsewhere. However, we do not believe that the kinds of E/M services furnished to patients outside of health care settings via real-time, interactive communication technology are accurately described by any existing E/M codes. This would include circumstances when the patient is located in his or her home and the location of the practitioner is

unspecified. In order to create a mechanism to report E/M services accurately, the BPCI Advanced and CJR models created specific sets of HCPCS G-codes to describe the E/M services furnished to the model beneficiaries in their homes via telehealth. Similarly for TEAM, we proposed to create a specific set of nine HCPCS G-codes to describe the E/M services furnished to TEAM beneficiaries in their homes via telehealth. If the proposed TEAM is finalized, we would specify the precise G-code created for TEAM and share them to TEAM participants prior to the first performance year.

Among the existing E/M visit services, we envision these services would be most similar to those described by the office and other outpatient E/M codes. Therefore, we proposed to structure the new codes similarly to the office/outpatient E/M codes but adjusted to reflect the location as the beneficiary's residence and the virtual presence of the practitioner. Specifically, we proposed to create a parallel structure and set of descriptors currently used to report office or other outpatient E/M services, see Table X.A.–15, for CPT codes 99201 through 99205 for new patient visits and CPT codes 99212 through 99215 for established patient visits. For example, the proposed G-code for a level 3 E/M visit for an established patient would be a telehealth visit for the evaluation and management of an established patient in the patient's home, which requires at least 2 of the following 3 key components:

- An expanded problem focused history;
- An expanded problem focused examination;
- Medical decision making of low complexity.

Counseling and coordination of care with other physicians, other qualified health care professionals or agencies are provided consistent with the nature of the problem(s) and the patient's or family's needs or both. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent with the patient or family or both via real-time, audio and video intercommunications technology.

TABLE X.A.-15: PROPOSED TEAM TELEHEALTH WAIVER G-CODE CROSSWALK

TEAM G-Code (Used for illustrative purposes. Specific G-codes- will be created if TEAM is finalized)	Short Descriptor	Corresponding Office/Outpatient E/M CPT Code
GXX01	Remote E/M new pt 10mins	99201
GXX02	Remote E/M new pt 20mins	99202
GXX03	Remote E/M new pt 30 mins	99203
GXX04	Remote E/M new pt 45mins	99204
GXX05	Remote E/M new pt 60mins	99205
GXX12	Remote E/M est. pt 10mins	99212
GXX13	Remote E/M est. pt 15mins	99213
GXX14	Remote E/M est. pt 25mins	99214
GXX15	Remote E/M est. pt 40mins	99215

We note that we did not propose a G-code to parallel the level 1 office/outpatient visit for an established patient, since that service does not require the presence of the physician or other qualified health professional.

We proposed to develop payment rates for these new telehealth G-codes for E/M services in the patient's home that are similar to the payment rates for the office/outpatient E/M services, since the codes will describe the work involved in furnishing similar services. Therefore, we proposed to include the resource costs typically incurred when services are furnished via telehealth. In terms of the relative resource costs involved in furnishing these services, we believe that the efficiencies of virtual presentation generally limit resource costs other than those related to the professional time, intensity, and malpractice risk to marginal levels. Therefore, we proposed to adopt work and malpractice (MP) RVUs associated with the corresponding level of office/outpatient codes as the typical service because the practitioner's time and intensity and malpractice liabilities when conducting a visit via telehealth are comparable to the office visit. We would include final RVUs under the CY 2026 Medicare Physician Fee Schedule for PY 1. Additionally, we proposed to update these values each performance year to correspond to final values established under the Medicare Physician Fee Schedule.

We considered whether each level of visit typically would warrant support by auxiliary licensed clinical staff within the context of TEAM. The cost of such staff and any associated supplies, for example, would be incorporated in the practice expense (PE) RVUs under the PFS. For the lower-level visits, levels 1 through 3 for new and 2 and 3 for established visits, we did not believe that the visit would necessarily require auxiliary medical staff to be available in the patient's home. We anticipated these lower-level visits would be the most

commonly furnished and would serve as a mechanism for the patient to consult quickly with a practitioner for concerns that can be easily described and explained by the patient. We did not propose to include PE RVUs for these services, since we do not believe that virtual visits envisioned for this model typically incur the kinds of costs included in the PE RVUs under the Medicare Physician Fee Schedule. For higher level visits, we typically would anticipate some amount of support from auxiliary clinical staff. For example, wound examination and minor wound debridement would be considered included in an E/M visit and would require licensed clinical staff to be present in the beneficiary's home during the telehealth visit in order for the complete service to be furnished. We believed it would be rare for a practitioner to conduct as complex and detailed a service as a level 4 or 5 E/M home visit via telehealth for TEAM beneficiaries in episodes without licensed clinical staff support in the home.

We have considered support by auxiliary clinical staff to be typical for level 4 or 5 E/M visits furnished to TEAM beneficiaries in the home via telehealth, however, we did not propose to incorporate these costs through PE RVUs. Given the anticipated complexity of these visits, we would expect to observe level 4 and 5 E/M visits to be reported on the same claim with the same date of service as a home visit or during a period of authorized home health care. If neither of these occurs, we proposed to require the physician to document in the medical record that auxiliary licensed clinical staff were available on site in the patient's home during the visit and if they were not, to document the reason that such a high-level visit would not require such personnel.

We noted that because the services described by the proposed G-codes, by definition, are furnished remotely using

telecommunications technology, they therefore are paid under the same conditions as in-person physicians' services, and they do not require a waiver to the requirements of section 1834(m) of the Act. We also noted that because these home telehealth services are E/M services, all other coverage and payment rules regarding E/M services would continue to apply.

Under TEAM, this proposal to waive the originating site requirements and create new home visit telehealth HCPCS codes would support the greatest efficiency and timely communication between providers and beneficiaries by allowing beneficiaries to receive telehealth services at their places of residence.

With respect to home health services paid under the home health prospective payment system (HH PPS), we emphasized that telehealth visits under this model cannot substitute for in-person home health visits per section 1895(e)(1)(A) of the Act. Furthermore, telehealth services by social workers cannot be furnished for TEAM beneficiaries who are in a home health episode because medical social services are included as home health services per section 1861(m) of the Act and paid for under the Medicare HH PPS. However, telehealth services permitted under section 1834 of the Act and furnished by physicians or other practitioners, specifically physician assistants, nurse practitioners, clinical nurse specialists, certified nurse midwives, nurse anesthetists, psychologists, and dietitians, can be furnished for TEAM beneficiaries who are in a home health episode. Finally, sections 1835(a) and 1814(a) of the Act require that the patient has a face-to-face encounter with the certifying physician or an allowed nonphysician practitioner (NPP) working in collaboration with or under the supervision of the certifying physician before the certifying physician certifies that the patient is eligible for home health services. Under

§ 424.22(a)(1)(v), the face-to-face encounter can be performed up to 90 days prior to the start of home health care or within 30 days after the start of home health care. Section 424.22(a)(1)(v)(A) also allows a physician, with privileges, who cared for the patient in an acute or PAC setting (from which the patient was directly admitted to home health) or an allowed NPP working in collaboration with or under the supervision of the acute or PAC physician to conduct the face-to-face encounter.

Although sections 1835(a) and 1814(a) of the Act allow the face-to-face encounter to be performed via telehealth, we did not propose that the waiver of the telehealth geographic site requirement for telehealth services and the originating site requirement for telehealth services furnished in the TEAM beneficiary's home or place of residence would apply to the face-to-face encounter required as part of the home health certification when that encounter is furnished via telehealth. In other words, when a face-to-face encounter furnished via telehealth is used to meet the requirement for home health certification, the usual Medicare telehealth rules apply with respect to geography and eligibility of the originating site. We expect that this policy would not limit TEAM beneficiaries' access to medically necessary home health services because beneficiaries receiving home health services during an episode will have had a face-to-face encounter with either the physician or an allowed NPP during their anchor hospitalization or a physician or allowed NPP during a post-acute facility stay prior to discharge directly to home health services.

Under the proposed waiver of the geographic site requirement and originating site requirement, all telehealth services would be required to be furnished in accordance with all Medicare coverage and payment criteria, and no additional payment would be made to cover set-up costs, technology purchases, training and education, or other related costs. The facility fee paid by Medicare to an originating site for a telehealth service would be waived if there is no facility as an originating site (that is, the service was originated in the beneficiary's home). Finally, providers and suppliers furnishing a telehealth service to a TEAM beneficiary in his or her home or place of residence during the episode would not be permitted to bill for telehealth services that were not fully furnished when an inability to provide the intended telehealth service is due to technical issues with telecommunications equipment

required for that service. Beneficiaries would be able to receive services furnished pursuant to the telehealth waivers only during the episode.

We plan to monitor patterns of utilization of telehealth services under TEAM to monitor for overutilization or reductions in medically necessary care, and significant reductions in face-to-face visits with physicians and NPPs. We plan to specifically monitor the distribution of new telehealth home visits that we are proposing, as we anticipate greater use of lower-level visits. Given our concern that auxiliary licensed clinical staff be present for level 4 and 5 visits, we will monitor our proposed requirement that these visits be billed on the same claim with the same date of service as a home nursing visit, during a period authorized home health care, or that the physician document the presence of auxiliary licensed clinical staff in the home or an explanation as to the specific circumstances precluding the need for auxiliary staff for the specific visit. We sought comments on the proposed waivers with respect to telehealth services, and the proposed creation of the home visit telehealth codes.

The following is a summary of the public comments we received on the proposed telehealth waivers and creation of home visit telehealth codes and our responses to those comments:

Comment: Many commenters expressed support for the proposed telehealth waivers. Some of these commenters indicated that these waivers would facilitate care coordination, improve access to services, and promote equity. A couple commenters lauded the consistency of these waivers with those offered under BPCI Advanced. A few commenters expressed specific support for the proposed waiver of the originating site requirements. A commenter expressed specific support for the proposed waiver of the geographic site requirements.

Response: We thank the commenters for their support and concur that the proposed waivers can improve care access and equity, facilitate care coordination, and provide continuity for providers with experience utilizing waivers in BPCI Advanced.

Comment: A commenter requested that CMS make the proposed telehealth waivers available for all TEAM procedures, as in CJR and BPCI Advanced.

Response: We thank the commenter for this recommendation. We would like to note that the usage of the proposed telehealth waivers under TEAM, pursuant to the requirements outlined

in § 512.580, is not restricted to certain TEAM clinical episodes.

Comment: A commenter suggested that we add a waiver permitting the delivery of physical therapist services via telehealth, noting the importance of initiating physical therapy soon after surgery. The commenter suggested that such a waiver could benefit individuals facing delays in care by allowing for the timely initiation of physical therapy following discharge.

Response: We thank the commenter for their suggestion and acknowledge the importance of physical therapy for many beneficiaries following a surgical procedure. We will take this recommendation into consideration and may propose such a waiver in future rulemaking if we believe it would improve beneficiary care and further the goals of the model.

Comment: A couple commenters provided input on the proposed creation of the home visit telehealth codes.

A commenter expressed support for the proposal to create new telehealth G-codes and HCPCS codes and corresponding payment rates for home health, indicating that telehealth can increase access to post-surgical care, particularly for patients facing barriers to access. This commenter further suggested that we permanently extend the new payment rates for these telehealth services beyond TEAM.

A commenter opposed the proposal to create new telehealth codes and lower payment rates for home health services in TEAM. This commenter indicated that the existing telehealth visit codes developed by the Current Procedural Terminology (CPT®) Editorial Panel should be available for use by all physicians.

Response: We thank the commenters for their responses regarding the proposed creation of TEAM-specific telehealth G-codes. As stated in the proposed rule at 89 FR 36466, we recognize that the existing set of codes for evaluation and management (E/M) visits are categorized and defined by the setting of service and describe services provided when both the patient and the practitioner are located in that setting. As a result, and with consideration of the comments received, we continue to believe that the kinds of E/M services furnished to patients outside of health care settings via real-time, interactive communication technology are not accurately described by any existing E/M codes. Further, we note that the creation of model-specific telehealth G-codes for BPCI Advanced and CJR provide precedent for the establishment of such codes for TEAM.

Comment: A couple commenters suggested that we apply the proposed telehealth waivers to all Medicare Fee-for-Service (FFS) beneficiaries with billing codes that could trigger a TEAM episode at participating hospitals. One of the commenters indicated that waivers are often underutilized due to concerns that a patient may not qualify as a model beneficiary.

Response: We thank the commenters for their suggestion and recognize the potential challenges that TEAM participants may face in identifying beneficiaries who will trigger a TEAM episode. We believe that certain provisions already included in the proposed rule will mitigate these concerns for participants. Regarding the telehealth waivers, we note that covered telehealth services would be provided after discharge from the anchor stay or completion of the anchor procedure, and correspondingly expect that providers would have a working knowledge of their patients' TEAM beneficiary status as part of their care coordination. As a result, and in further acknowledgement of the administrative challenge that would be imposed on CMS to track TEAM beneficiary status in real time, we do not believe it is necessary or appropriate to automatically apply the telehealth waivers to all FFS beneficiaries that could trigger a TEAM episode at a participating hospital.

After consideration of the comments received, we are finalizing at § 512.580(a) the waivers pertaining to telehealth services as proposed. We are also finalizing at § 512.580(a)(3)(ii) the creation of telehealth home visit HCPCS codes as proposed.

(4) SNF 3-Day Rule

Pursuant to section 1861(i) of the Act, a beneficiary must have a prior inpatient hospital stays of no fewer than 3 consecutive days to be eligible for Medicare coverage of inpatient SNF care. We refer to this as the SNF 3-day rule. We noted that the SNF 3-day rule has been waived for Medicare SNF coverage under other episode payment models, including the BPCI Advanced the CJR models. Model participants that elect to use the waiver can discharge model beneficiaries in fewer than 3 days from an anchor hospital stay or anchor procedure (in the case of the CJR model) to a SNF, where services are covered under Medicare Part A if all other coverage requirements for such services are satisfied.

Episode-based payment models like BPCI Advanced and CJR have the potential to mitigate the existing incentives under the Medicare program

to overuse SNF benefits for beneficiaries, as well as to furnish many fragmented services that do not reflect significant coordinated attention to and management of complications following hospital discharge. These model participants considering the early discharge of a beneficiary pursuant to the waiver must evaluate whether early discharge to a SNF is clinically appropriate and SNF services are medically necessary. Next, they must balance that determination and the potential benefits to the hospital in the form of internal cost savings due to greater financial efficiency with the understanding that a subsequent hospital readmission, attributable to premature discharge or low quality SNF care, could substantially increase episode spending while also resulting in poorer quality of care for the beneficiary. Furthermore, early hospital discharge for a beneficiary who would otherwise not require a SNF stay (that is, the beneficiary has no identified skilled nursing or rehabilitation need that cannot be provided on an outpatient basis) following a hospital stay of typical length does not improve episode efficiency.

Because of the potential benefits we see for TEAM participants, their provider partners, and beneficiaries, we proposed to waive the SNF 3-day rule for coverage of a SNF stay following the anchor hospitalization or anchor procedure under TEAM. We proposed to use our authority under section 1115A of the Act with respect to certain SNFs that furnish Medicare Part A post-hospital extended care services to beneficiaries included in an episode in TEAM. We believe this waiver is necessary to the model test so that TEAM participants can redesign care throughout the episode continuum of care extending to 30 days post-discharge from the anchor hospital stay or anchor procedure to maximize quality and hospital financial efficiency, as well as reduce episode spending under Medicare. All other Medicare rules for coverage and payment of Part A-covered SNF services would continue to apply to TEAM beneficiaries in all performance years of the model. Further, to ensure protection to TEAM beneficiary safety and optimize health outcomes, we proposed to require that TEAM participants may only discharge a TEAM beneficiary under this proposed waiver of the SNF 3-day rule to a SNF rated an overall of three stars or better by CMS based on information publicly available at the time of hospital discharge from an anchor hospital stay or anchor procedure. Problem areas due

to early hospital discharge may not be discovered through model monitoring and evaluation activities until well after the episode has concluded, and the potential for later negative findings alone may not afford sufficient beneficiary protections. CMS created a Five-Star Quality Rating System for SNFs to allow SNFs to be compared more easily and to help identify areas of concerning SNF performance. The Nursing Home Compare website gives each SNF an overall rating of between 1 and 5 stars.¹⁰⁰⁹ Those SNFs with 5 stars are considered to have much above average quality, and SNFs with 1 star are considered to have quality much below average. Published SNF ratings include distinct ratings of health inspection, staffing, and quality measures, with ratings for each of the three sources combined to calculate an overall rating. These areas of assessment are all relevant to the quality of SNF care following discharge from the anchor hospitalization or anchor procedure initiating an episode, especially if that discharge occurs after fewer than 3 days in the hospital. Because of the potential greater risks following early inpatient hospital discharge, we believe it is appropriate that all TEAM beneficiaries discharged from the TEAM participant to a SNF in fewer than 3 days be admitted to a SNF that has demonstrated that it can provide quality care to patients with significant unresolved post-surgical symptoms and problems. We believe such a SNF would need to provide care of at least average overall quality, which would be represented by an overall SNF 3-star or better rating.

Thus, the TEAM participant must discharge the beneficiary to a SNF that is qualified under the SNF 3-day rule waiver. We proposed that to be qualified under the SNF 3-day rule waiver a SNF must be included in the most recent calendar year quarter Five-Star Quality Rating System listing for SNFs on the Nursing Home Compare website for the date of the beneficiary's admission to the SNF. The qualified SNF must be rated an overall 3 stars or better for at least 7 of the 12 months based on a review of the most recent rolling 12 months of overall star ratings. We proposed to post on the CMS website the list of qualified SNFs in advance of the calendar quarter.

We recognized that there may be instances where a TEAM participant would like to use the SNF 3-day rule waiver, but the TEAM beneficiary receives inpatient PAC through swing

¹⁰⁰⁹ <https://www.medicare.gov/care-compare/?redirect=true&providerType=NursingHome>.

bed arrangements in a hospital or Critical Access Hospital (CAH), as designated in § 485.606 of this chapter, which is not subject to the Five-Star Quality Rating System. For example, a TEAM beneficiary located in a rural area may wish to receive PAC care closer to their home but there are no qualified SNFs in their area. Allowing TEAM participants to use the SNF 3-day rule waiver for hospitals and CAHs operating under swing bed agreements may support beneficiary freedom of choice and provide greater flexibility to TEAM participants for their care coordination efforts. This approach is consistent with the Shared Savings Program, which offers a similar SNF 3-day rule waiver and allows their ACOs to partner with hospitals and CAHs to with swing bed arrangements to utilize the waiver. Therefore, we sought comment on whether we should allow TEAM participants to use hospitals and CAHs operating under swing bed agreements for the SNF 3-day rule waiver and what beneficiary protections we should include since the Five-Star Quality Rating System would not apply.

The following is a summary of the public comments we received on the possibility of including swing bed arrangements under the SNF 3-day rule waiver and our responses to these comments:

Comment: A commenter recommended that we allow TEAM participants to use the SNF 3-day rule waiver for Critical Access Hospitals (CAHs) providing post-acute care (PAC) under swing bed arrangements. The commenter indicated that including swing beds under the SNF 3-day rule waiver would increase access to PAC services for beneficiaries in rural areas or areas with health care shortages.

Response: We thank the commenter for the recommendation. We would like to clarify that the option of including swing beds under the SNF 3-day rule waiver for TEAM participants was considered but not proposed in the proposed rule. While we agree that including swing bed arrangements under the SNF 3-day rule waiver could promote freedom of choice and PAC access for beneficiaries in areas with limited SNF options, we remain concerned about the lack of a standard and comprehensive quality assessment metric for hospitals and CAHs operating under swing bed arrangements, which are not subject to the Five-Star Quality Rating System. As stated in the preamble of the proposed rule at 89 FR 36468–9, we recognize that greater risks may be present for patients following early inpatient hospital discharge. The proposed SNF quality rating

requirement for use of the SNF 3-day rule waiver offers an additional level of protection to beneficiaries following an early discharge by ensuring that all TEAM beneficiaries discharged to a SNF after a hospital stay of fewer than 3 days are admitted to a SNF that has demonstrated that it can provide quality care to patients with significant unresolved post-surgical symptoms and problems. At this time, we do not feel that an appropriate corresponding metric is in place for swing bed arrangements. However, we will continue to monitor SNF utilization throughout the model and may seek additional comment and consider alterations to the SNF 3-day rule waiver requirements in future rulemaking.

After consideration of the comments received, and as discussed further below, we are finalizing at § 512.580(b) the waiver of the SNF 3-day rule as proposed, including the provisions for determining qualified SNFs as proposed at § 512.580(b)(3), and without inclusion of swing bed arrangements.

We plan to monitor patterns of SNF utilization under the TEAM, particularly with respect to hospital discharge in fewer than 3 days to a SNF, to ensure that beneficiaries are not being discharged prematurely to SNFs and that they are able to exercise their freedom of choice without patient steering. We sought comment on our proposal to waive the SNF 3-day stay rule for stays in SNFs rated overall as 3 stars or better following discharge from the anchor hospitalization or anchor procedures for episodes in TEAM.

The following is a summary of the public comments we received on the proposal to waive the SNF 3-day rule for stays in SNFs rated overall as 3 stars or better and our responses to these comments:

Comment: Many commenters expressed support for the proposed SNF 3-day rule waiver. Some of these commenters indicated that this waiver would facilitate care coordination, improve access to services, and promote equity. A couple commenters lauded the consistency of this waiver with that offered under BPCI Advanced.

Response: We thank the commenters for their support and concur that the proposed waiver can improve care access and equity, facilitate care coordination, and provide continuity for providers with experience utilizing the SNF 3-day rule waiver in BPCI Advanced.

Comment: A couple commenters suggested that we apply the proposed SNF 3-day rule waiver to all Medicare Fee-for-Service (FFS) beneficiaries with billing codes that could trigger a TEAM

episode at participating hospitals. A commenter indicated that waivers are often underutilized due to concerns that a patient may not qualify as a model beneficiary.

Response: We thank the commenters for their suggestion and recognize the potential challenges that TEAM participants may face in identifying beneficiaries who will trigger a TEAM episode. We believe that certain provisions already included in the proposed rule will mitigate these concerns for participants. Regarding the SNF 3-day rule waiver, we note in § 512.580(b)(1)–(2) that CMS determines eligibility for the SNF 3-day rule waiver based on TEAM beneficiary status on the date of discharge from the anchor hospitalization or the date of service of the anchor procedure, as applicable. As a result, and in further acknowledgement of the administrative challenge that would be imposed on CMS to track TEAM beneficiary status in real time, we do not believe it is necessary or appropriate to automatically apply the SNF 3-day rule waiver to all FFS beneficiaries that could trigger a TEAM episode at a participating hospital.

Comment: A commenter expressed support for the proposal to restrict usage of the SNF 3-day rule waiver to stays in SNFs that meet the three-star quality rating requirement.

Response: We thank the commenter for their support.

Comment: A commenter requested that CMS make the proposed SNF 3-day rule waiver available for all TEAM procedures, as in CJR and BPCI Advanced.

Response: We thank the commenter for this recommendation. We would like to note that the usage of the SNF 3-day rule waiver under TEAM, pursuant to the requirements outlined in § 512.580, is not restricted to certain TEAM clinical episodes.

After consideration of the comments received, we are finalizing at § 512.580(b) the waiver of the SNF 3-day rule as proposed.

(a) Additional Beneficiary Protections Under the SNF 3-Day Rule Waiver

We believed that it will be necessary to propose beneficiary protections against financial liability in addition to the beneficiary protections discussed elsewhere in this proposed rule. Specifically, we believed it is important to discern whether a waiver applies to SNF services furnished to a particular beneficiary to ensure compliance with the conditions of the waiver and improve our ability to monitor waivers for misuse.

In considering additional beneficiary protections that may be necessary to ensure proper use of SNF 3-day rule waiver under the TEAM, we noted that there are existing, well-established payment and coverage policies for SNF services based on sections 1861(i), 1862(a)(1), and 1879 of the Act that include protections for beneficiaries from liability for certain non-covered SNF charges. These existing payment and coverage policies for SNF services continue to apply under TEAM, including SNF services furnished pursuant to the SNF 3-day rule waiver. (For example, see section 70 in the Medicare Claims Processing Manual, Chapter 30—Financial Liability Protections on the CMS website at <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c30.pdf>; and Medicare Coverage of Skilled Nursing Facility Care <https://www.medicare.gov/coverage/skilled-nursing-facility-snf-care>; Medicare Benefit Policy Manual, Chapter 8—Coverage of Extended Care (SNF) Services Under Hospital Insurance at <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c08pdf.pdf>). In general, CMS requires that the SNF inform a beneficiary in writing about services and fees before the beneficiary is discharged to the SNF (§ 483.10(b)(6)); the beneficiary cannot be charged by the SNF for items or services that were not requested (§ 483.10(c)(8)(iii)(A)); a beneficiary cannot be required to request extra services as a condition of continued stay (§ 483.10(c)(8)(iii)(B)); and the SNF must inform a beneficiary that requests an item or service for which a charge will be made that there will be a charge for the item or service and what the charge will be (§ 483.10(c)(8)(iii)(C)). (See also section 6 of Medicare Coverage of Skilled Nursing Facility Care at <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c06.pdf>.)

As we discussed in the CJR final rule (80 FR 73454 through 73460), commenters expressed concern regarding the lag between a CJR beneficiary's Medicare coverage or eligibility status change and a TEAM participant's awareness of that change. There may be cases in which a SNF 3-day rule waiver is used by a TEAM participant because the TEAM participant believes that the beneficiary meets the inclusion criteria, based on the information available to the hospital and SNF at the time of the beneficiary's admission to the SNF, but in fact the beneficiary's Medicare coverage has

changed and the hospital was unaware of it based on available information. We recognize that despite good faith efforts by TEAM participants and SNFs to determine a beneficiary's Medicare status for the model, it may occur that a beneficiary is not eligible to be included in the TEAM at the time the SNF 3-day rule waiver is used. In these cases, we will cover services furnished under the waiver when the information available to the provider at the time the services under the waiver were furnished indicated that the beneficiary was included in the model.

Based on our experience with the SNF 3-day rule waiver, including the CJR model, we believed there are situations where it would be appropriate to require additional beneficiary financial protections under the SNF 3-day rule waiver for the TEAM. Specifically, we were concerned about potential beneficiary financial liability for non-covered Part A SNF services that might be directly related to use of the SNF 3-day rule waiver under the TEAM. We were concerned that there could be scenarios where a beneficiary could be charged for non-covered SNF services that were a result of a TEAM participant's inappropriate use of the SNF 3-day rule waiver. Specifically, we were concerned that a beneficiary could be charged for non-covered SNF services if a TEAM participant discharges a beneficiary to a SNF that does not meet the quality requirement (3 stars or higher in 7 of the last 12 months), and payment for SNF services is denied for lack of a qualifying inpatient hospital stay. We recognized that requiring a discharge planning notice would help mitigate concerns about beneficiaries' potential financial liability for non-covered services. Nevertheless, we were concerned that in this scenario, once the claim is rejected, the beneficiary may not be protected from financial liability under existing Medicare rules because the waiver would not be available, and the beneficiary would not have had a qualifying inpatient hospital stay. Thus, the TEAM beneficiary could be charged by the SNF for non-covered SNF services that were a result of an inappropriate attempt to use the waiver. In this scenario, Medicare would deny payment of the SNF claim, and the beneficiary could potentially be charged by the SNF for these non-covered SNF services, potentially subjecting such beneficiaries to significant financial liability. In this circumstance, we assume the TEAM participant's intent was to rely upon the SNF 3-day rule waiver, but the waiver requirements

were not met. We believe that in this scenario, the rejection of the claim could easily have been avoided if the hospital had confirmed that the requirements for use of the SNF 3-day rule waiver were satisfied or if the beneficiary had been provided the discharge planning notice and elected to go to a SNF that met the quality requirement.

The CJR model (82 FR 180) addressed beneficiary liability financial concerns for non-covered SNF services related to the waiver by generally placing the risk on the participant hospital and we believe it is appropriate to propose a similar policy for TEAM. CJR participant hospitals are generally held financially responsible for misusing the waiver in situations where waiver requirements are not met, because participant hospitals are required to be aware of the SNF 3-day rule waiver requirements. Participant hospitals are the entities financially responsible for episode spending under the model and will make the decision as to whether it is appropriate to discharge a beneficiary without a 3-day stay. In addition, the requirements for use of the SNF waiver are clearly laid out in the CJR final rule (80 FR 73273). CMS posts on the public website a list of qualifying SNFs (those with a 3-star or higher rating for 7 of the last 12 months). CJR participant hospitals are required to consult the published list of SNFs prior to utilizing the SNF 3-day rule waiver.

For participant hospitals that provide a beneficiary with the discharge planning notice, the hospital would not have financial liability for non-covered SNF services that result from inapplicability of the waiver. In other words, when the participant hospital has discharged a beneficiary to a SNF that does not qualify under the conditions of the waiver, and has not provided the required discharge planning notice so that the beneficiary is aware that he or she is accepting financial liability for non-covered SNF services as a result of not having a qualifying inpatient stay, the ultimate responsibility and financial liability for the non-covered SNF stay rests with the participant hospital. For this reason, we proposed to align with the CJR model policy and require TEAM participants to keep a record of discharge planning notice distribution to TEAM beneficiaries. We will monitor TEAM participants' use of discharge planning notices to assess the potential for their misuse.

To protect TEAM beneficiaries from being charged for non-covered SNF charges in instances when the waiver was used inappropriately, and similar to

the CJR model (82 FR 180), we proposed to add certain beneficiary protection requirements that would apply for SNF services that would otherwise have been covered except for lack of a qualifying hospital stay. Specifically, we proposed that if a TEAM participant discharges a beneficiary without a qualifying 3-day inpatient stay to a SNF that is not on the published list of SNFs that meet the TEAM SNF 3-day rule waiver quality requirements as of the date of admission to the SNF, the TEAM participant will be financially liable for the SNF stay if no discharge planning notice is provided to the beneficiary, alerting them of potential financial liability. If the TEAM participant provides a discharge planning notice, then the TEAM participant will not be financially liable for the cost of the SNF stay and the normal Medicare FFS rules for coverage of SNF services will apply. In cases where the TEAM participant provides a discharge planning notice and the beneficiary chooses to obtain care from a non-qualified SNF without a qualifying inpatient stay, the beneficiary assumes financial liability for services furnished (except those that are covered by Medicare Part B during a non-covered inpatient SNF stay).

In the event a TEAM beneficiary is discharged to a SNF without a qualifying 3-day inpatient stay, but the SNF is not on the qualified list as of the date of admission to the SNF, and the TEAM participant has failed to provide a discharge planning notice, we proposed that CMS apply the following rules:

- CMS shall make no payment to the SNF for such services.
- The SNF shall not charge the beneficiary for the expenses incurred for such services; and the SNF shall return to the beneficiary any monies collected for such services.
- The hospital shall be responsible for the cost of the uncovered SNF stay.

We sought comment on these proposals. Specifically, we sought comment on whether it is reasonable to—(1) cover services furnished under the SNF waiver based on TEAM participant knowledge of beneficiary eligibility for the TEAM as determined by Medicare coverage status at the time the services under the waiver were furnished; and (2) to hold the TEAM participant financially responsible for rejected SNF claims if a TEAM beneficiary is discharged to a SNF without a qualifying 3-day inpatient stay, but the SNF is not on the qualified list as of the date of admission to the SNF, and the TEAM participant has failed to provide a discharge planning notice. Finally, we sought comment on

any other related issues that we should consider in connection with these proposals to protect beneficiaries from significant financial liability for non-covered SNF services related to the waiver of the SNF 3-day rule under the proposed TEAM. We may address those issues through future notice and comment rulemaking.

The following is a summary of the public comments we received on beneficiary protection considerations in connection with the proposed waiver of the SNF 3-day rule and our responses to these comments:

Comment: A commenter expressed support for the proposal to waive responsibility for denied claims relying on the SNF 3-day rule waiver in instances where the participant would have no way of knowing that a patient would not ultimately be assigned as a TEAM beneficiary. The commenter indicated that this provision would encourage use of the waiver by ensuring coverage of SNF stays even if a patient is later excluded from the model.

Response: We thank the commenter for their support and concur that the provision to determine SNF 3-day rule waiver coverage based on TEAM beneficiary status at the time of discharge, as described in § 512.580(b), provides protection from unforeseen beneficiary ineligibility.

Comment: A commenter inquired whether it would be permissible to provide patients with a list of SNFs only including those with a quality rating of at least 3 stars, citing the 3-star requirement for coverage under the SNF 3-day rule waiver.

Response: We thank the commenter for their inquiry and suggestion. We appreciate the need to simultaneously maintain freedom of choice and protection for beneficiaries discharged to a SNF. We note that the TEAM waiver of the SNF 3-day rule represents an extension of existing PAC options covered by Medicare for TEAM beneficiaries deemed medically appropriate for discharge to a SNF after an inpatient hospital stay of less than 3 days. Medicare will continue to cover SNF stays for TEAM beneficiaries discharged to a SNF after an inpatient hospital stay of 3 days or more under existing Medicare rules, which do not include a star rating requirement.

As stated in the proposed rule, we recognize that the waiver of the SNF 3-day rule has the potential to introduce additional risk to beneficiaries through early hospital discharge. While model monitoring and evaluation activities may detect negative outcomes resulting from this risk, such results are likely to be known only after the end of the

episode. The CMS Five-Star Quality Rating System for SNFs provides an additional means of beneficiary protection through the comparison and identification of SNFs based on quality of care. As stated in the proposed rule at 89 FR 36469, we believe it is appropriate that all TEAM beneficiaries discharged from the TEAM participant to a SNF in fewer than 3 days be admitted to a SNF that has demonstrated that it can provide quality care to patients with significant unresolved post-surgical symptoms and problems. As stated in § 512.582(b).(2).(iv).(E), as part of discharge planning and referral, TEAM participants must provide a complete list of HHAs, SNFs, IRFs, or LTCHs that are participating in the Medicare program, and that serve the geographic area (as defined by the HHA) in which the patient resides, or in the case of a SNF, IRF, or LTCH, in the geographic area requested by the patient. We provide in § 512.582(a)(3)(iii) that TEAM participants may recommend preferred providers and suppliers, consistent with applicable statutes and regulations. We believe that this provision would permit TEAM participants to recommend SNF providers that meet the 3-star waiver use requirement, of which we propose to provide a list on a quarterly basis. We also note that participants are required to provide a discharge planning notice which would notify beneficiaries who are being discharged to SNF after less than 3 days in the hospital that they would not receive Medicare coverage for their stay at a SNF that does not meet the 3-star requirement for waiver usage. We expect that this would disincentivize beneficiaries in this situation from choosing non-covered SNFs. We believe that the combination of permitting participants to recommend preferred SNFs and notifying beneficiaries that stays at SNFs that do not meet the 3-star waiver use requirement would not be covered by Medicare provides sufficient means to meet the beneficiary protection goal of the 3-star provision while maintaining freedom of choice.

Comment: A commenter recommended additional provisions in response to the concern that beneficiaries could be charged for SNF services that do not meet the requirements for coverage under the SNF 3-day rule waiver. The commenter recommended that we institute a SNF affiliate agreement and that we include a beneficiary notice that TEAM participants would not be responsible for SNF stays that do not meet the

quality rating requirement for use of the SNF 3-day rule waiver.

Response: We thank the commenter for their suggestions and concur that it is necessary to provide beneficiary protections surrounding coverage for SNF services under the SNF 3-day rule waiver. Regarding beneficiary notice, we note that a TEAM participant would be required in § 512.580(b)(3) to provide a discharge planning notice which, per § 512.580(b)(3)(ii), must include notification that the beneficiary would be responsible for payment for services rendered during a SNF stay that would not be covered by Medicare Part B due to not meeting the SNF 3-day rule waiver requirements outlined in § 512.580. Regarding agreements between TEAM participants and SNFs, we note that TEAM participants would be able to enter into financial arrangements with TEAM collaborators pursuant to the requirements defined in § 512.565. In light of these provisions and the expected administrative burden associated with a separate SNF affiliate agreement, we do not believe it is necessary to institute such an agreement at this time. We will continue to monitor SNF utilization during the model test and may consider alterations to the SNF 3-day rule waiver provisions in future rulemaking.

After consideration of the comments received, we are finalizing at § 512.580(b) all provisions regarding the SNF 3-day rule waiver as proposed, including the financial liability provisions as proposed at § 512.580(b)(5).

i. Monitoring and Beneficiary Protection

(1) Overview

We proposed TEAM as we believe it is an opportunity to improve the quality of care and that the policies of the model support making care more easily accessible to consumers when and where they need it, increasing consumer engagement and thereby informing consumer choices. For example, under this model we proposed certain waivers which would offer TEAM participants additional flexibilities with respect to furnishing telehealth services and care in SNFs, as discussed in section X.A.3.h. of the preamble of this final rule. We believe that this model will improve beneficiary access and outcomes. Conversely, we do note that these same opportunities could be used to try to steer beneficiaries into lower cost services without an appropriate emphasis on maintaining or increasing quality. We direct readers to section X.A.3.d.(5) of the preamble of this final rule for discussion of the methodology

for calculating the reconciliation payment amount or repayment amount under this model. We believe that existing Medicare provisions can be effective in protecting beneficiary freedom of choice and access to appropriate care under TEAM. However, because TEAM is designed to promote care delivery efficiencies for episodes, providers may seek greater control over the continuum of care and, in some cases, could attempt to direct beneficiaries into care pathways that save money at the expense of beneficiary choice or even beneficiary outcomes. As such, we acknowledge that some additional safeguards may be necessary under TEAM for program integrity purposes as providers are simultaneously seeking opportunities to decrease costs and utilization. We believe that it is important to consider any possibility of adverse consequences to patients and to ensure that sufficient controls are in place to protect Medicare beneficiaries in episodes under TEAM.

(2) Beneficiary Choice and Notification

Because we have proposed that hospitals in selected geographic areas would be required to participate in the model, individual beneficiaries would not be able to opt out of TEAM when they receive care from a TEAM participant in the model. We do not believe that it is consistent with other Medicare programs to allow patients to opt out of a payment system that is unique to a particular geographic area. For example, the state of Maryland has a unique payment system under Medicare, but that payment system does not create an alternative care delivery system, and we do not expect it in any way to impact beneficiary decisions. Moreover, we do not believe that an ability to opt out of a payment system is a critical factor in upholding beneficiary choice if other safeguards are in place given that this model does not increase beneficiary cost-sharing. However, a beneficiary is not precluded from seeking care from providers or suppliers who do not participate in TEAM. We do believe that full notification and disclosure of the payment model and its possible implications is critical for beneficiary understanding and protection. It is important to create safeguards for beneficiaries to ensure that care recommendations are based on clinical needs and not inappropriate cost savings. It is also important for beneficiaries to know that they can raise any concerns with their clinicians, with 1-800-Medicare, or with their local Quality Improvement Organizations (QIOs).

In the proposed rule we stated that TEAM would not limit a beneficiary's ability to choose among Medicare providers or limit Medicare's coverage of items and services available to the beneficiary. Beneficiaries may continue to choose any Medicare participating provider, or any provider who has opted out of Medicare, with the same costs, copayments and responsibilities as they have with other Medicare services. The model would allow TEAM participants to enter into TEAM sharing arrangements, as discussed in section X.A.3.g.(4) of the preamble of this final rule, with certain providers and these preferred providers may be recommended to beneficiaries as long as those recommendations are made within the constraints of current law. However, TEAM participants may not limit beneficiaries to a preferred or recommended providers list that is not compliant with restrictions existing under current statutes and regulations.

Moreover, we indicated in the proposed rule that TEAM participants may not charge any TEAM collaborator, as discussed in section X.A.3.g.(3) of the preamble of this final rule, a fee to be included on any list of preferred providers or suppliers, nor may the hospital accept such payments, which would be considered to be outside the realm of risk-sharing agreements. Thus, TEAM does not create any restriction of beneficiary freedom to choose providers, including surgeons, hospitals, post-acute care or any other providers or suppliers. Moreover, as TEAM participants redesign care pathways, it may be difficult for providers to sort individuals based on health care insurance and to treat them differently. We anticipate that care pathway redesign occurring in response to the model will increase coordination of care, improve the quality of care, and decrease costs for all patients, not just for Medicare beneficiaries. We anticipate this broader care delivery impact to all patients may further promote consistent treatment of all beneficiaries.

In the proposed rule we stated we believe that beneficiary notification and engagement is essential because there will be a change in the way participating hospitals are paid. We believe that appropriate beneficiary notification should explain the model, advise patients of both their clinical needs and their care delivery choices, and should clearly specify any providers, suppliers, and ACOs holding a sharing arrangement with the TEAM participant should be identified to the beneficiary as a "financial partner of the hospital for the purposes of

participation in TEAM.” These policies seek to enhance beneficiaries’ understanding of their care, improve their ability to share in the decision-making, and ensure that they have the opportunity to consider competing benefits even as they are presented with cost-saving recommendations. We believe that appropriate beneficiary notification should do all of the following:

- Explain the model and how it will or will not impact the beneficiary’s care.
- Inform patients that they retain freedom of choice to choose providers and services.
- Explain how patients can access care records and claims data through an available patient portal and through sharing access to caregivers to their Blue Button® electronic health information.
- Explain that TEAM participants may receive beneficiary-identifiable claims data.
- Advise patients that all standard Medicare beneficiary protections remain in place, including the ability to report concerns of substandard care to QIOs and 1–800–MEDICARE.
- Provide a list of the providers, suppliers, and ACOs with whom the TEAM participant has a sharing arrangement. We recognize an exhaustive list of providers, suppliers, and ACOs may lengthen the beneficiary notification unnecessarily, therefore this requirement may be fulfilled by the TEAM participant including in the beneficiary notification a web address where beneficiaries may access the list.

After carefully considering the appropriate timing and circumstances for the necessary beneficiary notification, we proposed at (89 FR 36472) that TEAM participants must require all ACOs, providers, and suppliers who execute a Sharing Arrangement with a TEAM participant to share beneficiary notification materials, to be developed or approved by CMS, that detail this proposed payment model with the beneficiary prior to discharge from the anchor hospitalization or prior to discharge from the anchor procedure for a Medicare FFS patient who would be included under the model. TEAM participants must require this notification as a condition of any Sharing Arrangement. Where a TEAM participant does not have Sharing Arrangements with providers or suppliers that furnish services to beneficiaries during an episode, or where the anchor hospitalization or anchor procedure for a Medicare FFS patient who would be included under the model was ordered by a physician who does not have a Sharing

Arrangement, the beneficiary notification materials must be provided to the beneficiary by the TEAM participant. We indicated in the proposed rule that the purpose of this policy is to ensure that all TEAM beneficiaries receive the beneficiary notification materials, and that they receive such materials as early as possible but no later than discharge from the hospital or hospital outpatient department. We believe that this proposal targets beneficiaries for whom information is relevant and increases the likelihood that patients will become engaged and seek to understand the model and its potential impact on their care.

In addition, we proposed at § 512.582(b)(2) that TEAM participants must require every TEAM collaborator to provide written notice, to be developed by CMS, to applicable TEAM beneficiaries of the existence of its sharing arrangement with the TEAM participant and the basic quality and payment incentives under the model. We proposed that the notice must be provided no later than the time at which the beneficiary first receives an item or service from the TEAM collaborator during an episode. We recognize that due to the patient’s condition, it may not be feasible to provide notification at such time, in which case the notification must be provided to the beneficiary or his or her representative as soon as is reasonably practicable. We note that beneficiaries are accustomed to receiving similar notices of rights and obligations from healthcare providers prior to the start of inpatient care. However, we also considered that this information might be best provided by hospitals at the point of admission for all beneficiaries, as hospitals provide other information concerning patient rights and responsibilities at that time. We invited comment on ways in which the timing and source of beneficiary notification could best serve the needs of beneficiaries without creating unnecessary administrative work for providers and suppliers. We believe that this notification is an important safeguard to help ensure that beneficiaries in the model receive all medically necessary services, but it is also an important clinical opportunity to better engage beneficiaries in defining their goals and preferences as they share in the planning of their own care.

The following is a summary of comments we received on the proposed beneficiary notification and beneficiary protections (89 FR 36471) in the proposed model:

Comment: We received a number of comments supporting our proposals to

require notification of beneficiaries about their inclusion in a TEAM episode, and the sharing arrangements between TEAM participants and their collaborators, including our proposed timing for notification. Additionally, a commenter supported the idea that patients should be fully informed about TEAM and should be able to be active participants in their treatment decisions.

Response: We thank the commenters for their support and note that CMS will continue to strive for transparency in care delivery within TEAM.

Comment: Several commenters expressed concern with our proposed beneficiary notification policies. Some commenters stated CMS should take responsibility for the distribution of this letter. Other commenters felt the burden of this letter would be too high and should not be required. Commenters also made suggestions such as including the notification letter in other CMS materials such as the *Medicare & You* handbook, *Welcome to Medicare* packet or the Medicare Beneficiary Manual. Commenters also expressed that timing of the beneficiary notification letter is important and should be distributed at the time services are provided and as early as possible.

Response: We acknowledge the need to streamline the beneficiary notification process to mitigate administrative burdens for participating hospitals. Additionally, we understand the importance of providing information to beneficiaries about their care in clear, plain language. We are committed to ensuring that notifications are concise and easily understandable, as well as detail the model’s goals, structure, and potential impacts on care delivery and access. With regard to inclusion of the beneficiary notification information in other Medicare publications, we believe this would create confusion for beneficiaries, since not all beneficiaries who access or read those documents will be included in TEAM episodes. We also think it would not accomplish our goal of ensuring that TEAM participants directly provide notice to beneficiaries about their participation (and beneficiaries’ inclusion) in the model. Finally, we also note that the proposed beneficiary notification letter would allow providers the ability to translate the notification letter into needed languages for their hospital population.

Comment: A commenter stated concern with the timing for beneficiary notifications, noting that current requirements that notifications be made prior to discharge from the anchor hospitalization, or prior to discharge from the anchor procedure, may inform

beneficiaries too late for post-discharge planning. The commenter recommended notifications be made at the first encounter regardless of episode initiation.

Response: We appreciate the feedback regarding the timing of beneficiary notifications. Though the notification isn't required until discharge, we do expect discharge care to be coordinated prior to that time. CMS will review the suggestion to require notifications at the first encounter to better inform beneficiaries ahead of surgical decisions and we will take it into consideration in future rulemaking.

Comment: Several commenters provided general input on the proposed beneficiary protections under the model. A commenter recommended considering a longer lookback period than 90 days, such as 180 days or one year, in order to allow for an extended period to monitor changes in utilization and access to care. Additionally, a commenter suggested strengthening the model's emphasis on delivering high-quality care, and through monitoring, ensuring that cost-savings do not come at the expense of care delivery. Commenters urged CMS to design TEAM to reward primary care physicians for supporting optimal, long-term health outcomes. Furthermore, several commenters suggested that care under TEAM be person-centered, incorporating the beneficiary perspective, including recommendations such as patient-reported quality measures related to shared decision-making, developing a patient ombudsman role or contracting with patient navigators, and ensuring that community and beneficiary perspectives are included in the participant selection and evaluation processes.

Response: We thank the commenters for their suggestions and dedication to ensuring beneficiary protections for TEAM are in place. We will take this information under consideration when monitoring TEAM participants for potential compliance and access issues. We also refer readers to sections X.A.3.1 and X.A.3.c of this final rule, where we finalize proposals to encourage TEAM participants to connect beneficiaries to primary care and include a patient-reported outcome measure for one of the episode categories in TEAM.

After consideration of the public comments we received, we are finalizing as proposed our proposals for beneficiary freedom of choice at § 512.582(a), TEAM participant beneficiary notification at § 512.582(b)(1) and TEAM collaborator notice at § 512.582(b)(2).

(3) Monitoring for Access to Care

In the proposed rule we stated that since TEAM participants would receive a reconciliation payment when they are able to meet certain cost and quality performance thresholds, they could have an incentive to avoid complex, high-cost cases by referring them to nearby facilities or specialty referral centers. We intend to monitor the claims data from TEAM participants—for example, to compare a hospital's case mix relative to a pre-model historical baseline—to determine whether complex patients are potentially being systematically excluded. We indicated in the proposed rule that we will publish these data as part of the model evaluation to promote transparency and an understanding of the model's effects. We also proposed to continue to review and audit hospitals if we have reason to believe that they are compromising beneficiary access to care. For example, we may audit a hospital or conduct additional claims analyses where initial claims analysis indicates an unusual pattern of referral to regional hospitals located outside of the model catchment area or a clinically unexplained increase or decrease in surgical rates for procedures included in TEAM. We sought comment at (89 FR 36472) on our proposals to monitor TEAM participants.

The following is a summary of comments we received on the proposed monitoring for access to care:

Comment: A commenter supported the proposal to monitor inappropriate care patterns in TEAM.

Response: We thank the commenter for their support of our proposed monitoring and compliance of the model.

Comment: Several commenters referenced situations where monitoring will be especially important for TEAM. Some commenters are concerned that patients treated by TEAM participants should have access to the full range of treatment options necessary for their medical conditions, which are critical to the health and well-being of Medicare beneficiaries. Specifically, these commenters were concerned that TEAM participants might limit patient choice during the 30-day post-discharge period, potentially diverting patients away from essential post-acute services, and disregarding existing patient-physician relationships or avoiding specialist referrals that may be necessary. Additionally, commenters were concerned that participants might favor lower-cost, lower-utility devices over higher-cost technologies that are more appropriate for certain conditions,

thereby compromising the quality of care for patients with more intensive or costly needs. A commenter also emphasized timeliness with regard to monitoring, to ensure CMS is able to quickly address any adverse effects discovered through monitoring activities.

Response: We appreciate the commenters' concerns and are committed to monitoring for, and promptly addressing, any potential negative impacts identified through ongoing monitoring. As proposed, we will compare hospitals' case mixes to historical baselines to detect potential exclusion of complex patients and publish these findings for transparency. We will also review and audit hospitals to uncover any signs of compromised beneficiary access, such as unusual referral patterns or unexplained changes in surgical rates.

After consideration of the public comments we received, we are finalizing as proposed our proposals for monitoring for access to care at § 512.584.

(4) Monitoring for Quality of Care

In the proposed rule we noted that in any payment system that promotes efficiencies of care delivery, there may be opportunities to direct patients away from more expensive services at the expense of outcomes and quality. We believe that professionalism, the quality measures in the model, and clinical standards can be effective in preventing beneficiaries from being denied medically necessary care in the inpatient setting, outpatient setting, and in post-acute care settings during the 30 days post-discharge. Accordingly, we believe that the potential for the denial of medically necessary care within TEAM will not be greater than that which currently exists under IPPS. However, we also believe that we have the authority and responsibility to audit the medical records and claims of participating hospitals and their TEAM collaborators in order to ensure that beneficiaries receive medically necessary services. Similarly, at § 512.590, we proposed to monitor arrangements between TEAM participants and their TEAM collaborators to ensure that such arrangements do not result in the denial of medically necessary care, or other program or patient abuse. We invited public comment on these proposals and on whether there are elements of TEAM that would require additional beneficiary protection for the appropriate delivery of inpatient care, and if so, what types of monitoring or safeguards would be most appropriate.

We stated in the proposed rule that we believe that these safeguards are all enhanced by beneficiary knowledge and engagement. Therefore, we proposed at § 512.582(a)(3) to require that TEAM participants must, as part of discharge planning, account for potential financial bias by providing TEAM beneficiaries with a complete list of all available post-acute care options in the Medicare program, including HHAs, SNFs, IRFs, or LTCHs, in the service area consistent with medical need, including beneficiary cost-sharing and quality information (where available and when applicable). This list should also indicate whether the TEAM participant has a sharing arrangement with the post-acute care provider. We expect that the treating surgeons or other treating practitioners, as applicable, will continue to identify and discuss all medically appropriate options with the beneficiary, and that hospitals will discuss the various facilities and providers who are available to meet the clinically identified needs. These proposed requirements for TEAM participants would supplement the existing discharge planning requirements under the hospital Conditions of Participation. We also specifically note that neither the Conditions of Participation nor this proposed transparency requirement preclude hospitals from recommending preferred providers within the constraints created by current law, as coordination of care and optimization of care are important factors for successful participation in this model. We invited comment on this proposal, including additional opportunities to ensure high quality care.

We received no comments on these proposals and are finalizing as proposed our proposals on monitoring for quality of care at § 512.582 and § 512.590.

(5) Monitoring for Delayed Care

We stated in the proposed rule that we believe TEAM would incentivize TEAM participants to create efficiencies in the delivery of care within a 30-day episode following an acute clinical event. Theoretically, TEAM also could create incentives for TEAM participants or their TEAM collaborators to delay services until after such 30-day window has closed. Consistent with the CJR model, we believe that existing Medicare safeguards are sufficient to protect beneficiaries in TEAM.

We indicated in the proposed rule that our experience with other episode-based payment models, such as the BPCI Advanced model, has shown that providers focus first on appropriate care and then on efficiencies only as

obtainable in the setting of appropriate care. We believe that a 30-day post-discharge episode is sufficient to minimize the risk that TEAM participants and their TEAM collaborators would compromise services furnished in relation to a beneficiary's care. While we recognize that ongoing care for underlying conditions may be required after the 30-day episode, we believe that TEAM participants and other providers and suppliers would be unlikely to postpone key services beyond a 30-day period because the consequences of delaying care beyond such episode duration would be contrary to usual standards of care.

However, we also note in the proposed rule that additional monitoring would occur as a function of the proposed TEAM. As with the CJR model, we proposed as part of the reconciliation process (see section X.A.3.d.(5)(i) of the preamble of this final rule) that TEAM participants would be financially accountable for certain post-episode payments occurring in the 30 days after conclusion of the episode. We believe that including such a payment adjustment would create an additional deterrent to delaying care beyond the episode duration. In addition, we believe the data collection and calculations used to determine such adjustment would provide a mechanism to check whether providers are inappropriately delaying care. Finally, we noted in the proposed rule that the proposed quality measures create additional safeguards as such measures are used to monitor and influence clinical care at the institutional level.

We invited public comment on our proposed requirements for notification of beneficiaries and our proposed methods for monitoring participants' actions and ensuring compliance as well as on other methods to ensure that beneficiaries receive high quality, clinically appropriate care.

We received no comments on these proposals and are finalizing as proposed the proposals on monitoring for delayed care at § 512.582 and § 512.590.

j. Access to Records and Record Retention

In the proposed rule we stated that by virtue of their participation in an CMS Innovation Center model, TEAM participants and TEAM collaborators may receive model-specific payments, access to payment rule waivers, or some other model-specific flexibility (89 FR 36473). Therefore, we believe that CMS's ability to audit, inspect, investigate, and evaluate records and other materials related to participation

in CMS Innovation Center models is necessary and appropriate. There is a need for CMS to be able to audit, inspect, investigate, and evaluate records and materials related to participation in CMS Innovation Center models to allow us to ensure that TEAM participants are not denying or limiting the coverage or provision of benefits for beneficiaries as part of their participation in the CMS Innovation Center model. We proposed at § 512.505 to define "model-specific payment" to mean a payment made by CMS only to TEAM participants, under the terms of the CMS Innovation Center model that is not applicable to any other providers or suppliers; the term "model-specific payment" would include, unless otherwise specified, the reconciliation payment, described in section X.A.3.d.(5)(j) of the preamble of this final rule.

We noted in the proposed rule that there are audit and record retention requirements under the Medicare Shared Savings Program (42 CFR 425.314) and in current models being tested under section 1115A (such as under 42 CFR 510.110 for the CMS Innovation Center's Comprehensive Care for Joint Replacement Model) (89 FR 36473). Building off those existing requirements, we proposed in § 512.135(a), that the Federal Government, including, but not limited to, CMS, HHS, and the Comptroller General, or their designees, would have a right to audit, inspect, investigate, and evaluate any documents and other evidence regarding implementation of a CMS Innovation Center model. Additionally, in order to align with the policy of current models being tested by the CMS Innovation Center, we proposed that the TEAM participant and its TEAM collaborators must maintain and give the Federal Government, including, but not limited to, CMS, HHS, and the Comptroller General, or their designees, access to all documents (including books, contracts, and records) and other evidence sufficient to enable the audit, evaluation, inspection, or investigation of the CMS Innovation Center model, including, without limitation, documents and other evidence regarding all of the following:

- Compliance by the TEAM participant and its TEAM collaborators with the terms of the CMS Innovation Center model, including proposed new subpart A of proposed part 512.
- The accuracy of model-specific payments made under the CMS Innovation Center model.
- The TEAM participant's payment of amounts owed to CMS, or payment

adjustments, under the CMS Innovation Center model.

- Quality measure information and the quality of services performed under the terms of the CMS Innovation Center model, including proposed new subpart A of proposed part 512.

- Utilization of items and services furnished under the CMS Innovation Center model.

- The ability of the TEAM participant to bear the risk of potential losses and to repay any losses through claims adjustments to CMS, as applicable.

- Patient safety under TEAM.

- Any other program integrity issues.

We proposed that TEAM participants must maintain the documents and other evidence for a period of 6 years from the last payment determination for the TEAM participant under the CMS Innovation Center model or from the date of completion of any audit, evaluation, inspection, or investigation, whichever is later, unless—

- CMS determines there is a special need to retain a particular record or group of records for a longer period and notifies the TEAM participant at least 30 days before the normal disposition date; or

- There has been a termination, dispute, or allegation of fraud or similar fault against the TEAM participant in which case the records must be maintained for an additional 6 years from the date of any resulting final resolution of the termination, dispute, or allegation of fraud or similar fault.

We stated in the proposed rule that if CMS notifies the TEAM participant of a special need to retain a record or group of records at least 30 days before the normal disposition date, we proposed that the records must be maintained for such period of time determined by CMS (89 FR 36473). We also proposed that, if CMS notifies the TEAM participant of a special need to retain records or there has been a termination, dispute, or allegation of fraud or similar fault against the TEAM participant or its TEAM collaborators, the TEAM participant must notify its TEAM collaborators of the need to retain records for the additional period specified by CMS. This provision will ensure that that the government has access to the records. To avoid any confusion or disputes regarding the timelines outlined in this section of this final rule, we proposed to define the term “days” to mean calendar days.

We stated in the proposed rule that historically, the CMS Innovation Center has required participants in section 1115A models to retain records for at least 10 years, which is consistent with the outer limit of the statute of

limitations for the Federal False Claims Act and is consistent with the Shared Savings Program’s policy outlined at 42 CFR 425.314(b)(2) (89 FR 36474). For this reason, we solicited public comments on whether we should require hospital participants and TEAM collaborators to maintain records for less than 10 years.

We invited public comment on these proposed provisions described at § 512.586 regarding audits and record retention.

The following is a summary of comments we received on these proposed provisions regarding audits and record retention.

Comment: A commenter expressed support for the proposed requirements regarding Access and Record Retention for TEAM Participants and TEAM collaborators.

Response: CMS thanks the commentator for their support of the proposed requirement.

After consideration of the public comments we received, we are finalizing these proposed provisions described at § 512.586 regarding audits and record retention. Additionally, we recognize the overlap between model-specific payment and TEAM payment definitions, and therefore to minimize confusion, we are finalizing only the definition of TEAM payment at § 512.505 and not model-specific payment.

k. Data Sharing

(1) Overview

As discussed in the proposed rule at 89 FR 36384 and 89 FR 36419, we aim to incentivize TEAM participants to engage in care redesign efforts to improve quality of care and reduce Medicare FFS spending for beneficiaries included in the model during the anchor hospitalization or anchor procedure and the 30 days post-discharge from the hospital or hospital outpatient department. These care redesign efforts would require TEAM participants to work with and coordinate care with other health care providers and suppliers to improve the quality and efficiency of care for Medicare beneficiaries.

We have experience with a range of efforts designed to improve care coordination for Medicare beneficiaries, including the BPCI Advanced and CJR models, both of which make certain Medicare data available to participants to better enable them to achieve their goals. For example, both the BPCI Advanced and CJR participants may request to receive beneficiary-identifiable claims data and financial

performance data from the baseline period and throughout their tenure in the model to help them better understand the FFS beneficiaries that are receiving services from their providers and help them improve quality of care and conduct care coordination and other care redesign activities to improve patient outcomes or reduce health care for beneficiaries that could have initiated an episode in the model.

Based on our experience with these efforts, as discussed later in this section, we proposed to make certain beneficiary-identifiable claims data and regional aggregate data available to participants in TEAM regarding Medicare FFS beneficiaries who may initiate an episode and be attributed to them in the model. However, we also stated that we expect that TEAM participants are able to, or will work toward, independently identifying and producing their own data, through electronic health records, health information exchanges, or other means that they believe are necessary to best evaluate the health needs of their patients, improve health outcomes, and produce efficiencies in the provision and use of services.

(2) Beneficiary-Identifiable Claims Data

(a) Legal Authority To Share Beneficiary-Identifiable Data

We believe that TEAM participants may need access to certain Medicare beneficiary-identifiable data for the purposes of evaluating their performance, conducting quality assessment and improvement activities, conducting population-based activities relating to improving health or reducing health care costs, or conducting other health care operations listed in the first or second paragraph of the definition of “health care operations” under the HIPAA Privacy Rule, 45 CFR 164.501. We recognize that there are issues and sensitivities surrounding the disclosure of beneficiary-identifiable health information, and that several laws place constraints on sharing individually identifiable health information. For example, section 1106 of the Act generally bars the disclosure of information collected under the Act without consent unless a law (statute or regulation) permits the disclosure. Here, the HIPAA Privacy Rule would allow for the proposed disclosure of individually identifiable health information by CMS. In the proposed rule, we proposed to make TEAM participants accountable for quality and cost outcomes for TEAM beneficiaries during an anchor hospitalization or

anchor procedure and during the 30-day post-discharge period. We stated in the proposed rule that we believe that it is necessary for the purposes of this model to offer TEAM participants the ability to request summary or raw beneficiary-identifiable claims data for a 3-year baseline period as well as on a monthly basis during the performance year to help TEAM participants engage in care coordination and quality improvement activities for TEAM beneficiaries in an episode. For the 3-year baseline period, TEAM participants would only receive beneficiary-identifiable claims data for beneficiaries that initiated an episode in their hospital or hospital outpatient department in the 3-year baseline period, and the beneficiary-identifiable claims data shared with the TEAM participant would be limited to the items and services included in the episode. In other words, the TEAM participant would not receive beneficiary-identifiable claims data for beneficiaries that were admitted to their hospital or hospital outpatient department and did not initiate an episode in the baseline period. Nor would the TEAM participant receive beneficiary-identifiable claims data, for beneficiaries who did initiate an episode in their hospital or hospital outpatient department during the baseline period, for items and services that are not included in an episode, such as a primary care visit 5 days before the episode or a hospital readmission 1 day after the episode ends. We proposed to apply a similar approach for the beneficiary-identifiable claims data sharing during the performance year. We stated that we believe that these data would constitute the minimum information necessary to enable the TEAM participant to understand spending patterns during the episode, appropriately coordinate care, and target care strategies toward individual beneficiaries furnished care by the TEAM participant and other providers and suppliers.

Under the HIPAA Privacy Rule, covered entities (defined as health care plans, providers that conduct covered transactions, including hospitals, and health care clearinghouses) are barred from using or disclosing individually identifiable health information that is “protected health information” or PHI in a manner that is not explicitly permitted or required under the HIPAA Privacy Rule, without the individual’s authorization. The Medicare FFS program, a “health plan” function of the Department, is subject to the HIPAA Privacy Rule limitations on the disclosure of PHI. Hospitals, which

would be TEAM participants, and other Medicare providers and suppliers are also covered entities, provided they are health care providers as defined by 45 CFR 160.103 and they conduct (or someone on their behalf conducts) one or more HIPAA standard transactions electronically, such as for claims transactions. We noted that since TEAM participants are hospitals who are covered entities and are the only entities able to request the beneficiary-identifiable data and with whom CMS would share the beneficiary-identifiable data, we believe that the proposed disclosure of the beneficiary claims data for an anchor hospitalization or an anchor procedure plus 30-day post-discharge for episodes included under TEAM would be permitted by the HIPAA Privacy Rule under the provisions that permit disclosures of PHI for “health care operations” purposes. Under those provisions, a covered entity is permitted to disclose PHI to another covered entity for the recipient’s health care operations purposes if both covered entities have or had a relationship with the subject of the PHI to be disclosed, the PHI pertains to that relationship, and the recipient will use the PHI for a “health care operations” function that falls within the first two paragraphs of the definition of “health care operations” in the HIPAA Privacy Rule (45 CFR 164.506(c)(4)).

The first paragraph of the definition of health care operations includes “conducting quality assessment and improvement activities, including outcomes evaluation and development of clinical guidelines,” and “population-based activities relating to improving health or reducing health costs, protocol development, case management and care coordination” (45 CFR 164.501).

Under our proposal, TEAM participants would be using the data on their patients to evaluate the performance of the TEAM participant and other providers and suppliers that furnished services to the patient, conduct quality assessment and improvement activities, and conduct population-based activities relating to improved health for their patients. When done by or on behalf of a covered entity, these are covered functions and activities that would qualify as “health care operations” under the first and second paragraphs of the definition of health care operations at 45 CFR 164.501. Hence, as previously discussed, we believe that this provision is extensive enough to cover the uses we would expect a TEAM participant to make of the beneficiary-identifiable data

and would be permissible under the HIPAA Privacy Rule. Moreover, we noted that our proposed disclosures would be made only to HIPAA covered entities, specifically hospitals that are TEAM participants that have (or had) a relationship with the subject of the information, the information we would disclose would pertain to such relationship, and those disclosures would be for purposes listed in the first two paragraphs of the definition of “health care operations.”

When using or disclosing PHI, or when requesting this information from another covered entity, covered entities must make “reasonable efforts to limit” the information that is used, disclosed, or requested to a “minimum necessary” to accomplish the intended purpose of the use, disclosure, or request (45 CFR 164.502(b)). We stated in the proposed rule that we believe that the provision of the proposed data elements, as described in section X.A.3.k.(2)(c) of the preamble of this final rule, would constitute the minimum data necessary to accomplish the TEAM’s model goals of the TEAM participant.

The Privacy Act of 1974 also places limits on agency data disclosures. The Privacy Act applies when the federal government maintains a system of records by which information about individuals is retrieved by use of the individual’s personal identifiers (names, Social Security numbers, or any other codes or identifiers that are assigned to the individual). The Privacy Act prohibits disclosure of information from a system of records to any third party without the prior written consent of the individual to whom the records apply (5 U.S.C. 552a(b)).

“Routine uses” are an exception to this general principle. A routine use is a disclosure outside of the agency that is compatible with the purpose for which the data was collected. Routine uses are established by means of a publication in the **Federal Register** about the applicable system of records describing to whom the disclosure will be made and the purpose for the disclosure. For the proposed TEAM, the system of records would be covered in Master Demonstration, Evaluation, and Research Studies (DERS) for the Office of Research, Development and Information (ORDI) system of record (72 FR 19705). We stated that we believe that the proposed data disclosures are consistent with the purpose for which the data discussed in the proposed rule was collected and may be disclosed in accordance with the routine uses applicable to those records.

We noted that, as is the case with the CJR model, in the proposed rule, we

proposed to disclose beneficiary-identifiable data to only the hospitals that are bearing risk for episodes and not with their collaborators. As stated in the final CJR rule (80 FR 73515), we believe that the hospitals that are specifically held financially responsible for an episode should make the determination as to which data are needed to manage care and care processes with their collaborators as well as which data they might want to re-disclose, if any, to their collaborators provided they are in compliance with the HIPAA Privacy Rule.

We stated that we believe our data sharing proposals are permitted by and are consistent with the authorities and protections available under the aforementioned statutes and regulations. We sought comments on our proposals regarding the authority to share beneficiary-identifiable data with TEAM participants.

We received no public comments on our proposals regarding the legal authority for CMS to share beneficiary-identifiable data with TEAM participants. Thus, we are finalizing at § 512.562(b)(1) the proposal to share beneficiary-identifiable data with TEAM participants as permitted under the referenced statutes and regulations.

(b) Summary and Raw Beneficiary-Identifiable Claims Data Reports

Based on our experience with BPCI Advanced and CJR participants, we recognize that TEAM participants could vary with respect to the kinds of beneficiary-identifiable claims information that would best meet their needs. For example, while many TEAM participants might have the ability to analyze raw claims data, other TEAM participants could find it more useful to have a summary of these data. Given this, we proposed to make beneficiary-identifiable claims data for episodes in TEAM available through two formats, summary and raw, both for the baseline period and on an ongoing monthly basis during their participation in the model as we do for BPCI Advanced and CJR. As we explained in the proposed rule, summary beneficiary-identifiable claims data summarizes the claims data by combining and categorizing claims data to provide a broad view of the TEAM participant's health care expenditures and utilization. For example, a TEAM participant may use summary beneficiary-identifiable data to identify total episode spending for a given episode category across all of a TEAM participant's episodes in a given performance year. Raw beneficiary-identifiable claims data is unrefined and has not been grouped or combined and

includes the specific claims fields, as described in the minimum necessary data discussion in section X.A.3.k.(2).(c). of the preamble of this final rule, at the episode level. For example, a TEAM participant may use raw beneficiary-identifiable data to look at a particular episode to identify the diagnosis code(s) that were associated with a hospital readmission for a TEAM beneficiary.

First, for TEAM participants who wish to receive summary Medicare Parts A and B claims data, we proposed to offer TEAM participants, that enter into a TEAM data sharing agreement with CMS, as specified in section X.A.3.k.(6). of the preamble of this final rule, the option to submit a formal data request for summary beneficiary-identifiable claims data that have been aggregated to provide summary-level spending and utilization data on TEAM beneficiaries who would be in an episode during the baseline period and performance years, in accordance with applicable privacy and security laws and established privacy and security protections. We explained that such summary beneficiary-identifiable claims data would provide tools to monitor, understand, and manage utilization and expenditure patterns as well as to develop, target, and implement quality improvement programs and initiatives. For example, if the data provided by CMS to a particular TEAM participant reflects that, relative to their peers, a certain provider is associated with significantly higher rates of inpatient readmissions than the rates experienced by other beneficiaries with similar care needs, that may be evidence that the TEAM participant could consider, among other things, the appropriateness of that provider, whether other alternatives might be more appropriate, and whether there exist certain care interventions that could be incorporated post-discharge to lower readmission rates.

Second, for TEAM participants who wish to receive raw Medicare Parts A and B claims data, we proposed to offer TEAM participants, that enter into a TEAM data sharing agreement with CMS, the opportunity to submit a formal data request for raw beneficiary-identifiable claims data for TEAM beneficiaries who would be in an episode during the baseline period and performance years, in accordance with applicable privacy and security laws and established privacy and security protections. We explained that these raw beneficiary-identifiable claims data would be much more detailed compared to the summary beneficiary-identifiable claims data and include all beneficiary-

identifiable claims for all episodes in TEAM. In addition, they would include episode summaries, indicators for excluded episodes, diagnosis and procedure codes, and enrollment and dual eligibility information for beneficiaries that initiate episodes in TEAM. Through analysis, these raw beneficiary-identifiable claims data would provide TEAM participants with information to improve their ability to coordinate and target care strategies as well as to monitor, understand, and manage utilization and expenditure patterns. Such data would also aid them in developing, targeting, and implementing quality improvement programs and initiatives.

We explained that the summary and raw beneficiary-identifiable data would allow TEAM participants to assess summary and raw data on their relevant TEAM beneficiary population, giving them the flexibility to utilize the data based on their analytic capacity. Therefore, for both the baseline period and at a minimum on a monthly basis during a TEAM participant's performance year, we proposed to provide TEAM participants with an opportunity to request summary beneficiary-identifiable claims data and raw beneficiary-identifiable claims data that would meet HIPAA minimum necessary requirements in 45 CFR 164.502(b) and 164.514(d) and include Medicare Parts A and B beneficiary-identifiable claims data for TEAM beneficiaries in an episode during the 3-year baseline period and performance year. This means the summary and raw beneficiary-identifiable claims data would encompass the total expenditures and claims for the proposed episodes, including the anchor hospitalization or anchor procedure, and all non-excluded items and services in an episode covered under Medicare Parts A and B within the 30 days after discharge, including hospital care, post-acute care, and physician services for the TEAM participant's beneficiaries.

We proposed that if a TEAM participant wishes to receive beneficiary-identifiable claims data, they must submit a formal request for data on at least an annual basis in a manner form and by a date specified by CMS, indicating if they want summary beneficiary-identifiable data, raw beneficiary-identifiable data, or both, and sign a TEAM data sharing agreement. To comply with applicable laws and safeguards, we proposed the TEAM participant must attest that—

- The TEAM participant is requesting claims data of TEAM beneficiaries who would be in an episode during the

baseline period or performance year as a HIPAA-covered entity;

- The TEAM participant's request reflects the minimum data necessary for the TEAM participant to conduct health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501;

- The TEAM participant's use of claims data will be limited to developing processes and engaging in appropriate activities related to coordinating care and improving the quality and efficiency of care and conducting population-based activities relating to improving health or reducing health care costs that are applied uniformly to all TEAM beneficiaries, in an episode during the baseline period or performance year, and that these data will not be used to reduce, limit or restrict care for specific Medicare beneficiaries.

We proposed that the summary and raw beneficiary-identifiable data would be packaged and sent to a data portal (to which the TEAM participants must request and be granted access) in a "flat" or binary format for the TEAM participant to retrieve. We also noted that, for both the summary and raw beneficiary-identifiable claims data, we would exclude information that is subject to the regulations governing the confidentiality of substance use disorder patient records (42 CFR part 2) from the data shared with a TEAM participant. We stated that we believe our proposal to make data available to TEAM participants, through the most appropriate means, may be useful to TEAM participants to determine appropriate ways to increase the coordination of care, improve quality, enhance efficiencies in the delivery system, and otherwise achieve the goals of the proposed model. TEAM beneficiaries would be informed of TEAM and the potential sharing of Medicare beneficiary-identifiable claims data through the beneficiary notification, as discussed in section X.A.3.i.(2) of the preamble of this final rule. Further, CMS would make beneficiary-identifiable claims data available to a TEAM participant for beneficiaries who may be included in episodes, in accordance with applicable privacy and security laws and only in response to the TEAM participant's request for such data, through the use of an executed TEAM data sharing agreement with CMS.

We requested comments on this proposal to share beneficiary-identifiable claims data with TEAM participants at § 512.562(b).

The following is a summary of the public comments we received on the proposal to share beneficiary-identifiable data with TEAM participants and our responses to those comments:

Comment: A couple of commenters expressed support for the proposal to share certain beneficiary-level data with TEAM participants. The commenters indicated that these data would enable participants to identify their patient populations, plan and improve care, and gauge the quality of post-acute care providers.

Response: We thank the commenters for their support for the proposal to share certain beneficiary-level data under this model, and concur with the stated benefits for TEAM participants in receiving such data.

Comment: Several commenters emphasized the burden for TEAM participants in processing and analyzing data provided by CMS. These commenters noted that hospitals may need to dedicate staff or hire outside consultants to translate performance data into usable insights, and one of the commenters expressed specific concerns about the burden of this analytical work for safety net and rural hospitals. A commenter requested that CMS work to provide participant hospitals with the type of analyzed data that hospitals would otherwise pay outside analysts to generate, and another commenter suggested that CMS develop one-page data reports tailored to various types of hospital staff.

Response: We thank the commenters for expressing their concerns about the burden placed on hospitals to analyze performance data and generate usable insights. We also appreciate the commenters' suggestions for the provision of data reports that are usable without the aid of external analysts and that are tailored to different hospital staff. We note that the proposed availability of both summary and raw beneficiary-level and aggregate data for the baseline and performance periods is intended to provide data that is useful for TEAM participants with a range of analytic capacities. We also note that TEAM participants may weigh their own analytic capacities when determining whether to request beneficiary-identifiable data from CMS. We also note that, as stated in the preamble of the proposed rule at 89 FR 36474 and in alignment with the goals of the model, we expect that TEAM participants are able to, or will work toward being able to, independently identify and produce their own data through electronic health records, health information exchanges, or other

means as they deem necessary to evaluate patients, improve outcomes, and produce efficiencies. Still, we recognize that challenges may persist for TEAM participants in analyzing and improving patterns of care. Thus, we intend to provide additional supports to participants as we deem appropriate and feasible. For example, as with other models like BPCI Advanced and CJR, we plan to implement a learning system through which CMS can provide support to participants and participants can voluntarily share insights with each other. Additionally, similar to efforts undertaken to improve data transparency and utility during the course of BPCI Advanced, we will welcome input from TEAM participants and other interested parties on additional data sharing that could benefit participants and may consider such input in future rulemaking.

After consideration of the comments received, we are finalizing at § 512.562(b) the proposal to share certain beneficiary-identifiable claims data with TEAM participants.

(c) Minimum Necessary Data

We proposed TEAM participants must limit their beneficiary-identifiable data requests, for TEAM beneficiaries who are in an episode during the baseline period or performance year, to the minimum necessary to accomplish a permitted use of the data. We proposed the minimum necessary Parts A and B data elements may include but are not limited to the following data elements:

- Medicare beneficiary identifier (ID).
- Procedure code.
- Gender.
- Diagnosis code.
- Claim ID.
- The from and through dates of service.
- The provider or supplier ID.
- The claim payment type.
- Date of birth and death, if applicable.
- Tax identification number.
- National provider identifier.

We sought comment on the minimum necessary beneficiary-identifiable information for TEAM participants to request for purposes of conducting permissible health care operations purposes under this model at § 512.562(c).

The following is a summary of the public comments we received on the minimum necessary beneficiary-identifiable data for TEAM participants to request for health care operations purposes and our responses to those comments:

Comment: A couple of commenters further recommended that the

beneficiary-level data include all claim types.

Response: We thank the commenters for their requests. We note that the proposed beneficiary-identifiable data sharing would encompass the total expenditures and claims for the proposed episodes in order to best support participants in health care operations, including performance monitoring, care coordination, quality improvement, and population-based activities. This would include all non-excluded items and services in an episode covered under Medicare Parts A and B, including hospital care, post-acute care settings, and physician services—in other words, all claim types that are included in TEAM episodes. We note that including any claim types in the beneficiary-identifiable data sharing that are not among the claim types included in TEAM episodes would be irrelevant to TEAM and thus fall beyond the minimum necessary data sharing.

We are finalizing at § 512.562(c) the proposal to make beneficiary-identifiable data available to TEAM participants, to include raw and summary Medicare Parts A and B beneficiary-identifiable claims data for TEAM beneficiaries in an episode during the 3-year baseline period and performance year.

(3) Regional Aggregate Data

As discussed in section X.A.3.d.(3) of the preamble of this final rule, we proposed to incorporate regional pricing data when establishing target prices for TEAM participants, similar to the CJR model's target prices that are constructed at the regional level. As indicated in the CJR final rule (80 FR 73510), we finalized our proposal to share regional pricing data with CJR participants because it was a factor affecting target prices. Given some of the similar features between the CJR model and TEAM proposed in the proposed rule, particularly our proposal to incorporate regional pricing data when establishing target prices under the model, we proposed to provide regional aggregate expenditure data available for all Parts A and B claims associated with episodes in TEAM for the U.S. Census Division in which the TEAM participant is located, as we similarly provide to hospitals participating in the CJR model. Specifically, we proposed to provide TEAM participants with regional aggregate data on the total expenditures during an anchor hospitalization or anchor procedure and the 30-day post-discharge period for all Medicare FFS beneficiaries who would have initiated an episode under our proposed episode definitions at 89 FR 36416 during the

baseline period and performance years. This data would be provided at the regional level; that is, we proposed to share regional aggregate data with a TEAM participant for episodes initiated in the U.S. Census Division where the TEAM participant is located. These regional aggregate data would be in a format similar to the proposed summary beneficiary-identifiable claims data and would provide summary information on the average episode spending for episodes in TEAM in the U.S. Census Division in which the TEAM participant is located. However, the regional aggregate data would not be beneficiary-identifiable and would be de-identified in accordance with HIPAA Privacy Rule, 45 CFR 164.514(b). Further, the regional aggregate data would also comply with CMS data sharing requirements, including the CMS cell suppression policy which stipulates that no cell (for example, admissions, discharges, patients, services, etc.) containing a value of 1 to 10 can be reported directly. Given the regional aggregate data is de-identified, we proposed TEAM participants would not have to submit a request to receive this data and the data would not be subject to the terms and conditions of the TEAM data sharing agreement.

We sought comments on our proposal at § 512.562(d) to provide these data to TEAM participants.

We received no public comments on the proposal to provide regional aggregate data to TEAM participants and thus are finalizing at § 512.562(d) the provision of regional aggregate data to TEAM participants as proposed, noting that only minor grammatical changes were made to the regulatory text.

(4) Timing and Period of Baseline Period Data

We recognize that providing the ability for TEAM participants to request the summary and raw beneficiary-identifiable claims baseline data and receive regional aggregate baseline data would be important for TEAM participants to be able to detect unnecessary episode spending, coordinate care, and identify areas for practice transformation, and that early provision of this data, specifically before the model start date, as defined in § 512.505, could facilitate their efforts to do so. Also, as discussed in section X.A.3.d.(3)(a) of the preamble of this final rule, target prices would be calculated using a TEAM participant's historical episode spending during their baseline period. Further, we believe that TEAM participants would view the episode payment model effort as one involving continuous improvement. As

a result, changes initially contemplated by a TEAM participant could be subsequently revised based on updated information and experiences.

Therefore, as with the BPCI Advanced model, we proposed to make 3-years of baseline period data available to TEAM participants, who enter into a TEAM data sharing agreement with CMS, for beneficiaries who would have been included in an episode had the model been implemented during the baseline period, and intend to make these data available upon request prior to the start of each performance year and in accordance with applicable privacy and security laws and established privacy and security protections. We would provide the 3 years of baseline period data for the summary and raw beneficiary-identifiable data and for the regional aggregate data. We believe that 3 years of baseline period data is sufficient to support a TEAM participant's ability to detect unnecessary episode spending, coordinate care, and identify areas for practice transformation. We believe that if a TEAM participant has access to baseline period data for the 3-year period for each performance year used to set target prices, then it would be better able to assess its practice patterns, identify cost drivers, and ultimately redesign its care practices to improve efficiency and quality. We considered proposing to make available 4 years of baseline period data, or offering 1 year of baseline period data, but we believe offering 4 years of baseline period data would not be necessary since target prices in TEAM are constructed from a 3-year baseline period and 1 year of data may not sufficiently help TEAM participants identify areas to improve beneficiary health and care coordination or reducing health costs.

Therefore, we proposed that the 3-year period utilized for the baseline period match the baseline data used to create TEAM participants target prices every performance year, and roll forward one year every performance year, as discussed in section X.A.3.d.(3)(a) of the preamble of this final rule. Specifically, we proposed that the baseline period data for the summary and raw beneficiary-identifiable data reports and regional aggregate data report would be shared annually at least 1 month prior to the start of a performance year and available for episodes for each of the following performance years:

- Performance Year 1: Episodes that began January 1, 2022, through December 31, 2024

- Performance Year 2: Episodes that began January 1, 2023, through December 31, 2025
- Performance Year 3: Episodes that began January 1, 2024, through December 31, 2026
- Performance Year 4: Episodes that began January 1, 2025, through December 31, 2027
- Performance Year 5: Episodes that began January 1, 2026, through December 31, 2028

We requested comments on these proposals at proposed § 512.562(b)(6)(i) and § 512.562(d)(1)(i) to share beneficiary-identifiable data and regional aggregate data for a 3-year baseline period at least 1 month prior to the start of a performance year. We note that the proposed periods of data sharing stated in the proposed rule at 89 FR 36477 for Performance Years 4 and 5 were erroneously listed as being only two years long, ending at the end of 2026 and 2027, respectively. The data sharing periods have been corrected in this final rule to reflect the 3-year baseline period consistently across performance years—namely, episodes beginning January 1, 2025, through December 31, 2027, for Performance Year 4, and episodes beginning January 1, 2026, through December 31, 2028, for Performance Year 5.

The following is a summary of the public comments we received on the proposal to share beneficiary-identifiable data and regional aggregate data for a 3-year baseline period with TEAM participants at least 1 month prior to the start of a performance year and our responses to these comments:

Comment: A couple commenters requested earlier data sharing from CMS prior to the start of the model performance period. A couple commenters requested that CMS provide TEAM participants with a full set of claims and quality data one year prior to model launch, indicating that this is needed for participants to conduct the care redesign necessary for successful performance in the model. Another commenter requested that CMS provide baseline claims data and target prices at least one year prior to the performance period.

Response: We thank the commenters for these requests. As stated in the proposed rule, we recognize that sharing baseline claims data with TEAM participants prior to the model start date could facilitate their efforts to detect unnecessary spending, coordinate care, and identify areas for practice transformation. The proposed commitment by CMS to provide baseline data at least one month prior to

the start of the corresponding performance period is in recognition of the utility of these data for participants. However, we are not convinced that the provision of claims data to participants one year prior to model launch is necessary for participants' success in the model, nor that participants' success in the model will be determined by care redesign activities undertaken entirely prior to model launch. Instead, as stated in the proposed rule, we view TEAM participation as a process of continuous improvement and expect that participants will use baseline and performance period data to inform care redesign activities throughout their tenure in the model. In accordance with this expectation, we proposed to provide multiple sources of usable data to participants at regular intervals, including monthly beneficiary-identifiable claims data and yearly quality measure score data. For both claims and quality data, the proposed timing and cadence of data sharing was carefully considered and determined based on the utility of the data, availability of results, and administrative burden under this model specifically.

We also note that, as stated in the proposed rule (89 FR 36425), the proposed timing for CMS to share quality measure performance data with TEAM participants aligns with the established CMS Care Compare schedule found here: <https://data.cms.gov/provider-data/topics/hospitals/measures-and-currentdata-collection-periods>. Regarding target price data, we note that the timing of preliminary target price calculations is dependent on the availability of episode spending data for the baseline period. For example, as stated in the proposed rule (89 FR 36427), CMS would use baseline episode spending for episodes that started between January 1, 2022, and December 31, 2024, to determine baseline episode spending for Performance Year 1 (PY 1), which is proposed to begin on January 1, 2026. Since episodes starting on December 31, 2024, would be included in the PY 1 baseline spending calculations that form a primary component of PY 1 preliminary target prices, the timing of PY 1 target price calculations would need to allow the time not only for such episodes to end but also for claims run-out to capture any additional spending and for baseline spending and target price calculations to be performed. Thus, we conclude that it is not feasible for CMS to provide target price data, or indeed baseline spending data, a full

year prior to the applicable performance period.

Comment: A commenter reflected on the use of beneficiary-identifiable claims data from the 3-year baseline period, suggesting that these baseline period data should be considered in aggregate and not used for individual patient care decisions.

Response: We thank the commenter for sharing this view and concur that there are limitations to the use of baseline data for clinical decision making. We proposed to make available to TEAM participants multiple forms of baseline and performance period data such that participants may gain insights into multiple aspects of their care delivery and model performance. As stated in the proposed rule (89 FR 36474), we also expect that participants will work toward developing and improving their own data identification and analysis capabilities as part of their care improvement efforts.

After consideration of the comments received, we are finalizing at § 512.562(b)(6)(i) and § 512.562(d)(1)(i) the proposal to share beneficiary-identifiable data and regional aggregate data for a 3-year baseline period at least 1 month prior to the start of a performance year.

(5) Timing and Period of Performance Year Data

As discussed in the proposed rule, the availability of periodically updated raw and summary beneficiary-identifiable claims data and regional aggregate data would assist TEAM participants to identify areas where they might wish to change their care practice patterns, as well as monitor the effects of any such changes. With respect to these purposes, we considered what would be the most appropriate period for making updated raw and summary beneficiary-identifiable claims data and regional aggregate data available to TEAM participants, while complying with the HIPAA Privacy Rule's "minimum necessary" provisions, described in 45 CFR 164.502(b) and 164.514(d). We noted that we believe that monthly data updates would align with a 30-day post-discharge episode window given the episode's duration and the need to share data in a timely manner and identify areas for care improvement. Accordingly, we proposed to make updated raw and summary beneficiary-identifiable claims data and regional aggregate data available for a given performance year to TEAM participants upon receipt of a request for such information and execution of a TEAM data sharing agreement with CMS, that meets CMS's requirements to ensure the

applicable HIPAA conditions for disclosure have been met, as frequently as on a monthly basis during the performance year and continue sharing the claims data for up to 6 months beyond the end of that performance year to capture claims run out. We stated that we believe 6 months of claims run out is sufficient given that an internal review of Medicare claims data found that the majority of Medicare claims had been received, and were considered final, by 6 months after the date of service and is also consistent with how we proposed claims run out for the reconciliation process, as described in section X.A.3.d.(5). of the preamble of this final rule.¹⁰¹⁰

To accomplish this for the first performance year of the TEAM (2026), we proposed to provide, upon request and execution of a TEAM data sharing agreement with CMS, and in accordance with the HIPAA Privacy Rule, beneficiary-identifiable claims data and aggregate regional data from January 1, 2026, to December 30, 2026 on as frequently as a running monthly basis, as claims are available. We would continue sharing beneficiary-identifiable claims data and regional aggregate data for episodes in PY 1 for an additional 6 months, so until June 30, 2027, to capture claims run out for items and services billed during this time period. These datasets would represent all potential episodes that were initiated in 2026 and capture a sufficient amount of time, up to 6 months, for relevant claims to have been processed. We would limit the content of this data set to the minimum data necessary for the TEAM participant to conduct quality assessment and improvement activities and effectively coordinate care of its patient population. This data sharing process would continue each performance year of TEAM. We considered proposing to extend this period to capture more than 30 days of data or updating on a quarterly frequency. However, as discussed in the proposed rule, we do not believe this would benefit the TEAM participant since it may create challenges to timely identify potential TEAM beneficiaries for care coordination efforts. We sought comment on whether we should consider extending the period to capture more than 30 days of data or updating the data on a frequency other than monthly.

We sought comments on this proposal at proposed § 512.562(b)(6)(ii) and § 512.562(d)(1)(ii) to make beneficiary-identifiable data and regional aggregate data available on a monthly basis and for up to 6 months after a performance year.

The following is a summary of the public comments we received on the proposal to make beneficiary-identifiable data and regional aggregate data available to TEAM participants on a monthly basis and for up to 6 months after a performance year and our responses to these comments:

Comment: A couple of commenters expressed concern about the potential for data lags limiting the ability of participants to make real-time improvements. The commenters requested that CMS work to provide timely data as soon as feasible.

Response: We thank the commenters for sharing their concerns about data lags. We recognize that delays in data sharing can limit the utility of these data for participants in assessing and improving care. In recognition of the benefits of timely data for continuous improvement, we proposed to share raw and summary beneficiary-identifiable claims data as frequently as on a monthly basis during the performance year and for up to 6 months beyond the end of the performance year to capture claims run-out. As stated in the preamble of the proposed rule (89 FR 36478), we believe that the proposed timing of performance period data sharing aligns appropriately with the proposed 30-day episode length and the need for timely data.

Comment: A commenter requested that CMS include updated preliminary target prices as part of the monthly data sharing, or alternatively provide more detailed information on target price model coefficients to allow participants to proactively calculate target prices.

Response: We thank the commenter for their suggestions for additional data sharing surrounding target prices. We note that, as described in section X.A.3.d.(3).(b) of this final rule, TEAM preliminary target prices will be constructed at a regional level and shared with participants prior to the performance year, then will be updated with realized trends and participant-specific risk adjustments during reconciliation. As we note in the responses to comments in section X.A.3.d.(3).(b) of this final rule, coefficients will be calculated and made available to participants prior to the start of the performance year, so participants would be able to use them to estimate their episode-level target prices.

After consideration of the comments, we are finalizing at § 512.562(b)(6)(ii) and § 512.562(d)(1)(ii) the proposal to make beneficiary-identifiable data and regional aggregate data available on a monthly basis and for up to 6 months after a performance year.

(6) TEAM Data Sharing Agreement

We proposed that if a TEAM participant wishes to retrieve the beneficiary-identifiable data, the TEAM participant would be required to first complete, sign, and submit—and thereby agree to the terms of—a data sharing agreement with CMS, which we would call the TEAM data sharing agreement. We proposed to define the TEAM data sharing agreement as an agreement between the TEAM participant and CMS that includes the terms and conditions for any beneficiary-identifiable data being shared with the TEAM participant under § 512.562. Further, we proposed to require TEAM participants to comply with all applicable laws and the terms of the TEAM data sharing agreement as a condition of retrieving the beneficiary-identifiable data. We also proposed that the TEAM data sharing agreement would include certain protections and limitations on the TEAM participant's use and further disclosure of the beneficiary-identifiable data and would be provided in a form and manner specified by CMS. Additionally, we proposed that a TEAM participant that wishes to retrieve the beneficiary-identifiable data would be required to complete, sign, and submit a signed TEAM data sharing agreement at least annually. We stated that we believe that it is important for the TEAM participant to complete and submit a signed TEAM data sharing agreement at least annually so that CMS has up-to-date information that the TEAM participant wishes to retrieve the beneficiary-identifiable data and information on the designated data custodian(s). As described in greater detail later in this section, we proposed that a designated data custodian would be the individual(s) that a TEAM participant would identify as responsible for ensuring compliance with all privacy and security requirements and for notifying CMS of any incidents relating to unauthorized disclosures of beneficiary-identifiable data.

CMS believes it is important for the TEAM participant to first complete and submit a signed TEAM data sharing agreement before it retrieves any beneficiary-identifiable data to help protect the privacy and security of any beneficiary-identifiable data shared by CMS with the TEAM participant. There

¹⁰¹⁰ Medicare Claims Maturity: CCW White Paper accessed at https://www2.ccwdata.org/web/guest/white-papers?p_1_back_url=%2Fweb%2Fguest%2Fsearch%3Fq%3Dmedicare%2Bclaims%2Bmaturity on Jan, 26, 2024.

are important sensitivities surrounding the sharing of this type of individually identifiable health information, and CMS must ensure to the best of its ability that any beneficiary-identifiable data that it shares with TEAM participants would be further protected in an appropriate fashion.

We considered an alternative proposal under which TEAM participants would not need to complete and submit a signed TEAM data sharing agreement, but we concluded that, if we proceeded with this option, we would not have adequate assurances that the TEAM participants would appropriately protect the privacy and security of the beneficiary-identifiable data that we proposed to share with them. We also considered an alternative proposal under which the TEAM participant would need to complete and submit a signed TEAM data sharing agreement only once for the duration of the TEAM. However, we concluded that this similarly would not give CMS adequate assurances that the TEAM participant would protect the privacy and security of the beneficiary-identifiable data from CMS. We concluded that it is critical that we have up-to-date information and designated data custodians, and that requiring the TEAM participant to submit a TEAM data sharing agreement at least annually would represent the best means of achieving this goal.

We solicited public comment on our proposal to define TEAM data sharing agreement at § 512.505. We also sought comment on our proposal to require, in § 512.562(e)(2), that the TEAM participant agree to comply with all applicable laws and the terms of the TEAM data sharing agreement as a condition of retrieving the beneficiary-identifiable data, and on our proposal in § 512.562(e)(1) that the TEAM participant would need to submit the signed TEAM data sharing agreement at least annually if the TEAM participant wishes to retrieve the beneficiary-identifiable data.

The following is a summary of the public comments we received on the proposals to define the TEAM data sharing agreement, to require compliance with the terms of the TEAM data sharing agreement as a condition of retrieving the beneficiary-identifiable data, and to require submission of the TEAM data sharing agreement at least annually, and our responses to these comments:

Comment: A commenter expressed support and appreciation for the proposed protections surrounding the sharing of beneficiary-identifiable data with TEAM participants. The commenter reiterated that any data

sharing should be conducted in a manner that protects patient privacy and allows all points of care to maximize lessons learned and implement quality improvement activities.

Response: We thank the commenter for their support and agree that appropriate protections must be ensured in the sharing of beneficiary-identifiable data. As described in the proposed rule (89 FR 36478), we proposed that a TEAM participant requesting to receive such data from CMS would be required to submit a TEAM data sharing agreement at least annually and comply with the terms of said agreement. As proposed, the data sharing agreement would include certain protections and limitations on the TEAM participant's use and further disclosure of the beneficiary-identifiable data in compliance with the requirements imposed on covered entities by the HIPAA regulations. The TEAM participant would be required to designate a data custodian who would be responsible for ensuring compliance with all privacy and security requirements and for notifying CMS of any unauthorized disclosures of beneficiary-identifiable data. As detailed in the proposed rule (89 FR 36479), the data sharing agreement would also:

- Require the TEAM participant to comply with additional privacy, security, breach notification, and data retention requirements,
- Impose the same terms and conditions for any downstream recipient of the beneficiary-identifiable data that is a business associate of the TEAM participant or performs a similar function for the TEAM participant, and
- Revoke the eligibility of a TEAM participant to receive beneficiary-identifiable data in the event of any misuse or disclosure of such data in violation of any applicable statutory or regulatory requirements.

Comment: A commenter indicated that the need to request data on a monthly basis would impose an unnecessary burden on participants and requested that CMS automatically provide data on a monthly basis.

Response: We thank the commenter for their input and concur that requiring participants to request claims data on a monthly basis would constitute an unnecessary burden on participants. We wish to clarify that we do not intend to require participants to submit a request for claims data each month. As stated in the preamble of the proposed rule (89 FR 36478), TEAM participants would be required to complete, sign, and submit a TEAM data sharing agreement at least

annually to receive beneficiary-identifiable claims data on as frequently as a monthly basis as described in the preamble of the proposed rule (89 FR 36478). We believe this cadence appropriately balances participant burden with the need for CMS to maintain up-to-date information on participants and their data custodians.

After consideration of the comments received, we are finalizing at § 512.505 the definition of TEAM data sharing agreement as an agreement entered into between the TEAM participant and CMS that includes the terms and conditions for any beneficiary-identifiable data shared with the TEAM participant under § 512.562, which includes a minor change for clarity (adding "entered into") from the language proposed. In addition, we are finalizing at § 512.562(e)(1) the proposal that the TEAM participant would need to submit the signed TEAM data sharing agreement at least annually if the TEAM participant wishes to retrieve the beneficiary-identifiable data.

We are also finalizing at § 512.562(e)(2) the proposed requirement that the TEAM participant agree to comply with all applicable laws and the terms of the TEAM data sharing agreement as a condition of retrieving the beneficiary-identifiable data.

(a) Content of TEAM Data Sharing Agreement

We proposed that, under the TEAM data sharing agreement, TEAM participants would agree to certain terms, namely: (1) To comply with the requirements for use and disclosure of this beneficiary-identifiable data that are imposed on covered entities by the HIPAA regulations and the requirements of TEAM; (2) to comply with additional privacy, security, and breach notification requirements to be specified by CMS in the TEAM data sharing agreement; (3) to contractually bind each downstream recipient of the beneficiary-identifiable data that is a business associate of the TEAM participant to the same terms and conditions to which the TEAM participant is itself bound in its data sharing agreement with CMS as a condition of the downstream recipient's receipt of the beneficiary-identifiable data retrieved by the TEAM participant under TEAM; and (4) that if the TEAM participant misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the TEAM data sharing agreement, the TEAM participant would no longer be eligible to retrieve the

beneficiary-identifiable data and may be subject to additional sanctions and penalties available under the law. As discussed in the proposed rule, CMS believes that these terms for sharing beneficiary-identifiable data with TEAM participants are appropriate and important, as CMS must ensure to the best of its ability that any beneficiary identifiable data that it shares with TEAM participants would be further protected by the TEAM participant, and any business associates of the TEAM participant, in an appropriate fashion. We stated that we believe that these proposals would allow CMS to accomplish that.

We sought public comment on the additional privacy, security, breach notification, and other requirements that we would include in the TEAM data sharing agreement. CMS has these types of agreements in place as part of the governing documents of other models tested under section 1115A of the Act and in the Medicare Shared Savings Program. In these agreements, CMS typically requires the identification of data custodian(s) and imposes certain requirements related to administrative, physical, and technical safeguards relating to data storage and transmission; limitations on further use and disclosure of the data; procedures for responding to data incidents and breaches; and data destruction and retention. We noted that these provisions would be imposed in addition to any restrictions required by law, such as those provided in the HIPAA privacy, security and breach notification regulations. These provisions would not prohibit the TEAM participant from making any disclosure of the data otherwise required by law.

We also sought public comment on what disclosures of the beneficiary-identifiable data might be appropriate to permit or prohibit under the TEAM data sharing agreement. For example, we considered prohibiting, in the TEAM data sharing agreement, any further disclosure, not otherwise required by law, of the beneficiary-identifiable data to anyone who is not a HIPAA covered entity or business associate, as defined in 45 CFR 160.103, or to an individual practitioner in a treatment relationship with the TEAM beneficiary, or that practitioner's business associates. Such a prohibition would be similar to that imposed by CMS in other models tested under section 1115A of the Act in which CMS shares beneficiary identifiable data with model participants.

We considered these possibilities because there exist important legal and

policy limitations on the sharing of the beneficiary-identifiable data and CMS must carefully consider the ways in which and reasons for which we would provide access to this data for purposes of the TEAM. CMS believes that some TEAM participants may require the assistance of business associates, such as contractors, to perform data analytics or other functions using this beneficiary-identifiable data to support the TEAM participant's review of their care management and coordination, quality improvement activities, or clinical treatment of TEAM beneficiaries. CMS also believes that this beneficiary-identifiable data may be helpful for any HIPAA covered entities who are in a treatment relationship with the TEAM beneficiary.

We sought public comment on how a TEAM participant might need to, and want to, disclose the beneficiary-identifiable data to other individuals and entities to accomplish the goals of the TEAM, in accordance with applicable law.

The following is a summary of the public comments we received on potential needs for TEAM participants to disclose beneficiary-identifiable data to other individuals or entities to accomplish the goals of TEAM, and our responses to these comments:

Comment: A couple of commenters requested that we include provisions for data sharing among additional health care providers involved in providing care to TEAM beneficiaries. A commenter requested that CMS guarantee data sharing among physicians, other clinicians, and relevant non-clinical staff. This commenter indicated that hospital-level data are important for quality, safety, and cost improvement among anesthesiologists. Another commenter requested that CMS provide an option for TEAM participants to share claims data with collaborators, noting that such data sharing could especially benefit safety net providers and providers new to value-based care.

Response: We thank the commenters for their requests regarding further data sharing beyond the TEAM participant. We agree that multiple health care providers working within and beyond the TEAM participant organization may play a critical role in providing care for TEAM beneficiaries. We further recognize the benefit of sharing beneficiary-identifiable data with such providers as well as the provisions of the HIPAA Privacy Rule which permit disclosures of PHI between covered entities for certain "health care operations" purposes (45 CFR 164.506(c)(4)).

As noted in the proposed rule, in alignment with the CJR model, we proposed to enter into a data sharing agreement with, and disclose beneficiary-identifiable data to, only the hospitals that are bearing risk for episodes, and that CMS would not enter into a data sharing agreement with the business associates of TEAM participants. We reiterate that, as stated in the final CJR rule (80 FR 73515), we believe that the hospitals that are specifically held financially responsible for an episode should make the determination as to which data are needed to manage care and care processes with their collaborators as well as which data they might want to re-disclose, if any, to their collaborators provided they are in compliance with the HIPAA Privacy Rule. We proposed that under the TEAM data sharing agreement, the TEAM participant receiving beneficiary-identifiable data would agree to contractually bind each downstream recipient of the beneficiary-identifiable data that is a business associate of the TEAM participant to the same terms and conditions to which the TEAM participant is itself bound in its TEAM data sharing agreement with CMS as a condition of the business associate's receipt of the beneficiary-identifiable data retrieved by the TEAM participant under TEAM.

After considering the comments received, we are finalizing as proposed the content of the TEAM data sharing agreement as described at § 512.562(e), including the contractual obligations for downstream recipients of the beneficiary-identifiable data as proposed at § 512.562(e)(1)(iii). Specifically, we are finalizing the proposed requirements at § 512.562(e)(1)(i) through (iv) that the TEAM data sharing agreement would:

- Require the TEAM participant to comply with the requirements for use and disclosure of this beneficiary-identifiable data that are imposed on covered entities by the HIPAA regulations and the requirements of the TEAM;
- Require the TEAM participant to comply with additional privacy, security, breach notification, and data retention requirements specified by CMS—with one modification, removing "in the TEAM data sharing agreement" from the description of these requirements, to avoid redundancy;
- Contractually bind and impose the same terms and conditions for any downstream recipient of the beneficiary-identifiable data that is a business associate of the TEAM participant; and
- Revoke the eligibility of a TEAM participant to receive beneficiary-

identifiable data in the event of any misuse or disclosure of such data in violation of any applicable statutory or regulatory requirements or non-compliance with the provisions of the TEAM data sharing agreement.

We are finalizing one modification to use the defined term for “TEAM data sharing agreement” in the revocation provision under § 512.562(e)(1)(iv).

Under our proposal, the TEAM data sharing agreement would include other provisions, including requirements regarding data security, retention, destruction, and breach notification. For example, we are considering including, in the TEAM data sharing agreement, a requirement that the TEAM participant designate one or more data custodians who would be responsible for ensuring compliance with the privacy, security and breach notification requirements for the data set forth in the TEAM data sharing agreement; various security requirements like those found in other models tested under section 1115A of the Act, but no less restrictive than those provided in the relevant Privacy Act system of records notices; how and when beneficiary-identifiable data could be retained by the TEAM participant or its downstream participants of the beneficiary identifiable data; procedures for notifying CMS of any breach or other incident relating to the unauthorized disclosure of beneficiary-identifiable data; and provisions relating to destruction of the data. These are only examples and are not the only terms CMS would potentially include in the TEAM data sharing agreement.

We solicited public comment on this proposal that CMS, by adding § 512.562(e)(1)(ii), would impose certain requirements in the TEAM data sharing agreement related to privacy, security, data retention, breach notification, and data destruction.

Finally, CMS proposed, at § 512.562(e)(1)(iv), that the TEAM data sharing agreement would include a term providing that if the TEAM participant misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the TEAM data sharing agreement, the TEAM participant would no longer be eligible to retrieve beneficiary-identifiable data under proposed § 512.562(b) and may be subject to additional sanctions and penalties available under law. We also proposed that if CMS determines that one or more grounds for remedial action specified in § 512.592(a) has taken place, CMS may discontinue the provision of data sharing and reports to

the model participant. We proposed that CMS may take remedial action if the model participant misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the TEAM data sharing agreement.

We solicited public comment on this proposal, to prohibit the TEAM participant from obtaining beneficiary-identifiable data pertaining to the TEAM if the TEAM participant fails to comply with applicable laws and regulations, the terms of the TEAM, or the TEAM data sharing agreement.

We received no public comments regarding the proposed additional content of the TEAM data sharing agreement, namely the proposed addition of privacy, security, breach notification, and data retention requirements and the proposal to prohibit the TEAM participant from obtaining beneficiary-identifiable data pertaining to the TEAM if the TEAM participant fails to comply with applicable laws and regulations, the terms of the TEAM, or the TEAM data sharing agreement. Thus, we are finalizing at § 512.562(e)(1)(ii) the inclusion of additional requirements, as proposed, and at § 512.562(e)(1)(iv) the prohibition of a TEAM participant from receiving beneficiary-identifiable data in the event of non-compliance, as proposed.

l. Referral to Primary Care Services

We noted in this proposed rule, the CMS Innovation Center has placed accountable care at the center of our comprehensive strategy, with a goal of 100 percent of Medicare FFS beneficiaries (and most Medicaid beneficiaries as well) being in an accountable care relationship by 2030. Achieving the goal of increasing the number of beneficiaries in accountable care relationships and testing models and innovations supporting access to high-quality, integrated specialty care across the patient journey—both longitudinally and for procedural or acute services—will greatly depend on numerous factors, including the models and initiatives available for providers in value-based payment, but also our ability to create incentives for providers and suppliers to coordinate care across different aspects of care. With TEAM, we have an opportunity to further integrate care during the transition from an acute event- an episode- back to longitudinal care relationships, such as primary care.

We stated in the proposed rule that acute care hospitals commonly refer

patients back to primary care providers in the community upon discharge from the hospital, given the connection between ongoing care follow-up and reduced readmissions, among other benefits. While the hospital Conditions of Participation for discharge planning at § 482.43(a) outline requirements for referring patients to post-acute providers as well as community-based providers and suppliers, there is no specific requirement for referral back to a supplier, as defined in in section 1861(d) of the Act and codified at § 400.202, of primary care services, as defined in section 1842(i)(4) of the Act, at hospital discharge for all patients. Under TEAM, we proposed that TEAM participants be required to include in hospital discharge planning a referral to a supplier of primary care services for a TEAM beneficiary, on or prior to discharge from an anchor hospitalization or anchor procedure. We also proposed that the TEAM participant must comply with beneficiary freedom of choice requirements, as described in the Beneficiary Choice and Notification section: X.A.3.i.(2) of this final rule and codified at § 512.582(a), and not limit a TEAM beneficiary’s ability to choose among Medicare providers or suppliers. If a TEAM participant fails to comply with requiring a referral to a supplier of primary care services during hospital discharge planning, then we proposed the TEAM participant would be subject to remedial action, as described in the Remedial Action section: X.A.1.f. of this final rule.

Referring TEAM beneficiaries to a supplier of primary care services would require the TEAM participant to confirm the TEAM beneficiary’s primary care provider status during the anchor hospitalization or anchor procedure and make the referral to primary care services by the point of the hospital discharge. By requiring a referral to primary care services, TEAM would be used to connect TEAM beneficiaries with ongoing care beyond the course of the episode. Further, TEAM participants would be required to ensure TEAM beneficiaries preference of suppliers are considered to ensure proper beneficiary protections.

In the proposed rule we stated that we recognize that TEAM is comprised of procedural episodes, which may mean TEAM beneficiaries have a greater need to stay connected to their surgeon or specialist involved in their episode, rather than make a connection to primary care for ongoing care. Additionally, we also recognize requiring a referral to primary care services for all TEAM beneficiaries may

increase TEAM participant burden. However, we believe many hospitals already have this perform this process as a standard of care for discharge planning, therefore the burden on TEAM participants should be minimal.

We sought comment on our proposal at § 515.564 to require TEAM participants during hospital discharge planning to make a referral to a supplier of primary care services for a TEAM beneficiary on or prior to discharge from the anchor hospitalization or anchor procedure. We also sought comment on whether there are other mechanisms or ways to connect the TEAM beneficiary back to a supplier of primary care services that would support a patient's continuum of care.

The following is a summary of comments we received related to the proposed referral to primary care services policy and our responses to those comments:

Comment: We received some comments of support for our proposed policy to require TEAM participants to make a referral to a supplier of primary care services by the point of discharge from anchor hospitalization or anchor procedure. Several commenters acknowledged the importance of ensuring a handoff to primary care services as a critical component in good care coordination and improved patient outcomes.

Response: We appreciate the support received and the acknowledgement from commenters that a referral to primary care is an important aspect of ensuring strong care coordination and striving to improve patient outcomes. We agree with these commenters that requiring a referral to primary care services upon discharge will serve to give the patient the best opportunity for collaborative care.

Comment: We received some comments from commenters who express concern that physician access issues could make adherence to this policy difficult for some TEAM participants. These commenters mention that access could be a barrier in ensuring a referral occurred by the point of discharge from the anchor hospitalization or anchor procedure, stating that lack of available primary care resources could limited a TEAM participant's ability to adequately meet this requirement and asking that CMS consider an appropriate amount of time for a referral to occur.

A commenter recommended the use of other types of providers, such as telehealth or nurse-led programs, to better support broad access for a primary care referral by the point of

discharge from the anchor procedure or anchor hospitalization.

Another commenter expressed concern over requiring a referral back to primary care specifically for spinal fusion episodes. They mentioned that there is a shortage of primary care physicians and a growing number of primary care physicians who are no longer accepting Medicare patients due to the downward trend of Medicare payments. Because of these reasons, the commenter stated that this requirement could unduly impact access for patients in this model (either pre- or post-surgery).

Additionally, a couple of other commenters recommended that TEAM participants located in Health Professional Shortage Areas (HPSA) be given exemption, opt-out option, or episode extension from this policy as they may experience the greatest shortage of primary care providers in their communities.

Response: We acknowledge that access to primary care services varies based on many factors, including geographic location, market dynamics—among others. Furthermore, we acknowledge that there are areas with shortages of healthcare providers and varying volumes of providers accepting Medicare patients. However, we also acknowledge that ensuring a beneficiary is connected to a supplier of primary care services serves as a critical component to ensuring the patient has continued care coordination upon discharge from their anchor hospitalization or anchor procedure across all areas, even those with areas with shortages of providers. We also do not anticipate that any one clinical episode category, such as spinal fusion, included in TEAM would experience greater issues with access.

Additionally, we recognize that a referral to primary care services is a common component to hospital discharge planning procedure and, as such, expects that many TEAM participants, regardless of access issues or HSPA status, will already have this policy integrated into their standardized discharge planning procedures.

Comment: A commenter suggested that rural hospitals generally—and Sole Community Hospitals (SCH) and Medicare Dependent Hospitals (MDH) in particular—also often do not have robust care networks that are needed to succeed as TEAM participants. This commenter mentions that to be effective in the model, hospitals would also likely need to form networks with post-acute care providers, among others. They state that many communities served by SCHs and MDHs are

experiencing a shortage of primary care clinicians, which may make it difficult for participating hospitals to comply with the primary care referral requirement for reasons outside their control. Further, they state some rural communities simply do not have post-acute care providers. Those that do have limited options, and those post-acute providers may decline to collaborate with the hospitals in the ways that would be needed to succeed under TEAM.

Response: As mentioned in comment responses above, we recognize that access to primary care will vary depending on many factors. We also recognize that rural hospitals, including SCHs and MDHs, serve special patient populations and after often located in areas that have the potential to present unique challenges. However, these factors do not discount that these beneficiaries still need to be connected with a primary care provider to support ongoing care coordination beyond the scope of their TEAM episode.

Additionally, CMS disagrees that this policy will require providers to form networks—with primary care, post-acute care, or other types of healthcare providers—in order to be successful and adhere to this policy.

Comment: Some commenters expressed concern over the risk of disrupting a patient's existing primary care relationship through this policy. These commenters state the importance of ensuring patients with an existing primary care relationship be “tucked back into” their provider and not be referred to a different supplier of primary care services. A few commenters submitted comments requesting that TEAM participants be required to make referral decisions for primary care based on the patient's PCP status determined upon admission, thus ensuring TEAM participants would have the most up to date information on a patient's existing primary care relationship before making a referral and limit the risk the patient is referred away from their existing primary care provider. Additionally, a commenter encouraged CMS to create safeguards that can be used to monitor that a warm hand-off occurs back to the patient's existing primary care provider using CPT (Current Procedural Terminology) II codes, like the CPT II code used in Advanced Care Planning (ACP).

Response: We agree with these commenters on the importance of maintaining a patient's relationship with their existing primary care provider. Disrupting this relationship does not serve the patient's best interests and could cause delays or gaps

in providing the best care due to lack of historical knowledge and relationship between provider and patient.

CMS also agrees that TEAM participants would benefit from identifying the patient's primary care provider upon admission to their anchor hospitalization or anchor procedure and we expect that many TEAM participants already have this step built into their standardized admission practices.

Although we recognize the value in monitoring this policy through a mechanism such as HCPCS code present in claims data, CMS does not agree that these kinds of safeguards should be implemented. Specifically for the request to use HCPCS coding to identify advance care planning conversations, we do not believe that requiring an advance care planning conversation to occur during a specific window of the beneficiary's episode to be the most effective. CMS's expectation is that many beneficiaries are having these conversations with their providers at various times, including prior to an episode initiating. Additionally, this kind of claims-based monitoring would be requiring increased resources and burden to both TEAM participant and CMS. As mentioned above, we proposed the TEAM participant would be subject to remedial action, as described in the Remedial Action section: X.A.1.f. of this final rule, which we believe is a sufficient guardrail to encourage adherence to this policy by TEAM participants.

Comment: A few commenters mention concern that the policy to require a referral to a supplier of primary care services could cause higher referrals to in-network or hospital-system affiliated providers, leading to an imbalance of referrals to hospital affiliated over community practices or reduced patient volume to independent practices or practices not included in any preferred network.

Response: As mentioned above, we recognize the important of ensuring a patient's existing primary care relationship not be disrupted due to this policy. Additionally, TEAM participants must ensure they comply with beneficiary freedom of choice requirements. CMS urges TEAM participants to make referral decisions based on timely connection to a primary care provider and not base referrals on their own profit or benefit from retaining a beneficiary within any specific network.

Comment: We received a few comments where commenters opposed the requirement to refer to only a primary care supplier and asked CMS to consider making the referral policy

more flexible around which physician is engaged. These commenters state that not all patients would benefit from a primary care visit upon discharge from their TEAM episode, but rather may benefit from simply seeing their surgeon post-discharge.

Response: As TEAM is designed include multiple procedurally based clinical episode categories, we acknowledge that many beneficiaries that trigger a TEAM episode will likely engage in subsequent appointments with their specialist for follow-up and post-surgical care. We encourage these visits to take place and recognize the importance of the continued care from the patient's specialist after a procedure. However, this does not negate the importance of also ensuring the patient is engaged with a primary care provider to support their long-term care after the immediate care surrounding the patient's procedure has concluded. By requiring a referral to primary care, this creates opportunity for the patient's specialist and primary care providers to engage and support the patient with more collaborative care.

Comment: We received a comment that mentioned that TEAM covers the major surgeries that fall within the 90-day global period and asked for clarification on how a primary care provider would be compensated for the follow-up care provided to the patient during the 90-day global period.

Response: All providers furnishing services during a TEAM episode will be reimbursed per the applicable CMS fee schedule; CMS will not be issuing a global payment or any capitated payments as part of TEAM. We encourage this commenter and any other stakeholders with questions on how providers will be compensated to review sections on episode construction and reconciliation in the Items and Services Included in Episodes section: X.A.3(b)(5) and the Process for Reconciliation section: X.A.3(d)(5) of this final rule.

Comment: A commenter in support of this policy specifically asked CMS to consider how to use the referral process to ensure that primary care suppliers involved in care transitions are taking steps to prevent opioid misuse. This commenter states this could be done through requiring TEAM participants to counsel patients prior to discharge about their pain management options to ensure they are adequately informed about the benefits and risks of each potential treatment plan, document in the medical record a rationale for prescribing opioids, if applicable, together with a plan for (to the extent clinically appropriate) transitioning the

beneficiary to a non-opioid alternative over the course of the patient's treatment journey, and, for beneficiaries prescribed opioids at discharge, establishing a care plan that involves joint monitoring by the TEAM participant and primary care supplier to monitor for any signs of opioid misuse or opioid use disorder.

Response: We appreciate this commenter's acknowledgement of the risk of opioid overuse and recommendation that suppliers of primary care are monitoring their patient's use of opioids and identify potential overuse. CMS agrees that primary care suppliers should be identifying potential overuse for their patients. However, at this time, CMS does not plan to incorporate any formal policy surrounding opioid management or misuse avoidance. We do expect that primary care providers are actively engaged in conversations with their beneficiaries about all medications prescribed and documenting medications used to ensure they are able to identify potential misuse and avoid misuse.

Comment: A commenter asked CMS to consider how to leverage digital tools, such as a digital platform presented in a dashboard interface, to aid referrals between specialists and primary care physicians. The commenter states that this kind of interface could display information about an existing relationship with a primary care provider or offer options for discharge referrals based on the patient's coverage and specific need, aiding in better care coordination.

Response: CMS agrees with this commenter that the ability to leverage digital tools like a dashboard interface can strongly support collaboration, data-sharing, and communication between providers, such as specialists and primary care providers. However, creating and maintaining these kinds of digital tools would cause a significant drain on time and resources for CMS and potentially, TEAM participants. CMS encourages participants to consider how they can leverage digital tools to aid their success in TEAM; however, CMS will not be incorporating the support for any digital tool into TEAM at this time.

Comment: We received a comment from a commenter who recommended that primary care referrals only be made for a beneficiary without an existing primary care relationship. For a beneficiary with an existing primary care relationship, that the TEAM participant shares medical record documentation with the primary care

supplier to streamline care coordination.

Response: As mentioned in earlier comments, connection to a primary care provider upon discharge from a patient's anchor hospitalization or anchor procedure is critical to ensuring care coordination. CMS agrees that sharing of medical record documentation should be included in this process so primary care providers have the most up-to-date information so as to make this most informed decisions for their patient. However, CMS does not believe that the sharing of medical record documentation eliminates the need for patients to be referred for a visit to see their primary care providers. This connection between primary care and patient ensures all patients, even thoughts with existing primary care relationships, are involving the primary care providers in the ongoing care the patient needs.

Comment: Some commenters submitted comments asking to clarify how this policy would be monitored by CMS. A commenter mentioned there could be an increased risk for patients with high social determinants of health concerns and it would be helpful to know if these factors would be included in evaluation or monitoring of the policy.

Response: As mentioned above, if a TEAM participant fails to comply with requiring a referral to a supplier of primary care services during hospital discharge planning, the TEAM participant would be subject to remedial action, as described in the Remedial Action section: X.A.1.f. of this final rule. CMS does not plan to evaluate or monitor participants adherence to this policy for any specific populations of patients, such as those with social determinant of health concerns.

Comment: We received a few comments opposing the policy to require a referral to primary care services as it could add administrative burden on the TEAM participant. Commenters stated that requiring primary care referral at discharge does not further incentivize hospitals to coordinate care and states there are enough incentives in place now to coordinate care without additional documentation burden to the participant.

Response: CMS disagrees with these commenters and strongly believes that referring a patient to primary care upon discharge from anchor hospitalization or anchor procedure supports better care coordination and ongoing care for the patient beyond the care surrounding their procedure. For TEAM participants who do not currently refer to primary

care at discharge, we understand this will be an additional administrative component to build in their discharge planning procedures. However, we also believe that most TEAM participants already have a referral to primary care built into their discharge planning, which would not add additional administrative burden for those hospitals.

After consideration of the public comments we received, we are finalizing our proposal as proposed that TEAM participants be required to include in hospital discharge planning a referral to a supplier of primary care services for a TEAM beneficiary, on or prior to discharge from an anchor hospitalization or anchor procedure at § 512.564. We also finalize our proposal that the TEAM participant must comply with beneficiary freedom of choice requirements, as described in Beneficiary and Notification section: X.A.3.i.(2) of this final rule and codified at § 512.582(a), and not limit a TEAM beneficiary's ability to choose among Medicare providers or suppliers.

m. Alternative Payment Model Options (1) Background

We stated in the proposed rule (89 FR 36480) that in the Quality Payment Program (42 CFR 414.1415), an APM must meet three criteria to be considered an Advanced APM:

- Beginning with the CY 2025 Qualifying APM Participant (QP) performance period, an Advanced APM must require all eligible clinicians in each participating APM Entity, or for APMs in which hospitals are the participants, each hospital, to use Certified Electronic Health Record Technology (CEHRT).

- An Advanced APM must include quality measure performance as a factor when determining payment to participants for covered professional services under the terms of the APM.

- Meet the financial risk standard under 42 CFR 414.1415(c)(1) or (2) and the nominal amount standard under 42 CFR 414.1415(c)(3) or (4).

We sought to align the design of TEAM with the Advanced APM criteria in the Quality Payment Program and enable CMS to have the necessary information on eligible clinicians to make the requisite QP determinations. Eligible clinicians, as defined in 42 CFR 414.1305, that are captured on a CMS-maintained list for the APM entity, as defined in 42 CFR 414.1305, may be eligible to receive benefits for participating in an Advanced APM, including burden reduction and financial incentives. We proposed that

the TEAM participant would be considered the APM entity, but that the TEAM participant's eligible clinicians may be assessed for QP determinations depending on which track the TEAM participant is in and whether the CEHRT criteria are met (89 FR 36480). However, we also sought to ensure the design of TEAM meets the Merit-based Incentive Payment System (MIPS) APM criteria and that CMS has the necessary information on MIPS eligible clinicians, as defined in 42 CFR 414.1305, so that they may be eligible for certain scoring benefits under MIPS. We proposed to adopt two different APM options for TEAM—an AAPM option in which TEAM participants would attest to meeting the CEHRT standards and in which the TEAM participant's eligible clinicians may be assessed for QP determinations (to the extent TEAM is determined to be an Advanced APM for Track 2 and Track 3), and a non-AAPM option in which TEAM participants would not meet CEHRT or financial risk standards and in which the TEAM participant's MIPS eligible clinicians may be assessed for reporting and scoring through the APM Performance Pathway (APP) (to the extent the TEAM is determined to be a MIPS APM for all tracks).

(2) TEAM APM Options

In the proposed rule we stated an Advanced APM must require participants to use CEHRT (42 CFR 414.1415(a)), make payment based on quality measures (42 CFR 414.1415(b)) and meet financial risk standards (42 CFR 414.1415(c)) (89 FR 36481). We proposed to have two APM options in TEAM: a non-Advanced APM (non-AAPM) option and an Advanced APM (AAPM) option (89 FR 36481). The non-AAPM option would be for TEAM participants that do not meet the CEHRT or financial risk standards. These TEAM participants may still be considered APM entities in a MIPS APM. The AAPM option would be for TEAM participants in Tracks 2 and 3 that meet the CEHRT and financial risk standards. These TEAM participants would be considered APM entities in an Advanced APM., TEAM participants in Track 1 would automatically be assigned into the non-AAPM option since Track 1 would have no downside financial risk. The financial risk that we proposed in Tracks 2 and 3 would meet the generally applicable nominal amount standard, as defined in 42 CFR 414.1415(c)(3), but there may be TEAM participants in Tracks 2 and 3 who do not meet the CEHRT standard. TEAM participants in Tracks 2 or 3 that do not meet and attest to the CEHRT use

requirement would fall into the non-AAPM option of TEAM, but these TEAM participants may still be considered APM entities in a MIPS APM. TEAM participants that participate in Tracks 2 or 3 and meet and attest to the CEHRT use requirement would be in the AAPM option of TEAM.

We proposed to require TEAM participants who wish to participate in the AAPM option to attest to meeting the CEHRT use requirement that meets the CEHRT definition in our regulations at section 414.1305 on an annual basis prior to the start of each performance year in a form and manner and by a date specified by CMS (89 FR 36481). We proposed that the TEAM participant would be required to retain and provide CMS access to the attestation upon request. We further proposed that meeting and attesting to the CEHRT use criteria would be voluntary, and that CMS would assign TEAM participants who choose not to do so to the non-AAPM option. Lastly, we proposed to require TEAM participants who wish to participate in the AAPM option to provide their CMS Electronic Health Record (EHR) Certification IDs on an annual basis prior to the end of each performance year in a form and manner and by a date specified by CMS.

We stated in the proposed rule that we believe that a TEAM participant's decision to meet and attest to the CEHRT use criteria would not create significant additional administrative burden for the TEAM participant (89 FR 36481). Moreover, the choice of whether to meet and attest to the CEHRT use criteria would not otherwise affect the TEAM participant's requirements or opportunities under the model. However, a TEAM participant's decision to attest to CEHRT use may affect the ability of its clinicians to qualify as a QP. In other words, if a TEAM participant chose not to attest to CEHRT use, its clinicians would not be assessed for QPs status.

We sought comment on our proposals for the TEAM Advanced APM options and the associated requirements at § 512.522. We also sought comment on our proposed definitions for the AAPM option and non-AAPM option at § 512.505.

The following is a summary of comments we received on our proposals for the TEAM Advanced APM options, as well as comments on our proposed definitions for the AAPM option and non-AAPM option.

Comment: A commenter supports CMS' proposals related to Advanced APM options and QP status under TEAM and suggests that CMS can

reduce burden by not requiring TEAM participants to report on the MIPS Promoting Interoperability requirement. The commenter is concerned that CMS will require APM Participants to report on the MIPS Promoting Interoperability requirement in 2025, which could present a non-financial disincentive to APM Participation.

Response: We thank the commenter for their support of CMS' proposed Advanced APM options under TEAM, and for their recommendation regarding the reduction of burden for APM Participants. The recommendation made by the commenter is related to policies set by the Quality Payment Program (QPP) and are beyond the scope of the proposed TEAM. CMS will consider this recommendation for future use; however, we are unable to adopt this recommendation regarding QPP policies under this proposed rule.

Summary: A commenter seeks clarification on TEAM requirements regarding the use of Certified Electronic Health Record Technology (CEHRT) for TEAM Participants and Collaborators.

Response: We thank the commenter for their interest in the TEAM CEHRT requirements. The use of CEHRT is not required for TEAM Participants or TEAM collaborators, however, CMS proposes two APM options in TEAM: an Advanced APM (AAPM) option and a non-Advanced APM (non-AAPM) option. The AAPM option would be for TEAM Participants in Track 2 and 3 that meet the financial risk standards and attest to meeting the CEHRT requirements. In the non-AAPM option, that do not meet the financial risk standards and/or do not attest to meeting the CEHRT requirements.

Comment: A commenter recommended that CMS should reduce QP determination thresholds around Medicare Part B payments and Medicare Beneficiaries for TEAM Participants and Collaborators to ensure that they are provided relief from reporting under MIPS if they do not meet QP thresholds.

Response: We thank the commenter for their recommendation regarding the QP determination thresholds, and the potential burden faced by TEAM Participants and Collaborators who do not meet the QP thresholds. The recommendation made by the commenter is related to policies set under the Quality Payment Program (QPP) and are beyond the scope of the proposed TEAM. CMS will consider this recommendation for future use; however, we are unable to adopt this recommendation regarding QPP policies under this proposed rule.

After consideration of the public comments we received, we are

finalizing the TEAM Advanced APM options and the associated requirements at § 512.522, as well as the proposed definitions for the AAPM option and non-AAPM option at § 512.505.

(3) Financial Arrangements List and Clinician Engagement List

We proposed that each TEAM participant would be required to submit information about the eligible clinicians or MIPS eligible clinicians who enter into financial arrangements with the TEAM participant for purposes of supporting the TEAM participants' cost or quality goals as discussed in section X.A.3.g. of the preamble of this final rule (89 FR 36481). This information would enable CMS to make determinations as to eligible clinicians who could be considered QPs based on the services furnished under TEAM (to the extent the model is determined to be an AAPM) and would be necessary for APP reporting and scoring for MIPS eligible clinicians (to the extent the model is determined to be a MIPS APM). We proposed that for purposes of TEAM, the eligible clinicians or MIPS eligible clinicians could be: (1) TEAM collaborators, as described in section X.A.3.g.(3). of the preamble of this final rule, engaged in sharing arrangements with a TEAM participant; (2) PGP, NPPGP, or TGP members who are collaboration agents engaged in distribution arrangements with a PGP, NPPGP, or TGP that is a TEAM collaborator, as described in section X.A.3.g.(5). of the preamble of this final rule; or (3) PGP, NPPGP, or TGP members who are downstream collaboration agents engaged in downstream distribution arrangements with a PGP, NPPGP, or TGP that is also an ACO participant in an ACO that is a TEAM collaborator, as described in section X.A.3.g.(6). of the preamble of this final rule. The list of physicians and nonphysician practitioners in these three groups that we proposed to require TEAM participants to submit to CMS would satisfy the criteria to be considered an Affiliated Practitioner List, as defined in § 414.1305. We proposed to use the list submitted by TEAM participants to make determinations regarding which physicians and nonphysician practitioners should receive QP determinations or be reported for the APP based on the services they furnish under TEAM (89 FR 36481).

We proposed for the reasons detailed above that each TEAM participant with eligible clinicians or MIPS eligible clinicians must submit to CMS a financial arrangements list in a form and manner and by the date specified by

CMS on a quarterly basis during each performance year, or attest that there are no individuals to report on the financial arrangements list (89 FR 36481). We stated in the proposed rule that we believe submission of the financial arrangements list on a quarterly basis would align with the Quality Payment Program's QP determination dates, as described in § 414.1425. We proposed to define the financial arrangements list as the list of eligible clinicians or MIPS eligible clinicians that have a financial arrangement with the TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent. We proposed that the TEAM participant would be required to retain and provide CMS access to the financial arrangements list upon request. The proposed list must include the following information:

- For each TEAM collaborator who is a physician, nonphysician practitioner, or therapist during the performance year—

- ++ The name, tax identification number (TIN), and national provider identifier (NPI) of the TEAM collaborator; and

- ++ The start date and, if applicable, end date, for the sharing arrangement between the TEAM participant and the TEAM collaborator.

- For each collaboration agent who is a physician, nonphysician practitioner, or therapist during the performance year—

- ++ The name, TIN, and NPI of the collaboration agent and the name and TIN of the TEAM collaborator with which the collaboration agent has entered into a distribution arrangement; and

- ++ The start date and, if applicable, end date, for the distribution arrangement between the TEAM collaborator and the collaboration agent.

- For each downstream collaboration agent who is a physician or nonphysician practitioner, or therapist during the performance year—

- ++ The name, TIN, and NPI of the downstream collaboration agent and the name and TIN of the collaboration agent; and

- ++ The start date and, if applicable, end date, for the downstream distribution arrangement between the collaboration agent and the downstream collaboration agent.

- If there are no individuals that meet the reporting criteria above for TEAM collaborators, collaboration agents, or downstream collaboration agents, then the TEAM participant must attest on a quarterly basis in a form and manner and by a date specified by CMS that

there are no individuals to report on the financial arrangements list.

We indicated in the proposed rule that while the submission of the financial arrangements list may create some additional administrative burdens for certain TEAM participants, we expect that TEAM Participants could modify their contractual relationships with their TEAM collaborators and, correspondingly, require those TEAM collaborators to include similar requirements in their contracts with collaboration agents and in the contracts of collaboration agents with downstream collaboration agents (89 FR 36482).

In the proposed rule we recognize there may be physicians and nonphysician practitioners who would not be listed on the financial arrangements list because they have not entered into a financial arrangement as a TEAM collaborator, collaboration agent, or downstream collaboration agent, but who may nevertheless participate in TEAM activities, as defined at § 512.505, and may be eligible for QP determinations or eligible for APP reporting because they are affiliated with and support the APM Entity. We proposed that, in order to capture these physicians and nonphysician practitioners who are not listed on the TEAM participant's financial arrangements list for QP determinations or APP reporting, TEAM participants must also submit to CMS a clinician engagement list in a form and manner and by a date specified by CMS on a quarterly basis every performance year. We proposed to use the clinician engagement list for assessing QP determinations and for APP reporting. The submission of the clinician engagement lists may create some additional administrative burdens for TEAM participants, but we expect the effort to be worthwhile since some of these QP determinations may result in eligible clinicians receiving burden reduction benefits and financial incentives, and some MIPS eligible clinicians may receive MIPS APM scoring benefits (89 FR 36482).

We proposed to define the clinician engagement list as the list of eligible clinicians or MIPS eligible clinicians that participate in TEAM activities and have a contractual relationship with the TEAM participant, and who are not listed on the financial arrangements list (89 FR 36482). We proposed that the TEAM participant must submit the list to CMS on a quarterly basis during each performance year in a form and manner and by a date specified by CMS or attest that there are no individuals to report on the clinician engagement list. We

believe submission of the clinician engagement list on a quarterly basis would align with the Quality Payment Program's QP determination dates, as described in § 414.1425. We proposed that the TEAM participant would be required to retain and provide CMS access to the clinician engagement list upon request. We proposed that the clinician engagement list must include the following information:

- For each physician, nonphysician practitioner, or therapist who is not listed on the TEAM participant's financial arrangements list during the performance year but who does have a contractual relationship with the TEAM participant and participates in TEAM activities during the performance year—

- ++ The name, TIN, and NPI of the physician, nonphysician practitioner, or therapist; and

- ++ The start date and, if applicable, end date, for the contractual relationship between the physician, nonphysician practitioner, or therapist and the TEAM participant.

- We proposed that if there are no individuals that meet the requirements to be reported on the clinician engagement list, then the TEAM participant must attest on a quarterly basis in a form and manner and by a date specified by CMS that there are no individuals to report on the clinician engagement list (89 FR 36482).

We sought comments on the proposal to require TEAM participants to submit a financial arrangements list and clinician engagement list on a quarterly basis or attest that there are no individuals to report. We were especially interested in comments about approaches to information submission, including the content of the lists, and periodicity and method of submission to CMS that would minimize the reporting burden on TEAM participants while providing CMS with sufficient information about eligible clinicians to facilitate QP determinations and APP reporting to the extent that TEAM is considered to be an Advanced APM for Track 2 and Track 3 and a MIPS APM for all tracks, respectively. The following is a summary of the comments we received regarding the requirement for TEAM participants to submit a financial arrangements list and clinician engagement list to provide CMS with sufficient information about eligible clinicians to facilitate QP determinations and APP Reporting.

Comment: A commenter expressed support and approval of CMS' proposal to use the clinician engagement list for assessing QP determinations and for APP reporting.

Response: We thank the commenter for their support and approval of the TEAM proposal regarding the use of the clinician engagement list.

After consideration of the public comments we received, we are finalizing the requirement that TEAM participants submit a quarterly financial arrangements list and clinician engagement list, as applicable, in our regulation at § 512.522.

n. Interoperability

In the proposed rule we stated that improved interoperability of software systems and tools used to manage patients supports the goals of value-based care, enabling care coordination and data-driven decision making to improve outcomes and lower healthcare expenditures. Hospitals use electronic health record (EHR) systems to document patient medical history, which may include clinical data relevant to that person's care, including demographics, clinical notes, medications, vital signs, past medical and surgical history, immunizations, laboratory data and radiology reports. The EHR also has the ability to support other care-related and administrative activities directly or indirectly through various interfaces, including clinical decision support, quality improvement, and population-health outcomes reporting. While EHRs also include capabilities to coordinate care by sharing data in a structured system with other health care providers, health information exchanges (HIEs) and health information networks (HINs), as defined in 45 CFR 171.102, have played an increasingly important role in assisting hospitals to connect with other health care providers and ensure that information supporting care coordination is consistently shared.¹⁰¹¹ A hospital may be connected to an HIE or HIN that focuses on exchange within a defined geographic area, or nationally across systems and regions. Evidence suggests that participation with an entity facilitating cross-system exchange may improve patient outcomes, including decreased hospital readmission rates, as well as decreased utilization, such as repeat laboratory or radiology studies.^{1012 1013}

¹⁰¹¹ <https://www.healthit.gov/topic/health-it-and-health-information-exchange-basics/health-information-exchange>.

¹⁰¹² Chen, M., Guo, S., & Tan, X. (2019). Does health information exchange improve patient outcomes? Empirical evidence from Florida hospitals. *Health Affairs*, 38(2), 197–204. <https://doi.org/10.1377/hlthaff.2018.05447>.

¹⁰¹³ Menachemi, N., Rahurkar, S., Harle, C.A., & Vest, J.R. (2018). The benefits of health information exchange: an updated systematic review. *Journal of the American Medical Informatics Association*,

In the proposed rule, we stated that despite the growth of HIEs and HINs, important gaps remain for an infrastructure that supports the seamless exchange of clinical data across disparate healthcare organizations and software vendors. Barriers to interoperability create silos that limit care coordination between hospitals and other health care providers, especially during care transitions such as a patient being discharged from a hospital to a post-acute care facility. Existing HHS and CMS initiatives aim to support health care organizations engaging in interoperable exchange of health information. The Office of the National Coordinator for Health Information Technology (ONC) launched The Trusted Exchange Framework and Common Agreement (TEFCA), which establishes a universal governance, policy, and technical floor for nationwide interoperability; simplifies connectivity for organizations to securely exchange information to improve patient care, enhance the welfare of populations, and generate health care value; and enables individuals to gather their healthcare information.¹⁰¹⁴

CMS acknowledged the importance of TEFCA in the FY 2023 Inpatient Prospective Payment System (IPPS) final rule (87 FR 48780) by adding the Enabling Exchange under TEFCA (87 FR 49329) as a new measure under the Health Information Exchange Objective for the Medicare Promoting Interoperability Program. Participants in the Medicare Promoting Interoperability Program may also earn credit for the Health Information Exchange Objective by reporting on the previously finalized Health Information Exchange (HIE) Bidirectional Exchange measure (86 FR 45465).

In the CY 2023 Physician Fee Schedule final rule (87 FR 70067 through 70071), CMS also added a new optional measure, Enabling Exchange Under TEFCA, to the Health Information Exchange objective for the Merit-based Incentive Payment System (MIPS) Promoting Interoperability performance category beginning with the CY 2023 performance period/2025 MIPS payment year. Currently, for the CY 2024 performance period/2026 MIPS payment year, MIPS eligible clinicians may fulfill the Health Information Exchange objective via three avenues by reporting: (1) the two Support Electronic

25(9), 1259–1265. <https://doi.org/10.1093/jamia/ocy035>.

¹⁰¹⁴ <https://www.healthit.gov/topic/interoperability/policy/trusted-exchange-framework-and-common-agreement-tefca>.

Referral Loops measures; (2) the Health Information Exchange Bidirectional Exchange measure; or (3) the Enabling Exchange under TEFCA measure (88 FR 79357 through 79362).

In the proposed rule (89 FR 36482) we stated that we would like to support TEAM participants' interoperability efforts that could lead to best practices across U.S. health care landscape. However, we recognized that given the existing federal interoperability initiatives, we do not want to create duplicate efforts or create unnecessary burden on TEAM participants. We sought comment on how CMS can promote interoperability in the proposed TEAM, in particular, to what extent TEAM participants are planning on participating in TEFCA in the next 1–2 years, as well as other means by which interoperability may support care coordination for an episode. Any further proposals related to interoperability included in TEAM would be done in future notice and comment rulemaking.

We thank commenters for their input and will address these comments, along with further proposals, in future notice and comment rulemaking.

o. Evaluation Approach

(1) Background

TEAM is intended to enable CMS to better understand the effects of bundled payments models on a broader range of Medicare providers and capture a greater number of episodes of care than what is currently available under the CJR model and BPCI Advanced. Obtaining information that is representative of a wide and diverse group of providers and episodes of care will best inform us on how such a payment model might function were it to be more fully integrated within the Medicare program. All CMS Innovation Center models, which would include TEAM, are rigorously evaluated on their ability to improve quality and reduce costs. In addition, we routinely monitor CMS Innovation Center models for potential unintended consequences of the model that run counter to the stated objective of lowering costs without adversely affecting quality of care. Outlined later in this section are the design and evaluation methods, the data collection methods, key evaluation research questions, and the evaluation period and anticipated reports for TEAM.

(2) Design and Evaluation Methods

In the proposed rule we stated that our evaluation methodology for TEAM would be consistent with the CMS Innovation Center evaluation

approaches we have taken in other projects such as the BPCI initiative, BPCI Advanced and the CJR model, and o vxther CMS Innovation Center models. Specifically, the evaluation design and methodology for the proposed TEAM would allow for a comparison of historic patterns of care among TEAM participants to any changes made in these patterns in response to the TEAM. In addition, the overall design would include a comparison of TEAM participants with hospitals not participating in TEAM to help us discern simultaneous and competing provider and market level forces that could influence our findings.

We indicated in the proposed rule that the evaluation methodology for this model builds upon the fact that we proposed CBSAs to be selected for participation in the model based on a stratified random assignment. In this approach, researchers evaluate the effects of the model on outcomes of interest by directly comparing CBSAs that are randomly selected to participate in the model to a comparison group of CBSAs that were not randomly selected for the model (but could have been). Randomized evaluation designs of this kind are widely considered the “gold standard” for social science and medical research because they ensure that the systematic differences are reduced between units that do and do not experience an intervention, which ensures that (on average) differences in outcomes between participating and non-participating units reflect the effect of the intervention.

In the proposed rule we stated that we plan to use a range of analytic methods, including regression and other multivariate methods appropriate to the analysis of stratified randomized experiments to examine each of our measures of interest. Measures of interest could include, for example, quality of and access to care, utilization patterns, expenditures, and beneficiary experience. With these methodologies, we would be able to examine the experience of the TEAM participants over time relative to those in the comparison group controlling for as many of the relevant confounding factors as is possible. The evaluation would also include rigorous qualitative analyses to capture the evolving nature of care delivery transformation.

In the proposed rule we stated that in our design, we plan to evaluate the impact of the TEAM at the geographic unit level, the hospital level, and at the patient level. We also considered various statistical methods to address factors that could confound or bias our results. For example, we would use

statistical techniques to account for clustering, that is how groups of patients may have commonalities in outcomes by receiving care in the same hospitals or in the same markets. Accounting for clustering ensures that we do not overstate our effective sample size by failing to recognize how performance of hospitals in each market may not be fully independent of one another. Alternatively, accounting for clustering may improve statistical precision or allow us to examine better how patterns of performance vary across hospitals. Thus, in our analysis, if a large hospital consistently has poor performance, clustering would allow us to still be able to detect improved performance in the other, smaller hospitals in a market rather than placing too much weight on the results of one hospital.

In the proposed rule we stated that we plan to use various statistical techniques to examine the effects of the TEAM while also taking into account the effects of other ongoing interventions such as Medicare Shared Savings Program. For example, we considered additional regression techniques to help identify and evaluate the incremental effects of adding the TEAM in areas where patients and market areas are already subject to other models as well as potential interactions among these efforts.

(3) Data Collection Methods

We considered multiple sources of data to evaluate the effects of TEAM. In the proposed rule we stated that we expect to base much of our analysis on secondary data sources such as the Medicare FFS claims. Beneficiary level claims data would be analyzed to estimate expenditures in total and by type of provider and service, as well as whether or not there was an inpatient hospital readmission. In conjunction with the secondary data sources mentioned previously, we considered collecting primary data through a CMS-administered survey, guided interviews and focus groups with beneficiaries who were cared for and resulting in a TEAM episode during the performance year. The survey would be administered to beneficiaries who were cared for as patients within a TEAM episode or similar beneficiaries selected as part of a control group. The primary focus of a survey would be to obtain information on the beneficiary’s experience in TEAM episodes relative to usual care as represented in the control group. The administration of this beneficiary survey would be coordinated with administration of the HCAHPS (Hospital Consumer Assessment of Healthcare

Providers and Systems) survey to not conflict with or compromise the HCAHPS efforts. Likewise, we considered a survey administered by CMS with providers including, but not limited to, TEAM participants, physicians, and PAC providers participating in the TEAM. These surveys would provide insight on providers’ experience under the model and further information on the care redesign strategies undertaken by health care providers.

In addition, we considered CMS evaluation contractor administered site visits and focus groups with selected TEAM participants, physicians and PAC providers. In the proposed rule we stated that we believe that these qualitative methods would provide contextual information that would help us understand better the dynamics and interactions occurring among the providers in TEAM. For example, these data could help us understand hospitals’ intervention plans as well as how they were implemented and what they achieved. In contrast to relying on quantitative methods alone, qualitative approaches would enable us to capture variations in implementation as well as identify factors that are associated with successful interventions and distinguish the effects of multiple interventions that may be occurring within participating providers, such as simultaneous ACO and bundled payment participation.

We considered primary data collection efforts with providers and beneficiaries within the control group. The systematic data collection from a control group would allow us to observe and separate changes in standard care from the TEAM impact. Additionally, primary data collection with beneficiaries who received care from hospitals and providers in the control group would provide critical information about the impact of the model on patient-reported health status, experience of care, and overall satisfaction.

(4) Key Evaluation Research Questions

Our evaluation would assess the impact of the TEAM on the aims of improved care quality and efficiency as well as reduced health care costs. This would include assessments of patient experience of care, utilization, outcomes, Medicare expenditures, provider costs, and beneficiary access. Our key evaluation questions would include, but are not limited to, the following:

- Payment. Is there a reduction in Medicare expenditures in absolute terms? By subcategories? Do the TEAM participants reduce or eliminate

variations in expenditures that are not attributable to differences in health status? If so, how have they accomplished these changes? Did TEAM result in net savings to the Medicare program, after accounting for the financial incentives distributed under the model?

- Utilization. Are there changes in Medicare utilization patterns, overall and for specific types of services? How do these patterns compare to historic patterns, regional variations, and national patterns of care? How are these patterns of changing utilization associated with Medicare payments, patient experience and outcomes, and general clinical judgment of appropriate care?

- Referral Patterns and Market Impact. How has provider behavior in the selected mandatory CBSAs changed under the model? Is there evidence of broader changes to the market? Are provider relationships changing over the course of the model? Is the model facilitating continuity of care by connecting beneficiaries with new or existing primary care providers?

- Outcomes/Quality. Is there either a negative or positive impact on quality of care and/or better patient experiences of care? Did the incidence of relevant clinical outcomes such as complications remain constant or decrease? Were there changes in beneficiary outcomes under the model compared to appropriate comparison groups?

- Equity. Were there notable impacts of TEAM for subgroups based on beneficiary characteristics such as race/ethnicity, dual status, rurality, and other measures of socio-economic disadvantage? How did TEAM participants address health disparities in care? Did the financial performance differ for hospitals furnishing a substantial share of services to uninsured and low-income patients?

- Transformation. Is there evidence that the participants' changes in care delivery, that were made in the response to the model, will be sustained? Did TEAM enable positive spillover effects to other episodes of care, or other providers across the local market of the health system?

- Unintended Consequences. Did TEAM result in any unintended consequences, including adverse selection of patients, access problems, cost shifting beyond the agreed upon episode, evidence of stinting on appropriate care, anti-competitive effects on local health care markets, evidence of inappropriate referrals practices? If so, how, to what extent, and for which beneficiaries or providers?

- Potential for Extrapolation of Results. What was the typical patient case mix in the participating practices and how did this compare to regional and national patient populations? What were the characteristics of participating practices and to what extent were they representative of practices treating Medicare FFS beneficiaries? Was the model more successful in certain types of markets? To what extent would the results be able to be extrapolated to similar markets and/or nationally?

- Explanations for Variations in Impact. What factors are associated with the pattern of results (previously)? Specifically, are they related to:

- Characteristics of the model including variations by year and factors such as presence of downside risk or track assignment?

The TEAM participant's specific features and structure, including such factors as the number of relevant cases, provider mix, and health system affiliation?

- The TEAM participant's organizational culture and readiness
- The TEAM participant's care redesign interventions and their ability to carry out their proposed intervention?

- Characteristics and nature of interaction with partner providers including PAC provider community?

- Characteristics of market and CBSA such as resources, care infrastructure and supply of physicians and associated providers?

- Characteristics associated with the patient populations served?

(5) Evaluation Period and Anticipated Reports

As discussed in section X.A.3.a.(1) of the preamble of this final rule, TEAM would have a 5-year model performance period. The evaluation period would encompass this entire 5-year model performance period, a year baseline period and up to 2 years after. We plan to evaluate the TEAM on an annual basis. However, we recognize, that interim results are subject to changing policies as discussed in the preamble of this final rule, and issues such as sample size and random fluctuations in practice patterns. Hence, while CMS intends to conduct periodic summaries to offer useful insight during the model test, a final analysis after the end of the 5-year model performance period will be important for ultimately synthesizing and validating results.

We sought comments on our design, evaluation, data collection methods, and research questions.

The following is a summary of comments we received on the proposed

evaluation approach for TEAM and our responses to these comments:

Comment: Commenters detailed evaluation topics and subgroups in which they were particularly interested. A couple commenters expressed support for evaluating the impact on equity, especially for historically disadvantaged groups. A commenter stressed the importance of assessing differential impacts for all key questions by sociodemographic factors. A couple of commenters noted model overlap and the ability to distinguish impacts from co-occurring model participation as a critical area to quantify. A commenter highlighted patients with fracture as a key population to assess separately as they are typically more elderly and medically complex.

Response: We thank the commenters for their list of topics and subgroups of interest. These topics and subgroups are in alignment with our stated areas of interest and will be considered in the development and implementation of the evaluation plan.

Comment: A couple of commenters emphasized the importance of the patients' experience and supported the inclusion of beneficiaries and caregivers in data collection to better access patient and family caregivers and/or support persons' experience with this model.

Response: We agree with the commenters' points of emphasis. The inclusion of the patient and caregiver perspective is an important aspect of the evaluation of the impact of the model. The survey of patients is a key component of the evaluation to address the very important issues of patient functional performance, pain reduction, experience, and access.

Comment: A couple of commenters expressed concerns about the anticipated burden associated with the evaluation. A commenter express concern about the costs associated with duplicative and overlapping evaluation efforts. The commenter suggested a concerted effort to limit site visits, data requests, and other reporting requirements to the minimum necessary to understand the impact of the program.

Response: We acknowledge the commenters' concern related to the burden associated with the evaluation and will minimize it to the extent possible while still ensuring a thorough assessment of the model and its impacts. We intend to use the site visit approach for data collection judiciously while being mindful of the impact on providers. Furthermore, while we expect TEAM participants and TEAM collaborators to abide by the terms of

the model and to cooperate with the evaluation as discussed in section X.A.1.d of the preamble to this final rule, we point out that this final rule does not contain any provisions that the TEAM participants must incorporate the requirement that their TEAM collaborators host site visits in their agreements.

After consideration of the public comments received, we are finalizing the proposed approach to the evaluation without modification.

p. Decarbonization and Resilience Initiative

In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35934), we proposed a voluntary Decarbonization and Resilience Initiative within TEAM to assist hospitals in addressing the threats to the nation's health and its health care system presented by climate change and the effects of hospital carbon emissions on health outcomes, health care costs and quality of care. The voluntary initiative would have two elements: technical assistance for all interested TEAM participants and a proposed voluntary reporting option to capture information related to Scope 1 and Scope 2 emissions as defined by the Greenhouse Gas Protocol (GHGP) framework,¹⁰¹⁵ with the potential to add Scope 3 in future years.

The threats presented by climate change to the health of beneficiaries and to health care operations are growing. These include acute climate-related events (for example, wildfires, high-powered storms, flooding) that can harm exposed populations and disrupt service delivery, exacerbations of chronic illness (for example, extreme heat impacts on cardiovascular and pulmonary health), and increases in water-borne and insect-borne illness.¹⁰¹⁶ These risks often fall disproportionately on traditionally underserved populations, heightening existing health disparities.¹⁰¹⁷ In view

¹⁰¹⁷ EPA's Office of Atmospheric Programs. Climate Change and Social Vulnerability in the United States: A Focus on Six Impacts. U.S. Environmental Protection Agency. U.S.

of these challenges, health care organizations must increase their resilience, and understand and address their patients' climate-related health risks.

Health systems have reduced their own significant emissions and ground-level air pollution, often through the introduction of energy efficiency solutions, renewable energy initiatives, and focused efficiency measures in clinical care delivery in areas including surgery (described throughout section X.A.3.p. of the preamble of this final rule). We believe these types of cumulative reductions have the potential to make significant contributions to nationwide emission reductions and produce savings. At an individual facility level, these reductions have the potential to save the facility money and enhance their operational resilience (as many sustainable energy solutions can create more energy independence for facilities), meaning decarbonization has bearing on quality of care and cost. More efficient utilization of resources in the surgical setting, specifically, can also reduce cost and improve sustainability; for example, although operating rooms represent a relatively small proportion of hospitals' physical footprint, they typically consume 3–6 times more energy per square foot as the hospital as a whole,¹⁰¹⁸ account for 40–60 percent of the hospital's supply costs, and produce 30 percent of the hospital's waste.¹⁰¹⁹

Because hospital activities (such as surgical procedures) impact emissions and the work of hospitals requires uninterrupted service delivery, we believe TEAM presents an opportunity for CMS to learn more about key strategies for decarbonization (for example, clinical decarbonization approaches, approaches to reducing low-value services and physical waste)

and improving resiliency in the health care system. It is hoped that this initiative would help bring savings to the health system and the Medicare Program, consistent with TEAM's goals.

(1) Background

(a) Climate Impact on Health

Climate change driven by greenhouse gas (GHG) emissions threatens patients' health. The health care industry's contribution to those emissions is well-documented and accounts for between 4.4 and 4.6 percent of worldwide GHG emissions.¹⁰²⁰ In the U.S. in 2018, GHG emissions from the health care sector accounted for 8.5 percent of total U.S. GHG emissions.¹⁰²¹ According to the National Climate Assessment, the US Government's official report on climate change impacts, children, older adults, and low-income communities are disproportionately affected by climate change and pollution, meaning the Medicare, Medicaid, and CHIP programs bear much of the medical expenses and caregiving services related to emissions.¹⁰²² Medicare beneficiaries face several health conditions related to GHG emissions, including, but not limited to, heart disease, stroke, cancer, and respiratory diseases."¹⁰²³ More discussion on the impact of climate to Medicare, Medicaid, and CHIP beneficiaries is presented in section X.A.3.p.(1).(c).(v). of the preamble of this final rule. The estimated disease burden from U.S. health care pollution is the same order of magnitude as years

of life lost as a result of deaths from preventable medical errors.¹⁰²⁴

In keeping with an increased focus on climate resilience and sustainability across HHS, the Biden Administration in 2021 called for the creation of a new Office of Climate Change and Health Equity (OCCHE) within HHS via executive order (E.O. 14008), and for the first time HHS set an aim for addressing climate-related threats to health in its 2022–2026 strategic plan, requiring all Operating Divisions to contribute. In 2022, the Biden Administration launched the Health Sector Climate Pledge, a voluntary commitment to climate resilience and emissions reduction that invites health sector organizations to align with administration goals, cutting GHG emissions by 50 percent by 2030 and achieving net zero emissions by 2050. A group of 133 organizations representing 900 hospitals have signed the Pledge as of November 16, 2023.¹⁰²⁵ To support health sector efforts with climate resilience and emissions reduction, OCCHE developed a resource hub,¹⁰²⁶ featuring tools from across HHS such as a compendium of federal resources for the healthcare sector, information on how to leverage the IRA, an educational webinar series, and the Agency for Healthcare Research and Quality (AHRQ)'s Decarbonization Primer¹⁰²⁷

(referred to hereafter as the AHRQ primer). OCCHE also convenes federal health systems (for example, Indian Health Service, Veteran's Health Administration) to collaborate on meeting the administration's goals for emissions reduction, which can inform this initiative.

(b) Greenhouse Gas Protocol and Health

CMS has twice sought and received feedback on approaches to decarbonization and resilience through requests for information in proposed rules. The feedback to these requests was summarized in the final rules. The first request for information was published in the Patient Protection and Affordable Care Act; HHS Notice of Benefit and Payment Parameters for 2023 proposed rule (87 FR 693 through 694) and a summary presented in the final rule (87 FR 27354). The second was in the in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28478 through 28479) and the summary was presented in the final rule (87 FR 49167). Overall, respondents showed a notable interest in reducing health sector emissions and increasing transparent GHG emissions reporting. CMS continues to update policies to promote energy efficiency and reduce GHG emissions. For example, in 2023, CMS issued the Categorical Waiver Health Care Microgrid System. CMS requires specified providers to have “emergency power for an essential electrical system (EES) to be supplied by a generator or battery system.”¹⁰²⁸ The waiver permits normal and emergency power to be supplied by sources other than a generator or battery system, including a health care microgrid systems that use sustainable sources of energy such as solar power.

When discussing GHG for this initiative, we refer to the Greenhouse Gas Protocol (GHGP) framework, which is a globally recognized standard for quantifying and reporting on emissions. The framework defines 3 scope

levels.¹⁰²⁹ We have included examples that relate to health care.^{1030 1031}

Scope 1: Direct emissions. Direct GHG emissions occur from sources that are owned or controlled by an organization or company. For health care, Scope 1 captures health care operations such as direct facilities emissions, anesthetic gases, and GHG emissions from leased or owned vehicles.

Scope 2: Indirect emissions from purchased energy. GHG emissions from the generation of purchased electricity consumed by the organization or company. For health care facilities, Scope 2 includes purchased or acquired electricity, and steam, heat, or cooling consumed by the reporting organization or company.

Scope 3: Other indirect GHG emissions. Scope 3 allows for the treatment of all other indirect emissions. Scope 3 incorporates upstream and downstream emissions in the supply chain. For health care, Scope 3 may include purchased pharmaceuticals and chemicals, medical devices and supplies, food, water, waste, employee and patient transportation, and additional emissions outside of Scopes 1 and 2. In Scope 3, all purchased and sold goods have an estimated emissions factor for their production, transportation, and life cycle. For example, in a health care setting, Scope 3 emissions may include prescribed medicine such as metered dose inhalers (MDI). Scope 3 uniquely incorporates intangible emissions through the organization's reported investments.

In a 2018 analysis, Scope 1 accounted for 7 percent of the U.S. National Health Care GHG emissions, Scope 2 accounted for 11 percent, and Scope 3 accounted for the remaining 82 percent.¹⁰³² We

believe that Scopes 1 and 2 emissions reduction measures represent areas where there are significant opportunities to increase hospital operating efficiency and reduce operating costs. Therefore, we proposed in section X.A.3.p.(4). of the FY 2025 IPPS/LTCH PPS proposed rule, (89 FR 35934), that TEAM participants could voluntarily respond to organizational questions and Scopes 1 and 2 metrics, as participants in TEAM would have direct oversight of these items. While we did not propose Scope 3 metrics in this rule, we recognize Scope 3 accounts for the largest portion of GHG emissions. Therefore, we sought comment in section X.A.3.p.(4).(a).(vii). of the FY 2025 IPPS/LTCH PPS proposed rule, (89 FR 35934) on how we might be able to standardize and collect this information in the future.

(c) Rationale for Establishing the Decarbonization and Resilience Initiative

(i) GHG Emissions are Relevant to Monitoring and Evaluating Quality Outcomes

The CMS Innovation Center is granted discretion to collect data necessary for the purposes of evaluating and monitoring its models under section 1115A(b)(4)(B) of the Act.

Overwhelming evidence points to GHG emission's deleterious effect on patient health and the disproportionate impact borne by Medicare, Medicaid, and CHIP beneficiaries. See section X.A.3.p.(1).(c).(v). of the preamble of this final rule, for GHG Emissions Impact on Medicare, Medicaid, and CHIP populations.

Given the established impact GHG emissions have on Medicare, Medicaid, and CHIP beneficiary health, in the FY 2025 IPPS/LTCH PPS proposed rule, (89 FR 35934), CMS proposed to collect data on GHG emissions, through voluntary reporting, as part of our monitoring and evaluation of the model, just as CMS monitors for other quality indicators that may impact beneficiary health.

(ii) Measuring GHG Emissions is a Key First Step to Reducing GHG Emissions Which Could Improve Quality Outcomes for Beneficiaries

Measuring GHG emissions is an important first step toward reducing GHG emissions, and such reductions could lead to outcome quality improvements among beneficiaries. By

organizing a GHG emissions reporting system, CMS is supporting TEAM participants in establishing a baseline understanding of their GHG emissions, how much and how efficiently energy is used in their facilities, and the emissions generated by their facilities or activities. Establishing this baseline understanding is a necessary first step to lowering emissions. The proposed decarbonization initiative could directly lead to lower emissions through: (1) sharing benchmarkable data back to TEAM participants, which will support identification of opportunities to improve energy efficiency; (2) supporting their GHG emissions reporting activities, which will support TEAM participants in better understanding their current state energy consumption, GHG emissions, and opportunities to improve energy efficiency; and (3) providing technical assistance related to reporting, identifying, and accessing resources for and undertaking activities to reduce GHG emissions.

Given the association of emissions with chronic diseases, including respiratory and cardiovascular disease, the decarbonization and resilience initiative could improve health outcomes for the Medicare, Medicaid, and CHIP beneficiaries disproportionately affected by GHG emissions. In particular, the Environmental Protection Agency (EPA) released a report on the health impacts of GHG emissions, pollution, and climate change and health and pointed towards key health outcomes that are impacted—new asthma diagnoses in children age 0–17 due to particulate air pollution, premature deaths in adults ages 65 and older due to particulate air pollution, and deaths due to extreme temperatures.¹⁰³³ We would expect reductions in GHG emissions to improve these health outcomes for its patient populations.

(iii) Measuring GHG Emissions Could Improve Hospitals' Resilience and Beneficiaries' Continuity of Care, Both of Which Impact Quality Outcomes

In addition to these general health quality impacts, there are also resilience and continuity of care impacts associated with energy efficiency and a transition to sustainable energy sources

for hospitals, which also impact quality outcomes. One study that examined 158 hospital evacuations between 2000 and 2017 found that nearly three-quarters were for climate-sensitive events such as wildfires or hurricanes.¹⁰³⁴ In addition to causing hospital evacuations, climate change can disrupt health care system operations by causing facility damage and closures, power outages, displacement of health care professionals, and disruptions in transportation. These climate impacts affect access to and quality of care.

By sharing back benchmarkable data with TEAM participants (as described in section X.A.3.p.(6).(a)., Individualized Feedback Reports to TEAM Participants, of the preamble of this final rule), providing technical assistance related to GHG emissions reporting, and providing technical assistance to improve energy efficiency and energy resilience, the Decarbonization and Resilience Initiative could directly support TEAM participants in building greater energy resilience to disasters and ensuring greater continuity of care. We expect the Decarbonization and Resilience Initiative to increase the energy efficiency of participating TEAM participants and the degree to which they have sustainable, more localized sources of energy that are resilient to disasters and other climate change related hazards.¹⁰³⁵ We expect this to lead to fewer hospital closures during disasters and therefore improve continuity of care and other health quality outcomes for effected beneficiaries. Greenwich Hospital offers an example of this. In 2008, the hospital invested in building a low-carbon, energy efficient energy infrastructure with the intention of it being able to withstand the impact of an extreme weather event. The investment proved to be valuable because when Hurricane Sandy hit the New Jersey coast in 2012, the hospital was still able to carry on with normal healthcare operations.

(iv) GHG Emissions are Relevant to Reducing Program Expenditures

Reductions in operating costs and spending due to energy efficiency and more efficient provision of care (in the case of anesthetic gases) directly contribute to savings for CMS. GHG emissions reporting is a necessary first step for hospitals to begin to understand their emissions, how energy efficient their facilities and processes are, and to identify opportunities to increase efficiencies and lower operating costs and spending tied to GHG emissions and to overutilization of anesthetic gas. In turn, increased energy efficiency and reduced energy expenditures may reduce Medicare Program costs. Technical assistance provided under the initiative would also further help hospitals identify, resource, and implement energy efficiency improvements.

Medicare pays Critical Access Hospitals based on each hospital's reported costs outside of IPPS. Therefore, reductions in operating costs and some capital costs could lead to cost savings for the Medicare program. Medicare pays for capital and operating costs as part of IPPS payments, and efficiencies achieved through decarbonization could lead to savings to the Medicare program. In addition, reporting questions and metrics related to energy use could improve understanding of those costs and inform potential future policy development to secure further savings.

Medicare covers anesthesia services through both Part A and Part B. Research has shown that low-flow anesthesia techniques (≤ 1 L/min) are associated with lower costs, reduced emissions, and do not impact quality of care or health outcomes.¹⁰³⁶ The Patient Safety and Support of Positive Experiences with Anesthesia MIPS Value Pathway already includes an efficiency measure focused on encouraging the use of low flow inhalation general anesthesia during the maintenance phase of the anesthetic for patients aged 18 years or older who undergo an elective procedure lasting 30 minutes or longer (ABG44). Such improvements to the provision of care and anesthesia could simultaneously

lower emissions and reduce costs/produce savings.

(v) GHG Emissions Impact on Medicare, Medicaid, and CHIP Populations

Medicare and Medicaid beneficiary health and program expenditures are directly impacted by GHG emissions. Older adults, or those 65 years old and older, experience poorer health outcomes because of rising temperatures, air pollution, and disaster events. Depending on global trajectories of global warming, particulate matter concentrations are estimated to result in approximately 2,000 to 6,000 premature U.S. deaths for those over 65 years old on an annual basis. Air pollution has other negative health consequences, including the exacerbation of chronic obstructive pulmonary disease and increased occurrence of heart attacks, especially for those living with diabetes or obesity.¹⁰³⁷ Other studies have documented the impact of weather-related events such as high temperatures, flood, storms, or hurricanes that may disproportionately affect older adults.^{1038 1039 1040 1041}

Medicaid beneficiaries are typically lower-income populations, pregnant people, and children, all of whom

experience many direct and indirect health challenges because of climate drivers and events, including greater exposure to air pollution, mortality and injury from extreme temperatures, and food insecurity.¹⁰⁴²

Medicare and Medicaid beneficiaries are among the groups most vulnerable to the health effects of climate change and GHG emissions and bear the highest share of climate-sensitive health costs including those from GHG emissions which may account for billions in health-related costs to both programs.^{1043 1044} The Office of Management and Budget's (OMB) 2022 Assessment of the Federal Government's Financial Risks to Climate Change estimates that "Federal climate-related healthcare spending in a few key areas could increase by between \$824 million and \$22 billion (2020\$) by the end of the century."¹⁰⁴⁵

(2) Defining the Decarbonization and Resilience Initiative

We proposed at § 512.505 that a Decarbonization and Resilience Initiative is an initiative for TEAM participants that includes technical assistance on decarbonization and a voluntary reporting program where TEAM participants may annually report questions and metrics related to emissions to CMS based on information that we describe in section X.A.3.p.(4) of the preamble of this final rule.

In section X.A.3.p.(4) of the FY 2025 IPPS/LTCH PPS proposed rule, (89 FR 35934), we proposed that CMS would make available to TEAM participants technical assistance related to decarbonization, emissions reduction, and energy efficiency as described of the preamble of this final rule. The voluntary reporting component of the initiative described in section X.A.3.p.(4) of the preamble of this final rule would allow TEAM participants to

¹⁰⁴⁴ *Ibid*.

¹⁰⁴⁵ U.S. Office of Management & Budget. Climate Risk Exposure: An Assessment of the Federal Government's Financial Risks to Climate Change. OMB White Paper. April 2022. https://www.whitehouse.gov/wp-content/uploads/2022/04/OMB_Climate_Risk_Exposure_2022.pdf https://www.whitehouse.gov/wp-content/uploads/2022/04/OMB_Climate_Risk_Exposure_2022.pdf.

elect to report metrics including emissions data and assessment questions on four potential categories: organizational questions, building energy metrics, anesthetic gas metrics, and transportation metrics to CMS. As used in this initiative, the terms “metrics” and “measures” refer to data to be collected and reported by TEAM participants. We proposed the building energy metrics would be reported to CMS using the ENERGY STAR Portfolio Manager and all other metrics would be reported to CMS in a manner and form specified by CMS. TEAM participants that elect to report all the metrics after a performance year would receive individualized feedback reports and public recognition from CMS.

We summarize and respond to public comments received on the proposal to establish this initiative below.

Comment: Many commenters, including many providers, expressed strong support for the initiative. Commenters highlighted how the initiative will lessen the impact of climate change on health. Commenters also noted that the initiative would improve patient outcomes, provide cost savings, and help scale sustainable practices. A few commenters stated that the initiative provides helpful resources and incentives to reduce GHG emissions while minimizing the burden of participation. A commenter expressed their belief that this initiative will help signatories to the HHS Health Sector Climate Pledge strengthen their efforts.

Response: We thank commenters for their support. We agree that the initiative would have the potential to improve patient outcomes, may provide cost savings, and would help scale sustainable practices. The purpose of the initiative is to assist TEAM participants with addressing the threats to the nation’s health and its health care system presented by climate change and addressing the effects of hospital carbon emissions on health outcomes, health care costs and quality of care. We believe the two elements of the initiative, technical assistance and voluntary reporting, will help achieve this purpose while minimizing burden on facilities.

Comment: Several commenters supported including this initiative in TEAM and recommended additional actions. A few commenters expressed their belief that the initiative is a starting point or first step for future decarbonization efforts, but that more action is necessary to reduce emissions in the health care system. A few commenters requested incentives or penalties be added, stating that these are critical to emission reduction at a

systems level. A commenter recommended additional financial incentives to encourage hospital participation. Another commenter recommended tying emission reductions to Medicare payments.

Response: We thank commenters for their recommendations and support of this initiative. We will take commentators’ recommendations into account as we continue to build the initiative. We believe that the initiative is an important step in addressing hospital carbon emission reduction. We refer readers to section X.A.3.p.(6).(d) of this final rule for a summary of comments we received regarding financial incentives.

Comment: A few commenters recommended that the initiative should be accelerated, beginning earlier than 2026. A commenter specifically called out the need to accelerate the transition from voluntary to mandatory carbon reporting. Another commenter requested the initiative to be put in place by January 1, 2025.

Response: We appreciate commenters’ recommendations. We note that we did not propose a transition from voluntary to mandatory reporting, and any changes would be proposed in future notice and comment rulemaking. In regard to timing, as the initiative is part of monitoring efforts for TEAM, this initiative will begin with TEAM’s start date on January 1, 2026 (89 FR 35934, at 35935) as stated in section X.A.3.a.(1) of this final rule. CMS will issue sub-regulatory guidance and technical assistance for the voluntary reporting ahead of TEAM’s start date as feasible.

Comment: Several commenters noted their support for the initiative and expressed their opinion that it should be opened to all hospitals, not just TEAM participants. A few commenters noted that all hospitals need to participate due to the scale of the GHG emissions problem. Other commenters noted that the initiative, particularly technical assistance, would be of interest to a broader community and should be available for all hospitals and not restricted to TEAM. A commenter noted that this initiative and other CMS environmental sustainability initiatives should include hospital outpatient departments, ambulatory surgical centers, and office-based locations.

Response: We appreciate the commenters’ support for this initiative and their feedback regarding this voluntary reporting initiative. Given these comments and other considerations such as the ability to scale reporting across health systems with TEAM participants, we will allow a TEAM participant hospital to

voluntarily report its own metrics and respond to questions to CMS and additionally report on metrics and respond to questions to CMS on behalf of the TEAM participant’s hospital corporate affiliates. While CMS will provide an individualized feedback report to the TEAM participant, CMS will not provide individualized feedback reports to a TEAM participant’s hospital corporate affiliates. If a TEAM participant elects to report on all metrics and responds to questions to CMS, the participant is eligible to receive the badging provided by CMS as described in section X.A.3.p.(6).(b). If a TEAM participant voluntarily opts to report data regarding a corporate affiliate or affiliates, the badging, as described in section X.A.3.p.(6).(b) may include the corporate affiliate. This approach to reporting will allow acute care hospitals selected for TEAM to report on their own emissions as well as report on emissions across one or more of their hospital corporate affiliates within their larger health system, if they wish to do so, rather than needing to limit it to their acute care hospital alone. We agree with commenters that this voluntary reporting and feedback could be helpful to a TEAM participant if that additional voluntary expansion is warranted because the TEAM participant is just one part of a larger health system or other corporate affiliation structure. CMS emphasizes that this expanded reporting option is fully voluntary and at the discretion of the TEAM participant. In addition, in light of these strong supportive comments and given the alignment to CMS goals, CMS may consider expanding this voluntary reporting to additional providers, health care facilities and suppliers in future years.

Comment: Several commenters supported the initiative particularly because it is voluntary and optional. Commenters expressed concern that the potential cost, time, and resources to collect this data may be a barrier for some providers. A few commenters noted that this initiative will help hospitals reduce carbon emissions and improve emissions data reporting. A commenter noted that this initiative should be responsive to individual hospital needs because of the difference between hospitals.

Response: We thank the commenters for their support and understand their concerns that the time, cost, and resources needed to participate in this initiative may be prohibitive for some. As we gain experience with the technical assistance and voluntary reporting aspects of the initiative, we

plan to share information and learnings to address these concerns. We appreciate commenters' belief that the initiative will help hospitals to reduce carbon emissions and improve data reporting about emissions, and we understand the commenter's concern that it should be responsive to individual hospital's needs. Again, as we gain experience through our technical assistance and voluntary reporting of data, we will additional ways to identify ways to address these needs.

Comment: A few commenters expressed support specifically for including this initiative within TEAM. These commenters noted the importance of climate change and noted that the initiative will benefit the health care sector by helping to improve efficiency and increase cost savings through climate action. Some commenters expressed their belief that the reporting and accompanying technical assistance will lay the groundwork and precedent for other programs.

Response: We appreciate the commenters' support for including this initiative in TEAM and their belief that this initiative may benefit the health sector by improving efficiency, increasing cost savings, and laying the groundwork for other programs.

After reviewing the public comments, for the reasons set forth in this rule, we are modifying § 512.598(a) to not only allow TEAM participants to voluntarily report on metrics and respond to questions to CMS for their acute care hospital but additionally allow TEAM participants to report on metrics and respond to questions that includes the TEAM participant's hospital corporate affiliates. With this modification, we are finalizing the proposal defining this initiative.

(3) Technical Assistance

For the technical assistance portion of the Decarbonization and Resilience Initiative we proposed that CMS would provide three types of support to interested TEAM participants:

- Developing approaches to enhance organizational sustainability and resilience;
- Transitioning to care delivery methods that result in lower GHG emissions and are clinically equivalent to or better than previous care delivery methods (for example, switching from Desflurane to alternative inhaled anesthetics); and
- Identifying and using tools to measure emissions and associated measurement activities.

We summarize and respond to public comments received on the proposal to provide technical assistance to TEAM participants in this initiative below.

Comment: Several commenters stated that they support our providing technical assistance to TEAM participants. These commenters expressed the need for guidance with the initiative, transitioning care delivery to lower carbon emissions, and understanding the metrics in this area.

Response: We thank the commenters for their support and for identifying areas where our technical assistance may help guide TEAM participants.

Comment: A few commenters noted that geography and hospital characteristics need to be considered in technical assistance materials. A commenter believed that establishing technical assistance cohorts by region or selected core-based statistical area would help to develop regional approaches to address climate change. A commenter expressed concern about whether CMS is knowledgeable enough about the various emissions reduction opportunities that may exist for hospitals based on regional variations and individual hospital characteristics.

Response: We appreciate the comments asking us to take into consideration regional and geographic variations of hospitals as well as the unique characteristics of hospitals when developing our technical assistance for this initiative. As we develop the technical assistance aspect of this initiative, we will take these suggestions regarding geographic, regional, and hospital characteristics into consideration.

Comment: Several commenters believe that CMS should consider partnering with existing learning communities and leverage existing resources from groups such as OCCHE, NAM Climate Collaborative, and the American Climate Corps. A few commenters suggested that CMS should form technical assistance panels or advisory committees to promote learning between TEAM participants and experts. A commenter recommended that CMS align with TJC certification or help with compliance requirements for the TJC program.

Response: We thank the commenters for noting the importance of partnering with organizations that have been working with hospitals to successfully reduce their carbon emissions.

Comment: Several commenters requested that CMS go beyond technical assistance and provide funding for TEAM participants to assess their facility's emissions, set goals, reduce

emissions, and successfully implement voluntary reporting.

Response: We thank the commenters for identifying these suggestions.

Comment: A few commenters noted that CMS need to better define what will be included in technical assistance and how that assistance will be distributed to physicians and clinicians within their facilities. They noted that there are numerous sustainability actions that a hospital can take but help would be needed to tailor activities to their particular situation. A few commenters noted that customized or targeted technical assistance is preferred and that CMS should consider providing such technical assistance by establishing technical assistance cohorts, possibly by hospital type or by focusing on some aspect of GHG emission measurements including the basics of GHG measurements.

Response: We thank the commenters for their comments that point out the types of technical assistance needed and how TEAM participants may have different needs depending on their facility's situation and we will take those considerations into account as we develop our technical assistance plan.

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing the proposal to provide voluntary technical assistance in this initiative.

In the first support type, developing organizational approaches, CMS would offer interested TEAM participants guidance on best practices and methods for identifying opportunities to reduce GHG emissions while promoting sustainability and resilience. Particular attention will be placed on building efficiency and sustainable transportation. We would also help to identify potential non-Medicare financing strategies for this work, noting that TEAM participants have access to tax credits and grant programs that can support decarbonization and climate resilience investments through the Inflation Reduction Act,¹⁰⁴⁶ as well as other federal funding opportunities.¹⁰⁴⁷

¹⁰⁴⁶ HHS Office of Climate Change & Health Equity. (OCCHE) Quickfinder for Leveraging the Inflation Reduction Act for the Health Sector. HHS Office of the Assistant Secretary for Health. February 27, 2024. The Office of Climate Change and Health Equity (OCCHE) Quickfinder for Leveraging the Inflation Reduction Act for the Health Sector | [HHS.gov](https://www.hhs.gov/ocche) The Office of Climate Change and Health Equity (OCCHE) Quickfinder for Leveraging the Inflation Reduction Act for the Health Sector | [HHS.gov](https://www.hhs.gov/ocche).

¹⁰⁴⁷ HHS Office of Climate Change & Health Equity. Compendium of Federal Resources for Health Sector Emissions Reduction and Resilience. HHS Office of the Assistant Secretary for Health. December 7, 2023. Compendium of Federal Resources for Health Sector Emissions Climate

OCCHE is leading a Catalytic Program to support safety-net health providers in taking advantage of these unprecedented opportunities; TEAM participants would be encouraged to take advantage of the recorded content and other materials from that program.¹⁰⁴⁸

We summarize and respond to public comments received on the proposal to provide the first type of technical assistance support below.

Comment: Several commenters stressed that technical assistance in the absence of providing some form of direct, upfront funding may have little impact on reducing GHG emissions. A few commenters urged CMS to consider providing funding in the form of loans or grants. A commenter believed that upfront funding as compared to IRA tax credits that are received as reimbursement at a later point in time would be beneficial to TEAM participants. A commenter believed that IRA support for technical assistance regarding low carbon on site generation for the essential electrical system can be obtained only if the project succeeds but not if it fails.

Response: We thank these commenters for their suggestions regarding additional financial support options regarding this voluntary initiative.

Comment: A few commenters stated that some health systems need direct, hands-on technical assistance that will support their sustainability efforts such as tracking emissions, developing emissions reduction goals, navigating Treasury regulations for implementing the IRA, and linking TEAM participants to relevant funding sources. They noted that webinars and websites provide information that often is too general to be helpful.

Response: We thank the commenters who believe that direct, hands-on technical assistance would be most helpful to their health systems. TEAM participants will receive guidance on how to access the ENERGY STAR Portfolio Manager platform to report their facility's emissions and additional

technical assistance for the other reporting areas. We will take these comments into consideration as we review which technical assistance strategies to implement.

Comment: A commenter believes that technical assistance that specifically addresses Scope 1 emissions and its potential overlap with other categories is needed.

Response: We thank the commenter for this suggestion. After reviewing the public comments, for the reasons set forth in this rule, we are finalizing the proposal to provide the first type of technical assistance support in this initiative.

With respect to the second type of support transitioning to lower-carbon clinical alternatives, we would offer guidance on strategies for reducing emissions associated with inhaled anesthetic gases in pursuit of improvements on the measures described later in this section (drawing in part on ongoing work by federal health systems in this area). Other types of care delivery transitions could benefit patients by reducing demand for hospital services through education, addressing health inequities, improving telehealth options, and improving upstream care management.

We summarize and respond to public comments received on the proposal to provide the second type of technical assistance support below.

Comment: A few commenters recommended that CMS encourage TEAM participants to transition to clinical practices, therapies, and technologies that emit less carbon. They urged CMS to find a way to build embodied carbon into the metrics of clinical quality. A commenter provided an example in which a clinician has two choices of treatment with similar outcomes on all scales with the exception of embodied carbon. The commenter believed that the lower carbon intervention should be preferred. A commenter noted that the clinical and therapeutic benefits of specific gases such as desflurane and sevoflurane must be weighed against the benefits of reduced emissions when treating patients who are older or who present with certain conditions and asked us to respect the clinician's assessment in determining the safest anesthetic agents for the patient.

Response: We thank these commenters for providing us with these helpful insights and recommendations. We will take these insights and recommendations into consideration as we work to develop our technical assistance strategies to support TEAM participants' efforts to transition to

lower carbon clinical alternatives as well as the use of anesthetic gases in section X.A.3.p.(4).(a).(v). of this initiative.

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing the proposal to provide the second type of technical assistance support in this initiative.

For the third type of support, developing emissions measurement strategies, we would identify relevant measures, existing tools (for example, the ENERGY STAR Portfolio Manager platform described in section X.A.3.p.(4). of the preamble of this final rule) and new tools as needed. We would also offer guidance on strategies for using emissions data to identify opportunities to save energy and reduce emissions (for example, ENERGY STAR Treasure Hunt to identify potential areas to reduce energy usage).¹⁰⁴⁹

We summarize and respond to public comments received on the proposal to provide the third type of technical assistance support below.

Comment: A commenter urged CMS to provide interactive technical assistance in accounting methods, which include data sources and normalization methods, and believed that this interactive technical assistance should be provided directly from an expert oversight body at CMS or TJC, or both. The commenter urged CMS to not rely on third-party vendors to provide these accounting methods as third-party vendors may not have the expertise or may have conflicts of interest.

Response: We thank the commenter for their comment and will take these suggestions into consideration when developing technical assistance regarding emissions measurement strategies.

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing the proposal to provide the third type of technical assistance support in this initiative.

As proposed in the FY 2025 IPPS/LTCH PPS proposed rule, (89 FR 35934), this technical assistance would be provided to interested TEAM participants.

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing the proposal to provide technical assistance to TEAM participants who voluntarily participate in the Decarbonization and Resilience Initiative, including their corporate affiliates, as feasible.

(4) Voluntary Reporting

For the voluntary reporting portion of the TEAM Decarbonization and Resiliency Initiative, we proposed at § 512.598(a) that TEAM participants may elect to report metrics and questions related to emissions to CMS on an annual basis following each performance year. TEAM participants that elect to report on all the initiative metrics and questions to CMS, in the form and manner required by CMS, would be eligible for benefits such as receiving individualized feedback reports and public recognition as well as potentially achieving operational savings (please note these savings would be incidental and not a result of model-related payments). In section X.A.3.p.(4). of the preamble of this final rule, we proposed the metrics and questions that would be included in the voluntary reporting initiative. In section X.A.3.p.(5). of the preamble of this final rule, we proposed how and when TEAM participants would report the metrics and respond to questions to CMS. Finally, in section X.A.3.p.(6). of the preamble of this final rule, we outline our proposals for benefits for TEAM participants that elect to engage in the voluntary reporting portion of the Decarbonization and Resiliency Initiative as well as document some potential indirect benefits, such as operational savings.

We summarize and respond to public comments received on the proposal for voluntary reporting by TEAM participants that elect to report below.

Comment: Many commenters supported voluntary reporting. Commenters expressed their belief that reporting is an important first step to taking action on climate change. Commenters noted the need to pilot the reporting prior to making it mandatory. Commenters also noted some voluntary reporting is needed because some TEAM participants have limited resources and limited capacity to participate; they expressed concern about the potential burden of collecting emissions data. These commenters further requested that CMS streamline reporting to minimize this burden. Commenters also noted that voluntary reporting will help guide TEAM participants to carbon emission reporting, which may help to reduce emissions, lead to better health outcomes, and set a precedent for other health care institutions.

Response: We appreciate the commenters' support. We intend to streamline the voluntary reporting as much as possible to minimize burden and increase participation. We also

believe that technical assistance may provide TEAM participants with the support they may need to participate. We also believe that voluntary reporting is the first step to measure emission reductions and could lead to better health outcomes. In response to commenters' position that voluntary reporting may set a precedent for other health care entities, we agree and may consider other ways to integrate elements of the initiative in future models.

Comment: Several commenters stated their belief that this initiative should be mandatory rather than voluntary. Commenters argued the importance and urgency of curbing GHG emissions and the need to include as many health care facilities as possible. A commenter noted that they understood that the voluntary nature of this initiative is to encourage engagement, at least initially, but urged CMS to move toward some form of mandated participation in less than two years. Another commenter mentioned that starting in 2026 is too slow. A commenter recommended mandatory participation so that CMS could eventually modify the Composite Quality Score based on performance on this initiative.

Response: We appreciate the commenters' urgency on curbing GHG emissions; however, we believe that voluntary reporting, with technical assistance, is an important first step to understanding and curbing health care emissions. In regard to timing, as the initiative is part of monitoring efforts for TEAM, we cannot start this initiative until TEAM begins on January 1, 2026 (89 FR 35934, at 35935) as stated in section X.A.3.a.(1). of the final rule. Similarly, we cannot at this time indicate if or when we may propose to make this initiative to be mandatory.

Comment: A few commenters supported additional financial incentives to encourage TEAM participants to take part in the initiative. Some commenters noted this would be needed if the initiative ever became mandatory. A commenter noted the need for funding for TEAM participants to talk to patients about health and climate.

Response: We are not proposing to include financial incentives for the voluntary initiative. We refer readers to section X.A.3.p.(6).(d). of this final rule for more information on comments we received on integrating financial incentives in the future. We also agree that providers talking to patients about health and climate may be helpful and will consider whether that would be appropriate for technical assistance.

Comment: Several commenters believed that reporting on metrics was not sufficient. A few commenters believed the focus needs to move to setting goals and meeting outcomes rather than just reporting to meet national emission reduction goals. A commenter stated their belief that TEAM participants should also share raw data and measure performance with their sustainability teams, anesthesiologists, and other stakeholders first. Another commenter noted the need for health care clinicians, particularly those located in health centers in areas with high environmental injustice, to be able to talk to patients about the connection between climate and health. A commenter requested that CMS explore the feasibility of emission reduction benchmarks so that TEAM participants have a common target.

Response: We believe that this initiative's voluntary reporting, along with technical assistance, is a critical first step for TEAM participants to understand their GHG emissions to achieve the desired outcomes. Data is needed to understand current GHG emissions and to establish the desired outcomes of reduced GHG emissions. We believe this phased approach within this initiative will enable us to better understand opportunities for improvement, the impact on health, and potentially establish future benchmarks. We do encourage TEAM participants to work with and share data with their sustainability committees and clinicians in order to make progress on climate objectives, but we are not requiring that as part of this model. Similarly, we believe there may be value in health centers talking to their patients about the connection between climate and health but want to limit the first iteration of this initiative to selected metrics and assessment questions. We may consider whether examples of data sharing and discussion with patients would be appropriate for technical assistance.

Comment: A few commenters recommended that the metrics in this initiative be measured with verifiable data. Some commenters additionally asked that TEAM participants publicly disclose their GHG emissions measurements. A commenter recommended that CMS develop a process to ensure accuracy, either through auditing or third-party verification of data reports, especially if performance will become tied to bonus payments. Another commenter recommended CMS create a template for health care organizations to report their

results so the reports are consistent across organizations.

Response: We agree it is important to verify the data that is reported through this initiative. As discussed in more detail in sections X.A.3.p.(4).(a).(iv) through X.A.3.p.(4).(a).(vi) of this final rule, we are anchoring our data collection on tools like ENERGY STAR Portfolio Manager and on verified documented records such as purchase records and administrative billing. We did not propose that TEAM participants must publicly disclose their GHG emission measurements, as we believe that could deter participation. We do intend to assess the metric data for validity, but because we are trying to minimize burden, we therefore did not propose to conduct audits or third-party validations. We may revisit whether audits or other validations are needed in the future. Finally, we do intend to create reporting templates for the information not reported through ENERGY STAR Portfolio Manager and will issue this through sub-regulatory guidance.

Comment: A few commenters expressed additional benefits from collecting GHG data. Some commenters expressed their belief that this initiative can establish benchmarks and help identify areas where emissions levels are undermining progress on health outcomes. Commenters also noted that data can help identify trends and provide opportunities for new analysis and strategies for positive changes. A few commenters noted that this initiative may create efficiency through standards that help reduce waste and facilitate more robust GHG emission assessments.

Response: We thank the commenters for their support. We agree there are many potential benefits from collecting GHG emissions. We anticipate developing benchmarks for the participant feedback reports. We will also assess if there are trends that are particularly relevant for TEAM participants. Finally, as discussed in section X.A.3.p.(6) of this final rule, we do agree there may be some operational benefits to TEAM participants from operational efficiencies and waste reduction.

Comment: A commenter recommended making the reporting option of this initiative available to the entire country and not limited to TEAM participants.

Response: We appreciate the commenter's request, but the voluntary reporting of the initiative is part of the monitoring of TEAM and not a separate model that has separate participants. In the future, we may explore adding

similar initiatives to monitoring of other models.

Comment: A few commenters did not support disclosing carbon information, citing their belief that there is no clear evidence that public disclosure will result in the healthcare industry decarbonizing. A commenter noted that CMS does not reimburse differently regardless of a provider's carbon footprint. Another commenter believed that disclosure may prove regressive or counterproductive and may conflate improvements with reporting with actual GHG emissions reductions with improvements, and that published reports may be satisfying to investors. A commenter suggested that requiring a reduction or elimination of industry GHG emissions by regulation is far more effective, more durable and more than just this initiative.

Response: We recognize that reporting on GHG emissions and other assessment questions is not the same as reducing GHG emissions, but we think it is an important first step. As discussed in section X.A.3.p.(6).(d), we included an RFI on potential ways we might integrate the initiative into future TEAM financial incentives. We emphasize that reporting in the initiative is voluntary and that we are not requesting or requiring TEAM participants to publicly disclose their information, and as discussed in section X.A.3.p.(6).(b) of this final rule, we intend to be clear on what the participation badge includes. As for the commenter who suggested we regulate the reduction or elimination of GHG emissions in the health care industry, we believe that would be beyond the scope of TEAM.

After consideration of public comments, we are finalizing the voluntary reporting proposal at § 512.598(a) and note that if TEAM participants elect to report metrics and questions related to emissions to CMS on an annual basis, they must report the information to CMS no later than 120 days in the year following each performance year, or a later date specified by CMS.

(a) Decarbonization and Resilience Initiative Metrics

(i) Background on Scope and Metrics Sources

As discussed in section X.A.3.p.(1) of the preamble of this final rule, the GHGP establishes a framework for measuring Scope 1 and Scope 2 emissions. In identifying priority Scope 1 and Scope 2 categories and metrics for emissions reporting for TEAM participants, we considered guidance and research from several sources. In

2022, AHRQ convened an expert panel to develop a primer for identifying, prioritizing, monitoring, and reducing health care carbon emissions. In developing our proposals, we referred to this AHRQ primer to identify potential measures for Scopes 1 and 2. We also looked at guideline sources, such as: the new Sustainable Healthcare Certification requirements by TJC, for their elements on leadership, measurement, and performance improvement; and guidance from the National Academy of Medicine (NAM) for steps and key actions to reduce GHG emission within health care systems.

The AHRQ primer identified three categories that fit into Scopes 1 and 2: building energy, anesthetic gases, and transportation. NAM published key actions that facilities could take to address greenhouse gas emissions.¹⁰⁵⁰ These actions are broken into two steps. Step I focuses on actions to start a decarbonization journey and includes activities like assembling an executive sustainability team, performing a GHG inventory, and establishing specific decarbonization goals. Step II actions, which focus on specific interventions, include activities for reducing emissions from building energy, anesthetic gas, and transportation. TJC launched a Sustainable Healthcare Certification program that includes required standards for organizational performance and leadership, such as a sustainability plan, as well as requirements for collection of detailed emissions information for at least 3 different sources out of six—energy use (fuel combustion), purchased electricity (purchased grid electricity, district steam, chilled and hot water), anesthetic gas use (including volatile agents and nitrous oxide), pressurized metered-dose inhaler use, fleet vehicle carbon-based fuel use (from organization-owned vehicles), and waste disposal.

(ii) Scope and Sources for Metrics

At this time, we proposed to limit metrics that TEAM participants may voluntarily report for the Decarbonization and Resilience Initiative to Scope 1 (direct emissions

¹⁰⁵⁰ Kathy Gerwig, Hardeep Singh, Jodi Sherman, Walt Vernon, & Beth Schenk. Action Collaborative on Decarbonizing the Health Sector. Key Actions to Reduce Greenhouse Gas Emissions by U.S. Hospitals and Health Systems. National Academy of Medicine Climate Collaborative. 2022. <https://nam.edu/programs/climate-change-and-human-health/action-collaborative-on-decarbonizing-the-u-s-health-sector/key-actions-to-reduce-greenhouse-gas-emissions-by-u-s-hospitals-and-health-systems/>.

related to health care operations) and Scope 2 (emissions related to purchased electricity consumption). We believe that TEAM participants have more ability to track and report these metrics at this time and could use information from these metrics to assess ways to reduce their carbon emissions and improve their operating efficiency. TEAM participants would be encouraged to look at emissions across all three Scopes, but for this initial program, the proposed metrics would include Scopes 1 and 2. We sought comment on our proposal to limit the focus of Decarbonization and Resilience Initiative to Scopes 1 and 2 for the initial years of TEAM.

Based on programs and publications discussed in section X.A.3.p.(4).(a).(i) of the preamble of this final rule, we proposed four areas for reporting: (1) Organizational Questions; (2) Building Energy Metrics; (3) Anesthetic Gas Metrics; and (4) Transportation Metrics. We proposed at § 512.598(a) the metrics for the voluntary program. TEAM participants, if they so choose, would report on these four categories. In proposing these voluntary questions and areas for voluntary metric reporting, CMS is prioritizing alignment with existing initiatives such as those described in section X.A.3.p.(4).(a).(i) of the preamble of this final rule.

We summarize and respond to public comments received on the proposal regarding the background on scope and metrics sources below.

Comment: Several commenters supported using the GHGP and limiting the focus to Scopes 1 and 2 for the initial years of TEAM. A commenter noted the proposal had the right balance between administrative burden and highest potential for impact and has clear definitions. The commenter further noted that limiting to Scopes 1 and 2 would increase uptake of this initiative. A commenter recommended requiring all health facilities to measure and achieve reductions fully across Scopes 1 and 2 including energy use (Scope 1-Stationary Combustion, Mobile Fleet Combustion), purchased electricity (Scope 2 purchased grid electricity and district steam, chilled and hot water), fleet (based on fuel use) (Scope 1-Mobile Fuel Combustion), and waste anesthetic gas use (Scope 1-Fugitive Emissions). The commenter expressed the belief that these categories reflect those activities that many health facilities already track (for example, energy consumption) and/or are easy to quantify (for example., waste anesthetic gases from surgical procedures) and there are reasonable interventions for reducing these emissions in Scopes 1

and 2, and often, those interventions bring cost savings for health facilities.

Response: We thank the commenters for their support. We agree that starting with Scope 1 and 2 would have impact and be feasible for most TEAM participants to report.

Comment: Many commenters believed this initiative proposal did not go far enough because it did not include Scope 3 emissions which contribute significantly to the total emissions. These commenters recommended certain Scope 3 metrics they believed were attainable for TEAM participants to collect, including normalizing patient encounters when it came to reusables vs single use devices, collecting waste volumes, patient and employee travel by mileage, and food waste. A few commenters believed that Scope 3 data collection should also be mandatory.

Response: We understand Scope 3 accounts for a large portion of total healthcare emissions; however, we believe we should start with Scope 1 and Scope 2 for the initial years because we believe it is more feasible to collect and we want to encourage participation. We may add Scope 3 in the future. For additional comments related to Scope 3 metrics, please refer to section X.A.3.p.(4).(a).(vii)(A) of this final rule.

Comment: A commenter noted specifics related to the metrics under Scope 1 and Scope 2. A commenter suggested that CMS should not attempt to do all of Scope 1 and 2 emissions, and that there is some confusion in the industry around those boundaries. The commenter specifically noted that Scope 1 refers only to the Kyoto protocol gases, and not to all GHGs. Thus, some gases (such as desflurane) are not exactly Scope 1, even though they are directly emitted by the organization, and there are other sources of Scope 1 emissions (for example, refrigerants) that are not captured by ENERGY STAR. The commenter thus noted that the proposed measures are measuring some Scope 1 emissions and some other direct emissions. The commenter did support the measures that were proposed.

Response: We thank the commenter for the clarification. The gases listed in the GHGP include carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulphur hexafluoride (SF₆) and nitrogen trifluoride (NF₃).¹⁰⁵¹ However, additional healthcare related documents related to emissions, including both the AHRQ Primer and the NAM, consider both desflurane and similar gases in

their discussion. Therefore, we intend to measure these gases in this initiative. Also, we do not intend to capture all of Scope 1 and Scope 2, we are just collecting quantitative information on building energy, anesthetic gases, and transportation metrics (as discussed in section X.A.3.p.(4).(a).(vii).(a) of this final rule). We intend to update metrics as ENERGY STAR metrics evolve and are updated. We proposed at § 512.598(a)(2)(i) that these proposed building energy metrics would be based on the ENERGY STAR Portfolio Manager guidelines for the time of submission.

Comment: A commenter agreed with the need for normalization factors for comparing facilities. The commenter recommended CMS consider emission normalization factors related to patient outcomes, such as anesthetic hours (for volatile and nitrous oxide emissions), bed-days for inpatient care facility emissions, and potentially adjusted patient-days for total emissions.

Response: We thank the commenter for their suggestions. We agree on the importance of normalization factors and discuss that in the anesthetic gas metric and transportation metric portion of this final rule.

Comment: A commenter recommended that CMS align this initiative with other voluntary and mandatory initiatives, such as the Joint Commission Sustainable Healthcare Certification and the Department of Health and Human Services Health Sector Climate Pledge, mandatory state laws (for example, California) to avoid duplicative efforts.

Response: Our intention is to align with existing programs where possible when it comes to data collection and general questions. For the initiative, we considered questions from the Department of Health and Human Services Health Sector Climate Pledge and the Joint Commission Sustainable Healthcare Certification.

Comment: A commenter recommended CMS consider opportunities to improve reporting accuracy before focusing on opportunities to increase the number of TEAM participants voluntarily reporting information to CMS on Scope 1 and 2 metrics. The commenter noted they have seen significant variation in how this information is interpreted.

Response: We agree that reporting accuracy is important for the initiative. We are finalizing quantitative metrics which can be derived from purchase records, administrative billing, or other quantifiable data. We do intend to check submissions for data integrity and completeness.

¹⁰⁵¹ <https://ghgprotocol.org/corporate-standard>.

Comment: A few commenters asked for clarity on the scope of the data collected. A commenter recommended reporting Scope 1 and 2 metrics at the facility level, ideally using a health care organization's HCO ID number (for example, "HCO ID #1" with two hospital facilities within the same campus constitutes the boundary). This would make the reporting consistent with TJC's approach in their Sustainable Healthcare Certification (SHC) program as well as with ENERGY STAR Portfolio Manager. Another commenter recommended that CMS broaden its approach to measures to include hospital outpatient departments, ambulatory surgical centers, and office-based locations. The commenter noted that an increasing number of procedures are conducted in nonoperating room anesthetizing locations as well as outpatient settings.

Response: For TEAM participants that elect to report, we would require the quantitative building energy, anesthesia, and transportation metrics at the inpatient facility level (using the identifier selected for TEAM) in a manner that is consistent with ENERGY STAR Portfolio Manager. We will provide an option, however, for TEAM participants to additionally submit information for their hospital corporate affiliates. We also intend to publish technical guidance which will provide more details on how the information may be submitted.

Comment: A few commenters recommended that ENERGY STAR Portfolio Manager should be the only benchmarking and reporting tool, data repository, calculator tool, feedback, and support center for all proposed metrics in this initiative. A commenter stated that centralization at ENERGY STAR will make it easier to integrate Scope 3 reporting more quickly and to identify with best practices. Another commenter stated their belief that ENERGY STAR Portfolio Manager will avert greenwashing of data.

Response: We appreciate the commenter feedback. However, ENERGY STAR Portfolio Manager does not currently collect information on anesthetic gas and transportation. We may revisit using ENERGY STAR Portfolio Manager in the future if CMS would like to collect, and TEAM participants would like to submit, a larger scope of information.

After reviewing public comments, for the reasons set forth in this rule, we are finalizing the proposal to base our metrics on Scope 1 and Scope 2 of the GHGP with the acknowledgement that some of the anesthetic gases we are discussing are technically not part of the

GHGP but are important when reviewing emissions from anesthesia.

(iii) Organizational Questions

For the Decarbonization and Resilience Initiative, we proposed at § 512.598(a)(1) a set of organizational questions about the TEAM participants' sustainability team and sustainability activities. These questions are generally based on NAM's key action Step I shortlist. We proposed the organizational questions would include the following:

- Does your facility have a sustainability team? If so, does your facility's sustainability team include broad representation, seeking input across operational and clinical lines, and engaging staff, executive leaders, clinicians, board members, and patients?

- Does your facility perform a GHG inventory? If so, which of the following are included in your facility's GHG inventory:

- ++ Scope 1 emissions.

- ++ Scope 2 emissions.

- ++ Scope 3 emissions (business travel, employee commuting, waste)?

- Has your facility implemented a decarbonization goal that compares performance to a baseline year?

- What are your facility's decarbonization goals (for example, 10 percent GHG reduction annually across all operations, aiming to achieve 50 percent reduction by 2030)? What is the baseline year used to measure your facility's decarbonization success?

- Has your facility implemented a decarbonization plan?

- What is your facility's implementation plan? What milestones and deliverables to track progress are you documenting?

- Has your facility designated resources for decarbonization and resilience initiatives?

- Does your facility track operation room (OR) specific energy use or waste? If so, what, if any, OR energy efficiency or waste reduction initiatives have you implemented?

We anticipate these questions would be relatively straightforward to report on and provide a helpful baseline to inform technical assistance. We sought feedback on the potential burden of adding overall organizational questions to the Decarbonization and Resilience Initiative.

We summarize and respond to public comments received on the proposal to provide a set of organizational questions at § 512.598(a)(1) of the final rule later in this section.

Comment: A few commenters recommended adding additional

questions to the organizational question section that address the TEAM participants' sustainability team and activities, including questions about the healthcare system's current pledges, commitments, and certifications, specific questions about how GHG emissions are calculated and reported, large medical equipment energy use, decarbonization challenges, linkages between compensation and achieving decarbonization goals, and adding open ended questions. A commenter noted that identifying current activities of the TEAM participants sustainability team members takes time and helps hospitals understand expectation for local implementation efforts.

Response: We thank commenters for their recommendations. CMS is committed to helping organizations accurately assess their current level of decarbonization efforts. We will finalize organizational questions but may revise the set of questions based on this feedback.

Comment: A few commenters recommended requiring a climate resilience plan from TEAM participants to align with the HHS Health Sector Climate Pledge and to ensure continued ability to provide health care services during and after extreme weather events.

Response: We thank commenters for their recommendations and may take this suggestion under consideration.

Comment: A few commenters supported asking organizational questions from TEAM participants and confirmed that these questions would not be burdensome.

Response: We thank commenters for their support and their feedback on the level of burden for these questions.

Comment: A commenter recommended that TEAM participants complete these organizational questions on an annual basis since they are general in nature.

Response: We thank the commenter for the recommendation and confirm that the organizational questions are submitted on an annual basis, as referenced in section X.A.3.p.(4).(a).(iii).

Comment: A commenter recommended identifying questions that contain a set of smaller attainable goals to receive buy-in across the hospital facility.

Response: We thank the commenter for their recommendation and believe the organizational questions are an appropriate start on a decarbonization journey as they focus on identification and assembly of a team, conducting an inventory of GHG emissions, and developing specific decarbonization goals and plans.

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing with modifications at § 512.598(a)(1) the set of organizational questions about the TEAM participants' sustainability team and sustainability activities to allow us to collect and analyze the responses in a more structured way and to allow us to make comparisons across TEAM participants.

(iv) Building Energy Metrics

For building energy usage, we proposed metrics that would assess both the raw GHG emissions (location-based and market-based methods of calculation) from energy use (direct and indirect), source information, and information to normalize these metrics. Specifically, we proposed at § 512.598(a)(2) a set of building energy metrics related to measuring and reporting GHG emissions related to energy use at TEAM participant facilities. We proposed at § 512.598(a)(2)(i) that these proposed building energy metrics would be based on the ENERGY STAR Portfolio Manager guidelines for the time of submission and that TEAM participants choosing to report these metrics must submit using ENERGY STAR Portfolio Manager according to the reporting and timing requirements proposed in section X.A.3.p.(5) of the preamble of this final rule. We proposed to adopt the ENERGY STAR Portfolio Manager guidelines at the time of submission to ensure that the metrics collected are consistent with current standards.

For the Decarbonization and Resilience initiative, we proposed at § 512.598(a)(2)(ii) the following metrics: ENERGY STAR Score for Hospitals, as well as the supporting data that goes into that calculation, and energy costs and basic energy consumption metrics such as total, direct, and indirect GHG emissions and emissions intensity as specified in the ENERGY STAR Portfolio Manager.¹⁰⁵² As of the publication of the FY 2025 IPPS proposed rule, the most recent ENERGY STAR Score for Hospitals methodology was published in February 2021¹⁰⁵³ and requires information such as energy use

¹⁰⁵² EPA Office of Air Programs. ENERGY STAR Portfolio Manager Glossary. U.S. Environmental Protection Agency & U.S. Department of Energy. Undated. <https://portfoliomanager.energystar.gov/pm/glossary><https://portfoliomanager.energystar.gov/pm/glossary>.

¹⁰⁵³ EPA Office of Air Programs. ENERGY STAR Score for Hospitals (General Medical and Surgical). U.S. Environmental Protection Agency & U.S. Department of Energy. February 19, 2021. <https://www.energystar.gov/buildings/tools-and-resources/energy-star-score-hospitals-general-medical-and-surgical><https://www.energystar.gov/buildings/tools-and-resources/energy-star-score-hospitals-general-medical-and-surgical>.

intensity, electricity, natural gas, and other source emissions usage and several normalizing factors such as building size, number of full-time equivalent workers, number of staffed beds, number of magnetic resonance imaging (MRI) machines, and zip code (to pull weather and climate related data such as the number of heating and cooling days).¹⁰⁵⁴ We proposed that this supporting data would be reported to CMS, as well. Having both the aggregate score and the underlying details would provide CMS additional detail to monitor the impact of emissions. As described in section X.A.3.p.(5) of the preamble of this final rule, TEAM participants who elect to report data would submit after the performance year. Should the ENERGY STAR Score for Hospitals method change, we would default to the methods that ENERGY STAR is using at the time of submission so that the data reported to CMS would be consistent with ENERGY STAR Score for Hospitals.

ENERGY STAR Portfolio Manager also allows users to track GHG emissions and energy costs, which captures total energy cost and can inform tracking of potential savings.

There are several reasons we proposed that TEAM participants use the ENERGY STAR Portfolio Manager for submitting building energy metrics. First, ENERGY STAR Portfolio Manager is a free, on-line benchmarking tool used by over 3,000 hospitals as of January 2024 (approximately half of the number of U.S. hospitals¹⁰⁵⁵) to benchmark energy, water, and waste. Approximately forty-seven state and local governments¹⁰⁵⁶ require its use to track and report energy usage and emissions on an annual basis. We believe that by using data and information collected in the ENERGY STAR Portfolio Manager tool, we would minimize the reporting burden for TEAM participants and maximize the benchmarking value of reporting, which

¹⁰⁵⁴ EPA Office of Air Programs. Technical Reference: ENERGY STAR Score for Hospitals in the United States. U.S. Environmental Protection Agency & U.S. Department of Energy. ¹⁰⁵⁶ EPA Office of Air Programs. State/Local Compliance Ordinances. U.S. Environmental Protection Agency & U.S. Department of Energy. February 20, 2024. State/local compliance ordinances ([site.com](https://www.energystar.gov/sites/default/files/tools/Hospital_TechnicalReference_Feb2021_508.pdf)) State/local compliance ordinances ([site.com](https://www.energystar.gov/sites/default/files/tools/Hospital_TechnicalReference_Feb2021_508.pdf)).

should make comparisons and measuring progress easier. We also believe the information collected in the ENERGY STAR Score for Hospitals are similar to recommended measures in the AHRQ primer.

Finally, we also considered an alternative where we instead allowed private vendors with a relationship to the facility to submit equivalent information, aligned to the GHG Protocol, instead of ENERGY STAR Portfolio Manager. Ideally, we would like TEAM participants to have options to collect and capture their emissions data, but we also want to ensure that any benchmarks are consistent across TEAM participants.

We sought feedback on our proposed metrics reported through ENERGY STAR Portfolio Manager and on the alternative of allowing private vendors to submit equivalent information.

We summarize and respond to public comments received on the proposal to use building energy metrics related to measuring and reporting GHG emissions regarding energy use at TEAM participant facilities at § 512.598(a)(2) of the final rule below.

Comment: Several commenters supported the use of ENERGY STAR Portfolio Manager for the building energy metrics because it is the standard reporting structure health systems use to measure and track energy consumption and GHG emissions, was developed by the Environmental Protection Agency, limits reporting burden for providers, and is already used by the Department of Health and Human Services.

Response: We thank commenters for their support. We agree that the use of ENERGY STAR for the building energy metrics will limit reporting burden on providers.

Comment: A few commenters recommended that CMS use data tracking in ENERGY STAR Portfolio Manager and not require additional reporting of the building energy metrics to minimize reporting burden. A commenter recommended that CMS ensure easy integration of ENERGY STAR data for TEAM participants that participate in this initiative in order to minimize reporting burden.

Response: We thank commenters for their recommendations regarding the use of ENERGY STAR Portfolio Manager for our building energy metrics. The building energy metrics we finalize will be collected through ENERGY STAR Portfolio Manager and TEAM participants will be able to submit their information through that platform.

Comment: A commenter provided an alternative tool to ENERGY STAR Portfolio Manager. The commenter

noted that Health Care Without Harm and Practice Greenhealth's Health Care Emissions Impact Calculator is a publicly available tool that allows facilities to track their GHG emissions across Scope 1 and 2.

Response: We thank commenters for their suggested alternative. At this time, based on public feedback, we are finalizing our proposal to report building energy metrics through ENERGY STAR Portfolio Manager.

Comment: A few commenters did not support the alternative of allowing private vendors to submit equivalent information to ENERGY STAR Portfolio Manager. In not supporting this alternative, commenters stated their belief that a single reporting structure is critical to the success of a program; that the ENERGY STAR Portfolio Manager is the standard tool used to benchmark energy, water, and waste; and by only having one reporting structure, it will reduce reporting burden; and that allowing private vendors to submit data may create adverse future effects.

Response: We thank commenters for sharing their concerns on the alternative of allowing private vendors to submit equivalent information to ENERGY STAR Portfolio Manager. We agree the ENERGY STAR Portfolio Manager is the standard, but we wanted to recognize that some TEAM participants may use third party vendors for emissions reporting. However, based on public feedback, at this time, we are not finalizing the alternative of allowing private vendors to submit equivalent information to ENERGY STAR Portfolio Manager.

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing our proposed building energy metrics reported through ENERGY STAR Portfolio Manager. We are not finalizing our alternative proposal of allowing private vendors to submit equivalent information.

(v) Anesthetic Gas Metrics

We believe anesthetic gas metrics are important to collect for the TEAM Decarbonization and Resilience Initiative because the TEAM's proposed initial performance focus is on surgical procedures which regularly utilize anesthetic gas, as discussed previously. We proposed at § 512.598(a)(3) a set of metrics related to measuring and managing emissions from anesthetic gas. These metrics include total GHG emissions from inhaled anesthetic gases (based on purchase records) along with the associated normalization factors, and additional assessment questions.

We evaluated methods to consistently capture anesthesia metrics. ENERGY

STAR Portfolio Manager currently does not collect information or calculate benchmarks on anesthetic gases. Anesthetic gases may be collected through an optional field through ENERGY STAR Portfolio Manager, but we acknowledge that this is not a standardized field. We intend to update metrics as ENERGY STAR metrics evolve and are updated, as we proposed at § 512.598(a)(2)(i) that these proposed building energy metrics would be based on the ENERGY STAR Portfolio Manager guidelines for the time of submission. There are other calculators, such as Practice Greenhealth's® Health Care Emissions Impact Calculator that collect and calculate data related to anesthetic metrics,¹⁰⁵⁷ but we were concerned that using multiple tools to report metrics (considering we are already proposing to use ENERGY STAR Portfolio Manager for the building energy metrics) would increase reporting complexity and reporting burden. The AHRQ primer recommended total GHG emissions from inhaled anesthetics and mean gas flow rates, but we were concerned on the feasibility of capturing mean gas flow rates. Based on all these factors, we are therefore proposing at § 512.598(a)(3)(i) to include a metric for total GHG emissions from inhaled anesthetics using purchase records. The metric would include information such as volume of the bottle, the number of bottles, and/or the number of pounds, depending on the anesthetic gas.¹⁰⁵⁸ We believe purchase records provide a proxy for actual utilization and that purchase records may be easier for TEAM participants to report compared to actual usage which generally would have to be extracted from electronic health records. Also, we proposed at § 512.598(b)(3)(ii) normalization factors which we proposed to be anesthetic hours so we could more accurately compare the carbon impact across different facilities. We believe these metrics would provide information on anesthetic gases which would be most relevant to the episodes and provide a means for which to create anesthetic gas metric benchmarks.

At § 512.598(a)(3)(iii), we also proposed to include assessment questions broadly based on the key

¹⁰⁵⁷ Practice Greenhealth. Health Care Emissions Impact Calculator. 2023. <https://practicegreenhealth.org/tools-and-resources/health-care-emissions-impact-calculator>. <https://practicegreenhealth.org/tools-and-resources/health-care-emissions-impact-calculator>.

¹⁰⁵⁸ We recognize that certain gases and compounds are most easily measured by volume and others in weight as they are not purchased by bottle (for example, Nitrous Oxide).

actions recommended by NAM Step II for reducing emissions from anesthetic gases that TEAM participants may choose to answer. Assessment questions include the following:

- Has your facility set an emissions reduction goal related to anesthetic gases? If so, what is that goal?
- Does your facility track and benchmark anesthetic gas emissions at the procedure and provider level?
- Has your facility removed the use of desflurane or removed vaporizers when using desflurane?
- Has your facility decommissioned piped nitrous oxide and substituted e-cylinders? If not, are these activities in process?

We believe answering these assessment questions would provide facilities with ideas and actions that could in turn reduce impact on emissions and would supplement the other anesthesia gases data.

We sought comment on our proposed anesthesia gas metrics which would include the total GHG emissions from inhaled anesthetics and anesthetic hours and assessment questions for anesthetic gases. We particularly sought feedback on the feasibility of reporting data based on purchase records or whether we should require actual records. We also sought comment on the feasibility of capturing anesthetic hours or if we should consider a different normalization factor such as number of operating rooms. We also sought feedback on whether we should consider other calculators, metrics and inputs to determine GHG emissions from anesthetic gases, or quality measures such as ABG44: Low Flow Inhalational General Anesthesia.

Finally, while we believe it is important to capture the data on total GHG emissions from inhaled anesthetics, anesthetic hours, and the assessment questions for anesthetic gases, we also considered whether we provide the TEAM participants an option of reporting either the total GHG emissions from inhaled anesthetics (with anesthetic hours) or reporting the assessment questions for the voluntary reporting program. We believe this flexibility for TEAM participants could reduce reporting burden and enhance participation, but we are concerned this alternative may not provide comparable data across the TEAM participants who voluntarily submit data. We sought feedback on this alternative for TEAM participants who choose to submit to report either anesthetic gases and anesthetic hours or to report the assessment questions.

We summarize and respond to public comments received on the proposal to

use a set of metrics related to measuring and managing emissions from anesthetic gas at § 512.598(a)(3) below.

Comment: Several commenters supported collecting information on anesthetic gases using purchase records noting that purchase records have less administrative burden than actual records and it would provide needed data to build benchmarks.

Response: We thank commenters for their support. We agree that purchase records seem to be the most efficient way to collect anesthetic gas metrics and are finalizing that proposal. We do intend to evaluate potential benchmarks for the participant feedback reports.

Comment: A commenter recommended CMS pilot test collection metrics before implementing on a large scale to ensure that data elements can be captured uniformly.

Response: We agree on the importance of uniform data capture. We believe that rolling this initiative out in a voluntary manner will provide an opportunity to assess the comparability of the data captured.

Comment: A few commenters supported additional metrics for consideration. A commenter supports ABG44: Low Flow Inhalational General Anesthesia for the anesthesia Merit-based Incentive Payment Systems (MIPS) Value Pathway (MVP)—especially since many anesthesia groups do not have access to their hospital records or electronic health records. ABG44 is used to encourage anesthesia groups to track their gas flows. Another commenter recommended an outcome metric and performance metrics. The outcome metric is total anesthesia-related GHG emissions, normalized anesthesia-related GHG emissions (kgCO₂e/hour). The performance metrics are (1) agent selection—percent of clinical use for each anesthetic agent (sevoflurane, isoflurane, desflurane) which could be assessed across an entire practice, or per individual clinician and (2) efficiency of use—fresh gas flow assessment (mean vs. median fresh gas flow (FGF) per group practice or individual clinician).

Response: We thank the commenters for their feedback. For the first years of this voluntary initiative, we are not finalizing additional metrics for collection. We note that ABG44: Low Flow Inhalational General Anesthesia is still reportable for clinicians via the MIPS. We do believe we could assess the percent of agent selection with the information we are collecting from TEAM participants, but we are not asking for this information at the clinician level. We will review areas where our reporting tool may already

calculate normalized anesthesia-related GHG emissions. Finally, we are not proposing to capture fresh gas flow assessment because that information is not always available through purchase records or administrative claims data, although we may consider adding a question related to fresh gas flow to the assessment questions.

Comment: A few commenters strongly encouraged CMS to separate the assessment of volatile anesthetics (the “fluranes”: desflurane, sevoflurane, isoflurane) from nitrous oxide, noting the gases are clinically different, operationally different, and with different emission mitigation solutions. Commenters noted that anesthesia hours may be an appropriate normalizer for emissions are generated through clinical activity (measured in time). For nitrous oxide, much of the emissions come from central line systems. A few commenters recommended using operating rooms as a normalizing factor for nitrous oxide. A commenter requested CMS collect both the purchased information and utilization information for nitrous oxide noting that comparing these two numbers will accelerate the mitigation of fugitive nitrous oxide emissions by transitioning from central medical gas line distribution to decentralized distribution via localized E-tanks. A commenter noted that for areas where nitrous oxide is used outside of anesthesia care the normalizing factors would need to be numbers of patients receiving nitrous oxide analgesia because detailed quantitative data is not regularly captured in an EHR.

Response: We appreciate the feedback. We intend to look at nitrous oxide separately from the volatile anesthetics and as discussed below, we will be adding operating rooms onto our quantitative metrics to assess it as a potential normalizing factor for nitrous oxide. In section X.A.3.p.(4).(a).(vi) we are finalizing our proposal to capture patient encounters, so we will already have that data as a potential normalizing factor. We have heard other commenters that capturing actual utilization from an EHR may be cumbersome for some TEAM participants, so we are not requiring actual utilization for nitrous oxide at this point, but we could revisit that requirement in the future.

Comment: A few commenters supported the use of anesthetic hours to normalize the anesthetic metrics. Commenters noted while this information may not be exactly precise, it can be pulled from billing data and does not require a complicated extract from an electronic health record. A few commenters noted that anesthetic hours are appropriate for volatile gases and

not for nitrous oxide. A commenter said anesthetic hours was better than operation rooms because many services occur outside of the operating room.

Response: We thank commenters for their support. We are finalizing anesthetic hours as one potential normalizing factor. As discussed elsewhere in this section, we are also considering other potential normalizing factors.

Comment: A few commenters did not support using anesthetic hours or suggested alternatives to anesthetic hours for normalizing anesthetic gases. A commenter noted logistical issues with using anesthetic hours such as the anesthesia start times varying based on the circumstances and that anesthetic hours would have to be converted from 15-minute increments into hours which could add to administrative burden. Another commenter recommended using procedures or patient encounters or asking each organization to select the normalization factor. The commenter noted TEAM participants could select operating rooms, anesthetic hours or procedures. By allowing organizations to select their normalization factor, CMS would get a sense for which ones would be most attractive. A commenter said the recommended normalization from the anesthesia community is “MAC-hour equivalents” compared with an ideal (sevoflurane) reference point. The commenter noted this is feasible for any organization that uses EHRs, and automated flow meters and this metric can account for the complex nuances that otherwise make normalizing anesthetics complicated.

Response: We understand there may be limitations using anesthetic hours as a normalizing factor, however, we believe this number can be relatively easily captured from administrative claims data and thus may be more feasible than information collected from an EHR. We are concerned that procedures may not be appropriate because the timing of procedures vary greatly and therefore, we are not requesting that information. As discussed in an earlier response, we will add operating rooms as a required element to evaluate it as a potential normalizing factor, especially for nitrous oxide. Finally, we are allowing, but not requiring, reporting of “MAC-hour equivalents.” A minimum alveolar concentration (MAC) hour equivalent allows comparison of the amount of administered anesthetic gas to an equivalent mass of carbon dioxide that would be emitted for driving an automobile a certain number of miles, for example. We are concerned that not all participants are able to retrieve this

information easily from their EHR, but we understand the potential benefits of using MAC-hour equivalents as a normalizing factor, therefore, we will have an optional field for reporting this information.

Comment: A few commenters did not support reporting the assessment questions in lieu of reporting actual emissions from inhaled anesthetics. Commenters noted that CMS needed to start to collect this data in order to develop benchmarks and make comparisons. Commenters also noted this should be feasible as billing data and purchasing data should be universally available.

Response: We agree with commenters on the importance of capturing quantitative measures so TEAM participants can have benchmarks in comparison data. We also appreciate that data pulled from billing data and purchase records should be feasible. We do intend to finalize collection of anesthetic metrics with some modifications to the normalization factors.

Comment: A commenter supported the collection of responses to local structural questions as described in “Anesthetic Gas Metrics,” but asked for additional time before endorsing specific measures. The commenter noted that only a handful of anesthesia departments and their hospitals are collecting data. The commenter suggested that CMS develop a technical advisory panel to develop such measures or measure concepts and noted that they are planning to develop a suite of anesthesia-related environmental sustainability measures in the near future, with an eye toward gathering granular data from electronic health records, anesthesia machines, and other equipment. They requested CMS convene multistakeholder panels to develop other environmental sustainability measures and concepts that promote data exchange.

Response: In the future, CMS may consider establishing a technical advisory panel that is comprised of stakeholders which could provide feedback on measures, reporting and technical assistance.

Comment: A commenter recommended that the Decarbonization and Resilience Initiative include all areas within the hospital that use anesthetic gases, including nitrous oxide, and encourage responsibility from all service lines. The commenter noted an increase in the use of desflurane and isoflurane in non-operating room anesthetizing locations and that nitrous oxide is used services within the hospital such as obstetric,

urological, and dental patients not provided by anesthesiologists. The commenter further stated their belief that hospitals provide anesthesia groups and departments with increased authority over administration of nitrous oxide and recommended that CMS be explicit in this proposal that all physicians and clinical staff have a responsibility to reduce their use of certain anesthetic agents.

Response: We intend to collect information for each facility but will allow health systems optionally to report for additional locations outside the inpatient facility. We do agree that facilities and clinicians should collectively work together to reduce their anesthetic emissions, but we do not believe we should inform TEAM participants who elect to participate in the Decarbonization and Resilience Initiative how they need to implement their efforts.

Comment: A few commenters had specific feedback on our proposed assessment question “Has your facility removed the use of desflurane or removed vaporizers when using desflurane?” Some commenters recommended modifying the question to assess the “mitigation of desflurane emissions” to allow for the clinically appropriate and medically necessary use of desflurane while encouraging mitigation of desflurane emissions, noting this wording more closely matches the language of the NAM Step II recommendation. Another commenter believed that the phrasing should be modified to “remove or eliminate desflurane from formulary.” Another commenter believed that changing the phrasing to “restrict access to desflurane vaporizers” would be more actionable.

Response: We thank the commenters for their feedback. We agree that desflurane at times may be clinically appropriate and medically necessary and intend to adjust the assessment questions to reflect that distinction.

Comment: A commenter had suggested edits to the other anesthetic assessment questions. The commenter recommended adding the question “Implement a low FGF practice notification in EMR.” and replace “Has your facility decommissioned piped nitrous oxide and substituted e-cylinders? If not, are these activities in process?” with two questions: “Deactivate central nitrous oxide supply systems” and “Transition to portable nitrous oxide E-cylinder supply.” The commenter noted the language and terms on this topic are important and carry specific meanings with facilities professionals and it is important for health and sustainability professionals

to speak their language to gain their trust and partnership.

Response: We thank the commenters for their feedback. We will consider making these modifications to the assessment questions.

Comment: A commenter recommended the American Society of Anesthesiologists for reliable calculators, tools, and academic papers with up-to-date conversion factors.

Response: We thank the commenter for this suggestion. We will continue to evaluate tools as we assess the quantitative anesthetic data.

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing at § 512.598(a)(3)(i) to include a metric for total GHG emissions from inhaled anesthetics using purchase records. We are finalizing with modification at § 512.598(a)(3)(ii) normalization factors that may include information on anesthetic hours, operating rooms, or MAC-hour equivalents. Finally, we are finalizing at § 512.598(b)(3)(iii) assessment questions based on key actions recommended for reducing emissions for anesthetic gases although we may modify those questions in the future.

(vi) Transportation Metrics

The third category of information relevant to health care facilities is the GHG emissions related to leased or owned vehicles. We proposed at § 512.598(a)(4) a set of metrics that focus on greenhouse gases related to leased or owned vehicles. We proposed § 512.598(a)(4)(i) through (a)(4)(iii) metrics that include gallons for owned and leased vehicles consistent with GHGP Scope 1 requirements, patient encounter volume as a normalization factor, and assessment questions. For transportation emissions related to patient transportation and supply chain, please see the RFI on Scope 3 emissions which sought comment on the feasibility of reporting Scope 3 emissions such as those from Scope 3 transportation emissions (for example, patient transportation).

Including information on gallons for owned and leased vehicles aligns with the AHRQ primer core measure for transportation, and we anticipate that TEAM participants can capture this information. We also proposed that if TEAM participants choose to partake in the Decarbonization and Resilience Initiative Voluntary Reporting, we would require TEAM participants to capture patient encounter volume as a normalization factor and are considering a range of other factors consistent with

GHG protocols such as full-time equivalents (FTEs).

We also proposed a series of assessment questions that align with the NAM recommended key actions to reduce transportation emissions. Assessment questions include the following:

- Has your facility set an emissions reduction goal related to transportation? If so, what is that goal?

- Has your facility executed plans to reduce fleet emissions (either from reducing miles or replacing with electric vehicles [EVs])?

- Has your facility identified measures to optimize product delivery?

- Has your facility provided (or in the process of providing) EV charging infrastructure?

We sought feedback on the proposed transportation metrics. Additionally, we sought feedback to the extent hospitals are tracking this information and the operational feasibility to track and report this information or if other alternative metrics may be more feasible (for example, mileage). Finally, while we believe it is important to capture both the data on the gallons of gas as well as the assessment questions, we also considered whether we provide the TEAM participants an option of reporting either the gallons data or reporting the assessment questions for the voluntary reporting program. We believe this flexibility for TEAM participants could reduce reporting burden and enhance participation, but we are concerned this alternative may not provide comparable data across the TEAM participants who voluntarily submit data. We sought feedback on this alternative for TEAM participants who choose to submit to report either gallons and patient encounter or to report the assessment questions.

We invited public comment on our proposal at § 512.598(a)(4) to use a set of metrics that focus on greenhouse gases related to leased or owned vehicles.

Comment: A commenter recommended that CMS expand the assessment questions outside of yes or no parameters. This commenter also recommended that we remove the criteria in the question “Has your facility executed plans to reduce fleet emissions (either from reducing miles or replacing with electric vehicles [EVs])?” which would reduce the question to “Has your facility executed plans to reduce fleet emissions?” The commenter believes that removing the criteria, additional emission reduction plans can be included. This commenter also believes that CMS should adopt questions relating to whether the facility

has a policy or plan regarding reducing fleet emissions, the quantity of EV charging stations, and the distribution between owned and leased vehicles by the facility. Another commenter recommended that CMS eliminate the assessment question: “Has your facility identified measures to optimize product delivery?” because it is not related to Scope 1 emissions.

Response: We thank the commenters for their suggestions and may consider these suggestions for alterations to the assessment questions. CMS is considering modifications to the assessment questions to allow for more detailed structured responses and will publish the full and complete assessment questions in sub-regulatory guidance and/or technical reporting guidelines.

Comment: A commenter noted that CMS’ “gallons for owned and leased vehicles” should include gas and diesel as these are the primary fuel types used. The commenter noted that additional fuel types include gas-electric hybrid, E-85, electricity, biodiesel, CNG, Hydrogen fuel cell, and could be collected as well.

Response: We thank commenter for their response. We note that “gallons for owned and leased vehicles” include gas and diesel fuel types but that other fuel types will be addressed in sub-regulatory guidance.

Comment: A commenter recommended allowing the reporting entity to select their normalization factor from a bounded set. The commenter did not support using patient encounter volume as a normalization factor. Another commenter noted that they collect a variety of patient volume data, total FTEs, and refined FTEs regarding telework for their normalization factors. The commenter recommended that should CMS collect only total outpatient visits and total FTEs, CMS should consider adjusting emission calculations per median telehealth and telework percent to totals.

Response: We thank commenters for their recommendations. We believe that patient encounter volume could be a normalization factor that helps to benchmark and compare performance both within and between institutions.^{1059 1060 106 1062} We are

¹⁰⁵⁹ Bhargavi Sampath, Matthew Jensen, Jennifer Lenoci-Edwards, Kevin Little, Hardeep Singh, & Jodi D. Sherman. Reducing Health care Carbon Emissions: A Primer on Measures and Actions for Health Care Organizations to Mitigate Climate Change. U.S. Agency for Healthcare Research & Quality. AHRQ pub. No. 22–M011. September 2023. Available at: <https://www.ahrq.gov/sites/default/files/wysiwyg/healthsystemsresearch/decarbonization/decarbonization.pdf>

collecting other normalization factors to compare TEAM participants to each other and are considering a range of other factors consistent with GHG protocols such as FTEs (which is already collected through ENERGY STAR Portfolio Manager. We may also consider the number of FTEs in the future when reviewing potential metrics regarding staff transportation if scope 3 is pursued.

Comment: A commenter provided feedback on our alternative proposal for TEAM participants who choose to submit to report either gallons and patient encounter or to report the assessment questions. The commenter recommended limiting reporting to the gallons data because it is congruent with TJC program and would align organizations around the same set of metrics.

Response: We thank the commenter for their suggestions on our alternative proposal for TEAM participants who choose to submit to report either gallons and patient encounter or to report the assessment questions. The assessment questions for facilities allow facilities to report whether they are taking key actions to reduce transportation emissions and provide a deeper understanding of a hospitals’ commitment to reducing emissions. We believe that both the assessment questions and gallons reported are important in providing a whole-scope view on transportation at facilities.

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing the proposal at § 512.598(a)(4) to use a set of metrics that focus on greenhouse gases related to leased or owned vehicles.

(vii) Request for Information on Scope 3 Metrics and MDIs

Both Scope 3 and MDI emissions account for a large percentage of medical carbon emissions and CMS is

interested in potential ways in which to provide technical assistance to TEAM participants to assess available metrics to help reduce the enormity of this impact.

(a) Scope 3 Metrics

We believe Scope 3 emissions are relevant to a Decarbonization and Resilience Initiative connected to TEAM because Scope 3 emissions account for 82 percent of all U.S. health care emissions. Scope 3 includes all emissions upstream and downstream in the supply chain and other indirect emissions. We sought additional information regarding potential future voluntary reporting of Scope 3 emissions.

- What metrics or data collection elements would be appropriate for TEAM participants to accurately report Scope 3 emissions?
- Is there an industry standard tool that can be utilized for Scope 3 reporting?
- Which Scope 3 categories are most feasible and appropriate for hospitals participating in TEAM to report at this time?
- How can CMS and hospitals engage other parts of supply chain that contribute to Scope 3 emissions or incentivize their reduction of Scope 3 GHGs?
- Would hospital burden of Scope 3 reporting differ from Scope 1 and 2 reporting?

We summarize the feedback to our request for information as follows:

Comment: We received many comments related to Scope 3 reporting. Many commenters recommended certain Scope 3 metrics they believed were attainable for TEAM participants to collect, including normalizing patient encounters when it came to reusables vs single use devices, collecting waste volumes, patient and employee travel by mileage, and food waste. A few commenters recommended CMS to include Scope 3 metrics in the initiative, including making Scope 3 reporting mandatory and focusing on a limited but impactful set of metrics. A commenter suggested that Scope 3 is not burdensome to collect, and that there are a number of tools available for hospitals to use. This commenter recommended CMS to build its own tool in collaboration with EPA. A commenter recommended CMS provide leniency on Scope 3 metrics due to the complexity of these emissions in large hospital systems. A commenter recommended longer term technical assistance and for TEAM participants to use external regional vendors rather than CMS due to their familiarity with

local supply information. A commenter gave an example of a health system who had undertaken and published a partial Scope 3 inventory for CMS to reference.

Response: We thank the commenters for their input, acknowledge their recommendations, and will take the feedback into consideration in future rulemaking. We also refer readers to section X.A.3.p.(4).(a).(ii). for additional comments and feedback on why we excluded Scope 3 from the first year of the initiative.

Comment: A commenter recommended CMS include metrics that encourage clinicians to choose treatments that have less carbon emissions.

Response: We agree with the commenter, and we believe that starting with Scope 1 and Scope 2 will help start the process. We will look into incorporating Scope 3 in future.

We thank commenters for their support and will consider this feedback for future iterations of the initiative.

(b) MDIs

Also, under Scope 3, we sought additional information regarding MDIs. We believe that further understanding of the MDI prescription and usage rates could assist in finding pathways of reduction and substitution to a less harmful environmental option. However, we understand that most MDI prescriptions and the management of related conditions occur in the outpatient setting and may not be directly relevant to TEAM participants. Hospital reductions in MDI prescriptions can still result in significant reductions of GHG emissions. For example, Providence Oregon hospitals identified clinically equivalent MDI formulations of albuterol with 3-fold differences in emissions.¹⁰⁶³ By prioritizing the lower emissions intensity inhalers, these emissions are projected to drop by 42 percent, or 298 tons of CO₂e (the equivalent of 64 gasoline powered passenger vehicles driven) per year. We sought information on the feasibility of capturing information on MDI outpatient prescriptions as a percentage

¹⁰⁶³ Bhargavi Sampath, Matthew Jensen, Jennifer Lenoci-Edwards, Kevin Little, Hardeep Singh, & Jodi D. Sherman. Reducing Health care Carbon Emissions: A Primer on Measures and Actions for Health Care Organizations to Mitigate Climate Change. U.S. Agency for Healthcare Research & Quality. AHRQ pub. No. 22–M011. September 2023. Reducing Healthcare Carbon Emissions: A Primer on Measures and Actions to Mitigate Climate Change (ahrq.gov). Reducing Healthcare Carbon Emissions: A Primer on Measures and Actions to Mitigate Climate Change (ahrq.gov).

of all inhaler prescriptions relevant to TEAM participants.

What role do acute care hospitals, hospital-based pharmacies, or other providers in the inpatient setting play in prescribing MDIs and guiding patients toward environmentally preferable selections, such as dry powder inhaler,¹⁰⁶⁴ when clinically safe to do so?

We believe it would be important to record data such as the volume of each MDI canister (micrograms) and number of MDI canisters prescribed on an annual basis and this would be helpful to capture. We sought feedback on the feasibility of capturing information for the following questions:

- What is the utilization rate of MDIs and dry powder inhalers, for inpatients?
- What is the prescription rate of MDIs and dry powder inhalers?
- Is there a way to replace the MDI propellant from a hydrofluorocarbon to hydrofluoroalkane?

We summarize the feedback to our request for information as follows:

Comment: Many commenters provided feedback on MDIs. Commenters recommended ways of collecting MDIs, including number of prescriptions collected from EHRs, percentage of total possible MDI doses utilized, stratification by drug class, collecting formulation weights by grams rather than micrograms, requiring formularies to include environmental costs in their prioritization framework, frequency they are prescribing different albuterol formulations, including the dry powder form, and recommending devices that provide more actuations and less emissions. A commenter suggested that MDI emissions are complicated to assess and mitigate, requiring formulation-specific quantification within each drug class and action from multiple stakeholders. A commenter recommending using Medicare claims data to collect data rather than during the hospitalization when the patient is switched from an MDI to a Dry Powdered Inhaler (DPI). A commenter recommended using nebulized medications to reduce inpatient MDI use. A commenter supports collecting MDIs but believes that it does not seem to fit into the TEAM initiative since it focuses primarily on inpatients undergoing surgical procedures.

In response to the question of whether the MDI propellant from a

¹⁰⁶⁴ Kimberly Wintemute & Fiona Miller. Dry Powder Inhalers Are Environmentally Preferable to Metered-Dose Inhalers. CMAJ, vol. 192, no. 29, pp. E846. July 20, 2020. <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7828988/> <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7828988/>.

hydrofluorocarbon can be replaced to hydrofluoroalkane, a commenter noted that both are in the same class of chemical, and it is up to the preference of the pharmaceutical company. This commenter noted that not all hydrofluoroalkanes are potent GHGs and that the pharmaceutical industry is working on bringing new low or no global warming potential propellants to the market that are also hydrofluoroalkanes. This same commenter also expressed concern that the development of new propellants would move this drug-device combination from generic back to patent protection, potential driving prices up for patients and payers, similar to what happened in the 2000s during the chlorofluorocarbon to hydrofluorocarbon propellant transition.

Response: We thank the commenters for their input and acknowledge their recommendations. We may take the feedback into consideration in future rulemaking.

Comment: A few commenters pointed out the difference between Scope 1 MDIs, which is directly released onsite, versus Scope 3 MDIs, which is used outside of the health system.

Response: We thank the commenters for their input, pointing to differences between Scope 1 MDIs and Scope 3 MDIs. While some MDI usage may be classified as Scope 1, we believe it would be important to review MDI usage in total and not try to separate between Scope 1 and Scope 3 for the initial years of the initiative.

We thank the commenters for their input and will take the feedback into consideration in future rulemaking.

(5) Report Timing

For the Decarbonization and Resilience Initiative, we proposed at § 512.598(b) that, if TEAM participants so choose, they would report information annually to CMS after each performance period. The form and manner would be specified by CMS for each performance period including using ENERGY STAR Portfolio Manager for building energy metrics proposed in section X.A.3.p.(4).(a).(iv). of the preamble of this final rule. We anticipate reporting for the other metrics and assessment questions would be a survey and questionnaire in a form and manner specified by CMS. We also proposed at § 512.598(b) that the Decarbonization and Resilience Initiative information would need to be reported to CMS by no later than 120 days in the year following the performance period, or a later date as determined by CMS. We believe it is important to have flexibility to delay the

reporting in case of an emergency or technical issue.

We also considered requiring reporting by June 1 after the performance period to align with the majority of the local decarbonization programs that report to ENERGY STAR.¹⁰⁶⁵ We sought comment on the proposed report timing and alternatives.

We summarize and respond to public comments received on the proposal at § 512.598(b) to require TEAM participants to report information below.

Comment: A few commenters supported annual reporting by TEAM participants to CMS after each performance period. On commenter recommended one year of technical assistance prior to requiring reporting to support education on the initiative requirements and how to structure their programs prior to initial reporting.

Response: We thank the commenters for their support. We will take into consideration the option of providing technical assistance prior to the launch of the Decarbonization and Resilience Initiative and will utilize TEAM participants feedback to inform future technical assistance.

Comment: A commenter encouraged CMS to shorten the reporting timeline, stating the health sector is behind other sectors.

Response: We thank the commenter for their feedback and may consider it in future rulemaking. Because the Decarbonization and Resilience Initiative is part of TEAM, TEAM participants who elect to voluntarily participate in the initiative will not need to begin reporting until TEAM starts. However, CMS may provide technical assistance to help TEAM participants to prepare for the initiative ahead of the start of this initiative as part of TEAM.

Comment: A commenter supported the reporting deadline of June 1st after the previous year's performance period.

Response: We thank the commenter for their support of the proposed reporting deadline.

After consideration of public comments received, we are finalizing our proposal at § 512.598(b) as proposed.

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing the proposal to require TEAM participants to report information.

¹⁰⁶⁵ EPA Office of Air Programs. State/Local Compliance Ordinances. U.S. Environmental Protection Agency & U.S. Department of Energy. February 20, 2024. State/local compliance ordinances (*site.com*).

(6) Benefits for TEAM Participants Who Elect To Report in the Decarbonization and Resiliency Initiative

We proposed at § 512.598(c) that TEAM participants who elect to report all the metrics identified in section X.A.3.p.(4). of the preamble of this final rule in the manner described in section X.A.3.p.(5). of the preamble of this final rule would receive individualized feedback reports and be eligible to receive public recognition for their commitment to decarbonization. In addition to these proposed benefits, we believe TEAM participants may receive additional indirect benefits from engaging in the voluntary reporting portion of the Decarbonization and Resiliency Initiative.

We invited public comment on this proposal to offer benefits to TEAM participants who engage in voluntary reporting.

Comment: A few commenters supported proposed benefits to TEAM participants who elect to report in the decarbonization and resiliency initiative and recommended CMS reward TEAM participants by implementing a bonus to CQS or help offset the costs incurred by health care organizations with upfront funding or incentives for reporting.

Response: We thank comments for their support regarding the benefits to TEAM participants who elect to report in the decarbonization and resiliency initiative. At this time, we do not intend to modify the CQS, but we did seek feedback on how to incorporate financial incentives in the future and have a summary of comments in section X.A.3.p.(6).(d).

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing the proposal to offer benefits to TEAM participants who engage in voluntary reporting.

(a) Individualized Feedback Reports to TEAM Participants

We proposed at § 512.598(c)(1) to provide individualized feedback reports to TEAM participants who voluntarily report to CMS the four emissions-related metrics in the Decarbonization and Resilience Initiative. We anticipate these reports would summarize facilities' emissions metrics and would include benchmarks, as feasible, for normalized metrics to compare facilities, in aggregate, to other TEAM participants in the Decarbonization and Resilience Initiative. While ENERGY STAR has many robust benchmarks related to building energy efficiency, we believe that TEAM participants would be able to learn additional information from peers about emissions from

anesthetic gases and transportation emissions. See section X.A.3.p.(4).(a) of the preamble of this final rule for discussion of the proposed metrics and calculator tools to be used as part of the Decarbonization and Resilience Initiative. CMS does not intend to make these individualized feedback reports available to the public or other TEAM participants and intends them for the purpose of learning and improvement.

We invited public comment on this proposal to provide individualized feedback reports to TEAM participants.

Comment: Several commenters supported providing individualized feedback reports to TEAM participants who voluntarily report to CMS the four emissions-related metrics, noting the value of benchmark data to TEAM participants to help evaluate emissions and energy efficiencies, and with public recognition.

Response: We thank commenters for their support.

Comment: A few commenters recommended public disclosure of the general benchmarking data and verification at the facility level. A commenter requested CMS clarify with TEAM participants that reports can be shared with the public if a TEAM participant wants the data made public. A commenter recommended CMS provide individual feedback reports using relevant regional and hospital-type benchmarks.

Response: We appreciate the commenters' suggestion regarding public disclosure and verification of benchmarking data at the facility level. We will monitor data submitted by a TEAM participant for compliance with the requirements of this final rule and will ensure that the data is sufficiently complete. We will use processes similar to those used in other models in monitoring the data submitted by TEAM participants. At this time, due to limited resources, we will not be able to conduct audits of the data submitted. Finally, we want to caution that TEAM participant that receives data or information in an individualized feedback report from CMS as a participant in this initiative of TEAM must request in writing and receive written approval by CMS prior to publication or public disclosure of data or information contained in the individualized feedback report.

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing the proposal to provide individualized feedback reports to TEAM participants.

(b) Establishment of a Publicly Reported Hospital Recognition of Decarbonization Commitment

We proposed at § 512.598(c)(2) to establish a publicly reported hospital recognition badge for the commitment of the TEAM participant or of the TEAM participant's hospital corporate affiliate to decarbonization; CMS would post a hospital recognition badge on a CMS website. We would provide annual recognition to TEAM participants for reporting all the metrics detailed in section X.A.3.p.(4).(a) of the preamble of this final rule. The recognition badge would be reevaluated each year based on the reporting of performance year metrics to CMS. We believe adding this recognition to a consumer-facing CMS website would allow patients and families to choose hospitals that have participated in efforts to measure health care carbon emissions.

To encourage meaningful reductions in emissions, we sought comments on potentially expanding to a tiered recognition in future years. We believe a tiered approach could better acknowledge TEAM participants that have elected to voluntarily report their emissions data, actively engage in decarbonization activities that would result in reduced Scopes 1, 2, and 3 emissions, and meet absolute or relative standards of reported energy efficiency and lowered emissions. We sought comment on tiering such badging so as to recognize TEAM Participants that meet certain absolute or relative standards based on emissions reporting measures or other standards such as the Department of Energy's National Definition for a Zero Emission Building and may consider making select reported information public.¹⁰⁶⁶ Any modifications to the public recognition benefit would be addressed through future rulemaking.

We invited public comment on the proposed publicly reported hospital recognition of decarbonization commitment.

Comment: Several commenters supported a publicly reported hospital recognition badge for a TEAM participant's commitment to decarbonization. A few commenters recommended transparent and verifiable qualifications for a TEAM participant to receive a badge. A commenter

recommended expanding the public recognition with a tiered approach to encourage continuous improvement in GHG reduction performance. A commenter recommended a sustainability badge on Care Compare to recruit and retain care staff and attract patients. A commenter recommended CMS recognition of TJC Sustainable Healthcare Certification to align sustainability programs.

Response: We thank the commenters for their support for a publicly reported hospital recognition badge for reporting all metrics detailed in section X.A.3.p.(4).(a) of the preamble of this final rule. As noted in section X.A.3.p.(3), we are allowing a TEAM participant to voluntarily report on metrics and respond to questions to CMS on behalf of the TEAM participant's hospital corporate affiliates. To support recognition of that additional voluntary reporting, a TEAM participant may receive a badge for the commitment of the TEAM participant or for the commitment of the TEAM participant's hospital corporate affiliates. We want to be clear that the publicly reported hospital recognition badge is for reporting and not for performance. We will monitor data submitted by a TEAM participant for compliance with the requirements of this final rule and will ensure that the data is sufficiently complete. At this time, due to limited resources, we will not be able to conduct audits of the data submitted. We will not be establishing a tiered approach as we want to gain experience with the data submitted by TEAM participants before further consideration of a tiered approach.

Comment: A commenter did not support a recognition badge for non-disclosed data and recommends verified data disclosure to ensure total transparency. Another commenter did not support a star-ranking system for environmental sustainability until future studies define what patients care about most and what the rankings mean in terms of patient safety and quality of care.

Response: We appreciate the commenters' concerns regarding recognition badges and the data used. We will monitor data submitted by a TEAM participant for compliance with the requirements of this final rule and will ensure that the data is sufficiently complete. At this time, we are not proposing public disclosure of data submitted by TEAM participants as doing so may act as a barrier to voluntary participation. Due to limited resources, we will not be able to conduct audits of the data submitted.

¹⁰⁶⁶ Kent Peterson, Paul Torcellini, & Roger Grant. A Common Definition for Zero Energy Buildings. National Institute of Building Sciences. September 2015. DOE/EE-1247. https://www.energy.gov/sites/default/files/2015/09/f26/bto_common_definition_zero_energy_buildings_093015.pdf https://www.energy.gov/sites/default/files/2015/09/f26/bto_common_definition_zero_energy_buildings_093015.pdf.

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing the proposed publicly reported hospital recognition of decarbonization commitment.

(c) Indirect Benefits

We believe that in addition to the direct benefits of participating in the Decarbonization and Resilience Initiative there are several indirect benefits associated with the Initiative's efforts to assist interested TEAM participants in undertaking decarbonization and resilience activities. Decarbonization can help improve the financial well-being of health care facilities by reducing operational costs. Estimates indicate that up to 30 percent of the energy used in hospitals and other commercial buildings is consumed unnecessarily and investing in decarbonization has been shown to decrease operational costs through supply chain optimization and reduced energy consumption and expenditures.¹⁰⁶⁷

Beyond the potential cost reduction benefit of decarbonization, investing in decarbonization may help to improve patient care and outcomes. For example, facilities that opt to reduce GHG emissions by switching to renewable energy sources increase their resilience and thus can bypass power outages in the electric grid during climate emergencies. Furthermore, by reducing GHG emissions, healthcare facilities are contributing to preventing or ameliorating adverse health outcomes that are linked to air pollution and climate change-related hazards like hurricanes (for example, respiratory illnesses, injury).¹⁰⁶⁸ Health systems could benefit patients by reduced demand for hospital services through encouraging health education, addressing health inequities perpetuated by social determinants of health, improving telehealth options,

¹⁰⁶⁷ Hardeep Singh, Walt Vernon, Terri Scannell, & Kathy Gerwig. (2023). Crossing the Decarbonization Chasm: A Call to Action for Hospital and Health System Leaders to Reduce Their Greenhouse Gas Emissions. National Academy of Medicine Discussion Paper. November 29, 2023. <https://nam.edu/crossing-the-decarbonization-chasm-a-call-to-action-for-hospital-and-health-system-leaders-to-reduce-their-greenhouse-gas-emissions/>

September 17, 2019. Estimating the Health-Related Costs of 10 Climate-Sensitive U.S. Events During 2012—PMC (*nih.gov*). Estimating the Health-Related Costs of 10 Climate-Sensitive U.S. Events During 2012—PMC (*nih.gov*).

and improving upstream care management. A well-developed sustainability strategy could allow health systems to become more resilient to the consequences of extreme weather events, which exacerbate patients' chronic cardiac, respiratory, and other conditions.¹⁰⁶⁹

We summarize and respond to public comments received regarding the indirect benefits for TEAM participants who elect to report on the metrics.

Comment: A few commenters agreed with the indirect benefits of participating in the Decarbonization and Resilience Initiative, including cost savings overall and specifically in anesthesia departments, and reductions in air pollution and improvements in air quality that impact healthcare savings and public health benefits.

Response: We thank commenters for their feedback.

Comment: A commenter suggested decarbonization may not reduce costs and may increase operational costs and cited possible ongoing depreciation expenses as an example.

Response: We thank the commenter for their input. We believe that decarbonization may provide opportunities to decrease operational costs. Reports have shown that the operational costs of electric vehicles are lower than that of a vehicle with an internal combustion engine.^{1070 1071} Some efforts may not result in immediate cost savings but will be beneficial to the interests of hospitals and health systems.^{1072 1073} It is important to note, that an exclusive focus on direct cost savings and immediate return on investment does not capture long-term costs associated with impacts of climate change (for example, infrastructure/physical

damages, greater healthcare costs, etc.) and reputational costs.¹⁰⁷⁴

After reviewing the public comments, for the reasons set forth in this rule, we are finalizing the proposal regarding the indirect benefits for TEAM participants who elect to report on the metrics.

(d) Request for Information on Potential Future Incentives for Participation in the Voluntary Decarbonization and Resilience Initiative

At this time, we proposed not to include any bonuses, payments, or payment adjustments to TEAM participants for voluntary reporting in the Decarbonization and Resilience Initiative. We may add such a policy to the Decarbonization and Resilience Initiative in future years, subject to additional rulemaking. We sought feedback on the ways we could structure potential payments, bonuses, or payment adjustments. To offer some examples:

- A potential bonus added to the Composite Quality Score (CQS), which is discussed in section X.A.3.d.(5).(e). of the preamble of the proposed rule, for TEAM participants who report the information for the Decarbonization and Resilience Initiative. This would reward TEAM participants for collecting and reporting data, but not necessarily for better performance.

- We could elect to modify the CQS score by providing a bonus for those who perform well on the Decarbonization and Resilience Initiative. We welcomed thoughts on which metrics we should identify for measuring performance and how a bonus could be structured.

We invited public comment on the future bonuses, payments, or adjustments for participation in the Decarbonization and Resilience Initiative.

Comment: Many commenters recommended financial incentives to TEAM participants for voluntary reporting in the decarbonization and resilience initiative, including Medicare payment adjustments or bonus points; and linking reimbursement rates to emissions reductions or green medical supplies and pharmaceuticals. A few commenters recommended separate, targeted payments or upfront financial incentives, such as to hospitals serving low-income communities and focused on Scope 1 emissions; to small, independent, and rural hospitals; to hospital sustainability teams co-led by clinical and administrative leaders; and to hospitals to work with third parties.

¹⁰⁷⁴ Ibid.

A few commenters supported adding a potential bonus to the Composite Quality Score (CQS) for TEAM participants who report for the decarbonization and resilience initiative. A few commenters recommended revisions to the CQS score, to include establishing a climate resilience plan, and establishing an overall emissions reduction goal within the CQS.

A few commenters recommended additional administrative processes for the initiative including flexibility and a longer timeframe to address the uniqueness of healthcare operations as compared to other industries; audit or third-party verification of data reports to ensure accurate eligibility for bonus payments.

Response: We thank commenters for their input and acknowledge their recommendations and concerns. We may take commenters' feedback into consideration in future rulemaking related to financial incentives for voluntary reporting in the initiative.

Comment: A few commenters recommended non-financial incentives to TEAM participants for voluntary reporting in the decarbonization and resilience initiative including linking reporting to measurements of energy consumption, water usage, waste/disposal volume, and emission reduction; or the use of cloth gowns and scrubs, and reusable surgical equipment and tools.

Response: We thank the commenters for their suggestions and may consider other non-financial incentives for TEAM participants in future years.

Comment: A commenter did not support financial incentives to TEAM participants for voluntary reporting as bonuses or modifications related to GHG emissions would weaken the quality scoring system.

Response: We acknowledge the commenter's concern. At this point we are not finalizing financial incentives for the initiative. We will consider implications of a financial incentive on TEAM if we elect to do financial incentives in the future.

We appreciate the comments we received in response to the RFI and will consider them if we propose adding such a financial incentive policy to the initiative in future years, subject to additional rulemaking.

We note that we received comments and suggestions that were outside the scope of the proposed rule, which are not addressed in this final rule.

q. Termination of TEAM

In the proposed rule we stated that the general provisions relating to

termination of the model by CMS in 42 CFR 512.596 would apply to TEAM. Consistent with these provisions, in the event we terminate TEAM, we would provide written notice to TEAM participants specifying the grounds for termination and the effective date of such termination or ending. As provided by section 1115A(d)(2) of the Act and § 512.594, termination of the model under section 1115A(b)(3)(B) of the Act would not be subject to administrative or judicial review.

We received no comments on this proposal, and we are finalizing our proposal as proposed at § 512.596.

B. Provider Reimbursement Review Board (PRRB) (§ 405.1845)

Section 1878 of the Act (42 U.S.C. 1395oo) established by the Social Security Amendments of 1972, describes the role and function of the Provider Reimbursement Review Board (PRRB), a five-member administrative tribunal that adjudicates disputes over Medicare reimbursement for certain providers of services in the Medicare program. The statute requires the HHS Secretary to appoint individuals to the PRRB for a 3-year term of office; the law also established a shorter length of office for the first appointments for the newly created PRRB to permit staggered terms of office. To qualify for appointment to the PRRB, all members must be knowledgeable in the field of payment of providers of services; two members must be representative of a Medicare provider of services; and at least one member must be a certified public accountant. In 1974, the Social Security Administration (SSA), which administered the Medicare program prior to its transfer to the Health Care Financing Administration in the Department of Health and Human Services, promulgated the implementing regulations for the PRRB. The regulations governing the operation and administration of the PRRB reside at 42 CFR part 405 subpart R, with the provision governing the composition of the PRRB at 42 CFR 405.1845. In addition to codifying the statutory requirements governing the composition of the PRRB, the regulations established that no Board Member is permitted to serve more than two consecutive 3-year terms of office and that the Secretary has the authority to terminate a Board Member's term of office for good cause.

When the PRRB was established more than 50 years ago, payment to providers participating in the Medicare program was on a cost reimbursement basis. Beginning October 1, 1983, Medicare transitioned to a prospective payment system for inpatient hospitals. These

changes in reimbursement have led to changes in the types of cases adjudicated by the Board, the complexity of the matters that come before the Board, and often, the amount of time required to bring matters to resolution. While the limit on the number of consecutive terms served by a Board Member was established in the 1974 implementing regulations, CMS no longer believes that the current limitation on the number of consecutive terms a Board Member may serve makes good sense.

In the proposed rule, we sought public comment on our proposal to amend paragraphs (a) and (b) of 42 CFR 405.1845, effective January 1, 2025.

- First, we sought to modify the requirement that Board Members shall be knowledgeable in the area of cost reimbursement, so that it instead requires them to be knowledgeable in the field of payment of providers under Medicare Part A.

- Second, we proposed to permit a Board Member to serve no more than three consecutive terms, instead of two consecutive terms allowed under current regulations.

- Third, we proposed to permit a Board Member who is designated as Chairperson in their second or third consecutive term to serve a fourth consecutive term to continue leading the Board as Chairperson.

The proposed change to paragraph (a) is intended to align the regulatory language with the statute, which, at section 1878(h) of the Act states, "All of the members of the Board shall be persons knowledgeable in the field of payment of providers of services . . ." As explained earlier in this preamble, Medicare payment to providers was on cost reimbursement basis when this provision became law; however, this change would clarify that a Board Member must have knowledge of Medicare Part A payment (which broadly covers the category of cases adjudicated by the PRRB, as opposed to the narrower subcategory of cost reimbursement matters). The proposed changes to paragraph (b) are intended to reduce the amount of turnover that occurs on the PRRB, enabling CMS to recruit and retain highly qualified individuals as they gain experience in adjudicating cases. We believe that these changes have the potential to expand the pool of applicants seeking to serve on the Board and who, because of the current two-term limitation, may not be willing to entertain a job change for what would be at most a 6-year period of service. Under current regulations, if a Board Member is serving in their first or second consecutive term and later

designated as Chairperson, the total length of service on the PRRB remains 6 years, or two consecutive terms. In other words, a Board Member who is designated as Chairperson in year 4 or 5 of their second consecutive term is only permitted to serve 1 to 2 more years as Chairperson. Under the policy described in the proposed rule, the PRRB would continue to benefit from having an experienced Board Member serve for a total of 12 years, if they were designated as Chairperson in their second or third consecutive term.

We recognized in the proposed rule that the limit of two consecutive terms under current regulations creates more openings on the PRRB, which offers opportunities for newly appointed individuals to apply their unique skill sets, experience, and perspective to the work. However, we noted that there is an opportunity cost associated with the current level of turnover. Recruitment of Board Members occurs with regularity, generally every 1 to 3 years, and considerable time and effort have been expended by CMS and HHS in recruiting and vetting candidates as well as training newly appointed Board Members. Over time, it has been increasingly challenging to attract a large pool of qualified candidates who have relevant skills and experience in matters that come before the PRRB.

Even after a candidate is identified, they must be formally appointed to the PRRB by the Secretary. Upon accepting the appointment, a Board Member must devote significant time to learning the duties of the job. As a result, in our experience, a newer Board Member takes more time to complete tasks relative to their colleagues who have more experience in the role. While Board Members may have a strong legal, accounting, health care, or other professional background, this position often is the first time they are serving as an adjudicator. Conversely, when a Board Member departs, there is a loss of institutional knowledge and expertise that adversely impacts efficiency and productivity. Turnover also impacts the relationships among and between the Board Members, and it takes time for the newly constituted Board to learn how to work together. This proposal would decrease the frequency of turnover and permit lengthier periods of service for Board Members, which we believe would have the potential to increase the PRRB's efficiency and productivity.

The volume of cases filed with the PRRB has remained relatively steady over the past several decades with the average number of appeals filed and closed annually hovering around 2,000. The PRRB's docket has experienced

years in which fewer appeals were filed in large part due to holds on issuing Notices of Program Reimbursement from which many providers file their appeals. A year or years with a lower appeals volume was then followed in subsequent years by spikes of new appeals once the holds were lifted. The PRRB's total docket has ranged from about 5,000 appeals to about 10,000 appeals over the last 30 years, with an average ending annual inventory of 8,700 cases. The PRRB's fiscal year 2023 docket ended with 8,698 open appeals.

Additionally, the nature of the PRRB's cases has evolved over time. For example, in the past decade, the PRRB has seen an increase in broad-based legal challenges to regulatory interpretations and fewer appeals of reimbursable expenses specific to individual providers, which were common in the early years of the PRRB's operation. For example, early on, disputes over a provider's allowable costs in its cost report involving such expenses as owners' compensation, malpractice insurance, and marketing expenses were the norm, and generally these issues are simpler matters to adjudicate. With the evolution of Part A reimbursement to a prospective payment system, appeals to the PRRB frequently involve nuanced issues that implicate highly specialized and complex areas of law. Cases that have been adjudicated by the PRRB often reach the federal courts, and on occasion, are decided by the U.S. Supreme Court.¹⁰⁷⁵ Permitting Board Members to serve more than two consecutive terms would allow them greater opportunity to follow the landscape of issues under judicial review, as it is not unusual for it to take years for cases to wind their way through the courts. Over their length of service, a Board Member develops an understanding of how certain issues are decided in the courts and applies that knowledge to the issues presented to the PRRB. The longer length of service would allow Board Members to obtain a deeper understanding of, and knowledge about, pertinent issues and caselaw.

In the proposed rule, we explained that we considered a policy of permitting a Board Member to serve four consecutive 3-year terms, which would have permitted an individual to serve as long as 12 years (with the potential of serving another 3 years, or 15 years

total, if the Board Member would later be designated as Chairperson), as opposed to 9 years. Making a Board Member eligible to serve as many as four consecutive 3-year terms could have an advantage over three consecutive terms, as there will be less Member turnover and a greater ability to retain highly qualified Board Members. We sought public comment on this alternative option of four consecutive terms rather than three.

As explained in the proposed rule, we also considered permitting a Board Member who ascends to the position of Chairperson to serve an additional two or three consecutive terms, instead of the proposed one additional consecutive term. Such a policy would have permitted an individual to serve 15 or 18 years (three 3-year terms as a Board Member and another two or three 3-year terms as Chairperson). Allowing a Board Member who is later designated as Chairperson to serve two or three additional consecutive terms would have likely made all Board vacancies more attractive (given the prospect of career progression and a longer tenure) and provide a longer period for a Board Member to gain experience prior to assuming the role of Chairperson, as they developed the knowledge, skills, and abilities in serve in a leadership capacity on the Board. We solicited comment on these alternative options for the extended tenure of the Chairperson and whether our proposal or one of the alternative proposals best struck a balance between an appropriate level of turnover and CMS's desire to recruit and retain qualified Board Members.

Comment: Several commenters supporting our CMS's proposal to require Board Members to possess knowledge of Medicare Part A reimbursement, with the commenters noting that knowledge of payment to providers alone is insufficient. The commenters stated that it is critical that Board Members have specific knowledge and expertise in Medicare Part A reimbursement given the complex and unique types of Medicare cost report appeals that the PRRB adjudicates. These commenters also observed that this proposed amendment more appropriately reflects the statutory requirement of requiring Board Members to be knowledgeable in the field of "payment of providers of services."

Response: We agree. As expressed earlier in this preamble, we seek to clarify that a Board Member must have knowledge of Medicare Part A payment, which covers the diversity of cases

¹⁰⁷⁵ See e.g., *Becerra v. Empire Health Found., for Valley Hosp. Med. Ctr.*, 142 S. Ct. 2354 (2022); *Sebelius v. Auburn Reg'l Med. Ctr.*, 568 U.S. 145 (2013); *Your Home Visiting Nurse Servs., Inc. v. Shalala*, 525 U.S. 449 (1999); and *Bethesda Hosp. Ass'n v. Bowen*, 485 U.S. 399 (1988).

adjudicated by the PRRB, as opposed to cost reimbursement matters alone.

Comment: We received a comment expressing opposition to the proposed policy of allowing the term of Board Members be extended under certain circumstances up to 18 years. The commenter stated that the current system is working well and expressed concern about members with 9- to 18-year terms becoming entrenched. Other commenters expressed opposition to the proposed change and urged CMS instead to explore other options, such as higher pay which would serve as an incentive to attract highly qualified applicants to Board positions. Other commenters cautioned that the relaxation of term limits would deprive the Board of the regular infusion of fresh experience and perspectives that new Board Members bring.

Response: As explained earlier this preamble, turnover on the Board occurs with regularity, which has disruptive impacts on the Board's productivity and efficiency. Like anyone new to a position, it takes time to maximize a Board Member's contributions to the PRRB, which under regulations in effect prior to the effective date of this provision (January 1, 2025), would leave only one more 3-year term to apply the institutional knowledge and expertise they have acquired. Furthermore, a Board Member's departure at the end of their tenure creates a loss of such institutional knowledge and expertise; upon filling that vacancy, this cycle starts over again. However, we also recognize the commenters' concerns about permitting a Board Member to serve as long as 12 to 18 years and the risks of having such a long tenure. As such, we will not be finalizing the proposals to have Board Members serve more than three consecutive 3-year terms at this time.

Comment: Commenters questioned the effective date of January 1, 2025, as to when these PRRB composition-related changes were proposed to take effect. These commenters noted that by making them effective within months of issuance of the final rule, it creates an appearance that CMS seeks to reward current Board Members who might be sympathetic to the agency's position, which in turn undermines the legitimacy of the Board.

Response: We disagree with the commenters' characterization of the proposed effective date. As explained earlier in this preamble, it is time and resource intensive to recruit, screen, and appoint candidates to the PRRB, which occurs on a regular cadence. Furthermore, there is an upfront investment of time and effort on the part

of the newly appointed Board Member to learn their role and responsibilities and grow into the position. This set of changes to the regulations preserves the Secretary's existing long-standing authority to decide whether to reappoint a Board Member to a consecutive term or terminate a Board Member's term of office for good cause.

After consideration of the public comments received, we are finalizing our proposal to require Board Members to be knowledgeable in the field of payment of providers under Medicare Part A. Additionally, we are finalizing our proposal to permit a Board Member to serve no more than three 3-year consecutive terms. At this time, we are not finalizing any policy that modifies the number of consecutive terms served by the Chairperson. These regulatory changes become effective January 1, 2025.

C. Maternity Care Request for Information (RFI)

1. Overview

As described in the White House Blueprint for Addressing the Maternal Health Crisis and in the CMS Maternity Care Action Plan, we are committed to reducing maternal health disparities and improving maternal health outcomes during pregnancy, childbirth, and the postpartum period.^{1076 1077} In alignment with our commitment to addressing the maternal health crisis, this RFI sought to gather information on differences between hospital resources required to provide inpatient pregnancy and childbirth services to Medicare patients as compared to non-Medicare patients. To the extent that the resources required differ between patient populations, we also requested information on the extent to which non-Medicare payers, or other commercial insurers, may be using the IPPS as a basis for determining their payment rates for inpatient pregnancy and childbirth services and the effect, if any, that the use of the IPPS as a basis for determining payment by those payers may have on maternal health outcomes.

2. Use of Medicare Data for the Calculation of the IPPS MS-DRG Relative Weights

As explained in section II.A. of the preamble of this final rule, section

¹⁰⁷⁶ White House. White House Blueprint for Addressing the Maternal Health Crisis. 2022. Accessed January 2, 2024. <https://www.whitehouse.gov/wp-content/uploads/2022/06/Maternal-Health-Blueprint.pdf>.

¹⁰⁷⁷ CMS. CMS Cross Cutting Initiative: Maternity Care Action Plan. 2022. Accessed January 2, 2023. <https://www.cms.gov/files/document/cms-maternity-care-action-plan.pdf>.

1886(d)(4) of the Act requires the Secretary to establish a classification of inpatient hospital discharges by diagnosis-related groups and a methodology for classifying specific hospital discharges within these groups. We refer to these groups of diagnoses as the IPPS Medicare Severity Diagnosis Related Groups (MS-DRGs). For each MS-DRG, the Secretary is required to assign an appropriate weighting factor which reflects the relative hospital resources used with respect to discharges classified within that group compared to discharges classified within other groups. The Secretary is also required to adjust the MS-DRG classifications and weighting factors at least annually to reflect changes in treatment patterns, technology, and other factors which may change the relative use of hospital resources.

As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58652), our goal is always to use the best available data overall for ratesetting, including the calculation of the IPPS MS-DRG relative weights. We primarily utilize Medicare claims data and Medicare cost report data for IPPS ratesetting for inpatient hospital services. The claims data we utilize is specific to the Medicare beneficiaries population, which includes people 65 and older or people with disabilities, End-Stage Renal Disease, or amyotrophic lateral sclerosis (ALS) that qualifies them for Medicare earlier than the age of 65.¹⁰⁷⁸ Although most Medicare beneficiaries are 65 and older, in 2021 around 13% of the total share of Medicare beneficiaries were under the age of 65.¹⁰⁷⁹ Therefore, people of reproductive age may have Medicare as their primary health insurance. Notably, a study from the National Institutes of Health found that pregnant women with disabilities have higher risks for maternal mortality and severe complications during birth and pregnancy compared to other pregnant women.¹⁰⁸⁰ Thus, considering we utilize data that is specific to the Medicare beneficiary population in our ratesetting for inpatient hospital services we caution against using the IPPS rates and DRGs without first taking

¹⁰⁷⁸ Who's eligible for Medicare? U.S. Department of Health and Human Services. Accessed January 2, 2024. <https://www.hhs.gov/answers/medicare-and-medicaid/who-is-eligible-for-medicare/index.html>.

¹⁰⁷⁹ Medicare Beneficiaries at a Glance 2023 Edition. Centers for Medicare and Medicaid Services. <https://data.cms.gov/infographic/medicare-beneficiaries-at-a-glance>.

¹⁰⁸⁰ Gleason JL, Grewal J, Chen Z, Cernich AN, Grantz KL. Risk of Adverse Maternal Outcomes in Pregnant Women With Disabilities. *JAMA Netw Open.* 2021;4(12):e2138414. Published 2021 Dec 1. doi:10.1001/jamanetworkopen.2021.38414.

into account the characteristics of the Medicare beneficiary population.

3. Request for Information

This RFI generally sought to gather information on differences between the resources required to provide inpatient obstetrical services to Medicare patients, on which the IPPS MS-DRGs relative weights for those services are based, as compared to non-Medicare patients. To the extent that the resources required differ, we also sought information regarding the extent to which non-Medicare payers, such as state Medicaid programs, may be using the IPPS MS-DRG relative weights to determine payment for inpatient obstetrical services and the effect, if any, that use may have on maternal health outcomes. We asked some specific questions to help facilitate feedback on this issue and more broadly on maternal health, including the questions that follow.

- What policy options could help drive improvements in maternal health outcomes?
- How can CMS support hospitals in improving maternal health outcomes?
- What payment models have impacted maternal health outcomes, and how?
- What payment models have been effective in improving maternal health outcomes, especially in rural areas?
- What factors influence the number of vaginal deliveries and cesarean deliveries?
- What types of modifications or assumptions, if any, are being made by payers when they are using the IPPS MS-DRG relative weights to account for the fact they are based on the Medicare beneficiary population?
- Does the use of the IPPS MS-DRG relative weights as the basis for setting rates for other payers, including state Medicaid programs, impact efforts to reduce low-risk cesarean deliveries?
- To what extent are Medicare claims and cost report data reflective of the differences in relative costs between vaginal births and cesarean section births for non-Medicare patients?
- Are there other data beyond claims and cost reports that Medicare should consider incorporating in development of relative weights for vaginal births and cesarean section births?
- What impact, if any, does the relatively lower numbers of births in Medicare have on the variability of the relative weights?
- What effect, if any, does potential variability in the relative weights on an annual basis have on maternal health outcomes?

We also noted our longstanding principle, reiterated each year in the

IPPS rulemaking, that facilities should not consider differences in relative weights when making treatment decisions.

Comment: Generally, commenters expressed appreciation for CMS' and the Administration's interest and commitment to maternal health and improving maternal health outcomes. Commenters provided a wide range of feedback to the questions in the Maternity Care RFI, which is summarized in the following paragraphs.

Some commenters stated that payment rates to providers and health care professionals for pre/postnatal care, delivery, and related maternity care services were inadequate regardless of the payer. Some commenters said that there were structural issues with how payers pay for maternity care services and suggested payers restructure payments. Some commenters provided examples of payment restructuring that would include standby capacity payments, delivery fees, and federal add-on payments for labor and delivery.

Many commenters mentioned the importance of Disproportionate Share Hospital payments, Uncompensated Care Payments, and adequate payments from Medicare for all hospital services as keys to indirectly supporting hospitals that provide maternity care services.

Some commenters, including a national hospital association, stated that Medicare payment rates are generally not perceived to be a driver of practice patterns in maternity care.

Some commenters indicated that Medicare rates do impact other payers' payment rates in general, as well as specifically for maternity care services. For example, some comments discussed how Medicare payment rates are often used as a benchmark by state Medicaid programs for setting rates. With regard to commercial payers, various commenters pointed out that payment rates are set via contractual negotiations with providers, among other factors.

Various commenters indicated that Medicaid plays an important role in the delivery of maternity care services, and therefore encouraged CMS to work with state Medicaid agencies.

Most commenters acknowledged that resources to treat Medicare beneficiaries may differ from the resources required to treat a non-Medicare population. However, some commenters stated that they did not believe that the current MS-DRG structure and weights adequately reflect the resource consumption of maternity care services. Additionally, some of those commenters suggested that CMS use supplemental

data to adjust the MS-DRGs and weights.

Other suggestions to support improvements in maternal health outcomes included use of value-based care arrangements, standardizing quality reporting across payers, establishing support programs for care for mental health and substance use disorder, and for addressing housing and food security challenges.

Response: We appreciate the many thoughtful comments we received from hospitals, hospital associations, health systems, beneficiary groups, and others. We will consider the comments received for future actions in our ongoing efforts to reduce maternal health disparities and improve maternal health outcomes during pregnancy, childbirth, and the postpartum period of maternal health.

D. Changes to the Payment Error Rate Measurement (PERM)

The Payment Integrity Information Act of 2019 requires federal agencies to annually review programs susceptible to significant improper payments, estimate the amount of improper payments, report those estimates to Congress, and submit a report on actions the agency is taking to reduce the improper payments.

Medicaid and the Children's Health Insurance Program (CHIP) were identified as programs at risk for significant improper payments by the Office of Management and Budget (OMB). We measure Medicaid and CHIP improper payments through the Payment Error Rate Measurement (PERM) program. Under PERM, reviews are conducted in three component areas (FFS, managed care, and eligibility) for both the Medicaid program and CHIP. The results of these reviews are used to produce national program improper payment rates, as well as state-specific program improper payment rates. The PERM program uses a 17-state, 3-year rotation cycle for measuring improper payments, so every state is measured once every 3 years.

Section 202 of Division N of the Further Consolidated Appropriations Act, 2020 (FCAA, 2020) (Pub. L. 116-94) amended Medicaid program integrity requirements in Puerto Rico. Puerto Rico was required to publish a plan, developed by Puerto Rico in coordination with CMS, and approved by the CMS Administrator, not later than 18 months after the FCAA's enactment, for how Puerto Rico would develop measures to comply with the PERM requirements of 42 CFR part 431, subpart Q. Puerto Rico published this

plan on June 20, 2021,¹⁰⁸¹ and it was approved by the CMS Administrator on June 22, 2021. In the proposed rule, we proposed to remove the exclusion of Puerto Rico from the PERM program found at 42 CFR 431.954(b)(3). In compliance with section 202 of Division N of the FCAA, 2020, Puerto Rico has developed measures to comply with the PERM requirements of 42 CFR part 431, subpart Q. Including Puerto Rico in the PERM program will increase transparency in its Medicaid and CHIP operations and will improve program integrity efforts that protect taxpayer dollars from improper payments.

We proposed that Puerto Rico would be incorporated into the PERM program starting in RY27 (Cycle 3), which covers the payment period between July 1, 2025 through June 30, 2026.

We received no comments on this proposal and therefore are finalizing this provision with minor technical correction based on further review of current statute reference. Three references to the Improper Payments Information Act (IPIA) of 2002 (*Pub. L. 107-300*) will be updated to the Payment Integrity Information Act (PIIA) of 2019 (*Pub. L. 116-117*). Otherwise, the provision will be finalized without modification.

E. CoP Requirements for Hospitals and CAHs To Report Acute Respiratory Illnesses

1. Background

Under sections 1866 and 1902 of the Act, providers of services seeking to participate in the Medicare or Medicaid program, or both, must enter into an agreement with the Secretary or the state Medicaid agency, as appropriate. Hospitals (all hospitals to which the requirements of 42 CFR part 482 apply, including short-term acute care hospitals, LTC hospitals, rehabilitation hospitals, psychiatric hospitals, cancer hospitals, and children's hospitals) and CAHs seeking to be Medicare and Medicaid providers of services under 42 CFR part 485, subpart F, must be certified as meeting Federal participation requirements. Our conditions of participation (CoPs), conditions for coverage (CfCs), and requirements set out the patient health and safety protections established by the Secretary for various types of providers and suppliers. The specific statutory authority for hospital CoPs is set forth in section 1861(e) of the Act; section 1820(e) of the Act provides similar authority for CAHs. The hospital

provision at section 1861(e)(9) of the Act authorizes the Secretary to issue any regulations he or she deems necessary to protect the health and safety of patients receiving services in those facilities; the CAH provision at section 1820(e)(3) of the Act authorizes the Secretary to issue such other criteria as he or she may require. The CoPs are codified at 42 CFR part 482 for hospitals, and at 42 CFR part 485, subpart F, for CAHs.

Our CoPs at § 482.42 for hospitals and § 485.640 for CAHs require that hospitals and CAHs, respectively, have active facility-wide programs for the surveillance, prevention, and control of healthcare-associated infections (HAIs) and other infectious diseases and for the optimization of antibiotic use through stewardship. Additionally, the programs must demonstrate adherence to nationally recognized infection prevention and control guidelines, as well as to best practices for improving antibiotic use where applicable, and for reducing the development and transmission of HAIs and antibiotic-resistant organisms. Infection prevention and control problems and antibiotic use issues identified in the required hospital and CAH programs must also be addressed in coordination with facility-wide quality assessment and performance improvement (QAPI) programs.

Infection prevention and control is a primary goal and responsibility of hospitals and CAHs in their normal day-to-day operations, and these programs have been at the center of initiatives taking place in hospitals and CAHs since the beginning of the Public Health Emergency (PHE) for COVID-19. Our regulations for hospitals and CAHs at §§ 482.42(a)(3) and 485.640(a)(3), respectively, require infection prevention and control program policies to address any infection control issues identified by public health authorities.

On March 4, 2020, we issued guidance stating that hospitals should inform infection prevention and control services, local and state public health authorities, and other health care facility staff as appropriate about the presence of a person under investigation for COVID-19 (QSO-20-13-Hospitals). CMS followed this guidance with an interim final rule with comment period (IFC), "Medicare and Medicaid Programs, Clinical Laboratory Improvement Amendments (CLIA), and Patient Protection and Affordable Care Act; Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency," published on September 2, 2020 (85 FR 54820), that required hospitals and CAHs to report important data critical to support

the fight against COVID-19. The IFC provisions specifically required that hospitals and CAHs report specified information about COVID-19 in a format and frequency specified by the Secretary. Examples of data elements that could be required to be reported included things such as the number of staffed beds in a hospital and the number of those that are occupied, information about its supplies, and a count of patients currently hospitalized who have laboratory-confirmed COVID-19. These elements proved essential for developing and directing implementation of infection prevention and control guidance, as well as resource allocations and technical assistance during the PHE.

On August 10, 2022, we finalized revisions to the COVID-19 and Seasonal Influenza reporting standards for hospitals and CAHs (at §§ 482.42(e) and (f); and 485.640(d) and (e), respectively) in the FY 2023 IPPS final rule "Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2023 Rates" (87 FR 48780, 49409), to require that, beginning at the conclusion of the COVID-19 PHE declaration and continuing until April 30, 2024, hospitals and CAHs must electronically report information about COVID-19 and seasonal influenza virus, influenza-like illness, and severe acute respiratory infection in a standardized format specified by the Secretary. In establishing these requirements, we stressed that such reporting continued to be necessary for CMS to monitor whether individual hospitals and CAHs were appropriately tracking, planning for, responding to, and mitigating the spread and impact of COVID-19 and influenza on patients, the staff who care for them, and the general public (87 FR 49377). We also noted that the approach finalized in that rule would provide a path towards ending the overall reporting of COVID-19-related data between the end of the current PHE and April 2024, when those requirements would sunset (87 FR 49379).

2. Hospital Respiratory Illness Data Are and Will Continue To Be Critical for Patient Health and Safety

The COVID-19 pandemic highlighted the importance of taking a broad view of patient safety—one that recognizes patient safety is determined not just by what is happening at the bedside, but also what is happening in the broader hospital, and in hospitals across the region, state, and country. At the same time, it also demonstrated the patient

¹⁰⁸¹ [https://www.medicaid.pr.gov/pdf/Congress/PRDOH_Congressional%20Report%202%20PERM%20Compliance%20Plan_FINAL\[2\]\[1\].pdf](https://www.medicaid.pr.gov/pdf/Congress/PRDOH_Congressional%20Report%202%20PERM%20Compliance%20Plan_FINAL[2][1].pdf).

benefits of strong integration between public health and health care systems, particularly when data are available to direct collaborative actions that protect patient and public health and safety. Data from health care providers remain the key driver to identify and respond to public health threats, yet health care and public health data systems have long persisted on separate, often poorly compatible tracks.

Hospital and CAH-reported data on COVID-19, influenza, and RSV infections among patients, as well as hospital bed capacity and occupancy rates, continue to play a critical role in infection prevention and control efforts at every level of the health system. The value of these data extend beyond the COVID-19 PHE. For example, source control remains an important intervention during periods of higher respiratory virus transmission.¹⁰⁸² Data on hospital admissions reported under the current CoPs continue to inform national, state, and county recommendations for community and health care mitigation measures.¹⁰⁸³ Notably, the CDC recommends that health care facilities consider levels of respiratory virus transmission in the whole community when making decisions about source control. Comprehensive and consistent surveillance across hospitals creates a shared resource that all health care facilities in a community could use to inform infection control policies. Hospital and CAH requirements to report this data ended in April 2024. Not maintaining this reporting would result in an absence of vital information on local, regional, and national transmission and impact of respiratory illness and overall healthcare system capacity, with significant implications for both patient care and public health mitigation.

In the proposed rule, we provided a detailed discussion regarding the data produced by the hospital and CAH respiratory virus reporting requirements and how the insight provided by the data collected positively impacted patient health and safety by guiding

actions to reduce the prevalence of respiratory illnesses through enhanced planning, technical assistance, resource allocation, and coordination. We encourage readers to refer to the proposed rule for this detailed discussion (89 FR 36504–36505).¹⁰⁸⁴

3. Provisions of the Proposed Regulations and Analysis and Response to Public Comments

In response to the proposed rule, we received 1,377 total comments (709 unique) from patients, providers, medical professionals, national and state hospital associations, and pharmaceutical and biotech companies. In light of continued utility of respiratory illness data, the proposed policy aimed to continue national monitoring of COVID-19, influenza, and RSV cases to guide infection control interventions and hospital operations that directly relate to patient safety; monitor emerging and evolving respiratory illnesses; guide and motivate community-level disease control interventions; and enhance preparedness and resiliency to improve health system responses to future threats, including pandemics that pose catastrophic risks to patient safety and the health care system.

In this final rule, we provide a summary of the proposed provisions, a summary of the public comments received, and our responses to them, and an explanation for changes in the policies we are finalizing.

Comment: We received overwhelming support from patients and community members on our proposal to extend requirements for respiratory illness reporting in the hospital and CAH CoPs. Many commenters expressed that such data, when reported publicly, helps to inform both public and personal healthcare decisions. We received some anecdotes on personal experiences with long-COVID as well as stories of loved ones who died due to COVID. Although the PHE is over, commenters remind us that the threat to individuals remains, and many stated that accessible data is the number one factor in determining personal risk, especially for those who are immunocompromised. Many commenters mentioned how they rely on published public health data to inform their personal health decisions. For that reason, many recommend publishing the collected data to an easily accessible location, such as *HealthData.gov*. Likewise, a few state hospital organizations and

epidemiology industry groups voiced support for the proposal, noting that data collection is vital for the informed preparation and coordination of hospital operations before, during, and after surges of respiratory illnesses.

Response: We thank commenters for their overwhelming support of the hospital data reporting and for sharing their personal stories regarding the impact of COVID. The compelling narratives shared by commenters demonstrate importance of data reporting to inform both public health and personal safety. We support the publication of data in a publicly accessible manner. Previously, the COVID-19 and influenza hospitalization data were displayed in multiple ways on the CDC website. CDC will use similar approaches to communicate these data in the future, including continuing to provide data visualizations on our website and posting updated weekly data aggregated by state on *data.CDC.gov*. Consistent data on COVID-19, influenza, and RSV hospitalizations will facilitate clear and comprehensive communication to health care organizations and to the public about major viral respiratory disease trends and burden. In addition to disseminating tabular data and descriptive statistics calculated from the data, respiratory virus hospital admission data has underpinned publicly available advanced analytics including short-term forecasts, longer-term scenario projections, and analyses that quantify the epidemic trajectory in near real-time. The data will continue to be used in these types of analyses, which help the public interpret the data and understand what is happening in their state.

Comment: A few hospital associations expressed concern about the appropriateness of data reporting as a CoP requirement. These comments emphasized that establishing CoPs may threaten access to Medicare participation, facility financial viability, access to care, and operational efficiency, and hinder true infection prevention efforts. They also noted that data reporting may not accurately reflect community prevalence. While these groups noted the value of data reporting, many reflected on the existing willingness of hospitals to participate in voluntary data sharing. A few commenters suggested alternative mechanisms to foster data collection rather than through the CoPs, such as supporting infrastructure for voluntary disclosure that could lead to long-term automated, efficient data sharing.

Response: We appreciate the feedback from these commenters; however, we

¹⁰⁸² https://www.cdc.gov/infectioncontrol/guidelines/core-practices/index.html?CDC_AA_refVal=https%3A%2F%2Fwww.cdc.gov/hicpac/recommendationscore-practices.html.

¹⁰⁸³ Infection Control: Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) | CDC; 2023.12.14—IDPH Recommends Healthcare Facilities Adopt Mitigation Measures as Respiratory Viruses Increase (*illinois.gov*) 2024-doh-masking-advisory.pdf (*ny.gov*); Health Alert Network (HAN)—00503 | Urgent Need to Increase Immunization Coverage for Influenza, COVID-19, and RSV and Use of Authorized/Approved Therapeutics in the Setting of Increased Respiratory Disease Activity During the 2023–2024 Winter Season (*cdc.gov*).

¹⁰⁸⁴ FY2025 IPPS Proposed Rule. <https://www.govinfo.gov/content/pkg/FR-2024-05-02/pdf/2024-07567.pdf>.

disagree that the CoPs are an inappropriate means to assure essential data collection that protects the health and safety of patients. In our experience during the COVID-PHE, when similar data reporting requirements were first established, the data produced by hospital respiratory virus reporting requirements informed coordination of hospital operations and were especially important to anticipate and prepare for surge conditions. Collaborative, data driven approaches could help to manage patient transfers and alleviate strained hospitals, ultimately improving patient care by assuring that hospital resources are not overly strained to the point of patient harm. During the COVID PHE, state and local agencies, health care coalitions, and health systems used hospital capacity data to coordinate patient placement and reduce emergency department (ED) boarding and overcrowding, all of which improve the patient experience of care. Insight into hospital and CAH capacity helps ensure capabilities are available to meet patient needs with quality care through enhanced planning, technical assistance, resource allocation, and coordination.

Since the April 30, 2024, sunset of the COVID-19 data reporting requirement, data reporting has been voluntary for facilities. Since May 1, 2024, without the CoP requirement, reporting has dropped from near complete reporting by all US hospitals each week to only around 35 percent of hospitals reporting, representing nearly a 65 percentage point reduction. There is also significant variability by state, so that several states have zero reporting, leaving gaps in the visibility of the healthcare system and the burden of respiratory illness. The majority of hospitals that are continuing to report data to the National Healthcare Safety Network (NHSN) are doing so on a daily basis, and we appreciate their dedication and recognition of the importance of this reporting. Due to the dramatic decrease of data reporting during the voluntary period, we conclude that voluntary reporting is insufficient to capture this data on a consistently widespread and accurate basis. Information sharing across the health care ecosystem helps the health care community to prepare for, and effectively respond to, respiratory illness surges in ways that maintain the safety and availability of critical care services.

We recognize that neither the number of incident respiratory virus hospital admissions nor the number of prevalent respiratory virus hospitalizations are direct measures of community

prevalence (that is, the proportion of people in a community who are infectious). Indeed, no respiratory virus surveillance system routinely used in the United States directly measures infection prevalence in the community. It is therefore necessary to use proxy measures. Rates of respiratory virus hospital admissions are strongly affected by transmission in the community and therefore these data serve as a valuable correlate of community transmission dynamics.

Overall, we note that the information reported would be shared with both CMS and CDC, retained, and publicly reported to support protecting the health and safety of patients as well as facility personnel and the general public. These requirements would support our efforts to proactively and transparently inform interested parties and ensure that the most complete information on viruses is available.

Comment: Some commenters suggest delaying the compliance date to ensure that hospitals would be prepared to comply. A commenter stated that an October 2024 start date for reporting influenza and RSV data is too soon since this data has not been previously required. The commenter explained that facilities would need time to operationalize this requirement.

Response: We understand the implementation timeline concerns expressed by commenters. However, due to the unpredictable nature of viruses, it is vital that this information be collected and recorded in a timely manner. We are working to avoid significant gaps in data and expect hospitals to be prepared to report, as the finalized policy is a reduction from the already familiar required reporting that ended in April 2024. Retaining the data reporting requirements is an important element of maintaining effective surveillance of novel viruses. In addition, there are still significant risks of morbidity and mortality for immunocompromised patients. Timely and actionable surveillance enables CMS to continue to respond to facilities in need of additional technical support and oversight to assure patient health and safety. As such, we are finalizing our proposal to extend a streamlined data set of required ongoing reporting and additional reporting in the event of a future PHE for an acute infectious illness, effective November 1, 2024. We note that there is a 90-day delay between the date of publication of this final rule and the effective date of these requirements, allowing hospitals sufficient time to prepare for implementing the streamlined data reporting requirements.

a. Proposal To Establish Ongoing Reporting for COVID-19, Influenza, and RSV

We proposed to revise the hospital and CAH infection prevention and control and antibiotic stewardship programs CoPs to extend a modified form of the current COVID-19 and influenza reporting requirements that would include data for RSV and reduce the frequency of reporting for hospitals and CAHs. Specifically, we proposed to replace the COVID-19 and Seasonal Influenza reporting standards for hospitals and CAHs at § 482.42(e) and (f) and § 485.640(d) and (e), respectively, with a new standard addressing respiratory illnesses to require that, beginning on October 1, 2024, hospitals and CAHs electronically report information about COVID-19, influenza, and RSV in a standardized format and frequency specified by the Secretary. To the extent determined by the Secretary, we proposed that the data elements for which reporting would be required at this time include—

- Confirmed infections of respiratory illnesses, including COVID-19, influenza, and RSV, among hospitalized patients;
- Hospital bed census and capacity (both overall and by hospital setting and population group [adult or pediatric]); and
- Limited patient demographic information, including age.

Therefore, outside of a declared PHE for an acute infectious illness, we proposed that hospitals and CAHs would have to report these data on a weekly basis (either in the form of weekly totals or snapshots of key indicators) through the NHSN or other CDC-owned or CDC-supported system as determined by the Secretary.

We noted that the proposed policy was scaled back and tailored from the post-COVID-19 PHE requirements that expired April 30, 2024, and that we intend to continue the collection of the minimally necessary data to maintain a level of situational awareness that would benefit patients and hospitals across the country while reducing reporting burden on hospitals and CAHs.

We welcomed public comments on our proposals and on ways that reporting burden could be minimized while still providing adequate and actionable data. We also requested feedback on any challenges of collecting and reporting these data; ways that CMS could reduce reporting burden for facilities; alternative reporting mechanisms or quality reporting programs through which CMS could

instead effectively and sustainably incentivize reporting and the value of these data in protecting the health and safety of individuals receiving treatment and working in hospitals and CAHs.

In the proposed rule, we also discussed the impact of the COVID-19 pandemic on communities across the United States, and the disproportionate impact on socially vulnerable populations. We noted that from the beginning, reports indicated that people of color and people from economically disadvantaged communities were at an increased risk of becoming sick from COVID-19, being hospitalized due to COVID-19, and dying from COVID-19, compared to members of predominantly white and/or affluent communities.¹⁰⁸⁵ Unfortunately, the data necessary to detect and respond to these disparities were not consistently available from core data sources, including hospitalization data reported by hospitals and CAHs under existing requirements §§ 482.42(e) and (f); and 485.640(d) and (e), respectively.

We emphasized our commitment to protecting patients from all communities and preventing inequities caused or exacerbated by respiratory viruses like COVID-19, influenza, and RSV and how timely, complete data on racial and ethnic differences in hospitalizations are critical to meeting such a commitment in policy solutions. For that reason, we sought public comment on expanding the scope of demographic information collection to further support improvements in clinical outcomes while also protecting privacy and the safety of demographic groups.

Specifically, we invited comment as to whether race/ethnicity demographic information should be explicitly included as part of requirements for ongoing reporting beginning on the effective date of the final rule. We indicated our particular interest in comments that address the ways these additional data elements could be used to better protect patient and community health and safety both during and outside of a declared PHE and how to protect patient privacy within demographic groups, while being sure not to also stigmatize demographic groups.

Comment: Commenters requested further clarification and more detailed regulations to ensure that hospital and CAH data collections contribute to higher quality health care and do so at

a lower cost to providers. Commenters requested clarity regarding the data elements required for reporting, including the respiratory pathogens, limited demographic information, hospital census and capacity data, as well as how CMS intends to use the data to ensure hospitals have enough resources for compliance. A commenter recommended revising the ongoing data collection requirements by collecting both adult and pediatric data, collecting the census of staffed beds, and reporting the level of care and equipment available. Some commenters recommended expanding reporting to all communicable diseases that might improve public health information available to the public and those working to ensure public health, while others limited their suggestions to expanding reporting to address H5N1 as well as “hospital acquired infections.” Some commenters also questioned the need for reporting hospital bed capacity data outside of a PHE. For instance, a commenter mentioned that hospital bed census and capacity is reported yearly in the annual NHSN survey. The commenter mentioned hospital bed capacity likely does not change drastically week to week, therefore this data element is excessive. Some commenters suggested that other surveillance indicators such as wastewater surveillance data or data from public health lab testing could be used instead. A commenter stated that respiratory virus hospitalizations “severely lag” community transmission.

Response: The proposed reporting requirements were written in a manner that would allow for maximum flexibility by covering a broad array of services and entities. In developing the proposed requirements, we considered the data elements that proved most actionable and informative over the course of the COVID-19 PHE with evidence of protecting health and safety, as well as more recent lessons that have emerged during the 2023–2024 respiratory virus response. We also considered ways to balance the burden of reporting on hospitals and CAHs with the need to maintain a level of situational awareness that benefits the patients and communities served by hospitals, as well as benefitting hospitals directly. We believe that reporting all communicable disease and hospital acquired infections would be overly burdensome for providers. Likewise, reporting related to H5N1 on a routine basis would also be unduly burdensome at this time.

Respiratory virus surveillance is inherently multi-faceted, and other sources of data may be important

adjuncts. However, they have their own significant limitations. For example, wastewater surveillance does not cover all jurisdictions. One of the key advantages of the proposed hospital-based surveillance is that it would provide data that are nationally comprehensive and can be resolved at the sub-state level (for example, by health service area). A published CDC analysis found that COVID-19—associated hospital admissions lagged reported case incidence by one day and test positivity and ED visits by four days. When considered over the scale of epidemic waves that last for weeks or months, an indicator that lags by less than a week can be a valuable source of actionable information to inform infection control decisions within hospitals.¹⁰⁸⁶ In addition, per the bed capacity data elements, CDC is funding (\$24.9 million from the Epidemiology and Laboratory Capacity Program) over 19 States to automate bed capacity reporting to NHSN via a State repository.¹⁰⁸⁷ The long-term goal of this project is to develop a fully automated approach that standardizes data elements.

Comment: Commenters asked for clarity on how hospitals should collect, format, and submit the requested data. Many commenters urged CMS to establish a modern automated, standardized reporting and collection system for providers and to partner with CDC, Administration for Strategic Preparedness and Response (ASPR), and the Office of the National Coordinator for Health IT (ONC). Such a platform would provide a single place where all the proposed data elements could be captured. Commenters mentioned Trusted Exchange Framework and Common Agreement (TEFCA), CDC’s National Syndromic Surveillance Program (NSSP), and NHSN, and standards which could facilitate transfer with such a platform including Fast Healthcare Interoperability Resources (FHIR), United States Core Data for Interoperability (USCDI), USCDI Plus (USCDI+). In addition, commenters mentioned that CMS should establish a certification criterion for public health technologies used by Public Health Agencies (PHA).

Response: We appreciate the support of our goal of transitioning to, and using, more modern, flexible approaches and networks that support data exchange between and across

¹⁰⁸⁵ <https://oig.hhs.gov/oei/reports/OEI-05-20-00540.asp>; <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC9533809/#:~:text=In%20this%20study%20cohort%2C%2062,%2C%20and%205%25%20were%20Hispanic.>

¹⁰⁸⁶ <https://www.cdc.gov/mmwr/volumes/72/wr/mm7219e2.htm>

¹⁰⁸⁷ https://www.cdc.gov/nhsn/pdfs/training/D1_Connectivity-Initiative_-_Hospital-Bed-Capacity-Project_508c.pdf

public health and healthcare institutions to modernize the public health information infrastructure. We agree that easily adoptable universal standards are necessary for accurate data reporting and would reduce burden. We appreciate commenters support of TEFCA, FHIR, and USCDI/USCDI+. We agree that establishment of certification criteria for public health technologies used by PHAs would improve bi-directional exchange and help improve the quality, timeliness, and completeness of public health reporting. We refer readers to the Health Data, Technology, and Interoperability: Patient Engagement, Information Sharing, and Public Health Interoperability (HTI-2) Proposed Rule, in which ONC has proposed to establish certification criteria for health IT used by public health.¹⁰⁸⁸

Through its data modernization efforts, CDC is working to strengthen public health digital infrastructure. These efforts include investments in core data sources and systems that provide actionable data for facilities, health systems, and response agencies. NHSN is actively engaged in developing approaches to data collection that can be automated and thus reduce the manual burden of reporting by healthcare facilities. NHSN is piloting automated versions of the respiratory virus data collection that, if successful, could be used during the 2025–2026 respiratory season.¹⁰⁸⁹ CDC has several pilot sites enrolling through the NHSN with the NHSNCoLab, a collaborative partnership that allows facilities to send automated data flows to NHSN via FHIR and other digital approaches.¹⁰⁹⁰ These pilot sites are ready to test out this automated activity that is designed to reduce burden. NSSP is also actively working to expand existing data flows collecting emergency department visits to include inpatient hospitalizations and direct admissions, capitalizing on the automated nature of admit, discharge, and transfer (ADT) messaging to improve public health understanding of hospitalizations. To further reduce burden, CMS will work with the CDC to ensure hospitals can continue to use existing, established systems to report data in the interim. The CDC will continue increasing the automation capabilities of the surveillance systems

like NHSN and NSSP and their abilities to connect with other data submission techniques, vendors, and systems. The CDC, CMS, and ASPR are also working with ONC, jurisdictions, health information technology (health IT) vendors, hospitals and CAHs, and other public and private partners to establish national standards and interoperability requirements that reduce burden and promote standardization. We aim to build an infrastructure to create more automated, efficient, timely, and less burdensome processes for data reporting.

Comment: A significant number of commenters indicated that the reporting requirements were too burdensome, time consuming, and duplicative. Some commenters noted that the burden on hospitals and health systems may outweigh the benefits of mandatory reporting. Commenters were concerned that this type of reporting was resource intensive and would require hospitals to implement reporting processes and systems. These groups mentioned the increased paperwork burden that would be placed on staff to comply with reporting requirements noting that increased staff would be necessary to comply with all the steps of data collection, verification, and submission, while hospitals are currently facing staffing challenges.

Some commenters specifically highlighted the potential burden on rural facilities, citing the need for significant onboarding, capacity-building, technical assistance, and the lack of existing public health relationships. Commenters note that rural facilities may not have sufficient informatics support of their own and might not likely be able to find enough funding or workforce to support such reporting. Many commenters suggested financial support would be necessary to alleviate some burden.

In addition, some commenters mentioned that infection data may be already reported through other mandatory mechanisms, including manual case reporting, electronic case reporting (eCR), and NSSP. A commenter expressed concern that the same data reporting requirements were being required from multiple HHS agencies. Commenters suggested that CMS would have to allocate resources to hospitals to build capacity to report COVID cases should the CoP be finalized.

Response: We acknowledge the potential burden of our proposed reporting requirements, especially for rural and small facilities. We understand that some commenters felt these data were duplicative of other

reporting measures or that the CoPs were an inappropriate method to implement data reporting requirements, and this could place unnecessary burdens on hospitals. Federal reporting requirements are used by State and local authorities to inform their operations and response for their particular populations. Due to the variation in mandates across States and localities, we will continue to require surveillance efforts at the Federal level and maintain the reporting requirements in more or less the form in use up through April 30, 2024.

CMS, CDC, and ASPR will work with hospitals, health systems, and State, territorial, local and Tribal agencies (STLTs) to streamline this Federal, State, and local reporting burden, utilizing the least burdensome technical exchange mechanism for reporting. CDC and ASPR, together with ONC, would also take steps to encourage State, local, jurisdictional partners to utilize HHS-adopted health IT standards such as USCDI that are already supported by existing systems for data exchange, which would further reduce burden on health care systems. We will also explore where guidance could leverage data sets being developed under the USCDI+ initiative, which focuses on develop and advancing use of standardized data elements for exchange for additional use cases that build on the USCDI.

Comment: Many commenters suggested ways to revise the proposed regulations in general. Commenters suggested that CMS ask each State, territory, or regional jurisdiction—but not individual hospitals—to voluntarily submit a retrospective file that covers the gap period between May 1 and September 30, 2024, when possible, to gain a better understanding of the viruses and have a complete data set. Many commenters also suggested adding COVID to the list of measures utilized by the Hospital Acquired Condition (HAC) Reduction Program and defining the measure “hospital-onset COVID” as infection within five days after admissions, opposed to the current fourteen days, because current variants only take two to three days from exposure to develop symptoms and the average hospital stay is 5.4 days. Other commenters provided recommendations for measures to improve hospital infection prevention, including mandatory staff masking, use of air purifiers, and use of UVC lights. Another comment suggested that all healthcare providers that see patients in primary care and medical practices settings should be required to report all

¹⁰⁸⁸ The HTI-2 proposed rule is available on ONC's website at https://www.healthit.gov/sites/default/files/page/2024-07/ONC_HTI-2_Proposed_Rule.pdf.

¹⁰⁸⁹ https://www.cdc.gov/nhsn/pdfs/training/D1_Introducing-NHSNs-New-Digital-Quality-Measures_508c.pdf.

¹⁰⁹⁰ <https://www.cdc.gov/nhsn/nhsncolab/index.html>.

infectious diseases within one week of a patient visit.

Response: We appreciate the suggestion to ask for voluntary retrospective data from each State, territory, or regional jurisdiction, however we note that many individual facilities have already been voluntarily submitting many of these data elements. We appreciate the suggestion to add COVID to the HAC Reduction program, defining hospital-onset COVID and specific infection control measures, however the suggestions are outside the scope of the CoPs. We appreciate the suggestion to require medical practices to report all infectious diseases, however this is also outside the scope of this rule.

Comment: A commenter expressed concerns that this requirement would be extremely burdensome for laboratories and strongly recommended delaying any reporting requirements for respiratory diseases during a non-PHE time until a clear process that leveraged existing EHR systems was in place to minimize the burden on laboratories and eliminate the need for laboratories to duplicate reporting to multiple agencies.

Response: We appreciate the commenter’s feedback regarding the downstream impact on laboratories associated with requirements for hospital and CAHs to report data on respiratory illnesses. However, the CoPs set forth in this rule apply to hospitals and CAHs and do not apply to laboratories. While there are hospital (§ 483.27) and CAH (§ 485.635(b)(2)) CoPs that require hospitals and CAHs to have adequate laboratory services to meet the needs of their patients in accordance with the Clinical Laboratory Improvement Amendments (CLIA) program (42 CFR part 493), the requirements finalized in this rule are specific to reporting activities and do not address agreements that hospitals and CAHs must have with laboratories (either directly or through contracts) to address laboratory services and testing.

Thus, this comment is outside the scope of this rule.

Comment: We received many comments advocating for ongoing data submissions to be more frequent than once a week, including daily. Those that fully support the proposed rule agree with continued ongoing weekly reporting. However, we also received many comments that suggested that facilities provide a snapshot of data from one day per week, which would reduce administrative burden compared to daily data for all days reported once per week and/or cumulative weekly totals. Many comments discussed the tradeoff between data granularity and burden on hospitals to comply.

Response: We appreciate the feedback that we received and the numerous suggestions of ways to revise reporting frequency. To clarify, weekly reporting would encapsulate daily data, but the facility would submit it once a week. While commenters had mixed response to weekly data reporting, the majority were in support of this frequency. Sustained data collection and reporting outside of emergencies would help ensure that hospitals and CAHs maintain a functional reporting capacity that could be mobilized quickly when a new threat emerges to inform and direct response efforts (for example, resource allocations or patient load balancing within and across facilities) that protect patients and their communities. It would also provide the baseline data necessary to forecast, detect, quantify and, ultimately, direct responses to signals of strain.

Some commenters also indicated that weekly reporting should be limited to a one-day-a-week snapshot, rather than aggregate totals, as means of further reducing reporting burden. We agree that following this approach makes sense in cases where the resulting data are still sufficiently useful to justify reporting. Taking into consideration the need to limit overall reporting burden and the specific uses of data elements, we identified as many data elements as

possible for which a “one-day-a-week” snapshot would be acceptable. These included bed census and capacity data, as well as total confirmed existing infections of respiratory illnesses, including COVID–19, influenza, and RSV, among hospitalized patients.

However, a one-day-a-week snapshot for newly admitted patients with confirmed infections of respiratory illnesses, including COVID–19, influenza, and RSV, would significantly degrade the utility of reported data for patient and public health and safety applications. Accordingly, we are finalizing our proposal to require reporting of a limited set of respiratory disease and hospital capacity data on a weekly basis. We are further clarifying that new admissions of patients with confirmed respiratory illnesses, including COVID–19, influenza, and RSV by age group, would be reported as weekly totals. However, the other data elements, such as staffed bed capacity and occupancy, prevalence of hospitalizations and ICU patients by respiratory illnesses, required under this provision would be reported as one-day-a-week snapshots. We believe our approach of totals where most important/impactful, and snapshots where feasible, strikes an appropriate balance between value/burden, particularly since the overall impact of shifting to weekly totals and snapshots reporting already represents a significant reduction in burden relative to the proposed rule, which involved reporting daily totals on a weekly basis. These variables and reporting methodology will be part of the revised CDC information collection National Healthcare Safety Network (NHSN) Surveillance in Healthcare Facilities (OMB 0920–1317) or, as designated by the Secretary, other CDC systems and corresponding approved information collection packages. Changes may be made over time based on patient and population health needs and technology advances, but for FY 2025, the information collection will include:

One-Day-a-Week Snapshot	Weekly Total New Hospital Admissions
<ul style="list-style-type: none"> • Staffed bed capacity and occupancy including adult and pediatric • Hospitalizations prevalence by respiratory illness and bed type 	<ul style="list-style-type: none"> • Total new hospital admissions for adult and pediatric patients by age range, over a defined weekly period

Comment: Many commenters submitted suggestions related to the solicitation of public comments on the collection of demographic information. Most commenters agree that there are

benefits to collecting race and ethnicity data to better address disparities in public health response. However, commenters note that some patients may be less willing to share additional

demographic information, such as their socioeconomic or disability status, therefore there is a tradeoff between honoring patient choices and having a complete data set. A commenter noted

that demographic factors such as socioeconomic or disability status are too burdensome and very subjective. Commenters also expressed concern about the consistency of the data set. Since there are not uniform requirements across States in terms of what questions are asked and how they are asked, the response options available, and how and when data is collected, comments stressed the importance of creating definitions and categories so that there is a standard classification for the entire nation. Some commenters had suggestions on appropriate timelines for future demographic reporting. For example, commenters suggested waiting to collect demographic data until finalization of the Office of Management and Budget Revised Statistical Policy Directive No. 15 (SPD-15), updated March 28, 2024, which would govern how federal agencies collect and use race and ethnicity data in their programs.

Some commenters weighed the pros and cons of aggregate versus patient-level data. For instance, age should be collected only in categories rather than each patient's exact age. A commenter noted the importance of protecting patient confidentiality in hospitals where there might be small numbers of a particular race or ethnicity. Lastly, some commenters highlighted how reporting on these additional data elements would increase burden. Specifically, many noted that all electronic health records are not prepared to collect and exchange data on disability and health related social needs in a standardized manner. While some larger facilities may already collect these data, smaller facilities that manually report data would have a large burden.

Response: We thank commenters for the information and perspectives that they provided on expanding the collection and submission of demographic data. While we are not expanding the collection of demographic data at this time due to the need to further refine this concept and the need to begin data collection by November 1, 2024, we acknowledge that not collecting this data would represent a gap in epidemiological information. We believe that demographic data plays an important role in informing healthcare decisions that ultimately impact the health and safety of patients. We intend to continue exploring ways to facilitate the collection of additional demographic data and close this gap in the future.

Final Rule Action: We are finalizing our proposal to require ongoing respiratory illness reporting in a

modified form as proposed. Hospitals and CAHs, in a standardized format and frequency specified by the Secretary, must electronically report data related to COVID-19, influenza, and RSV including confirmed infections of respiratory illnesses among hospitalized patients, hospital bed census and capacity (both overall and by hospital setting and population group [adult or pediatric]), and limited patient demographic information, including age. Beginning November 1, 2024, hospitals and CAHs must electronically report this information to CDC's NHSN or other CDC-owned or CDC-supported system, as determined by the Secretary.

b. Proposal To Collect Additional Elements During a PHE

We proposed in the NPRM that during a declared federal, state, or local PHE for an acute infectious illness, or if an event was significantly likely to become a PHE for an acute infectious illness, the Secretary could require hospitals to report data up to a daily frequency without going through notice and comment rulemaking. Specifically, we proposed that the Secretary could require the reporting of additional or modified data elements relevant to an acute infectious illness PHE including but not limited to: confirmed infections of the infectious disease, facility structure and infrastructure operational status; hospital/ED diversion status; staffing and staffing shortages; supply inventory shortages (for example, equipment, blood products, gases); medical countermeasures and therapeutics; and additional, demographic factors.

We invited comments on whether, during a PHE, there should be any limits to the data the Secretary could require without notice and comment rulemaking, such as limits on the duration of additional reporting or the scope of the jurisdiction of reporting (that is, state or local PHEs). We also sought comments on whether and how the Secretary should still seek stakeholder feedback on additional elements during a PHE without notice and comment rulemaking and how HHS should notify hospitals of new required acute infectious illness data. We also invited comments on the evidence HHS should provide to demonstrate: (1) that an event is "significantly likely to become a PHE"; or (2) that the increased scope of required data would be used to protect patient and community health and safety. Finally, we invited comment on whether hospitals should be compensated for collecting and reporting these data if the burden

reached a certain threshold of cost or time.

Comment: We received mixed responses regarding our proposal for reporting respiratory illness data during a PHE. Some stakeholders noted that the value of reporting respiratory illness data during a PHE outweighed the administrative burden and suggested that there should be incentives for hospitals to provide even more data during a PHE. However, commenters also noted that increased reporting during a PHE would significantly burden hospitals during the most vulnerable and resource-constrained period. Some mentioned that data collection during PHE was especially burdensome without any payoff for hospital facilities since staff would have to spend substantial time trying to oversee data collection while juggling patients and implementing infection control protocols.

In particular, hospital associations shared significant concern regarding the proposed flexibility provided to the Secretary to request increased reporting if there was a "likely threat" of a PHE, especially with the lack of notice and comment rulemaking to define what might rise to the level of a "significantly likely threat". Commenters questioned CMS's authority, noting there is no legal standard or precedent to support such a requirement and requested CMS provide additional justification. Many commenters urged CMS to withdraw the proposal to adopt increased reporting for events that are "significantly likely" to become PHEs.

Commenters encouraged CMS to work with stakeholders to determine the necessary level of required reporting during a PHE and emphasized that public health organizations should play a role in the decision-making. Lastly, commenters emphasized that, on occasions when PHE reporting was required, the Secretary should be required to provide clear and detailed notification, such as the use of an automated system, noting that regional emergency coordinators could be an appropriate resource to disseminate information.

Response: We understand the need for clarity when PHE-related reporting is required; we acknowledge the efforts that would be required of providers and the strain that the COVID-19 PHE placed on the health care system. The experiences with the COVID-19 PHE and the new "normal" that we currently face with circulating respiratory illnesses that include COVID-19 is why we believe it is imperative to retain respiratory illness data reporting and ensure that facilities are informed and

prepared in the event of another PHE. Routinely collected data from hospitals power forecasts that inform decision making during an emergency response.

In the face of future illness emergencies, we anticipate stakeholders—including health care systems—will continue to need data on how respiratory illnesses are affecting and burdening the health care system. Better understanding anticipated impacts empower hospitals and CAHs, health systems, and jurisdictions to take steps that protect patient safety and health care system capacity in the face of surges in respiratory virus cases, including low-probability, high-impact events such as pandemics that pose catastrophic risks to patient safety and the health care system. These include facility-initiated actions, such as delaying elective procedures or activating contracts for additional surge staffing support, as well as jurisdiction or federal-level actions to mobilize supplies, staffing, or other forms of support. Collaborations during the COVID-19 pandemic demonstrated the value of bringing together analysts, public health officials, and health care practitioners and leaders to use advanced analytics to guide emergency response, and data from hospitals were central to some of these efforts. The federal government has made significant investments to consolidate these gains and develop response-ready analytic tools that work at scale to meet the needs of the health care and public health systems. As part of CDC's recent reorganization, the Inform and Disseminate Division within the Office of Public Health Data, Surveillance, and Technology uses human-centered design to develop systems and products that effectively communicate public health data. CDC's Center for Forecasting and Outbreak Analytics uses hospital data to generate, evaluate, and continually refine analytic products such as real-time estimates of transmission rates, short-term forecasts, and scenario models that evaluate the impact of vaccines and other interventions. The Center also provides financial and technical support to state and local public health agencies, the healthcare sector, and academic collaborators to develop analytic tools that support decision making to combat infectious disease threats.

We acknowledge concerns about potential elasticity of proposed data categories, particularly those outlined for enhanced reporting during a PHE. In the event of a PHE, HHS will provide proper notification to hospitals and CAHs to activate increased PHE reporting and indicate the frequency

and required additional elements that are necessary for reporting based on the specific circumstances at the time. We expect to use a communication mechanism, such as a Quality Safety and Oversight Memo, that is readily available to the public, nationally accessible, and familiar to stakeholders, to ensure clarity and access to necessary information. Through the identified mechanism, the Secretary will provide clear, standardized definitions for any data to be reported, as well as instructions and the effective data for the PHE specific reporting. We also reiterate that the data elements proposed for PHE reporting will represent our best effort in identifying those categories that will be required for additional reporting. We note that these data elements, supply inventory shortages; staffing shortages; relevant medical countermeasures and therapeutic inventories, usage, or both; and facility structure and operating status, including hospital/ED diversion status, have all previously been reported on by hospitals and we expect that hospitals will be aware and prepared in the event they are required to again report this information during a PHE.

We recognize the concerns raised regarding the proposal to also require increased PHE reporting if a "likely threat" of a PHE exists. We also anticipate that the ongoing reporting requirements established in this rule will be sufficient to assure patient health and safety in times when the threat of a PHE is significantly likely. Therefore, in response to the concerns raised we are withdrawing the proposal that the Secretary may require increased reporting if the threat of a PHE is significantly likely. The Secretary may require increased reporting in the event of a future PHE declaration for a respiratory illness. We believe the benefits of data collection are necessary to protect patient safety and inform public health decisions and public policy and expect hospitals to consider the need to ramp up reporting during a future PHE. We encourage hospitals to utilize their required emergency preparedness plans and policies and procedures to promote readiness and actions that could reduce burden during a resource intense time (that is, during a PHE).

Final rule Action: We are finalizing as proposed our proposal to require additional reporting during a declared federal, state, or local PHE for an acute infectious illness. We have withdrawn our proposal to require additional reporting if the Secretary determines that an event is "significantly likely" to become a PHE for an infectious disease.

During a declared federal, state, or local PHE for an acute infectious illness the Secretary may require reporting of data elements relevant to confirmed infections of the acute infectious illness, facility structure and infrastructure operational status, hospital/ED diversion status, staffing and staffing shortages, supply inventory shortages (for example, equipment, blood products, gases), medical countermeasures and therapeutics, and additional demographic factors.

c. Request for Information on Health Care Reporting to the National Syndromic Surveillance Program

In the proposed rule, we included a RFI on health care reporting to the CDC's National Syndromic Surveillance Program (NSSP), which is a collaboration among CDC, other federal agencies, local and state health departments, and academic and private sector partners who have formed a Community of Practice to collect, analyze, and share electronic patient encounter data received from emergency departments, urgent and ambulatory care centers, inpatient health care settings, and laboratories.

We emphasized that Syndromic surveillance is not a part of any condition of participation under this program, however the continued growth of national syndromic surveillance would benefit hospitals, health care, and public health. The goal of the RFI was to gather feedback to better understand what else could be done to ensure that this effort could continue to make progress and that this critical data source is available at all levels of public health to support health care preparedness, public health readiness, and responsiveness to existing and emerging health threats. We sought input on the following:

- How could CMS further advance hospital and CAH participation in CDC's NSSP?

- Should CMS require hospitals and CAHs to report data to CDC's NSSP, whether as a condition of participation or as a modification to current requirements under the Promoting Interoperability Program?

- Should CMS explore other incentive or existing quality and reporting programs to collect this information?

- What would be the potential burden for facilities in creating these connections in state and local public health jurisdictions that have not yet established syndromic programs and/or where state and local public health are not presently exchanging data with CDC's NSSP? Are there unique

challenges in rural areas that CMS should take into consideration?

- Data reported as part of syndromic surveillance requirements could serve as an alternative source for the COVID-19, influenza, and RSV hospitalization reporting requirements proposed in this rule—and even support eventual evolution towards an all-hazards approach for monitoring inpatient hospitalizations for conditions of public health significance. Should CMS consider a future requirement or otherwise incentivize facilities to expand ADT-based reporting currently provided for emergency department visits to include data collected from inpatient settings as defined in the HHS COVID-19 reporting guidance,¹⁰⁹¹ or a subset of these? If the latter, should a subset of inpatient locations be subject to such a requirement? What would be the potential value and burden trade-offs to facilities? And should any requirement specify that reporting also be to CDC's NSSP (in addition to more general reporting to state/local syndromic surveillance systems? (noting that often the reporting to CDC's NSSP happens through a given state/local system and that applicable law may apply).

- How could CMS leverage its authorities and programs to improve the quality of data reported to CDC's NSSP, especially for key elements that are sometimes incomplete, including discharge diagnoses, discharge disposition, and patient class?¹⁰⁹²

- In addition to its value for public health, how could CDC's NSSP serve as a tool to directly improve clinical practice, patient safety, and overall situational awareness? What types of questions would you like the system to help answer?

Comment: We received varied responses to this comment solicitation. A commenter reminded us that NSSP is already a measure under the Public Health and Clinical Data Exchange objectives in the Promoting Interoperability Program, therefore introducing an unnecessary duplication in reporting by requiring hospitals to submit the same data to NSSP that is already being reported to State. Another commenter suggested that the CDC's NSSP could serve as, “a valuable tool to directly improve clinical practice, patient safety, and overall situational awareness by leveraging aggregated data for early warning signals without

necessitating extensive line-level data sharing.” To further advance hospital and CAH participation in the NSSP a commenter recommended clearly defining reporting requirements specific to applicable care settings, such as emergency or inpatient settings. To address the potential burden for facilities in creating connections in state and local public health jurisdictions that have not yet established syndromic programs or where data exchange with CDC's NSSP is not currently happening, a commenter suggested (1) using standardized formats and vocabulary to accelerate adoption and simplify implementation and configuration efforts for both IT developers and healthcare providers (2) using a single submission point to submit a report, which could then be distributed to the appropriate jurisdictions in either identified or de-identified formats to improve efficiencies; and (3) Leveraging TEFCA to work under a single common agreement and trust framework.

Response: We appreciate the comments that we received on this subject and will use them to further inform our understanding of advancing hospital and CAH participation in the NSSP. We appreciate that hospital and CAH attestation to participate in syndromic surveillance reporting is a required measure under the Promoting Interoperability Program's Public Health and Clinical Data Exchange Objective. However, as noted in the proposed rule, inclusion in that program, while a valuable incentive, has not been sufficient to close the current participation gap. As also noted in the proposed rule, CMS is not proposing a new CoP specific to ED reporting at this time. However, we disagree that any such measure, if introduced, would result in significant duplicative reporting, as states could submit data on hospitals' behalf to CDC as many already do voluntarily. CDC is in the early stages of a project, through NSSP, to expand existing data flows collecting ED visits from admit, discharge and transfer (ADT) messaging to include inpatient hospitalizations and direct admits. This effort will capitalize on the fully automated nature of this data exchange to improve CDC and STLT understanding of hospitalizations across all hazards while minimizing the additional burden of collection required for these data. Key principles of this effort include (1) improving upon processes initiated early in the COVID-19 pandemic by facilitating improvements in automation; (2) promoting efficiency by re-using, where possible, existing infrastructure and

processes such as ADT messaging systems within healthcare, NSSP, and jurisdictional ED data pipelines; (3) and building upon fully automated processes that are maintained for coordinating patient care, such that once configured, minimal additional resources are needed for long term sustainment of the data exchange with public health.

XI. MedPAC Recommendations and Publicly Available Files

A. MedPAC Recommendations

Under section 1886(e)(4)(B) of the Act, the Secretary must consider MedPAC's recommendations regarding hospital inpatient payments. Under section 1886(e)(5) of the Act, the Secretary must publish in the annual proposed and final IPPS rules the Secretary's recommendations regarding MedPAC's recommendations. We have reviewed MedPAC's March 2024 “Report to the Congress: Medicare Payment Policy” and have given the recommendations in the report consideration in conjunction with the policies set forth in this final rule. MedPAC recommendations for the IPPS for FY 2025 are addressed in Appendix B to this final rule.

For further information relating specifically to the MedPAC reports or to obtain a copy of the reports, contact MedPAC at (202) 653-7226, or visit MedPAC's website at <https://www.medpac.gov>.

B. Publicly Available Files

IPPS-related data are available on the internet for public use. The data can be found on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index>. We listed the data files available in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36509 through 36510).

Commenters interested in discussing any data files used in construction of this final rule should contact Michael Treitel at (410) 786-4552.

XII. Collection of Information Requirements

A. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act (PRA) of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB,

¹⁰⁹¹ <https://www.hhs.gov/sites/default/files/covid-19-faqs-hospitals-hospital-laboratory-acute-care-facility-data-reporting.pdf>.

¹⁰⁹² <https://www.cdc.gov/nssp/technical-pubs-and-standards.html#Dictionaries>.

section 3506(c)(2)(A) of the PRA of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the proposed rule, we solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs). The following ICRs are listed in the order of appearance within the preamble (see sections II. through X. of the preamble of this final rule).

B. Collection of Information Requirements

1. ICRs Regarding the Implementation of Section 4122 of the Consolidated Appropriations Act, 2023—Distribution of Additional Residency Positions

As discussed in section V.F.2. of the preamble of this final rule, teaching hospitals would be able to submit electronic applications to CMS for resident slot increase requests under section 4122 of the Consolidated Appropriations Act (CAA), 2023. The burden associated with these requests will be captured under OMB control number 0938–1417 (expiration date March 31, 2025), currently approved for CMS to receive electronic applications for Medicare-funded GME Residency Positions submitted in accordance with Section 126 of the CAA, 2021. For that information collection, we estimated each eligible hospital (1,325 hospitals) would require 8 hours per eligible hospital annually to gather appropriate documentation, prepare and submit an application for a total burden of 10,600 hours (8 hours \times 1,325 hospitals). The most recent data from the BLS reflects a mean salary for legal secretaries and administrative assistants of \$26.05.¹⁰⁹³ With the fringe benefits included the salary is \$52.10 (\$26.05 \times 2). The total cost related to this information collection is approximately \$416.80 per eligible hospital per year (\$52.10 \times 8.0 hours per hospital). The total estimated burden is \$552,260 (\$52.10 \times 10,600 hours). As a result of the final policies,

for FY 2026, if an eligible hospital submits an electronic application to CMS for section 126 of the CAA, 2021 or for section 4122 of the CAA, 2023, the total annual burden remains the same. However, if an eligible hospital submits an electronic application to CMS for both section 126 of the CAA, 2021, and section 4122 of the CAA, 2023, we estimated that the new total annual burden to be 16 hours per eligible hospital. We estimated the adjustment in the number of hours from 8 hours to 16 hours, results in 21,200 hours (16 hours \times 1,325 hospitals) at a cost of \$1,104,520 (\$52.10 \times 21,200 hours) for FY 2026 only. We will submit the revised information collection request to OMB for approval under OMB control number 0938–1417 (expiration date March 31, 2025).

We received no comments on this proposal and therefore are finalizing this provision without modification.

2. ICRs for Payment Adjustments for Establishing and Maintaining Access to Essential Medicines

In section V.J. of the preamble of this final rule, we finalized, for cost reporting periods beginning on or after October 1, 2024, a separate payment under IPPS to small, independent hospitals for establishing and maintaining access to buffer stocks of essential medicines to foster a more reliable, resilient supply of these medicines for these hospitals. The payment adjustments will be based on the reasonable cost incurred by the hospital for establishing and maintaining access to a 6-month buffer stock of one or more essential medicines during the cost reporting period. In order to calculate the essential medicines payment adjustment for each eligible cost reporting period, we will create a new supplemental cost reporting form that will collect the additional information from hospitals.

Specifically, the new cost reporting worksheet will collect the costs of a hospital that voluntarily requests separate payment under this policy for the costs associated with establishing and maintaining access to its buffer stock of one or more essential medicines. This new information will include the costs associated with contractual arrangements to establish and maintain access to buffer stock(s) of essential medicine(s) as well as the costs associated with directly establishing and maintaining buffer stock(s) of essential medicine(s) such as (but not limited to) utilities like cold chain storage and heating, ventilation, and air conditioning, warehouse space, refrigeration, management of stock

including stock rotation, managing expiration dates, and managing recalls, administrative costs related to contracting and record-keeping, and dedicated staff for maintaining the buffer stock(s). This information will be used, along with other information already collected on the Hospitals and Health Care Complex Cost Report (Form CMS–2552–10) approved under OMB control number 0938–0050, to calculate the IPPS payment adjustment amount. This new cost report worksheet may be submitted by a provider of service as part of the annual filing of the cost report and the provider should make available to its contractor and CMS, documentation to substantiate the data included on this Medicare cost report worksheet. The documentation requirements are based on the recordkeeping requirements at current § 413.20, which require providers of services to maintain sufficient financial records and statistical data for proper determination of costs payable under Medicare.

The burden associated with filling out this new essential medicine cost report worksheet would be the time and effort necessary for the provider to locate and obtain the relevant supporting documentation to report the costs of a hospital to establish and maintain access to its buffer stock for the cost reporting period. We estimated the number of respondents to be approximately 500. This number is comprised of Medicare certified section 1886(d) hospitals that are small, independent hospitals that would be eligible for the payment adjustment. We estimated the average burden hours per facility to be 1.0 hour. This breaks down to approximately 0.4 hours per provider for recordkeeping, which includes a 0.10-hour burden associated with monitoring the quarterly communication from CMS regarding updates to the list of essential medicines that are considered to be in shortage for purposes of this policy, beginning when the hospital elects to establish a buffer stock of an essential medicine and when the hospital is not able to maintain a previously established 6 month buffer stock of an essential medicine. We estimated 0.6 hours per provider for obtaining and analyzing the data and reporting. We recognize this average varies depending on the provider size and complexity. In addition to general comment on this burden estimate, we specifically sought feedback on the burden estimate that is associated with monitoring the FDA shortage list as described. We stated that CMS would conduct provider education regarding

¹⁰⁹³ U.S. Bureau of Labor Statistics. Occupational Outlook Handbook, Legal Secretaries and Administrative Assistants. Accessed on February 6, 2024. Available at: <https://www.bls.gov/oes/current/oes436012.htm>.

additions and deletions to the publicly available FDA Drug Shortages Database to assist hospitals with the finalized policy.

We estimated the associated labor costs as follows. As explained earlier, the estimate of 0.4 hour is required for recordkeeping including time for bookkeeping activities. Based on the most recent data published by Bureau of Labor Statistics (BLS) in its 2022 Occupation Employment and Wage Statistics Program, the mean hourly wage for Bookkeeping, Accounting, and Auditing Clerks (Category 43–3031) is \$22.81. We added 100 percent of the mean hourly wage to account for fringe and overhead benefits, which calculates to \$45.62 (\$22.81 + \$22.81) and multiplied it by 0.4 hour, to determine the annual recordkeeping costs per hospital to be \$18.25 (\$45.62 per hour multiplied by 0.4 hour). The estimated 0.6 hours for reporting include time for accounting and audit professionals' activities. The mean hourly wage for Accountants and Auditors (Category 13–2011) is \$41.70. We added 100 percent of the mean hourly wage to account for fringe and overhead benefits, which calculates to \$83.40 (\$41.70 plus \$41.70) and multiplied it by 0.6 hour, to determine the annual reporting costs per hospital to be \$50.04 (\$83.40 per hour multiplied by 0.6 hour). We calculated the total average annual cost per hospital of \$68.29 by adding the recordkeeping costs (which includes monitoring the quarterly communication from CMS regarding updates to the list of essential medicines) of \$18.25 plus the reporting costs of \$50.04. We estimated the total annual cost to be \$34,145 (\$68.29 cost per hospital multiplied by 500 hospitals). We sought comment on our estimates and cost of recordkeeping and oversight.

We did not receive any comments specific to our ICR for payment adjustments for establishing and maintaining access to essential medicines. We did, however, receive comments on the general administrative burden that eligible hospitals who voluntarily participate in this finalized policy are anticipated to experience. These comments are summarized in the V.J. pages of the preamble of this final rule.

3. ICRs Relating to the Hospital Readmissions Reduction Program

We are not finalizing any changes to the Hospital Readmissions Reduction Program for FY 2025. All six of the current Hospital Readmissions Reduction Program's measures are claims-based measures. We believe that

continuing to use these claims-based measures will not create or reduce any information collection burden for hospitals because they will continue to be collected using Medicare FFS claims that hospitals are already submitting to the Medicare program for payment purposes.

4. ICRs for the Hospital Value-Based Purchasing (VBP) Program

In section IX.B.2. of the preamble of this final rule, we discuss our updates to the Hospital VBP Program. Specifically, we are adopting an updated version of the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey measure beginning with the FY 2030 program year to align with the adoption of the updated measure in the Hospital IQR Program beginning with the CY 2025 reporting period/FY 2027 payment determination. The updated HCAHPS Survey measure in the Hospital VBP Program adds three new survey dimensions, removes one existing survey dimension, and modifies one existing survey dimension. We are also modifying scoring of the HCAHPS Survey measure in the Hospital VBP Program for the FY 2027 to FY 2029 program years to only score on the six unchanged dimensions of the survey while the updates to the survey are adopted and publicly reported on in the Hospital IQR Program. In addition, we are modifying scoring on the HCAHPS Survey measure beginning with the FY 2030 program year to account for the updated measure.

Data collections for the Hospital VBP Program are associated with the Hospital IQR Program under OMB control number 0938–1022 (expiration date January 31, 2026), the National Healthcare Safety Network under OMB control number 0920–0666 (expiration date December 31, 2026), and the HCAHPS Survey under OMB control number 0938–0981 (expiration date January 31, 2025). The Hospital VBP Program will use data that are also used to calculate quality measures in these programs and Medicare FFS claims data that hospitals are already submitting to CMS for payment purposes, therefore, the program does not estimate any additional change in burden associated with these finalized updates outside of the burden that is associated with collecting that data under the Hospital IQR Program. There is also no estimated change in burden related to the finalized scoring methodology modification because the policy does not require hospitals to submit any additional information specific to the Hospital VBP Program but instead will change how

hospitals are scored based on the information already being submitted under the Hospital IQR Program.

We discuss the burden associated with the adoption of the updated HCAHPS Survey measure under the Hospital IQR Program in section XII.B.6. of the preamble of this final rule. We note that respondents will only complete the HCAHPS Survey once for use in both programs, so there is no additional information collection burden for the Hospital VBP Program.

We summarized comments on the information collection burden estimates associated with the adoption of the updates to the HCAHPS Survey measure in section IX.B.2. of this final rule.

5. ICRs Relating to the Hospital-Acquired Condition (HAC) Reduction Program

OMB has currently approved 28,800 hours of burden and approximately \$1.2 million under OMB control number 0938–1352 (expiration date November 30, 2025), accounting for information collection burden experienced by the 400 subsection (d) hospitals selected for validation each year in the HAC Reduction Program.

As discussed in section V.M. of the preamble of this final rule above, we are not adding or removing any measures from the HAC Reduction Program.

6. ICRs for the Hospital Inpatient Quality Reporting (IQR) Program

a. Background

Data collections for the Hospital IQR Program are associated with OMB control number 0938–1022. OMB has currently approved 2,286,977 hours of burden at a cost of approximately \$80.3 million under OMB control number 0938–1022 (expiration date January 31, 2026), accounting for information collection burden experienced by approximately 3,150 IPPS hospitals and 1,350 non-IPPS hospitals for the FY 2026 payment determination. In this final rule, we describe the burden changes regarding collection of information, under OMB control number 0938–1022, for IPPS hospitals.

For more detailed information on what requirements we are changing for the Hospital IQR Program, we refer readers to sections IX.B.1., IX.B.2., and IX.C. of the preamble of this final rule. We are adopting seven new measures: (1) Age-Friendly Hospital measure beginning with the CY 2025 reporting period/FY 2027 payment determination; (2) Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 payment determination, with modifications; (3) Catheter-

Associated Urinary Tract Infection (CAUTI) Standardized Infection Ratio Stratified for Oncology Locations measure beginning with the CY 2026 reporting period/FY 2028 payment determination; (4) Central Line-Associated Bloodstream Infection (CLABSI) Standardized Infection Ratio Stratified for Oncology Locations measure beginning with the CY 2026 reporting period/FY 2028 payment determination; (5) Hospital Harm—Falls with Injury electronic clinical quality measure (eCQM) beginning with the CY 2026 reporting period/FY 2028 payment determination; (6) Hospital Harm—Postoperative Respiratory Failure eCQM beginning with the CY 2026 reporting period/FY 2028 payment determination; and (7) Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) measure beginning with the July 1, 2023—June 30, 2025 reporting period/FY 2027 payment determination. We are refining two measures: (1) the Global Malnutrition Composite Score eCQM, beginning with the CY 2026 reporting period/FY 2028 payment determination; and (2) the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey measure beginning with the CY 2025 reporting period/FY 2027 payment determination. We are also removing five measures: (1) Death Rate Among Surgical Inpatients with Serious Treatable Complications (CMS PSI-04) measure beginning with the July 1, 2023—June 30, 2025 reporting period/FY 2027 payment determination; (2) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Acute Myocardial Infarction (AMI) measure beginning with the July 1, 2021—June 30, 2024 reporting period/FY 2026 payment determination; (3) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Heart Failure (HF) measure beginning with the July 1, 2021—June 30, 2024 reporting period/FY 2026 payment determination; (4) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Pneumonia (PN) measure beginning with the July 1, 2021—June 30, 2024 reporting period/FY 2026 payment determination; and (5) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) measure beginning with the April 1, 2021—March 31, 2024 reporting period/FY 2026 payment determination. We are finalizing a modified version of our

proposal to increase the total number of eCQMs that must be reported each year. We are increasing the total number of eCQMs reported from six to eight for the CY 2026 reporting period/FY 2028 payment determination, from eight to nine for the CY 2027 reporting period/FY 2029 payment determination, and then from nine to eleven beginning with the CY 2028 reporting period/FY 2030 payment determination. Lastly, we are updating data validation policies, including updating the scoring methodology for eCQM validation, removing the requirement that hospitals must submit 100 percent of eCQM records to pass validation beginning with CY 2025 eCQM data affecting the FY 2028 payment determination, and no longer requiring hospitals to resubmit medical records as part of their request for reconsideration of validation beginning with CY 2025 discharges affecting the FY 2028 payment determination.

In the FY 2024 IPPS/LTCH PPS final rule, we utilized the median hourly wage rate for Medical Records Specialists, in accordance with the Bureau of Labor Statistics (BLS), to calculate our burden estimates for the Hospital IQR Program (88 FR 59312). Using the most recent May 2022 National Occupational Employment and Wage Estimates data from the BLS reflects a mean hourly wage of \$24.56 per hour for all medical records specialists (SOC 29-2072), however, we are using the mean hourly wage for medical records specialists for the industry, “general medical and surgical hospitals,” which is \$26.06.¹⁰⁹⁴ We believe the industry of “general medical and surgical hospitals” is more specific to our settings for use in our calculations than other industries that fall under medical records specialists, such as “office of physicians” or “nursing care facilities.” We calculated the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($\$26.06 \times 2 = \52.12) to estimate total cost is a reasonably accurate estimation method. Accordingly, unless otherwise specified, we will calculate cost burden to hospitals using a wage plus benefits

¹⁰⁹⁴ U.S. Bureau of Labor Statistics. Occupational Outlook Handbook, Medical Records Specialists. Accessed January 3, 2024. Available at: <https://www.bls.gov/oes/current/oes292072.htm>.

estimate of \$52.12 per hour throughout the discussion in this section of this final rule for the Hospital IQR Program.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59312), our burden estimates were based on an assumption of approximately 3,150 IPPS hospitals. For this final rule, based on data from the FY 2024 Hospital IQR Program payment determination, we are updating our assumption and estimate that approximately 3,050 IPPS hospitals will report data to the Hospital IQR Program for the CY 2025 reporting period and subsequent years, unless otherwise noted.

b. Information Collection Burden Estimate for the Adoption of the Age Friendly Hospital Measure Beginning With the CY 2025 Reporting Period/FY 2027 Payment Determination

In section IX.C.5.a. of the preamble of this final rule, we discuss adoption of the Age Friendly Hospital measure beginning with the CY 2025 reporting period/FY 2027 payment determination. Hospitals will submit responses on an annual basis during the submission period through CMS' Hospital Quality Reporting (HQR) System. Specifically, for the Age Friendly Hospital measure, hospitals will be required to attest “yes” or “no” in response to questions across five domains annually for a given reporting period. Similar to the Hospital Commitment to Health Equity measure currently approved under OMB control number 0938-1022, which also requires a “yes” or “no” attestation to questions across five domains, we estimate the information collection burden associated with this measure to be, on average across all 3,050 IPPS hospitals, no more than 10 minutes per hospital per year (87 FR 49385). Using the estimate of 10 minutes (or 0.167 hour) per hospital per year, we estimate that adoption of this measure will result in a total annual burden increase of 509 hours across all participating IPPS hospitals ($0.167 \text{ hour} \times 3,050 \text{ IPPS hospitals}$) at a cost of \$26,529 ($509 \text{ hours} \times \52.12).

We received no comments on our burden estimates.

c. Information Collection Burden Estimate for Adoption of the Patient Safety Structural Measure Beginning With the CY 2025 Reporting Period/FY 2027 Payment Determination

In section IX.B.1. of the preamble of this final rule, we are finalizing with modification the Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 payment determination. Hospitals will submit responses on an annual basis

during the submission period through the Centers for Disease Control and Prevention's (CDC) National Healthcare Safety Network (NHSN), which is a secure, internet-based surveillance system maintained and managed by the CDC that is provided free of charge to providers. To report to the NHSN, hospitals must first agree to the NHSN Agreement to Participate and Consent form, which specifies how NHSN data will be used, including fulfilling CMS's quality measurement reporting requirements for NHSN data.¹⁰⁹⁵ Specifically, hospitals will be required to provide responses and attest "yes" or "no" in response to a total of five domains for a given reporting period.

We note that burden estimates under OMB control number 0920–0666 (expiration date December 31, 2026) are calculated based on the CDC's Organization Identification Numbers (OrgIDs). The CDC's OrgID reflects physical locations, meaning that multiple OrgIDs may appear under a single IPPS-related CMS Certification Number, which results in a higher number of potential respondents for burden calculations. Accounting for relevant physical locations, we estimate that 3,900 OrgID locations will submit data to the NHSN for this measure. Similar to the Hospital Commitment to Health Equity measure currently approved under OMB control number 0938–1022, which also requires a "yes" or "no" response to each of five domains, we estimate the information collection burden associated with this measure to be, on average across all 3,900 OrgID locations, no more than 10 minutes per hospital per year. We are modifying the attestation statement in Domain 4 Statement B of the measure to remove the portion of the attestation related to voluntary reporting to the NPSD and focus instead on the beneficial activities possible through engagement with a PSO. Because this does not affect the number of responses each hospital must provide, we are not making a change to our burden assumptions. Using the estimate of 10 minutes (or 0.167 hour) per OrgID location per year, and the updated wage estimate as described previously, we estimate that the adoption of this measure will result in a total annual burden increase of 650 hours across all participating OrgID locations (0.167 hour × 3,900 OrgID locations) at a cost of \$33,878 (650 hours × \$52.12).

We received no comments on our burden estimates.

We discuss the burden associated with the adoption of the Patient Safety Structural measure for the PCHQR Program in section XII.B.7.a. of this final rule. We will work with the CDC to submit the revised information collection estimates for NHSN data collection to OMB for approval under OMB control number 0920–0666. Therefore, we do not anticipate any changes in burden associated with OMB control number 0938–1022.

d. Information Collection Burden Estimate for Adoption of Two Healthcare-Associated Infection (HAI) Measures Beginning With the CY 2026 Reporting Period/FY 2028 Payment Determination

In section IX.C.5.b. of the preamble of this final rule, we discuss the adoption of two HAI measures beginning with the CY 2026 reporting period/FY 2028 payment determination: (1) the CAUTI Standardized Infection Ratio Stratified for Oncology Locations measure, and (2) the CLABSI Standardized Infection Ratio Stratified for Oncology Locations measure. We will collect data for both measures via the CDC's NHSN. Hospitals will provide data for both measures from their EHRs and report on a quarterly basis. The burden associated with submission of data via the NHSN continues to be accounted for under OMB control number 0920–0666. Therefore, we do not anticipate any changes in burden associated with OMB control number 0938–1022.

We received no comments on our assumptions regarding burden.

e. Information Collection Burden for Adoption of Two eCQMs and Modification of One eCQM Beginning With the CY 2026 Reporting Period/FY 2028 Payment Determination

In sections IX.C.5.c. and IX.C.5.d of the preamble of this final rule, we are adopting two new eCQMs beginning with the CY 2026 reporting period/FY 2028 payment determination: (1) the Hospital Harm—Falls With Injury eCQM, and the (2) Hospital Harm—Postoperative Respiratory Failure eCQM, to add to the set of eCQMs from which hospitals may self-select to meet their eCQM reporting requirements. In section IX.C.7.a. of the preamble of this final rule, we discuss the modification of the Global Malnutrition Composite Score eCQM to add patients ages 18 to 64 to the current cohort of patients 65 years or older beginning with the CY 2026 reporting period/FY 2028 payment determination.

Under OMB control number 0938–1022, the currently approved burden estimate for reporting six eCQMs is 4 hours per IPPS hospital (0.167 hours/eCQM × 4 quarters × 6 eCQMs) for all six required eCQM measures. The addition of these two new Hospital Harm eCQMs and modification of the Global Malnutrition Composite Score eCQM will not affect the information collection burden associated with submitting eCQM data under the currently established Hospital IQR Program, which is that hospitals are not required to report more than a total of six eCQMs (87 FR 49299 through 49302). However, in the immediately following section of this Collection of Information section, we discuss the burden associated with increasing the total number of eCQMs that will be required to be reported.

We received no comments on our assumptions regarding burden.

f. Information Collection Burden for the Modification of the eCQM Reporting Requirements Beginning With the CY 2026 Reporting Period/FY 2028 Payment Determination

In section IX.C.9.c. of the preamble of this final rule, we are finalizing with modification the eCQM reporting requirements whereby we will increase the total number of eCQMs to be reported from six to eight eCQMs for the CY 2026 reporting period/FY 2028 payment determination, from eight to nine eCQMs for the CY 2027 reporting period/FY 2029 payment determination, and then from nine to eleven eCQMs beginning with the CY 2028 reporting period/FY 2030 payment determination.

We previously finalized in the FY 2023 IPPS/LTCH PPS final rule that, for the CY 2024 reporting period/FY 2026 payment determination and subsequent years, hospitals are required to submit data for six eCQMs each year which must include the Safe Use of Opioids-Concurrent Prescribing, Cesarean Birth, and Severe Obstetric Complications eCQMs in addition to three self-selected eCQMs (87 FR 49387). In this final rule, we are finalizing our proposal with modification, such that for the CY 2026 reporting period/FY 2028 payment determination, hospitals will be required to submit data for eight total eCQMs: three self-selected eCQMs, and the Safe Use of Opioids, Severe Obstetric Complications, Cesarean Birth, Hospital Harm—Severe Hypoglycemia, and Hospital Harm—Severe Hyperglycemia eCQMs. We are also finalizing the proposal with modification, such that for the CY 2027 reporting period/FY 2029 payment determination, hospitals will be

¹⁰⁹⁵ CDC. (2023). FAQs About NHSN Agreement to Participate and Consent. Available at: <https://www.cdc.gov/nhsn/about-nhsn/faq-agreement-to-participate.html>.

required to submit data for these eight eCQMs in addition to the Hospital Harm—Opioid-Related Adverse Events eCQM. Lastly, we are also finalizing this proposal with modification, such that beginning with the CY 2028 reporting period/FY 2030 payment determination, hospitals will be required to submit data for these nine eCQMs in addition to the Hospital Harm—Pressure Injury and Hospital Harm—Acute Kidney Injury eCQMs.

We continue to estimate the information collection burden associated with the eCQM reporting requirements to be 10 minutes per measure per quarter. For the increase in reporting from six to eight eCQMs for the CY 2026 reporting period/FY 2028 payment determination, we estimate a total of 20 minutes, or 0.33 hours (10 minutes \times 2 eCQMs), per hospital per quarter. We estimate a total burden increase of 4,067 hours (0.33 hour \times 3,050 IPPS hospitals \times 4 quarters) at a cost of \$211,972 (4,067 hours \times \$52.12). For the additional increase in reporting from eight to nine eCQMs beginning with the CY 2027 reporting period/FY 2029 payment determination, we estimate a total of 30 minutes, or 0.5 hours (10 minutes \times 3 eCQMs), per hospital per quarter, accounting for both the increase of two eCQMs for the CY 2026 reporting period/FY 2028 payment determination and the increase of one eCQM for the CY 2027 reporting period/FY 2029 payment determination. We estimate a total burden increase of 6,100 hours annually (0.5 hour \times 3,050 IPPS hospitals \times 4 quarters) at a cost of \$317,932 (6,100 hours \times \$52.12) compared to the currently approved burden estimate. Lastly, for the additional increase in reporting from nine to eleven eCQMs beginning with the CY 2028 reporting period/FY 2030 payment determination, we estimate a total of 50 minutes, or 0.83 hours (10 minutes \times 5 eCQMs), per hospital per quarter, accounting for both the increase of two eCQMs for the CY 2026 reporting period/FY 2028 payment determination, the increase of one eCQM for the CY 2027 reporting period/FY 2029 payment determination, and the increase of two eCQMs for the CY 2028 reporting period/FY 2030 payment determination. We estimate a total burden increase of 10,126 hours annually (0.83 hour \times 3,050 IPPS hospitals \times 4 quarters) at a cost of \$527,767 (10,126 hours \times \$52.12) compared to the currently approved burden estimate.

We received no comments on our burden estimates.

g. Information Collection Burden for the Adoption of the Thirty-Day Risk-Standardized Death Rate Among Surgical Inpatients With Complications (Failure-to-Rescue) Measure Beginning With the July 1, 2023–June 30, 2025 Reporting Period/FY 2027 Payment Determination

In section IX.C.5.e. of the preamble of this final rule, we are adopting the Thirty-day Risk-standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) measure beginning with the July 1, 2023–June 30, 2025 reporting period/FY 2027 payment determination. Because this measure is calculated using Medicare Advantage data and Medicare FFS claims that are already reported to the Medicare program for payment purposes, adopting this measure will not result in a change in burden associated with OMB control number 0938–1022.

We received no comments on our assumptions regarding burden.

h. Information Collection Burden for the Removal of Five Claims-Based Measures

In section IX.C.6.b. of the preamble of this final rule, we are removing four claims-based payment measures beginning with the FY 2026 payment determination: (1) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for AMI measure; (2) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for HF measure; (3) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Pneumonia measure; and (4) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Elective Primary THA and/or TKA measure. In section IX.C.6.a., we are also removing the Death Rate Among Surgical Inpatients with Serious Treatable Complications (CMS PSI–04) claims-based measure beginning with the FY 2027 payment determination.

Because these measures are calculated using Medicare FFS claims that are already reported to the Medicare program for payment purposes, removing these measures will not result in a change in burden associated with OMB control number 0938–1022.

We received no comments on our assumptions regarding burden.

i. Information Collection Burden for the Modification of the HCAHPS Survey Measure Beginning With the CY 2025 Reporting Period/FY 2027 Payment Determination

In section IX.B.2.e. of the preamble of this final rule, we are modifying the

HCAHPS Survey measure beginning with the CY 2025 reporting period/FY 2027 payment determination.

Specifically, the updated measure includes adding three new sub-measures, removing one existing sub-measure, and revising one existing sub-measure. The new sub-measures will include: “Care Coordination,”

“Restfulness of Hospital Environment,” and “Information about Symptoms.”

Under OMB control number 0938–0981 (expiration date January 31, 2025), we estimate the time to complete the HCAHPS Survey is approximately 7.25 minutes per respondent and approximately 2,309,985 respondents will complete and submit the HCAHPS Survey as part of the Hospital IQR Program. As stated in section IX.B.2.b. of this final rule, we estimate the combination of survey sub-measure removals and additions will result in an additional 0.75 minute (0.0125 hour) per respondent to complete the updated version of the HCAHPS Survey.

Therefore, we estimate the updated time to complete the HCAHPS Survey will be 8 minutes per respondent (0.133 hour).

We believe that the cost for patients undertaking administrative and other tasks on their own time is a post-tax wage of \$24.04/hr. The Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices identifies the approach for valuing time when individuals undertake activities on their own time.¹⁰⁹⁶ To derive the costs for patients, a measurement of the usual weekly earnings of wage and salary workers from BLS’s Labor Force Statistics program, Current Population Survey (CPS) of \$1,118 was divided by 40 hours to calculate an hourly pre-tax wage rate of \$27.95/hr.¹⁰⁹⁷ This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 14 percent calculated by comparing pre- and post-tax income,¹⁰⁹⁸ resulting in the post-tax hourly wage rate of \$24.04/hr. Unlike our state and private sector wage adjustments, we are not adjusting patients’ wages for fringe benefits and other indirect costs since the individuals’ activities, if any, will occur outside the scope of their employment. We therefore estimate a burden increase of 28,875 hours (2,309,985 respondents

¹⁰⁹⁶ <https://aspe.hhs.gov/reports/valuing-time-us-department-health-human-services-regulatory-impact-analyses-conceptual-framework>.

¹⁰⁹⁷ <https://www.bls.gov/news.release/pdf/wkyeng.pdf>. Accessed January 1, 2024.

¹⁰⁹⁸ <https://www.census.gov/library/stories/2023/09/median-household-income.html>. Accessed January 2, 2024.

× 0.0125 hour) at a cost of \$694,155 (28,875 hours × \$24.04).

We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–0981.

We summarized comments on the information collection burden associated with the adoption of the updates to the HCAHPS Survey measure in section IX.B.2. of this final rule.

j. Information Collection Burden for Changes to Data Validation Policies

In section IX.C.10. of the preamble of this final rule, we are updating the scoring methodology for eCQM validation, replacing the existing combined validation score for eCQMs and chart-abstracted measures with two separate validation scores for chart-abstracted measures and eCQMs, beginning with the FY 2028 payment determination, and removing the requirement that hospitals must submit 100 percent of eCQM records to pass validation beginning with CY 2025 eCQM data affecting the FY 2028 payment determination. We are also finalizing in section IX.C.13 of this final rule to no longer require hospitals to resubmit medical records as part of their request for reconsideration of validation, beginning with CY 2025 discharges affecting the FY 2028 payment determination.

Changes to the scoring methodology and validation score will not affect burden as neither the amount of data nor frequency of data submission is impacted. The removal of the requirement that hospitals must submit 100 percent of eCQM records to pass validation will not affect burden, as the implementation of eCQM validation scoring will still require hospitals to submit the same number of requested

medical records to validate the accuracy of eCQM data (the extent to which data abstracted from the submitted medical record matches the data submitted in the QRDA I file). Lastly, as finalized in the FY 2011 IPPS/LTCH PPS final rule regarding information collection burden associated with the Hospital IQR Program’s request for reconsideration process, information collection requirements imposed subsequent to an administrative action are not subject to the Paperwork Reduction Act (PRA) under 5 CFR 1320.4(a)(2), therefore to no longer require hospitals to resubmit medical records as part of their request for reconsideration of validation will not affect burden (75 FR 50411).

We received no comments on our assumptions regarding burden.

k. Summary of Information Collection Burden Estimates for the Hospital IQR Program

In summary, under OMB control number 0938–1022, we estimate that the policies in this final rule will result in a total increase of 10,635 hours at a cost of \$554,296 annually for 3,050 IPPS hospitals from the CY 2025 reporting period/FY 2027 payment determination through the CY 2028 reporting period/FY 2030 payment determination. Under OMB control number 0920–0666, we estimate that the policies in this final rule will result in a total increase of 650 hours at a cost of \$33,878 annually for 3,900 hospitals beginning with the CY 2025 reporting period/FY 2027 payment determination. Under OMB control number 0938–0981, we estimate that the policies in this final rule will result in a total increase of 28,875 hours at a cost of \$694,155 annually for patients responding to the HCAHPS Survey beginning with the CY 2025 reporting period/FY 2027 payment determination.

The total increase in burden associated with the finalized information collections under OMB control numbers 0938–1022, 0920–0666, and 0938–0981 is approximately 40,160 hours (10,635 + 650 + 28,875) at a cost of \$1,282,329 (\$554,296 + \$33,878 + \$694,155). We will submit the revised information collection estimates to OMB for approval under OMB control numbers 0938–1022, 0920–0666, and 0938–0981.

With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis (section I.K. of Appendix A of this final rule).

Comment: A commenter stated that in general, the burden estimates for the program do not accurately reflect the total reporting process, with specific mention of information reporting to state and local health departments.

Response: We thank the commenter for its feedback on the burden associated with reporting quality measures. We understand that some hospitals may experience burden greater than our estimates, however, our estimates appropriately reflect the average across all IPPS and non-IPPS hospitals. CMS continues to make efforts to balance the burden of quality measure reporting with the value provided to both participating hospitals and the public by the measures included in the Hospital IQR Program measure set. We also note that the burden estimates in this final rule only reflect the time required to collect and submit required data to federal agencies under the Hospital IQR Program and not to state and local health departments due to any requirements external to the Hospital IQR Program.

BILLING CODE 4120-01-C

7. ICRs for PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

OMB has currently approved 109 hours of burden at a cost of \$2,452 under OMB control number 0938-1175 (expiration date January 31, 2027), accounting for the annual information collection requirements for 11 PCHs for the PCHQR Program. In this final rule, we are adopting the Patient Safety Structural measure with modification to one domain beginning with the CY 2025 reporting period/FY 2027 program year. This new measure will affect the information collection burden. In addition, we are modifying the HCAHPS Survey beginning with the CY 2025 reporting period/FY 2027 program year, which is currently approved under OMB control number 0938-0981 (expiration date January 31, 2025). We are also moving up the start date for public display of the Hospital Commitment to Health Equity (HCHE) measure. This policy will not affect the information collection burden associated with the PCHQR Program.

In the FY 2024 IPPS/LTCH PPS final rule, we utilized the median hourly wage rate for Medical Records

Specialists, in accordance with the Bureau of Labor Statistics (BLS), to calculate our burden estimates for the PCHQR Program (88 FR 59317). While the most recent data from the BLS reflects a mean hourly wage of \$24.56 per hour for all medical records specialists, \$26.06 is the mean hourly wage for “general medical and surgical hospitals,” which is an industry within medical records specialists.¹⁰⁹⁹ We believe the industry of “general medical and surgical hospitals” is more specific to our settings for use in our calculations than other industries that fall under medical records specialists, such as “office of physicians” or “nursing care facilities.” We calculated the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($\$26.06 \times 2 =$

¹⁰⁹⁹ U.S. Bureau of Labor Statistics. Occupational Outlook Handbook, Medical Records Specialists. Accessed on January 2, 2024. Available at: <https://www.bls.gov/oes/current/oes292072.htm>.

\$52.12) to estimate total cost is a reasonably accurate estimation method. Accordingly, unless otherwise specified, we will calculate cost burden to hospitals using a wage plus benefits estimate of \$52.12 per hour throughout the discussion in this section of this rule for the PCHQR Program.

a. Information Collection Burden Estimate for the Adoption of the Patient Safety Structural Measure Beginning With the CY 2025 Reporting Period/FY 2027 Program Year

In section IX.B.1. of the preamble of this final rule, we are adopting with modification the Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 program year. PCHs will submit responses on an annual basis during the submission period through the Center for Disease Control and Prevention’s (CDC) National Healthcare Safety Network (NHSN). Specifically, PCHs will be required to provide responses and attest “yes” or “no” in response to a total of five domains for a given reporting period. Similar to the Hospital Commitment to Health Equity measure currently approved under OMB control number 0938-1022 (expiration date

January 31, 2026), which also requires a “yes” or “no” response to each of five domains, we estimate the information collection burden associated with this measure to be, on average across all 11 PCHs, no more than 10 minutes per PCH per year. We are modifying the attestation statement in Domain 4 Statement B of the measure to remove the portion of the attestation related to voluntary reporting to the NPSD and focus instead on the beneficial activities possible through engagement with a PSO. Because this does not affect the number of responses each hospital must provide, we are not making a change to our burden assumptions. Using the estimate of 10 minutes (or 0.167 hours) per PCH per year, and the updated wage estimate as described previously, we estimate that the adoption of this measure will result in a total annual burden increase of 2 hours across all participating PCHs (0.167 hours × 11 PCHs) at a cost of \$104 (2 hours × \$52.12).

We discussed the burden associated with the adoption of the Patient Safety Structural measure for the Hospital IQR Program in section XII.B.6.c. of this final rule. We will work with CDC to submit the revised information collection estimates for NHSN data collection to OMB for approval under OMB control number 0920–0666.

We received no comments on this proposal and therefore are finalizing our burden estimates without modification.

b. Information Collection Burden for the Modification of the HCAHPS Survey Beginning With the CY 2025 Reporting Period/FY 2027 Program Year

In section IX.B.2.e of the preamble of this final rule, we are modifying the HCAHPS Survey measure beginning with the CY 2025 reporting period/FY 2027 program year. Specifically, we are refining the current HCAHPS Survey by adding three new sub-measures, removing one existing sub-measure, and revising one existing sub-measure. The new sub-measures will include: “Care Coordination,” “Restfulness of Hospital Environment,” and “Information about Symptoms.”

Under OMB control number 0938–0981 (expiration date January 31, 2025),

we estimated the time to complete the HCAHPS Survey is approximately 7.25 minutes per respondent and approximately 13,105 respondents will complete and submit the HCAHPS Survey as part of the PCHQR Program. As stated in section IX.B.2.b of this final rule, we estimated the combination of sub-measure removals and additions will result in an additional 0.75 minutes (0.0125 hours) per respondent to complete the HCAHPS Survey. Therefore, we estimated the updated time to complete the HCAHPS Survey will be 8 minutes per respondent (0.133 hours).

We believe that the cost for beneficiaries undertaking administrative and other tasks on their own time is a post-tax wage of \$24.04/hr. The Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices identifies the approach for valuing time when individuals undertake activities on their own time.¹¹⁰⁰ To derive the costs for beneficiaries, a measurement of the usual weekly earnings of wage and salary workers of \$1,118 was divided by 40 hours to calculate an hourly pre-tax wage rate of \$27.95/hr.¹¹⁰¹ This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 14 percent calculated by comparing pre- and post-tax income,¹¹⁰² resulting in the post-tax hourly wage rate of \$24.04/hr. Unlike our State and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals’ activities, if any, will occur outside the scope of their employment. We therefore estimate a burden increase of 164 hours (13,105 respondents × 0.0125 hours) at a cost of \$3,943 (164 hours × \$24.04).

We will submit the revised information collection request to OMB

¹¹⁰⁰ <https://aspe.hhs.gov/reports/valuing-time-us-department-health-human-services-regulatory-impact-analyses-conceptual-framework>.

¹¹⁰¹ <https://www.bls.gov/news.release/pdf/wkyeng.pdf>. Accessed January 1, 2024.

¹¹⁰² <https://www.census.gov/library/stories/2023/09/median-household-income.html>. Accessed January 2, 2024.

for approval under OMB control number 0938–0981.

We summarized comments on the proposed information collection burden associated with the adoption of the updates to the HCAHPS Survey measure in Section IX.B.2. of this final rule. We are finalizing our burden estimates without modification.

c. Information Collection Burden Estimate for the Policy To Move Up the Start Date of Public Display of the Hospital Commitment to Health Equity Measure

In section IX.D.5. of the preamble of this final rule, we are moving up the start date of PCH performance on the Hospital Commitment to Health Equity measure. Because we are not requiring PCHs to collect or submit any additional data, we do not estimate any change in information collection burden associated with this policy.

We received no comments on this proposal and are therefore finalizing our assumptions regarding burden without modification.

d. Summary of Information Collection Burden Estimates for the PCHQR Program

In summary, under OMB control number 0920–0666 (expiration date December 31, 2026), we estimate that the policies being finalized will result in a total increase of 2 hours at a cost of \$104 annually for 11 PCHs beginning with the CY 2025 reporting period/FY 2027 program year. Under OMB control number 0938–0981 (expiration date January 31, 2025), we estimated that the policies being finalized will result in a total increase of 164 hours at a cost of \$3,943 annually for 11 PCHs beginning with the CY 2025 reporting period/FY 2027 program year. The total increase in burden associated with this information collection will be approximately 166 hours at a cost of \$4,047. We will submit the revised information collection request to OMB for approval under OMB control numbers 0920–0666 and 0938–0981.

8. ICRs for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

An LTCH that does not meet the requirements of the LTCH QRP for a fiscal year will receive a 2-percent applicable annual update for that fiscal year.

We believe that the burden associated with the LTCH QRP is the time and effort associated with complying with the requirements of the LTCH QRP. In sections IX.E.4.c. and IX.E.4.e. of the preamble of this final rule, we proposed to add four items to the LCDS and modify one item on the LCDS. The LCDS V5.1 has been approved under OMB control number 0938-1163 (Expiration date: 08/31/2025). The following is a discussion of this information collection.

In section IX.E.4.c. of this final rule, we proposed to adopt four new items as standardized patient assessment data elements under the SDOH category beginning with the FY 2028 LTCH QRP. The proposed items, Living Situation

(one item), Food (two items), and Utilities (one item), will be collected at admission using the LCDS. These four new items will be added to the LCDS and will result in an increase of 0.02 hours (1.2 minutes/60) of clinical staff time at admission. In addition, as described in section IX.E.4.e. of this final rule, we also proposed to modify the current Transportation item on the LCDS, which is currently collected at admission and discharge. We proposed that the modified Transportation item will only be collected at admission beginning with the FY 2028 LTCH QRP as described in section . and IX.E.7.b. of this final rule. The burden associated with collecting this item at admission and discharge was accounted for in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42606) when the item was originally adopted. Additionally, LTCHs will no longer have to collect one item at discharge to meet LTCH QRP reporting requirements, which will result in a decrease of 0.005 hours (0.3 minutes/60) of clinical staff time at discharge. Using data collected for FY 2023, we estimate

130,050 total admissions and 96,890 planned discharges from 330 LTCHs annually. This equates to an increase of 2,117 hours for all LTCHs $[(130,050 \times 0.02 \text{ hour}) \text{ minus } (96,890 \times 0.005 \text{ hour})]$ and 6.41 hours per LTCH.

We believe that the additional SDOH items will be completed equally by RNs and LPN/LVNs. Individual LTCHs determine the staffing resources necessary. We averaged BLS' National Occupational Employment and Wage Estimates (see Table XII.B-08) for these labor types and established a composite cost estimate using our adjusted wage estimates. The composite estimate of \$65.31/hr was calculated by weighting each hourly wage equally $[(\$78.10 + \$52.52)/2]$. We estimate the total cost would be increased by \$418.88 per LTCH annually, or \$138,231.88 for all LTCHs annually $[(130,050 \text{ admission assessments} \times 0.02 \text{ hour} = 2,601 \text{ hours}) \times \$65.31/\text{hr}] \text{ minus } [(96,890 \text{ planned discharge assessments} \times 0.005 \text{ hour} = 484.45 \text{ hours}) \times \$65.31/\text{hr}] = \$138,231.88$; $(\$138,231.88/330 \text{ LTCHs} = \$418.88/\text{LTCH})$.

TABLE XII.B-08: U.S. BUREAU OF LABOR AND STATISTICS' MAY 2021 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation Title	Occupation Code	Median Hourly Wage (\$/hr)	Overhead and Fringe Benefit (\$/hr)	Adjusted Hourly Wage (\$/hr)
Registered Nurse (RN)	29-1141	\$39.05	\$39.05	\$78.10
Licensed Practical Nurse/Licensed Vocational Nurse (LPN/LVN)	29-2061	\$26.26	\$26.26	\$52.52

As described in Table XII.B-09, under OMB control number 0938-1163, we estimate that the policies finalized in this final rule for the LTCH QRP would result in an overall increase of 2,117 hours annually for 330 LTCHs. The total cost increase related to this information collection is estimated at approximately \$138,231.88. The increase in burden would be accounted for in a revised information collection request under OMB control number (0938-1163).

TABLE XII.B-09: ESTIMATED LTCH QRP PROGRAM IMPACTS FOR FY 2028

Requirement	Per LTCH		All LTCHs	
	Change in Annual Burden Hours	Change in Annual Cost	Change in Annual Burden Hours	Change in Annual Cost
Estimated change in burden associated with Collecting Four New Items As Standardized Patient Assessment Data Elements and Modifying One Item Collected as a Standardized Patient Assessment Data Element beginning with the FY 2028 LTCH QRP	+6.41 hours	+\$418.88	+2,117 hours	+\$138,231.88

In section IX.E.7.c. of this final rule, we finalized the proposal to extend the LCDS Admission assessment window from three days to four days beginning with the FY 2028 LTCH QRP. However, this change will have no impact on burden since it is an administrative change and does not impact the number of items collected.

We invited public comments on these potential information collection requirements. We responded to these comments in section IX.E.4 and IX.E.7 of this final rule. After considering the public comments received, and for the reasons outlined in these sections of the final rule and our comment responses, we are finalizing the revisions as proposed.

9. ICRs for the Medicare Promoting Interoperability Program

a. Background

In section IX.F. of the preamble of this final rule, we discussed several finalized policies for the Medicare

Promoting Interoperability Program. As discussed in the most recent Paperwork Reduction Act (PRA) approval under OMB control number 0938-1278 (expiration date April 30, 2027), OMB has approved 29,625 hours of burden at a cost of approximately \$1.3 million, accounting for information collection burden experienced by approximately 3,150 eligible hospitals and 1,350 CAHs for the EHR reporting period in CY 2024. In this final rule, we describe the burden changes regarding collection of information under OMB control numbers 0938-1278 and 0938-1022 for eligible hospitals and CAHs. The collection of information burden analysis is focused on all eligible hospitals and CAHs that could participate in the Medicare Promoting Interoperability Program and report the objectives and measures and electronic clinical quality measures (eCQMs), under the Medicare Promoting Interoperability Program for the EHR

reporting periods in CY 2025 through CY 2028.

We are adopting two new eCQMs beginning with the CY 2026 reporting period: (1) the Hospital Harm—Falls with Injury eCQM, and (2) the Hospital Harm—Postoperative Respiratory Failure eCQM. In addition, we are separating the previously finalized Antimicrobial Use and Resistance (AUR) Surveillance measure into two separate measures, beginning with the EHR reporting period in CY 2025: (1) the Antimicrobial Use (AU) Surveillance measure, and (2) the Antimicrobial Resistance (AR) Surveillance measure. We are also modifying the Global Malnutrition Composite Score eCQM, beginning with the CY 2026 reporting period. In addition, we are increasing the total number of eCQMs that must be reported each year by eligible hospitals and CAHs from six to eight eCQMs for the CY 2026 reporting period, from eight to nine eCQMs for the CY 2027 reporting

period, and then from nine to eleven eCQMs beginning with the CY 2028 reporting period. Lastly, we are increasing the minimum scoring threshold from 60 points to 70 points for the EHR reporting period in CY 2025 and then from 70 points to 80 points beginning with the EHR reporting period in CY 2026; this will not affect the information collection burden associated with the Medicare Promoting Interoperability Program.

In the FY 2024 IPPS/LTCH PPS final rule, we utilized the median hourly wage rate for Medical Records Specialists, in accordance with the BLS, to calculate our burden estimates for the Medicare Promoting Interoperability Program (88 FR 59325). While the most recent data, the May 2022 National Occupational Employment and Wage Estimates from the BLS, reflects a mean hourly wage of \$24.56 per hour for all medical records specialists (SOC 29–2072); we use the mean hourly wage for medical records specialists for the industry, “general medical and surgical hospitals,” which is \$26.06.¹¹⁰³ We believe the industry of “general medical and surgical hospitals” is more specific to our settings for use in our calculations than other industries that fall under medical records specialists, such as “office of physicians” or “nursing care facilities.” We calculated the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($\$26.06 \times 2 = \52.12) to estimate total cost is a reasonably accurate estimation method. Accordingly, unless otherwise specified, we will calculate cost burden to eligible hospitals and CAHs using a wage plus benefits estimate of \$52.12 per hour throughout the discussion in this section of this rule for the Medicare Promoting Interoperability Program.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59325), our burden estimates were based on an assumption of 4,500 eligible hospitals and CAHs. In the FY 2024 IPPS/LTCH PPS final rule, the Medicare Promoting Interoperability Program and Hospital IQR Program used the same estimate for the number of eligible hospitals and IPPS hospitals for both programs (88 FR 59325). In section

XII.B.6.a. of the preamble of this final rule, we provide our updated estimate of 3,050 IPPS hospitals for the Hospital IQR Program for the CY 2025 reporting period. Upon further analysis, we believe it is no longer appropriate to use the same estimate for both programs as the approximately 100 eligible hospitals located in Maryland and Puerto Rico which were previously excluded from our estimate of IPPS hospitals and included in our estimate of non-IPPS hospitals should be included as eligible hospitals for the Medicare Promoting Interoperability Program. Therefore, based on data from the EHR reporting period in CY 2022, we estimated approximately 3,150 eligible hospitals and 1,400 CAHs will report data to the Medicare Promoting Interoperability Program for the EHR reporting period in CY 2025, for a total number of 4,550 respondents.

b. Information Collection Burden for the Adoption of the Two eCQMs and Modification of One eCQM Beginning With the CY 2026 Reporting Period

In section IX.F.6.a. of the preamble of this final rule, we are adopting two new eCQMs beginning with the CY 2026 reporting period: (1) the Hospital Harm—Falls With Injury eCQM and (2) the Hospital Harm—Postoperative Respiratory Failure eCQM, to add to the set of eCQMs from which hospitals may self-select to meet their eCQM reporting requirements. In section IX.F.6.a. of the preamble of this final rule, we are modifying the Global Malnutrition Composite Score eCQM to add patients ages 18 to 64 to the current cohort of patients 65 years or older beginning with the CY 2026 reporting period.

Under OMB control number 0938–1022 (expiration date January 31, 2026), the currently approved burden estimate for reporting of six eCQMs is four hours per CAH and the 100 eligible hospitals not included as IPPS hospitals for the Hospital IQR Program (0.167 hours/eCQM \times 4 quarters \times 6 eCQMs) for all six required eCQMs. The addition of these two new Hospital Harm eCQMs and modification of the Global Malnutrition Composite Score eCQM will not affect the information collection burden associated with submitting eCQM data under the Medicare Promoting Interoperability Program. As finalized in the FY 2023 IPPS/LTCH PPS final rule, current policy requires CAHs to select six eCQMs from the eCQM measure set on which to report (87 FR 49365 through 49367). In other words, although these new eCQMs are being added to the eCQM measure set, CAHs are not required to report more than a total of six eCQMs for the CY

2025 reporting period. We refer readers to section XII.B.7.f. of this final rule for discussion of the burden estimates associated with this policy impacting eligible hospitals (referred to as IPPS hospitals under the Hospital IQR Program).

In section XII.B.9.c. of this final rule (Collection of Information section), we account for the burden associated with increasing the total number of eCQMs reported from six to eight eCQMs for the CY 2026 reporting period, from eight to nine eCQMs for the CY 2027 reporting period, and then from nine to eleven eCQMs beginning with the CY 2028 reporting period. We refer readers to section XII.B.7.f. of this final rule for discussion of the burden estimates associated with these policies impacting eligible hospitals (referred to as IPPS hospitals under the Hospital IQR Program).

We received no comments on the proposals and are therefore finalizing our assumptions regarding burden without modification.

c. Information Collection Burden for the Modification of the eCQM Reporting Requirements Beginning With the CY 2026 Reporting Period

In section IX.F.6.b. of the preamble of this final rule, we are finalizing with modification our eCQM reporting requirements by increasing the total number of eCQMs to be reported from six to eight eCQMs for the CY 2026 reporting period, from eight to nine eCQMs for the CY 2027 reporting period, and from nine to eleven eCQMs beginning with the CY 2028 reporting period.

We previously finalized in the FY 2023 IPPS/LTCH PPS final rule that, for the CY 2024 reporting period, CAHs are required to annually submit data for six eCQMs each year, which must consist of the Safe Use of Opioids-Concurrent Prescribing, Cesarean Birth, and Severe Obstetric Complications eCQMs in addition to three self-selected eCQMs (87 FR 49394 through 49395). We are finalizing with modification that, for the CY 2026 reporting period, CAHs will be required to submit data for eight total eCQMs: three self-selected eCQMs, and the Safe Use of Opioids, Cesarean Birth, Hospital Harm—Severe Hypoglycemia, and Hospital Harm—Severe Hyperglycemia eCQMs. We are also finalizing with modification that, for the CY 2027 reporting period, CAHs will be required to submit data for these eight eCQMs as well as the Hospital Harm—Opioid-Related Adverse Events eCQM, for nine total eCQMs. Lastly, we are finalizing with modification that,

¹¹⁰³ U.S. Bureau of Labor Statistics. Occupational Outlook Handbook, Medical Records Specialists. Accessed on January 3, 2024. Available at: <https://www.bls.gov/oes/current/oes292072.htm>.

beginning with the CY 2028 reporting period, CAHs will be required to submit data for these nine eCQMs as well as the Hospital Harm—Pressure Injury and Hospital Harm—Acute Kidney Injury eCQMs for eleven total eCQMs.

To calculate the information collection burden associated, we estimate a total of 1,500 respondents, which includes the 100 eligible hospitals not included as IPPS hospitals for the Hospital IQR Program as well as the 1,400 CAHs required to report eCQM data for the Medicare Promoting Interoperability Program. We continue to estimate the information collection burden associated with the eCQM reporting and submission requirements to be 10 minutes per measure per quarter. For the increase in submission from six to eight eCQMs for the CY 2026 reporting period, we estimate a total of 20 minutes, or 0.33 hours (10 minutes × 2 eCQMs), per CAH per quarter. We estimate a total burden increase of 2,000 hours (0.33 hour × 1,400 CAHs and 100 eligible hospitals × 4 quarters) at a cost of \$104,240 (2,000 hours × \$52.12). For the additional increase in submission from eight to nine eCQMs beginning with the CY 2027 reporting period, we estimate a total of 30 minutes, or 0.5 hours (10 minutes × 3 eCQMs), per CAH per quarter. We estimate a total burden increase of 3,000 hours annually (0.5 hours × 1,500 CAHs × 4 quarters) at a cost of \$156,360 (3,000 hours × \$52.12). For the additional increase in submission from nine to eleven eCQMs beginning with the CY 2027 reporting period, we estimate a total of 50 minutes, or 0.83 hours (10 minutes × 5 eCQMs), per CAH per quarter. We estimate a total burden increase of 5,000 hours annually (0.83 hours × 1,500 CAHs × 4 quarters) at a cost of \$260,600 (5,000 hours × \$52.12). We refer readers to section XII.B.7.f. of this final rule for discussion of the burden estimates associated with this policy impacting eligible hospitals (referred to as IPPS

hospitals under the Hospital IQR Program).

With respect to any costs/burdens related to eligible hospitals (referred to as IPPS hospitals under the Hospital IQR Program), we refer readers to section XII.B.7.f. of this final rule.

We received no comments on our burden estimates.

d. Information Collection Burden for the Separation of the AUR Surveillance Measure Into Two Measures Beginning With the EHR Reporting Period in CY 2025

In section IX.F.2. of the preamble of this final rule, we are finalizing the modification of the AUR Surveillance measure by separating the single measure into two measures: (1) AU Surveillance, and (2) AR Surveillance, beginning with the EHR reporting period in CY 2025. In the CY 2023 IPPS/LTCH PPS final rule, we finalized a burden estimate of 0.5 minutes per eligible hospital and CAH to attest the AUR Surveillance measure (87 FR 49394). In association with this policy, we estimate an annual increase in burden for each eligible hospital and CAH to attest to both measures of 0.5 minutes (.0083 hours). Therefore, we estimate a total increase in burden of 38 hours across all eligible hospitals and CAHs (.0083 hours × 4,550 eligible hospitals and CAHs) annually at a cost of \$1,981 (38 hours × \$52.12).

We received no comments on our burden estimates.

e. Information Collection Burden for the Increase to the Minimum Scoring Threshold Beginning With the EHR Reporting Period in CY 2025

In section IX.F.5. of the preamble of this final rule, we are finalizing an increase to the minimum scoring threshold from 60 points to 70 points for the EHR reporting period in CY 2025 and an increase to the minimum scoring threshold from 70 points to 80 points beginning with the EHR reporting

period in CY 2026. Because we are not requiring eligible hospitals or CAHs to collect or submit any additional data, we do not estimate any change in information collection burden associated with the policy.

We received no comments on our assumptions regarding burden.

f. Summary of Estimates Used to Calculate the Collection of Information Burden

In summary, under OMB control number 0938–1278, we estimate that the policies in this final rule will result in an increase in burden of 38 hours at a cost of \$1,981 across 4,550 hospitals. In addition, under OMB control number 0938–1022, we estimate that the policies in this final rule will result in an increase in burden of 5,000 hours at a cost of \$260,600 across 4,550 hospitals. The total increase in burden associated with the finalized information collections under OMB control numbers 0938–1278 and 0938–1022 is approximately 5,038 hours (38 + 5,000) at a cost of \$262,581 (\$1,981 + \$260,600). Based on these policies, the annual burden per eligible hospital and CAH will increase to 6 hours and 36 minutes (6.6 hours) as well as an additional 7.33 hours annually for CAHs and the 100 eligible hospitals that do not participate in the Hospital IQR Program to report eCQMs. We will submit the revised information collection estimates to OMB for approval under OMB control numbers 0938–1022 and 0938–1278. With respect to costs/burdens related to eligible hospitals (referred to as IPPS hospitals under the Hospital IQR Program), we refer readers to section XII.B.7.f. of this final rule.

With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis (section I.N. of Appendix A of this final rule).

BILLING CODE 4120-01-C

10. ICRs for the Transforming Episode Accountability Model

In section X.A. of the preamble of this final rule, we discuss testing the Transforming Episode Accountability Model (TEAM) under the authority of the CMS Innovation Center. Section 1115A of the Act authorizes the CMS Innovation Center to test innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children’s Health Insurance Program beneficiaries while reducing program expenditures. As stated in section 1115A(d)(3) of the Act, Chapter 35 of title 44, United States Code, shall

not apply to the testing and evaluation of models under section 1115A of the Act. As a result, the information collection requirements contained in this final rule for TEAM need not be reviewed by the Office of Management and Budget.

We received no comments on the information collection requirements and therefore are finalizing this provision without modification.

11. ICRs for Payment Error Rate Measurement (PERM)

a. ICRs Regarding § 431.970 Information Submission and Systems Access Requirements

Section 431.970 defines state and provider submission responsibilities, including state submission of Medicaid and CHIP FFS claims and managed care payments on a quarterly basis; and provider submission of medical records. These claims and payments are rigorously reviewed by the Federal statistical contractor. Additionally, states are required to collect and submit (with an estimate of 4 submissions) state policies, including an initial submission

and quarterly updates. The ongoing burden associated with the requirements under § 431.970 is the time and effort it will take each of the up to 36 state programs (17–18 Medicaid and 17–18 CHIP agencies for 17–18 states equates to maximum 36 total respondents each PERM year) to submit its claims universe, collect and submit state policies, and the time and effort it will take providers to furnish medical record documentation. We estimate that it will take 1,350 hours annually per state program to develop and submit its claims universe and state policies. The total estimated hours are broken down between the FFS, managed care, and eligibility components and is estimated at 900 hours for universe development and submission, and 450 hours for policy collection and submission. Per component it is estimated at 1,150 FFS hours, 100 managed care hours, and 100 eligibility hours for a total of 48,600 annual hours (1,350 hours × 36 respondents). The total estimated annual cost per respondent is \$86,832 (1,350 hours × \$64.32), and the total estimated annual cost across all respondents is \$3,125,952 (\$86,832 × 36 respondents). The preceding requirements and burden estimates will be submitted to OMB as reinstatements with changes of the information collection requests previously approved under control numbers 0938–0974, 0938–0994, and 0938–1012. Inclusion of Puerto Rico has added an additional burden of 2,700 hours and \$173,664 for Information Submission and Systems Access Requirements.

We received no comments on this proposal and therefore are finalizing this provision with minor technical correction based on further review of current statute reference. Three references to the Improper Payments Information Act (IPIA) of 2002 (*Pub. L. 107–300*) will be updated to the Payment Integrity Information Act (PIIA) of 2019 (*Pub. L. 116–117*). Otherwise, the provision will be finalized without modification.

b. ICRs Regarding § 431.992 Corrective Action Plan

Section 431.992 requires states to submit corrective action plans to address all improper payments and deficiencies found through the PERM review as defined at § 431.960(f)(1) and evaluate corrective actions from the previous PERM cycle as defined at § 431.992(b)(4). The ongoing burden associated with the requirements under § 431.992 is the time and effort it would take each of the up to 36 state programs (17–18 Medicaid and 17–18 CHIP

agencies for 17–18 states equates to maximum 36 total respondents per PERM cycle) to submit its corrective action plan. We estimate that it will take 750 hours (250 hours for FFS, 250 hours for managed care and an additional 250 hours for eligibility), per PERM cycle per state program to submit its corrective action plan for a total estimated annual burden of 27,000 hours (750 hours × 36 respondents). We estimate the total cost per respondent to be \$48,240 (750 hours × \$64.32). The total estimated cost for all respondents is \$1,736,640 (\$48,240 × 36 respondents). The preceding requirements and burden estimates will be submitted to OMB as part of reinstatement of the information collection requests previously approved under control numbers 0938–0974, 0938–0994, and 0938–1012. total burden would amount to: 36 annual respondents, 36 annual responses, and 750 hours per corrective action plan. Inclusion of Puerto Rico has added an additional burden of 1,500 hours and \$96,480 for Corrective Action Plan requirements.

We received no comments on this proposal and therefore are finalizing this provision with minor technical correction based on further review of current statute reference. Three references to the Improper Payments Information Act (IPIA) of 2002 (*Pub. L. 107–300*) will be updated to the Payment Integrity Information Act (PIIA) of 2019 (*Pub. L. 116–117*). Otherwise, the provision will be finalized without modification.

c. ICRs Regarding § 431.998 Difference Resolution and Appeal Process

Section 431.998 allows states to dispute federal contractor findings. The ongoing burden associated with the requirements under § 431.998 is the time and effort it would take each of the up to 36 state programs (17–18 Medicaid and 17–18 CHIP agencies for 17–18 states equates to maximum 36 total respondents per PERM cycle) to review PERM findings and inform the Federal contractor(s) of any additional information and/or dispute requests. We estimated that it will take 1,625 hours (500 hours for FFS, 475 hours for managed care and an additional 650 hours for eligibility) per PERM cycle per state program to review PERM findings and inform federal contractor(s) of any additional information or dispute requests for FFS, managed care, and eligibility components for a total estimated annual burden of 58,500 hours (1,625 hours × 36 respondents). We estimate the total cost per respondent to be \$104,520 (1,625 hours

× \$64.32). The total estimated cost for all respondents is \$3,762,720 (\$104,520 × 36 respondents). The preceding requirements and burden estimates will be submitted to OMB as reinstatements of the information collection requests previously approved under control numbers 0938–0974, 0938–0994, and 0938–1012. Total burden would amount to: 36 annual respondents, 36 annual responses, and 1,625 hours per PERM cycle.

Inclusion of Puerto Rico has added an additional burden of 3,250 hours and \$209,040 for Difference Resolution and Appeal Process requirements.

We received no comments on this proposal and therefore are finalizing this provision with minor technical correction based on further review of current statute reference. Three references to the Improper Payments Information Act (IPIA) of 2002 (*Pub. L. 107–300*) will be updated to the Payment Integrity Information Act (PIIA) of 2019 (*Pub. L. 116–117*). Otherwise, the provision will be finalized without modification.

12. ICRs for the CoP Requirements for Hospitals and CAHs To Report Acute Respiratory Illnesses

a. Ongoing Reporting

The hospital must electronically report information on acute respiratory illnesses, including influenza, SARS–CoV–2/COVID–19, and RSV, in a standardized format and frequency specified by the Secretary. To the extent as required by the Secretary, this report must include the following data elements:

- Confirmed infections for a limited set of respiratory illnesses, including but not limited to influenza, SARS–CoV–2/COVID–19, and RSV, among newly admitted and hospitalized patients.
- Total bed census and capacity, including for critical hospital units and age groups.
- Limited patient demographic information, including but not limited to age.

For purposes of burden estimates, we do not differentiate among hospitals and CAHs as they all would collect data. For the estimated costs contained in the analysis that follows, we used data from the BLS to determine the mean hourly wage for the staff member responsible for reporting the required information for a hospital (or a CAH).¹¹⁰⁴ Based on our experience with hospitals and CAHs and the previous COVID–19 and related reporting requirements, we believe that

¹¹⁰⁴ <https://www.bls.gov/oes/2022/may/oes291141.htm>.

this would primarily be the responsibility of a registered nurse and we have used this position in this analysis at an average hourly salary of \$39.05. For the total hourly cost, we doubled the mean hourly wage for a 100 percent increase to cover overhead and fringe benefits, according to standard HHS estimating procedures. If the total cost after doubling resulted in 0.50 or more, the cost was rounded up to the next dollar. If it was 0.49 or below, the total cost was rounded down to the next dollar. Therefore, we estimated the total hourly cost for a registered nurse to perform these duties would be \$78.

We expect that facilities will need to review their existing policies and procedures to ensure they comply with the permanent reporting requirements finalized in this rule. We assume that a RN with responsibility for these activities will review and update the policies and procedures. In addition, prior to the actual submission of the data, we expect that compliance with

ongoing reporting will require continuous efforts to collect and organize the information necessary to report the data through the NHSN or other CDC-owned or CDC supported system as determined by the Secretary. Based on the assumption of weekly reporting frequency, we estimate that total annual burden hours for all participating hospitals and CAHs to conduct these activities and comply with these requirements would be 248,976 hours based on weekly reporting of the required information by approximately 6,384 hospitals and CAHs × 52 weeks per year and at an average weekly response time of 0.75 hours for a registered nurse with an average hourly salary of \$78. Therefore, the estimate for total annual costs for all hospitals and CAHs to comply with the required reporting provisions weekly would be \$19,420,128 (248,976 hours × 6,384 facilities) or approximately \$3,042 per facility annually (\$19,420,128/6,384 facilities).

We will update the PRA packages for the hospital and CAH CoPs to include these preliminary estimates for these reporting activities (OMB control numbers 0938–0328 for hospitals and 0938–1043 for CAHs). We note that any additional ICR burden related to the specific instruments used for reporting and the time necessary to submit/report the data is the National Healthcare Safety Network (NHSN) Surveillance in Healthcare Facilities (OMB control number 0920–1317) package.

Furthermore, we note that this estimate likely overestimates the costs associated with reporting because it assumes that all hospitals and CAHs will report manually. Efforts are underway to automate hospital and CAH reporting that have the potential to significantly decrease reporting burden and improve reliability. Our preliminary estimates for these reporting activities (OMB control numbers 0938–0328 for hospitals and 0938–1043 for CAHs) can be found in the tables that follow.

ESTIMATED ANNUALIZED BURDEN HOURS					
Type of Respondent	Form Name	Number of Respondents	Number of Responses per Respondent (low range -high range)	Average Burden per Response (in hours)	Total Burden Hours (low range – high range)
Hospitals and CAHs	Standardized format as determined by the Secretary	6,384	52	0.75	248,976
Total					248,976

ESTIMATED ANNUALIZED RESPONDENT BURDEN COSTS			
Type of Respondent	Total Burden Hours	Hourly Wage Rate	Total Respondent Costs
Hospitals and CAH Staff – Registered Nurses	248,976	*\$78	\$19,420,128
Total			\$19,420,128

b. PHE Reporting

In the event that the Secretary has declared a Public Health Emergency (PHE) for an acute infectious illness, the hospital must also electronically report the following data elements in a standardized format and frequency specified by the Secretary:

- Supply inventory shortages.
- Staffing shortages.

- Relevant medical countermeasures and therapeutic inventories, usage, or both.

- Facility structure and operating status, including hospital/ED diversion status.

Similar to the activities necessary to comply with ongoing reporting, hospitals and CAHs will need to ensure they have policies and procedures in place to activate PHE specific reporting and will require staff to gather the

information necessary to support reporting at a frequency determined by the Secretary (OMB Control Nos. 0938–0328 and 0938–1043). Likewise, the specific information collection for the data reporting is the NHSN Surveillance in Healthcare Facilities (OMB Control Number 0920–1317). For purposes of burden estimates, we do not differentiate among hospitals and CAHs as they all would complete the same data collection. For the estimated costs

contained in the analysis that follows, we used data from the U.S. Bureau of Labor Statistics (BLS) to determine the mean hourly wage for the staff member responsible for reporting the required information for a hospital (or a CAH).¹¹⁰⁵ Based on our experience with hospitals and CAHs and the previous COVID-19 and related reporting requirements, we believe that this will primarily be the responsibility of a registered nurse and we have used this position in this analysis at an average hourly salary of \$39,05. For the total hourly cost, we doubled the mean hourly wage for a 100 percent increase to cover overhead and fringe benefits, according to standard HHS estimating procedures. If the total cost after doubling resulted in 0.50 or more, the cost was rounded up to the next dollar. If it was 0.49 or below, the total cost was rounded down to the next dollar. Therefore, we estimated the total hourly cost for a registered nurse to perform these duties will be \$78.

We acknowledge that the data elements and reporting frequency could increase or decrease due to the what the Secretary deems necessary for the given PHE; the changes would impact this burden estimate. For instance, data reporting requirements may be active for less than or more than a year. During the COVID-19 PHE, facilities reported daily. However, we cannot predict how often the Secretary would require data reporting for any future PHE. Therefore, we include two burden estimates to encapsulate a range in frequency of reporting. The lower range is based on twice a week reporting. The higher range is based on daily reporting.

Based on the assumption of twice weekly reporting frequency, we estimate that total annual burden hours for all participating hospitals and CAHs to comply with these requirements will be 995,904 hours based on twice weekly reporting of the required information by approximately 6,384 hospitals and CAHs × 104 days a year and at an average twice weekly response time of 1.5 hours for a registered nurse with an average hourly salary of \$78. Therefore, the estimate for total annual costs for all hospitals and CAHs to comply with the required reporting provisions weekly will be \$77,680,512 (995,904 hours × \$78) or approximately \$12,168 (\$77,680,512/6,384 facilities) per facility annually.

Based on the assumption of daily reporting frequency, we estimate that total annual burden hours for all participating hospitals and CAHs to

comply with these requirements will be 3,495,240 hours based on daily reporting of the required information by approximately 6,384 hospitals and CAHs × 365 days a year and at an average daily response time of 1.5 hours for a registered nurse with an average hourly salary of \$78. Therefore, the estimate for total annual costs for all hospitals and CAHs to comply with the required reporting provisions weekly will be \$272,628,720 (3,495,240 hours × \$78) or approximately \$42,705 (\$272,628,720/6,384 facilities) per facility annually.

Furthermore, we note that this estimate likely overestimates the costs associated with reporting because it assumes that all hospitals and CAHs will report manually. Efforts are underway to automate hospital and CAH reporting that have the potential to significantly decrease reporting burden and improve reliability. Our preliminary estimates for these reporting activities (OMB control numbers 0938-0328 for hospitals and 0938-1043 for CAHs) can be found in the tables that follow.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Diseases, Health facilities, Health professions, Medical devices, Medicare Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 413

Diseases, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 431

Grant programs-health, Health facilities, Medicaid, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 482

Grant programs-health, Hospitals, Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 485

Grant programs-health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 495

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Health professions, Health records, Medicaid, Medicare, Penalties, Privacy, and Reporting and recordkeeping requirements.

42 CFR Part 512

Administrative practice and procedure, Health care, Health facilities, Health insurance, Intergovernmental relations, Medicare, Penalties, Reporting and recordkeeping requirements. For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as follows:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

- 1. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395r, and 1395ww(k).

- 2. Effective January 1, 2025, amend § 405.1845 by revising paragraphs (a)

and (b) and the paragraph (c) paragraph heading to read as follows:

§ 405.1845 Composition of Board; hearings, decisions, and remands.

(a) *Composition of the Board.* The Board consists of five members appointed by the Secretary.

(1) All members must be knowledgeable in the field of payment of providers under Medicare Part A.

(2) At least one member must be a certified public accountant.

(3) At least two Board members must be representative of providers of services.

(b) *Terms of office.* The term of office for Board members must be 3 years, except that initial appointments may be for such shorter terms as the Secretary may designate to permit staggered terms of office.

(1) No member may serve more than three consecutive terms of office.

(2) The Secretary has the authority to terminate a Board member's term of office for good cause.

(c) *Role of the Chairperson.* * * *

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

- 3. The authority citation for part 412 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

- 4. Section 412.1 is amended by revising paragraph (a)(1)(iv) to read as follows:

§ 412.1 Scope of part.

(a) * * *

(1) * * *

(iv) Additional payments are made for outlier cases, bad debts, indirect medical education costs, for serving a disproportionate share of low-income patients, for the additional resource costs of domestic National Institute for Occupational Safety and Health approved surgical N95 respirators, and for the additional resource costs for small, independent hospitals to establish and maintain access to buffer stocks of essential medicines.

- 5. Section 412.2 is amended by adding paragraph (f)(11) to read as follows:

§ 412.2 Basis of payment.

(f) * * *

(11) A payment adjustment for small, independent hospitals for the additional resource costs of establishing and maintaining access to buffer stocks of

ESTIMATED ANNUALIZED RESPONDENT BURDEN COSTS

Administrator of the Centers for
Medicare & Medicaid Services.

essential medicines as specified in § 412.113.

* * * * *

■ 6. Section 412.23 is amended by revising paragraphs (e)(3)(i) and (iii), removing and reserving paragraph (e)(3)(iv) and revising and republishing paragraph (e)(4) to read as follows:

§ 412.23 Excluded hospitals: Classifications.

* * * * *

(e) * * *

(3) * * *

(i) Subject to the provisions of paragraphs (e)(3)(ii) through (vii) of this section and paragraphs (e)(4)(iv) and (v) of this section as applicable, the average Medicare inpatient length of stay specified under paragraph (e)(2)(i) of this section is calculated by dividing the total number of covered and noncovered days of stay of Medicare inpatients (less leave or pass days) by the number of total Medicare discharges for the hospital's most recent complete cost reporting period. Subject to the provisions of paragraphs (e)(3)(ii) through (vii) of this section, the average inpatient length of stay specified under paragraph (e)(2)(ii) of this section is calculated by dividing the total number of days for all patients, including both Medicare and non-Medicare inpatients (less leave or pass days) by the number of total discharges for the hospital's most recent complete cost reporting period.

* * * * *

(iii) If a change in a hospital's average length of stay specified under paragraph (e)(2)(i) or (e)(2)(ii) of this section would result in the hospital not maintaining an average Medicare inpatient length of stay of greater than 25 days, the calculation is made by the same method for the period of at least 5 consecutive months of the immediately preceding 6-month period.

(iv) [Reserved]

* * * * *

(4) For the purpose of calculating the average length of stay for hospitals seeking to become long-term care hospitals, with the exception of paragraphs (e)(3)(iii) and (v) of this section, the provisions of paragraph (e)(3) of this section apply.

(i) *Definition.* For the purpose of payment under the long-term care hospital prospective payment system under subpart O of this part, a new long-term care hospital is a provider of inpatient hospital services that meets the qualifying criteria in paragraphs (e)(1) and (e)(2) of this section; meets the applicable requirements of paragraphs (e)(4)(ii) through (v) of this

section; and, under present or previous ownership (or both), its first cost reporting period as a LTCH begins on or after October 1, 2002.

(ii) *Satellite facilities and remote locations of hospitals seeking to become new long-term care hospitals.* Except as specified in paragraph (e)(4)(iii) of this section, a satellite facility (as defined in § 412.22(h)) or a remote location of a hospital (as defined in § 413.65(a)(2) of this chapter) that voluntarily reorganizes as a separate Medicare participating hospital, with or without a concurrent change in ownership, and that seeks to qualify as a new long-term care hospital for Medicare payment purposes must demonstrate through documentation that it meets the average length of stay requirement as specified under paragraphs (e)(2)(i) or (e)(2)(ii) of this section based on discharges that occur on or after the effective date of its participation under Medicare as a separate hospital.

(iii) *Provider-based facility or organization identified as a satellite facility and remote location of a hospital prior to July 1, 2003.* Satellite facilities and remote locations of hospitals that became subject to the provider-based status rules under § 413.65 as of July 1, 2003, that become separately participating hospitals, and that seek to qualify as long-term care hospitals for Medicare payment purposes may submit to the fiscal intermediary discharge data gathered during the period of at least 5 consecutive months of the immediate 6 months preceding the facility's separation from the main hospital for calculation of the average length of stay specified under paragraph (e)(2)(i) or paragraph (e)(2)(ii) of this section.

(iv) *Qualifying period for hospitals seeking to become long-term care hospitals.* A hospital may be classified as a long-term care hospital after a 6-month qualifying period, provided that the average length of stay during the period of at least 5 consecutive months of that 6-month qualifying period, calculated under paragraph (e)(2) of this section, is greater than 25 days. The 6-month qualifying period for a hospital is the 6 months immediately preceding the date of long-term care hospital classification.

(v) *Special rule for hospitals seeking to become long-term care hospitals that experience a change in ownership.* If a hospital seeks exclusion from the inpatient prospective payment system as a long-term care hospital and a change of ownership (as described in § 489.18 of this chapter) occurs within the period of at least 5 consecutive months of the 6-month period preceding

its petition for long-term care hospital status, the hospital may be excluded from the inpatient prospective payment system as a long-term care hospital for the next cost reporting period if, for the period of at least 5 consecutive months of the 6 months immediately preceding the start of the cost reporting period for which the hospital is seeking exclusion from the inpatient prospective payment system as a long-term care hospital (including time before the change of ownership), the hospital has met the required average length of stay, has continuously operated as a hospital, and has continuously participated as a hospital in Medicare.

* * * * *

■ 7. Section 412.88 is amended by adding paragraphs (a)(2)(ii)(C) and (b)(2)(iv) to read as follows:

§ 412.88 Additional payment for new medical service or technology.

* * * * *

(a) * * *

(2) * * *

(ii) * * *

(C) For a medical product that is a gene therapy that is indicated and used specifically for the treatment of sickle cell disease and approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule, for discharges occurring on or after October 1, 2024, if the costs of the discharge (determined by applying the operating cost-to-charge ratios as described in § 412.84(h)) exceed the full DRG payment, an additional amount equal to the lesser of—

(1) 75 percent of the costs of the new medical service or technology; or

(2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment.

* * * * *

(b) * * *

(2) * * *

(iv) For discharges occurring on or after October 1, 2024, for a medical product that is a gene therapy that is indicated and used specifically for the treatment of sickle cell disease and approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule, 75 percent of the estimated costs of the new medical service or technology.

■ 8. Section 412.90 is amended by revising paragraph (j) to read as follows:

§ 412.90 General rules.

* * * * *

(j) *Medicare-dependent, small rural hospitals.* For cost reporting periods beginning on or after April 1, 1990, and before October 1, 1994, and for

discharges occurring on or after October 1, 1997 and before January 1, 2025, CMS adjusts the prospective payment rates for inpatient operating costs determined under subparts D and E of this part if a hospital is classified as a Medicare-dependent, small rural hospital.

* * * * *

■ 9. Section 412.96 is amended by revising paragraph (c)(2)(ii) to read as follows:

§ 412.96 Special treatment: Referral centers.

* * * * *

(c) * * *
(2) * * *

(ii) For cost reporting periods beginning on or after January 1, 1986, an osteopathic hospital, recognized by the American Osteopathic Healthcare Association (or any successor organization), that is located in a rural area must have at least 3,000 discharges during its cost reporting period that began during the same fiscal year as the cost reporting periods used to compute the regional median discharges under paragraph (i) of this section to meet the number of discharges criterion. A hospital applying for rural referral center status under the number of discharges criterion in this paragraph must demonstrate its status as an osteopathic hospital.

* * * * *

■ 10. Section 412.101 is amended by revising paragraphs (b)(2)(i) and (iii), (c)(1), and (c)(3) introductory text to read as follows:

§ 412.101 Special treatment: Inpatient hospital payment adjustment for low-volume hospitals.

* * * * *

(b) * * *
(2) * * *

(i) For FY 2005 through FY 2010, the portion of FY 2025 beginning on January 1, 2025 and subsequent fiscal years, a hospital must have fewer than 200 total discharges, which includes Medicare and non-Medicare discharges, during the fiscal year, based on the hospital's most recently submitted cost report, and be located more than 25 road miles (as defined in paragraph (a) of this section) from the nearest "subsection (d)" (section 1886(d) of the Act) hospital.

* * * * *

(iii) For FY 2019 through FY 2024 and the portion of FY 2025 beginning on October 1, 2024, and ending on December 31, 2024, a hospital must have fewer than 3,800 total discharges, which includes Medicare and non-Medicare discharges, during the fiscal

year, based on the hospital's most recently submitted cost report, and be located more than 15 road miles (as defined in paragraph (a) of this section) from the nearest "subsection (d)" (section 1886(d) of the Act) hospital.

* * * * *

(c) * * *

(1) For FY 2005 through FY 2010, the portion of FY 2025 beginning on January 1, 2025, and subsequent fiscal years, the adjustment is an additional 25 percent for each Medicare discharge.

* * * * *

(3) For FY 2019 through FY 2024 and the portion of FY 2025 beginning on October 1, 2024, and ending on December 31, 2024, the adjustment is as follows:

* * * * *

■ 11. Section 412.103 is amended by revising paragraph (a)(1) to read as follows:

§ 412.103 Special treatment: Hospitals located in urban areas and that apply for reclassification as rural.

(a) * * *

(1) The hospital is located in a rural census tract of a Metropolitan Statistical Area (MSA) as determined under the most recent version of the Goldsmith Modification, using the Rural-Urban Commuting Area codes and additional criteria, as determined by the Federal Office of Rural Health Policy (FORHP) of the Health Resources and Services Administration (HRSA), which is available at the web link provided in the most recent **Federal Register** notice issued by HRSA defining rural areas.

* * * * *

■ 12. Section 412.104 is amended by revising paragraphs (b)(2) through (4) to read as follows:

§ 412.104 Special treatment: Hospitals with high percentage of ESRD discharges.

* * * * *

(b) * * *

(2)(i) Effective for cost reporting periods beginning before October 1, 2024, the estimated weekly cost of dialysis is the average number of dialysis sessions furnished per week during the 12-month period that ended June 30, 1983, multiplied by the average cost of dialysis for the same period.

(ii) Effective for cost reporting periods beginning on or after October 1, 2024, the estimated weekly cost of dialysis is calculated as 3 dialysis sessions per week multiplied by the applicable ESRD prospective payment system (PPS) base rate (as defined in 42 CFR 413.171) that corresponds with the fiscal year in which the cost reporting period begins.

(3) The average cost of dialysis used for purposes of determining the

estimated weekly cost of dialysis for cost reporting periods beginning before October 1, 2024, includes only those costs determined to be directly related to the renal dialysis services. (These costs include salary, employee health and welfare, drugs, supplies, and laboratory services.)

(4) Effective for cost reporting periods beginning before October 1, 2024, the average cost of dialysis is reviewed and adjusted, if appropriate, at the time the composite rate reimbursement for outpatient dialysis is reviewed.

* * * * *

■ 13. Section 412.105 is amended by adding paragraph (f)(1)(iv)(C)(4) to read as follows:

§ 412.105 Special treatment: Hospitals that incur indirect costs for graduate medical education programs.

* * * * *

(f) * * *

(1) * * *

(iv) * * *

(C) * * *

(4) Effective for portions of cost reporting periods beginning on or after July 1, 2026, a hospital may qualify to receive an increase in its otherwise applicable FTE resident cap if the criteria specified in § 413.79(q) of this subchapter are met.

* * * * *

■ 14. Section 412.106 is amended by revising paragraph (i)(1) to read as follows:

§ 412.106 Special treatment: Hospitals that serve a disproportionate share of low-income patients.

* * * * *

(i) * * *

(1) Interim payments are made during the payment year to each hospital that is estimated to be eligible for payments under this section at the time of the annual final rule for the hospital inpatient prospective payment system, subject to the final determination of eligibility at the time of cost report settlement for each hospital. For FY 2025, interim uncompensated care payments are calculated based on an average of the most recent 2 years of available historical discharge data. For FY 2026 and subsequent years, interim uncompensated care payments are calculated based on an average of the most recent 3 years of available historical discharge data.

* * * * *

■ 15. Section 412.108 is amended by revising paragraphs (a)(1) introductory text and (c)(2)(iii) introductory text to read as follows:

§ 412.108 Special treatment: Medicare-dependent, small rural hospitals.

(a) * * *
(1) *General considerations.* For cost reporting periods beginning on or after April 1, 1990, and ending before October 1, 1994, or for discharges occurring on or after October 1, 1997, and before January 1, 2025, a hospital is classified as a Medicare-dependent, small rural hospital if it meets all of the following conditions:

* * * * *
(c) * * *
(2) * * *

(iii) For discharges occurring during cost reporting periods (or portions thereof) beginning on or after October 1, 2006, and before January 1, 2025, 75 percent of the amount that the Federal rate determined under paragraph (c)(1) of this section is exceeded by the highest of the following:

* * * * *

■ 16. Section 412.113 is amended by adding paragraph (g) to read as follows:

§ 412.113 Other payments.

* * * * *

(g) *Additional resource costs of establishing and maintaining access to buffer stocks of essential medicines.* (1) Essential medicines are the 86 medicines prioritized in the report Essential Medicines Supply Chain and Manufacturing Resilience Assessment developed by the U.S. Department of Health and Human Services Office of the Assistant Secretary for Preparedness and Response and published in May of 2022, and any subsequent revisions to that list of medicines. A buffer stock of essential medicines for a hospital is a supply, for no less than a 6-month period of one or more essential medicines.

(2) The additional resource costs of establishing and maintaining access to a buffer stock of essential medicines for a hospital are the additional resource costs incurred by the hospital to directly hold a buffer stock of essential medicines for its patients or arrange contractually for such a buffer stock to be held by another entity for use by the hospital for its patients. The additional resource costs of establishing and maintaining access to a buffer stock of essential medicines does not include the resource costs of the essential medicines themselves.

(3) For cost reporting periods beginning on or after October 1, 2024, a payment adjustment to a small, independent hospital for the additional resource costs of establishing and maintaining access to buffer stocks of essential medicines is made as

described in paragraph (g)(4) of this section. For purposes of this section, a small, independent hospital is a hospital with 100 or fewer beds as defined in § 412.105(b) during the cost reporting period that is not part of a chain organization, defined as a group of two or more health care facilities which are owned, leased, or through any other device, controlled by one organization.

(4) The payment adjustment is based on the estimated reasonable cost incurred by the hospital for establishing and maintaining access to buffer stocks of essential medicines during the cost reporting period.

■ 17. Section 412.140 is amended by revising paragraphs (d)(2)(ii) and (e)(2)(vii) introductory text to read as follows:

§ 412.140 Participation, data submission, and validation requirements under the Hospital Inpatient Quality Reporting (IQR) Program.

* * * * *

(d) * * *
(2) * * *

(ii)(A) Prior to the FY 2028 payment determination, a hospital meets the eCQM validation requirement with respect to a fiscal year if it submits 100 percent of sampled eCQM measure medical records in a timely and complete manner, as determined by CMS.

(B) For the FY 2028 payment determination and later years, a hospital meets the eCQM validation requirement with respect to a fiscal year if it achieves a 75-percent score, as determined by CMS.

* * * * *

(e) * * *
(2) * * *

(vii) If the hospital has requested reconsideration on the basis that CMS concluded it did not meet the validation requirement set forth in paragraph (d) of this section, the reconsideration request must contain a detailed explanation identifying which data the hospital believes was improperly validated by CMS and why the hospital believes that such data are correct.

* * * * *

§ 412.230 [Amended]

■ 18. In § 412.230 amend paragraph (a)(5)(i) by removing the phrase “in the rural area of the state” and adding in its place the phrase “either in its geographic area or in the rural area of the State”.

■ 19. Amend § 412.273 by revising paragraphs (c)(1)(ii) and (c)(2) to read as follows:

§ 412.273 Withdrawing an application, terminating an approved 3-year reclassification, or canceling a previous withdrawal or termination.

* * * * *

(c) * * *
(1) * * *

(ii) After the MGCRB issues a decision, provided that the request for withdrawal is received by the MGCRB within 45 days of the date of filing for public inspection of the proposed rule at the website of the Office of the Federal Register, or within 7 calendar days of receiving a decision of the Administrator’s in accordance with § 412.278, whichever is later concerning changes to the inpatient hospital prospective payment system and proposed payment rates for the fiscal year for which the application has been filed.

(2) A request for termination must be received by the MGCRB within 45 days of the date of filing for public inspection of the proposed rule at the website of the Office of the Federal Register, or within 7 calendar days of receiving a decision of the Administrator’s in accordance with § 412.278, whichever is later concerning changes to the inpatient hospital prospective payment system and proposed payment rates for the fiscal year for which the termination is to apply.

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; OPTIONAL PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES

■ 20. The authority citation for part 413 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww.

§ 413.75 [Amended]

■ 21. Section 413.75 is amended in paragraph (b), in the introductory text of the definition of “Emergency Medicare GME Affiliated Group” by removing the reference “§ 413.79(f)(6)” and adding in its place the reference “§ 413.79(f)(7)”.

§ 413.78 [Amended]

■ 22. Section 413.78 is amended by—

■ a. In paragraph (e)(3)(iii), removing the reference “§ 413.79(f)(6)” and adding in its place the reference “§ 413.79(f)(7)”; and

■ b. In paragraph (f)(3)(iii) introductory text, removing the reference

“§ 413.79(f)(6)” and adding in its place the reference “§ 413.79(f)(7)”.

- 23. Section 413.79 is amended by—
- a. Revising paragraphs (d)(6), (f)(8) and (k)(2)(i); and
- b. Adding paragraph (q).

The revisions and addition read as follows:

§ 413.79 Direct GME payments: Determination of the weighted number of FTE residents.

* * * * *

(d) * * *

(6) Subject to the provisions of paragraph (h) of this section, FTE residents who are displaced by the closure of either another hospital or another hospital’s program are added to the FTE count after applying the averaging rules in this paragraph (d), for the receiving hospital for the duration of the time that the displaced residents are training at the receiving hospital.

* * * * *

(f) * * *

(8) FTE resident cap slots added under section 126 of Public Law 116–260 and section 4122 of Public Law 117–328 may be used in a Medicare GME affiliation agreement beginning in the fifth year after the effective date of those FTE resident cap slots.

* * * * *

(k) * * *

(2) * * *

(i)(A) For rural track programs started before October 1, 2012, for the first 3 years of the rural track’s existence, the rural track FTE limitation for each urban hospital will be the actual number of FTE residents, subject to the rolling average specified in paragraph (d)(7) of this section, training in the rural track at the urban hospital and the rural nonprovider site(s).

(B) For rural track programs started on or after October 1, 2012, and before October 1, 2022, prior to the start of the urban hospital’s cost reporting period that coincides with or follows the start of the sixth program year of the rural track’s existence, the rural track FTE limitation for each urban hospital will be the actual number of FTE residents, subject to the rolling average specified in paragraph (d)(7) of this section, training in the rural track at the urban hospital and the rural nonprovider site(s).

(C) For cost reporting periods beginning on or after October 1, 2022, before the start of the urban or rural hospital’s cost reporting period that coincides with or follows the start of the sixth program year of the Rural Track Program’s existence, the rural track FTE limitation for each hospital will be the

actual number of FTE residents training in the Rural Track Program at the urban or rural hospital and subject to the requirements under § 413.78(g), at the rural nonprovider site(s).

* * * * *

(q) *Determination of an increase in the otherwise applicable resident cap under section 4122 of the Consolidated Appropriations Act (Pub. L. 117–328).* For portions of cost reporting periods beginning on or after July 1, 2026, a hospital may receive an increase in its otherwise applicable FTE resident cap (as determined by CMS) if the hospital meets the requirements and qualifying criteria under section 1886(h)(10) of the Act and if the hospital submits an application to CMS within the timeframe specified by CMS.

PART 431—STATE ORGANIZATION AND GENERAL ADMINISTRATION

- 24. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 1302.

§ 431.954 [Amended]

- 25. Section 431.954 is amended by:
 - a. In paragraph (a)(2), removing the phrase “Improper Payments Information Act of 2002 (Pub. L. 107–300)” and adding in its place the phrase “Payment Integrity Information Act (PIIA) of 2019 (Pub. L. 116–117)”.
 - b. In paragraph (b)(3) by removing the words “Puerto Rico”.

§ 431.960 [Amended]

- 26. Section 431.960 is amended in paragraph (a) by removing the phrase “Improper Payments Information Act of 2002” and adding in its place the word “PIIA”.

§ 431.998 [Amended]

- 27. Section 431.998 is amended in paragraph (f) by removing the word “IPIA” and adding in its place the word “PIIA”.

PART 482—CONDITIONS OF PARTICIPATION FOR HOSPITALS

- 28. The authority citation for part 482 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr, unless otherwise noted.

- 29. Effective November 1, 2024, amend § 482.42 by revising paragraph (e) and removing paragraph (f) to read as follows:

§ 482.42 Condition of participation: Infection prevention and control and antibiotic stewardship programs.

* * * * *

(e) *Respiratory illness reporting—(1) Ongoing reporting.* The hospital must electronically report information on acute respiratory illnesses, including influenza, SARS-CoV-2/COVID-19, and RSV.

(i) The report must be in a standardized format and frequency specified by the Secretary.

(ii) To the extent as required by the Secretary, this report must include all of the following data elements:

(A) Confirmed infections for a limited set of respiratory illnesses, including but not limited to influenza, SARS-CoV-2/COVID-19, and RSV, among newly admitted and hospitalized patients.

(B) Total bed census and capacity, including for critical hospital units and age groups.

(C) Limited patient demographic information, including but not limited to age.

(2) *Public health emergency (PHE) reporting.* In the event that the Secretary has declared a national, State, or local PHE for an acute infectious illness, the hospital must also electronically report the following data elements in a standardized format and frequency specified by the Secretary:

(i) Supply inventory shortages.

(ii) Staffing shortages.

(iii) Relevant medical countermeasures and therapeutic inventories, usage, or both.

(iv) Facility structure and operating status, including hospital/ED diversion status.

PART 485—CONDITIONS OF PARTICIPATION: SPECIALIZED PROVIDERS

- 30. The authority citation for part 482 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

- 31. Effective November 1, 2024, amend § 485.640 by revising paragraph (d) and removing paragraph (e) to read as follows:

§ 485.640 Condition of participation: Infection prevention and control and antibiotic stewardship programs.

* * * * *

(d) *Respiratory illness reporting—(1) Ongoing reporting.* The CAH must electronically report information on acute respiratory illnesses, including influenza, SARS-CoV-2/COVID-19, and RSV.

(i) The report must be in a standardized format and frequency specified by the Secretary.

(ii) To the extent as required by the Secretary, the report must include the following data elements:

(A) Confirmed infections for a limited set of respiratory illnesses, including but not limited to influenza, SARS-CoV-2/COVID-19, and RSV, among newly admitted and hospitalized patients.

(B) Total bed census and capacity, including for critical hospital units and age groups.

(C) Limited patient demographic information, including but not limited to age.

(2) *Public health emergency (PHE) reporting.* In the event that the Secretary has declared a national, State, or local PHE for an acute infectious illness, the CAH must also electronically report the following data elements in a standardized format and frequency specified by the Secretary:

- (i) Supply inventory shortages.
- (ii) Staffing shortages.
- (iii) Relevant medical

countermeasures and therapeutic inventories, usage, or both.

(iv) Facility structure and operating status, including CAH/ED diversion status.

* * * * *

PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD TECHNOLOGY INCENTIVE PROGRAM

■ 32. The authority citation for part 495 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 33. Section 495.24 is amended by—
 ■ a. In paragraph (f)(1)(i)(B) removing the phrase “In 2023 and subsequent years” and adding in its place the phrase “In 2023 and 2024,”; and
 ■ b. Adding paragraphs (f)(1)(i)(C) and (D).

The addition reads as follows:

§ 495.24 Stage 3 meaningful use objectives and measures for EPs, eligible hospitals and CAHs for 2019 and subsequent years.

* * * * *

- (f) * * *
- (1) * * *
- (i) * * *

(C) In 2025 and subsequent years, earn a total score of at least 70 points.

(D) In 2026 and subsequent years, earn a total score of at least 80 points.

* * * * *

PART 512—STANDARD PROVISIONS FOR INNOVATION CENTER MODELS AND SPECIFIC PROVISIONS FOR CERTAIN MODELS

■ 34. The authority citation for part 512 continues to read as follows:

Authority: 42 U.S.C. 1302, 1315a, and 1395hh.

■ 35. Revise the heading for part 512 to read as set forth above.

■ 36. Add subparts D and E to read as follows:

Subpart D [Reserved]

Subpart E—Transforming Episode Accountability Model (TEAM)

Sec.

General

512.500 Basis and scope of subpart.

512.505 Definitions.

TEAM Participation

512.510 Voluntary opt-in participation.

512.515 Geographic areas.

512.520 Participation tracks.

512.522 APM options.

Scope of Episodes Being Tested

512.525 Episodes.

512.535 Beneficiary inclusion criteria.

512.537 Determination of the episode.

Pricing Methodology

512.540 Determination of preliminary target prices.

512.545 Determination of reconciliation target prices.

Quality Measures and Composite Quality Score

512.547 Quality measures, composite quality score, and display of quality measures.

Reconciliation and Review Process

512.550 Reconciliation process and determination of the reconciliation payment or repayment amount.

512.552 Treatment of incentive programs or add-on payments under existing Medicare payment systems.

512.555 Proration of payments for services that extend beyond an episode.

512.560 Appeals process.

512.561 Reconsideration review processes.

Data Sharing and Other Requirements

512.562 Data sharing with TEAM participants.

512.563 Health equity reporting.

512.564 Referral to primary care services.

Financial Arrangements and Beneficiary Incentives

512.565 Sharing arrangements.

512.568 Distribution arrangements.

512.570 Downstream distribution arrangements.

512.575 TEAM beneficiary incentives.

512.576 Application of the CMS-sponsored model arrangements and patient incentives safe harbor.

Medicare Program Waivers

512.580 TEAM Medicare Program waivers.

General Provisions

512.582 Beneficiary protections.

512.584 Cooperation in model evaluation and monitoring.

512.586 Audits and record retention.

512.588 Rights in data and intellectual property.

512.590 Monitoring and compliance.

512.592 Remedial action.

512.594 Limitations on review.

512.595 Bankruptcy and other notifications.

512.596 Termination of TEAM or TEAM participant from model by CMS.

512.598 Decarbonization and resilience initiative.

General

§ 512.500 Basis and scope of subpart.

(a) *Basis.* This subpart implements the test of the Transforming Episode Accountability Model (TEAM) under section 1115A(b) of the Act. Except as specifically noted in this part, the regulations under this subpart do not affect the applicability of other provisions affecting providers and suppliers under Medicare FFS, including the applicability of provisions regarding payment, coverage, and program integrity.

(b) *Scope.* This subpart sets forth the following:

- (1) Participation in TEAM.
- (2) Scope of episodes being tested.
- (3) Pricing methodology.
- (4) Quality measures and quality reporting requirements.
- (5) Reconciliation and review processes.
- (6) Data sharing and other requirements
- (7) Financial arrangements and beneficiary incentives.
- (8) Medicare program waivers
- (9) Beneficiary protections.
- (10) Cooperation in model evaluation and monitoring.
- (11) Audits and record retention.
- (12) Rights in data and intellectual property.
- (13) Monitoring and compliance.
- (14) Remedial action.
- (15) Limitations on review.
- (16) Miscellaneous provisions on bankruptcy and other notifications.
- (17) Model termination by CMS.
- (18) Decarbonization and resilience initiative.

§ 512.505 Definitions.

For the purposes of this part, the following definitions are applicable unless otherwise stated:

AAPM stands for Advanced Alternative Payment Model.

AAPM option means the advanced alternative payment model option of TEAM for Track 2 and Track 3 TEAM participants that provide their CMS EHR Certification ID and attest to their use of CEHRT in accordance with § 512.522.

ACO means an accountable care organization, as defined at § 425.20 of this chapter.

ACO participant has the meaning set forth in § 425.20 of this chapter.

ACO provider/supplier has the meaning set forth in § 425.20 of this chapter.

Acute care hospital means a provider subject to the prospective payment system specified in § 412.1(a)(1) of this chapter.

Age bracket risk adjustment factor means the coefficient of risk associated with a patient's age bracket, calculated as described in § 512.545(a)(1).

Aggregated reconciliation target price refers to the sum of the reconciliation target prices for all episodes attributed to a given TEAM participant for a given performance year.

Alignment payment means a payment from a TEAM collaborator to a TEAM participant under a sharing arrangement, for the sole purpose of sharing the TEAM participant's responsibility for making repayments to Medicare.

AMI stands for acute myocardial infarction

Anchor hospitalization means the initial hospital stay upon admission for an episode category included in TEAM, as described in § 512.525(c), for which the institutional claim is billed through the inpatient prospective payment system (IPPS).

Anchor procedure means a procedure related to an episode category, as described in § 512.525(c), included in TEAM that is permitted and paid for by Medicare when performed in a hospital outpatient department (HOPD) and billed through the Hospital Outpatient Prospective Payment System (OPPS).

ADI stands for Area Deprivation Index.

APM stands for Alternative Payment Model.

APM Entity means an entity as defined in § 414.1305 of this chapter.

Baseline episode spending refers to total episode spending by all providers and suppliers associated with a given MS-DRG/HCPCS episode type for all hospitals in a given region during the baseline period.

Baseline period means the 3-year historical period used to construct the preliminary target price and reconciliation target price for a given performance year.

Baseline year means any one of the 3 years included in the baseline period.

Benchmark price means average standardized episode spending by all providers and suppliers associated with a given MS-DRG/HCPCS episode type for all hospitals in a given region during the applicable baseline period.

Beneficiary means an individual who is enrolled in Medicare FFS.

Beneficiary who is dually eligible means a beneficiary enrolled in both Medicare and full Medicaid benefits.

BPCI stands for Bundled Payments for Care Improvement, which was an

episode based payment initiative with four models tested by the CMS Innovation Center from April 2013 to September 2018.

BPCI Advanced stands for the Bundled Payments for Care Improvement Advanced Model, which is an episode-based payment model tested by the CMS Innovation Center from October 2018 to December 2025.

CABG (Coronary Artery Bypass Graft Surgery) means any coronary revascularization procedure paid through the IPPS under MS-DRGs 231–236, including both elective CABG and CABG procedures performed during initial acute myocardial infarction (AMI) treatment.

CCN stands for CMS certification number.

CEHRT means certified electronic health record technology that meets the requirements set forth in § 414.1305 of this chapter.

Change in control means any of the following:

(1) The acquisition by any "person" (as this term is used in sections 13(d) and 14(d) of the Securities Exchange Act of 1934) of beneficial ownership (within the meaning of Rule 13d–3 promulgated under the Securities Exchange Act of 1934), directly or indirectly, of voting securities of the TEAM participant representing more than 50 percent of the TEAM participant's outstanding voting securities or rights to acquire such securities.

(2) The acquisition of the TEAM participant by any individual or entity.

(3) The sale, lease, exchange, or other transfer (in one transaction or a series of transactions) of all or substantially all of the assets of the TEAM participant.

(4) The approval and completion of a plan of liquidation of the TEAM participant, or an agreement for the sale or liquidation of the TEAM participant.

CJR stands for the Comprehensive Care for Joint Replacement Model, which is an episode-based payment model tested by the CMS Innovation Center from April 2016 to December 2024.

Clinician engagement list means the list of eligible clinicians or MIPS eligible clinicians that participate in TEAM activities and have a contractual relationship with the TEAM participant, and who are not listed on the financial arrangements list, as described in § 512.522(c).

CMS Electronic Health Record (EHR) Certification ID means the identification number that represents the combination of Certified Health Information Technology that is owned and used by providers and hospitals to provide care to their patients and is generated by the

Certified Health Information Technology Product List.

Collaboration agent means an individual or entity that is not a TEAM collaborator and that is either of the following:

(1) A member of a PGP, NPPGP, or TGP that has entered into a distribution arrangement with the same PGP, NPPGP, or TGP in which he or she is an owner or employee, and where the PGP, NPPGP, or TGP is a TEAM collaborator.

(2) An ACO participant or ACO provider/supplier that has entered into a distribution arrangement with the same ACO in which it is participating, and where the ACO is a TEAM collaborator.

Composite quality score (CQS) means a score computed for each TEAM participant to summarize the TEAM participant's level of quality performance and improvement on specified quality measures as described in § 512.547.

Core-based statistical area (CBSA) means a statistical geographic entity defined by the Office of Management and Budget (OMB) consisting of the county or counties associated with at least one core (urbanized area or urban cluster) of at least 10,000 population, plus adjacent counties having a high degree of social and economic integration with the core as measured through commuting ties with the counties containing the core.

CORF stands for comprehensive outpatient rehabilitation facility.

Covered services means the scope of health care benefits described in sections 1812 and 1832 of the Act for which payment is available under Part A or Part B of Title XVIII of the Act.

Critical access hospital (CAH) means a hospital designated under subpart F of part 485 of this chapter.

CQS adjustment amount means the amount subtracted from the positive or negative reconciliation amount to generate the reconciliation payment or repayment amount.

CQS adjustment percentage means the percentage CMS applies to the positive or negative reconciliation amount based on the TEAM participant's CQS performance.

CQS baseline period means the time period used to benchmark quality measure performance.

Days means calendar days.

Decarbonization and Resilience Initiative means an initiative for TEAM participants that includes technical assistance on decarbonization and a voluntary reporting program where TEAM participants may annually report

metrics and questions related to emissions in accordance with § 512.598.

Descriptive TEAM materials and activities means general audience materials such as brochures, advertisements, outreach events, letters to beneficiaries, web pages, mailings, social media, or other materials or activities distributed or conducted by or on behalf of the TEAM participant or its downstream participants when used to educate, notify, or contact beneficiaries regarding TEAM. All of the following communications are not descriptive TEAM materials and activities:

(1) Communications that do not directly or indirectly reference TEAM (for example, information about care coordination generally).

(2) Information on specific medical conditions.

(3) Referrals for health care items and services, except as required by § 512.564.

(4) Any other materials that are excepted from the definition of “marketing” as that term is defined at 45 CFR 164.501.

Discount factor means a set percentage included in the preliminary target price and reconciliation target price intended to reflect Medicare’s potential savings from TEAM.

Distribution arrangement means a financial arrangement between a TEAM collaborator that is an ACO, PGP, NPPGP, or TGP and a collaboration agent for the sole purpose of distributing some or all of a gainsharing payment received by the ACO, PGP, NPPGP, or TGP.

Distribution payment means a payment from a TEAM collaborator that is an ACO, PGP, NPPGP, or TGP to a collaboration agent, under a distribution arrangement, composed only of gainsharing payments.

DME stands for durable medical equipment.

Downstream collaboration agent means an individual who is not a TEAM collaborator or a collaboration agent and who is a member of a PGP, NPPGP, or TGP that has entered into a downstream distribution arrangement with the same PGP, NPPGP, or TGP in which he or she is an owner or employee, and where the PGP, NPPGP, or TGP is a collaboration agent.

Downstream distribution arrangement means a financial arrangement between a collaboration agent that is both a PGP, NPPGP, or TGP and an ACO participant and a downstream collaboration agent for the sole purpose of sharing a distribution payment received by the PGP, NPPGP, or TGP.

Downstream participant means an individual or entity that has entered

into a written arrangement with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent under which the downstream participant engages in one or more TEAM activities.

EHR stands for electronic health record.

Eligible clinician means a clinician as defined in § 414.1305 of this chapter.

Episode category means one of the five episodes tested in TEAM as described at § 512.525(d).

Episode means all Medicare Part A and B items and services described in § 512.525(e) (and excluding the items and services described in § 512.525(f)) that are furnished to a beneficiary described in § 512.535 during the time period that begins on the date of the beneficiary’s admission to an anchor hospitalization or the date of the anchor procedure, as described at § 512.525(c), and ends on the 30th day following the date of discharge from the anchor hospitalization or anchor procedure, with the date of discharge or date of the anchor procedure itself being counted as the first day in the 30-day post-discharge period, as described at § 512.537. If an anchor hospitalization is initiated on the same day as or in the 3 days following an outpatient procedure that could initiate an anchor procedure for the same episode category, the outpatient procedure initiates an anchor hospitalization and the anchor hospitalization start date is that of the outpatient procedure.

Essential access community hospital means a hospital as defined under § 412.109 of this chapter.

Final normalization factor refers to the national mean of the benchmark price for each MS-DRG/HCPCS episode type divided by the national mean of the risk-adjusted benchmark price for the same MS-DRG/HCPCS episode type.

Financial arrangements list means the list of eligible clinicians or MIPS eligible clinicians that have a financial arrangement with the TEAM participant, TEAM collaborator, collaboration agent, and downstream collaboration agent, as described in § 512.522(b).

Gainsharing payment means a payment from a TEAM participant to a TEAM collaborator, under a sharing arrangement, composed of only reconciliation payments, internal cost savings, or both.

HCPCS stands for Healthcare Common Procedure Coding System, which is used to bill for items and services.

Health disparities mean preventable differences in the burden of disease, injury, violence, or opportunities to

achieve optimal health, health quality, or health outcomes that are experienced by one or more underserved communities within the TEAM participant’s population of TEAM beneficiaries that the TEAM participant will aim to reduce.

Health equity goal means a targeted outcome relative to health equity plan performance measures.

Health equity plan means a document that identifies health equity goals, intervention strategies, and performance measures to improve health disparities identified within the TEAM participant’s population of TEAM beneficiaries that the TEAM participant will aim to reduce as described in § 512.563.

Health equity plan intervention strategy means the initiative the TEAM participant creates and implements to reduce the identified health disparities as part of the health equity plan.

Health equity plan performance measure means a quantitative metric that the TEAM participant uses to measure changes in health disparities arising from the health equity plan intervention strategies.

Health-related social need means an unmet, adverse social condition that can contribute to poor health outcomes and is a result of underlying social determinants of health, which refer to the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.

HHA means a Medicare-enrolled home health agency.

High-cost outlier cap refers to the 99th percentile of regional spending for a given MS-DRG/HCPCS episode type in a given region, which is the amount at which episode spending would be capped for purposes of determining baseline and performance year episode spending.

Hospital means a hospital as defined in section 1886(d)(1)(B) of the Act.

Hospital discharge planning means the standards set forth in § 482.43 of this chapter.

ICD-CM stands for International Classification of Diseases, Clinical Modification.

Internal cost savings means the measurable, actual, and verifiable cost savings realized by the TEAM participant resulting from care redesign undertaken by the TEAM participant in connection with providing items and services to TEAM beneficiaries within an episode. Internal cost savings does not include savings realized by any individual or entity that is not the TEAM participant.

IPF stands for inpatient psychiatric facility.

IPPS stands for Inpatient Prospective Payment System, which is the payment system for subsection (d) hospitals as defined in section 1886(d)(1)(B) of the Act.

IRF stands for inpatient rehabilitation facility.

LIS stands for Medicare Part D Low-Income Subsidy.

Lower-Extremity Joint Replacement (LEJR) means any hip, knee, or ankle replacement that is paid under MS-DRG 469, 470, 521, or 522 through the IPPS or HCPCS code 27447, 27130, or 27702 through the OPSS.

LTCH stands for long-term care hospital.

Major Bowel Procedure means any small or large bowel procedure paid through the IPPS under MS-DRG 329-331.

Mandatory CBSA means a core-based statistical area selected by CMS in accordance with § 512.515 where all eligible hospitals are required to participate in TEAM.

MDC stands for Major Diagnostic Category.

Medically necessary means reasonable and necessary for the diagnosis or treatment of an illness or injury, or to improve the functioning of a malformed body member.

Medicare Severity Diagnosis-Related Group (MS-DRG) means, for the purposes of this model, the classification of inpatient hospital discharges updated in accordance with § 412.10 of this chapter.

Medicare-dependent, small rural hospital (MDH) means a specific type of hospital that meets the classification criteria specified under § 412.108 of this chapter.

Member of the NPPGP or NPPGP member means a nonphysician practitioner or therapist who is an owner or employee of an NPPGP and who has reassigned to the NPPGP his or her right to receive Medicare payment.

Member of the PGP or PGP member means a physician, nonphysician practitioner, or therapist who is an owner or employee of the PGP and who has reassigned to the PGP his or her right to receive Medicare payment.

Member of the TGP or TGP member means a therapist who is an owner or employee of a TGP and who has reassigned to the TGP his or her right to receive Medicare payment.

MIPS stands for Merit-based Incentive Payment System.

MIPS eligible clinician means a clinician as defined in § 414.1305 of this chapter.

Model performance period means the 60-month period from January 1, 2026,

to December 31, 2030, during which TEAM is being tested and the TEAM participant is held accountable for spending and quality.

Model start date means January 1, 2026, the start of the model performance period.

MS-DRG/HCPCS episode type refers to the subset of episodes within an episode category that are associated with a given MS-DRG/HCPCS, as set forth at § 512.540(a)(1).

Non-AAPM option means the option of TEAM for TEAM participants in Track 1 or for TEAM participants in Track 2 or Track 3 that do not attest to use of CEHRT as described in § 512.522.

Nonphysician practitioner means one of the following:

(1) A physician assistant who satisfies the qualifications set forth at § 410.74(a)(2)(i) and (ii) of this chapter.

(2) A nurse practitioner who satisfies the qualifications set forth at § 410.75(b) of this chapter.

(3) A clinical nurse specialist who satisfies the qualifications set forth at § 410.76(b) of this chapter.

(4) A certified registered nurse anesthetist (as defined at § 410.69(b) of this chapter).

(5) A clinical social worker (as defined at § 410.73(a) of this chapter).

(6) A registered dietician or nutrition professional (as defined at § 410.134 of this chapter).

NPI stands for National Provider Identifier.

NPPGP stands for Non-Physician Provider Group Practice, which means an entity that is enrolled in Medicare as a group practice, includes at least one owner or employee who is a nonphysician practitioner, does not include a physician owner or employee, and has a valid and active TIN.

NPRA stands for Net Payment Reconciliation Amount, which means the dollar amount representing the difference between the reconciliation target price and performance year spending, after adjustments for quality and stop-gain/stop-loss limits, but prior to the post-episode spending adjustment.

OIG stands for the Department of Health and Human Services Office of the Inspector General.

OP means an outpatient procedure for which the institutional claim is billed by the hospital through the OPSS.

OPPS stands for the Outpatient Prospective Payment System.

PAC stands for post-acute care.

PBPM stands for per-beneficiary-per-month.

Performance year means a 12-month period beginning on January 1 and ending on December 31 of each year during the model performance period.

Performance year spending means the sum of standardized Medicare claims payments during the performance year for the items and services that are included in the episode in accordance with § 512.525(e), excluding the items and services described in § 512.525(f).

PGP stands for physician group practice.

Physician has the meaning set forth in section 1861(r) of the Act.

Post-episode spending amount means the sum of all Medicare Parts A and B payments for items and services furnished to a beneficiary within 30 days after the end of an episode and includes the prorated portion of services that began during the episode and extended into the 30-day post-episode period.

Preliminary target price refers to the target price provided to the TEAM participant prior to the start of the performance year, which is subject to adjustment at reconciliation, as set forth at § 512.540.

Primary care services has the meaning set forth in section 1842(i)(4) of the Act.

Prospective normalization factor refers to the multiplier incorporated into the preliminary target price to ensure that the average of the total risk-adjusted preliminary target price does not exceed the average of the total non-risk adjusted preliminary target price, calculated as set forth in § 512.540(b)(6).

Prospective trend factor refers to the multiplier incorporated into the preliminary target price to estimate changes in spending patterns between the baseline period and the performance year, calculated as set forth in § 512.540(b)(7).

Provider means a “provider of services” as defined under section 1861(u) of the Act and codified in the definition of “provider” at § 400.202 of this chapter.

Provider of outpatient therapy services means an entity that is enrolled in Medicare as a provider of therapy services and furnishes one or more of the following:

(1) Outpatient physical therapy services as defined in § 410.60 of this chapter.

(2) Outpatient occupational therapy services as defined in § 410.59 of this chapter.

(3) Outpatient speech-language pathology services as defined in § 410.62 of this chapter.

QP stands for Qualifying APM Participant as defined in § 414.1305 of this chapter.

Quality-adjusted reconciliation amount refers to the dollar amount representing the difference between the reconciliation target price and

performance year spending, after adjustments for quality, but prior to application of stop-gain/stop-loss limits and the post-episode spending adjustment.

Raw quality measure score means the quality measure value as obtained from the Hospital Inpatient Quality Reporting Program and the Hospital-Acquired Condition Reduction Program.

Reconciliation amount means the dollar amount representing the difference between the reconciliation target price and performance year spending, prior to adjustments for quality, stop-gain/stop-loss limits, and post-episode spending.

Reconciliation payment amount means the amount that CMS may owe to a TEAM participant after reconciliation as determined in accordance with § 512.550(g).

Reconciliation target price means the target price applied to an episode at reconciliation, as determined in accordance with § 512.545.

Region means one of the nine U.S. census divisions, as defined by the U.S. Census Bureau.

Reorganization event refers to a merger, consolidation, spin off or other restructuring that results in a new hospital entity under a given CCN.

Repayment amount means the amount that the TEAM participant may owe to Medicare after reconciliation as determined in accordance with § 512.550(g).

Retrospective trend factor refers to the multiplier incorporated into the reconciliation target price to estimate realized changes in spending patterns during the performance year, calculated as set forth in § 512.545(f).

Rural hospital means an IPPS hospital that meets one of the following criteria:

(1) Is located in a rural area as defined under § 412.64 of this chapter.

(2) Is located in a rural census tract defined under § 412.103(a)(1) of this chapter.

Safety Net hospital means an IPPS hospital that meets at least one of the following criteria:

(1) Exceeds the 75th percentile of the proportion of Medicare beneficiaries considered dually eligible for Medicare and Medicaid across all PPS acute care hospitals in the baseline period.

(2) Exceeds the 75th percentile of the proportion of Medicare beneficiaries partially or fully eligible to receive Part D low-income subsidies across all PPS acute care hospitals in the baseline period.

Scaled quality measure score means the score equal to the percentile to which the TEAM participant's raw

quality measure score would have belonged in the CQS baseline period.

Sharing arrangement means a financial arrangement between a TEAM participant and a TEAM collaborator for the sole purpose of making gainsharing payments or alignment payments under TEAM.

SNF stands for skilled nursing facility.

Sole community hospital (SCH) means a hospital that meets the classification criteria specified in § 412.92 of this chapter.

Spinal Fusion means any cervical, thoracic, or lumbar spinal fusion procedure paid through the IPPS under MS-DRG 402, 426, 427, 428, 429, 430, 447, 448, 450, 451, 471, 472, or 473, or through the OPSS under HCPCS codes 22551, 22554, 22612, 22630, or 22633.

Supplier means a supplier as defined in section 1861(d) of the Act and codified at § 400.202 of this chapter.

Surgical Hip and Femur Fracture Treatment (SHFFT) means a hip fixation procedure, with or without fracture reduction, but excluding joint replacement, that is paid through the IPPS under MS-DRGs 480-482.

TAA stands for total ankle arthroplasty.

TEAM activities mean any activity related to promoting accountability for the quality, cost, and overall care for TEAM beneficiaries and performance in the model, including managing and coordinating care; encouraging investment in infrastructure and redesigned care processes for high quality and efficient service delivery; or carrying out any other obligation or duty under the model.

TEAM beneficiary means a beneficiary who meets the beneficiary inclusion criteria in § 512.535 and who is in an episode.

TEAM collaborator means an ACO or one of the following Medicare-enrolled individuals or entities that enters into a sharing arrangement:

- (1) SNF.
- (2) HHA.
- (3) LTCH.
- (4) IRF.
- (5) Physician.
- (6) Nonphysician practitioner.
- (7) Therapist in private practice.
- (8) CORF.
- (9) Provider of outpatient therapy services.
- (10) PGP.
- (11) Hospital.
- (12) CAH.
- (13) NPPGP.
- (14) Therapy Group Practice (TGP).

TEAM data sharing agreement means an agreement entered into between the TEAM participant and CMS that

includes the terms and conditions for any beneficiary-identifiable data shared with the TEAM participant under § 512.562.

TEAM HCC count refers to the TEAM Hierarchical Condition Category count, which is a categorical risk adjustment variable designed to reflect a beneficiary's overall health status during a lookback period by grouping similar diagnoses into one related category and counting the total number of diagnostic categories that apply to the beneficiary.

TEAM participant means an acute care hospital that either—

(1) Initiates episodes and is paid under the IPPS with a CCN primary address located in one of the mandatory CBSAs selected for participation in TEAM in accordance with § 512.515; or

(2) Makes a voluntary opt-in participation election to participate in TEAM in accordance with § 512.510 and is accepted to participate in TEAM by CMS.

TEAM payment means a payment made by CMS only to TEAM participants, or a payment adjustment made only to payments made to TEAM participants, under the terms of TEAM that is not applicable to any other providers or suppliers.

TEAM reconciliation report means the report prepared after each reconciliation that CMS provides to the TEAM participant notifying the TEAM participant of the outcome of the reconciliation.

TGP or therapy group practice means an entity that is enrolled in Medicare as a therapy group in private practice, includes at least one owner or employee who is a therapist in private practice, does not include an owner or employee who is a physician or nonphysician practitioner, and has a valid and active TIN.

THA means total hip arthroplasty.

Therapist means one of the following individuals as defined at § 484.4 of this chapter:

- (1) Physical therapist.
- (2) Occupational therapist.
- (3) Speech-language pathologist.

Therapist in private practice means a therapist that—

(1) Complies with the special provisions for physical therapists in private practice in § 410.60(c) of this chapter;

(2) Complies with the special provisions for occupational therapists in private practice in § 410.59(c) of this chapter; or

(3) Complies with the special provisions for speech-language pathologists in private practice in § 410.62(c) of this chapter.

TIN stands for taxpayer identification number.

TKA stands for total knee arthroplasty.

Track 1 means a participation track in TEAM in which any TEAM participant may participate for the first performance year and only TEAM participants who are a safety net hospital, as defined in § 512.505, may participate for performance years 1 through 3 of the model. TEAM participants in Track 1 are subject to all of the following:

- (1) CQS adjustment percentage described in § 512.550(d)(1)(i).
- (2) Limitations on gain described in § 512.550(e)(2).
- (3) The calculation of the reconciliation payment described in § 512.550(g).

Track 2 means a participation track in TEAM in which certain TEAM participants, as described in § 512.520(b)(4), may request to participate in for performance years 2 through 5. TEAM participants in Track 2 are subject to all of the following:

- (1) CQS adjustment percentage described in § 512.550(d)(1)(ii).
- (2) Limitations on gain and loss described in § 512.550(e)(2) and § 512.550(e)(3).
- (3) The calculation of the reconciliation payment or repayment amount described in § 512.550(g).

Track 3 means a participation track in TEAM in which a TEAM participant may participate in for performance years 1 through 5. TEAM participants in Track 3 are subject to all of the following:

- (1) CQS adjustment percentage described in § 512.550(d)(1)(iii).
- (2) Limitations on loss and gain described in § 512.550(e)(1) and in § 512.550(e)(2).
- (3) The calculation of the reconciliation payment or repayment amount described in § 512.550(g).

Underserved community means a population sharing a particular characteristic, including geography, that has been systematically denied a full opportunity to participate in aspects of economic, social, and civic life.

U.S. Territories means American Samoa, the Federated States of Micronesia, Guam, the Marshall Islands, and the Commonwealth of the Northern Mariana Islands, Palau, Puerto Rico, U.S. Minor Outlying Islands, and the U.S. Virgin Islands.

Weighted scaled score means the scaled quality measure score multiplied by its normalized weight.

TEAM Participation

§ 512.510 Voluntary opt-in participation.

(a) *General.* Hospitals that wish to voluntarily opt-in to TEAM for the full duration of the model performance period must submit a written participation election letter as described in paragraph (d) of this section during the voluntary participation election period specified in paragraph (c) of this section.

(b) *Eligibility.* A hospital must not be located in a mandatory CBSA selected for TEAM participation, in accordance with § 512.515, and must satisfy one of the following criteria to be eligible for voluntary opt-in participation election—

(1) Be a participant hospital in the CJR model that participates in CJR until the last day of the last performance year, December 31, 2024; or

(2) Be a hospital participating in the BPCI Advanced model, either as a participant or downstream episode initiator, that participates in BPCI Advanced until the last day of the last performance period, December 31, 2025.

(c) *Voluntary participation election period.* The voluntary participation election period begins on January 1, 2025 and ends on January 31, 2025.

(d) *Voluntary participation election letter.* The voluntary participation election letter serves as the model participation agreement. CMS may accept the voluntary participation election letter if the letter meets all of the following criteria:

- (1) Includes all of the following:
 - (i) Hospital name.
 - (ii) Hospital address.
 - (iii) Hospital CCN.
 - (iv) Hospital contact name, telephone number, and email address.
 - (v) Model name (TEAM).
- (2) Includes a certification that the hospital will—

(i) Comply with all applicable requirements of this part and all other laws and regulations applicable to its participation in TEAM; and

(ii) Submit data or information to CMS that is accurate, complete and truthful, including, but not limited to, the participation election letter and any other data or information that CMS uses for purposes of TEAM.

(3) Is signed by the hospital administrator, chief financial officer, or chief executive officer with authority to bind the hospital.

(4) Is submitted in the form and manner specified by CMS.

(e) *CMS rejection of participation letter.* CMS may reject a participation election letter for reasons including, but not limited to, program integrity concerns or ineligibility, and notifies

the hospital of the rejection within 30 days of the determination.

§ 512.515 Geographic areas.

(a) *General.* CMS uses stratified random sampling to select the mandatory CBSAs included in TEAM.

(b) *Exclusions.* CMS excludes from the selection of geographic areas CBSAs that meet any of the following criteria:

(1) Are located entirely in the State of Maryland.

(2) Are located partially in Maryland, and in which more than 50 percent of the five episode categories tested in TEAM were initiated at a Maryland hospital between January 1, 2022 and June 30, 2023.

(3) Did not have at least one episode for at least one of the five episode categories tested in TEAM between January 1, 2022 and June 30, 2023.

(c) *Stratification.* (1) Based on the median for each of the following four metrics, CMS designates the CBSAs that are not excluded in accordance with paragraph (b) of this section as “high” and “low”:

(i) Average episode spend for a broad set of episode categories tested in the BPCI Advanced Model, as described in § 512.505, between January 1, 2022 and June 30, 2023.

(ii) Number of acute care hospitals paid under the IPPS between January 1, 2022 and June 30, 2023.

(iii) Past exposure to CMS’ bundled payment models, which are Bundled Payments for Care Improvement (BPCI) Models 2, 3, and 4, as described in § 512.505, Comprehensive Care for Joint Replacement (CJR) as described in § 512.505, or BPCI Advanced between October 1, 2013 and December 31, 2022.

(iv) Number of Safety Net hospitals in 2022 that have initiated at least one episode between January 1, 2022 and June 30, 2023 for at least one of the five episode categories tested in TEAM.

(2)(i) CMS stratifies the CBSAs into mutually exclusive groups corresponding to the 16 unique combinations of these “high” and “low” designations.

(ii) CMS assigns selection probabilities ranging from 20 percent to 33.3 percent to each of the 16 strata, with a higher selection probability for strata containing CBSAs with a high number of safety net hospitals or low past exposure to bundles and a lower selection probability for all other strata.

(3)(i) CMS recategorizes outlier CBSAs in these 16 strata with a very high number of safety net hospitals into a 17th stratum.

(ii) CMS assigns a selection probability of 50 percent to the 17th stratum.

(4)(i) CMS recategorizes CBSAs still remaining in the first 16 strata with at least one hospital participating in BPCI Advanced or CJR as of January 1, 2024 or those located in the states of Vermont, Connecticut, or Hawaii into an 18th stratum.

(ii) CMS assigns a selection probability of 20 percent to the 18th stratum.

(d) *Random selection into TEAM.* CMS randomly selects mandatory CBSAs into TEAM from each of the 18 strata according to selection probabilities described in paragraph (c) of this section.

§ 512.520 Participation tracks.

(a) *For performance year 1:* (1) Any TEAM participant may choose to participate in Track 1 or Track 3.

(2) The TEAM participant must notify CMS of its track choice, prior to performance year 1, in a form and manner and by a date specified by CMS.

(3) CMS assigns the TEAM participant to Track 1 for performance year 1 if a TEAM participant does not choose a track in the form and manner and by the date specified by CMS.

(b) *For performance years 2 through 5:* (1) CMS assigns a TEAM participant to participate in Track 3 unless the TEAM participant requests to participate in Track 1 or Track 2 and receives approval from CMS to participate in Track 1 or Track 2, with the exception that a TEAM participant cannot request participation in Track 1 for performance years 4 and 5.

(2) The TEAM participant must notify CMS of its Track 1 or Track 2 request prior to performance year 2, and prior to every performance year thereafter, as applicable, in a form and manner and by a date specified by CMS.

(3) CMS does not approve a TEAM participant's request to participate in Track 1 submitted in accordance with paragraph (b)(2) of this section unless the TEAM participant is a safety net hospital, as defined in § 512.505, at the time of the request.

(4) CMS does not approve a TEAM participant's request to participate in Track 2 submitted in accordance with paragraph (b)(2) of this section unless the TEAM participant is one of the following hospital types at the time of the request:

(i) Medicare-dependent hospital (as defined in § 512.505).

(ii) Rural hospital (as defined in § 512.505).

(iii) Safety Net hospital (as defined in § 512.505).

(iv) Sole community hospital (as defined in § 512.505).

(v) Essential access community hospital (as defined in § 512.505).

(5) A TEAM participant who does not notify CMS of its Track 1 or Track 2 request prior to a given performance year in the form and manner and by the date specified by CMS or who is not a safety net hospital, as defined as defined in § 512.505, or one of the hospital types specified in paragraph (b)(4) of this section at the time of the request is assigned to Track 3 for the applicable performance year.

§ 512.522 APM options.

(a) *TEAM APM options.* For performance years 1 through 5, a TEAM participant may choose either of the following options based on their CEHRT use and track participation:

(1) *AAPM option.* A TEAM participant participating in Track 2 or Track 3 may select the AAPM option by attesting in a form and manner and by a date specified by CMS to their use of CEHRT, as defined in § 414.1305 of this chapter, on an annual basis prior to the start of each performance year.

(i) A TEAM participant that selects the AAPM option as provided for in paragraph (a)(1) must provide their CMS electronic health record certification ID in a form and manner and by a date specified by CMS on annual basis prior to the end of each performance year.

(ii) A TEAM participant that selects the AAPM option as provided for in paragraph (a)(1) must retain documentation of their attestation to CEHRT use and provide access to the documentation in accordance with § 512.586.

(2) *Non-AAPM option.* CMS assigns the TEAM participant to the non-AAPM option if the TEAM participant is in Track 1 or if the TEAM participant is in Track 2 or Track 3 and does not attest in a form and manner and by a date specified by CMS to their use of CEHRT as defined in § 414.1305 of this chapter.

(b) *Financial arrangements list.* A TEAM participant with TEAM collaborators, collaboration agents, or downstream collaboration agents during a performance year must submit to CMS a financial arrangements list in a form and manner and by a date specified by CMS on a quarterly basis for each performance year. The financial arrangements list must include the following:

(1) *TEAM collaborators.* For each physician, nonphysician practitioner, or therapist who is a TEAM collaborator during the performance year:

(i) The name, TIN, and NPI of the TEAM collaborator.

(ii) The start date and, if applicable, end date, for the sharing arrangement between the TEAM participant and the TEAM collaborator.

(2) *Collaboration agents.* For each physician, nonphysician practitioner, or therapist who is a collaboration agent during the performance year:

(i) The name, TIN, and NPI of the collaboration agent and the name and TIN of the TEAM collaborator with which the collaboration agent has entered into a distribution arrangement.

(ii) The start date and, if applicable, end date, for the distribution arrangement between the TEAM collaborator and the collaboration agent.

(3) *Downstream collaboration agents.* For each physician, nonphysician practitioner, or therapist who is a downstream collaboration agent during the performance year:

(i) The name, TIN, and NPI of the downstream collaboration agent and the name and TIN of the collaboration agent with which the downstream collaboration agent has entered into a downstream distribution arrangement.

(ii) The start date and, if applicable, end date, for the downstream distribution arrangement between the collaboration agent and the downstream collaboration agent.

(c) *Clinician engagement list.* A TEAM participant must submit to CMS a clinician engagement list in a form and manner and by a date specified by CMS on a quarterly basis during each performance year. The clinician engagement list must include the following:

(1) For each physician, nonphysician practitioner, or therapist who is not on a TEAM participant's financial arrangements list during the performance year but who does have a contractual relationship with the TEAM participant and participates in TEAM activities during the performance year:

(i) The name, TIN, and NPI of the physician, nonphysician practitioner, or therapist.

(ii) The start date and, if applicable, the end date for the contractual relationship between the physician, nonphysician practitioner, or therapist and the TEAM participant.

(d) *Attestation to no individuals.* A TEAM participant with no individuals that meet the criteria specified in paragraphs (b)(1) through (3) of this section for the financial arrangements list or paragraph (c) of this section for the clinician engagement list must attest in a form and manner and by a date specified by CMS that there are no financial arrangements or clinician engagements to report.

(e) *Documentation requirements.* A TEAM participant that submits a financial arrangements list specified in paragraph (b) of this section or a clinician engagement list specified in

paragraph (c) of this section must retain and provide access to the documentation in accordance with § 512.586.

Scope of Episodes Being Tested

§ 512.525 Episodes.

(a) *Time periods.* All episodes must begin on or after January 1, 2026 and end on or before December 31, 2030.

(b) *Episode attribution.* All items and services included in the episode are attributed to the TEAM participant at which the anchor hospitalization or anchor procedure, as applicable, occurs.

(c) *Episode initiation.* An episode is initiated by—

(1) A beneficiary's admission to a TEAM participant for an anchor hospitalization that is paid under a MS-DRG specified in paragraph (d) of this section; or

(2) A beneficiary's receipt of an anchor procedure billed under a HCPCS code specified in paragraph (d) of this section. If an anchor hospitalization is initiated on the same day as or in the 3 days following an outpatient procedure that could initiate an anchor procedure for the same episode category, the episode start date is that of the outpatient procedure rather than the admission date, and an anchor procedure is not initiated.

(d) *Episode categories.* The MS-DRGs and HCPCS codes included in the episodes are as follows:

(1) *Lower Extremity Joint Replacement (LEJR):* (i) IPPS discharge under MS-DRG 469, 470, 521, or 522; or

(ii) OPPI claim for HCPCS codes 27447, 27130, or 27702.

(2) *Surgical Hip/Femur Fracture Treatment (SHFFT).* IPPS discharge under MS-DRG 480 to 482.

(3) *Coronary Artery Bypass Graft Surgery (CABG).* IPPS discharge under MS-DRG 231 to 236.

(4) *Spinal Fusion:* (i) IPPS discharge under MS-DRG 402, 426, 427, 428, 429, 430, 447, 448, 450, 451, 471, 472, 473; or

(ii) OPPI claim for HCPCS codes 22551, 22554, 22612, 22630, or 22633.

(5) *Major Bowel Procedure.* IPPS discharge under MS-DRG 329 to 331.

(e) *Included services.* All Medicare Part A and B items and services are included in the episode, except as specified in paragraph (f) of this section. These services include, but are not limited to, the following:

- (1) Physicians' services.
- (2) Inpatient hospital services (including hospital readmissions).
- (3) IPF services.
- (4) LTCH services.
- (5) IRF services.

(6) SNF services.

(7) HHA services.

(8) Hospital outpatient services.

(9) Outpatient therapy services.

(10) Clinical laboratory services.

(11) DME.

(12) Part B drugs and biologicals, except for those excluded under paragraph (f) of this section.

(13) Hospice services.

(14) Part B professional claims dated in the 3 days prior to an anchor hospitalization if a claim for the surgical procedure for the same episode category is not detected as part of the hospitalization because the procedure was performed by the TEAM participant on an outpatient basis, but the patient was subsequently admitted as an inpatient.

(f) *Excluded services.* The following items, services, and payments are excluded from the episode:

(1) Select items and services considered unrelated to the anchor hospitalization or the anchor procedure for episodes in the baseline period and performance year, including, but not limited to, the following:

(i) Inpatient hospital admissions for MS-DRGs that group to the following categories of diagnoses:

(A) Oncology.

(B) Trauma medical.

(C) Organ transplant.

(D) Ventricular shunt.

(ii) Inpatient hospital admissions that fall into the following Major Diagnostic Categories (MDCs):

(A) MDC 02 (Diseases and Disorders of the Eye).

(B) MDC 14 (Pregnancy, Childbirth, and Puerperium).

(C) MDC 15 (Newborns).

(D) MDC 25 (Human Immunodeficiency Virus).

(2) New technology add-on payments, as defined in part 412, subpart F of this chapter for episodes in the baseline period and performance year.

(3) Transitional pass-through payments for medical devices as defined in § 419.66 of this chapter for episodes initiated in the baseline period and performance year.

(4) Hemophilia clotting factors provided in accordance with § 412.115 of this chapter for episodes in the baseline period and performance year.

(5) Part B payments for low-volume drugs, high-cost drugs and biologicals, and blood clotting factors for hemophilia for episodes in the baseline period and performance year, billed on outpatient, carrier, and DME claims, defined as—

(i) Drug/biological HCPCS codes that are billed in fewer than 31 episodes in total across all episodes in TEAM during the baseline period;

(ii) Drug/biological HCPCS codes that are billed in at least 31 episodes in the baseline period and have a mean cost of greater than \$25,000 per episode in the baseline period; and

(iii) HCPCS codes corresponding to clotting factors for hemophilia patients, identified in the quarterly average sales price file for certain Medicare Part B drugs and biologicals as HCPCS codes with clotting factor equal to 1, HCPCS codes for new hemophilia clotting factors not included in the baseline period, and other HCPCS codes identified as hemophilia.

(6) Part B payments for low-volume drugs, high-cost drugs and biologicals, and blood clotting factors for hemophilia for episodes initiated in the performance year, billed on outpatient, carrier, and DME claims, defined as—

(i) Drug/biological HCPCS codes that were not captured in the baseline period and appear in 10 or fewer episodes in the performance year;

(ii) Drug/biological HCPCS codes that were not included in the baseline period, appear in more than 10 episodes in the performance year, and have a mean cost of greater than \$25,000 per episode in the performance year; and

(iii) Drug/biological HCPCS codes that were not included in the baseline period, appear in more than 10 episodes in the performance year, have a mean cost of \$25,000 or less per episode in the performance year, and correspond to a drug/biological that appears in the baseline period but was assigned a new HCPCS code between the baseline period and the performance year.

(iv) HCPCS codes for new hemophilia clotting factors not included in the baseline period.

(g) *TEAM exclusions List.* The list of excluded MS-DRGs, MDCs, and HCPCS codes is posted on the CMS website.

(h) *Updating the TEAM exclusions list.* The list of excluded services is updated through rulemaking to reflect all of the following:

- (1) Changes to the MS-DRGs under the IPPS.
- (2) Coding changes.
- (3) Other issues brought to CMS' attention.

§ 512.535 Beneficiary inclusion criteria.

(a) Episodes tested in TEAM include only those in which care is furnished to beneficiaries who meet all of the following criteria upon admission for an anchor procedure or anchor hospitalization:

- (1) Are enrolled in Medicare Parts A and B.
- (2) Are not eligible for Medicare on the basis of having end stage renal disease, as described in § 406.13 of this chapter.

(3) Are not enrolled in any managed care plan (for example, Medicare Advantage, health care prepayment plans, or cost-based health maintenance organizations).

(4) Are not covered under a United Mine Workers of America health care plan.

(5) Have Medicare as their primary payer.

(b) The episode is canceled in accordance with § 512.537(b) if at any time during the episode a beneficiary no longer meets all criteria in this section.

§ 512.537 Determination of the episode.

(a) *Episode conclusion.* (1) An episode ends on the 30th day following the date of the anchor procedure or the date of discharge from the anchor hospitalization, as applicable, with the date of the anchor procedure or the date of discharge from the anchor hospitalization being counted as the first day in the 30-day post-discharge period.

(b) *Cancellation of an episode.* The episode is canceled and is not included in the reconciliation calculation as specified in § 512.545 if any of the following occur:

(1) The beneficiary ceases to meet any criterion listed in § 512.535.

(2) The beneficiary dies during the anchor hospitalization or the outpatient stay for the anchor procedure.

(3) The episode qualifies for cancellation due to extreme and uncontrollable circumstances. An extreme and uncontrollable circumstance occurs if both of the following criteria are met:

(i) The TEAM participant has a CCN primary address that—

(A) Is located in an emergency area, as those terms are defined in section 1135(g) of the Act, for which the Secretary has issued a waiver under section 1135 of the Act; and

(B) Is located in a county, parish, or tribal government designated in a major disaster declaration or emergency disaster declaration under the Stafford Act.

(ii) The date of admission to the anchor hospitalization or the date of the anchor procedure is during an emergency period (as defined in section 1135(g) of the Act) or in the 30 days before the date that the emergency period (as defined in section 1135(g) of the Act) begins.

Pricing Methodology

§ 512.540 Determination of preliminary target prices.

(a) *Preliminary target price application.* CMS establishes preliminary target prices for TEAM

participants for each performance year of the model as follows:

(1) *MS-DRG/HCPCS episode type.*

CMS uses the MS-DRGs and, as applicable, HCPCS codes specified in § 512.525(d) when calculating the preliminary target prices for each MS-DRG/HCPCS episode type.

(i) CMS determines a separate preliminary target price for each of the 24 MS-DRGs specified in § 512.525(d).

(ii) Preliminary target prices for a subset of the MS-DRGs specified in § 512.525(d) include certain HCPCS codes as follows:

(A) HCPCS 27130 and 27447 are included in MS-DRG 470.

(B) HCPCS 27702 is included in MS-DRG 469.

(C) HCPCS 22551 and 22554 are included in MS-DRG 473.

(D) HCPCS 22612 and 22630 are included in MS-DRG 451.

(E) HCPCS 22633 is included in MS-DRG 402.

(2) *Applicable time period for preliminary target prices.* CMS calculates preliminary target prices for each MS-DRG/HCPCS episode type and region for each performance year and applies the preliminary target price to each episode based on the episode's date of discharge from the anchor hospitalization or the episode's date of the anchor procedure, as applicable.

(3) *Episodes that begin in one performance year and end in the subsequent performance year.* CMS applies the preliminary target price to the episode based on the date of discharge from the anchor hospitalization or the date of the anchor procedure, as applicable, but reconciles the episode based on the end date of the episode.

(b) *Preliminary target price calculation.* (1) CMS calculates preliminary target prices based on average baseline episode spending for the region where the TEAM participant is located.

(i) The region used for calculating the preliminary target price corresponds to the U.S. Census Division associated with the primary address of the CCN of the TEAM participant, and the regional episode spending amount is based on all hospitals in the region, except as specified in § 512.540(b)(1)(ii).

(ii) In cases where a TEAM participant is located in a mandatory CBSA selected for participation in TEAM which spans more than one region, the TEAM participant and all other hospitals in the mandatory CBSA are grouped into the region where the most populous city in the mandatory CBSA is located for pricing and payment calculations.

(2) CMS uses the following baseline periods to determine baseline episode spending:

(i) Performance Year 1: Episodes beginning on January 1, 2022 through December 31, 2024.

(ii) Performance Year 2: Episodes beginning on January 1, 2023 through December 31, 2025.

(iii) Performance Year 3: Episodes beginning on January 1, 2024 through December 31, 2026.

(iv) Performance Year 4: Episodes beginning on January 1, 2025 through December 31, 2027.

(v) Performance Year 5: Episodes beginning on January 1, 2026 through December 31, 2028.

(3) CMS calculates the benchmark price as the weighted average of baseline episode spending, applying the following weights:

(i) Baseline episode spending from baseline year 1 is weighted at 17 percent.

(ii) Baseline episode spending from baseline year 2 is weighted at 33 percent.

(iii) Baseline episode spending from baseline year 3 is weighted at 50 percent.

(4) *Exception for high episode spending.* CMS applies a high-cost outlier cap to baseline episode spending at the 99th percentile of regional spending for each of the MS-DRG/HCPCS episode types specified in § 512.540(a)(1)(ii).

(5) *Exclusion of incentive programs and add-on payments under existing Medicare payment systems.* Certain Medicare incentive programs and add-on payments are excluded from baseline episode spending by using, with certain modifications, the CMS Price (Payment) Standardization Detailed Methodology used for the Medicare spending per beneficiary measure in the Hospital Value-Based Purchasing Program.

(6) *Prospective normalization factor.* Based on the episodes in the most recent calendar year of the baseline period, CMS calculates a prospective normalization factor, which is a multiplier that ensures that the average risk adjusted target price does not exceed the average unadjusted target price, by doing the following:

(i) CMS applies risk adjustment multipliers, as specified in § 512.545(a)(1) through (3), to the most recent baseline year episodes to calculate the estimated risk-adjusted target price for all performance year episodes.

(ii) CMS divides the mean of the preliminary target price for each episode across all hospitals and regions by the mean of the estimated risk-adjusted

target price calculated in § 512.540(b)(6)(i) for the same episode types across all hospitals and regions.

(7) *Prospective trend factor.* CMS calculates the following:

(i) The average regional episode spending for each MS-DRG/HCPCS episode type using the most recent calendar year of the applicable baseline period.

(ii) The difference between the average regional spending for each MS-DRG/HCPCS episode type during the most recent calendar year of the baseline period and the average regional spending for each MS-DRG/HCPCS episode type during the first years of the baseline period to determine the prospective trend factor.

(8) *Communication of preliminary target prices.* CMS communicates the preliminary target prices for each MS-DRG/HCPCS episode type for each region to the TEAM participant before the performance year in which they apply.

(c) *Discount factor.* CMS incorporates an episode category specific discount factor of 1.5 percent for CABG and Major Bowel episodes and 2 percent for LEJR, SHFFT, and Spinal Fusion episodes to the TEAM participant's preliminary episode target prices intended to reflect Medicare's potential savings from TEAM.

§ 512.545 Determination of reconciliation target prices.

CMS calculates the reconciliation target price as follows:

(a) CMS risk adjusts the preliminary episode target prices computed under § 512.540 at the beneficiary level using a TEAM Hierarchical Condition Category (HCC) count risk adjustment factor, an age bracket risk adjustment factor, a social need risk adjustment factor, and at the hospital level using a hospital bed size risk adjustment factor and a safety net hospital risk adjustment factor, and at the episode category-specific beneficiary level using factors specified in paragraph (a)(6)(i) through (v) of this section.

(1) The TEAM HCC count risk adjustment factor uses five variables, representing beneficiaries with zero, one, two, three, or four or more CMS-HCC conditions based on a lookback period that ends on the day prior to the anchor hospitalization or anchor procedure.

(2) The age bracket risk adjustment factor uses four variables, representing beneficiaries in the following age groups as of the first day of the episode:

- (i) Less than 65 years.
- (ii) 65 to less than 75 years.
- (iii) 75 years to less than 85 years.

(iv) 85 years or more.

(3) The social need risk adjustment factor uses two variables, representing beneficiaries that, as of the first day of the episode—

(i) Meet one or more of the following measures of social need:

(A) State ADI above the 8th decile.

(B) National ADI above the 80th percentile.

(C) Eligibility for the low-income subsidy.

(D) Eligibility for full Medicaid benefits.

(ii) Do not meet any of the three measures of social need in § 512.545(a)(1)(iii)(A).

(4) The hospital bed size risk adjustment factor uses four variables based on the TEAM participant's characteristics:

(i) 250 beds or fewer.

(ii) 251–500 beds.

(iii) 501–850 beds.

(iv) 850 beds or more.

(5) The safety net hospital risk adjustment factor is based on the TEAM participant meeting the definition of safety net hospital, as defined in § 512.505.

(6) Episode category-specific beneficiary level risk adjustment factors represent the presence or absence in beneficiaries, as of the first day of the episode, of each of the following conditions:

(i) CABG episode category.

(A) Prior post-acute care use.

(B) HCC 18: Diabetes with Chronic Complications.

(C) HCC 46: Severe Hematological Disorders.

(D) HCC 58: Major Depressive, Bipolar, and Paranoid Disorders.

(E) HCC 84: Cardio-Respiratory Failure and Shock.

(F) HCC 85: Congestive Heart Failure.

(G) HCC 86: Acute Myocardial Infarction.

(H) HCC 96: Specified Heart Arrhythmias.

(I) HCC 103: Hemiplegia/Hemiparesis.

(J) HCC 111: Chronic Obstructive Pulmonary Disease.

(K) HCC 112: Fibrosis of Lung and Other Chronic Lung Disorders.

(L) HCC 134: Dialysis Status.

(ii) LEJR episode category.

(A) Ankle procedure or reattachment, partial hip procedure, partial knee arthroplasty, total hip arthroplasty or hip resurfacing procedure, and total knee arthroplasty.

(B) Disability as the original reason for Medicare enrollment.

(C) Dementia without complications.

(D) Prior post-acute care use.

(E) HCC 8: Metastatic Cancer and Acute Leukemia.

(F) HCC 18: Diabetes with Chronic Complications.

(G) HCC 22: Morbid Obesity.

(H) HCC 58: Major Depressive, Bipolar, and Paranoid Disorders.

(I) HCC 78: Parkinson's and Huntington's Diseases.

(J) HCC 85: Congestive Heart Failure.

(K) HCC 86: Acute Myocardial Infarction.

(L) HCC 103: Hemiplegia/Hemiparesis.

(M) HCC 111: Chronic Obstructive Pulmonary Disease.

(N) HCC 112: Fibrosis of Lung and Other Chronic Lung Disorders.

(O) HCC 134: Dialysis Status.

(P) HCC 170: Hip Fracture/Dislocation.

(iii) Major Bowel Procedure episode category.

(A) Long-term institutional care use.

(B) HCC 11: Colorectal, Bladder, and Other Cancers.

(C) HCC 18: Diabetes with Chronic Complications.

(D) HCC 21: Protein-Calorie Malnutrition.

(E) HCC 33: Intestinal Obstruction/Perforation.

(F) HCC 82: Respirator Dependence/Tracheostomy Status.

(G) HCC 85: Congestive Heart Failure.

(H) HCC 86: Acute Myocardial Infarction.

(I) HCC 103: Hemiplegia/Hemiparesis.

(J) HCC 111: Chronic Obstructive Pulmonary Disease.

(K) HCC 112: Fibrosis of Lung and Other Chronic Lung Disorders.

(L) HCC 134: Dialysis Status.

(M) HCC 188: Artificial Openings for Feeding or Elimination.

(iv) SHFFT episode category.

(A) HCC 18: Diabetes with Chronic Complications.

(B) HCC 22: Morbid Obesity.

(C) HCC 82: Respirator Dependence/Tracheostomy Status.

(D) HCC 83: Respiratory Arrest.

(E) HCC 84: Cardio-Respiratory Failure and Shock.

(F) HCC 85: Congestive Heart Failure.

(G) HCC 86: Acute Myocardial Infarction.

(H) HCC 96: Specified Heart Arrhythmias.

(I) HCC 103: Hemiplegia/Hemiparesis.

(J) HCC 111: Chronic Obstructive Pulmonary Disease.

(K) HCC 112: Fibrosis of Lung and Other Chronic Lung Disorders.

(L) HCC 134: Dialysis Status.

(M) HCC 157: Pressure Ulcer of Skin with Necrosis Through to Muscle, Tendon, or Bone.

(N) HCC 158: Pressure Ulcer of Skin with Full Thickness Skin Loss.

(O) HCC 161: Chronic Ulcer of Skin, Except Pressure.

(P) HCC 170: Hip Fracture/Dislocation.

(v) Spinal Fusion episode category.

(A) Prior post-acute care use.

(B) HCC 8: Metastatic Cancer and Acute Leukemia.

(C) HCC 18: Diabetes with Chronic Complications.

(D) HCC 22: Morbid Obesity.

(E) HCC 40: Rheumatoid Arthritis and Inflammatory Connective Tissue Disease.

(F) HCC 58: Major Depressive, Bipolar, and Paranoid Disorders.

(G) HCC 85: Congestive Heart Failure.

(H) HCC 86: Acute Myocardial Infarction.

(I) HCC 96: Specified Heart Arrhythmias.

(J) HCC 103: Hemiplegia/Hemiparesis.

(K) HCC 111: Chronic Obstructive Pulmonary Disease.

(L) HCC 112: Fibrosis of Lung and Other Chronic Lung Disorders.

(M) HCC 134: Dialysis Status.

(b) All risk adjustment factors are computed prior to the start of the performance year via a linear regression analysis. The regression analysis is computed using 3 years of claims data as follows:

(1) For performance year 1, CMS uses claims data with dates of service dated January 1, 2022 to December 31, 2024.

(2) For performance year 2, CMS uses claims data with dates of service dated January 1, 2023 to December 31, 2025.

(3) For performance year 3, CMS uses claims data with dates of service dated January 1, 2024 to December 31, 2026.

(4) For performance year 4, CMS uses claims data with dates of service dated January 1, 2025 to December 31, 2027.

(5) For performance year 5, CMS uses claims data with dates of service dated January 1, 2026 to December 30, 2028.

(c) The annual linear regression analysis produces exponentiated coefficients to determine the anticipated marginal effect of each risk adjustment factor on episode costs. CMS transforms, or exponentiates, these coefficients, and the resulting coefficients are the beneficiary and hospital-level risk adjustment factors, specified in paragraphs (a)(1) through (6) of this section, that would be used during reconciliation for the subsequent performance year.

(d) At the time of reconciliation, the preliminary target prices computed under § 512.540 are risk adjusted by applying the applicable beneficiary level and hospital-level risk adjustment factors specific to the beneficiary in the episode, as set forth in paragraphs (a)(1) through (6) of this section.

(e) The risk-adjusted preliminary target prices are normalized at

reconciliation to ensure that the average of the total risk-adjusted preliminary target price does not exceed the average of the total non-risk adjusted preliminary target price.

(1) The final normalization factor at reconciliation—

(i) Is the national mean of the benchmark price for each MS-DRG/HCPCS episode type divided by the national mean of the risk-adjusted benchmark price for the same MS-DRG/HCPCS episode type.

(ii) As applied, cannot exceed ± 5 percent of the prospective normalization factor (as specified in § 512.540(b)(6)).

(2) CMS applies the final normalization factor to the previously calculated, beneficiary and provider level, risk-adjusted target prices specific to each region and MS-DRG/HCPCS episode type.

(f) *Retrospective trend factor.* CMS calculates the average regional capped performance year episode spending for each MS-DRG/HCPCS episode type divided by the average regional capped baseline period episode spending for each MS-DRG/HCPCS episode type.

(1) The retrospective trend factor is capped so that the maximum difference cannot exceed ± 3 percent of the prospective trend factor (as specified in § 512.540(b)(7)).

(2) CMS applies the capped retrospective trend factor to the previously calculated normalized, risk adjusted target prices specific to each region and MS-DRG/HCPCS episode type, as specified in paragraph (e)(2) of this section, to calculate the reconciliation target prices, which are compared to performance year spending at reconciliation, as specified in § 512.550(c).

Quality Measures and Composite Quality Score

§ 512.547 Quality measures, composite quality score, and display of quality measures.

(a) *Quality measures.* CMS calculates the quality measures used to evaluate the TEAM participant's performance using Medicare claims data or patient-reported outcomes data that TEAM participants report under the Hospital Inpatient Quality Reporting Program and the Hospital-Acquired Condition Reduction Program. The following quality measures and CQS baseline periods are used for public reporting and for determining the TEAM participant's CQS as described in paragraph (b) of this section:

(1) For performance year 1:

(i) For all episode categories: Hybrid Hospital-Wide All-Cause Readmission Measure with Claims and Electronic

Health Record Data (CMIT ID #356) with a CY 2025 CQS baseline period;

(ii) For all episode categories: CMS Patient Safety and Adverse Events Composite (CMS PSI 90) (CMIT ID #135) with a CY 2025 CQS baseline period; and

(iii) For LEJR episodes: Hospital-Level Total Hip and/or Total Knee Arthroplasty (THA/TKA) Patient-Reported Outcome-Based Performance Measure (PRO-PM) (CMIT ID #1618) with a CY 2025 CQS baseline period.

(2) For performance years 2 through 5:

(i) For all episode categories: Hybrid Hospital-Wide All-Cause Readmission Measure with Claims and Electronic Health Record Data (CMIT ID #356) with a CY 2025 CQS baseline period;

(ii) For all episode categories: Hospital Harm—Falls with Injury (CMIT ID #1518) with a CY 2026 CQS baseline period;

(iii) For all episode categories: Hospital Harm—Postoperative Respiratory Failure (CMIT ID #1788) with a CY 2026 CQS baseline period;

(iv) For all episode categories: Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) (CMIT ID #134) with a CY 2026 CQS baseline period; and

(v) For LEJR episodes: Hospital-Level Total Hip and/or Total Knee Arthroplasty (THA/TKA) Patient-Reported Outcome-Based Performance Measure (PRO-PM) (CMIT ID #1618) with a CY 2025 CQS baseline period.

(b) *Calculation of the composite quality score (CQS).* (1) CMS converts the TEAM participant's raw quality measure score for the performance year into a scaled quality measure score by comparing the raw quality measure score to the distribution of raw quality measure score percentiles among a national cohort of hospitals, consisting of TEAM participants and hospitals not participating in TEAM, in the CQS baseline period.

(i) CMS assigns a scaled quality measure score equal to the percentile to which the TEAM Participant's raw quality measure score would have belonged in the CQS baseline period.

(A) CMS assigns the higher scaled quality measure score if the TEAM participant's raw quality measure score straddles two percentiles in the CQS baseline period.

(B) For the Hospital-Level Total Hip and/or Total Knee Arthroplasty (THA/TKA) Patient-Reported Outcome-Based Performance Measure (PRO-PM) (CMIT ID #1618):

(1) CMS assigns a scaled quality measure score of 100 if the TEAM participant's raw quality measure score

is greater than the maximum of the raw quality measure scores in the CQS baseline period.

(2) CMS assigns a scaled quality measure score of 0 if the raw quality measure score is less than the minimum of the raw quality measure scores in the baseline period.

(C) For the Hybrid Hospital-Wide All-Cause Readmission Measure with Claims and Electronic Health Record Data (CMIT ID #356) measure, the CMS Patient Safety and Adverse Events Composite (CMS PSI 90) (CMIT ID #135) measure, the Hospital Harm—Falls with Injury (CMIT ID #1518) measure, the Hospital Harm—Postoperative Respiratory Failure (CMIT ID #1788) measure, and the Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) (CMIT ID #134) measure:

(1) CMS assigns a scaled quality measure score of 0 if the TEAM participant has a raw quality measure score greater than the maximum of the raw quality measure scores in the CQS baseline period.

(2) CMS assigns a scaled quality measure score of 100 if the TEAM participant has a raw quality score less than the minimum of the raw scores in the CQS baseline period.

(D) CMS does not assign a scaled quality measure score if the TEAM participant has no raw quality measure score.

(2) CMS calculates a normalized weight for each quality measure by dividing the TEAM participant's volume of attributed episodes for a given quality measure by the total volume of all the TEAM participant's attributed episodes.

(3) CMS calculates a weighted scaled score for each quality measure by multiplying each quality measure's scaled quality measure score, computed under paragraph (b)(2) of this section, by its normalized weight, computed under paragraph (b)(3) of this section.

(4) CMS sums each quality measure's weighted scaled score, computed under paragraph (b)(4) of this section, to construct the CQS.

(c) *Display of quality measures.* CMS does all of the following:

(1) Displays quality measure results on the publicly available CMS website that is specific to TEAM, in a form and manner consistent with other publicly reported measures.

(2) Shares quality measures with the TEAM participant prior to display on the CMS website.

(3) Uses the following time periods to share quality measure performance:

(i) Quality measure performance in performance year 1 is reported in 2027.

(ii) Quality measure performance in performance year 2 is reported in 2028.

(iii) Quality measure performance in performance year 3 is reported in 2029.

(iv) Quality measure performance in performance year 4 is reported in 2030.

(v) Quality measure performance in performance year 5 is reported in 2031.

Reconciliation and Review Process

§ 512.550 Reconciliation process and determination of the reconciliation payment or repayment amount.

(a) *General.* Providers and suppliers furnishing items and services included in the episode bill for such items and services in accordance with existing Medicare rules.

(b) *Reconciliation process.* Six months after the end of each performance year, CMS does the following:

(1) Performs a reconciliation calculation to establish a reconciliation payment or repayment amount for each TEAM participant.

(2) For TEAM participants that experience a reorganization event in which one or more hospitals reorganize under the CCN of a TEAM participant, performs—

(i) Separate reconciliation calculations for each predecessor TEAM participant for episodes where the anchor hospitalization admission or the anchor procedure occurred before the effective date of the reorganization event; and

(ii) Reconciliation calculations for each new or surviving TEAM participant for episodes where the anchor hospitalization admission or anchor procedure occurred on or after the effective date of the reorganization event.

(c) *Calculation of the reconciliation amount.* CMS compares the reconciliation target prices described in § 512.545 and the TEAM participant's performance year spending to establish a reconciliation amount for the TEAM participant for each performance year as follows:

(1) CMS determines the performance year spending for each episode included in the performance year (other than episodes that have been canceled in accordance with § 512.537(b)) using claims data that is available 6 months after the end of the performance year.

(2) CMS calculates and applies the high-cost outlier cap for performance year episode spending by applying the calculation described in § 512.540(b)(4) to performance year episode spending.

(3) CMS applies the adjustments specified in § 512.545 to the preliminary target prices computed in accordance with § 512.540 to calculate the reconciliation target prices.

(4) CMS aggregates the reconciliation target prices computed in accordance with paragraph (c)(3) of this section for all episodes included in the performance year (other than episodes that have been canceled in accordance with § 512.537(b)).

(5) CMS subtracts the performance year spending amount determined under paragraph (c)(1–2) of this section from the aggregated reconciliation target price amount determined under paragraph (c)(4) of this section to determine the reconciliation amount.

(d) *Calculation of the quality-adjusted reconciliation amount.* CMS adjusts the reconciliation amount based on the Composite Quality Score as follows:

(1) CMS calculates a CQS adjustment percentage based on a TEAM participant's CQS, computed in accordance with § 512.547(b).

(i) CMS applies a CQS adjustment percentage up to 10 percent for positive reconciliation amounts for TEAM participants in Track 1.

(ii) CMS applies a CQS adjustment percentage up to 10 percent for positive reconciliation amounts and up to 15 percent for negative reconciliation amounts for TEAM participants in Track 2.

(iii) CMS applies a CQS adjustment percentage up to 10 percent for positive reconciliation amounts and up to 10 percent for negative reconciliation amounts for TEAM participants in Track 3.

(2) CMS multiplies the CQS adjustment percentage, computed under paragraph (d)(1) of this section, by the TEAM participant's positive or negative reconciliation amount calculated in paragraph (c) of this section to construct the CQS adjustment amount.

(3) CMS subtracts the CQS adjustment amount, computed from paragraph (d)(2) of this section, from the positive or negative reconciliation amount calculated in paragraph (c) of this section to construct the quality-adjusted reconciliation amount.

(e) *Calculation of the net payment reconciliation amount (NPRA).* CMS applies stop-loss and stop gain limits to the quality-adjusted reconciliation amount computed in paragraph (d) of this section to calculate the NPRA as follows:

(1) *Limitation on loss.* For TEAM participants in Track 3, except as provided in paragraph (e)(3) of this section, the repayment amount for a performance year cannot exceed 20 percent of the aggregated reconciliation target price amount calculated in paragraph (c)(3) of this section for the performance year. The post-episode spending calculation amount in

paragraph (f) of this section is not subject to the limitation on loss.

(2) *Limitation on gain.* (i) For TEAM participants in Track 1, the reconciliation payment amount for a performance year cannot exceed 10 percent of the aggregated reconciliation target price amount calculated in accordance with paragraph (c)(3) of this section for the performance year.

(ii) For TEAM participants in Tracks 2, the reconciliation payment amount for a performance year cannot exceed 5 percent of the aggregated reconciliation target price amount calculated in accordance with paragraph (c)(3) of this section for the performance year.

(iii) For TEAM participants in Track 3, the reconciliation payment amount for a performance year cannot exceed 20 percent of the aggregated reconciliation target price amount calculated in accordance with paragraph (c)(3) of this section for the performance year.

(iv) The post-episode spending amount calculated in accordance with paragraph (f) of this section is not subject to the limitation on gain.

(3) *Limitation on loss for certain providers.* For performance years 2–5, the repayment amount for a TEAM participant in Track 2 defined at § 512.505, must not exceed 5 percent of the aggregated reconciliation target price amount calculated in accordance with paragraph (c)(3) of this section.

(f) *Post-episode spending calculation.* CMS calculates the post-episode spending amount as follows: If the average post-episode spending amount for a TEAM participant in the performance year being reconciled is greater than 3 standard deviations above the regional average post-episode spending amount for the performance year, then the post-episode spending amount that exceeds 3 standard deviations above the regional average post-episode spending amount for the performance year is subtracted from the NPRA for that performance year.

(g) *Calculation of the reconciliation payment or repayment amount.* (1) CMS applies the results of the post-episode spending calculation set forth in paragraph (f) of this section to the NPRA as follows:

(i) For TEAM participants whose post-episode spending amount does not exceed the limit calculated in paragraph (f) of this section, the reconciliation payment or repayment amount is equal to the NPRA.

(ii) If the TEAM participant's post-episode spending exceeds the limit calculated in paragraph (f) of this section, CMS subtracts the amount of post-episode spending exceeding the limit from the NPRA to calculate the

reconciliation payment or repayment amount.

(2) If the amount calculated in paragraph (g)(1) of this section is positive, the TEAM participant is owed a reconciliation payment in that amount, to be paid by CMS in one lump sum payment.

(3) If the amount calculated in paragraph (g)(1) of this section is negative, CMS determines the repayment amount as follows:

(i) For TEAM participants in Track 1, the TEAM participant does not owe a repayment amount.

(ii) For TEAM participants in Track 2 or Track 3 for Performance Years 1–5, as applicable, the Team participant owes that amount as a repayment to CMS.

(h) *TEAM reconciliation report.* CMS issues each TEAM participant a TEAM reconciliation report for the performance year. Each TEAM reconciliation report contains the following:

(1) The total performance year spending for the TEAM participant.

(2) The TEAM participant's reconciliation target prices.

(3) The TEAM participant's reconciliation amount.

(4) The TEAM participant's composite quality score calculated in accordance with § 512.547(b).

(5) The TEAM participant's quality-adjusted reconciliation amount.

(6) The stop-loss and stop-gain limits that apply to the TEAM participant.

(7) The TEAM participant's NPRA.

(8) The TEAM participant's post-episode spending amount, if applicable.

(9) The amount of any reconciliation payment owed to the TEAM participant or repayment owed by the TEAM participant to CMS for the performance year, if applicable.

§ 512.552 Treatment of incentive programs or add-on payments under existing Medicare payment systems.

The TEAM does not replace any existing Medicare incentive programs or add-on payments. The TEAM payments are independent of, and do not affect, any incentive programs or add-on payments under existing Medicare payment systems.

§ 512.555 Proration of payments for services that extend beyond an episode.

(a) *General.* CMS prorates services included in the episode that extend beyond the episode so that only those portions of the services that were furnished during the episode are included in the calculation of the actual episode payments.

(b) *Proration of services.* CMS prorates payments for services that extend

beyond the episode for the purposes of calculating both baseline episode spending and performance year spending using the following methodology:

(1) *Non-IPPS inpatient services.* Non-IPPS inpatient services that extend beyond the end of the episode are prorated according to the percentage of the actual length of stay (in days) that falls within the episode.

(2) *Home health agency services.* Home health agency services paid under the Medicare prospective payment system in accordance with part 484, subpart E of this chapter that extend beyond the episode are prorated according to the percentage of days, starting with the first billable service date and through and including the last billable service date, that occur during the episode.

(3) *IPPS services.* IPPS services that extend beyond the end of the episode are prorated according to the MS-DRG geometric mean length of stay, using the following methodology:

(i) The first day of the IPPS stay is counted as 2 days.

(ii) If the actual length of stay that occurred during the episode is equal to or greater than the MS-DRG geometric mean, the full MS-DRG payment is allocated to the episode.

(iii) If the actual length of stay that occurred during the episode is less than the MS-DRG geometric mean length of stay, the MS-DRG payment amount is allocated to the episode based on the number of inpatient days that fall within the episode.

(4) If the full amount of the payment is not allocated to the episode, any remainder amount is allocated to the post-episode spending calculation (defined in § 512.550(f)).

§ 512.560 Appeals process.

(a) *Notice of calculation error (first level of appeal).* Subject to the limitations on review in § 512.594, if a TEAM participant wishes to dispute calculations involving a matter related to payment, reconciliation amounts, repayment amounts, the use of quality measure results in determining the composite quality score, or the application of the composite quality score during reconciliation, the TEAM participant is required to provide written notice of the calculation error, in a form and manner and by a date specified by CMS.

(1) Unless the TEAM participant provides such written notice, CMS deems the TEAM reconciliation report to be final 30 calendar days after it is issued and proceeds with the payment or repayment processes as applicable.

(2) If CMS receives a notice of a calculation error within 30 calendar days of the issuance of the TEAM reconciliation report, CMS responds in writing within 30 calendar days to either confirm that there was an error in the calculation or verify that the calculation is correct. CMS reserves the right to extend the time for its response upon written notice to the TEAM participant.

(3) Only TEAM participants may use the calculation error process described in this part.

(b) *Exception to the appeals process.* If the TEAM participant contests a matter that does not involve an issue contained in, or a calculation that contributes to, a TEAM reconciliation report, a notice of calculation error is not required. In these instances, if CMS does not receive a request for reconsideration from the TEAM participant within 10 calendar days of the notice of the initial reconciliation, the initial determination is deemed final and CMS proceeds with the action indicated in the initial determination. This does not apply to the limitations on review in § 512.594.

§ 512.561 Reconsideration review processes.

(a) *Applicability of this section.* This section is applicable only where section 1869 of the Act has been waived or is not applicable for TEAM participants. This section is only applicable to TEAM participants.

(b) *Right to reconsideration.* The TEAM participant may request reconsideration of a determination made by CMS only if such reconsideration is not precluded by section 1115A(d)(2) of the Act or this subpart.

(1) A request for reconsideration by the TEAM participant must satisfy the following criteria:

(i) The request must be submitted to a designee of CMS (“Reconsideration Official”) who—

(A) Is authorized to receive such requests; and

(B) Did not participate in the determination that is the subject of the reconsideration request or, if applicable, the notice of calculation error process.

(ii) The request must include a copy of the initial determination issued by CMS and contain a detailed, written explanation of the basis for the dispute, including supporting documentation.

(iii) The request must be made within 30 days of the date of the initial determination for which reconsideration is being requested via email to an address as specified by CMS.

(2) Requests that do not meet the requirements of paragraph (b)(1) of this section are denied.

(3) Within 10 business days of receiving a request for reconsideration, the Reconsideration Official sends the parties a written acknowledgement of receipt of the reconsideration request. This acknowledgement sets forth the following:

(i) The review procedures.

(ii) A schedule that permits each party to submit position papers and supporting documentation in support of the party’s position for consideration by the reconsideration official.

(4) The TEAM participant must satisfy the notice of calculation error requirements specified in this part before submitting a reconsideration request under paragraph (b) of this section.

(c) *Standards for reconsideration.* (1) The parties must continue to fulfill all responsibilities and obligations under TEAM during the course of any dispute arising under this part.

(2) The reconsideration consists of a review of documentation that is submitted timely and in accordance with the standards specified by the reconsideration official.

(3) The burden of proof is on the TEAM participant to demonstrate to the reconsideration official with clear and convincing evidence that the determination is inconsistent with the terms of this subpart.

(d) *Reconsideration determination.* (1) The reconsideration determination is based solely upon—

(i) Position papers and supporting documentation that are timely submitted to the reconsideration official per the schedule defined in paragraph (b)(3)(ii) and meet the standards for submission under paragraph (b)(1) of this section; and

(ii) Documents and data that were timely submitted to CMS in the required format before CMS made the determination that is the subject of the reconsideration request.

(2) The reconsideration official issues the reconsideration determination to CMS and to the TEAM participant in writing.

(3) Absent unusual circumstances, in which case the reconsideration official reserves the right to an extension upon written notice to the TEAM participant, the reconsideration determination is issued within 60 days of receipt of timely filed position papers and supporting documentation per the schedule defined in paragraph (b)(3)(ii) of this section.

(4) The reconsideration determination is final and binding 30 days after its

issuance, unless the TEAM participant or CMS timely requests review of the reconsideration determination in accordance with paragraphs (e)(1) and (2) of this section.

(e) *CMS Administrator review.* The TEAM participant or CMS may request that the CMS Administrator review the reconsideration determination.

(1) The request must be made via email within 30 days of the date of the reconsideration determination to the address specified by CMS.

(2) The request must include a copy of the reconsideration determination and a detailed written explanation of why the TEAM participant or CMS disagrees with the reconsideration determination.

(3) The CMS Administrator promptly sends the parties a written acknowledgement of receipt of the request for review.

(4) The CMS Administrator sends the parties notice of the following:

(i) Whether the request for review is granted or denied.

(ii) If the request for review is granted, the review procedures and a schedule that permits each party to submit a brief in support of the party’s position for consideration by the CMS Administrator.

(5) If the request for review is denied, the reconsideration determination is final and binding as of the date the request for review is denied.

(6) If the request for review is granted—

(i) The record for review consists solely of—

(A) Timely submitted briefs and the evidence contained in the record of the proceedings before the reconsideration official; and

(B) Evidence as set forth in the documents and data described in paragraph (d)(1)(ii) of this section;

(ii) The CMS Administrator reviews the record and issues to CMS and to the TEAM participant a written determination; and

(iii) The written determination of the CMS Administrator is final and binding as of the date the written determination is sent.

Data Sharing and Other Requirements

§ 512.562 Data sharing with TEAM participants.

(a) *General.* CMS shares certain beneficiary-identifiable data as described in paragraphs (b), (c), and (e) of this section and certain regional aggregate data as described in paragraph (d) of this section with TEAM participants regarding TEAM beneficiaries and performance under the model.

(b) *Beneficiary-identifiable claims data.* CMS shares beneficiary-identifiable claims data with TEAM participants as follows:

(1) CMS makes available certain beneficiary-identifiable claims data described in paragraph (b)(5) of this section for TEAM participants to request for purposes of conducting health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501 regarding their TEAM beneficiaries.

(2) A TEAM participant that wishes to receive beneficiary-identifiable claims data for its TEAM beneficiaries must do all of the following:

(i) Submit a formal request for the data on at least an annual basis in a manner and form and by a date specified by CMS, indicating their selection of summary beneficiary-identifiable data, raw beneficiary-identifiable data, or both, and attest that—

(A) The TEAM participant is requesting claims data of TEAM beneficiaries who would be in an episode during the baseline period or performance year, as a HIPAA covered entity.

(B) The TEAM participant's request reflects the minimum data necessary, as set forth in paragraph (c) of this section, for the TEAM participant to conduct health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501.

(C) The TEAM participant's use of claims data is limited to developing processes and engaging in appropriate activities related to coordinating care, improving the quality and efficiency of care, and conducting population-based activities relating to improving health or reducing health care costs that are applied uniformly to all TEAM beneficiaries, in an episode during the baseline period or performance year, and that these data are not to be used to reduce, limit or restrict care for specific Medicare beneficiaries.

(ii) Sign and submit a TEAM data sharing agreement, as defined in § 512.505, with CMS as set forth in paragraph (e) of this section.

(3) CMS shares this beneficiary-identifiable claims data with a TEAM participant in accordance with applicable privacy and security laws and established privacy and security protections.

(4) CMS omits from the beneficiary-identifiable claims data any information that is subject to the regulations in 42 CFR part 2 governing the confidentiality

of substance use disorder patient records.

(5) The beneficiary-identifiable claims data includes, when available, the following:

(i) Unrefined (raw) Medicare Parts A and B beneficiary-identifiable claims data for TEAM beneficiaries in an episode during the 3-year baseline period and performance year.

(ii) Summarized (summary) Medicare Parts A and B beneficiary-identifiable claims data for TEAM beneficiaries in an episode during the 3-year baseline period and performance year.

(6) CMS makes available the beneficiary-identifiable claims data for retrieval by TEAM participants at the following frequency:

(i) Annually, at least 1 month prior to every performance year for baseline period data, based on the baseline periods described in § 512.540(b)(2).

(ii) Monthly during the performance year and for up to 6 months after the performance year for performance year data.

(c) *Minimum necessary data.* The TEAM participant must limit its request for beneficiary-identifiable data under paragraph (b) of this section to the minimum necessary Parts A and B data elements which may include, but are not limited to the following:

(1) Medicare beneficiary identifier (ID).

(2) Procedure code.

(3) Gender.

(4) Diagnosis code.

(5) Claim ID.

(6) The from and through dates of service.

(7) The provider or supplier ID.

(8) The claim payment type.

(9) Date of birth and death, if applicable.

(10) Tax identification number.

(11) National provider identifier.

(d) *Regional aggregate data.* (1) CMS shares regional aggregate data for the 3-year baseline period and performance years with TEAM participants as follows:

(i) Shares 3-year baseline period regional aggregate data annually at least 1 month before the performance year, based on the baseline periods described in § 512.540(b)(2).

(ii) Shares performance year regional aggregate data on a monthly basis during the performance year and for up to 6 months after the performance year.

(2) Regional aggregate data—

(i) Is aggregated based on all Parts A and B claims associated with episodes in TEAM for the U.S. Census Division in which the TEAM participant is located;

(ii) Summarizes average episode spending for episodes in TEAM in the

U.S. Census Division in which the TEAM participant is located; and

(iii) Is de-identified in accordance with 45 CFR 164.514(b).

(e) *TEAM data sharing agreement.* (1) A TEAM participant who wishes to retrieve the beneficiary-identifiable data specified in paragraph (b) of this section, must complete and submit, on at least an annual basis, a signed TEAM data sharing agreement, as defined in § 512.505, to be provided in a form and manner and by a date specified by CMS, under which the TEAM participant agrees:

(i) To comply with the requirements for use and disclosure of this beneficiary-identifiable data that are imposed on covered entities by the HIPAA regulations and the requirements of the TEAM set forth in this part.

(ii) To comply with additional privacy, security, breach notification, and data retention requirements specified by CMS.

(iii) To contractually bind each downstream recipient of the beneficiary-identifiable data that is a business associate of the TEAM participant to the same terms and conditions to which the TEAM participant is itself bound in its TEAM data sharing agreement with CMS as a condition of the business associate's receipt of the beneficiary-identifiable data retrieved by the TEAM participant under TEAM.

(iv) That if the TEAM participant misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the TEAM data sharing agreement, CMS may deem the TEAM participant ineligible to retrieve beneficiary-identifiable data under paragraph (b) of this section for any amount of time, and the TEAM participant may be subject to additional sanctions and penalties available under the law.

(2) A TEAM participant must comply with all applicable laws and the terms of the TEAM data sharing agreement in order to retrieve the beneficiary-identifiable data.

§ 512.563 Health equity reporting.

(a) *Health equity plans.* (1) The TEAM participant may voluntarily submit a health equity plan to CMS for each performance year that includes the elements specified in paragraph (a)(2) of this section, in a form and manner and by the date specified by CMS.

(2) Health equity plans must include the following elements:

(i) Identifies health disparities in the TEAM participant's population of TEAM beneficiaries.

(ii) Identifies health equity goals and describes how the TEAM participant uses the health equity goals to monitor and evaluate progress in reducing the identified health disparities.

(iii) Describes the health equity plan intervention strategy.

(iv) Identifies health equity plan performance measure(s), the data sources used to construct the performance measures, and an approach to monitor and evaluate the measures.

(b) *Health-related social needs screening and reporting.* (1) For all performance years, the TEAM participant may voluntarily submit aggregated health-related social needs screening and screened-positive data in a form and manner and by the dates specified by CMS. The health-related social needs screening and reporting must include the elements specified in paragraph (a)(2) of this section.

(2) CMS uses the following measures from the Hospital Inpatient Quality Reporting Program for the TEAM participants who opt to voluntarily submit aggregated health-related social needs screening and screened-positive data.

(i) Screening for Social Drivers of Health (SDOH-1; CMIT ID #1664).

(ii) Screen Positive Rate for Social Drivers of Health (SDOH-2; CMIT ID #1662).

(3) For all performance years, TEAM participants that voluntarily submit data health-related social needs screening and screened-positive data as specified in paragraphs (b)(1) and (2) of this section may voluntarily submit information on referral policies and procedures for beneficiaries that screen positive for health-related social needs in a form and manner and by dates specified by CMS.

(c) *Demographic data collection and reporting.* For all performance years, the TEAM participant may voluntarily collect and submit to CMS, in a form and manner and by the dates specified by CMS, demographic data of TEAM beneficiaries that are willing to share demographic data elements with the TEAM participant and CMS.

§ 512.564 Referral to primary care services.

(a) A TEAM participant must include in hospital discharge planning a referral to a supplier of primary care services for a TEAM beneficiary, on or prior to discharge from an anchor hospitalization or anchor procedure.

(b) In making the referral described in paragraph (a) of this section, the TEAM

participant must comply with beneficiary freedom of choice, as described in § 512.582(a).

(c) A TEAM participant that does not comply with paragraph (a) of this section, may be subject to remedial action as described in § 512.592.

Financial Arrangements and Beneficiary Incentives

§ 512.565 Sharing arrangements.

(a) *General.* (1) A TEAM participant may enter into a sharing arrangement with a TEAM collaborator to make a gainsharing payment, or to receive an alignment payment, or both. A TEAM participant must not make a gainsharing payment to a TEAM collaborator or receive an alignment payment from a TEAM collaborator except in accordance with a sharing arrangement.

(2) A sharing arrangement must comply with the provisions of this section and all other applicable laws and regulations, including the applicable fraud and abuse laws and all applicable payment and coverage requirements.

(3) TEAM participants must develop, maintain, and use a set of written policies for selecting individuals and entities to be TEAM collaborators.

(i) These policies must contain criteria related to, and inclusive of, the quality of care delivered by the potential TEAM collaborator and the provision of TEAM activities.

(ii) The selection criteria cannot be based directly or indirectly on the volume or value of past or anticipated referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent.

(iii) A selection criterion that considers whether a potential TEAM collaborator has performed a reasonable minimum number of services that would qualify as TEAM activities, as determined by the TEAM participant, will be deemed not to violate the volume or value standard if the purpose of the criterion is to ensure the quality of care furnished to TEAM beneficiaries.

(4) If a TEAM participant enters into a sharing arrangement, its compliance program must include oversight of sharing arrangements and compliance with the applicable requirements of TEAM.

(b) *Requirements.* (1) A sharing arrangement must be in writing and signed by the parties, and entered into

before care is furnished to TEAM beneficiaries under the sharing arrangement.

(2) Participation in a sharing arrangement must be voluntary and without penalty for nonparticipation.

(3) The sharing arrangement must require the TEAM collaborator and its employees, contractors (including collaboration agents), and subcontractors (including downstream collaboration agents) to comply with all of the following:

(i) The applicable provisions of this part (including requirements regarding beneficiary notifications, access to records, record retention, and participation in any evaluation, monitoring, compliance, and enforcement activities performed by CMS or its designees).

(ii) All applicable Medicare provider enrollment requirements at § 424.500 of this chapter, including having a valid and active TIN or NPI, during the term of the sharing arrangement.

(iii) All other applicable laws and regulations.

(4) The sharing arrangement must require the TEAM collaborator to have or be covered by a compliance program that includes oversight of the sharing arrangement and compliance with the requirements of TEAM that apply to its role as a TEAM collaborator, including any distribution arrangements.

(5) The sharing arrangement must not pose a risk to beneficiary access, beneficiary freedom of choice, or quality of care.

(6) The board or other governing body of the TEAM participant must have responsibility for overseeing the TEAM participant's participation in TEAM, its arrangements with TEAM collaborators, its payment of gainsharing payments, its receipt of alignment payments, and its use of beneficiary incentives in TEAM.

(7) The specifics of the agreement must be documented in writing and must be made available to CMS upon request (as outlined in § 512.590).

(8) The sharing arrangement must specify the following:

(i) The purpose and scope of the sharing arrangement.

(ii) The obligations of the parties, including specified TEAM activities and other services to be performed by the parties under the sharing arrangement.

(iii) The date range for which the sharing arrangement is effective.

(iv) The financial or economic terms for payment, including the following:

(A) Eligibility criteria for a gainsharing payment.

(B) Eligibility criteria for an alignment payment.

(C) Frequency of gainsharing or alignment payments.

(D) Methodology and accounting formula for determining the amount of a gainsharing payment or alignment payment.

(9) The sharing arrangement must not—

(i) Induce the TEAM participant, TEAM collaborator, or any employees, contractors, or subcontractors of the TEAM participant or TEAM collaborator to reduce or limit medically necessary services to any Medicare beneficiary; or

(ii) Restrict the ability of a TEAM collaborator to make decisions in the best interests of its patients, including the selection of devices, supplies, and treatments.

(c) *Gainsharing payment, alignment payment, and internal cost savings conditions and restrictions.* (1)

Gainsharing payments, if any, must—

(i) Be derived solely from reconciliation payment amounts, or internal cost savings, or both;

(ii) Be distributed on an annual basis (not more than once per calendar year);

(iii) Not be a loan, advance payment, or payment for referrals or other business; and

(iv) Be clearly identified as a gainsharing payment at the time it is paid.

(2)(i) To be eligible to receive a gainsharing payment, a TEAM collaborator must meet quality of care criteria for the performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment that comprises the gainsharing payment. The quality-of-care criteria must be established by the TEAM participant and directly relate to the episode.

(ii) To be eligible to receive a gainsharing payment, or to be required to make an alignment payment, a TEAM collaborator other than ACO, PGP, NPPGP, or TGP must have directly furnished a billable item or service to a TEAM beneficiary during an episode that was attributed to the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment.

(iii) To be eligible to receive a gainsharing payment, or to be required to make an alignment payment, a TEAM collaborator that is a PGP, NPPGP, or TGP must meet the following criteria:

(A) The PGP, NPPGP, or TGP must have billed for an item or service that was rendered by one or more PGP member, NPPGP member, or TGP member respectively to a TEAM beneficiary during an episode that was attributed to the same performance year

for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment.

(B) The PGP, NPPGP, or TGP must have contributed to TEAM activities and been clinically involved in the care of TEAM beneficiaries during the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment. A non-exhaustive list of examples where, a PGP, NPPGP, or TGP might have been clinically involved in the care of TEAM beneficiaries includes—

(1) Providing care coordination services to TEAM beneficiaries during or after inpatient admission;

(2) Engaging with a TEAM participant in care redesign strategies, and performing a role in implementing such strategies, that are designed to improve the quality of care for episodes and reduce episode spending; or

(3) In coordination with other providers and suppliers (such as PGP members, NPPGP members, or TGP members; the TEAM participant; and post-acute care providers), implementing strategies designed to address and manage the comorbidities of TEAM beneficiaries.

(iv) To be eligible to receive a gainsharing payment, or to be required to make an alignment payment, a TEAM collaborator that is an ACO must meet the following criteria:

(A) The ACO must have had an ACO provider/supplier that directly furnished, or an ACO participant that billed for, an item or service that was rendered to a TEAM beneficiary during an episode that was attributed to the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment; and

(B) The ACO must have contributed to TEAM activities and been clinically involved in the care of TEAM beneficiaries during the performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment. A non-exhaustive list of ways in which an ACO might have been clinically involved in the care of TEAM beneficiaries could include—

(1) Providing care coordination services to TEAM beneficiaries during and/or after inpatient admission;

(2) Engaging with a TEAM participant in care redesign strategies and performing a role in implementing such strategies that are designed to improve the quality of care and reduce spending for episodes; or

(3) In coordination with providers and suppliers (such as ACO participants, ACO providers/suppliers, the TEAM participant, and post-acute care providers), implementing strategies designed to address and manage the comorbidities of TEAM beneficiaries.

(3) The methodology for accruing, calculating and verifying internal cost savings will be determined by the TEAM participant. The methodology—

(i) Must be transparent, measurable, and verifiable in accordance with generally accepted accounting principles (GAAP) and Government Auditing Standards (The Yellow Book).

(ii) Used to calculate internal cost savings must reflect the actual, internal cost savings achieved by the TEAM participant through the documented implementation of TEAM activities identified by the TEAM participant and must exclude—

(A) Any savings realized by any individual or entity that is not the TEAM participant; and

(B) “Paper” savings from accounting conventions or past investment in fixed costs.

(4) The amount of any gainsharing payments must be determined in accordance with a methodology that is based solely on quality of care and the provision of TEAM activities. The methodology may take into account the amount of TEAM activities provided by a TEAM collaborator relative to other TEAM collaborators.

(5) For a performance year, the aggregate amount of all gainsharing payments that are derived from reconciliation payment amounts must not exceed the amount of that year’s reconciliation payment amount.

(6) No entity or individual, whether a party to a sharing arrangement or not, may condition the opportunity to make or receive gainsharing payments or to make or receive alignment payments directly or indirectly on the volume or value of past or anticipated referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent.

(7) A TEAM participant must not make a gainsharing payment to a TEAM collaborator if CMS has notified the TEAM participant that such TEAM collaborator is subject to any action by CMS, HHS or any other governmental entity, or its designees, for noncompliance with this part or the fraud and abuse laws, for the provision of substandard care to TEAM beneficiaries or other integrity problems, or for any other program integrity problems or noncompliance with any other laws or regulations.

(8) The sharing arrangement must require the TEAM participant to recoup any gainsharing payment that contained funds derived from a CMS overpayment on a reconciliation payment amount or was based on the submission of false or fraudulent data.

(9) Alignment payments from a TEAM collaborator to a TEAM participant may be made at any interval that is agreed upon by both parties, and must not be—

(i) Issued, distributed, or paid prior to the calculation by CMS of a repayment amount; payment;

(ii) Loans, advance payments, or payments for referrals or other business; or

(iii) Assessed by a TEAM participant in the absence of a repayment amount.

(10) The TEAM participant must not receive any amounts under a sharing arrangement from a TEAM collaborator that are not alignment payments.

(11) For a performance year, the aggregate amount of all alignment payments received by the TEAM participant must not exceed 50 percent of the TEAM participant's repayment amount.

(12) The aggregate amount of all alignment payments from a TEAM collaborator to the TEAM participant may not be greater than—

(i) With respect to a TEAM collaborator other than an ACO, 25 percent of the TEAM participant's repayment amount.

(ii) With respect to a TEAM collaborator that is an ACO, 50 percent of the TEAM participant's repayment amount.

(13) The amount of any alignment payments must be determined in accordance with a methodology that does not directly account for the volume or value of past or anticipated referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent.

(14) All gainsharing payments and any alignment payments must be administered by the TEAM participant in accordance with generally accepted accounting principles (GAAP) and Government Auditing Standards (The Yellow Book).

(15) All gainsharing payments and alignment payments must be made by check, electronic funds transfer, or another traceable cash transaction.

(d) *Documentation requirements.* (1) TEAM participants must—

(i) Document the sharing arrangement contemporaneously with the establishment of the arrangement;

(ii) Publicly post (and update on at least a quarterly basis) on a web page on the TEAM participant's website—

(A) Accurate lists of all current TEAM collaborators, including the TEAM collaborators' names and addresses as well as accurate historical lists of all TEAM collaborators.

(B) Written policies for selecting individuals and entities to be TEAM collaborators as required by § 512.565(a)(3).

(iii) Maintain, and require each TEAM collaborator to maintain, contemporaneous documentation with respect to the payment or receipt of any gainsharing payment or alignment payment that includes, at a minimum—

(A) Nature of the payment (gainsharing payment or alignment payment);

(B) Identity of the parties making and receiving the payment;

(C) Date of the payment;

(D) Amount of the payment; and

(E) Date and amount of any recoupment of all or a portion of a TEAM collaborator's gainsharing payment.

(F) Explanation for each recoupment, such as whether the TEAM collaborator received a gainsharing payment that contained funds derived from a CMS overpayment of a reconciliation payment or was based on the submission of false or fraudulent data.

(2) The TEAM participant must keep records of all of the following:

(i) Its process for determining and verifying its potential and current TEAM collaborators' eligibility to participate in Medicare.

(ii) Its plan to track internal cost savings.

(iii) Information on the accounting systems used to track internal cost savings.

(iv) A description of current health information technology, including systems to track reconciliation payment amounts, repayment amounts, and internal cost savings.

(v) Its plan to track gainsharing payments and alignment payments.

(3) The TEAM participant must retain and provide access to and must require each TEAM collaborator to retain and provide access to, the required documentation in accordance with § 512.586.

§ 512.568 Distribution arrangements.

(a) *General.* (1) An ACO, PGP, NPPGP, or TGP that is a TEAM collaborator and has entered into a sharing arrangement with a TEAM participant may distribute all or a portion of any gainsharing payment it receives from the TEAM participant only in accordance with a distribution arrangement.

(2) All distribution arrangements must comply with the provisions of this section and all other applicable laws and regulations, including the fraud and abuse laws.

(b) *Requirements.* (1) All distribution arrangements must be in writing and signed by the parties, contain the effective date of the agreement, and be entered into before care is furnished to TEAM beneficiaries under the distribution arrangement.

(2) Participation in a distribution arrangement must be voluntary and without penalty for nonparticipation.

(3) The distribution arrangement must require the collaboration agent to comply with all applicable laws and regulations.

(4) The opportunity to make or receive a distribution payment must not be conditioned directly or indirectly on the volume or value of past or anticipated referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent.

(5) The amount of any distribution payments from an ACO, from an NPPGP to an NPPGP member, or from a TGP to a TGP member, must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities and that may take into account the amount of such TEAM activities provided by a collaboration agent relative to other collaboration agents.

(6) The amount of any distribution payments from a PGP must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities and that may take into account the amount of such TEAM activities provided by a collaboration agent relative to other collaboration agents.

(7) A collaboration agent is eligible to receive a distribution payment only if the collaboration agent furnished or billed for an item or service rendered to a TEAM beneficiary during an episode that was attributed to the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount that comprises the gainsharing payment being distributed.

(8) With respect to the distribution of any gainsharing payment received by an ACO, PGP, NPPGP, or TGP, the total amount of all distribution payments for a performance year must not exceed the amount of the gainsharing payment received by the TEAM collaborator from the TEAM participant for the same performance year.

(9) All distribution payments must be made by check, electronic funds transfer, or another traceable cash transaction.

(10) The collaboration agent must retain the ability to make decisions in the best interests of the patient, including the selection of devices, supplies, and treatments.

(11) The distribution arrangement must not—

(i) Induce the collaboration agent to reduce or limit medically necessary items and services to any Medicare beneficiary; or

(ii) Reward the provision of items and services that are medically unnecessary.

(12) The TEAM collaborator must maintain contemporaneous documentation regarding distribution arrangements in accordance with § 512.586, including all of the following:

(i) The relevant written agreements.

(ii) The date and amount of any distribution payment(s).

(iii) The identity of each collaboration agent that received a distribution payment.

(iv) A description of the methodology and accounting formula for determining the amount of any distribution payment.

(13) The TEAM collaborator may not enter into a distribution arrangement with any individual or entity that has a sharing arrangement with the same TEAM participant.

(14) The TEAM collaborator must retain and provide access to and must require collaboration agents to retain and provide access to, the required documentation in accordance with § 512.586.

§ 512.570 Downstream distribution arrangements.

(a) *General.* (1) An ACO participant that is a PGP, NPPGP, or TGP and that has entered into a distribution arrangement with a TEAM collaborator

that is an ACO, may distribute all or a portion of any distribution payment it receives from the TEAM collaborator only in accordance with a downstream distribution arrangement.

(2) All downstream distribution arrangements must comply with the provisions of this section and all applicable laws and regulations, including the fraud and abuse laws.

(b) *Requirements.* (1) All downstream distribution arrangements must be in writing and signed by the parties, contain the effective date of the agreement, and be entered into before care is furnished to TEAM beneficiaries under the downstream distribution arrangement.

(2) Participation in a downstream distribution arrangement must be voluntary and without penalty for nonparticipation.

(3) The downstream distribution arrangement must require the downstream collaboration agent to comply with all applicable laws and regulations.

(4) The opportunity to make or receive a downstream distribution payment must not be conditioned directly or indirectly on the volume or value of past or anticipated referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent.

(5) The amount of any downstream distribution payments from an NPPGP to an NPPGP member or from a TGP to a TGP member must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities and that may take into account the amount of such TEAM activities provided by a downstream collaboration agent relative to other downstream collaboration agents.

(6) The amount of any downstream distribution payments from a PGP must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities and that may take into account the amount of such TEAM activities provided by a downstream collaboration agent relative to other downstream collaboration agents.

(7) A downstream collaboration agent is eligible to receive a downstream distribution payment only if the downstream collaboration agent furnished an item or service to a TEAM beneficiary during an episode that is

attributed to the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount that comprises the gainsharing payment from which the ACO made the distribution payment to the PGP, NPPGP, or TGP that is an ACO participant.

(8) The total amount of all downstream distribution payments made to downstream collaboration agents must not exceed the amount of the distribution payment received by the PGP, NPPGP, or TGP from the ACO.

(9) All downstream distribution payments must be made by check, electronic funds transfer, or another traceable cash transaction.

(10) The downstream collaboration agent must retain his or her ability to make decisions in the best interests of the beneficiary, including the selection of devices, supplies, and treatments.

(11) The downstream distribution arrangement must not—

(i) Induce the downstream collaboration agent to reduce or limit medically necessary services to any Medicare beneficiary; or

(ii) Reward the provision of items and services that are medically unnecessary.

(12) The PGP, NPPGP, or TGP must maintain contemporaneous documentation regarding downstream distribution arrangements in accordance with § 512.586, including the following:

(i) The relevant written agreements.

(ii) The date and amount of any downstream distribution payment.

(iii) The identity of each downstream collaboration agent that received a downstream distribution payment.

(iv) A description of the methodology and accounting formula for determining the amount of any downstream distribution payment.

(13) The PGP, NPPGP, or TGP may not enter into a downstream distribution arrangement with any PGP member, NPPGP member, or TGP member who has—

(i) A sharing arrangement with a TEAM participant.

(ii) A distribution arrangement with the ACO that the PGP, NPPGP, or TGP is a participant in.

(14) The PGP, NPPGP, or TGP must retain and provide access to, and must require downstream collaboration agents to retain and provide access to, the required documentation in accordance with § 512.586.

§ 512.575 TEAM beneficiary incentives.

(a) *General.* TEAM participants may choose to provide in-kind patient engagement incentives including but not limited to items of technology to

TEAM beneficiaries in an episode, subject to the following conditions:

(1) The incentive must be provided directly by the TEAM participant or by an agent of the TEAM participant under the TEAM participant's direction and control to the TEAM beneficiary during an episode.

(2) The item or service provided must be reasonably connected to medical care provided to a TEAM beneficiary during an episode.

(3) The item or service must be a preventive care item or service or an item or service that advances a clinical goal, as listed in paragraph (c) of this section, for a TEAM beneficiary in an episode by engaging the TEAM beneficiary in better managing his or her own health.

(4) The item or service must not be tied to the receipt of items or services outside the episode.

(5) The item or service must not be tied to the receipt of items or services from a particular provider or supplier.

(6) The availability of the items or services must not be advertised or promoted, except that a TEAM beneficiary may be made aware of the availability of the items or services at the time the TEAM beneficiary could reasonably benefit from them.

(7) The cost of the items or services must not be shifted to any Federal health care program, as defined at section 1128B(f) of the Act.

(b) *Technology provided to a TEAM beneficiary.* TEAM beneficiary engagement incentives involving technology are subject to the following additional conditions:

(1) Items or services involving technology provided to a TEAM beneficiary may not exceed \$1,000 in retail value for any one TEAM beneficiary during any one episode.

(2) Items or services involving technology provided to a TEAM beneficiary must be the minimum necessary to advance a clinical goal, as listed in paragraph (c) of this section, for a beneficiary in an episode.

(3) Items of technology exceeding \$75 in retail value must—

(i) Remain the property of the TEAM participant; and

(ii) Be retrieved from the TEAM beneficiary at the end of the episode, with documentation of the ultimate date of retrieval. The TEAM participant must document all retrieval attempts. In cases when the item of technology is not able to be retrieved, the TEAM participant must determine why the item was not retrievable. If it was determined that the item was misappropriated (if it were sold, for example), the TEAM participant must take steps to prevent

future beneficiary incentives for that TEAM beneficiary. Following this process, documented, diligent, good faith attempts to retrieve items of technology will be deemed to meet the retrieval requirement.

(c) *Clinical goals of TEAM.* The following are the clinical goals of TEAM, which may be advanced through TEAM beneficiary incentives:

(1) Beneficiary adherence to drug regimens.

(2) Beneficiary adherence to a care plan.

(3) Reduction of readmissions and complications following an episode.

(4) Management of chronic diseases and conditions that may be affected by the TEAM procedure.

(d) *Documentation of TEAM beneficiary incentives.* (1) TEAM participants must maintain documentation of items and services furnished as beneficiary incentives that exceed \$25 in retail value.

(2) The documentation must be established contemporaneously with the provision of the items and services with a record established and maintained to include at least the following:

(i) The date the incentive is provided.

(ii) The identity of the TEAM beneficiary to whom the item or service was provided.

(3) The documentation regarding items of technology exceeding \$75 in retail value must also include contemporaneous documentation of any attempt to retrieve technology at the end of an episode, or why the items were not retrievable, as described in paragraph (b)(3) of this section.

(4) The TEAM participant must retain and provide access to the required documentation in accordance with § 512.586.

§ 512.576 Application of the CMS-sponsored model arrangements and patient incentives safe harbor.

(a) *Application of the CMS-sponsored model arrangements safe harbor.* CMS has determined that the Federal Anti-Kickback Statute Safe Harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)(1)) is available to protect remuneration furnished in TEAM in the form of the sharing arrangement's gainsharing payments and alignment payments, the distribution arrangement's distribution payments, and the downstream distribution arrangement's distribution payments that meet all safe harbor requirements set forth in 42 CFR 1001.952(ii), and §§ 512.565, 512.568, 512.570.

(b) *Application of the CMS-sponsored model patient incentives safe harbor.* CMS has determined that the Federal

Anti-Kickback Statute Safe Harbor for CMS-sponsored model patient incentives (42 CFR 1001.952(ii)(2)) is available to protect TEAM beneficiary incentives that meet all safe harbor requirements set forth in 42 CFR 1001.952(ii) and § 512.575.

Medicare Program Waivers

§ 512.580 TEAM Medicare Program Waivers

(a) *Waiver of certain telehealth requirements—*(1) *Waiver of the geographic site requirements.* Except for the geographic site requirements for a face-to-face encounter for home health certification, CMS waives the geographic site requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act for episodes being tested in TEAM solely for services that—

(i) May be furnished via telehealth under existing Medicare program requirements; and

(ii) Are included in the episode in accordance with § 512.525(e).

(2) *Waiver of the originating site requirements.* Except for the originating site requirements for a face-to-face encounter for home health certification, CMS waives the originating site requirements under section 1834(m)(4)(ii)(I) through (VIII) of the Act for episodes to permit a telehealth visit to originate in the beneficiary's home or place of residence solely for services that—

(i) May be furnished via telehealth under existing Medicare program requirements; and

(ii) Are included in the episode in accordance with § 512.525(e).

(3) *Waiver of selected payment provisions.* (i) CMS waives the payment requirements under section 1834(m)(2)(A) of the Act so that the facility fee normally paid by Medicare to an originating site for a telehealth service is not paid if the service is originated in the beneficiary's home or place of residence.

(ii) CMS waives the payment requirements under section 1834(m)(2)(B) of the Act to allow the distant site payment for telehealth home visit HCPCS codes unique to TEAM.

(4) *Other requirements.* All other requirements for Medicare coverage and payment of telehealth services continue to apply, including the list of specific services approved to be furnished by telehealth.

(b) *Waiver of the SNF 3-day rule—*(1) *Episodes initiated by an anchor hospitalization.* CMS waives the SNF 3-day rule for coverage of a SNF stay within 30 days of the date of discharge from the anchor hospitalization for a

beneficiary who is a TEAM beneficiary on the date of discharge from the anchor hospitalization if the SNF is identified on the applicable calendar quarter list of qualified SNFs at the time of the TEAM beneficiary's admission to the SNF.

(2) *Episodes initiated by an anchor procedure.* CMS waives the SNF 3-day rule for coverage of a SNF stay within 30 days of the date of service of the anchor procedure for a beneficiary who is a TEAM beneficiary on the date of service of the anchor procedure if the SNF is identified on the applicable calendar quarter list of qualified SNFs at the time of the TEAM beneficiary's admission to the SNF.

(3) *Determination of qualified SNFs.* CMS determines the qualified SNFs for each calendar quarter based on a review of the most recent rolling 12 months of overall star ratings on the Five-Star Quality Rating System for SNFs on the Nursing Home Compare website. Qualified SNFs are rated an overall of 3 stars or better for at least 7 of the 12 months.

(4) *Posting of qualified SNFs.* CMS posts to the CMS website the list of qualified SNFs in advance of the calendar quarter.

(5) *Financial liability for non-covered SNF services.* If CMS determines that the waiver requirements specified in paragraph (b) of this section were not met, the following apply:

(i) CMS makes no payment to a SNF for SNF services if the SNF admits a TEAM beneficiary who has not had a qualifying anchor hospitalization or anchor procedure.

(ii) In the event that CMS makes no payment for SNF services furnished by a SNF as a result of paragraph (b)(5)(i) of this section, the beneficiary protections specified in paragraph (b)(5)(iii) of this section apply, unless the TEAM participant has provided the beneficiary with a discharge planning notice in accordance with § 512.582(b)(3).

(iii) If the TEAM participant does not provide the beneficiary with a discharge planning notice in accordance with § 512.582(b)(3)—

(A) The SNF must not charge the beneficiary for the expenses incurred for such services;

(B) The SNF must return to the beneficiary any monies collected for such services; and

(C) The TEAM participant is financially liable for the expenses incurred for such services.

(6) *Coverage of SNF services and discharge planning notification.* If the TEAM participant provided a discharge planning notice to the beneficiary in accordance with § 512.582(b)(3), then

normal SNF coverage requirements apply, and the beneficiary may be financially liable for non-covered SNF services.

(c) *Other requirements.* All other Medicare rules for coverage and payment of Part A-covered services continue to apply except as otherwise waived in this part.

General Provisions

§ 512.582 Beneficiary protections.

(a) *Beneficiary freedom of choice.* (1) A TEAM participant, TEAM collaborators, collaboration agents, downstream collaboration agent and downstream participants must not restrict Medicare beneficiaries' ability to choose to receive care from any provider or supplier.

(2) The TEAM participant and its downstream participants must not commit any act or omission, nor adopt any policy that inhibits beneficiaries from exercising their freedom to choose to receive care from any provider or supplier or from any health care provider who has opted out of Medicare. The TEAM participant and its downstream participants may communicate to TEAM beneficiaries the benefits of receiving care with the TEAM participant, if otherwise consistent with the requirements of this part and applicable law.

(3) As part of discharge planning and referral, TEAM participants must provide a complete list of HHAs, SNFs, IRFs, or LTCHs that are participating in the Medicare program, and that serve the geographic area (as defined by the HHA) in which the patient resides, or in the case of a SNF, IRF, or LTCH, in the geographic area requested by the patient.

(i) This list must be presented to TEAM beneficiaries for whom home health care, SNF, IRF, or LTCH services are medically necessary.

(ii) TEAM participants must specify on the list those post-acute care providers on the list with whom they have a sharing arrangement.

(iii) TEAM participants may recommend preferred providers and suppliers, consistent with applicable statutes and regulations.

(iv) TEAM participants may not limit beneficiary choice to any list of providers or suppliers in any manner other than as permitted under applicable statutes and regulations.

(v) TEAM participants must take into account patient and family preferences for choice of provider and supplier when they are expressed.

(4) TEAM participants may not charge any TEAM collaborator a fee to be

included on any list of preferred providers or suppliers, nor may the TEAM participant accept such payments.

(b) *Required beneficiary notification—*
(1) *TEAM participant beneficiary notification—*(i) *Notification to beneficiaries.* Each TEAM participant must provide written notification to any TEAM beneficiary that meets the criteria in § 512.535 of his or her inclusion in the TEAM model.

(ii) *Timing of notification.* Prior to discharge from the anchor hospitalization, or prior to discharge from the anchor procedure, as applicable, the TEAM participant must provide the TEAM beneficiary with a beneficiary notification as described in paragraph (b)(1)(iv) of this section.

(iii) *List of beneficiaries who have received a notification.* The TEAM participant must be able to generate a list of all beneficiaries who have received such notification, including the date on which the notification was provided to the beneficiary, to CMS or its designee upon request.

(iv) *Content of notification.* The beneficiary notification must contain all of the following:

(A) A detailed explanation of TEAM and how it might be expected to affect the beneficiary's care.

(B) Notification that the beneficiary retains freedom of choice to choose providers and services.

(C) Explanation of how patients can access care records and claims data through an available patient portal, if applicable, and how they can share access to their Blue Button® electronic health information with caregivers.

(D) Explanation of the type of beneficiary-identifiable claims data the TEAM participant may receive.

(E) A statement that all existing Medicare beneficiary protections continue to be available to the TEAM beneficiary. These include the ability to report concerns of substandard care to Quality Improvement Organizations or the 1-800-MEDICARE helpline.

(F) A list of the providers, suppliers, and ACOs with whom the TEAM participant has a sharing arrangement. This requirement may be fulfilled by the TEAM participant including in the detailed notification a Web address where beneficiaries may access the list.

(2) *TEAM collaborator notice.* A TEAM participant must require every TEAM collaborator to provide written notice to applicable TEAM beneficiaries of TEAM, including information on the quality and payment incentives under TEAM, and the existence of its sharing arrangement with the TEAM participant.

(j) With the exception of ACOs, PGPs, NPPGPs, and TGPs, a TEAM participant must require every TEAM collaborator that furnishes an item or service to a TEAM beneficiary during an episode to provide written notice to the beneficiary of TEAM, including basic information on the quality and payment incentives under TEAM, and the existence of the TEAM collaborator's sharing arrangement.

(A) The notice must be provided no later than the time at which the beneficiary first receives an item or service from the TEAM collaborator during an episode. In circumstances where, due to the patient's condition, it is not feasible to provide notification at such time, the notification must be provided to the beneficiary or his or her representative as soon as is reasonably practicable.

(B) The TEAM collaborator must be able to provide a list of all beneficiaries who received such a notice, including the date on which the notice was provided to the beneficiary, to CMS upon request.

(ii) A TEAM participant must require every PGP, NPPGP, or TGP that is a TEAM collaborator where a member of the PGP, member of the NPPGP, or member of the TGP furnishes an item or service to a TEAM beneficiary during an episode to provide written notice to the beneficiary of TEAM, including basic information on the quality and payment incentives under TEAM, and the existence of the entity's sharing arrangement.

(A)(1) The notice must be provided no later than the time at which the beneficiary first receives an item or service from any member of the PGP, member of the NPPGP, or member of the TGP, and the required PGP, NPPGP, or TGP notice may be provided by that member respectively.

(2) In circumstances where, due to the patient's condition, it is not feasible to provide notice at such times, the notice must be provided to the beneficiary or his or her representative as soon as is reasonably practicable.

(B) The PGP, NPPGP, or TGP must be able to provide a list of all beneficiaries who received such a notice, including the date on which the notice was provided to the beneficiary, to CMS upon request.

(iii) A TEAM participant must require every ACO that is a TEAM collaborator where an ACO participant or ACO provider/supplier furnishes an item or service to a TEAM beneficiary during an episode to provide written notice to the beneficiary of TEAM, including basic information on the quality and payment incentives under TEAM, and the

existence of the entity's sharing arrangement.

(A)(1) The notice must be provided no later than the time at which the beneficiary first receives an item or service from any ACO participant or ACO provider/supplier and the required ACO notice may be provided by that ACO participant or ACO provider/supplier respectively.

(2) In circumstances where, due to the patient's condition, it is not feasible to provide notice at such times, the notice must be provided to the beneficiary or his or her representative as soon as is reasonably practicable.

(B) The ACO must be able to provide a list of all beneficiaries who received such a notice, including the date on which the notice was provided to the beneficiary, to CMS upon request.

(3) *Discharge planning notice.* A TEAM participant must provide the beneficiary with a written notice of any potential financial liability associated with non-covered services recommended or presented as an option as part of discharge planning, no later than the time that the beneficiary discusses a particular post-acute care option or at the time the beneficiary is discharged from an anchor procedure or anchor hospitalization, whichever occurs earlier.

(i) If the TEAM participant knows or should have known that the beneficiary is considering or has decided to receive a non-covered post-acute care service or other non-covered associated service or supply, the TEAM participant must notify the beneficiary in writing that the service would not be covered by Medicare.

(ii) If the TEAM participant is discharging a beneficiary to a SNF after an inpatient hospital stay, and the beneficiary is being transferred to or is considering a SNF that would not qualify under the SNF 3-day waiver in § 512.580, the TEAM participant must notify the beneficiary in accordance with paragraph (b)(3)(i) of this section that the beneficiary will be responsible for payment for the services furnished by the SNF during that stay, except those services that would be covered by Medicare Part B during a non-covered inpatient SNF stay.

(4) *Access to records and retention.* Lists of beneficiaries that receive notifications or notices must be retained, and access provided to CMS, or its designees, in accordance with § 512.586.

(c) *Availability of services.* (1) The TEAM participant and its downstream participants must continue to make medically necessary covered services available to beneficiaries to the extent

required by applicable law. TEAM beneficiaries and their assignees retain their rights to appeal claims in accordance with part 405, subpart I of this chapter.

(2) The TEAM participant and its downstream participants must not take any action to select or avoid treating certain Medicare beneficiaries based on their income levels or based on factors that would render the beneficiary an "at-risk beneficiary" as defined at § 425.20 of this chapter.

(3) The TEAM participant and its downstream participants must not take any action to selectively target or engage beneficiaries who are relatively healthy or otherwise expected to improve the TEAM participant's or downstream participant's financial or quality performance.

(d) *Descriptive TEAM materials and activities.* (1) The TEAM participant and its downstream participants must not use or distribute descriptive TEAM materials and activities that are materially inaccurate or misleading.

(2) The TEAM participant and its downstream participants must include the following statement on all descriptive TEAM materials and activities: "The statements contained in this document are solely those of the authors and do not necessarily reflect the views or policies of the Centers for Medicare & Medicaid Services (CMS). The authors assume responsibility for the accuracy and completeness of the information contained in this document."

(3) The TEAM participant and its downstream participants must retain copies of all written and electronic descriptive TEAM materials and activities and appropriate records for all other descriptive TEAM materials and activities in a manner consistent with § 512.135(c).

(4) CMS reserves the right to review, or have a designee review, descriptive TEAM materials and activities to determine whether or not the content is materially inaccurate or misleading. This review takes place at a time and in a manner specified by CMS once the descriptive TEAM materials and activities are in use by the TEAM participant.

§ 512.584 Cooperation in model evaluation and monitoring.

The TEAM participant and its TEAM collaborators must comply with the requirements of § 403.1110(b) of this chapter and must otherwise cooperate with CMS' TEAM evaluation and monitoring activities as may be necessary to enable CMS to evaluate TEAM in accordance with section

1115A(b)(4) of the Act and to conduct monitoring activities under § 512.590, including producing such data as may be required by CMS to evaluate or monitor TEAM, which may include protected health information as defined in 45 CFR 160.103 and other individually-identifiable data.

§ 512.586 Audits and record retention.

(a) *Right to audit.* The Federal government, including CMS, HHS, and the Comptroller General, or their designees, has the right to audit, inspect, investigate, and evaluate any documents and other evidence regarding implementation of TEAM.

(b) *Access to records.* The TEAM participant and its TEAM collaborators must maintain and give the Federal government, including CMS, HHS, and the Comptroller General, or their designees, access to all such documents and other evidence sufficient to enable the audit, evaluation, inspection, or investigation of the implementation of TEAM, including without limitation, documents and other evidence regarding all of the following:

(1) The TEAM participant's and its downstream participants' compliance with the terms of TEAM.

(2) The accuracy of TEAM reconciliation payment amounts and repayment amounts.

(3) The TEAM participant's payment of amounts owed to CMS under TEAM.

(4) Quality measure information and the quality of services performed under the terms of TEAM.

(5) Utilization of items and services furnished under TEAM.

(6) The ability of the TEAM participant to bear the risk of potential losses and to repay any losses to CMS, as applicable.

(7) Patient safety.

(8) Other program integrity issues.

(c) *Record retention.* (1) The TEAM participant and its downstream participants must maintain the documents and other evidence described in paragraph (b) of this section and other evidence for a period of 6 years from the last payment determination for the TEAM participant under TEAM or from the date of completion of any audit, evaluation, inspection, or investigation, whichever is later, unless—

(i) CMS determines there is a special need to retain a particular record or group of records for a longer period and notifies the TEAM participant at least 30 days before the normal disposition date; or

(ii) There has been a termination, dispute, or allegation of fraud or similar fault against the TEAM participant or its

downstream participants, in which case the records must be maintained for an additional 6 years from the date of any resulting final resolution of the termination, dispute, or allegation of fraud or similar fault.

(2) If CMS notifies the TEAM participant of the special need to retain records in accordance with paragraph (c)(1)(i) of this section or there has been a termination, dispute, or allegation of fraud or similar fault against the TEAM participant or its downstream participants described in paragraph (c)(1)(ii) of this section, the TEAM participant must notify its downstream participants of this need to retain records for the additional period specified by CMS.

§ 512.588 Rights in data and intellectual property.

(a) CMS may—

(1) Use any data obtained under §§ 512.584, 512.586, or 512.590 to evaluate and monitor TEAM; and

(2) Disseminate quantitative and qualitative results and successful care management techniques, including factors associated with performance, to other providers and suppliers and to the public. Data disseminated may include patient—

(i) De-identified results of patient experience of care and quality of life surveys, and patient; and

(ii) De-identified measure results calculated based upon claims, medical records, and other data sources.

(b) Notwithstanding any other provision of this part, for all data that CMS confirms to be proprietary trade secret information and technology of the TEAM participant or its downstream participants, CMS or its designee(s) will not release this data without the express written consent of the TEAM participant or its downstream participant, unless such release is required by law.

(c) If the TEAM participant or its downstream participant wishes to protect any proprietary or confidential information that it submits to CMS or its designee, the TEAM participant or its downstream participant must label or otherwise identify the information as proprietary or confidential. Such assertions are subject to review and confirmation by CMS prior to CMS' acting upon such assertions.

§ 512.590 Monitoring and compliance.

(a) *Compliance with laws.* The TEAM participant and each of its downstream participants must comply with all applicable laws and regulations.

(b) *CMS monitoring and compliance activities.* (1) CMS staff, or its approved designee, may conduct monitoring

activities to ensure compliance by the TEAM participant and each of its downstream participants with the terms of TEAM under this subpart to—

(i) Understand TEAM participants' use of TEAM payments; and

(ii) Promote the safety of beneficiaries and the integrity of TEAM.

(2) Monitoring activities may include, without limitation, all of the following:

(i) Documentation requests sent to the TEAM participant and its downstream participants, including surveys and questionnaires.

(ii) Audits of claims data, quality measures, medical records, and other data from the TEAM participant and its downstream participants.

(iii) Interviews with members of the staff and leadership of the TEAM participant and its downstream participants.

(iv) Interviews with beneficiaries and their caregivers.

(v) Site visits to the TEAM participant and its downstream participants, performed in a manner consistent with paragraph (c) of this section.

(vi) Monitoring quality outcomes and clinical data, if applicable.

(vii) Tracking patient complaints and appeals.

(3) In conducting monitoring and oversight activities, CMS or its designees may use any relevant data or information including without limitation all Medicare claims submitted for items or services furnished to TEAM beneficiaries.

(c) *Site visits.* (1) In a manner consistent with § 512.584, the TEAM participant and its downstream participants must cooperate in periodic site visits performed by CMS or its designees in order to facilitate the evaluation of TEAM and the monitoring of the TEAM participant's compliance with the terms of TEAM.

(2) CMS or its designee provides, to the extent practicable, the TEAM participant or downstream participant with no less than 15 days advance notice of any site visit. CMS—

(i) Attempts, to the extent practicable, to accommodate a request for particular dates in scheduling site visits; and

(ii) Does not accept a date request from a TEAM participant or downstream participant that is more than 60 days after the date of the CMS initial site visit notice.

(3) The TEAM participant and its downstream participants must ensure that personnel with the appropriate responsibilities and knowledge associated with the purpose of the site visit are available during all site visits.

(4) CMS may perform unannounced site visits at the office of the TEAM

participant and any of its downstream participants at any time to investigate concerns about the health or safety of beneficiaries or other patients or other program integrity issues.

(5) Nothing in this part shall be construed to limit or otherwise prevent CMS from performing site visits permitted or required by applicable law.

(d) *Reopening of payment determinations.* (1) CMS may reopen a TEAM payment determination on its own motion or at the request of a TEAM participant, within 4 years from the date of the determination, for good cause (as defined at § 405.986 of this chapter).

(2) CMS may reopen a TEAM payment determination at any time if there exists reliable evidence (as defined in § 405.902 of this chapter) that the determination was procured by fraud or similar fault (as defined in § 405.902 of this chapter).

(3) CMS's decision regarding whether to reopen a TEAM payment determination is binding and not subject to appeal.

(e) *OIG authority.* Nothing contained in the terms of TEAM limits or restricts the authority of the HHS Office of Inspector General or any other Federal government authority, including its authority to audit, evaluate, investigate, or inspect the TEAM participant or its downstream participants for violations of any Federal statutes, rules, or regulations.

§ 512.592 Remedial action.

(a) *Grounds for remedial action.* CMS may take one or more remedial actions described in paragraph (b) of this section if CMS determines that the TEAM participant or a downstream participant:

(1) Has failed to comply with any of the terms of TEAM, included in this subpart.

(2) Has failed to comply with any applicable Medicare program requirement, rule, or regulation.

(3) Has taken any action that threatens the health or safety of a beneficiary or other patient.

(4) Has submitted false data or made false representations, warranties, or certifications in connection with any aspect of TEAM.

(5) Has undergone a change in control that presents a program integrity risk.

(6) Is subject to any sanctions of an accrediting organization or a Federal, State, or local government agency.

(7) Is subject to investigation or action by HHS (including the HHS Office of Inspector General and CMS) or the Department of Justice due to an allegation of fraud or significant misconduct, including any of the following:

(i) Being subject to the filing of a complaint or filing of a criminal charge.

(ii) Being subject to an indictment.

(iii) Being named as a defendant in a False Claims Act *qui tam* matter in which the Federal government has intervened, or similar action.

(8) Has failed to demonstrate improved performance following any remedial action imposed under this section.

(9) Has misused or disclosed beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the TEAM data sharing agreement.

(b) *Remedial actions.* If CMS determines that one or more grounds for remedial action described in paragraph (a) of this section has taken place, CMS may take one or more of the following remedial actions:

(1) Notify the TEAM participant and, if appropriate, require the TEAM participant to notify its downstream participants of the violation.

(2) Require the TEAM participant to provide additional information to CMS or its designees.

(3) Subject the TEAM participant to additional monitoring, auditing, or both.

(4) Prohibit the TEAM participant from distributing TEAM payments, as applicable.

(5) Require the TEAM participant to terminate, immediately or by a deadline specified by CMS, its agreement with a downstream participant with respect to TEAM.

(6) Require the TEAM participant to submit a corrective action plan in a form and manner and by a date specified by CMS.

(7) Discontinue the provision of data sharing and reports to the TEAM participant.

(8) Recoup TEAM payments.

(9) Reduce or eliminate a TEAM payment otherwise owed to the TEAM participant.

(10) Such other action as may be permitted under the terms of this part.

§ 512.594 Limitations on review.

There is no administrative or judicial review under sections 1869 or 1878 of the Act or otherwise for all of the following:

(a) The selection of models for testing or expansion under section 1115A of the Act.

(b) The selection of organizations, sites, or participants to test TEAM, including a decision by CMS to remove a TEAM participant or to require a TEAM participant to remove a downstream participant from TEAM.

(c) The elements, parameters, scope, and duration of testing or dissemination, including without limitation the following:

(1) The selection of quality performance standards for TEAM by CMS.

(2) The methodology used by CMS to assess the quality of care furnished by the TEAM participant.

(3) The methodology used by CMS to attribute TEAM beneficiaries to the TEAM participant, if applicable.

(d) Determinations regarding budget neutrality under section 1115A(b)(3) of the Act.

(e) The termination or modification of the design and implementation of TEAM under section 1115A(b)(3)(B) of the Act.

(f) Determinations about expansion of the duration and scope of TEAM under section 1115A(c) of the Act, including the determination that TEAM is not expected to meet criteria described in paragraph (a) or (b) of this section.

§ 512.595 Bankruptcy and other notifications.

(a) *Notice of bankruptcy.* If the TEAM participant has filed a bankruptcy petition, whether voluntary or involuntary, the TEAM participant must provide written notice of the bankruptcy to CMS and to the U.S. Attorney's Office in the district where the bankruptcy was filed, unless final payment has been made by either CMS or the TEAM participant under the terms of TEAM and all administrative or judicial review proceedings relating to any TEAM payments have been fully and finally resolved.

(1) The notice of bankruptcy must be sent by certified mail no later than 5 days after the petition has been filed and must contain a copy of the filed bankruptcy petition (including its docket number).

(2) The notice to CMS must be addressed to the CMS Office of Financial Management at 7500 Security Boulevard, Mailstop C3-01-24, Baltimore, MD 21244 or such other address as may be specified on the CMS website for purposes of receiving such notices.

(b) *Notice of legal name change.* A TEAM participant must furnish written notice to CMS within 30 days of any change in its legal name becomes effective. The notice of legal name change must meet all of the following:

(1) Be in a form and manner specified by CMS.

(2) Include a copy of the legal document effecting the name change, which must be authenticated by the appropriate State official.

(c) *Notice of change in control.* (1) A TEAM participant must furnish written notice to CMS in a form and manner specified by CMS at least 90 days before any change in control becomes effective.

(2) If CMS determines, in accordance with § 512.592(a)(5), that a TEAM participant's change in control would present a program integrity risk, CMS may—

(i) Take remedial action against the TEAM participant under § 512.160(b).

(ii) Require immediate reconciliation and payment of all monies owed to CMS by a TEAM participant that is subject to a change in control.

§ 512.596 Termination of TEAM or TEAM participant from model by CMS.

(a) *Termination of TEAM.* (1) CMS may terminate TEAM for reasons including, but not limited to, the following:

(i) CMS determines that it no longer has the funds to support TEAM.

(ii) CMS terminates TEAM in accordance with section 1115A(b)(3)(B) of the Act.

(2) If CMS terminates TEAM, CMS provides written notice to the TEAM participant specifying the grounds for termination and the effective date of such termination.

(b) *Notice of a TEAM participant's termination from TEAM.* If a TEAM participant receives notification that it has been terminated from TEAM and wishes to dispute the termination, it must provide a written notice to CMS requesting review of the termination within 10 calendar days of the notice.

(1) CMS has 30 days to respond to the TEAM participant's request for review.

(2) If the TEAM participant fails to notify CMS, the termination is deemed final.

§ 512.598 Decarbonization and Resilience Initiative.

(a) *Voluntary reporting.* A TEAM participant may elect to respond to questions and report metrics related to the TEAM participant's, or the TEAM participant's corporate affiliate's, emissions to CMS on an annual basis following each performance period. Voluntary reporting includes the following metrics:

(1) Organizational questions, which are a set of questions about the TEAM participants' sustainability team and sustainability activities.

(2) Building energy metrics, which are a set of metrics related to measuring and reporting GHG emissions related to energy use at TEAM participant facilities.

(i) Building energy metrics are based on the ENERGY STAR® Portfolio

Manager® guidelines for the time of submission. TEAM participants reporting these metrics must submit using ENERGY STAR Portfolio Manager in the manner described in paragraph (b) of this section.

(ii) Metrics to be collected include all of the following:

(A) ENERGY STAR® Score for Hospitals as defined in the ENERGY STAR® Portfolio Manager® as well as supporting data which may include energy use intensity, electricity, natural gas, and other source emissions and normalizing factors such as building size, number of full-time equivalent workers, number of staffed beds, number of magnetic resonance imaging machines, zip codes, and heating and cooling days, as specified in the ENERGY STAR® Portfolio Manager®.

(B) Energy cost, to capture total energy costs, as specified in the ENERGY STAR® Portfolio Manager®.

(C) Total, direct, and indirect GHG emissions and emissions intensity as specified in the ENERGY STAR® Portfolio Manager®.

(3) Anesthetic gas metrics, which are a set of metrics related to measuring and managing emissions from anesthetic gas which include all of the following:

(i) Total greenhouse gas emissions from inhaled anesthetics based on purchase records.

(ii) Normalization factors that may include information on anesthetic hours, operating rooms, or MAC-hour equivalents.

(iii) Assessment questions based on key actions recommended for reducing emissions for anesthetic gases.

(4) Transportation metrics, which are a set of metrics that focus on greenhouse gases related to leased or owned vehicles and may include any of the following:

(i) Gallons for owned and leased vehicles.

(ii) Normalization factors that may include patient encounter volume and the number of full-time equivalent (FTE) employees.

(iii) Assessment questions on key actions to reduce transportation emissions.

(b) *Manner and timing of reporting.*

(1) If the TEAM participant elects to report the metrics in paragraph (b) of this section to CMS, such information must be reported to CMS in a form and manner specified by CMS for each performance year, including the use of ENERGY STAR® Portfolio Manager® for the building energy metrics at paragraph (a)(2) of this section and a survey and questionnaire for questions and metrics at paragraphs (a)(1), (3), and (4) of this section.

(2) If the TEAM participant chooses to participate, the TEAM participant must report the information to CMS—

(i) No later than 120 days in the year following the performance year; or

(ii) A later date as specified by CMS.

(c) *Individualized feedback reports; recognition.* If a TEAM participant elects to report all the metrics specified in paragraph (a) of this section to CMS, in the manner specified in paragraph (b) of this section, CMS annually provides the TEAM participant with the following:

(1) Individualized feedback reports, which may summarize facilities' emissions metrics and may include benchmarks, as feasible, for normalized metrics to compare facilities, in aggregate, to other TEAM participants in the Decarbonization and Resilience Initiative. A TEAM participant that receives individualized feedback reports from CMS must request approval from CMS in writing and receive written approval from CMS prior to publication or public disclosure of data or information contained in the individualized feedback reports.

(2) Publicly reported hospital recognition for the TEAM participant's commitment to decarbonization through a hospital recognition badge publicly reported on a CMS website, which may include recognition of the TEAM participant's corporate affiliates when such data has been submitted as specified in paragraph (a) of this section.

Xavier Becerra,

Secretary, Department of Health and Human Services.

The following Will Not Publish in the Code of Federal Regulations Addendum—Schedule of Standardized Amounts, Update Factors, Rate-of-Increase Percentages Effective With Cost Reporting Periods Beginning on or After October 1, 2024, and Payment Rates for LTCHs Effective for Discharges Occurring on or After October 1, 2024

I. Summary and Background

In this Addendum, we are setting forth a description of the methods and data we used to determine the prospective payment rates for Medicare hospital inpatient operating costs and Medicare hospital inpatient capital-related costs for FY 2025 for acute care hospitals. We also are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS for FY 2025. We note that, because certain hospitals excluded from the IPPS are paid on a reasonable cost basis subject to a rate-of-increase ceiling (and not by the IPPS),

these hospitals are not affected by the figures for the standardized amounts, offsets, and budget neutrality factors. Therefore, in this final rule, we are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS that would be effective for cost reporting periods beginning on or after October 1, 2024. In addition, we are setting forth a description of the methods and data we used to determine the LTCH PPS standard Federal payment rate that would be applicable to Medicare LTCHs for FY 2025.

In general, except for SCHs and MDHs, for FY 2025, each hospital's payment per discharge under the IPPS is based on 100 percent of the Federal national rate, also known as the national adjusted standardized amount. This amount reflects the national average hospital cost per case from a base year, updated for inflation.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment:

- The Federal national rate (including, as discussed in section IV.E. of the preamble of this final rule, uncompensated care payments under section 1886(r)(2) of the Act).
- The updated hospital-specific rate based on FY 1982 costs per discharge.
- The updated hospital-specific rate based on FY 1987 costs per discharge.
- The updated hospital-specific rate based on FY 1996 costs per discharge.
- The updated hospital-specific rate based on FY 2006 costs per discharge.

Under section 1886(d)(5)(G) of the Act, MDHs historically were paid based on the Federal national rate or, if higher, the Federal national rate plus 50 percent of the difference between the Federal national rate and the updated hospital-specific rate based on FY 1982 or FY 1987 costs per discharge, whichever was higher. However, section 5003(a)(1) of Public Law 109–171 extended and modified the MDH special payment provision that was previously set to expire on October 1, 2006, to include discharges occurring on or after October 1, 2006, but before October 1, 2011. Under section 5003(b) of Public Law 109–171, if the change results in an increase to an MDH's target amount, we must rebase an MDH's hospital specific rates based on its FY 2002 cost report. Section 5003(c) of Public Law 109–171 further required that MDHs be paid based on the Federal national rate or, if

higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the updated hospital specific rate. Further, based on the provisions of section 5003(d) of Public Law 109–171, MDHs are no longer subject to the 12-percent cap on their DSH payment adjustment factor. Section 4102 of the Consolidated Appropriations Act, 2023 (Pub. L. 117–328), enacted on December 29, 2022, extended the MDH program through FY 2024 (that is, for discharges occurring on or before September 30, 2024). Subsequently, section 307 of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, further extended the MDH program for FY 2025 discharges occurring before January 1, 2025. Prior to enactment of the CAA, 2024, the MDH program was only to be in effect through the end of FY 2024. Under current law, the MDH program will expire for discharges on or after January 1, 2025. We refer readers to section V.F. of the preamble of this final rule for further discussion of the MDH program.

As discussed in section V.B.2. of the preamble of this final rule, section 1886(n)(6)(B) of the Act was amended to specify that the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act apply to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022. In general, Puerto Rico hospitals are paid 100 percent of the national standardized amount and are subject to the same national standardized amount as subsection (d) hospitals that receive the full update. Accordingly, our discussion later in this section does not include references to the Puerto Rico standardized amount or the Puerto Rico-specific wage index.

As discussed in section II. of this Addendum, we are making changes in the determination of the prospective payment rates for Medicare inpatient operating costs for acute care hospitals for FY 2025. In section III. of this Addendum, we discuss our policy changes for determining the prospective payment rates for Medicare inpatient capital-related costs for FY 2025. In section IV. of this Addendum, we are setting forth the rate-of-increase percentage for determining the rate-of-increase limits for certain hospitals excluded from the IPPS for FY 2025. In section V. of this Addendum, we

discuss policy changes for determining the LTCH PPS standard Federal rate for LTCHs paid under the LTCH PPS for FY 2025. The tables to which we refer in the preamble of this final rule are listed in section VI. of this Addendum and are available via the internet on the CMS website.

II. Changes to Prospective Payment Rates for Hospital Inpatient Operating Costs for Acute Care Hospitals for FY 2025

The basic methodology for determining prospective payment rates for hospital inpatient operating costs for acute care hospitals for FY 2005 and subsequent fiscal years is set forth under § 412.64. The basic methodology for determining the prospective payment rates for hospital inpatient operating costs for hospitals located in Puerto Rico for FY 2005 and subsequent fiscal years is set forth under §§ 412.211 and 412.212. In this section, we discuss the factors we are using for determining the prospective payment rates for FY 2025.

In summary, the standardized amounts set forth in Tables 1A, 1B, and 1C that are listed and published in section VI. of this Addendum (and available via the internet on the CMS website) reflect—

- Equalization of the standardized amounts for urban and other areas at the level computed for large urban hospitals during FY 2004 and onward, as provided for under section 1886(d)(3)(A)(iv)(II) of the Act.
- The labor-related share that is applied to the standardized amounts to give the hospital the highest payment, as provided for under sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act. For FY 2025, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount.

We refer readers to section V.B. of the preamble of this final rule for a complete discussion on the FY 2025 inpatient hospital update. The table that follows shows these four scenarios:

FY 2025 Applicable Percentage Increase for the IPPS				
FY 2025	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
Market Basket Rate-of-Increase	3.4	3.4	3.4	3.4
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0	0	-0.85	-0.85
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0	-2.55	0	-2.55
Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.5	-0.5	-0.5	-0.5
Applicable Percentage Increase Applied to Standardized Amount	2.9	0.35	2.05	-0.5

We note that section 1886(b)(3)(B)(viii) of the Act, which specifies the adjustment to the applicable percentage increase for “subsection (d)” hospitals that do not submit quality data under the rules established by the Secretary, is not applicable to hospitals located in Puerto Rico. In addition, section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016, and also to apply the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022. Accordingly, the applicable percentage increase for subsection (d) Puerto Rico hospitals that are not meaningful EHR users for FY 2025 and subsequent fiscal years is adjusted by the adjustment for failure to be a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act. The regulations at 42 CFR 412.64(d)(3)(ii) reflect the current law for the update for subsection (d) Puerto Rico hospitals for FY 2022 and subsequent fiscal years.

- An adjustment to the standardized amount to ensure budget neutrality for DRG recalibration and reclassification, as provided for under section 1886(d)(4)(C)(iii) of the Act.
- An adjustment to the standardized amount to ensure budget neutrality for the permanent 10 percent cap on the reduction in a MS–DRG’s relative weight in a given fiscal year, as discussed in section II.D.2.c. of the preamble of this final rule, consistent with our current methodology for implementing DRG recalibration and reclassification budget neutrality under section 1886(d)(4)(C)(iii) of the Act.

- An adjustment to ensure the wage index and labor-related share changes (depending on the fiscal year) are budget neutral, as provided for under section 1886(d)(3)(E)(i) of the Act (as discussed in the FY 2006 IPPS final rule (70 FR 47395) and the FY 2010 IPPS final rule (74 FR 44005)). We note that section 1886(d)(3)(E)(i) of the Act requires that when we compute such budget neutrality, we assume that the provisions of section 1886(d)(3)(E)(ii) of the Act (requiring a 62-percent labor-related share in certain circumstances) had not been enacted.

- An adjustment to ensure the effects of geographic reclassification are budget neutral, as provided for under section 1886(d)(8)(D) of the Act, by removing the FY 2024 budget neutrality factor and applying a revised factor.

- An adjustment to the standardized amount to implement in a budget neutral manner the increase in the wage index values for hospitals with a wage index value below the 25th percentile wage index value across all hospitals (as described in section III.G.5 of the preamble of this final rule).

- An adjustment to the standardized amount to implement in a budget neutral manner the wage index cap policy (as described in section III.G.6. of the preamble of this final rule).

- An adjustment to ensure the effects of the Rural Community Hospital Demonstration program required under section 410A of Public Law 108–173 (as amended by sections 3123 and 10313 of Public Law 111–148, which extended the demonstration program for an additional 5 years and section 15003 of Public Law 114–255), are budget neutral as required under section 410A(c)(2) of Public Law 108–173.

- An adjustment to remove the FY 2024 outlier offset and apply an offset

for FY 2025, as provided for in section 1886(d)(3)(B) of the Act.

For FY 2025, consistent with current law, we are applying the rural floor budget neutrality adjustment to hospital wage indexes. Also, consistent with section 3141 of the Affordable Care Act, instead of applying a State-level rural floor budget neutrality adjustment to the wage index, we are applying a uniform, national budget neutrality adjustment to the FY 2025 wage index for the rural floor.

For FY 2025, as we proposed, we are continuing to not remove the Stem Cell Acquisition Budget Neutrality Factor from the prior year’s standardized amount and to not apply a new factor. If we removed the prior year’s adjustment, we would not satisfy budget neutrality. We believe this approach ensures the effects of the reasonable cost-based payment for allogeneic hematopoietic stem cell acquisition costs under section 108 of the Further Consolidated Appropriations Act, 2020 (Pub. L. 116–94) are budget neutral as required under section 108 of Public Law 116–94. For a discussion of Stem Cell Acquisition Budget Neutrality Factor, we refer the reader to the FY 2021 IPPS/LTCH PPS final rule (85 FR 59032 and 59033).

A. Calculation of the Adjusted Standardized Amount

1. Standardization of Base-Year Costs or Target Amounts

In general, the national standardized amount is based on per discharge averages of adjusted hospital costs from a base period (section 1886(d)(2)(A) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d) of the Act. The September 1, 1983 interim final rule (48 FR 39763) contained a detailed explanation of how base-year cost data

(from cost reporting periods ending during FY 1981) were established for urban and rural hospitals in the initial development of standardized amounts for the IPPS.

Sections 1886(d)(2)(B) and 1886(d)(2)(C) of the Act require us to update base-year per discharge costs for FY 1984 and then standardize the cost data in order to remove the effects of certain sources of cost variations among hospitals. These effects include case-mix, differences in area wage levels, cost-of-living adjustments for Alaska and Hawaii, IME costs, and costs to hospitals serving a disproportionate share of low-income patients.

For FY 2025, as we proposed, we are continuing to use the national labor-related and nonlabor-related shares (which are based on the 2018-based hospital IPPS market basket) that were used in FY 2024. Specifically, under section 1886(d)(3)(E) of the Act, the Secretary estimates, from time to time, the proportion of payments that are labor-related and adjusts the proportion (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs of the DRG prospective payment rates. We refer to the proportion of hospitals' costs that are attributable to wages and wage-related costs as the "labor-related share." For FY 2025, as discussed in section III.I. of the preamble of this final rule, as we proposed, we are using a labor-related share of 67.6 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, as we proposed, we are applying the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000.

The standardized amounts for operating costs appear in Tables 1A, 1B, and 1C that are listed and published in section VI. of the Addendum to this final rule and are available via the internet on the CMS website.

2. Computing the National Average Standardized Amount

Section 1886(d)(3)(A)(iv)(II) of the Act requires that, beginning with FY 2004 and thereafter, an equal standardized amount be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage increase. Accordingly, as proposed, we are calculating the FY 2025 national average

standardized amount irrespective of whether a hospital is located in an urban or rural location.

3. Updating the National Average Standardized Amount

Section 1886(b)(3)(B) of the Act specifies the applicable percentage increase used to update the standardized amount for payment for inpatient hospital operating costs. We note that, in compliance with section 404 of the MMA, we are using the 2018-based IPPS operating and capital market baskets for FY 2025. As discussed in section V.B. of the preamble of this final rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we are reducing the FY 2025 applicable percentage increase (which for this final rule is based on IGI's second quarter 2024 forecast of the 2018-based IPPS market basket) by the productivity adjustment, as discussed elsewhere in this final rule.

Based on IGI's second quarter 2024 forecast of the hospital market basket percentage increase (as discussed in Appendix B of this final rule), the forecast of the hospital market basket percentage increase for FY 2025 for this final rule is 3.4 percent and the forecast of the productivity adjustment for FY 2025 for this final rule is 0.5 percent. As discussed earlier, for FY 2025, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, there are four possible applicable percentage increases that can be applied to the standardized amount. We refer readers to section V.B. of the preamble of this final rule for a complete discussion on the FY 2025 inpatient hospital update to the standardized amount. We also refer readers to the previous table for the four possible applicable percentage increases that would be applied to update the national standardized amount. The standardized amounts shown in Tables 1A through 1C that are published in section VI. of this Addendum and that are available via the internet on the CMS website reflect these differential amounts.

Although the update factors for FY 2025 are set by law, we are required by section 1886(e)(4) of the Act to recommend, taking into account MedPAC's recommendations, appropriate update factors for FY 2025 for both IPPS hospitals and hospitals and hospital units excluded from the IPPS. Section 1886(e)(5)(A) of the Act requires that we publish our

recommendations in the **Federal Register** for public comment. Our recommendation on the FY 2025 update factors is set forth in appendix B of this final rule.

4. Methodology for Calculation of the Average Standardized Amount

The methodology we used to calculate the FY 2025 standardized amount is as follows:

- To ensure we are only including hospitals paid under the IPPS in the calculation of the standardized amount, we applied the following inclusion and exclusion criteria: include hospitals whose last four digits fall between 0001 and 0879 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS website at: <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf>); exclude CAHs at the time of this final rule; exclude hospitals in Maryland (because these hospitals are paid under an all payer model under section 1115A of the Act); and remove PPS excluded-cancer hospitals that have a "V" in the fifth position of their provider number or a "E" or "F" in the sixth position.

Section 125 of Division CC (section 125) of the CAA 2021 established a new rural Medicare provider type: Rural Emergency Hospitals (REHs). (We refer the reader to the CMS website at <https://www.cms.gov/medicare/health-safety-standards/guidance-for-laws-regulations/hospitals/rural-emergency-hospitals> for additional information on REHs.) In doing so, section 125 amended section 1861(e) of the Act, which provides the definition of a hospital and states that the term "hospital" does not include, unless the context otherwise requires, a critical access hospital (as defined in subsection (mm)(1)) or a rural emergency hospital (as defined in subsection (kkk)(2)). Section 125 also added section 1861(kkk) to the Act, which sets forth the requirements for REHs. Per section 1861(kkk)(2) of the Act, one of the requirements for an REH is that it does not provide any acute care inpatient services (other than post-hospital extended care services furnished in a distinct part unit licensed as a skilled nursing facility (SNF)). Therefore, we believe hospitals that have subsequently converted to REH status should be removed from the calculation of the standardized amount, because they are a separately certified Medicare provider type and are not comparable to other short-term, acute care hospitals as they do not provide inpatient hospital services. For FY 2025, we proposed to exclude REHs from the calculation of the standardized amount, including

hospitals that subsequently became REHs after the period from which the data were taken. We did not receive any comments with regard to this proposal, and we are finalizing as proposed to exclude hospitals that have subsequently converted to REH from the calculation of the standardized amount, including hospitals that subsequently became REHs after the period from which the data were taken.

- As in the past, we are adjusting the FY 2025 standardized amount to remove the effects of the FY 2024 geographic reclassifications and outlier payments before applying the FY 2025 updates. We then applied budget neutrality offsets for outliers and geographic reclassifications to the standardized amount based on FY 2025 payment policies.

- We do not remove the prior year's budget neutrality adjustments for reclassification and recalibration of the DRG relative weights and for updated wage data because, in accordance with sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act, estimated aggregate payments after updates in the DRG relative weights and wage index should equal estimated aggregate payments prior to the changes. If we removed the prior year's adjustment, we would not satisfy these conditions.

Budget neutrality is determined by comparing aggregate IPPS payments before and after making changes that are required to be budget neutral (for example, changes to MS-DRG classifications, recalibration of the MS-DRG relative weights, updates to the wage index, and different geographic reclassifications). We include outlier payments in the simulations because they may be affected by changes in these parameters.

- Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50433), because IME Medicare Advantage payments are made to IPPS hospitals under section 1886(d) of the Act, we believe these payments must be part of these budget neutrality calculations. However, we note that it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation or the outlier offset to the standardized amount because the statute requires that outlier payments be not less than 5 percent nor more than 6 percent of total "operating DRG payments," which does not include IME and DSH payments. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage

IME payment amount to the budget neutrality adjustments.

- Consistent with the methodology in the FY 2012 IPPS/LTCH PPS final rule, in order to ensure that we capture only fee-for-service claims, we are only including claims with a "Claim Type" of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).

- Consistent with our methodology established in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57277), in order to further ensure that we capture only FFS claims, we are excluding claims with a "GHOPAID" indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).

- Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50423), we examine the MedPAR file and remove pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of "3" for blood clotting with a revenue code of "0636" from the covered charge field for the budget neutrality adjustments. We are removing organ acquisition charges, except for cases that group to MS-DRG 018, from the covered charge field for the budget neutrality adjustments because organ acquisition is a pass-through payment not paid under the IPPS. Revenue centers 081X-089X are typically excluded from ratesetting, however, we are not removing revenue center 891 charges from MS-DRG 018 claims during ratesetting because those revenue 891 charges were included in the relative weight calculation for MS-DRG 018, which is consistent with the policy finalized in the FY 2021 final rule (85 FR 58600). We note that a new MedPAR variable for revenue code 891 charges was introduced in April 2020.

- For FY 2025, we are continuing to remove allogeneic hematopoietic stem cell acquisition charges from the covered charge field for budget neutrality adjustments. As discussed in the FY 2021 IPPS/LTCH PPS final rule, payment for allogeneic hematopoietic stem cell acquisition costs is made on a reasonable cost basis for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842).

- The participation of hospitals under the BPCI (Bundled Payments for Care Improvement) Advanced model started on October 1, 2018. The BPCI Advanced model, tested under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of a single payment and risk track, which bundles payments for

multiple services beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in the BPCI Advanced model in one of two capacities: as a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals would continue to receive IPPS payments under section 1886(d) of the Act. Acute care hospitals that are participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation's website at: <https://innovation.cms.gov/initiatives/bpci-advanced/>.

For FY 2025, consistent with how we treated hospitals that participated in the BPCI Advanced Model in the FY 2021 IPPS/LTCH PPS final rule (85 FR 59029 and 59030), as we proposed, we are including all applicable data from subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations. We believe it is appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because these hospitals are still receiving IPPS payments under section 1886(d) of the Act. For the same reasons, as we proposed, we included all applicable data from subsection (d) hospitals participating in the Comprehensive Care for Joint Replacement (CJR) Model in our IPPS payment modeling and ratesetting calculations.

- Consistent with our methodology established in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688), we believe that it is appropriate to include adjustments for the Hospital Readmissions Reduction Program and the Hospital VBP Program (established under the Affordable Care Act) within our budget neutrality calculations.

Both the hospital readmissions payment adjustment (reduction) and the hospital VBP payment adjustment (redistribution) are applied on a claim-by-claim basis by adjusting, as applicable, the base-operating DRG payment amount for individual subsection (d) hospitals, which affects the overall sum of aggregate payments on each side of the comparison within the budget neutrality calculations.

In order to properly determine aggregate payments on each side of the comparison, consistent with the

approach we have taken in prior years, for FY 2025, we are applying a proxy based on the prior fiscal year hospital readmissions payment adjustment and a proxy based on the prior fiscal year hospital VBP payment adjustment on each side of the comparison, consistent with the methodology that we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688). Under this policy for FY 2025, we used the final FY 2024 readmissions adjustment factors from Table 15 of the FY 2024 IPPS/LTCH PPS final rule and the final FY 2024 hospital VBP adjustment factors from Table 16B of the FY 2024 IPPS/LTCH PPS final rule. These proxy factors are applied on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum. We refer the reader to section V.K. of the preamble of this final rule for a complete discussion on the Hospital Readmissions Reduction Program and section V.L. of the preamble of this final rule for a complete discussion on the Hospital VBP Program.

- The Affordable Care Act also established section 1886(r) of the Act, which modifies the methodology for computing the Medicare DSH payment adjustment beginning in FY 2014. Beginning in FY 2014, IPPS hospitals receiving Medicare DSH payment adjustments receive an empirically justified Medicare DSH payment equal to 25 percent of the amount that would previously have been received under the statutory formula set forth under section 1886(d)(5)(F) of the Act governing the Medicare DSH payment adjustment. In accordance with section 1886(r)(2) of the Act, the remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals who are uninsured and any additional statutory adjustment, is available to make additional payments to Medicare DSH hospitals based on their share of the total amount of uncompensated care reported by Medicare DSH hospitals for a given time period. In order to properly determine aggregate payments on each side of the comparison for budget neutrality, prior to FY 2014, we included estimated Medicare DSH payments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

To do this for FY 2025 (as we did for the last 11 fiscal years), as we proposed, we are including estimated empirically justified Medicare DSH payments that

would be paid in accordance with section 1886(r)(1) of the Act and estimates of the additional uncompensated care payments made to hospitals receiving Medicare DSH payment adjustments as described by section 1886(r)(2) of the Act. That is, we considered estimated empirically justified Medicare DSH payments at 25 percent of what would otherwise have been paid, and also the estimated additional uncompensated care payments for hospitals receiving Medicare DSH payment adjustments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

We also are including the estimated supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

- When calculating total payments for budget neutrality, to determine total payments for SCHs, we model total hospital-specific rate payments and total Federal rate payments and then include whichever one of the total payments is greater. As discussed in section IV.G. of the preamble to this final rule and later in this section, we proposed to continue to use the FY 2014 finalized methodology under which we take into consideration uncompensated care payments in the comparison of payments under the Federal rate and the hospital-specific rate for SCHs. Therefore, we are including estimated uncompensated care payments in this comparison.

As discussed elsewhere in this final rule, section 307 of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, extended the MDH program for FY 2025 discharges occurring before January 1, 2025. Prior to enactment of the CAA, 2024, the MDH program was only to be in effect through the end of FY 2024. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2025. As a result, MDHs that currently receive the higher of payments made based on the Federal rate or the payments made based on the Federal rate plus 75 percent of the difference between payments based on the Federal rate and the hospital-specific rate will be paid based on the Federal rate starting January 1, 2025. In the proposed rule we stated that because of the timing of this legislation, the total payments for budget neutrality in the proposed rule did not reflect the extension of the MDH

program for the first quarter of FY 2025. We further stated in the proposed rule that this extension will be reflected in the total payments for budget neutrality for the final rule. For this final rule, approximately 117 hospitals would receive payments under the MDH program for the first quarter of FY 2025. Upon further review and consideration, given the limited magnitude, for this final rule we did not include this extension in the total payments for budget neutrality. Accordingly, for this final rule, the budget neutrality factor calculations do not reflect the extension of the MDH program for the first quarter of FY 2025.

- As proposed, we included an adjustment to the standardized amount for those hospitals that are not meaningful EHR users in our modeling of aggregate payments for budget neutrality for FY 2025. Similar to FY 2024, we are including this adjustment based on data on the prior year's performance. Payments for hospitals would be estimated based on the applicable standardized amount in Tables 1A and 1B for discharges occurring in FY 2025.

- In our determination of all budget neutrality factors described in section II.A.4. of this Addendum, we used transfer-adjusted discharges.

We note, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49414 through 49415), we finalized a change to the ordering of the budget neutrality factors in the calculation so that the RCH Demonstration budget neutrality factor is applied after all wage index and other budget neutrality factors. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule for further discussion.

We note that the wage index value is calculated and assigned to a hospital based on the hospital's labor market area. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core-Based Statistical Areas (CBSAs) established by the Office of Management and Budget (OMB). The current statistical areas used in FY 2024 are based on the OMB delineations that were adopted beginning with FY 2015 (based on the revised delineations issued in OMB Bulletin No. 13–01) to calculate the area wage indexes, with updates as reflected in OMB Bulletin Nos. 15–01, 17–01, and 18–04. For purposes of determining all of the FY 2024 budget neutrality factors, we determined aggregate payments on each side of the comparison for our budget neutrality calculations using wage indexes based on the current CBSAs.

On July 21, 2023, OMB released Bulletin No. 23–01. A copy of OMB

Bulletin No. 23–01 may be obtained at <https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf>. According to OMB, the delineations reflect the 2020 Standards for Delineating Core Based Statistical Areas (“the 2020 Standards”), which appeared in the **Federal Register** on July 16, 2021 (86 FR 37770 through 37778), and the application of those standards to Census Bureau population and journey-to-work data (for example, 2020 Decennial Census, American Community Survey, and Census Population Estimates Program data). In order to implement these revised standards for the IPPS, it was necessary to identify the new OMB labor market area delineation for each county and hospital in the country. As stated in section III.B. of the preamble of this final rule, we believe that using the revised delineations based on OMB Bulletin No. 23–01 will increase the integrity of the IPPS wage index system by more accurately representing current geographic variations in wage levels. As discussed in section III. of the preamble of this final rule, we are finalizing to adopt the new OMB labor market area delineations as described in the July 21, 2023 OMB Bulletin No. 23–01, effective for the FY 2025 IPPS wage index.

Consistent with our policy to adopt the new OMB delineations, in order to properly determine aggregate payments on each side of the comparison for our budget neutrality calculations, we are using wage indexes based on the new OMB delineations in the determination of all of the budget neutrality factors discussed later in this section. We also note that, consistent with past practice as finalized in the FY 2005 IPPS final rule (69 FR 49034), we are not adopting the new OMB delineations themselves in a budget neutral manner. We continue to believe that the revision to the labor market areas in and of itself does not constitute an “adjustment or update” to the adjustment for area wage differences, as provided under section 1886(d)(3)(E) of the Act.

a. Reclassification and Recalibration of MS–DRG Relative Weights Before Cap

Section 1886(d)(4)(C)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. As discussed in section II.D. of the preamble of this final rule, we normalized the recalibrated MS–DRG relative weights by an adjustment factor so that the average case relative weight after recalibration is equal to the average case relative weight prior to

recalibration. However, equating the average case relative weight after recalibration to the average case relative weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case relative weight. Therefore, as we have done in past years, we are making a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

For this FY 2025 final rule, as we proposed, to comply with the requirement that MS–DRG reclassification and recalibration of the relative weights be budget neutral for the standardized amount and the hospital-specific rates, we used FY 2023 discharge data to simulate payments and compared the following:

- Aggregate payments using the new OMB labor market area delineations for FY 2025, the FY 2024 labor-related share percentages, the FY 2024 relative weights, and the FY 2024 pre-reclassified wage data, and applied the proxy hospital readmissions payment adjustments and proxy hospital VBP payment adjustments (as described previously); and

- Aggregate payments using the new OMB labor market area delineations for FY 2025, the FY 2024 labor-related share percentages, the FY 2025 relative weights before applying the 10 percent cap, and the FY 2024 pre-reclassified wage data, and applied the same proxy hospital readmissions payment adjustments and proxy hospital VBP payment adjustments applied previously.

Because this payment simulation uses the FY 2025 relative weights (before applying the 10 percent cap), consistent with our policy in section V.I. of the preamble to this final rule, we applied the adjustor for certain cases that group to MS–DRG 018 in our simulation of these payments. We note that because the simulations of payments for all of the budget neutrality factors discussed in this section also use the FY 2025 relative weights, we are applying the adjustor for certain MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-cell and other immunotherapies) cases in all simulations of payments for the budget neutrality factors discussed later in this section. We refer the reader to section V.I. of the preamble of this final rule for a complete discussion on the adjustor for certain cases that group to MS–DRG 018 and to section II.D.2.b. of the preamble of this final rule, for a complete discussion of the adjustment to the FY 2025 relative weights to

account for certain cases that group to MS–DRG 018.

Based on this comparison, we computed a budget neutrality adjustment factor and applied this factor to the standardized amount. As discussed in section IV. of this Addendum, we are applying the MS–DRG reclassification and recalibration budget neutrality factor to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2024. Please see the table later in this section setting forth each of the FY 2025 budget neutrality factors.

b. Budget Neutrality Adjustment for Reclassification and Recalibration of MS–DRG Relative Weights With Cap

As discussed in section II.D.2.c of the preamble of this final rule, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48897 through 48900), we finalized a permanent 10-percent cap on the reduction in an MS–DRG’s relative weight in a given fiscal year, beginning in FY 2023. As also discussed in section II.D.2.c of the preamble of this final rule, and consistent with our current methodology for implementing budget neutrality for MS–DRG reclassification and recalibration of the relative weights under section 1886(d)(4)(C)(iii) of the Act, we apply a budget neutrality adjustment to the standardized amount for all hospitals so that this 10-percent cap on relative weight reductions does not increase estimated aggregate Medicare payments beyond the payments that would be made had we never applied this cap. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule for further discussion.

To calculate this budget neutrality adjustment factor for FY 2025, we used FY 2023 discharge data to simulate payments and compared the following:

- Aggregate payments using the new OMB labor market area delineations for FY 2025, the FY 2024 labor-related share percentages, the FY 2025 relative weights before applying the 10-percent cap, and the FY 2024 pre-reclassified wage data, and applied the proxy FY 2025 hospital readmissions payment adjustments and the proxy FY 2025 hospital VBP payment adjustments; and

- Aggregate payments using the new OMB labor market area delineations for FY 2025, the FY 2024 labor-related share percentages, the FY 2025 relative weights after applying the 10-percent cap, and the FY 2024 pre-reclassified wage data, and applied the same proxy FY 2025 hospital readmissions payment adjustments and proxy FY 2025 hospital VBP payment adjustments applied previously.

Because this payment simulation uses the FY 2025 relative weights, consistent with our proposal in section V.I. of the preamble to this final rule and our historical policy, and as discussed in the preceding section, we applied the adjuster for certain cases that group to MS–DRG 018 in our simulation of these payments.

In addition, we applied the MS–DRG reclassification and recalibration budget neutrality adjustment factor before the cap (derived in the first step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2024 to FY 2025. Based on this comparison, we computed a budget neutrality adjustment factor and applied this factor to the standardized amount. As discussed in section IV. of this Addendum, as we proposed, we are applying this budget neutrality factor to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2024. Please see the table later in this section setting forth each of the FY 2025 budget neutrality factors.

c. Updated Wage Index—Budget Neutrality Adjustment

Section 1886(d)(3)(E)(i) of the Act requires us to update the hospital wage index on an annual basis beginning October 1, 1993. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. Section 1886(d)(3)(E)(i) of the Act requires that we implement the wage index adjustment in a budget neutral manner. However, section 1886(d)(3)(E)(ii) of the Act sets the labor-related share at 62 percent for hospitals with a wage index less than or equal to 1.0000, and section 1886(d)(3)(E)(i) of the Act provides that the Secretary shall calculate the budget neutrality adjustment for the adjustments or updates made under that provision as if section 1886(d)(3)(E)(ii) of the Act had not been enacted. In other words, this section of the statute requires that we implement the updates to the wage index in a budget neutral manner, but that our budget neutrality adjustment should not take into account the requirement that we set the labor-related share for hospitals with wage indexes less than or equal to 1.0000 at the more advantageous level of 62 percent. Therefore, for purposes of this budget neutrality adjustment, section 1886(d)(3)(E)(i) of the Act prohibits us from taking into account the fact that hospitals with a wage index less than or

equal to 1.0000 are paid using a labor-related share of 62 percent. Consistent with current policy, for FY 2025, as we proposed, we are adjusting 100 percent of the wage index factor for occupational mix. We describe the occupational mix adjustment in section III.E. of the preamble of this final rule.

To compute a budget neutrality adjustment factor for wage index and labor-related share percentage changes, we used FY 2023 discharge data to simulate payments and compared the following:

- Aggregate payments using the new OMB labor market area delineations for FY 2025, the FY 2025 relative weights and the FY 2023 pre-reclassified wage indexes, applied the FY 2024 labor-related share of 67.6 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the proxy FY 2025 hospital readmissions payment adjustment and the proxy FY 2025 hospital VBP payment adjustment.

- Aggregate payments using the new OMB labor market area delineations for FY 2025, the FY 2025 relative weights and the proposed FY 2025 pre-reclassified wage indexes, applied the labor-related share for FY 2025 of 67.6 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the same proxy FY 2025 hospital readmissions payment adjustments and proxy FY 2025 hospital VBP payment adjustments applied previously.

In addition, we applied the MS–DRG reclassification and recalibration budget neutrality adjustment factor before the proposed cap (derived in the first step) and the 10 percent cap on relative weight reductions adjustment factor (derived from the second step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2024 to FY 2025. Based on this comparison, we computed a budget neutrality adjustment factor and applied this factor to the standardized amount for changes to the wage index. Please see the table later in this section for a summary of the FY 2025 budget neutrality factors.

d. Reclassified Hospitals—Budget Neutrality Adjustment

Section 1886(d)(8)(B) of the Act provides that certain rural hospitals are deemed urban. In addition, section 1886(d)(10) of the Act provides for the reclassification of hospitals based on determinations by the MGCRB. Under section 1886(d)(10) of the Act, a hospital may be reclassified for purposes of the wage index.

Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amount to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. Additionally, as discussed, changes in the wage index are generally budget neutralized. We note, in the FY 2024 IPPS/LTCH final rule (88 FR 58971 through 58977), we finalized a policy beginning with FY 2024 to include hospitals with § 412.103 reclassification along with geographically rural hospitals in all rural wage index calculations, and only exclude “dual reclass” hospitals (hospitals with simultaneous § 412.103 and MGCRB reclassifications) in accordance with the hold harmless provision at section 1886(d)(8)(C)(ii) of the Act. Consistent with the previous policy, beginning with FY 2024, we include the data of all § 412.103 hospitals (including those that have an MGCRB reclassification) in the calculation of “the wage index for rural areas in the State in which the county is located” as referred to in section 1886(d)(8)(C)(iii) of the Act.

We refer the reader to the FY 2015 IPPS final rule (79 FR 50371 and 50372) for a discussion regarding the requirement of section 1886(d)(8)(C)(iii) of the Act. We further note that the wage index adjustments provided for under section 1886(d)(13) of the Act are not budget neutral. Section 1886(d)(13)(H) of the Act provides that any increase in a wage index under section 1886(d)(13) of the Act shall not be taken into account in applying any budget neutrality adjustment with respect to such index under section 1886(d)(8)(D) of the Act. To calculate the budget neutrality adjustment factor for FY 2025, we used FY 2022 discharge data to simulate payments and compared the following:

- Aggregate payments using the new OMB labor market area delineations for FY 2025, the FY 2025 labor-related share percentage, the FY 2025 relative weights, and the FY 2025 wage data prior to any reclassifications, and applied the proxy FY 2025 hospital readmissions payment adjustments and the proxy FY 2025 hospital VBP payment adjustments.

- Aggregate payments using the new OMB labor market area delineations for FY 2025, the FY 2025 labor-related share percentage, the FY 2025 relative weights, and the FY 2025 wage data after such reclassifications, and applied the same proxy FY 2025 hospital readmissions payment adjustments and

the proxy FY 2025 hospital VBP payment adjustments applied previously.

We note that the reclassifications applied under the second simulation and comparison are those listed in Table 2 associated with this final rule, which is available via the internet on the CMS website. This table reflects reclassification crosswalks for FY 2025 and applies the policies explained in section III. of the preamble of this final rule. Based on this comparison, we computed a budget neutrality adjustment factor and applied this factor to the standardized amount to ensure that the effects of these provisions are budget neutral, consistent with the statute. Please see the table later in this section for a summary of the FY 2025 budget neutrality factors.

The FY 2025 budget neutrality adjustment factor was applied to the standardized amount after removing the effects of the FY 2024 budget neutrality adjustment factor. We note that the FY 2025 budget neutrality adjustment reflects FY 2025 wage index reclassifications approved by the MGCRB or the Administrator at the time of development of this final rule.

Comment: A commenter requested that CMS confirm that if an urban hospital has reclassified as rural under § 412.103, the “before” wage index value for the hospital in this simulation would be equal to the rural wage index for its state. The commenter further asked for confirmation if was this CMS’s policy prior to FY 2024, or did it originate in FY 2024 when CMS decided to regard § 412.103 hospitals as rural for purposes of the rural wage index.

Response: The “before” wage index value uses a hospitals area wage data before any reclassifications or state rural wage index is applied. This is also referred to as the pre reclassified wage index. Therefore, if an urban hospital has reclassified as rural under section § 412.103, the “before” wage index value would be based on the hospitals urban area wage index prior to any reclassification or application of the state rural wage index. We also confirm that this has been the policy prior to FY 2024.

Comment: A commenter requested that CMS confirm that section 1886(d)(8)(C)(ii) has no effect on aggregate expenditures or the Reclassification Budget Neutrality Adjustment (RBNA). The commenter also referenced the FY 2024 IPPS/LTCH PPS final rule (88 FR 58976) with regard to the calculation of the rural wage index and requested that CMS confirm that when a state’s rural wage index is determined under Calculations 2 or 3,

the increase in aggregate expenditures is measured by reference to what the rural wage index for the state would have been under Calculation 1. Finally, the commenter also requested that CMS confirm that section 1886(d)(8)(C)(iii) has no effect on aggregate expenditures or the RBNA for geographically rural or § 412.103 hospitals that have a LUGAR or MGCRB reclassification.

Response: It appears that the commenter believes that calculation 1 should be used for the pre reclassified wage index. As previously mentioned, the “before” wage index value uses a hospitals area wage data before any reclassifications or state rural wage index is applied (the pre reclassified wage index). The “after” wage index for a rural area would be based on the greater of the three rural wage index calculations as discussed in the FY 2024 IPPS/LTCH final rule. Accordingly, there could be an impact on the budget neutrality factor due to sections 1886(d)(8)(C)(ii) and (iii) of the Act, and the “before” wage index uses the pre reclassified wage index and not Calculation 1.

Under § 412.64(e)(4), we make an adjustment to the wage index to ensure that aggregate payments after implementation of the rural floor under section 4410 of the BBA (Pub. L. 105–33) are equal to the aggregate prospective payments that would have been made in the absence of this provision. Consistent with section 3141 of the Affordable Care Act and as discussed in section III.G. of the preamble of this final rule and codified at § 412.64(e)(4)(ii), the budget neutrality adjustment for the rural floor is a national adjustment to the wage index.

For FY 2025 there is one hospital in Puerto Rico with wage data. Therefore, for this final rule, we do not need to apply the calculation discussed in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50369 through 50370). In a future fiscal year, if there were no hospitals with wage data in rural Puerto Rico, we would then calculate a national rural Puerto Rico wage index based on the policy adopted in the FY 2008 IPPS final rule with comment period (72 FR 47323). That is, we would use the unweighted average of the wage indexes from all CBSAs (urban areas) that are contiguous to (share a border with) the rural counties to compute the rural floor (72 FR 47323; 76 FR 51594).

We note, in the FY 2024 IPPS/LTCH final rule (88 FR 58971–77), we finalized a policy beginning with FY 2024 to include hospitals with § 412.103 reclassification along with geographically rural hospitals in all

rural wage index calculations and are only excluding “dual reclass” hospitals (hospitals with simultaneous § 412.103 and MGCRB reclassifications) in accordance with the hold harmless provision at section 1886(d)(8)(C)(ii) of the Act. Consistent with the previous policy, beginning with FY 2024, we include the data of all § 412.103 hospitals (including those that have an MGCRB reclassification) in the calculation of the rural floor.

To calculate the national rural floor budget neutrality adjustment factor, we used FY 2023 discharge data to simulate payments, the new OMB labor market area delineations adopted for FY 2025, and the post-reclassified national wage indexes and compared the following:

- National simulated payments without the rural floor.
- National simulated payments with the rural floor.

Based on this comparison, we determined a national rural floor budget neutrality adjustment factor. The national adjustment was applied to the national wage indexes to produce rural floor budget neutral wage indexes. Please see the table later in this section for a summary of the FY 2025 budget neutrality factors.

As further discussed in section III.G.2. of this final rule, we note that section 9831 of the American Rescue Plan Act of 2021 (Pub. L. 117–2), enacted on March 11, 2021 amended section 1886(d)(3)(E)(i) of the Act (42 U.S.C. 1395ww(d)(3)(E)(i)) and added section 1886(d)(3)(E)(iv) of the Act to establish a minimum area wage index (or imputed floor) for hospitals in all-urban States for discharges occurring on or after October 1, 2022. Unlike the imputed floor that was in effect from FY 2005 through FY 2018, section 1886(d)(3)(E)(iv)(III) of the Act provides that the imputed floor wage index shall not be applied in a budget neutral manner. Specifically, section 9831(b) of Public Law 117–2 amends section 1886(d)(3)(E)(i) of the Act to exclude the imputed floor from the budget neutrality requirement under section 1886(d)(3)(E)(i) of the Act. In the past, we budget neutralized the estimated increase in payments each year resulting from the imputed floor that was in effect from FY 2005 through FY 2018. For FY 2022 and subsequent years, in applying the imputed floor required under section 1886(d)(3)(E)(iv) of the Act, we are applying the imputed floor after the application of the rural floor and would apply no reductions to the standardized amount or to the wage index to fund the increase in payments to hospitals in all-urban States resulting from the application of the imputed floor. We

refer the reader to section III.G.2. of the preamble of this final rule for a complete discussion regarding the imputed floor.

Comment: A commenter requested that CMS fully describe the interplay between the Reclassification Budget Neutrality Factor and the Rural Floor Budget Neutrality Factor and make available the calculations of both budget neutrality adjustments. The commenter stated that it is unclear how the Reclassification Budget Neutrality Factor is applied or potentially replaced with the Rural Floor Budget Neutrality Factor for a provider who receives both adjustments.

Response: With regard to the commenter requesting a description of the interplay between the Reclassification Budget Neutrality Factor and the Rural Floor Budget Neutrality Factor and a calculation of both adjustments, we refer the commenter to sections II.A.4.d. and II.A.4.e. of the Addendum of this final rule for a complete discussion of the budget neutrality impacts of reclassified hospitals and the rural floor. We also refer the commenter to the table in the Addendum summarizing the FY 2025 budget neutrality factors. Regarding the interplay of both adjustments and the impact on a hospital that receives both, we remind the commenter that the reclassification budget neutrality adjustment is applied to the standardized amount while the rural floor budget neutrality factor is applied to the wage index.

f. Continuation of the Low Wage Index Hospital Policy—Budget Neutrality Adjustment

As discussed in section III.G.5. of the preamble of this final rule, we are continuing for FY 2025 the wage index policy finalized in the FY 2020 IPPS/LTCH PPS final rule to address wage index disparities by increasing the wage index values for hospitals with a wage index value below the 25th percentile wage index value across all hospitals (the low wage index hospital policy). As discussed in section III.G.3. of this final rule, consistent with our current methodology for implementing wage index budget neutrality under section 1886(d)(3)(E) of the Act, we are making a budget neutrality adjustment to the national standardized amount for all hospitals so that the increase in the wage index for hospitals with a wage index below the 25th percentile wage index, is implemented in a budget neutral manner.

We note that the FY 2020 low wage index hospital policy and the related budget neutrality adjustment are the

subject of pending litigation in multiple courts. On July 23, 2024, the Court of Appeals for the D.C. Circuit held that the Secretary lacked authority under 1886(d)(3)(E) or 1886(d)(5)(I)(i) of the Act to adopt the low wage index hospital policy for FY 2020, and that the policy and related budget neutrality adjustment must be vacated. *Bridgeport Hosp. v. Becerra*, Nos. 22–5249, 22–5269, 2024 WL 3504407, at *7–*8 & n.6 (D.C. Cir. July 23, 2024). As of the date of this Rule’s publication, the time to seek further review of the D.C. Circuit’s decision in *Bridgeport Hospital* has not expired. See Fed. R. App. P. 40(a)(1). The government is evaluating the decision and considering options for next steps.

To calculate this budget neutrality adjustment factor for FY 2025, we used FY 2023 discharge data to simulate payments and compared the following:

- Aggregate payments using the new OMB labor market area delineations for FY 2025, the FY 2025 labor-related share percentage, the FY 2025 relative weights, and the FY 2025 wage index for each hospital before adjusting the wage indexes under the low wage index hospital policy, and applied the proxy FY 2025 hospital readmissions payment adjustments and the proxy FY 2025 hospital VBP payment adjustments; and
- Aggregate payments using the new OMB labor market area delineations for FY 2025, the FY 2025 labor-related share percentage, the FY 2025 relative weights, and the FY 2025 wage index for each hospital after adjusting the wage indexes under the low wage index hospital policy, and applied the same proxy FY 2025 hospital readmissions payment adjustments and the proxy FY 2025 hospital VBP payment adjustments applied previously.

This final FY 2025 budget neutrality adjustment factor was applied to the standardized amount.

g. Permanent Cap Policy for Wage Index—Budget Neutrality Adjustment

As noted previously, in section III.G.6. of the preamble to this final rule, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49018 through 49021) we finalized a policy to apply a 5-percent cap on any decrease to a hospital’s wage index from its wage index in the prior FY, regardless of the circumstances causing the decline. That is, a hospital’s wage index would not be less than 95 percent of its final wage index for the prior FY. We also finalized the application of this permanent cap policy in a budget neutral manner through an adjustment to the standardized amount to ensure that estimated aggregate payments under our wage index cap

policy for hospitals that will have a decrease in their wage indexes for the upcoming fiscal year of more than 5 percent will equal what estimated aggregate payments would have been without the permanent cap policy.

To calculate a wage index cap budget neutrality adjustment factor for FY 2025, we used FY 2023 discharge data to simulate payments and compared the following:

- Aggregate payments without the 5-percent cap using the FY 2025 labor-related share percentages, the new OMB labor market area delineations for FY 2025, the FY 2025 relative weights, the FY 2025 wage index for each hospital after adjusting the wage indexes under the low wage index hospital policy, and applied the proxy FY 2025 hospital readmissions payment adjustments and the proxy FY 2025 hospital VBP payment adjustments.

- Aggregate payments with the 5-percent cap using the FY 2025 labor-related share percentages, the new OMB labor market area delineations for FY 2025, the FY 2025 relative weights, the FY 2025 wage index for each hospital after adjusting the wage indexes under the low wage index hospital policy, and applied the same proxy FY 2025 hospital readmissions payment adjustments and the proxy FY 2025 hospital VBP payment adjustments applied previously.

We note, Table 2 associated with this final rule contains the wage index by provider before and after applying the low wage index hospital policy and the cap.

h. Rural Community Hospital Demonstration Program Adjustment

In section V.N. of the preamble of this final rule, we discuss the Rural Community Hospital (RCH) Demonstration program, which was originally authorized for a 5-year period by section 410A of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173), and extended for another 5-year period by sections 3123 and 10313 of the Affordable Care Act (Pub. L. 111–148). Subsequently, section 15003 of the 21st Century Cures Act (Pub. L. 114–255), enacted December 13, 2016, amended section 410A of Public Law 108–173 to require a 10-year extension period (in place of the 5-year extension required by the Affordable Care Act, as further discussed later in this section). Finally, Division CC, section 128(a) of the Consolidated Appropriations Act of 2021 (Pub. L. 116–260) again amended section 410A to require a 15-year extension period in place of the 10-year period. We make an adjustment to the

standardized amount to ensure the effects of the RCH Demonstration program are budget neutral as required under section 410A(c)(2) of Public Law 108–173. We refer readers to section V.N. of the preamble of this final rule for complete details regarding the Rural Community Hospital Demonstration.

With regard to budget neutrality, as mentioned earlier, we make an adjustment to the standardized amount to ensure the effects of the Rural Community Hospital Demonstration are budget neutral, as required under

section 410A(c)(2) of Public Law 108–173. For FY 2025, based on the latest data for this final rule, the total amount that we are applying to make an adjustment to the standardized amounts to ensure the effects of the Rural Community Hospital Demonstration program are budget neutral is \$19,414,819. Accordingly, using the most recent data available to account for the estimated costs of the demonstration program, for FY 2025, we computed a factor for the Rural Community Hospital Demonstration budget neutrality

adjustment that would be applied to the standardized amount. Please see the table later in this section for a summary of the Proposed FY 2025 budget neutrality factors. We refer readers to section V.N. of the preamble of this final rule on complete details regarding the calculation of the amount we are applying to make an adjustment to the standardized amounts.

The following table is a summary of the FY 2025 budget neutrality factors, as discussed in the previous sections.

Summary of FY 2025 Budget Neutrality Factors	
MS-DRG Reclassification and Recalibration Budget Neutrality Factor	0.997190
Cap Policy MS-DRG Weights Budget Neutrality Factor	0.999874
Wage Index Budget Neutrality Factor	1.000114
Reclassification Budget Neutrality Factor	0.962791
*Rural Floor Budget Neutrality Factor	0.977499
Low Wage Index Hospital Policy Budget Neutrality Factor	0.997157
Cap Policy Wage Index Budget Neutrality Factor	0.999173
Rural Demonstration Budget Neutrality Factor	0.999810

*The rural floor budget neutrality factor is applied to the national wage indexes while the rest of the budget neutrality adjustments are applied to the standardized amounts.

i. Outlier Payments

Section 1886(d)(5)(A) of the Act provides for payments in addition to the basic prospective payments for “outlier” cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs greater than the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, any new technology add-on payments, and the “outlier threshold” or “fixed-loss” amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for an outlier payment). We refer to the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, any new technology add-on payments, and the outlier threshold as the outlier “fixed-loss cost threshold.” To determine whether the costs of a case exceed the fixed-loss cost threshold, a hospital’s CCR is applied to the total covered charges for the case to convert the charges to estimated costs. Payments for eligible cases are then made based on a marginal cost factor, which is a percentage of the estimated costs above the fixed-loss cost

threshold. The marginal cost factor for FY 2025 is 80 percent, or 90 percent for burn MS–DRGs 927, 928, 929, 933, 934 and 935. We have used a marginal cost factor of 90 percent since FY 1989 (54 FR 36479 through 36480) for designated burn DRGs as well as a marginal cost factor of 80 percent for all other DRGs since FY 1995 (59 FR 45367).

In accordance with section 1886(d)(5)(A)(iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments (which does not include IME and DSH payments) plus outlier payments. When setting the outlier threshold, we compute the projected percentage by dividing the total projected operating outlier payments by the total projected operating DRG payments plus projected operating outlier payments. As discussed in the next section, for FY 2025, we are incorporating an estimate of the impact of outlier reconciliation when setting the outlier threshold. We do not include any other payments such as IME and DSH within the outlier target amount. Therefore, it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation. Section 1886(d)(3)(B) of the Act requires the Secretary to reduce the average standardized amount by a factor to

account for the estimated total of outlier payments as a proportion of total DRG payments. More information on outlier payments may be found on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/outlier.html>.

(1) Methodology To Incorporate an Estimate of the Impact of Outlier Reconciliation in the FY 2025 Outlier Fixed-Loss Cost Threshold

The regulations in 42 CFR 412.84(i)(4) state that any outlier reconciliation at cost report settlement will be based on operating and capital cost-to-charge ratios (CCRs) calculated based on a ratio of costs to charges computed from the relevant cost report and charge data determined at the time the cost report coinciding with the discharge is settled. Instructions for outlier reconciliation are in section 20.1.2.5 of chapter 3 of the Claims Processing Manual (on line at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf>). The original instructions issued in July 2003¹¹⁰⁶ instruct MACs to identify for CMS any instances where: (1) a

¹¹⁰⁶ Change Request 2785 (Transmittal A–03–058; July 3, 2003) found at <https://www.cms.gov/regulations-and-guidance/guidance/transmittals/downloads/a03058.pdf>.

hospital's actual operating CCR for the cost reporting period fluctuates plus or minus 10 percentage points or more compared to the interim operating CCR used to calculate outlier payments when a bill is processed; and (2) the total operating and capital outlier payments for the hospital exceeded \$500,000 for that cost reporting period. Cost reports that meet these criteria will have the hospital's outlier payments reconciled at the time of cost report final settlement if approved by the CMS Central Office. For the remainder of this discussion, we refer to these criteria as the original criteria for outlier reconciliation (or the original criteria).

On March 28, 2024, we issued Change Request (CR) 13566, which is available at <https://www.cms.gov/medicare/regulations-guidance/transmittals/2024-transmittals/r12558cp>. CR 13566 provides additional instructions to MACs that expand the criteria for identifying cost reports MACs are to refer to CMS for approval of outlier reconciliation. We anticipate that MACs will identify more cost reports to refer to CMS for outlier reconciliation approval. A report issued by the Office of the Inspector General (OIG) recommended that CMS require reconciliation of all hospital outlier payments during a cost-reporting period in its November 2019 report titled "Hospitals Received Millions in Excessive Outlier Payments Because CMS Limits the Reconciliation Process" (A-05-16-00060).¹¹⁰⁷ CMS concurs with the OIG's recommendation and is exploring the administrative feasibility of reconciling the outlier payments for all hospitals.

Consistent with the OIG recommendation, CMS modified the original criteria for identifying cost reports to refer to CMS for outlier reconciliation approval in instructions to MACs in CR 13566. Specifically, CR 13566 states that for cost reports beginning on or after October 1, 2024, MACs shall identify for CMS any instances where: (1) the actual operating CCR is found to be plus or minus 20 percent or more from the operating CCR used during that time period to make outlier payments, and (2) the total operating and capital outlier payments for the hospital exceeded \$500,000 for that cost reporting period. For the remainder of this discussion, we refer to these criteria as the new criteria for outlier reconciliation (or the new criteria). In the proposed rule we stated that we believe the new criteria balance

current administrative feasibility with the goal of expanding the scope of cost reports identified for outlier reconciliation approval and conducting outlier reconciliation more frequently to increase the accuracy of outlier payments. These new criteria for identifying hospital cost reports that MACs should identify for outlier reconciliation approval are in addition to the original criteria for reconciliation described previously. That is, under the new criteria, MACs identify hospitals for outlier reconciliation that would not have met the original criteria. For example, in an instance where a hospital was paid with an operating CCR of 0.09 and its actual operating CCR was 0.07, then the hospital would not have met the 10-percentage point criterion under the original criteria (the hospital's operating CCR would have to be a negative number, which is not possible). Under the new criteria, a hospital that had a change in their actual operating CCR that was greater than 20 percent from the CCR used for payment during the cost reporting period would be referred to CMS. Using the same example, while the operating CCR changed by a difference of -0.02 percentage point ($0.07 - 0.09$), the percentage change operating CCR is -22.2 percent ($(0.07/0.09) - 1$), which meets the new 20 percent criterion. In addition, CR 13566 instructs that for cost reporting periods that begin on or after October 1, 2024, a hospital in its first cost reporting period will be referred for reconciliation of outlier payments at the time of cost report final settlement. As such, new hospitals will be referred for outlier reconciliation regardless of the change to the operating CCR and no matter the amount of outlier payments during the cost reporting period.

If we determine that a hospital's outlier payments should be reconciled, we reconcile both operating and capital outlier payments. We refer readers to section 20.1.2.5 of Chapter 3 of the Medicare Claims Processing Manual for complete instructions regarding outlier reconciliation, including the update to the outlier reconciliation criteria provided in CR 13566.

Comment: Commenters were concerned that CMS has added new criteria for determining which hospitals will have their outlier payments reconciled in CR 13566. The commenters stated CMS has not explained the grounds for the new criteria or its retention of the old criteria, and the new criteria were adopted without notice and comment rulemaking. The commenters stated their belief that new reconciliation

criteria constitute a substantive change to CMS' payment policy that cannot be adopted without notice and comment rulemaking. The commenters urged CMS to withdraw the CR.

MedPAC supported changes in CR 13566 and agreed with CMS that expanding the criteria for identifying hospitals for outlier reconciliation approval and increasing the frequency reconciliation would increase the accuracy of outlier payments while maintaining relatively low administrative burden. MedPAC also encouraged CMS to continue to monitor outlier payments and administrative burden to inform if additional changes to referral criteria are warranted in future years.

Response: CMS established the outlier reconciliation regulation under § 412.84(i)(4) effective for discharges on or after August 8, 2003 which makes all hospital outlier payments subject to reconciliation. CMS has not modified the outlier regulation. The instructions CMS has issued via CR 13566 have set forth an enforcement policy that determines when MACs will identify additional hospitals for reconciliation referral. They do not change the legal standards that govern the hospitals.

We appreciate MedPAC's supporting comment. As we explained in the proposed rule, we believe the new criteria balance current administrative feasibility with the goal of expanding the scope of cost reports identified for outlier reconciliation approval to increase the accuracy of outlier payments. These new criteria for identifying hospital cost reports that MACs should be referred for outlier reconciliation approval are in addition to the original criteria for reconciliation described previously.

The regulations at § 412.84(m) further state that at the time of any outlier reconciliation under § 412.84(i)(4), outlier payments may be adjusted to account for the time value of any underpayments or overpayments. Section 20.1.2.6 of Chapter 3 of the Medicare Claims Processing Manual contains instructions on how to assess the time value of money for reconciled outlier amounts.

If the operating CCR of a hospital approved for outlier reconciliation is lower at cost report settlement compared to the operating CCR used for payment, the hospital would owe CMS money. Conversely, if the operating CCR increases at cost report settlement compared to the operating CCR used for payment, CMS would owe the hospital money.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42623 through 42635), we

¹¹⁰⁷ This report is available on the OIG website at: <https://oig.hhs.gov/oas/reports/region5/51600060.pdf>.

finalized a methodology to incorporate outlier reconciliation in the FY 2020 outlier fixed loss cost threshold. As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19592), we stated that rather than trying to predict which claims and/or hospitals may be subject to outlier reconciliation, we believe a methodology that incorporates an estimate of outlier reconciliation dollars based on actual outlier reconciliation amounts reported in historical cost reports would be a more feasible approach and provide a better estimate and predictor of outlier reconciliation for the upcoming fiscal year. We also stated that we believe the methodology addresses stakeholders' concerns about the impact of outlier reconciliation on the modeling of the outlier threshold. For a detailed discussion of additional background regarding the incorporation of outlier reconciliation into the outlier fixed loss cost threshold, we refer the reader to the FY 2020 IPPS/LTCH PPS final rule. Consistent with the instructions to MACs that added new criteria that identify additional cost reports for reconciliation referral beginning with FY 2025 cost reports, we proposed changes to our methodology to reflect the estimated reconciled outlier payments of the additional hospital cost reports identified under the new criteria. Specifically, we proposed to make modifications to the steps of our methodology in section II.A.4.i.1.a. of this Addendum to reflect the estimated reconciled outlier payments under the new criteria in the projection of outlier reconciliations for the FY 2025 outlier fixed loss cost threshold.

(a) Incorporating a Projection of Outlier Reconciliations for the FY 2025 Outlier Threshold Calculation

Based on the methodology finalized in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42623 through 42625), for FY 2025, we proposed to continue to incorporate outlier reconciliation in the FY 2025 outlier fixed loss cost threshold, with modifications to reflect the expansion of outlier reconciliations under the new criteria in CR 13566 (described previously).

As discussed in the FY 2020 IPPS/LTCH PPS final rule, for FY 2020, we used the historical outlier reconciliation amounts from the FY 2014 cost reports (cost reports with a begin date on or after October 1, 2013, and on or before September 30, 2014), which we believed would provide the most recent and complete available data to project the estimate of outlier reconciliation. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42623

through 42625) for a discussion on the use of the FY 2014 cost report data for purposes of projecting outlier reconciliations for the FY 2020 outlier threshold calculation. For FY 2024, we applied the same methodology finalized in FY 2020, using the historical outlier reconciliation amounts from the FY 2018 cost reports (cost reports with a begin date on or after October 1, 2017, and on or before September 30, 2018).

Similar to the FY 2024 methodology, we proposed to determine a projection of outlier reconciliations for the FY 2025 outlier threshold calculation by advancing the historical data used by 1 year. Specifically, we proposed to use FY 2019 cost reports (cost reports with a begin date on or after October 1, 2018, and on or before September 30, 2019). For FY 2025, we proposed to use the methodology from FY 2020 to incorporate a projection of operating outlier reconciliations for the FY 2025 outlier threshold calculation, modified to reflect additional cost reports that would be identified for reconciliation under the new criteria in CR 13566. Because the new criteria are not effective until FY 2025 cost reports, to estimate outlier reconciliation dollars under the new criteria, we proposed to apply the new criteria to FY 2019 cost reports as if they had been in place at the time of final cost report settlement (as described in more detail later in this section).

As described previously, under the expanded outlier reconciliation criteria in CR 13566, for cost reporting periods beginning on or after October 1, 2024, new hospitals will have their outlier payments referred for outlier reconciliation by the MAC to CMS in their first cost reporting period regardless of the change to the operating CCR or the amount of outlier payments during the cost reporting period. For purposes of the methodology for incorporating a projection of operating outlier reconciliations for the FY 2025 outlier threshold calculation to reflect additional cost reports that would be identified for reconciliation under the criteria added by CR 13566, we did not propose to include the first cost reporting periods of new hospitals because the lack of predictability of new hospitals' data may impact the reliability of our projection. We noted in the proposed rule that we expect the proposed modifications to our methodology for incorporating a projection of operating outlier reconciliations into the outlier threshold calculation would be necessary for 6 years, at which point the additional FY 2025 cost reports with outlier payments reconciled under the new criteria will

be reflected in the HCRIS data available to be used to set the threshold.

For FY 2019 hospital cost reports that were reconciled using the original criteria for referral for outlier reconciliation, in the FY 2025 proposed rule, we used the December 2023 HCRIS extract of the cost report data to calculate the proposed percentage adjustment for outlier reconciliation. For the FY 2025 final rule, we proposed to use the latest quarterly HCRIS extract that is publicly available at the time of the development of that rule which, for FY 2025, would be the March 2024 extract. As discussed in the FY 2024 IPPS/LTCH final rule (88 FR 59346), we stated that we generally expect historical cost reports for the applicable fiscal year to be available by March, and we have worked with our MACs so that historical cost reports for the applicable fiscal year can be made available with the March HCRIS update for the final rule.

To account for the additional hospital cost reports that would be reconciled as a result of the new criteria, we proposed to use data from the Provider Specific File (PSF) and the cost report to identify the FY 2019 cost reports that would have met the new criteria if those criteria had been in effect. This is because the FY 2019 cost reports in HCRIS would not have been identified as meeting the new criteria for outlier reconciliation since those new criteria are not being used until cost reports beginning with FY 2025. As such, these FY 2019 cost reports do not have an amount reported for operating or capital outlier reconciliation dollars. Therefore, we proposed to modify our methodology to estimate the outlier reconciliation dollars based on the operating and capital outlier amounts reported on the FY 2019 cost reports and supplemental data collected from the MACs, as described further in this section.

The following proposed steps are similar to those finalized in the FY 2020 final rule, with updated data for FY 2025 and additional steps to reflect the cost reports that would be identified with new criteria under the updated instructions:

Step 1.—Identify hospital cost reports that meet the original criteria or the new criteria.

Step 1a.—Identify hospitals that report on their cost report the operating outlier reconciliation dollars on Worksheet E, Part A, Line 2.01. We note, these were hospitals that were identified by the MACs that met the original criteria for outlier reconciliation and were approved by CMS for outlier reconciliation. We use the Federal FY

2019 cost reports for hospitals paid under the IPPS from the most recent publicly available quarterly HCRIS extract available at the time of development of the proposed and final rules and exclude sole community hospitals (SCHs) that were paid under their hospital-specific rate (that is, if Worksheet E, Part A, Line 48 is greater than Line 47). We note that when there are multiple columns available for the lines of the cost report described in the following steps and the provider was paid under the IPPS for that period(s) of the cost report, then we believe it is appropriate to use multiple columns to fully represent the relevant IPPS payment amounts, consistent with our methodology for the FY 2020 final rule.

Step 1b.—For hospitals that were not included in Step 1a, to identify hospitals that would be referred for outlier reconciliation under the new criteria, we proposed to use data from the latest PSF and cost report data from the most recent publicly available quarterly HCRIS extract. We identified hospitals with cost reports where the actual operating CCR for the cost reporting period fluctuates plus or minus 20 percent or more compared to the interim operating CCR used to calculate outlier payments when a bill is processed. To do this, we compared the operating CCR calculated from the FY 2019 cost report in the most recent publicly available quarterly HCRIS extract (the December 2023 HCRIS for the proposed rule) to the weighted operating CCR used for claim payment during the FY 2019 cost reporting period from the latest quarterly PSF update (December 2023 for the proposed rule). We then determined whether the hospital had total operating and capital outlier payments greater than \$500,000 during the FY 2019 cost reporting period based on the most recent publicly available quarterly HCRIS (the December 2023 HCRIS for the proposed rule). If the hospital met both of these criteria, we included the operating outlier payments from the MAC using CCRs from the FY 2019 cost report (as described in Step 2b–2). For the final rule, to identify hospitals that would be referred for reconciliation, we proposed to use the most recent HCRIS and PSF data available, which would be the

March 2024 update. We note that for this purpose we assumed that all hospitals that would be referred for outlier reconciliation under the new criteria would have their outlier payments reconciled.

Step 2.—Determine the aggregate amount of operating outlier reconciliation dollars (under both the original criteria and the new criteria).

Step 2a.—Calculate the aggregate amount of historical total of operating outlier reconciliation dollars (Worksheet E, Part A, Line 2.01) using the Federal FY 2019 cost reports from Step 1a.

Step 2b.—For the hospitals that would have met the new criteria as identified in Step 1b, to determine the aggregate amount of operating outlier reconciliation dollars, we proposed to use the following process:

We collected supplemental estimated outlier payment data from the MACs for claims with discharges occurring during the hospital's FY 2019 cost reporting period to estimate the change in the hospital's outlier payments. Specifically, for each hospital identified in Step 1b, the MACs used the actual operating CCR calculated from the FY 2019 cost report and the utility in the claims system along with that CCR to determine total outlier payments for claims with discharges occurring during the hospital's FY 2019 cost report (this is the same process MACs would have used if the cost report had been identified for reconciliation had the new criteria been in place for FY 2019 cost reports). For those same claims with discharges occurring during the hospital's 2019 cost report, the MAC provided to CMS the outlier payment as reported on the claim (which was based on the hospital's CCR in the PSF at the time of claim payment).

Using this supplemental estimated outlier payment data, we computed a ratio of the outlier payments based on the actual operating CCR for the FY 2019 cost reporting period and the CCR used at the time of claim payment. This ratio is then applied to the operating outlier payment reported on the FY 2019 cost report to impute an operating outlier payment for the FY 2019 cost report. In the proposed rule we stated that we believe it is appropriate to impute the operating outlier payment

for the cost report using the supplemental data from the MACs described previously rather than use the actual amount reported on the cost report because the claims data in the claims processing system may slightly differ from the cost report data in the HCRIS due to timing. This approach would also allow CMS to use more recent data (from the most recent publicly available quarterly HCRIS extract, which was from December 2023 for the proposed rule) to estimate outlier reconciliation dollars as compared to estimating outlier reconciliation dollars using the supplemental outlier payment data from the MACs, which was submitted by the MACs to CMS beginning in November 2022 (as described in this section). This is also the same data used to determine the aggregate amount of operating outlier reconciliation dollars for hospitals from the FY 2019 cost report data using the December 2023 HCRIS extract in Step 2a.

As presented in the table that follows, to calculate the imputed operating outlier payment for the FY 2019 cost report, we multiplied the operating outlier payment reported on the FY 2019 cost report by the following ratio (determined from the supplemental data collected from the MACs described previously): Operating Outlier Payments from MAC using the CCR from FY 2019 Cost Report divided by Operating Outlier Payments from MAC Based on Claim Payment. The general formula is the following: Operating Outlier Payments Reported on the Cost Report* (Operating Outlier Payments from MAC Using CCRs from FY 2019 Cost Report/ Operating Outlier Payments from MAC Based on Claim Payment).

To calculate the Estimated Operating Outlier Reconciliation Dollars, we then subtracted the Imputed Operating Outlier Amount for the FY 2019 Cost Report (Step 2b–5) from the Operating Outlier Payment Reported on the FY 2019 Cost Report (Step 2b–1).

The following is an example to illustrate our proposed calculation to determine the estimated amount of operating outlier reconciliation dollars for the hospitals that would have met the new criteria:

	Description	Amount
Step 2b-1	Operating Outlier Payment Reported on the FY 2019 Cost Report	\$1,000,000
Step 2b-2	Operating Outlier Payments from MAC Using CCRs from FY 2019 Cost Report	\$800,000
Step 2b-3	Operating Outlier Payments from MAC Based on Claim Payment	\$975,000
Step 2b-4	Ratio of Step 2b-2 Divided by Step 2b-3	0.82
Step 2b-5	Imputed Operating Outlier Payment for the FY 2019 Cost Report (Step 2b-1 * Step 2b-4)	\$820,513
Step 2b-6	Estimated Operating Outlier Reconciliation Dollars (Step 2b-1 - Step 2b-5)	\$179,487

We noted the following, with regard to the data used in the calculation:

- Due to system limitations the MACs needed 13 months to process all providers' claims through the claims utility (for Steps 2b-2 and 2b-3). The MACs used the operating and capital CCR from the FY 2019 cost reports based on the September 2022 HCRIS extract and began processing the supplemental data for FY 2019 outlier payments in November 2022. We proposed to move this forward each year, using the September HCRIS for future fiscal years for the CCRs (for example, for FY 2026, MACs would use CCRs from the FY 2020 cost reports based on the September 2023 HCRIS).

- For FY 2025, for the "Operating Outlier Payment Reported on the FY 2019 Cost Report" (Step 2b-1) we used operating outlier payments reported on Worksheet E, Part A, Lines 2.02, 2.03, and 2.04 from the FY 2019 cost report using the most recent publicly available quarterly HCRIS extract for the proposed rule (that is, the December 2023 HCRIS extract). We proposed to move this forward each year and use the most recent publicly available quarterly HCRIS extract (for example, for FY 2026, we would use operating outlier payments reported on Worksheet E, Part A, Lines 2.02, 2.03, and 2.04 from the FY 2020 cost reports using the most recent publicly available quarterly HCRIS extract).

- For the hospitals identified in Step 1b, for the proposed rule we posted a public use file that included the operating CCR calculated from the FY 2019 cost report in the most recent publicly available quarterly HCRIS extract (the December 2023 HCRIS for the proposed rule), the weighted operating CCR used for claim payment during the FY 2019 cost reporting period from the latest quarterly PSF update (December 2023 for the proposed rule), supplemental data from the MACs and operating outlier payment reported on the FY 2019 cost report.

Step 3.—Calculate the aggregate amount of total Federal operating payments across all applicable hospitals using the Federal FY 2019 cost reports. The total Federal operating payments consist of the Federal payments

(Worksheet E, Part A, Line 1.01 and Line 1.02, plus Line 1.03 and Line 1.04), outlier payments (Worksheet E, Part A, Lines 2.02, 2.03, and 2.04), and the outlier reconciliation amounts from Steps 2a and 2b. We noted that a negative amount on Worksheet E, Part A, Line 2.01 from Step 2a for outlier reconciliation indicates an amount that was owed by the hospital, and a positive amount indicates this amount was paid to the hospital. Similarly, a negative amount from Step 2b for outlier reconciliation indicates an amount that would have been owed by the hospital, and a positive amount indicates an amount that would have been paid to the hospital.

Step 4.—Divide the aggregate amount from Step 2 (that is, the sum of the amounts from Steps 2a and 2b) by the amount from Step 3 and multiply the resulting amount by 100 to produce the percentage of total operating outlier reconciliation dollars to total Federal operating payments for FY 2019. For FY 2025, the proposed ratio was a negative 0.03979 percent ($(-\$34,513,755 / \$86,740,955,496) \times 100$), which, when rounded to the second digit, is -0.04 percent. We stated that this percentage amount would be used to adjust the outlier target for FY 2025 as described in Step 5.

Step 5.—Because the outlier reconciliation dollars are only available on the cost reports, and not in the Medicare claims data in the MedPAR file used to model the outlier threshold, we proposed to target 5.1 percent minus the percentage determined in Step 4 in determining the outlier threshold. Using the FY 2019 cost reports, because the aggregate outlier reconciliation dollars from Step 2 are negative, we are targeted an amount higher than 5.1 percent for outlier payments for FY 2025 under our proposed methodology. Therefore, for FY 2025, we proposed to incorporate a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.14 percent [5.1 percent - (-0.04 percent)].

In the proposed rule we stated that when the percentage of operating outlier reconciliation dollars to total Federal operating payments rounds to a negative value (that is, when the aggregate

amount of outlier reconciliation as a percent of total operating payments rounds to a negative percent), the effect is a decrease to the outlier threshold compared to an outlier threshold that is calculated without including this estimate of operating outlier reconciliation dollars.

As explained in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19593), we would continue to use a 5.1 percent target (or an outlier offset factor of 0.949) in calculating the outlier offset to the standardized amount. Therefore, the proposed operating outlier offset to the standardized amount was 0.949 (1 - 0.051). In section II.A.4.i.(2), of this Addendum, we provided the FY 2025 outlier threshold as calculated for the proposed rule both with and without including this proposed percentage estimate of operating outlier reconciliation.

We invited public comment on our proposed methodology for projecting an estimate of outlier reconciliation and incorporating that estimate into the modeling for the fixed-loss cost outlier threshold for FY 2025.

We did not receive any comments with regard to the steps described previously and we are finalizing as proposed without modification the methodology to project an estimate of outlier reconciliation and incorporating that estimate into the modeling for the fixed-loss cost outlier threshold for FY 2025. As we proposed and where stated in the previous steps, we are finalizing to use the most recent HCRIS and PSF data available for this final rule, which is the March 2024 update. Also, for the hospitals identified in Step 1b, similar to the proposed rule, for this final rule, we have posted a public use file that includes the operating CCR calculated from the FY 2019 cost report in the most recent publicly available quarterly HCRIS extract (the March 2023 HCRIS for this final rule), the weighted operating CCR used for claim payment during the FY 2019 cost reporting period from the latest quarterly PSF update (March 2023 for this final rule), supplemental data from the MACs and operating outlier payment reported on the FY 2019 cost report.

With regard to step 4, the final ratio is a negative 0.041994 percent $((-\$36,439,127/\$86,772,005,692) \times 100)$, which, when rounded to the second digit, is -0.04 percent. This percentage amount is used to adjust the outlier target for FY 2025 as described in Step 5. Based on step 5, for FY 2025, we are incorporating a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.14 percent [5.1 percent $- (-0.04$ percent)]. In section II.A.4.i.(2). of this Addendum, we provide the FY 2025 outlier threshold as calculated for this final rule both with and without including this percentage estimate of operating outlier reconciliation.

(b) Reduction to the FY 2025 Capital Standard Federal Rate by an Adjustment Factor To Account for the Projected Proportion of Capital IPPS Payments Paid as Outliers

We establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital related costs (58 FR 46348). Similar to the calculation of the adjustment to the standardized amount to account for the projected proportion of operating payments paid as outlier payments, as discussed in greater detail in section III.A.2. of this Addendum, we proposed to reduce the FY 2025 capital standard Federal rate by an adjustment factor to account for the projected proportion of capital IPPS payments paid as outliers. The regulations in 42 CFR 412.84(i)(4) state that any outlier reconciliation at cost report settlement would be based on operating and capital CCRs calculated based on a ratio of costs to charges computed from the relevant cost report and charge data determined at the time the cost report coinciding with the discharge is settled. As such, any reconciliation also applies to capital outlier payments.

For FY 2025, we proposed to continue to use the methodology from FY 2020 to adjust the FY 2025 capital standard Federal rate by an adjustment factor to account for the projected proportion of capital IPPS payments paid as outliers, with modifications to reflect the expansion of outlier reconciliations under the new criteria in CR 13566 (described previously).

For purposes of the methodology for incorporating a projection of capital outlier reconciliations for the FY 2025 outlier adjustment to the capital standard Federal rate to reflect additional cost reports that would be identified for reconciliation under the criteria added by CR 13566, as we discussed in section II.A.4.i.1.a. of the Addendum of this final rule regarding

the projection of the operating outlier reconciliation, we did not propose to include the first cost reporting periods of new hospitals because the lack of predictability of new hospitals' data may impact the reliability of our projection. As noted, we expect the proposed modifications to our methodology for incorporating a projection of capital outlier reconciliations into the outlier adjustment to the capital standard federal rate would be necessary for 6 years, at which point the additional FY 2025 cost reports with outlier payments reconciled under the new criteria will be reflected in the HCRIS data available to be used to determine this adjustment.

For FY 2019 hospital cost reports that were reconciled using the original criteria for referral for outlier reconciliation, for the FY 2025 proposed rule, we used the December 2023 HCRIS extract of the cost report data to calculate the proposed percentage adjustment for outlier reconciliation. For the FY 2025 final rule, we proposed to use the latest quarterly HCRIS extract that is publicly available at the time of the development of that rule which, for FY 2025, would be the March 2024 extract. As discussed in the FY 2024 IPPS/LTCH final rule (88 FR 59347), we generally expect historical cost reports for the applicable fiscal year to be available by March, and we have worked with our MACs so that historical cost reports for the applicable fiscal year can be made available with the March HCRIS update for the final rule.

To account for the additional hospital cost reports that would be reconciled as a result of the new criteria, we proposed to use data from the PSF and the cost report to identify the FY 2019 cost reports that would have met the new criteria if those criteria had been in effect. This is because the FY 2019 cost reports in HCRIS would not have been identified as meeting the new criteria for outlier reconciliation since those new criteria are not being used until cost reports beginning with FY 2025. As such, these FY 2019 cost reports do not have an amount reported for operating or capital outlier reconciliation dollars. Therefore, we proposed to modify our methodology to estimate the outlier reconciliation dollars based on the operating and capital outlier amounts reported on the FY 2019 cost reports and supplemental data collected from the MACs as described further in this section.

Similar to FY 2020, as part of our proposal for FY 2025 to incorporate into the outlier model the total outlier reconciliation dollars from the most

recent and most complete fiscal year cost report data, we also proposed to adjust our estimate of FY 2025 capital outlier payments to incorporate a projection of capital outlier reconciliation payments when determining the adjustment factor to be applied to the capital standard Federal rate to account for the projected proportion of capital IPPS payments paid as outliers (that is, the capital outlier payment adjustment factor). To do so, we proposed to use the following methodology, which generally parallels the proposed methodology to incorporate a projection of operating outlier reconciliation payments for the FY 2025 outlier threshold calculation, including updated data for FY 2025 and additional steps to reflect the cost reports that would be identified with new criteria under the updated instructions.

Step 1.—Identify hospital cost reports that meet the original criteria or the new criteria.

Step 1a.—Identify hospitals that report on their cost report the capital outlier reconciliation dollars on Worksheet E, Part A, Line 93, Column 1. We note, these were hospitals that were identified by the MACs that met the original criteria for outlier reconciliation and were approved by CMS for outlier reconciliation. We used the Federal FY 2019 cost reports for hospitals paid under the IPPS from the most recent publicly available quarterly HCRIS extract available at the time of development of the proposed and final rules and exclude SCHs that were paid under their hospital-specific rate (that is, if Worksheet E, Part A, Line 48 is greater than Line 47). We note that when there are multiple columns available for the lines of the cost report described in the following steps and the provider was paid under the IPPS for that period(s) of the cost report, then we believe it is appropriate to use multiple columns to fully represent the relevant IPPS payment amounts, consistent with our methodology for the FY 2020 final rule.

Step 1b.—For hospitals that were not included in Step 1a, to identify hospitals that would be referred for outlier reconciliation under the new criteria, we used the same hospitals that were identified in Step 1b of the operating methodology. We note, as discussed previously, the new criteria from CR 13566 is based on the change to the operating CCR (not the capital CCR) where the actual operating CCR for the cost reporting period fluctuates plus or minus 20 percent or more compared to the interim operating CCR used to calculate outlier payments when a bill

is processed and the hospital had total operating and capital outlier payments greater than \$500,000 during the cost reporting period.

Step 2.—Determine the aggregate amount of capital outlier reconciliation dollars (under both the original criteria and the new criteria).

Step 2a.—Calculate the aggregate amount of the historical total of capital outlier reconciliation dollars (Worksheet E, Part A, Line 93, Column 1) using the Federal FY 2019 cost reports from Step 1.

Step 2b.—For the hospitals that would have met the new criteria as identified in Step 1b, to determine the aggregate amount of capital outlier reconciliation dollars, we proposed to use the following process (we note this process is the same as Step 2b of the operating methodology):

We collected supplemental estimated outlier payment data from the MACs for claims with discharges occurring during the hospital’s FY 2019 cost reporting period to estimate the change in the hospital’s outlier payments. Specifically, for each hospital identified in Step 1b, the MACs used the actual capital CCR calculated from the FY 2019 cost report and the utility in the claims system along with that CCR to determine total outlier payments for claims with discharges occurring during the hospital’s FY 2019 cost report (this is the same process MACs would have used if the cost report had been identified for reconciliation had the new

criteria been in place for FY 2019 cost reports). For those same claims with discharges occurring during the hospital’s 2019 cost report, the MAC provided to CMS the outlier payment as reported on the claim (which was based on the hospital’s CCR in the PSF at the time of claim payment).

Using this supplemental estimated outlier payment data, we computed a ratio of the outlier payments based on the actual capital CCR for the FY 2019 cost reporting period and the capital CCR used at the time of claim payment. This ratio is then applied to the capital outlier payment reported on the FY 2019 cost report to impute a capital outlier payment for the FY 2019 cost report. We stated that we believe it is appropriate to impute the capital outlier payment for the cost report using the supplemental data from the MACs described previously rather than use the actual amount reported on the cost report because the claims data in the claims processing system may slightly differ from the cost report data in the HCRIS due to timing. This approach would also allow CMS to use more recent data (from the most recent publicly available quarterly HCRIS extract, which was December 2023 for the proposed rule) to estimate outlier reconciliation dollars as compared to estimating outlier reconciliation dollars using the supplemental data from the MACs which was submitted by the MACs to CMS beginning in November

2022 (as described in this section). This is also the same data used to determine the aggregate amount of capital outlier reconciliation dollars for hospitals from the FY 2019 cost report data using the December 2023 HCRIS extract in Step 2a.

As presented in the table that follows, to calculate the imputed capital outlier payment for the FY 2019 cost report, we multiplied the capital outlier payment reported on the FY 2019 cost report by the following ratio (determined from the supplemental data collected from the MACs described previously): Capital Outlier Payments from MAC using the CCR from FY 2019 Cost Report divided by Capital Outlier Payments from MAC Based on Claim Payment. The general formula is the following: Capital Outlier Payments Reported on the Cost Report * (Capital Outlier Payments from MAC Using CCRs from FY 2019 Cost Report / Capital Outlier Payments from MAC Based on Claim Payment).

To calculate the Estimated Capital Outlier Reconciliation Dollars, we then subtracted the Imputed Capital Outlier Amount for the FY 2019 Cost Report (Step 2b–5) from the Capital Outlier Payment Reported on the FY 2019 Cost Report (Step 2b–1).

The following is an example to illustrate our proposed calculation to determine the estimated amount of capital outlier reconciliation dollars for the hospitals that would have met the new criteria:

	Description	Amount
Step 2b-1	Operating Outlier Payment Reported on the FY 2019 Cost Report	\$1,000,000
Step 2b-2	Operating Outlier Payments from MAC Using CCRs from FY 2019 Cost Report	\$800,000
Step 2b-3	Operating Outlier Payments from MAC Based on Claim Payment	\$975,000
Step 2b-4	Ratio of Step 2b-2 Divided by Step 2b-3	0.82
Step 2b-5	Imputed Operating Outlier Payment for the FY 2019 Cost Report (Step 2b-1 * Step 2b-4)	\$820,513
Step 2b-6	Estimated Operating Outlier Reconciliation Dollars (Step 2b-1 - Step 2b-5)	\$179,487

We noted the following in the proposed rule, with regard to the data used in the calculation:

- Due to system limitations the MACs needed 13 months to process all providers’ claims through the claims utility (for Steps 2b–2 and 2b-3). The MACs used the operating and capital CCR from the FY 2019 cost reports based on the September 2022 HCRIS extract and began processing the supplemental data for FY 2019 outlier payments in November 2022. We proposed to move this forward each year, using the September HCRIS for future fiscal years for the CCRs (for example, for FY 2026, MACs would use

CCRs from the 2020 cost reports based on the September 2023 HCRIS).

- For FY 2025, for the “Capital Outlier Payment Reported on the FY 2019 Cost Report” (Step 2b–1) we used capital outlier payments reported on Worksheet L, Part I, Line 2 and Line 2.01 from the FY 2019 cost report using the most recent publicly available quarterly HCRIS extract for the proposed rule (that is, the December 2023 HCRIS extract). We proposed to move this forward each year and use the most recent publicly available quarterly HCRIS extract (for example, for FY 2026, we would use operating capital payments reported on Worksheet L, Part

I, Line 2 and Line 2.01 from the FY 2020 cost reports using the most recent publicly available quarterly HCRIS extract).

- For the hospitals identified in Step 1b, we posted a public use file that includes the operating CCR calculated from the FY 2019 cost report in the most recent publicly available quarterly HCRIS extract (the December 2023 HCRIS for the proposed rule), the weighted operating CCR used for claim payment during the FY 2019 cost reporting period from the latest quarterly PSF update (December 2023 for the proposed rule), supplemental data from the MACs and capital outlier

payments reported on the FY 2019 cost report.

Step 3.—Calculate the aggregate amount of total capital Federal payments across all applicable hospitals using the Federal FY 2019 cost reports. The total capital Federal payments consist of the capital DRG payments, including capital outlier payments, capital indirect medical education (IME) and capital disproportionate share hospital (DSH) payments (Worksheet E, Part A, Line 50, Column 1) and the capital outlier reconciliation amounts from Steps 2a and 2b. We note that a negative amount on Worksheet E, Part A, Line 93 from Step 2a for capital outlier reconciliation indicates an amount that was owed by the hospital, and a positive amount indicates this amount was paid to the hospital. Similarly, a negative amount from Step 2b for capital outlier reconciliation indicates an amount that would have been owed by the hospital, and a positive amount indicates an amount that would have been paid to the hospital.

Step 4.—Divide the aggregate amount from Step 2 (that is, the sum of the amounts from Steps 2a and 2b) by the amount from Step 3 and multiply the resulting amount by 100 to produce the percentage of total capital outlier reconciliation dollars to total capital Federal payments for FY 2019. This percentage amount would be used to adjust the estimate of capital outlier payments for FY 2025 as described in Step 5.

Step 5.—Because the outlier reconciliation dollars are only available on the cost reports, and not in the specific Medicare claims data in the MedPAR file used to estimate outlier payments, we proposed that the estimate of capital outlier payments for FY 2025 would be determined by adding the percentage in Step 5 to the estimated percentage of capital outlier payments otherwise determined using the shared outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. (We noted that this percentage is added for capital outlier payments but subtracted in the analogous step for operating outlier payments. We have a unified outlier payment methodology that uses a shared threshold to identify outlier cases for both operating and capital payments. The difference stems from the fact that operating outlier payments are determined by first setting a “target” percentage of operating outlier payments relative to aggregate operating payments which produces the outlier threshold. Once the shared threshold is

set, it is used to estimate the percentage of capital outlier payments to total capital payments based on that threshold. Because the threshold is already set based on the operating target, rather than adjusting the threshold (or operating target), we adjust the percentage of capital outlier to total capital payments to account for the estimated effect of capital outlier reconciliation payments. This percentage is adjusted by adding the capital outlier reconciliation percentage from Step 5 to the estimate of the percentage of capital outlier payments to total capital payments based on the shared threshold.) We noted, when the aggregate capital outlier reconciliation dollars from Steps 2a and 2b are negative, the estimate of capital outlier payments for FY 2025 under our proposed methodology would be lower than the percentage of capital outlier payments otherwise determined using the shared outlier threshold.

For the FY 2025 proposed rule, the estimated percentage of FY 2025 capital outlier payments otherwise determined using the shared outlier threshold was 4.26 percent (estimated capital outlier payments of \$290,612,698 divided by (estimated capital outlier payments of \$290,612,698 plus the estimated total capital Federal payment of \$6,532,600,813)). The proposed ratio in Step 5 was a negative -0.026446 percent ($(-\$2,056,344/\$7,775,606,401) \times 100$), which, when rounded to the second digit, is -0.03 percent. Therefore, for the FY 2025 proposed rule, taking into account projected capital outlier reconciliation under our proposed methodology decreased the estimated percentage of FY 2025 aggregate capital outlier payments by 0.03 percent.

As discussed in section III.A.2. of this Addendum, we proposed to incorporate the capital outlier reconciliation dollars from Step 5 when applying the outlier adjustment factor in determining the capital Federal rate based on the estimated percentage of capital outlier payments to total capital Federal rate payments for FY 2025.

We invited public comment on our proposed methodology for projecting an estimate of capital outlier reconciliation and incorporating that estimate into the modeling of the estimate of FY 2025 capital outlier payments for purposes of determining the capital outlier adjustment factor.

We did not receive any comments with regard to the steps described previously and we are finalizing as proposed without modification the methodology for projecting an estimate of capital outlier reconciliation and

incorporating that estimate into the modeling of the estimate of FY 2025 capital outlier payments for purposes of determining the capital outlier adjustment factor. As we proposed and where stated in the previous steps, for this final rule, we used the most recent HCRIS and PSF data available for this final rule, which is the March 2024 update. Also, for the hospitals identified in Step 1b, similar to the proposed rule, for this final rule, we have posted a public use file that includes the operating CCR calculated from the FY 2019 cost report in the most recent publicly available quarterly HCRIS extract (the March 2024 HCRIS for this final rule), the weighted operating CCR used for claim payment during the FY 2019 cost reporting period from the latest quarterly PSF update (March 2024 for this final rule), supplemental data from the MACs and operating outlier payment reported on the FY 2019 cost report.

With regard to step 5, for this FY 2025 final rule, the estimated percentage of FY 2025 capital outlier payments otherwise determined using the shared outlier threshold is 4.26 percent (estimated capital outlier payments of \$292,195,135 divided by (estimated capital outlier payments of \$292,195,135 plus the estimated total capital Federal payment of \$6,564,012,091)). The ratio in Step 5 is a negative -0.028042 percent ($(-\$2,181,440/\$7,779,306,800) \times 100$), which, when rounded to the second digit, is -0.03 percent. Therefore, for this FY 2025 final rule, taking into account projected capital outlier reconciliation under our methodology will decrease the estimated percentage of FY 2025 aggregate capital outlier payments by 0.03 percent.

As discussed in section III.A.2. of this Addendum, we are incorporating the capital outlier reconciliation dollars from Step 5 when applying the outlier adjustment factor in determining the capital Federal rate based on the estimated percentage of capital outlier payments to total capital Federal rate payments for FY 2025.

(2) FY 2025 Outlier Fixed-Loss Cost Threshold

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50977 through 50983), in response to public comments on the FY 2013 IPPS/LTCH PPS proposed rule, we made changes to our methodology for projecting the outlier fixed-loss cost threshold for FY 2014. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for a detailed discussion of the changes.

As we have done in the past, to calculate the proposed FY 2025 outlier threshold, we simulated payments by applying FY 2025 payment rates and policies using cases from the FY 2023 MedPAR file. As noted in section II.C. of this Addendum, we specify the formula used for actual claim payment which is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the Provider-Specific File (PSF) while CMS uses an adjusted CCR (as described later in this section) to project the threshold for the upcoming fiscal year. In addition, charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

To determine the FY 2025 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2023 to FY 2025. Consistent with the FY 2020 IPPS/LTCH PPS final rule (84 FR 42626 and 42627), we proposed to use the following methodology to calculate the charge inflation factor for FY 2025:

- Include hospitals whose last four digits fall between 0001 and 0899 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS website at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf>); include CAHs and REHs that were IPPS hospitals for the time period of the MedPAR data being used to calculate the charge inflation factor; include hospitals in Maryland; and remove PPS-excluded cancer hospitals that have a “V” in the fifth position of their provider number or a “E” or “F” in the sixth position.

- Include providers that are in both periods of charge data that are used to calculate the 1-year average annual rate-of-change in charges per case. We note this is consistent with the methodology used since FY 2014.

- We excluded Medicare Advantage IME claims for the reasons described in section I.A.4. of this Addendum. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.

- In order to ensure that we capture only FFS claims, we included claims with a “Claim Type” of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).

- In order to further ensure that we capture only FFS claims, we excluded

claims with a “GHOPAID” indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).

- We examined the MedPAR file and removed pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of “3” for blood clotting with a revenue code of “0636” from the covered charge field. We also removed organ acquisition charges from the covered charge field because organ acquisition is a pass-through payment not paid under the IPPS. As noted previously, we are removing allogeneic hematopoietic stem cell acquisition charges from the covered charge field for budget neutrality adjustments. As discussed in the FY 2021 IPPS/LTCH PPS final rule, payment for allogeneic hematopoietic stem cell acquisition costs is made on a reasonable cost basis for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842).

- Because this payment simulation uses the FY 2025 relative weights, consistent with our policy discussed in section IV.I. of the preamble to this final rule, we applied the adjustor for certain cases that group to MS-DRG 018 in our simulation of these payments.

Our general methodology to inflate the charges computes the 1-year average annual rate-of-change in charges per case which is then applied twice to inflate the charges on the MedPAR claims by 2 years since we typically use claims data for the fiscal year that is 2 years prior to the upcoming fiscal year.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42627), we modified our charge inflation methodology. We stated that we believe balancing our preference to use the latest available data from the MedPAR files and stakeholders’ concerns about being able to use publicly available MedPAR files to review the charge inflation factor can be achieved by modifying our methodology to use the publicly available Federal fiscal year period (that is, for FY 2020, we used the charge data from Federal fiscal years 2017 and 2018), rather than the most recent data available to CMS which, under our prior methodology, was based on calendar year data. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule for a complete discussion regarding this change.

For the same reasons discussed in that rulemaking, for FY 2025, we proposed to use the same methodology as FY 2020 to determine the charge inflation factor. That is, for FY 2025, we proposed to use the MedPAR files for the two most recent available Federal fiscal year time

periods to calculate the charge inflation factor, as we did for FY 2020.

Specifically, for the proposed rule we used the December 2022 MedPAR file of FY 2022 (October 1, 2021 to September 30, 2022) charge data (released for the FY 2024 IPPS/LTCH PPS proposed rule) and the December 2023 MedPAR file of FY 2023 (October 1, 2022 to September 30, 2023) charge data (released for the FY 2025 IPPS/LTCH PPS proposed rule) to compute the proposed charge inflation factor. We proposed that for the FY 2025 final rule, we would use more recently updated data, that is the MedPAR files from March 2023 for the FY 2022 time period and March 2024 for the FY 2023 time period.

For FY 2025, under this proposed methodology, to compute the 1-year average annual rate-of-change in charges per case, we compared the average covered charge per case of \$82,570.13 (\$574,544,024,043/6,958,255) from October 1, 2021 through September 30, 2022, to the average covered charge per case of \$85,990.03 (\$593,444,028,889/6,901,312) from October 1, 2022 through September 30, 2023. This rate-of-change was 4.142 percent (1.04142) or 8.4555 percent (1.084555) over 2 years. The billed charges are obtained from the claims from the MedPAR file and inflated by the inflation factor specified previously.

As we have done in the past, in this FY 2025 IPPS/LTCH PPS proposed rule, we proposed to establish the FY 2025 outlier threshold using hospital CCRs from the December 2023 update to the Provider-Specific File (PSF), the most recent available data at the time of the development of the proposed rule. We proposed to apply the following edits to providers’ CCRs in the PSF. We believe these edits are appropriate to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replace these CCRs with the statewide average CCR for the upcoming fiscal year. We also assign the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF or whose CCRs exceed the ceilings described later in this section (3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals). We do not apply the adjustment factors described later in this section to hospitals assigned the statewide average CCR. For FY 2025, we proposed to continue to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained later in this section). We also proposed that, if more recent data

become available, we would use that data to calculate the final FY 2025 outlier threshold.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted operating and capital CCR from the same period of the prior year.

Therefore, as we have done in the past, we proposed to adjust the CCRs from the December 2023 update of the PSF by comparing the percentage change in the national average case weighted operating CCR and capital CCR from the December 2022 update of the PSF to the national average case weighted operating CCR and capital CCR from the December 2023 update of the PSF. We note that, in the proposed rule, we used total transfer-adjusted cases from FY 2023 to determine the national average case weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the proposed methodology, for the proposed rule, we calculated a December 2022 operating national average case-weighted CCR of 0.246416 and a December 2023 operating national average case-weighted CCR of 0.254624. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the December 2022 operating national average case-weighted CCR from the December 2023 operating national average case-weighted CCR and then dividing the result by the December 2022 national operating average case-weighted CCR. This resulted in a proposed one-year national operating CCR adjustment factor of 1.03331.

We used this same proposed methodology to adjust the capital CCRs. Specifically, we calculated a December 2022 capital national average case-weighted CCR of 0.018005 and a December 2023 capital national average case-weighted CCR of 0.017765. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the December 2022 capital national average case-weighted CCR from the December

2023 capital national average case-weighted CCR and then dividing the result by the December 2022 capital national average case-weighted CCR. This resulted in a proposed one-year national capital CCR adjustment factor of 0.98667.

For purposes of estimating the proposed outlier threshold for FY 2025, we used a wage index that reflects the policies discussed in the proposed rule. This includes the following:

- Application of the proposed rural and imputed floor adjustment.
- The proposed frontier State floor adjustments in accordance with section 10324(a) of the Affordable Care Act.
- The proposed out-migration adjustment as added by section 505 of Public Law 108–173.
- Incorporating the proposed FY 2025 low wage index hospital policy (described in section III.G.5 of the preamble of this final rule) for hospitals with a wage index value below the 25th percentile, where the increase in the wage index value for these hospitals would be equal to half the difference between the otherwise applicable final wage index value for a year for that hospital and the 25th percentile wage index value for that year across all hospitals.
- Incorporating our policy (described in section III.6. of the preamble of this final rule) to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline.

As stated earlier, if we did not take the aforementioned into account, our estimate of total FY 2025 payments would be too low, and, as a result, our outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments (which includes outlier reconciliation).

As described in sections V.K. and V.L., respectively, of the preamble of this final rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the proposed hospital VBP payment adjustments and the hospital readmissions payment adjustments in the proposed outlier threshold calculation or the proposed outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the Act are not

affected by these payment adjustments. Therefore, outlier payments would continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we proposed to exclude the estimated hospital VBP payment adjustments and the estimated hospital readmissions payment adjustments from the calculation of the proposed outlier fixed-loss cost threshold.

We note that, to the extent section 1886(r) of the Act modifies the DSH payment methodology under section 1886(d)(5)(F) of the Act, the uncompensated care payment under section 1886(r)(2) of the Act, like the empirically justified Medicare DSH payment under section 1886(r)(1) of the Act, may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A) of the Act. As we have done since the implementation of uncompensated care payments in FY 2014, for FY 2025, we proposed to allocate an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. We continue to believe that allocating an eligible hospital's estimated uncompensated care payment to all cases equally in the calculation of the outlier fixed-loss cost threshold would best approximate the amount we would pay in uncompensated care payments during the year because, when we make claim payments to a hospital eligible for such payments, we would be making estimated per-discharge uncompensated care payments to all cases equally.

Furthermore, we continue to believe that using the estimated per-claim uncompensated care payment amount to determine outlier estimates provides predictability as to the amount of uncompensated care payments included in the calculation of outlier payments. Therefore, consistent with the methodology used since FY 2014 to calculate the outlier fixed-loss cost threshold, for FY 2025, we proposed to include estimated FY 2025 uncompensated care payments in the computation of the proposed outlier fixed-loss cost threshold. Specifically, we proposed to use the estimated per-discharge uncompensated care payments to hospitals eligible for the

uncompensated care payment for all cases in the calculation of the proposed outlier fixed-loss cost threshold methodology.

In addition, consistent with the methodology finalized in the FY 2023 final rule, we proposed to include the estimated supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals in the computation of the FY 2025 proposed outlier fixed-loss cost threshold. Specifically, we proposed to use the estimated per-discharge supplemental payments to hospitals eligible for the supplemental payment for all cases in the calculation of the proposed outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1. of this Addendum to simulate and calculate the Federal payment rate and outlier payments for all claims. In addition, as described in the earlier section to this Addendum, we proposed to incorporate an estimate of FY 2025 outlier reconciliation in the methodology for determining the outlier threshold. As noted previously, for the FY 2025 proposed rule, the ratio of outlier reconciliation dollars to total Federal Payments (Step 4) is a negative 0.039789 percent, which, when rounded to the second digit, is -0.04 percent. Therefore, for FY 2025, we proposed to incorporate a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.14 percent [5.1 percent $- (-0.04$ percent)]. Under this proposed approach, we determined a proposed threshold of \$49,237 and calculated total outlier payments of \$4,330,371,122 and total operating Federal payments of \$79,917,085,666. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold matched with the 5.14 percent target, which reflected our proposal to incorporate an estimate of outlier reconciliation in the determination of the outlier threshold (as discussed in more detail in the previous section of this Addendum). We noted that, if calculated without applying our proposed methodology for incorporating an estimate of outlier reconciliation in the determination of the outlier threshold, the proposed threshold would be \$49,601. We proposed an outlier fixed-loss cost threshold for FY 2025 equal to the prospective payment rate for the MS-DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, estimated supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and any add-on

payments for new technology, plus \$49,237.

Comment: A commenter requested that CMS apply trims when calculating charge inflation as it does under the LTCH PPS to “remove all claims from providers whose growth in average charges was a statistical outlier”.

Response: We responded to a similar comment in the FY 2024 IPPS/LTCH final rule (88 FR 59351). As we explained in that final rule, there are many more providers and claims under the IPPS compared to the LTCH PPS. When we analyzed the LTCH PPS claims data, a single LTCH provider had substantial increases in its charges with average charges per case of approximately \$10 million which significantly influenced the charge inflation factor. Since there are fewer hospitals and claims under the LTCH PPS, the potential for a single provider to influence the charge inflation factor is much more significant. We are not aware of a similar situation with a hospital having such high average charges under the IPPS. Therefore, we believe it is not necessary to apply the same trim to hospitals included in the IPPS charge inflation factor. We refer the reader to the FY 2024 IPPS/LTCH final rule for our complete response.

Comment: Commenters were concerned about the proposed increase in the high-cost outlier threshold, a 15 percent increase from the FY 2024 threshold, which they stated would significantly decrease the number of cases that qualify for an outlier payment. The commenters stated that the proposed increase in the threshold compared to FY 2024 is substantial and comes after a decade of increases which amount to a 126 percent increase from FY 2013 through FY 2025.

Commenters stated that they believe much of the increase in FY 2025 is being driven by the fact that CMS has estimated and proposed to use a one-year national operating CCR adjustment factor of 1.03331. These commenters stated that the CCR adjustment factor is much higher than it has been in the past and is largely driven by CCRs that are reflecting the high-cost inflation, namely labor costs, that have been experienced by hospitals during 2022 and 2023.

A commenter stated that CMS’ proposed operating CCR adjustment factor for FY 2025 is anomalous and would be the first use of a projected increase in the CCRs since FY 2013. The commenter asserted that the anomalous first-time year-over-year increase in CCRs, used for the proposed FY 2025 adjustment factor, is driven by CCRs skewed by costs—largely labor costs—

incurred during the peak inflationary period of the COVID-19 PHE in 2022 and early 2023. The commenter explained that CMS’ projection of a one-year 1.033 change in CCRs suggest that average costs per case increased by over 7 percent, given that CMS estimated average charge inflation of about 4.4 percent from FY 2022 to FY 2023. The commenter stated that CMS’ current data and projections reflect a Q4 2022 peak in the four-quarter moving average percent change to the market basket index level followed by a slowing in cost inflation.

The commenter further stated that a comparison of the March 2023 and March 2024 updates of the PSF (in lieu of the December 2022 and December 2023 updates of the PSF used in the proposed rule) shows that CCRs are again declining such that a CCR adjustment factor greater than 1.0 is unreasonable. Despite this decline, the commenter expressed concern that a CCR adjustment factor calculated from this data will continue to be skewed by data from an anomalous period of rapid inflation. The commenter asserted that a preliminary review of HCRIS data indicates that CCRs are in fact declining in ways that are not yet reflected in the PSF. Therefore, the commenter urged CMS to not only use more recent data from the PSF when finalizing a CCR adjustment factor, but also to address the skewing impact of older CCR data (namely that from 2022 and earlier) in the PSF so as to develop a CCR adjustment factor that reasonably projects CCRs for FY 2025.

In addition, the commenter stated that in the past, CMS has deviated from its general methodology for calculating the CCR adjustment factor when appropriate to ensure that the CCR adjustment factor provides a reasonable approximation of anticipated CCR trends. The commenter cited the FY 2023 IPPS/LTCH final rule (87 FR 48780, 48797) where CMS did not use its usual methodology because it would have produced an “abnormally high” CCR adjustment factor of approximately 1.03 and instead applied a CCR adjustment factor from the last 1-year period prior to the COVID-19 PHE. The commenter concluded that it is likewise unreasonable to assume that CCRs will continue to increase at the abnormally high rates seen during a period of rapid and significant cost increases and urged CMS to modify its method for FY 2025 to develop a CCR adjustment factor that is consistent with historical pre-PHE period CCR changes and that reflects the most recent CCR data, which demonstrate a consistent trend of decreasing CCRs.

Other commenters recommended that CMS examine its methodology more closely and consider making additional, temporary changes to help mitigate the substantial increases that are occurring in the outlier threshold. The commenters suggested that CMS could instead apply the FY 2024 CCR adjustment factor in calculating the FY 2025 outlier threshold, which they stated would mitigate the anomalous increase. Another commenter suggested that CMS should keep the outlier threshold flat due to the increase in the threshold finalized in the FY 2024 IPPS/LTCH PPS final rule. The commenter stated that since MS-DRGs were introduced back in 2007, the fixed cost outlier threshold has increased at a steady, gradual pace. A commenter suggested that CMS review methodological changes to improve base MS-DRG payment rates that would facilitate a decrease in the number of cases for which outlier payments are made on a routine basis. Another commenter stated that CMS be more consistent in determining the outlier threshold so there are not significant variations year over year. The commenter suggested that one alternative would be to consider establishing a new outlier baseline and then increasing the outlier threshold each year by the approved market basket percentage or CMS could implement a three-year rolling average for calculating the outlier threshold as a stabilizing factor. A commenter encouraged CMS to limit the final FY 2025 and future year over year increases in the outlier threshold to ensure more accurate and appropriate reimbursement rates across high cost cases.

Response: We appreciate the commenters' feedback. While the proposed CCR adjustment factor was based on a comparison of average CCRs from the December 2022 and December 2023 updates of the PSF, consistent with our usual practice we are using more recent CCR data for the final rule. Specifically, for this final rule, as discussed in greater detail below, based on the latest data available, we calculated a national operating CCR adjustment factor of 1.015123, which is slightly over 1.0 and less than half the increase of the proposed factor of 1.03331 in the proposed rule.

We agree that prior to recent years the CCRs have decreased year-over-year, and as such the CCR adjustment factors were slightly less than 1.0 compared to the slightly over 1.0 value calculated for this final rule. In FY 2023 we did not use the factor based on the most recent data available at that time, stating that we believed the abnormally high CCR

adjustment factor as compared to historical levels was partially due to the high number of COVID-19 cases with higher charges that were treated in IPPS hospitals in FY 2021. As noted by the commenters, there are other factors aside from COVID-19 cases, such as higher labor costs and inflation, that may be contributing to the change in average CCRs above 1.0. We acknowledge there can be variation in the annual changes in CCRs and charges, as noted by the commenter's examples. At this time, it is challenging to precisely predict the relative relationship between hospitals' costs and charging practices for the upcoming FY. It is reasonable to assume balancing older historical data (*i.e.*, pre COVID-19 PHE) used to determine the CCR adjustment factor) with more recent data (*i.e.*, during and post COVID-19 PHE) to calculate the CCR adjustment factor that the resulting CCR adjustment factor may be slightly over 1.0 or slightly under 1.0. In other words, and as explained earlier, the current conditions such as higher labor costs and inflation were not as prevalent with the historical older data as the CCR adjustment factor was consistently under 1.0, so it is unclear at this time whether change in average CCRs would return to being under 1.0 or remain above 1.0. Given that the use of the most recent data available, after updating it for this final rule, results in a CCR adjustment factor that is within that reasonable range and that it is challenging to precisely predict the relative relationship between hospitals' costs and charging practices for the upcoming FY, we do not believe it is necessary to deviate from our usual practice of using the most recent data available to determine the CCR adjustment factor for FY 2025. We believe a national operating CCR adjustment factor of 1.015123, which is slightly over 1.0, used in conjunction with the charge inflation factor discussed below results in a reasonable prediction of average costs in FY 2025 for purposes of the outlier threshold calculation.

With regard to the other suggestions from the commenters, as noted previously, section 1886(d)(5)(A)(iv) of the Act states that outlier payments may not be less than 5 percent nor more than 6 percent of the total payments projected or estimated to be made based on DRG prospective payment rates for discharges in that year. We believe that the commenters' suggestion to maintain the FY 2024 outlier fixed-loss cost threshold for FY 2025 or using a rolling average or limiting the increase in the outlier threshold would be inconsistent

with the statute as such a threshold would not result in a projection outlier payments that are not less than 5 percent nor more than 6 percent of projected total payments for FY 2025.

With regard to the commenter that suggested CMS review methodological changes to improve base MS-DRG payment rates that would facilitate a decrease in the number of cases for which outlier payments are made on a routine basis, the commenter did not provide any specific suggestions and we welcome suggestions from the commenter that we can consider for future rulemaking.

Comment: A commenter requested that CMS consider whether it is appropriate to include extreme cases when calculating the threshold. This commenter explained that high charge cases have a significant impact on the threshold. The commenter stated that it examined the data to understand the factors that drove an increase of over 80 percent between FY 2017 and FY 2024, and to propose to increase the threshold almost an additional 15 percent for FY 2025, and stated that it observed that the inclusion of extreme cases in the calculation of the threshold, the rate of which are increasing over time, significantly impacts CMS' determination of the fixed-loss threshold. If this trend continues (that is, if the number (and proportion) of extreme cases continues to increase each year), the commenter stated that the impact of this population of cases on the threshold will likewise increase. Thus, the commenter recommended that CMS carefully consider what is causing this trend, whether the inclusion of these cases in the calculation of the threshold is appropriate, or whether a separate outlier mechanism should apply to these cases that more closely hews outlier payments to marginal costs.

Response: We responded to a similar comment in prior rulemaking, most recently in the FY 2024 IPPS/LTCH final rule (88 FR 59352). Specifically, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38526) and other prior rulemaking, we explained the methodology used to calculate the outlier threshold includes all claims to account for all different types of cases, including high charge cases, to ensure that CMS meets the 5.1 percent target. As the commenter pointed out, the volume of these cases continues to rise, making their impact on the threshold significant. We believe excluding these cases would artificially lower the threshold. We believe it is important to include all cases in the calculation of the threshold no matter how high or low

the charges. Including these cases with high charges lends more accuracy to the threshold, as these cases have an impact on the threshold and continue to rise in volume. Therefore, we believe the inclusion of the high-cost outlier cases in the calculation of the outlier threshold is appropriate.

Also, as we explained in the FY 2024 IPPS/LTCH final rule (88 FR 59352), in response to commenter's recommendation that CMS consider whether a separate outlier mechanism should apply to these cases that more closely hews outlier payments to marginal costs, we believe the current calculation of outlier payment meets these goals. If a case has high charges that once reduced to cost significantly exceed the payment plus the threshold, then the case will receive a larger outlier payment reflective of the higher costs. Therefore, we believe the current payment system provides such a mechanism.

Comment: A commenter noted the final fixed-loss threshold established by CMS has consistently been lower than the threshold set forth in the proposed rule, and the variance between the proposed and final thresholds has generally exceeded 4 percent. The commenter emphasized that this demonstrates that CMS must ordinarily use the most recent data to appropriately calculate the outlier threshold.

Response: We responded to similar comments in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50378 through 50379) and refer readers to that rule for our response. We reiterate that CMS' historical policy is to use the best available data when setting the payment rates and factors in both the proposed and final rules. Sometimes there are variables that change between the proposed and final rule as result of the availability of more recent data, such as the charge inflation factor and the CCR adjustment factors that can cause fluctuations in the threshold amount. Other factors such as changes to the wage indexes and market basket increase can also cause the outlier fixed loss cost threshold to fluctuate between the proposed rule and the final rule each year. We use the latest data that is available at the time of the development of the proposed and final rules, such as the most recent update of MedPAR claims data and CCRs from the most recent update of the PSF.

After consideration of the public comments we received and for the reasons discussed, we are finalizing to use the same methodology we proposed, without modifications, to calculate the final outlier threshold for FY 2025.

For the FY 2025 final outlier threshold, we used the March 2023 MedPAR file of FY 2022 (October 1, 2021 through September 30, 2022) charge data (released in conjunction with the FY 2024 IPPS/LTCH PPS final rule) and the March 2024 MedPAR file of FY 2023 (October 1, 2022 through September 30, 2023) charge data (released in conjunction with this FY 2025 IPPS/LTCH PPS final rule) to determine the charge inflation factor. To compute the 1-year average annual rate-of-change in charges per case, we compared the average covered charge per case of \$ 82,677.79 (\$577,981,065,082/6,990,766 cases) from October 1, 2021 through September 31, 2022, to the average covered charge per case of \$ 86,082.41 (\$596,812,542,644/6,933,037 cases) from October 1, 2021 through September 31, 2023. This rate-of-change was 4.1 percent (1.04118) or 8.4 percent (1.08406) over 2 years. The billed charges are obtained from the claims from the MedPAR file and inflated by the inflation factor specified previously.

As we have done in the past, we are establishing the FY 2025 outlier threshold using hospital CCRs from the March 2024 update to the Provider-Specific File (PSF)—the most recent available data at the time of the development of the final rule. We applied the following edits to providers' CCRs in the PSF. We believe these edits are appropriate to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replaced these CCRs with the statewide average CCR for the upcoming fiscal year. We also assigned the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF or whose CCRs exceed the ceilings described later in this section (3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals). We did not apply the adjustment factors described later in this section to hospitals assigned the statewide average CCR. For FY 2025, we also are continuing to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained later in this section).

For this final rule, as we have done since FY 2014 (with the exception of FYs 2022 and 2023, as discussed in the FY 2022 and FY 2023 IPPS/LTCH PPS proposed and final rules), we are adjusting the CCRs from the March 2024 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR

and capital CCR from the March 2023 update of the PSF to the national average case-weighted operating CCR and capital CCR from the March 2024 update of the PSF. We note that we used total transfer-adjusted cases from FY 2023 to determine the national average case weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the methodology noted earlier, for this final rule, we calculated a March 2023 operating national average case-weighted CCR of 0.24849 and a March 2024 operating national average case-weighted CCR of 0.252248. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the March 2023 operating national average case weighted CCR from the March 2024 operating national average case-weighted CCR and then dividing the result by the March 2023 national operating average case-weighted CCR. This resulted in a national operating CCR adjustment factor of 1.015123.

We used the same methodology earlier to adjust the capital CCRs. Specifically, for this final rule, we calculated a March 2023 capital national average case-weighted CCR of 0.017716 and a March 2024 capital national average case-weighted CCR of 0.017666. We then calculated the percentage change between the two national capital case weighted CCRs by subtracting the March 2023 capital national average case-weighted CCR from the March 2024 capital national average case-weighted CCR and then dividing the result by the March 2023 capital national average case-weighted CCR. This resulted in a national capital CCR adjustment factor of 0.997178.

As discussed previously, for purposes of estimating the final outlier threshold for FY 2025, we used a wage index that reflects the policies discussed in this final rule. This includes the following:

- Application of the rural and imputed floor adjustment.
- The frontier State floor adjustments in accordance with section 10324(a) of the Affordable Care Act.
- The out-migration adjustment as added by section 505 of Public Law 108–173.
- Incorporating the FY 2025 low wage index hospital policy (described in

section III.G.5 of the preamble of this final rule) for hospitals with a wage index value below the 25th percentile, where the increase in the wage index value for these hospitals would be equal to half the difference between the otherwise applicable final wage index value for a year for that hospital and the 25th percentile wage index value for that year across all hospitals.

- Incorporating our policy (described in section III.6. of the preamble of this final rule) to apply a 5-percent cap on any decrease to a hospital’s wage index from its wage index in the prior FY, regardless of the circumstances causing the decline.

As stated previously, if we did not take the above into account, into our estimate of total FY 2025 payments would be too low, and, as a result, our outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.14 percent of total payments (which reflects the estimate of outlier reconciliation calculated for this final rule).

- We excluded the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.

- We used the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.

- Based on the policy finalized, as previously described, we used the estimated per-discharge supplemental payments to hospitals eligible for the supplemental payment for all cases in

the calculation of the proposed outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1. of this Addendum to simulate and calculate the Federal payment rate and outlier payments for all claims. In addition, as described in the earlier section to this Addendum, we are finalizing to incorporate an estimate of FY 2025 outlier reconciliation in the methodology for determining the outlier threshold. As noted previously, for this final rule, the ratio of outlier reconciliation dollars to total Federal Payments (Step 4) is a negative 4.1994 percent, which, when rounded to the second digit, is -0.04 percent. Therefore, for FY 2025, we incorporated a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.14 percent [5.1 percent (-0.04 percent)]. Under this approach, we determined a threshold of \$ 46,152 and calculated total outlier payments of \$ 4,349,520,041 and total operating Federal payments of \$ 80,269,760,637. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold matched with the 5.14 percent target, which incorporated an estimate of outlier reconciliation in the determination of the outlier threshold (as discussed in more detail in the previous section of this Addendum). We note that, if calculated without applying our methodology for incorporating an estimate of outlier reconciliation in the determination of the outlier threshold, the threshold would be \$46,502. We are finalizing an outlier fixed-loss cost threshold for FY 2025 equal to the prospective payment rate for the MS-

DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, estimated supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and any add on payments for new technology, plus \$46,152.

(3) Other Changes Concerning Outliers

As stated in the FY 1994 IPPS final rule (58 FR 46348), we establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. When we modeled the combined operating and capital outlier payments, we found that using a common threshold resulted in a higher percentage of outlier payments for capital-related costs than for operating costs. We project that the threshold for FY 2025 (which reflects our methodology to incorporate an estimate of operating outlier reconciliation) would result in outlier payments that would equal 5.1 percent of operating DRG payments and we estimate that capital outlier payments would equal 4.23 percent of capital payments based on the Federal rate (which reflects our methodology discussed previously to incorporate an estimate of capital outlier reconciliation).

In accordance with section 1886(d)(3)(B) of the Act and as discussed previously, we reduce the FY 2025 standardized amount by 5.1 percent to account for the projected proportion of payments paid as outliers.

The outlier adjustment factors that would be applied to the operating standardized amount and capital Federal rate based on the FY 2025 outlier threshold are as follows:

	Operating Standardized Amounts	Capital Federal Rate *
National	0.949	0.957682

*The adjustment factor for the capital Federal rate includes an adjustment to the estimated percentage of FY 2025 capital outlier payments for capital outlier reconciliation, as discussed previously and in section III.A.2 in this Addendum.

We are applying the outlier adjustment factors to the FY 2025 payment rates after removing the effects of the FY 2024 outlier adjustment factors on the standardized amount.

To determine whether a case qualifies for outlier payments, we currently apply hospital-specific CCRs to the total covered charges for the case. Estimated operating and capital costs for the case are calculated separately by applying separate operating and capital CCRs. These costs are then combined and

compared with the outlier fixed-loss cost threshold.

Under our current policy at § 412.84, we calculate operating and capital CCR ceilings and assign a statewide average CCR for hospitals whose CCRs exceed 3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals. Based on this calculation, for hospitals for which the MAC computes operating CCRs greater than 1.283 or capital CCRs greater than 0.132 or hospitals for which the MAC is unable to calculate a CCR (as described under

§ 412.84(i)(3) of our regulations), statewide average CCRs are used to determine whether a hospital qualifies for outlier payments. Table 8A listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the statewide average operating CCRs for urban hospitals and for rural hospitals for which the MAC is unable to compute a hospital-specific CCR within the range previously specified. These statewide average ratios would be effective for discharges occurring on or after October 1, 2024

and would replace the statewide average ratios from the prior fiscal year. Table 8B listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the comparable statewide average capital CCRs. As previously stated, the CCRs in Tables 8A and 8B would be used during FY 2025 when hospital-specific CCRs based on the latest settled cost report either are not available or are outside the range noted previously. Table 8C listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the statewide average total CCRs used under the LTCH PPS as discussed in section V. of this Addendum.

We finally note that section 20.1.2 of chapter three of the Medicare Claims Processing Manual (on the internet at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf>) covers an array of topics, including CCRs, reconciliation, and the time value of money. Per the regulations at 42 CFR 412.84(i)(1), a hospital may request that its MAC use a different (higher or lower) cost-to-charge ratio based on substantial evidence presented by the hospital. We encourage hospitals that are assigned the statewide average operating and/or capital CCRs to work with their MAC on a possible alternative operating and/or capital CCR as explained in the manual. Use of an alternative CCR developed by the hospital in conjunction with the MAC can avoid possible overpayments or underpayments at cost report settlement, thereby ensuring better accuracy when making outlier payments and negating the need for outlier reconciliation. We also note that a hospital may request an alternative operating or capital CCR at any time as long as the guidelines of the manual are followed. In addition, the manual outlines the outlier reconciliation process for hospitals and Medicare contractors. We refer hospitals to the manual instructions for complete details on outlier reconciliation.

(4) FY 2023 Outlier Payments

Our current estimate, using available FY 2023 claims data, is that actual outlier payments for FY 2023 were approximately 5.27 percent of actual total MS-DRG payments. Therefore, the data indicate that, for FY 2023, the percentage of actual outlier payments relative to actual total payments is higher than we projected for FY 2023. Consistent with the policy and statutory interpretation we have maintained since the inception of the IPPS, we do not

make retroactive adjustments to outlier payments to ensure that total outlier payments for FY 2023 are equal to 5.1 percent of total MS-DRG payments. As explained in the FY 2003 Outlier final rule (68 FR 34502), if we were to make retroactive adjustments to all outlier payments to ensure total payments are 5.1 percent of MS-DRG payments (by retroactively adjusting outlier payments), we would be removing the important aspect of the prospective nature of the IPPS. Because such an across-the-board adjustment would either lead to more or less outlier payments for all hospitals, hospitals would no longer be able to reliably approximate their payment for a patient while the patient is still hospitalized. We believe it would be neither necessary nor appropriate to make such an aggregate retroactive adjustment. Furthermore, we believe it is consistent with the statutory language at section 1886(d)(5)(A)(iv) of the Act not to make retroactive adjustments to outlier payments. This section states that outlier payments be equal to or greater than 5 percent and less than or equal to 6 percent of projected or estimated (not actual) MS-DRG payments. We believe that an important goal of a PPS is predictability. Therefore, we believe that the fixed-loss outlier threshold should be projected based on the best available historical data and should not be adjusted retroactively. A retroactive change to the fixed-loss outlier threshold would affect all hospitals subject to the IPPS, thereby undercutting the predictability of the system as a whole.

We note that, because the MedPAR claims data for the entire FY 2024 period would not be available until after September 30, 2024, we are unable to provide an estimate of actual outlier payments for FY 2024 based on FY 2024 claims data in this final rule. We will provide an estimate of actual FY 2024 outlier payments in the FY 2026 IPPS/LTCH PPS proposed rule.

5. FY 2025 Standardized Amount

The adjusted standardized amount is divided into labor-related and nonlabor-related portions. Tables 1A and 1B listed and published in section VI. of this Addendum (and available via the internet on the CMS website) contain the national standardized amounts that we are applying to all hospitals, except hospitals located in Puerto Rico, for FY 2025. The standardized amount for hospitals in Puerto Rico is shown in Table 1C listed and published in section VI. of this Addendum (and available via

the internet on the CMS website). The amounts shown in Tables 1A and 1B differ only in that the labor-related share applied to the standardized amounts in Table 1A is 67.6 percent, and the labor-related share applied to the standardized amounts in Table 1B is 62 percent. In accordance with sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act, we are applying a labor-related share of 62 percent, unless application of that percentage would result in lower payments to a hospital than would otherwise be made. In effect, the statutory provision means that we would apply a labor-related share of 62 percent for all hospitals whose wage indexes are less than or equal to 1.0000.

In addition, Tables 1A and 1B include the standardized amounts reflecting the applicable percentage increases for FY 2025.

The labor-related and nonlabor-related portions of the national average standardized amounts for Puerto Rico hospitals for FY 2025 are set forth in Table 1C listed and published in section VI. of this Addendum (and available via the internet on the CMS website). Similarly, section 1886(d)(9)(C)(iv) of the Act, as amended by section 403(b) of Public Law 108-173, provides that the labor-related share for hospitals located in Puerto Rico be 62 percent, unless the application of that percentage would result in lower payments to the hospital.

The following table illustrates the changes from the FY 2024 national standardized amounts to the FY 2025 national standardized amounts. The second through fifth columns display the changes from the FY 2024 standardized amounts for each applicable FY 2025 standardized amount. The first row of the table shows the updated (through FY 2024) average standardized amount after restoring the FY 2024 offsets for outlier payments, geographic reclassification, rural demonstration, lowest quartile, and wage index cap policy budget neutrality. The MS-DRG reclassification and recalibration wage index, and stem cell acquisition budget neutrality factors are cumulative (that is, we have not restored the offsets). Accordingly, those FY 2024 adjustment factors have not been removed from the base rate in the following table. Additionally, for FY 2025 we have applied the budget neutrality factors for the lowest quartile hospital policy, described previously.

CHANGES FROM FY 2024 STANDARDIZED AMOUNTS TO THE FY 2025 STANDARDIZED AMOUNTS

	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
FY 2025 Base Rate after removing: 1. FY 2024 Geographic Reclassification Budget Neutrality (0.971295) 2. FY 2024 Operating Outlier Offset (0.949) 3. FY 2024 Rural Demonstration Budget Neutrality Factor (0.999463) 4. FY 2024 Lowest Quartile Budget Neutrality Factor (0.997402) 5. FY 2024 Cap Policy Wage Index Budget Neutrality Factor (0.999645)	If Wage Index is Greater Than 1.0000: Labor (67.6%): \$ 4,782.01 Nonlabor (32.4%): \$ 2,291.97 If Wage Index is less Than or Equal to 1.0000: Labor (62%): \$4,385.87 Nonlabor (38%): \$2,688.11	If Wage Index is Greater Than 1.0000: Labor (67.6%): \$4,782.01 Nonlabor (32.4%): \$2,291.97 If Wage Index is less Than or Equal to 1.0000: Labor (62%): \$4,385.87 Nonlabor (38%): \$2,688.11	If Wage Index is Greater Than 1.0000: Labor (67.6%): \$4,782.01 Nonlabor (32.4%): \$2,291.97 If Wage Index is less Than or Equal to 1.0000: Labor (62%): \$4,385.87 Nonlabor (38%): \$2,688.11	If Wage Index is Greater Than 1.0000: Labor (67.6%): \$4,782.01 Nonlabor (32.4%): \$2,291.97 If Wage Index is less Than or Equal to 1.0000: Labor (62%): \$4,385.87 Nonlabor (38%): \$2,688.11
FY 2025 Update Factor	1.029	1.0035	1.0205	0.995

FY 2025 Operating Outlier Factor	0.949	0.949	0.949	0.949
National Standardized Amount for FY 2025 if Wage Index is Greater Than 1.0000; Labor/Non-Labor Share Percentage (67.6/32.4)	Labor: \$4,466.00 Nonlabor: \$2,140.51	Labor: \$4,355.33 Nonlabor: \$2,087.47	Labor: \$4,429.11 Nonlabor: \$2,122.83	Labor: \$4,318.44 Nonlabor: \$2,069.78
National Standardized Amount for FY 2025 if Wage Index is Less Than or Equal to 1.0000; Labor/Non-Labor Share Percentage (62/38)	Labor: \$4,096.04 Nonlabor: \$2,510.47	Labor: \$3,994.54 Nonlabor: \$2,448.26	Labor: \$4,062.20 Nonlabor: \$2,489.74	Labor: \$3,960.70 Nonlabor: \$2,427.52

B. Adjustments for Area Wage Levels and Cost-of-Living

Tables 1A through 1C, as published in section VI. of this Addendum (and available via the internet on the CMS website), contain the labor-related and nonlabor-related shares that we are using to calculate the prospective payment rates for hospitals located in the 50 States, the District of Columbia, and Puerto Rico for FY 2025. This section addresses two types of adjustments to the standardized amounts that are made in determining the prospective payment rates as described in this Addendum.

1. Adjustment for Area Wage Levels

Sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act require that we make an adjustment to the labor-related portion of the national prospective payment rate to account for area differences in hospital wage levels. This adjustment is made by multiplying the labor-related portion of the adjusted standardized amounts by the appropriate wage index for the area in which the hospital is located. For FY 2025, as discussed in section IV.B.3. of the preamble of this final rule, we are applying a labor-related share of 67.6 percent for the national standardized amounts for all IPPS hospitals

(including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are applying the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000. In section III. of the preamble of this final rule, we discuss the data and methodology for the FY 2025 wage index.

2. Adjustment for Cost-of-Living in Alaska and Hawaii

Section 1886(d)(5)(H) of the Act provides discretionary authority to the Secretary to make adjustments as the Secretary deems appropriate to take into account the unique circumstances of hospitals located in Alaska and Hawaii. Higher labor-related costs for these two States are taken into account in the adjustment for area wages described previously. To account for higher non-labor-related costs for these two States, we multiply the nonlabor-related portion of the standardized amount for

hospitals in Alaska and Hawaii by an adjustment factor.

In the FY 2013 IPPS/LTCH PPS final rule, we established a methodology to update the COLA factors for Alaska and Hawaii that were published by the U.S. Office of Personnel Management (OPM) every 4 years (coinciding with the update to the labor-related share of the IPPS market basket), beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS proposed and final rules for additional background and a detailed description of this methodology (77 FR 28145 through 28146 and 77 FR 53700 through 53701, respectively). For FY 2022, in the FY 2022 IPPS/LTCH

PPS final rule (86 FR 45546 through 45547), we updated the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule. Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, we are continuing to use the same COLA factors in FY 2025 that were used in FY 2024 to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii. The following table lists the COLA factors for FY 2025.

**FY 2025 Cost-of-Living Adjustment Factors (COLA):
Alaska and Hawaii Hospitals**

Area	FY 2022 through FY 2025
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.22
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.22
City of Juneau and 80-kilometer (50-mile) radius by road	1.22
Rest of Alaska	1.24
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.22
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

Lastly, as we finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53700 and 53701), we intend to update the COLA factors at the same time as the update to the labor-related share of the IPPS market basket.

C. Calculation of the Prospective Payment Rates

1. General Formula for Calculation of the Prospective Payment Rates for FY 2025

In general, the operating prospective payment rate for all hospitals (including hospitals in Puerto Rico) paid under the IPPS, except SCHs and MDHs, for FY 2025 equals the Federal rate (which includes uncompensated care payments). As previously discussed, section 4102 of the Consolidated Appropriations Act, 2023 (Pub. L. 117–328), enacted on December 29, 2022, extended the MDH program through FY 2024 (that is, for discharges occurring on or before September 30, 2024). Subsequently, section 307 of the Consolidated Appropriations Act, 2024

(CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, further extended the MDH program for discharges occurring before January 1, 2025. Prior to enactment of the CAA, 2024, the MDH program was only to be in effect through the end of FY 2024. Under current law, the MDH program will expire for discharges on or after January 1, 2025.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment:

- The Federal national rate (which, as discussed in section IVE. of the preamble of this final rule, includes uncompensated care payments).
- The updated hospital-specific rate based on FY 1982 costs per discharge.
- The updated hospital-specific rate based on FY 1987 costs per discharge.
- The updated hospital-specific rate based on FY 1996 costs per discharge.
- The updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

The prospective payment rate for SCHs for FY 2025 equals the higher of

the applicable Federal rate, or the hospital-specific rate as described later in this section. The prospective payment rate for MDHs for FY 2025 discharges occurring before January 1, 2025 equals the higher of the Federal rate, or the Federal rate plus 75 percent of the difference between the Federal rate and the hospital-specific rate as described in this section. For MDHs, the updated hospital-specific rate is based on FY 1982, FY 1987, or FY 2002 costs per discharge, whichever yields the greatest aggregate payment.

2. Operating and Capital Federal Payment Rate and Outlier Payment Calculation

Note: The formula specified in this section is used for actual claim payment and is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the PSF while CMS uses an adjusted CCR (as described previously) to project the threshold for the upcoming fiscal year. In addition,

charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

Step 1—Determine the MS-DRG and MS-DRG relative weight (from Table 5) for each claim primarily based on the ICD-10-CM diagnosis and ICD-10-PCS procedure codes on the claim.

Step 2—Select the applicable average standardized amount depending on whether the hospital submitted qualifying quality data and is a meaningful EHR user, as described previously.

Step 3—Compute the operating and capital Federal payment rate:

—Federal Payment Rate for Operating Costs = MS-DRG Relative Weight × [(Labor-Related Applicable Standardized Amount × Applicable CBSA Wage Index) + (Nonlabor-Related Applicable Standardized Amount × Cost-of-Living Adjustment)] × (1 + IME + (DSH * 0.25))

—Federal Payment for Capital Costs = MS-DRG Relative Weight × Federal Capital Rate × Geographic Adjustment Fact × (1 + IME + DSH)

Step 4—Determine operating and capital costs:

—Operating Costs = (Billed Charges × Operating CCR)

—Capital Costs = (Billed Charges × Capital CCR)

Step 5—Compute operating and capital outlier threshold (CMS applies a geographic adjustment to the operating and capital outlier threshold to account for local cost variation):

—Operating CCR to Total CCR = (Operating CCR)/(Operating CCR + Capital CCR)

—Operating Outlier Threshold = [Fixed Loss Threshold × ((Labor-Related Portion × CBSA Wage Index) + Nonlabor-Related portion)] × Operating CCR to Total CCR + Federal Payment with IME, DSH + Uncompensated Care Payment + supplemental payment for eligible IHS/Tribal hospitals and Puerto

Rico hospitals + New Technology Add-On Payment Amount

—Capital CCR to Total CCR = (Capital CCR)/(Operating CCR + Capital CCR)

—Capital Outlier Threshold = (Fixed Loss Threshold × Geographic Adjustment Factor × Capital CCR to Total CCR) + Federal Payment with IME and DSH

Step 6—Compute operating and capital outlier payments:

—Marginal Cost Factor = 0.80 or 0.90 (depending on the MS-DRG)

—Operating Outlier Payment = (Operating Costs—Operating Outlier Threshold) × Marginal Cost Factor

—Capital Outlier Payment = (Capital Costs—Capital Outlier Threshold) × Marginal Cost Factor

The payment rate may then be further adjusted for hospitals that qualify for a low-volume payment adjustment under section 1886(d)(12) of the Act and 42 CFR 412.101(b). The base-operating DRG payment amount may be further adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment as described under sections 1886(q) and 1886(o) of the Act, respectively. Payments also may be reduced by the 1-percent adjustment under the HAC Reduction Program as described in section 1886(p) of the Act. We also make new technology add-on payments in accordance with section 1886(d)(5)(K) and (L) of the Act. Finally, we add the uncompensated care payment and supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals to the total claim payment amount. As noted in the previous formula, we take uncompensated care payments, supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and new technology add-on payments into consideration when calculating outlier payments.

3. Hospital-Specific Rate (Applicable Only to SCHs and MDHs)

a. Calculation of Hospital-Specific Rate

Section 1886(b)(3)(C) of the Act provides that SCHs are paid based on

whichever of the following rates yields the greatest aggregate payment: the Federal rate; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment. As discussed previously, currently MDHs are paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the greater of the updated hospital-specific rates based on either FY 1982, FY 1987, or FY 2002 costs per discharge. As noted, under current law, the MDH program is effective for FY 2025 discharges on or before December 31, 2024.

For a more detailed discussion of the calculation of the hospital-specific rates, we refer readers to the FY 1984 IPPS interim final rule (48 FR 39772); the April 20, 1990 final rule with comment period (55 FR 15150); the FY 1991 IPPS final rule (55 FR 35994); and the FY 2001 IPPS final rule (65 FR 47082).

b. Updating the FY 1982, FY 1987, FY 1996, FY 2002 and FY 2006 Hospital-Specific Rate for FY 2025

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Because the Act sets the update factor for SCHs and MDHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, the applicable percentage increases to the hospital-specific rates applicable to SCHs and MDHs are the following:

FY 2025	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
Market Basket Rate-of-Increase	3.4	3.4	3.40	3.4
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0	0	-0.85	-0.85
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0	-2.55	0	-2.55
Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.5	-0.5	-0.5	-0.5
Applicable Percentage Increase Applied to Standardized Amount	2.9	0.35	2.05	-0.5

For a complete discussion of the applicable percentage increase applied to the hospital-specific rates for SCHs and MDHs, we refer readers to section V.F. of the preamble of this final rule.

In addition, because SCHs and MDHs use the same MS-DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, the hospital-specific rate is adjusted by a budget neutrality factor to ensure that changes to the MS-DRG classifications and the recalibration of the MS-DRG relative weights are made in a manner so that aggregate IPPS payments are unaffected. Therefore, the hospital specific-rate for an SCH or MDH is adjusted by the MS-DRG reclassification and recalibration budget neutrality factor, as discussed in section III. of this Addendum and listed in the table in section II. of this Addendum. In addition, as discussed in section II.E.2.d. of the preamble this final rule and previously, we are applying a permanent 10-percent cap on the reduction in a MS-DRG's relative weight in a given fiscal year, as finalized in the FY 2023 IPPS/LTCH PPS final rule. Because SCHs and MDHs use the same MS-DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, consistent with the policy adopted in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48897 through 48900 and 49432 through 49433), the hospital specific-rate for an SCH or MDH would be adjusted by the MS-DRG 10-percent cap budget neutrality factor. The resulting rate is used in determining the payment rate that an SCH or MDH would receive for its discharges beginning on or after October 1, 2024.

III. Changes to Payment Rates for Acute Care Hospital Inpatient Capital-Related Costs for FY 2025

The PPS for acute care hospital inpatient capital-related costs was implemented for cost reporting periods beginning on or after October 1, 1991. The basic methodology for determining

Federal capital prospective rates is set forth in the regulations at 42 CFR 412.308 through 412.352. In this section of this Addendum, we discuss the factors that we used to determine the capital Federal rate for FY 2025, which would be effective for discharges occurring on or after October 1, 2024.

All hospitals (except "new" hospitals under § 412.304(c)(2)) are paid based on the capital Federal rate. We annually update the capital standard Federal rate, as provided in § 412.308(c)(1), to account for capital input price increases and other factors. The regulations at § 412.308(c)(2) also provide that the capital Federal rate be adjusted annually by a factor equal to the estimated proportion of outlier payments under the capital Federal rate to total capital payments under the capital Federal rate. In addition, § 412.308(c)(3) requires that the capital Federal rate be reduced by an adjustment factor equal to the estimated proportion of payments for exceptions under § 412.348. (We note that, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53705), there is generally no longer a need for an exceptions payment adjustment factor.) However, in limited circumstances, an additional payment exception for extraordinary circumstances is provided for under § 412.348(f) for qualifying hospitals. Therefore, in accordance with § 412.308(c)(3), an exceptions payment adjustment factor may need to be applied if such payments are made. Section 412.308(c)(4)(ii) requires that the capital standard Federal rate be adjusted so that the effects of the annual DRG reclassification and the recalibration of DRG weights and changes in the geographic adjustment factor (GAF) are budget neutral.

Section 412.374 provides for payments to hospitals located in Puerto Rico under the IPPS for acute care hospital inpatient capital-related costs, which currently specifies capital IPPS payments to hospitals located in Puerto

Rico are based on 100 percent of the Federal rate.

A. Determination of the Federal Hospital Inpatient Capital-Related Prospective Payment Rate Update for FY 2025

In the discussion that follows, we explain the factors that we used to determine the capital Federal rate for FY 2025. In particular, we explain why the FY 2025 capital Federal rate will increase approximately 1.33 percent, compared to the FY 2024 capital Federal rate. As discussed in the impact analysis in Appendix A to this final rule, we estimate that capital payments per discharge will increase approximately 2.8 percent during that same period. Because capital payments constitute approximately 10 percent of hospital payments, a 1-percent change in the capital Federal rate yields only approximately a 0.1 percent change in actual payments to hospitals.

1. Projected Capital Standard Federal Rate Update

Under § 412.308(c)(1), the capital standard Federal rate is updated on the basis of an analytical framework that takes into account changes in a capital input price index (CIPI) and several other policy adjustment factors. Specifically, we adjust the projected CIPI rate of change, as appropriate, each year for case-mix index-related changes, for intensity, and for errors in previous CIPI forecasts. The update factor for FY 2025 under that framework is 3.1 percent based on a projected 2.6 percent increase in the 2018-based CIPI, a 0.0 percentage point adjustment for intensity, a 0.0 percentage point adjustment for case-mix, a 0.0 percentage point adjustment for the DRG reclassification and recalibration, and a forecast error correction of 0.5 percentage point. As discussed in section III.C. of this Addendum, we continue to believe that the CIPI is the most appropriate input price index for capital costs to measure capital price

changes in a given year. We also explain the basis for the FY 2025 CIPI projection in that same section of this Addendum. In this final rule, we describe the policy adjustments that we applied in the update framework for FY 2025.

The case-mix index is the measure of the average DRG weight for cases paid under the IPPS. Because the DRG weight determines the prospective payment for each case, any percentage increase in the case-mix index corresponds to an equal percentage increase in hospital payments.

The case-mix index can change for any of several reasons—

- The average resource use of Medicare patient changes (“real” case-mix change);
- Changes in hospital documentation and coding of patient records result in higher-weighted DRG assignments (“coding effects”); or
- The annual DRG reclassification and recalibration changes may not be budget neutral (“reclassification effect”).

We define real case-mix change as actual changes in the mix (and resource requirements) of Medicare patients, as opposed to changes in documentation and coding behavior that result in assignment of cases to higher-weighted DRGs, but do not reflect higher resource requirements. The capital update framework includes the same case-mix index adjustment used in the former operating IPPS update framework (as discussed in the May 18, 2004 IPPS proposed rule for FY 2005 (69 FR 28816)). (We no longer use an update framework to make a recommendation for updating the operating IPPS standardized amounts, as discussed in section II. of appendix B to the FY 2006 IPPS final rule (70 FR 47707).)

For FY 2025, we are projecting a 0.5 percent total increase in the case-mix index. We estimated that the real case-mix increase would equal 0.5 percent for FY 2025. The net adjustment for change in case-mix is the difference between the projected real increases in case mix and the projected total increase in case mix. Therefore, as proposed, the net adjustment for case-mix change in FY 2025 is 0.0 percentage point.

The capital update framework also contains an adjustment for the effects of DRG reclassification and recalibration. This adjustment is intended to remove the effect on total payments of prior year’s changes to the DRG classifications and relative weights, to retain budget neutrality for all case-mix index-related changes other than those due to patient severity of illness. Due to the lag time

in the availability of data, there is a 2-year lag in data used to determine the adjustment for the effects of DRG reclassification and recalibration. For example, for this final rule, we have the FY 2023 MedPAR claims data available to evaluate the effects of the FY 2023 DRG reclassification and recalibration as part of our update for FY 2025. We assume for purposes of this adjustment, that the estimate of FY 2023 DRG reclassification and recalibration would result in no change in the case-mix when compared with the case mix index that would have resulted if we had not made the reclassification and recalibration changes to the DRGs. Therefore, as proposed, we are making a 0.0 percentage point adjustment for reclassification and recalibration in the update framework for FY 2025.

The capital update framework also contains an adjustment for forecast error. The input price index forecast is based on historical trends and relationships ascertainable at the time the update factor is established for the upcoming year. In any given year, there may be unanticipated price fluctuations that may result in differences between the actual increase in prices and the forecast used in calculating the update factors. In setting a prospective payment rate under the framework, we make an adjustment for forecast error only if our estimate of the change in the capital input price index for any year is greater than 0.25 percentage point in absolute terms. There is a 2-year lag between the forecast and the availability of data to develop a measurement of the forecast error. Historically, when a forecast error of the CIPI is greater than 0.25 percentage point in absolute terms, it is reflected in the update recommended under this framework. A forecast error of 0.5 percentage point was calculated for the FY 2023 update, for which there are historical data. That is, current historical data indicate that the forecasted FY 2023 CIPI increase (2.5 percent) used in calculating the FY 2023 update factor is 0.5 percentage point lower than actual realized price increases (3.0 percent). As this exceeds the 0.25 percentage point threshold, we are making an adjustment of 0.5 percentage point for the FY 2023 forecast error in the update for FY 2025.

Under the capital IPPS update framework, we also make an adjustment for changes in intensity. Historically, we calculate this adjustment using the same methodology and data that were used in the past under the framework for operating IPPS. The intensity factor for the operating update framework reflects

how hospital services are utilized to produce the final product, that is, the discharge. This component accounts for changes in the use of quality-enhancing services, for changes within DRG severity, and for expected modification of practice patterns to remove noncost-effective services. Our intensity measure is based on a 5-year average.

We calculate case-mix constant intensity as the change in total cost per discharge, adjusted for price level changes (the CPI for hospital and related services) and changes in real case-mix. Without reliable estimates of the proportions of the overall annual intensity changes that are due, respectively, to ineffective practice patterns and the combination of quality-enhancing new technologies and complexity within the DRG system, we assume that one-half of the annual change is due to each of these factors. Thus, the capital update framework provides an add-on to the input price index rate of increase of one-half of the estimated annual increase in intensity, to allow for increases within DRG severity and the adoption of quality-enhancing technology.

In this final rule, as proposed, we are continuing to use a Medicare-specific intensity measure that is based on a 5-year adjusted average of cost per discharge for FY 2025 (we refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 0436) for a full description of our Medicare-specific intensity measure). Specifically, for FY 2025, we are using an intensity measure that is based on an average of cost-per-discharge data from the 5-year period beginning with FY 2018 and extending through FY 2022. Based on these data, we estimated that case-mix constant intensity declined during FYs 2018 through 2022. In the past, when we found intensity to be declining, we believed a zero (rather than a negative) intensity adjustment was appropriate. Consistent with this approach, because we estimated that intensity declined during that 5-year period, we believe it is appropriate to continue to apply a zero-intensity adjustment for FY 2025. Therefore, as proposed, we are making a 0.0 percentage point adjustment for intensity in the update for FY 2025.

Earlier, we described the basis of the components we used to develop the 3.1 percent capital update factor under the capital update framework for FY 2025, as shown in the following table.

FY 2025 UPDATE FACTOR TO THE CAPITAL FEDERAL RATE

Capital Input Price Index*	2.6
Intensity:	0.0
Case-Mix Adjustment Factors:	
Projected Case-Mix Change	-0.5
Real Across DRG Change	0.5
Subtotal	0.0
Effect of FY 2023 Reclassification and Recalibration	0.0
Forecast Error Correction	0.5
Total Update	3.1

*The capital input price index represents the IGI 2024 2nd quarter forecast of the 2018-based CPII with historical data through the 1st quarter 2024.

2. Outlier Payment Adjustment Factor

Section 412.312(c) establishes a unified outlier payment methodology for inpatient operating and inpatient capital-related costs. A shared threshold is used to identify outlier cases for both inpatient operating and inpatient capital-related payments. Section 412.308(c)(2) provides that the standard Federal rate for inpatient capital-related costs be reduced by an adjustment factor equal to the estimated proportion of capital-related outlier payments to total inpatient capital-related PPS payments. The outlier threshold is set so that operating outlier payments are projected to be 5.1 percent of total operating IPPS DRG payments. For FY 2025, as proposed, we incorporated the impact of estimated operating outlier reconciliation payment amounts into the outlier threshold model. (For more details on our incorporation of the estimated operating outlier reconciliation payment amounts into the outlier threshold model, including modifications to our methodology to reflect the estimate of operating outlier reconciliation payment amounts under the new criteria which expands the scope of cost reports identified for outlier reconciliation approval in FY 2025, see section II.A.4.i. of this Addendum to this final rule.)

For FY 2024, we estimated that outlier payments for capital-related PPS payments will equal 4.02 percent of inpatient capital-related payments based on the capital Federal rate. Based on the threshold discussed in section II.A. of this Addendum, we estimate that prior to taking into account projected capital outlier reconciliation payments, outlier payments for capital-related costs will equal 4.26 percent of inpatient capital-related payments based on the capital Federal rate in FY 2025. Using the methodology outlined in section II.A.4.i. of this Addendum, we estimate that taking into account projected capital

outlier reconciliation payments will decrease the estimated percentage of FY 2025 capital outlier payments by 0.03 percent. Therefore, accounting for estimated capital outlier reconciliation, the estimated outlier payments for capital-related PPS payments will equal 4.23 percent (4.26 percent – 0.03 percent) of inpatient capital-related payments based on the capital Federal rate in FY 2025. Accordingly, we applied an outlier adjustment factor of 0.9577 in determining the capital Federal rate for FY 2025. Thus, we estimate that the percentage of capital outlier payments to total capital Federal rate payments for FY 2025 will be higher than the percentage we estimated for FY 2024. (For more details on our methodology for incorporating the impact of estimated capital outlier reconciliation payment amounts into the calculation of the capital outlier adjustment factor for FY 2025, including modifications made to our methodology to reflect the estimate of capital outlier reconciliation payment amounts under the new criteria which expands the scope of cost reports identified for outlier reconciliation approval in FY 2025, see section II.A.4.i. of this Addendum to this final rule.)

The outlier reduction factors are not built permanently into the capital rates; that is, they are not applied cumulatively in determining the capital Federal rate. The FY 2025 outlier adjustment of 0.9577 is a –0.22 percent change from the FY 2024 outlier adjustment of 0.9598. Therefore, the net change in the outlier adjustment to the capital Federal rate for FY 2024 is 0.9978 (0.9577/0.9598) so that the outlier adjustment will decrease the FY 2025 capital Federal rate by approximately –0.22 percent compared to the FY 2024 outlier adjustment.

3. Budget Neutrality Adjustment Factor for Changes in DRG Classifications and Weights and the GAF

Section 412.308(c)(4)(ii) requires that the capital Federal rate be adjusted so that aggregate payments for the fiscal year based on the capital Federal rate, after any changes resulting from the annual DRG reclassification and recalibration and changes in the GAF, are projected to equal aggregate payments that would have been made on the basis of the capital Federal rate without such changes.

As discussed in section III.G.5. of the preamble of this final rule, in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42325 through 42339), we finalized a policy to help reduce wage index disparities between high and low wage index hospitals by increasing the wage index values for hospitals with a wage index value below the 25th percentile wage index. We stated that this policy would be effective for at least 4 years, beginning in FY 2020. This policy was applied in FYs 2020 through 2024, and we are finalizing our proposal to continue to apply this policy for at least 3 more years, beginning in FY 2025. We note that the FY 2020 low wage index hospital policy and the related budget neutrality adjustment are the subject of pending litigation in multiple courts. On July 23, 2024, the Court of Appeals for the D.C. Circuit held that the Secretary lacked authority under 1886(d)(3)(E) or 1886(d)(5)(I)(i) of the Act to adopt the low wage index hospital policy for FY 2020, and that the policy and related budget neutrality adjustment must be vacated. *Bridgeport Hosp. v. Becerra*, Nos. 22–5249, 22–5269, 2024 WL 3504407, at *7–*8 & n.6 (D.C. Cir. July 23, 2024). As of the date of this Rule’s publication, the time to seek further review of the D.C. Circuit’s decision in *Bridgeport Hospital* has not expired. *See* Fed. R. App. P. 40(a)(1). The government is evaluating the

decision and considering options for next steps.

In addition, beginning in FY 2023, we finalized a permanent 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY regardless of the circumstances causing the decline. That is, under this policy, a hospital's wage index value would not be less than 95 percent of its prior year value (87 FR 49018 through 49021).

We have established a 2-step methodology for computing the budget neutrality factor for changes in the GAFs in light of the effect of those wage index changes on the GAFs. In the first step, we first calculate a factor to ensure budget neutrality for changes to the GAFs due to the update to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy, consistent with our historical GAF budget neutrality factor methodology. In the second step, we calculate a factor to ensure budget neutrality for changes to the GAFs due to our policy to increase the wage index for hospitals with a wage index value below the 25th percentile wage index, which will continue in FY 2025, and our policy to place a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index in the prior fiscal year. In this section, we refer to the policy that we applied in FYs 2020 through FY 2024 and continue to apply in FY 2025, of increasing the wage index for hospitals with a wage index value below the 25th percentile wage index, as the lowest quartile hospital wage index adjustment (also known as low wage index hospital policy). We refer to our policy to place a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index in the prior fiscal year as the 5-percent cap on wage index decreases policy.

The budget neutrality factors applied for changes to the GAFs due to the update to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy are built permanently into the capital Federal rate; that is, they are applied cumulatively in determining the capital Federal rate. However, the budget neutrality factor for the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy is not permanently built into the capital Federal rate. This is because the GAFs with the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy applied from the previous year are not used in the budget neutrality factor calculations for the current year. Accordingly, and consistent with this

approach, prior to calculating the GAF budget neutrality factors for FY 2025, we removed from the capital Federal rate the budget neutrality factor applied in FY 2024 for the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy. Specifically, we divided the capital Federal rate by the FY 2024 budget neutrality factor of 0.9964 (88 FR 59362). We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45552) for additional discussion on our policy of removing the prior year budget neutrality factor for the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases from the capital Federal rate.

In light of the changes to the wage index and other wage index policies for FY 2025 discussed previously, which directly affect the GAF, we continue to compute a budget neutrality adjustment for changes in the GAFs in two steps. We discuss our 2-step calculation of the GAF budget neutrality factors for FY 2025 as follows.

To determine the GAF budget neutrality factors for FY 2025, we first compared estimated aggregate capital Federal rate payments based on the FY 2024 MS-DRG classifications and relative weights and the FY 2024 GAFs to estimated aggregate capital Federal rate payments based on the FY 2024 MS-DRG classifications and relative weights and the FY 2025 GAFs without incorporating the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy. To achieve budget neutrality for these changes in the GAFs, we calculated an incremental GAF budget neutrality adjustment factor of 0.9887 for FY 2025. Next, we compared estimated aggregate capital Federal rate payments based on the FY 2025 GAFs with and without the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy. For this calculation, estimated aggregate capital Federal rate payments were calculated using the FY 2025 MS-DRG classifications and relative weights (after application of the 10-percent cap discussed later in this section) and the FY 2025 GAFs (both with and without the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy). (We note, for this calculation the GAFs included the imputed floor, out-migration, and Frontier state adjustments.) To achieve budget neutrality for the effects of the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy on the FY 2025 GAFs, we calculated an incremental GAF budget neutrality

adjustment factor of 0.9958. As discussed earlier in this section, the budget neutrality factor for the lowest quartile hospital wage index adjustment factor and the 5-percent cap on wage index decreases policy is not permanently built into the capital Federal rate. Consistent with this, we present the budget neutrality factor for the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy calculated under the second step of this 2-step methodology separately from the other budget neutrality factors in the discussion that follows, and this factor is not included in the calculation of the combined GAF/DRG adjustment factor described later in this section.

In the FY 2023 IPPS/LTCH PPS final rule, we finalized a permanent 10-percent cap on the reduction in an MS-DRG's relative weight in a given fiscal year, beginning in FY 2023. Consistent with our historical methodology for adjusting the capital standard Federal rate to ensure that the effects of the annual DRG reclassification and the recalibration of DRG weights are budget neutral under § 412.308(c)(4)(ii), we finalized to apply an additional budget neutrality factor to the capital standard Federal rate so that the 10-percent cap on decreases in an MS-DRG's relative weight is implemented in a budget neutral manner (87 FR 49436). Specifically, we augmented our historical methodology for computing the budget neutrality factor for the annual DRG reclassification and recalibration by computing a budget neutrality adjustment for the annual DRG reclassification and recalibration in two steps. We first calculate a budget neutrality factor to account for the annual DRG reclassification and recalibration prior to the application of the 10-percent cap on MS-DRG relative weight decreases. Then we calculate an additional budget neutrality factor to account for the application of the 10-percent cap on MS-DRG relative weight decreases.

To determine the DRG budget neutrality factors for FY 2025, we first compared estimated aggregate capital Federal rate payments based on the FY 2024 MS-DRG classifications and relative weights to estimated aggregate capital Federal rate payments based on the FY 2025 MS-DRG classifications and relative weights prior to the application of the 10-percent cap. For these calculations, estimated aggregate capital Federal rate payments were calculated using the FY 2025 GAFs without the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases

policy. The incremental adjustment factor for DRG classifications and changes in relative weights prior to the application of the 10-percent cap is 0.9970. Next, we compared estimated aggregate capital Federal rate payments based on the FY 2025 MS-DRG classifications and relative weights prior to the application of the 10-percent cap to estimated aggregate capital Federal rate payments based on the FY 2025 MS-DRG classifications and relative weights after the application of the 10-percent cap. For these calculations, estimated aggregate capital Federal rate payments were also calculated using the FY 2025 GAFs without the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy. The incremental adjustment factor for the application of the 10-percent cap on relative weight decreases is 0.9999. Therefore, to achieve budget neutrality for the FY 2025 MS-DRG reclassification and recalibration (including the 10-percent cap), based on the calculations described previously, we are applying an incremental budget neutrality adjustment factor of 0.9969 (0.9970×0.9999) for FY 2025 to the capital Federal rate. We note that all the values are calculated with unrounded numbers.

The incremental adjustment factor for the FY 2025 MS-DRG reclassification and recalibration (0.9969) and for changes in the FY 2025 GAFs due to the update to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy (0.9887) is 0.9856 (0.9969×0.9887). This incremental adjustment factor is built permanently into the capital Federal rates. To achieve budget neutrality for the effects of the continuation of the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy on the FY 2025 GAFs, as described previously, we calculated a budget neutrality adjustment factor of 0.9958 for FY 2025. We refer to this budget neutrality factor for the remainder of this section as the lowest quartile/cap adjustment factor.

We applied the budget neutrality adjustment factors described previously to the capital Federal rate. This follows the requirement under § 412.308(c)(4)(ii) that estimated aggregate payments each

year be no more or less than they would have been in the absence of the annual DRG reclassification and recalibration and changes in the GAFs.

The methodology used to determine the recalibration and geographic adjustment factor (GAF/DRG) budget neutrality adjustment is similar to the methodology used in establishing budget neutrality adjustments under the IPPS for operating costs. One difference is that, under the operating IPPS, the budget neutrality adjustments for the effect of updates to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy are determined separately. Under the capital IPPS, there is a single budget neutrality adjustment factor for changes in the GAF that result from updates to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy. In addition, there is no adjustment for the effects that geographic reclassification, the lowest quartile hospital wage index adjustment, or the 5-percent cap on wage index decreases policy described previously have on the other payment parameters, such as the payments for DSH or IME.

The incremental GAF/DRG adjustment factor of 0.9856 accounts for the MS-DRG reclassifications and recalibration (including application of the 10-percent cap on relative weight decreases) and for changes in the GAFs that result from updates to the wage data, the effects on the GAFs of FY 2025 geographic reclassification decisions made by the MGCRB compared to FY 2024 decisions, and the application of the rural floor policy. The lowest quartile/cap adjustment factor of 0.9958 accounts for changes in the GAFs that result from our continuation of the policy to increase the wage index values for hospitals with a wage index value below the 25th percentile wage index and the 5-percent cap on wage index decreases policy. However, these factors do not account for changes in payments due to changes in the DSH and IME adjustment factors.

4. Capital Federal Rate for FY 2025

For FY 2024, we established a capital Federal rate of \$503.83 (88 FR 59363). We are establishing an update of 3.1 percent in determining the FY 2025

capital Federal rate for all hospitals. As a result of this update and the budget neutrality factors discussed earlier, we are establishing a national capital Federal rate of \$510.51 for FY 2025. The national capital Federal rate for FY 2025 was calculated as follows:

- The FY 2025 update factor is 1.031; that is, the update is 3.1 percent.
- The FY 2025 GAF/DRG budget neutrality adjustment factor that is applied to the capital Federal rate for changes in the MS-DRG classifications and relative weights (including application of the 10-percent cap on relative weight decreases) and changes in the GAFs that result from updates to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy is 0.9856.
- The FY 2025 lowest quartile/cap budget neutrality adjustment factor that is applied to the capital Federal rate for changes in the GAFs that result from our policy to increase the wage index values for hospitals with a wage index value below the 25th percentile wage index and the 5-percent cap on wage index decreases policy is 0.9958.
- The FY 2025 outlier adjustment factor is 0.9577.

We are providing the following chart that shows how each of the factors and adjustments for FY 2025 affects the computation of the FY 2025 national capital Federal rate in comparison to the FY 2024 national capital Federal rate. The FY 2025 update factor has the effect of increasing the capital Federal rate by 3.1 percent compared to the FY 2024 capital Federal rate. The GAF/DRG budget neutrality adjustment factor has the effect of decreasing the capital Federal rate by 1.44 percent. The FY 2025 lowest quartile/cap budget neutrality adjustment factor has the effect of decreasing the capital Federal rate by 0.07 percent compared to the FY 2024 capital Federal rate. The FY 2025 outlier adjustment factor has the effect of decreasing the capital Federal rate by 0.22 percent compared to the FY 2024 capital Federal rate. The combined effect of all the changes would increase the national capital Federal rate by approximately 1.33 percent, compared to the FY 2024 national capital Federal rate.

COMPARISON OF FACTORS AND ADJUSTMENTS: FY 2024 CAPITAL FEDERAL RATE AND THE FY 2025 CAPITAL FEDERAL RATE

	FY 2024	FY 2025	Change	Percent Change
Update Factor ¹	1.0380	1.0310	1.0310	3.10
GAF/DRG Adjustment Factor ¹	0.9885	0.9856	0.9856	-1.44
Quartile/Cap Adjustment Factor ²	0.9964	0.9958	0.9993	-0.07
Outlier Adjustment Factor ³	0.9598	0.9577	0.9978	-0.22
Capital Federal Rate	\$503.83	\$510.51	1.0133	1.33 ⁴

¹ The update factor and the GAF/DRG budget neutrality adjustment factors are built permanently into the capital Federal rate. Thus, for example, the incremental change from FY 2024 to FY 2025 resulting from the application of the 0.9856 GAF/DRG budget neutrality adjustment factor for FY 2025 is a net change of 0.9856 (or -1.44 percent).

² The lowest quartile/cap budget neutrality adjustment factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the FY 2025 lowest quartile/cap budget neutrality adjustment factor is 0.9958/0.9964 or 0.9993 (or -0.07 percent).

³ The outlier reduction factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the FY 2025 outlier adjustment factor is 0.9577/0.9598 or 0.9978 (or -0.22 percent).

⁴ Percent change may not sum due to rounding.

B. Calculation of the Inpatient Capital-Related Prospective Payments for FY 2025

For purposes of calculating payments for each discharge during FY 2025, the capital Federal rate is adjusted as follows: (Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME Adjustment Factor, if applicable). The result is the adjusted capital Federal rate.

Hospitals also may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. Section 412.312(c) provides for a shared threshold to identify outlier cases for both inpatient operating and inpatient capital-related payments. The outlier threshold for FY 2025 is in section II.A. of this Addendum. For FY 2025, a case will qualify as a cost outlier if the cost for the case is greater than the prospective payment rates for the MS-DRG plus IME and DSH payments (including the empirically justified Medicare DSH payment and the estimated uncompensated care payment), estimated supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and any add-on payments for new technology, plus the fixed-loss amount of \$46,152.

Currently, as provided under § 412.304(c)(2), we pay a new hospital 85 percent of its reasonable costs during the first 2 years of operation, unless it elects to receive payment based on 100 percent of the capital Federal rate. Effective with the third year of operation, we pay the hospital based on 100 percent of the capital Federal rate (that is, the same methodology used to

pay all other hospitals subject to the capital PPS).

C. Capital Input Price Index

1. Background

Like the operating input price index, the capital input price index (CIPI) is a fixed-weight price index that measures the price changes associated with capital costs during a given year. The CIPI differs from the operating input price index in one important aspect—the CIPI reflects the vintage nature of capital, which is the acquisition and use of capital over time. Capital expenses in any given year are determined by the stock of capital in that year (that is, capital that remains on hand from all current and prior capital acquisitions). An index measuring capital price changes needs to reflect this vintage nature of capital. Therefore, the CIPI was developed to capture the vintage nature of capital by using a weighted-average of past capital purchase prices up to and including the current year.

For this final rule, we are using the IPPS operating and capital market baskets that reflect a 2018 base year. For a complete discussion of the 2018-based market baskets, we refer readers to section IV. of the preamble of the FY 2022 IPPS/LTCH PPS final rule (86 FR 45194 through 45213).

2. Forecast of the CIPI for FY 2025

Based on IHS Global Inc.'s second quarter 2024 forecast, for this final rule, we are forecasting the 2018-based CIPI to increase 2.6 percent in FY 2025. This reflects a projected 3.1 percent increase in vintage-weighted depreciation prices (building and fixed equipment, and movable equipment), and a projected 4.2 percent increase in other capital expense prices in FY 2025, partially

offset by a projected 1.5 percent decline in vintage-weighted interest expense prices in FY 2025. The weighted average of these three factors produces the forecasted 2.6 percent increase for the 2018-based CIPI in FY 2025. As proposed, we are using the more recent data available for this final rule to determine the FY 2025 increase in the 2018-based CIPI for this final rule.

IV. Changes to Payment Rates for Excluded Hospitals: Rate-of-Increase Percentages for FY 2025

Payments for services furnished in children's hospitals, 11 cancer hospitals, and hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) that are excluded from the IPPS are paid on the basis of reasonable costs based on the hospital's own historical cost experience, subject to a rate-of-increase ceiling. A per discharge limit (the target amount, as defined in § 413.40(a) of the regulations) is set for each hospital, based on the hospital's own cost experience in its base year, and updated annually by a rate-of-increase percentage specified in § 413.40(c)(3). In addition, as specified in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38536), effective for cost reporting periods beginning during FY 2018, the annual update to the target amount for extended neoplastic disease care hospitals (hospitals described in § 412.22(i) of the regulations) also is the rate-of-increase percentage specified in § 413.40(c)(3). (We note that, in accordance with § 403.752(a), religious nonmedical health care institutions (RNHCIs) are also subject to the rate-of-

increase limits established under § 413.40 of the regulations.)

For the FY 2025 IPPS/LTCH PPS proposed rule, based on IGI's 2023 fourth quarter forecast, we estimated that the 2018-based IPPS operating market basket percentage increase for FY 2025 would be 3.0 percent (that is, the estimate of the market basket rate-of-increase). Based on this estimate, the FY 2025 rate-of-increase percentage that we proposed to apply to the FY 2024 target amounts to calculate the FY 2025 target amounts for children's hospitals, the 11 cancer hospitals, RNCHIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa was 3.0 percent, in accordance with the applicable regulations at 42 CFR 413.40. However, we proposed that if more recent data became available for the FY 2025 IPPS/LTCH PPS final rule, we would use such data, if appropriate, to calculate the final IPPS operating market basket update for FY 2025. Based on more recent data available (IGI's second quarter 2024 forecast), we estimate that the 2018-based IPPS operating market basket percentage increase for FY 2025 is 3.4 percent (that is, the estimate of the market basket rate-of-increase). Based on this estimate, the FY 2025 rate-of-increase percentage that we will apply to the FY 2024 target amounts to calculate the FY 2025 target amounts for children's hospitals, the 11 cancer hospitals, RNCHIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa is 3.4 percent, in accordance with the applicable regulations at 42 CFR 413.40.

IRFs and rehabilitation distinct part units, IPFs and psychiatric units, and LTCHs are excluded from the IPPS and paid under their respective PPSs. The IRF PPS, the IPF PPS, and the LTCH PPS are updated annually. We refer readers to section VIII. of the preamble and section V. of the Addendum of this final rule for the changes to the Federal payment rates for LTCHs under the LTCH PPS for FY 2025. The annual updates for the IRF PPS and the IPF PPS are issued by the agency in separate **Federal Register** documents.

We received no comments on this proposal and therefore are finalizing this provision without modification. Incorporating more recent data available for this final rule, as we proposed, we are adopting a 3.4 percent update for FY 2025.

V. Changes to the Payment Rates for the LTCH PPS for FY 2025

A. LTCH PPS Standard Federal Payment Rate for FY 2025

1. Overview

In section VIII. of the preamble of this final rule, we discuss our annual updates to the payment rates, factors, and specific policies under the LTCH PPS for FY 2025.

Under § 412.523(c)(3) of the regulations, for FY 2012 and subsequent years, we updated the standard Federal payment rate by the most recent estimate of the LTCH PPS market basket at that time, including additional statutory adjustments required by sections 1886(m)(3) (citing sections 1886(b)(3)(B)(xi)(II) and 1886(m)(4) of the Act as set forth in the regulations at § 412.523(c)(3)(viii) through (xvii)). (For a summary of the payment rate development prior to FY 2012, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38310 through 38312) and references therein.)

Section 1886(m)(3)(A) of the Act specifies that, for rate year 2012 and each subsequent rate year, any annual update to the standard Federal payment rate shall be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act as discussed in section VIII.C.2. of the preamble of this final rule. This section of the Act further provides that the application of section 1886(m)(3)(B) of the Act may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year. (As noted in section VIII.C.2. of the preamble of this final rule, the annual update to the LTCH PPS occurs on October 1 and we have adopted the term "fiscal year" (FY) rather than "rate year" (RY) under the LTCH PPS beginning October 1, 2010. Therefore, for purposes of clarity, when discussing the annual update for the LTCH PPS, including the provisions of the Affordable Care Act, we use the term "fiscal year" rather than "rate year" for 2011 and subsequent years.)

For LTCHs that fail to submit the required quality reporting data in accordance with the LTCH QRP, the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

2. Development of the FY 2025 LTCH PPS Standard Federal Payment Rate

Consistent with our historical practice and § 412.523(c)(3)(xvii), for FY 2025, as we proposed, we are applying the annual update to the LTCH PPS

standard Federal payment rate from the previous year. Furthermore, in determining the LTCH PPS standard Federal payment rate for FY 2025, we also are making certain regulatory adjustments, consistent with past practices. Specifically, in determining the FY 2025 LTCH PPS standard Federal payment rate, as we proposed, we are applying a budget neutrality adjustment factor for the changes related to the area wage level adjustment (that is, changes to the wage data and labor-related share) as discussed in section V.B.6. of this Addendum.

In this final rule, we are establishing an annual update to the LTCH PPS standard Federal payment rate of 3.0 percent (that is, the most recent estimate of the 2022-based LTCH market basket increase of 3.5 percent less the productivity adjustment of 0.5 percentage point). Therefore, in accordance with § 412.523(c)(3)(xvii), we are applying an update factor of 1.030 to the FY 2024 LTCH PPS standard Federal payment rate of \$48,116.62 to determine the FY 2025 LTCH PPS standard Federal payment rate. Also, in accordance with § 412.523(c)(3)(xvii) and (c)(4), we are required to reduce the annual update to the LTCH PPS standard Federal payment rate by 2.0 percentage points for LTCHs that fail to submit the required quality reporting data for FY 2025 as required under the LTCH QRP. Therefore, for LTCHs that fail to submit quality reporting data under the LTCH QRP, we are establishing an annual update to the LTCH PPS standard Federal payment rate of 1.0 percent (or an update factor of 1.010). This update reflects the annual market basket update of 3.5 percent reduced by the 0.5 percentage point productivity adjustment, as required by section 1886(m)(3)(A)(i) of the Act, minus 2.0 percentage points for LTCHs failing to submit quality data under the LTCH QRP, as required by section 1886(m)(5) of the Act. Consistent with § 412.523(d)(4), we are applying an area wage level budget neutrality factor to the FY 2025 LTCH PPS standard Federal payment rate of 0.9964315, based on the best available data at this time, to ensure that any changes to the area wage level adjustment (that is, the annual update of the wage index (including the update to the CBSA labor market areas and the application of the 5-percent cap on wage index decreases, discussed later in this section), and labor-related share) will not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. Accordingly, we are

establishing an LTCH PPS standard Federal payment rate of \$49,383.26 (calculated as $\$48,116.62 \times 1.030 \times 0.9964315$) for FY 2025. For LTCHs that fail to submit quality reporting data for FY 2025, in accordance with the requirements of the LTCH QRP under section 1866(m)(5) of the Act, we are establishing an LTCH PPS standard Federal payment rate of \$48,424.36 (calculated as $\$48,116.62 \times 1.010 \times 0.9964315$) for FY 2025.

B. Adjustment for Area Wage Levels Under the LTCH PPS for FY 2025

1. Background

Under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we established an adjustment to the LTCH PPS standard Federal payment rate to account for differences in LTCH area wage levels under § 412.525(c). The labor-related share of the LTCH PPS standard Federal payment rate is adjusted to account for geographic differences in area wage levels by applying the applicable LTCH PPS wage index. The applicable LTCH PPS wage index is computed using wage data from inpatient acute care hospitals without regard to reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act.

The FY 2025 LTCH PPS standard Federal payment rate wage index values that will be applicable for LTCH PPS standard Federal payment rate discharges occurring on or after October 1, 2024, through September 30, 2025, are presented in Table 12A (for urban areas) and Table 12B (for rural areas), which are listed in section VI. of this Addendum and available via the internet on the CMS website.

2. Geographic Classifications (Labor Market Areas) Under the LTCH PPS

In adjusting for the differences in area wage levels under the LTCH PPS, the labor-related portion of an LTCH's Federal prospective payment is adjusted by using an appropriate area wage index based on the geographic classification (labor market area) in which the LTCH is located. Specifically, the application of the LTCH PPS area wage level adjustment under existing § 412.525(c) is made based on the location of the LTCH—either in an “urban area,” or a “rural area,” as defined in § 412.503. Under § 412.503, an “urban area” is defined as a Metropolitan Statistical Area (MSA) (which includes a Metropolitan division, where applicable), as defined by the Executive OMB, and a “rural area” is defined as any area outside of an urban area (75 FR 37246).

The geographic classifications (labor market area definitions) currently used under the LTCH PPS, effective for discharges occurring on or after October 1, 2014, are based on the Core Based Statistical Areas (CBSAs) established by OMB, which are based on the 2010 decennial census data. In general, the current statistical areas (which were implemented beginning with FY 2015) are based on revised OMB delineations issued on February 28, 2013, in OMB Bulletin No. 13–01. (We note we have adopted minor revisions and updates in the years between the decennial censuses.) We adopted these labor market area delineations because they were at that time based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas. We also believed that these OMB delineations would ensure that the LTCH PPS area wage level adjustment most appropriately accounted for and reflected the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level. We noted that this policy was consistent with the IPPS policy adopted in FY 2015 under § 412.64(b)(1)(ii)(D) (79 FR 49951 through 49963). (For additional information on the CBSA-based labor market area (geographic classification) delineations currently used under the LTCH PPS and the history of the labor market area definitions used under the LTCH PPS, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50180 through 50185).)

In general, it is our historical practice to update the CBSA-based labor market area delineations annually based on the most recent updates issued by OMB. Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. However, OMB occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses. OMB Bulletin No. 17–01, issued August 15, 2017, established the delineations for the Nation's statistical areas, and the corresponding changes to the CBSA-based labor market areas were adopted in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41731). A copy of this bulletin may be obtained on the website at: https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/bulletins/2017/b-17-01.pdf.

On April 10, 2018, OMB issued OMB Bulletin No. 18–03, which superseded OMB Bulletin No. 17–01 (August 15, 2017). On September 14, 2018, OMB issued OMB Bulletin No. 18–04, which superseded OMB Bulletin No. 18–03

(April 10, 2018). Historically OMB bulletins issued between decennial censuses have only contained minor modifications to CBSA delineations based on changes in population counts. However, OMB's 2010 Standards for Delineating Metropolitan and Micropolitan Standards created a larger mid-decade redelineation that takes into account commuting data from the American Commuting Survey. As a result, OMB Bulletin No. 18–04 (September 14, 2018) included more modifications to the CBSAs than are typical for OMB bulletins issued between decennial censuses. We adopted the updates set forth in OMB Bulletin No. 18–04 in the FY 2021 IPPS/LTCH PPS final rule (85 FR 59050 through 59051). A copy of OMB Bulletin No. 18–04 (September 14, 2018) may be obtained at <https://www.whitehouse.gov/wp-content/uploads/2018/09/Bulletin-18-04.pdf>.

On March 6, 2020, OMB issued Bulletin No. 20–01, which provided updates to and superseded OMB Bulletin No. 18–04, which was issued on September 14, 2018. The attachments to OMB Bulletin No. 20–01 provided detailed information on the update to statistical areas since September 14, 2018. (For a copy of this bulletin, we refer readers to the following website: <https://www.whitehouse.gov/wp-content/uploads/2020/03/Bulletin-20-01.pdf>.) In OMB Bulletin No. 20–01, OMB announced one new Micropolitan Statistical Area and one new component of an existing Combined Statistical Area. After reviewing OMB Bulletin No. 20–01, we determined that the changes in OMB Bulletin 20–01 encompassed delineation changes that would not affect the CBSA-based labor market area delineations used under the LTCH PPS. Therefore, we adopted the updates set forth in OMB Bulletin No. 20–01 in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45556 through 45557) consistent with our general policy of adopting OMB delineation updates; however, the LTCH PPS area wage level adjustment was not altered as a result of adopting the updates because the CBSA-based labor market area delineations were the same as the CBSA-based labor market area delineations adopted in the FY 2021 IPPS/LTCH PPS final rule based on OMB Bulletin No. 18–04 (85 FR 59050 through 59051). Thus, most recently in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59366), we continued to use the CBSA-based labor market area delineations as established in OMB Bulletin 18–04 and OMB Bulletin 20–01.

In the July 16, 2021 **Federal Register** (86 FR 37777), OMB finalized a

schedule for future updates based on results of the decennial Census updates to commuting patterns from the American Community Survey. In accordance with that schedule, on July 21, 2023, OMB released Bulletin No. 23–01, which superseded OMB Bulletin No. 20–01. A copy of OMB Bulletin No. 23–01 may be obtained at <https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf>. According to OMB, the delineations reflect the 2020 Standards for Delineating Core Based Statistical Areas (“the 2020 Standards”), which appeared in the **Federal Register** on July 16, 2021 (86 FR 37770 through 37778), and the application of those standards to Census Bureau population and journey-to-work data (that is, 2020 Decennial Census, American Community Survey, and Census Population Estimates Program data). In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36584 through 36586), we proposed to adopt the revised delineations announced in OMB Bulletin No. 23–01 effective for FY 2025 under the LTCH PPS. We did not receive any public comments on this proposal. Therefore, in this final rule, under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we are adopting the revised delineations announced in OMB Bulletin No. 23–01 effective for FY 2025 under the LTCH PPS, as we proposed, without modification. We believe that adopting the CBSA-based labor market area delineations established in OMB Bulletin 23–01 will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas (81 FR 57298). Our adoption of the revised delineations announced in OMB Bulletin No. 23–01 is consistent with the changes under the IPPS for FY 2025 as discussed in section III.B. of the preamble of this final rule. A summary of these changes is presented in the discussion that follows in this section. For complete details on the changes, we refer readers to section III.B. of the preamble of this final rule.

a. Urban Counties That Will Become Rural Under the Revised OMB Delineations

CBSAs are made up of one or more constituent counties. Analysis of the revised labor market area delineations (based upon OMB Bulletin No. 23–01) that we are adopting, beginning in FY 2025, shows that a total of 53 counties (and county equivalents) that were located in an urban CBSA pursuant to OMB Bulletin No. 20–01 will be located in a rural area under the revised OMB delineations. The chart in section III.B.4. of the preamble of this final rule lists the 53 urban counties that will be rural under these revised OMB delineations.

b. Rural Counties That Will Become Urban Under the Revised OMB Delineations

Analysis of the revised labor market area delineations (based upon OMB Bulletin No. 23–01) that we are adopting, beginning in FY 2025, shows that a total of 54 counties (and county equivalents) that were located in a rural area pursuant to OMB Bulletin No. 20–01 will be located in an urban CBSA under the revised OMB delineations. The chart in section III.B.5. of the preamble of this final rule lists the 54 rural counties that will be urban under these revised OMB delineations.

c. Urban Counties That Will Move to a Different Urban CBSA Under the Revised OMB Delineations

In addition to rural counties becoming urban and urban counties becoming rural, some urban counties will shift from one urban CBSA to another urban CBSA under our adoption of the revised delineations announced in OMB Bulletin No. 23–01. In other cases, the adoption of the revised delineations announced in OMB Bulletin No. 23–01 will involve a change only in CBSA name and/or number, while the CBSA continues to encompass the same constituent counties. For example, CBSA 23844 (Gary, IN) will experience both a change to its number and its name and become CBSA 29414 (Lake County-Porter County-Jasper County, IN), while all of its four constituent counties will remain the same. In other cases, only the name of the CBSA will be modified, and none of the currently assigned counties will be reassigned to a different urban CBSA. The chart in section III.B.6. of the preamble of this final rule lists the CBSAs where only the name and/or CBSA number changed.

There are also counties that will shift between existing and new CBSAs, changing the constituent makeup of the CBSAs, under our adoption of the revisions to the OMB delineations based on OMB Bulletin No. 23–01. For example, some CBSAs will be split into multiple new CBSAs, or a CBSA will lose one or more counties to other urban CBSAs. The chart in section III.B.6 of the preamble of this final rule lists the urban counties that will move from one urban CBSA to a new or modified CBSA under our adoption of these revisions to the OMB delineations.

d. Change to County-Equivalents in the State of Connecticut

For FY 2025, we are continuing to use the Federal Information Processing Standard (FIPS) county codes, maintained by the U.S. Census Bureau, for purposes of cross walking counties to CBSAs. In a June 6, 2022 **Federal Register** notice (87 FR 34235 through 34240), the Census Bureau announced that it was implementing the State of Connecticut’s request to replace the 8 counties in the State with 9 new “Planning Regions.” Planning regions now serve as county-equivalents within the CBSA system. OMB Bulletin No. 23–01 is the first set of revised delineations that referenced the new county-equivalents for Connecticut. For the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36585), we evaluated the change in hospital assignments for Connecticut LTCHs and proposed to adopt the planning regions as county equivalents for wage index purposes. As all forthcoming county-based delineation data will utilize these new county-equivalent definitions for the Connecticut, we believe it is necessary to adopt this migration from counties to planning region county-equivalents in order to maintain consistency with OMB Bulletin No. 23–01 and future OMB updates. We did not receive any public comments on this proposal. Therefore, in this final rule, we are adopting our proposal to adopt the planning regions as county equivalents for wage index purposes, without modification. Our adoption of the planning regions as county equivalents for wage index purposes is consistent with the changes under the IPPS for FY 2025 as discussed in section III.B.3. of the preamble of this final rule. We are providing the following crosswalk for each LTCH in Connecticut with the current (FY 2024) and new (FY 2025) FIPS county and county-equivalent codes and CBSA assignments.

CCN	Current FIPS	Current County	Current CBSA	New FIPS	New Planning Area (County Equivalent)	New CBSA
072003	09009	NEW HAVEN	35300	09170	SOUTH CENTRAL CONNECTICUT	35300
072004	09003	HARTFORD	25540	09110	CAPITOL	25540

As previously discussed, we are adopting the revisions announced in OMB Bulletin No. 23–01 to the CBSA-based labor market area delineations under the LTCH PPS, effective October 1, 2024. Accordingly, the FY 2025 LTCH PPS wage index values in Tables 12A and 12B listed in section VI. of the Addendum to this final rule (which are available via the internet on the CMS website) reflect the revisions to the CBSA-based labor market area delineations previously described. We also are including in a supplemental data file an updated county-to-CBSA crosswalk that reflects the revisions to the CBSA-based labor market area delineations. This supplemental data file for public use will be posted on the CMS website for this final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

3. Labor-Related Share for the LTCH PPS Standard Federal Payment Rate

Under the payment adjustment for the differences in area wage levels under § 412.525(c), the labor-related share of an LTCH's standard Federal payment rate is adjusted by the applicable wage index for the labor market area in which the LTCH is located. The LTCH PPS labor-related share currently represents the sum of the labor-related portion of operating costs and a labor-related portion of capital costs using the applicable LTCH market basket. Additional background information on the historical development of the labor-related share under the LTCH PPS can be found in the RY 2007 LTCH PPS final rule (71 FR 27810 through 27817 and 27829 through 27830) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51766 through 51769 and 51808).

For FY 2013, we rebased and revised the market basket used under the LTCH PPS by adopting a 2009-based LTCH market basket. In addition, for FY 2013 through FY 2016, we determined the labor-related share annually as the sum of the relative importance of each labor-related cost category of the 2009-based LTCH market basket for the respective fiscal year based on the best available data. (For more details, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53477 through 53479).) For FY 2017, we rebased and revised the 2009-based LTCH market basket to reflect a 2013 base year. In addition, for

FY 2017 through FY 2020, we determined the labor-related share annually as the sum of the relative importance of each labor-related cost category of the 2013-based LTCH market basket for the respective fiscal year based on the best available data. (For more details, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57085 through 57096).) Then, effective for FY 2021, we rebased and revised the 2013-based LTCH market basket to reflect a 2017 base year and determined the labor-related share annually as the sum of the relative importance of each labor-related cost category in the 2017-based LTCH market basket using the most recent available data. (For more details, we refer readers to the FY 2021 IPPS/LTCH PPS final rule (85 FR 58909 through 58926).)

As discussed in section VIII.D of the preamble to this final rule, effective for FY 2025, as we proposed, we are rebasing and revising the 2017-based LTCH market basket to reflect a 2022 base year. In addition, as discussed in section VIII.D. of the preamble of this final rule, as we proposed, we are establishing that the LTCH PPS labor-related share for FY 2025 is the sum of the FY 2025 relative importance of each labor-related cost category in the 2022-based LTCH market basket using the most recent available data. For more information on comments related to our proposed labor-related share based on the labor-related cost categories in the 2022-based LTCH market basket as well as our responses to those comments, we refer readers to section VIII.D of the preamble of this final rule. Also, as we proposed, consistent with our historical practice, we are using the most recent data available to determine the final FY 2025 labor-related share in this final rule.

Table EEEE9 in section VIII.D. of the preamble of this final rule shows the FY 2025 labor-related share using the 2022-based LTCH market basket and the FY 2024 labor-related share using the 2017-based LTCH market basket. The labor-related share for FY 2025 is the sum of the labor-related portion of operating costs from the 2022-based LTCH market basket (that is, the sum of the FY 2025 relative importance shares of Wages and Salaries; Employee Benefits; Professional Fees; Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and

Repair Services; All Other: Labor-Related Services) and a portion of the relative importance of Capital-Related cost weight from the 2022-based LTCH market basket. The relative importance reflects the different rates of price change for these cost categories between the base year (2022) and FY 2025. Based on IHS Global Inc.'s second quarter 2024 forecast of the 2022-based LTCH market basket, the sum of the FY 2025 relative importance for Wages and Salaries; Employee Benefits; Professional Fees; Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; and All Other: Labor-Related Services is 68.9 percent. The portion of capital-related costs that is influenced by the local labor market is estimated to be 46 percent (that is, the same percentage applied to the 2009-based, 2013-based, and 2017-based LTCH market basket capital-related costs relative importance). Since the FY 2025 relative importance for capital-related costs is 8.4 percent based on IHS Global Inc.'s second quarter 2024 forecast of the 2022-based LTCH market basket, we took 46 percent of 8.4 percent to determine the labor-related share of capital-related costs for FY 2025 of 3.9 percent. Therefore, we are finalizing a total labor-related share for FY 2025 of 72.8 percent (the sum of 68.9 percent for the labor-related share of operating costs and 3.9 percent for the labor-related share of capital-related costs). The total difference between the FY 2025 labor-related share using the 2022 based LTCH market basket (72.8 percent) and the FY 2024 labor-related share using the 2017 based LTCH market basket (68.5 percent) is 4.3 percentage points. As discussed in greater detail in section VIII.D. of the preamble of this final rule, this difference is primarily attributable to the revision to the base year cost weights for those categories included in the labor-related share.

4. Wage Index for FY 2025 for the LTCH PPS Standard Federal Payment Rate

Historically, we have established LTCH PPS area wage index values calculated from acute care IPPS hospital wage data without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act (67 FR 56019). The area wage level adjustment established under the

LTCH PPS is based on an LTCH's actual location without regard to the "urban" or "rural" designation of any related or affiliated provider. As with the IPPS wage index, wage data for multicampus hospitals with campuses located in different labor market areas (CBSAs) are apportioned to each CBSA where the campus (or campuses) are located. We also employ a policy for determining area wage index values for areas where there are no IPPS wage data.

Consistent with our historical methodology, to determine the applicable area wage index values for the FY 2025 LTCH PPS standard Federal payment rate, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, as we proposed, we are continuing to employ our historical practice of using the same data we used to compute the FY 2025 acute care hospital inpatient wage index, as discussed in section III. of the preamble of this final rule (that is, wage data collected from cost reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2021) because these data are the most recent complete data available.

In addition, as we proposed, we computed the FY 2025 LTCH PPS standard Federal payment rate area wage index values consistent with the "urban" and "rural" geographic classifications (that is, the labor market area delineations as previously discussed in section V.B. of this Addendum) and our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS. As we proposed, we also continued to apportion the wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, consistent with the IPPS policy. Lastly, consistent with our existing methodology for determining the LTCH PPS wage index values, for FY 2025, as we proposed, we continued to use our existing policy for determining area wage index values for areas where there are no IPPS wage data. Under our existing methodology, the LTCH PPS wage index value for urban CBSAs with no IPPS wage data is determined by using an average of all of the urban areas within the State, and the LTCH PPS wage index value for rural areas with no IPPS wage data is determined by using the unweighted average of the wage indices from all of the CBSAs that are contiguous to the rural counties of the State.

Based on the FY 2021 IPPS wage data that we used to determine the FY 2025 LTCH PPS area wage index values in this final rule, there are no IPPS wage data for the urban area of Hinesville, GA (CBSA 25980). Consistent with our existing methodology, we calculated the FY 2025 wage index value for CBSA 25980 as the average of the wage index values for all of the other urban areas within the State of Georgia (that is, CBSAs 10500, 12020, 12054, 12260, 15260, 16860, 17980, 19140, 23580, 31420, 31924, 40660, 42340, 46660, and 47580), as shown in Table 12A, which is listed in section VI. of this Addendum.

Based on the FY 2021 IPPS wage data that we used to determine the FY 2025 LTCH PPS area wage index values in this final rule, there are no IPPS wage data for rural North Dakota (CBSA 35). Consistent with our existing methodology, we calculated the FY 2025 wage index value for CBSA 35 as the average of the wage index values for all CBSAs that are contiguous to the rural counties of the State (that is, CBSAs 13900, 22020, 24220, and 33500), as shown in Table 12B, which is listed in section VI. of this Addendum. We note that, as IPPS wage data are dynamic, it is possible that the number of urban and rural areas without IPPS wage data will vary in the future.

Comment: A commenter stated that CMS should account for geographic reclassification of IPPS hospitals when determining the LTCH PPS wage index. The commenter believes that not accounting for geographic reclassification when determining the LTCH PPS wage index disadvantages LTCHs when competing with IPPS hospitals for clinical staff.

Response: We did not propose to account for geographic reclassification of IPPS hospitals when determining the LTCH PPS wage index as suggested by the commenter and do not believe such a policy is necessary at this time, but we will take this comment into consideration to potentially inform future rulemaking.

Comment: A commenter stated that there are discrepancies between the IPPS and LTCH PPS wage indexes for the same CBSAs. This commenter requested that CMS provide additional information on these differences and provide the data and information necessary to replicate the LTCH PPS wage index calculations. The commenter did not provide examples of specific CBSAs that were of particular concern to them.

Response: We thank the commenter for the feedback. As we described previously, the LTCH PPS wage index

values are calculated from acute care IPPS hospital wage data without taking into account geographic reclassification. There are also several other adjustments made in determining the IPPS wage index that are not applicable to the LTCH PPS wage index, such as the occupational mix adjustment. For these reasons, differences between the LTCH PPS wage index and the IPPS wage index are to be expected. We refer the reader to section III.C. of the preamble of this final rule for details on the methodology for computing the IPPS wage index. We note that the wage and hours data from the acute care IPPS hospital used in calculating the LTCH PPS wage index values are available in the Public Use Files released with each proposed and final rule each fiscal year. The Public Use Files for this final rule will be posted on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

5. Permanent Cap on Wage Index Decreases

a. Permanent Cap on LTCH PPS Wage Index Decreases

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49440 through 49442), we finalized a policy that applies a permanent 5-percent cap on any decrease to an LTCH's wage index from its wage index in the prior year. Consistent with the requirement at § 412.525(c)(2) that changes to area wage level adjustments are made in a budget neutral manner, we include the application of this policy in the determination of the area wage level budget neutrality factor that is applied to the standard Federal payment rate, as is discussed later in section V.B.6. of this Addendum.

Under this policy, an LTCH's wage index will not be less than 95 percent of its wage index for the prior fiscal year. An LTCH's wage index cap adjustment is determined based on the wage index value applicable to the LTCH on the last day of the prior Federal fiscal year. However, for newly opened LTCHs that become operational on or after the first day of the fiscal year, these LTCHs will not be subject to the LTCH PPS wage index cap since they were not paid under the LTCH PPS in the prior year. For example, newly opened LTCHs that become operational during FY 2025 would not be eligible for the LTCH PPS wage index cap in FY 2025. These LTCHs would receive the calculated wage index for the area in which they are geographically located, even if other LTCHs in the same geographic area are receiving a wage

index cap. The cap on wage index decreases policy is reflected at § 412.525(c)(1).

For each LTCH we identify in our rulemaking data, we are including in a supplemental data file the wage index values from both fiscal years used in determining its capped wage index. This includes the LTCH's final prior year wage index value, the LTCH's uncapped current year wage index value, and the LTCH's capped current year wage index value. Due to the lag in rulemaking data, a new LTCH may not be listed in this supplemental file for a few years. For this reason, a newly opened LTCH could contact their MAC to ensure that its wage index value is not less than 95 percent of the value paid to it for the prior Federal fiscal year. This supplemental data file for public use will be posted on the CMS website for this final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

Comment: A commenter expressed their appreciation of the permanent cap on LTCH PPS wage index decreases policy.

Response: We thank the commenter for their support of this policy.

b. Permanent Cap on IPPS Comparable Wage Index Decreases

Determining LTCH PPS payments for short-stay-outlier cases (reflected in § 412.529) and site neutral payment rate cases (reflected in § 412.522(c)) requires calculating an "IPPS comparable amount." For information on this "IPPS comparable amount" calculation, we refer the reader to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49608 through 49610). Determining LTCH PPS payments for LTCHs that do not meet the applicable discharge payment percentage (reflected in § 412.522(d)) requires calculating an "IPPS equivalent amount." For information on this "IPPS equivalent amount" calculation, we refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42439 through 42445).

Calculating both the "IPPS comparable amount" and the "IPPS equivalent amount" requires adjusting the IPPS operating and capital standardized amounts by the applicable IPPS wage index for nonreclassified IPPS hospitals. That is, the standardized amounts are adjusted by the IPPS wage index for nonreclassified IPPS hospitals located in the same geographic area as the LTCH. In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49442 through 49443), we finalized a policy that applies a permanent 5-percent cap on decreases in an LTCH's applicable IPPS

comparable wage index from its applicable IPPS comparable wage index in the prior year. Historically, we have not budget neutralized changes to LTCH PPS payments that result from the annual update of the IPPS wage index for nonreclassified IPPS hospitals. Consistent with this approach, the cap on decreases in an LTCH's applicable IPPS comparable wage index is not applied in a budget neutral manner.

Under this policy, an LTCH's applicable IPPS comparable wage index will not be less than 95 percent of its applicable IPPS comparable wage index for the prior fiscal year. An LTCH's applicable IPPS comparable wage index cap adjustment is determined based on the wage index value applicable to the LTCH on the last day of the prior Federal fiscal year. However, for newly opened LTCHs that become operational on or after the first day of the fiscal year, these LTCHs will not be subject to the applicable IPPS comparable wage index cap since they were not paid under the LTCH PPS in the prior year. For example, newly opened LTCHs that become operational during FY 2025 would not be eligible for the applicable IPPS comparable wage index cap in FY 2025. This means that these LTCHs would receive the calculated applicable IPPS comparable wage index for the area in which they are geographically located, even if other LTCHs in the same geographic area are receiving a wage cap. The cap on IPPS comparable wage index decreases policy is reflected at § 412.529(d)(4)(ii)(B) and (d)(4)(iii)(B).

Similar to the information we are making available for the cap on the LTCH PPS wage index values (described previously), for each LTCH we identify in our rulemaking data, we are including in a supplemental data file the wage index values from both fiscal years used in determining its capped applicable IPPS comparable wage index. Due to the lag in rulemaking data, a new LTCH may not be listed in this supplemental file for a few years. For this reason, a newly opened LTCH could contact its MAC to ensure that its applicable IPPS comparable wage index value is not less than 95 percent of the value paid to them for the prior Federal fiscal year. This supplemental data file for public use will be posted on the CMS website for this final rule at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

6. Budget Neutrality Adjustments for Changes to the LTCH PPS Standard Federal Payment Rate Area Wage Level Adjustment

Historically, the LTCH PPS wage index and labor-related share are updated annually based on the latest available data. Under § 412.525(c)(2), any changes to the area wage index values or labor-related share are to be made in a budget neutral manner such that estimated aggregate LTCH PPS payments are unaffected; that is, will be neither greater than nor less than estimated aggregate LTCH PPS payments without such changes to the area wage level adjustment. Under this policy, we determine an area wage level adjustment budget neutrality factor that is applied to the standard Federal payment rate to ensure that any changes to the area wage level adjustments are budget neutral such that any changes to the area wage index values or labor-related share would not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, under § 412.523(d)(4), we have applied an area wage level adjustment budget neutrality factor in determining the standard Federal payment rate, and we also established a methodology for calculating an area wage level adjustment budget neutrality factor. (For additional information on the establishment of our budget neutrality policy for changes to the area wage level adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771 through 51773 and 51809).)

For FY 2025, in accordance with § 412.523(d)(4), we are applying an area wage level budget neutrality factor to adjust the LTCH PPS standard Federal payment rate to account for the estimated effect of the adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments, consistent with the methodology we established in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51773). As discussed in section V.B.6. of this Addendum, consistent with, § 412.525(c)(2), we include the application of the 5-percent cap on wage index decreases in the determination of the area wage level budget neutrality factor. Specifically, as we proposed, we determined an area wage level adjustment budget neutrality factor that is applied to the LTCH PPS standard Federal payment rate under § 412.523(d)(4) for FY 2025 using the following methodology:

Step 1—Simulate estimated aggregate LTCH PPS standard Federal payment

rate payments using the FY 2024 wage index values and the FY 2024 labor-related share of 68.5 percent. We note that the FY 2024 wage index values are based on the existing CBSA labor market areas used in the FY 2024 IPPS/LTCH PPS final rule.

Step 2—Simulate estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2025 wage index values (including the update to the CBSA labor market areas and the application of the 5 percent cap on wage index decreases) and the FY 2025 labor-related share of 72.8 percent. (As noted previously, the changes to the wage index values based on updated hospital wage data are discussed in section V.B.4. of this Addendum and the labor-related share is discussed in section V.B.3. of this Addendum.)

Step 3—Calculate the ratio of these estimated total LTCH PPS standard Federal payment rate payments by dividing the estimated total LTCH PPS standard Federal payment rate payments using the FY 2024 area wage level adjustments (calculated in Step 1) by the estimated total LTCH PPS standard Federal payment rate payments using the FY 2025 updates to the area wage level adjustment (calculated in Step 2) to determine the budget neutrality factor for updates to the area wage level adjustment for FY 2025 LTCH PPS standard Federal payment rate payments.

Step 4—Apply the FY 2025 updates to the area wage level adjustment budget neutrality factor from Step 3 to determine the FY 2025 LTCH PPS standard Federal payment rate after the application of the FY 2025 annual update.

As we proposed, we used the most recent data available, including claims from the FY 2023 MedPAR file, in calculating the FY 2025 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor. We note that, because the area wage level adjustment under § 412.525(c) is an adjustment to the LTCH PPS standard Federal payment rate, consistent with historical practice, we only used data from claims that qualified for payment at the LTCH PPS standard Federal payment rate under the dual rate LTCH PPS to calculate the FY 2025 LTCH PPS standard Federal

payment rate area wage level adjustment budget neutrality factor.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49448), we discussed the abnormal charging practices of an LTCH (CCN 312024) in FY 2021 that led to the LTCH receiving an excessive amount of high-cost outlier payments. In that rule, we stated our understanding that, based on information we received from the provider, these abnormal charging practices would not persist into FY 2023. Therefore, we did not include their cases in our model for determining the FY 2023 outlier fixed-loss amount. In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59376), we stated that the FY 2022 MedPAR claims also reflect the abnormal charging practices of this LTCH. Therefore, we removed claims from CCN 312024 when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2024 and all other FY 2024 ratesetting calculations, including the MS–LTC–DRG relative weights and the calculation of the area wage level adjustment budget neutrality factor. Given recent actions by the Department of Justice regarding CCN 312024 (see <https://www.justice.gov/opa/pr/new-jersey-hospital-and-investors-pay-untied-states-306-million-alleged-false-claims-related>), as we proposed, we again removed claims from CCN 312024 when determining the area wage level adjustment budget neutrality factor for FY 2025 and all other FY 2025 ratesetting calculations, including the MS–LTC–DRG relative weights and the fixed-loss amount for LTCH PPS standard Federal payment rate cases.

For this final rule, using the steps in the methodology previously described, we determined a FY 2025 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor of 0.9964315. Accordingly, in section V.A. of this Addendum, we applied the area wage level adjustment budget neutrality factor of 0.9964315 to determine the FY 2025 LTCH PPS standard Federal payment rate, in accordance with § 412.523(d)(4).

C. Cost-of-Living Adjustment (COLA) for LTCHs Located in Alaska and Hawaii

Under § 412.525(b), a cost-of-living adjustment (COLA) is provided for LTCHs located in Alaska and Hawaii to

account for the higher costs incurred in those States. Specifically, we apply a COLA to payments to LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standard Federal payment rate by the applicable COLA factors established annually by CMS. Higher labor-related costs for LTCHs located in Alaska and Hawaii are taken into account in the adjustment for area wage levels previously described. The methodology used to determine the COLA factors for Alaska and Hawaii is based on a comparison of the growth in the Consumer Price Indexes (CPIs) for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). It also includes a 25-percent cap on the CPI-updated COLA factors. Under our current policy, we have updated the COLA factors using the methodology as previously described every 4 years (at the same time as the update to the labor-related share of the IPPS market basket) and we last updated the COLA factors for Alaska and Hawaii published by OPM for 2009 in FY 2022 (86 FR 45559 through 45560).

We continue to believe that determining updated COLA factors using this methodology would appropriately adjust the nonlabor-related portion of the LTCH PPS standard Federal payment rate for LTCHs located in Alaska and Hawaii. Therefore, in this final rule, for FY 2025, under the broad authority conferred upon the Secretary by section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, as we proposed, we are continuing to use the COLA factors based on the 2009 OPM COLA factors updated through 2020 by the comparison of the growth in the CPIs for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as established in the FY 2022 IPPS/LTCH PPS final rule. (For additional details on our current methodology for updating the COLA factors for Alaska and Hawaii and for a discussion on the FY 2022 COLA factors, we refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45559 through 45560).)

**COST-OF-LIVING ADJUSTMENT FACTORS (COLA):
ALASKA AND HAWAII UNDER THE LTCH PPS FOR FY 2025**

Area	FY 2025
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.22
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.22
City of Juneau and 80-kilometer (50-mile) radius by road	1.22
Rest of Alaska	1.24
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.22
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

D. Adjustment for LTCH PPS High Cost Outlier (HCO) Cases

1. HCO Background

From the beginning of the LTCH PPS, we have included an adjustment to account for cases in which there are extraordinarily high costs relative to the costs of most discharges. Under this policy, additional payments are made based on the degree to which the estimated cost of a case (which is calculated by multiplying the Medicare allowable covered charge by the hospital's overall hospital CCR) exceeds a fixed-loss amount. This policy results in greater payment accuracy under the LTCH PPS and the Medicare program, and the LTCH sharing the financial risk for the treatment of extraordinarily high-cost cases.

We retained the basic tenets of our HCO policy in FY 2016 when we implemented the dual rate LTCH PPS payment structure under section 1206 of Public Law 113–67. LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid at the LTCH PPS standard Federal payment rate, which includes, as applicable, HCO payments under § 412.523(e). LTCH discharges that do not meet the criteria for exclusion are paid at the site neutral payment rate, which includes, as applicable, HCO payments under § 412.522(c)(2)(i). In the FY 2016 IPPS/LTCH PPS final rule, we established separate fixed-loss amounts and targets for the two different LTCH PPS payment rates. Under this bifurcated policy, the historic 8-percent HCO target was retained for LTCH PPS standard Federal payment rate cases, with the fixed-loss amount calculated using only data from

LTCH cases that would have been paid at the LTCH PPS standard Federal payment rate if that rate had been in effect at the time of those discharges. For site neutral payment rate cases, we adopted the operating IPPS HCO target (currently 5.1 percent) and set the fixed-loss amount for site neutral payment rate cases at the value of the IPPS fixed-loss amount. Under the HCO policy for both payment rates, an LTCH receives 80 percent of the difference between the estimated cost of the case and the applicable HCO threshold, which is the sum of the LTCH PPS payment for the case and the applicable fixed-loss amount for such case.

To maintain budget neutrality, consistent with the budget neutrality requirement at § 412.523(d)(1) for HCO payments to LTCH PPS standard Federal rate payment cases, we also adopted a budget neutrality requirement for HCO payments to site neutral payment rate cases by applying a budget neutrality factor to the LTCH PPS payment for those site neutral payment rate cases. (For additional details on the HCO policy adopted for site neutral payment rate cases under the dual rate LTCH PPS payment structure, including the budget neutrality adjustment for HCO payments to site neutral payment rate cases, we refer readers to § 412.522(c)(2)(i) of the regulations and to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49617 through 49623).)

2. Determining LTCH CCRs Under the LTCH PPS

a. Background

As noted previously, CCRs are used to determine payments for HCO adjustments for both payment rates under the LTCH PPS and are also used to determine payments for site neutral

payment rate cases. As noted earlier, in determining HCO and the site neutral payment rate payments (regardless of whether the case is also an HCO), we generally calculate the estimated cost of the case by multiplying the LTCH's overall CCR by the Medicare allowable charges for the case. An overall CCR is used because the LTCH PPS uses a single prospective payment per discharge that covers both inpatient operating and capital-related costs. The LTCH's overall CCR is generally computed based on the sum of LTCH operating and capital costs (as described in section 150.24, Chapter 3, of the Medicare Claims Processing Manual (Pub. 100–4)) as compared to total Medicare charges (that is, the sum of its operating and capital inpatient routine and ancillary charges), with those values determined from either the most recently settled cost report or the most recent tentatively settled cost report, whichever is from the latest cost reporting period. However, in certain instances, we use an alternative CCR, such as the statewide average CCR, a CCR that is specified by CMS, or one that is requested by the hospital. (We refer readers to § 412.525(a)(4)(iv) of the regulations for further details regarding CCRs and HCO adjustments for either LTCH PPS payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate.)

The LTCH's calculated CCR is then compared to the LTCH total CCR ceiling. Under our established policy, an LTCH with a calculated CCR in excess of the applicable maximum CCR threshold (that is, the LTCH total CCR ceiling, which is calculated as 3 standard deviations from the national geometric average CCR) is generally assigned the applicable statewide CCR.

This policy is premised on a belief that calculated CCRs in excess of the LTCH total CCR ceiling are most likely due to faulty data reporting or entry, and CCRs based on erroneous data should not be used to identify and make payments for outlier cases.

b. LTCH Total CCR Ceiling

Consistent with our historical practice, as we proposed, we used the best available data to determine the LTCH total CCR ceiling for FY 2025 in this final rule. Specifically, in this final rule, we used our established methodology for determining the LTCH total CCR ceiling based on IPPS total CCR data from the March 2024 update of the Provider Specific File (PSF), which is the most recent data available. Accordingly, we are establishing an LTCH total CCR ceiling of 1.368 under the LTCH PPS for FY 2025 in accordance with § 412.525(a)(4)(iv)(C)(2) for HCO cases under either payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate. (For additional information on our methodology for determining the LTCH total CCR ceiling, we refer readers to the FY 2007 IPPS final rule (71 FR 48117 through 48119).)

We did not receive any public comments on our proposals and are finalizing our proposals as described previously.

c. LTCH Statewide Average CCRs

Our general methodology for determining the statewide average CCRs used under the LTCH PPS is similar to our established methodology for determining the LTCH total CCR ceiling because it is based on “total” IPPS CCR data. (For additional information on our methodology for determining statewide average CCRs under the LTCH PPS, we refer readers to the FY 2007 IPPS final rule (71 FR 48119 through 48120).) Under the LTCH PPS HCO policy at § 412.525(a)(4)(iv)(C), the SSO policy at § 412.529(f)(4)(iii), and the site neutral payment rate at § 412.522(c)(1)(ii), the MAC may use a statewide average CCR, which is established annually by CMS, if it is unable to determine an accurate CCR for an LTCH in one of the following circumstances: (1) New LTCHs that have not yet submitted their first Medicare cost report (a new LTCH is defined as an entity that has not accepted assignment of an existing hospital’s provider agreement in accordance with § 489.18); (2) LTCHs whose calculated CCR is in excess of the LTCH total CCR ceiling; and (3) other LTCHs for whom data with which to calculate a CCR are not available (for example, missing or faulty data). (Other sources of data that the MAC may consider in determining

an LTCH’s CCR include data from a different cost reporting period for the LTCH, data from the cost reporting period preceding the period in which the hospital began to be paid as an LTCH (that is, the period of at least 6 months that it was paid as a short-term, acute care hospital), or data from other comparable LTCHs, such as LTCHs in the same chain or in the same region.)

Consistent with our historical practice of using the best available data, in this final rule, as we proposed, we are using our established methodology for determining the LTCH PPS statewide average CCRs, based on the most recent complete IPPS “total CCR” data from the March 2024 update of the PSF. As we proposed, we are establishing LTCH PPS statewide average total CCRs for urban and rural hospitals that will be effective for discharges occurring on or after October 1, 2024, through September 30, 2025, in Table 8C listed in section VI. of this Addendum (and available via the internet on the CMS website).

Under the LTCH PPS labor market areas for FY 2025, all areas in the District of Columbia, New Jersey, and Rhode Island are classified as urban. Therefore, there are no rural statewide average total CCRs listed for those jurisdictions in Table 8C. This policy is consistent with the policy that we established when we revised our methodology for determining the applicable LTCH statewide average CCRs in the FY 2007 IPPS final rule (71 FR 48119 through 48121) and is the same as the policy applied under the IPPS. In addition, consistent with our existing methodology, in determining the urban and rural statewide average total CCRs for Maryland LTCHs paid under the LTCH PPS, as we proposed, we are continuing to use, as a proxy, the national average total CCR for urban IPPS hospitals and the national average total CCR for rural IPPS hospitals, respectively. We are using this proxy because we believe that the CCR data in the PSF for Maryland hospitals may not be entirely accurate (as discussed in greater detail in the FY 2007 IPPS final rule (71 FR 48120)).

Furthermore, although Connecticut, Massachusetts, and North Dakota have areas that are designated as rural under the LTCH PPS labor market areas for FY 2025, in our calculation of the LTCH statewide average CCRs, there were no trimmed CCR data available from IPPS hospitals located in these rural areas as of March 2024. We refer the reader to section II.A.4.i.(2). of this Addendum for details on the trims applied to the IPPS CCR data from the March 2024 update of the PSF, which are the same

data used to calculate the LTCH statewide average total CCRs. Therefore, consistent with our existing methodology, we used the national average total CCR for rural IPPS hospitals for rural Connecticut, Massachusetts, and North Dakota in Table 8C. We note that there were no LTCHs located in these rural areas as of March 2024.

We did not receive any public comments on our proposals. We are finalizing our proposals as described previously.

d. Reconciliation of HCO Payments

Under the HCO policy at § 412.525(a)(4)(iv)(D), the payments for HCO cases are subject to reconciliation (regardless of whether payment is based on the LTCH standard Federal payment rate or the site neutral payment rate). Specifically, any such payments are reconciled at settlement based on the CCR that was calculated based on the cost report coinciding with the discharge. For additional information on the reconciliation policy, we refer readers to sections 150.26 through 150.28 of the Medicare Claims Processing Manual (Pub. 100–4), as added by Change Request 7192 (Transmittal 2111; December 3, 2010) and the RY 2009 LTCH PPS final rule (73 FR 26820 through 26821), and most recently modified by Change Request 13566 (Transmittal 12558; March 28, 2024) with an update to the outlier reconciliation criteria.

Comment: Commenters were concerned that CMS has added new criteria for determining which LTCHs will have their outlier payments reconciled in CR 13566. The commenters stated their belief that new reconciliation criteria constitute a substantive change to CMS’ payment policy that cannot be adopted without notice and comment rulemaking. The commenters urged CMS to withdraw the CR.

Response: CMS established the outlier reconciliation regulation under § 412.525(a)(4)(iv)(D) effective for discharges on or after October 1, 2006, which makes all LTCH outlier payments subject to reconciliation. CMS has not modified the outlier regulation. The instructions CMS has issued via CR 13566 have set forth an enforcement policy that determines when MACs will identify additional LTCHs for reconciliation referral. They do not change the legal standards that govern the LTCHs.

3. High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

a. High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

Under the regulations at § 412.525(a)(2)(ii) and as required by section 1886(m)(7) of the Act, the fixed-loss amount for HCO payments is set each year so that the estimated aggregate HCO payments for LTCH PPS standard Federal payment rate cases are 99.6875 percent of 8 percent (that is, 7.975 percent) of estimated aggregate LTCH PPS payments for LTCH PPS standard Federal payment rate cases. (For more details on the requirements for high-cost outlier payments in FY 2018 and subsequent years under section 1886(m)(7) of the Act and additional information regarding high-cost outlier payments prior to FY 2018, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38542 through 38544).)

b. Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2025

In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36590 through 36592), we presented our proposed methodology for determining the outlier fixed-loss amount for LTCH PPS standard Federal payment rate cases and proposed an outlier fixed-loss amount of \$90,921. In the proposed rule, we acknowledged that the proposed increase to the fixed-loss amount from the FY 2024 fixed-loss amount (\$59,873) was substantial. We also acknowledged that the FY 2024 fixed-loss amount was substantially higher than the FY 2023 fixed-loss amount (\$38,518). Recognizing that such substantial increases to the fixed-loss amount in consecutive years could impact LTCH operations, in the proposed rule, we considered an alternative approach for determining the proposed fixed-loss threshold for FY 2025. As discussed in full in section I.O.4. of Appendix A of the proposed rule (89 FR 36664), the alternative approach we considered would have established the FY 2025 fixed-loss amount as an average of the FY 2024 fixed-loss amount and our modelled FY 2025 fixed-loss amount. Under this approach, the proposed fixed-loss amount would have been \$75,397 $((\$59,873 + \$90,921)/2)$. In the proposed rule, we solicited comments on our proposed fixed-loss amount for FY 2025 as well as on the alternative approach that we considered for determining the fixed-loss amount for FY 2025. In this section, we first summarize and respond to the

comments received in response to those solicitations. Later in this section, we present the detailed application of our finalized methodology after consideration of the comments received.

Comment: Several commenters objected to the charge inflation factor we proposed to apply under our proposed methodology for determining the FY 2025 fixed-loss amount. Many commenters urged CMS to return to the methodology employed prior to FY 2022 in which the charge inflation factor was set equal to the market basket update. These commenters stated that returning to this methodology would provide greater stability and predictability to the outlier fixed-loss amount. A commenter asserted that the proposed charge inflation methodology has led to inaccurate fixed-loss amounts in previous years and therefore CMS should return to our previous methodology. This commenter stated that CMS significantly overpaid outliers in FY 2023 relative to our statutory 7.975 percent target and would have significantly underpaid outliers in FY 2024 but for the modifications CMS made to the methodology in the FY 2024 final rule, in which CMS applied a charge inflation factor and CCR adjustment factor based on data prior to the COVID-19 PHE rather than based on the most recently available data. Another commenter stated that CMS should return to its previous methodology because of the uncertain impacts of inflation on charges and lagged availability of changes in CCRs. A commenter requested that CMS calculate the charge inflation factor based on data from prior to the COVID-19 PHE. Another commenter stated that CMS should modify the statistical outlier trim used in our methodology for determining the charge inflation factor by removing claims for providers with a calculated charge growth factor that exceeds 1 standard deviation from the mean provider charge growth factor. A commenter requested that when determining the two-year charge inflation factor, CMS double the one-year charge inflation factor rather than squaring the one-year charge inflation factor. The same commenter stated that the CCR adjustment factor is a double adjustment of the charge inflation factor and requested that CMS remove the CCR adjustment factor from the calculation of the outlier fixed-loss amount.

Response: We appreciate the feedback and suggestions that commenters provided on the proposed charge inflation factor. We appreciate the importance of more stability and predictability in the annual fixed-loss amount. We agree that it is reasonable

to evaluate the effectiveness and accuracy of our fixed-loss amount methodology by determining how close actual outlier payments were to our statutory target of 7.975 percent of total payments for LTCH PPS standard Federal payment rate cases. We also acknowledge that in recent years and in FY 2025, the calculated fixed-loss amount would have been lower if we had estimated charge inflation based on the market basket update. However, we do not agree with commenters that the fixed-loss amounts calculated under the previous market basket methodology would have yielded outlier payments closer to the statutory target in either FY 2022 or FY 2023. We estimate that high cost outlier payments significantly exceeded the statutory 7.975 percent target in both FY 2022 and FY 2023. Using the previous market basket methodology for FY 2022 and FY 2023 would have resulted in lower estimates of costs per discharge and lower fixed-loss amounts. These lowered fixed-loss amounts would have resulted in high cost outlier payments exceeding the statutory target by even more than we estimate actually occurred. While commenters also implied that this market basket approach would have yielded a more accurate fixed-loss amount in FY 2024, we note that commenters are referring to our projection of FY 2024 outlier payments included in the proposed rule. The FY 2024 payment projections in both the proposed rule and this final rule are not based on actual FY 2024 claims but rather based on a payment model that uses FY 2023 claims. We refer the reader to section J.3.C. of the Appendix to this final rule for a full description of our methodology for modelling FY 2024 payments using FY 2023 claims. We believe it is more appropriate to evaluate the effectiveness and accuracy of our fixed-loss amount methodology based on an analysis of actual FY 2024 payments rather than a projection of FY 2024 payments. For these reasons we continue to believe using a charge inflation factor based on actual growth rates in charges from historical claims data rather than one based on quarterly market basket update values leads to better accuracy in calculating the fixed-loss amount that would result in actual outlier payments meeting the statutory target.

We also disagree with the other modifications commenters suggested we make to the charge inflation factor. We believe using the most recent data available is appropriate for projecting charge inflation for FY 2025. In FYs 2022 through 2024, we used a charge

inflation factor based on data prior to the COVID-19 PHE. However, after analyzing actual LTCH PPS claims from FY 2022 and FY 2023, we believe actual outlier payments during these years would have been closer to the statutory target if we had used the most recent available data to determine the charge inflation factor when establishing the fixed-loss amounts for these fiscal years. We note that the commenter that requested CMS remove claims for providers with a calculated charge growth factor that exceeds 1 standard deviation from the mean provider charge growth factor did not provide any justification for making this methodology change. We continue to believe that removing providers from the charge inflation factor calculation with a calculated charge growth factor that exceeds 3 standard deviations from the mean provider charge growth factor is effective at removing actual aberrations in the data that would distort the measure of average charge growth. We also note that using 3 standard deviations from the mean as a threshold for removing aberrations in ratesetting data is a standard method that CMS uses in other IPPS and LTCH PPS ratesetting calculations, such as the calculation of the relative weights. We also disagree with the comment that the CCR adjustment factor is duplicative of the charge inflation factor or that it should be applied in an additive rather than a multiplicative manner. The charge inflation factor accounts for the historical growth in charges for LTCHs while the CCR adjustment factor accounts for historical changes in the relationship between costs and charges for LTCHs. We believe both factors are necessary for estimating costs of LTCH cases in FY 2025 from historical LTCH data. To account for annual growth in LTCHs' charges, we also continue to believe that squaring the one-year charge inflation factor is the appropriate calculation for projecting year-over-year charge inflation for a two-year period. That is, to increase the charges from the FY 2023 MedPAR claims to projected FY 2025 charge levels, it is necessary to multiply the FY 2023 charges by the one-year charge inflation factor two times (FY 2023 charges \times 1-year charge inflation factor \times 1-year charge inflation factor). To simplify this equation, the FY 2023 charges can instead be multiplied by the 1-year charge inflation factor squared (FY 2023 charges \times (1-year charge inflation factor²)) and achieve the same resulting estimate of projected FY 2025 charges.

Comment: Some commenters asserted that the data CMS proposed to use were

significantly impacted by the COVID-19 pandemic. These commenters stated that the claims and cost report data CMS proposed to use reflect patient acuity and cost trends that are unlikely to be repeated in FY 2025. Examples provided by commenters included differences in patient acuity during the COVID-19 pandemic, levels of COVID-19 hospitalizations, and changes in vaccination and immunity rates. These commenters also believe that CMS should adjust our ratesetting methodologies for FY 2025, including our methodology for determining the fixed-loss amount, to account for these pandemic-era impacts. We note that commenters did not provide recommendations for specific technical adjustments CMS could make to the ratesetting data to account for the impact of COVID-19.

Similar to last year, some commenters urged CMS to exclude dialysis patients from the FY 2023 claims data when determining the outlier fixed-loss amount. Commenters again stated that since the start of the COVID-19 pandemic, the cost of providing in-hospital dialysis to LTCH patients has increased significantly. These commenters stated that many LTCHs continue to face significant increases in the rates charged by third-party dialysis vendors or have begun providing dialysis services "in-house" at higher costs. Some commenters stated that they expect this trend to continue as the staffing and wage pressures faced by third-party vendors continue. Commenters also stated that LTCHs continue to face challenges discharging dialysis patients due to limited space in outpatient dialysis clinics, which has led to longer lengths of stay and costs for these cases. Commenters believe that dialysis cases are skewing the fixed-loss amount calculation and believe removing dialysis cases would allow for a more accurate forecast of what costs and charges will look like when these issues subside.

A few commenters encouraged CMS to use more recent data to determine the fixed-loss amount in the final rule. Some commenters requested that CMS incorporate claims data from FY 2024 into the calculation of the fixed-loss amount for FY 2025. Another commenter stated that CMS should use data from more recent cost reports in the calculation. This commenter stated that their analysis has found that using data from cost reports with a July 31st cutoff historically has resulted in a more accurate fixed-loss amount.

Response: We thank the commenters for their suggestions to modify the data used in calculating the fixed-loss

threshold to account for COVID-19 impacts. In the FY 2023 claims data used for this final rule, we found that approximately 4.0 percent of LTCH standard payment rate claims had a COVID-19 diagnosis code. We do not have reason to assume that the percentage of claims with a COVID-19 diagnosis code in FY 2025 will be meaningfully different than FY 2023. Furthermore, using the March 2024 update of the FY 2023 MedPAR file, we estimate that actual high-cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments in FY 2023 would only decrease by 0.1 percentage point if we were to remove all claims with a COVID-19 diagnosis. Therefore, while we do not believe a modification is necessary, we also believe that making such modification would not have had a significant influence on the fixed-loss amount for FY 2025. For these reasons, we are not adopting commenters' suggestion to use different data from the data we proposed to use in calculating the fixed-loss threshold to account for the impact of the COVID-19 pandemic.

We thank the commenters for the suggestion to exclude dialysis claims when calculating the fixed-loss threshold. Although commenters described why dialysis cases were costly in FY 2023, similar to our response to such comments last year (88 FR 59374-59375), we still do not find that commenters provided sufficient evidence to support why costs for these types of patients would differ significantly from FY 2023 to FY 2025, such that it would be appropriate to exclude them from our calculations. Some commenters explicitly stated in their comments that they expect LTCHs will continue to incur higher costs of providing dialysis services to patients. For these reasons, we are not adopting commenters' suggestion to exclude dialysis claims when calculating the fixed-loss threshold for FY 2025.

We thank the commenters for the suggestion to use more recent data for calculating the fixed-loss threshold in this final rule. As discussed later in this section, we are using more recent data than we used in the proposed rule. Specifically, we are using the March 2024 update of the FY 2023 MedPAR file and the March 2024 update of the Provider Specific File (PSF) to calculate the fixed-loss threshold in this final rule. At the time of developing this final rule, the March 2024 update of the FY 2023 MedPAR file was the most recent full year of publicly available claims data. Similarly, at the time of developing this final rule, the March 2024 update of the PSF was the most

recent publicly available version of the PSF. With regards to the comment requesting we use the most recently available cost report data, we note that the PSF generally contains CCR data from an LTCH's most recently settled or tentatively settled cost report, whichever is from the latest cost reporting period.

We continue to believe it is most appropriate to use one full year of publicly available claims data in our ratesetting calculations. The use of one full year of publicly available claims data is consistent with our historical practice and is not susceptible to the seasonality issues affiliated with using partial year data. Therefore, we are not adopting commenters' suggestion to incorporate claims from the first part of FY 2024 in our calculation of the fixed-loss threshold for FY 2025.

Comment: Several commenters believe that CMS needs to update its high-cost outlier policy to better account for the effects of the dual rate LTCH PPS payment structure on outlier payments. Several commenters stated that the under the dual rate payment structure, the majority of LTCH standard Federal payment rate cases have become concentrated to only a few MS-LTC-DRGs. The commenters stated that there is great variation in patient severity and costs among the cases grouped to these MS-LTC-DRGs which they believe leads to many of them qualifying for outlier payments, and that this pattern is contributing to the proposed increase in the fixed-loss amount. Commenters highlighted standard Federal payment rate cases grouped to base MS-LTC-DRGs 189 and 207 in particular. These two base MS-DRGs, which accounted for over 40 percent of standard Federal payment rate cases in FY 2023, are not subdivided based on the presence or absence of a complication or comorbidity (CC) or a major complication or comorbidity (MCC). Commenters requested that CMS refine certain MS-LTC-DRGs, such as by creating subgroups within these base MS-DRGs based on the presence or absence of CCs and MCCs, which they believe would increase LTCH PPS payment accuracy thereby reducing the outlier payments made to cases grouped to such MS-LTC-DRGs.

Response: We appreciate commenters' suggestions on possible refinements to certain MS-LTC-DRGs, in particular the concerns regarding the absence of CC or MCC subgroups within certain high-volume MS-LTC-DRGs, and commenters' thoughts on the impact this may have on LTCH PPS outlier payments. We note that we did not propose to make any adjustments or

create CC or MCC subgroups within the MS-LTC-DRGs as requested by commenters. We also recognize that such adjustments would have differential impacts on individual LTCHs based on each LTCH's case mix. As such, we would like to have the opportunity to explore and analyze such adjustments more before making this type of change. Therefore, we are not adopting any of the changes to the MS-LTC-DRGs suggested by commenters in this final rule. However, we may consider these comments for future rulemaking.

Comment: Commenters expressed concern with the impact of the LTCH PPS dual rate payment system on the claims data CMS uses for calculating the fixed-loss amount. Commenters asserted that because CMS only uses cases that would have been paid the standard Federal rate, the claims dataset used in the calculation is smaller and on average has a higher acuity than the claims datasets CMS used prior to the start of the dual rate payment structure. The commenters believe this change has led to fluctuations in the fixed-loss amount. A commenter stated that CMS should reconsider whether the statutory outlier payment target of 7.975 percent is still an appropriate target for LTCH PPS standard Federal rate cases under the dual rate payment system.

Response: We thank the commenters for this feedback. We note that commenters did not provide specific recommendations on how CMS could address the decreasing number of cases available for LTCH PPS ratesetting. We agree with commenters and believe it is reasonable to expect that, given the statutory patient criteria for payment at the LTCH PPS standard Federal rate, the average acuity of the LTCH claims data used for determining the FY 2025 outlier fixed-loss amount is higher than the average acuity of the claims data used prior to the start of the dual rate payment structure. However, section 1886(m)(7) of the Act directs the Secretary to establish a fixed-loss amount for LTCH PPS standard Federal payment rate cases that would result in total estimated outlier payments being equal to 7.975 percent of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

Comment: In general, commenters expressed concern with the proposed increase to the outlier fixed-loss amount and believe it would have negative financial impacts on LTCHs. A commenter stated that most LTCHs would not be able to absorb the level of financial losses that they believe would result from the proposed fixed-loss amount. Another commenter stated that

the proposed increase to the outlier fixed-loss amount conflicts with CMS's principle for stability and predictability in reimbursement rates. Commenters stated that the proposed outlier fixed-loss amount would reduce access to LTCHs, such as restricting the number of patients they admit with pressure injuries. Many commenters stated that decreased access to LTCH services would lead to significant increases in their length of stays and costs in the intensive care units of IPPS hospitals. Several commenters stated that the proposed outlier fixed-loss amount would lead to LTCH closures. Many commenters expressed that even the outlier fixed-loss amount determined using the alternative approach we considered would require LTCHs to experience significant financial losses. A commenter stated that the alternative approach we considered for determining the outlier fixed-loss amount would only delay the implementation of a steep financial cliff for LTCHs. Commenters provided a variety of recommendations for CMS to consider when determining the fixed-loss amount in this final rule.

We received several comments requesting that we adopt a modified version of the alternative approach we considered in the proposed rule for determining the FY 2025 fixed-loss amount. Many of these commenters requested that instead of phasing in the increase in the fixed-loss amount over two-years, we phase in the increase over a longer period, such as a four-year period. Commenters believe this modified approach would create a more stable transition.

A commenter requested that CMS set the FY 2025 fixed-loss amount equal to the FY 2023 fixed-loss amount. Other commenters similarly requested that CMS set the FY 2025 fixed-loss amount equal to the FY 2024 fixed-loss amount. Several commenters requested that CMS adopt a non-budget neutral cap on annual increases to the fixed-loss amount. Commenters stated that this cap would be similar to the cap policies CMS already applies to the LTCH PPS wage index and MS-LTC-DRG relative weights. Some commenters suggested that such a cap be temporary while others suggested it become a permanent part of the methodology. Such a limit on annual increases to the fixed-loss amount suggested by commenters included a cap of no more than 5 percent, of no more than 10 percent, and set equal to the annual market basket percent increase. In general, commenters believe a cap on annual increases would provide stability and predictability to the LTCH PPS.

Response: We thank the commenters for the feedback, including the variety of suggestions on alternative methods for determining the FY 2025 fixed-loss amount. In the proposed rule we acknowledged that the proposed increase to the fixed-loss amount was substantial and sought comments on our proposed fixed-loss amount as well as an alternative approach we considered. Specifically, in the FY 2025 IPPS/LTCH PPS proposed rule, we proposed a fixed-loss amount for FY 2025 of \$90,921 that would result in estimated outlier payments projected to be equal to 7.975 percent of estimated FY 2025 payments for such cases. In that same proposed rule, we also discussed an alternative approach we considered which would have established the FY 2025 fixed-loss amount as an average of the FY 2024 fixed amount and our modelled FY 2025 fixed-loss amount. Under this approach, the proposed fixed-loss amount would have been \$75,397. This fixed-loss amount would have resulted in estimated outlier payments projected to exceed the 7.975 percent statutory target, and we would have used the broad authority conferred upon the Secretary under section 307(b)(1) of the BIPA to make this “adjustment” to “outliers” under the LTCH PPS.

As discussed in greater detail later in this section, with the use of more recent data available for this final rule, our proposed methodology for determining the fixed-loss amount results in a fixed-loss amount of \$77,048, which is significantly lower than the fixed-loss amount of \$90,921 that we proposed. Given this significant reduction, at this time we do not believe it is necessary or appropriate to use our adjustments authority to adjust outlier payments by using an alternative methodology to set the fixed-loss amount that would not result in total estimated outlier payments being projected to be equal to the statutory target of 7.975 percent in section 1886(m)(7) of the Act. As discussed in the proposed rule (88 FR 36592), we currently estimate that high-cost outlier payments in both FYs 2023 and 2024 will account for a percentage of total LTCH PPS standard Federal payment rate payments that is much higher than the budget neutral statutory target of 7.975 percent. For example, as discussed in Appendix A to this final rule, based on the most recent available data, we currently model that high-cost outlier payments in FY 2024 will account for 8.8 percent of total LTCH PPS standard Federal payment rate payments. At this time, we believe that using our proposed historical methodology which results in a fixed-

loss amount of \$77,048 for FY 2025 strikes an appropriate balance between accurately estimating high cost outlier payments and considering the financial effect on LTCHs caused by increases in the fixed-loss amount. We understand commenters’ concerns regarding payment stability and access to care under the LTCH PPS, and will continue to consider those issues for future rulemaking.

After consideration of comments received, we are finalizing our proposed methodology for determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025 without modification. In this section of this Addendum, we present the detailed application of our finalized methodology.

When we implemented the LTCH PPS, we established a fixed-loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments (that is, the target percentage) under the LTCH PPS (67 FR 56022 through 56026). When we implemented the dual rate LTCH PPS payment structure beginning in FY 2016, we established that, in general, the historical LTCH PPS HCO policy would continue to apply to LTCH PPS standard Federal payment rate cases. That is, the fixed-loss amount for LTCH PPS standard Federal payment rate cases would be determined using the LTCH PPS HCO policy adopted when the LTCH PPS was first implemented, but we limited the data used under that policy to LTCH cases that would have been LTCH PPS standard Federal payment rate cases if the statutory changes had been in effect at the time of those discharges.

To determine the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases, we estimate outlier payments and total LTCH PPS payments for each LTCH PPS standard Federal payment rate case (or for each case that would have been an LTCH PPS standard Federal payment rate case if the statutory changes had been in effect at the time of the discharge) using claims data from the MedPAR files. In accordance with § 412.525(a)(2)(ii), the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases results in estimated total outlier payments being projected to be equal to 7.975 percent of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49448), we discussed the abnormal charging practices of an LTCH (CCN 312024) in FY 2021 that led to the LTCH receiving an excessive amount of high-cost outlier payments. In that rule,

we stated our belief, based on information we received from the provider, that these abnormal charging practices would not persist into FY 2023. Therefore, we did not include their cases in our model for determining the FY 2023 outlier fixed-loss amount. In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59376), we stated that the FY 2022 MedPAR claims also reflect the abnormal charging practices of this LTCH. Therefore, we removed claims from CCN 312024 when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2024 and all other FY 2024 ratesetting calculations, including the MS–LTC–DRG relative weights and the calculation of the area wage level adjustment budget neutrality factor. Given recent actions by the Department of Justice regarding CCN 312024 (see <https://www.justice.gov/opa/pr/new-jersey-hospital-and-investors-pay-united-states-306-million-alleged-false-claims-related>), as we proposed, we again removed claims from CCN 312024 when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025 and all other FY 2025 ratesetting calculations, including the MS–LTC–DRG relative weights and the calculation of the area wage level adjustment budget neutrality factor.

(1) Charge Inflation Factor for Use in Determining the Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2025

Under the LTCH PPS, the cost of each claim is estimated by multiplying the charges on the claim by the provider’s CCR. Due to the lag time in the availability of claims data, when estimating costs for the upcoming payment year we typically inflate the charges from the claims data by a uniform factor.

For greater accuracy in calculating the fixed-loss amount, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45562 through 45566), we finalized a technical change to our methodology for determining the charge inflation factor. Similar to the method used under the IPPS hospital payment methodology (as discussed in section II.A.4.i.(2) of this Addendum), our methodology determines the LTCH charge inflation factor based on the historical growth in charges for LTCH PPS standard Federal payment rate cases, calculated using historical MedPAR claims data. In this section of this Addendum, we describe our charge inflation factor methodology.

Step 1—Identify LTCH PPS Standard Federal Payment Rate Cases

The first step in our methodology is to identify LTCH PPS standard Federal

payment rate cases from the MedPAR claim files for the two most recently available Federal fiscal year time periods. For both fiscal years, consistent with our historical methodology for determining payment rates for the LTCH PPS, we remove any claims submitted by LTCHs that were all-inclusive rate providers as well as any Medicare Advantage claims. For both fiscal years, we also remove claims from providers that only had claims in one of the fiscal years.

Step 2—Remove Statistical Outliers

The next step in our methodology is to remove all claims from providers whose growth in average charges was a statistical outlier. We remove these statistical outliers prior to calculating the charge inflation factor because we believe they may represent aberrations in the data that would distort the measure of average charge growth. To perform this statistical trim, we first calculate each provider's average charge in both fiscal years. Then, we calculate a charge growth factor for each provider by dividing its average charge in the most recent fiscal year by its average charge in the prior fiscal year. Then we remove all claims for providers whose calculated charge growth factor was outside 3 standard deviations from the mean provider charge growth factor.

Step 3—Calculate the Charge Inflation Factor.

The final step in our methodology is to use the remaining claims to calculate a national charge inflation factor. We first calculate the average charge for those remaining claims in both fiscal years. Then we calculate the national charge inflation factor by dividing the average charge in the more recent fiscal year by the average charge in the prior fiscal year.

Following the methodology described previously, as we proposed, we computed a charge inflation factor based on the most recently available data. Specifically, we used the March 2024 update of the FY 2023 MedPAR file and the March 2023 update of the FY 2022 MedPAR as the basis of the LTCH PPS standard Federal payment rate cases for the two most recently available Federal fiscal year time periods, as described previously in our methodology.

Therefore, we trimmed the March 2024 update of the FY 2023 MedPAR file and the March 2023 update of the FY 2022 MedPAR file as described in steps 1 and 2 of our methodology. To compute the 1-year average annual rate-of-change in charges per case, we compared the average covered charge per case of \$281,402 (\$11,630,925,449/41,332 cases) from FY 2022 to the average covered charge per case of \$301,946

(\$12,740,324,507/42,194 cases) from FY 2023. This rate-of-change was 7.3005 percent, which results in a 1-year charge inflation factor of 1.073005, and a 2-year charge inflation factor of 1.15134 (calculated by squaring the 1-year factor). We inflated the billed charges obtained from the FY 2023 MedPAR file by this 2-year charge inflation factor of 1.15134 when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025.

(2) CCRs for Use in Determining the Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2025

For greater accuracy in calculating the fixed-loss amount, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45562 through 45566), we finalized a technical change to our methodology for determining the CCRs used to calculate the fixed-loss amount. Similar to the methodology used for IPPS hospitals (as discussed in section II.A.4.i.(2). of this Addendum), our methodology adjusts CCRs obtained from the best available PSF data by an adjustment factor that is calculated based on historical changes in the average case-weighted CCR for LTCHs. We believe these adjusted CCRs more accurately reflect CCR levels in the upcoming payment year because they account for historical changes in the relationship between costs and charges for LTCHs. In this section of this Addendum, we describe our CCR adjustment factor methodology.

Step 1—Assign Providers Their Historical CCRs

The first step in our methodology is to identify providers with LTCH PPS standard Federal payment rate cases in the most recent MedPAR claims file (excluding all-inclusive rate providers and providers with only Medicare Advantage claims). For each of these providers, we then identify the CCR from the most recently available PSF. For each of these providers we also identify the CCR from the PSF that was made available one year prior to the most recently available PSF.

Step 2—Trim Providers with Insufficient CCR Data

The next step in our methodology is to remove from the CCR adjustment factor calculation any providers for which we cannot accurately measure changes to their CCR using the PSF data. We first remove any provider whose CCR was missing in the most recent PSF or prior year PSF. We next remove any provider assigned the statewide average CCR for their State in either the most recent PSF or prior year PSF. We lastly remove any provider whose CCR was not updated between the most recent

PSF and prior year PSF (determined by comparing the effective date of the records).

Step 3—Remove Statistical Outliers

The next step in our methodology is to remove providers whose change in their CCR is a statistical outlier. To perform this statistical trim, for those providers remaining after application of Step 2, we calculate a provider-level CCR growth factor by dividing the provider's CCR from the most recent PSF by its CCR in the prior year's PSF. We then remove any provider whose CCR growth factor was outside 3 standard deviations from the mean provider CCR growth factor. These statistical outliers are removed prior to calculating the CCR adjustment factor because we believe that they may represent aberrations in the data that would distort the measure of average annual CCR change.

Step 4—Calculate a CCR Adjustment Factor

The final step in our methodology is to calculate, across all remaining providers after application of Step 3, an average case-weighted CCR from both the most recent PSF and prior year PSF. The provider case counts that we use to calculate the case-weighted average are determined from claims for LTCH standard Federal rate cases from the most recent MedPAR claims file. We note when determining these case counts, consistent with our historical methodology for determining the MS-LTC-DRG relative weights, we do not count short stay outlier claims as full cases but instead as a fraction of a case based on the ratio of covered days to the geometric mean length of stay for the MS-LTC-DRG grouped to the case. We calculate the national CCR adjustment factor by dividing the case-weighted CCR from the most recent PSF by the case-weighted CCR from the prior year PSF.

Following the methodology described previously, as we proposed, we computed a CCR adjustment factor based on the most recently available data. Specifically, we used the March 2024 PSF as the most recently available PSF and the March 2023 PSF as the PSF that was made available one year prior to the most recently available PSF, as described in our methodology. In addition, we used claims from the March 2024 update of the FY 2023 MedPAR file in our calculation of average case-weighted CCRs described in Step 4 of our methodology. Specifically, following the methodology described previously and, for providers with LTCH PPS standard Federal payment rate cases in the March 2024 update of the FY 2023 MedPAR file, we

identified their CCRs from both the March 2023 PSF and March 2024 PSF. After performing the trims outlined in our methodology, we used the LTCH PPS standard Federal payment rate case counts from the FY 2023 MedPAR file (classified using finalized Version 42 of the GROUPE) to calculate case-weighted average CCRs. Based on this data, we calculated a March 2023 national average case-weighted CCR of 0.236968 and a March 2024 national average case-weighted CCR of 0.234910. We then calculated the proposed national CCR adjustment factor by dividing the March 2024 national average case-weighted CCR by the March 2023 national average case-weighted CCR. This results in a proposed 1-year national CCR adjustment factor of 0.991315. When calculating the fixed-loss amount for FY 2025, we assigned the statewide average CCR for the upcoming fiscal year to all providers who were assigned the statewide average in the March 2024 PSF or whose CCR was missing in the March 2024 PSF. For all other providers, we multiplied their CCR from the March 2024 PSF by the 1-year national CCR adjustment factor of 0.991315. We note that the March 2024 PSF national average case-weighted CCR was 1.4 percent lower than the December 2023 PSF national average case-weighted CCR. We also note that the 1-year national adjustment CCR adjustment factor calculated in this final rule is 3.1 percent lower than the 1-year national adjustment CCR factor that we proposed. The incorporation of more recent cost-to-charge ratio data into our payment model was the primary driver of the reduction in the fixed-loss amount calculated in this final rule compared to the fixed-loss amount calculated in the proposed rule.

(3) Proposed Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2025

In this final rule, for FY 2025, using the best available data and the steps described previously, we calculated a fixed-loss amount that would maintain estimated HCO payments at the projected 7.975 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases as required by section 1886(m)(7) of the Act and in accordance with § 412.525(a)(2)(ii) (based on the payment rates and policies for these cases presented in this final rule). Consistent with our historical practice, we use the best available LTCH claims data and CCR data, when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for

FY 2025 in the final rule. Therefore, based on LTCH claims data from the March 2024 update of the FY 2023 MedPAR file adjusted for charge inflation and adjusted CCRs from the March 2024 update of the PSF, under the broad authority of section 123(a)(1) of the BBRA and section 307(b)(1) of the BIPA, we are establishing a fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025 of \$77,048 that will result in estimated outlier payments projected to be equal to 7.975 percent of estimated FY 2025 payments for such cases. As such, we will make an additional HCO payment for the cost of an LTCH PPS standard Federal payment rate case that exceeds the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the adjusted LTCH PPS standard Federal payment rate payment and the fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$77,048).

4. High-Cost Outlier Payments for Site Neutral Payment Rate Cases

When we implemented the application of the site neutral payment rate in FY 2016, in examining the appropriate fixed-loss amount for site neutral payment rate cases issue, we considered how LTCH discharges based on historical claims data would have been classified under the dual rate LTCH PPS payment structure and the CMS' Office of the Actuary projections regarding how LTCHs will likely respond to our implementation of policies resulting from the statutory payment changes. We again relied on these considerations and actuarial projections in FY 2017 and FY 2018 because the historical claims data available in each of these years were not all subject to the LTCH PPS dual rate payment system. Similarly, for FYs 2019 through 2024, we continued to rely on these considerations and actuarial projections because, due to the transitional blended payment policy for site neutral payment rate cases and the provisions of section 3711(b)(2) of the CARES Act, the historical claims data available in each of these years were not subject to the full effect of the site neutral payment rate.

For FYs 2016 through 2024, our actuaries projected that the proportion of cases that would qualify as LTCH PPS standard Federal payment rate cases versus site neutral payment rate cases under the statutory provisions would remain consistent with what is reflected in the historical LTCH PPS claims data. Although our actuaries did not project an immediate change in the proportions

found in the historical data, they did project cost and resource changes to account for the lower payment rates. Our actuaries also projected that the costs and resource use for cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and would likely mirror the costs and resource use for IPPS cases assigned to the same MS-DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what is found based on the historical data. As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49619), this actuarial assumption is based on our expectation that site neutral payment rate cases would generally be paid based on an IPPS comparable per diem amount under the statutory LTCH PPS payment changes that began in FY 2016, which, in the majority of cases, is much lower than the payment that would have been paid if these statutory changes were not enacted. In light of these projections and expectations, we discussed that we believed that the use of a single fixed-loss amount and HCO target for all LTCH PPS cases would be problematic. In addition, we discussed that we did not believe that it would be appropriate for comparable LTCH PPS site neutral payment rate cases to receive dramatically different HCO payments from those cases that would be paid under the IPPS (80 FR 49617 through 49619 and 81 FR 57305 through 57307). For those reasons, we stated that we believed that the most appropriate fixed-loss amount for site neutral payment rate cases for FYs 2016 through 2024 would be equal to the IPPS fixed-loss amount for that particular fiscal year. Therefore, we established the fixed-loss amount for site neutral payment rate cases as the corresponding IPPS fixed-loss amounts for FYs 2016 through 2024. In particular, in FY 2024, we established the fixed-loss amount for site neutral payment rate cases as the FY 2024 IPPS fixed-loss amount of \$42,750 (88 FR 59378).

For this final rule, we used FY 2023 data in the FY 2025 LTCH PPS ratesetting. We note that section 3711(b)(2) of the CARES Act provided a waiver of the application of the site neutral payment rate for LTCH cases admitted during the COVID-19 PHE period. The COVID-19 PHE expired on May 11, 2023. Therefore, all LTCH PPS cases in FY 2023 with admission dates on or before the PHE expiration date were paid the LTCH PPS standard Federal rate regardless of whether the

discharge met the statutory patient criteria. Because not all FY 2023 claims in the data used for this final rule were subject to the site neutral payment rate, we continue to rely on the same considerations and actuarial projections used in FYs 2016 through 2024 when developing a fixed-loss amount for site neutral payment rate cases for FY 2025. Our actuaries continue to project that the costs and resource use for FY 2025 cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and will likely mirror the costs and resource use for IPPS cases assigned to the same MS-DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what was found based on the historical data. (Based on the FY 2023 LTCH claims data used in the development of this final rule, if the provisions of the CARES Act had not been in effect, approximately 71 percent of LTCH cases would have been paid the LTCH PPS standard Federal payment rate and approximately 29 percent of LTCH cases would have been paid the site neutral payment rate for discharges occurring in FY 2023.)

For these reasons, we continue to believe that the most appropriate fixed-loss amount for site neutral payment rate cases for FY 2025 is the IPPS fixed-loss amount for FY 2025. Therefore, for FY 2025, as we proposed, we are establishing that the applicable HCO threshold for site neutral payment rate cases is the sum of the site neutral payment rate for the case and the IPPS fixed-loss amount. That is, we are establishing a fixed-loss amount for site neutral payment rate cases of \$46,152, which is the same FY 2025 IPPS fixed-loss amount discussed in section II.A.4.i.(2). of this Addendum. Accordingly, under this policy, for FY 2025, we will calculate an HCO payment for site neutral payment rate cases with costs that exceed the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the site neutral payment rate payment and the fixed-loss amount for site neutral payment rate cases of \$46,152).

In establishing an HCO policy for site neutral payment rate cases, we established a budget neutrality adjustment under § 412.522(c)(2)(i). We established this requirement because we believed, and continue to believe, that the HCO policy for site neutral payment rate cases should be budget neutral, just as the HCO policy for LTCH PPS

standard Federal payment rate cases is budget neutral, meaning that estimated site neutral payment rate HCO payments should not result in any change in estimated aggregate LTCH PPS payments.

To ensure that estimated HCO payments payable to site neutral payment rate cases in FY 2025 would not result in any increase in estimated aggregate FY 2025 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce site neutral payment rate payments by 5.1 percent to account for the estimated additional HCO payments payable to those cases in FY 2025. Consistent with our historical practice, as we proposed, we are continuing this policy.

As discussed earlier, consistent with the IPPS HCO payment threshold, we estimate the fixed-loss threshold would result in FY 2025 HCO payments for site neutral payment rate cases to equal 5.1 percent of the site neutral payment rate payments that are based on the IPPS comparable per diem amount. As such, to ensure estimated HCO payments payable for site neutral payment rate cases in FY 2025 would not result in any increase in estimated aggregate FY 2025 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce the site neutral payment rate amount paid under § 412.522(c)(1)(i) by 5.1 percent to account for the estimated additional HCO payments payable for site neutral payment rate cases in FY 2025. To achieve this, for FY 2025, as we proposed, we are applying a budget neutrality factor of 0.949 (that is, the decimal equivalent of a 5.1 percent reduction, determined as $1.0 - 5.1/100 = 0.949$) to the site neutral payment rate for those site neutral payment rate cases paid under § 412.522(c)(1)(i). We note that, consistent with our current policy, this HCO budget neutrality adjustment will not be applied to the HCO portion of the site neutral payment rate amount (81 FR 57309).

Comment: A few commenters stated that they were concerned with the proposed increase to the fixed-loss amount for site-neutral rate cases.

Response: We acknowledge the commenters' concern. We note that the commenters did not elaborate on the basis for their concerns with the proposed fixed-loss amount for site-neutral rate cases. The commenters also did not suggest any modifications for CMS to make in establishing the fixed-loss amount for site-neutral rate cases in this final rule. Therefore, after consideration of comments received, we

are finalizing our proposals as described previously, without modification.

E. Update to the IPPS Comparable Amount To Reflect the Statutory Changes to the IPPS DSH Payment Adjustment Methodology

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766), we established a policy to reflect the changes to the Medicare IPPS DSH payment adjustment methodology made by section 3133 of the Affordable Care Act in the calculation of the "IPPS comparable amount" under the SSO policy at § 412.529 and the "IPPS equivalent amount" under the site neutral payment rate at § 412.522. Historically, the determination of both the "IPPS comparable amount" and the "IPPS equivalent amount" includes an amount for inpatient operating costs "for the costs of serving a disproportionate share of low-income patients." Under the statutory changes to the Medicare DSH payment adjustment methodology that began in FY 2014, in general, eligible IPPS hospitals receive an empirically justified Medicare DSH payment equal to 25 percent of the amount they otherwise would have received under the statutory formula for Medicare DSH payments prior to the amendments made by the Affordable Care Act. The remaining amount, equal to an estimate of 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under the age of 65 who are uninsured, is made available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. The additional uncompensated care payments are based on the hospital's amount of uncompensated care for a given time period relative to the total amount of uncompensated care for that same time period reported by all hospitals that receive Medicare DSH payments.

To reflect the Medicare DSH payment adjustment methodology statutory changes in section 3133 of the Affordable Care Act in the calculation of the "IPPS comparable amount" and the "IPPS equivalent amount" under the LTCH PPS, we stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766) that we will include a reduced Medicare DSH payment amount that reflects the projected percentage of the payment amount calculated based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act that will be paid to eligible IPPS hospitals as

empirically justified Medicare DSH payments and uncompensated care payments in that year (that is, a percentage of the operating Medicare DSH payment amount that has historically been reflected in the LTCH PPS payments that are based on IPPS rates). We also stated, in the FY 2014 IPPS/LTC PPS final rule (78 FR 50766), that the projected percentage will be updated annually, consistent with the annual determination of the amount of uncompensated care payments that will be made to eligible IPPS hospitals. We believe that this approach results in appropriate payments under the LTCH PPS and is consistent with our intention that the “IPPS comparable amount” and the “IPPS equivalent amount” under the LTCH PPS closely resemble what an IPPS payment would have been for the same episode of care, while recognizing that some features of the IPPS cannot be translated directly into the LTCH PPS (79 FR 50766 through 50767).

As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36593 through 36594), for FY 2025, based on the most recent data available at that time, we proposed to establish that the calculation of the “IPPS comparable amount” under § 412.529 would include an applicable operating Medicare DSH payment amount that is equal to 71.61 percent of the operating Medicare DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula absent the amendments made by the Affordable Care Act. Furthermore, consistent with our historical practice, we proposed that, if more recent data became available, we would use that data to determine the applicable operating Medicare DSH payment amount used to calculate the “IPPS comparable amount” in the final rule.

We did not receive any public comments in response to our proposal, and as such are finalizing this proposal. However, as we proposed, we are determining the applicable operating Medicare DSH payment amount used to calculate the “IPPS comparable amount” in this final rule using more recent data.

For FY 2025, as discussed in greater detail in section IV.E.2.b. of the preamble of this final rule, based on the most recent data available, our estimate of 75 percent of the amount that would otherwise have been paid as Medicare DSH payments (under the methodology

outlined in section 1886(r)(2) of the Act) is adjusted to 54.29 percent of that amount to reflect the change in the percentage of individuals who are uninsured. The resulting amount is then used to determine the amount available to make uncompensated care payments to eligible IPPS hospitals in FY 2025. In other words, the amount of the Medicare DSH payments that would have been made prior to the amendments made by the Affordable Care Act is adjusted to 40.72 percent (the product of 75 percent and 54.29 percent) and the resulting amount is used to calculate the uncompensated care payments to eligible hospitals. As a result, for FY 2025, we project that the reduction in the amount of Medicare DSH payments pursuant to section 1886(r)(1) of the Act, along with the payments for uncompensated care under section 1886(r)(2) of the Act, will result in overall Medicare DSH payments of 65.72 percent of the amount of Medicare DSH payments that would otherwise have been made in the absence of the amendments made by the Affordable Care Act (that is, 25 percent + 40.72 percent = 65.72 percent).

Therefore, for FY 2025, consistent with our proposal, we are establishing that the calculation of the “IPPS comparable amount” under § 412.529 will include an applicable operating Medicare DSH payment amount that is equal to 65.72 percent of the operating Medicare DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula absent the amendments made by the Affordable Care Act.

F. Computing the Adjusted LTCH PPS Federal Prospective Payments for FY 2025

Under the dual rate LTCH PPS payment structure, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate are paid based on the LTCH PPS standard Federal payment rate. Under § 412.525(c), the LTCH PPS standard Federal payment rate is adjusted to account for differences in area wages; we make this adjustment by multiplying the labor-related share of the LTCH PPS standard Federal payment rate for a case by the applicable LTCH PPS wage index (the final FY 2025 values are shown in Tables 12A through 12B listed in section VI. of this Addendum and are

available via the internet on the CMS website). The LTCH PPS standard Federal payment rate is also adjusted to account for the higher costs of LTCHs located in Alaska and Hawaii by the applicable COLA factors (the final FY 2025 factors are shown in the chart in section V.C. of this Addendum) in accordance with § 412.525(b). In this final rule, we are establishing an LTCH PPS standard Federal payment rate for FY 2025 of \$49,383.26, as discussed in section V.A. of this Addendum. We illustrate the methodology to adjust the LTCH PPS standard Federal payment rate for FY 2025, applying our finalized LTCH PPS amounts for the standard Federal payment rate, MS–LTC–DRG relative weights, and wage index in the following example:

Example:

During FY 2025, a Medicare discharge that meets the criteria to be excluded from the site neutral payment rate, that is, an LTCH PPS standard Federal payment rate case, is from an LTCH that is located in CBSA 16984, which has a FY 2025 LTCH PPS wage index value of 1.0207 (as shown in Table 12A listed in section VI. of this Addendum). The Medicare patient case is classified into MS–LTC–DRG 189 (Pulmonary Edema & Respiratory Failure), which has a relative weight for FY 2025 of 0.9787 (as shown in Table 11 listed in section VI. of this Addendum). The LTCH submitted quality reporting data for FY 2025 in accordance with the LTCH QRP under section 1886(m)(5) of the Act.

To calculate the LTCH’s total adjusted Federal prospective payment for this Medicare patient case in FY 2025, we computed the wage-adjusted Federal prospective payment amount by multiplying the unadjusted FY 2025 LTCH PPS standard Federal payment rate (\$49,383.26) by the labor-related share (72.8 percent) and the wage index value (1.0207). This wage-adjusted amount was then added to the nonlabor-related portion of the unadjusted LTCH PPS standard Federal payment rate (27.2 percent; adjusted for cost of living, if applicable) to determine the adjusted LTCH PPS standard Federal payment rate, which is then multiplied by the MS–LTC–DRG relative weight (0.9787) to calculate the total adjusted LTCH PPS standard Federal prospective payment for FY 2025 (\$49,059.74). The table illustrates the components of the calculations in this example.

Unadjusted LTCH PPS Standard Federal Prospective Payment Rate	\$49,383.26
Labor-Related Share	× 0.728
Labor-Related Portion of the LTCH PPS Standard Federal Payment Rate	= \$35,951.01
Wage Index (CBSA 16984)	× 1.0207
Wage-Adjusted Labor Share of the LTCH PPS Standard Federal Payment Rate	= \$36,695.20

Nonlabor-Related Portion of the LTCH PPS Standard Federal Payment Rate (\$49,383.26 × 0.272)	+ \$13,432.25
Adjusted LTCH PPS Standard Federal Payment Amount	= \$50,127.45
MS–LTC–DRG 189 Relative Weight	× 0.9787
Total Adjusted LTCH PPS Standard Federal Prospective Payment	= \$49,059.74

VI. Tables Referenced in This Final Rule Generally Available Through the Internet on the CMS Website

This section lists the tables referred to throughout the preamble of this final rule and in the Addendum. In the past, a majority of these tables were published in the **Federal Register** as part of the annual proposed and final rules. However, similar to FYs 2012 through 2024, for the FY 2025 rulemaking cycle, the IPPS and LTCH PPS tables will not be published in the **Federal Register** in the annual IPPS/LTCH PPS proposed and final rules and will be on the CMS website. Specifically, all IPPS tables listed in the final rule, with the exception of IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E, will generally be available on the CMS website. IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E are displayed at the end of this section and will continue to be published in the **Federal Register** as part of the annual proposed and final rules.

Tables 7A and 7B historically contained the Medicare prospective payment system selected percentile lengths of stay for the MS–DRGs for the prior year and upcoming fiscal year. We note, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49452), we finalized beginning with FY 2023, to provide the percentile length of stay information previously included in Tables 7A and 7B in the supplemental AOR/BOR data file. The AOR/BOR files can be found on the FY 2025 IPPS final rule home page on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

After hospitals have been given an opportunity to review and correct their calculations for FY 2025, we will post Table 15 (which will be available via the CMS website) to display the final FY 2025 readmissions payment adjustment factors that will be applicable to discharges occurring on or after October 1, 2024. We expect Table 15 will be posted on the CMS website in the Fall 2024.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites identified in this final rule should contact Michael Treitel at (410) 786–4552.

The following IPPS tables for this final rule are generally available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. Click on the link on the left side of the screen titled “FY 2025 IPPS Final Rule Home Page” or “Acute Inpatient—Files—for Download.”

* For LTCHs that fail to submit quality reporting data for FY 2025 in accordance with the LTCH Quality Reporting Program (LTCH QRP), the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

BILLING CODE 4120-01-C

Appendix A: Economic Analyses

I. Regulatory Impact Analysis

A. Statement of Need

This final rule is necessary to make payment and policy changes under the IPPS for Medicare acute care hospital inpatient services for operating and capital-related costs as well as for certain hospitals and hospital units excluded from the IPPS. This final rule also is necessary to make payment and policy changes for Medicare hospitals under the LTCH PPS. Also, as we note later in this Appendix, the primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs, while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this final rule, such as the updates to the IPPS and LTCH PPS rates, and the final policies and discussions relating to applications for new technology add-on payments, are needed to further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries.

We expect that these changes would ensure that the outcomes of the prospective payment systems are reasonable and provide equitable payments, while avoiding or minimizing unintended adverse consequences.

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

a. Update to the IPPS Payment Rates

In accordance with section 1886(b)(3)(B) of the Act and as described in section V.B. of the preamble to this final rule, we are updating the national standardized amount for inpatient hospital operating costs by the applicable percentage increase of 2.9 percent (that is, a 3.4 percent market basket update with a reduction of 0.5 percentage point for the productivity adjustment). We are also applying the applicable percentage increase (including the market basket update and the productivity adjustment) to the hospital-specific rates.

Subsection (d) hospitals that do not submit quality information under rules established by the Secretary and that are meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act would receive an applicable percentage increase of 2.05 percent which reflects a one-quarter percent reduction of the market basket update for failure to submit quality data. Hospitals that are identified as not meaningful EHR users and do submit quality information under section 1886(b)(3)(B)(viii) of the Act would receive an applicable percentage increase of 0.35 percent which reflects a three-quarter percent reduction of the market basket update for being identified as not a meaningful EHR user.

Hospitals that are identified as not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act and also do not

submit quality data under section 1886(b)(3)(B)(viii) of the Act would receive an applicable percentage increase of -0.5 percent, which reflects a one-quarter percent reduction of the market basket update for failure to submit quality data and a three-quarter percent reduction of the market basket update for being identified as not a meaningful EHR user.

b. Changes for the Add-On Payments for New Services and Technologies

Consistent with sections 1886(d)(5)(K) and (L) of the Act, we review applications for new technology add-on payments based on the eligibility criteria at 42 CFR 412.87. As set forth in 42 CFR 412.87(f)(1), we consider whether a technology meets the criteria for the new technology add-on payment and announce the results as part of the annual updates and changes to the IPPS. New technology add-on payments are not budget neutral.

As discussed in section I.E.8. of the preamble of this final rule, we are finalizing our proposal that, beginning with new technology add-on payments for FY 2026, in assessing whether to continue the new technology add-on payments for those technologies that are first approved for new technology add-on payments in FY 2025 or a subsequent year, we will extend new technology add-on payments for an additional fiscal year when the 3-year anniversary date of the product's entry onto the U.S. market occurs on or after October 1 of the upcoming fiscal year. For technologies that were first approved for new technology add-on payments prior to FY 2025, including for technologies we determine to be substantially similar to those technologies, we will continue to use the midpoint of the upcoming fiscal year (April 1) when determining whether a technology would still be considered "new" for purposes of new technology add-on payments. Similarly, we are also finalizing that beginning with applications for new technology add-on payments for FY 2026, we will use the start of the fiscal year (October 1) instead of April 1 to determine whether to approve new technology add-on payment for that fiscal year. We note that this change will be effective beginning with new technology add-on payments for FY 2026, and there would be no impact of this change in FY 2025. For purposes of estimating the impact of our finalized changes to the calculation of the inpatient new technology add-on payment—under the assumption that all of the FY 2025 new technology add-on payment applications that have been FDA-approved or -cleared or have a documented delay in market availability between October 1, 2023, and March 30, 2024 (as discussed in section I.E.5. and section I.E.6. of the preamble of this final rule), and that are first approved for new technology add-on payments in FY 2025, would continue to meet the specified criteria for new technology add-on payments for FY 2026 and FY 2027—this policy would increase IPPS spending by approximately \$459 million in FY 2027. Because it is difficult to predict the actual new technology add-on payment for each case, the estimated impact in this final rule is based on the applicants' estimated cost and volume

projections at the time they submitted their application (or based on updated figures provided during the public comment period) and as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment.

As discussed in section I.E.9. of the preamble of this final rule, we are finalizing our proposal that beginning with new technology add-on payment applications for FY 2026, we will no longer consider a hold status to be an inactive status for the purposes of eligibility for the new technology add-on payment under our existing policy for technologies that are not already FDA market authorized for the indication that is the subject of the new technology add-on payment application. Under existing policy, applicants must have a complete and active FDA market authorization request at the time of new technology add-on payment application submission and must provide documentation of FDA acceptance (for a 510k application or De Novo Classification request) or filing (for a PMA, NDA, or BLA) to CMS at the time of application submission, consistent with the type of FDA marketing authorization application the applicant has submitted to FDA. We note that the cost impact of this proposal is not estimable. We expect that some applicants who were ineligible in FY 2025 may apply for new technology add-on payments for FY 2026.

As discussed in section I.E.10. of the preamble of this final rule, we are finalizing our proposal that, subject to our review of the new technology add-on payment eligibility criteria, for a gene therapy approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule that is indicated and used specifically for the treatment of sickle cell disease (SCD), effective with discharges on or after October 1, 2024 and concluding at the end of the 2- to 3-year newness period for such therapy, if the costs of a discharge (determined by applying CCRs as described in § 412.84(h)) involving the use of such therapy for the treatment of SCD exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. We estimate that for the two gene therapy technologies that are approved for new technology add-on payments in this final rule that are indicated for and used in the treatment of SCD (as discussed in section I.E.5. of the preamble of this final rule), these changes to the calculation of the inpatient new technology add-on payment will increase IPPS spending by approximately \$38 million in FY 2025. Because it is difficult to predict the actual new technology add-on payment for each case, the estimated impact in this final rule is based on the applicants' estimated cost and volume projections at the time they submitted their application and as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment.

c. Continuation of the Low Wage Index Hospital Policy

To help mitigate wage index disparities between high wage and low wage hospitals, in the FY 2020 IPPS/LTCH PPS rule (84 FR 42326 through 42332), we adopted a policy to increase the wage index values for certain hospitals with low wage index values (the low wage index hospital policy). This policy was adopted in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals. We indicated our intention that this policy would be effective for at least 4 years, beginning in FY 2020, to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. We also stated we intended to revisit the issue of the duration of this policy in future rulemaking as we gained experience under the policy. As discussed in section III.G.5. of the preamble of this final rule, while we are using the FY 2021 cost report data for the FY 2025 wage index, we are unable to comprehensively evaluate the effect, if any, the low wage index hospital policy had on hospitals' wage increases during the years the COVID-19 PHE was in effect. We believe it is necessary to wait until we have useable data from fiscal years after the PHE before reaching any conclusions about the efficacy of the policy. Therefore, for FY 2025, we are finalizing that the low wage index hospital policy and the related budget neutrality adjustment would be effective for at least 3 more years, beginning in FY 2025.

d. Implementation of Section 4122 of the Consolidated Appropriations Act, 2023 (CAA, 2023)

As discussed in section V.G.2. of the preamble of this final rule, we are finalizing our proposal to implement section 4122 of the Consolidated Appropriations Act (CAA) of 2023. Section 4122(a) of the CAA, 2023, amended section 1886(h) of the Act by adding a new section 1886(h)(10) of the Act requiring the distribution of additional residency positions (also referred to as slots) to hospitals. Section 4122 of the CAA of 2023 makes available 200 residency positions, to be distributed beginning in FY 2026, with priority given to hospitals in 4 statutorily specified categories. At least 100 of the 200 residency positions made available under section 4122 of the CAA of 2023 shall be distributed for psychiatry or psychiatry subspecialty residency training programs. We expect these changes will make appropriate Medicare GME payments to hospitals for Medicare's share of the direct costs to operate the hospital's approved medical residency program, and for IPPS hospitals the indirect costs associated with residency programs that may result in higher patient care costs, consistent with the law. We expect that these changes will ensure that the outcomes of these Medicare payment policies are reasonable and provide equitable payments, while avoiding or minimizing unintended adverse consequences.

e. Additional Payment for Uncompensated Care to Medicare Disproportionate Share Hospitals (DSHs) and Supplemental Payment

In this final rule, as required by section 1886(r)(2) of the Act, we are updating our estimates of the 3 factors used to determine uncompensated care payments for FY 2025. Beginning with FY 2023, we adopted a multiyear averaging methodology to determine Factor 3 of the uncompensated care payment methodology, which would help to mitigate against large fluctuations in uncompensated care payments from year to year. Under this methodology, for FY 2025 and subsequent fiscal years, we would determine Factor 3 for all eligible hospitals using a 3-year average of the data on uncompensated care costs from Worksheet S-10 for the 3 most recent fiscal years for which audited data are available. Specifically, we would use a 3-year average of audited data on uncompensated care costs from Worksheet S-10 from the FY 2019, FY 2020, and FY 2021 cost reports to calculate Factor 3 for FY 2025 for all eligible hospitals. Beginning with FY 2023 (87 FR 49047 through 49051), we also established a supplemental payment for IHS and Tribal hospitals and hospitals located in Puerto Rico. In section IV.D. of the preamble of this final rule, we summarize the ongoing methodology for supplemental payments.

f. Rural Community Hospital Demonstration Program

The Rural Community Hospital Demonstration (RCHD) was authorized originally for a 5-year period by section 410A of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108-173), and it was extended for another 5-year period by section 3123 and 10313 of the Affordable Care Act (Pub. L. 111-148). Section 15003 of the 21st Century Cures Act (Cures Act) (Pub. L. 114-255) extended the demonstration for an additional 5-year period, and section 128 of the Consolidated Appropriations Act of 2021 (Pub. L. 116-159) included an additional 5-year re-authorization. CMS has conducted the demonstration since 2004, which allows enhanced, cost-based payment for Medicare inpatient services for up to 30 small rural hospitals.

The authorizing legislation imposes a strict budget neutrality requirement. In this final rule, we summarize the status of the demonstration program, and the ongoing methodologies for implementation and budget neutrality.

2. Frontier Community Health Integration Project (FCHIP) Demonstration

The Frontier Community Health Integration Project (FCHIP) demonstration was authorized under section 123 of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110-275), as amended by section 3126 of the Affordable Care Act of 2010 (Pub. L. 114-158), and most recently re-authorized and extended by the Consolidated Appropriations Act of 2021 (Pub. L. 116-260). The legislation authorized a demonstration project to allow eligible entities to develop and test new models for the delivery of health care in order to improve access to and better integrate the

delivery of acute care, extended care and other health care services to Medicare beneficiaries in certain rural areas. The FCHIP demonstration initial period was conducted in 10 critical access hospitals (CAHs) from August 1, 2016, to July 31, 2019, and the demonstration "extension period" began on January 1, 2022, to run through June 30, 2027.

The authorizing legislation requires the FCHIP demonstration to be budget neutral. In this final rule, we proposed to continue with the budget neutrality approach used in the demonstration initial period for the demonstration extension period—to offset payments across CAHs nationally—should the demonstration incur costs to Medicare.

3. Update to the LTCH PPS Payment Rates

As discussed in section VIII.D. of the preamble of this final rule, we are rebasing and revising the 2017-based LTCH market basket to reflect a 2022 base year. The update to the LTCH PPS standard Federal payment rate for FY 2025 is discussed in section VIII.C.2. of the preamble of this final rule. For FY 2025, we are updating the LTCH PPS standard Federal payment rate by 3.0 percent (that is, a 3.5 percent market basket update with a reduction of 0.5 percentage point for the productivity adjustment, as required by section 1886(m)(3)(A)(i) of the Act). LTCHs that failed to submit quality data, as required by 1886(m)(5)(A)(i) of the Act would receive an update of 1.0 percent for FY 2025, which reflects a 2.0 percentage point reduction for failure to submit quality data.

4. Hospital Quality Programs

Section 1886(b)(3)(B)(viii) of the Act requires subsection (d) hospitals to report data in accordance with the requirements of the Hospital IQR Program for purposes of measuring and making publicly available information on health care quality and links the quality data submission to the annual applicable percentage increase. Sections 1886(b)(3)(B)(ix), 1886(n), and 1814(l) of the Act require eligible hospitals and CAHs to demonstrate they are meaningful users of certified EHR technology for purposes of electronic exchange of health information to improve the quality of health care and links the submission of information demonstrating meaningful use to the annual applicable percentage increase for eligible hospitals and the applicable percent for CAHs. Section 1886(m)(5) of the Act requires each LTCH to submit quality measure data in accordance with the requirements of the LTCH QRP for purposes of measuring and making publicly available information on health care quality, and in order to avoid a 2-percentage point reduction. Section 1886(o) of the Act requires the Secretary to establish a value-based purchasing program under which value-based incentive payments are made in a fiscal year to hospitals that meet the performance standards established on an announced set of quality and efficiency measures for the fiscal year. The purposes of the Hospital VBP Program include measuring the quality of hospital inpatient care, linking hospital measure performance to payment, and making publicly available information on hospital quality of care. Section 1886(p) of the Act requires a reduction in payment

for subsection (d) hospitals that rank in the worst-performing 25 percent with respect to measures of hospital-acquired conditions under the HAC Reduction Program for the purpose of measuring HACs, linking measure performance to payment, and making publicly available information on health care quality. Section 1886(q) of the Act requires a reduction in payment for subsection (d) hospitals for excess readmissions based on measures for applicable conditions under the Hospital Readmissions Reduction Program for the purpose of measuring readmissions, linking measure performance to payment, and making publicly available information on health care quality. Section 1866(k) of the Act applies to hospitals described in section 1886(d)(1)(B)(v) of the Act (referred to as “PPS-exempt cancer hospitals” or “PCHs”) and requires PCHs to report data in accordance with the requirements of the PCHQR Program for purposes of measuring and making publicly available information on the quality of care furnished by PCHs. However, there is no reduction in payment to a PCH that does not report data.

5. Other Provisions

a. Transforming Episode Accountability Model (TEAM)

In section X.A. of the preamble of this final rule, we are testing a new alternative payment model called the Transforming Episode Accountability Model (TEAM). Section 1115A of the Act authorizes the testing of innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and CHIP beneficiaries while reducing program expenditures. The underlying issue addressed by the model is that under FFS, Medicare makes separate payments to providers and suppliers for items and services furnished to a beneficiary over the course of an episode. Because providers and suppliers are paid for each individual item or service delivered, this may lead to care that is fragmented, unnecessary or duplicative, while making it challenging to invest in quality improvement or care coordination that would maximize patient benefit. We anticipate the model may reduce costs while maintaining or improving quality of care by bundling payment for items and services for a given episode and holding TEAM participants accountable for spending and quality performance, as well as by providing incentives to promote high quality and efficient care.

This final rule will create and test an episode-based payment model under the authority at section 1115A of the Act in which selected acute care hospitals, located within the mandatory Core Based Statistical Areas (CBSAs) that CMS selected for model implementation, will be required to participate. CMS will allow a one-time opportunity for hospitals that participate until the last day of the last performance period in the BPCI Advanced model or the last day of the last performance year of the CJR model, that are not located in a mandatory CBSA selected for TEAM participation to voluntarily opt into

TEAM.¹¹⁰⁸ The model builds on and incorporates certain model features from other CMS Innovation Center episode-based payment models such as the BPCI Advanced Model and the CJR Model. Testing this new model allows us to learn more about the patterns of potentially inefficient utilization of health care services, as well as how to improve the beneficiary care experience during care transitions and incentivize quality improvements for common surgical episodes. This information may inform future Medicare payment policy and potentially establish the framework for managing clinical episodes as a standard practice in Traditional Medicare.

Under the model, acute care hospitals will be accountable for five episode categories: coronary artery bypass graft, lower extremity joint replacement, major bowel procedure, surgical hip/femur fracture treatment excluding lower extremity joint replacement, and spinal fusion. We believe the model may benefit Medicare beneficiaries through improving the coordination of items and services paid for through Medicare FFS payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode. The model will also provide an opportunity to evaluate the nature and extent of reductions in the cost of treatment by providing financial incentives for providers to coordinate their efforts to meet patient needs and prevent future costs. The model may benefit beneficiaries by holding hospitals accountable for the quality and cost of care for 30 day episodes after a beneficiary is discharged from the inpatient stay or hospital outpatient procedure, which could encourage investment in infrastructure and redesigned care processes that promote high quality and efficient service delivery that focuses on patient-centered care.

We received no comments on the statement of need and therefore are finalizing this provision without modification.

b. Provider Reimbursement Review Board (PRRB)

Section 1878 of the Act (42 U.S.C. 1395oo) established by the Social Security Amendments of 1972, requires the Secretary to appoint individuals to the PRRB for a 3-year term of office. In regulations promulgated after the enactment of this provision, 42 CFR 405.1845 stipulated that no member shall serve more than two consecutive 3-year terms of office. In section X.B. of the preamble of this final rule, we finalize our proposal to increase from two to three the number of consecutive terms that a PRRB Member is eligible to serve. We believe that extending the length of service of Board Members could have an increased effect on the PRRB’s productivity and efficiency as well as increase the number of individuals who seek a position on the PRRB.

c. Payment Error Rate Measurement (PERM)

Section 202 of the Further Consolidated Appropriations Act of 2020 (CAA; Pub. L.

116–94) amended Medicaid program integrity requirements in Puerto Rico. Puerto Rico was required to publish a plan, developed by Puerto Rico in coordination with CMS, and approved by the CMS Administrator, not later than 18 months after the CAA’s enactment, for how Puerto Rico would develop measures to comply with the PERM requirements of 42 CFR part 431, subpart Q. Puerto Rico published this plan on June 20, 2021, that was approved by the CMS Administrator on June 22, 2021.

In section X.E. of the preamble of this final rule, we discuss the proposal to remove the exclusion of Puerto Rico from the PERM program found at 42 CFR 431.954(b)(3). In compliance with section 202 of the CAA, Puerto Rico has developed measures to comply with the PERM requirements of 42 CFR part 431, subpart Q. Therefore, we proposed that the PERM program become applicable to Puerto Rico. We are finalizing our proposal and believe that including Puerto Rico in the PERM program will increase visibility into its Medicaid and CHIP operations and improve its program integrity efforts, that protect taxpayer dollars from improper payments.

d. Hospital CoP Reporting Requirements

Under sections 1861(e)(9) and 1820(e)(3) of the Act, hospitals and CAHs, respectively, under the Medicare and Medicaid programs must meet standards for the health and safety of patients receiving services in those facilities. Rules issued under that statutory authority require such facilities to engage in the surveillance, prevention, and control of health care-associated acute respiratory illnesses. In 2020, we published detailed reporting standards related specifically to COVID–19 for hospitals and CAHs. Those standards sunset on April 30, 2024. In section X.F. of the preamble of this final rule, we will establish streamlined standards that apply to a range of acute respiratory illnesses, not just to COVID–19, and will contribute to the ability to combat potential future threats from either existing or potential future sources of such infections.

B. Overall Impact

We have examined the impacts of this final rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), Executive Order 14094 on Modernizing Regulatory Review (April 6, 2023), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (CRA) (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 14094 amends section 3(f) of Executive Order 12866 to define a

¹¹⁰⁸ For the BPCI Advanced model, the last day of the last performance period is December 31, 2025. For the CJR model, the last day of the last performance year is December 31, 2024.

“significant regulatory action” as any regulatory action that is likely to result in a action that may: (1) have an annual effect on the economy of \$200 million or more in any 1 year, or adversely affect in a material way the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, territorial, or tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise legal or policy issues for which centralized review would meaningfully further the President’s priorities or the principles set forth in this Executive Order.

A regulatory impact analysis (RIA) must be prepared for a regulatory action that is significant under section 3(f)(1). Based on our estimates, OMB’S Office of Information and Regulatory Affairs (OIRA) has determined this rulemaking is significant under section 3(f)(1) of E.O. 12866. Accordingly, we have prepared a regulatory impact analysis that to the best of our ability presents the costs and benefits of the rulemaking. Pursuant to Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act), OIRA has also determined that this rule meets the criteria set forth in 5 U.S.C. OMB has reviewed these regulations, and the Departments have provided the following assessment of their impact.

We estimate that the changes for FY 2025 acute care hospital operating and capital payments would redistribute amounts in excess of \$200 million to acute care hospitals. The applicable percentage increase to the IPPS rates required by the statute, in conjunction with other payment changes in this final rule, would result in an estimated \$2.9 billion increase in FY 2025 payments, primarily driven by the changes in FY 2025 operating payments, including uncompensated care payments, FY 2025 capital payments, the expiration of the temporary changes in the low-volume hospital program and the expiration of the MDH program. These changes are relative to payments made in FY 2024. The impact analysis of the capital payments can be found in section I.I. of the Appendix in this final rule. In addition, as described in section I.J. of this Appendix, LTCHs are expected to experience an increase in payments by approximately \$58 million in FY 2025 relative to FY 2024.

Our operating payment impact estimate includes the 2.9 percent hospital update to the standardized amount (reflecting the 3.4 percent market basket update reduced by the 0.5 percentage point productivity adjustment). The estimates of IPPS operating payments to acute care hospitals do not reflect any changes in hospital admissions or real case-mix intensity, which would also affect overall payment changes.

The analysis in this Appendix, in conjunction with the remainder of this document, demonstrates that this final rule is consistent with the regulatory philosophy and principles identified in Executive Orders

12866 and 13563, the RFA, and section 1102(b) of the Act. This final rule would affect payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant. Finally, in accordance with the provisions of Executive Order 12866, the Office of Management and Budget has reviewed this final rule.

C. Objectives of the IPPS and the LTCH PPS

The primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs, while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this final rule would further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these changes would ensure that the outcomes of the prospective payment systems are reasonable and equitable, while avoiding or minimizing unintended adverse consequences.

Because this final rule contains a range of policies, we refer readers to the section of the final rule where each policy is discussed. These sections include the rationale for our decisions, including the need for the policy.

D. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our policy changes, as well as statutory changes effective for FY 2025, on various hospital groups. We estimate the effects of individual policy changes by estimating payments per case, while holding all other payment policies constant. We use the best data available, but, generally unless specifically indicated, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, case mix, changes to the Medicare population, or incentives. In addition, we discuss limitations of our analysis for specific policies in the discussion of those policies as needed.

E. Hospitals Included in and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital related- costs of acute care hospitals encompass most general short-term, acute care hospitals that participate in the Medicare program. There were 25 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short term, acute care hospitals, hospitals in Maryland are paid in accordance with the Maryland Total Cost of Care Model, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, 6 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) receive payment for inpatient

hospital services they furnish on the basis of reasonable costs, subject to a rate-of-increase ceiling.

As of March 2024, there were 3,082 IPPS acute care hospitals included in our analysis. This represents approximately 53 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There also are approximately 1,381 CAHs. These small, limited service hospitals are paid on the basis of reasonable costs, rather than under the IPPS. IPPS-excluded hospitals and units, which are paid under separate payment systems, include IPFs, IRFs, LTCHs, RNHCIs, children’s hospitals, cancer hospitals, extended neoplastic disease care hospital, and short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. Changes in the prospective payment systems for IPFs and IRFs are made through separate rulemaking. Payment impacts of changes to the prospective payment systems for these IPPS-excluded hospitals and units are not included in this final rule. The impact of the update and policy changes to the LTCH PPS for FY 2025 is discussed in section I.J. of this Appendix.

F. Quantitative Effects of the Policy Changes Under the IPPS for Operating Costs

1. Basis and Methodology of Estimates

In this final rule, we are announcing policy changes and payment rate updates for the IPPS for FY 2025 for operating costs of acute care hospitals. The FY 2025 updates to the capital payments to acute care hospitals are discussed in section I.I. of the Appendix in this final rule.

Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that total FY 2025 operating payments would increase by 2.8 percent, compared to FY 2024. The impacts do not reflect changes in the number of hospital admissions or real case-mix intensity, which would also affect overall payment changes.

We have prepared separate impact analyses of the changes to each system. This section deals with the changes to the operating inpatient prospective payment system for acute care hospitals. Our payment simulation model relies on the best available claims data to enable us to estimate the impacts on payments per case of certain changes in this final rule. However, there are other changes for which we do not have data available that would allow us to estimate the payment impacts using this model. For those changes, we have attempted to predict the payment impacts based upon our experience and other more limited data.

The data used in developing the quantitative analyses of changes in payments per case presented in this section are taken from the FY 2023 MedPAR file and the most current Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the changes to the operating PPS do not incorporate cost data, data from the best available hospital cost reports were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not adjust for future changes in such

variables as admissions, lengths of stay, or underlying growth in real case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each change. Third, we use various data sources to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from the different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2023 MedPAR file, we simulate payments under the operating IPPS given various combinations of payment parameters. As described previously, Indian Health Service hospitals and hospitals in Maryland were excluded from the simulations. The impact of payments under the capital IPPS, and the impact of payments for costs other than inpatient operating costs, are not analyzed in this section. Estimated payment impacts of the capital IPPS for FY 2025 are discussed in section I.I. of this Appendix. We note, as discussed in section III. of the preamble of this final rule, we are finalizing our proposal to adopt the new OMB labor market area delineations as described in the July 21, 2023 OMB Bulletin No. 23–01, effective for the FY 2025 IPPS wage index. We also note, as discussed in section II.A.4. of the Addendum of this final rule, we used wage indexes based on the new OMB delineations in determining aggregate payments on each side of the comparison for the changes discussed below, except where otherwise noted (for example, the FY 2024 baseline simulation model). This is consistent with our discussion in section II.A.4. of the Appendix of this final rule, to use wage indexes based on the new OMB delineations in the determination of all of the budget neutrality factors in order to properly determine aggregate payments on each side of the comparison for our budget neutrality calculations. We further note that as discussed in that same section, consistent

with past practice as finalized in the FY 2005 IPPS final rule (69 FR 49034), we are not adopting the new OMB delineations themselves in a budget neutral manner. We continue to believe that the revision to the labor market areas in and of itself does not constitute an “adjustment or update” to the adjustment for area wage differences, as provided under section 1886(d)(3)(E) of the Act.

We discuss the following changes:

- The effects of the application of the applicable percentage increase of 2.9 percent (that is, a 3.4 percent market basket update with a reduction of 0.5 percentage point for the productivity adjustment), and the applicable percentage increase (including the market basket update and the productivity adjustment) to the hospital-specific rates.

- The effects of the changes to the relative weights and MS–DRG GROUPER.

- The effects of the changes in hospitals’ wage index values reflecting updated wage data from hospitals’ cost reporting periods beginning during FY 2021, compared to the FY 2020 wage data, to calculate the FY 2025 wage index.

- The effects of the geographic reclassifications by the MGCRB (as of publication of this final rule) that would be effective for FY 2025.

- The effects of the rural floor with the application of the national budget neutrality factor to the wage index.

- The effects of the imputed floor wage index adjustment. This provision is not budget neutral.

- The effects of the frontier State wage index adjustment under the statutory provision that requires hospitals located in States that qualify as frontier States to not have a wage index less than 1.0. This provision is not budget neutral.

- The effects of the implementation of section 1886(d)(13) of the Act, which provides for an increase in a hospital’s wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties

with higher wage indexes for FY 2025. This provision is not budget neutral.

- The effects of the expiration of the special payment status for MDHs beginning January 1, 2025 under current law. As discussed elsewhere in this final rule, section 307 of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, extended the MDH program for FY 2025 discharges occurring before January 1, 2025. Prior to enactment of the CAA, 2024, the MDH program was only to be in effect through the end of FY 2024. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2025. As a result, MDHs that currently receive the higher of payments made based on the Federal rate or the payments made based on the Federal rate plus 75 percent of the difference between payments based on the Federal rate and the hospital-specific rate will be paid based on the Federal rate starting January 1, 2025.

- The total estimated change in payments based on the FY 2025 policies relative to payments based on FY 2024 policies.

In accordance with section 1886(b)(3)(B)(i) of the Act, each year we update the national standardized amount for inpatient hospital operating costs by a factor called the “applicable percentage increase.” For FY 2025, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount.

We refer readers to section V.B. of the preamble of this final rule for a complete discussion on the FY 2025 inpatient hospital update. The table that follows shows these four scenarios:

BILLING CODE 4120–01–P

FY 2025 APPLICABLE PERCENTAGE INCREASE FOR THE IPPS				
FY 2025	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
Market Basket Rate-of-Increase	3.4	3.4	3.4	3.4
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0	0	-0.85	-0.85
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0	-2.55	0	-2.55
Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.5	-0.5	-0.5	-0.5
Applicable Percentage Increase Applied to Standardized Amount	2.9	0.35	2.05	-0.5

BILLING CODE 4120-01-C

To illustrate the impact of the FY 2025 changes, our analysis begins with a FY 2024 baseline simulation model using: the FY 2024 applicable percentage increase of 2.6 percent; the FY 2024 MS-DRG GROUPER (Version 41); the FY 2024 CBSA designations for hospitals based on the OMB definitions from the 2010 Census; the FY 2024 wage index; and no MGCRB reclassifications. Outlier payments are set at 5.1 percent of total operating MS-DRG and outlier payments for modeling purposes.

We note the following at the time this impact analysis was prepared:

- 90 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2025 because they failed the quality data submission process or did not choose to participate, but are meaningful EHR users. For purposes of the simulations shown later in this section, we modeled the payment changes for FY 2025 using a reduced update for these hospitals.
- 82 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2025 because they are identified as not meaningful EHR users that do submit quality information under section 1886(b)(3)(B)(viii) of the Act. For purposes of the simulations shown in this section, we modeled the payment changes for FY 2025 using a reduced update for these hospitals.
- 27 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2025 because they are identified as not meaningful EHR users that do not submit quality data under section 1886(b)(3)(B)(viii) of the Act.

Each policy change, statutory or otherwise, is then added incrementally to this baseline, finally arriving at an FY 2025 model incorporating all of the changes. This simulation allows us to isolate the effects of each change.

Our comparison illustrates the percent change in payments per case from FY 2024 to FY 2025. Two factors not discussed separately have significant impacts here. The first factor is the update to the standardized amount (see the table earlier in this section that shows the four applicable percentage increases that can be applied to the national standardized amount for FY 2025). We note, section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Because the Act sets the update factor for SCHs and MDHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, the applicable percentage increases to the hospital-specific rates applicable to SCHs and MDHs for FY 2025 are the same as the four applicable percentage increases in the table earlier in this section.

A second significant factor that affects the changes in hospitals' payments per case from FY 2024 to FY 2025 is the change in hospitals' geographic reclassification status from one year to the next. That is, payments

may be reduced for hospitals reclassified in FY 2024 that are no longer reclassified in FY 2025. Conversely, payments may increase for hospitals not reclassified in FY 2024 that are reclassified in FY 2025.

2. Analysis of Table I

Table I displays the results of our analysis of the changes for FY 2025. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The top row of the table shows the overall impact on the 3,082 acute care hospitals included in the analysis.

The next two rows of Table I contain hospitals categorized according to their geographic location: urban and rural. There are 2,392 hospitals located in urban areas and 690 hospitals in rural areas included in our analysis. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The last groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2025 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban and rural show that the numbers of hospitals paid based on these categorizations after consideration of geographic reclassifications (including reclassifications under sections 1886(d)(8)(B) and 1886(d)(8)(E) of the Act) are 1,714, and 1,368, respectively.

The next three groupings examine the impacts of the changes on hospitals grouped by whether or not they have GME residency

programs (teaching hospitals that receive an IME adjustment) or receive Medicare DSH payments, or some combination of these two adjustments. There are 1,832 nonteaching hospitals in our analysis, 958 teaching hospitals with fewer than 100 residents, and 292 teaching hospitals with 100 or more residents.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next category groups together hospitals considered urban or rural, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next six rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs and RRCs) and reclassification status from urban to rural in accordance with section 1886(d)(8)(E) of the Act. Of the hospitals that are not reclassified from urban to rural, there are 155 RRCs, 244 SCHs, and 119 hospitals that are both SCHs and RRCs. Of the hospitals that are reclassified from urban to rural, there are 579 RRCs, 34 SCHs, and 46 hospitals that are both SCHs and RRCs.

The next series of groupings are based on the type of ownership and the hospital's Medicare and Medicaid utilization expressed as a percent of total inpatient days. These

data were taken from the most recent available Medicare cost reports.

The next grouping concerns the geographic reclassification status of hospitals. The first subgrouping is based on whether a hospital is reclassified or not. The second and third subgroupings are based on whether urban and rural hospitals were reclassified by the MGCRB for FY 2025 or not, respectively. The fourth subgrouping displays hospitals that reclassified from urban to rural in accordance with section 1886(d)(8)(E) of the Act. The fifth subgrouping displays hospitals deemed urban in accordance with section 1886(d)(8)(B) of the Act.

¹ Because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2023, and hospital cost report data are from the latest available reporting periods.

a. Effects of the Hospital Update (Column 1)

As discussed in section V.B. of the preamble of this final rule, this column includes the hospital update, including the 3.4 percent market basket rate-of-increase reduced by the 0.5 percentage point for the productivity adjustment. As a result, we are making a 2.9 percent update to the national standardized amount. This column also includes the update to the hospital-specific rates which includes the 3.4 percent market basket rate-of-increase reduced by 0.5 percentage point for the productivity adjustment. As a result, we are making a 2.9 percent update to the hospital-specific rates. Overall, hospitals would experience a 2.9 percent increase in payments primarily due to the combined effects of the hospital update to the national standardized amount and the hospital update to the hospital-specific rate.

b. Effects of the Changes to the MS-DRG Reclassifications and Relative Cost-Based Weights With Recalibration Budget Neutrality (Column 2)

Column 2 shows the effects of the changes to the MS-DRGs and relative weights with the application of the recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. Consistent with section 1886(d)(4)(C)(ii) of the Act, we calculated a recalibration budget neutrality factor to account for the changes in MS-DRGs and relative weights to ensure that the overall payment impact is budget neutral. We also applied the permanent 10-percent cap on the reduction in a MS-DRG's relative weight in a given year and an associated recalibration cap budget neutrality factor to account for the 10-percent cap on relative weight reductions to ensure that the overall payment impact is budget neutral.

As discussed in section II.D. of the preamble of this final rule, for FY 2025, we calculated the MS-DRG relative weights using the FY 2023 MedPAR data grouped to the Version 42 (FY 2025) MS-DRGs. The reclassification changes to the GROUPEER are described in more detail in section II.C. of the preamble of this final rule.

The "All Hospitals" line in Column 2 indicates that changes due to the MS-DRGs and relative weights would result in a 0.0 percent change in payments with the application of the recalibration budget neutrality factor of 0.99719 and the recalibration cap budget neutrality factor of 0.999874 to the standardized amount.

c. Effects of the Wage Index Changes (Column 3)

Column 3 shows the impact of the updated wage data, with the application of the wage budget neutrality factor. The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core Based Statistical Areas (CBSAs) established by OMB. The current statistical standards (based on OMB

standards) used in FY 2025 are discussed in section III.A.2. of the preamble of this final rule. Specifically, we are implementing the new OMB delineations as described in the July 21, 2023 OMB Bulletin No. 23-01, effective beginning with the FY 2025 IPPS wage index.

Section 1886(d)(3)(E) of the Act requires that, beginning October 1, 1993, we annually update the wage data used to calculate the wage index. In accordance with this requirement, the wage index for acute care hospitals for FY 2025 is based on data submitted for hospital cost reporting periods, beginning on or after October 1, 2020 and before October 1, 2021. The estimated impact of the updated wage data on hospital payments is isolated in Column 3 by holding the other payment parameters constant in this simulation. That is, Column 3 shows the percentage change in payments when going from a model using the FY 2024 wage index, the labor-related share of 67.6 percent, and having a 100-percent occupational mix adjustment applied, to a model using the FY 2025 pre-reclassification wage index with the labor-related share of 67.6 percent, also having a 100-percent occupational mix adjustment applied, while holding other payment parameters, such as use of the Version 42 MS-DRG GROUPEER constant. As noted earlier and as discussed in section II.A.4. of the Addendum of this final rule, we used wage indexes based on the new OMB delineations in determining aggregate payments on each side of the comparison/model. The FY 2025 occupational mix adjustment is based on the CY 2022 occupational mix survey.

In addition, the column shows the impact of the application of the wage budget neutrality to the national standardized amount. In FY 2010, we began calculating separate wage budget neutrality and recalibration budget neutrality factors, in accordance with section 1886(d)(3)(E) of the Act, which specifies that budget neutrality to account for wage index changes or updates made under that subparagraph must be made without regard to the 62 percent labor-related share guaranteed under section 1886(d)(3)(E)(ii) of the Act. Therefore, for FY 2025, we are calculating the wage budget neutrality factor to ensure that payments under the updated wage data and the labor-related share of 67.6 percent are budget neutral, without regard to the lower labor-related share of 62 percent applied to hospitals with a wage index less than or equal to 1.0. In other words, the wage budget neutrality factor is calculated under the assumption that all hospitals receive the higher labor-related share of the standardized amount. The FY 2025 wage budget neutrality factor is 1.000114 and the overall payment change is 0 percent.

Column 3 shows the impacts of updating the wage data. Overall, the new wage data and the labor-related share, combined with the wage budget neutrality adjustment, would lead to no change for all hospitals, as shown in Column 3.

In looking at the wage data itself, the national average hourly wage would increase 9.20 percent compared to FY 2024. Therefore, the only manner in which to

² This column displays the payment impact of the hospital rate update, including the 2.9 percent update to the national standardized amount and the hospital-specific rate (the 3.4 percent market basket rate-of-increase reduced by 0.5 percentage point for the productivity adjustment).

³ This column displays the payment impact of the changes to the Version 42 GROUPEER, the changes to the relative weights and the recalibration of the MS-DRG weights based on FY 2023 MedPAR data, and the permanent 10-percent cap where the relative weight for a MS-DRG would decrease by more than ten percent in a given fiscal year. This column displays the application of the recalibration budget neutrality factors of 0.99719 and 0.999874.

⁴ This column displays the payment impact of the update to wage index data using FY 2021 cost report data. This column displays the payment impact of the application of the wage budget neutrality factor. The wage budget neutrality factor is 1.000114.

⁵ Shown here are the effects of geographic reclassifications by the Medicare Geographic Classification Review Board (MGCRB). The effects demonstrate the FY 2025 payment impact of going from no reclassifications to the reclassifications scheduled to be in effect for FY 2025. Reclassification for prior years has no bearing on the payment impacts shown here. This column reflects the geographic budget neutrality factor of 0.962791.

⁶ This column displays the effects of the rural floor. The Affordable Care Act requires the rural floor budget neutrality adjustment to be a 100 percent national level adjustment. The rural floor budget neutrality factor applied to the wage index 0.977499.

⁷ This column shows the combined impact of (1) the imputed floor for all-urban states; (2) the policy that requires hospitals located in frontier States have a wage index no less than 1.0; and (3) the policy which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. These are not budget neutral policies.

⁸ This column displays the impact of the expiration of the MDH status on January 1, 2025, a non-budget neutral payment provision.

⁹ This column shows the estimated change in payments from FY 2024 to FY 2025.

maintain or exceed the previous year’s wage index was to match or exceed the 9.20 percent increase in the national average hourly wage.

The following chart compares the shifts in wage index values for hospitals due to changes in the average hourly wage data for FY 2025 relative to FY 2024. These figures reflect changes in the “pre-reclassified, occupational mix-adjusted wage index,” that is, the wage index before the application of

geographic reclassification, the rural floor, the out-migration adjustment, and other wage index exceptions and adjustments. We note that the “post-reclassified wage index” or “payment wage index,” which is the wage index that includes all such exceptions and adjustments (as reflected in Tables 2 and 3 associated with this final rule) is used to adjust the labor-related share of a hospital’s standardized amount, either 67.6 percent or 62 percent, depending on whether a

hospital’s wage index is greater than 1.0 or less than or equal to 1.0. Therefore, the pre-reclassified wage index figures in the following chart may illustrate a somewhat larger or smaller change than would occur in a hospital’s payment wage index and total payment.

The following chart shows the projected impact of changes in the area wage index values for urban and rural hospitals based on the wage data used for this final rule.

FY 2025 Percentage Change in Area Wage Index Values	Number of Hospitals	
	Urban	Rural
Increase 10 percent or more	65	0
Increase greater than or equal to 5 percent and less than 10 percent	299	71
Increase or decrease less than 5 percent	1,824	610
Decrease greater than or equal to 5 percent and less than 10 percent	177	2
Decrease 10 percent or more	6	0
Unchanged	0	0

d. Effects of MGRCB Reclassifications (Column 4)

Our impact analysis to this point has assumed acute care hospitals are paid on the basis of their actual geographic location (with the exception of ongoing policies that provide that certain hospitals receive payments on bases other than where they are geographically located, such as hospitals with a § 412.103 reclassification or “LUGAR” status). The changes in Column 4 reflect the per case payment impact of moving from this baseline to a simulation incorporating the MGRCB decisions for FY 2025.

By spring of each year, the MGRCB makes reclassification determinations that would be effective for the next fiscal year, which begins on October 1. The MGRCB may approve a hospital’s reclassification request for the purpose of using another area’s wage index value. Hospitals may appeal denials by the MGRCB of reclassification requests to the CMS Administrator. Further, hospitals have 45 days from the date the IPPS final rule is issued in the **Federal Register** to decide whether to withdraw or terminate an approved geographic reclassification for the following year.

The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, for purposes of this impact analysis, we are applying an adjustment of 0.962791 to ensure that the effects of the reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are budget neutral (section II.A. of the Addendum to this final rule).

Geographic reclassification generally benefits hospitals in rural areas. We estimate that the geographic reclassification would increase payments to rural hospitals by an average of 2.4 percent. By region, most rural hospital categories would experience increases in payments due to MGRCB reclassifications.

Table 2 listed in section VI. of the Addendum to this final rule and available via

the internet on the CMS website reflects the reclassifications for FY 2025.

e. Effects of the Rural Floor, Including Application of National Budget Neutrality (Column 5)

As discussed in section III.G.1. of the preamble of this final rule, section 4410 of Public Law 105–33 established the rural floor by requiring that the wage index for a hospital in any urban area cannot be less than the wage index applicable to hospitals located in rural areas in the same state. We apply a uniform budget neutrality adjustment to the wage index. Column 5 shows the effects of the rural floor.

The Affordable Care Act requires that we apply one rural floor budget neutrality factor to the wage index nationally. We have calculated a FY 2025 rural floor budget neutrality factor to be applied to the wage index of 0.977499, which would reduce wage indexes by 2.3 percent compared to the rural floor provision not being in effect.

Column 5 shows the projected impact of the rural floor with the national rural floor budget neutrality factor applied to the wage index. The column compares the post-reclassification FY 2025 wage index of providers before the rural floor adjustment to the post-reclassification FY 2025 wage index of providers with the rural floor adjustment.

We estimate that 771 hospitals would receive the rural floor in FY 2025. All IPPS hospitals in our model would have their wage indexes reduced by the rural floor budget neutrality adjustment of 0.977499. We project that, in aggregate, rural hospitals would experience a 0.7 percent decrease in payments as a result of the application of the rural floor budget neutrality adjustment because the rural hospitals do not benefit from the rural floor, but have their wage indexes downwardly adjusted to ensure that the application of the rural floor is budget neutral overall. We project that, in the aggregate, hospitals located in urban areas would experience a 0.1 percent increase in payments, because increases in payments to

hospitals benefitting from the rural floor offset decreases in payments to non-rural floor urban hospitals whose wage index is downwardly adjusted by the rural floor budget neutrality factor. Urban hospitals in the Pacific region would experience a 2.3 percent increase in payments primarily due to the application of the rural floor in California.

f. Effects of the Application of the Imputed Floor, Frontier State Wage Index and Out-Migration Adjustment (Column 6)

This column shows the combined effects of the application of the following: (1) the imputed floor under section 1886(d)(3)(E)(iv)(I) and (II) of the Act, which provides that for discharges occurring on or after October 1, 2021, the area wage index applicable to any hospital in an all-urban State may not be less than the minimum area wage index for the fiscal year for hospitals in that State established using the methodology described in § 412.64(h)(4)(vi) in effect for FY 2018; (2) section 10324(a) of the Affordable Care Act, which requires that we establish a minimum post-reclassified wage index of 1.00 for all hospitals located in “frontier States;” and (3) the effects of section 1886(d)(13) of the Act, which provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index.

These three wage index provisions are not budget neutral and would increase payments overall by 0.3 percent compared to the provisions not being in effect.

Section 1886(d)(3)(E)(iv)(III) of the Act provides that the imputed floor wage index for all-urban States shall not be applied in a budget neutral manner. Therefore, the imputed floor adjustment is estimated to increase IPPS operating payments by approximately \$203 million. There are an estimated 76 providers in Washington DC, New Jersey, Puerto Rico, and Rhode Island

that would receive the imputed floor wage index.

The term “frontier States” is defined in the statute as States in which at least 50 percent of counties have a population density less than 6 persons per square mile. Based on these criteria, 5 States (Montana, Nevada, North Dakota, South Dakota, and Wyoming) are considered frontier States, and an estimated 41 hospitals located in Montana, North Dakota, South Dakota, and Wyoming would receive a frontier wage index of 1.0000. We note, the rural floor for Nevada exceeds the frontier state wage index of 1.000, and therefore no hospitals in Nevada receive the frontier state wage index. Overall, this provision is not budget neutral and is estimated to increase IPPS operating payments by approximately \$55 million.

In addition, section 1886(d)(13) of the Act provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county but work in a different area with a higher wage index. Hospitals located in counties that qualify for the payment adjustment would receive an increase in the wage index that is equal to a weighted average of the difference between the wage index of the resident county, post-reclassification and the higher wage index work area(s), weighted by the overall percentage of workers who are employed in an area with a higher wage index. There are an estimated 203 providers that would receive the out-migration wage adjustment in FY 2025. This out-migration wage adjustment is not budget neutral, and we estimate the impact of these providers receiving the out-migration increase would be approximately \$65 million.

g. Effects of the Expiration of MDH Special Payment Status (Column 7)

Column 7 shows our estimate of the changes in payments due to the expiration of MDH status, a nonbudget neutral payment provision. Section 102 of the Continuing Appropriations and Ukraine Supplemental Appropriations Act, 2023 (Pub. L. 117–180), extended the MDH program (which, under previous law, was to be in effect for discharges before October 1, 2022 only) through December 16, 2022. Section 102 of the Further Continuing Appropriations and Extensions Act, 2023 (Pub. L. 117–229) extended the MDH program through December 23, 2022. Section 4102 of the Consolidated Appropriations Act, 2023 (Pub. L. 117–328), extended the MDH program through FY 2024 (that is for discharges occurring before October 1, 2024). As previously noted, section 307 of the CAA, 2024 (Pub. L. 118–42), enacted on March 9, 2024, further extended the MDH program for FY 2025 discharges occurring before January

1, 2025. Prior to enactment of the CAA, 2024, the MDH program was only to be in effect through the end of FY 2024. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2025. Hospitals that qualify to be MDHs receive the higher of payments made based on the Federal rate or the payments made based on the Federal rate amount plus 75 percent of the difference between payments based on the Federal rate and payments based on the hospital-specific rate (a hospital-specific cost-based rate). Because this provision is not budget neutral, the expiration of this payment provision is estimated to result in a 0.1 percent decrease in payments overall. There are currently 173 MDHs, of which we estimate 117 would be paid under the blended payment of the Federal rate and hospital-specific rate if the MDH program were not set to expire. Because those 117 MDHs will no longer receive the blended payment and will be paid only under the Federal rate for FY 2025 discharges beginning on or after January 1, 2025, it is estimated that those hospitals would experience an overall decrease in payments of approximately \$152 million. The \$152 million overall decrease reflects the 3-month extension of the MDH program through December 31, 2024 under section 307 of the CAA, 2024.

h. Effects of All FY 2025 Changes (Column 8)

Column 8 shows our estimate of the changes in payments per discharge from FY 2024 and FY 2025, resulting from all changes reflected in this final rule for FY 2025. It includes combined effects of the year-to-year change of the factors described in previous columns in the table.

The average increase in payments under the IPPS for all hospitals is approximately 2.8 percent for FY 2025 relative to FY 2024 and for this row is primarily driven by the changes reflected in Column 1. Column 8 includes the annual hospital update of 2.9 percent to the national standardized amount. This annual hospital update includes the 3.4 percent market basket rate-of-increase reduced by the 0.5 percentage point productivity adjustment. Hospitals paid under the hospital-specific rate would receive a 2.9 percent hospital update. As described in Column 1, the annual hospital update for hospitals paid under the national standardized amount, combined with the annual hospital update for hospitals paid under the hospital-specific rates, combined with the other adjustments described previously and shown in Table I, would result in a 2.48 percent increase in payments in FY 2025 relative to FY 2024.

This column also reflects the estimated effect of outlier payments returning to their

targeted levels in FY 2025 as compared to the estimated outlier payments for FY 2024 produced from our payment simulation model. As discussed in section II.A.4.i. of the Addendum to this final rule, the statute requires that outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments plus outlier payments, and also requires that the average standardized amount be reduced by a factor to account for the estimated proportion of total DRG payments made to outlier cases. We continue to use a 5.1 percent target (or an outlier offset factor of 0.949) in calculating the outlier offset to the standardized amount, just as we did for FY 2024. Therefore, our estimate of payments per discharge for FY 2025 from our payment simulation model reflects this 5.1 percent outlier payment target. Our payment simulation model shows that estimated outlier payments for FY 2024 were less than that target by approximately 0.05 percent. Therefore, our estimate of the changes in payments per discharge from FY 2024 to FY 2025 in Column 8 reflects the estimated 0.05 percent change in outlier payments produced by our payment simulation model when returning to the 5.1 percent outlier target for FY 2025. There are also interactive effects among the various factors comprising the payment system that we are not able to isolate, which may contribute to our estimate of the changes in payments per discharge from FY 2024 and FY 2025 in Column 8.

Overall payments to hospitals paid under the IPPS due to the applicable percentage increase and changes to policies related to MS-DRGs, geographic adjustments, and outliers are estimated to increase by 2.8 percent for FY 2025. Hospitals in urban areas would experience a 2.8 percent increase in payments per discharge in FY 2025 compared to FY 2024. Hospital payments per discharge in rural areas are estimated to increase by 2.6 percent in FY 2025.

3. Impact Analysis of Table II

Table II presents the projected impact of the changes for FY 2025 for urban and rural hospitals and for the different categories of hospitals shown in Table I. It compares the estimated average payments per discharge for FY 2024 with the estimated average payments per discharge for FY 2025, as calculated under our models. Therefore, this table presents, in terms of the average dollar amounts paid per discharge, the combined effects of the changes presented in Table I. The estimated percentage changes shown in the last column of Table II equal the estimated percentage changes in average payments per discharge from Column 8 of Table I.

4. Impact Analysis of Table III: Provider Deciles by Beneficiary Characteristics

Advancing health equity is the first pillar of CMS’s 2022 Strategic Framework.¹¹⁰⁹ To gain insight into how the IPPS policies could affect health equity, we have added Table III, Provider Deciles by Beneficiary Characteristics, for informational purposes. Table III details providers in terms of the beneficiaries they serve, and shows differences in estimated average payments per case and changes in estimated average payments per case relative to other providers.

As noted in section I.C. of this Appendix, this final rule contains a range of policies, and there is a section of the final rule where each policy is discussed. Each section includes the rationale for our decisions, including the need for the final policy. The information contained in Table III is provided solely to demonstrate the quantitative effects of our policies across a number of health equity dimensions and does not form the basis or rationale for the policies.

Patient populations that have been disadvantaged or underserved by the healthcare system may include patients with the following characteristics, among others: members of racial and ethnic minorities;

members of federally recognized Tribes, people with disabilities; members of the lesbian, gay, bisexual, transgender, and queer (LGBTQ+) community; individuals with limited English proficiency, members of rural communities, and persons otherwise adversely affected by persistent poverty or inequality. The CMS Framework for Health Equity was developed with particular attention to disparities in chronic and infectious diseases; as an example of a chronic disease associated with significant disparities, we therefore also detail providers in terms of the percentage of their claims for beneficiaries receiving ESRD Medicare coverage.

Because we do not have data for all characteristics that may identify disadvantaged or underserved patient populations, we use several proxies to capture these characteristics, based on claims data from the FY 2023 MedPAR file and Medicare enrollment data from Medicare’s Enrollment Database (EDB), including: race/ethnicity, dual eligibility for Medicaid and Medicare, Medicare low income subsidy (LIS) enrollment, a joint indicator for dual or LIS enrollment, presence of an ICD-10-CM Z code indicating a “social determinant of health” (SDOH), presence of a behavioral health diagnosis code, receiving ESRD Medicare coverage, qualifying for Medicare due to disability, living in a rural area, and living in an area with an area deprivation

index (ADI) greater than or equal to 85. We refer to each of these proxies as characteristics in Table III and the discussion that follows.

a. Race

The first health equity-relevant grouping presented in Table III is race/ethnicity. To assign the race/ethnicity variables used in Table III, we utilized the Medicare Bayesian Improved Surname Geocoding (MBISG) data in conjunction with the MedPAR data. The method used to develop the MBISG data involves estimating a set of six racial and ethnic probabilities (White, Black, Hispanic, American Indian or Alaskan Native, Asian or Pacific Islander, and multiracial) from the surname and address of beneficiaries by using previous self-reported data from a national survey of Medicare beneficiaries, post-stratified to CMS enrollment files. The MBISG method is used by the CMS Office of Minority Health in its reports analyzing Medicare Advantage plan performance on Healthcare Effectiveness Data and Information Set (HEDIS) measures, and is being considered by CMS for use in other CMS programs. To estimate the percentage of discharges for each specified racial/ethnic category for each hospital, the sum of the probabilities for that category for that hospital was divided by the hospital’s total number of discharges.

¹¹⁰⁹ Available at: <https://www.cms.gov/files/document/2022-cms-strategic-framework.pdf>.

b. Income

The two main proxies for income available in the Medicare claims and enrollment data are dual eligibility for Medicare and Medicaid and Medicare LIS status. Dual-enrollment status is a powerful predictor of poor outcomes on some quality and resource use measures even after accounting for additional social and functional risk factors.¹¹¹⁰ Medicare LIS enrollment refers to a beneficiary's enrollment in the low-income subsidy program for the Part D prescription drug benefit. This program covers all or part of the Part D premium for qualifying Medicare beneficiaries and gives them access to reduced copays for Part D drugs. (We note that beginning on January 1, 2024, eligibility for the full low-income subsidy was expanded to include individuals currently eligible for the partial low-income subsidy.) Because Medicaid eligibility rules and benefits vary by state/territory, Medicare LIS enrollment identifies beneficiaries who are likely to have low income but may not be eligible for Medicaid. Not all beneficiaries who qualify for the dual or LIS programs actually enroll. Due to differences in the dual eligibility and LIS qualification criteria and less than complete participation in these programs, sometimes beneficiaries were flagged as dual but not LIS or vice versa. Hence this analysis also used a "dual or LIS" flag as a third proxy for low income. The dual and LIS flags were constructed based on enrollment/eligibility status in the EDB during the month of the hospital discharge.

c. Social Determinants of Health (SDOH)

Social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.¹¹¹¹ These circumstances or determinants influence an individual's health status and can contribute to wide health disparities and inequities. ICD-10-CM contains Z-codes that describe a range of issues related—but not limited—to education and literacy, employment, housing, ability to obtain adequate amounts of food or safe drinking water, and occupational exposure to toxic agents, dust, or radiation. The presence of ICD-10-CM Z-codes in the range Z55–Z65 identifies beneficiaries with these SDOH characteristics. The SDOH flag used for this analysis was turned on if one of these Z-codes was recorded on the claim for the hospital stay itself (that is, the beneficiary's prior claims were not examined for additional Z-codes). Since these codes are not required for Medicare FFS patients and did not impact payment under the IPPS in FY 2023, we believe they may be underreported in the claims data from the FY 2023 MedPAR file used for this analysis and not reflect the actual rates of SDOH. In 2019, 0.11 percent of all Medicare FFS claims were Z code claims and 1.59 percent of

continuously enrolled Medicare FFS beneficiaries had claims with Z codes.¹¹¹² However, we expect the reporting of Z codes on claims may increase over time, because of newer quality measures in the Hospital Inpatient Quality Reporting (IQR) Program that capture screening and identification of patient-level, health-related social needs (MUC21-134 and MUC21-136) (87 FR 49201 through 49220). In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58755 through 58759), we also finalized a change to the severity designation of the following three ICD-10-CM diagnosis codes from non-CC to CC: Z59.00 (Homelessness, unspecified), Z59.01 (Sheltered homelessness) and Z59.02 (Unsheltered homelessness). We also refer the reader to section II.C.12.c.1. of the preamble of this final rule, where we discuss our final policy to change the severity level designation of the following seven ICD-10-CM diagnosis codes from non-CC to CC for FY 2025: Z59.10 (Inadequate housing, unspecified), Z59.11 (Inadequate housing environmental temperature), Z59.12 (Inadequate housing utilities), Z59.19 (Other inadequate housing), Z59.811 (Housing instability, housed, with risk of homelessness), Z59.812 (Housing instability, housed, homelessness in past 12 months), and Z59.819 (Housing instability, housed unspecified).

d. Behavioral Health

Beneficiaries with behavioral health diagnoses often face co-occurring physical illnesses, but often experience difficulty accessing care.¹¹¹³ The combination of physical and behavioral health conditions can exacerbate both conditions and result in poorer outcomes than one condition alone.¹¹¹⁴ Additionally, the intersection of behavioral health and health inequities is a core aspect of CMS' Behavioral Health Strategy.¹¹¹⁵ We used the presence of one or more ICD-10-CM codes in the range of F01–F99 to identify beneficiaries with a behavioral health diagnosis.

e. Disability

Beneficiaries with disabilities are categorized as being disabled because of a medically determinable physical or mental impairment(s) that has lasted or is expected to last for a continuous period of at least 12 months or is expected to result in death.¹¹¹⁶ Beneficiaries with disabilities often have

complex healthcare needs and difficulty accessing care. Beneficiaries with disabilities were classified as such persons for the purposes of this analysis if their original reason for qualifying for Medicare was disability; this information was obtained from Medicare's EDB. We note that this is likely an underestimation of disability because it does not account for beneficiaries who became disabled after becoming entitled to Medicare. This metric also does not capture all individuals who would be considered to have a disability under 29 U.S.C. 705(9)(B).

f. ESRD

Beneficiaries with ESRD have high healthcare needs and high medical spending, and often experience comorbid conditions and poor mental health. Beneficiaries with ESRD also experience significant disparities, such as a limited life expectancy.¹¹¹⁷ Beneficiaries were classified as ESRD for the purposes of this analysis if they were receiving Medicare ESRD coverage during the month of the discharge; this information was obtained from Medicare's EDB.

g. Geography

Beneficiaries in some geographic areas—particularly rural areas or areas with concentrated poverty—often have difficulty accessing care.^{1118 1119} For this impact analysis, beneficiaries were classified on two dimensions: from a rural area and from an area with an area deprivation index (ADI) greater than or equal to 85.

Rural status is defined for purposes of this analysis using the primary Rural-Urban Commuting Area (RUCA) codes 4–10 (including micropolitan, small town, and rural areas) corresponding to each beneficiary's zip code. RUCA codes are defined at the census tract level based on measures of population density, urbanization, and daily commuting. The ADI is obtained from a publicly available dataset designed to capture socioeconomic disadvantage at the neighborhood level.¹¹²⁰ It utilizes data on income, education, employment, housing quality, and 13 other factors from the American Community Survey and combines them into a single raw score, which is then used to rank neighborhoods (defined at various levels), with higher scores reflecting greater deprivation. The version of the ADI used for this analysis is at the Census Block Group level and the ADI corresponds to the Census

Block Group's percentile nationally. Living in an area with an ADI score of 85 or above, a validated measure of neighborhood disadvantage, is shown to be a predictor of 30-day readmission rates, lower rates of cancer survival, poor end of life care for patients with heart failure, and longer lengths of stay and fewer home discharges post-knee surgery even after accounting for individual social and economic risk factors.^{1121 1122 1123 1124 1125} The MedPAR

¹¹²⁵ Khlopas A, et al., "Neighborhood Socioeconomic Disadvantages Associated With Prolonged Lengths of Stay, Nonhome Discharges,

discharge data was linked to the RUCA using beneficiaries' five-digit zip code and to the ADI data using beneficiaries' 9-digit zip codes, both of which were derived from Common Medicare Enrollment (CME) files. Beneficiaries with no recorded zip code were treated as being from an urban area and as having an ADI less than 85.

For each of these characteristics, the hospitals were classified into groups as follows. First, all discharges at IPPS hospitals (excluding Maryland and IHS hospitals) in the FY 2023 MedPAR file were flagged for the presence of the characteristic, with the exception of race/ethnicity, for which probabilities were assigned instead of binary flags, as described further in this section. Second, the percentage of discharges at each hospital for the characteristic was calculated. Finally, the hospitals were divided into four groups based on the percentage of discharges for each characteristic: decile group 1 contains the 10% of hospitals with the lowest rate of discharges for that characteristic; decile group 2 to 5 contains the hospitals with less than or equal to the median rate of discharges for that characteristic, excluding those in decile group 1; decile group 6 to 9 contains the hospitals with greater than the median rate of discharges for that characteristic, excluding those in decile group 10; and decile group 10 contains the 10% of hospitals with the highest rate of discharges for that characteristic. These decile groups provide an overview of the

and 90-Day Readmissions After Total Knee Arthroplasty." *The Journal of Arthroplasty*. No. 37(6), pp S37–S43, doi: 10.1016/j.arth.2022.01.032 (June 2022), available at <https://www.sciencedirect.com/science/article/pii/S0883540322000493>.

ways in which the average estimated payments per discharge vary between the providers with the lowest and highest percentages of discharges for each characteristic, as well as those above and below the median.

We note that a supplementary provider-level dataset containing the percentage of discharges at each hospital for each of the characteristics in Table III is available on our website.

- Column 1 of Table III specifies the beneficiary characteristic.
- Column 2 specifies the decile group.
- Column 3 specifies the percentiles covered by the decile group.
- Column 4 specifies the percentage range of discharges for each decile group specified in the first column.
- Columns 5 and 6 present the average estimated payments per discharge for FY 2024 and average estimated payments per discharge for FY 2025, respectively.
- Column 7 shows the percentage difference between these averages.

The average payment per discharge, as well as the percentage difference between the average payment per discharge in FY 2024 and FY 2025, can be compared across decile groups. For example, providers with the lowest decile of discharges for Dual (All) or LIS Enrolled beneficiaries have an average FY 2024 payment per discharge of \$13,660.95, while providers with the highest decile of discharges for Dual (All) or LIS Enrolled beneficiaries have an average FY 2024 payment per discharge of \$21,150.86. This pattern is also seen in the average FY 2025 payment per discharge.

* Decile group 1 contains the 10% of hospitals with the lowest rate of discharges for that characteristic; decile group 2 to 5 contains the hospitals with less than or equal to the median rate of discharges for that characteristic, excluding those in decile group 1; decile group 6 to 9 contains the hospitals with greater than the median rate of discharges for that characteristic, excluding those in group 10; and decile group 10 contains the 10% of hospitals with the highest rate of discharges for that characteristic.

** Greater than 10 percent of providers did not report discharges associated with this characteristic. Therefore, we have randomly allocated those providers to decile groups 1 and 2.

BILLING CODE 4120-01-C

1. Effects of the Policy Changes Relating to New Medical Service and Technology Add-On Payments

a. FY 2025 Status of Technologies Approved for FY 2024 New Technology Add-On Payments

As discussed in section II.E.4. of the preamble of this final rule, we are continuing to make new technology add-on payments in FY 2025 for the 24 technologies that would still be considered “new” for purposes of new technology add-on payments for FY 2025. Under § 412.88(a)(2), the new

technology add-on payment for each case would be limited to the lesser of: (1) 65 percent of the costs of the new technology (or 75 percent of the costs for technologies designated as Qualified Infectious Disease Products (QIDPs) or approved under the Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD) pathway); or (2) 65 percent of the amount by which the costs of the case exceed the standard MS-DRG payment for the case (or 75 percent of the amount for technologies designated as QIDPs or approved under the LPAD pathway). Because it is difficult to predict the actual new technology add-on payment for

each case, the estimated total payments in this final rule are based on the applicant’s estimated cost and volume projections at the time they submitted their application (or based on updated figures provided during the public comment period) and the increase in new technology add-on payments for FY 2025 as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment.

In the following table, we present estimated payment for the 24 technologies for which we are continuing to make new technology add-on payments in FY 2025:

BILLING CODE 4120-01-P

FY 2025 ESTIMATES FOR NEW TECHNOLOGY ADD-ON PAYMENTS TO CONTINUE FOR FY 2025			
Technology Name	Estimate d Cases	FY 2025 NTAP Amount (65 % or 75 %)	Estimated Total FY 2025 Impact

Aggregate Estimated Total FY 2025 Impact			\$262,400,516.03

*These two technologies were determined to be substantially similar to each other and therefore have been evaluated as one application for new technology add-on payments under the IPPS.

BILLING CODE 4120-01-C

b. FY 2025 Applications for New Technology Add-On Payments

In sections II.E.5. and 6. of the preamble to this final rule are 21 discussions of

technologies for which we received applications for add-on payments for new medical services and technologies for FY 2025 (including Casgevy™ (exagamglogene autotemcel) for which the applicant

submitted a single application for two separate indications, each of which is discussed separately; and ELREXFIO™ (elranatamab-bcmm) and TALVEY™ (talquetamab-tgvs), which are substantially

similar to each other and evaluated as one application for new technology add-on payments under the IPPS). We note that of the 39 applications (23 alternative and 16 traditional) we received, 8 applications were not eligible for consideration for new technology add-on payment (7 alternative and 1 traditional), and 10 applicants withdrew their application (5 alternative and 5 traditional) prior to the issuance of this final rule (including the withdrawal of the application for DefenCath® (taurolidine/heparin), which received conditional approval for new technology add-on payments for FY 2024, subsequently was eligible to receive new technology add-on payments beginning with discharges on or after January 1, 2024, and for which we proposed and are finalizing to continue making new technology add-on payments for FY 2025). In the 21 discussions of technologies in the preamble of this final rule, there are a total of 15 new approvals for 14 technologies (3 traditional and 11 alternative) for new technology add-on payments for FY 2025. As explained in the preamble to this final rule, add-on payments for new medical services and technologies

under section 1886(d)(5)(K) of the Act are not required to be budget neutral.

As discussed in section I.I.E.6. of the preamble of this final rule, under the alternative pathway for new technology add-on payments, new technologies that are medical products with a QIDP designation, approved through the FDA LPAD pathway, or are designated under the Breakthrough Device program will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS, and will not need to demonstrate that the technology represents a substantial clinical improvement. These technologies must still be within the 2- to 3-year newness period, as discussed in section I.I.E.1.a.(1). of the preamble this final rule, and must also still meet the cost criterion.

As fully discussed in section I.I.E.6. of the preamble of this final rule, we are approving 12 new technology add-on payments for 11 technologies that applied under the alternative pathway for new technology add-on payments for FY 2025 (including ZEVTERA™ (ceftobiprole medocaril) for which the applicant submitted a single

application for multiple indications, and for which we are approving two separate new technology add-on payments). The approvals include 10 technologies that received a Breakthrough Device designation from FDA and 1 that was designated as a QIDP by FDA. We did not receive any LPAD applications for add-on payments for new technologies for FY 2025.

Based on information from the applicants at the time of this final rule, we estimate that total payments for the technologies approved under the alternative pathway will be approximately \$171.5 million for FY 2025. Total estimated FY 2025 payments for new technologies that are designated as a QIDP are approximately \$5.6 million, and the total estimated FY 2025 payments for new technologies that are part of the Breakthrough Device program are approximately \$165.9 million.

In the following table, we present detailed estimates for the 11 technologies for which we are approving 12 new technology add-on payments under the alternative pathway in FY 2025:

BILLING CODE 4120-01-P

FY 2025 ESTIMATES FOR NEW TECHNOLOGY ADD-ON PAYMENTS FOR TECHNOLOGIES UNDER THE ALTERNATIVE PATHWAY FOR FY 2025				
Technology Name	Pathway (QIDP, LPAD, or Breakthrough Device)	Estimated Cases	FY 2025 NTAP Amount (65% or 75%)	Estimated Total FY 2025 Impact
ZEVTERA™ (ceftobiprole medocaril); ABSSSI and CABP indications	QIDP	245	\$2,812.50	\$689,062.50
ZEVTERA™ (ceftobiprole medocaril); SAB indication	QIDP	571	\$8,625.00	\$4,924,875.00
Annalise Enterprise CTB Triage - OH	Breakthrough Device	271,200	\$241.39	\$65,464,968.00
AStar® System	Breakthrough Device	69,000	\$97.50	\$6,727,500.00
Edwards EVOQUE™ Tricuspid Valve Replacement System	Breakthrough Device	800	\$31,850.00	\$25,480,000.00
GORE® EXCLUDER® Thoracoabdominal Branch Endoprosthesis (TAMBE Device)	Breakthrough Device	518	\$47,238.75	\$24,469,672.50
LimFlow™ System	Breakthrough Device	561	\$16,250.00	\$9,116,250.00
Paradise™ Ultrasound Renal Denervation System	Breakthrough Device	200	\$14,950.00	\$2,990,000.00
PulseSelect™ Pulsed Field Ablation (PFA) Loop Catheter	Breakthrough Device	3,402	\$6,337.50	\$21,560,175.00
Symlicity Spyral™ Multi-Electrode Renal Denervation Catheter	Breakthrough Device	55	\$10,400.00	\$572,000.00
TriClip™ G4	Breakthrough Device	150	\$26,000.00	\$3,900,000.00
VADER® Pedicle System	Breakthrough Device	200	\$28,242.50	\$5,648,500.00
Estimated Total FY 2025 Impact				\$171,543,003.00

As fully discussed in section I.I.E.6. of the preamble of this final rule, we are approving new technology add-on payments for 3 technologies that applied under the traditional pathway for new technology add-on payments for FY 2025. We are also providing new technology add-on payments

for 2 technologies that were evaluated as one application due to substantial similarity, and which are also considered substantially similar to a technology that was approved for new technology add-on payments for FY 2024 and is still considered “new” for purposes of new technology add-on

payments for FY 2025. Based on information from the applicants at the time of rulemaking, we estimate that total payments for the technologies for which we are making new technology add-on payments is approximately \$335.6 million for FY 2025.

In the following table, we present detailed estimates for the 6 technologies for which we are providing 5 new technology add-on payments under the traditional pathway in FY 2025:

FY 2025 ESTIMATES FOR NEW TECHNOLOGY ADD-ON PAYMENTS FOR TECHNOLOGIES UNDER THE TRADITIONAL PATHWAY FOR FY 2025			
Technology Name	Estimated Cases	FY 2025 NTAP Amount (65% or 75%)	Estimated Total FY 2025 Impact
CASGEVY™ (exagamglogene autotemcel); Sickle Cell Disease indication*	117	\$1,650,000.00	\$193,050,000.00
ELREXFIO™ (elranatamab-bcmm) and TALVEY™ (talquetamab-tgvs)**	2,470	\$12,899.59	\$31,861,982.36
HEPZATO™ KIT (melphalan for injection/hepatic delivery system)	149	\$118,625.00	\$17,675,125.00
LYFGENIA™ (lovotibeglogene autotemcel)*	40	\$2,325,000.00	\$93,000,000.00
Estimated Total FY 2025 Impact			\$335,587,107.36

*As discussed in section II.E.10 of the preamble of this final rule, we are revising the new technology add-on payment percentage to 75 percent, for a medical product that is a gene therapy that is indicated and used specifically for the treatment of SCD and approved for new technology add-on payments for the treatment of SCD in the FY 2025 IPPS/LTCH PPS final rule.

** These two technologies were determined to be substantially similar to each other and were therefore evaluated as one application for new technology add-on payments under the IPPS.

c. Total Estimated Costs for New Technology Add-On Payments in FY 2025 new technology add-on payments for FY 2025:

In the following table, we present summary estimates for all technologies approved for

FY 2025 ESTIMATES FOR NEW TECHNOLOGY ADD-ON PAYMENTS FOR FY 2025	
Category	Estimated Total FY 2025 Impact
Technologies Continuing New Technology Add-on Payments in FY 2025	\$262,400,516.03
Alternative Pathway Applications	\$171,543,003.00
Traditional Pathway Applications	\$335,587,107.36
Aggregate Estimated Total FY 2025 Impact	\$769,530,626.39

BILLING CODE 4120-01-C

2. Medicare DSH Uncompensated Care Payments and Supplemental Payment for Indian Health Service Hospitals and Tribal Hospitals and Hospitals Located in Puerto Rico

As discussed in section IV.E. of the preamble of this final rule, under section 3133 of the Affordable Care Act, hospitals that are eligible to receive Medicare DSH payments will receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments under section 1886(d)(5)(F) of the Act. The remainder, equal to an estimate of 75 percent of what formerly would have been paid as Medicare DSH payments (Factor 1), reduced to reflect changes in the percentage of uninsured individuals (Factor 2), is available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has reported uncompensated care. Each hospital that is

eligible for Medicare DSH payments will receive an additional payment based on its estimated share of the total amount of uncompensated care for all hospitals eligible for Medicare DSH payments. The uncompensated care payment methodology has redistributive effects based on the proportion of a hospital's amount of uncompensated care relative to the aggregate amount of uncompensated care of all hospitals eligible for Medicare DSH payments (Factor 3). The change to Medicare DSH payments under section 3133 of the Affordable Care Act is not budget neutral.

In this final rule, we are establishing the amount to be distributed as uncompensated care payments (UCP) to DSH-eligible hospitals for FY 2025, which is \$5,705,743,275.00. This figure represents 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 54.29 percent. For FY 2024, the amount available

to be distributed for uncompensated care was \$5,938,006,756.87 or 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 59.29 percent. In addition, eligible IHS/Tribal hospitals and hospitals located in Puerto Rico are estimated to receive approximately \$79,884,597 million in supplemental payments in FY 2025, as determined based on the difference between each hospital's FY 2022 UCP (decreased by 20.67 percent, which is the projected change between the FY 2025 total uncompensated care payment amount and the total uncompensated care payment amount for FY 2022) and its FY 2025 UCP as calculated using the methodology for FY 2025. If this difference is less than or equal to zero, the hospital will not receive a supplemental payment. For this final rule, the total UCP and supplemental payments equal approximately \$5.786 billion. For FY 2025, we are using 3 years of data on

uncompensated care costs from Worksheet S-10 of the FYs 2019, 2020, and 2021 cost reports to calculate Factor 3 for all DSH-eligible hospitals, including IHS/Tribal hospitals and Puerto Rico hospitals. For a complete discussion regarding the methodology for calculating Factor 3 for FY 2025, we refer readers to section IV.E. of the preamble of this final rule. For a discussion regarding the methodology for calculating the supplemental payments, we refer readers to section IV.D. of the preamble of this final rule.

To estimate the impact of the combined effect of the changes in Factors 1 and 2, as well as the changes to the data used in determining Factor 3, on the calculation of Medicare UCP along with changes to supplemental payments for IHS/Tribal hospitals and hospitals located in Puerto Rico, we compared total UCP and supplemental payments estimated in the FY 2024 IPPS/LTCH PPS final rule correction notice (88 FR 68484) to the combined total of the proposed UCP and the supplemental payments estimated in this FY 2025 IPPS/

LTCH PPS final rule. For FY 2025, we calculated 75 percent of the estimated amount that would be paid as Medicare DSH payments absent section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 59.29 percent and multiplied by a Factor 3 calculated using the methodology described in the FY 2024 IPPS/LTCH PPS final rule. For FY 2025, we calculated 75 percent of the estimated amount that would be paid as Medicare DSH payments during FY 2025 absent section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 54.29 percent and multiplied by a Factor 3 calculated using the methodology described previously. For this final rule, the supplemental payments for IHS/Tribal hospitals and Puerto Rico hospitals are calculated as the difference between the hospital's adjusted base year amount (as determined based on the hospital's FY 2022 uncompensated care payment) and the hospital's FY 2025 uncompensated care payment.

Our analysis included 2,399 hospitals that are projected to be DSH-eligible in FY 2025.

Our analysis did not include hospitals that had terminated their participation in the Medicare program as of February 2, 2024, Maryland hospitals, new hospitals, and SCHs that are expected to be paid based on their hospital-specific rates. The 23 hospitals that are anticipated to be participating in the Rural Community Hospital Demonstration Program were also excluded from this analysis, as participating hospitals are not eligible to receive empirically justified Medicare DSH payments and uncompensated care payments. In addition, the data from merged or acquired hospitals were combined under the surviving hospital's CMS certification number (CCN), and the non-surviving CCN was excluded from the analysis. The estimated impact of the changes in Factors 1, 2, and 3 on UCP and supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals across all hospitals projected to be DSH-eligible in FY 2025, by hospital characteristic, is presented in the following table:

BILLING CODE 4120-01-P

Source: Dobson | DaVanzo analysis of 2019, 2020, and 2021 Hospital Cost Reports.

*Dollar UCP calculated by [0.75 * estimated section 1886(d)(5)(F) payments * Factor 2 * Factor 3]. When summed across all hospitals projected to receive DSH payments, UCP and supplemental payments are estimated to be \$6,021 million in FY 2024, and UCP and supplemental payments are estimated to be \$5,786 million in FY 2025.

** For IHS/Tribal hospitals and Puerto Rico hospitals, this impact table reflects the supplemental payments.

*** Percentage change is determined as the difference between Medicare UCP and supplemental payments modeled for this FY 2025 IPPS/LTCH PPS proposed rule (column 3) and Medicare UCP and supplemental payments modeled for the FY 2024 IPPS/LTCH PPS final rule correction notice (column 2) divided by Medicare UCP and supplemental payments modeled for the FY 2024 IPPS/LTCH PPS final rule correction notice (column 2) times 100 percent.

****Hospitals with missing or unknown Medicare utilization or Medicaid utilization are not shown in the table.

BILLING CODE 4120-01-C

The changes in projected FY 2025 UCP and supplemental payments compared to the total of UCP and supplemental payments in FY 2024 are driven by changes in Factor 1 and Factor 2. Factor 1 has increased from the FY 2024 final rule's Factor 1 of \$10.015 billion to this final rule's Factor 1 of \$10.457 billion. Factor 2 has decreased from the FY 2024 final rule's Factor 2 of 59.29 percent to this final rule's Factor 2 of 54.29 percent. In addition, we note that there is a slight increase in the number of projected DSH-eligible hospitals to 2,399 at the time of the development of this final rule compared to the 2,384 DSH-eligible hospitals in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58640). Based on the changes, the impact analysis found that, across all projected DSH-eligible hospitals, FY 2025 UCP and supplemental payments are estimated at approximately \$5.786 billion, or a decrease of approximately 3.91 percent from FY 2024 UCP and supplemental payments (approximately \$6.021 billion). While the changes result in a net decrease in the total amount available to be distributed in UCP and supplemental payments, the projected payment amounts vary by hospital type. This redistribution of payments is caused by changes in Factor 3 and the amount of the supplemental payment for DSH-eligible IHS/ Tribal hospitals and Puerto Rico hospitals. As seen in the previous table, a percent

change of less than negative 3.91 percent indicates that hospitals within the specified category are projected to experience a larger decrease in payments, on average, compared to the universe of projected FY 2025 DSH-eligible hospitals. Conversely, a percentage change greater than negative 3.91 percent indicates that a hospital type is projected to have a smaller decrease compared to the overall average. The variation in the distribution of overall payments by hospital characteristic is largely dependent on a given hospital's uncompensated care costs as reported on the Worksheet S-10 and used in the Factor 3 computation and whether the hospital is eligible to receive the supplemental payment.

Rural hospitals, in general, are projected to experience a smaller decrease in UCP compared to the decrease their urban counterparts are projected to experience. Overall, rural hospitals are projected to receive a 1.16 percent decrease in payments, while urban hospitals are projected to receive a 4.07 percent decrease in payments, which is slightly larger than the overall hospital average.

By bed size, rural hospitals with 0 to 99 beds are projected to receive a smaller than average decrease of 2.97 percent in payments, while those with 100 to 249 beds are projected to receive an increase of 1.14. Additionally, rural hospitals with 250+ beds are projected to receive a 0.59 percent

increase in payments. Among urban hospitals, the smallest urban hospitals, those with 0 to 99 beds, are projected to receive a 3.43 percent increase in payments. In contrast, larger urban hospitals with 100-249 beds and urban hospitals with 250+ beds are projected to receive decreases in payments that are larger than the overall hospital average, by 4.81 and 4.26 percent, respectively.

By region, rural hospitals are projected to receive a varied range of payment changes. Rural hospitals in the New England, West North Central, and Middle Atlantic regions are projected to receive larger than average decreases in payments. Rural hospitals in all other regions are projected to receive either increases in payments or smaller than average decreases in payments. Urban hospitals in the West South Central, Mountain, and Pacific regions are projected to receive either increases in payments or smaller than average decreases in payments, while urban hospitals in all other regions are projected to receive larger than average decreases in payments.

By payment classification, hospitals in urban payment areas overall are expected to receive a 3.71 percent decrease in UCP and supplemental payments. Hospitals in large urban payment areas are projected to receive a smaller than average decrease in payments of 2.36 percent. In contrast, hospitals in other urban payment areas and hospitals in rural

payment areas are projected to receive larger than average decreases in payments of 5.69 and 4.13 percent, respectively.

Nonteaching hospitals and teaching hospitals with 100+ residents are projected to receive smaller than average payment decreases of 3.27 percent and 3.47 percent, respectively. Teaching hospitals with fewer than 100 residents are projected to receive larger than average payment decreases of 4.87 percent. Voluntary hospitals are projected to receive larger than average decreases of 4.61 percent, while government-owned hospitals and proprietary hospitals are expected to receive smaller than average payment increases of 2.63 percent and 3.59 percent, respectively. Hospitals with less than 25 percent Medicare utilization are projected to receive smaller than average decreases of 3.22 percent. Hospitals with Medicare utilization between 25–50 percent, 50–65 percent, and greater than 65 percent are projected to receive larger than average decreases of 5.58 percent, 8.28 percent, and 7.06 percent, respectively. Hospitals with 50–65 percent Medicaid utilization are projected to receive a smaller than average decrease in payments of 1.93 percent, while those with greater than 65 percent Medicaid utilization are projected to receive a 5.79 percent increase in payments. Meanwhile, hospitals with less than 25 percent Medicaid utilization and those with Medicaid utilization between 25–50 percent are projected to receive larger than average decreases of 4.44 percent and 4.31 percent, respectively.

The impact table reflects the modeled FY 2025 UCP and supplemental payments for IHS/Tribal and Puerto Rico hospitals. We note that the supplemental payments to IHS/Tribal hospitals and Puerto Rico hospitals are estimated to be approximately \$79.9 million in FY 2025.

3. Effects of the Changes to Low-Volume Hospital Payment Adjustment Policy

In section V.D. of the preamble of this final rule, we discuss the legislative extension of the temporary changes to the low-volume hospital payment policy originally provided for by the Affordable Care Act and extended by subsequent legislation. Specifically, section 306 of the CAA, 2024 further extended the modified definition of low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals under section 1886(d)(12) through December 31, 2024. Beginning January 1, 2025, the low-volume hospital qualifying criteria and payment adjustment will revert to the statutory requirements that were in effect prior to FY 2011, and the preexisting low-volume hospital payment adjustment methodology and qualifying criteria, as implemented in FY 2005, will resume. Effective for FY 2025, discharges occurring on or after January 1, 2025 and subsequent years, in order to qualify as a low-volume hospital, a subsection (d) hospital must be more than 25 road miles from another subsection (d) hospital and have less than 200 discharges (that is, less than 200 discharges total, including both Medicare and non-Medicare discharges) during the fiscal year. We recognize the importance of this extension with respect to

the goal of advancing health equity by addressing the health disparities that underlie the health system, which is one of CMS' strategic pillars and a Biden-Harris Administration priority, as described in section I.A.2. of the preamble of this final rule. The provisions of section 306 of the CAA, 2024 are projected to increase payments to IPPS hospitals by approximately \$89 million in FY 2025 relative to what the payments would have been in the absence of section 306.

Based upon the best available data at this time, we estimate the expiration of the temporary changes to the low-volume hospital payment policy for FY 2025 discharges occurring on or after January 1, 2025 will decrease aggregate low-volume hospital payments by \$267 million in FY 2025 as compared to FY 2024. These payment estimates were determined based on the estimated payments for the approximately 600 providers that are expected to no longer qualify under the criteria that will apply beginning on January 1, 2025. These impacts were calculated using the same methodology used in developing the quantitative analyses of changes in payments per case discussed previously in section I.G. of this Appendix A of this final rule.

4. Effects of the Distribution of Additional Residency Positions Under the Provisions of Section 4122 of Subtitle C of the Consolidated Appropriations Act, 2023 (CAA, 2023)

In section V.F.2. of this final rule, we are finalizing our proposal to implement section 4122 of the CAA, 2023, which requires that the Secretary initiate an application round to distribute 200 residency positions (also referred to as slots) with at least 100 of the positions being distributed for psychiatry or psychiatry subspecialty residency programs. The residency positions distributed under section 4122 are effective July 1, 2026.

Under our final policy, we'll first distribute slots by prorating the available 200 positions among all qualifying hospitals that apply for such slots, such that each qualifying applicant hospital will receive up to 1.00 FTE – that is, 1.00 FTE or a fraction of 1.00 FTE. According to our final policy, a qualifying hospital is a Category One, Category Two, Category Three, or Category Four hospital, or one that meets the definitions of more than one of these categories, as defined at section 1886(h)(10)(F)(iii) of the Act.¹¹²⁶ We also

¹¹²⁶ Category One consists of hospitals that are located in a rural area (as defined in section 1886(d)(2)(D) of the Act) or have been reclassified being located in a rural area (pursuant to section 1886(d)(8)(E) of the Act). Category Two consists of hospitals in which the reference resident level of the hospital (as specified in section 1886(h)(10)(F)(iv) of the Act) is greater than the otherwise applicable resident limit. Category Three consists of hospitals located in States with new medical schools that received 'Candidate School' status from the Liaison Committee on Medical Education (LCME) or that received 'Pre-Accreditation' status from the American Osteopathic Association (AOA) Commission on Osteopathic College Accreditation (the COCA) on or after January 1, 2000, and that have achieved or

finalized that if any residency slots remain after distributing up to 1.00 FTE to each such qualifying hospital, we will prioritize the distribution of the remaining slots based on the HPSA score associated with the program for which each qualifying hospital is applying using the methodology we finalized for purposes of implementing section 126 of the CAA, 2021 (86 FR 73434 through 73440). Using this HPSA prioritization method, a qualifying hospital's total award under section 4122 of the CAA, 2023, will be limited to 10.00 additional FTEs consistent with section 1886(h)(10)(C)(i) of the Act. We believe including such a prioritization will further support the training of residents in underserved and rural areas thereby helping to address physician shortages and the larger issue of health inequities in these areas.

The CMS Office of the Actuary (OACT) estimates an increase of \$10 million in Medicare payments to teaching hospitals for FY 2026, and an increase in Medicare payments to teaching hospitals of \$280 million for FYs 2026 through 2030 (over 5 years). In total, for FYs 2026 through 2036, Medicare payments to teaching hospitals are estimated to increase by \$740 million.

In addition, we are finalizing a modification to our methodology for distributing slots under section 126 of the CAA, 2021. Section 1886(h)(9)(B)(ii) of the Act requires the Secretary to distribute at least 10 percent of the aggregate number of total residency positions available to the same four categories of hospitals. Section 126 of the CAA, 2021, makes available 1,000 residency positions and therefore, at least 100 residency positions must be distributed to hospitals qualifying in each of the four categories. In the final rule implementing section 126 of the CAA, 2021, we stated we would track progress in meeting all statutory requirements and evaluate the need to modify the distribution methodology in future rulemaking (86 FR 73441). To date, we have completed the distribution of residency slots under rounds 1 and 2 of the section 126 distributions and have determined that only 12.76 DGME slots and 18.06 IME slots were distributed to hospitals qualifying under Category Four. Under our final policy, in rounds 4 and 5 we will prioritize the distribution of slots to hospitals that qualify under Category Four, regardless of HPSA score, to ensure that at least 100 residency slots are distributed to these hospitals. The remaining slots awarded under rounds 4 and 5 will be distributed using the existing methodology based on HPSA score (86 FR 73434 through 73440). That is, the remaining slots will be distributed to hospitals qualifying under Category One, Category Two, or Category

continue to progress toward 'Full Accreditation' status (as such term is defined by the LCME) or toward 'Accreditation' status (as such term is defined by the COCA); or additional locations and branch campuses established on or after January 1, 2000, by medical schools with 'Full Accreditation' status (as such term is defined by LCME) or 'Accreditation' status (as such term is defined by the COCA). Category Four consists of hospitals that serve areas designated as HPSAs under section 332(a)(1)(A) of the Public Health Service Act (PHSA), as determined by the Secretary.

Three, or hospitals that meet the definition of more than one of these categories, based on the HPSA score associated with the program for which each hospital is applying. We believe there is a minimal impact on Medicare payments associated with this change in methodology as the number of total slots distributed will remain the same.

5. Effects of Changes to Additional Payment for Hospitals With a High Percentage of ESRD Beneficiary Discharges

As discussed in section V.I. of the preamble of this final rule, we are finalizing our proposal to update our payment methodology for determining the ESRD add-on payment for hospitals with a high percentage of ESRD beneficiary discharges. Currently under § 412.104(b), the ESRD add-on is based on the average length of stay (in days) for ESRD beneficiaries in the hospital, expressed as a ratio to 1 week (7 days), multiplied by the estimated weekly cost of dialysis, then multiplied by the number of ESRD beneficiary discharges (Worksheet E Part A Column 1 line 41.01). After consideration of public comments, we are finalizing our proposal that, effective for cost reporting periods beginning on or after October 1, 2024, the estimated weekly cost of dialysis will be calculated as the ESRD PPS base rate (as defined in 42 CFR 413.171) multiplied by three. As proposed, under this policy, the CY 2025 ESRD PPS base rate will be used for all cost reports beginning during Federal FY 2025 (that is, for cost reporting periods starting on or after October 1, 2024, through September 30, 2025).

Our impact analysis includes 91 hospitals that were eligible for the ESRD add-on payment based on the historical composite rate in the FY 2017 cost report data, which is a historical year that has a high percentage of final settled cost report data regarding ESRD add-on payments. As we did in the proposed rule (89 FR 36620), we estimated the impact of the payment methodology by comparing total ESRD add-on payments from the December 2023 update of the FY 2017 cost report data to the estimated FY 2025 ESRD add-on payments using, for illustrative purposes, the CY 2024 ESRD PPS base rate published in the CY 2024 ESRD PPS final rule (88 FR 76345), which is \$271.02. (As previously noted, the CY 2025 ESRD PPS base rate will be used for all cost reports beginning during Federal FY 2025 (that is, for cost reporting periods starting on or after October 1, 2024, through September 30, 2025).) The total ESRD add-on payments based on the FY 2017 cost report data are approximately \$22 million. The total estimated FY 2025 ESRD add-on payments, as estimated using the CY 2024 ESRD PPS base rate, will be approximately \$31.4 million. Therefore, we estimated the ESRD add-on payments will increase by approximately \$10 million.

6. Estimated Effects of the IPPS Payment Adjustment for Establishing and Maintaining Access to Essential Medicines

As discussed in section V.K.1. of the preamble of this final rule, we are finalizing IPPS payment adjustments for the Medicare inpatient share of additional resource costs that small, independent hospitals incur in

establishing and maintaining access to a 6-month buffer stock of one or more essential medicine(s), effective for cost reporting periods beginning on or after October 1, 2024.

We are finalizing this payment adjustment under the IPPS for the additional Medicare inpatient share of resource costs of establishing and maintaining access to a buffer stock of essential medicines under section 1886(d)(5)(I) of the Act.

The data currently available to calculate a spending estimate for FY 2025 under the IPPS is limited. However, we believe the methodology described in this section to calculate this spending estimate under the IPPS for FY 2025 is reasonable based on the information available.

To estimate total spending associated with this finalized policy under the IPPS, we used the following information for all eligible hospitals with completed 12-month or greater cost reporting periods concluding in CY 2021 (the most recent cost reporting period for which data was available):

- Estimated spend per eligible hospital on its applicable essential medicines, expressed as a percentage of the total Drugs Charged to Patients cost center, as found on Worksheet B, Part 1, line 73, column 26 on Form CMS-2552-2010. For purposes of this estimate, we believe it is reasonable to assume that the cost of a given hospital's essential medicines will be 1 percent of its total Drugs Charged to Patients costs.

- Multiplicative factor of 50 percent to estimate the total cost of the essential medicines that are in the 6-month buffer stock.

- Assumed cost of carrying essential medicines, expressed as a percentage of the total cost of the essential medicines that are in the buffer stock. Based on commenter feedback on the CY 2024 OPPI/ASC proposed rule,¹¹²⁷ we believe it is reasonable to assume for purposes of this spending estimate a cost of carrying essential medicines of 20 percent of the cost of the essential medicines themselves. This assumption of a 20 percent cost of carrying would apply to any size of buffer stock of essential medicine.

- The provider-specific inpatient Medicare share percentage, expressed as the percentage of inpatient Medicare costs to total hospital costs.

To calculate the estimated aggregate IPPS payments under this finalized policy, we multiplied together the four factors listed for each eligible hospital and summed across all eligible hospitals. Based on the latest hospital cost report data available, we identified approximately 500 IPPS hospitals that would potentially be eligible for this finalized payment. Eligible IPPS hospitals are those providers that: (1) had 100 or fewer beds as defined in § 412.105(b); and (2) answered "N" to line 140, column 1 and did not fill out any part of lines 141 through 143 on Worksheet S2 Part I on Form CMS-2552-10. We estimate that the aggregate FY 2025 IPPS payments under this finalized policy, given the assumptions detailed previously, would

be approximately \$0.3 million, and the mean IPPS payment per eligible hospital would be approximately \$620 over the course of a year. This policy would not be budget neutral under the IPPS.

We also estimated the total costs for eligible hospitals to establish and maintain buffer stocks of essential medicines in order to inform the public what portion of the total costs would be separately paid under the finalized policy. To calculate this, we multiplied together the first three factors listed previously for each eligible hospital, but not the fourth factor (*i.e.* we did not multiply by the provider specific inpatient Medicare share percentage) and summed across all eligible hospitals. We estimate that the total annual costs for eligible hospitals to establish and maintain buffer stocks of essential medicines would be approximately \$2.8 million, and the mean cost per eligible hospital would be approximately \$5,610. The IPPS payments under this finalized policy represent approximately 11 percent of that amount, or \$0.3 million.

As discussed earlier, our estimate was calculated at the hospital level and then summed. However, for illustrative purposes the calculation can be described alternatively as starting with the aggregated total Drugs Charged to Patients across eligible hospitals of approximately \$2.8 billion, assuming the annual cost of essential medicines to be 1 percent of that amount or \$28 million ($=\$2.8 \text{ billion} * .01$), calculating the cost of 6 months of essential medicines as half that amount or \$14 million ($=\$28 \text{ million} * .50$), assuming that the cost of carrying essential medicines is 20 percent of that amount or \$2.8 million ($=\$14 \text{ million} * .20$), and then calculating the Medicare inpatient share of that amount at 11 percent or \$0.3 million ($=\$2.8 \text{ million} * .11$).

We sought comment on these assumptions and estimates.

Comment: Although many commenters raised concerns that the estimated average payment is inadequate to cover the costs of buffer stock acquisition, storage, maintenance, and other related costs, we did not receive comments regarding our assumptions and estimates for purposes of estimating the effects of the IPPS payment adjustment for establishing and maintaining access to essential medicines.

Response: We thank the commenters for their feedback regarding the payments. We agree with commenters that the IPPS payment adjustment under this policy does not equal to the total reasonable costs to establish and maintain a buffer stock of essential medicines. This is by definition as the policy is limited to the Medicare inpatient share of that amount. We also note that the average IPPS payment does not reflect the range of potential payments under this policy as these payments will be hospital specific depending on each hospital's reasonable costs of maintaining and establishing its buffer stocks and its Medicare inpatient share of those costs. In response to comments and to illustrate this point, we have calculated selected percentiles of estimated total reasonable costs and the estimated IPPS payments under this policy in Table K-CDD-1.

¹¹²⁷ <https://www.regulations.gov/comment/CMS-2023-0120-3326>.

TABLE K-CDD-1: ESTIMATES OF TOTAL REASONABLE ANNUAL COSTS TO ESTABLISH AND MAINTAIN A BUFFER STOCK OF ESSENTIAL MEDICINES AND THE DISTRIBUTION OF THE IPPS PAYMENTS AT SELECTED PERCENTILES

Percentiles	Total Reasonable Costs	IPPS Payment
90 th	\$17,213	\$1,885
75 th	\$6,140	\$672
Median	\$2,443	\$255
25 th	\$1,241	\$95
10 th	\$603	\$35

After consideration of the comments received, we continue to believe the methodology described in this section to calculate this spending estimate under the IPPS for FY 2025 is reasonable based on the information currently available.

7. Effects Under the Hospital Readmissions Reduction Program for FY 2025

In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36238), we did not propose to add, modify, or remove any measures or policies for the FY 2025 Hospital Readmissions Reduction Program; the policies finalized in FY 2023 IPPS/LTCH PPS final rule (87 FR 49081 through 49094) continue to apply. This program requires a reduction to a hospital's base operating diagnosis-related group (DRG) payments to account for excess readmissions of selected applicable conditions and procedures. Table I.G.7.-01 and the analysis in this final rule illustrate the estimated financial impact of the Hospital Readmissions Reduction Program payment adjustment methodology by hospital characteristic. Hospitals are sorted into quintiles based on the proportion of dual-eligible stays among Medicare fee-for-service (FFS) and managed care stays between July 1, 2020 and June 30, 2023 (that is, the FY 2025 Hospital Readmissions Reduction Program's applicable period, which is the most recently available data at

the time of publication of this final rule). Hospitals' excess readmission ratios (ERRs) are assessed relative to their peer group median and a neutrality modifier is applied in the payment adjustment factor calculation to maintain budget neutrality. In this FY 2025 IPPS/LTCH PPS final rule, we are providing an updated estimate of the financial impact using the proportion of dually-eligible beneficiaries, ERRs, and aggregate payments for each condition/procedure and all discharges for applicable hospitals from the FY 2025 Hospital Readmissions Reduction Program applicable period (that is, July 1, 2020, through June 30, 2023).

The results in Table I.G.7.-01 include 2,828 non-Maryland hospitals estimated as eligible to receive a penalty during the performance period. Hospitals are eligible to receive a penalty if they have 25 or more eligible discharges for at least one measure between July 1, 2020, and June 30, 2023. The second column in Table I.G.7.-01 indicates the total number of non-Maryland hospitals with available data for each characteristic that have an estimated payment adjustment factor less than 1 (that is, penalized hospitals).

The third column in Table I.G.7.-01 indicates the estimated percentage of penalized hospitals among those eligible to receive a penalty by hospital characteristic.

For example, 78.34 percent of eligible hospitals characterized as non-teaching hospitals are expected to be penalized. Among teaching hospitals, 88.57 percent of eligible hospitals with fewer than 100 residents and 90.14 percent of eligible hospitals with 100 or more residents are expected to be penalized. The fourth column in Table I.G.7.-01 estimates the financial impact on hospitals by hospital characteristic. Table I.G.7.-01 also shows the share of penalties as a percentage of all base operating DRG payments for hospitals with each characteristic. This is calculated as the sum of penalties for all hospitals with that characteristic over the sum of all base operating DRG payments for those hospitals between October 1, 2022, through September 30, 2023 (FY 2023). For example, the penalty as a share of payments for non-teaching hospitals is 0.45 percent. This means that total penalties for all non-teaching hospitals are 0.45 percent of total payments for non-teaching hospitals. Measuring the financial impact on hospitals as a percentage of total base operating DRG payments accounts for differences in the amount of base operating DRG payments for hospitals with the characteristic when comparing the financial impact of the program on different groups of hospitals.

BILLING CODE 4120-01-P

Estimated Percentage of Hospitals Penalized and Penalty as Share of Payments for FY 2025 Hospital Readmissions Reduction Program by Hospital Characteristic				
Hospital Characteristic	Number of Eligible Hospitals^(a)	Number of Penalized Hospitals^(b)	Percentage of Hospitals Penalized^(c) (%)	Penalty as a share of payments^(d) (%)
All Hospitals	2,828	2,342	82.81	0.42
By Geographic Location (n= 2,828)				
Urban hospitals	2,164	1,836	84.84	0.42

Source: The table results are based on the data used to calculate the FY 2025 payment adjustment factors of open, non-Maryland, subsection (d) hospitals only. The FY 2025 payment adjustment factors are based on discharges from July 1, 2020, through June 30, 2023. Although data from all subsection (d) and Maryland hospitals are used in calculations of each hospital's ERR, this table does not include results for Maryland hospitals and hospitals that are not open as of the October 2024 public reporting open hospital list because these hospitals are not eligible for a penalty under the program. Hospitals are sorted into five peer groups based on the proportion of FFS and managed care dual-eligible stays for the multi-year performance period. Hospital characteristics are from the FY 2025 IPPS Proposed Rule Impact File.

Note: The total number of hospitals with hospital characteristics data may not add up to the total number of hospitals because not all hospitals have data for all characteristics. Not all hospitals had data for MCR percentage (n=2,827; missing=1).

^a This column is the number of applicable hospitals within the characteristic that are eligible for a penalty (that is, they have 25 or more eligible discharges for at least one measure).

^b This column is the number of applicable hospitals that are penalized (that is, they have 25 or more eligible discharges for at least one measure and an estimated payment adjustment factor less than 1) within the characteristic.

^c This column is the percentage of applicable hospitals that are penalized among hospitals that are eligible to receive a penalty by characteristic.

^d This column is calculated as the sum of all penalties for the group of hospitals with that characteristic divided by total base operating DRG payments for all those hospitals. Measuring the financial impact on hospitals as a percentage of total base operating DRG payments in this way allows for comparisons across hospital characteristics that accounts for differences in the amount of base operating DRG payments for different groups of hospitals. MedPAR data from October 1, 2022, through September 30, 2023 (FY 2023), are used to estimate the total base operating DRG payments.

^e A hospital is considered a teaching hospital if it has an Indirect Medical Education adjustment factor for Operation PPS (TCHOP) greater than zero.

^f A hospital is considered a safety-net hospital if it is in the top DSH quintile.

^g DSH patient percentage is the sum of the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income (SSI), and the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.

^h MCR (Medicare Cost Report) percentage is the percentage of total inpatient stays from Medicare patients.

BILLING CODE 4120-01-C

8. Effects of Changes Under the FY 2025 Hospital Value-Based Purchasing (VBP) Program

The Secretary makes value-based incentive payments to hospitals under the Hospital Value-Based Purchasing Program based on their performance on measures during the performance period with respect to a fiscal year. These incentive payments will be funded for FY 2025 through a reduction to the FY 2025 base operating DRG payment amount for hospital discharges for such fiscal year, as required by section 1886(o)(7)(B) of the Act. The applicable percentage for FY 2025 and subsequent years is two percent. The total amount available for value-based incentive payments must be equal to the total amount of reduced payments for all hospitals for the fiscal year, as estimated by the Secretary. In section V.L.1.b. of the preamble of this final rule, we estimate the available pool of funds for value-based incentive payments in the FY 2025 program year, which, in accordance with section 1886(o)(7)(C)(v) of the Act, will be 2.00 percent of base operating DRG payments, or

a total of approximately \$1.67 billion. This estimated available pool for FY 2025 is based on the historical pool of hospitals that were eligible to participate in the FY 2024 program year and the payment information from the March 2024 update to the FY 2023 MedPAR file.

The estimated impacts of the FY 2025 program year by hospital characteristic, found in Table I.8.-01., are based on historical TPSs. We used the FY 2024 program year's TPSs to calculate the proxy adjustment factors used for this impact analysis. These are the most recently available scores that hospitals were given an opportunity to review and correct. The proxy adjustment factors use estimated annual base operating DRG payment amounts derived from the March 2024 update to the FY 2023 MedPAR file. The proxy adjustment factors can be found in Table 16A associated with this final rule (available via the internet on the CMS website).

The impact analysis shows that, for the FY 2025 program year, the number of hospitals with a positive percent change in base operating DRG (49.7 percent) is lower than

the number of hospitals with a negative percent change (50.3 percent). Approximately half of all hospitals experience a percent change in base operating DRG between -2.1 percent and 0.0 percent. On average, urban and rural hospitals in the West North Central and Pacific regions have the highest positive percent change in base operating DRG. Urban hospitals in the Middle Atlantic, East South Central, and West South Central regions experience a negative average percent change in base operating DRG. All other regions (both urban and rural) experience a positive average % change in base operating DRG. With respect to hospitals' Medicare utilization as a percent of inpatient days (MCR), as the MCR percent increases, the average percent change in base operating DRG increases. As DSH percent increases, the average percent change in base operating DRG generally decreases. On average, non-teaching hospitals have a higher percent change in base operating DRG compared to teaching hospitals.

9. Effects Under the HAC Reduction Program for FY 2025

We are presenting the estimated impact of the FY 2025 Hospital-Acquired Condition (HAC) Reduction Program on hospitals by hospital characteristic based on previously adopted policies for the program. In the FY 2025 IPPS/LTCH PPS proposed rule, we did not propose to add or remove any measures from the HAC Reduction Program, nor did we propose any changes to reporting or submission requirements which would have any significant economic impact for the FY 2025 program year or future years. The table in this section presents the estimated proportion of hospitals in the worst-performing quartile of Total HAC Scores by hospital characteristic. Hospitals' CMS Patient Safety and Adverse Events Composite (CMS PSI 90) measure results are based on Medicare fee-for-service (FFS) discharges from July 1, 2021 through June 30, 2023 and version 14.0 of the PSI software. Hospitals' measure results for Centers for Disease Control and Prevention (CDC) Central Line-

Associated Bloodstream Infection (CLABSI), Catheter-Associated Urinary Tract Infection (CAUTI), Colon and Abdominal Hysterectomy Surgical Site Infection (SSI), Methicillin-resistant *Staphylococcus aureus* (MRSA) bacteremia, and *Clostridium difficile* Infection (CDI) are derived from standardized infection ratios (SIRs) calculated with hospital surveillance data reported to the CDC's National Healthcare Safety Network (NHSN) for infections occurring between January 1, 2022 and December 31, 2023. Hospital characteristics are based on the FY 2025 IPPS Proposed Rule Impact File.

This table includes 2,933 non-Maryland hospitals with an estimated FY 2025 Total HAC Score based on the most recently available data at the time of publication of this final rule. Maryland hospitals and hospitals without a Total HAC Score are excluded from the table. Actual results for FY 2025 will be determined in the fall of 2024 after a 30-day review and corrections period for hospitals to review their program results. The first column presents a breakdown of each characteristic, and the second column

indicates the number of hospitals for the respective characteristic.

The third column in the table indicates the estimated number of hospitals for each characteristic that would be in the worst-performing quartile of Total HAC Scores. For example, with regard to teaching status, 426 hospitals out of 1,700 hospitals characterized as non-teaching hospitals would be subject to a payment reduction. Among teaching hospitals, 196 out of 935 hospitals with fewer than 100 residents and 102 out of 285 hospitals with 100 or more residents would be subject to a payment reduction.

The fourth column in the table indicates the estimated proportion of hospitals for each characteristic that would be in the worst-performing quartile of Total HAC Scores and thus receive a payment reduction under the FY 2025 HAC Reduction Program. For example, 25.1 percent of the 1,700 hospitals characterized as non-teaching hospitals, 21.0 percent of the 935 teaching hospitals with fewer than 100 residents, and 35.8 percent of the 285 teaching hospitals with 100 or more

residents would be subject to a payment reduction.

BILLING CODE 4120-01-P

Estimated Proportion of Hospitals in the Worst-Performing Quartile (>75th percentile) of the Total HAC Scores for the FY 2025 HAC Reduction Program (by Hospital Characteristic)

South Atlantic	494	111	22.5
East South Central	255	73	28.6
West South Central	444	93	20.9
Mountain	224	39	17.4
Pacific	375	104	27.7

Source: FY 2025 HAC Reduction Program estimated final rule results are based on CMS PSI 90 data from July 1, 2021, through June 30, 2023, and CDC NHSN HAI results from January 1, 2022, through December 31, 2023. Hospital Characteristics are based on the FY 2025 IPPS Proposed Rule Impact File.

Note: The total number of hospitals with hospital characteristic data may not add up to the total number of hospitals because not all hospitals have data for all characteristics. Not all hospitals had data for geographic location, teaching status, ownership, Safety-net status, and DSH percent (n = 2,920; missing = 13), and MCR percent (n = 2,915; missing = 18).

^a This column is the number of non-Maryland hospitals with a Total HAC Score within the corresponding characteristic that are estimated to be in the worst-performing quartile.

^b This column is the percent of non-Maryland hospitals within each characteristic that are estimated to be in the worst-performing quartile. The percentages are calculated by dividing the number of non-Maryland hospitals with a Total HAC Score in the worst-performing quartile by the total number of non-Maryland hospitals with a Total HAC Score within that characteristic.

^c The number of non-Maryland hospitals with a Total HAC Score (N = 2,933).

^d A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero.

^e A hospital is considered a Safety-net hospital if it is in the top quintile for DSH percent.

^f The DSH patient percentage is equal to the sum of: (1) the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income; and (2) the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.

BILLING CODE 4120-01-C

10. Effects of Implementation of the Rural Community Hospital Demonstration Program in FY 2024

In section II.A.4.h. of the Addendum of this final rule for FY 2025, we discussed our budget neutrality methodology for section 410A of Public Law 108-173, as amended by sections 3123 and 10313 of Pub. L 111-148, by section 15003 of Public Law 114-255, and most recently, by section 128 of Public Law 116-260, which requires the Secretary to conduct a demonstration that would modify payments for inpatient services for up to 30 rural hospitals.

Section 128 of Public Law 116-260 requires the Secretary to conduct the Rural Community Hospital Demonstration for a 15-year extension period (that is, for an additional 5 years beyond the previous extension period). In addition, the statute provides for continued participation for all hospitals participating in the demonstration program as of December 30, 2019.

Section 410A(c)(2) of Public Law 108-173 requires that in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary

would have paid if the demonstration program under this section was not implemented (budget neutrality). We propose to adopt the general methodology used in previous years, whereby we estimated the additional payments made by the program for each of the participating hospitals as a result of the demonstration, and then adjusted the national IPPS rates by an amount sufficient to account for the added costs of this demonstration. In other words, we have applied budget neutrality across the payment system as a whole rather than across the participants of this demonstration. The language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration was not implemented, but does not identify the range across which aggregate payments must be held equal.

For this final rule, the resulting amount applicable to FY 2025 for 22 participating hospitals is \$49,914,526, which we are incorporating into the budget neutrality offset adjustment for FY 2025. This estimated amount is based on the specific assumptions regarding the data sources used, that is,

recently available “as submitted” cost reports and historical and currently finalized update factors for cost and payment.

In previous years, we have incorporated a second component into the budget neutrality offset amounts identified in the final IPPS rules. As finalized cost reports became available, we determined the amount by which the actual costs of the demonstration for an earlier, given year differed from the estimated costs for the demonstration set forth in the final IPPS rule for the corresponding fiscal year, and we incorporated that amount into the budget neutrality offset amount for the upcoming fiscal year. We have calculated this difference for FYs 2005 through 2018 between the actual costs of the demonstration as determined from finalized cost reports once available, and estimated costs of the demonstration as identified in the applicable IPPS final rules for these years.

With the extension of the demonstration for another 5-year period, as authorized by section 128 of Public Law 116-260, we will continue this general procedure. Thus, we are including in the budget neutrality offset amount in the FY 2025 final rule the amount by which the actual costs of the demonstration, as determined from finalized cost reports and revisions by the MACs for

the 27 hospitals that completed cost reporting periods beginning in FY 2019, differed from the estimated costs identified in the FY 2019 final rule. Accordingly, the actual costs of the demonstration for FY 2019 fell short of the estimated amount in the FY 2019 by \$30,499,707. This amount is subtracted from the estimated amount for FY 2025, resulting in \$19,414,819, which represents the budget neutrality offset amount to be applied to the national IPPS rates for FY 2025.

Comment: The parent company for two of the participating hospitals expressed support for the continuation of the of the Rural Community Hospital Demonstration program, while noting that it does not offer long-term financial stability needed to maintain health care access in rural areas. The commenter requests that the demonstration be made a permanent program, and, in addition, that CMS institute an application process to ensure the demonstration meets program capacity. Furthermore, the commenter requests several technical adjustments to the administration of the demonstration that may enhance stability in the payment to the participating hospitals.

Response: We appreciate the comments. We have conducted the demonstration program in accordance with Congressional mandates. Title XVIII does not extend authority to make the demonstration a permanent program. With regard to any further actions, we intend to work with the commenter and other rural stakeholders to examine the issues involved.

11. Effects of Continued Implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration

As described in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59119 through 59122), CMS waived certain Medicare rules for CAHs participating in the demonstration extension period to allow for alternative reasonable cost-based payment methods in the three distinct intervention service areas: telehealth services, ambulance services, and skilled nursing facility/nursing facility services. These waivers were implemented with the goal of increasing access to care with no net increase in costs. As we explained in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59119 through 59122), section 129 of Public Law 116–159, stipulates that only the 10 CAHs that participated in the initial period of the FCHIP Demonstration are eligible to participate during the extension period. Among the eligible CAHs, five elected to participate in the extension period. The selected CAHs are located in two states—Montana and North Dakota—and are implementing the three intervention services.

As explained in the FY 2024 IPPS/LTCH PPS final rule, we based our selection of CAHs for participation in the demonstration with the goal of maintaining the budget neutrality of the demonstration on its own terms meaning that the demonstration would produce savings from reduced transfers and admissions to other health care providers, offsetting any increase in Medicare payments as a result of the demonstration. However, because of the small size of the demonstration and uncertainty associated

with the projected Medicare utilization and costs, the policy we finalized for the demonstration extension period of performance in the FY 2024 IPPS/LTCH PPS final rule provides a contingency plan to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met.

In the FY 2024 IPPS/LTCH PPS final rule, we adopted the same budget neutrality policy contingency plan used during the demonstration initial period to ensure that the budget neutrality requirement in section 123 of Public Law 110 275 is met during the demonstration extension period. If analysis of claims data for Medicare beneficiaries receiving services at each of the participating CAHs, as well as from other data sources, including cost reports for the participating CAHs, shows that increases in Medicare payments under the demonstration during the 5-year extension period is not sufficiently offset by reductions elsewhere, we will recoup the additional expenditures attributable to the demonstration through a reduction in payments to all CAHs nationwide.

As explained in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59119 through 59122), because of the small scale of the demonstration, we indicated that we did not believe it would be feasible to implement budget neutrality for the demonstration extension period by reducing payments to only the participating CAHs. Therefore, in the event that this demonstration extension period is found to result in aggregate payments in excess of the amount that would have been paid if this demonstration extension period were not implemented, CMS policy is to comply with the budget neutrality requirement finalized in the FY 2024 IPPS/LTCH PPS final rule, by reducing payments to all CAHs, not just those participating in the demonstration extension period.

In the FY 2024 IPPS/LTCH PPS final rule, we stated that we believe it is appropriate to make any payment reductions across all CAHs because the FCHIP Demonstration was specifically designed to test innovations that affect delivery of services by the CAH provider category. As we explained in the FY 2024 IPPS/LTCH PPS final rule, we believe that the language of the statutory budget neutrality requirement at section 123(g)(1)(B) of Public Law 110–275 permits the agency to implement the budget neutrality provision in this manner. The statutory language merely refers to ensuring that aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project was not implemented and does not identify the range across which aggregate payments must be held equal.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45323 through 45328), CMS concluded that the initial period of the FCHIP Demonstration had satisfied the budget neutrality requirement described in section 123(g)(1)(B) of Pub L. 110–275. Therefore, CMS did not apply a budget neutrality payment offset policy for the initial period of the demonstration. As explained in the FY 2022 IPPS/LTCH PPS final rule, we finalized a policy to address

the demonstration budget neutrality methodology and analytical approach for the initial period of the demonstration. In the FY 2024 IPPS/LTCH PPS final rule, we finalized a policy to adopt the same budget neutrality methodology and analytical approach used during the demonstration initial period to be used for the demonstration extension period. As stated in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59119 through 59122), our policy for implementing the 5-year extension period for section 129 of Public Law 116–260 follows same budget neutrality methodology and analytical approach as the demonstration initial period methodology. While we expect to use the same methodology that was used to assess the budget neutrality of the FCHIP Demonstration during initial period of the demonstration to assess the financial impact of the demonstration during this extension period, upon receiving data for the extension period, we may update and/or modify the FCHIP budget neutrality methodology and analytical approach to ensure that the full impact of the demonstration is appropriately captured. Therefore, we did not propose to apply a budget neutrality payment offset to payments to CAHs in FY 2025. This policy will have no impact for any national payment system for FY 2025. We received no comments on this provision and therefore are finalizing this provision without modification.

12. Effects of Proposed Implementation of the Transforming Episode Accountability Model (TEAM)

In section X.A. of the preamble of this final rule, we are finalizing the test of a new mandatory episode-based payment model titled the Transforming Episode Accountability Model (TEAM) under the authority of the CMS Center for Medicare and Medicaid Innovation (CMS Innovation Center). Section 1115A of the Act authorizes the CMS Innovation Center to test innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries while reducing program expenditures. The intent of TEAM is to improve beneficiary care through financial accountability for episode categories that begin with one of the following procedures: coronary artery bypass graft, lower extremity joint replacement, major bowel procedure, surgical hip/femur fracture treatment, and spinal fusion. TEAM will test whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. We anticipate that TEAM may benefit Medicare beneficiaries through improving the coordination of items and services paid for through Medicare fee-for-service (FFS) payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode.

TEAM will require acute care hospitals located within selected mandatory CBSAs to participate in the model. CMS will allow a one-time opportunity for hospitals that participate until the last day of the last

performance period in the BPCI Advanced model or the last day of the last performance year of the CJR model, that are not located in a mandatory CBSA selected for TEAM participation to voluntarily opt into TEAM.¹¹²⁸ This episode-based payment model will begin on January 1, 2026, and end on December 31, 2030. Payment approaches that hold providers accountable for episode cost and performance can potentially create incentives for the implementation and coordination of care redesign between participants and other providers and suppliers such as physicians and post-acute care providers. TEAM could enable hospitals to consider the most appropriate strategies for care redesign, including (1) increasing post-hospitalization follow-up and medical management for patients; (2) coordinating care across the inpatient and post-acute care spectrum; (3) conducting appropriate discharge planning; (4) improving adherence to treatment or drug regimens; (5) reducing readmissions and complications during the post-discharge period; (6) managing chronic diseases and conditions that may be related to the proposed episodes; (7) choosing the most appropriate post-acute care setting; and (8) coordinating between providers and suppliers such as hospitals, physicians, and post-acute care providers.

Under this model, TEAM participants will continue to bill Medicare under the traditional FFS system for items and services furnished to Medicare FFS beneficiaries. The TEAM participant may receive a

reconciliation payment from CMS if Medicare FFS expenditures for a performance year are less than the reconciliation target price, subject to a quality adjustment. TEAM will not have downside risk for Track 1 and TEAM participants will only be accountable for performance year spending below their reconciliation target price, subject to a quality adjustment, that will result in a reconciliation payment amount. For Track 2 and Track 3, TEAM will be a two-sided risk model that requires TEAM participants to be accountable for performance year spending above or below their reconciliation target price, subject to a quality adjustment, that will result in a reconciliation payment amount or a repayment amount.

a. Effects on the Medicare Program

TEAM is a mandatory episode-based payment model which will have a direct effect on the Medicare program because TEAM participants will be incentivized to reduce Medicare spending. Additionally, TEAM participants may receive a reconciliation payment amount from CMS or have to pay CMS a repayment amount based on their spending and quality performance. Table I.G.12-01 shows the projected financial impacts of TEAM over the course of the five-year model test. The first performance year (2026) of TEAM is expected to cost the Medicare program \$38 million because we assume most TEAM participants will elect participation in Track 1, which is not subject

to downside risk. In performance year 2 (2027), TEAM participants in Track 1 will have no downside risk while TEAM participants in Track 2 and Track 3 will be subject to both upside and downside risk, and we estimate TEAM participants on net (that is, repayment amounts less reconciliation payments) will pay \$37 million to CMS, and that TEAM will save the Medicare program \$96 million. To protect TEAM participants from significant financial risk, we have finalized a 5 percent stop-loss and stop-gain limit for TEAM participants in Track 2 and a 20 percent stop-loss and stop-gain limit for TEAM participants in Track 3. These limits will cap the total amount of repayments paid by TEAM participants to CMS or cap the total amount of reconciliation payment amounts paid by CMS to TEAM participants. In performance year 3 (2028), we estimate TEAM participants on net will pay \$68 million to CMS, and that TEAM will save the Medicare program \$129 million. We estimate that TEAM participants on net will pay CMS \$93 million in performance year 4 and \$77 million in performance year 5, and that TEAM will save the Medicare program \$154 million and \$140 million for these performance years, respectively. We estimate that CMS will pay TEAM participants \$442 million and TEAM participants will pay CMS \$622 million, and that TEAM will save the Medicare program approximately \$481 million over the 5 performance years (2026 through 2030).

TABLE I.G.12.-01: PROJECTED FINANCIAL IMPACTS OF TEAM (IN MILLIONS)

	2026	2027	2028	2029	2030
TEAM episode spending	\$5,715	\$5,828	\$5,943	\$6,058	\$6,163
(+) Reconciliation payment amounts (positive)	\$95	\$93	\$82	\$82	\$90
(+) Reconciliation repayment amounts (negative)	\$0	-\$130	-\$150	-\$175	-\$167
- Baseline episode spending	\$5,773	\$5,887	\$6,003	\$6,119	\$6,225
Impact	\$38	-\$96	-\$129	-\$154	-\$140
Impact as % of Baseline	0.7%	-1.6%	-2.1%	-2.5%	-2.2%

* These estimates are before financial interactions with Part B premium or the Medicare Advantage program.

(1) Assumptions

We assumed TEAM episode volume is estimated to grow at the same rate as projected Medicare FFS enrollment as indicated in the 2023 Medicare Trustees Report.¹¹²⁹ Further, an internal sample set of hospitals was used to estimate financial impacts and simulate TEAM participation. The amount of national episode spending captured by the sample set of hospitals was 29 percent in 2023.

We note that TEAM participants are estimated to reduce episode spending by 1 percent as a result of participating in TEAM. The fifth annual evaluation report of the Comprehensive Care for Joint Replacement

(CJR) model indicated that CJR resulted in roughly a 4 percent reduction in lower extremity joint replacement (LEJR) spending (not including reconciliation payments) for participants over the course of the model.¹¹³⁰ Since participation in CJR is mandatory in 34 metropolitan statistical areas, and LEJR episodes make up a significant portion of the episodes included in TEAM, the CJR evaluation results appear to be a reasonable proxy for what to expect in TEAM. However, the episode length in CJR is 90 days, whereas in TEAM the proposed length is 30 days. Internal analysis indicated that the 30-day episode is approximately 75 percent as costly as a 90-day episode for LEJR procedures. In

addition, post-acute care spending has been declining in recent years for episodes that we are proposing to include in TEAM, which could limit the potential for TEAM participants to achieve significant improvements in efficiency. Thus, we believe that the intervention effect of TEAM on episode spending will be a reduction of 0 to 3 percent (see Table I.G.12-02 for a sensitivity analysis for how the financial impact is affected by changes in this assumption).

We also note that starting from actual episode spending that occurred in the first half 2023, average baseline spending per episode is estimated to increase by 1.5

¹¹²⁸ For the BPCI Advanced model, the last day of the last performance period is December 31,

¹¹²⁹ For the CJR model, the last day of the last performance year is December 31, 2024.

¹¹³⁰ <https://www.cms.gov/oact/tr/2023>.

¹¹³⁰ <https://www.cms.gov/priorities/innovation/data-and-reports/2023/cjr-py5-annual-report>.

percent every year. The national average per episode spending growth for all TEAM episode types in years 2018, 2019, 2022, and 2023 was approximately 1.3 percent. Annual growth rates for each episode type were weighted by spending, and historical experience during 2020 and 2021 were excluded due to possible impacts from the peak of the COVID-19 pandemic. Since some of the historical experience in these years includes Medicare policy changes for LEJR episodes that resulted in surgeries occurring in more efficient care settings, translating to spending decreases that may not be duplicated in future years, the assumed annual trend is slightly greater than the observed average trend from the historical experience.

Additionally, our estimates do not include the impact of TEAM beneficiary overlap with total cost of care models, such as when a TEAM beneficiary is also assigned to a Medicare Shared Savings Program ACO. However, given the precision in the Shared Savings Program projections, we do not anticipate a practical difference in the ACO's shared savings estimates. Nor do we anticipate TEAM beneficiary overlap with

total cost of care models having a meaningful effect to TEAM's projected financial impacts, described in Table I.G.12-01.

TEAM will allow hospitals in the CJR and BPCI Advanced models that have remained in their respective models until the conclusion of those initiatives the option to voluntarily participate in TEAM. Impacts from these potential participants have not been included in our estimates due to the high degree of uncertainty regarding the level of interest that these potential participants will have in TEAM. We would expect that the majority of voluntary opt-in TEAM participants would come from the CJR model due to the large amount of attrition that has occurred in the BPCI Advanced model. We also expect that hospitals who would choose to opt into TEAM would include CJR participant hospitals that have consistently received positive reconciliation payments in recent years. Given the magnitude of reconciliation payments for CJR participant hospitals in recent years, we assume that the maximum potential costs of the voluntary opt-in policy will not jeopardize the overall direction of the net savings estimate.

Because the financial impact is based on projections of spending, the estimates implicitly assume that there will be no significant difference between the projected episode spending used to calculate the prospective target prices and actual episode spending. This assumption has a large degree of uncertainty, and the actual TEAM financial impacts will be sensitive to this difference. However, some of the financial risk of the projection error is mitigated by the retrospective trend factor. Target prices will still be susceptible to some error risk if the projection error exceeds the retrospective trend factor cap. The direction, magnitude and timing of projection inaccuracies would all affect the overall financial impact estimate.

(2) Sensitivity Analysis

We also performed a sensitivity analysis to assess various intervention effects on TEAM. Overall financial impacts are sensitive to the intervention effect TEAM would have on TEAM participants' episode spending. Table I.G.12-02 includes financial impacts at various intervention effect assumptions (note that negative values indicate savings):

TABLE I.G.12-02: TEAM SENSITIVITY ANALYSIS AT VARIOUS INTERVENTION EFFECTS

Intervention Effect	2026	2027	2028	2029	2030
-3.0%	-0.4%	-1.8%	-3.3%	-3.7%	-2.9%
-1.0%	0.7%	-1.6%	-2.1%	-2.5%	-2.2%
0.0%	1.3%	-1.5%	-1.5%	-1.9%	-1.9%

The sensitivity is due to the lack of the requirement that participants participate in downside risk during performance year 1 and the effect that reductions in episode spending during performance years would have on target prices for future performance years.

The following is a summary of comments we received on the effects to Medicare and our responses to these comments:

Comment: A commenter indicated that the impact analysis in the proposed rule estimated that TEAM will generate \$705 million in net savings for the Medicare program and on net \$403 million is projected to result from hospitals paying CMS because actual episode spending exceeded the target price but CMS did not estimate how much it will pay hospitals that generated a reconciliation payment amount.

Response: We thank the commenter for their question. For this final rule we have updated the Table I.G.12.-01, to reflect updated estimates as a result of final policy modifications. This updated table now separates reconciliation payment amounts and repayment amounts on discrete rows, rather than netting them on a single row, to allow the public to view the payments to TEAM participants (reconciliation payment amounts) and payments to CMS (repayment amounts) over the course of the five-year model performance period. The updated estimates indicate that we anticipate CMS

will pay TEAM participants \$442 million and TEAM participants will pay CMS \$622 million as a result of participation in the model.

Comment: A couple of commenters had concerns that the proposed rule's impact analysis did not consider what it will cost hospitals to participate in TEAM. A commenter indicated that based on the volume projections for each episode and assuming 25% of the targeted CBSAs are required to participate, it is estimated that hospital costs to participate will range between \$530 million and \$744 million, which is between 75% to 106% of CMS' net projected savings and represent an unfunded mandate by the agency. Further, the costs to participate will either be cross-subsidized by the private sector, require hospitals to redeploy funding and resources from other outcome improvement efforts that are targeted to communities' needs, and/or result in further loss of access to services for Medicare beneficiaries and the broader community. Another commenter requested CMS estimate the potential costs of participation, and then draw on potentially relevant experience in the similar BPCI Advanced or CJR models to put forward a good faith estimate of what fraction of participating hospitals can expect to gain or lose money through participation.

Response: We appreciate the commenters' concerns or the potential economic impact on TEAM participants. We disagree with the commenter's estimate for how much TEAM will cost to implement and that it represents an unfunded mandate. We believe TEAM participants will not incur significant costs to implement TEAM because the administrative, monitoring, and compliance requirements for TEAM will not substantially diverge from existing requirements for Medicare providers. TEAM will not be adding to quality measure reporting or health equity reporting burden because we are using quality measures that TEAM participants will already be reporting for other CMS quality reporting programs and health equity reporting is voluntary. Nor does TEAM require TEAM participants to alter the way items and services are billed to Medicare, invest in technology or analytics, or increase human capital. A TEAM participant may wish to not change their behaviors or care practices, or devote resources to implementing the model, and they will still have financial protections that would prevent hospital costs equating to the commenter's estimates. Specifically, TEAM includes provisions such as the high-cost outlier cap that limits high-cost episode payments, and the stop-loss limit that restricts how much a TEAM participant may be required to pay CMS, as discussed in sections X.A.3.f.(3)(e)

and X.A.3.f.(5)(h) of the preamble of this final rule. Further, all TEAM participants are eligible to participate in Track 1 for the first performance year, as discussed in section X.A.3.a.(3) of the preamble of this final rule, with no downside financial risk or up to two additional years of no downside risk for TEAM participants that are safety net hospitals, as defined in section X.A.3.f.(2) of the preamble of this final rule.

We also do not agree that TEAM will be cross-subsidized by the private sector, but in contrast we anticipate that private or commercial patients and payers may benefit from the care redesign inventions implemented by the TEAM participant. We believe many hospitals already have established standard care pathways and care teams that have experience managing beneficiaries who receive these procedures, so we do not expect TEAM to require a significant overhaul to care practices or significantly increase operating costs, but to rather encourage TEAM participants to introduce refinements to existing process that will create the efficiencies to improve quality and reduce spending. These efficiencies may result in spillover effects to other patients in the hospital that yield broader quality and spending improvements beyond TEAM, generating a positive financial impact for the TEAM participant and potentially other payers.

We also disagree that TEAM will result in Medicare beneficiaries losing access to services. TEAM participants may not limit access to medically necessary items and services, nor limit the TEAM beneficiary's choice of Medicare providers and suppliers. We will monitor beneficiary care, as discussed in section X.A.3.i of the preamble of this final rule, to ensure beneficiary access to care and freedom of choice is not compromised.

Lastly, we acknowledge the commenter's recommendation on drawing from experience in the BPCI Advanced and CJR models to estimate the fiscal impact to a hospital. However, we do not believe that this is something that can be accurately modeled given the high amount of uncertainty regarding individual hospital resources, capabilities, and care redesign interventions that might potentially be spurred by TEAM.

b. Effects on the Medicare Beneficiaries

We believe that episode-based payment models may have the potential to benefit beneficiaries because the intent of the models is to test whether providers are able to improve the coordination and transition of care, invest in infrastructure and redesigned care processes for high quality and efficient service delivery and incentivize higher value care across the inpatient and post-acute care spectrum. We believe that episode-based payment models have a patient-centered focus such that they incentivize improved healthcare delivery and communication based on the needs of the beneficiary, thus potentially benefitting beneficiaries. We anticipate the model will not affect beneficiary cost sharing for items and services that beneficiaries receive from TEAM participants or premiums paid by beneficiaries. If there is a shift in the utilization of items and services within each

episode, then beneficiary cost sharing could be higher or lower than would otherwise be experienced.

We are including a patient reported outcome measure, specific to LEJR episode categories, in the TEAM quality measures that will be tied to payment with the belief that doing so would encourage TEAM participants to focus on and deliver improved quality of care for Medicare beneficiaries. Additionally, TEAM participants must perform well on quality measure performance to achieve their maximum reconciliation payment. The accountability of TEAM participants for both quality and the cost of care that is furnished to TEAM beneficiaries within an episode provides TEAM participants with new incentives to improve the health and well-being of the Medicare beneficiaries they treat.

Additionally, the model does not affect the beneficiary's freedom of choice to obtain health services from any individual or organization qualified to participate in the Medicare program as guaranteed under section 1802 of the Act. Eligible beneficiaries who receive one of the five proposed surgical episode categories from a TEAM participant will not have the option to opt their episodes out of the model. TEAM participants may not prevent or restrict beneficiaries to any list of preferred or recommended providers.

Many controls exist under Medicare to ensure beneficiary access and quality, and we will use our existing authority, if necessary, to audit TEAM participants if claims analysis indicates an inappropriate change in delivered services. Given that TEAM participants may receive a reconciliation payment, subject to a quality adjustment, when they are able to reduce spending below the reconciliation target price, they could have an incentive to avoid complex, high-cost cases by referring them to nearby facilities or specialty referral centers. We intend to monitor the claims data from TEAM participants—for example, to compare a hospital's case mix relative to a pre-model historical baseline to determine whether complex patients are being systematically excluded. Furthermore, we are requiring TEAM participants to supply beneficiaries with written information regarding the hospital's participation in TEAM as well as their rights under Medicare, including their right to use their provider of choice.

We will implement safeguards to ensure that Medicare beneficiaries do not experience a delay in services. Specifically, to avoid perverse incentives to withhold or delay medically necessary care until after an episode ends, TEAM participants will remain responsible for episode spending in the 30-day period following completion of each episode for all services covered under Medicare Parts A and B, regardless of whether the services are included in the episode definition.

Importantly, approaches to savings will include taking steps that facilitate patient recovery, shorten recovery duration, and minimize post-operative problems that might lead to readmissions. Thus, the model itself rewards better patient care.

Lastly, we note that TEAM will not change Medicare FFS payments, beneficiary

copayments, deductibles, or coinsurance. Beneficiaries may benefit if TEAM participants are able to systematically improve the quality of care while reducing costs. We welcomed but did not receive public comments on our estimates of the impact of TEAM on Medicare beneficiaries.

c. Aggregate Effects on the Market

There may be spillover effects in the non-Medicare market, or even in the Medicare market in other areas as a result of this model. Testing changes in Medicare payment policy may have implications for non-Medicare payers. As an example, non-Medicare patients may benefit if participating hospitals introduce system-wide changes that improve the coordination and quality of health care. Other payers may also be developing payment models and may align their payment structures with CMS or may be waiting to utilize results from CMS' evaluations of payment models. Because it is unclear whether and how this evidence applies to a test of these new payment models, our analyses assume that spillover effects on non-Medicare payers will not occur, although this assumption is subject to considerable uncertainty. We welcomed comments on this assumption and evidence on how this rulemaking, would impact non-Medicare payers and patients but did not receive any comments.

13. Effects of Changes the Provider Reimbursement Review Board (PRRB) Membership

In section X.B. of the preamble of this final rule, we finalized proposed changes to 42 CFR 405.1845 to permit individuals to serve one additional consecutive term as PRRB Members, relative to the current regulations, which allow two consecutive 3-year terms (6 consecutive years). Based on historical experience, PRRB Members generally serve 6 consecutive years as permitted by the current regulations; under the final rule, a PRRB Member would be eligible to serve for 9 years. We anticipate achieving productivity gains and greater efficiencies from retaining experienced Board Members over a longer period, particularly since Board Members spend a portion of their initial term acclimating to the adjudicatory responsibilities and deepening their expertise in the wide scope of specialized matters that come before the Board. Accordingly, under the policy we are adopting in the final rule, we anticipate that a Board Member would be in a better position to efficiently address increasingly complex and technical issues and a higher volume of cases as they gain additional seniority. Furthermore, the possibility of having a 9-year tenure on the PRRB might make the position more attractive to prospective applicants, thereby increasing the size and quality of the candidate pool. We believe for example that otherwise qualified individuals might refrain from applying, knowing that the position is limited to no more than 6 years. Therefore, this policy will result in a no cost impact relative to the requirements of Executive Orders 12866, 13563, and 14094. There may be negligible government savings attributable to reducing human resource-related costs such as recruitment and hiring activity. We

received no comments on this aspect of our proposal and are finalizing this provision without modification.

14. Effects of the Removal of the Puerto Rico Exclusion From Payment Error Rate Measurement (PERM) Review

In section X.D. of the preamble of this final rule, we discuss in detail the changes to the administration of the existing PERM program. The Further Consolidated Appropriations Act of 2020 (Pub. L. 116–94) required Puerto Rico to publish a plan, developed in coordination with CMS, and approved by the CMS Administrator, not later than 18 months after the FCAA's enactment, for how Puerto Rico would develop measures to comply with the PERM requirements of 42 CFR part 431, subpart Q. Currently, Puerto Rico is excluded from PERM via regulation at 42 CFR 431.954(b)(3). Puerto Rico will be incorporated into the PERM program starting in reporting year 2027 (Cycle 3), which covers the payment period between July 1, 2025 through June 30, 2026.

In the proposed rule, we noted that including Puerto Rico in the PERM program will increase transparency into its Medicaid and CHIP operations and should improve program integrity efforts that protect taxpayer dollars from improper payments. A state¹¹³¹ in the PERM program will be reviewed only once every 3 years and it is not likely that a provider would be selected more than once per program cycle to provide supporting documentation, minimizing the annual burden on both the state and its providers. Therefore, we estimate the cost to Puerto Rico for participating in the PERM program will be approximately \$3.5 million annually. More detail about the cost and burden hours associated with response to requests for information (approximately 6,000 hours annually) can be found in the program PRA package (CMS—10166, CMS—10178, CMS—10184). Therefore, we did not anticipate this to be a significant administrative cost.

We did not prepare an analysis for this policy under the Regulatory Flexibility Act (RFA) because we determined that the policy will not have a significant impact on a substantial number of small entities.

We did not prepare an analysis for section 1102(b) of the Act because we determined that this policy will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule that may result in expenditure in any one year of \$100 million in 1995 dollars, updated annually for inflation. That threshold level is currently approximately \$183 million. This policy will not result in an impact of \$183 million or more on State, local or tribal governments, in the aggregate, or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when

it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. Because this policy does not impose substantial costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We received no comments on this proposal and therefore are finalizing this provision with minor technical correction based on further review of current statute reference. Three references to the Improper Payments Information Act (IPIA) of 2002 (Pub. L. 107–300) will be updated to the Payment Integrity Information Act (PIIA) of 2019 (Pub. L. 116–117). Otherwise, the provision will be finalized without modification.

15. Effects of Hospital and CAH Reporting of Acute Respiratory Illnesses

In section X.F. of the preamble of this final rule, we discuss our finalized requirements related to the reporting of acute respiratory illnesses that will have potentially major public health benefits. Routine reporting of these illnesses absent any new emergency makes it possible to use the data to determine which hospitals faced unusually high or low reported levels of such illnesses. Such comparisons will allow individual hospitals, individual cities or states, or the federal government, to analyze outlier hospitals (either high or low rates of acute respiratory infections) to determine if there were any local factors that might suggest some form of intervention will be beneficial to redress problems or to export successes among the universe of hospitals and CAHs. For example, if hospitals in a particular geographic area were finding an unusually high rate of these illnesses among admitted patients from a particular geographic area, investigation of potential causes might lead to improvements in that area's immunization outreach efforts. It will not take many such interventions to have potentially substantial life-saving effects. In the hopefully unlikely case where an outbreak of acute respiratory illness was so substantial as to require the declaration of a public health emergency, the life-saving benefits could be high. For example, an "early warning" signal could speed the development of a vaccine, effective use of particular medicines for treatments, or other interventions to prevent or ameliorate adverse outcomes ranging from a single instance of illness to a national epidemic.

We received no public comments on our estimates.

H. Effects on Hospitals and Hospital Units Excluded From the IPPS

As of July 2024, there were 92 children's hospitals, 11 cancer hospitals, 6 short term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, 1 extended neoplastic disease care hospital, and 11 RNHCIs being paid on a reasonable cost basis subject to the rate-of-increase ceiling under § 413.40. (In accordance with § 403.752(a) of the regulation, RNHCIs are paid under § 413.40.) Among the remaining providers, the rehabilitation hospitals and units, and the LTCHs, are paid the Federal prospective per

discharge rate under the IRF PPS and the LTCH PPS, respectively, and the psychiatric hospitals and units are paid the Federal per diem amount under the IPF PPS. As stated previously, IRFs and IPFs are not affected by the rate updates discussed in this final rule. The impacts of the changes on LTCHs are discussed in section I.J. of this appendix.

For the children's hospitals, cancer hospitals, short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, the extended neoplastic disease care hospital, and RNHCIs, the update of the rate-of-increase limit (or target amount) is the estimated FY 2025 percentage increase in the 2018-based IPPS operating market basket, consistent with section 1886(b)(3)(B)(ii) of the Act, and §§ 403.752(a) and 413.40 of the regulations. Consistent with current law, based on IGI's second quarter 2024 forecast of the 2018-based IPPS market basket increase, we are estimating the FY 2025 update to be 3.4 percent (that is, the estimate of the market basket rate-of-increase), as discussed in section V.A. of the preamble of this final rule. We proposed that if more recent data became available for the final rule, we would use such data, if appropriate, to calculate the final IPPS operating market basket update for FY 2025. The Affordable Care Act requires a productivity adjustment (0.5 percentage point reduction for FY 2025), resulting in a 2.9 percent applicable percentage increase for IPPS hospitals that submit quality data and are meaningful EHR users, as discussed in section V.B. of the preamble of this final rule. Children's hospitals, cancer hospitals, short term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, the extended neoplastic disease care hospital, and RNHCIs that continue to be paid based on reasonable costs subject to rate-of-increase limits under § 413.40 of the regulations are not subject to the reductions in the applicable percentage increase required under the Affordable Care Act. Therefore, for those hospitals paid under § 413.40 of the regulations, the update is the percentage increase in the 2018-based IPPS operating market basket for FY 2025, currently estimated at 3.4 percent.

The impact of the update in the rate-of-increase limit on those excluded hospitals depends on the cumulative cost increases experienced by each excluded hospital since its applicable base period. For excluded hospitals that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these excluded hospitals receive. Conversely, for excluded hospitals with cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that would not be paid.

We note that, under § 413.40(d)(3), an excluded hospital that continues to be paid under the TEFRA system and whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus the lesser of: (1) 50 percent of its reasonable costs in excess of 110 percent of the limit; or (2) 10 percent of its limit. In addition, under the various provisions set forth in § 413.40,

¹¹³¹ For PERM, a "state" represents an entity receiving Medicaid and CHIP funding that is measured for improper payments, which includes the 50 states, the District of Columbia, and now Puerto Rico.

hospitals can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

I. Effects of Changes in the Capital IPPS

1. General Considerations

For the impact analysis presented in this section of this final rule, we used data from the March 2024 update of the FY 2023 MedPAR file and the March 2024 update of the Provider-Specific File (PSF) that was used for payment purposes. Although the analyses of the changes to the capital prospective payment system do not incorporate cost data, we used the March 2024 update of the most recently available hospital cost report data to categorize hospitals. Our analysis has several qualifications and uses the best data available, as described later in this section of this final rule.

Due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, it is possible that some individual hospitals are placed in the wrong category.

Using cases from the March 2024 update of the FY 2023 MedPAR file, we simulated payments under the capital IPPS for FY 2024 and the payments for FY 2025 for a comparison of total payments per case. Short-term, acute care hospitals not paid under the general IPPS (for example, hospitals in Maryland) are excluded from the simulations.

The methodology for determining a capital IPPS payment is set forth at § 412.312. The basic methodology for calculating the capital IPPS payments in FY 2025 is as follows:

$(\text{Standard Federal rate}) \times (\text{DRG weight}) \times (\text{GAF}) \times (\text{COLA for hospitals located in Alaska and Hawaii}) \times (1 + \text{DSH adjustment factor} + \text{IME adjustment factor, if applicable}).$

In addition to the other adjustments, hospitals may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. We modeled payments for each hospital by multiplying the capital Federal rate by the geographic adjustment factor (GAF) and the hospital's case-mix. Then we added estimated payments for indirect medical education, disproportionate share, and outliers, if applicable. For purposes of this impact analysis, the model includes the following assumptions:

- The capital Federal rate was updated, beginning in FY 1996, by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable

changes in intensity, and other factors. As discussed in section III.A.1. of the Addendum to this final rule, the update to the capital Federal rate is 3.1 percent for FY 2025.

- In addition to the FY 2025 update factor, the FY 2025 capital Federal rate was calculated based on a GAF/DRG budget neutrality adjustment factor of 0.9856, a budget neutrality factor for the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy of 0.9958, and an outlier adjustment factor of 0.9577.

2. Results

We used the payment simulation model previously described in section I.I. of Appendix A of this final rule to estimate the potential impact of the changes for FY 2025 on total capital payments per case, using a universe of 3,082 hospitals. As previously described, the individual hospital payment parameters are taken from the best available data, including the March 2024 update of the FY 2023 MedPAR file, the March 2024 update to the PSF, and the most recent available cost report data from the March 2024 update of HCRIS. In Table III, we present a comparison of estimated total payments per case for FY 2024 and estimated total payments per case for FY 2025 based on the FY 2025 payment policies. Column 2 shows estimates of payments per case under our model for FY 2024. Column 3 shows estimates of payments per case under our model for FY 2025. Column 4 shows the total percentage change in payments from FY 2024 to FY 2025. The change represented in Column 4 includes the 3.1 percent update to the capital Federal rate and other changes in the adjustments to the capital Federal rate. The comparisons are provided by: (1) geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case in FY 2025 are expected to increase 2.8 percent compared to capital payments per case in FY 2024. This expected increase is primarily due to the 3.1 percent update to the capital Federal rate being partially offset by an expected decrease in capital outlier payments. In general, regional variations in estimated capital payments per case in FY 2025 as compared to capital payments per case in FY 2024 are primarily due to the changes in GAFs, and are generally consistent with the projected changes in payments due to the changes in the wage index (and policies affecting the wage index), as shown in Table I in section I.F. of this appendix.

The net impact of these changes is an estimated 2.8 percent increase in capital payments per case from FY 2024 to FY 2025 for all hospitals (as shown in Table III). The geographic comparison shows that, on average, hospitals in both urban and rural classifications would experience an increase

in capital IPPS payments per case in FY 2025 as compared to FY 2024. Capital IPPS payments per case would increase by an estimated 2.7 percent for hospitals in urban areas while payments to hospitals in rural areas would increase by 3.8 percent from FY 2024 to FY 2025. The primary factor contributing to the difference in the projected increase in capital IPPS payments per case for rural hospitals as compared to urban hospitals is the estimated increase in capital payments to rural hospitals due to the effect of changes in the GAFs.

The comparisons by region show that the change in capital payments per case from FY 2024 to FY 2025 for urban areas range from a 0.1 percent decrease for the Pacific urban region to a 5.0 percent increase for the East South Central and East North Central urban regions. Meanwhile, the change in capital payments per case from FY 2024 to FY 2025 for rural areas range from a 0.3 percent decrease for the Pacific rural region to a 6.0 percent increase for the East North Central rural region. Capital IPPS payments per case for hospitals located in Puerto Rico are projected to increase by an estimated 2.2 percent. These regional differences are primarily due to the changes in the GAFs.

The comparison by hospital type of ownership (Voluntary, Proprietary, and Government) shows that proprietary hospitals are expected to experience an increase in capital payments per case from FY 2024 to FY 2025 of 3.2 percent and government hospitals are expected to experience an increase per case from FY 2024 to FY 2025 of 2.3 percent. Meanwhile, voluntary hospitals are expected to experience an increase in capital payments per case from FY 2024 to FY 2025 of 2.8 percent.

Section 1886(d)(10) of the Act established the MGCRB. Hospitals may apply for reclassification for purposes of the wage index for FY 2025. Reclassification for wage index purposes also affects the GAFs because that factor is constructed from the hospital wage index. To present the effects of the hospitals being reclassified as of the publication of this final rule for FY 2025, we show the average capital payments per case for reclassified hospitals for FY 2025. Urban reclassified hospitals are expected to experience an increase in capital payments of 3.0 percent; urban nonreclassified hospitals are expected to experience an increase in capital payments of 2.3 percent. Rural reclassified hospitals are expected to experience an increase in capital payments of 4.1 percent; rural nonreclassified hospitals are expected to experience an increase in capital payments of 3.3 percent. The higher expected increase in payments for rural reclassified hospitals compared to rural nonreclassified hospitals is primarily due to the changes in the GAFs.

BILLING CODE 4120-01-C

J. Effects of Payment Rate Changes and Policy Changes Under the LTCH PPS

1. Introduction and General Considerations

In section VIII. of the preamble of this final rule and section V. of the Addendum to this final rule, we set forth the annual update to the payment rates for the LTCH PPS for FY 2025. In the preamble of this final rule, we specify the statutory authority for the provisions that are presented, identify the policies for FY 2025, and present rationales for our provisions as well as alternatives that were considered. In this section, we discuss the impact of the changes to the payment rate, factors, and other payment rate policies related to the LTCH PPS that are presented in the preamble of this final rule in terms of their estimated fiscal impact on the Medicare budget and on LTCHs.

There are 331 LTCHs included in this impact analysis. We note that, although there are currently approximately 339 LTCHs, for purposes of this impact analysis, we excluded the data of all-inclusive rate providers consistent with the development of the FY 2025 MS-LTC-DRG relative weights (discussed in section VIII.B.3. of the preamble of this final rule). We have also excluded data for CCN 312024 from this impact analysis due to their abnormal charging practices. We note this is consistent with our removal of this LTCH from the calculation of the FY 2025 MS-LTC-DRG relative weights, the area wage level

adjustment budget neutrality factor, and the fixed-loss amount for LTCH PPS standard Federal payment rate cases (discussed in section VIII.B.3. of the preamble of this final rule). Moreover, another LTCH, only had one claim in the claims data used for this final rule. Because the number of covered days of care that are chargeable to Medicare utilization for the stay was reported as 0 on this claim, we excluded this claim and LTCH from our impact analysis. Lastly, in the claims data used for this final rule, one of the 331 LTCHs included in our impact analysis only had claims for site neutral payment rate cases and, therefore, does not affect our impact analysis for LTCH PPS standard Federal payment rate cases presented in Table IV (that is, the impact analysis presented in Table IV is based on the data for 330 LTCHs).

In the impact analysis, we used the payment rate, factors, and policies presented in this final rule, the 3.0 percent annual update to the LTCH PPS standard Federal payment rate, the update to the MS-LTC-DRG classifications and relative weights, the update to the wage index values (including the update to the CBSA labor market areas) and labor-related share, and the best available claims and CCR data to estimate the change in payments for FY 2025.

Under the dual rate LTCH PPS payment structure, payment for LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) is based

on the LTCH PPS standard Federal payment rate. Consistent with the statute, the site neutral payment rate is the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments as specified in § 412.525(a), reduced by 4.6 percent for FYs 2018 through 2026; or 100 percent of the estimated cost of the case as determined under § 412.529(d)(2). In addition, there are two separate high cost outlier targets—one for LTCH PPS standard Federal payment rate cases and one for site neutral payment rate cases.

Based on the best available data for the 331 LTCHs in our database that were considered in the analyses used for this final rule, we estimate that overall LTCH PPS payments in FY 2025 will increase by approximately 2.2 percent (or approximately \$58 million) based on the rates and factors presented in section VIII. of the preamble and section V. of the Addendum to this final rule.

Based on the FY 2023 LTCH cases that were used for the analysis in this final rule, approximately 29 percent of those cases were classified as site neutral payment rate cases (that is, 29 percent of LTCH cases would not meet the statutory patient-level criteria for exclusion from the site neutral payment rate). We note that section 3711(b)(2) of the CARES Act provided a waiver of the application of the site neutral payment rate for LTCH cases admitted during the COVID-19 PHE period. The COVID-19 PHE expired on May 11, 2023. Therefore, all LTCH PPS cases in FY

2023 with admission dates on or before the PHE expiration date were paid the LTCH PPS standard Federal rate regardless of whether the discharge met the statutory patient criteria. Because not all FY 2023 cases were subject to the site neutral payment rate, for purposes of this impact analysis, we continue to rely on the same considerations and actuarial projections used in FYs 2016 through 2024. Our Office of the Actuary currently estimates that the percent of LTCH PPS cases that will be classified as site neutral payment rate cases in FY 2025 will not change significantly from the most recent historical data. To estimate FY 2025 LTCH PPS payments for site neutral payment rate cases, we calculated the IPPS comparable per diem amounts using the FY 2025 IPPS rates and factors along with other changes that will apply to the site neutral payment rate cases in FY 2025. We estimate that aggregate LTCH PPS payments for these site neutral payment rate cases will increase by approximately 4.2 percent (or approximately \$13 million). This projected increase in payments to LTCH PPS site neutral payment rate cases is primarily due to the finalized updates to the IPPS rates and factors reflected in our estimate of the IPPS comparable per diem amount, as well as an increase in estimated costs for these cases determined using the charge and CCR adjustment factors described in section V.D.3.b. of the Addendum to this final rule. We note that we estimate payments to site neutral payment rate cases in FY 2025 will represent approximately 12 percent of estimated aggregate FY 2025 LTCH PPS payments.

Based on the FY 2023 LTCH cases that were used for the analysis in this final rule, approximately 71 percent of LTCH cases will meet the patient-level criteria for exclusion from the site neutral payment rate in FY 2025, and will be paid based on the LTCH PPS standard Federal payment rate. We estimate that total LTCH PPS payments for these LTCH PPS standard Federal payment rate cases in FY 2025 will increase approximately 2.0 percent (or approximately \$45 million). This estimated increase in LTCH PPS payments for LTCH PPS standard Federal payment rate cases in FY 2025 is primarily due to the 3.0 percent annual update to the LTCH PPS standard Federal payment rate being partially offset by a projected 0.8 percentage point decrease in high cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments, which is discussed later in this section.

Based on the 331 LTCHs that were represented in the FY 2023 LTCH cases that were used for the analyses in this final rule presented in this appendix, we estimate that aggregate FY 2024 LTCH PPS payments will be approximately \$2.581 billion, as compared to estimated aggregate FY 2025 LTCH PPS payments of approximately \$2.638 billion, resulting in an estimated overall increase in LTCH PPS payments of approximately \$58 million. We note that the estimated \$58 million increase in LTCH PPS payments in FY 2025 does not reflect changes in LTCH admissions or case-mix intensity, which will also affect the overall payment effects of the policies in this final rule.

The LTCH PPS standard Federal payment rate for FY 2024 is \$48,116.62. For FY 2025, we are establishing an LTCH PPS standard Federal payment rate of \$49,383.26 which reflects the 3.0 percent annual update to the LTCH PPS standard Federal payment rate and the budget neutrality factor for updates to the area wage level adjustment of 0.9964315 (discussed in section V.B.6. of the Addendum to this final rule). For LTCHs that fail to submit data for the LTCH QRP, in accordance with section 1886(m)(5)(C) of the Act, we are establishing an LTCH PPS standard Federal payment rate of \$48,424.36. This LTCH PPS standard Federal payment rate reflects the updates and factors previously described, as well as the required 2.0 percentage point reduction to the annual update for failure to submit data under the LTCH QRP.

Table IV shows the estimated impact for LTCH PPS standard Federal payment rate cases. The estimated change attributable solely to the annual update of 3.0 percent to the LTCH PPS standard Federal payment rate is projected to result in an increase of 2.9 percent in payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025, on average, for all LTCHs (Column 6). The estimated increase of 2.9 percent shown in Column 6 of Table IV also includes estimated payments for short-stay outlier (SSO) cases, a portion of which are not affected by the annual update to the LTCH PPS standard Federal payment rate, as well as the reduction that is applied to the annual update for LTCHs that do not submit the required LTCH QRP data. For most hospital categories, the projected increase in payments based on the LTCH PPS standard Federal payment rate to LTCH PPS standard Federal payment rate cases also rounds to approximately 2.9 percent.

For FY 2025, we are updating the wage index values based on the most recent available data (data from cost reporting periods beginning during FY 2021 which is the same data used for the FY 2025 IPPS wage index) and the revised CBSA labor market areas delineations that we are adopting (as discussed in section V.B.2. of the Addendum to this final rule). In addition, we are establishing a labor-related share of 72.8 percent for FY 2025, based on the most recent available data (IGI's second quarter 2024 forecast) of the relative importance of the labor-related share of operating and capital costs of the 2022-based LTCH market basket. We are also applying an area wage level budget neutrality factor of 0.9964315 to ensure that the changes to the area wage level adjustment will not result in any change in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases.

For LTCH PPS standard Federal payment rate cases, we currently estimate high-cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments will decrease from FY 2024 to FY 2025. Based on the FY 2023 LTCH cases that were used for the analyses in this final rule, we estimate that the FY 2024 high-cost outlier threshold of \$59,873 (as established in the FY 2024 IPPS/LTCH PPS final rule) will result in estimated high cost outlier

payments for LTCH PPS standard Federal payment rate cases in FY 2024 that are projected to exceed the 7.975 percent target. Specifically, we currently estimate that high-cost outlier payments for LTCH PPS standard Federal payment rate cases will be approximately 8.8 percent of the estimated total LTCH PPS standard Federal payment rate payments in FY 2024. Combined with our estimate that FY 2025 high-cost outlier payments for LTCH PPS standard Federal payment rate cases will be 7.975 percent of estimated total LTCH PPS standard Federal payment rate payments in FY 2025, this will result in an estimated decrease in high cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments of approximately 0.8 percentage point between FY 2024 and FY 2025. We note that, in calculating these estimated high cost outlier payments, we inflated charges reported on the FY 2023 claims by the charge inflation factor described in section V.D.3.b. of the Addendum to this final rule. We also note that, in calculating these estimated high-cost outlier payments, we estimated the cost of each case by multiplying the inflated charges by the adjusted CCRs that we determined using our finalized methodology described in section V.D.3.b. of the Addendum to this final rule.

Table IV shows the estimated impact of the payment rate and policy changes on LTCH PPS payments for LTCH PPS standard Federal payment rate cases for FY 2025 by comparing estimated FY 2024 LTCH PPS payments to estimated FY 2025 LTCH PPS payments. (As noted earlier, our analysis does not reflect changes in LTCH admissions or case-mix intensity.) We note that these impacts do not include LTCH PPS site neutral payment rate cases as discussed in section I.J.3. of this appendix.

Comment: We received comments expressing concerns about the adequacy of the 1.2 percent increase in payments to LTCH PPS standard Federal payment rate cases that we projected in the proposed rule. These comments primarily focused on the impact that the proposed annual update to the LTCH PPS standard Federal payment rate and the proposed fixed-loss amount for high-cost outlier cases would have on payments to LTCH PPS standard Federal payment rate cases in FY 2025.

Response: We appreciate commenters' concerns about the proposed 1.2 percent increase in payment to LTCH PPS standard Federal payment rate cases. As explained in the proposed rule (89 FR 36635), that estimated increase of approximately 1.2 percent was primarily due to the proposed 2.8 percent annual update to the LTCH PPS standard Federal payment rate being partially offset by a projected 1.3 percent decrease in high-cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payment. We received several comments on the proposed annual update to the LTCH PPS standard Federal payment rate which we have summarized and responded to in sections VIII.C. and VIII.D. of the preamble to this final rule. We also received several comments on the proposed fixed-loss amount for high-cost outlier cases which we have summarized and responded to in section V.D.3. of the Addendum to this final rule.

Based on the finalized payment rates and factors in this final rule, we now project a 2.0 percent increase in payments to LTCH PPS standard Federal payment rate cases for FY 2025 (as compared to our projection of 1.2 percent in the proposed rule). This increase in our projected percentage change in payments is partially being driven by the upward revision in this final rule to the annual update for FY 2025 in the proposed rule. The final annual update factor of 3.0 percent is 0.2 percentage point higher than the proposed annual update factor. As discussed in section VIII.C.2. of the preamble to this final rule, we believe this LTCH market basket increase appropriately reflects the input price growth that LTCHs will incur providing medical services in FY 2025. The increase in our projected percentage change in payments is also partially being driven by a downward revision in this final rule to our estimate of FY 2024 high cost outlier payments to LTCH PPS standard Federal payment rate cases. In this final rule, after incorporating into our payment model more recent data, as discussed in section V.D.3. of the Addendum to this final rule, we now estimate that high cost outlier payments for LTCH PPS standard Federal payment rate cases will be approximately 8.8 percent of the estimated total LTCH PPS standard Federal payment rate payments in FY 2024 (as compared to our estimate of 9.3 percent in the proposed rule). The reduction in our estimate of the FY 2024 outlier payment percentage has the effect of increasing our projected percent change in payments from FY 2024 to FY 2025.

As we discuss in detail throughout this final rule, based on the best available data, we believe that the provisions of this final rule relating to the LTCH PPS, which are projected to result in an overall increase in estimated aggregate LTCH PPS payments (for both LTCH PPS standard Federal payment rate cases and site neutral payment rate cases), and the resulting LTCH PPS payment amounts will result in appropriate Medicare payments that are consistent with the statute.

2. Impact on Rural Hospitals

For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. As shown in Table IV, we are projecting a 2.8 percent increase in estimated payments for LTCH PPS standard Federal payment rate cases for LTCHs located in a rural area. This increase is primarily due to the combination of the 3.0 percent annual update to the LTCH PPS standard Federal payment rate for FY 2025, the changes to the area wage level adjustment, and estimated changes in outlier payments. This estimated impact is based on the FY 2023 data for the 19 rural LTCHs (out of 330 LTCHs) that were used for the impact analyses shown in Table IV.

3. Anticipated Effects of the LTCH PPS Payment Rate Changes and Policy Changes

a. Budgetary Impact

Section 123(a)(1) of the BBRA requires that the PPS developed for LTCHs “maintain budget neutrality.” We believe that the statute’s mandate for budget neutrality

applies only to the first year of the implementation of the LTCH PPS (that is, FY 2003). Therefore, in calculating the FY 2003 standard Federal payment rate under § 412.523(d)(2), we set total estimated payments for FY 2003 under the LTCH PPS so that estimated aggregate payments under the LTCH PPS were estimated to equal the amount that would have been paid if the LTCH PPS had not been implemented.

Section 1886(m)(6)(A) of the Act establishes a dual rate LTCH PPS payment structure with two distinct payment rates for LTCH discharges beginning in FY 2016. Under this statutory change, LTCH discharges that meet the patient-level criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid based on the LTCH PPS standard Federal payment rate. LTCH discharges paid at the site neutral payment rate are generally paid the lower of the IPPS comparable per diem amount, reduced by 4.6 percent for FYs 2018 through 2026, including any applicable high cost outlier (HCO) payments, or 100 percent of the estimated cost of the case, reduced by 4.6 percent.

As discussed in section I.J.1. of this appendix, we project an increase in aggregate LTCH PPS payments in FY 2025 of approximately \$58 million. This estimated increase in payments reflects the projected increase in payments to LTCH PPS standard Federal payment rate cases of approximately \$45 million and the projected increase in payments to site neutral payment rate cases of approximately \$13 million under the dual rate LTCH PPS payment rate structure required by the statute beginning in FY 2016.

As discussed in section V.D. of the Addendum to this final rule, our actuaries project cost and resource changes for site neutral payment rate cases due to the site neutral payment rates required under the statute. Specifically, our actuaries project that the costs and resource use for cases paid at the site neutral payment rate will likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate, and will likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG. While we are able to incorporate this projection at an aggregate level into our payment modeling, because the historical claims data that we are using in this final rule to project estimated FY 2025 LTCH PPS payments (that is, FY 2023 LTCH claims data) do not reflect this actuarial projection, we are unable to model the impact of the change in LTCH PPS payments for site neutral payment rate cases at the same level of detail with which we are able to model the impacts of the changes to LTCH PPS payments for LTCH PPS standard Federal payment rate cases. Therefore, Table IV only reflects changes in LTCH PPS payments for LTCH PPS standard Federal payment rate cases and, unless otherwise noted, the remaining discussion in section I.J.3. of this appendix refers only to the impact on LTCH PPS payments for LTCH PPS standard Federal payment rate cases. In the following section, we present our provider impact analysis for the changes that affect LTCH PPS

payments for LTCH PPS standard Federal payment rate cases.

b. Impact on Providers

The basic methodology for determining a per discharge payment for LTCH PPS standard Federal payment rate cases is currently set forth under §§ 412.515 through 412.533 and 412.535. In addition to adjusting the LTCH PPS standard Federal payment rate by the MS–LTC–DRG relative weight, we make adjustments to account for area wage levels and SSOs. LTCHs located in Alaska and Hawaii also have their payments adjusted by a COLA. Under our application of the dual rate LTCH PPS payment structure, the LTCH PPS standard Federal payment rate is generally only used to determine payments for LTCH PPS standard Federal payment rate cases (that is, those LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate). LTCH discharges that do not meet the patient-level criteria for exclusion are paid the site neutral payment rate, which we are calculating as the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), reduced by 4.6 percent for FYs 2018 through 2026, including any applicable outlier payments, or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). In addition, when certain thresholds are met, LTCHs also receive HCO payments for both LTCH PPS standard Federal payment rate cases and site neutral payment rate cases that are paid at the IPPS comparable per diem amount.

To understand the impact of the changes to the LTCH PPS payments for LTCH PPS standard Federal payment rate cases presented in this final rule on different categories of LTCHs for FY 2025, it is necessary to estimate payments per discharge for FY 2024 using the rates, factors, and the policies established in the FY 2024 IPPS/LTCH PPS final rule and estimate payments per discharge for FY 2025 using the rates, factors, and the policies in this final rule (as discussed in section VIII. of the preamble of this final rule and section V. of the Addendum to this final rule). As discussed elsewhere in this final rule, these estimates are based on the best available LTCH claims data and other factors, such as the application of inflation factors to estimate costs for HCO cases in each year. The resulting analyses can then be used to compare how our policies applicable to LTCH PPS standard Federal payment rate cases affect different groups of LTCHs.

For the following analysis, we group hospitals based on characteristics provided in the OSCAR data, cost report data in HCRIS, and PSF data. Hospital groups included the following:

- Location: large urban/other urban/rural.
- Participation date.
- Ownership control.
- Census region.
- Bed size.

c. Calculation of LTCH PPS Payments for LTCH PPS Standard Federal Payment Rate Cases

For purposes of this impact analysis, to estimate the per discharge payment effects of our policies on payments for LTCH PPS

standard Federal payment rate cases, we simulated FY 2024 and FY 2025 payments on a case-by-case basis using historical LTCH claims from the FY 2023 MedPAR files that met or would have met the criteria to be paid at the LTCH PPS standard Federal payment rate if the statutory patient-level criteria had been in effect at the time of discharge for all cases in the FY 2023 MedPAR files. For modeling FY 2024 LTCH PPS payments, we used the FY 2024 standard Federal payment rate of \$48,116.62 (or \$47,185.03 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP). Similarly, for modeling payments based on the FY 2025 LTCH PPS standard Federal payment rate, we used the FY 2025 standard Federal payment rate of \$49,383.26 (or \$48,424.36 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP). In each case, we applied the applicable adjustments for area wage levels and the COLA for LTCHs located in Alaska and Hawaii. Specifically, for modeling FY 2024 LTCH PPS payments, we used the current FY 2024 labor-related share (68.5 percent), the wage index values established in the Tables 12A and 12B listed in the Addendum to the FY 2024 IPPS/LTCH PPS final rule (which are available via the internet on the CMS website), the FY 2024 HCO fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$59,873 (as reflected in the FY 2024 IPPS/LTCH PPS final rule), and the FY 2024 COLA factors (shown in the table in section V.C. of the Addendum to that final rule) to adjust the FY 2024 nonlabor-related share (31.5 percent) for LTCHs located in Alaska and Hawaii. Similarly, for modeling FY 2025 LTCH PPS payments, we used the FY 2025 LTCH PPS labor-related share (72.8 percent),

the FY 2025 wage index values from Tables 12A and 12B listed in section VI. of the Addendum to this final rule (which are available via the internet on the CMS website), the FY 2025 HCO fixed-loss amount for LTCH PPS standard Federal payment rate cases of \$77,048 (as discussed in section V.D.3. of the Addendum to this final rule), and the FY 2025 COLA factors (shown in the table in section V.C. of the Addendum to this final rule) to adjust the FY 2025 nonlabor-related share (27.2 percent) for LTCHs located in Alaska and Hawaii. We note that in modeling payments for HCO cases for LTCH PPS standard Federal payment rate cases, we inflated charges reported on the FY 2023 claims by the charge inflation factors in section V.D.3.b. of the Addendum to this final rule. We also note that in modeling payments for HCO cases for LTCH PPS standard Federal payment rate cases, we estimated the cost of each case by multiplying the inflated charges by the adjusted CCRs that we determined using our finalized methodology described in section V.D.3.b. of the Addendum to this final rule.

The impacts that follow reflect the estimated “losses” or “gains” among the various classifications of LTCHs from FY 2024 to FY 2025 based on the payment rates and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this final rule. Table IV illustrates the estimated aggregate impact of the change in LTCH PPS payments for LTCH PPS standard Federal payment rate cases among various classifications of LTCHs. (As discussed previously, these impacts do not include LTCH PPS site neutral payment rate cases.)

• The first column, LTCH Classification, identifies the type of LTCH.

• The second column lists the number of LTCHs of each classification type.

• The third column identifies the number of LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria.

• The fourth column shows the estimated FY 2024 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).

• The fifth column shows the estimated FY 2025 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).

• The sixth column shows the percentage change in estimated payments per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2024 to FY 2025 due to the annual update to the standard Federal rate (as discussed in section V.A.2. of the Addendum to this final rule).

• The seventh column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 due to the changes to the area wage level adjustment (that is, the updated hospital wage data, labor market areas, and labor-related share) and the application of the corresponding budget neutrality factor (as discussed in section V.B.6. of the Addendum to this final rule).

• The eighth column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 (Column 4) to FY 2025 (Column 5) due to all changes.

BILLING CODE 4120-01-P

TABLE IV: IMPACT OF PAYMENT RATE AND POLICY CHANGES TO LTCH PPS PAYMENTS FOR LTCH PPS STANDARD FEDERAL PAYMENT RATE CASES FOR FY 2025 (ESTIMATED FY 2024 PAYMENTS COMPARED TO ESTIMATED FY 2025 PAYMENTS)

LTCH Classification (1)	No. of LTCHS (2)	Number of LTCH PPS Standard Payment Rate Cases (3)	Average FY 2024 LTCH PPS Payment Per Standard Payment Rate (4)	Average FY 2025 LTCH PPS Payment Per Standard Payment Rate ¹ (5)	Change Due to Change to the Annual Update to the Standard Federal Rate ² (6)	Percent Change Due to Changes to Area Wage Adjustment with Wage Budget Neutrality ³ (7)	Percent Change Due to All Standard Payment Rate Changes ⁴ (8)

- ¹ Estimated FY 2025 LTCH PPS payments for LTCH PPS standard Federal payment rate criteria based on the payment rate and factor changes applicable to such cases presented in the preamble and the Addendum to this final rule.
- ² Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 due to the annual update to the LTCH PPS standard Federal payment rate.
- ³ Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 due to the changes to the area wage level adjustment under § 412.525(c) (that is, the updated hospital wage data, labor market areas, and labor related share) with budget neutrality.
- ⁴ Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 (shown in Column 4) to FY 2025 (shown in Column 5), due to all of the changes to the rates and factors applicable to such cases presented in the preamble and the Addendum to this final rule. We note that this column, which shows the percent change in estimated payments per discharge due to all changes, does not equal the sum of the percent changes in estimated payments per discharge due to the annual update to the LTCH PPS standard Federal payment rate (Column 6) and due to the changes to the area wage level adjustment with budget neutrality (Column 7) due to the effect of estimated changes in estimated payments to aggregate HCO payments for LTCH PPS standard Federal payment rate cases (as discussed in this impact analysis), as well as other interactive effects that cannot be isolated.

and policy changes for LTCH PPS standard Federal payment rate cases presented in this final rule. The impact analysis in Table IV shows that estimated payments per discharge for LTCH PPS standard Federal payment rate cases are projected to increase 2.0 percent, on average, for all LTCHs from FY 2024 to FY 2025 as a result of the payment rate and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this final rule. This estimated 2.0 percent increase in LTCH PPS payments per discharge was determined by comparing estimated FY 2025 LTCH PPS payments (using the finalized payment rates and factors discussed in this final rule) to estimated FY 2024 LTCH PPS payments for LTCH discharges which will be LTCH PPS standard Federal payment rate cases if the dual rate LTCH PPS payment structure was or had been in effect at the time of the discharge (as described in section I.J.3. of this appendix).

As stated previously, we are finalizing an annual update to the LTCH PPS standard Federal payment rate for FY 2025 of 3.0 percent. For LTCHs that fail to submit quality data under the requirements of the LTCH QRP, as required by section 1886(f)(5)(C) of the Act, a 2.0 percentage point reduction is applied to the annual update to the LTCH PPS standard Federal payment rate. Consistent with § 412.523(d)(4), we also are applying a budget neutrality factor for changes to the area wage level adjustment of 0.9964315 (discussed in section V.B.6. of the Addendum to this final rule), based on the best available data at this time, to ensure that any changes to the area wage level adjustment will not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. As we also explained earlier in this section of the final rule, for most categories of LTCHs (as shown in Table IV, Column 6), the estimated payment increase due to the 3.0 percent annual update to the LTCH PPS standard Federal payment rate is projected to result in approximately a 2.9 percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases for all LTCHs from FY 2024 to FY 2025. We note our estimate of the changes in payments due to the update to the LTCH PPS standard Federal payment rate also includes estimated payments for short-stay outlier (SSO) cases, a portion of which are not affected by the annual update to the LTCH PPS standard Federal payment rate, as well as the reduction that is applied to the annual update for LTCHs that do not submit data under the requirements of the LTCH QRP.

(1) Location

Based on the most recent available data, the vast majority of LTCHs are located in urban areas. Only approximately 6 percent of the LTCHs are identified as being located in a rural area, and approximately 4 percent of all LTCH PPS standard Federal payment rate cases are expected to be treated in these rural hospitals. The impact analysis presented in Table IV shows that the overall average percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 for all hospitals is 2.0 percent. Urban LTCHs

are projected to experience an increase of 1.9 percent. Meanwhile, rural LTCHs are projected to experience an increase of 2.8 percent.

(2) Participation Date

LTCHs are grouped by participation date into four categories: (1) before October 1983; (2) between October 1983 and September 1993; (3) between October 1993 and September 2002; and (4) October 2002 and after. Based on the best available data, the categories of LTCHs with the largest expected percentage of LTCH PPS standard Federal payment rate cases (approximately 41 percent and 45 percent, respectively) are in LTCHs that began participating in the Medicare program between October 1993 and September 2002 and after October 2002. These LTCHs are expected to experience an increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 of 2.2 percent and 1.9 percent, respectively. LTCHs that began participating in the Medicare program between October 1983 and September 1993 are projected to experience an increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 of 2.0 percent, as shown in Table IV. Approximately 3 percent of LTCHs began participating in the Medicare program before October 1983, and these LTCHs are projected to experience a decrease in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 of 0.3 percent, partially due to the changes to the area wage level adjustment.

(3) Ownership Control

LTCHs are grouped into three categories based on ownership control type: voluntary, proprietary, and government. Based on the best available data, approximately 16 percent of LTCHs are identified as voluntary (Table IV). The majority (approximately 81 percent) of LTCHs are identified as proprietary, while government owned and operated LTCHs represent approximately 3 percent of LTCHs. Based on ownership type, proprietary LTCHs are expected to experience an increase in payments to LTCH PPS standard Federal payment rate cases of 2.1 percent. Voluntary LTCHs are expected to experience an increase in payments to LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 of 1.3 percent. Government owned and operated LTCHs are expected to experience an increase in payments to LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 of 1.2 percent.

(4) Census Region

The comparisons by region show that the changes in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 are projected to range from an increase of 0.4 percent in the New England region to increases of 2.7 percent in both the East South Central region and the Mountain region. These regional variations are primarily due to the changes to the area wage adjustment and estimated changes in outlier payments.

BILLING CODE 4120-01-C
d. Results

Based on the FY 2023 LTCH cases (from 330 LTCHs) that were used for the analyses in this final rule, we have prepared the following summary of the impact (as shown in Table IV) of the LTCH PPS payment rate

(5) Bed Size

LTCHs are grouped into six categories based on bed size: 0–24 beds; 25–49 beds; 50–74 beds; 75–124 beds; 125–199 beds; and greater than 200 beds. We project that LTCHs with 125–199 beds will experience an increase in payments for LTCH PPS standard Federal payment rate cases of 1.0 percent. LTCHs with 25–49 beds are projected to experience the largest increase in payments, 2.5 percent. The remaining bed size categories are projected to experience an increase in payments in the range of 1.4 to 1.9 percent.

4. Effect on the Medicare Program

As stated previously, we project that the provisions of this final rule will result in an increase in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases in FY 2025 relative to FY 2024 of approximately \$45 million (or approximately 2.0 percent) for the 331 LTCHs in our database. Although, as stated previously, the hospital-level impacts do not include LTCH PPS site neutral payment rate cases, we estimate that the provisions of this final rule will result in an increase in estimated aggregate LTCH PPS payments to site neutral payment rate cases in FY 2025 relative to FY 2024 of approximately \$13 million (or approximately 4.2 percent) for the 331 LTCHs in our database. (As noted previously, we estimate payments to site neutral payment rate cases in FY 2025 will represent approximately 12 percent of total estimated FY 2025 LTCH PPS payments.) Therefore, we project that the provisions of this final rule will result in an increase in estimated aggregate LTCH PPS payments for all LTCH cases in FY 2025 relative to FY 2024 of approximately \$58 million (or approximately 2.2 percent) for the 331 LTCHs in our database.

5. Effect on Medicare Beneficiaries

Under the LTCH PPS, hospitals receive payment based on the average resources consumed by patients for each diagnosis. We do not expect any changes in the quality of care or access to services for Medicare beneficiaries as a result of this final rule, but we continue to expect that paying prospectively for LTCH services will enhance the efficiency of the Medicare program. As discussed previously, we do not expect the continued implementation of the site neutral payment system to have a negative impact on access to or quality of care, as demonstrated in areas where there is little or no LTCH presence, general short-term acute care hospitals are effectively providing treatment for the same types of patients that are treated in LTCHs.

K. Effects of Requirements for the Hospital Inpatient Quality Reporting (IQR) Program

In sections IX.B.1., IX.B.2., and IX.C. of the preamble of this final rule, we discuss the finalized requirements for hospitals reporting quality data under the Hospital IQR Program to receive the full annual percentage increase for the FY 2027 payment determination and subsequent years.

In the preamble of this final rule, we are adopting seven new measures: (1) Age-Friendly Hospital measure beginning with

the CY 2025 reporting period/FY 2027 payment determination; (2) Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 payment determination, with modifications; (3) Catheter-Associated Urinary Tract Infection (CAUTI) Standardized Infection Ratio Stratified for Oncology Locations measure beginning with the CY 2026 reporting period/FY 2028 payment determination; (4) Central Line-Associated Bloodstream Infection (CLABSI) Standardized Infection Ratio Stratified for Oncology Locations measure beginning with the CY 2026 reporting period/FY 2028 payment determination; (5) Hospital Harm—Falls with Injury electronic clinical quality measure (eCQM) beginning with the CY 2026 reporting period/FY 2028 payment determination; (6) Hospital Harm—Postoperative Respiratory Failure eCQM beginning with the CY 2026 reporting period/FY 2028 payment determination; and (7) Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) measure beginning with the July 1, 2023–June 30, 2025 reporting period/FY 2027 payment determination. We are modifying two measures: (1) the Global Malnutrition Composite Score eCQM, beginning with the CY 2026 reporting period/FY 2028 payment determination; and (2) the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey measure beginning with the CY 2025 reporting period/FY 2027 payment determination. We are also removing five measures: (1) Death Rate Among Surgical Inpatients with Serious Treatable Complications (CMS PSI–04) measure beginning with the July 1, 2023–June 30, 2025 reporting period/FY 2027 payment determination; (2) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Acute Myocardial Infarction (AMI) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; (3) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Heart Failure (HF) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; (4) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Pneumonia (PN) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; and (5) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) measure beginning with the April 1, 2021–March 31, 2024 reporting period/FY 2026 payment determination. We are finalizing a modified version of our proposal to increase the total number of eCQMs that must be reported each year. We are increasing the total number of eCQMs reported from six to eight for the CY 2026 reporting period/FY 2028 payment determination, from eight to nine for the CY 2027 reporting period/FY 2029 payment determination, and then from nine to eleven beginning with the CY 2028 reporting period/FY 2030 payment determination. Lastly, we are updating data

validation policies, including updating the scoring methodology for eCQM validation, removing the requirement that hospitals must submit 100 percent of eCQM records to pass validation beginning with CY 2025 eCQM data affecting the FY 2028 payment determination, and no longer requiring hospitals to resubmit medical records as part of their request for reconsideration of validation beginning with CY 2025 discharges affecting the FY 2028 payment determination.

As shown in the summary tables in section XII.B.6.k. of the preamble of this final rule, we estimate a total information collection burden increase of 40,160 hours at a cost of \$1,282,329 annually associated with the finalized policies across a 3-year period from the CY 2025 reporting period/FY 2027 payment determination through the CY 2028 reporting period/FY 2030 payment determination, compared to our currently approved information collection burden estimates.

In sections IX.C.5.a. and IX.B.1 of the preamble of this final rule, we are adopting the Age Friendly Hospital and Patient Safety Structural measures. In order for hospitals to receive a point for each of the domains in the measures, affirmative attestations are required for each of the statements within a domain. As noted in the FY 2023 IPPS/LTCH PPS final rule when we finalized the Hospital Commitment to Health Equity measure, hospitals that are unable to attest affirmatively for a statement and desire to improve their measure performance by earning additional points under the measure, will likely have additional costs associated with activities such as updating hospital policies, protocols, or processes; engaging senior leadership; conducting required analyses, surveys, and screenings; performing data analysis and collection; and training staff (87 FR 49492). The extent of these costs will vary from hospital to hospital depending on what policies the hospital already has in place, what activities the hospital is already performing, hospital size, and the individual choices each hospital makes to meet the criteria necessary to attest affirmatively. There may also be some non-recurring costs associated with changes in workflow and information systems to collect patient screening data if a hospital is not already doing so, however, the extent of these costs is difficult to quantify as different hospitals may utilize different modes of data collection (for example paper-based, electronically patient-directed, clinician-facilitated, etc.).

For the Age Friendly Hospital measure, there may be additional impacts incurred by patients admitted to hospitals that do not currently conduct patient screenings but decide to do so. Hospitals will be able to conduct these screenings via multiple methods, however, we believe most hospitals will likely collect data through a screening tool incorporated into their electronic health record (EHR) or other patient intake process. For the Frailty Screening and Intervention domain, we assume patients will be screened using a combination of validated tools such as the Katz Index of Independence in Activities of Daily Living, the Lawton and Brody Instrumental Activities of Daily-Living

Scale, the Mini-Cog screening for early dementia, and the Patient Health Questionnaire-2 depression module.¹¹³² For the Social Vulnerability domain, we assume patients will be screened using a tool such as the Emergency Department Senior Abuse Identification (ED Senior AID) tool,¹¹³⁷ which is currently undergoing validation. We estimate each patient will require no more than 20 minutes (0.33 hours) to complete the screenings for both domains.

We believe that the cost for beneficiaries undertaking administrative and other tasks on their own time is a post-tax wage of \$24.04/hr. The Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices identifies the approach for valuing time when individuals undertake activities on their own time.¹¹³⁸ To derive the costs for beneficiaries, a measurement of the usual weekly earnings of wage and salary workers of \$1,118 was divided by 40 hours to calculate an hourly pre-tax wage rate of \$27.95/hr.¹¹³⁹ This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 14 percent calculated by comparing pre- and post-tax income,¹¹⁴⁰ resulting in the post-tax hourly wage rate of \$24.04/hr. Unlike our state and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals' activities, if any, will occur outside the scope of their employment.

Based on information collected by the Agency for Healthcare Research and Quality for CY 2010 through CY 2019,¹¹⁴¹ we estimate approximately 7,600,000 patients may be screened annually across all participating IPPS hospitals (12,850,233 average annual admissions of patients aged 65 and over \times (3,050 IPPS hospitals \div 5,157 total U.S. community hospitals¹¹⁴²) or an

average of 2,492 patients per IPPS hospital. For the CY 2025 reporting period and subsequent years, for each IPPS hospital that elects to perform these screenings, we estimate it will require patients an average of 831 hours (2,492 respondents \times 0.33 hours) at a cost of \$19,969 (831 hours \times \$24.04) to complete the screenings.

In sections IX.C.5.c. and IX.C.5.d. of the preamble of this final rule, we are adopting two new eCQMs. As noted in the FY 2022 IPPS/LTCH PPS final rule regarding adoption of eCQMs, while there is no change in information collection burden related to the finalized policies with regard to reporting of measure data, we believe that costs associated with adopting two new eCQMs are multifaceted and include not only the burden associated with reporting, but also the costs associated with implementing and maintaining all of the eCQMs available for use in the Hospital IQR Program in hospitals' EHR systems (86 FR 45607). We do not believe the remaining policies will result in any additional economic impact beyond the additional collection of information burden discussed in section XII.B.6 of this final rule.

Historically, 100 hospitals, on average, that participate in the Hospital IQR Program do not receive the full annual percentage increase in any fiscal year due to the failure to meet all requirements of the Hospital IQR Program. We anticipate that the number of hospitals not receiving the full annual percentage increase will be approximately the same as in past years based on review of previous performance.

We received no comments on our assumptions regarding effects of requirements discussed in this final rule.

L. Effects of New Requirements for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

In section IX.D. of the preamble of this final rule, we discuss finalized requirements for PPS-exempt cancer hospitals (PCHs) reporting quality data under the PCH Quality Reporting (PCHQR) Program. The PCHQR Program is authorized under section 1866(k) of the Act. There is no financial impact to PCH Medicare reimbursement if a PCH does not submit data.

In the preamble of this final rule, we are: (1) adopting the Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 program year with modification to one domain; (2) modifying the HCAHPS Survey beginning with the CY 2025 reporting period/FY 2027 program year; and (3) moving up the start date for public display of PCH performance on the Hospital Commitment to Health Equity measure.

As shown in the summary table in section XII.B.7.d. of this final rule, we estimate a total information collection burden increase for 11 PCHs of 166 hours at a cost of \$4,047 annually associated with our finalized policies and updated burden estimates beginning with the CY 2025 reporting period/FY 2027 program year compared with our currently approved information collection burden estimates. We refer readers to section XII.B.7. of this final rule (Collection of Information) for a detailed discussion of the calculations estimating the changes to the

information collection burden for submitting data to the PCHQR Program.

In section IX.B.1. of the preamble of this final rule, we are adopting the Patient Safety Structural measure. We finalized that in order for a PCH to receive a point for a domain in the measure, the PCH will be required to affirmatively attest to each of the statements within that domain. We estimate that if a PCH is unable to attest affirmatively to all of the statements in a domain and, in a future program year, desires to earn a point for that domain, the PCH will likely incur costs associated with activities needed to be able to affirmatively attest, which can include updating policies, protocols, or processes; engaging senior leadership; conducting required analyses; or training staff (87 FR 49492). The extent of these costs will vary from PCH to PCH depending on what policies the PCH already has in place, what activities the PCH is already performing, facility size, and the individual choices each PCH makes in order to meet the criteria necessary to attest affirmatively.

We do not believe the remaining policies to modify the HCAHPS Survey beginning with the CY 2025 reporting period/FY 2027 program year and to move up the start date for public display of PCH performance on the Hospital Commitment to Health Equity measure will result in any additional economic impact beyond the additional collection of information burden discussed in section XII.B.7. of this final rule.

We received no comments and are therefore finalizing our assumptions regarding effects of requirements discussed in this final rule without modification.

M. Effects of Requirements for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

In section IX.E. of this final rule, we are finalizing four new items as standardized patient assessment data elements under the SDOH category and to modify the current Transportation item on the LCDS beginning with the FY 2028 LTCH QRP. We are finalizing that LTCHs will collect the four new items at admission using the LCDS for: Living Situation (one item), Food (two items), and Utilities (one item). We are finalizing modifications for the Transportation item, which is currently collected via the LCDS at admission and discharge. We are finalizing that the modified Transportation item will only be collected at admission beginning with the FY 2028 LTCH QRP. We also are finalizing our proposal to extend the admission assessment window for the LCDS from three to four days beginning with the FY 2028 LTCH QRP. Finally, we sought and received information on two topics: future measure concepts for the LTCH QRP and a future LTCH Star Rating system.

The effect of these finalized proposals for the LTCH QRP will be an overall increase in burden for LTCHs participating in the LTCH QRP. As shown in summary table XII.B-09 in section XII.B.8. of this final rule, we estimate a total information collection burden increase for 330 eligible LTCHs of 2,116.55 hours for a cost increase of \$138,231.88 annually associated with our proposed policies and updated burden

estimates for the FY 2028 LTCH QRP program year compared to our currently approved information collection burden estimates. We refer readers to section XII.B.8. of this final rule, where we have provided an estimate of the burden and cost to LTCHs, and note that it will be included in a revised information collection request under OMB control number 0938–1163.

N. Effects of Requirements Regarding the Medicare Promoting Interoperability Program

In section IX.F. of the preamble of this final rule, we discuss finalized requirements for eligible hospitals and critical access hospitals (CAHs) to report objectives and measures and electronic clinical quality measures (eCQMs) under the Medicare Promoting Interoperability Program.

In this final rule, we are: (1) adopting the Hospital Harm—Falls with Injury eCQM beginning with the CY 2026 reporting period; (2) adopting the Hospital Harm—Postoperative Respiratory Failure eCQM beginning with the CY 2026 reporting period; (3) modifying the Antimicrobial Use and Resistance (AUR) Surveillance measure by splitting it into an Antimicrobial Use Surveillance measure and an Antimicrobial Resistance Surveillance measure beginning with the electronic health record (EHR) reporting period in CY 2025; (4) modifying the Global Malnutrition Composite Score eCQM, beginning with the CY 2026 reporting period; (5) increasing the total number of eCQMs that must be reported from six to eight eCQMs for the CY 2026 reporting period, from eight to nine eCQMs for the CY 2027 reporting period, and then from nine to eleven eCQMs beginning with the CY 2028 reporting period; and (6) increasing the minimum scoring threshold from 60 points to 70 points for the EHR reporting period in CY 2025 and then from 70 points to 80 points beginning with the EHR reporting period in CY 2026.

As shown in the summary table in section XII.B.9. of this final rule, we estimate a total information collection burden increase of 5,038 hours at a cost of \$262,581 annually associated with our finalized policies and updated burden estimates over the four-year period from the EHR reporting period in CY 2025 through the EHR reporting period in CY 2028 compared to our currently approved information collection burden estimates. We refer readers to section XII.B.9.f. of this final rule (Collection of Information) for a detailed discussion of the calculations estimating the changes to the information collection burden for submitting data to the Medicare Promoting Interoperability Program.

In section IX.F.6.a. of the preamble of this final rule, we are adopting two new eCQMs and modifying one eCQM. Similar to our previous discussion in the FY 2022 IPPS/LTCH PPS final rule regarding adoption of eCQM measures for the Hospital IQR Program (86 FR 45607), costs associated with adopting new or modified eCQMs can be multifaceted and variable, and include not only the burden associated with reporting data to CMS, but also the costs associated with implementing and maintaining all of the eCQMs available for use in the Medicare Promoting Interoperability Program in eligible hospitals' and CAHs' EHR systems.

In section IX.F.5. of the preamble of this final rule, we are finalizing increases to the performance-based scoring threshold for eligible hospitals and CAHs reporting under the Medicare Promoting Interoperability Program from 60 points to 70 points for the EHR reporting period in CY 2025 and from 70 points to 80 points beginning with the EHR reporting period in CY 2026. Our review of the CY 2022 Medicare Promoting Interoperability Program's performance results indicates 98.5 percent of eligible hospitals and CAHs currently successfully meet the threshold of 60 points and 92.8 percent of eligible hospitals and CAHs currently meet the threshold of 70 points, while 81.5 percent of eligible hospitals and CAHs currently exceed a score of 80 points. Therefore, the 11.3 percent and 17 percent of eligible hospitals and CAHs that meet the current threshold of 60 points but not the finalized threshold of 70 points for the EHR reporting period in CY 2025 and 80 points beginning with the EHR reporting period in CY 2026, respectively, will be required to better align their health information systems with evolving industry standards, increase data exchange, or both, to raise their performance score or be subject to a potential downward payment adjustment. We do not believe the remaining policies will result in any additional economic impact beyond the additional collection of information burden discussed in section XII.B.9. of this final rule.

We received no comments on our assumptions regarding these effects.

O. Alternatives Considered

This final rule contains a range of policies. It also provides descriptions of the statutory provisions that are addressed, identifies the finalized policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

1. Alternatives Considered for the Distribution of Additional Residency Positions Under the Provisions of Section 4122 of Subtitle C of the Consolidated Appropriations Act, 2023 (CAA, 2023)

Section 4122(a) of the CAA, 2023 amended section 1886(h) of the Act by adding a new section 1886(h)(10) of the Act requiring the distribution of an additional 200 residency positions (also referred to as slots) to qualifying hospitals. Section 1886(h)(10)(B)(iii) of the Act further requires that each qualifying hospital that submits a timely application receive at least 1 (or a fraction of 1) of the slots made available under section 1886(h)(10) of the Act before any qualifying hospital receives more than 1 residency position.

As discussed in section V.F.2. of this final rule, after consideration of public comments, we are finalizing our proposal, with minor modifications, to implement section 4122 of the CAA, 2023. In section V.F.2. of the proposed rule, we discussed our proposal to first distribute slots by prorating the available 200 positions among all qualifying hospitals such that each qualifying hospital receives up to 1.00 FTE—that is, 1.00 FTE or a fraction of 1.00 FTE. We proposed that a qualifying hospital is a Category One, Category Two, Category Three, or Category Four hospital, or one that meets the

definitions of more than one of these categories, as defined at section 1886(h)(10)(F)(iii) of the Act.¹¹⁴³ We proposed that if any residency slots remain after distributing up to 1.00 FTE to each qualifying hospital, we will prioritize the distribution of the remaining slots based on the HPSA score associated with the program for which each qualifying hospital is applying using the methodology we finalized for purposes of implementing section 126 of the CAA, 2021 (86 FR 73434 through 73440). Using this HPSA prioritization method, we proposed to limit a qualifying hospital's total award under section 4122 of the CAA, 2023, to 10.00 additional FTEs, consistent with section 1886(h)(10)(C)(i) of the Act.

We considered alternative approaches for distribution of additional residency positions under the provisions of section 4122 of the CAA. An alternative we considered placed greater emphasis on the distribution of additional residency positions to hospitals that are training residents in geographic and population HPSAs. Under this approach, the statutory requirement that each qualifying hospital receive 1 slot or a fraction of 1 slot would be met by awarding each qualifying hospital 0.01 FTE. The remaining residency slots would be prioritized for distribution based on the HPSA score associated with the program for which each hospital is applying using the HPSA prioritization methodology we finalized for purposes of implementing section 126 of the CAA, 2021 (86 FR 73434 through 73440). After consideration of the public comments, as discussed in section V.F.2. of the preamble of this final rule, we did not adopt this alternative.

2. Alternative Considered for the Separate IPPS Payment for Establishing and Maintaining Access to Essential Medicines

As discussed in section V.J. of the preamble of this final rule, we are establishing a separate payment under the IPPS to small, independent hospitals of 100 beds or fewer that are not part of a chain organization for the additional resource costs involved in voluntarily establishing and

¹¹⁴³ Category One consists of hospitals that are located in a rural area (as defined in section 1886(d)(2)(D) of the Act) or have been reclassified being located in a rural area (pursuant to section 1886(d)(8)(E) of the Act). Category Two consists of hospitals in which the reference resident level of the hospital (as specified in section 1886(h)(10)(F)(iv) of the Act) is greater than the otherwise applicable resident limit. Category Three consists of hospitals located in States with new medical schools that received 'Candidate School' status from the Liaison Committee on Medical Education (LCME) or that received 'Pre-Accreditation' status from the American Osteopathic Association (AOA) Commission on Osteopathic College Accreditation (the COCA) on or after January 1, 2000, and that have achieved or continue to progress toward 'Full Accreditation' status (as such term is defined by the LCME) or toward 'Accreditation' status (as such term is defined by the COCA); or additional locations and branch campuses established on or after January 1, 2000, by medical schools with 'Full Accreditation' status (as such term is defined by LCME) or 'Accreditation' status (as such term is defined by the COCA). Category Four consists of hospitals that serve areas designated as HPSAs under section 332(a)(1)(A) of the Public Health Service Act (PHSA), as determined by the Secretary.

maintaining access to 6-month buffer stocks of essential medicines. Although at the current time we do not believe it would be appropriate to expand the pool of hospitals eligible for this initial implementation of the policy due primarily to the existing purchasing power of larger hospitals and chain hospitals and concerns regarding inducing or exacerbating shortages, as we and stakeholders gain experience with the policy it may become appropriate to consider expansion of eligibility in future rulemaking, potentially in conjunction with domestic manufacturing requirements as may be feasible based on increases in the domestic manufacturing capacity of essential medicines.

3. Alternatives Considered to the LTCH QRP Reporting Requirements

We are finalizing our proposal to add four new assessment items to the LCDS and modify one assessment item on the LCDS in sections IX.E.4. and IX.E.7.b. of this final rule. We believe adopting these four new assessment items as standardized patient assessment data elements and modifying the current Transportation item will advance the CMS National Quality Strategy Goals of equity and engagement. We considered the alternative of delaying the collection of these four new assessment items and modifying the current Transportation item. However, given the fact they will encourage meaningful collaboration between healthcare providers, caregivers, and community-based organizations to address HRSNs prior to discharge from the LTCH, we believe further delay is unwarranted.

We are also finalizing our proposal to extend the LCDS Admission assessment window in section IX.E.7.c. of this final rule. We considered the option of maintaining the current 3-day assessment period versus extending it to 4 days. However, this policy is responsive to LTCHs' feedback that we received regarding the difficulty of collecting the required LCDS data elements within the 3-day assessment window when medically complex patients are admitted prior to and on weekends. Additionally, extending the assessment period will have no impact on the calculation of LTCH QRP measures, and will only require minimal revisions to the LCDS guidance manuals.

4. Alternatives Considered for the Transforming Episode Accountability Model

In section X.A. of the preamble of this final rule, we are finalizing the test of a new mandatory episode-based payment model called the Transforming Episode Accountability Model (TEAM). TEAM is designed to improve beneficiary care through financial accountability for episode categories that begin with one of the following procedures: coronary artery bypass graft, lower extremity joint replacement, major bowel procedure, surgical hip/femur fracture treatment, and spinal fusion. TEAM will test whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. We anticipate that TEAM will benefit Medicare beneficiaries through improving the coordination of items and services paid

for through Medicare FFS payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode.

Throughout this final rule, we have identified our policies and alternatives that we have considered and provided information as to the effects of these alternatives and the rationale for each of the policies. For example, we considered allowing physician group practices (PGPs) to be TEAM participants, however, we are concerned that PGPs are generally smaller entities and care for a lower volume of Medicare beneficiaries which could make it challenging to take on the level of financial risk to participate in the model. In the proposed rule we solicited comments on our proposals, on the alternatives we have identified, and on other alternatives that we should consider. We note that our estimates are limited to acute care hospitals that are selected to participate in this model and do not include the acute care hospitals that voluntarily opt-in to TEAM due to the high degree of uncertainty regarding the level of interest that these potential participants will have in TEAM. This model will not directly affect hospitals that are not participating in the model. However, the model may encourage innovations in health care delivery in other areas or in care reimbursed through other payers. For example, a TEAM participant may choose to extend their arrangements to arrangements outside of the model for all surgical procedures they provide, as permitted by all applicable laws, not just those reimbursed by Medicare and tested in TEAM. We welcomed comments on our proposals and the alternatives we have identified in the preamble of this final rule. In each section of the final rule that we received comments, we have addressed them accordingly.

P. Overall Conclusion

1. Acute Care Hospitals

Acute care hospitals are estimated to experience an increase of approximately \$2.9 billion in FY 2025, including operating, capital, and the combined effects of (1) the changes to add-on payments for certain ESRD discharges, (2) the payment adjustment for establishing and maintaining access to a buffer stock of essential medicines, (3) new technology add-on payment changes, and (4) the statutory expiration of the MDH program and the temporary changes to the low-volume hospital payment adjustment on January 1, 2025. The estimated change in operating payments is approximately \$2.7 billion (discussed in sections I.F. of this Appendix). The estimated change in capital payments is approximately \$0.209 billion (discussed in section I.I. of this Appendix). The estimated change in the combined effects of (1) the changes to add-on payments for certain ESRD discharges; (2) the payment adjustment for establishing and maintaining access to a buffer stock of essential medicines; (3) new technology add-on payment changes; and (4) the statutory expiration of the temporary changes to the low-volume hospital payment adjustment on

January 1, 2025 is approximately \$0.021 billion as discussed in sections I.F. and I.G. of this Appendix. Totals may differ from the sum of the components due to rounding.

Table I. of section I.F. of this Appendix also demonstrates the estimated redistributional impacts of the IPPS budget neutrality requirements for the MS-DRG and wage index changes, and for the wage index reclassifications under the MGCRB.

We estimate that hospitals will experience a 2.8 percent increase in capital payments per case, as shown in Table III. of section I.I. of this Appendix. We project that there will be a \$209 million increase in capital payments in FY 2025 compared to FY 2024.

The discussions presented in the previous pages, in combination with the remainder of this final rule, constitute a regulatory impact analysis.

2. LTCHs

Overall, LTCHs are projected to experience an increase in estimated payments in FY 2025. In the impact analysis, we are using the rates, factors, and policies presented in this final rule based on the best available claims and CCR data to estimate the change in payments under the LTCH PPS for FY 2025. Accordingly, based on the best available data for the 331 LTCHs included in our analysis, we estimate that overall FY 2025 LTCH PPS payments would increase approximately \$58 million relative to FY 2024, primarily due to the annual update to the LTCH PPS standard Federal rate partially offset by an estimated decrease in high-cost outlier payments.

Q. Regulatory Review Cost Estimation

If regulations impose administrative costs on private entities, such as the time needed to read and interpret a rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that would review the final rule, we assumed that the total number of timely pieces of correspondence on this year's proposed rule would be the number of reviewers of the final rule. We acknowledge that this assumption may understate or overstate the costs of reviewing the rule. It is possible that not all commenters reviewed this year's rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For these reasons, we believe that the number of past commenters would be a fair estimate of the number of reviewers of the final rule.

We recognize that different types of entities are in many cases affected by mutually exclusive sections of the rule. Thus, for the purposes of our estimate we assume that each reviewer read approximately 50 percent of the proposed rule. Finally, in our estimates, we have used the 6,180 number of timely pieces of correspondence on the FY 2025 IPPS/LTCH PPS proposed rule as our estimate for the number of reviewers of the final rule. We continue to acknowledge the uncertainty involved with using this number, but we believe it is a fair estimate due to the variety of entities affected and the likelihood that some of them choose to rely (in full or in part) on press releases, newsletters, fact sheets, or other sources rather than the

comprehensive review of preamble and regulatory text.

Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing the final rule is \$129.28 per hour, including overhead and fringe benefits (https://www.bls.gov/oes/current/oes_nat.htm). Assuming an average reading speed, we estimate that it would take approximately 32.94 hours for the staff to review half of this final rule. For each IPPS hospital or LTCH that reviews this final rule,

the estimated cost is \$4,258.48 (32.94 hours × \$129.28). Therefore, we estimate that the total cost of reviewing this final rule is \$26,317,406 (\$4,258.48 × 6,180 reviewers).

II. Accounting Statements and Tables

A. Acute Care Hospitals

As required by OMB Circular A-4 (available at https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf), in Table V. of this Appendix, we have prepared an accounting

statement showing the classification of the expenditures associated with the provisions of this final rule as they relate to acute care hospitals. This table provides our best estimate of the change in Medicare payments to providers as a result of the changes to the IPPS presented in this final rule. All expenditures are classified as transfers to Medicare providers.

As shown in Table V. of this Appendix, the net costs to the Federal Government associated with the policies in this final rule are estimated at \$2.9 billion.

TABLE V.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES UNDER THE IPPS FROM FY 2024 TO FY 2025

Category	Transfers
Annualized Monetized Transfers	\$2.9 billion
From Whom to Whom	Federal Government to IPPS Medicare Providers

B. LTCHs

As discussed in section I.J. of this Appendix, the impact analysis of the payment rates and factors presented in this final rule under the LTCH PPS is projected to result in an increase in estimated aggregate LTCH PPS payments in FY 2025 relative to FY 2024 of approximately \$58 million based on the data for 331 LTCHs in our database that are subject to payment under the LTCH

PPS. Therefore, as required by OMB Circular A-4 (available at https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf), in Table VI. of this Appendix, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate LTCHs. Table VI. of this Appendix provides our best estimate of the estimated change in Medicare

payments under the LTCH PPS as a result of the payment rates and factors and other provisions presented in this final rule based on the data for the 331 LTCHs in our database. All expenditures are classified as transfers to Medicare providers (that is, LTCHs).

As shown in Table VI. of this Appendix, the net cost to the Federal Government associated with the policies for LTCHs in this final rule are estimated at \$58 million.

TABLE VI.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM THE FY 2024 LTCH PPS TO THE FY 2025 LTCH PPS

Category	Transfers
Annualized Monetized Transfers	\$58 million
From Whom to Whom	Federal Government to LTCH Medicare Providers

III. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small government jurisdictions. We estimate that most hospitals and most other providers and suppliers are small entities as that term is used in the RFA. The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than \$8.0 million to \$41.5 million in any 1 year). (For details on the latest standards for health care providers, we refer readers to page 38 of the Table of Small Business Size Standards for NAIC 622 found on the SBA website at https://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf.)

For purposes of the RFA, all hospitals and other providers and suppliers are considered

to be small entities. Because all hospitals are considered to be small entities for purposes of the RFA, the hospital impacts described in this final rule are impacts on small entities. Individuals and States are not included in the definition of a small entity. MACs are not considered to be small entities because they do not meet the SBA definition of a small business.

HHS’s practice in interpreting the RFA is to consider effects “economically significant” if greater than 5 percent of providers reach a threshold of 3 to 5 percent or more of total revenue or total costs. We believe that the provisions of this final rule relating to IPPS hospitals would have an economically significant impact on small entities as explained in this Appendix. Therefore, the Secretary has certified that this final rule would have a significant economic impact on a substantial number of small entities. For example, the majority of the 3,082 IPPS hospitals included in the impact analysis shown in “Table I.—Impact Analysis of Changes to the IPPS for Operating Costs for FY 2025,” on average are expected to see

increases in the range of 2.8 percent, primarily due to the hospital rate update, as discussed in section I.F. of this Appendix. On average, the rate update for these hospitals is estimated to be 2.9 percent.

The 330 LTCH PPS hospitals included in the impact analysis shown in “Table IV: Impact of Payment Rate and Policy Changes to LTCH PPS Payments for LTCH PPS Standard Federal Payment Rate Cases for FY 2025 (Estimated FY 2024 Payments Compared to Estimated FY 2025 Payments)” on average are expected to see an increase of approximately 2.0 percent, primarily due to the annual standard Federal rate update for FY 2025 (3.0 percent) being partially offset by a projected 0.8 percentage point decrease in high cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments, as discussed in section I.J. of this Appendix.

This final rule contains a range of final policies. It provides descriptions of the statutory provisions that are addressed, identifies the finalized policies, and presents rationales for our decisions and, where

relevant, alternatives that were considered. The analyses discussed in this Appendix and throughout the preamble of this final rule constitutes our regulatory flexibility analysis. We solicited public comments on our estimates and analysis of the impact of our proposals on small entities.

IV. Impact on Small Rural Hospitals

Section 1102(b) of the Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS and the LTCH PPS, we continue to classify these hospitals as urban hospitals.

As shown in Table I. in section I.F. of this Appendix, rural IPPS hospitals with 0–49 beds (341 hospitals) are expected to experience an increase in payments from FY 2024 to FY 2025 of 1.6 percent and rural IPPS hospitals with 50–99 beds (182 hospitals) are expected to experience an increase in payments from FY 2024 to FY 2025 of 1.4 percent. These changes are primarily driven by the hospital rate update offset by the statutory expiration of the MDH program. We refer readers to Table I. in section I.F. of this Appendix for additional information on the quantitative effects of the policy changes under the IPPS for operating costs.

All rural LTCHs (19 hospitals) shown in Table IV. in section I.J. of this Appendix have less than 100 beds. These hospitals are expected to experience an increase in payments from FY 2024 to FY 2025 of 2.8 percent. This increase is primarily due to the combination of the 3.0 percent annual update to the LTCH PPS standard Federal payment rate for FY 2025, the changes to the area wage level adjustment, and estimated changes in outlier payments, as discussed in section I.J. of this Appendix.

V. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2024, that threshold level is approximately \$183 million. This final rule would not mandate any requirements that meet the threshold for State, local, or tribal governments, nor would it affect private sector costs.

VI. Executive Order 13132

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has federalism implications.

This final rule would not have a substantial direct effect on state or local governments, preempt states, or otherwise have a federalism implication.

VII. Executive Order 13175

Executive Order 13175 directs agencies to consult with Tribal officials prior to the formal promulgation of regulations having tribal implications. Section 1880(a) of the Act states that a hospital of the Indian Health Service, whether operated by such Service or by an Indian tribe or tribal organization, is eligible for Medicare payments so long as it meets all of the conditions and requirements for such payments which are applicable generally to hospitals. Consistent with section 1880(a) of the Act, this final rule contains general provisions also applicable to hospitals and facilities operated by the Indian Health Service or Tribes or Tribal organizations under the Indian Self-Determination and Education Assistance Act. We continue to engage in consultations with Tribal officials on IPPS issues of interest. We use input received from these consultations, as well as the comments on the proposed rule, to inform our rulemaking.

VIII. Executive Order 12866

In accordance with the provisions of Executive Order 12866, the Office of Management and Budget reviewed this final rule.

Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules. Accordingly, this Appendix provides the recommendations for the update factors for the IPPS national standardized amount, the hospital-specific rate for SCHs and MDHs, and the rate-of-increase limits for certain hospitals excluded from the IPPS, as well as LTCHs. In prior years, we made a recommendation in the IPPS proposed rule and final rule for the update factors for the payment rates for IRFs and IPFs. However, for FY 2025, consistent with our approach for FY 2024, we are including the Secretary's recommendation for the update factors for IRFs and IPFs in separate **Federal Register** documents at the time that we announce the annual updates for IRFs and IPFs. We also discuss our response to MedPAC's recommended update factors for inpatient hospital services.

II. Inpatient Hospital Update for FY 2025

A. FY 2025 Inpatient Hospital Update

As discussed in section V.B. of the preamble to this final rule, for FY 2025,

consistent with section 1886(b)(3)(B) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are setting the applicable percentage increase by applying the following adjustments in the following sequence. Specifically, the applicable percentage increase under the IPPS is equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to a reduction of one-quarter of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals that fail to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act and a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals not considered to be meaningful electronic health record (EHR) users in accordance with section 1886(b)(3)(B)(ix) of the Act, and then subject to an adjustment based on changes in economy-wide productivity (the productivity adjustment). Section 1886(b)(3)(B)(xi) of the Act, as added by section 3401(a) of the Affordable Care Act, states that application of the productivity adjustment may result in the applicable percentage increase being less than zero.

We note that, in compliance with section 404 of the MMA, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45194 through 45204), we replaced the 2014-based IPPS operating and capital market baskets with the rebased and revised 2018-based IPPS operating and capital market baskets beginning in FY 2022.

In the FY 2025 IPPS/LTCH PPS proposed rule, in accordance with section 1886(b)(3)(B) of the Act, we proposed to base the proposed FY 2025 market basket update used to determine the applicable percentage increase for the IPPS on IGI's fourth quarter 2023 forecast of the 2018-based IPPS market basket rate-of-increase with historical data through third quarter 2023, which was estimated to be 3.0 percent. In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section IV.B. of the preamble of the FY 2025 IPPS/LTCH PPS proposed rule, based on IGI's fourth quarter 2023 forecast, we proposed a productivity adjustment of 0.4 percentage point for FY 2025. We also proposed that if more recent data subsequently became available, we would use such data, if appropriate, to determine the FY 2025 market basket update and productivity adjustment for the FY 2025 IPPS/LTCH PPS final rule.

In the FY 2025 IPPS/LTCH PPS proposed rule, based on IGI's fourth quarter 2023 forecast of the 2018-based IPPS market basket update and the productivity adjustment, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR

user), we presented four possible applicable percentage increases that could be applied to the standardized amount.
 In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we are establishing the applicable percentages increase for the FY

2025 updates based on IGI's second quarter 2024 forecast of the 2018-based IPPS market basket of 3.4 percent and the productivity adjustment of 0.5 percentage point, as discussed in section V.A of the preamble of this final rule, depending on whether a hospital submits quality data under the rules

established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, as shown in the table that follows.

FY 2025	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
Market Basket Rate-of-Increase	3.4	3.4	3.4	3.4
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	-0.85	-0.85
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	-2.55	0.0	-2.55
Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.5	-0.5	-0.5	-0.5
Applicable Percentage Increase Applied to Standardized Amount	2.9	0.35	2.05	-0.5

B. FY 2025 SCH and MDH Update

Section 1886(b)(3)(B)(iv) of the Act provides that the FY 2025 applicable percentage increase in the hospital-specific rate for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS).

Section 307 of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, extended the MDH program for FY 2025 discharges occurring before January 1, 2025. Prior to enactment of the CAA, 2024, the MDH program was only to be in effect through the end of FY 2024. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2025. We refer readers to section V.E. of the preamble of this final rule for further discussion of the MDH program.

As previously stated, the update to the hospital specific rate for SCHs and MDHs is subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, depending on whether a hospital submits quality data and is a meaningful EHR user, we are establishing the same four possible applicable percentage increases in the previous table for the hospital-specific rate applicable to SCHs and MDHs.

C. FY 2025 Puerto Rico Hospital Update

Because Puerto Rico hospitals are no longer paid with a Puerto Rico-specific standardized amount under the amendments to section 1886(d)(9)(E) of the Act, there is no longer a need for us to make an update to the Puerto Rico standardized amount. Hospitals in Puerto Rico are now paid 100 percent of the national standardized amount and, therefore, are subject to the same update to the national standardized amount discussed under section V.B.1. of the preamble of this final rule.

In addition, as discussed in section V.B.2. of the preamble of this final rule, section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that subsection (d) Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016. In addition, section 1886(n)(6)(B) of the Act was amended to specify that the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act apply to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022.

Section 1886(b)(3)(B)(ix) of the Act in conjunction with section 602(d) of Public Law 114–113 requires that for FY 2024 and subsequent fiscal years, any subsection (d) Puerto Rico hospital that is not a meaningful EHR user as defined in section 1886(n)(3) of the Act and not subject to an exception under section 1886(b)(3)(B)(ix) of the Act will have a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments).

Based on IGI's fourth quarter 2023 forecast of the 2018-based IPPS market basket update with historical data through third quarter 2023, in the FY 2025 IPPS/LTCH PPS proposed rule, in accordance with section 1886(b)(3)(B) of the Act, as previously discussed, for Puerto Rico hospitals, we proposed a market basket update of 3.0 percent and a productivity adjustment of 0.4 percentage point. Therefore, for FY 2025, depending on whether a Puerto Rico hospital is a meaningful EHR user, we stated that there are two possible applicable percentage increases that can be applied to the standardized amount. Based on these data, we proposed the following applicable percentage increases to the standardized amount for FY 2025 for Puerto Rico hospitals:

- For a Puerto Rico hospital that is a meaningful EHR user, we proposed an applicable percentage increase to the

operating standardized amount of 2.6 percent (that is, the FY 2025 estimate of the proposed market basket rate-of-increase of 3.0 percent less an adjustment of 0.4 percentage point for the proposed productivity adjustment).

- For a Puerto Rico hospital that is not a meaningful EHR user, we proposed an applicable percentage increase to the operating standardized amount of 0.35 percent (that is, the FY 2025 estimate of the proposed market basket rate-of-increase of 3.0 percent, less an adjustment of 2.25 percentage point (the proposed market basket rate-of-increase of 3.0 percent × 0.75 for failure to be a meaningful EHR user), and less an adjustment of 0.4 percentage point for the proposed productivity adjustment).

As noted previously, we proposed that if more recent data subsequently became available, we would use such data, if appropriate, to determine the FY 2025 market basket update and the productivity adjustment for the FY 2025 IPPS/LTCH PPS final rule.

As discussed in section V.A.1. of the preamble of this final rule, based on more recent data available for this FY 2025 IPPS/LTCH PPS final rule, we estimate that the FY 2025 market basket update used to determine the applicable percentage increase for the IPPS is 3.4 percent less a productivity adjustment of 0.5 percentage point. Therefore, in accordance with section 1886(b)(3)(B) of the Act, for this final rule, for Puerto Rico hospitals the more recent update of the market basket update is 3.4 percent less a productivity adjustment of 0.5 percentage point. For FY 2025, depending on whether a Puerto Rico hospital is a meaningful EHR user, there are two possible applicable percentage increases that can be applied to the standardized amount. Based on these data, we determined the following applicable percentage increases to the standardized amount for FY 2025 for Puerto Rico hospitals:

- For a Puerto Rico hospital that is a meaningful EHR user, an applicable

percentage increase to the FY 2025 operating standardized amount of 2.9 percent (that is, the FY 2025 estimate of the market basket rate-of-increase of 3.4 percent less 0.5 percentage point for the productivity adjustment).

- For a Puerto Rico hospital that is not a meaningful EHR user, an applicable percentage increase to the operating standardized amount of 0.35 percent (that is, the FY 2025 estimate of the market basket rate-of-increase of 3.4 percent, less an adjustment of 2.55 percentage point (the market basket rate-of-increase of 3.4 percent \times 0.75 for failure to be a meaningful EHR user), and less 0.5 percentage point for the productivity adjustment).

D. Update for Hospitals Excluded From the IPPS for FY 2025

Section 1886(b)(3)(B)(ii) of the Act is used for purposes of determining the percentage increase in the rate-of-increase limits for children's hospitals, cancer hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Section 1886(b)(3)(B)(ii) of the Act sets the rate-of-increase limits equal to the market basket percentage increase. In accordance with § 403.752(a) of the regulations, religious nonmedical health care institutions (RNHCIs) are paid under the provisions of § 413.40, which also use section 1886(b)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits.

Currently, children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa are among the remaining types of hospitals still paid under the reasonable cost methodology, subject to the rate-of-increase limits. In addition, in accordance with § 412.526(c)(3) of the regulations, extended neoplastic disease care hospitals (described in § 412.22(i) of the regulations) also are subject to the rate-of-increase limits. As discussed in section VI. of the preamble of this final rule, we proposed to use the percentage increase in the 2018-based IPPS operating market basket to update the target amounts for children's hospitals, PPS-excluded cancer hospitals, RNHCIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and extended neoplastic disease care hospitals for FY 2025 and subsequent fiscal years. Accordingly, for FY 2025, the rate-of-increase percentage to be applied to the target amount for these children's hospitals, cancer hospitals, RNHCIs, extended neoplastic disease care hospitals, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa is the FY 2025 percentage increase in the 2018-based IPPS operating market basket. For this final rule, the current estimate of the IPPS operating market basket percentage increase for FY 2025 is 3.4 percent.

E. Update for LTCHs for FY 2025

Section 123 of Public Law 106–113, as amended by section 307(b) of Public Law 106–554 (and codified at section 1886(m)(1) of the Act), provides the statutory authority for updating payment rates under the LTCH PPS.

As discussed in section V.A. of the Addendum to this final rule, we are updating the LTCH PPS standard Federal payment rate for FY 2025 by 3.0 percent, consistent with section 1886(m)(3) of the Act which provides that any annual update be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (that is, the productivity adjustment). Furthermore, in accordance with the LTCH QR Program under section 1886(m)(5) of the Act, we are reducing the annual update to the LTCH PPS standard Federal rate by 2.0 percentage points for failure of a LTCH to submit the required quality data. Accordingly, we are establishing an update factor of 1.030 in determining the LTCH PPS standard Federal rate for FY 2025. For LTCHs that fail to submit quality data for FY 2025, we are establishing an annual update to the LTCH PPS standard Federal rate of 1.0 percent (that is, the annual update for FY 2025 of 3.0 percent less 2.0 percentage points for failure to submit the required quality data in accordance with section 1886(m)(5)(C) of the Act and our rules) by applying a update factor of 1.010 in determining the LTCH PPS standard Federal rate for FY 2025. (We note that, as discussed in section VII.D. of the preamble of this final rule, the update to the LTCH PPS standard Federal payment rate of 3.0 percent for FY 2025 does not reflect any budget neutrality factors.)

III. Secretary's Recommendations

MedPAC is recommending inpatient hospital rates be updated by the amount specified in current law plus 1.5 percent. MedPAC's rationale for this update recommendation is described in more detail in this section. As previously stated, section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Consistent with current law, depending on whether a hospital submits quality data and is a meaningful EHR user, we are recommending the four applicable percentage increases to the standardized amount listed in the table under section II. of this Appendix B. We are recommending that the same applicable percentage increases apply to SCHs and MDHs.

In addition to making a recommendation for IPPS hospitals, in accordance with section 1886(e)(4)(A) of the Act, we are recommending update factors for certain other types of hospitals excluded from the IPPS. Consistent with our policies for these facilities, we are recommending an update to the target amounts for children's hospitals, cancer hospitals, RNHCIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands,

and American Samoa and extended neoplastic disease care hospitals of 3.4 percent.

For FY 2025, consistent with policy set forth in section VII. of the preamble of this final rule, for LTCHs that submit quality data, we are recommending an update of 3.0 percent to the LTCH PPS standard Federal rate. For LTCHs that fail to submit quality data for FY 2025, we are recommending an annual update to the LTCH PPS standard Federal rate of 1.0 percent.

IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2024 Report to Congress, MedPAC assessed the adequacy of current payments and costs, and the relationship between payments and an appropriate cost base. MedPAC recommended an update to the hospital inpatient rates by the amount specified in current law plus 1.5 percent. MedPAC anticipates that their recommendation to update the IPPS payment rate by the amount specified under current law plus 1.5 percent in 2025 would generally be adequate to maintain beneficiaries' access to hospital inpatient and outpatient care and keep IPPS payment rates close to, if somewhat below, the cost of delivering high-quality care efficiently.

MedPAC stated that their recommended update to IPPS and OPSS payment rates of current law plus 1.5 percent may not be sufficient to ensure the financial viability of some Medicare safety-net hospitals with a poor payer mix. MedPAC recommends redistributing the current Medicare safety-net payments (disproportionate share hospital and uncompensated care payments) using the MedPAC-developed Medicare Safety-Net Index (MSNI) for hospitals. In addition, MedPAC recommends adding \$4 billion to this MSNI pool of funds to help maintain the financial viability of Medicare safety-net hospitals and recommended to Congress transitional approaches for a MSNI policy.

We refer readers to the March 2024 MedPAC report, which is available for download at www.medpac.gov, for a complete discussion on these recommendations.

In light of these recommendations, and in particular those concerning safety net hospitals, we look forward to working with Congress on these matters. In the FY 2024 IPPS/LTCH PPS proposed rule, we sought comments on the challenges faced by safety-net hospitals and potential approaches to help safety-net hospitals meet those challenges. These comments will inform and guide our future rulemaking and other actions in this area.

We are establishing an applicable percentage increase for FY 2025 of 2.9 percent as described in section 1886(b)(3)(B) of the Act, provided the hospital submits quality data and is a meaningful EHR user consistent with these statutory requirements. We note that, because the operating and capital payments in the IPPS remain separate, we are continuing to use separate updates for operating and capital payments in the IPPS. The update to the capital rate is discussed in section III. of the Addendum to this final rule.

We note that section 1886(d)(5)(F) of the Act provides for additional Medicare payment adjustments, called Medicare disproportionate share hospital (DSH) payments, for subsection (d) hospitals that serve a significantly disproportionate number of low-income patients. Section 1886(r) of the Act provides that, for FY 2014 and each subsequent fiscal year, the Secretary shall pay each such subsection (d) hospital that is eligible for Medicare DSH payments an

empirically justified DSH payment equal to 25 percent of the Medicare DSH adjustment they would have received under section 1886(d)(5)(F) of the Act if subsection (r) did not apply. The remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments if subsection (r) of the Act did not apply, reduced to reflect changes in the percentage of individuals who are uninsured, is available to make additional payments to

each hospital that qualifies for Medicare DSH payments and has uncompensated care. These additional payments are called uncompensated care payments. We refer readers to section IV. of preamble of this final rule for a further discussion of Medicare DSH and uncompensated care payments.

RIN 2060–AV26

Fuels Regulatory Streamlining Amendments**AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Proposed rule.**SUMMARY:** This action proposes revisions, updates, and corrections to EPA's streamlined fuel quality regulations. This action does not propose to change the stringency of the existing fuel quality standards.**DATES:** *Comments.* Comments must be received on or before October 15, 2024.*Public hearing:* If anyone contacts EPA requesting a public hearing by September 4, 2024, EPA will hold a virtual public hearing on September 12, 2024. Please refer to the **SUPPLEMENTARY INFORMATION** section for additional information on the public hearing.**ADDRESSES:** *Comments.* Submit your comments, identified by Docket ID No.EPA–HQ–OAR–2024–0143, at <http://www.regulations.gov>. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from the docket. EPA may publish any comment received to its public docket. Do not submit to EPA's docket at <https://www.regulations.gov> any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). Please visit <https://www.epa.gov/dockets/commenting-epa-dockets> for additional submission methods; the full EPA public comment policy; information about CBI or multimedia submissions; and general guidance on making effective comments.*Public hearing.* If a virtual public hearing is requested by September 4, 2024, it will be held on September 12,

2024. The hearing will begin at 9:00 a.m. Eastern Daylight Time (EDT) and end when all parties who wish to speak have had an opportunity to do so. All hearing attendees (including even those who do not intend to provide testimony) should register for the virtual public hearing by September 4, 2024.

Information on the status of the hearing and how to register can be found at <https://www.epa.gov/diesel-fuel-standards/fuels-regulatory-streamlining>. Additional information regarding the hearing appears below under **SUPPLEMENTARY INFORMATION**.**FOR FURTHER INFORMATION CONTACT:** Nick Parsons, Office of Transportation and Air Quality, Assessment and Standards Division, Environmental Protection Agency, 2000 Traverwood Drive, Ann Arbor, MI 48105; telephone number: 734–214–4479; email address: parsons.nick@epa.gov.**SUPPLEMENTARY INFORMATION:****Does this action apply to me?**

Entities potentially affected by this proposed rule are those involved with the production, distribution, and sale of transportation fuels, including gasoline and diesel fuel. Potentially affected categories include:

Category	NAICS ¹ code	Examples of potentially affected entities
Industry ...	211130	Natural gas liquids extraction and fractionation.
Industry ...	221210	Natural gas production and distribution.
Industry ...	324110	Petroleum refineries (including importers).
Industry ...	325110	Butane and pentane manufacturers.
Industry ...	325193	Ethyl alcohol manufacturing.
Industry ...	325199	Manufacturers of gasoline additives.
Industry ...	424710	Petroleum bulk stations and terminals.
Industry ...	424720	Petroleum and petroleum products wholesalers.
Industry ...	457110, 457120	Fuel retailers.
Industry ...	457210	Other fuel dealers.
Industry ...	486910	Natural gas liquids pipelines, refined petroleum products pipelines.
Industry ...	493190	Other warehousing and storage—bulk petroleum storage.

¹ North American Industry Classification System (NAICS).

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities potentially affected by this action. This table lists the types of entities that EPA is now aware could potentially be affected by this action. Other types of entities not listed in the table could also be affected. To determine whether your entity would be affected by this action, you should carefully examine the applicability criteria in 40 CFR part 1090. If you have any questions regarding the applicability of this action to a particular entity, consult the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Participation in Virtual Public Hearing

Information on the status of the virtual public hearing and how to register can be found at <https://www.epa.gov/diesel-fuel-standards/fuels-regulatory-streamlining>. The last day to pre-register to speak at the hearing is September 4, 2024. Please note that any updates made to any aspect of the hearing will be posted online at <https://www.epa.gov/diesel-fuel-standards/fuels-regulatory-streamlining>. Please monitor the website or contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to determine if there are any updates. EPA does not intend to publish a document

in the **Federal Register** announcing updates.

If a virtual public hearing is held, each commenter will have 3 minutes to provide oral testimony. EPA may ask clarifying questions during the oral presentations, but will not respond to the presentations at that time. Written statements and supporting information submitted during the comment period will be considered with the same weight as oral comments and supporting information presented at the public hearing.

If you require the services of a translator or special accommodations such as audio description, please pre-register for the hearing and describe your needs by September 4, 2024. EPA

may not be able to arrange accommodations without advance notice.

Preamble Acronyms and Abbreviations

Throughout this document the use of “we,” “us,” or “our” is intended to refer to EPA. We use multiple acronyms and terms in this preamble. While this list may not be exhaustive, to ease the reading of this preamble and for reference purposes, EPA defines the following terms and acronyms here:

ARV	accepted reference value
BOB	gasoline before oxygenate blending
DFE	denatured fuel ethanol
EMTS	EPA Moderated Transaction System
GTAB	gasoline treated as blendstock
NFSP	National Fuel Survey Program
OFR	Office of the Federal Register
PBMS	Performance-based Measurement System
PCG	previously certified gasoline
RVP	Reid vapor pressure
SQC	statistical quality control
TGP	transmix gasoline product

- VI. Statutory Authority

I. Background and Overview

On December 4, 2020, EPA finalized the Fuels Regulatory Streamlining Rule (“streamlining rule”) that replaced EPA’s prior gasoline, diesel fuel, and other fuel quality programs in 40 CFR part 80 with a new set of provisions and definitions in 40 CFR part 1090.¹ Since that time, EPA found that several provisions in 40 CFR part 1090 require further correction or clarification to better align with current market practices; this action proposes such changes. As further discussed in Section V, the regulatory text in this document includes both text that EPA is proposing to change as well as text that EPA is republishing without change for context and clarity in keeping with new guidance by the Office of the Federal Register (OFR). EPA is not reopening for comment any of the unchanged text. Specifically, EPA is not reopening any fuel quality standard (e.g., the sulfur, benzene, and Reid vapor pressure (RVP) standards for gasoline in 40 CFR part 1090, subpart C, and the sulfur and cetane standards for diesel fuel in 40 CFR part 1090, subpart D), the general requirements that regulated parties register with EPA, maintain records, submit reports, etc., or the general requirements for averaging, banking, and trading. Any comments received on these topics or on portions of the regulations that are not the subject of this action will be considered as beyond the scope of this rulemaking.

This action proposes amendments to two main areas of EPA’s fuel quality regulations. First, EPA is proposing minor revisions to provide clarity and flexibility to provisions that govern how fuel, fuel additives, and regulated blendstocks are sampled and tested to demonstrate compliance. Since finalizing the streamlining rule, EPA identified, with stakeholder input, several areas in the sampling and testing provisions that need further consideration and clarification. These areas include the in-line blending waiver provisions, instructions for collecting samples through automatic and manual sampling, the process for demonstrating homogeneity for

certification testing, and requirements related to demonstrating the accuracy and precision of test methods. The sampling and testing amendments are discussed in Section II.

Second, EPA is proposing the following technical amendments, which are discussed in Section III:

- Clarification of definitions and general provisions.
- Clarification of the truthful reporting requirement.
- Clarification of the RVP standard in federal 7.8 psi RVP areas.
- Adjustments to notifications under the National Fuel Survey Program (NFSP).
- Addition of provisions to allow for certifying fuel loaded onto domestic marine vessels.
- Numerous clarifications, corrections, and consistency edits to the regulations.

II. Sampling and Testing

A. Determining the Volume of Non-Compliant Fuel

EPA is proposing to clarify how batches of fuel certified through automatic sampling would be treated when a test result indicates that a regulated parameter exceeds a per-gallon standard. A per-gallon standard is defined as “the maximum or minimum value for any parameter that applies to every volume unit of a specified fuel, fuel additive, or regulated blendstock.”² This definition is consistent with EPA’s historic approach to per-gallon standards. Whether fuel is produced and tested by in-line blending or in storage tanks, each gallon of fuel must meet all applicable per-gallon standards. EPA expects fuel manufacturers to apply a margin of safety to their production targets to ensure that all fuel meets all applicable per-gallon standards in 40 CFR part 1090.

The current regulation states that “[a] batch is noncompliant if any tested sample does not meet all applicable per-gallon standards.”³ Since the streamlining rule was finalized in 2020, several stakeholders expressed concern that this language could be construed to mean that EPA would consider the entire volume of a batch produced by in-line blending to be in violation of a per-gallon standard whenever any test result exceeded the per-gallon standard. To address this concern, EPA is proposing to remove the above-referenced language in 40 CFR 1090.1335(e)(2) and add clarifying

² 40 CFR 1090.80.

³ 40 CFR 1090.1335(e)(2).

¹ 85 FR 78412.

language to 40 CFR 1090.1335(b) and (c). Specifically, EPA is proposing first to modify the manual-sampling provisions in 40 CFR 1090.1335(b) to include the statement that “The entire batch volume is noncompliant if a sample fails to meet any applicable per-gallon standard.” This is intended to be consistent with the provision described above from 40 CFR 1090.1335(e)(2). Second, EPA is proposing to modify the automatic-sampling provisions in 40 CFR 1090.1335(c) to clarify that the entire batch volume is noncompliant if the composite sample fails to meet any applicable per-gallon standard. However, if an in-line sample fails to meet any applicable per-gallon standard, EPA would consider the volume of noncompliant fuel to be the volume starting with the last passing result before the failing result (or the start of the batch), up to the first passing result after the failing result (or the end of the batch). For example, if a head sample exceeds a standard, followed shortly by a middle sample with a valid passing result, the volume of noncompliant fuel would be limited to the portion of the batch preceding the middle sample with the passing result. Also, if the fuel manufacturer took an extra sample between the head and middle samples and determined that the extra sample had a passing result, that would further limit the volume of fuel considered noncompliant.

This proposed approach is intended to preserve the long-standing principle of requiring every tested sample to meet all applicable per-gallon standards, while allowing us to consider a portion of the in-line blended batch to be compliant based on tested samples that establish the boundaries of what should be considered noncompliant. We believe the proposed approach properly incentivizes fuel manufacturers both to design and manage their processes to provide for appropriate compliance margins and to perform spot testing as appropriate to verify that the blended fuel continues to meet all applicable per-gallon standards for the whole batch.

Fuel manufacturers can measure fuel parameters using procedures that are different than the test methods used to generate official test results for certification. We recognize that those nonstandard measurements provide value to fuel manufacturers to inform the blending process and add assurance that the blend settings continue to maintain compliant fuel across the batch. However, as nonstandard tests, those measurements cannot be used to reduce the volume of fuel considered noncompliant if there are test results

from any official test method showing that a sample fails to meet a per-gallon standard.

We request comment on this approach to quantify the volume of noncompliant fuel when a test result from in-line blending indicates an exceedance of a per-gallon standard.

B. Requirements for In-Line Blending

The current in-line blending waiver provisions require that interested fuel manufacturers submit general information about their in-line blending equipment, including the location, layout, operation, and monitoring of equipment.⁴ During EPA review and approval of in-line blending waiver requests following finalization of the streamlining rule, multiple stakeholders raised concerns regarding the requirement to follow ASTM D4177⁵ and the sampling and testing of spot samples. Through iterative discussion with these stakeholders, EPA approved multiple flexibilities addressing these and other concerns in individual waiver requests. In this action, EPA is proposing to codify these previously approved flexibilities in the regulations to ensure a consistent and transparent framework. These proposed in-line blending flexibilities would codify existing industry practices, and thus would not impose a new or greater burden on industry. EPA is not reopening for comment the existing provisions for in-line blending waivers.

The rest of this section describes several additional proposed provisions for in-line blending waivers to provide further flexibility, or to provide EPA with additional information to help with overseeing in-line blending processes.

We request comment on the proposed amendments for in-line blending waivers. In particular, we note that in some cases fuel manufacturers are already including elements of the proposed additional information in their existing in-line blending waivers and accordingly invite those fuel manufacturers to describe how their experiences either align with the proposed provisions or lead them to make specific recommendations for adjusting the proposed provisions, along with any appropriate supporting information.

1. Scope of Measurements and Sampling Frequency

EPA is proposing to require fuel manufacturers to identify which

⁴ 40 CFR 1090.1315.

⁵ ASTM D4177–22e1, “Standard Practice for Automatic Sampling of Petroleum and Petroleum Products,” approved July 1, 2022.

blendstock parameters will be measured for managing the blending process and the typical sampling frequency for those measurements. This would enable EPA to better understand the fuel manufacturer’s ability to manage the blending process to keep fuel parameters within targeted values over the course of the blend and to not exceed per-gallon standards.

Regarding sampling frequency, the general instruction for automatic sampling at 40 CFR 1090.1335(c) is to follow ASTM D4177 and to create a composite sample from at least 9,604 grabs to represent the batch, with a secondary specification to collect samples with a sampling frequency that does not exceed 20 seconds throughout the batch. The underlying objective is to require a sampling frequency that corresponds to a margin of error of 0.01. EPA is proposing to amend 40 CFR 1090.1335(c) to include a direct reference to the 0.01 error specification to allow for less frequent sampling, as long as sampling does not exceed a margin of error of 0.01. In addition, we recognize that such a sampling frequency may be difficult to achieve for certain batch characteristics. EPA is therefore proposing to allow fuel manufacturers to describe in their in-line blending waiver requests circumstances in which they cannot meet the requirement to achieve a margin of error at or below 0.01. Any fuel manufacturer in those circumstances must quantify their measurement variability and adjust target values as needed to account for the greater margin of error. This proposed approach is intended to accommodate special circumstances without relaxing the per-gallon standards that apply for the fuel.

2. Reduced Spot Sampling for Small Batches

As described in Section II.A, automatic sampling generally requires collection of head, middle, and tail samples to confirm that the blended fuel meets all applicable per-gallon standards across the batch. We acknowledge that collecting all three of these spot samples can be difficult for small batches due to the logistics of collecting and analyzing samples during the blending process. EPA is therefore proposing that in-line blending waivers may allow for reduced sampling requirements for certain batch sizes to provide additional flexibility. Specifically, EPA is proposing to allow for collecting a single sample anytime during the blend for a batch involving up to 8 hours of blending or up to 1 million gallons of fuel, and for

collecting two evenly distributed samples during the blend for a batch involving up to 16 hours of blending or up to 2 million gallons of fuel. These specified values would be based on actual volume and duration. If a batch volume or duration extends beyond what was anticipated and exceeds the specified threshold for relief from sampling requirements, that would trigger the need to collect additional samples. We request comment on whether the proposed threshold values for volume and duration should be adjusted to larger or smaller volumes to properly reflect the competing interests of reducing test burden for small batches and ensuring that the whole batch meets requirements. We also request comment on whether to apply the reduced sampling requirements based on meeting the specified threshold values for both the volume and duration of the batch, rather than just one or the other.

Another possible challenge for complying with the requirement to collect head, middle, and tail samples for automatic sampling is the possibility of process dynamics that cause the fuel manufacturer to terminate the batch earlier than planned. Any number of factors may cause the early termination, and the termination may involve different levels of urgency. We are aware that such an early termination may not allow for an orderly process of collecting all the required fuel samples. EPA is therefore proposing that in-line blending waivers may allow for failing to perform required tests. The allowance for reduced sampling and testing would be limited to unforeseen circumstances. When the unforeseen circumstances allow for it, fuel manufacturers should collect required samples whenever possible. This may involve shifting toward an earlier collection when there is uncertainty about blending duration for the batch, and there should be an effort to adjust plans for an earlier collection when the adjusted batch termination allows for it. However, to ensure that fuel manufacturers do not always rely on this reduced-sampling option, EPA is proposing that fuel manufacturers may exercise this reduced-sampling option for no more than 10 percent of their in-line blending batches for the calendar year.⁶ If a fuel manufacturer exceeds the 10 percent limit, EPA may consider that their in-line blending waiver has proven

⁶ We note that we have already allowed fuel manufacturers to use this proposed approach of a 10 percent limit under the current regulations as a way to address situations where reduced sampling and testing of in-line blending batches is necessary.

inadequate in practice.⁷ We request comment on these proposed provisions, including on the appropriateness of capping the allowance for reduced sampling to 10 percent of annual batches.

3. Contingency Plans for Equipment Failure

Some current in-line blending waivers include provisions that describe how the fuel manufacturer would respond if their essential test equipment fails, which we believe is an important contingency to plan for. EPA is therefore proposing that all in-line blending waivers include this element of emergency planning. Rather than specifying a standard practice, EPA is proposing that fuel manufacturers describe their contingency plans for alternative sampling and testing in cases involving failure of the automatic compositor or other essential equipment. Such contingency plans might appropriately consider a wide range of possible scenarios. The overall goal of this contingency plan would be to preserve the ability to collect an appropriate sample to properly represent the batch for purposes of demonstrating that the fuel meets all applicable per-gallon standards. EPA is proposing to require that, where possible, contingency plans include collecting a second composite sample with a redundant system to minimize the risk of shipping fuel without proper documentation for compliance, or alternatively to avoid the burden of finding a different sampling method to demonstrate compliance.

4. Alternative Compliance Demonstration To Remedy Noncompliance

The current regulation contains a general requirement to demonstrate that a batch of fuel, fuel additive, or regulated blendstock meets all applicable per-gallon standards before any portion of the batch leaves the facility.⁸ In-line blending waivers create an exception to that general requirement, with the understanding that the terms and conditions for a specific facility's blending process includes process controls to give adequate assurance that fuel from in-line blending will comply with all applicable per-gallon standards. The question of possible remedies by a fuel manufacturer arises when considering the possibility of test results showing that fuel coming out of an in-line blending process does not in fact meet

⁷ 40 CFR 1090.20(d) and (e).

⁸ 40 CFR 1090.1310(b).

all applicable per-gallon standards. To the extent that fuel has already left the facility, EPA would expect to take appropriate action to address the violation of failing to meet standards. However, fuel manufacturers may be able to take further measures before the blended fuel leaves the facility to demonstrate that the fuel meets all applicable per-gallon standards. Such remedies would involve additional testing, and it may also involve modifying or further blending the fuel to comply. EPA is proposing to allow fuel manufacturers to specify an alternative sampling demonstration in their contingency plan if an automatic sampling test result fails to meet an applicable per-gallon standard, as opposed to being subject to EPA action to address the violation of failing to meet standards.

The proposed amendment identifies two example remedies that would be available as long as the fuel remains at the facility. First, we describe batch certification based on manual sampling in a tank if the fuel manufacturer collects the entire batch of blended fuel represented by the noncompliant test result in the tank before it leaves the fuel manufacturing facility gate. Second, we describe batch certification based on secondary automatic sampling as fuel comes out of a holding tank used to collect the fuel that failed to meet a per-gallon standard. Such an approved alternative sampling demonstration would allow the fuel manufacturer to disregard the earlier failing result if the subsequent valid measurements show that all shipped fuel meets all applicable per-gallon standards.

C. Process for Amending In-Line Blending Waivers

Section II.B describes additional information for fuel manufacturers to include in in-line blending waivers. In most cases, fuel manufacturers already include the proposed information in their approved in-line blending waivers. However, in some cases, fuel manufacturers will likely need to make updates to their approved in-line blending waivers to comport with the proposed changes. EPA is therefore proposing that all in-line blending waivers must comply with the proposed new specifications starting March 1, 2025, with all the proposed new flexibilities being optionally available before that deadline.

To accommodate the timely review of these anticipated changes and other periodic updates to fuel manufacturers' in-line blending waivers, EPA is also proposing changes to the process for amending approved in-line blending

waivers. EPA is proposing to specify that requests for an amended waiver must include a description of the intended changes and a comparison document that comprehensively and clearly identifies the proposed changes to the waiver. The request must also include the statement attesting to the truthfulness of the submitted information, as described in Section III.B. These proposed specifications are intended to standardize the format and substance of the information submitted for the requested approval, with the intent of streamlining EPA review of the submitted material. It is particularly important for the comparison document to include all intended changes to the approved in-line blending waiver so that EPA staff can focus their review on the suggested amendments to the waiver instead of previously approved elements of the waiver.

While these proposed specifications for requests to amend in-line blending waivers will facilitate timely review by EPA staff, we are aware that fuel manufacturers depend on timely processing of their requests even when circumstances lead to a protracted review period. EPA is therefore proposing that approval of a waiver amendment request is deemed to be effective 60 days after EPA acknowledges receiving the request if there is no further EPA response to the request. Keying the date to our acknowledgement is important to avoid a case where the fuel manufacturer submits the request in a way that does not come directly to our attention. An EPA response to the request may be in the form of denying the request, identifying deficiencies, or requiring additional information. Under the proposed approach, if EPA identifies deficiencies or requires additional information, the deemed approval date would be 60 days after EPA acknowledges receipt of the subsequent submission that addresses the deficiencies or includes the requested information.

Considering the proposed timing items together, fuel manufacturers could expect requests to amend their in-line blending waivers to comply with the proposed new requirements to be deemed approved by the March 1, 2025, deadline if the requests are submitted by December 31, 2024. We also note that depending on when the final rule promulgating these changes becomes effective, EPA may also extend the proposed March 1, 2025, deadline to provide fuel manufacturers sufficient time to update their in-line blending waivers to meet the proposed new specifications. We request comment on

whether additional time is needed for fuel manufacturers to update their in-line blending waivers to meet the proposed new specifications.

D. Changes to Manual Sampling Provisions

EPA is proposing to allow for the collection of spot samples or tap samples to be used as a default method in addition to the currently specified “running” or “all-levels” sampling. Under the current regulation, a fuel manufacturer must collect a “running” or “all-levels” sample from the top of the tank and may use tap sampling or spot sampling to collect upper, middle, and lower samples only “if a running or all-levels sample is impractical for a given storage configuration.”⁹ Since finalization of the streamlining rule, stakeholders have expressed concern over the ambiguity of the term “impractical” and contended that tap or spot sampling is as robust as running or all-levels sampling. EPA agrees that testing with spot samples or tap samples can be used to routinely collect tank samples for testing. Homogeneity requirements further ensure that spot samples and tap samples can properly represent the batch. EPA is therefore proposing to allow spot sampling and tap sampling to be treated on par with running or all-levels sampling.

E. Homogeneity Samples Used for Batch Certification

The streamlining rule added provisions describing a much more detailed approach for demonstrating that a batch can be considered homogeneous when drawing manual samples for certification.¹⁰ Industry efforts to comply with these more detailed specifications have led to requests for EPA to provide further clarification and adjustments to accommodate several specific circumstances.

1. Waivers From the Homogeneity Requirement

Under the current regulations, the homogeneity requirement is waived for several certain situations.¹¹ EPA is proposing to waive the homogeneity requirement for three additional circumstances. First, we recognize that homogeneity testing is impractical for horizontal tanks used for storing ethanol denaturant. Therefore, EPA is proposing to waive the homogeneity requirement for horizontal tanks with a circular or elliptical cross section and with a

volume less than 42,000 gallons to align with current practice for storing ethanol denaturant. The proposed waiver includes a requirement to draw samples from the approximate mid-depth of the product level to ensure that the measured parameters best represent the batch.

Second, EPA is proposing to waive the homogeneity requirement for certified butane and certified pentane. Certified butane and certified pentane are stored under pressure, which makes it impractical to collect homogeneity samples using the methods of ASTM D4057.¹²

Third, we are aware that a small number of fuel tanks allow for tap sampling only at ground level, along with sampling from the roof. Homogeneity testing with such a tank configuration therefore depends on sampling from the roof. Section II.D describes how EPA is proposing to allow tap sampling as a method that is equivalent to running or all-levels sampling. Based on those same concerns, we are aware that homogeneity testing is not possible with a tank that has only a single location for tap sampling when it is not an option to sample from the roof. EPA is proposing to allow an alternative homogeneity demonstration when inclement weather prevents sampling from the roof for such a fuel tank based on prior approval of a mixing process that has been shown to achieve homogeneity. The mixing demonstration must apply for the specific tank configuration and include consideration of a range of product types, fill levels, and other relevant parameters to ensure that the specific circumstances that apply for a given certification support the conclusion that the mixed fuel would meet homogeneity specifications. Anyone relying on this waiver from the homogeneity requirement would be required to keep records documenting EPA approval of the mixing procedure, the specific actions taken to follow the approved mixing procedure, and the forcing weather event.

We request comment on these three additional waivers from the homogeneity requirement, and on any other circumstances where collecting samples to meet homogeneity specifications is impractical or infeasible. Any suggestion for additional waivers from the homogeneity requirement should describe the need for relief and any possible mitigating

⁹ 40 CFR 1090.1335(b).

¹⁰ 40 CFR 1090.1337.

¹¹ 40 CFR 1090.1337(a).

¹² ASTM D4057–22, “Standard Practice for Manual Sampling of Petroleum and Petroleum Products,” approved May 1, 2022.

factors or actions that would address concerns for variability of measured properties from different samples. We also request comment on the proposed qualifying conditions and corresponding compliance requirements for each of the proposed additional waivers from the homogeneity requirement.

2. Homogeneity Testing Requirements

EPA is proposing to clarify homogeneity testing requirements for special cases.¹³ The first case addresses homogeneity test results that fall below the lower range for a given parameter. The homogeneity demonstration depends on showing that multiple samples collected in different places inside the tank have measured values that are consistent. Test results are not helpful for comparing results across samples if measured values are at or below the lower limit of the test method. EPA is therefore proposing to disallow using measurements for demonstrating homogeneity if multiple measured values are at or below the pooled limit of quantitation (PLOQ), laboratory limit of quantitation (LLOQ), or the valid range of the test method. In those cases, EPA is proposing that homogeneity testing would instead be based on one of the following: (1) Testing with a different qualifying, valid test method for the same parameter; or (2) Testing a different parameter identified in 40 CFR 1090.1337(d) and (e). For example, if a fuel manufacturer tested a summer gasoline for both RVP (required) and sulfur, and multiple sulfur measurements using ASTM D2622¹⁴ were below the valid range of the test method, EPA is proposing that the fuel manufacturer could not use those values to demonstrate homogeneity. In this situation, the fuel manufacturer would need to perform homogeneity testing by one of the following: (1) Measuring sulfur with an approved alternative test method; (2) Measuring benzene with the referee test method or an approved alternative test method; or (3) Measuring density or API gravity using one of the test methods specified in 40 CFR 1090.1337(d)(1).

The second case relates to testing that includes results for more than the required number of parameters. Homogeneity testing for gasoline, gasoline treated as blendstock (GTAB), and transmix gasoline product (TGP) involves measurements of at least two parameters, while homogeneity testing

for diesel fuel involves measurements of at least one parameter. A laboratory may have commercial or other reasons to perform measurements that include more than the minimum number of tests for demonstrating homogeneity. EPA is proposing that if more than the required parameters are tested, homogeneity testing fails when testing for any parameter other than density or API gravity does not meet the applicable homogeneity criterion.

The third case is for density or API gravity results that fall above the current scope of ASTM D4052.¹⁵ For valid testing, ASTM D4052 currently specifies an upper limit of 66° API. EPA is proposing to temporarily allow using test results above 66° API for homogeneity testing with ASTM D4052. Calculations for samples that exceed 66° API would be based on the same equation that applies for results that are (51–66° API). The proposed allowance applies only for testing performed with ASTM D4052 through December 31, 2026. This temporary provision allows for continued testing for this commonly used test method, with the expectation that the ongoing ASTM process for updating the test method will allow for valid measurements above 66° API by the end of 2026. EPA is aware that ASTM has started the process to update the precision statements for ASTM D4052, which would allow for expanding the acceptable upper API gravity range in the specified timeframe.

These proposed changes are intended to clarify how to apply the established homogeneity principles for addressing the identified special circumstances. We request comment on the proposed provisions and whether the proposed end of the temporary provisions (*i.e.*, the end of 2026) is enough time for ASTM to complete its inter-laboratory study and update ASTM D4052.

F. Retaining Samples

Fuel manufacturers and oxygenate producers are currently required to retain untested (or less tested) samples for summer gasoline and tested (or most tested) samples for winter gasoline, diesel fuel, and oxygenate.¹⁶ The requirement for such parties to retain tested samples (other than summer gasoline) was based on minimizing any test differences for cases involving EPA duplication of measurements already made to certify a batch. The requirement for retaining untested samples of summer gasoline was based on ASTM

5191,¹⁷ which calls for RVP measurements to be from an aliquot that is the first test specimen withdrawn from a sample container.

Industry stakeholders have expressed concern about the burden of complying with these sample retention requirements. We acknowledge that the advantage of repeating a measurement on a tested sample is offset by the risk that the sampling process could introduce errors caused by changing the characteristics of the sample. Accordingly, EPA is proposing to simplify the sample retention regulations by requiring parties to only retain an untested sample that is representative of the batch. This proposed approach relies on the principle that demonstrating homogeneity allows for any sample from the batch to be used for measurements to establish test values to characterize the batch. Untested samples allow for testing summer gasoline for RVP, and they provide an unadulterated starting point for measuring any other parameters.

We request comment on the proposed simplified instruction for retaining samples, specifically on the relative risks of introducing measurement error from using tested and untested samples to make new measurements, the need to allow for additional flexibility to retain tested samples in certain circumstances, and the need for separate instructions for batches not demonstrated to be homogeneous.

G. Homogeneity Testing of PCG

The regulations specify requirements that apply for a refiner or blending manufacturer that adds blendstock to previously certified gasoline (PCG) to produce a new batch of gasoline.¹⁸ Refiners and blending manufacturers can meet the requirements based on either “compliance by subtraction” or “compliance by addition.” The streamlining rule established that homogeneity requirements apply to the blendstocks and finished gasoline for compliance by addition but did not address homogeneity for compliance by subtraction for the PCG.¹⁹ Compliance by subtraction in many cases does not depend on homogeneity testing because the relevant fuel parameters for the PCG are already known, as the PCG previously underwent certification testing consistent with the sampling and

¹⁷ ASTM D5191–22, “Standard Test Method for Vapor Pressure of Petroleum Products and Liquid Fuels (Mini Method),” approved July 1, 2022.

¹⁸ 40 CFR 1090.1320.

¹⁹ Note that the finished gasoline created in a PCG compliance by subtraction situation must meet the homogeneity requirements.

¹³ 40 CFR 1090.1337(f).

¹⁴ ASTM D2622–16, “Standard Test Method for Sulfur in Petroleum Products by Wavelength Dispersive X-ray Fluorescence Spectrometry,” approved January 1, 2016.

¹⁵ ASTM D4052–18a, “Standard Test Method for Density, Relative Density, and API Gravity of Liquids by Digital Density Meter,” approved December 15, 2018.

¹⁶ 40 CFR 1090.1345.

testing requirements in 40 CFR part 1090, subpart N. However, if a batch of PCG was mixed with other batches of PCG or if the batch of PCG was exempt from homogeneity testing under 40 CFR 1090.1337(a)(4), the relevant fuel parameters are not known, and the batch of PCG should be demonstrated to be homogeneous prior to testing for compliance by subtraction to ensure the test results are valid. As such, EPA is proposing to require homogeneity testing for compliance by subtraction if blending involves multiple batches of PCG, or if a single batch of PCG was certified without demonstrating homogeneity under 40 CFR 1090.1337(a)(4). Homogeneity testing for these cases ensures that tested samples properly represent the batch after blending.

We request comment on applying homogeneity requirements in these specific circumstances related to compliance by subtraction. We also request comment on either further narrowing these specified circumstances or adjusting the proposal to require homogeneity testing more broadly. We also request comment on how to address the situation where a party blends an aborted in-line blending batch of gasoline into a tank that also contains PCG with unknown parameters prior to leaving the fuel manufacturing facility.

H. Precision and Accuracy Demonstration

The streamlining rule carried the principles for the Performance-based Measurement System (PBMS) from 40 CFR part 80 into 40 CFR part 1090. The streamlining rule added specifications to clarify how to apply quality-control testing requirements for meeting precision and accuracy requirements. Demonstrating precision and accuracy is critical for ensuring that test results are valid and properly represent the sample.²⁰ In reviewing program implementation for quality-control testing, we recognized the need to address two shortcomings. First, while in-house testing for accuracy requires that test results meet specifications, the option to demonstrate compliance with accuracy requirements by periodically participating in a crosscheck program does not identify a “fail” condition for nonconforming test results. Second, for both precision and accuracy, the regulations do not describe the consequence for failing to meet requirements.

EPA is proposing that any of the following outcomes would result in a failed test result from a crosscheck

program and thus are not valid for demonstrating compliance with accuracy requirements:

- The crosscheck program does not have a robust accepted reference value (ARV) based on the check standard requirements in Section 6.2 of ASTM D6299.²¹
- The difference between the test result and the ARV is greater than the maximum allowable difference for accuracy under 40 CFR 1090.1375.
- The difference between the test result and the ARV is greater than the method-defined limit for check standard accuracy, if applicable.
- The measured value lies outside of two Z-scores.²²

If test results from a crosscheck program are found to be invalid for demonstrating compliance, EPA is proposing to allow a laboratory to make timely corrections to avoid a compliance or enforcement consequence. Specifically, EPA is proposing that the laboratory would need to respond to a problematic test result by performing a root cause analysis and correcting the problem, which we understand to already be standard practice across the industry. The laboratory would need to document the findings of the root cause analysis and the steps taken to correct the problem. Under this proposal, the laboratory would have a grace period to continue testing for 35 days without being out of compliance. After that grace period, the laboratory would need to demonstrate that they again meet accuracy and precision requirements. The laboratory would be considered to continue to meet accuracy requirements if, after correcting the problems identified by the root cause analysis, in-house testing meets accuracy requirements using a check standard qualified by a third party. Alternatively, the laboratory could participate in the next crosscheck program and receive test results meeting specifications. We believe the proposed deadline for correcting issues represent a reasonable timeframe for taking remedial action and getting new test results.

Failing to meet precision or accuracy requirements indicates that test instruments are not suitable for generating valid test results for certification. As a result, EPA is proposing to specify that presumed fuel

parameters²³ would apply any time a laboratory fails to meet precision or accuracy requirements that prevent it from demonstrating compliance with standards using valid test results. For meeting accuracy requirements by participating in a crosscheck program, the presumed fuel parameters would apply only if the laboratory failed to correct the problems identified by the root cause analysis and repeat testing with valid test results within the specified timeframe. On the other hand, if corrective action is not taken to remedy the failing result within the specified timeframe, the presumed fuel parameters would apply for all relevant tests starting on the date the laboratory received the first failing report from the crosscheck program.

We request comment on these proposed revisions to precision and accuracy requirements. We specifically request comment on the proposed criteria for evaluating test results from crosscheck programs, the proposed process and timeline for remedying an adverse result from crosscheck programs, and the proposed approach and timeline to address a finding that a laboratory has failed to meet precision and accuracy requirements.

The proposed criteria for crosscheck programs create a boundary to ensure that individual test results are accurate for purposes of meeting standards; they do not address a scenario in which a laboratory would manage measurement error in a way that consistently undershoots the true value by a small amount. We accordingly request comment on specific provisions that would address such a possibility of long-term bias in test results.

It bears note that these proposed revisions narrowly address failures to meet precision and accuracy requirements in quality-control testing under 40 CFR 1090.1375. Any broader or different failure to meet testing specifications under 40 CFR part 1090 would be treated as its own violation based on the circumstances that apply.

I. Excluding SQC Data Points

EPA is proposing to allow for the exclusion of certain test results from statistical quality control (SQC) testing, as long as the fuel manufacturer or their third-party laboratory meets certain criteria. The regulations currently incorporate by reference ASTM D6299–20; however, neither 40 CFR part 1090 nor ASTM D6299–20 clearly addresses how to handle suspected outlier results obtained as part of SQC testing.²⁴ Since

²¹ ASTM D6299–23a, “Standard Practice for Applying Statistical Quality Assurance and Control Charting Techniques to Evaluate Analytical Measurement System Performance,” approved December 1, 2023.

²² The Z-score is a standardized dimensionless measure of the difference between an individual result in a data set and the sample arithmetic mean.

²³ 40 CFR 1090.1710(g).

²⁴ 40 CFR 1090.95(c)(30) and 1090.1375.

²⁰ 40 CFR 1090.1375.

the streamlining rule was promulgated in 2020, however, ASTM has updated this method to ASTM D6299–23a, which allows for the exclusion of outliers in SQC testing. Fuel manufacturers have asked EPA to update its incorporation by reference of ASTM D6299–20 in 40 CFR part 1090 to ASTM D6299–23a to also address outliers as part of SQC testing. EPA is proposing to update the regulations to reference the updated standard.

The purpose of SQC testing is to ensure that a fuel manufacturer or their third-party laboratory is conducting valid tests to ensure compliance with EPA's fuel quality requirements. Under ASTM D6299–23a, excluding an SQC test result can be appropriate under two scenarios:

- *Scenario 1:* When identified as an outlier using an appropriate statistical test, such as the Generalized Extreme Studentized Deviate (GESD), and evidence gathered from an investigation supports the exclusion. Supporting evidence could include a transcription error or other assignable cause that is not part of the normal process and needs to be properly documented.

- *Scenario 2:* During what is perceived to be normal operations of the SQC process, an SQC test result might fall outside of the Upper or Lower Control Limit, which is a strong indication of a system that is out-of-statistical-control (OOS). However, an immediate retest SQC sample should be performed to confirm the OOS event. If the retest indicates the system is in control as described in ASTM D6299–23a, then the OOS is not confirmed and the original SQC result might be excluded following further statistical analysis as addressed in section A1.5.4.1 of ASTM D6299–23a.

To provide clarity, EPA is proposing to allow outliers to be excluded from SQC samples—but not certification samples—under the certain circumstances outlined in ASTM D6299–23a.

However, we are concerned that parties may dub certain test results as outliers even though the test result is valid and should be included as part of SQC simply because the party does not like the test result. Therefore, EPA is also proposing to add recordkeeping requirements for exclusion events. If SQC data are excluded using the protocols outlined in ASTM D6299–23a, the laboratory would need to document the result as well as the assignable cause and justification for exclusion. EPA expects that SQC exclusions should be visible on the user's quality control chart while at the same time be excluded from ongoing SQC statistics.

Under this proposed approach, if EPA determines that the assignable cause for a test result treated as an outlier was not consistent with the circumstances described in ASTM D6299–23a, then such a test result would need to be retroactively included in the party's SQC. Furthermore, if documentation of the result as well as the assignable cause and justification are not maintained, EPA is proposing that the test result must also be included as part of the party's SQC.

We request comment on this proposed approach to excluding outliers for SQC testing.

J. Testing of Oxygenates for PCG Under Compliance by Subtraction

EPA is proposing a separate procedure for blending manufacturers that make a new batch of fuel with PCG that was a gasoline before oxygenate blending (BOB) and do not want to account for oxygenate added downstream under the compliance by subtraction provisions at 40 CFR 1090.1320(a)(1).²⁵ Under the existing regulations, a blending manufacturer certifying a batch using the PCG by subtraction procedures must create a hand blend of the PCG if the PCG was a BOB to determine the parameters of the PCG that will be used for the blending manufacturer's compliance calculations.²⁶ EPA established this requirement to ensure consistent accounting of sulfur and benzene levels of the PCG and believes that this approach is reasonable in the case where both the manufacturer of the PCG (a BOB in this case) and the manufacturer of the new finished fuel have accounted for oxygenate added downstream. However, after finalization

²⁵ Under EPA's fuel quality regulations, a gasoline manufacturer may add additional blendstocks to PCG to create a new batch of gasoline so long as the gasoline manufacturer certifies the new batch as meeting all applicable per-gallon standards, and properly accounts for the sulfur and benzene levels of the gasoline manufacturer's annual average compliance calculations. The regulations at 40 CFR 1090.1320 provide two options for the certification of a new batch using PCG. First, the gasoline manufacturer may directly measure the gasoline and sulfur levels of the added blendstock and report those measurements and the volume as a positive batch thereby adding those values to the gasoline manufacturer's annual sulfur and benzene compliance calculations; this procedure is called compliance by addition. The gasoline manufacturer may also determine the sulfur and benzene levels of the new blendstocks by measuring the sulfur and benzene levels of the PCG and the finished fuel then subtracting the PCG from the finished fuel to determine the values of the added blendstock; as such, this procedure is called compliance by subtraction. Gasoline manufacturers often use the compliance by subtraction method for PCG because it is often impractical to directly measure the sulfur and benzene values of blendstocks.

²⁶ 40 CFR 1090.1320(a)(1).

of the streamlining rule, one stakeholder suggested that the creation of a hand blend for the PCG would not result in an accurate accounting of sulfur and benzene levels of the new finished fuel if the manufacturer of such fuel did not account for oxygenate added downstream. Rather, this stakeholder highlighted that testing both the PCG and the finished fuel without the addition of oxygenates would result in the correct sulfur and benzene levels of the reported sulfur and benzene values for average annual compliance if the manufacturer did not intend to account for oxygenate added downstream. Thus, in this circumstance there is no need to create a hand blend. EPA agrees with this assessment and as such is proposing to clarify the regulations to accommodate the scenario where a blending manufacturer complies by subtraction for PCG and does not account for oxygenate added downstream. Under this proposal, the blending manufacturer would test and report the sulfur and benzene values of the PCG and the finished fuel without the addition of oxygenates, which would be netted during the fuel manufacturer's annual compliance demonstration to report the correct sulfur and benzene values of the added blendstock. EPA still believes blending manufacturers that use the compliance by subtraction provisions to certify batches of fuels produced from PCG and elect to account for oxygenate added downstream should follow the existing requirement to create a hand blend of both the PCG and the finished fuel and are therefore not proposing to change that requirement. We request comment on this approach.

III. Other Technical Amendments

A. Definition of Batch

EPA is proposing to modify the definition of batch to better align with how the sampling and testing regulatory provisions establish the values for the regulated parameters for batches. Under the current definition, a batch is defined as a "quantity of fuel, fuel additive, or regulated blendstock that has a homogeneous set of properties."²⁷ The definition notes further that "[t]his also includes fuel, fuel additive, or regulated blendstock for which homogeneity testing is not required under § 1090.1337(a)." Since this definition was promulgated in the streamlining rule, industry stakeholders have identified that the definition appears inconsistent because it says that a batch must be homogeneous, but the

²⁷ 40 CFR 1090.80.

regulations also allow for certifying a batch without demonstrating homogeneity. It is also the case that fuel produced with in-line blending procedures is not subject to any homogeneity requirement. To address these concerns, EPA is proposing to revise the definition of batch to mean “a quantity of fuel, fuel additive, or regulated blendstock with properties that can be characterized by a single set of values using the measurement procedures in subpart N of this part.” We believe this framing better reflects our intent to have the values established through the sampling and testing provisions reflect the volume identified as the batch for manual sampling in cases where homogeneity has been determined and in cases where a party is allowed to certify a batch without demonstrating homogeneity. The proposed definition also aligns with the requirement that fuel manufacturers using in-line blending must collect a single composite sample that represents the whole batch being certified. We request comment on this revised definition.

B. Truthful Reporting

EPA is proposing to clarify a requirement that applies to all information submitted to the Agency. Parties that submit information to EPA must, among other things, ensure that the information is complete, accurate, and not misleading according to the submitter’s personal knowledge and belief. This requirement is codified at 18 U.S.C. 1001 and in several other statutory provisions. EPA’s data systems—such as DCFuel and the EPA Moderated Transaction System (EMTS)—require the submitter to actively acknowledge this responsibility. For DCFuel, the submitter confirms that the information “meets all the requirements of the” applicable regulations by actively checking the certification box. Similarly, when information is submitted through EMTS, the submitter certifies that, “the information shown is a correct and accurate account of the transaction(s) that have taken place” or, “under penalty of law, that the information provided in this document is, to the best of [the submitter’s] knowledge and belief, true, accurate, and complete. [The submitter is] aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.” When information is submitted to EPA through email, however, there is currently no equivalent certification made, though the same requirement to

submit complete, accurate, and not misleading information still applies. Therefore, EPA is proposing to add language in 40 CFR 1090.20 to ensure that the regulated community is aware that this obligation applies to all information submitted under 40 CFR part 1090, regardless of the form of that submission. We note that the statutory requirement to submit complete, accurate, and not misleading information applies with or without the proposed regulatory clarification. We request comment on this language.

C. Clarification of RVP Standard in Federal 7.8 psi RVP Areas

EPA is proposing to correct the RVP standards for federal 7.8 psi RVP areas to allow for the use of 9.0 psi RVP summer gasoline in federal 7.8 psi RVP areas during the month of May. Prior to the streamlining rule, gasoline used in federal 7.8 psi RVP areas had to meet a 9.0 psi RVP standard during the month of May and a 7.8 psi RVP standard for the remainder of the summer season (*i.e.*, June 1 to September 15). In the gasoline RVP standards specified in 40 CFR part 1090.215, EPA inadvertently modified the RVP standard for federal 7.8 psi RVP areas for the month of May in transcribing the previous RVP standards table in 40 CFR 80.27. This proposed revision would fix that transcription error.

D. National Fuel Survey Program Notifications

EPA is proposing that independent surveyors include additional information in notifications to EPA and branded fuel manufacturers when the surveyor identifies potential non-compliance as part of the NFSP. Under the current NFSP requirements, the independent surveyor utilizes information about retail outlets to identify potential locations and ultimately randomly selects retail outlets for sampling. When the independent surveyor collects samples, it tests the sample to determine whether it meets the applicable fuel quality standards. If a test result exceeds one or more applicable standards, the independent surveyor is required to notify EPA, the retailer, and the branded fuel manufacturer (if applicable) within 24 hours of identifying the issue. The current regulations do not specify that the surveyor indicate the contact information of the retail outlet in the notification provided to EPA or the branded fuel manufacturer (if applicable), even though the independent surveyor has this information readily available. Based on EPA’s experience with the NFSP to date,

we believe that including such information as part of the notifications for potentially non-compliant samples would help EPA and branded fuel manufacturers more expeditiously resolve these issues consistent with EPA’s original intent in setting up the NFSP. As such, EPA is proposing that any notification to EPA or a branded fuel manufacturer of a potential non-compliant sample would be required to include the retail outlet’s contact information, including name, title, mailing address, telephone number, and email address of a representative of the retail outlet, if available. We request comment on this proposed requirement.

E. Fuel Certification With Domestic Marine Vessels

Several stakeholders requested flexibility to meet testing requirements for fuel certification when loading gasoline or diesel fuel onto domestic marine vessels, specifically by sampling and testing with the procedures that apply for importing fuel on marine vessels as specified in 40 CFR 1090.1605. EPA is proposing to provide this flexibility subject to the stipulations that each vessel compartment would need to be sampled and tested independently, and that no additional product would be loaded after sampling has been completed. The marine vessel would also not be permitted to navigate beyond 15 miles from the fuel manufacturing facility or discharge fuel until demonstrating compliance with all applicable per-gallon standards. This proposed condition is intended to allow fuel manufacturers to free up dock space while waiting on test results. However, the fuel manufacturer would still be accountable for any noncompliance and would maintain responsibility for addressing any noncompliance before the fuel is discharged. EPA selected the 15-mile limit based on prior discussions with industry and believes this distance would be sufficient to allow for vessels to travel to free up dock space and still return to port to bring fuel back to the fuel manufacturing facility if an issue is identified with the fuel after it has left the dock.

We request comment on this proposed flexibility for certifying fuel on domestic marine vessels, including the appropriateness of the 15-mile limit.

F. Technical Corrections

EPA is proposing numerous technical amendments to 40 CFR part 1090. These amendments are being made to correct minor inaccuracies and clarify the current regulations. These changes are described in Table III.F–1. We seek comment on the proposed changes.

TABLE III.F-1—MISCELLANEOUS TECHNICAL CORRECTIONS AND CLARIFICATIONS TO FUEL QUALITY REGULATIONS

Part and section of Title 40	Description of revision
1090.50(a)	Removing explanatory text that noted that the rounding provisions at 1090.50 are consistent with ASTM E29 and NIST SP 811.
1090.55(b)(1), 1090.215(d)(1), and 1090.1335(b)(3)	Changing the term “retail station” to “retail outlet” to be consistent with the defined terms in 1090.80.
1090.55(b)(2)	Adding cross-references to 1090.1335 to ensure that auditors for in-line blending waivers have experience with sampling VCSBs.
1090.55(b)(3)	Clarifying that auditing in-line blending operations requires an auditor to be familiar with the in-line blending waiver provisions of 1090.1315 and to demonstrate work experience and be proficient with the automatic sampling procedures specified in 1090.1335(c).
1090.80	Adding missing definitions of “Distillate global marine fuel”, “ECA associated area”, “Emission control area (ECA)”, “Fuel additive manufacturing facility”, “Regulated blendstock import facility”, and “Regulated blendstock production facility”.
1090.85(g)	Adding paragraph to clarify that generic terms may also be used to refer to specific fuel, fuel additive, or regulated blendstock types.
1090.90	Adding missing acronym for volume additive reconciliation (VAR).
1090.110(c)	Removing requirement for detergent blenders to demonstrate compliance with 1090.260(a) and 1090.1240 because it is duplicative of existing requirements at 1090.100(a) and 1090.110(a).
1090.215(c)	Adding paragraph to clarify that the most stringent RVP standard applies when more than one summer gasoline RVP standard applies in the same geographic area.
1090.220(e) and 1090.1320(b)	Clarifying that parties may not blend certified butane and certified pentane into previously certified summer reformulated gasoline (RFG) or summer RBOB under 1090.1320(b).
1090.515(d)	Adding the term “other” prior to nonroad engines to clarify that the provision that limits the use of 500 ppm LM diesel in nonroad engines does not include locomotive and marine engines that are allowed to use it.
1090.605, 1090.610, 1090.615, 1090.620, 1090.625, 1090.630, 1090.635, 1090.640, 1090.645, and 1090.650.	Amending to use consistent language for all exemption provisions and clarifying which exemption provisions also apply to fuel additives and regulated blendstocks.
1090.605(a)(1)	Updating national security exemption to remove obsolete references to engine and vehicle emission standards.
1090.700, 1090.715, 1090.725, 1090.740, and 1090.745	Clarifying and simplifying the existing equations for sulfur and benzene, but not changing the overall calculations.
1090.905(c)(1)(viii)(A), (c)(2)(viii)(A), and (c)(8)(vii)(A)	Clarifying that batch reports must include whether the 1-psi waiver applies to the batch of summer gasoline.
1090.905(c)(3)(i)(H)	Removing requirement to report RVP standard and RVP test results for gasoline produced from PCG using compliance by subtraction because it is duplicative of the reporting requirement at 1090.905(c)(3)(ii).
1090.915(c)(5)	Clarifying that oxygenate producers may report sulfur levels as allowed under 1090.1330 instead of only through testing.
1090.1000(e)(2)(i)(A)	Clarifying that a certified butane producer must test certified butane before transferring the certified butane batch for delivery.
1090.1105	Clarifying that the PTD requirements of this section apply to exempt fuel additive and regulated blendstock in addition to exempt fuel.
1090.1110(e)	Clarifying which PTD requirements apply to gasoline detergent and which PTD requirements apply to gasoline.
1090.1215(a)	Clarifying that distillate global marine fuel manufacturers must comply with the recordkeeping requirements of this section.
1090.1230(b)(8)	Removing recordkeeping requirements for the sampling and testing of undenatured ethanol because they are duplicative of the general recordkeeping requirements for all sampling and testing at 1090.1205(c).
1090.1240(b)(2)(ii)(B)	Clarifying that the total volume of detergent must be calculated in gallons.
1090.1255(a)	Clarifying that a manufacturer or distributor of 500 ppm LM diesel fuel using transmix must comply with the recordkeeping requirements of this section.
1090.1315(a)(1)	Amending to allow for an RCO’s delegate to submit in-line blending waiver requests.
1090.1335(b)	Adding a reference to the latest version of ASTM D4057 for manual sampling and updating the regulation to include proper cites to content in ASTM D4057.
1090.1335(b)(4)	Adding a statement for manual sampling to clarify that, once the batch meets homogeneity specifications, any properly drawn sample may be used to represent the batch.
1090.1335(c)	Reorganizing paragraph content to align with manual sampling.

TABLE III.F-1—MISCELLANEOUS TECHNICAL CORRECTIONS AND CLARIFICATIONS TO FUEL QUALITY REGULATIONS—
Continued

Part and section of Title 40	Description of revision
1090.1337(b)	Clarifying how samples tested for homogeneity may be used to certify a batch of fuel.
1090.1337(c)	Removing separate reference to tap sampling, since that is just one kind of spot sampling.
1090.1337(d)	Clarifying that the homogeneity parameters for gasoline apply equally for GTAB and TGP.
1090.1337(d)	Allowing for homogeneity testing based on density as being equivalent to API gravity.
1090.1337(e)	Expanding paragraph to describe homogeneity testing parameters for oxygenate and certified ethanol denaturant.
1090.1337(f)	Adjusting wording to allow for a passing result for homogeneity testing if the variation among measured values is exactly equal to the pass-fail criterion.
1090.1340(a)(1)	Clarifying that a hand blend from the worst-case BOB sample is required if fuel manufacturers rely on worst-case results instead of performing homogeneity testing.
1090.1350(c)(4)	Clarifying that the specified recording precision applies for all measured oxygenate compounds.
1090.1355(b)	Updating for consistent reference to test methods rather than test procedures.
1090.1360(b)(1)(i)	Clarifying the absolute fuel parameters by removing text that is duplicative of the PBMS requirements at 1090.1350(a).
1090.1365(a)(3)	Clarifying that qualifying a test method applies for all instruments needed for those measurements.
1090.1365(b)(3)	Clarifying that laboratories qualifying an alternative method for oxygenate measurements must include all the oxygenate compounds identified in the referee method (ASTM D5599).
1090.1365(b)(3), Table 3	Referencing an older version of ASTM D5191 to properly identify the version corresponding to the specified reproducibility value for gasoline RVP measurements to qualify alternative measurement procedures.
1090.1365(c)(3)(i)	Narrowing the scope of the demonstration to exclude fuel additives and regulated blendstocks (other than butane) that are not covered by PBMS.
1090.1375(c)	Simplifying the instruction to select a test fuel for quality testing by requiring that the fuel sample have an ARV representing fuel that is typical for testing, rather than requiring selecting a sample with an ARV that is connected to a standard. This is especially important for RVP measurements, where there might be multiple standards.
1090.1375(d)	Decreasing the crosscheck program requirements for RVP testing from three to two times per year. This is based on RVP standards applying only for summer gasoline.
1090.1395(a)(1)(i)	Clarifying that baseline fuel for detergent testing must contain between 8.0 and 10.0 volume percent ethanol instead of denatured fuel ethanol (DFE). This is consistent with the previous provisions at 40 CFR part 80.
1090.1420(a)(2)	Clarifying that the two references to “10 volume percent” are referring to 10 volume percent ethanol and not 10 volume percent DFE.
1090.1450(c)(3)(ii) and (v)	Clarifying that summer gasoline samples that are not subject to EPA’s federal RVP standards under 1090.630 do not need to be tested for RVP under the National Sampling and Testing Oversight Program (NSTOP).
1090.1605(b)(1)(i)	Making explicit the assumption that fuel in an individual compartment on a marine vessel is homogeneous.
1090.1605(b)(1)(ii)	Clarifying how to demonstrate that a composite sample is valid.
1090.1605(b)(1)(iii)	Clarifying that RVP measurements are on individual samples, not composite samples.
1090.1610(a)(1)(i)(A)	Removing the word “fuel” to account for parameter measurements in fuel additives, etc.
1090.1800(a)(3)	Adding 1090.1800(a)(3) to clarify that gasoline manufacturers that transact sulfur/benzene credits for a compliance period but that did not produce gasoline in that compliance period must still undergo an annual attest audit for the credit transactions.
1090.1810, 1090.1815, 1090.1820, 1090.1825, 1090.1830, 1090.1835, 1090.1840, 1090.1845.	Amending to use consistent language for all attestation engagement provisions.

TABLE III.F-1—MISCELLANEOUS TECHNICAL CORRECTIONS AND CLARIFICATIONS TO FUEL QUALITY REGULATIONS—Continued

Part and section of Title 40	Description of revision
1090.1, 1090.5, 1090.15, 1090.20, 1090.80, 1090.90, 1090.95, 1090.100, 1090.105, 1090.110, 1090.130, 1090.140, 1090.145, 1090.155, 1090.160, 1090.165, 1090.175, 1090.180, 1090.200, 1090.210, 1090.215, 1090.230, 1090.265, 1090.285, 1090.290, 1090.295, 1090.300, 1090.310, 1090.315, 1090.325, 1090.500, 1090.510, 1090.520, 1090.605, 1090.610, 1090.615, 1090.620, 1090.625, 1090.630, 1090.635, 1090.640, 1090.645, 1090.650, 1090.700, 1090.710, 1090.715, 1090.720, 1090.725, 1090.730, 1090.735, 1090.740, 1090.745, 1090.800, 1090.805, 1090.815, 1090.820, 1090.900, 1090.905, 1090.910, 1090.915, 1090.925, 1090.930, 1090.935, 1090.1000, 1090.1005, 1090.1010, 1090.1015, 1090.1100, 1090.1105, 1090.1110, 1090.1115, 1090.1120, 1090.1205, 1090.1210, 1090.1215, 1090.1230, 1090.1240, 1090.1245, 1090.1250, 1090.1255, 1090.1320, 1090.1335, 1090.1340, 1090.1350, 1090.1355, 1090.1365, 1090.1375, 1090.1390, 1090.1395, 1090.1400, 1090.1405, 1090.1410, 1090.1415, 1090.1420, 1090.1450, 1090.1515, 1090.1600, 1090.1610, 1090.1615, 1090.1710, 1090.1715, 1090.1800, 1090.1805, 1090.1810, 1090.1815, 1090.1820, 1090.1825, 1090.1830, 1090.1835, 1090.1840, 1090.1845, 1090.1850.	Correcting typographical, grammatical, and consistency errors.

IV. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at <https://www.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is not a significant regulatory action as defined in Executive Order 12866, as amended by Executive Order 14094, and was therefore not subject to a requirement for Executive Order 12866 review.

B. Paperwork Reduction Act (PRA)

This action does not impose any new information collection burden under the PRA. OMB has previously approved the information collection activities contained in the existing regulations and has assigned OMB control number 2060-0731.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. In making this determination, EPA concludes that the impact of concern for this rule is any significant adverse economic impact on small entities and that the agency is certifying that this rule will not have a significant economic impact on a substantial number of small entities because the rule has no net regulatory burden on the small entities subject to the rule.

The small entities directly regulated by the RFS program are small refiners, which are defined at 13 CFR 121.201. This action proposes relatively minor corrections and modifications to EPA's fuel quality regulations, and we do not anticipate that there will be any significant cost increases associated with these proposed changes. We have therefore concluded that this action will have no net regulatory burden for all directly regulated small entities.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of \$100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. This action imposes no enforceable duty on any state, local, or tribal governments. Requirements for the private sector do not exceed \$100 million in any one year.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175. This action will be implemented at the Federal level and

potentially affects transportation fuel refiners, blenders, marketers, distributors, importers, exporters, and renewable fuel producers and importers. Tribal governments would be affected only to the extent they produce, purchase, and use regulated fuels. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2–202 of the Executive Order. Therefore, this action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA) and 1 CFR Part 51

This action involves technical standards. Except for the standards discussed in this section, the standards included in the regulatory text as incorporated by reference were all

previously approved for incorporation by reference (IBR) and no change is included in this action.

In accordance with the requirements of 1 CFR 51.5, we are proposing to

incorporate by reference the use of attestation standards from the American Institute of Certified Public Accountants (AICPA). The referenced standards may be obtained from AICPA, 220 Leigh

Farm Rd., Durham, NC 27707–8110, (919) 402–4500, or www.aicpa-cima.org. We are proposing to incorporate by reference the following standards from AICPA:

Standard or test method	Part and section of Title 40	Summary
AICPA Code of Professional Conduct, updated through December 2023.	1090.95 and 1090.1800	This updated document describes standardized accounting practices for performing audits.
Statement on Standards for Attestation Engagements No. 19, Agreed-Upon Procedures Engagements, Issued December 2019.	1090.95 and 1090.1800	This updated document describes standardized practices for performing attestation engagements.
System of Quality Management Standard No. 1, A Firm's System of Quality Management; Issued June 2022.	1090.95 and 1090.1800	This new standard describes requirements for designing quality standards.
System of Quality Management Standard No. 2, Engagement Quality Reviews; Issued June 2022.	1090.95 and 1090.1800	This new standard describes quality standards for performing attestation engagements.
System of Quality Management Standard No. 3, Amendments to Quality Management Standard Section 10, "A Firm's System of Quality Management" and Section 20, "Engagement Quality Reviews;" Issued March 2023.	1090.95 and 1090.1800	This new standard describes amended requirements for designing quality standards and performing attestation engagements.

In accordance with the requirements of 1 CFR 51.5, we are proposing to incorporate by reference the use of certain standards and test methods from ASTM International. The referenced

standards and test methods may be obtained from ASTM International, 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, PA, 19428–2959, (610) 832–9585, or www.astm.org. We are

proposing to incorporate by reference the following standards from ASTM International:

Standard or test method	Part and section of Title 40	Summary
ASTM D86–23ae1, Standard Test Method for Distillation of Petroleum Products and Liquid Fuels at Atmospheric Pressure, approved December 1, 2023.	1090.95 and 1090.1350	This updated standard describes procedures to characterize a fuel's distillation parameters.
ASTM D975–24, Standard Specification for Diesel Fuel, approved May 1, 2024.	1090.80 and 1090.95	This updated standard describes parameters to characterize a range of properties and grades of diesel fuel.
ASTM D1319–20a, Standard Test Method for Hydrocarbon Types in Liquid Petroleum Products by Fluorescent Indicator Adsorption, approved August 1, 2020.	1090.95 and 1090.1350	This updated standard describes procedures to measure the aromatic content of diesel fuel.
ASTM D2163–23, Standard Test Method for Determination of Hydrocarbons in Liquefied Petroleum (LP) Gases and Propane/Propene Mixtures by Gas Chromatography, approved March 1, 2023.	1090.95 and 1090.1350	This updated standard describes procedures to measure the purity and benzene content of butane and pentane.
ASTM D2622–21, Standard Test Method for Sulfur in Petroleum Products by Wavelength Dispersive X-ray Fluorescence Spectrometry, approved December 1, 2021.	1090.95, 1090.1350, 1090.1360, and 1090.1375.	This updated standard describes procedures to measure sulfur content.
ASTM D3231–24, Standard Test Method for Phosphorus in Gasoline, approved March 1, 2024.	1090.95 and 1090.1350	This updated standard describes procedures to measure the phosphorus content of gasoline.
ASTM D3237–22, Standard Test Method for Lead in Gasoline by Atomic Absorption Spectroscopy, approved October 1, 2022.	1090.95 and 1090.1350	This updated standard describes procedures to measure the lead content of gasoline.
ASTM D4052–22, Standard Test Method for Density, Relative Density, and API Gravity of Liquids by Digital Density Meter, approved May 1, 2022.	1090.95 and 1090.1337	This updated standard describes procedures to measure fuel density.
ASTM D4057–22, Standard Practice for Manual Sampling of Petroleum and Petroleum Products, approved May 1, 2022.	1090.95, 1090.1335, and 1090.1605.	This updated standard describes procedures to normalize manual sampling procedures for measuring fuel parameters.
ASTM D4177–22e1, Standard Practice for Automatic Sampling of Petroleum and Petroleum Products, approved July 1, 2022.	1090.95, 1090.1315, and 1090.1335.	This updated standard describes procedures to normalize automatic sampling procedures for an in-line blending configuration.
ASTM D4814–24a, Standard Specification for Automotive Spark-Ignition Engine Fuel, approved July 1, 2024.	1090.80, 1090.95, and 1090.1395.	This updated standard describes parameters to characterize a range of properties and grades of motor gasoline.
ASTM D5186–24, Standard Test Method for Determination of the Aromatic Content and Polynuclear Aromatic Content of Diesel Fuels By Supercritical Fluid Chromatography, approved July 1, 2024.	1090.95 and 1090.1350	This updated standard describes procedures to measure the aromatic content of diesel fuel.
ASTM D5191–22, Standard Test Method for Vapor Pressure of Petroleum Products and Liquid Fuels (Mini Method), approved July 1, 2022.	1090.95 and 1090.1360	This updated standard describes procedures to measure the volatility of gasoline.

Standard or test method	Part and section of Title 40	Summary
ASTM D5599–22, Standard Test Method for Determination of Oxygenates in Gasoline by Gas Chromatography and Oxygen Selective Flame Ionization Detection, approved April 1, 2022.	1090.95 and 1090.1360	This updated standard describes procedures to measure the oxygenate content of gasoline.
ASTM D5769–22, Standard Test Method for Determination of Benzene, Toluene, and Total Aromatics in Finished Gasolines by Gas Chromatography/Mass Spectrometry, approved July 1, 2022.	1090.95, 1090.1350, and 1090.1360.	This updated standard describes procedures to measure a fuel's concentration of benzene and other aromatic compounds.
ASTM D6299–23a, Standard Practice for Applying Statistical Quality Assurance and Control Charting Techniques to Evaluate Analytical Measurement System Performance, approved December 1, 2023.	1090.95, 1090.1370, 1090.1375, and 1090.1450.	This updated standard describes numerical and statistical methods for evaluating procedures for measuring various fuel parameters.
ASTM D6667–21, Standard Test Method for Determination of Total Volatile Sulfur in Gaseous Hydrocarbons and Liquefied Petroleum Gases by Ultraviolet Fluorescence, approved April 1, 2021.	1090.95, 1090.1360, and 1090.1375.	This updated standard describes procedures to measure the sulfur content of butane.
ASTM D6751–24, Standard Specification for Biodiesel Fuel Blend Stock (B100) for Middle Distillate Fuels, approved March 1, 2024.	1090.95 and 1090.1350	This updated standard describes the characteristics of biodiesel.

ASTM International and AICPA regularly publish updated versions of their standards, with the potential that there will be a published version of one or more of the documents listed above before we adopt the final rule that is more recent than the documents we identify in this proposed rule. For any of these more recently updated versions, we will consider including a reference to the latest document when we finalize the revisions covered by this proposed rule.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

EPA believes this type of action does not concern human health or environmental conditions and therefore cannot be evaluated with respect to potentially disproportionate and adverse effects on communities with environmental justice concerns. This action does not affect the level of protection provided to human health or the environment by applicable air quality standards. This action proposes relatively minor corrections and modifications to EPA's existing fuel quality regulations and therefore will not cause emissions increases from these sources.

V. Amendatory Instructions

Amendatory instructions are the standard terms that OFR uses to give specific instructions to agencies on how to change the CFR. OFR's historical guidance was to include amendatory instructions accompanying each individual change that was being made (e.g., each sentence or individual

paragraph). The piecemeal amendments served as an indication of changes EPA was proposing for public comment. Due to the extensive number of technical and conforming amendments being proposed in this action, however, EPA is utilizing OFR's new amendatory instruction "revise and republish" for proposed revisions that will become effective when this action is finalized.²⁸ Therefore, instead of the past practice of piecemeal amendments for proposed revisions to the CFR, EPA is using the "revise and republish" instruction to both revise regulatory text that is being proposed for comment and republish in their entirety certain sections of 40 CFR part 1090 that contain the regulatory text being revised and proposed for comment. To indicate those portions of provisions where changes are being proposed for comment, EPA has created a red-line version of 40 CFR part 1090 that incorporates the proposed changes. This red-line version is available in the docket for this action, as well as on EPA's website at <https://www.epa.gov/diesel-fuel-standards/fuels-regulatory-streamlining>. This red-line version provides further context to assist the public in reviewing and making meaningful comments on the proposed regulatory text changes. As previously noted, EPA is not reopening those unchanged provisions for comment. Republishing provisions that are unchanged in this proposal is consistent with guidance from OFR.

²⁸ OFR's Document Drafting Handbook (Chapter 2, 2–38) explains that agencies "[u]se [r]epublish to set out unchanged text for the convenience of the reader, often to provide context for your regulatory changes." <https://www.archives.gov/federal-register/write/handbook>. Additional information on OFR's mandatory use of "revise and republish" is available at <https://www.archives.gov/federal-register/write/ddh/revise-republish>.

VI. Statutory Authority

Statutory authority for this action comes from sections 114, 202, 203, 204, 205, 206, 207, 208, 209, 211, 213, 216, and 301 of the Clean Air Act, 42 U.S.C. 7414, 7521, 7522, 7523, 7524, 7525, 7541, 7542, 7543, 7545, 7547, 7550, and 7601.

List of Subjects in 40 CFR Part 1090

Environmental protection, Administrative practice and procedure, Air pollution control, Diesel fuel, Fuel additives, Gasoline, Imports, Incorporation by reference, Oil imports, Petroleum, Renewable fuel.

Michael S. Regan,
Administrator.

For the reasons set forth in the preamble, EPA proposes to amend 40 CFR part 1090 as follows:

PART 1090—REGULATION OF FUELS, FUEL ADDITIVES, AND REGULATED BLENDSTOCKS

■ 1. The authority citation for part 1090 continues to read as follows:

Authority: 42 U.S.C. 7414, 7521, 7522–7525, 7541, 7542, 7543, 7545, 7547, 7550, and 7601.

Subpart A—General Provisions

■ 2. Amend § 1090.1 by revising paragraphs (a)(1) and (2) to read as follows:

§ 1090.1 Applicability and relationship to other parts.

(a) * * *

(1) The regulations include standards for fuel parameters that directly or indirectly affect vehicle, engine, and equipment emissions, air quality, and public health. The regulations also include standards and requirements for

fuel additives and regulated blendstocks that are components of any fuel regulated under this part.

(2) This part also specifies requirements for any person who engages in activities associated with the production, distribution, storage, and sale of any fuel, fuel additive, or regulated blendstock, such as collecting and testing samples for regulated parameters, reporting information to EPA to demonstrate compliance with fuel quality requirements, and performing other compliance measures to implement the standards. A party that produces and distributes other related products, such as heating oil, may need to meet certain reporting, recordkeeping, labeling, or other requirements of this part.

* * * * *

■ 3. Amend § 1090.5 by:

■ a. Revising paragraphs (b)(3) and (c)(4); and

■ b. Adding paragraph (d).

The revisions and addition read as follows:

§ 1090.5 Implementation dates.

* * * * *

(b) * * *

(3) Unless otherwise specified, a regulated party must use the provisions of 40 CFR part 80 in 2021 to demonstrate compliance with regulatory requirements for the 2020 calendar year. This applies to calculating credits for the 2020 compliance period, and to any sampling, testing, reporting, or auditing related to any fuel, fuel additive, or regulated blendstock produced or imported in 2020.

* * * * *

(c) * * *

(4) The independent surveyor may collect only one summer or winter gasoline sample for each participating gasoline manufacturing facility instead of the minimum two samples required under § 1090.1450(c)(2)(i).

(d) The provisions of § 1090.1315(a)(7) through (14) apply beginning March 1, 2025. Fuel manufacturers may optionally apply those new provisions before March 1, 2025.

■ 4. Amend § 1090.15 by revising paragraph (e) to read as follows:

§ 1090.15 Confidential business information.

* * * * *

(e) EPA may disclose the information specified in paragraphs (b) through (d) of this section on its website, or otherwise make it available to interested parties, without additional notice, notwithstanding any claims that the information is entitled to confidential

treatment under 40 CFR part 2, subpart B or 5 U.S.C. 552(b)(4).

■ 5. Amend § 1090.20 by:

■ a. Revising paragraph (f); and

■ b. Adding paragraph (g).

The revision and addition read as follows:

§ 1090.20 Approval of submissions under this part.

* * * * *

(f) Any person who has an approval revoked or voided under this part is liable for any resulting violation of the requirements of this part.

(g) Submitting false, misleading, or incomplete information is a violation of law.

■ 6. Amend § 1090.50 by revising paragraph (a) to read as follows:

§ 1090.50 Rounding.

(a) Unless otherwise specified, round values to the number of significant digits necessary to match the number of decimal places of the applicable standard or specification. Perform all rounding as specified in 40 CFR 1065.20(e)(1) through (6).

* * * * *

■ 7. Amend § 1090.55 by revising and republishing paragraph (b) to read as follows:

§ 1090.55 Requirements for independent parties.

* * * * *

(b) Technical ability. The third party must meet all the following requirements in order to demonstrate their technical capability to perform specified activities under this part:

(1) An independent surveyor that conducts a survey under subpart O of this part must have personnel familiar with petroleum marketing, the sampling and testing of gasoline and diesel fuel at retail outlets, and the designing of surveys to estimate compliance rates for fuel parameters nationwide. The independent surveyor must demonstrate this technical ability in plans submitted under subpart O of this part.

(2) A laboratory attempting to qualify alternative procedures must contract with an independent third party to verify the accuracy and precision of measured values as specified in § 1090.1365. The independent third party must demonstrate work experience and a good working knowledge of the VCSB methods specified in §§ 1090.1335, 1090.1365, and 1090.1370, with training and expertise corresponding to a bachelor's degree in chemical engineering, or combined bachelor's degrees in chemistry and statistics.

(3) Any person auditing in-line blending operations must be familiar

with the waiver provisions of § 1090.1315 and be proficient with the sampling procedures specified in § 1090.1335(c).

* * * * *

■ 8. Amend § 1090.80 by:

■ a. Revising the definitions of "Auditor", "Automated detergent blending facility", and "Batch";

■ b. Removing the definition of "California diesel" and adding in alphabetical order the definition of "California diesel fuel";

■ c. Revising the definitions of "Certified ethanol denaturant producer", "Detergent additive package", "Detergent blender", and "Diesel fuel manufacturer";

■ d. Adding in alphabetical order the definition of "Distillate global marine fuel";

■ e. Revising the definitions of "Downstream location", "E0", and "E85";

■ f. Adding in alphabetical order the definition of "ECA associated area";

■ g. Revising the definition of "ECA marine fuel";

■ h. Adding in alphabetical order the definition of "Emission control area (ECA)";

■ i. Revising the definitions of "Fuel additive" and "Fuel additive manufacturer";

■ j. Adding in alphabetical order the definition of "Fuel additive manufacturing facility";

■ k. Revising the definitions of "Fuel manufacturing facility", "Gasoline before oxygenate blending (BOB)", "Gasoline manufacturer", "Global marine fuel", "Marine engine", "Non-automated detergent blending facility", and "Reformulated gasoline (RFG)";

■ l. Adding in alphabetical order the definition of "Regulated blendstock import facility";

■ m. Revising the definition of "Regulated blendstock producer";

■ n. Adding in alphabetical order the definition of "Regulated blendstock production facility";

■ o. Revising the definitions of "Sampling strata" and "Transmix processor";

■ p. Removing the definition of "Volume Additive Reconciliation (VAR) Period" and adding in alphabetical order the definition of "Volume additive reconciliation (VAR) period"; and

■ q. Revising the definition of "Wholesale purchaser-consumer (WPC)".

The revisions and additions read as follows:

§ 1090.80 Definitions.

* * * * *

Auditor means any person who conducts audits under subpart S of this part.

Automated detergent blending facility means any facility (including, but not limited to, a truck or individual storage tank) at which detergent is blended with gasoline by means of an injector system calibrated to automatically deliver a specified amount of detergent.

Batch means a quantity of fuel, fuel additive, or regulated blendstock with properties that can be characterized by a single set of values using the measurement procedures in subpart N of this part.

California diesel fuel means diesel fuel designated by a diesel fuel manufacturer as for use in California.

Certified ethanol denaturant producer means any person who certifies ethanol denaturant as meeting the requirements in § 1090.275.

Detergent additive package means an additive package containing detergent and may also contain carrier oils and other active components such as corrosion inhibitors, antioxidants, metal deactivators, and handling solvents.

Detergent blender means any person who owns, leases, operates, controls, or supervises the blending operation of a detergent blending facility, or who imports detergent-additized gasoline.

Diesel fuel manufacturer means a fuel manufacturer that owns, leases, operates, controls, or supervises a diesel fuel manufacturing facility.

Distillate global marine fuel means global marine fuel that is distillate fuel.

Downstream location means any point in the fuel distribution system other than a fuel manufacturing facility through which fuel passes after it leaves the fuel manufacturing facility gate at which it was certified (e.g., fuel at facilities of distributors, pipelines, terminals, carriers, retailers, oxygenate blenders, and WPCs).

E0 means gasoline that contains no ethanol.

E85 means a fuel that contains more than 50 and no more than 83 volume percent ethanol and is used, intended for use, or made available for use in flex-fuel vehicles or flex-fuel engines. E85 is not gasoline.

ECA associated area has the meaning given in 40 CFR 1043.20.

ECA marine fuel means diesel fuel, distillate fuel, or residual fuel used, intended for use, or made available for use in C3 marine vessels while the vessels are operating within an ECA, or an ECA associated area.

Emission control area (ECA) has the meaning given in 40 CFR 1043.20.

Fuel additive has the same meaning as additive in 40 CFR 79.2(e).

Fuel additive manufacturer means any person who owns, leases, operates, controls, or supervises a fuel additive manufacturing facility.

Fuel additive manufacturing facility means any facility where fuel additive is produced or imported.

Fuel manufacturing facility means any facility where fuel is produced, imported, or recertified. Fuel manufacturing facilities include refineries, fuel blending facilities, transmix processing facilities, import facilities, and any facility where fuel is recertified.

Gasoline before oxygenate blending (BOB) means gasoline for which a gasoline manufacturer has accounted for oxygenate added downstream under § 1090.710. BOB is subject to all the requirements and standards that apply to gasoline, unless subject to a specific alternative standard or requirement under this part.

Gasoline manufacturer means a fuel manufacturer that owns, leases, operates, controls, or supervises a gasoline manufacturing facility.

Global marine fuel means diesel fuel, distillate fuel, or residual fuel used, intended for use, or made available for use in steamships or Category 3 marine vessels while the vessels are operating in international waters or in any waters outside the boundaries of an ECA. Global marine fuel is subject to the provisions of MARPOL Annex VI. (Note: This part regulates only distillate global marine fuel.)

Marine engine has the meaning given in 40 CFR 1042.901.

Non-automated detergent blending facility means any facility (including a truck or individual storage tank) at which detergent additive is blended using a hand-blending technique or any other non-automated method.

Reformulated gasoline (RFG) means gasoline that is certified under

§ 1090.1000(b) and that meets the standards and requirements in § 1090.220.

Regulated blendstock import facility means any facility where regulated blendstock is imported into the United States.

Regulated blendstock producer means any person who produces or imports regulated blendstock in the United States, or any person who owns, leases, operates, controls, or supervises a facility where regulated blendstock is produced or imported.

Regulated blendstock production facility means any facility where regulated blendstock is produced.

Sampling strata means the following types of areas sampled during a survey:

- (1) Densely populated areas.
- (2) Transportation corridors.
- (3) Rural areas.

Transmix processor means any person who owns, leases, operates, controls, or supervises a transmix processing facility in the United States. A transmix processor is a fuel manufacturer.

Volume additive reconciliation (VAR) period means the following:

- (1) For an automated detergent blending facility, the VAR period is a time period lasting no more than 31 days or until an adjustment to a detergent concentration rate that increases the initial rate by more than 10 percent, whichever occurs first. The concentration setting for a detergent injector may be adjusted by more than 10 percent above the initial rate without terminating the VAR period, provided the purpose of the change is to correct a batch misadditization prior to the transfer of the batch to another party, or to correct an equipment malfunction and the concentration is immediately returned to no more than 10 percent above the initial rate of concentration after the correction.
- (2) For a non-automated detergent blending facility, the VAR period constitutes the blending of one batch of gasoline.

Wholesale purchaser-consumer (WPC) means any person who is an ultimate consumer of fuels and who purchases or obtains fuels for use in motor vehicles, nonroad vehicles, nonroad engines, or nonroad equipment, including locomotive or marine engines, and, in the case of liquid fuels, receives delivery of that product into a storage tank of at least 550-gallon capacity

substantially under the control of that person.

* * * * *

■ 9. Amend § 1090.85 by adding paragraph (g) to read as follows:

§ 1090.85 Explanatory terms.

* * * * *

(g) *Generic terms.* Certain terms that are generically defined in this part (e.g., “fuel manufacturing facility” or “importer”) may also be used to refer to a specific fuel, fuel additive, or regulated blendstock type (e.g., “diesel fuel manufacturing facility” or “gasoline importer”).

- 10. Amend § 1090.90 by:
 - a. Revising entry “PLOQ”; and
 - b. Adding in alphabetical order entry “VAR”.

The revision and addition read as follows:

§ 1090.90 Acronyms and abbreviations.

	*	*	*	*	*	*	*
PLOQ							
VAR							

- 11. Amend § 1090.95 by:
 - a. Revising paragraphs (b) and (c)(1), (3), and (c)(6) through (8);
 - b. Removing paragraph (c)(9) and redesignating paragraphs (c)(10) through (37) as paragraphs (c)(9) through (36);
 - c. Revising newly redesignated paragraphs (c)(9), (10), (12) through (14), (17), (19), (20), (23), (24), (29), (31), and (35);
 - d. Removing paragraph (c)(38) and redesignating paragraphs (c)(39) and (40) as paragraphs (c)(37) and (38).

The revisions read as follows:

§ 1090.95 Incorporation by reference.

(19) ASTM D5186–24, Standard Test Method for Determination of the Aromatic Content and Polynuclear Aromatic Content of Diesel Fuels by Supercritical Fluid Chromatography, approved July 1, 2024 (“ASTM D5186”); IBR approved for § 1090.1350(b).

(20) ASTM D5191–22, Standard Test Method for Vapor Pressure of Petroleum Products and Liquid Fuels (Mini Method), approved July 1, 2022 (“ASTM D5191”); IBR approved for § 1090.1360(d).

* * * * *

(23) ASTM D5599–22, Standard Test Method for Determination of Oxygenates in Gasoline by Gas Chromatography and Oxygen Selective Flame Ionization Detection, approved April 1, 2022 (“ASTM D5599”); IBR approved for § 1090.1360(d).

(24) ASTM D5769–22, Standard Test Method for Determination of Benzene, Toluene, and Total Aromatics in Finished Gasolines by Gas

Chromatography/Mass Spectrometry, approved July 1, 2022 (“ASTM D5769”); IBR approved for §§ 1090.1350(b) and 1090.1360(d).

(29) ASTM D6299–23a, Standard Practice for Applying Statistical Quality Assurance and Control Charting Techniques to Evaluate Analytical Measurement System Performance, approved December 1, 2023 (“ASTM D6299”); IBR approved for §§ 1090.1370(c), 1090.1375(a), (b), (c), and (d), and 1090.1450(c).

(31) ASTM D6667–21, Standard Test Method for Determination of Total Volatile Sulfur in Gaseous Hydrocarbons and Liquefied Petroleum Gases by Ultraviolet Fluorescence, approved April 1, 2021 (“ASTM D6667”); IBR approved for §§ 1090.1360(d) and 1090.1375(c).

(35) ASTM D6751–24, Standard Specification for Biodiesel Fuel Blend Stock (B100) for Middle Distillate Fuels, approved March 1, 2024 (“ASTM D6751”); IBR approved for § 1090.1350(b).

Subpart B—General Requirements and Provisions for Regulated Parties

■ 12. Amend § 1090.100 by revising the introductory text and paragraph (d) to read as follows:

§ 1090.100 General provisions.

This subpart provides an overview of the general requirements and provisions applicable to any regulated party under this part. A person who meets the definition of more than one type of regulated party must comply with the requirements applicable to each of those types of regulated parties. For example, a fuel manufacturer that also transports fuel must meet the requirements applicable to a fuel manufacturer and a distributor. A regulated party is required to comply with all applicable requirements of this part, regardless of whether they are identified in this subpart. Any person who produces, sells, transfers, supplies, dispenses, or distributes fuel, fuel additive, or regulated blendstock must comply with all applicable requirements.

(d) *Importers*. In addition to the requirements of paragraphs (a) through (c) of this section and §§ 1090.105 and 1090.155, an importer must also comply with subpart Q of this part.

■ 13. Amend § 1090.105 by revising paragraphs (a)(1), (a)(8), (b)(4), and (b)(8) to read as follows:

§ 1090.105 Fuel manufacturers.

(a) *Producing compliant gasoline*. A gasoline manufacturer must produce or import gasoline that meets the standards in subpart C of this part and must comply with the ABT requirements of subpart H of this part.

(8) *Annual attestation engagement*. A gasoline manufacturer must submit annual attestation engagement reports to EPA under subpart S of this part.

(4) *Certification and designation*. (i) A diesel fuel or ECA marine fuel manufacturer must certify and designate the diesel fuel or ECA marine fuel they produce under subpart K of this part.

(ii) A distillate global marine fuel manufacturer must designate the distillate global marine fuel they produce under subpart K of this part.

(8) *Distillate global marine fuel manufacturers*. A distillate global marine fuel manufacturer does not need to comply with the requirements of paragraphs (b)(1), (2), (3), and (6) of this section for distillate global marine fuel that is exempt from the standards in subpart D of this part, as specified in § 1090.650.

§ 1090.110 [Amended]

■ 14. Amend § 1090.110 by removing paragraph (c) and redesignating paragraph (d) as paragraph (c).

■ 15. Amend § 1090.130 by revising paragraphs (d), (f), and (g) to read as follows:

§ 1090.130 Certified butane blenders.

(d) *PTDs*. On each occasion when a certified butane blender transfers custody of or title to any gasoline blended with certified butane, the transferor must provide to the transferee PTDs under subpart L of this part.

(f) *Survey*. A certified butane blender may participate in the applicable fuel surveys under subpart O of this part.

(g) *Annual attestation engagement*. A certified butane blender must submit annual attestation engagement reports to EPA under subpart S of this part.

■ 16. Amend § 1090.140 by revising paragraphs (d), (f), and (g) to read as follows:

§ 1090.140 Certified pentane blenders.

(d) *PTDs*. On each occasion when a certified pentane blender transfers custody of or title to any gasoline blended with certified pentane, the

transferor must provide to the transferee PTDs under subpart L of this part.

(f) *Survey*. A certified pentane blender may participate in the applicable fuel surveys under subpart O of this part.

(g) *Annual attestation engagement*. A certified pentane blender must submit annual attestation engagement reports to EPA under subpart S of this part.

■ 17. Amend § 1090.145 by revising paragraph (g) to read as follows:

§ 1090.145 Transmix processors.

(g) *Annual attestation engagement*. A transmix processor must submit annual attestation engagement reports to EPA under subpart S of this part.

■ 18. Amend § 1090.155 by revising paragraphs (a)(1), (b)(1), and (b)(3) to read as follows:

§ 1090.155 Fuel additive manufacturers.

(1) *Gasoline additive standards*. A gasoline additive manufacturer must comply with the applicable requirements of subpart C of this part.

(1) *Diesel fuel additive standards*. A diesel fuel additive manufacturer must comply with the applicable requirements of subpart D of this part.

(3) *PTDs*. On each occasion when a diesel fuel additive manufacturer transfers custody of or title to any diesel fuel additive, the transferor must provide to the transferee PTDs under subpart L of this part.

■ 19. Amend § 1090.160 by revising paragraphs (a) and (b) to read as follows:

§ 1090.160 Distributors, carriers, and resellers.

(a) *Gasoline and diesel fuel standards*. A distributor, carrier, or reseller must comply with the applicable requirements of subparts C and D of this part.

(b) *Registration*. A distributor or carrier must register with EPA under subpart I of this part if they are part of the 500 ppm LM diesel fuel distribution chain in a compliance plan submitted under § 1090.515(g).

■ 20. Amend § 1090.165 by revising paragraphs (a) and (c) to read as follows:

§ 1090.165 Retailers and WPCs.

(a) *Gasoline and diesel fuel standards*. A retailer or WPC must comply with the

applicable requirements of subparts C and D of this part.

* * * * *

(c) Fuels produced through fuel dispensers. A retailer or WPC that produces gasoline (e.g., E15) through a fuel dispenser with anything other than PCG and DFE is also a blending manufacturer and must comply with the applicable requirements in § 1090.105.

■ 21. Amend § 1090.175 by revising paragraphs (c) and (d) to read as follows:

§ 1090.175 Auditors.

* * * * *

(c) Attestation engagements. An auditor must conduct audits under subpart S of this part.

(d) Independence requirements. In order to perform an annual attestation engagement under subpart S of this part, an auditor must meet the independence requirements in § 1090.55 unless they are a certified internal auditor under § 1090.1800(b)(1)(i).

■ 22. Amend § 1090.180 by revising paragraphs (a) and (c) to read as follows:

§ 1090.180 Pipeline operators.

* * * * *

(a) Gasoline and diesel fuel standards. A pipeline operator must comply with

the applicable requirements of subparts C and D of this part.

* * * * *

(c) Transmix requirements. A pipeline operator must comply with all applicable requirements of subpart F of this part.

Subpart C—Gasoline Standards

■ 23. Amend § 1090.200 by revising paragraph (c)(2)(i) to read as follows:

§ 1090.200 Overview and general requirements.

* * * * *

- (c) * * *
(2) * * *

(i) Importers that import gasoline by rail or truck using the provisions of § 1090.1610 to meet the alternative per-gallon standards of §§ 1090.205(d) and 1090.210(c).

* * * * *

■ 24. Amend § 1090.210 by revising paragraph (c)(1) to read as follows:

§ 1090.210 Benzene standards.

* * * * *

- (c) * * *

(1) An importer that imports gasoline by rail or truck under § 1090.1610 must comply with a benzene per-gallon standard of 0.62 volume percent instead

of the standards specified in paragraphs (a) and (b) of this section.

* * * * *

■ 25. Revise and republish § 1090.215 to read as follows:

§ 1090.215 Gasoline RVP standards.

Except as specified in subpart G of this part and paragraph (d) of this section, all gasoline designated as summer gasoline or located at any location in the United States during the summer season is subject to a maximum RVP per-gallon standard in this section.

(a)(1) Federal 9.0 psi maximum RVP per-gallon standard. Gasoline designated as summer gasoline or located at any location in the United States during the summer season must meet a maximum RVP per-gallon standard of 9.0 psi unless the gasoline is subject to one of the lower maximum RVP per-gallon standards specified in paragraphs (a)(2) through (5) of this section.

(2) Federal 7.8 maximum RVP per-gallon standard. (i) Except as specified in paragraph (a)(2)(ii) of this section, gasoline designated as 7.8 psi summer gasoline, or located in the following areas during the summer season, must meet a maximum RVP per-gallon standard of 7.8 psi:

TABLE 1 TO PARAGRAPH (a)(2)(i)—FEDERAL 7.8 PSI RVP AREAS

Table with 3 columns: Area designation, State, and Counties. Rows include Denver-Boulder-Greeley-Ft. Collins-Loveland, Reno, Portland, Salem, Beaumont-Port Arthur, and Salt Lake City.

1 That portion of Larimer County, CO that lies south of a line described as follows: Beginning at a point on Larimer County's eastern boundary and Weld County's western boundary intersected by 40 degrees, 42 minutes, and 47.1 seconds north latitude, proceed west to a point defined by the intersection of 40 degrees, 42 minutes, 47.1 seconds north latitude and 105 degrees, 29 minutes, and 40.0 seconds west longitude, thence proceed south on 105 degrees, 29 minutes, 40.0 seconds west longitude to the intersection with 40 degrees, 33 minutes and 17.4 seconds north latitude, thence proceed west on 40 degrees, 33 minutes, 17.4 seconds north latitude until this line intersects Larimer County's western boundary and Grand County's eastern boundary. (Includes part of Rocky Mtn. Nat. Park.)

2 That portion of Weld County, CO that lies south of a line described as follows: Beginning at a point on Weld County's eastern boundary and Logan County's western boundary intersected by 40 degrees, 42 minutes, 47.1 seconds north latitude, proceed west on 40 degrees, 42 minutes, 47.1 seconds north latitude until this line intersects Weld County's western boundary and Larimer County's eastern boundary.

(ii) Gasoline designated as 9.0 psi summer gasoline may be located in the areas specified in Table 1 to paragraph (a)(2)(i) of this section between May 1 and May 31.

(3) RFG maximum RVP per-gallon standard. Gasoline designated as Summer RFG or located in an RFG covered area during the summer season must meet a maximum RVP per-gallon standard of 7.4 psi.

(4) California gasoline. Gasoline designated as California gasoline or used in areas subject to the California reformulated gasoline regulations must comply with those regulations under Title 13, California Code of Regulations, sections 2250–2273.5.

(5) SIP-controlled gasoline. Gasoline designated as SIP-controlled gasoline or used in areas subject to a SIP-approved state fuel rule that requires an RVP of less than 9.0 psi must meet the

requirements of the federally approved SIP.

(b) Ethanol 1.0 psi waiver. (1) Except as specified in paragraph (b)(3) of this section, any gasoline subject to a federal 9.0 psi or 7.8 psi RVP standard in paragraph (a)(1) or (2) of this section that meets the requirements of paragraph (b)(2) of this section is not in violation of this section if its RVP does not exceed the applicable standard by more than 1.0 psi.

(2) To qualify for the special regulatory treatment specified in paragraph (b)(1) of this section, gasoline must meet the applicable RVP standard in paragraph (a)(1) or (2) of this section prior to the addition of ethanol and must contain ethanol at a concentration

of at least 9 volume percent and no more than 10 volume percent.

(3)(i) RFG and SIP-controlled gasoline that does not allow for the ethanol 1.0 psi waiver does not qualify for the special regulatory treatment specified in paragraph (b)(1) of this section.

(ii) Gasoline subject to the 9.0 psi RVP standard in paragraph (a)(1) of this section in the following areas is excluded from the special regulatory treatment specified in paragraph (b)(1) of this section:

TABLE 2 TO PARAGRAPH (b)(3)(ii)—AREAS EXCLUDED FROM THE ETHANOL 1.0 PSI WAIVER

State	Counties	Effective date
Illinois	All	April 28, 2025.
Iowa	All	April 28, 2025.
Minnesota	All	April 28, 2025.
Missouri	All	April 28, 2025.
Nebraska	All	April 28, 2025.
Ohio	All	April 28, 2025.
South Dakota	All	April 28, 2025.
Wisconsin	All	April 28, 2025.

(c) Gasoline subject to more than one RVP standard. Gasoline located in an area of the United States subject to more than one RVP standard specified in paragraphs (a)(1) through (5) of this section must meet the most stringent standard.

(d) Exceptions. The RVP standard in paragraph (a) of this section for the area in which the gasoline is located does not apply to that gasoline if the person(s) who produced, imported, sold, offered for sale, distributed, offered to distribute, supplied, offered for supply, dispensed, stored, transported, or introduced the gasoline into commerce can demonstrate one of the following:

(1) The gasoline is designated as winter gasoline and was not sold, offered for sale, supplied, offered for supply, dispensed, or introduced into commerce for use during the summer season and was not delivered to any retail outlet or WPC during the summer season.

(2) The gasoline is designated as summer gasoline for use in an area other than the area in which it is located and was not sold, offered for sale, supplied, offered for supply, dispensed, or introduced into commerce in the area in which the gasoline is located. In this case, the standard that applies to the gasoline is the standard applicable to the area for which the gasoline is designated.

■ 26. Amend § 1090.220 by revising paragraph (e) to read as follows:

§ 1090.220 RFG standards.

* * * * *

(e) Certified butane and certified pentane blending limitation. Certified butane and certified pentane must not be blended with Summer RFG or Summer RBOB under § 1090.1320(b).

■ 27. Revise and republish § 1090.230 to read as follows:

§ 1090.230 Limitation on use of gasoline-ethanol blends.

(a) No person may sell, introduce, cause, or permit the sale or introduction of gasoline containing greater than 10 volume percent ethanol (e.g., E15) into any model year 2000 or older light-duty gasoline motor vehicle, any heavy-duty gasoline motor vehicle or engine, any highway or off-highway motorcycle, or any gasoline-powered nonroad engine, vehicle, or equipment.

(b) Paragraph (a) of this section does not prohibit a person from producing, selling, introducing, causing, or allowing the sale or introduction of gasoline containing greater than 10 volume percent ethanol into any flex-fuel vehicle or flex-fuel engine.

■ 28. Amend § 1090.265 by revising paragraph (c) to read as follows:

§ 1090.265 Gasoline additive standards.

* * * * *

(c) Any person who blends any fuel additive that does not meet the requirements of paragraphs (a) and (b) of this section is a gasoline manufacturer and must comply with all the requirements applicable to a gasoline manufacturer under this part.

* * * * *

■ 29. Amend § 1090.285 by revising the introductory text to read as follows:

§ 1090.285 RFG covered areas.

The RFG covered areas are as follows:
* * * * *

■ 30. Amend § 1090.290 by revising paragraph (d)(4) to read as follows:

§ 1090.290 Changes to RFG covered areas and procedures for opting out of RFG.

* * * * *

(d) * * *

(4) EPA will publish a document in the **Federal Register** announcing the approval of an RFG opt-out request and its effective date.

* * * * *

■ 31. Amend § 1090.290 by revising paragraph (d) to read as follows:

§ 1090.295 Procedures for relaxing the federal 7.8 psi RVP standard.

* * * * *

(d) EPA will publish a document in the **Federal Register** announcing the approval of any federal 7.8 psi gasoline relaxation request and its effective date.

* * * * *

Subpart D—Diesel Fuel and ECA Marine Fuel Standards

■ 32. Amend § 1090.300 by revising paragraph (h) to read as follows:

§ 1090.300 Overview and general requirements.

* * * * *

(h) No person may introduce used motor oil, or used motor oil blended with diesel fuel, into the fuel system of model year 2007 or later diesel fuel motor vehicles or engines or model year 2011 or later nonroad diesel fuel vehicles or engines (not including locomotive or marine engines).

■ 33. Amend § 1090.310 by revising paragraph (c) to read as follows:

§ 1090.310 Diesel fuel additives standards.

* * * * *

(c) The provisions of this section do not apply to additives used in 500 ppm LM diesel fuel or ECA marine fuel.

■ 34. Revise and republish § 1090.315 to read as follows:

§ 1090.315 Heating oil, kerosene, ECA marine fuel, and jet fuel provisions.

Heating oil, kerosene, ECA marine fuel, or jet fuel must not be sold for use

in motor vehicles or nonroad equipment and are not subject to the ULSD standards in § 1090.305 unless it is also designated as ULSD under § 1090.1015(a).

■ 35. Amend § 1090.325 by revising paragraph (c)(1) to read as follows:

§ 1090.325 ECA marine fuel standards.

* * * * *

(c) * * *

(1) Residual fuel made available for use in a steamship or C3 marine vessel if the U.S. government exempts or excludes the vessel from MARPOL Annex VI fuel standards. Diesel fuel and other distillate fuel used in diesel fuel engines operated on such vessels is subject to the standards in this section instead of the standards in § 1090.305 or § 1090.320.

* * * * *

Subpart F—Transmix and Pipeline Interface Provisions

■ 36. Amend § 1090.500 by revising paragraph (c)(3)(ii) to read as follows:

§ 1090.500 Gasoline produced from blending transmix into PCG.

* * * * *

(c) * * *

(3) * * *

(ii) A letter signed by the RCO, or their delegate, stating that the information contained in the submission is true to the best of their belief must accompany the petition.

* * * * *

■ 37. Amend § 1090.510 by revising the section heading to read as follows:

§ 1090.510 Diesel fuel and distillate fuel produced from TDP.

* * * * *

■ 38. Amend § 1090.515 by revising paragraph (d) to read as follows:

§ 1090.515 500 ppm LM diesel fuel produced from TDP.

* * * * *

(d) *Use restrictions.* 500 ppm LM diesel fuel may only be used in locomotive or marine engines that are not required to use ULSD under 40 CFR 1033.815 or 40 CFR 1042.660, respectively. No person may use 500 ppm LM diesel fuel in locomotive or marine engines that are required to use ULSD, in any other nonroad vehicle or engine, or in any motor vehicle engine.

* * * * *

■ 39. Amend § 1090.520 by revising paragraph (b) to read as follows:

§ 1090.520 Handling practices for pipeline interface that is not transmix.

* * * * *

(b) During the summer season, a pipeline operator must not cut pipeline

interface from two batches of gasoline subject to different RVP standards that are shipped adjacent to each other by pipeline into the batch of gasoline that is subject to the more stringent RVP standard. For example, during the summer season, a pipeline operator must not cut pipeline interface from a batch of RFG shipped adjacent to a batch of conventional gasoline into the batch of RFG.

Subpart G—Exemptions

■ 40. The heading of subpart G is revised to read as set forth above.

■ 41. Revise and republish § 1090.605 to read as follows:

§ 1090.605 Exemptions for national security and military use.

(a) Fuel, fuel additive, or regulated blendstock that is produced, imported, sold, offered for sale, supplied, offered for supply, stored, dispensed, or transported for use in the following tactical military vehicles, engines, or equipment, including locomotive or marine engines, is exempt from the standards specified in this part:

(1) Tactical military vehicles, engines, or equipment, including locomotive or marine engines, that have an EPA national security exemption from the emission standards in this chapter. See 40 CFR part 85, subpart R, and 40 CFR 1068.225.

(2) Tactical military vehicles, engines, or equipment, including locomotive or marine engines, that are not subject to a national security exemption from vehicle or engine emissions standards specified in paragraph (a)(1) of this section but, for national security purposes (e.g., for purposes of readiness, including training, for deployment overseas), need to be fueled on the same fuel as the vehicles, engines, or equipment that EPA has granted such a national security exemption.

(b) The exempt fuel, fuel additive, or regulated blendstock must meet all the following requirements:

(1) The fuel, fuel additive, or regulated blendstock must be accompanied by PTDs that meet the requirements of subpart L of this part.

(2) The fuel, fuel additive, or regulated blendstock must be completely segregated from non-exempt fuel, fuel additive, or regulated blendstock at all points in the distribution system.

(3) The fuel, fuel additive, or regulated blendstock must be dispensed from a fuel dispenser stand, fueling truck, or tank that is labeled with the appropriate designation of the exempt fuel, fuel additive, or regulated blendstock.

(4) The fuel, fuel additive, or regulated blendstock must not be used in any vehicles, engines, or equipment, including locomotive or marine engines, other than those specified in paragraph (a) of this section.

■ 42. Revise and republish § 1090.610 to read as follows:

§ 1090.610 Exemptions for temporary research, development, and testing.

(a) *Requests for an exemption.* (1) Any person may receive an exemption from the standards specified in this part for fuel, fuel additive, or regulated blendstock used for research, development, or testing (“R&D”) purposes under paragraph (b) of this section by submitting the information specified in paragraph (c) of this section as specified in § 1090.10 and meeting the requirements of paragraph (d) of this section.

(2) Any person who performs emissions certification testing for a motor vehicle or motor vehicle engine under 42 U.S.C. 7525 or nonroad engine or nonroad vehicle under 42 U.S.C. 7546 is exempt from the standards specified in this part for the fuel, fuel additive, or regulated blendstock they use for emissions certification testing if they have an exemption under 40 CFR parts 85 and 86 to perform such testing.

(b) *Criteria for an R&D exemption.* For an R&D exemption to be granted, the person requesting an exemption must do all the following:

(1) Demonstrate that the exemption is for an appropriate R&D purpose.

(2) Demonstrate that an exemption is necessary.

(3) Design an R&D program that is reasonable in scope.

(4) Have a degree of control consistent with the purpose of the R&D program and EPA’s monitoring requirements.

(5) Meet the requirements specified in paragraphs (c) and (d) of this section.

(c) *Information required to be submitted.* To aid in demonstrating each of the elements in paragraph (b) of this section, the person requesting an exemption must include, at a minimum, all the following information:

(1) A concise statement of the purpose of the R&D program demonstrating that the R&D program has an appropriate R&D purpose.

(2) An explanation of why the stated purpose of the R&D program is unable to be achieved in a practicable manner without meeting the requirements of this part.

(3) A demonstration of the reasonableness of the scope of the R&D program, including all the following:

(i) An estimate of the R&D program’s duration in time (including beginning and ending dates).

(ii) An estimate of the maximum number of vehicles, engines, and equipment involved in the program, and the number of miles and engine hours that will be accumulated on each.

(iii) The manner in which the information on the vehicles, engines, or equipment used in the R&D program will be recorded and made available to EPA upon request.

(iv) An estimate of the volume of fuel, fuel additive, or regulated blendstock expected to be used in the R&D program that does not comply with the requirements of this part, as applicable.

(v) A list of how all applicable standards of this part would or would not apply to the fuel, fuel additive, or regulated blendstock expected to be used in the R&D program.

(4) With regard to control, a demonstration that the R&D program affords EPA a monitoring capability, including all the following:

(i) A description of the technical and operational aspects of the R&D program.

(ii) The site of the R&D program (including facility name, street address, city, county, state, and ZIP code).

(iii) The manner in which information on the vehicles, engines, or equipment used in the R&D program will be recorded and made available to EPA upon request.

(iv) The manner in which information on the fuel, fuel additive, or regulated blendstock used in the R&D program (including quantity, properties, name, address, telephone number, and contact person of the supplier, and the date received from the supplier) will be recorded and made available to EPA upon request.

(v) The manner in which the person will ensure that fuel, fuel additive, or regulated blendstock used in the R&D program will be segregated from non-exempt fuel, fuel additive, or regulated blendstock and how fuel dispensers will be labeled to ensure that fuel, fuel additive, or regulated blendstock used in the R&D program is not dispensed for use in motor vehicles or nonroad engines, vehicles, or equipment, including locomotive or marine engines, that are not part of the R&D program.

(vi) The name, business address, telephone number, and title of the person in the organization requesting an exemption from whom further information on the application may be obtained.

(vii) The name, business address, telephone number, and title of the person in the organization requesting an exemption who is responsible for recording and making available the information specified in this paragraph

(c), and the location where such information will be maintained.

(viii) Any other information requested by EPA to determine whether the R&D program satisfies the criteria in paragraph (b) of this section.

(d) *Additional requirements.* (1) Fuel, fuel additive, or regulated blendstock used in the R&D program must meet all the following requirements:

(i) The fuel, fuel additive, or regulated blendstock must be accompanied by PTDs that meet the requirements of subpart L of this part.

(ii) The fuel, fuel additive, or regulated blendstock must be designated as exempt fuel, fuel additive, or regulated blendstock by the fuel, fuel additive, or regulated blendstock manufacturer or supplier, as applicable.

(iii) The fuel, fuel additive, or regulated blendstock must be completely segregated from non-exempt fuel, fuel additive, or regulated blendstock at all points in the distribution system.

(iv) The fuel, fuel additive, or regulated blendstock must not be sold, distributed, offered for sale or distribution, dispensed, supplied, offered for supply, transported to or from, or stored by a retail outlet or WPC facility, unless the WPC facility is associated with the R&D program that uses the fuel, fuel additive, or regulated blendstock.

(2) At the completion of the R&D program, any emission control systems or elements of design that are damaged or rendered inoperative must be replaced on vehicles, engines, or equipment remaining in service or the responsible person will be liable for a violation of 42 U.S.C. 7522(a)(3), unless sufficient evidence is supplied that the emission controls or elements of design were not damaged.

(e) *Approval of exemption.* EPA may grant an R&D exemption upon a demonstration that the requirements of this section have been met. The R&D exemption approval may include such terms and conditions as EPA determines necessary to monitor the exemption and to carry out the purposes of this part, including restoration of emission control systems.

(1) The volume of fuel, fuel additive, or regulated blendstock used in the R&D program must not exceed the amount estimated in paragraph (c)(3)(iv) of this section, unless EPA grants an approval for a greater amount.

(2) Any R&D exemption granted under this section will expire at the completion of the R&D program or 1 year from the date of approval, whichever occurs first, and may only be

extended upon re-application consistent with the requirements of this section.

(3) If any information required in paragraph (c) of this section changes after approval of the R&D exemption, the responsible person must notify EPA in writing immediately.

(f) *Notification of completion.* Any person with an approved R&D exemption under this section must notify EPA in writing within 30 days after completion of the R&D program.

■ 43. Revise and republish § 1090.615 to read as follows:

§ 1090.615 Exemptions for racing and aviation.

Fuel, fuel additive, or regulated blendstock that is used in aircraft, or is used in racing vehicles or racing boats in sanctioned racing events, is exempt from the standards in subparts C and D of this part if all the following requirements are met:

(a) The fuel, fuel additive, or regulated blendstock must be identified on PTDs and on any fuel dispenser from which the fuel, fuel additive, or regulated blendstock is dispensed as restricted for use either in aircraft or in racing motor vehicles or racing boats that are used only in sanctioned racing events.

(b) The fuel, fuel additive, or regulated blendstock must be completely segregated from non-exempt fuel, fuel additive, or regulated blendstock at all points in the distribution system.

(c) The fuel, fuel additive, or regulated blendstock must not be made available for use as gasoline or diesel fuel subject to the standards in subpart C or D of this part, respectively, or dispensed for use in motor vehicles or nonroad engines, vehicles, or equipment, including locomotive or marine engines, except for those used only in aircraft or in sanctioned racing events.

■ 44. Revise and republish § 1090.620 to read as follows:

§ 1090.620 Exemptions for Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

Fuel that is produced, imported, sold, offered for sale, supplied, offered for supply, stored, dispensed, or transported for use in the territories of Guam, American Samoa, or the Commonwealth of the Northern Mariana Islands, is exempt from the standards in subparts C and D of this part if all the following requirements are met:

(a) The fuel must be designated by the fuel manufacturer as gasoline, diesel fuel, or ECA marine fuel for use only in Guam, American Samoa, or the

Commonwealth of the Northern Mariana Islands.

(b) The fuel must be used only in Guam, American Samoa, or the Commonwealth of the Northern Mariana Islands.

(c) The fuel must be accompanied by PTDs that meet the requirements of subpart L of this part.

(d) The fuel must be completely segregated from non-exempt fuel at all points from the point the fuel is designated as exempt fuel for use only in Guam, American Samoa, or the Commonwealth of the Northern Mariana Islands, while the exempt fuel is in the United States (including an ECA or an ECA associated area under 40 CFR 1043.20) but outside these territories.

■ 45. Amend § 1090.625 by:

■ a. Revising paragraphs (b)(2), (b)(5), and (c)(1);

■ b. Revising and republishing paragraph (d)(2); and

■ c. Revising paragraph (e).

The revisions and republication read as follows:

§ 1090.625 Exemptions for California gasoline and diesel fuel.

* * * * *

(b) * * *

(2) Designated California gasoline or diesel fuel must be completely segregated from fuel that is not California gasoline or diesel fuel at all points in the distribution system.

* * * * *

(5) Each transferor and transferee of California gasoline or diesel fuel produced outside the state of California must maintain copies of PTDs as specified in subpart M of this part.

* * * * *

(c) * * *

(1) Comply with the sampling and testing provisions specified in subpart N of this part, as applicable.

* * * * *

(d) * * *

(2) Redesignates the California gasoline as gasoline under this part without recertification and does all the following:

(i) Demonstrates that the gasoline meets all applicable requirements for California reformulated gasoline under Title 13 of the California Code of Regulations.

(ii) Properly redesignates the gasoline under § 1090.1010(b)(2)(vi).

(iii) Generates PTDs under subpart L of this part.

(iv) Keeps records under subpart M of this part.

(v) Does not include the redesignated California gasoline in their average standard compliance calculations.

(e) California diesel fuel used outside of California. California diesel fuel may be used in any part of the United States outside of the state of California without recertification if the manufacturer or distributor of the California diesel fuel redesignates the California diesel fuel as diesel fuel under this part and does all the following:

(1) Demonstrates that the diesel fuel meets all applicable requirements for California diesel fuel under Title 13 of the California Code of Regulations.

(2) Properly redesignates the diesel fuel under § 1090.1015(b)(3)(iii).

(3) Generates PTDs under subpart L of this part.

(4) Keeps records under subpart M of this part.

■ 46. Revise and republish § 1090.630 to read as follows:

§ 1090.630 Exemptions for Alaska, Hawaii, Puerto Rico, and the U.S. Virgin Islands summer gasoline.

Summer gasoline that is produced, imported, sold, offered for sale, supplied, offered for supply, stored, dispensed, or transported for use in Alaska, Hawaii, Puerto Rico, or the U.S. Virgin Islands is exempt from the RVP standards in § 1090.215 if all the following requirements are met:

(a) The summer gasoline must be designated by the fuel manufacturer as summer gasoline for use only in Alaska, Hawaii, Puerto Rico, or the U.S. Virgin Islands.

(b) The summer gasoline must be used only in Alaska, Hawaii, Puerto Rico, or the U.S. Virgin Islands.

(c) The summer gasoline must be accompanied by PTDs that meet the requirements of subpart L of this part.

(d) The summer gasoline must be completely segregated from non-exempt gasoline at all points from the point the summer gasoline is designated as exempt fuel for use only in Alaska, Hawaii, Puerto Rico, or the U.S. Virgin Islands, while the exempt summer gasoline is in the United States but outside these states or territories.

■ 47. Amend § 1090.635 by revising the section heading to read as follows:

§ 1090.635 Exemptions for refinery extreme, unusual, and unforeseen hardship.

* * * * *

■ 48. Revise and republish § 1090.640 to read as follows:

§ 1090.640 Exemptions for E85.

(a) Gasoline that is used to produce E85 is exempt from the gasoline deposit control requirements in § 1090.260.

(b) Any person who uses the exemption in paragraph (a) of this section must keep records to demonstrate that such exempt gasoline

was used to produce E85 and was not distributed from a terminal for use as gasoline.

■ 49. Revise and republish § 1090.645 to read as follows:

§ 1090.645 Exemptions for exports of fuel, fuel additive, and regulated blendstock.

(a) Fuel, fuel additive, or regulated blendstock that is exported for sale outside of the United States is exempt from the standards in subparts C and D of this part if all the following requirements are met:

(1) The fuel, fuel additive, or regulated blendstock must be designated for export by the fuel manufacturer, fuel additive manufacturer, or regulated blendstock producer.

(2) The fuel, fuel additive, or regulated blendstock designated for export must be accompanied by PTDs that meet the requirements of subpart L of this part.

(3) The fuel manufacturer, fuel additive manufacturer, or regulated blendstock producer must keep records that demonstrate that the fuel, fuel additive, or regulated blendstock was ultimately exported from the United States.

(4) The fuel, fuel additive, or regulated blendstock must be completely segregated from non-exempt fuel, fuel additive, or regulated blendstock at all points from the point the fuel, fuel additive, or regulated blendstock is designated for export to the point where it is ultimately exported from the United States.

(b) Fuel, fuel additive, or regulated blendstock certified and designated for export may be certified for use in the United States if all the applicable requirements of this part are met.

(c) Any fuel dispensed from a retail outlet within the geographic boundaries of the United States is not exempt under this section.

■ 50. Revise and republish § 1090.650 to read as follows:

§ 1090.650 Exemptions for distillate global marine fuel.

(a) Distillate global marine fuel that is produced, imported, sold, offered for sale, supplied, offered for supply, stored, dispensed, or transported for use in steamships or Category 3 marine vessels is exempt from the standards in subpart D of this part when operating outside of ECA boundaries if all the following requirements are met:

(1) The fuel must not exceed 0.50 weight percent sulfur (5,000 ppm).

(2) The fuel must be accompanied by PTDs that meet the requirements of subpart L of this part.

(3) The fuel must be designated as distillate global marine fuel.

(4) The fuel must be completely segregated from non-exempt fuel at all points in the distribution system.

(5) The fuel must not be used in vehicles, engines, or equipment other than in steamships or Category 3 marine vessels.

(b)(1) Fuel that does not meet the requirements specified in paragraph (a) of this section is subject to the standards, requirements, and prohibitions that apply for ULSD under this part.

(2) Any person who produces, imports, sells, offers for sale, supplies, offers for supply, stores, dispenses, or transports distillate global marine fuel without meeting the applicable recordkeeping requirements of subpart M of this part must not claim the fuel is exempt from the standards, requirements, and prohibitions that apply for ULSD under this part.

Subpart H—Averaging, Banking, and Trading Provisions

- 51. Amend § 1090.700 by:
 - a. Revising and republishing paragraphs (a) and (b); and
 - b. Revising paragraphs (e)(7) and (8).

The revisions and republications read as follows:

§ 1090.700 Compliance with average standards.

(a) *Compliance with the sulfur average standard.* For each of their facilities, a gasoline manufacturer must demonstrate compliance with the sulfur average standard in § 1090.205(a) by using the equations in paragraphs (a)(1) and (2) of this section.

(1) *Compliance sulfur value calculation.* (i) The compliance sulfur value is determined as follows:

$$CSV_y = S_{tot,y} + DS_{(y-1)} + DS_{Oxy_Total,y} - C_S$$

Where:

CSV_y = Compliance sulfur value for compliance period y, in ppm-gallons.

$S_{tot,y}$ = Total amount of sulfur produced during compliance period y, per paragraph (a)(1)(ii) of this section, in ppm-gallons.

$DS_{(y-1)}$ = Sulfur deficit from compliance period y-1, per § 1090.715(a)(1), in ppm-gallons.

$DS_{Oxy_Total,y}$ = Total sulfur deficit from downstream BOB recertification during compliance period y, per § 1090.740(b)(1), in ppm-gallons.

C_S = Sulfur credits used by the gasoline manufacturer, per § 1090.720, in ppm-gallons.

(ii) The total amount of sulfur produced is determined as follows:

$$S_{tot,y} = \sum_{i=1}^n (V_i \cdot S_i)$$

Where:

$S_{tot,y}$ = Total amount of sulfur produced during compliance period y, in ppm-gallons.

V_i = Volume of gasoline produced or imported in batch i, in gallons.

S_i = Sulfur content of batch i, in ppm.

i = Individual batch of gasoline produced or imported during the compliance period.

n = Number of batches of gasoline produced or imported during the compliance period.

If the calculation of $S_{tot,y}$ results in a negative number, replace it with zero.

(2) *Sulfur compliance calculation.* (i) Compliance with the sulfur average standard in § 1090.205(a) is achieved if the following equation is true:

$$CSV_y \leq V_{tot} \cdot S_{std}$$

Where:

CSV_y = Compliance sulfur value for compliance period y, per paragraph (a)(1)(i) of this section, in ppm-gallons.

V_{tot} = Total volume of gasoline produced or imported during the compliance period, in gallons.

S_{std} = Gasoline sulfur average standard, per § 1090.205(a), in ppm.

(ii) Compliance with the sulfur average standard in § 1090.205(a) is not achieved if a deficit is incurred two or more consecutive years. A gasoline manufacturer incurs a deficit under § 1090.715 if the following equation is true:

$$CSV_y > V_{tot} \cdot S_{std}$$

Where:

CSV_y = Compliance sulfur value for compliance period y, per paragraph (a)(1)(i) of this section, in ppm-gallons.

V_{tot} = Total volume of gasoline produced or imported during the compliance period, in gallons.

S_{std} = Sulfur average standard, per § 1090.205(a), in ppm.

(b) *Compliance with the benzene average standards.* For each of their facilities, a gasoline manufacturer must demonstrate compliance with the benzene average standard in § 1090.210(a) by using the equations in paragraphs (b)(1) and (2) of this section and with the maximum benzene average standard in § 1090.210(b) by using the equations in paragraphs (b)(3) and (4) of this section.

(1) *Compliance benzene value calculation.* (i) The compliance benzene value is determined as follows:

$$CBV_y = Bz_{tot,y} + D_{Bz,(y-1)} + D_{Bz_Oxy_Total,y} - C_{Bz}$$

Where:

CBV_y = Compliance benzene value for compliance period y, in benzene gallons.

$Bz_{tot,y}$ = Total amount of benzene produced during compliance period y, per paragraph (b)(1)(ii) of this section, in benzene gallons.

$D_{Bz,(y-1)}$ = Benzene deficit from compliance period y-1, per § 1090.715(a)(2), in benzene gallons.

$D_{Bz_Oxy_Total,y}$ = Total benzene deficit from downstream BOB recertification during compliance period y, per § 1090.740(b)(3), in benzene gallons.

C_{Bz} = Benzene credits used by the gasoline manufacturer, per § 1090.720, in benzene gallons.

(ii) The total amount of benzene produced is determined as follows:

$$Bz_{tot,y} = \sum_{i=1}^n (V_i \cdot Bz_i)$$

Where:

$Bz_{tot,y}$ = Total amount of benzene produced during compliance period y, in benzene gallons.

V_i = Volume of gasoline produced or imported in batch i, in gallons.

Bz_i = Benzene content of batch i, in volume percent.

i = Individual batch of gasoline produced or imported during the compliance period.

n = Number of batches of gasoline produced or imported during the compliance period.

If the calculation of $Bz_{tot,y}$ results in a negative number, replace it with zero.

(2) *Benzene average compliance calculation.* (i) Compliance with the benzene average standard in § 1090.210(a) is achieved if the following equation is true:

$$CBV_y \leq V_{tot} \cdot Bz_{avg_std}$$

Where:

CBV_y = Compliance benzene value for compliance period y, per paragraph (b)(1)(i) of this section, in benzene gallons.

V_{tot} = Total volume of gasoline produced or imported during the compliance period, in gallons.

Bz_{avg_std} = Benzene average standard, per § 1090.210(a), in volume percent.

(ii) Compliance with the benzene average standard in § 1090.210(a) is not achieved if a deficit is incurred two or more consecutive years. A gasoline manufacturer incurs a deficit under § 1090.715 if the following equation is true:

$$CBV_y > V_{tot} \cdot Bz_{avg_std}$$

Where:

CBV_y = Compliance benzene value for compliance period y, per paragraph (b)(1)(i) of this section, in benzene gallons.

V_{tot} = Total volume of gasoline produced or imported during the compliance period, in gallons.

Bz_{avg_std} = Benzene average standard, per § 1090.210(a), in volume percent.

(3) *Average benzene concentration calculation.* The average benzene concentration is determined as follows:

$$Bz_{avg,y} = \frac{\sum_{i=1}^n (V_i \cdot Bz_i)}{V_{tot}}$$

Where:

Bz_{avg,y} = Average benzene concentration for compliance period y, in volume percent.

V_i = Volume of gasoline produced or imported in batch i, in gallons.

Bz_i = Benzene content of batch i, in volume percent.

i = Individual batch of gasoline produced or imported during the compliance period.
n = Number of batches of gasoline produced or imported during the compliance period.

V_{tot} = Total volume of gasoline produced or imported during the compliance period, in gallons.

(4) *Maximum benzene average compliance calculation.* Compliance with the maximum benzene average standard in § 1090.210(b) is achieved if the following equation is true:

$$Bz_{avg,y} \leq Bz_{max_std}$$

Where:

Bz_{avg,y} = Average benzene concentration for compliance period y, per paragraph (b)(3) of this section, in volume percent.

Bz_{max_std} = Maximum benzene average standard, per § 1090.210(b), in volume percent.

(5) *Rounding and reporting benzene values.* (i) The total amount of benzene produced, as calculated in paragraph (b)(1)(ii) of this section, must be rounded to the nearest whole benzene gallon in accordance with § 1090.50.

(ii) The average benzene concentration, as calculated in paragraph (b)(3) of this section, must be rounded and reported to two decimal places in accordance with § 1090.50.

(e) * * *

(7) Gasoline imported by rail or truck using the provisions of § 1090.1610 to meet the alternative per-gallon standards of §§ 1090.205(d) and 1090.210(c).

(8) Gasoline exempt under subpart G of this part from the average standards in subpart C of this part (e.g., California gasoline, racing fuel, etc.).

■ 52. Amend § 1090.710 by revising the introductory text to read as follows:

§ 1090.710 Downstream oxygenate accounting.

The requirements of this section apply to BOB for which a gasoline manufacturer accounts for the effects of the oxygenate blending that occurs downstream of the fuel manufacturing facility gate in the gasoline manufacturer's average standard compliance calculations under this subpart. This section also includes requirements for oxygenate blenders to ensure that oxygenate is added in

accordance with the blending instructions specified by the gasoline manufacturer in order to ensure fuel quality standards are met.

* * * * *
■ 53. Amend § 1090.715 by revising and republishing paragraph (a) to read as follows:

§ 1090.715 Deficit carryforward.

(a) A gasoline manufacturer incurs a compliance deficit if they exceed the average standard specified in subpart C of this part for a given compliance period. The deficit incurred must be determined as specified in paragraph (a)(1) of this section for sulfur and paragraph (a)(2) of this section for benzene.

(1) The sulfur deficit incurred is determined as follows:

$$D_{S,y} = CSV_y - V_{tot} \cdot S_{std}$$

Where:

D_{S,y} = Sulfur deficit incurred for compliance period y, in ppm-gallons.

CSV_y = Compliance sulfur value for compliance period y, per § 1090.700(a)(1), in ppm-gallons.

V_{tot} = Total volume of gasoline produced or imported during the compliance period, in gallons.

S_{std} = Sulfur average standard, per § 1090.205(a), in ppm.

(2) The benzene deficit incurred is determined as follows:

$$D_{Bz,y} = CBV_y - V_{tot} \cdot Bz_{avg_std}$$

Where:

D_{Bz,y} = Benzene deficit incurred for compliance period y, in benzene gallons.

CBV_y = Compliance benzene value for compliance period y, per § 1090.700(b)(1)(i), in benzene gallons.

V_{tot} = Total volume of gasoline produced or imported during the compliance period, in gallons.

Bz_{avg_std} = Benzene average standard, per § 1090.210(a), in volume percent.

* * * * *

■ 54. Amend § 1090.720 by revising paragraphs (c)(5) and (d) to read as follows:

§ 1090.720 Credit use.

* * * * *

(c) * * *

(5) A gasoline manufacturer must only use credits that they own at the time of use.

(d) *Credit reporting.* A gasoline manufacturer that generates, transacts, or uses credits under this subpart must submit reports to EPA that include all information regarding credits as specified in § 1090.905 using forms and procedures specified by EPA.

* * * * *

■ 55. Amend § 1090.725 by revising paragraphs (a)(2)(vi), (c)(1), (d)(1), and (f) to read as follows:

§ 1090.725 Credit generation.

(a) * * *

(2) * * *

(vi) Importation of gasoline by rail or truck using the alternative sampling and testing requirements in § 1090.1610.

* * * * *

(c) * * *

(1) The number of sulfur credits generated is determined as follows:

$$C_{S,y} = V_{tot} \cdot S_{std} - CSV_y$$

Where:

C_{S,y} = Sulfur credits generated for compliance period y, in ppm-gallons.

V_{tot} = Total volume of gasoline produced or imported during the compliance period, in gallons.

S_{std} = Sulfur average standard, per § 1090.205(a), in ppm.

CSV_y = Compliance sulfur value for compliance period y, per § 1090.700(a)(1), in ppm-gallons.

* * * * *

(d) * * *

(1) The number of benzene credits generated is determined as follows:

$$C_{Bz,y} = V_{tot} \cdot Bz_{avg_std} - CBV_y$$

Where:

C_{Bz,y} = Benzene credits generated for compliance period y, in benzene gallons.

V_{tot} = Total volume of gasoline produced or imported during the compliance period, in gallons.

Bz_{avg_std} = Benzene average standard, per § 1090.210(a), in volume percent.

CBV_y = Compliance benzene value for compliance period y, per § 1090.700(b)(1)(i), in benzene gallons.

* * * * *

(f) *Credit generation reporting.* A gasoline manufacturer that generates credits under this section must submit reports to EPA that contain all information regarding credit generation as specified in § 1090.905 using forms and procedures specified by EPA.

■ 56. Amend § 1090.730 by revising paragraphs (f) and (h) to read as follows:

§ 1090.730 Credit transfers.

* * * * *

(f) No person may transfer credits if the transfer would cause them to incur a compliance deficit under § 1090.715.

* * * * *

(h) The transferor and the transferee must submit reports to EPA that include all information regarding the transaction as specified in § 1090.905 using forms and procedures specified by EPA.

■ 57. Amend § 1090.735 by revising paragraph (a) to read as follows:

§ 1090.735 Invalid credits and remedial actions.

* * * * *

(a) Invalid credits must not be used to achieve compliance with an average

standard specified in subpart C of this part, regardless of the good faith belief that the credits were validly generated.

* * * * *

■ 58. Amend § 1090.740 by:

■ a. Revising paragraphs (a)(2) and (4); and

■ c. Revising and republishing paragraph (b).

The revisions and republication read as follows:

§ 1090.740 Downstream BOB recertification.

(a) * * *

(2) A gasoline manufacturer must comply with applicable requirements of this part and incur deficits to be

included in their compliance calculations under § 1090.700 for each facility at which the gasoline manufacturer recertifies BOB.

* * * * *

(4) A party that only recertifies BOB that contains a greater amount of a specified oxygenate (e.g., a party adds 15 volume percent ethanol instead of 10 volume percent ethanol to an E10 BOB) or a different oxygenate at an equal or greater amount (e.g., a party adds 16 volume percent isobutanol instead of 10 volume percent ethanol to an E10 BOB) does not incur deficits under this section, does not need to submit reports under subpart J of this part, and does not need to arrange for an auditor to

conduct an audit under subpart S of this part. The party must still comply with all other applicable provisions of this part (e.g., register and keep records under subparts I and M of this part, respectively).

(b) A gasoline manufacturer that recertifies a BOB under this section must calculate sulfur and benzene deficits for each batch and the total deficits for sulfur and benzene as follows:

(1) *Total sulfur deficit from downstream BOB recertification.* Calculate the total sulfur deficit from downstream BOB recertification for each facility as follows:

$$D_{S_Oxy_Total,y} = \sum_{i=1}^n D_{S_Oxy_Batch,i}$$

Where:

$D_{S_Oxy_Total,y}$ = Total sulfur deficit from downstream BOB recertification during compliance period y, in ppm-gallons.

$D_{S_Oxy_Batch,i}$ = Sulfur deficit for batch i of recertified BOB, per paragraph (b)(2) of this section, in ppm-gallons.

i = Individual batch of BOB recertified during compliance period y.

n = Number of batches of BOB recertified during compliance period y.

(2) *Sulfur deficits from downstream BOB recertification.* Calculate the sulfur deficit from BOB recertification for each individual batch of BOB recertified as follows:

$$D_{S_Oxy_Batch,i} = V_{BOB} \cdot PSV \cdot \left(\frac{1}{1 - (PTD_{Oxy} - ACTUAL_{Oxy})} - 1 \right)$$

Where:

$D_{S_Oxy_Batch,i}$ = Sulfur deficit for batch i of recertified BOB, in ppm-gallons.

V_{BOB} = Volume of BOB in the batch being recertified, in gallons.

PSV = Presumed sulfur value of recertified BOB, in ppm. For purposes of this equation, PSV equals 11 ppm.

PTD_{Oxy} = Volume fraction of oxygenate that would have been added to the BOB as specified on PTDs.

$ACTUAL_{Oxy}$ = Volume fraction of oxygenate that was actually added to the BOB. If no

oxygenate was added to the BOB, then $ACTUAL_{Oxy}$ equals 0.

(3) *Total benzene deficit from downstream BOB recertification.* Calculate the total benzene deficit from downstream BOB recertification for each facility as follows:

$$D_{Bz_Oxy_Total,y} = \sum_{i=1}^n D_{Bz_Oxy_Batch,i}$$

Where:

$D_{Bz_Oxy_Total,y}$ = Total benzene deficit from downstream BOB recertification during compliance period y, in benzene gallons.

$D_{Bz_Oxy_Batch,i}$ = Benzene deficit for batch i of recertified BOB, per paragraph (b)(4) of this section, in benzene gallons.

i = Individual batch of BOB recertified during compliance period y.

n = Number of batches of BOB recertified during compliance period y.

(4) *Benzene deficits from downstream BOB recertification.* Calculate the benzene deficit from BOB recertification for each individual batch of BOB recertified as follows:

$$D_{Bz_Oxy_Batch,i} = V_{BOB} \cdot PBV \cdot \left(\frac{1}{1 - (PTD_{Oxy} - ACTUAL_{Oxy})} - 1 \right)$$

Where:

$D_{Bz_Oxy_Batch,i}$ = Benzene deficit for batch i of recertified BOB, in benzene gallons.

V_{BOB} = Volume of BOB in the batch being recertified, in gallons.

PBV = Presumed benzene value of recertified BOB, in volume percent. For purposes of this equation, PBV equals 0.68 volume percent.

PTD_{Oxy} = Volume fraction of oxygenate that would have been added to the BOB as specified on PTDs.

$ACTUAL_{Oxy}$ = Volume fraction of oxygenate that was actually added to the BOB. If no

oxygenate was added to the BOB, then ACTUAL_{Oxy} equals 0.

(5) *Deficit rounding.* The deficits calculated in paragraphs (b)(1) through (4) of this section must be rounded and reported to the nearest sulfur ppm-gallon or benzene gallon in accordance with § 1090.50, as applicable.

■ 59. Revise and republish § 1090.745 to read as follows:

§ 1090.745 Informational annual average calculations.

(a) A gasoline manufacturer must calculate and report annual average sulfur and benzene concentrations for each of their facilities as specified in this section. The values calculated and reported under this section are not used to demonstrate compliance with average standards under this part.

(b) A gasoline manufacturer must calculate and report their unadjusted average sulfur concentration as follows:

S_avg,y = (sum from i=1 to n of (V_i * S_i)) / V_tot

Where:

S_avg,y = Facility unadjusted average sulfur concentration for compliance period y, in ppm. Round and report S_avg,y to two decimal places.

V_i = Volume of gasoline produced or imported in batch i, in gallons.

S_i = Sulfur content of batch i, in ppm.

i = Individual batch of gasoline produced or imported during the compliance period.

n = Number of batches of gasoline produced or imported during the compliance period.

V_tot = Total volume of gasoline produced or imported during the compliance period, in gallons.

(c) A gasoline manufacturer must calculate and report their net average sulfur concentration as follows:

S_net_avg,y = (CSV_y) / V_tot

Where:

S_net_avg,y = Facility net average sulfur concentration for compliance period y, in ppm. Round and report S_net_avg,y to two decimal places.

CSV_y = Compliance sulfur value for compliance period y, per § 1090.700(a)(1), in ppm-gallons.

V_tot = Total volume of gasoline produced or imported during the compliance period, in gallons.

(d) A gasoline manufacturer must calculate and report their net average benzene concentration as follows:

B_net_avg,y = (CBV) / V_tot

Where:

B_net_avg,y = Facility net average benzene concentration for compliance period y, in volume percent. Round and report B_net_avg,y to two decimal places.

CBV_y = Compliance benzene value for compliance period y, per § 1090.700(b)(1)(i), in benzene gallons.

V_tot = Total volume of gasoline produced or imported during the compliance period, in gallons.

Subpart I—Registration

■ 60. Amend § 1090.800 by revising paragraph (d) to read as follows:

§ 1090.800 General provisions.

(d) RCO submission. Registration information must be submitted by the RCO. The RCO may delegate responsibility to a person who is familiar with the requirements of this part and who is no lower in the organization than a fuel manufacturing facility manager, or equivalent.

■ 61. Amend § 1090.805 by revising and republishing paragraph (b) to read as follows:

§ 1090.805 Contents of registration.

(b) Additional information required for certified pentane producers. In addition to the information in paragraph (a) of this section, a certified pentane producer must also submit the following information:

(1) A description of the certified pentane production facility that demonstrates that the facility is capable of producing certified pentane that is compliant with the requirements of this part without significant modifications to the existing facility.

(2) A description of how certified pentane will be shipped from the certified pentane production facility to the certified pentane blender(s) and the associated quality assurance practices that demonstrate that contamination during distribution can be adequately controlled so as not to cause certified pentane to be in violation of the standards in this part.

■ 62. Amend § 1090.815 by revising paragraph (a)(4) to read as follows:

§ 1090.815 Deactivation (involuntary cancellation) of registration.

(4) Any required attestation engagement report has not been received within 30 days of the required submission date.

■ 63. Amend § 1090.820 by revising paragraph (b)(3) to read as follows:

§ 1090.820 Changes of ownership.

(3) A letter, signed by the RCO from the company that currently owns or will own the company or facility and, if possible, documentation from the company that previously registered the company or facility that details the effective date of the transfer of ownership of the company or facility and summarizes any changes to the registration information.

Subpart J—Reporting

■ 64. Amend § 1090.900 by revising paragraphs (c) and (d) to read as follows:

§ 1090.900 General provisions.

(c) Report deadlines. All annual, batch, and credit transaction reports required under this subpart, except attestation engagement reports, must be submitted by March 31 for the preceding compliance period (e.g., reports covering the calendar year 2021 must be submitted to EPA by no later than March 31, 2022). Attestation engagement reports must be submitted by June 1 for the preceding compliance period (e.g., attestation engagement reports covering calendar year 2021 must be submitted to EPA by no later than June 1, 2022). Independent survey quarterly reports must be submitted by the deadlines in Table 1 to paragraph (a)(4) in § 1090.925.

(d) RCO submission. Reports must be signed and submitted by the RCO or their delegate.

- 65. Amend § 1090.905 by:
a. Revising the section heading;
b. Revising paragraphs (a)(2)(iv)(E), (b)(2)(vi)(E), (c)(1)(viii)(A), (c)(2)(ii) and (iii), and (c)(2)(viii)(A);
c. Removing paragraph (c)(3)(i)(H) and redesignating paragraphs (c)(3)(i)(I) and (J) as paragraphs (c)(3)(i)(H) and (I); and
d. Revising paragraphs (c)(4) introductory text, (c)(5)(i)(E), and (c)(8)(vii)(A).

The revisions read as follows:

§ 1090.905 Reports by gasoline manufacturers.

(E) The total sulfur deficit from downstream BOB recertification, per § 1090.740(b)(1).

- (b) * * *
(2) * * *
(vi) * * *

(E) The total benzene deficit from downstream BOB recertification, per § 1090.740(b)(3).

* * * * *
(c) * * *
(1) * * *
(viii) * * *

(A) The applicable RVP standard, as specified in § 1090.215, and whether the ethanol 1.0 psi waiver under § 1090.215(b) applies.

* * * * *
(2) * * *
(ii) The batch number.
(iii) The date the batch was produced or imported.

* * * * *
(viii) * * *

(A) The applicable RVP standard, as specified in § 1090.215, and whether the ethanol 1.0 psi waiver under § 1090.215(b) applies, for the neat CBOB, or hand blend of RBOB and oxygenate prepared under § 1090.1340.

* * * * *

(4) For blendstock(s) added to PCG by a gasoline manufacturer complying by addition under § 1090.1320(a)(2), report each blendstock as a separate batch and all the following information:

* * * * *
(5) * * *
(i) * * *

(E) The volume percentage of butane in batches of butane, or pentane in batches of pentane, provided by the certified butane or certified pentane supplier.

* * * * *
(8) * * *
(vii) * * *

(A) The applicable RVP standard, as specified in § 1090.215, and whether the ethanol 1.0 psi waiver under § 1090.215(b) applies.

* * * * *

■ 66. Amend § 1090.910 by:
■ a. Revising the section heading; and
■ b. Revising the introductory text and paragraphs (a)(1)(ix) and (x).

The revisions read as follows:

§ 1090.910 Reports by gasoline manufacturers that recertify BOB to gasoline.

A gasoline manufacturer that recertifies BOB under § 1090.740 must report the information of this section, as applicable.

(a) * * *
(1) * * *

(ix) The sulfur deficit for the batch calculated under § 1090.740(b)(2).

(x) The benzene deficit for the batch calculated under § 1090.740(b)(4).

* * * * *

■ 67. Amend § 1090.915 by:

■ a. Revising the section heading; and
■ b. Revising paragraph (c)(5).
The revisions read as follows:

§ 1090.915 Reports by oxygenate producers and importers.

* * * * *

(c) * * *

(5) The sulfur content of the batch, in ppm, and the method used to determine the sulfur content.

* * * * *

■ 68. Amend § 1090.925 by revising paragraphs (b)(3) introductory text and (c)(3)(ii) through (iv) to read as follows:

§ 1090.925 Reports by independent surveyors.

* * * * *

(b) * * *

(3) For each diesel fuel sample collected at a retail outlet by the independent surveyor:

* * * * *

(c) * * *

(3) * * *

(ii) The mean, median, and range expressed in appropriate units for each measured fuel parameter.

(iii) The standard deviation for each measured fuel parameter.

(iv) The estimated compliance rate for each measured fuel parameter subject to a per-gallon standard in subpart C or D of this part.

* * * * *

■ 69. Revise and republish § 1090.930 to read as follows:

§ 1090.930 Reports by auditors.

(a) Attestation engagement reports required under subpart S of this part must be submitted by an independent auditor registered with EPA and associated with a company, or companies, through registration under subpart I of this part. Each attestation engagement report must clearly identify the company and compliance level (*e.g.*, facility), time period, and scope covered by the report. Attestation engagement reports covered by this section include those required under this part and those required under 40 CFR part 80, subpart M, beginning with the report due June 1, 2022.

(b) An attestation engagement report must be submitted to EPA covering each compliance period by June 1 of the following calendar year. The auditor must make the attestation engagement report available to the company for which it was performed.

(c) The attestation engagement must comply with subpart S of this part and the attestation engagement report must clearly identify the methodologies followed and any findings, exceptions, and variances.

(d) A single attestation engagement report submission by the auditor may include procedures performed under this part and under 40 CFR part 80, subpart M. If a single submission method is used, the auditor must clearly and separately describe the procedures and findings for each program.

(e) The auditor must submit written acknowledgement from the RCO that the gasoline manufacturer has reviewed the attestation engagement report.

■ 70. Amend § 1090.935 by revising paragraphs (a)(1) introductory text and (a)(1)(i) to read as follows:

§ 1090.935 Reports by diesel fuel manufacturers.

(a) * * *

(1) For each compliance period, a diesel fuel manufacturer that produces ULSD must submit the following information:

(i) The EPA-issued company and facility identifiers for the diesel fuel manufacturer.

* * * * *

Subpart K—Batch Certification and Designation

■ 71. Amend § 1090.1000 by revising paragraphs (b)(2)(ii), (b)(4) introductory text, (b)(5), (c)(2)(ii), and (e)(2)(i)(A) to read as follows:

§ 1090.1000 Batch certification requirements.

* * * * *

(b) * * *

(2) * * *

(ii) Ensure that each batch of gasoline meets the applicable requirements of subpart C of this part using the applicable procedures specified in subpart N of this part. A transmix processor must also meet all applicable requirements of subpart F of this part to ensure that each batch of gasoline meets the applicable requirements of subpart C of this part.

* * * * *

(4) Any person who mixes summer gasoline with summer or winter gasoline that has a different designation must comply with one of the following:

* * * * *

(5) Any person who mixes summer gasoline with winter gasoline to transition any storage tank from winter to summer gasoline is exempt from the requirement in paragraph (b)(4)(ii) of this section but must ensure that the gasoline meets the applicable RVP standard in § 1090.215.

(c) * * *

(2) * * *

(ii) Ensure that each batch of diesel fuel or ECA marine fuel meets the

applicable requirements of subpart D of this part using the applicable procedures specified in subpart N of this part. A transmix processor must also meet all applicable requirements specified in subpart F of this part to ensure that each batch of diesel fuel or ECA marine fuel meets the applicable requirements of subpart D of this part.

* * * * *

- (e) * * *
(2) * * *
(i) * * *

(A) Testing must occur after the most recent delivery into the certified butane producer's storage tank, before transferring the certified butane batch for delivery.

* * * * *

72. Amend § 1090.1005 by revising the section heading to read as follows:

1090.1005 Designation of batches of fuel, fuel additive, and regulated blendstock.

* * * * *

73. Amend § 1090.1010 by revising paragraph (c)(2) to read as follows:

1090.1010 Designation requirements for gasoline and regulated blendstocks.

* * * * *

- (c) * * *

(2) The name of the specific oxygenate (e.g., isobutanol).

* * * * *

74. Amend § 1090.1015 by:

- a. Revising the section heading; and
b. Revising paragraphs (a) introductory text, (b) introductory text, and (b)(3)(iii) through (v).

The revisions read as follows:

1090.1015 Designation requirements for diesel fuel and distillate fuel.

(a) Designation requirements for diesel fuel and distillate fuel manufacturers.

* * * * *

(b) Designation requirements for distributors of diesel fuel and distillate fuel. A distributor of diesel fuel or distillate fuel must accurately and clearly designate each batch of diesel fuel or distillate fuel for which they transfer custody as follows:

* * * * *

- (3) * * *

(iii) California diesel fuel may be redesignated as ULSD if the requirements specified in § 1090.625(e) are met.

(iv) Heating oil, kerosene, ECA marine fuel, or jet fuel may be redesignated as ULSD if it meets the ULSD standards in § 1090.305 and was designated as ULSD under paragraph (a) of this section.

(v) 500 ppm LM diesel fuel may be redesignated as ECA marine fuel, distillate global marine fuel, or heating

oil. Any person who redesignates 500 ppm LM diesel fuel to ECA marine fuel or distillate global marine fuel must maintain records from the producer of the 500 ppm LM diesel fuel (i.e., PTDs accompanying the fuel under § 1090.1115) to demonstrate compliance with the 500 ppm sulfur standard in § 1090.320(b).

* * * * *

Subpart L—Product Transfer Documents

75. Amend § 1090.1100 by revising paragraph (c) to read as follows:

1090.1100 General requirements.

* * * * *

(c) Part 80 PTD requirements. For any product subject to 40 CFR part 80, subpart M, a party must also include the applicable PTD information required under 40 CFR 80.1453.

76. Revise and republish § 1090.1105 to read as follows:

1090.1105 PTD requirements for exempt fuel, fuel additive, and regulated blendstock.

(a) In addition to the information required under § 1090.1100, on each occasion when any person transfers custody or title to any exempt fuel, fuel additive, or regulated blendstock under subpart G of this part, other than when the exempt fuel, fuel additive, or regulated blendstock is sold or dispensed to the ultimate end user at a retail outlet or WPC facility, the transferor must provide the transferee PTDs that include the following statements, as applicable:

(1) National security exemption language. For fuel, fuel additive, or regulated blendstock with a national security exemption specified in § 1090.605: "This fuel is for use in vehicles, engines, or equipment under an EPA-approved national security exemption only."

(2) R&D exemption language. For fuel, fuel additive, or regulated blendstock used for an R&D program specified in § 1090.610: "This fuel is for use in research, development, and test programs only."

(3) Racing fuel language. For fuel, fuel additive, or regulated blendstock used for racing purposes specified in § 1090.615: "This fuel is for racing purposes only."

(4) Aviation fuel language. For fuel, fuel additive, or regulated blendstock used in aircraft specified in § 1090.615: "This fuel is for aviation use only."

(5) Territory fuel exemption language. For fuel for use in American Samoa, Guam, or the Commonwealth of the Northern Mariana Islands specified in

§ 1090.620: "This fuel is for use only in Guam, American Samoa, or the Northern Mariana Islands."

(6) California gasoline language. For California gasoline specified in § 1090.625: "California gasoline".

(7) California diesel fuel language. For California diesel fuel specified in § 1090.625: "California diesel fuel".

(8) Alaska, Hawaii, Puerto Rico, and U.S. Virgin Islands summer gasoline language. For summer gasoline for use in Alaska, Hawaii, Puerto Rico, or the U.S. Virgin Islands specified in § 1090.630: "This summer gasoline is for use only in Alaska, Hawaii, Puerto Rico, or the U.S. Virgin Islands."

(9) Exported fuel language. For exported fuel, fuel additive, or regulated blendstock specified in § 1090.645: "This fuel is for export from the United States only."

(b) In statements required by paragraph (a) of this section, where "fuel" is designated in a statement, the specific fuel, fuel additive, or regulated blendstock type (e.g., "diesel fuel" or "gasoline") may be used in place of the word "fuel".

77. Amend § 1090.1110 by revising paragraphs (b)(2)(i) introductory text, (c)(1)(i) introductory text, and (e) to read as follows:

1090.1110 PTD requirements for gasoline, gasoline additives, and gasoline regulated blendstocks.

* * * * *

- (b) * * *

- (2) * * *

(i) Except as specified in paragraph (b)(2)(ii) of this section, for batches of summer BOB, identification of the product with one of the following statements indicating the applicable RVP standard, as specified in § 1090.215:

* * * * *

- (c) * * *

- (1) * * *

(i) Except as specified in paragraph (c)(1)(ii) of this section, for summer gasoline, identification of the product with one of the following statements indicating the applicable RVP standard, as specified in § 1090.215:

* * * * *

(e) Gasoline detergent language requirements. (1) In addition to any other PTD requirements of this subpart, on each occasion when any person transfers custody or title to any gasoline detergent, the transferor must provide to the transferee PTDs that include the following information:

(i) The identity of the product being transferred as detergent.

(ii) The name of the registered detergent must be used to identify the

detergent additive package on its PTD and the LAC on the PTD must be consistent with the requirements in § 1090.260.

(2) In addition to any other PTD requirements of this subpart, on each occasion when any person transfers custody or title to any gasoline, the transferor must provide to the transferee PTDs that include the following information:

(i) The identify of the gasoline being transferred as detergent-additized gasoline or non-detergent-additized gasoline.

(ii) [Reserved]

* * * * *

■ 78. Amend § 1090.1115 by:

- a. Revising the section heading; and
- b. Revising paragraph (a).

The revisions read as follows:

§ 1090.1115 PTD requirements for distillate fuel and residual fuel.

(a) *General requirements.* On each occasion when any person transfers custody or title of any distillate fuel or residual fuel, other than when fuel is sold or dispensed to the ultimate end user at a retail outlet or WPC facility, the transferor must provide the transferee PTDs that include the following information:

(1) The sulfur per-gallon standard that the transferor represents the distillate fuel or residual fuel to meet under subpart D of this part (e.g., 15 ppm sulfur for ULSD or 1,000 ppm sulfur for ECA marine fuel).

(2) An accurate and clear statement of the applicable designation(s) of the distillate fuel or residual fuel under § 1090.1015 (e.g., “ULSD”, “500 ppm LM diesel fuel”, or “ECA marine fuel”).

(3) If the distillate fuel or residual fuel does not meet the sulfur standard in § 1090.305(b) for ULSD, the following statement: “Not for use in highway vehicles or engines or nonroad, locomotive, or marine engines.”

* * * * *

■ 79. Amend § 1090.1120 by revising paragraph (b)(3)(iii) to read as follows:

§ 1090.1120 PTD requirements for diesel fuel additives.

* * * * *

(b) * * *

(3) * * *

(iii) The contribution to the sulfur content of the diesel fuel, in ppm, that would result if the diesel fuel additive package is used at the maximum recommended concentration.

* * * * *

Subpart M—Recordkeeping

■ 80. Amend § 1090.1205 by revising paragraphs (c) introductory text and (c)(1) through (4) to read as follows:

§ 1090.1205 Recordkeeping requirements for all regulated parties.

* * * * *

(c) *Sampling and testing.* Any party that performs any sampling and testing on any fuel, fuel additive, or regulated blendstock must keep records of the following information for each sample collected:

(1) The date, time, location, and identification of the storage tank, railcar, truck, or vessel from which the sample was collected.

(2) The name and title of the person who collected the sample and the person who performed the test.

(3) The results of all tests, including where more than one test is performed, as originally printed by the testing apparatus, or where no printed result is produced, the results as originally recorded by the person that performed the test.

(4) The test methodology used.

* * * * *

■ 81. Amend § 1090.1210 by revising paragraphs (d)(1) and (d)(2)(i) to read as follows:

§ 1090.1210 Recordkeeping requirements for gasoline manufacturers.

* * * * *

(d) * * *

(1) Records that reflect the storage and movement of the PCG or TGP and blendstock within the gasoline manufacturing facility to the point such PCG or TGP is used to produce gasoline or BOB.

(2) * * *

(i) The results of tests to determine the sulfur content, benzene content, oxygenate(s) content, and in the summer, RVP, for the PCG or TGP and volume of the PCG or TGP when received at the gasoline manufacturing facility.

* * * * *

■ 82. Amend § 1090.1215 by revising paragraphs (a), (b) introductory text, and (c) introductory text to read as follows:

§ 1090.1215 Recordkeeping requirements for diesel fuel, ECA marine fuel, and distillate global marine fuel manufacturers.

(a) *Overview.* In addition to the requirements in § 1090.1205, a diesel fuel, ECA marine fuel, or distillate global marine fuel manufacturer must keep records for each of their facilities that include the information in this section.

(b) *Diesel fuel and ECA marine fuel records.* For each batch of ULSD, 500

ppm LM diesel fuel, or ECA marine fuel, a diesel fuel or ECA marine fuel manufacturer must keep records of the following information:

* * * * *

(c) *Distillate global marine fuel records.* For distillate global marine fuel, a distillate global marine fuel manufacturer must keep records of the following information:

* * * * *

■ 83. Amend § 1090.1230 by revising paragraph (b)(8) to read as follows:

§ 1090.1230 Recordkeeping requirements for oxygenate producers.

* * * * *

(b) * * *

(8) The neat ethanol production quality control records or the test results on the neat ethanol, as applicable.

* * * * *

■ 84. Amend § 1090.1240 by revising paragraphs (b)(2)(i), (b)(2)(ii)(B), and (b)(2)(vi) to read as follows:

§ 1090.1240 Recordkeeping requirements for gasoline detergent blenders.

* * * * *

(b) * * *

(2) * * *

(i) The dates of the VAR period.

(ii) * * *

(B) For a facility that uses a gauge to measure the inventory of the detergent storage tank, the total volume of detergent must be calculated as follows:

$$V_D = DI_i - DI_f + DI_a - DI_w$$

Where:

V_D = Volume of detergent, in gallons.

DI_i = Initial detergent inventory of the tank, in gallons.

DI_f = Final detergent inventory of the tank, in gallons.

DI_a = Sum of any additions to detergent inventory, in gallons.

DI_w = Sum of any withdrawals from detergent inventory for purposes other than the additization of gasoline, in gallons.

* * * * *

(vi) If the detergent injector is set below the applicable LAC, or adjusted by more than 10 percent above the concentration initially set in the VAR period, documentation establishing that the purpose of the change is to correct a batch misadditization prior to the end of the VAR period and prior to the transfer of the batch to another party or to correct an equipment malfunction and the date and adjustments of the correction.

* * * * *

■ 85. Amend § 1090.1245 by revising paragraph (b)(2) to read as follows:

§ 1090.1245 Recordkeeping requirements for independent surveyors.

* * * * *

(b) * * *

(2) Records related to a geographically focused E15 survey program under § 1090.1420(b).

* * * * *

■ 86. Amend § 1090.1250 by revising paragraph (b)(2) to read as follows:

§ 1090.1250 Recordkeeping requirements for auditors.

* * * * *

(b) * * *

(2) Copies of each attestation engagement report prepared and all related records developed to prepare each report.

■ 87. Amend § 1090.1255 by:

- a. Revising the section heading; and
- b. Revising paragraphs (a), (c)(4), and (d).

The revisions read as follows:

§ 1090.1255 Recordkeeping requirements for transmix, 500 ppm LM diesel fuel, and pipeline interface.

(a) *Overview.* In addition to the requirements in § 1090.1205, a transmix processor, transmix blender, transmix distributor, manufacturer or distributor of 500 ppm LM diesel fuel using transmix, or pipeline operator must keep records that include the information in this section.

* * * * *

(c) * * *

(4) Documents or information that demonstrates that the 500 ppm LM diesel fuel was only used in locomotive or marine engines that are not required to use ULSD under 40 CFR 1033.815 or 40 CFR 1042.660, respectively.

(d) *Pipeline interface.* A pipeline operator must keep records that demonstrate compliance with the pipeline interface handling practices in § 1090.520.

Subpart N—Sampling, Testing, and Retention

■ 88. Amend § 1090.1300 by revising paragraphs (b) and (d) to read as follows:

§ 1090.1300 General provisions.

* * * * *

(b) If you need to meet requirements for a quality assurance program at a minimum frequency, the first shipment of product you receive from each distributor triggers the testing requirement for that distributor. Perform testing with the first shipment of product to demonstrate compliance for the testing period. The following example illustrates the requirements for testing based on sampling the more frequent of every 90 days or 500,000 gallons of certified butane you receive from each distributor:

(1) If you receive an initial shipment of certified butane from a distributor on March 1, perform testing on that batch to show that it meets standards. A passing result qualifies all further shipments of certified butane from that distributor until May 29, as long as you receive less than 500,000 gallons of certified butane from that distributor during those 90 days. In that case, the testing period ends May 29 and the next testing period starts when you receive another shipment of certified butane from that distributor on or after May 30.

(2) If you receive a shipment from that distributor before May 29 that causes the total volume of certified butane from that distributor to exceed 500,000 gallons over the testing period, the date that batch is received represents the end of the testing period. The next testing period starts when you receive another shipment of certified butane from that distributor.

* * * * *

(d) Anyone performing tests under this subpart must apply good laboratory practices for all sampling, measurement, and calculations related to testing required under this part. This requires performing these procedures in a way that is consistent with generally accepted scientific and engineering principles and properly accounting for all available relevant information. The following examples illustrate how to apply good laboratory practices:

(1) You may exclude outlier data points for quality testing under § 1090.1375 as specified in ASTM D6299 (incorporated by reference in § 1090.95), subject to the following requirements:

(i) The justification for exclusion must be an assignable cause that is not part of the normal process and does not result from common causes.

(ii) You must meet requirements for documenting and supporting exclusion of data points as specified in § 1090.1375(a)(5).

(2) [Reserved]

* * * * *

■ 89. Amend § 1090.1310 by:

- a. Revising paragraph (b) introductory text; and
- b. Adding paragraph (f).

The revision and addition read as follows:

§ 1090.1310 Testing to demonstrate compliance with standards.

* * * * *

(b) A fuel manufacturer, fuel additive manufacturer, or regulated blendstock producer must perform the following measurements before fuel, fuel additive, or regulated blendstock from a given batch leaves the facility, except as

specified in paragraph (f) of this section and § 1090.1315:

* * * * *

(f) Refiners and blending manufacturers may meet the testing requirements of paragraph (b) of this section by loading gasoline or diesel fuel onto a marine vessel, subject to the following conditions:

(1) The marine vessel remains within 15 miles of the fuel manufacturing facility after loading.

(2) Each vessel compartment is sampled for meeting certification testing requirements as specified in § 1090.1605(b)(1).

(3) No additional loading occurs after sampling is complete.

(4) The refiner or blending manufacturer ensures that the fuel meets all applicable per-gallon standards before the fuel leaves the area specified in paragraph (f)(1) of this section.

■ 90. Amend § 1090.1315 by:

- a. Revising the introductory text and paragraph (a) introductory text;
- b. Adding paragraphs (a)(7) through (14); and
- c. Revising paragraph (c).

The revisions and additions read as follows:

§ 1090.1315 In-line blending.

A fuel manufacturer using in-line blending equipment may qualify for a waiver from the requirement in § 1090.1310(b) to test every batch of fuel before the fuel leaves the fuel manufacturing facility. This section describes in-line blending waiver provisions that apply instead of or in addition to the requirements in § 1090.1335(c).

(a) Submit a request signed by the RCO, or their delegate, to EPA with the following information:

* * * * *

(7) Describe which blendstock parameters you intend to measure for managing the blending process and the typical sampling frequency for those measurements.

(8) Describe any circumstances in which it is not possible to achieve a sampling frequency corresponding to a margin of error of 0.01. Also describe how you will adjust target values to account for the greater measurement variability. For example, if the greater margin of error corresponds to a 2 percent increase in measurement variability, adjust measured values of all parameters subject to per-gallon and average standards upward by 2 percent.

(9) Describe an alternative sampling plan to meet requirements to test head, middle, and tail samples for small

batches. Your alternative sampling plan may allow you to collect a single sample anytime during the blend for a batch involving up to 8 hours of blending or up to 1 million gallons of fuel, and it may allow you to collect two evenly distributed samples during the blend for a batch involving up to 16 hours of blending or up to 2 million gallons of fuel.

(10) Describe your plans to meet requirements to test head, middle, and tail samples in cases where unforeseen circumstances cause the batch to be complete before blending the anticipated batch volume. Any failure to perform required tests must not occur in more than 10 percent of in-line blending batches for the calendar year.

(11) Describe contingency plans for alternative sampling and testing in cases involving failure of the automatic compositor or other essential equipment. Where possible, include collecting a second composite sample with a redundant system.

(12) Describe any contingency plans for an alternative sampling demonstration if an automatic sampling test result fails to meet a per-gallon standard. Your plan may include certifying the batch based on manual sampling in a tank if you collect the whole batch in the tank before it leaves the fuel manufacturing facility gate. Similarly, as long as the fuel remains at the facility, you may certify the batch based on secondary automatic sampling as fuel comes out of a holding tank that you use to collect the fuel that failed to meet a per-gallon standard.

(13) In the case of in-line blending into a marine vessel, describe an alternative, equivalent method for meeting the requirement in § 1090.1335(c)(4) to collect head-middle-tail samples.

(14) Include the following statement: "The information in this submission is true, accurate, and complete to the best of my knowledge. I am aware that there are significant civil and criminal penalties for submitting false, misleading, or incomplete information."

* * * * *

(c) The following provisions apply for amending an approved waiver under this section:

(1) You must submit an updated waiver request to EPA 60 days before making any material change to your in-line blending process. Examples of material changes include changing analyzer hardware or programming, changing the location of the analyzer, changing the piping configuration, changing the mixing control hardware or programming logic, changing sample

compositors or compositor settings, or expanding fuel blending capacity. Changing the name of the company or business unit is an example of a change that is not material.

(2) The request must include a description of the intended changes and a comparison document that clearly and comprehensively identifies the proposed changes to the waiver. The request must also include the statement in paragraph (a)(14) of this section.

(3) Your request to amend a waiver under this section is deemed to be approved effective 60 days after EPA acknowledges receiving the request if there is no EPA response to the request. Such a response may be in the form of denying the request, identifying deficiencies, or requiring additional information. If we require that you correct a deficiency or submit additional information, your waiver request is deemed to be approved effective 60 days after EPA acknowledges receiving the responsive submission.

* * * * *

- 91. Amend § 1090.1320 by:
 - a. Revising paragraph (a) introductory text;
 - b. Revising and republishing paragraph (a)(1)(i);
 - c. Revising paragraphs (b) introductory text and (b)(1);
 - d. Adding paragraphs (b)(5) and (6); and
 - e. Revising paragraph (c)(1).
- The revisions, republication, and additions read as follows:

§ 1090.1320 Adding blendstock to PCG.

* * * * *

(a) Sample and test using one of the following methods to exclude PCG from the compliance demonstration for sulfur content and benzene content:

- (1) * * *
- (i) Determine the sulfur content, benzene content, and oxygenate content of the PCG before blending blendstocks to produce a new batch of gasoline as follows:

(A) Sample and test the sulfur content, benzene content, and oxygenate content of each batch of PCG using the procedures in § 1090.1350. Demonstrate homogeneity as specified in § 1090.1337 if blending involves multiple batches of PCG, or if a single batch of PCG was certified without demonstrating homogeneity under § 1090.1337(a)(4). The blending manufacturer does not need to test PCG for oxygenate content if they can demonstrate that the PCG does not contain oxygenates as specified in paragraph (a)(1)(i)(C) of this section or § 1090.1310(e)(1).

(B) If the PCG is a BOB and the blending manufacturer is accounting for

downstream oxygenate under § 1090.710, also prepare a hand blend under § 1090.1340 and test the hand blend for sulfur content and benzene content.

(C) The blending manufacturer may use the PCG manufacturer's certification test results if the PCG was received directly from the PCG manufacturer by an in-tank transfer or tank-to-tank transfer within the same terminal as long as the results are from the PCG that is being transferred.

(D) If you are unable to measure a PCG parameter, you must comply using either the presumed value for the PCG volume or an EPA-approved alternative value as described in § 1090.1710(g).

* * * * *

(b) A certified butane or certified pentane blender that blends certified butane or certified pentane into PCG, other than Summer RFG or Summer RBOB, to make a new batch of gasoline may comply with the following requirements instead of the requirements of paragraph (a) of this section:

(1) For summer gasoline, measure the RVP of the blended fuel. The fuel manufacturer may rely on test results from the certified butane or certified pentane producer for sulfur content and benzene content.

* * * * *

(5) If the quality assurance testing under paragraph (b)(4) of this section shows that certified butane or certified pentane fails to meet one or more of the standards specified in § 1090.250 or § 1090.255, the certified butane or certified pentane received from that distributor during that testing period is deemed to be in violation of the relevant per-gallon standard. Any later shipment of certified butane or certified pentane received from that distributor will also be deemed to be in violation of the relevant per-gallon standard unless another quality assurance test is conducted demonstrating that certified butane or certified pentane received from that distributor meets the standards specified in § 1090.250 or § 1090.255.

(6) If certified butane or certified pentane is deemed to be in violation under paragraph (b)(5) of this section, the certified butane or certified pentane blender must calculate its compliance obligations using paragraph (a)(2) of this section using the test results from the quality assurance program and obtain any necessary sulfur or benzene credits.

(c) * * *

(1) Calculate and incur sulfur and benzene deficits under the BOB recertification provisions of § 1090.740.

* * * * *

■ 92. Revise and republish § 1090.1335 to read as follows:

§ 1090.1335 Collecting, preparing, and testing samples.

(a) *General provisions.* Use good laboratory practice to collect samples to represent the batch you are testing. For example, take steps to ensure that a batch is always well mixed before sampling. Also, always take steps to prevent sample contamination, such as completely flushing sampling taps and piping and pre-rinsing sample containers with the product being sampled. Follow the procedures in paragraph (b) of this section for manual sampling. Follow the procedures in paragraph (c) of this section for automatic sampling. Additional requirements for measuring RVP are specified in paragraph (d) of this section. A description of how to determine compliance based on single or multiple tests on single or multiple samples is specified in paragraph (e) of this section.

(b) *Manual sampling.* Perform manual sampling using one of the methods specified in ASTM D4057 (incorporated by reference in § 1090.95) to demonstrate compliance with standards as follows:

(1) Collect a “running” or “all-levels” sample from the top of the tank. Drawing a sample from a standpipe is acceptable only if it is slotted or perforated to ensure that the drawn sample properly represents the whole batch.

(2) Use tap sampling (or other spot sampling) to collect upper, middle, and lower samples. Collect samples that most closely match the recommendations in ASTM D4057. Adjust spot sampling for partially filled tanks as shown in Table 1, Table 5, or Table 6 of ASTM D4057, as applicable.

(3) If the procedures in paragraphs (b)(1) and (2) of this section are impractical for a given storage configuration, you may use alternative sampling procedures as specified in ASTM D4057. This applies primarily for sampling with railcars, trucks, retail outlets, and other downstream locations.

(4) Test results with manual sampling are valid only after you demonstrate homogeneity as specified in § 1090.1337. Once a batch meets homogeneity specifications, you may use any properly drawn sample to represent the batch, subject to the hand-blending provisions of § 1090.1340. The

entire batch volume is noncompliant if a sample fails to meet any applicable per-gallon standard.

(5) Except as specified for marine vessels in § 1090.1605, you must not do certification testing with a composite sample from manual sampling.

(c) *Automatic sampling.* Perform automatic sampling as specified in ASTM D4177 (incorporated by reference in § 1090.95), with the additional provisions specified in this paragraph (c). Automatic sampling is intended to apply for in-line blending, including configurations that involve a pipeline filling a tank that will be certified as compliant before it leaves the fuel manufacturing facility gate.

(1) Follow all specifications for automatic sampling in this paragraph (c) unless EPA approves an in-line blending waiver that authorizes specific exceptions under § 1090.1315.

(2) Configure the system to ensure a well-mixed stream at the sampling point. Align the start and end of sampling with the start and end of creating the batch.

(3) Set a sampling frequency based on collecting 9,604 grabs or a smaller number of grabs that achieves a margin of error of 0.01 or less as specified in Section 19.1.3 of ASTM D4177; however, less frequent sampling is acceptable as long as the interval between samples does not exceed 20 seconds throughout the batch. Keep records to show that the sampling frequency meets specifications.

(4) Collect three samples for individual measurements in addition to the composite sample. Draw head, middle, and tail samples that come from the initial, middle, and final thirds of the estimated batch volume, respectively.

(5) If the composite sample fails to meet any applicable per-gallon standard, the entire batch volume is noncompliant. If one or more separate samples fail to meet any applicable per-gallon standard, the volume of noncompliant fuel is the volume starting with the last valid passing result before the failing result (or the start of the batch), up to the first valid passing result after the failing result (or the end of the batch).

(6) EPA may approve a different sampling strategy under an approved in-line blending waiver under § 1090.1315 if it is appropriate for a given facility or for a small-volume batch.

(d) *Sampling provisions related to measuring RVP of summer gasoline.* The following additional provisions apply for preparing samples to measure the RVP of summer gasoline:

(1) Meet the additional specifications for manual and automatic sampling in ASTM D5842 (incorporated by reference in § 1090.95).

(2) If you measure other fuel parameters for a given sample in addition to RVP testing, always measure RVP first.

(e) *Testing and reporting to demonstrate compliance with standards.* Perform testing as specified in this subpart and report values to demonstrate compliance with per-gallon and average standards as follows:

(1) For parameters subject to per-gallon standards, report the highest measured value (or the lowest measured value for testing related to cetane index or other parameters that are subject to a standard representing a minimum value). This applies for repeat tests on a given sample and for testing multiple samples (including head, middle, and tail samples from automatic sampling).

(2) In the case of automatic sampling for parameters subject to average standards, report the result from the composite sample to represent the batch for demonstrating compliance with the average standard. For any repeat testing with the composite sample, calculate the arithmetic average from all tests to represent the batch.

(3) In the case of manual sampling for parameters subject to average standards, determine the value representing the batch as follows:

(i) For testing with only a single sample, report that value to represent the batch. If there are repeat tests with that sample, report the arithmetic average from all tests to represent the sample.

(ii) For testing with more than one sample, report the arithmetic average from all tested samples to represent the batch. If there are repeat tests for any sample, calculate the arithmetic average of those repeat tests to determine a single value to represent that sample before calculating the average value to represent the batch.

■ 93. Revise and republish § 1090.1337 to read as follows:

§ 1090.1337 Demonstrating homogeneity.

(a) Certification test results corresponding to manual sampling as specified in § 1090.1335(b) are valid only if collected samples meet the homogeneity specifications in this section, except that the homogeneity testing requirement does not apply in the following cases:

(1) There is only a single sample using the procedure specified in § 1090.1335(b)(2).

(2) Upright cylindrical tanks that have a liquid depth of less than 10 feet.

(3) Horizontal tanks with circular or elliptical cross section with a volume less than 42,000 gallons used for storing ethanol denaturant. Draw samples from the approximate mid-depth of the product level.

(4) You draw spot samples as specified in paragraph (c) of this section, test each sample for every parameter subject to a testing requirement, and use the worst-case test result for each parameter for purposes of reporting, meeting per-gallon and average standards, and all other aspects of compliance.

(5) Your tank configuration depends on roof sampling for homogeneity demonstration, but inclement weather prevents collecting roof samples and EPA has already approved a plan for a mixing procedure to ensure a homogeneous batch for your specific tank configuration. EPA approval of the mixing procedure will include consideration of product type, fill level, and other relevant parameters for specific tank configurations and batch characteristics. Keep records to document EPA approval of the mixing procedure, your actions to follow the approved mixing procedure, and the forcing weather event.

(6) Sampling occurs at a downstream location where it is not possible to collect separate samples and steps are taken to ensure that the batch is well mixed.

(7) The product being tested is certified butane or certified pentane.

(b) Any test to establish homogeneity is considered a certification test relative to a per-gallon standard for a given parameter if the test result is the worst-case value from all testing performed for the batch. Report the highest measured value as specified in § 1090.1335(e)(2).

(c) Use spot sampling as specified in § 1090.1335(b)(2) for homogeneity testing.

(d) Demonstrate homogeneity for gasoline, GTAB, and TGP using two of the procedures specified in this paragraph (d) with each sample. For summer gasoline, the homogeneity demonstration must include RVP measurement.

(1) Measure density or API gravity using ASTM D287, ASTM D1298, ASTM D4052, or ASTM D7777 (incorporated by reference in § 1090.95).

(2) Measure the sulfur content as specified in § 1090.1360.

(3) Measure the benzene content as specified § 1090.1360.

(4) Measure the RVP as specified in § 1090.1360.

(e) Homogeneity requirements apply as follows for other products:

(1) Demonstrate homogeneity for diesel fuel using one of the procedures specified in paragraph (d)(1) or (2) of this section.

(2) Demonstrate homogeneity for certified ethanol denaturant and oxygenate based on measured sulfur content as specified in § 1090.1360, except that no homogeneity testing is required for DFE if you calculate sulfur content as specified in § 1090.1330.

(f) Consider the batch to be homogeneous for a given parameter if the measured values for all tested samples vary by no more than the published reproducibility of the test method multiplied by 0.75 ($R \times 0.75$). If reproducibility is a function of measured values, calculate reproducibility using the average value of the measured parameter representing all tested samples. Calculate using all meaningful significant figures as specified for the test method, even if § 1090.1350(c) describes a different precision. For cases that do not require a homogeneity demonstration under paragraph (a) of this section, the lack of homogeneity demonstration does not prevent a quantity of fuel, fuel additive, or regulated blendstock from being considered a batch for demonstrating compliance with the requirements of this part. The following additional provisions apply for special cases:

(1) Do not use test results for a given test method for a parameter to demonstrate homogeneity if multiple measured values are at or below the test method's PLOQ, LLOQ, or valid range, as applicable. You may instead use a different test method as allowed under this subpart to get test results with the same parameter or with a different parameter.

(2) If you have homogeneity test results for more than the required number of parameters and not all parameters meet the criteria, all testing results except density or API gravity must meet applicable homogeneity criteria to demonstrate that the batch is homogeneous.

(3) If using ASTM D4052 (incorporated by reference in § 1090.95) for measuring density or API gravity to demonstrate homogeneity through December 31, 2026, you may calculate the homogeneity criterion based on the reproducibility of the test method at the limit of the valid range for testing, even if measured results extend beyond the valid range.

■ 94. Amend § 1090.1340 by revising paragraphs (a) introductory text, (a)(1), and (a)(2)(iii) to read as follows:

§ 1090.1340 Preparing a hand blend from BOB.

(a) If you produce or import BOB and instruct downstream blenders to add oxygenate, you must meet the requirements of this subpart by blending oxygenate that reflects the anticipated sulfur content and benzene content of the oxygenate for blending into a BOB sample. To do this, prepare each hand blend by adding oxygenate to the BOB sample in a way that corresponds to your instructions to downstream blenders for the sampled batch of fuel. Prepare hand blends as follows:

(1) Take steps to avoid introducing high or low bias in sulfur content when selecting from available samples to prepare the hand blend. For example, if there are three samples with discrete sulfur content measurements, select the sample with the mid-range sulfur content. In other cases, randomly select the sample. If you omit the homogeneity demonstration under § 1090.1337(a)(4), prepare a single hand blend using the BOB sample that has the highest sulfur content.

(2) * * *

(iii) As an example, if you give instructions for a given batch of BOB to perform downstream blending to make E10, E15, and a blend that contains 8 volume percent butanol, prepare a hand blend for testing winter gasoline with 8 volume percent butanol, and prepare an E10 hand blend for testing summer gasoline.

* * * * *

■ 95. Amend § 1090.1345 by:

■ a. Revising paragraph (a)(5);

■ b. Adding paragraphs (a)(6) and (7); and

■ c. Redesignating paragraphs (c) through (e) as paragraphs (b) through (d).

The revision and additions read as follows:

§ 1090.1345 Retaining samples.

(a) * * *

(5) The nominal volume of retained liquid samples must be at least 330 ml.

(6) If you have only a single sample for testing, keep that sample after testing is complete. If you collect multiple samples from a single batch, keep an untested sample that represents the batch.

(7) If you test a hand blend under § 1090.1340, keep a sample of the BOB and a sample representative of the oxygenate used to prepare the hand blend.

* * * * *

■ 96. Amend § 1090.1350 by revising paragraphs (c)(4) and (5) to read as follows:

§ 1090.1350 Overview of test procedures.

(c) * * *
 (4) Record oxygenate content to the nearest 0.01 mass percent for each measured oxygenate.

(5) Record diesel fuel aromatic content to the nearest 0.1 volume percent, or record cetane index to the nearest whole number.

* * * * *
 ■ 97. Amend § 1090.1355 by revising paragraphs (a) and (b)(1) and (2) to read as follows:

§ 1090.1355 Calculation adjustments and corrections.

(a) Adjust measured values for total vapor pressure as follows:
 $RVP = 0.956 \cdot P_{total} - 0.347$

Where:
 RVP = Reid vapor pressure, in psi.
 P_{total} = Measured total vapor pressure, in psi.

(b) * * *
 (1) If your test method involves a published procedure with a Pooled Limit of Quantitation (PLOQ), treat the PLOQ as your final result if your measured result is below the PLOQ.

(2) If your test method involves a published procedure with a limited scope but no PLOQ, treat the lower bound of the scope as your final result if your measured result is less than that value.

* * * * *
 ■ 98. Amend § 1090.1360 by revising paragraph (b)(1)(i) to read as follows:

§ 1090.1360 Performance-based Measurement System.

(b) * * *
 (1) * * *

(i) Sulfur.
 * * * * *
 ■ 99. Amend § 1090.1365 by:
 ■ a. Revising the introductory text and paragraphs (a)(3) and (4);
 ■ b. Revising and republishing paragraphs (b) and (c)(3);
 ■ c. Revising paragraphs (f)(2) and (5).
 The revisions and republication read as follows:

§ 1090.1365 Qualifying criteria for alternative measurement procedures.
 This section specifies how to qualify alternative procedures for measuring absolute and method-defined fuel parameters under the Performance-based Measurement System specified in § 1090.1360.

(a) * * *
 (3) Except as specified in paragraph (d) of this section, testing to demonstrate compliance with the precision and accuracy specifications in this section apply only for the laboratory where the testing occurred. At a given laboratory, qualifying a test method applies for all associated instruments used for testing to certify fuel.

(4) If a procedure for measuring benzene or sulfur in gasoline has no published PLOQ and no published scope with a lower bound, you must establish a LLOQ.

(b) All alternative procedures must meet precision criteria based on a calculated maximum allowable standard deviation for a given fuel parameter as specified in this paragraph (b). The precision criteria apply for measuring the parameters and fuels specified in paragraph (b)(4) of this section. Take the following steps to qualify the

measurement procedure for measuring a given fuel parameter:

(1) The fuel must meet the parameter specifications in Table 1 to paragraph (b)(4) of this section. This may require that you modify the fuel you typically produce to be within the specified range. Absent a specification (maximum or minimum), select a fuel representing values that are typical for your testing. Store and mix the fuel to maintain a homogenous mixture throughout the measurement period to ensure that each fuel sample drawn from the batch has the same properties.

(2) Measure the fuel parameter from a homogeneous fuel batch at least 20 times. Record each result in sequence. Do not omit any valid results unless you use good engineering judgment to determine that the omission is necessary and you document those results and the reason for excluding them. Perform this analysis over a 20-day period. You may make up to 4 separate measurements in a 24-hour period, as long as the interval between measurements is at least 4 hours. Do not measure RVP more than once from a single sample.

(3) An alternative procedure for measuring oxygenate in gasoline must account for every type of oxygenate covered by the referee method.

(4) Calculate the maximum allowable standard deviation as follows:

$$\sigma_{max} = x_1 \cdot \frac{x_2}{x_3}$$

Where:
 σ_{max} = Maximum allowable standard deviation.

x_1 , x_2 , and x_3 have the values from the following table:

TABLE 1 TO PARAGRAPH (b)(4)—PRECISION CRITERIA FOR QUALIFYING ALTERNATIVE PROCEDURES

Fuel, fuel additive, or regulated blendstock	Fuel parameter	Range	x_1	x_2 = Repeatability (r) or reproducibility (R) ¹	x_3	Fixed values of σ_{max}	Source ²
ULSD	Sulfur	5 ppm minimum.	1.5	$r = 1.33$	2.77	0.72	ASTM D3120–08.
500 ppm LM diesel fuel ..	Sulfur	350 ppm minimum.	1.5	$r = 21.3$	2.77	11.5	ASTM D2622–16.
ECA marine fuel	Sulfur	700 ppm minimum.	1.5	$r = 37.1$	2.77	20.1	ASTM D2622–16.
Butane	Sulfur	1.5	$r = 0.1152 \cdot x$	2.77	ASTM D6667–14.
Gasoline	Sulfur	1.5	$r = 0.4998 \cdot x^{0.54}$	2.77	ASTM D7039–15a.
Gasoline	Oxygenate	0.3	$R = 0.13 \cdot x^{0.83}$	1	ASTM D5599–18.
Gasoline	RVP ³	0.3	$R = 0.40$	1	0.12	ASTM D5191–15.
Gasoline	Benzene	0.15	$R = 0.221 \cdot x^{0.67}$	1	ASTM D5769–20.

¹ Calculate repeatability and reproducibility using the average value determined from testing. Use units as specified in § 1090.1350(c).
² Note that the listed procedure may be different than the referee procedure identified in § 1090.1360(d), or it may be an older version of the referee procedure.
³ Use only 1-liter containers for testing to qualify alternative methods.

(c) * * *

(3) The measurement procedure meets the accuracy requirement as follows:

(i) Demonstrate accuracy for measuring sulfur in gasoline and butane using samples to represent sulfur values from 1 to 10 ppm, 11 to 20 ppm, and 21 to 95 ppm. You may omit any of these ranges if you do not perform testing with fuel in that range. Calculate the maximum allowable difference between the average measured value

and the ARV for each applicable range as follows:

Where:

$$\Delta_{\max} = 0.75 \cdot \sigma_{\max}$$

Δ_{\max} = Maximum allowable difference.
 σ_{\max} = Maximum allowable standard deviation, per paragraph (b)(4) of this section, using the sulfur content represented by the ARV.

(ii) Demonstrate accuracy for measuring sulfur in diesel fuel using test fuels meeting the specifications in Table 2 to this section. For testing diesel

fuel-related blendstocks and additives, use representative test samples meeting the appropriate sulfur specification. Table 2 to this paragraph also identifies the maximum allowable difference between average measured value and the ARV corresponding to the ARV at the upper end of each specified range. These values are based on calculations with the equation in paragraph (c)(3)(i) of this section, with parameter values set equal to the standard.

TABLE 2 TO PARAGRAPH (C)(3)(II)—ACCURACY CRITERIA FOR QUALIFYING ALTERNATIVE PROCEDURES WITH DIESEL FUEL AND DIESEL FUEL-RELATED BLENDSTOCKS AND ADDITIVES

Fuel	Sulfur content (ppm)	Illustrated maximum allowable difference
ULSD	10–20	0.54
500 ppm LM diesel fuel	450–500	8.65
ECA marine fuel	900–1,000	15.1

* * * * *

(f) * * *

(2) Test with a range of fuels that are typical of those you will analyze at your laboratory. Use either consensus-named fuels or locally named reference materials. Consensus-named fuels are homogeneous fuel quantities sent around to different laboratories for analysis, which results in a “consensus name” representing the average value of the parameter for all participating laboratories. Locally named reference materials are fuel samples analyzed using the reference test method, either at your laboratory or at a reference installation, to establish an estimated value for the fuel parameter; locally named reference materials usually come from the fuel you produce.

■ a. Redesignating paragraph (a)(4) as (a)(5) and adding new paragraph (a)(4);

■ b. Revising paragraphs (c) introductory text, (c)(2), and (c)(4); and

■ c. Adding paragraphs (d) and (e).

The additions and revisions read as follows:

§ 1090.1375 Quality control procedures.

* * * * *

(a) * * *

(4) Keep records to document any test results excluded for being out of control under Section 8.5 and A1.5.4.1 of ASTM D6299 (incorporated by reference in § 1090.95). Identify the assignable cause and include any appropriate additional supporting justification.

* * * * *

(c) *Accuracy demonstration.* For absolute fuel parameters (VCSB and non-VCSB) and for method-defined fuel parameters using non-VCSB methods, you must show that you meet accuracy criteria as specified in this paragraph (c). For method-defined VCSB procedures, you may meet accuracy requirements as specified in this paragraph (c) or by comparing your results to the accepted reference value in an inter-laboratory crosscheck

program as specified in paragraph (d) of this section.

* * * * *

(2) Except as specified in paragraph (c)(3) of this section, test every instrument using a check standard meeting the specifications of ASTM D6299. Select a fuel sample with an ARV representing fuel that is typical for your testing.

* * * * *

(4) You meet accuracy requirements under this section if the difference between your measured value for the check standard and the ARV is less than the value from the following equation:

$$\Delta_{\max} = 0.75 \cdot R \cdot \sqrt{1 + \frac{1}{L}}$$

Where:

Δ_{\max} = Maximum allowable difference.
 L = Total number of test results used to determine the ARV of a consensus-named fuel. For testing locally named fuels for which no consensus-based ARV applies, use L equal to ∞ .
 R = Reproducibility of the referee procedure identified in § 1090.1360(d), as noted in Table 1 to paragraph (b)(4) of § 1090.1365 or in the following table:

(5) Perform testing at your laboratory as specified in paragraph (b) of this section to establish the repeatability of the alternative procedure. The repeatability must be as good as or better than that specified in paragraph (b)(4) of this section.

* * * * *

■ 100. Amend § 1090.1375 by:

TABLE 1 TO PARAGRAPH (C)(4)—CRITERIA FOR QUALIFYING ALTERNATIVE PROCEDURES

Tested product	Referee procedure ¹	Reproducibility (R) ²
ULSD, 500 ppm diesel fuel, ECA marine fuel, diesel fuel additive, gasoline, gasoline regulated blendstock, and gasoline additive.	ASTM D2622	$R = 0.4273 \cdot x^{0.8015}$
Butane	ASTM D6667	$R = 0.3130 \cdot x$

¹ ASTM specifications are incorporated by reference, see § 1090.95.

² Calculate reproducibility using the average value determined from testing. Use units as specified in § 1090.1350(c).

(d) *Demonstrating accuracy by participating in crosscheck programs.* You may meet accuracy requirements under paragraph (c) of this section by comparing your results to the accepted reference value in an inter-laboratory crosscheck program sponsored by ASTM International or another VCSB at least three times per year (two times per year for RVP), subject to the following provisions:

(1) Your results from the crosscheck program are not valid for demonstrating compliance with accuracy requirements for an instrument under this section if any of the following apply:

(i) The crosscheck program does not have a robust ARV based on the check standard requirements in Section 6.2 of ASTM D6299 (incorporated by reference, see § 1090.95).

(ii) The difference between the test result and the ARV is greater than the maximum allowable difference in paragraph (c)(4) of this section.

(iii) The difference between the test result and the ARV is greater than the method-defined limit for check standard accuracy, if applicable.

(iv) The measured value lies outside of two Z-scores.

(2) If your results from the crosscheck program are not valid under paragraph (a)(1) of this section, perform a root cause analysis and document your findings and the steps you take to correct the problem. You continue to meet accuracy requirements under this section for the affected parameter only if you correct the problem and demonstrate compliance with the accuracy requirements of this section within 35 days after learning of a failure under paragraph (d)(1) of this section. The compliance demonstration may be based on in-house testing using a check standard qualified by a third party, or on testing in the next crosscheck program.

(e) *Failure to meet precision or accuracy requirements.* The presumed values specified in § 1090.1710(g) apply for parameter measurements with instruments failing to meet precision or accuracy requirements under this section. If you fail to meet the deadlines for resolving crosscheck-related issues under paragraph (d)(2) of this section, the presumed values apply starting at the point of learning of a failure under paragraph (d)(1) of this section.

■ 101. Amend § 1090.1390 by revising the section heading to read as follows:

§ 1090.1390 Requirement for automated detergent blending equipment calibration.
* * * * *

■ 102. Amend § 1090.1395 by revising paragraphs (a) introductory text,

(a)(1)(i), and (b) introductory text to read as follows:

§ 1090.1395 Gasoline deposit control test procedures.
* * * * *

(a) *Top Tier-based test method.* Use the procedures specified in ASTM D6201 (incorporated by reference in § 1090.95), as follows:

(1) * * *

(i) 8.0–10.0 volume percent ethanol that meets the requirements in § 1090.270 and conforms to the specifications of ASTM D4806 (incorporated by reference in § 1090.95).

(b) *CARB test method.* Use the procedures specified by CARB in Title 13, California Code of Regulations, section 2257 (incorporated by reference in § 1090.95).

Subpart O—Survey Provisions

■ 103. Amend § 1090.1400 by revising paragraph (a)(2) to read as follows:

§ 1090.1400 General provisions.
(a) * * *

(2) The program plan must be signed by the RCO of the independent surveyor conducting the program.

■ 104. Amend § 1090.1405 by revising paragraphs (a)(1) and (b)(2) to read as follows:

§ 1090.1405 National fuels survey program.
(a) * * *

(1) A gasoline manufacturer that elects to account for oxygenate added downstream under § 1090.710 must participate in the national fuels survey program (NFSP) specified in paragraph (b) of this section.

(2) The survey program must be conducted by collecting samples representative of retail outlets in the United States as specified in § 1090.1415.

■ 105. Amend § 1090.1410 by revising paragraphs (b)(1) and (2), (c)(3) and (5), (d), and (e) to read as follows:

§ 1090.1410 Independent surveyor requirements.
* * * * *

(1) Obtain samples representative of the gasoline and diesel fuel (including diesel fuel made available at retail outlets to nonroad vehicles, engines, and equipment) offered for sale separately from all retail outlets in accordance with the survey program

plan approved by EPA, or immediately notify EPA of any refusal of a retailer to allow samples to be taken.

(2) Obtain the number of samples representative of the number of retail outlets offering E15.

(3) Diesel fuel samples must be analyzed for sulfur content.

(5) All testing must be completed by an EPA-approved laboratory within 10 business days after receipt of the sample.

(d) Verify E15 labeling requirements at retail outlets that offer E15 for sale.

(e)(1) Using procedures specified in an EPA-approved plan under § 1090.1415, notify EPA, the retailer, and the branded fuel manufacturer (if applicable) within 24 hours after an EPA-approved laboratory has completed analysis when any of the following occur:

(i) A test result for a gasoline sample yields a sulfur content result that exceeds the downstream sulfur per-gallon standard in § 1090.205(c).

(ii) A test result for a gasoline sample yields an RVP result that exceeds the applicable RVP standard in § 1090.215.

(iii) A test result for a diesel fuel sample yields a sulfur content result that exceeds the sulfur standard in § 1090.305(b).

(iv) A test result for a gasoline sample identified as “E15” yields an ethanol content result that exceeds 15 volume percent.

(v) A test result for a gasoline sample not identified as “E15” yields an ethanol content of more than 10 volume percent ethanol.

(2) Any notification to EPA or a branded fuel manufacturer under paragraph (e)(1) of this section must include the retail outlet’s contact information, including name, title, mailing address, telephone number, and email address of a representative of the retail outlet, if available.

■ 106. Amend § 1090.1415 by:

■ a. Revising and republishing paragraph (d); and

■ b. Revising paragraphs (e)(2) and (f) introductory text.

The revisions and republication read as follows:

§ 1090.1415 Survey program plan design requirements.
* * * * *

(d) *Retail outlet selection.* (1) Retail outlets to be sampled in a sampling area must be selected from among all gasoline retail outlets in the United

States with the probability of selection proportionate to the volume of gasoline sold at the retail outlet. The sample of retail outlets must also include gasoline retail outlets with different brand names as well as those gasoline retail outlets that are unbranded.

(2) For any retail outlet from which a sample of gasoline or diesel fuel was collected during a survey and was reported to EPA under § 1090.1410(e),

that retail outlet must be included in the subsequent survey.

(3) At least one sample of a product dispensed as E15 must be collected at each gasoline retail outlet when E15 is present, and separate samples must be taken that represent the gasoline contained in each storage tank at the gasoline retail outlet unless collection of separate samples is not practicable.

(4) At least one sample of diesel fuel must be collected at each retail outlet when diesel fuel is present. Samples of diesel fuel may be collected at retail outlets that sell gasoline.

(e) * * *

(2) The minimum number of samples to be included in the survey program plan for each calendar year is calculated as follows:

$$n = \left(\frac{(Z_\alpha + Z_\beta)^2}{4 \cdot [\arcsin(\sqrt{\phi_1}) - \arcsin(\sqrt{\phi_0})]} \right) \cdot F_a \cdot F_b \cdot Su_n \cdot St_n$$

Where:

n = Minimum number of samples in a year-long survey series. However, n must be greater than or equal to 2,000 for the number of diesel fuel samples or 5,000 for the number of gasoline samples.

Z α = Upper percentile point from the normal distribution to achieve a one-tailed 95 percent confidence level (5 percent α -level). For purposes of this survey program, Z α equals 1.645.

Z β = Upper percentile point to achieve 95 percent power. For purposes of this survey program, Z β equals 1.645.

ϕ_1 = Maximum proportion of non-compliant outlets for a region to be deemed compliant. This parameter needs to be 5 percent or greater (i.e., 5 percent or more of the outlets, within a stratum such that the region is considered non-compliant).

ϕ_0 = Underlying proportion of non-compliant outlets in a sample. For the first survey program plan, ϕ_0 will be 2.3 percent. For subsequent survey program plans, ϕ_0 will be the average of the proportion of outlets found to be non-compliant over the previous 4 surveys.

F $_a$ = Adjustment factor for the number of extra samples required to compensate for samples that could not be included in the survey (e.g., due to technical or logistical considerations), based on the number of additional samples required during the previous 4 surveys. F $_a$ must be greater than or equal to 1.1.

F $_b$ = Adjustment factor for the number of samples required to resample each retail outlet with test results reported to EPA under § 1090.1410(e), based on the rate of resampling required during the previous 4 surveys. F $_b$ must be greater than or equal to 1.1.

Su $_n$ = Number of surveys per year. For purposes of this survey program, Su $_n$ equals 4.

St $_n$ = Number of sampling strata. For purposes of this survey program, St $_n$ equals 3.

* * * * *

(f) *Laboratory designation.* Any laboratory that the independent surveyor intends to use to test samples collected as part of the NFSP must be approved annually as part of the survey program plan approval process under

§ 1090.1400(a). In the survey program plan submitted to EPA, the independent surveyor must include the following information regarding any laboratory they intend to use to test samples:

* * * * *

■ 107. Amend § 1090.1420 by revising and republishing paragraph (a) to read as follows:

§ 1090.1420 Additional requirements for E15 misfueling mitigation surveying.

(a) *E15 misfueling mitigation survey requirement.* (1) Any gasoline manufacturer, oxygenate blender, or oxygenate producer that produces, introduces into commerce, sells, or offers for sale gasoline, BOB, DFE, or gasoline-ethanol blended fuel that is intended for use in or as E15 must comply with either survey program Option 1 (as specified in paragraph (b) of this section) or Option 2 (as specified in paragraph (c) of this section).

(2) For an oxygenate producer that produces or imports DFE, the DFE is deemed as intended for use in E15 unless the oxygenate producer demonstrates that it was not intended for such use. The oxygenate producer may demonstrate, at a minimum, that DFE is not intended for use in E15 by including language on PTDs stating that the DFE is not intended for use in E15, entering into contracts with oxygenate blenders to limit the use of their DFE to gasoline-ethanol blended fuels of no more than 10 volume percent ethanol, and limiting the concentration of their DFE to no more than 10 volume percent ethanol in their fuel additive registration under 40 CFR part 79.

* * * * *

■ 108. Amend § 1090.1450 by:

■ a. Revising paragraph (c)(2)(v);

■ b. Revising and republishing paragraph (c)(3); and

■ c. Revising paragraphs (c)(4) introductory text, (c)(10) introductory

text, (c)(10)(iii), (d)(2)(i), (d)(3)(ii), (d)(4) introductory text, (d)(4)(iv), and (d)(5).

The revisions and republication read as follows:

§ 1090.1450 National sampling and testing oversight program.

* * * * *

(c) * * *

(2) * * *

(v) Samples collected must be shipped via ground service within 2 business days from when the samples are collected to an EPA-approved laboratory as established in an approved NSTOP plan under this section. A random subset of collected samples must also be shipped to the EPA National Vehicle and Fuel Emissions Laboratory as established in an approved NSTOP plan under this section.

(3) Test, or arrange to be tested, samples collected under paragraph (c)(2) of this section as follows:

(i) Winter gasoline samples must be analyzed for oxygenate content, sulfur content, benzene content, distillation parameters, aromatics, and olefins.

(ii) Summer gasoline samples must be analyzed for oxygenate content, sulfur content, benzene content, distillation parameters, aromatics, olefins, and RVP, except that samples of exempt gasoline under § 1090.630 do not need to be analyzed for RVP.

(iii) All samples must be tested by an EPA-approved laboratory using test methods specified in subpart N of this part.

(iv) All analyses must be completed by an EPA-approved laboratory within 10 business days after receipt of the sample.

(v) A gasoline manufacturer must analyze gasoline samples for sulfur content, benzene content, and for summer gasoline, RVP, except that samples of exempt gasoline under § 1090.630 do not need to be analyzed for RVP.

(4) Using procedures specified in an EPA-approved NSTOP plan under this section, notify EPA and the gasoline manufacturer within 24 hours after an EPA-approved laboratory has completed analysis when any of the following occur:

* * * * *

(10) Review the test performance index and precision ratio for each method and instrument the laboratory used to test gasoline samples collected under this section as follows:

* * * * *

(iii) A gasoline manufacturer must supply copies of the necessary information to the independent surveyor to review the TPI and PR for each method and instrument used to test gasoline samples collected under this section.

* * * * *

(d) * * *
(2) * * *

(i) Each participating gasoline manufacturing facility must be sampled at least once during each season they produce fuel. The NSTOP plan must demonstrate how these facilities will be randomly selected within the summer and winter seasons.

* * * * *

(3) * * *

(ii) The minimum number of samples to be included in the NSTOP plan for each calendar year is calculated as follows:

$$n = R \cdot F_a \cdot F_b \cdot Su_n$$

Where:

n = Minimum number of samples in a year.
R = Number of participating gasoline manufacturing facilities.

F_a = Adjustment factor for the number of extra samples required to compensate for samples that could not be included in the NSTOP (e.g., due to technical or logistical considerations), based on the number of additional samples required during the previous 2 calendar years. F_a must be greater than or equal to 1.1.

F_b = Adjustment factor for the number of samples required to ensure oversight. For purposes of this program, F_b equals 1.25.

Su_n = Number of samples required per participating facility per year. For purposes of this program, Su_n equals 2.

(4) *Laboratory designation.* Any laboratory that the independent surveyor intends to use to test samples collected as part of the NSTOP must be approved annually as part of the NSTOP plan approval process in § 1090.1400(a). The independent surveyor must include the following information regarding each laboratory it intends to use to test samples:

* * * * *

(iv) Records demonstrating the laboratory's performance in a laboratory

crosscheck program for the most recent 12 months prior to submission of the NSTOP plan.

(5) *Sampling procedure.* The NSTOP plan must include a detailed description of the sampling procedures used to collect samples at participating gasoline manufacturing facilities.

* * * * *

Subpart P—Retailer and Wholesale Purchaser-Consumer Provisions

■ 109. Amend § 1090.1515 by revising the section heading to read as follows:

§ 1090.1515 Diesel fuel sulfur labeling provisions.

* * * * *

Subpart Q—Importer and Exporter Provisions

■ 110. Amend § 1090.1600 by revising paragraphs (b) and (d) to read as follows:

§ 1090.1600 General provisions for importers.

* * * * *

(b)(1) Except as specified in paragraph (b)(2) of this section, all applicable standards in subparts C and D of this part apply to imported gasoline and diesel fuel, respectively.

(2) An importer that imports gasoline at multiple import facilities must comply with the gasoline average standards in §§ 1090.205(a) and 1090.210(a) as specified in § 1090.705(b), unless the importer complies with the provisions of § 1090.1610 to meet the alternative per-gallon standards for rail or truck imports specified in §§ 1090.205(d) and 1090.210(c).

* * * * *

(d) Alternative testing requirements for an importer that imports fuel, fuel additive, or regulated blendstock by rail or truck are specified in § 1090.1610.

■ 111. Amend § 1090.1605 by revising and republishing paragraph (b)(1) to read as follows:

§ 1090.1605 Importation by marine vessel.

* * * * *

(b) * * *

(1) The importer must sample each compartment of the vessel and use one of the following methods to meet testing requirements:

(i) Treat each compartment as a separate batch. Each individual compartment is deemed to meet the homogeneity requirements in § 1090.1337.

(ii) Except as specified in paragraph (b)(1)(iii) of this section, combine samples from separate compartments

into a single, vessel-volumetric composite sample using the procedures in Section 9.2.4 of ASTM D4057 (incorporated by reference in § 1090.95). Test results from the composite sample are valid only if single samples collected from each affected compartment together meet the homogeneity requirements in § 1090.1337.

(iii) Measure the RVP of a sample collected from each compartment for summer gasoline.

* * * * *

■ 112. Revise and republish § 1090.1610 to read as follows:

§ 1090.1610 Importation by rail or truck.

(a) An importer that imports fuel, fuel additive, or regulated blendstock by rail or truck must meet the sampling and testing requirements of subpart N of this part by sampling and testing each compartment of the railcar or truck unless they do one of the following:

(1) *Use supplier results.* The importer may rely on test results from the supplier for fuel, fuel additive, or regulated blendstock imported by rail or truck if the importer meets all the following requirements:

(i) The importer obtains documentation of test results from the supplier for each batch of fuel, fuel additive, or regulated blendstock in accordance with the following requirements:

(A) The testing includes measurements for all the parameters specified in § 1090.1310 using the measurement procedures specified in § 1090.1350.

(B) Testing for a given batch occurs after the most recent delivery into the supplier's storage tank and before transferring the fuel, fuel additive, or regulated blendstock to the railcar or truck.

(ii) The importer conducts testing to verify test results from each supplier as follows:

(A) Collect a sample at least once every 30 days or every 50 rail or truckloads from a given supplier, whichever is more frequent. Test the sample as specified in paragraphs (a)(1)(i)(A) and (B) of this section.

(B) Treat importation of each fuel, fuel additive, or regulated blendstock separately, but treat railcars or truckloads together if the fuel, fuel additive, or regulated blendstock is imported from a given supplier by rail or truck.

(2) *Certify in a storage tank.* The importer may transfer the fuel, fuel additive, or regulated blendstock imported by rail or truck into storage tanks that also contain the same product

if the importer meets the following requirements:

(i) For gasoline, the importer transfers gasoline into one or more empty tanks or tanks containing PCG that the importer owns.

(A) If the importer transfers gasoline into one or more empty tanks, they must sample and test the sulfur content, benzene content, and for summer gasoline, RVP, of each tank into which the gasoline was transferred.

(B) If the importer transfers gasoline into one or more tanks containing PCG, they must sample the PCG already in the tank prior to transferring gasoline from the train or truck, test the sulfur content and benzene content, and report this PCG as a negative batch as specified in § 1090.905(c)(3)(i). After transferring the gasoline into the tanks, the importer must sample and test the sulfur content, benzene content, and for summer gasoline, RVP, of each tank into which the gasoline was transferred and report the volume, sulfur content, and benzene content as a positive batch.

(C) Include the PCG in the tank before transferring and the volume and properties after transferring in compliance calculations as specified in § 1090.700(d)(4)(i).

(D) The sample retention requirements in § 1090.1345 apply to the samples taken prior to transferring and those taken after transferring.

(ii) For all other fuel, fuel additive, or regulated blendstock, the importer must sample and test the fuel, fuel additive, or regulated blendstock in each tank into which it was transferred. The importer must ensure that all applicable per-gallon standards are met before the fuel, fuel additive, or regulated blendstock is shipped from the tank.

(b) If an importer that elects to comply with paragraph (a)(1) or (2) of this section fails to meet the applicable requirements, they must meet the sampling and testing requirements of subpart N of this part for each compartment of the railcar or truck until EPA determines that the importer has adequately addressed the cause of the failure.

■ 113. Amend § 1090.1615 by revising and republishing paragraph (d) to read as follows:

§ 1090.1615 Gasoline treated as a blendstock.

* * * * *

(d)(1) The importer must treat the GTAB as if it were imported gasoline and complete all the requirements for a gasoline manufacturer under § 1090.105(a) (except for the sampling, testing, and sample retention

requirements in § 1090.105(a)(6)) for the GTAB at the time it is imported.

(2) Any GTAB that ultimately is not used to produce gasoline (e.g., a tank bottom of GTAB) must be treated as newly imported gasoline and must meet all applicable requirements for imported gasoline.

Subpart R—Compliance and Enforcement Provisions

■ 114. Amend § 1090.1710 by revising paragraph (g) introductory text to read as follows:

§ 1090.1710 Penalties.

* * * * *

(g) The presumed fuel parameter values in this paragraph (g) apply for cases in which any person fails to comply with the sampling or testing requirements and must be reported, unless EPA, in its sole discretion, approves a different value. Any person requesting the use of alternative test values must submit their request to EPA as specified in § 1090.10 within 30 days of discovering failure to comply with sampling and testing requirements. EPA may consider any relevant information to determine whether a different value is appropriate.

* * * * *

■ 115. Amend § 1090.1715 by:

- a. Revising paragraph (c); and
- b. Revising and republishing paragraph (e).

The revisions and republication read as follows:

§ 1090.1715 Liability provisions.

* * * * *

(c) Any parent corporation is liable for any violation committed by any of its wholly owned subsidiaries.

* * * * *

(e)(1) Any person who produced, imported, sold, offered for sale, dispensed, supplied, offered for supply, stored, transported, caused the transportation or storage of, or introduced into commerce fuel, fuel additive, or regulated blendstock that is in the storage tank containing fuel, fuel additive, or regulated blendstock that is found to be in violation of a per-gallon standard is liable for the violation.

(2) In order for a carrier to be liable under paragraph (e)(1) of this section, EPA must demonstrate by reasonably specific showing, by direct or circumstantial evidence, that the carrier caused the violation.

* * * * *

Subpart S—Attestation Engagements

■ 116. Amend § 1090.1800 by:

- a. Adding paragraph (a)(3); and

■ b. Revising paragraphs (b)(1)(ii) and (d)(1).

The addition and revisions read as follows:

§ 1090.1800 General provisions.

(a) * * *

(3) A gasoline manufacturer that transacts sulfur or benzene credits under this part.

(b) * * *

(1) * * *

(ii) The auditor may be a certified public accountant, or firm of such accountants, that is independent of the gasoline manufacturer. Such an auditor must comply with the AICPA *Code of Professional Conduct*, including its independence requirements, the AICPA *Statements on Quality Control Standards (SQCS) No. 8, A Firm's System of Quality Control* (both incorporated by reference in § 1090.95), and applicable rules of state boards of public accountancy. Such an auditor must also perform the attestation engagement in accordance with the AICPA *Statement on Standards for Attestation Engagements (SSAE) No. 19, Agreed-Upon Procedures Engagements*, especially as noted in sections AT-C 105, 215, and 315 (incorporated by reference in § 1090.95).

* * * * *

(d) * * *

(1) The auditor must prepare an attestation engagement report identifying the applicable procedures specified in this subpart along with the auditor's corresponding findings for each procedure. The auditor must submit the attestation engagement report electronically to EPA by June 1 of the year following the compliance period.

* * * * *

■ 117. Amend § 1090.1805 by revising paragraph (a)(3) to read as follows:

§ 1090.1805 Representative samples.

(a) * * *

(3) Determine sample size using an alternate method that is equivalent to or better than the methods specified in paragraphs (a)(1) and (2) of this section with respect to strength of inference and freedom from bias. An auditor that determines a sample size using an alternate method must describe and justify the alternate method in the attestation engagement report.

* * * * *

■ 118. Revise and republish § 1090.1810 to read as follows:

§ 1090.1810 General procedures for gasoline manufacturers.

An auditor must perform the procedures specified in this section for

a gasoline manufacturer that produces gasoline in the United States.

(a) *Registration and reports.* An auditor must review registration and reports as follows:

(1) Obtain copies of the gasoline manufacturer's registration information submitted under subpart I of this part and all reports (except batch reports) submitted by the gasoline manufacturer under subpart J of this part.

(2) For each gasoline manufacturing facility, confirm that the facility's registration is accurate based on the activities reported during the compliance period, including that the registration for the facility and any related updates were completed prior to conducting regulated activities at the facility and report any discrepancies.

(3) Confirm that the gasoline manufacturer submitted all reports required under subpart J of this part for activities they performed during the compliance period and report any exceptions.

(4) Obtain a written statement from the gasoline manufacturer's RCO that the submitted reports are complete and accurate.

(5) Report the name of any commercial computer program used to track any data required under this part.

(b) *Inventory reconciliation analysis.* An auditor must review an inventory reconciliation analysis as follows:

(1) Obtain an inventory reconciliation analysis from the gasoline manufacturer for each gasoline type produced at each facility (e.g., RFG, CG, RBOB, CBOB), including the inventory at the beginning and end of the compliance period and inventory records (e.g., receipts, production volumes, shipments, transfers, and gain/loss).

(2) Foot and cross-foot the volumes by gasoline type.

(3) Compare the beginning and ending inventory to the inventory records for each gasoline type and report any variances.

(4) Report the total volume of each gasoline type.

(c) *Listing of gasoline tenders.* An auditor must review a listing of gasoline tenders as follows:

(1) Obtain a detailed listing of gasoline tenders from the gasoline manufacturer, by gasoline type.

(2) Foot the tender volumes by gasoline type.

(3) Compare the total volume from the tenders to the inventory reconciliation analysis obtained under paragraph (b) of this section for each gasoline type and report any variances.

(d) *Listing of gasoline batches.* An auditor must review a listing of gasoline batches as follows:

(1) Obtain the gasoline batch reports submitted by the gasoline manufacturer under subpart J of this part.

(2) Foot the batch volumes by gasoline type.

(3) Compare the total volume from the batch reports to the inventory reconciliation analysis obtained under paragraph (b) of this section for each gasoline type and report any variances.

(4) Report as a finding any batch with a reported value that does not meet a per-gallon standard in subpart C of this part.

(e) *Test methods.* An auditor must follow the procedures specified in § 1090.1845 to determine whether the gasoline manufacturer complies with the applicable quality control requirements specified in § 1090.1375.

(f) *Detailed testing of BOB tenders.* An auditor must review a detailed listing of BOB tenders as follows:

(1) Select a representative sample of BOB tenders from the listing of tenders obtained under paragraph (c) of this section.

(2) Obtain the associated PTD for each selected tender.

(3) Using a unique identifier, confirm that the correct PTDs are obtained for the selected tenders.

(4) Compare the volume on the listing for each selected tender to the associated PTD and report any exceptions.

(5) Confirm that the PTD associated with each selected tender contains all the applicable language required under subpart L of this part and report any exceptions.

(g) *Detailed testing of BOB batches.* An auditor must review a detailed listing of BOB batches as follows:

(1) Select a representative sample of BOB batches from the batch reports obtained under paragraph (d) of this section.

(2) Obtain the volume documentation and laboratory analysis for each selected batch.

(3) Compare the reported volume for each selected batch to the volume documentation and report any exceptions.

(4) Compare the reported properties for each selected batch to the laboratory analysis and report any exceptions.

(5) Compare the reported test methods used for each selected batch to the laboratory analysis and report any exceptions.

(6) Determine each oxygenate type and amount that was required for blending with each selected batch.

(7) Confirm that each oxygenate type and amount included in the BOB hand blend agrees with the gasoline manufacturer's blending instructions for

each selected batch and report any exceptions.

(8) Confirm that the gasoline manufacturer participates in the NFSP under § 1090.1405, if applicable.

(9)(i) For a blending manufacturer, confirm that the laboratory analysis includes test results for oxygenate content, if applicable, and distillation parameters (i.e., T10, T50, T90, final boiling point, and percent residue).

(ii) For a blending manufacturer not required to measure oxygenate content, confirm that records demonstrate that the PCG or blendstock contained no oxygenate, no oxygenate was added to the final gasoline batch, and the blending manufacturer did not account for oxygenate added downstream under § 1090.710.

(h) *Detailed testing of finished gasoline tenders.* An auditor must review a detailed listing of finished gasoline tenders as follows:

(1) Select a representative sample of finished gasoline tenders from the listing of tenders obtained under paragraph (c) of this section.

(2) Obtain the associated PTD for each selected tender.

(3) Using a unique identifier, confirm that the correct PTDs are obtained for the selected tenders.

(4) Compare the volume on the listing for each selected tender to the associated PTD and report any exceptions.

(5) Confirm that the PTD associated with each selected tender contains all the applicable language required under subpart L of this part and report any exceptions.

(i) *Detailed testing of finished gasoline batches.* An auditor must review a detailed listing of finished gasoline batches as follows:

(1) Select a representative sample of finished gasoline batches from the batch reports obtained under paragraph (d) of this section.

(2) Obtain the volume documentation and laboratory analysis for each selected batch.

(3) Compare the reported volume for each selected batch to the volume documentation and report any exceptions.

(4) Compare the reported properties for each selected batch to the laboratory analysis and report any exceptions.

(5) Compare the reported test methods used for each selected batch to the laboratory analysis and report any exceptions.

(6)(i) For a blending manufacturer, confirm that the laboratory analysis includes test results for oxygenate content, if applicable, and distillation parameters (i.e., T10, T50, T90, final boiling point, and percent residue).

(ii) For a blending manufacturer not required to measure oxygenate content, confirm that records demonstrate that the PCG or blendstock contained no oxygenate, no oxygenate was added to the final gasoline batch, and the blending manufacturer did not account for oxygenate added downstream under § 1090.710.

(j) *Detailed testing of blendstock batches.* In the case of adding blendstock to TGP or PCG under § 1090.1320(a)(2), an auditor must review a detailed listing of blendstock batches as follows:

(1) Select a representative sample of blendstock batches from the batch reports obtained under paragraph (d) of this section.

(2) Obtain the volume documentation and laboratory analysis for each selected batch.

(3) Compare the reported volume for each selected batch to the volume documentation and report any exceptions.

(4) Compare the reported properties for each selected batch to the laboratory analysis and report any exceptions.

(5) Compare the reported test methods used for each selected batch to the laboratory analysis and report any exceptions.

(6) For a blending manufacturer not required to measure oxygenate content, confirm that records demonstrate that the PCG or blendstock contained no oxygenate, no oxygenate was added to the final gasoline batch, and the blending manufacturer did not account for oxygenate added downstream under § 1090.710.

■ 119. Revise and republish § 1090.1815 to read as follows:

§ 1090.1815 General procedures for gasoline importers.

An auditor must perform the procedures specified in this section for a gasoline importer.

(a) *Registration and reports.* An auditor must review registration and reports for the importer as specified in § 1090.1810(a).

(b) *Listing of gasoline imports.* An auditor must review a listing of gasoline imports as follows:

(1) Obtain a detailed listing of gasoline imports from the importer, by gasoline type.

(2) Foot the import volumes from the importer by gasoline type.

(3) Obtain a detailed listing of gasoline imports directly from the third-party customs broker, by gasoline type.

(4) Foot the import volumes from the third-party customs broker by gasoline type.

(5) Compare the total volume from the listing of imports supplied by the

importer to the listing of imports supplied by the third-party customs broker for each gasoline type and report any variances.

(6) Report the total imported volume of each gasoline type.

(c) *Listing of gasoline batches.* An auditor must review a listing of gasoline batches as follows:

(1) Obtain the gasoline batch reports submitted by the importer under subpart J of this part.

(2) Foot the batch volumes by gasoline type.

(3) Compare the total volume from the batch reports to the listing of imports supplied by the importer under paragraph (b) of this section for each gasoline type and report any variances.

(4) Report as a finding any batch with a reported value that does not meet a per-gallon standard in subpart C of this part.

(d) *Test methods.* An auditor must follow the procedures specified in § 1090.1845 to determine whether the importer complies with the applicable quality control requirements specified in § 1090.1375.

(e) *Detailed testing of BOB imports.* An auditor must review a detailed listing of BOB imports as follows:

(1) Select a representative sample of BOB imports from the listing of imports supplied by the importer under paragraph (b) of this section.

(2) Obtain the associated U.S. Customs Entry Summary and PTD for each selected import.

(3) Using a unique identifier, confirm that the correct U.S. Customs Entry Summaries are obtained for the selected imports.

(4) Compare the volume and location the import arrived in the United States on the listing for each selected import to the associated U.S. Customs Entry Summary and report any exceptions.

(5) Using a unique identifier, confirm that the correct PTDs are obtained for the selected imports.

(6) Compare the volume on the listing for each selected import to the associated PTD and report any exceptions.

(7) Confirm that the PTD associated with each selected import contains all the applicable language required under subpart L of this part and report any exceptions.

(f) *Detailed testing of BOB batches.* An auditor must review a detailed listing of BOB batches as follows:

(1) Select a representative sample of BOB batches from the batch reports obtained under paragraph (c) of this section.

(2) Obtain the volume inspection report and laboratory analysis for each selected batch.

(3) Compare the reported volume for each selected batch to the volume inspection report and report any exceptions.

(4) Compare the reported properties for each selected batch to the laboratory analysis and report any exceptions.

(5) Compare the reported test methods used for each selected batch to the laboratory analysis and report any exceptions.

(6) Determine each oxygenate type and amount that was required for blending with each selected batch.

(7) Confirm that each oxygenate type and amount included in the BOB hand blend agrees with the importer's blending instructions for each selected batch and report any exceptions.

(8) Confirm that the importer participates in the NFSP under § 1090.1405, if applicable.

(g) *Detailed testing of finished gasoline imports.* An auditor must review a detailed listing of finished gasoline imports as follows:

(1) Select a representative sample of finished gasoline imports from the listing of imports supplied by the importer under paragraph (b) of this section.

(2) Obtain the associated U.S. Customs Entry Summary and PTD for each selected import.

(3) Using a unique identifier, confirm that the correct U.S. Customs Entry Summaries are obtained for the selected imports.

(4) Compare the volume and location the import arrived in the United States on the listing for each selected import to the associated U.S. Customs Entry Summary and report any exceptions.

(5) Using a unique identifier, confirm that the correct PTDs are obtained for the selected imports.

(6) Compare the volume on the listing for each selected import to the associated PTD and report any exceptions.

(7) Confirm that the PTD associated with each selected import contains all the applicable language required under subpart L of this part and report any exceptions.

(h) *Detailed testing of finished gasoline batches.* An auditor must review a detailed listing of finished gasoline batches as follows:

(1) Select a representative sample of finished gasoline batches from the batch reports obtained under paragraph (c) of this section.

(2) Obtain the volume inspection report and laboratory analysis for each selected batch.

(3) Compare the reported volume for each selected batch to the volume inspection report and report any exceptions.

(4) Compare the reported properties for each selected batch to the laboratory analysis and report any exceptions.

(5) Compare the reported test methods used for each selected batch to the laboratory analysis and report any exceptions.

(i) *Additional procedures for gasoline imported by rail or truck.* An auditor must perform the following additional procedures for an importer that imports gasoline into the United States by rail or truck under § 1090.1610:

(1)(i) Select a representative sample of gasoline batches from the batch reports obtained under paragraph (c) of this section.

(ii) Obtain the tank activity records for each selected batch from the party that supplied the gasoline to the importer.

(iii) Identify the point of sampling and testing associated with each selected batch in the tank activity records.

(iv) Confirm that the sampling and testing for each selected batch occurred after the most recent delivery into the supplier's storage tank and before transferring gasoline to the railcar or truck.

(2)(i) Obtain a detailed listing of the importer's quality assurance program sampling and testing results.

(ii) Determine whether the frequency of sampling and testing meets the requirements in § 1090.1610(a)(2) and report any discrepancies.

(iii)(A) Select a representative sample of gasoline batches from the sampling and testing results.

(B) Obtain the laboratory analysis for each selected batch.

(C) Determine whether the importer analyzed the test sample for each selected batch, and report as a finding any batch where the importer failed to perform the analysis using the methods specified in subpart N of this part.

(D) Obtain and review any terminal test results corresponding to the time of collecting the quality assurance test samples.

(E) Compare the terminal test results to the test results from the quality assurance program. Report as a finding any test result with a difference that is greater than the reproducibility of the applicable method specified in subpart N of this part.

■ 120. Revise and republish § 1090.1820 to read as follows:

§ 1090.1820 Additional procedures for GTAB.

In addition to any other procedure required under this subpart, an auditor must perform the procedures specified in this section for a gasoline manufacturer that imports GTAB under § 1090.1615.

(a) *Listing of GTAB imports.* An auditor must review a listing of GTAB imports as follows:

(1) Obtain a detailed listing of GTAB imports from the importer.

(2) Foot the import volumes from the importer.

(3) Obtain a detailed listing of GTAB imports directly from the third-party customs broker.

(4) Foot the import volumes from the third-party customs broker.

(5) Compare the total volume from the listing of imports supplied by the importer to the listing of imports supplied by the third-party customs broker and report any variances.

(6) Report the total imported volume of GTAB and the corresponding facilities at which the GTAB was blended.

(b) *Listing of GTAB batches.* An auditor must review a listing of GTAB batches as follows:

(1) Obtain the GTAB batch reports submitted by the importer under subpart J of this part.

(2) Foot the batch volumes.

(3) Compare the total volume from the batch reports to the listing of imports supplied by the importer under paragraph (a) of this section and report any variances.

(c) *Detailed testing of GTAB imports.* An auditor must review a detailed listing of GTAB imports as follows:

(1) Select a representative sample of GTAB imports from the listing of imports supplied by the importer under paragraph (a) of this section.

(2) Obtain the associated U.S. Customs Entry Summary for each selected import.

(3) Using a unique identifier, confirm that the correct U.S. Customs Entry Summaries are obtained for the selected imports.

(4) Compare the volume and location the import arrived in the United States on the listing for each selected import to the associated U.S. Customs Entry Summary and report any exceptions.

(d) *Detailed testing of GTAB batches.* An auditor must review a detailed listing of GTAB batches as follows:

(1) Select a representative sample of GTAB batches from the batch reports obtained under paragraph (b) of this section.

(2) Obtain the volume inspection report for each selected batch.

(3) Compare the reported volume for each selected batch to the volume inspection report and report any exceptions.

(e) *GTAB tracing.* An auditor must trace and review the movement of GTAB from importation to gasoline production as follows:

(1) Compare the total volume from the batch reports obtained under paragraph (b) of this section to the inventory reconciliation analysis obtained under § 1090.1810(b).

(2)(i) Obtain tank activity records that describe the movement of each selected batch under paragraph (d) of this section from importation to gasoline production.

(ii) Identify each selected batch in the tank activity records and trace each selected batch to subsequent reported batches of BOB or finished gasoline and report any exceptions.

(iii) Match the location of the facility where gasoline was produced from each selected batch to the location where each selected batch arrived in the United States, or to the facility directly receiving the selected batch from the import facility.

(iv) Determine the status of the tank(s) before receiving each selected batch (e.g., empty tank, tank containing blendstock, tank containing GTAB, tank containing PCG).

(v) If the tank(s) contained PCG before receiving the selected batch, take the following additional steps:

(A) Obtain and review a copy of the documented tank mixing procedures.

(B) Determine the volume and properties of the tank bottom that was PCG before adding GTAB.

(C) Confirm that the gasoline manufacturer determined the volume and properties of the BOB or finished gasoline produced using GTAB by excluding the volume and properties of any PCG, and that the gasoline manufacturer separately reported the PCG volume and properties under subpart J of this part and report any discrepancies.

■ 121. Revise and republish § 1090.1825 to read as follows:

§ 1090.1825 Additional procedures for PCG used to produce gasoline.

In addition to any other procedure required under this subpart, an auditor must perform the procedures specified in this section for a gasoline manufacturer that produces gasoline from PCG under § 1090.1320.

(a) *Listing of PCG batches.* An auditor must review a listing of PCG batches as follows:

(1) Obtain the PCG batch reports submitted by the gasoline manufacturer under subpart J of this part.

(2) Foot the batch volumes.

(3) Compare the total volume from the batch reports to the inventory reconciliation analysis obtained under § 1090.1810(b) and report any variances.

(b) *Detailed testing of PCG batches.* An auditor must review a detailed listing of PCG batches as follows:

(1) Select a representative sample of PCG batches from the batch reports obtained under paragraph (a) of this section.

(2) Obtain the volume documentation, laboratory analysis, associated PTD, and tank activity records for each selected batch.

(3) Identify each selected batch in the tank activity records and trace each selected batch to subsequent reported batches of BOB or finished gasoline and report any exceptions.

(4) For each selected batch, report as a finding any instance where the reported volume was adjusted from the original receipt volume, such as for exported PCG.

(5) Compare the reported volume for each selected batch to the volume documentation and report any exceptions.

(6) Compare the reported gasoline type for each selected batch to the associated PTD and report any exceptions.

(7) Compare the reported properties for each selected batch to the laboratory analysis and report any exceptions.

(8) Compare the reported test methods used for each selected batch to the laboratory analysis and report any exceptions.

■ 122. Revise and republish § 1090.1830 to read as follows:

§ 1090.1830 Alternative procedures for certified butane blenders.

An auditor must perform the procedures specified in this section instead of or in addition to the applicable procedures in § 1090.1810 for a certified butane blender that blends certified butane into PCG under § 1090.1320(b).

(a) *Registration and reports.* An auditor must review registration and reports as follows:

(1) Obtain copies of the certified butane blender's registration information submitted under subpart I of this part and all reports submitted by the certified butane blender under subpart J of this part, including the batch reports for the certified butane received and blended.

(2) For each butane blending facility, confirm that the facility's registration is accurate based on the activities reported during the compliance period, including that the registration for the facility and any related updates were completed prior to conducting regulated activities at the facility and report any discrepancies.

(3) Confirm that the certified butane blender submitted all reports required under subpart J of this part for activities they performed during the compliance period and report any exceptions.

(4) Obtain a written statement from the certified butane blender's RCO that the submitted reports are complete and accurate.

(5) Report the name of any commercial computer program used to track any data required under this part.

(b) *Inventory reconciliation analysis.* An auditor must review an inventory reconciliation analysis as follows:

(1) Obtain an inventory reconciliation analysis from the certified butane blender for each butane blending facility related to all certified butane movements, including the inventory at the beginning and end of the compliance period, receipts, blending/production volumes, shipments, transfers, and gain/loss.

(2) Foot and cross-foot the volumes.

(3) Compare the beginning and ending inventory to the certified butane blender's inventory records and report any variances.

(4) Compare the total volume of certified butane received from the inventory reconciliation analysis to the batch reports obtained under paragraph (a) of this section and report any variances.

(5) Compare the total volume of certified butane blended from the inventory reconciliation analysis to the batch reports obtained under paragraph (a) of this section and report any variances.

(6) Report the total volume of certified butane received and blended.

(c) *Listing of certified butane receipts.* An auditor must review a listing of certified butane receipts as follows:

(1) Obtain a detailed listing of certified butane receipts for certified butane received at each butane blending facility from the certified butane blender.

(2) Foot the receipt volumes.

(3) Compare the total volume from the receipts to the batch reports obtained under paragraph (a) of this section and report any variances.

(d) *Detailed testing of certified butane batches.* An auditor must review a detailed listing of certified butane batches as follows:

(1) Select a representative sample of certified butane batches from the batch reports obtained under paragraph (a) of this section.

(2) Obtain the volume documentation and laboratory analysis for each selected batch.

(3) Compare the reported volume for each selected batch to the volume documentation and report any exceptions.

(4) Compare the reported properties for each selected batch to the laboratory analysis and report any exceptions.

(5) Compare the reported test methods used for each selected batch to the laboratory analysis and report any exceptions.

(6) Report as a finding any batch with a reported value that does not meet a standard for certified butane in subpart C of this part.

(e) *Quality assurance program review.* An auditor must review a certified butane blender's quality assurance program as follows:

(1) Obtain a detailed listing of the certified butane blender's quality assurance program sampling and testing results.

(2) Determine whether the frequency of sampling and testing meets the requirements in § 1090.1320(b)(4) and report any discrepancies.

■ 123. Amend § 1090.1835 by revising paragraph (a) to read as follows:

§ 1090.1835 Alternative procedures for certified pentane blenders.

(a) An auditor must perform the procedures specified in this section instead of or in addition to the applicable procedures in § 1090.1810 for a certified pentane blender that blends certified pentane into PCG under § 1090.1320(b).

* * * * *

■ 124. Revise and republish § 1090.1840 to read as follows:

§ 1090.1840 Additional procedures related to compliance with gasoline average standards.

In addition to any other procedure required under this subpart, an auditor must perform the procedures specified in this section for a gasoline manufacturer that complies with the standards in subpart C of this part using the procedures specified in subpart H of this part.

(a) *Annual compliance demonstration review.* An auditor must review annual compliance demonstrations as follows:

(1) Obtain the annual compliance reports for sulfur and benzene and associated batch reports submitted by the gasoline manufacturer under subpart J of this part.

(2)(i) For a gasoline refiner or gasoline blending manufacturer, compare the total volume of gasoline produced at each facility from the annual compliance report to the inventory reconciliation analysis obtained under § 1090.1810(b) and report any variances.

(ii) For a gasoline importer, compare the total volume of gasoline imported from the annual compliance report to the listing of imports supplied by the importer under § 1090.1815(b) and report any variances.

(3) For each facility, recalculate and report the following values:

(i) Compliance sulfur value, per § 1090.700(a)(1), and compliance benzene value, per § 1090.700(b)(1)(i).

(ii) Unadjusted average sulfur concentration, per § 1090.745(b), and average benzene concentration, per § 1090.700(b)(3).

(iii) Number of credits generated during the compliance period, or number of banked or traded credits needed to meet standards for the compliance period.

(iv) Number of credits from the preceding compliance period that are expired or otherwise no longer available for the compliance period being reviewed.

(v) Net average sulfur concentration, per § 1090.745(c), and net average benzene concentration, per § 1090.745(d).

(4) Compare the recalculated values under paragraph (a)(3) of this section to the reported values in the annual compliance reports and report any exceptions.

(5) Report whether the gasoline manufacturer had a deficit for both the compliance period being reviewed and the preceding compliance period.

(b) *Credit transaction review.* An auditor must review credit transactions as follows:

(1) Obtain the credit transaction reports submitted by the gasoline manufacturer under subpart J of this part and contracts or other information that documents all credit transfers. Also obtain records that support intracompany transfers.

(2) For each reported transaction, compare the supporting documentation with the credit transaction reports for the following elements and report any exceptions:

(i) Compliance period of creation.

(ii) Credit type (*i.e.*, sulfur or benzene) and number of times traded.

(iii) Quantity.

(iv) The name of the other company participating in the credit transfer.

(v) Transaction type.

(c) *Facility-level credit reconciliation.* Except as specified in paragraph (c)(4) of this section, an auditor must perform a facility-level credit reconciliation separately for each gasoline manufacturing facility as follows:

(1) Obtain the credits remaining or the credit deficit from the previous compliance period from the credit transaction reports obtained under paragraph (b) of this section.

(2) Calculate and report as a finding the net credits remaining at the end of the compliance period.

(3) Compare the ending balance of credits or credit deficit recalculated under paragraph (c)(2) of this section to

the corresponding value from the annual compliance report obtained under paragraph (a) of this section and report any variances.

(4) For an importer, the procedures of this paragraph (c) apply at the company level.

(d) *Company-level credit reconciliation.* An auditor must perform a company-level credit reconciliation as follows:

(1) Obtain a credit reconciliation listing company-wide credits aggregated by facility for the compliance period.

(2) Foot and cross-foot the credit quantities.

(3) Compare and report the beginning balance of credits, the ending balance of credits, the associated credit activity at the company level in accordance with the credit reconciliation listing, and the corresponding credit balances and activity submitted by the gasoline manufacturer under subpart J of this part.

(e) *Procedures for gasoline manufacturers that recertify BOB.* An auditor must perform the following procedures for a gasoline manufacturer that recertifies BOB under § 1090.740 and incurs a deficit:

(1) Perform the procedures specified in § 1090.1810(a) to review the gasoline manufacturer's registration and reports.

(2)(i) Obtain the recertified BOB batch reports submitted by the gasoline manufacturer under subpart J of this part.

(ii) Select a representative sample of recertified BOB batches from the batch reports.

(iii) Obtain supporting documentation (*e.g.*, PTDs, bills of lading, etc.) for each selected batch.

(iv) Compare the information on the batch reports to the supporting documentation and report any exceptions.

(v) Recalculate the deficits in accordance with the provisions of § 1090.740 and report any discrepancies.

(vi) Confirm that the deficits are included in the annual compliance report and report any exceptions.

■ 125. Revise and republish § 1090.1845 to read as follows:

§ 1090.1845 Procedures related to meeting performance-based measurement and statistical quality control for test methods.

(a) *General provisions.* (1) In addition to any other procedure required under this subpart, an auditor must perform the procedures specified in this section for a gasoline manufacturer.

(2) The auditor performing the procedures in this section must meet the laboratory experience requirements specified in § 1090.55(b)(2).

(3) In cases where the auditor employs, contracts, or subcontracts an external specialist, all the requirements in § 1090.55 apply to the external specialist. The auditor is responsible for overseeing the work of the specialist, consistent with applicable professional standards specified in § 1090.1800.

(4) In the case of quality control testing at a third-party laboratory, the auditor may perform a single attestation engagement on the third-party laboratory for multiple gasoline manufacturers if the auditor directly reviewed the information from the third-party laboratory. The third-party laboratory may also arrange for the auditor to perform a single attestation engagement on the third-party laboratory and make that available to gasoline manufacturers that have testing performed by the third-party laboratory.

(b) *Non-referee method qualification review.* For each test method used to measure a gasoline parameter as specified in a report submitted under subpart J of this part that is not one of the referee procedures listed in § 1090.1360(d), the auditor must review the following:

(1) Obtain supporting documentation showing that the laboratory has qualified the alternative test method by meeting the precision and accuracy criteria specified under § 1090.1365.

(2) Report a list of the alternative test methods used.

(3) Confirm that the gasoline manufacturer supplied the supporting documentation for each alternative test method and report any exceptions.

(4) If the auditor has previously reviewed supporting documentation under this paragraph (b) for an alternative test method at the laboratory, the auditor does not have to review the supporting documentation again.

(c) *Reference installation review.* For each reference installation used by the gasoline manufacturer during the compliance period, the auditor must review the following:

(1) Obtain supporting documentation demonstrating that the reference installation followed the qualification procedures specified in § 1090.1370(c)(1) and (2) and the quality control procedures specified in § 1090.1370(c)(3).

(2) Confirm that the laboratory completed the qualification procedures and report any exceptions.

(d) *Instrument control review.* For each test instrument used to measure gasoline parameters for batches selected as part of a representative sample under § 1090.1810, the auditor must review whether test instruments were in control as follows:

(1) Obtain a listing from the laboratory of the instruments and period when the instruments were used to measure gasoline parameters during the compliance period for batches selected as part of the representative sample under § 1090.1810.

(2) Obtain statistical quality assurance data and control charts demonstrating ongoing quality testing to meet the accuracy and precision requirements specified in § 1090.1375 or 40 CFR 80.47, as applicable.

(3) Confirm that the laboratory performed statistical quality assurance monitoring of its instruments under § 1090.1375 and report any exceptions.

(4) Report as a finding any test result that was excluded for being out of control and the laboratory did not have an assignable cause with appropriate supporting justification.

(5) Report as a finding the listing of instruments obtained under paragraph (d)(1) of this section and the compliance period when the instrument control review was completed.

■ 126. Revise and republish § 1090.1850 to read as follows:

§ 1090.1850 Procedures related to in-line blending waivers.

In addition to any other procedure required under this subpart, an auditor must perform the procedures specified in this section for a gasoline manufacturer that relies on an in-line blending waiver under § 1090.1315.

(a)(1) Obtain a copy of the gasoline manufacturer's in-line blending waiver submission and EPA's approval letter.

(2) Confirm that the sampling procedures and composite calculations conform to the specifications in § 1090.1315(a)(2).

(3) Review the gasoline manufacturer's procedure for defining a batch for compliance purposes. Review available test data demonstrating that the test results from in-line blending correctly characterize the fuel parameters for the designated batch.

(4) Confirm that the gasoline manufacturer corrected their operations because of previous audits, if applicable.

(5) Confirm that the equipment and procedures have not materially changed from the gasoline manufacturer's in-line blending waiver. In cases of material change in equipment or procedure, confirm that the gasoline manufacturer updated their in-line blending waiver and report any exceptions.

(6) Perform any additional procedures unique to the blending operation, as specified in the in-line blending waiver, and report any findings, variances, or exceptions, as applicable.

(7) Confirm that the gasoline manufacturer has complied with all provisions related to their in-line blending waiver and report any exceptions.

(b)(1) Obtain test data, including head, middle, and tail results, for each batch produced under the gasoline manufacturer's in-line blending waiver.

(2) Review the alternative sampling plan to meet requirements to test head, middle, and tail samples for small batches under § 1090.1315(a)(9).

(3) Report as a finding any instance where only a single sample was taken for a small batch involving more than 8 hours of blending or more than 1 million gallons of fuel.

(4) Report as a finding any instance where two samples were unevenly distributed for a small batch or where only two samples were taken for a small batch involving more than 16 hours of blending or up to 2 million gallons of fuel.

(5) Determine and report the percentage of in-line blending batches where the gasoline manufacturer failed to perform the required head, middle, and tail samples due to unforeseen circumstances. Report as a finding if this percentage is greater than 10 percent of in-line blending batches for the calendar year.

(6) Determine and report each instance where a contingency plan for alternative sampling was utilized under § 1090.1315(a)(12).

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion

in today's **List of Public Laws**.

Last List August 1, 2024

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly

enacted public laws. To subscribe, go to https://portalguard.gsa.gov/__layouts/PG/register.aspx.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
