The CFPB also received comments about whether data providers are furnishers under the FCRA. The CFPB would not consider data providers under this final rule to be furnishers solely by virtue of permitting data access pursuant to an authorization that is consistent with the final rule. This is the case even assuming data are provided to a data aggregator that qualifies as a consumer reporting agency. In these unique circumstances, the consumer, and not the data provider, would be the party that is furnishing data to the consumer reporting agency. This is the case because of a particular combination of circumstances, including that the data are only shared with the aggregator after the data provider is asked to do so by the consumer; the data are shared pursuant to a written authorization designed to ensure that the consumer has meaningful control of the uses of the specific data that are shared; the data are further protected by use restrictions to ensure they continue to be used for the benefit of the consumer; and the data provider is not exercising its own agency or control or benefiting from the arrangement, but rather is simply

[37] The CFPB assumes commenters were contemplating an FCRA rulemaking with a scope similar to what was described in the CFPB's FCRA 2023 SBREFA Outline, which included proposals under consideration related to data broker activities and medical debt information. *See* Consumer Fin. Prot. Bureau, *Small Business Advisory Review Panel for Consumer Reporting Rulemaking Outline of Proposals and Alternatives Under Consideration* (Sept. 15, 2023), *https://files.consumerfinance.gov/f/documents/cfpb_consumer-reporting-rule-sbrefa_outline-of-proposals.pdf.*

[38] *See* 15 U.S.C. 1681a(f) (defining consumer reporting agency).

[39] *See* 15 U.S.C. 1681b (identifying permissible purposes).

facilitating the consumer's decision to furnish.[40]

The CFPB received comments seeking clarification about whether data aggregators are consumer reporting agencies under the FCRA. However, this final rule does not cause data aggregators to incur legal liability under the FCRA that they would not otherwise assume through their ordinary operations. Addressing this topic is not necessary to finalize this rulemaking because whether a data aggregator is a consumer reporting agency under the FCRA requires a fact-specific inquiry of considerations beyond the scope of this final rule. Data aggregators may engage in a variety of activities and have multiple business models, and whether a data aggregator is a consumer reporting agency will depend on the satisfaction of all components of the statutory definition in the FCRA—a determination not affected by this final rule.

The CFPB disagrees that the sequencing of the Personal Financial Data Rights and FCRA rulemakings adversely impacted the public's ability to comment on the Personal Financial Data Rights proposed rule. After issuing the Personal Financial Data Rights proposed rule, the CFPB published a proposed rule regarding medical information under the FCRA. *See* 89 FR 51682 (June 18, 2024) (Medical Debt Proposed Rule). The Medical Debt Proposed Rule would remove a regulatory exception in Regulation V from the limitation in the FCRA on creditors obtaining or using information on medical debts for credit eligibility determinations and would limit the circumstances under which consumer reporting agencies are permitted to furnish consumer reports containing medical debt information to creditors when making credit eligibility determinations. The CFPB is also engaged in a rulemaking focused on data broker activities (Data Broker Rulemaking).

With respect to the sequencing of the Personal Financial Data Rights and the Medical Debt and Data Broker rulemakings, the fact that this final rule does not change what a person would need to do to comply with its existing obligations under the FCRA means that completing the Medical Debt and Data Broker rulemakings is not necessary to finalize this rulemaking. The CFPB will consider feedback received in the course of the Medical Debt and Data Broker rulemakings, evaluate the further steps it may take in those rulemakings, and will respond to comments as appropriate.

The CFPB acknowledges that the potential applicability of the FCRA to uses of covered data under the final rule presents operational complexity, and the CFPB is taking steps to coordinate the final rule with the ongoing FCRA rulemakings. As described in part IV.A.5, the CFPB is substantially revising the compliance deadlines for data providers under the final rule. The CFPB has determined that the extension of the compliance deadlines strikes the appropriate balance between carrying out the objectives of the statute while also providing an entity covered by the final rule with more time to work through these operational challenges and understand the entity's compliance obligations under the final rule in light of the FCRA.

Gramm-Leach-Bliley Act and Regulation P

A few commenters addressed the general applicability of the GLBA and Regulation P, 12 CFR part 1016. Several commenters asked for clarity about how financial institutions should comply when data are subject to both the GLBA and the Personal Financial Data Rights rule. For example, a bank commenter and a bank trade association commenter asked which use limitation standard would apply. A third party commenter suggested that the CFPB rely on existing authorities and not impose new regulations on the collection, use, and retention of covered data where the collection, use, and retention of the data may be addressed by other laws, including the GLBA. A research institute commenter asserted that consumers might be confused if they received multiple disclosures.

Response to Comments

The CFPB has determined that the final rule does not affect a person's obligations or duties under the GLBA. In addition, the CFPB has determined that the final rule is not inconsistent with the GLBA or Regulation P. As with the FCRA, some commenters sought clarification about how a person would comply when data are subject to the GLBA and CFPA section 1033, including whether the limitations on collection, use, and retention of data under the final rule would apply where such limitations are not imposed under the GLBA and Regulation P. While the GLBA and Regulation P may permit some uses of information that may not be permitted under the final rule, compliance with the final rule does not require a person to violate the GLBA or Regulation P. Moreover, the CFPB expects that a person covered by the final rule is experienced with managing the respective requirements of applicable State and Federal laws, including the implementation of overlapping disclosure requirements.

Other commenters raised broader issues. For example, a data aggregator commenter suggested that the CFPB should encourage Congress to amend GLBA or pass a Federal data privacy law. This commenter also suggested that the CFPB undertake a GLBA rulemaking. These comments are outside the scope of this rulemaking.

The CFPB declines to rely on existing legal frameworks, including the GLBA and Regulation P, to regulate consumer privacy. The purposes and objectives of CFPA section 1033, which are described in part III.A, differ in certain respects from the purposes and objectives of other laws (such as the GLBA). The requirements set forth in the final rule are better suited to the open banking context, and could not be substituted by applying existing authorities to consumer-authorized access of covered data.

Comments addressing the GLBA in relation to a specific proposed provision, such as comments recommending the final rule adopt Regulation P's privacy protections for third parties, are addressed in part IV.C and D.4.

CFPA Section 1034(c)

Section 1034(c) of the CFPA generally requires large financial institutions to comply with consumer requests for information concerning their accounts in a timely manner, subject to certain statutory exceptions.[41] In October 2023, prior to the proposal, the CFPB issued an advisory opinion on CFPA section 1034(c) that interprets this provision for the purpose of highlighting the obligations it imposes upon large financial institutions.[42] One commenter asked the CFPB to clarify the extent to which the scope of data covered by CFPA section 1033 and by the CFPA section 1034(c) advisory opinion overlap, and how that may impact obligations for data providers.

CFPA sections 1033(b) and 1034(c)(2) both generally apply to ''information in the control or possession'' of a covered

[40] *See, e.g.,* 12 CFR 1022.41(c)(3) (Under the Furnisher Rule in Regulation V, when the consumer furnishes information to a CRA about themselves, the consumer is not considered a ''furnisher.'').

[41] Specifically, CFPA section 1034(c) applies to insured depository institutions (including credit unions) that offer or provide consumer financial products or services and that have total assets of more than $10 billion, as well as their affiliates.

[42] Consumer Fin. Prot. Bureau, *Consumer Information Requests to Large Banks and Credit Unions,* 88 FR 71279 (Oct. 16, 2023).

person ''concerning the consumer financial product or service that the consumer obtained from such covered person.'' However, the statutes differ in several respects, including the types of covered persons subject to, the exceptions to information covered by, and the form in which information must be provided pursuant to the statutes.

The statutes impose separate obligations on large depository institutions (including credit unions), and how the statutes impact institutions' obligations will depend on the facts.[43] As noted in the advisory opinion:

> [S]ection 1033 governs consumer authorized third-party access to data made available in electronic form in connection with third-party provision of other products or services—including for example, the provision of a potentially competing account offering. This is why, for example, section 1033 is limited to data available in the normal course, and why section 1033 requires data to be 'made available . . . in electronic form.'[44]

See also part IV.C regarding a comparison between CFPA sections 1034(c) and 1033 with respect to the final rule's prohibition on fees for data access.

5. Other Comments

A number of commenters sought information on how the CFPB will conduct oversight of third parties. Commenters stated that many authorized third parties are outside the CFPB's enforcement or supervisory jurisdiction, and asserted that data aggregators pose relatively greater risks to consumers than authorized third parties. Some commenters also asked whether the CFPB would consider complaints from industry participants when setting supervision and enforcement priorities, and asked that the CFPB encourage consumers to submit complaints to its consumer complaint program.[45] Several commenters sought information on how the CFPB would provide guidance after the final rule is issued. In addition, a consumer advocate recommended that the CFPB engage in a consumer education campaign to inform consumers of their rights under the rule. The commenter explained that improved consumer understanding of consumer-authorized data sharing would increase consumer confidence in sharing data and protect them from bad actors.

SBA Advocacy requested that the CFPB determine whether the final rule is necessary in light of current State law (citing the California Consumer Privacy Act as an example) and whether the final rule conflicts with State laws. Other commenters questioned whether the CFPB had taken proper account of international open banking regimes in developing the proposal.

With respect to questions about how the CFPB intends to enforce and supervise for the requirements that apply to third parties, § 1001.2(b) of the final rule provides additional assurance that financial data processing by third parties, among others, is subject to the CFPA. This includes enforcement and, where appropriate, supervision, by the CFPB. In addition, the CFPB and FTC coordinate law enforcement activities regarding the offering or provision of consumer financial products and services by covered persons within the FTC's jurisdiction under the FTC Act, including conducting joint investigations where appropriate, to minimize duplication of efforts and burden on FTC-covered industry participants. This may include coordination on enforcement activities regarding the CFPA prohibition on unfair, deceptive, or abusive acts or practices and the FTC Safeguards Rule. The CFPB also coordinates with State attorneys general and State regulators. With respect to questions about the role of consumer complaints in establishing supervision and enforcement priorities, the CFPB prioritizes supervisory and enforcement activity on the basis of risk, taking into account, among other factors, the size of each entity, the volume of its transactions involving consumer financial products or services, the size and risk presented by the markets in which it is a participant, the extent of relevant State oversight, and any field and market information that the CFPB has on the entity. Such field and market information can include, for example, information from complaints and any other information the CFPB has about risks to consumers and to markets posed by a particular entity. In response to comments advocating for CFPB supervision of third parties, including data aggregators, the CFPB's supervisory authority is defined by the CFPA. The CFPB agrees that supervision of data aggregators is important. Supervisory examinations over one or more data aggregators, including larger participants in the consumer reporting market, are scheduled or ongoing,[46] and the CFPB will continue to engage in this supervision as necessary.

With respect to guidance after the final rule is issued, the CFPB plans to make available a range of resources to assist with effective implementation of the rule, including a small entity compliance guide. The CFPB also has a regulatory support program that can provide assistance. With respect to comments about improving consumer awareness of their rights under this rule, the CFPB notes that the consumer protections in this rule are intended to ensure that consumers can access their own data and can authorize access by third parties that are acting on their behalf. For more discussion of consumer awareness of third party access, see part IV.D below. The CFPB intends to further consider how to increase consumer awareness of and confidence in authorized third party data access.

The CFPB has considered State law and international legal frameworks to inform the final rule's approach to data providers' obligations to make data available upon request and third parties' obligations to act on behalf of consumers in order to access such data. Several States impose obligations on businesses to make information available to consumers in a portable, structured format, where technologically feasible.[47] Several States also impose privacy obligations on businesses. However, these State laws differ in terms of their scope and substantive requirements. In addition, a number of States include exemptions for businesses or data covered by certain Federal consumer financial laws, like the GLBA.[48] The CFPB believes it is appropriate to carry out congressional intent to issue Federal regulations pursuant to CFPA section 1033, including the interoperability objectives of CFPA section 1033(d), by issuing requirements applicable nationwide to promote safe, secure, reliable, and competitive data access. The CFPB is not aware of conflicts between State law and the final rule. See parts VI and VII for further discussion of the impacts of State law.

As part of this rulemaking, the CFPB has considered international open banking models, as discussed in the proposed rule and further below. The CFPB's authority and policy approach

[43] As noted in the advisory opinion, the CFPB does not interpret section 1034(c) to preempt or otherwise supersede the requirements of other Federal or State laws and regulations designed to protect privacy and data security, including, for example, any restrictions that may be imposed in the CFPB's upcoming rule implementing section 1033. *See* 88 FR 71279, 71279 n.27 (Oct. 16, 2023).

[44] *See id.* at 71279 n.23.

[45] *See generally* Consumer Fin. Prot. Bureau, *Submit a complaint about a financial product or service, https://www.consumerfinance.gov/complaint/* (last visited Oct. 17, 2024).

[46] *See* Supervisory Highlights, Issue 30, Summer 2023, 88 FR 52131, 52142 (Aug. 7, 2023).

[47] *See, e.g.,* Cal. Consumer Privacy Act of 2018 section 1798.130(a)(3)(B)(i)–(iii).

[48] *See, e.g., id.* section 1798.145(e). *See also* SBREFA Outline at 46 n.50.

in this final rule are not identical to those of other jurisdictions. In particular, as discussed in part IV.3, IV.C.2, and elsewhere in part IV, the final rule does not require data providers to initiate payments, unlike some other open banking regimes. The final rule instead implements CFPA section 1033 with respect to a data provider's obligation to make available covered data to consumers and third parties authorized to access such data on their behalf. The CFPB has taken account of the experience of international jurisdictions in developing the final rule generally and as discussed in part IV.C.2 with respect to the prohibition on fees for third party access, part IV.C.3 with respect to commercially reasonable performance standards, and the final rule's approach to screen scraping, as discussed in part IV.D.1. The CFPB believes any differences between the approach of this final rule and those of other jurisdictions are appropriate in light of the particular market and regulatory frameworks applicable to the U.S. See parts VI and VII for further discussion of international jurisdictions.

A. Subpart A—General

1. Overview

Subpart A of the final rule establishes the coverage and terminology necessary to implement CFPA section 1033 for this rule, beginning with § 1033.101, which describes the authority, purpose, and organization of the regulation in part 1033. Subpart A defines the coverage of the final rule, sets forth tiered compliance dates, defines terms appearing throughout the regulatory text, and, as finalized in the Industry Standard-Setting Final Rule, sets forth criteria for recognized standard setters.

2. Authority, Purpose, and Organization (§ 1033.101)

In the proposed rule, the CFPB proposed § 1033.101(a) to describe the CFPB's legal authority to issue the rule for the purposes described in proposed § 1033.101(b). Proposed § 1033.101(c) described the organization of the proposed rule within part 1033. The Industry Standard-Setting Final Rule finalized the language in proposed § 1033.101(a) and a more limited version of proposed § 1033.101(b) and (c), to reflect the limited purpose and organization of the Industry Standard-Setting Final Rule. The CFPB did not receive comment on the proposed rule's proposed language in § 1033.101.

In this final rule, the CFPB is not making changes to the legal authority language in § 1033.101(a) that was finalized by the Industry Standard-Setting Final Rule. The CFPB is amending the language finalized by the Industry Standard-Setting Final Rule at § 1033.101(b) and (c), as originally proposed by the proposed rule, to reflect the purpose and organization of this final rule. Final § 1033.101(c) also refers to the appendix containing standard setter recognition procedures that was finalized as part of the Industry Standard-Setting Final Rule. Other than with respect to § 1033.101, the final rule published in this **Federal Register** document does not amend any of the provisions of the Industry Standard-Setting Final Rule. The regulatory text published in this **Federal Register** document restates the regulatory text finalized in the Industry Standard-Setting Final Rule (other than with respect to § 1033.101) for clarity and ease of reading.

3. Coverage of Data Providers (§ 1033.111(a) Through (c))

Proposal

Section 1033(a) applies to ''covered persons,'' as defined in the CFPA. In the proposal, the CFPB explained its intent to implement the broad coverage of CFPA section 1033 through this and supplemental rulemaking. For this first rule to implement coverage and other substantive provisions of CFPA section 1033(a), the CFPB proposed to define a subset of covered persons that would be required to make data available with respect to certain consumer financial products or services: Regulation E asset accounts, Regulation Z credit cards, and products or services that facilitate payments from a Regulation E account or a Regulation Z credit card. The CFPB explained that the last of these categories would clarify that the proposed rule would cover all consumer-facing entities involved in facilitating Regulation E account and Regulation Z credit card transactions.

In the proposed rule, the CFPB discussed how payment data from these products and services support common beneficial consumer use cases today, including transaction-based underwriting and payment initiation. Specifically, the CFPB proposed in § 1033.111(b) to define covered consumer financial product or service to mean (1) a Regulation E account, a defined term that would have the same meaning as defined in 12 CFR 1005.2(b); (2) a Regulation Z credit card, a defined term that would have the same meaning as defined in 12 CFR 1026.2(a)(15)(i); and (3) the facilitation of payments from a Regulation E account or Regulation Z credit card. The CFPB proposed in § 1033.111(c) to define data provider to mean a covered person, as defined in 12 U.S.C. 5481(6), that is (1) a Regulation E financial institution, as defined in 12 CFR 1005.2(i); (2) a Regulation Z card issuer, as defined in 12 CFR 1026.2(a)(7); or (3) any other person that controls or possesses information concerning a covered consumer financial product or service the consumer obtained from that person. In example 1 to § 1033.111(c), the CFPB proposed to provide an example that a digital wallet provider is a data provider. The CFPB requested comment on the proposed definitions.

The proposed rule also explained that the CFPB was considering adding EBT-related data to the final rule, or reaching EBT cards in a subsequent rulemaking. State and local administered needs-tested benefits are exempt from EFTA coverage by statute. When distributed electronically, needs-based benefits established under State or local law or administered by a State or local agency are primarily issued to consumers via EBT cards. EBT-related data are mainly accessed directly by the consumer through private entities that have contracted with State or local governments that administer programs for Federal Government agencies. The CFPB requested comment on whether the most appropriate way to solve issues related to EBT data accessed directly by the consumer is through section 1033 of the CFPA, and whether it should do so as part of this first rulemaking related to payments data or a subsequent rule under CFPA section 1033. The CFPB also requested comment on third party practices related to consumer-authorized EBT data, and the benefits and drawbacks of enabling third party access to EBT-related data, including with respect to data security.

Comments

Many commenters, including third parties and consumer advocates, stated that the proposed coverage was too narrow. Advocated additions included all covered persons and financial products and services under the CFPA, all Regulation Z creditors (such as mortgage, auto, and payday lenders), payroll providers, holders of tax records, electronic bill presentment providers, investment products, retirement accounts, and small business lenders. Some third party commenters asserted that data providers will otherwise restrict or fail to offer access to these data. One bank data provider commenter stated that the narrow scope of coverage could cause consumer confusion. A non-bank data provider that also acts as a third party stated that

coverage should be broader because much or all of the covered data are already made available by banks today.

Conversely, many data provider commenters requested narrower coverage, and that the CFPB clarify the rule's applicability, particularly with regard to pass-through payments and payment facilitation providers. Some commenters asked for specific exclusions for products or entities that they asserted are excluded from the CFPB's authority under the CFPA, such as corporate credit cards and merchants. Several third party and trade association commenters asked the CFPB to clarify that the rule does not cover other entities that initiate payments on the payee's behalf, such as embedded payment service providers that provide payment processing services exclusively for merchants, third party marketplaces operated prominently in the name of their affiliate company, and loan servicers. One non-bank data provider that also acts as a third party asked the CFPB to exclude online marketplaces and ride sharing apps. Two data provider trade associations asked the CFPB to exclude inactive or closed accounts.

Two trade associations commenting on the CFPB's TILA interpretive rule regarding credit products marketed as BNPL,[49] along with a provider of BNPL products, stated that the Personal Financial Data Rights rule should not apply to BNPL providers because they lacked notice that such providers are card issuers under Regulation Z and that the proposal did not adequately account for the impact on BNPL providers. A third party trade association supported coverage of BNPL providers as data providers, explaining in a comment on the CFPB's TILA interpretative rule that it supports the consumer right to share their balance and transaction information for any and all of their credit accounts. A few bank data provider trade associations commenting on the TILA interpretive rule recommended that the CFPB clarify that nonbank BNPL providers are held to the same standards as banks with regard to consumer protections generally.

With regards to pass-through payments, bank data providers, a large nondepository data provider, and trades representing bank and nondepository data providers stated that data related to those products would be duplicative, introduce errors, provide limited consumer benefit relative to the increased burden on digital wallet providers, and conflict with their belief that the account-holding bank should control access to that data. One data provider trade association asserted that data providers should only be permitted to share data that is unique to them. The commenter stated that banks cannot conduct due diligence on the authorized third party that is requesting data access through the digital wallet provider, and this could lead to consumer confusion and other risks. The commenter asserted that these digital wallets do not possess data pertaining to a consumer financial product or service that the consumer obtained from the data provider. Some bank data provider commenters cited security and liability concerns about allowing pass-through payment providers to share data with third parties, rather than requiring the third parties to go to the underlying bank.

A few commenters stated that the proposal was unclear as to whether any entity that controls or possesses covered data would have obligations under the rule, even if a consumer did not obtain a covered consumer financial product or service from the data provider and even if the data do not concern a covered consumer financial product or service. A few trade associations and other commenters asserted that the CFPB needed to clarify whether point of sale terminal providers and other payment service providers are covered under § 1033.111(c). One bank trade association asked the CFPB to clarify that the obligation to make available covered data would not apply to consumers who are domiciled outside of the U.S., stating that without this clarification foreign requirements for data protection and privacy will be triggered, impacting data handling and protection that vary widely across countries.

The CFPB received many comments from individual consumers, consumer groups, other nonprofit organizations, third parties, and Members of Congress in support of covering EBT providers in this stage of the rulemaking. Their reasons were similar to those raised during the SBREFA process, including how consumers would benefit from increased access to their EBT data and how such access could help identify fraud. Some of these commenters also asserted that excluding EBT providers from this rulemaking could worsen existing issues related to data access and service. A few commenters supported a subsequent rulemaking to cover EBT providers if they are not covered under this rule.

Some commenters, including industry trade associations and a Member of Congress, cautioned against including EBT providers in this or any future rulemaking. Although these commenters raised concerns the CFPB considered in the proposed rule, like the potential for fraud to increase and the lack of EFTA protections, some commenters also asserted that the CFPB is not the right agency to address EBT data access. These commenters asserted that Congress specifically excluded EBT from being regulated as demand deposit accounts and instead largely granted authority to regulate EBT to USDA. A payments trade association commenter cautioned that agencies that administer EBT will not have contractual relationships with entities involved with third party access and therefore these entities will not need to comply with certain restrictions put in place by the governing agencies.

Final Rule

For the reasons discussed herein, the CFPB is finalizing § 1033.111(a) through (c) as proposed, with some clarifying changes to the definition of covered consumer financial product or service in § 1033.111(b)(3). This facilitation of payments prong in § 1033.111(b)(3) is finalized to include facilitation of payments from a Regulation E account or Regulation Z credit card, excluding products or services that merely facilitate first party payments. For purposes of part 1033, a first party payment is a transfer initiated by the payee or an agent acting on behalf of the underlying payee. First party payments include payments initiated by loan servicers.

As in the proposal, § 1033.111(c) defines data provider to mean a covered person, as defined in 12 U.S.C. 5481(6), that is: (1) A financial institution, as defined in Regulation E, 12 CFR 1005.2(i); (2) A card issuer, as defined in Regulation Z, 12 CFR 1026.2(a)(7); or (3) Any other person that controls or possesses information concerning a covered consumer financial product or service that the consumer obtained from that person. Example 1 to paragraph (c) states that a digital wallet provider is a data provider.

Payment data from these products and services support common beneficial consumer use cases today, including transaction-based underwriting, payments, deposit account switching, and comparison shopping for bank and credit card accounts. Data from checking accounts, savings accounts, and other Regulation E accounts allow a consumer or third party to view a consumer's income, expenses, fees, and spending. Digital wallet providers hold similar valuable data that can provide a complete understanding of a consumer's

[49] *Truth in Lending (Regulation Z); Use of Digital User Accounts To Access Buy Now, Pay Later Loans,* 89 FR 47068 (May 31, 2024).

finances. Today, a digital wallet can initiate payments from multiple credit cards, prepaid accounts, and checking accounts. A digital wallet can facilitate payments from accounts that the digital wallet provider offers through depository institution partners, or from linked accounts issued by other institutions (sometimes referred to as pass-through payments). Regulation Z credit cards are increasingly used as payment devices for everyday expenses, and credit card transaction data have in some cases become interchangeable with Regulation E account transaction data. Given the foreign applicability provisions of Regulation E and Regulation Z, covered consumer financial products and services in this rule are limited to products and services obtained by consumers who reside in the U.S. See Regulation E comment 3(a)–3 and Regulation Z comment 1(c)–1 for a discussion of foreign applicability.

Covering Regulation E accounts, Regulation Z credit cards, and payment facilitation products and services leverage existing infrastructure for consumer-authorized data sharing, thus facilitating implementation. Data providers generally share these covered data on consumer interfaces today, and some share covered data with third parties. Given how consumers' payment data are commonly shared and can be used to access consumer funds or track household spending, it is appropriate to prioritize these data for greater protection under this rule. As discussed in part IV.C and D, the CFPB is also finalizing a number of measures to foster a safe and secure data access framework.

In addition, consumers benefit from being able to permission access to digital wallet pass-through data and the marginal burden on digital wallet providers is generally limited. Digital wallet providers and entities that refer to themselves as neobanks generally qualify as Regulation E financial institutions; some also may be Regulation Z card issuers. Digital wallet providers that facilitate pass-through payments typically also provide a funds-holding asset account or credit card, so would already be subject to the requirements of this rule, including the requirement to maintain interfaces under § 1033.301. The few digital wallet providers who do not yet offer these products in conjunction with their pass-through products tend to be very large, sophisticated technology companies that commonly access and use data as third parties. Although digital wallet providers today typically qualify as Regulation E financial institutions under § 1033.111(c)(1), including § 1033.111(c)(3) provides clarity that all digital wallet providers are data providers and ensures coverage as payment products evolve. This provision makes clear that the rule covers consumer-facing entities involved in facilitating Regulation E account and Regulation Z credit card transactions, except, as discussed below, products or services that merely facilitate first party payments. Given that digital wallet providers—including pass-through providers—typically are Regulation E financial institutions, the marginal compliance burden of including the payment facilitation prong is limited.

Moreover, the potential consumer benefit is clear. Digital wallets are ubiquitous today, with both remote and point of sale acceptance. Some companies that originated as non-financial providers, such as search engines, social media companies, and retail merchants, are steadily offering asset accounts and credit cards themselves—sometimes leveraging data they have obtained from depository institutions for underwriting or other purposes. As consumers increasingly connect multiple financial products to these non-bank providers, and these providers increasingly offer asset accounts and credit cards in conjunction with other services, non-bank providers may control or possess different or more robust covered data than the underlying depository institution. Consumers may also find it more convenient to permission access through the digital wallet provider or other payment facilitation provider, and may expect to be able to do so. Accordingly, requiring digital wallet data providers to make available data for both pass through and non-pass through accounts may best align the rule with consumer expectations, ease sharing for consumers who connect multiple payment methods to their digital wallets or otherwise frequently use their digital wallets, and provide consumers with access to more robust payment transaction data. The CFPB agrees with commenters that pass-through data providers should not be required to make available information to initiate payment to or from a Regulation E account under § 1033.211(c); changes to the covered data provision are discussed below in connection with subpart B.

The CFPB is clarifying the definition of covered consumer financial product or service in § 1033.111(b)(3) to exclude situations where an entity is solely facilitating first party payments, such as a merchant or mortgage loan servicer initiating a payment from the consumer's account to itself. First party payments are distinct from payment facilitation products. Accordingly, the CFPB is finalizing § 1033.111(b)(3) with language to explicitly exclude products or services that merely facilitate first party payments. For purposes of this definition, a first party payment is a transfer initiated by the payee or an agent on behalf of the underlying payee. First party payments include payments initiated by a loan servicer.

Situations where an entity is merely initiating a payment to itself for a product or service it provided to the consumer would not be enough to qualify as a covered consumer financial product or service. For example, a mortgage servicer that merely initiates a payment to fulfill the consumer's mortgage obligation would not qualify as facilitation of payments under § 1033.111(b)(3), as the mortgage servicer is initiating a payment to itself or is otherwise acting an agent to the underlying mortgage holder. Similarly, an online merchant initiating a payment to itself for goods it sold directly to the consumer, or a utility company initiating payment to satisfy a consumer's electric bill, would not qualify as facilitation of payments under § 1033.111(b)(3). However, some first party payments continue to fall within the definition of covered consumer financial product or service, such as situations where the data provider is initiating a transfer to itself in conjunction with a product that facilitates payments to other payees, or the data provider is otherwise providing a Regulation E or Regulation Z account. For example, § 1033.111(b) includes a digital wallet provider initiating a transfer from an external bank account to the consumer's digital wallet held by that same provider, a digital wallet provider initiating a pass through transfer from the consumer's Regulation E or Regulation Z account to another payee that participates in the debit or credit card network, and a credit card provider initiating a credit card payment from the consumer's external bank account to itself.

As stated in § 1033.201(a)(1), a data provider's obligation to make available data is limited to covered data in the data provider's control or possession concerning a covered consumer financial product or service that the consumer obtained from the data provider, in an electronic form usable by consumers and authorized third parties. For clarity, the CFPB is adding language to § 1033.111(a) to reiterate that a data provider's obligations are limited to covered data concerning a covered consumer financial product or

service that the consumer obtained from the data provider.

With regard to excluding products that are not subject to the CFPB's authority, any such exclusions would be superfluous, potentially confusing, and create risk that they would be misused to undermine coverage of payment facilitation products that do fall within the CFPB's authority. The § 1033.111(b) definition of covered consumer financial product or service is expressly limited to a consumer financial product or service as defined in 12 U.S.C. 5481(5). The CFPB has decided not to add exclusions, such as an exclusion for online marketplaces that are not otherwise subject to the CFPB's authority, because that may create detrimental loopholes for products that also provide a payment facilitation or other Regulation E access device function. For example, an online marketplace may involve payments to the data provider for products or services sold by that same data provider, but also facilitate payments to other merchants.

The CFPB intends to implement CFPA section 1033 with respect to other covered persons and consumer financial products or services through future rulemaking. The CFPB declines to expand the scope of covered data and consumer financial products and services in this final rule. Prioritizing Regulation E accounts, Regulation Z credit cards, and payment facilitation products and services advances competition goals across a broader range of markets while addressing pressing consumer use cases and risks. The CFPB also has considered that the marginal risks to consumers of including these covered consumer financial products and services is limited by Regulation E and Regulation Z error protections applying to all the products covered by this final rule; in addition, most (if not all) such covered data are shared with third parties to some extent today. The CFPB has considered that EBT cards are exempt from EFTA coverage by statute, but that pursuant to the Consolidated Appropriations Act of 2023, the USDA has been directed to engage in a rulemaking and issue guidance on EBT card security practices. The Spring 2024 Unified Agenda shows that this USDA rulemaking is in the proposed rulemaking stage, indicating that completion of a final rule remains some period away.

In order to determine coverage, entities need to determine whether they control or possess covered data concerning a covered consumer financial product or service that the consumer obtained from that entity, and whether they otherwise meet the definition of data provider in § 1033.111(c). This coverage determination is the same for all entities, including those that in providing BNPL products may qualify as card issuers under Regulation Z. BNPL providers had sufficient notice of their potential inclusion in the rule because they received notice that the CFPB proposed to cover Regulation Z card issuers and credit cards under CFPA section 1033.

4. Coverage Threshold for Depository Institution Data Providers (§ 1033.111(d))

Proposal

In § 1033.111(d), the CFPB proposed to exclude from the requirements of this rule data providers that are depository institutions without a consumer interface. The CFPB noted that such institutions tend to be very small, may not have resources to support or maintain online or mobile banking systems, and may use a relationship banking model that provides a more personalized relationship with their customers. The CFPB also proposed to limit the exclusion to depository institutions, preliminarily determining that the complicating factors that exist for depository institutions are less likely to exist for nondepository institutions. The proposed rule also noted that nondepository institution data providers within the scope of the proposed rule tend to use business models built on the ability to innovate using technology and to move quickly to implement technological solutions. The CFPB sought comment on various issues, including whether different or additional criteria, such as an institution's asset size or activity level, should be taken into consideration when determining what depository institutions would be covered by the rule.

Comments Received

Though a few commenters stated that all institutions should be required to comply with the rule, the vast majority of those who commented on this provision stated that some institutions should not. Many credit union, bank, and credit union and bank trade associations commenters stated that the proposed exemption was too limited. Many of these commenters also stated that coverage should be based on asset size, instead of the presence of a consumer interface, and suggested thresholds ranging from $850 million to $10 billion in total assets. Others stated that number of deposit accounts or customers should be relevant to coverage, or that depository institutions under a certain size should be able to ''opt out'' of the rule's requirements. A few credit union trade association commenters and one credit union commenter stated that there should be tiered exemptions where different tiers of depository institutions would not need to comply with various requirements of the rule: data providers with no consumer interface should be completely excluded, depository institutions that meet the SBA definition of a small business should only be required to provide a consumer interface, and minimum technical specifications should not apply to developer interfaces of depository institutions holding less than $50 billion in assets.

Several nondepository entity trade association commenters and one technology service provider commenter stated that nondepository institutions that do not have digital banking should be exempt from the rule. One nondepository institution trade association commenter stated that there are many nondepository institutions that do not have a consumer interface, including debt collectors.

While one bank commenter stated that depository institutions that elect to eliminate their consumer interfaces after the rule's effective date should not remain subject to the rule, a nondepository entity trade association commenter stated that they should. One nondepository entity trade association commenter stated that depository institutions should be given a grace period to comply with the rule's requirements when establishing a consumer interface while another stated that they should not. Finally, SBA Advocacy stated that the CFPB should consider third party exemptions that will not compromise data security and privacy.

Final Rule

For the reasons discussed herein, the CFPB is finalizing § 1033.111(d) with modifications. Unlike the proposed rule, final § 1033.111(d) bases coverage on a depository institution data provider's total assets, not on the presence of a consumer interface. As in the proposed rule, all nondepository institution data providers are covered by the rule.

Final § 1033.111(d) states that the requirements of subparts B and C do not apply to data providers defined under § 1033.111(c)(1) through (3) that are depository institutions that hold total assets equal to or less than the SBA size standard for the data provider's appropriate NAICS code for commercial

banking, credit unions, savings institutions and other depository credit intermediation, or credit card issuing, as codified in 13 CFR 121.201. The current size standard for all the relevant NAICS codes is $850 million. Section 1033.111(d) also states that, if at any point, a depository institution that held total assets greater than that SBA size standard as of the final rule's effective date, subsequently holds total assets below that amount, the requirements of subparts B and C continue to apply. Section 1033.111(d)(1) provides information on how to determine the SBA standard based on specific NAICS codes. Section 1033.111(d)(2) explains that total assets held by a depository institution are determined by averaging the assets reported on its four preceding quarterly call report data submissions to the FFIEC or NCUA, as applicable, or its submissions to the appropriate oversight body to the extent it does not submit such reports to the FFIEC or NCUA. Relatedly, and as more fully discussed in the discussion of compliance dates, § 1033.121(c) addresses how to determine compliance dates for depository institutions that hold total assets at or below the SBA size standard but that subsequently cross that threshold.

Unlike the proposed rule, the final rule bases coverage on the total assets held by a depository institution data provider and provides those entities a reasonable amount of time to comply with the part's requirements upon reaching the coverage floor. Asset size is a more accurate proxy than the mere existence of a consumer interface to help approximate a depository institution's resources and ability to comply with the rule's requirements. An institution that may offer a basic consumer interface may nevertheless not possess the resources or technological sophistication to upgrade that interface and create a compliant developer interface. A depository institution's total asset size, however, provides information about an institution's size, sophistication, and relative resources to comply with the rule because an institution's size measured by assets will generally correlate with its resources. In addition, the CFPB does not have information to indicate that any depository institution data provider over the current $850 million size standard lacks a consumer interface.[50]

Under the final rule, to streamline compliance, the specified depository institution data providers are not subject to any requirement to make data available through an interface. However, most depository institution data providers with total assets at or below the current $850 million size standards already have some form of consumer interface, and the CFPB expects that such institutions will continue to provide their customers with that service. The CFPB also understands that many depository institution data providers with total assets at or below the current $850 million size standards make at least some covered data available to consumer-authorized third parties, and expects that such institutions will continue doing so, including by offering developer interfaces when the benefits of doing so are commensurate with the institution's resources.

As with the proposed rule, the final rule covers all nondepository institution data providers. Though a few commenters stated that nondepository institution data providers without consumer interfaces should not be covered by the rule's requirements, they did not offer grounds to rebut the proposed rule's determination that nondepository institution data providers lack the same complicating factors that exist for their depository institution counterparts. Nondepository institution data providers within the scope of the final rule tend to use business models built on the ability to innovate with respect to technology and move quickly to implement technological changes and solutions.

As explained, the final rule does not cover depository institution data providers that hold total assets below the SBA size standard for the specific NAICS code that encompasses each depository institution data provider subject to this rule. The size standard for each of the named NAICS codes, currently $850 million, is re-evaluated by the SBA at least once every five years. In theory, the size standards of the named NAICS codes could diverge during that re-evaluation. The CFPB has determined that, given the historical standards, the likelihood of that occurring is minimal.

The CFPB believes the SBA size standard is an appropriate threshold to determine depository institution data provider coverage at this time. Several credit union trade associations and a trade association of community banks stated that an $850 million threshold would address concerns about the costs of providing data access to third parties under the terms of the rule. In particular, a credit union trade association believed such a threshold would be appropriate to address concerns about the ability of smaller credit unions to remain competitive, noting that those below the threshold might discontinue services if they had to comply with the rule. As discussed further in part VI.E.1, many community banks, credit unions, and trade associations commented that they expect the costs for small depository institutions of providing required data access to be much higher than those estimated by the CFPB in the proposal. Though they did not provide additional data or information that would allow the CFPB to precisely update the cost estimates, the CFPB acknowledges that small depository institutions might face additional challenges in implementing the rule at this time. The CFPB believes that the SBA size standard is an appropriate metric to ensure the rule does not unduly burden entities that are not dominant in their field and may have difficulty competing under the rule without sacrificing products or services.

At least one bank trade association commenter recommended generally that the coverage threshold be $10 billion in total assets, although the commenter stated that if the threshold is not set at $10 billion, then an asset threshold of $850 million would be appropriate.[51] This commenter did not provide reasoning for this position, and based on other comments received, the CFPB believes depository institutions with assets above the SBA size standard in the final rule will not face the same types of constraints as those below. For example, a credit union trade association recommended that credit unions with assets between $850 million and $50 billion should be subject to the data provider requirements of the rule, with the exception of minimum technical performance requirements. As discussed in part IV.C.3, the CFPB has made the minimum response rate requirement in § 1033.311(c) more flexible relative to the proposal and has lengthened the compliance timelines for all data providers. Further, not covering depository institutions with total assets of $10 billion and under would not cover a large share of total accounts, at approximately 31 percent of covered accounts. In contrast, setting the threshold at depository institutions with more than $850 million in total assets

[50] If there were hypothetically such depository institutions, their number would be very small and creating an exemption solely for such institutions would add complexity to the regulatory regime and not be proportionate.

[51] The CFPB also received one comment from a software developer stating that, until an accreditation process has been developed, financial institutions with less than $10 billion in assets should not be required to comply with the rule.

excludes approximately 10 percent of covered accounts.

For now, in light of the reasons herein, the CFPB is not extending coverage to depository institutions with assets of $850 million or below. However, the CFPB anticipates that, as the process of building out systems capable of complying with the rule's requirements plays out and data providers, core providers, and other vendors work to streamline the resources and processes necessary to comply, the costs of compliance will go down, potentially making coverage for smaller depository institutions more appropriate. Relative to the alternative of a higher coverage threshold such as $10 billion in assets, covering a larger share of depository institution data providers with this rule—and, in particular, covering depository institution data providers that use the same vendors and core providers as smaller depository institutions—increases the likelihood that resources to facilitate third party access will be available for smaller depository institution data providers that seek to integrate them in the future. The CFPB will continue to monitor market conditions and engage with relevant vendors and other service providers to determine if changes to the rule's coverage are warranted.

Section 1033.111(d)(2) states that a depository institution data provider's total assets are calculated by averaging its assets reported on its four preceding quarterly call report submissions to the FFIEC or NCUA, as applicable. Averaging total assets over a year provides a more accurate financial picture than using the total assets at one point in time. Additionally, the SBA calculates whether a specific institution meets its size standards by averaging the assets reported on its four quarterly financial statements for the preceding year. *See* 13 CFR 121.201 n.8.

Section 1033.111(d)(3) outlines the process by which a depository institution data provider determines total assets when there is a merger or acquisition where the surviving depository institution does not have four quarterly call report submissions. The surviving depository institution shall use the combined assets reported on the quarterly call report submissions by all predecessor depository institutions for quarterly assets prior to the merger. For quarterly assets after the merger or acquisition, quarterly assets shall be determined by using the assets reported on the quarterly call report submissions by the surviving depository institution. Total assets shall be determined by using the average of the quarterly assets for the four preceding quarters, whether the quarterly assets are the combined assets of the predecessor depository institutions or from the surviving depository institution. The rule does not include explicit instructions on how newly formed depository institution data providers with no predecessor depository institutions determine total assets. The regulatory text is clear that four quarterly call report submissions are necessary to determine total assets and thus, a newly formed depository institution data provider with no predecessor depository institutions will determine total assets once it has four of its quarterly call report submissions available to make that determination.

As of the rule's effective date, depository institution data providers must determine their total assets by averaging their assets on the four preceding call report data submissions. If that total falls under the coverage threshold, the institution is not then subject to the rule's requirements, but it must continue to calculate total assets going forward based on the formula laid out in § 1033.111(d)(2) to determine if its assets have increased enough such that it becomes covered by the rule.[52]

The final rule does not allow depository institution data providers to fall out of coverage because their asset holdings dip from above to below the threshold. Once a depository institution data provider has become capable of building and maintaining data access in accordance with the rule's requirements, it will need to meet the data access requirements of the rule; ongoing costs of compliance will be minimal, even if their total assets held have diminished.

5. Compliance Dates (§ 1033.121)

Proposal

The CFPB proposed in § 1033.121 to stagger data provider compliance dates into four tiers, so as to ensure timely compliance based on asset size or revenue, depending on the type of data provider. A number of factors might affect how quickly a data provider could comply with the rule, including, for example, a data provider's size, relative technological sophistication, use of third party service providers to build and maintain software and hardware systems, and, in the case of many data providers, the existence of multiple legacy hardware and software systems that increase cost or otherwise impact their ability to layer on new technology. Nondepository institution data providers do not face these same obstacles. They do not have as many vendors and information technology systems that would need to be connected, and implementation could generally occur in-house. Thus, they could move faster to implement the rule's requirements. In preamble, the CFPB noted that data providers might need to transition third parties to developer interfaces in a staggered order; proposed § 1033.321 provided flexibility in that respect.

Subject to the limitations of proposed §§ 1033.321 and 1033.111(d), proposed § 1033.121 would have required data providers to make data access available by four compliance dates, all tied to publication of the final rule in the **Federal Register***:* (1) depository institutions with $500 billion in total assets and nondepository institutions that generate $10 billion in revenue in the preceding calendar year or that are projected to generate $10 billion in revenue in the current calendar year would have been required to comply approximately six months after **Federal Register** publication; (2) depository institutions with between $50 billion and $500 billion in total assets and nondepository institutions that generate less than $10 billion in the preceding calendar year and are projected to generate less than $10 billion in the current calendar year would have been required to comply approximately one year after **Federal Register** publication; (3) depository institutions with between $850 million and $50 billion in total assets would have been required to comply approximately 2.5 years after **Federal Register** publication; and (4) depository institutions with under $850 million in total assets would have been required to comply approximately four years after **Federal Register** publication.

The CFPB sought comment on a number of issues, including whether different or additional criteria should be taken into consideration when determining compliance dates, on the structure of each tier, and whether nondepository institutions should be included in all tiers. The CFPB also sought comment on whether the final rule should include language clarifying the time allowed to fully transition third parties to data access, so as to ensure that data providers do not impede timely third party access to an interface while also accounting for reasonable risk management.

[52] Section 1033.121(c) describes compliance dates for depository institution data providers that hold total assets less than the SBA size standard as of the effective date but subsequently cross that threshold.

Comments Received

Most commenters that addressed this section stated that a tiered implementation schedule was appropriate, while a few nondepository entity trade association, consumer advocate, and bank trade association and bank commenters stated that such implementation would incentivize data aggregators and third parties to prioritize and work with larger entities and would temporarily create gaps in consumer data access across the market. One consumer advocate commenter also stated that tiered compliance may inadvertently disadvantage smaller institutions because the current speed of digital transformation can benefit larger, more resourced providers who will have a head start on developing norms for interfaces while less resourced providers will have less of a say in how those interfaces are developed. A nondepository entity trade association and a research institute commenter suggested that the CFPB should allow transition time once an API is available to move access gradually to the API and provide for a transition period rather than final compliance dates. Commenters did not specify how the final rule should structure a transition period without final compliance dates. A data aggregator and a third party nondepository entity commenter also suggested that the final rule impose different compliance dates on different requirements in the final rule. One data aggregator commenter suggested specific API endpoints by which to set different deadlines for specific separate requirements.

Most commenters who addressed this section recommended that compliance dates account for the timeline for development of consensus standards (with some specific suggestions regarding standard file format and developer interface standardized format) and occur after the CFPB's recognition of a standard-setting body, occur after the issuance of a qualified industry standard, or some combination of the above. See the discussion of § 1033.311(b) in part IV.C.3 below regarding the timing of the issuance of consensus standards by recognized standard setters.

Though a consumer advocate and a couple third party nondepository commenters saw the proposed compliance dates as appropriate, the majority of commenters, including banks, credit unions, credit union and bank trade associations, and nondepository entity trade associations, on this section described them as too short. Commenters explained that data providers would need to work with third parties, taking care not to put existing consumer account connections at risk when migrating and onboarding third parties to compliant data access, and would also need to ensure compliance with other rules, including any FCRA rules issued by the CFPB. Bank, credit union, and bank and credit union trade association commenters also noted many other actions data providers would have to engage in to comply, including updating public-facing websites to meet disclosure requirements, generating and publishing performance metrics, ensuring data are provided in a standardized format, ensuring support for required data elements that are not currently shared, build new functionality pertaining to machine-readable files accessible for consumers, and managing new access duration requirements, among other actions. Credit union trade association commenters described the potential for a bottleneck in the proposed third tier because it would cover over 1,000 banks and credit unions, and requested an additional tier that would allow five years for implementation. One bank commenter stated that banks with less than $10 billion in total assets exclusively rely on third parties to provide digital banking, including bill payment portals, and core processing systems. One law firm commenter stated that nondepository institution data providers would have the most burden in complying because they are less likely to already have interfaces and policies in place to timely receive and respond to requests for data. Different commenters offered various time periods for how long compliance should be. Suggestions ranged from allowing an additional six to 18 months for all tiers, 24 months for the largest data providers, four to six years for small providers, and at least 10 years for all data providers.

Some bank, bank trade association, third party nondepository entity, and nondepository entity trade association commenters requested compliance dates for third parties and aggregators. One stated that the CFPB should ensure that the compliance date for the largest data providers is feasible not only for the relevant data providers but also for data recipients. Another stated that there should be a 12-month compliance period for aggregators and merchants that use aggregators, and a six-month grace period thereafter for aggregators to cure any technical violations that do not result in direct instances of consumer harm.

Finally, one bank trade association commenter asked for clarification as to how ownership structure influences which tier an entity falls into as some entities are comprised of multiple types of companies.

Final Rule

For the reasons discussed herein, the CFPB is finalizing § 1033.121 with revisions to increase the number of compliance date tiers, redefine the types of depository institutions included in each tier, change the metrics used to define the types of data providers included in each tier, extend compliance deadlines for all tiers, and provide clarification for how depository institution data providers determine compliance deadlines when their total assets do not meet the threshold for coverage as of the effective date but subsequently cross that threshold. Specifically, § 1033.121(b) provides that, in the first tier, depository institution data providers that hold at least $250 billion in total assets and nondepository institution data providers that generated at least $10 billion in total receipts in either calendar year 2023 or calendar year 2024 must comply by April 1, 2026. In the second tier, depository institution data providers that hold at least $10 billion in total assets but less than $250 billion in total assets and nondepository institution data providers that generated less than $10 billion in total receipts in both calendar year 2023 and calendar year 2024 must comply by April 1, 2027. In the third tier, depository institution data providers that hold at least $3 billion in total assets but less than $10 billion in total assets must comply by April 1, 2028. In the fourth tier, depository institution data providers that hold at least $1.5 billion in total assets but less than $3 billion in total assets must comply by April 1, 2029. In the final tier, depository institution data providers that hold less than $1.5 billion in total assets but more than $850 million in total assets must comply by April 1, 2030.

Data providers must have established functioning developer and consumer interfaces required under § 1033.301(a) that are technically capable of complying with the requirements in subparts B and C of part 1033 by their compliance deadline. For example, developer interfaces must be able to make available all covered data (as defined in § 1033.211) in a standardized format (§ 1033.311(b)) and be capable of performing in a commercially reasonable manner (§ 1033.311(c)). Some data providers will be able to receive requests from authorized third parties for covered data through their developer interface by then. However, the CFPB recognizes that other data

providers may need to transition existing third party access arrangements or otherwise onboard new third parties after their compliance deadline as necessary to avoid violating other legal obligations and to manage the technical integration process.

The CFPB recognizes that data providers may need time to onboard third parties in a staggered manner in accordance with sound risk management. It is permissible under the final rule to manage the onboarding process a staged manner, to the extent permitted under § 1033.321. As discussed further in part IV.C.4 below, a data provider could rely on § 1033.321 to deny a third party access to the developer interface temporarily, consistent with policies and procedures reasonably designed to comply with safety and soundness standards of a prudential regulator (among other legal obligations), and if the denial complies with § 1033.321(b). Once a third party has access to the developer interface, a data provider must respond to requests for covered data in accordance with the rule.

It will raise significant concerns if a data provider seeks to rely on § 1033.321 to justify noncompliance with the technical requirements of subparts B and C of the final rule, such as those impacting functionality, commercially reasonable performance, or security of the developer interface. Such requirements are independent of whether a data provider can deny a third party access under § 1033.321. For example, it likely would be impermissible for a data provider to deny a third party access under § 1033.321 temporarily, in connection with onboarding, solely because the data provider's developer interface could not scale to achieve the 99.5 percent response rate required under § 1033.311(c)(1) for periods with a high volume of requests.

To be clear, § 1033.321 does not allow data providers to delay access during the onboarding process unreasonably. For example, a data provider could not manage the onboarding process in an inconsistent or discriminatory manner. Establishing policies and procedures to manage the onboarding process as expeditiously as possible in a way that properly accounts for relevant risk management considerations will help ensure data providers do not unlawfully avoid their obligations to implement CFPA section 1033. In managing the onboarding process, data providers are also subject to the rule's anti-evasion provision in § 1033.201(a)(2) and other applicable consumer financial laws, including the prohibition on unfair, deceptive, or abusive acts or practices.

Section 1033.121(a) provides that a data provider's compliance date is based upon the calculation of total assets or total receipts, as appropriate. Section 1033.121(a)(1) also provides that, for depository institution data providers, total assets are determined by averaging the assets reported on its 2023 third quarter, 2023 fourth quarter, 2024 first quarter, and 2024 second quarter call report data submissions to the FFIEC or NCUA, as applicable, or its submissions to the appropriate oversight body to the extent it does not submit such reports to the FFIEC or NCUA. With respect a commenter's request to clarify how ownership structure influences which tier a depository institution falls into for compliance purposes, the regulatory text makes clear that a depository institution data provider looks to the total assets it reports on its call report data submissions. Section 1033.121(a)(2) provides that, for nondepository institution data providers, total receipts are calculated based on the SBA definition of receipts, as codified in 13 CFR 121.104(a). Section 1033.121(c) states compliance timelines for depository institution data providers that do not meet the coverage threshold as of the rule's effective date, but that subsequently cross that threshold. It provides that a depository institution data provider has a reasonable amount of time to comply with the rule after exceeding the size standard, and that the reasonable amount of time shall not exceed five years. This period is counted from the submission of a data provider's fourth call report described in the asset size calculation in § 1033.111(d)(2), the analysis of which, under such calculation, results in an asset size that crosses the size threshold.

The compliance periods for each tier in the final rule will ensure that data providers of different sizes and resources will have the appropriate amount of time to comply, in part, because the largest, most resourced data providers will be complying first and smaller depository institution data providers who are most likely to be relying on core providers and other third parties will be split into additional, smaller, more manageable tiers. The largest data providers, many of which already have the required interfaces in development, have until April 1, 2026, to comply, which will provide them with sufficient time to meet the rule's requirements. Comments received from the largest depository institution data providers, as well as data provider trade associations and a few smaller banks and credit unions, requested 24 months for the largest depository institution data providers to comply, but also noted that many of the largest depository institution data providers already have interfaces that could be adapted to comply with the final rule's requirements when issued and did not specify why 24 months would be necessary to build the developer interface required by the rule. In addition, some commenters requesting 24 months identified aspects of implementation related to onboarding third parties onto a developer interface and processing requests. As discussed above, data providers must have established functioning interfaces by their compliance dates and are permitted to manage granting third parties access to the developer interface, consistent with § 1033.321.

The second tier of data providers will have more than two years to comply, which will allow them to learn from the experience coming into compliance of the first tier of data providers; the same is true for the third tier of data providers with more than three years for compliance. The fourth and fifth tiers, which constitute the smallest depository institution data providers by asset size and the entities most likely to depend on core processors or other third parties to assist with compliance, will be able to learn from the experiences of the data providers that had to comply earlier and should have a smoother transition than they might otherwise. These periods balance the need for effective compliance with the provision of sufficient time to ensure a smooth transition and minimize time between tier compliance to ensure that any temporary data access gaps will be short lived. The CFPB has revised the compliance date tiers in response to comments, to reduce the total number of depository institutions in each tier. This should reduce the burden on core processors and other third parties, easing overall compliance efforts.

Consistent with the proposed rule, nondepository institution data providers must comply with the final rule's requirements as part of the first or second tiers. But these tiers now have more time to achieve compliance. Further, though one law firm commenter stated that nondepository institution data providers are most likely not to already have interfaces and policies in place to timely receive and respond to requests for data, this assertion does not negate the CFPB's finding, through the SBREFA process and ongoing market monitoring, that such data providers do not have as many vendors and information

technology systems that will need to be connected and that implementation by nondepository institution data providers can occur in-house without the need to engage core processors or other third party vendors. These data providers also tend to have business models that are based on the ability to adopt to technological innovations relatively quickly. Thus, these data providers will be able to move more quickly to implement the rule's requirements.

The final rule clarifies that, for purposes of determining an institution's compliance date, a depository institution data provider must look at the average total assets over a defined year of call report data. Averaging total assets over the course of one year provides a more accurate picture of asset holdings than just using assets as of the end of a single calendar quarter. A nondepository institution data provider must look at its total receipts, as calculated based on the SBA definition of receipts in 13 CFR 121.104(a). The SBA definition of receipts is widely used in many regulations and provides a comprehensive, consistent definition for nondepository institution data providers to benchmark their revenue. These provisions will ensure that all institutions are using consistent metrics to determine compliance periods.

Section 1033.111(d) addresses asset limitations to coverage for depository institution data providers and specifies asset calculation methods. Section 1033.121(c) discusses compliance timing for depository institution data providers that are at or below the asset threshold at the effective date but later exceed the applicable threshold. This provision allows such institutions a reasonable time to comply after they exceed the applicable threshold, not to exceed five years. The smallest depository institution data providers subject to the rule's requirements as of the rule's effective date will have approximately five years to comply, making this a logical ceiling for compliance timing for depository institution data providers that subsequently become subject to the rule's requirements. However, as more time passes and more institutions implement the rule's requirements, compliance will become less onerous, less expensive and require less time. Thus, what constitutes a reasonable amount of time for compliance may evolve downward with time.

The final rule does not set explicit compliance dates for third parties because they are unnecessary. The CFPB is providing additional time for the largest data providers to come into compliance with the rule, which will give third parties and aggregators additional time to prepare for implementation of the rule. In addition, transitioning the market from screen scraping will further incentivize third parties and aggregators to meet the requirements to request proper access under the terms of the rule. See part IV.4 above for a discussion of whether data providers complying with this rule are furnishers under the FCRA.

6. Definitions (§ 1033.131)

Card Issuer, Covered Consumer Financial Product or Service, Covered Data, Data Provider, Financial Institution, Recognized Standard Setter, Regulation E Account, and Regulation Z Credit Card

Consistent with the proposed rule, the coverage-related terms—card issuer, covered consumer financial product or service, covered data, data provider, financial institution, Regulation E account, and Regulation Z credit card—are listed under § 1033.131 with cross-references to the full definitions in §§ 1033.111 and 1033.211 (covered data).

The term recognized standard setter, which was finalized in the Industry Standard-Setting Final Rule, is also listed under § 1033.131 with a cross-reference to the full definition in § 1033.141. As finalized in that rule, the term refers to a standard-setting body with certain attributes listed in § 1033.141(a) (finalized as part of the Industry Standard-Setting Final Rule), including recognition by the CFPB pursuant to certain application procedures. The CFPB began accepting applications from standard-setting bodies seeking recognition in the summer of 2024.

Authorized Third Party

The CFPB proposed under section 1033(a) to require data providers to make available covered data to certain third parties ''acting on behalf'' of a consumer. The CFPB proposed in § 1033.131 to define the term authorized third party as a third party that has complied with the authorization procedures described in proposed § 1033.401. Proposed § 1033.401 specified what requirements a third party would have to satisfy to become an authorized third party, and thus be entitled to access covered data on behalf of a consumer.

Few commenters addressed the proposed definition of authorized third party. A third party commenter stated that data aggregators sometimes function as authorized third parties. The commenter recommended that the rule clarify how the definition applies to a data aggregator that follows the authorization procedures, stating that the definitions of authorized third party and data aggregator could be modified to note that an entity could be both. More generally, several commenters raised concerns about the scope of third parties that should be permitted under the rule to access covered data on behalf of consumers. These comments are addressed in part IV.D.1 below.

For the reasons discussed herein, the CFPB is adopting the definition of authorized third party as proposed to mean a third party that has complied with the authorization procedures in § 1033.401. As discussed in more detail in part IV.D, the authorization procedures are designed to ensure that third parties accessing covered data under section 1033(a) of the CFPA pursuant to the rule's framework are ''acting on behalf'' of a consumer, and therefore consistent with the definition of consumer in CFPA section 1002(4). This definition of an authorized third party provides a term to designate which third parties are entitled to access consumer information, on the consumer's behalf, pursuant to the rule's framework.

It is not necessary for the definition of authorized third party to specify that a data aggregator may also function as an authorized third party in other circumstances. A third party may play different roles in different circumstances. However, for a particular request for access to covered data, an entity would play only one role. The definition of authorized third party (like the definitions of data aggregator and data provider) is designed only to identify what role an entity plays for that particular request for access to covered data.

Consensus Standard

The CFPB proposed in § 1033.131 to define the term qualified industry standard to mean a standard issued by a standard-setting body that is fair, open, and inclusive in accordance with § 1033.141(a), which includes CFPB recognition. In the Industry Standard-Setting Final Rule, the CFPB addressed comments regarding the proposed qualified industry standard definition, the attributes of a standard-setting body, and the process for CFPB recognition. The Industry Standard-Setting Final Rule revised the definition of qualified industry standard in proposed § 1033.131 and renamed it a ''consensus standard.''

While the Industry Standard-Setting Final Rule adopted this term, it did not

address the role consensus standards would play in this final rule. The CFPB generally proposed that conformance to a qualified industry standard would provide ''indicia,'' or partial evidence, of data providers' and third parties' compliance with specified provisions. Generally, conformance to a qualified industry standard would not be required to comply nor would it constitute compliance with a specified provision.[53] No provision in the proposal would have required a data provider or third party to comply with a qualified industry standard.

Many commenters addressed the role consensus standards should play in the implementation of the final rule. Generally, commenters supported inclusion of standards set by voluntary standard-setting bodies, and focused on whether the standards should be indicia of compliance or something else, such as a safe harbor. Some commenters believed consensus standards should play no role in the final rulemaking and should rather be wholly determined by private standard-setting bodies.

One civil rights group commenter supported the proposal's approach to weighing standards as indicia of compliance. Further, data provider commenters preferred to consider compliance with consensus standards as an indicator of compliance rather than a requirement for compliance.

Some data provider and third party commenters recommended that consensus standards provide a legal safe harbor for compliance with various provisions of the final rule. These commenters suggested that a safe harbor would provide certainty and clarity to market participants and would encourage participants to invest in the setting of and compliance with appropriate standards. Further, commenters expressed concern that some participants may not expend the resources to conform to consensus standards if doing so could still result in noncompliance with regulatory requirements. Additionally, some bank commenters recommended that if the rule does not employ consensus standards as safe harbors, it should instead use a ''commercially reasonable'' standard. These commenters expressed concern that the ''indicia of compliance'' terminology could receive excessive weight by market participants, and effectively become the implicit compliance regime of the rule.

A variety of commenters opposed the framework for recognizing standard-setting bodies. Some commenters stated that CFPA section 1033 does not address the CFPB's authority to recognize standard-setting bodies as capable of issuing consensus standards for data providers and third parties, and that the proposed standards framework could conflict with prudential requirements imposed on data providers. One research institute commenter opposed the consensus standards framework on the grounds that the Federal Government should not interfere with the internal governance of private standard-setting bodies.

Generally, the CFPB has determined that consensus standards can usefully serve as indicia of compliance for various provisions stated throughout the final rule. If the final rule provided safe harbors, as some commenters suggested, recognized standard setters could play a regulatory role, rather than a consensus standard-setting one. Such an approach would also ignore the fact that a standard may be insufficient in some respect (for example, for incompleteness given the rule requirement on point) or in particular, idiosyncratic circumstances. The indicia of compliance framework maintains part 1033 as the applicable legal standard while giving due weight to a fair, open, and inclusive consensus standard as evidence of compliance with the rule.[54] Consensus standards can assist entities in fulfilling their legal obligations but do not relieve an entity from its duty to confirm that it is complying with the rule.[55] By the same token, consensus standards are not mandates.

While some commenters advocated for a ''commercially reasonable'' test as a substitute for consensus standards, the CFPB believes that looking exclusively at commercial reasonableness would ignore the potential benefits of more specific consensus standards developed through a fair, open, and inclusive process involving all stakeholders. As discussed below, in the context of § 1033.311(c)(1), a developer interface must provide a response within a commercially reasonable amount of time and indicia of such a response includes conformance to an applicable consensus standard.

Regarding the comment opposing Federal Government involvement in the governance of private standard-setting bodies, the CFPB notes that it has a legitimate interest in ensuring that standard-setting bodies follow an appropriate process when issuing standards as to which conformance carries some indicia of compliance with a CFPB rule. Moreover, no existing or future private entity is required to become a CFPB-recognized standard-setting body, and a range of external standards may continue to be of utility and value to regulated entities even if they are not consensus standards adopted by recognized standard setters. The CFPB is finalizing the provisions of the final rule that cite consensus standards using its rulemaking authority under CFPA section 1033(a) and (d) and section 1022(b)(1). These provisions carry out the objectives of section 1033 by encouraging the development of fair, open, and inclusive industry standards that will facilitate implementation of the final rule.

Regarding some commenters' concern that consensus standards could conflict with prudential requirements, CFPA section 1033(e) requires that the CFPB consult with the prudential regulators and the FTC so that certain objectives are met. In compliance with this provision, prior to issuing the Industry Standard-Setting Final Rule the CFPB consulted on several occasions with staff from the prudential regulators and the FTC to discuss various aspects of the rule, including criteria for and processes with respect to standard-setting bodies. Such discussions were, in part, to achieve effective alignment between the Industry Standard-Setting Final Rule and prudential requirements. The CFPB has conducted further consultations after the release of the Industry Standard-Setting Final Rule and is not aware of conflicts with prudential requirements. In addition, because consensus standards serve as indicia, nothing in a consensus standard could legally override a Federal legal obligation, prudential or otherwise. A hypothesized conflict, accordingly, could not be meaningful.

Details about the role of consensus standards with regard to particular requirements of the final rule can be found in the discussion below.

[53] The one exception to that approach was with respect to the proposed requirement that a data provider's developer interface make covered data available in a ''standardized format'' in proposed § 1033.311(b). In that case, adherence to a qualified industry standard would have been deemed to satisfy the requirement. The final rule instead uses the indicia-of-compliance approach in that context, for the reasons explained in the discussion of final § 1033.311 below.

[54] In this respect, the CFPB encourages recognized standard setters to ensure a consensus standard complies with the final rule and that they maintain procedures that allow regulated entities to straightforwardly evidence their conformance to a consensus standard at negligible cost.

[55] The CFPB may be able to provide additional guidance about particular consensus standards, especially if market participants seek that in particular cases. However, that is different from providing a safe harbor for all the consensus standards that may have some bearing on rule compliance, as requested by some commenters.

Consumer

The CFPB proposed in § 1033.131 to define the term consumer for purposes of part 1033 to mean a natural person. The proposed definition specified that trusts established for tax or estate planning purposes would be considered natural persons. The preamble to the proposal explained that the proposed definition differs from the definition of consumer in CFPA section 1002(4), which defines a consumer as ''an individual or an agent, trustee, or representative acting on behalf of an individual.'' The preamble explained the proposed definition was designed to distinguish the term consumer from third parties that are authorized to access covered data on behalf of a consumer pursuant to the proposed procedures in subpart D.

A bank and some trade associations for banks supported the proposed approach not to refer to ''agents'' in the definition of consumer, because they said including agents could cause significant confusion or complication as there are numerous parties which could act as the consumer's agent and would have access to covered data pursuant to the third party authorization procedures in subpart D. Some commenters, including third parties and data aggregators, noted what they described as potential confusion related to the proposed definition being different from the statutory definition. Others, like data aggregators and third parties, stated that the final rule should align the definition of consumer to the statutory definition.

Commenters also asked for additional changes and clarifications related to the definition of consumer. For example, a data provider and trade associations for banks requested clarification around the proposed rule's inclusion of trusts established for tax or estate planning purposes as natural persons, and how a trust could authorize a third party to access the trust's data. Trade associations for third parties suggested the definition of consumer should be narrowed to include only consumers with at least one current account with the data provider. Additionally, a consumer advocate stated that the final rule should include in the definition of consumer small businesses seeking access to their financial data.

Finally, some banks, trade associations for data providers, third parties, and data aggregators focused on how smaller commercial third parties, or parties that traditionally would not require authorization through section 1033 to access consumer data, might be impacted by the rule (*e.g.,* how a small broker-dealer might be treated if they are not considered a consumer; and how custodians, guardians, and other authorized agents may authorize third parties).

For the reasons discussed herein, the CFPB is finalizing the definition of ''consumer'' in the rule as proposed with a modification to specify that the term includes guardians, trustees, custodians, or similar natural persons acting on behalf of a consumer pursuant to State law.

The term consumer is commonly used in various consumer finance-related contexts to refer to individuals, *i.e.,* natural persons. *See, e.g.,* Regulation E, 12 CFR 1005.2(e). The final rule accounts for the CFPA's definition, which also includes ''an agent, trustee, or representative acting on behalf of an individual,'' by establishing third party authorization procedures described in subpart D to ensure all relevant parties may access covered data. Accordingly, the substance of the rule aligns with the CFPA's definition of consumer, and nothing in the CFPA prevents the CFPB from using different vocabulary within such a rule.

Further, as described above, some commenters requested clarification regarding the inclusion of trusts as natural persons for purposes of the definition of consumer. Trusts are referred to as natural persons in other consumer finance-related contexts. *See, e.g.,* Regulation Z comment 3(a)–10 (''Credit extended for consumer purposes to certain trusts is considered to be credit extended to a natural person rather than credit extended to an organization.''). In the context of CFPA section 1033, a data provider would control or possess the covered data concerning a consumer financial product or service that the trust obtained from the data provider. As such, trusts established for estate or tax planning purposes are appropriately considered consumers in the context of CFPA section 1033.

In the proposed rule, the CFPB requested comment on how individuals who are not account owners currently use existing legal mechanisms to directly access covered data. As described above, some commenters sought clarification on how parties that traditionally would not require authorization through CFPA section 1033 to access consumer data might be impacted by the rule. For example, some commenters cited guardians and custodians as examples of natural persons who might manage certain accounts and therefore attempt to authorize third parties to access covered data. After considering these comments, the CFPB is including in the definition of consumer a statement that consumers include guardians, trustees, custodians, or similar natural persons acting on behalf of a consumer pursuant to State law. In these circumstances, natural persons who manage consumer accounts through legal instrumentation are granted authority to manage those assets. Custodial accounts, for example, may be established by financial institutions under the Uniform Gifts to Minors Act (*see generally* 8A U.L.A. 405 (1983)) or the Uniform Transfers to Minors Act (*see generally* 8A U.L.A. 153 (Supp. 1987)), and are set up and managed by an adult for the benefit of a minor until the minor reaches the age of majority. Guardianships, trusts, and custodian accounts function similarly: existing legal processes, unrelated to CFPA section 1033's data access rights, establish rights for a natural person to manage the assets and income for another natural person. In these cases, it would be appropriate for the natural person duly authorized to manage another natural person's covered financial products or services to also authorize third parties to access the covered data related to those products or services pursuant to section 1033. Further, the State statutory and common law protections in place that cover these persons are sufficient such that these persons can be considered consumers when acting in those capacities for another person, and it is not necessary to apply the provisions of subpart D to them.

The CFPB is aware that some corporate terms and conditions contain provisions by which consumers purportedly appear to consent, upon acceptance, to the corporate entities' limited powers of attorney to act as agents for the consumers. These circumstances would not position such corporate entities as consumers under the revised definition in final § 1033.131 of the rule because they are factually and legally different from those circumstances addressed by the final rule's definition of consumer. The natural persons considered consumers under the final rule have broad authority established through State law mechanisms to stand directly in the shoes of the consumer with respect to the covered financial product or service associated with the consumer.

Finally, as described above, some commenters suggested the CFPB narrow the final rule to include only consumers with at least one current account with the data provider. The CFPB has determined that §§ 1033.201(a) and 1033.331 and the authorization procedures described in § 1033.401

sufficiently ensure that consumers who have covered data and accounts with the data provider can authorize third parties to access covered data, while the exceptions in CFPA section 1033(b) and § 1033.221 ensure that data providers are not required to provide information that they cannot provide in the ordinary course of business. A commenter also suggested the final rule include small businesses in the definition of consumer. However, CFPA section 1033 applies only to ''consumer financial products and services'' as defined in CFPA section 1002(5). Accordingly, expanding the final rule to include small business accounts would be inconsistent with the statutory text. However, the CFPB expects that small business account providers may find the framework of part 1033 to be a useful model for enabling small businesses to share data about their accounts, and therefore may choose to use their developer interfaces to facilitate that access.

Consumer Interface

The CFPB proposed in § 1033.131 to define consumer interface as an interface through which a data provider receives requests for covered data and makes available covered data in an electronic form usable by consumers in response to the requests.

No commenters objected to the proposal's general approach of a framework under which authorized third parties would not be entitled under part 1033 to access individual consumers' covered data through providers' functionality designed for consumers. Depository institutions and depository institution trade associations stated, however, that the proposed definition was insufficiently clear because under the proposal a depository institution data provider would have been exempt from part 1033 if it did not have a consumer interface. They said that a data provider with relatively basic online banking functionality for its consumer account holders would not be able to determine with sufficient certainty whether that functionality qualified as a ''consumer interface'' thereby subjecting the data provider to the requirements of part 1033.

Under the final rule, the application or non-application of part 1033 to a depository institution data provider does not depend in whole or in part on whether or not the data provider has functionality for providing covered data to individual consumers. Instead, as discussed elsewhere, it is determined by whether the data provider is above a certain asset size. As a result, a data provider above that asset size and thus subject to part 1033 does not need to determine whether the functionality through which it makes covered data available to individual consumers meets the definition, but instead must ensure that it offers functionality for making covered data available that meets the requirements of subparts B and C of part 1033.[56] Accordingly, the rule's label for that functionality—the ''consumer interface'' definition—does not need modification and the CFPB adopts the definition as proposed for the reasons discussed herein.

Data Aggregator

The CFPB proposed in § 1033.131 to define the term data aggregator to mean an entity that is retained by and provides services to the authorized third party to enable access to covered data. The proposed rule noted that some third parties retain data aggregators for assistance in obtaining access to data from data providers. Certain provisions in proposed § 1033.431 specified what role data aggregators would play in the third party authorization procedures, what information about data aggregators would have to be included in the authorization disclosure, and what conditions data aggregators would have to certify that they agree to as part of the third party authorization procedures. The CFPB requested comment on whether data aggregator is an appropriate term for describing third parties that may provide assistance in accessing covered data or whether there are other terms, such as ''data intermediary,'' that would be more appropriate.

Some commenters stated that the proposed definition was too broad. A research institute commenter stated that the proposed definition would sweep in any service provider or subcontractor that contributes in any way to a third party being able to access consumer data from a data provider. The commenter recommended narrowing the definition to avoid imposing burdens on service providers that have no direct relationship to consumers or their data. A nondepository entity commenter stated that data aggregator is a generic term that could lead to confusion and recommended that the rule provide more granular definitions of the different types of services provided, with the term data aggregator applying only to entities that aggregate all types of financial data. A data aggregator commenter stated that the rule should use the term data access platform instead of data aggregator because the term data aggregator does not fully reflect the role that such entities play and that data access platform is a market standard term.

In contrast, a bank and a bank trade association commenter stated that the proposed definition of data aggregator was too narrow. The bank commenter requested that the definition of data aggregator be expanded to include data aggregators that assist non-authorized third parties in accessing consumer data.

Several commenters recommended that the CFPB clarify the proposed definition of data aggregator. A research institute commenter stated that the CFPB should clarify whether a data aggregator can be an authorized third party. Two credit union trade associations recommended that the rule clarify what ''retained by'' means in the context of a third party that uses a wholly owned subsidiary as a data aggregator, and also what ''enable access to covered data'' means for a credentialing service that facilitates a data provider's risk management and data security review. Finally, they stated that the rule should clarify whether ''enabling access'' requires a data aggregator to be the party connected to a developer interface.

For the reasons discussed herein, the CFPB is finalizing the definition of data aggregator with a minor change from the proposal. The proposal defined data aggregator to mean an entity that is retained by and provides services to the authorized third party to enable access to covered data. The term ''person'' as used elsewhere in the rule and in the CFPA includes both natural persons and entities. In most situations, a data aggregator will be an entity rather than a natural person. However, to account for the situation in which a data aggregator is not an entity and for consistency with other definitions, such as third party, the CFPB is revising the definition to change ''entity'' to ''person,'' so that data aggregator means a person that is retained by and provides services to the authorized third party to enable access to covered data. This definition of data aggregator strikes an appropriate balance. It is broad enough to include persons that provide various types of services to authorized third parties that enable access to covered data, ensuring that the consumer protections related to data aggregators will apply to persons involved in accessing and collecting covered data. It is not limited to persons that are connected to a developer

[56] If a data provider has more than one mechanism through which it makes available covered data to consumers, each of the mechanisms does not individually need to satisfy the requirements of part 1033. Collectively, the mechanisms must do so.

interface, as it also covers persons collecting, processing, or combining covered data.

However, by limiting the scope of the definition to persons that provide services to the authorized third party to enable access to covered data, the definition avoids sweeping in persons that are providing services that are only incidentally connected to data access. Contrary to the concerns raised by one commenter, the definition does not cover a person that contributes in any way to accessing covered data; the person must provide services that enable access to covered data in order to meet the definition of a data aggregator. The CFPB has determined that it would not be appropriate to adopt more granular definitions based on the specific services that entities provide. The purpose of the data aggregator definition is to identify persons that, regardless of the specific services they provide, are subject to various consumer protections in the rule because of their involvement with and proximity to covered data.

As noted above in connection with the discussion of the definition of authorized third party, the CFPB recognizes that persons may play different roles in different transactions and that an entity may be a data aggregator in some transactions and an authorized third party in others. The definitions of data aggregator and authorized third party are intended to identify what role an entity is playing with respect to a particular request for covered data and are not fixed terms. Regarding the comment about whether a wholly owned subsidiary of a third party could be a data aggregator, the CFPB notes that, assuming the subsidiary is a separate person from the third party, the subsidiary could be a data aggregator.

The CFPB declines to expand the scope of the data aggregator definition to include data aggregators that serve non-authorized third parties. The data aggregator definition, and the provisions related to data aggregators in § 1033.431, are designed to specify what obligations data aggregators must satisfy when they assist authorized third parties that access covered data on a consumer's behalf pursuant to the rule's framework. Expanding the definition of data aggregator to include persons that provide data aggregation services to non-authorized third parties would go beyond the scope of the consumer-authorized data access framework described in the rule.

The CFPB also declines to further expand upon what ''enable access to covered data'' means in specific contexts, as requested by some commenters. The definition is designed to capture a variety of different arrangements and accordingly is sufficiently clear. Finally, the CFPB declines to adopt a term other than data aggregator. Only one commenter recommended using a different term, and data aggregator is a widely used and understood term.

Depository Institution

The CFPB is adding a definition of depository institution to the final rule for clarity and to facilitate compliance with the rule. The definition of depository institution is any depository institution as defined in the Federal Deposit Insurance Act, 12 U.S.C. 1813(c)(1), or any credit union as defined in the NCUA's regulation at 12 CFR 700.2. This definition provides additional clarity that all depository institutions, not just bank entities, are included when the rule refers to depository institutions.

Developer Interface

The CFPB proposed in § 1033.131 to define developer interface as an interface through which a data provider receives requests for covered data and makes available covered data in an electronic form usable by authorized third parties in response to the requests.

Commenters generally did not express concern with the proposed definition. A few blockchain-related nondepository and individual consumer commenters, however, stated that the CFPB should require data providers to grant developer interface access to individual consumers upon the consumers' submission of sufficient information to the data providers (*i.e.,* sufficient to enable the providers to comply with their interface access and risk assessment obligations under part 1033 and other laws). These commenters said that such a requirement would help empower consumers to serve as their own personal financial data custodians if they so desire.

The final rule does not require data providers to grant developer interface access to individual consumers (though it also does not bar them from doing so). Such a requirement could burden data providers in ways the CFPB has not adequately evaluated by necessitating that they consider a high number of requests for consumer access to their developer interfaces. In addition, consumers may obtain their financial data—including in machine-readable form—through consumer interfaces.

For the reasons discussed herein, the CFPB is finalizing the definition of developer interface as proposed. The definition does not require use of any particular technology. Instead, it facilitates the readability of part 1033 by establishing a brief label—''developer interface''—by which other provisions in part 1033 may refer to the functionality through which a data provider receives and responds to requests for covered data from authorized third parties in accordance with the requirements of the rule. The very limited comments on this definition indicate that relevant industry participants do not object to the utility of the term for these purposes.

Third Party

The CFPB proposed in § 1033.131 to define the term third party as any person or entity that is not the consumer about whom the covered data pertains or the data provider that controls or possesses the consumer's covered data. The proposed rule used the term third party to refer to entities seeking access to covered data and to other parties, including data aggregators.

A trade association for nondepository entities stated that the definitions of third party and data provider (addressed in § 1033.111(c)) were unclear. The commenter stated that an entity could be construed as either, such as when a fintech partners with a bank.

For the reasons discussed herein, the CFPB is finalizing the definition of third party with a minor change from the proposal. The proposed definition referred to ''any person or entity.'' The term ''person'' as used elsewhere in this rule and in the CFPA includes both natural persons and entities, so the phrase ''or entity'' in the definition of third party is unnecessary. Accordingly, the final rule defines third party to mean any person that is not the consumer about whom the covered data pertains or the data provider that controls or possesses the consumer's covered data.

As discussed above in connection with the definitions of authorized third party and data aggregator, an entity may play different roles in different transactions and may serve as a data provider in one transaction and a third party in another transaction. The definitions are intended to identify what roles the parties are playing in a particular request for access to covered data. The CFPB concludes that additional clarifications in the definitions are not necessary.

B. Subpart B—Making Covered Data Available

1. Overview

Disagreements around the data that should be available to consumers and authorized third parties have limited consumers' ability to use their data and imposed costs on data providers and third parties. Subpart B of part 1033 addresses these obstacles by establishing a framework for the general categories of data that must be made available, including specific data fields that have been significant sources of disagreement, and exceptions from these requirements. Subpart B also restates the general requirement in CFPA section 1033(a) for data providers to make covered data available in an electronic form usable by consumers and includes a prohibition against evasion.

2. Availability and Anti-Evasion (§ 1033.201)

General Obligation (§ 1033.201(a)(1))

Consistent with the general obligation in CFPA section 1033(a), the CFPB proposed in § 1033.201(a) to require a data provider to make available to a consumer and an authorized third party, upon request, covered data in the data provider's control or possession concerning a covered consumer financial product or service that the consumer obtained from the data provider, in an electronic form usable by consumers and authorized third parties. It also stated that compliance with the requirements in §§ 1033.301 and 1033.311 is also required.

The CFPB received only a few comments addressing the restatement of the statutory obligation in proposed § 1033.201(a). Of those, none objected to it and some, including consumer advocates in particular, supported the restatement. They argued that specific regulatory provisions could become outdated as technology evolves and that restating data providers' general statutory obligation in part 1033 would help make clear that the general obligation to make consumers' data available to them and to their authorized third party representatives stands nonetheless. A few data provider commenters requested that the rule be explicit that the ''electronic form'' of covered data may differ as between the consumer interface and the developer interface.[57]

For the reasons discussed herein, the CFPB is finalizing its restatement of CFPA's section 1033(a) general statutory obligation as § 1033.201(a)(1). The CFPB has removed the proposed additional sentence that referred to §§ 1033.301 and 1033.311, as it is unnecessary to state here that data provider obligations under § 1033.201(a)(1) are in addition to the data provider obligations under other provisions of subparts B and C. (Final § 1033.201(a)(2), regarding anti-evasion, is discussed below.)

The restatement in § 1033.201(a)(1) of the general obligation under CFPA section 1033(a) to make covered data available establishes the core obligation of data providers in part 1033. This obligation is in addition to the other requirements established by part 1033. As commenters observed, technology and business practices will continue to evolve over time. As they do, data providers' general statutory obligation to make covered data available will remain in place, implemented by § 1033.201(a)(1), as will data providers' obligations to comply with the other requirements of the rule set forth in subparts B and C of part 1033. To be clear, there may be overlap as to the substance of the requirements established by § 1033.201(a)(1) and the substance of the other requirements in subparts B and C, but that does not affect data providers' obligation to comply with the entirety of subparts B and C including § 1033.201(a)(1). There may also be obligations under § 1033.201(a)(1) that do not overlap with other requirements in subparts B and C; this likewise does not affect data providers' obligation to comply with § 1033.201(a)(1). Similarly, there may be requirements under the other provisions of subparts B and C that do not overlap with § 1033.201(a)(1); that does not affect data providers' obligation to comply with the other provisions of subparts B and C.

Under current industry practice, it is typical for the electronic form of data made available through data providers' consumer interfaces to differ from the electronic form of data made available through their developer interfaces. Nothing in § 1033.201(a)(1) or any other provision of part 1033 requires that aspect of current industry practice to change. Section 1033.201(a)(1) requires data providers to make covered data available in an electronic form usable by consumers and authorized third parties, but the electronic form usable by consumers need not be the same as the electronic form usable by authorized third parties.

Covered Data in Natural Language

In the proposal, the CFPB stated that statutory requirement set forth in § 1033.201(a) that a data provider make available covered data in its control or possession obligates the data provider to make a consumer's covered data available in Spanish or English (or any other language) if that is the language in which the data provider maintains the consumer's covered data. A few data provider commenters argued that the requirement should not apply to the developer interface.

That statement from the proposal remains an accurate description of data providers' obligations under § 1033.201(a); accordingly, the CFPB reaffirms it here. Some elements of covered data, discussed in more detail under § 1033.211, are non-numeric—that is, they include natural language. When a data provider controls or possesses covered data that includes natural language, the data provider must make available the data in the language in which the data provider controls or possesses the covered data (whether that language is Spanish, English, or any other language). Further, this obligation applies to both consumer and developer interfaces.

Anti-Evasion Provision (§ 1033.201(a)(2))

The CFPB requested comment on whether part 1033 should set forth an explicit prohibition against data provider conduct that would evade the objectives of CFPA section 1033, pursuant to the authority provided to the CFPB by CFPA section 1022(b)(1). More specifically, the CFPB requested comment on whether it should set forth explicit prohibitions against (1) actions that a data provider knows or should know are likely to interfere with a consumer's or authorized third party's ability to request covered data, or (2) making available information in a form or manner that a data provider knows or should know is likely to render the covered data unusable. The CFPB also requested comment on whether it should prohibit practices that might effectively make data unavailable or unusable to consumers and authorized third parties.

The CFPB received only a few comments addressing whether its final rule should include a prohibition against evasion. Data provider commenters that addressed the issue opposed such a prohibition on the grounds that it would be premature because actual evasive activity remains

[57] The CFPB also received comments requesting that it undertake a consumer education campaign to ensure that consumers are aware of their rights under CFPA section 1033. While the CFPB continues to consider these suggestions, they are outside the scope of this rulemaking and the CFPB does not address them here.

speculative. In contrast, third party commenters that addressed the issue supported inclusion of a prohibition against evasion. These commenters asserted that the proposed rule did not do enough to prevent data providers from interfering with access, such as by varying the performance of their interfaces, by implementing systems in non-standard ways that limit interoperability, or by imposing excessive burdens or procedures that restrict or delay access to covered data depending on which third party is requesting access. They also asserted that there is a history of data provider efforts to delay or interfere with data access by authorized third parties.

The CFPB has determined that is necessary and appropriate to include in part 1033 a prohibition against evasion, pursuant to the CFPB's authority under CFPA section 1022(b)(1). Accordingly, the CFPB is adopting § 1033.201(a)(2) for the reasons discussed herein, which states that a data provider must not take any action (1) with the intent of evading the requirements of subparts B and C of part 1033; (2) that the data provider knows or should know is likely to render unusable the covered data that the data provider makes available; or (3) that the data provider knows or should know is likely to prevent, interfere with, or materially discourage a consumer or authorized third party from accessing covered data consistent with part 1033.

The anti-evasion provision in § 1033.201(a)(2) prohibits data provider conduct that is taken to evade the requirements of this final rule but which the CFPB may not, or could not, have fully anticipated in developing the rule. Part 1033 contains certain requirements that are targeted at potential data provider evasion and which rely in part on the CFPB's authority to prevent evasion under CFPA section 1022(b)(1). However, the CFPB cannot anticipate every possible way in which data providers might seek to evade the requirements of part 1033. The CFPB has determined that § 1033.201(a)(2) provides flexibility to address future data provider conduct taken to evade part 1033. The CFPB has also determined that the evasion prohibition will enhance the effectiveness of the final rule's specific, substantive requirements, and thereby preserve the consumer rights provided by part 1033. In adopting the evasion prohibition, the CFPB's judgment is informed by concerns that commercial actors might be able to use their market power and incumbency to privilege their concerns and interests above fair competition that could benefit consumers.

Current Data (§ 1033.201(b))

Proposal

In the facilitation of payment transactions, data providers regularly refresh covered data, and such data are often necessary to enable common beneficial use cases, like transaction-based underwriting and personal financial management. Both depository and nondepository data providers typically make available recently updated transaction and account balance data through online or mobile banking applications. However, the CFPB received questions during the SBREFA process about whether data providers could simply provide the last monthly statement rather than being required to make available recent transactions and current account balance. Proposed § 1033.201(b) interpreted CFPA section 1033(a) to require that, in complying with proposed § 1033.201(a), a data provider would need to make available the most recently updated covered data that it has in its control or possession at the time of a request. It also specified that a data provider would need to make available information concerning authorized but not yet settled debit card transactions. The preamble discussed how this debit card transaction situation was an example and asked for comment on whether the provision regarding current data would benefit from additional examples or other clarifications.

When consumers make a request for information concerning a consumer financial product or service, the most recently updated information in a data provider's control or possession is likely to be most usable. However, the proposal explained that § 1033.201(b) was not intended to limit a consumer's right to access historical covered data. The CFPB requested comment on whether the provision regarding current data would benefit from additional examples or other clarifications. The CFPB also requested input on issues in the market today with data providers making available only older information that is not fully responsive to a consumer's request.

Comments

Commenters did not object to a general requirement to make available the most recently updated covered data in the data provider's control or possession at the time of the request. One large data aggregator stated that the proposed data requirement is sufficiently clear, especially because it explains that pending transaction information must be made available. Some data provider commenters asserted that the CFPB should not require information concerning authorized but not yet settled debit card transactions. One data provider commenter stated that requiring pending transaction information is like asking financial institutions to look into a crystal ball to predict the future. The commenter asserted that some merchants, such as gas stations and hotels, send pre-authorizations for dollar amounts higher than the actual transaction amounts to ensure funds are available. Data provider commenters raised similar concerns about pending transaction information with regards to covered data under § 1033.211(a); those comments are discussed further below.

Final Rule

For the reasons discussed herein, the CFPB is finalizing § 1033.201(b) as proposed with an edit to clarify the example of authorized but not yet settled transactions. The current data provision in § 1033.201(b) requires that, in complying with paragraph (a) of this section, a data provider must make available the most recently updated covered data that it has in its control or possession at the time of a request. A data provider must make available information concerning authorized but not yet settled transactions. The CFPB notes that § 1033.201(b) does not limit a consumer's right to access historical covered data.

Finalizing this current data requirement helps ensure that data providers make available the most current data in their control or possession. Current data includes information regarding pending transactions that have not yet settled, including but not limited to pending debit card, credit card, and bill payment transactions. As discussed below with regards to transaction data in § 1033.211(a), pending transaction information can be helpful for a variety of use cases, including personal financial management. Although such information may ultimately change, consumers and third parties may need access to pending transaction information in order to plan for imminent withdrawals. Such information may also be necessary for a consumer or third party to determine whether a consumer needs to deposit additional funds into an account or is approaching a credit limit and thus should delay additional purchases. Data providers could limit funds or credit availability in response to pending transactions, and a consumer may need to know about pending transactions to understand any associated changes in

available funds or credit. Given how authorized but not yet settled transactions may encompass a variety of payment types now and in the future, including credit card and certain bill pay transactions, and the risk that the debit card example might be misinterpreted to narrow the scope of this current data requirement, the final rule text removes the term ''debit card'' to more generally explain that a data provider must make available information concerning authorized but not yet settled transactions.

3. Covered Data (§ 1033.211)

In General

Proposal

CFPA section 1033(a) generally requires data providers to make available, upon request, ''information in the control or possession of the covered person concerning the consumer financial product or service that the consumer obtained from such covered person, including information relating to any transaction, series of transactions, or to the account including costs, charges and usage data.'' The CFPB proposed in § 1033.211 to implement this by defining the information that a data provider would need to make available under the general obligation to make covered data available in proposed § 1033.201(a). Proposed § 1033.211 used the term covered data instead of the statutory term ''information'' and defined covered data to encompass several categories of information, as applicable: transaction information (including historical transaction information), account balance, information to initiate payment to or from a Regulation E account, terms and conditions, upcoming bill information, and basic account verification information.

The proposal explained that this covered data definition would leverage existing operational and legal infrastructure and that requiring data that are generally made available to consumers today would support most beneficial consumer use cases. The CFPB noted that certain proposed categories of data, such as upcoming bill information, historical transaction information, information to initiate a transfer to or from a Regulation E account, and basic account identity information can support account switching because it can ease the account opening process, identify recurring payments that need to be set up at the new account, and transfer funds out of the old account. The CFPB requested comment on the benefits and data needs for consumers who are in the process of switching accounts.

The CFPB preliminarily concluded that the covered data definition also would address several issues in the consumer-authorized data sharing system today, including clarifying which data must be made available under the consumer's CFPA section 1033 right. Currently, data providers provide authorized third parties with inconsistent access to data. Pricing terms, like APR, have been particularly contested. Inconsistent access to consumer-authorized data may prevent the development of new use cases and the improvement of existing use cases. In addition, inconsistent access to consumer-authorized data may be hindering standardization in the market, and therefore further hindering competition and innovation, as parties must negotiate individual categories of information to be made available.

To address concerns about data providers restricting access to specific pieces of information, the proposed rule also gave examples of information that would fall within the covered data categories. The CFPB explained that these examples were illustrative and were not an exhaustive list of data that a data provider would be required to make available under the proposed rule. Under the proposed rule, a data provider would only have an obligation to make available applicable covered data; for example, a Regulation E financial institution providing only a Regulation E account would not need to make available a credit card APR or billing statement. The CFPB requested comment on whether additional data fields should be specified to minimize disputes about whether the information would fall within the covered data definition. The CFPB explained that, as proposed, the rule would allow flexibility as industry standards develop while minimizing ambiguity over the types of information that must be made available. The CFPB also requested comment on whether the proposed categories of information provide sufficient flexibility to market participants to develop qualified industry standards.

The CFPB explained that these provisions would carry out the objectives of CFPA section 1033 of ensuring data are usable by consumers and authorized third parties by focusing on data that stakeholders report are valuable for third party use cases and that are generally under the control or possession of all covered persons. These provisions also would promote the use and development of standardized formats for carrying out the objectives of CFPA section 1033(d) by encouraging industry to focus format standardization efforts around these data categories.

Comments

Data providers, third parties, and other commenters generally supported the CFPB's categories and examples approach to defining covered data, noting that the categories-plus-examples approach allows market flexibility. Commenters also stated that the proposed categories of covered data would leverage existing legal and operational infrastructure, and that these covered data are generally available on consumer interfaces today. However, some commenters requested additional clarity or narrowing of the covered data categories, such as explaining that the covered data obligations only apply with regards to the covered consumer financial product or service. A few data provider commenters stated that the data categories should be narrowed significantly because they asserted that covering categories like pending transactions, terms and conditions, and upcoming bill information would exceed the CFPB's CFPA section 1033 authority. A few data provider commenters requested more specificity, such as defining all required data fields.

Some third party, consumer advocate, and other commenters requested that the CFPB expand the scope of covered data. For example, one consumer advocate commenter stated that covered data should include login usernames and passwords, challenge question responses, and customer service history. As another example, a third party commenter asked the CFPB to include a consumer identification number that could be linked to all consumer accounts, a consumer's date of birth, the date an account was opened, an account's transferability status, and other account status information. A large data aggregator asked the CFPB to specifically require data providers to provide the consumer's periodic statements as PDF documents. One commenter asked for clarification that, where a data provider is obligated to make available licensed information pursuant to the rule, the data provider does not provide a license to the authorized third party.

Final Rule

For the reasons discussed herein, the CFPB is finalizing the proposed approach to covered data—that is, defining a list of categories of data that data providers must make available together with non-exhaustive examples of data fields that fall within those

categories. The categories and examples approach to covered data appropriately balances resolving areas of market disagreement with avoiding detailed specifications, such as defining all individual data fields, that could interfere with efficiency and innovation.

The CFPB declines to expand the scope of covered data in this first rule to implement the substantive provisions of CFPA section 1033. The covered data definition in this final rule leverages existing operational and legal infrastructure: data providers generally make this covered data available through consumer interfaces, and existing laws require most of the categories of information to be disclosed through periodic statement and account disclosure requirements. Requiring data that are generally made available to consumers today supports most beneficial consumer use cases, including transaction-based underwriting, payment credential verification, comparison shopping, account switching, and personal financial management. This covered data definition addresses several issues in the consumer-authorized data sharing system today, including (1) maximizing consumer benefits by clarifying which data must be made available under the consumer's CFPA section 1033 right; (2) addressing potential data provider anticompetitive conduct and incentives to withhold particular data fields; and (3) promoting conditions for standardization in the market. These covered data fall within the CFPB's authority under section 1033 as they are information in the control or possession of the covered person concerning the consumer financial product or service that the consumer obtained from such covered person. With respect to whether the data provider necessarily provides a license to authorized third parties to licensed information required to be made available under the rule, the rule does not require data providers to do so. Authorized third parties are subject to the limitations on collection, use, and retention under § 1033.421. At the same time, the rule requires covered data to be made available upon request, subject to the exceptions at § 1033.221, including an exception for confidential commercial information. The commenter did not specify what type of information might be subject to a license, but it is unlikely that the covered data defined at § 1033.211 would be subject to a license; and such information is generally made available to consumers today.

Comments received on the proposed categories and examples, and changes made in the final rule, are discussed below.

Transaction Information (§ 1033.211(a))

The CFPB proposed in § 1033.211(a) to make available transaction information as covered data, providing examples of amount, date, payment type, pending or authorized status, payee or merchant name, rewards credits, and fees or finance charges. The CFPB explained that this category would refer to information about individual transactions, and discussed SBREFA feedback from bank data providers to exclude pending transactions. The CFPB preliminarily concluded that pending transaction information would support a variety of beneficial use cases.

The CFPB also proposed to include historical transaction information in the control or possession of the data provider. Proposed § 1033.211(a) explained that a data provider would be deemed to make available sufficient historical transaction information for purposes of § 1033.201(a) if it makes available at least 24 months of such information. The CFPB explained that historical transaction data supports a variety of use cases, including transaction-based underwriting, account switching, and personal financial management, but also observed that data providers do not make a consistent amount of historical transaction information available.

The CFPB discussed how many stakeholders, including third party small entity representatives during the SBREFA process, have provided feedback that 24 months of historical transaction data would support the vast majority of consumer use cases. Some data provider and consumer advocate stakeholders have explained that 24 months would be consistent with the recordkeeping requirements in Regulation E and Regulation Z. The CFPB preliminarily concluded that setting a safe harbor at a minimum of 24 months would ensure that consumers have access to sufficient historical transaction data for common beneficial use cases, while providing compliance certainty to data providers. This length of time would also be consistent with the existing recordkeeping timeframes in Regulation E, 12 CFR 1005.13, and Regulation Z, 12 CFR 1026.25. The CFPB also noted that data providers typically control or possess more than 24 months of historical transaction data and may continue to make more than 24 months available.

The CFPB requested comment on whether the transaction information examples were sufficiently detailed and consistent with market practices, whether to retain the safe harbor for historical transaction data, and whether a different amount of historical transaction data would be more appropriate. The CFPB also requested comment on whether and how the rule should require that data providers make available historical data for other categories of information, such as account terms and conditions, whether such historical data are kept in the ordinary course of business today, and the use cases for such data.

Comments

Commenters generally did not oppose inclusion of transaction information within the scope of covered data, with some data provider commenters asserting that this information is clearly required under CFPA section 1033. A few data provider commenters asked for additional clarification, such as whether the merchant name field refers to the merchant shown in the transaction description in the periodic statement or other sources like a web-based search about the merchant. Many data provider commenters opposed covering pending transaction information and reiterated concerns raised during the SBREFA process, including arguments that such information is not provided on monthly account statements, falls outside the CFPB's 1033 authority as it is not concerning a product that the consumer ''obtained'' from the data provider, is confusing for consumers, and could change at settlement so introduces error risk.

Some commenters opposed the rewards credits example, stating that this information is proprietary, difficult to disclose, subject to misinterpretation, not disclosed today, and could erode the incentives of data providers to invest in merchant categorization tools. A few of these commenters asked the CFPB to limit the information to rewards balance, which they explained is typically made available today.

Third party commenters generally supported the 24-month safe harbor for historical transaction data, stating that 24 months would support most use cases and is consistent with market practices today. A consumer advocate commenter supported the consistency between this period and Regulation Z, 12 CFR 1026.25(a) and Regulation E, 12 CFR 1005.13(b), as both require retention of records for two years to document compliance with their requirements. One third party commenter asked the CFPB to require seven years of historical transaction data and a consumer advocate commenter suggested a period of three years. Some

data provider commenters and SBA Advocacy recommended that the safe harbor should be narrowed to a shorter period, such as six or 12 months. A trade association representing data providers stated that the historical data provision would be inconsistent with section 1033(c), which states, ''Nothing in [CFPA section 1033] shall be construed to impose any duty on a covered person to maintain or keep any information about a consumer.'' 12 U.S.C. 5533(c).

Final Rule

For the reasons discussed herein, the CFPB is finalizing the transaction information requirement as proposed, including the requirement to provide historical transaction information and the 24-month safe harbor, with a minor edit to clarify that the example is referring to transaction date. The CFPB has determined that this pending transaction information is beneficial to consumers given how it supports use cases like personal financial management and fraud prevention, and is generally made available to consumers and third parties today. The CFPB has determined that a 24-month safe harbor period will support most use cases, will encourage more consistent data access across institutions, is consistent with market practices today, aligns with existing record retention requirements in Regulation E and Regulation Z, and appropriately balances providing compliance certainty and encouraging standard market practices with allowing flexibility in case there are data providers who do not control or possess 24 months of historical transaction information notwithstanding their other regulatory obligations. A shorter safe harbor, such as 6 months, would not sufficiently support common use cases like personal financial management and loan underwriting, which typically require more historical transaction information and may be particularly reliant on more data when a consumer's income has seasonal variations. Given that data providers can determine how much historical transaction information to make available according to how much is in the data provider's control or possession rather than by taking advantage of this safe harbor, this provision is consistent with CFPA section 1033(c), which states that nothing in this section shall be construed to impose any duty on a covered person to maintain or keep any information about a consumer. However, the CFPB expects that data providers generally will have at least 24-months of historical transaction information in their control or possession given the existing Regulation E and Z record retention requirements.

Account Balance (§ 1033.211(b))

The CFPB proposed in § 1033.211(b) to require data providers to make available account balance. The CFPB explained that in preamble that this category would include available funds in an asset account and any credit card balance. The CFPB requested comment on whether this term is sufficiently defined or whether additional examples of account balance, such as the remaining credit available on a credit card, are necessary.

A few data provider and third party commenters asked for specific clarifications related to account balance, such as stating that account balance means ''current balance and statement balance,'' balance for credit cards means ''total balance owed,'' and that the CFPB should require currency information. One data provider commenter requested that the CFPB require detailed account balance specifications based on payment type given differences in how various payment networks determine the available balance, ledger balance, and settlement.

For the reasons discussed herein, the CFPB is finalizing the requirement to provide account balance information as covered data. The CFPB has determined that account balance is not a commonly disputed category and that the market will benefit from flexibility in determining how to break down various account balances that apply to an account. However, the CFPB recognizes that a variety of account balances can apply to a product and use case—such as cash advance balance, statement balance, and current balance—and will monitor the market to ensure that data providers are making available this information in a manner usable by consumers and third parties.

Information To Initiate Payment to or From a Regulation E Account (§ 1033.211(c))

In § 1033.211(c), the CFPB proposed to require a data provider to make available information to initiate a payment to or from the consumer's Regulation E account. An example would have explained that this category includes a tokenized account and routing number that can be used to initiate an ACH transaction. It also explained that a data provider would be permitted to make available a tokenized account and routing number instead of, or in addition to, a non-tokenized account and routing number.

The CFPB discussed how Regulation E account numbers are typically shared through consumer interfaces and are required to be disclosed under existing Regulation E periodic statement provisions. Account numbers and routing numbers can be used to initiate a transfer of funds to or from a Regulation E account over the ACH network, enabling common use cases like initiating payments and depositing loan proceeds. Although data providers have recourse under private contracts, private network rules, and commercial law to recover funds stolen by an unauthorized entity, many data providers have expressed concern about their Regulation E obligations and urged the CFPB to allow the sharing of TANs with authorized third parties. The CFPB discussed how these TANs, which are in use today, may help mitigate fraud risks to consumers and data providers. TANs allow data providers to identify compromised points more easily and revoke payment credentials on a targeted basis (rather than issuing a new account number to the consumer). However, some third parties have asserted that TANs do not support certain use cases, such as allowing third parties to print checks to pay vendors, initiating payments by check or wire, and detecting fraud.

The CFPB preliminarily concluded that TANs allow third parties to enable most beneficial payment use cases while mitigating fraud risks, and therefore data providers should have the option of making TANs available to authorized third parties in lieu of full account and routing numbers. The CFPB noted that a TAN would only meet this requirement if it contained sufficient information to initiate payment to or from a Regulation E account. The CFPB requested comment on whether to allow TANs in lieu of non-tokenized account and routing numbers, including whether TANs would mitigate fraud risks and, in contrast, whether TANs have any limitations that could interfere with beneficial consumer use cases, and whether and how adoption and use of TANs might be informed by qualified industry standards. The CFPB also requested comment on whether data providers should also be required to make available information to initiate payments from a Regulation Z credit card.

Comments

Some data providers and trade associations opposed the proposed requirement to make available information to initiate payment to or from a Regulation E account, stating that sharing such information would

introduce liability risks to data providers and consumers and asserting that payment initiation falls outside the CFPB's authority under CFPA section 1033. In contrast, a few other commenters stated that requiring account number would be appropriate and that they generally make this information available to consumers and third parties today. Some data provider commenters expressed their opposition to the growing usage of ''pay-by-bank,'' a phrase sometimes used to describe consumer-to-merchant payment alternatives to the debit and credit card networks. These commenters asserted that the ACH network is not appropriate for third party payments and therefore the CFPB should not require data providers to make available ACH payment initiation information. One trade association representing bank data providers asked the CFPB to clarify that this category does not include the ability to of a third party to initiate credit-push payments from a consumer's account.

A few data provider commenters asked the CFPB to clarify the scope of the required information and whether account and routing number would satisfy the obligation. Data provider commenters also raised ambiguity and overbreadth concerns, asserting that this provision could be read to require wire transfer information and other payment information within the data provider's control or possession. Several data provider commenters opposed adding a requirement to make available information to initiate payment from a credit card account, asserting that requiring credit card number would introduce significant risks to consumers and data providers and that the CFPB had not sufficiently considered the risks of requiring such data. Some third party and data provider commenters stated that some account information is necessary to allow consumers and third parties to differentiate accounts, including situations where a consumer needs to identify which account they are permissioning access to, or when a third party is verifying a consumer's assets for loan underwriting.

Many third party commenters supported including information to initiate payment, with some asking the CFPB to clarify that it includes other payment types beyond ACH. For example, one data provider commenter that is also a third party asserted that the category should be expanded to include all means to initiate payments, including debit card information and FedNow information.

The CFPB received mixed comments on the allowance for TANs. Although some data providers focused their comments on concerns related to providing payment initiation information generally, others noted the potential security benefits of TANs and supported the proposed approach. Commenters supporting use of TANs stated that they enable data providers to identify the point of compromise in case of a breach; enable consumers and data providers to revoke compromised payment credentials on a targeted basis; enable data providers and consumers to limit risks of bank account fraud, as they can be restricted to a particular third party; and offer simple implementation and reliable technology given that they exist in the market today and can be easily adopted. One commenter stated that TANs would allow a data provider to create a token for a specific third party, so that any transactions on that token can be attributed to the third party. Commenters also stated that consumers can more easily revoke TANs when a payee is misusing the token or the consumer otherwise wants to revoke authorization, rather than needing to completely close an account and disrupt other account payment activity. Tokens also enable data providers to better identify the source of a cybersecurity incident or fraud, and would allow data providers to quickly stop fraud on a compromised token by restricting the ability to transact with that token. One large data aggregator stated that allowing TANs in lieu of non-tokenized account numbers could encourage further development of pay-by-bank functionality. This commenter also requested several significant modifications to the TAN option, such as allowing the third party to obtain the non-tokenized account and routing number if a TAN does not meet the third party's particular use case, and requiring data providers who share a TAN to also make available a unique user identifier. A payment network governance organization supporting TANs stated that industry does not tokenize routing numbers.

Some third parties opposed allowing data providers to make available TANs in lieu of non-tokenized account and routing numbers as proposed. These commenters asked the CFPB to remove the allowance for TANs and only allow non-tokenized account and routing numbers, asserting that the ability to revoke TANs introduces risks of fraud perpetrated by consumers, TAN payments are more likely to fail, there is potential for data providers to issue TANs in an anticompetitive manner, TANs should be addressed in a separate rulemaking, and TANs do not support some consumer and third party use cases like generating paper checks, assessing the likelihood of payment failure, and interfering with fraud controls that track a particular account's payment activity. A few third parties also asserted that there is no market-wide standard for TANs and that TANs are not interoperable among the payment networks used today, including FedNow, Real-Time Payments (RTP), and ACH. These commenters differed on whether it would be appropriate to defer to a standard-setting body to determine the specifications for TANs. Some shared concerns that if the CFPB finalized the TAN option, the rule should adopt specific TAN revocation and expiration provisions. One trade association commenter and a third party commenter stated that non-tokenized account and routing number information is not that sensitive because it is printed on paper checks and already needs to be encrypted according to private network rules. A third party commenter asserted that industry-wide controls serve as better protective tools than optional use of TANs, as the ACH network already monitors for high returns rates in order to identify fraudsters running unauthorized debits against stolen ACH numbers, banks who sponsor third party senders into the ACH system are required to perform due diligence on those senders, consumers have rights under Regulation E to have their bank reverse an unauthorized payment, and banks regularly honor consumer claims of unauthorized account activity even if there is no evidence that the account activity was unauthorized.

Final Rule

For the reasons discussed herein, the CFPB is finalizing the § 1033.211(c) category of information to initiate payment to or from a Regulation E account, including language allowing data providers to make available TANs in lieu of non-tokenized account numbers, with some clarifications.

The CFPB has determined that information to initiate payment to or from a Regulation E account supports many essential consumer use cases such as account switching and making payments. The CFPB understands that consumers use account and routing numbers today to support use cases like signing up for direct deposit, making bill payments, and designating an account to accept loan proceeds. Consumers can provide this information directly to third parties, but making it available through a data provider has a variety of benefits, including accuracy

of the number sequence, ensuring that a correct and valid account is being accessed, and reduced friction in how quickly and easily that information shared. This information falls within the CFPB's authority under section 1033 as it is information in the control or possession of the covered person concerning the consumer financial product or service that the consumer obtained from such covered person. As discussed above in part IV.3, the rule does not require account write access or otherwise require payment initiation. Part IV.3 includes additional discussion of comments related to concerns about liability.

Some data provider and trade association commenters asked the CFPB to clarify that pre-existing payment authorization requirements continue to apply. The CFPB agrees with commenters that regardless of whether a third party obtains information to initiate payment from a consumer or from an authorized third party, that third party would need to obtain appropriate payment authorization from the consumer. If the third party is not a depository institution, it would need to go through an originating depository institution to access the ACH payment network, and that originating depository institution continues to have due diligence, Know-Your-Customer, and private network obligations in terms of warranting that the third party's payment order is valid. The consumer's receiving depository financial institution and any other financial institutions in the transaction would also have Regulation E obligations, including error resolution obligations for any unauthorized payments. However, according to private network rules, the receiving depository financial institution can seek remediation for errors from the originating depository financial institution and third party that facilitate the erroneous payment.

Given the benefits of making this information available, how it is required to be disclosed under Regulation E periodic statement requirements, how it is generally made available to consumers and third parties today, applicable Regulation E error protections for consumers in the event the information is misused, existing private network and safety and soundness obligations of originating depository institutions that facilitate a third party's payment, and the ability of the depository data providers to seek redress from originating depository institutions for erroneous payments, the CFPB has determined that data providers must make available information to initiate payment to or from a Regulation E account held by the data provider.

Instead of using the term ''account and routing number'' to define this covered data category, the CFPB is finalizing the broader proposed ''information to initiate payment'' language for two forward-looking reasons. First, the payments market may start to shift away from account and routing number as security and data practices evolve, and this broader language provides the market with flexibility to share data in accordance with those shifts. Second, since third parties typically use account and routing number to complete ACH payments today, using the ''account and routing number'' term may be misinterpreted to limit the types of payments that the information can be used to initiate. As the payment market evolves and more broadly adopts alternatives to the ACH network, such as RTP and FedNow, data providers may control or possess other payment initiation information that can be retrieved in the ordinary course of business—and accordingly such information would need to be made available. This information could include information sufficient to submit a request for payment. However, this provision is limited to information sharing and accordingly does not include the ability of a third party to access and push payment out of a consumer's account, also referred to as ''write'' access.

To clarify the scope of this information and address commenters' concerns about ambiguity, the CFPB is finalizing a clarification that this category is limited to information to initiate payment to or from a Regulation E account held directly or indirectly by the data provider. The final rule also explains that the requirement to make available this information does not apply to data providers who do not directly or indirectly hold the underlying Regulation E account. For example, a data provider that merely facilitates pass-through payments to third parties would not be required to make available account and routing number for the underlying Regulation E account.

The CFPB notes that CFPA section 1033(b)(4) and the final rule at §§ 1033.211(c) and 1033.221(d) only require data providers to share payment initiation information that they can retrieve in the ordinary course of business. In the current market, account number is clearly retrievable in the ordinary course of business given that it is typically shared through consumer and developer interfaces today and is required to be disclosed on the Regulation E periodic statement. The CFPB is not requiring payment initiation information that is not retrievable in the ordinary course of business. For purposes of this rule, the CFPB is making the determination that debit card numbers are data that are not retrievable in the ordinary course because of a unique historically-driven combination of factors that together suffice to put this data outside the scope of the rule, including the physical way—plastic cards—in which providers have typically chosen to make debit card credentials available to consumers, and the specific nature of how longstanding private payment network rules govern which entities can issue and control debit card payment credentials. As noted above, as the payment market adopts alternatives to the ACH network, such as RTP and FedNow, data providers may control or possess other payment initiation information that data providers can retrieve in the ordinary course of business—and accordingly such information would need to be made available.

This provision does not impact other requirements for initiating payment or accessing the payment networks. Section 1033.211(c) requires that data providers make available information to initiate payment to or from a Regulation E account; payment authorization requirements continue to separately apply. The CFPB confirms that, in order to initiate payment, third parties would need proper payment authorization from the consumer subject to, without limitation, Regulation E preauthorized electronic fund transfer provisions and private network rule authorization requirements. The CFPB notes that, in order to access the payment network and initiate an ACH or similar payment, a third party would need an originating depository financial institution relationship. With regards to payment initiation, this provision does not alter due diligence and network requirements that apply to originating depository financial institutions providing access to the ACH payment network.

The CFPB is also finalizing, with modifications, the proposed example that would allow data providers to share a tokenized account number instead of, or in addition to, a non-tokenized account number. This clarification is now moved into the rule text paragraph and no longer is labeled as an example. To address commenters' concerns about anticompetitive issuance of TANs, the rule text also now states that such tokenization is appropriate so long as it is not used as a pretext to restrict

competitive use of payment initiation information; the reference to ''routing number'' has been removed in light of comments that routing number is not typically tokenized. TANs, used appropriately, can meet consumer use cases for electronic payments. The CFPB notes that use of TANs in conformance with applicable consensus standards can serve to indicate appropriate use. In addition, data providers have legitimate reasons to use TANs because they can protect the security of the relevant payment system and thus benefit its participants, including the consumer. In particular, TANs lower the risk of unauthorized transactions by limiting the potential for payment credentials to be misused for purposes the consumer did not intend or authorize, by helping to identify the source of a data breach, and by causing less disruption to consumers and the payment system when a credential is appropriately replaced. These benefits apply even though non-tokenized account numbers appear on paper checks and may need to be stored in an encrypted form according to private network rules. The CFPB notes that a data provider's provision of a TAN in lieu of non-tokenized account number is optional and that sometimes consumers share non-tokenized account and routing numbers directly with third parties.

With regard to concerns from some third party commenters that TANs can interfere with fraud controls that track an account's payment history, third parties can use the account identifier described under § 1033.211(f) to distinguish consumer accounts. However, the CFPB cautions that § 1033.421(a) limits authorized third party use of covered data, including TANs, to what is reasonably necessary to provide the consumer's requested product or service. The general limitation standard, including uses that are reasonably necessary to protect against actual or potential fraud, is discussed below regarding § 1033.421(a) and (c). TANs do allow consumers to more easily revoke their payment authorizations, but ease of revocation is a consumer benefit of TANs as it allows consumers to exercise more precise and immediate control over their account in the event that they have concerns about a payee. The interaction between TANs and revocation is discussed further in § 1033.331(e). In response to a third party commenter's statement that industry controls are more effective than TANs, the CFPB notes that unauthorized payment fraud exists in the market today and the CFPB has taken public action against financial institutions that do not comply with their error resolution requirements.

This final rule does not require data providers to grant access to, or facilitate payments on, any particular payment network. Accordingly, the CFPB does not require that TANs be interoperable across multiple payment networks. However, to the extent that data providers pretextually use TANs to frustrate consumers' ability to provide functioning payment initiation information to authorized third parties of their choice, such pretextual use would violate the anti-evasion provision at § 1033.201(a)(2). The CFPB intends to monitor the market for any such pretextual use of the allowance for TANs, and will issue future guidance about the use of TANs in lieu of a full account number if needed.

Terms and Conditions (§ 1033.211(d))

The CFPB proposed to require terms and conditions be made available as covered data in § 1033.211(d). The CFPB explained that terms and conditions generally refer to the contractual terms under which a data provider provides a covered consumer financial product or service. The proposed rule included several non-exhaustive examples of information that would constitute terms and conditions.

The CFPB discussed how certain terms and conditions, such as pricing, reward programs terms, and whether an arbitration agreement applies to the product, support beneficial use cases, like comparison shopping and personal financial management. Authorized third parties could use this information to help consumers more easily understand and compare the terms applicable to a covered consumer financial product or service. Since pricing is a fundamental term that is provided in account opening disclosures and change in terms disclosures, the CFPB proposed to include APR, APY, fees, and other pricing information in this category. The CFPB also discussed how this provision would benefit consumers because they may not be able to easily find this information through a consumer interface today, and some data providers may not be consistently sharing it with third parties. The CFPB requested comment on whether the final rule should include more examples of information that must be made available under terms and conditions.

Comments

Data provider commenters generally did not dispute including APR and APY as examples of covered data, although a few opposed sharing that information. Some bank data provider and related trade association commenters opposed including information other than realized fees, such as applicable fee schedule. Some data provider commenters opposed including other examples in the final rule, such as rewards program terms, overdraft opt-in status, and whether an account was subject to an arbitration agreement, arguing that such information falls within the exceptions in § 1033.221 or otherwise falls outside the CFPB's 1033 authority as it is not related to the covered consumer financial product or service and is not cost, charges, or usage data. One credit union trade association stated that arbitration information will make consumers targets for predatory attorneys and contradicts statements in a separate CFPB rulemaking regarding covered form contracts used by nonbanks.

Many data provider commenters raised technical and burden concerns about this category, stating that terms and conditions are not well suited to developer interfaces, as some terms cannot be reduced to numerical or binary data fields. Other stated concerns included: (1) lack of clarity over whether the rule is requiring a PDF of an entire terms and conditions document; (2) the number of terms and conditions documents applicable to an account, and whether all of them must be made available; (3) full terms and conditions documents are not useful or desirable for third parties to receive; (4) sharing full terms and conditions documents entails sharing of extraneous information; and (5) sharing current terms and conditions documents is overly burdensome and infeasible. A data aggregator commenter asserted that full terms and conditions contain some substantial legal terms that are neither supportive of any existing use cases nor easily transformed into a machine-readable format. This commenter requested that the CFPB identify the data elements that may be maintained in the terms and conditions and require that those elements—rather than the full terms and conditions—be made available in a machine-readable format.

One bank trade association commenter asked the CFPB to allow data providers to share a PDF of the complete terms and conditions rather than through data fields, and another suggested allowing data providers to post terms on their website rather than making them available through the developer portal. A large data aggregator commenter explained that some third party interfaces allow PDF documents to be shared today.

Final Rule

For the reasons discussed herein, the CFPB is finalizing the requirement to make available terms and conditions as covered data, with some additional limitations. The CFPB is aware that a variety of terms and conditions may impact a covered consumer financial product or service and some of those terms may not support current consumer use cases. The CFPB agrees with commenters that terms and conditions can be defined to provide compliance clarity to data providers and limit the extent of information they need to make available, while supporting current and potential use cases. Accordingly, the CFPB is finalizing a definition of the terms and conditions category limited to data in agreements evidencing the terms of the legal obligation between a data provider and a consumer for a covered consumer financial product or service, such as data in the account opening agreement and any amendments or additions to that agreement, including pricing information.

The CFPB has determined that the proposed non-exhaustive examples of terms and conditions are helpful to clarify the terms and conditions category and minimize market disagreements about whether certain pieces of information must be made available. The applicable fee schedule is important information for comparison shopping and personal financial management as consumers need to anticipate what fees can be charged in order to evaluate a product's true cost and plan spending. Rewards programs are an important factor to a consumer's decision to obtain and use a consumer financial product or service, and the CFPB has determined that it is appropriate to require that these rewards program terms be made available under § 1033.201(a)(1). Similarly, whether a consumer has opted into overdraft coverage or is subject to an arbitration agreement is relevant to how a consumer may decide to use or comparison shop for a product or service, including determining applicable fees and their rights with respect to that product or service. All of these non-exhaustive examples reflect the terms and conditions of the legal obligation between a data provider and a consumer for a covered consumer financial product or service. In response to a comment that arbitration information will be used to target consumers or otherwise relates to other CFPB policies related to form contracts, this information is not being collected by the CFPB and will not be shared unless the consumer chooses to do so.

The CFPB has added credit limit to the list of non-exhaustive examples of terms and conditions. Credit limit is a key term that is typically determined and disclosed when a consumer obtains a Regulation Z credit card, and account agreements generally permit the provider to make changes to the credit limit. Although the CFPB asked for comment on credit availability with regard to account balance in § 1033.211(b), the CFPB has determined that it would be clearer to include credit limit as an example under this terms and conditions category. The CFPB is finalizing example 2 to § 1033.211(d) to state that this category includes the applicable fee schedule, any APR or APY, credit limit, rewards program terms, whether a consumer has opted into overdraft coverage, and whether a consumer has entered into an arbitration agreement.

In the current market, certain terms and conditions are commonly requested and made available as discrete data fields in developer interfaces. For example, discrete data fields for applicable APRs and APYs are typically shared in third party interfaces to support comparison shopping and personal account management. The CFPB expects that such commonly requested terms and conditions will continue to be made available as discrete callable data fields, as § 1033.311 requires developer interfaces to make data available in a standardized and machine-readable format that is widely used by other data providers and designed to be readily usable by authorized third parties.

As use cases develop, third parties may seek access to terms and conditions that are not commonly used today. For example, a third party may need a specific term from the account opening agreement to provide a product or service requested by the consumer. If that term falls within terms and conditions as defined in § 1033.211(d), the term is covered data and the provider's developer interface must make that data available. However, the data provider's developer interface would not necessarily need to make that specific term available as a discrete ''callable'' data field. Instead, it could make it available within a broader section of the agreement or by making available the full account opening agreement, subject to the standardized and machine-readable format requirements in § 1033.311(b). As discussed in § 1033.421(b), the general limitation on use and retention of covered data in § 1033.421(a) would apply to that data. The CFPB concludes that given how some account agreement terms are not translatable to discrete numerical or binary data fields, it is appropriate for data providers to have flexibility in how they share terms and conditions information through the developer interface in a machine-readable format. (See part IV.C.2 for a discussion of the machine-readability requirement applicable to the developer interface.) Some data providers already appear to be sharing longer documents, such as statements, through developer interfaces today.[58] The CFPB also concludes that because (1) most account agreement terms are publicly available, broadly applicable and not specific to a particular consumer, and (2) third parties are restricted in terms of what information they can use and retain under § 1033.421(a), the privacy concerns are limited in this particular situation.

Upcoming Bill Information (§ 1033.211(e))

The CFPB proposed in § 1033.211(e) to require upcoming bill information to be made available as covered data. An example explained that upcoming bill information would include information about third party bill payments scheduled through the data provider and any upcoming payments due from the consumer to the data provider. For example, it would include the minimum amount due on the data provider's credit card billing statement, or a utility payment scheduled through a depository institution's online bill payment service. The CFPB preliminarily concluded that this information would be necessary to support personal financial management and consumers who are switching accounts. The CFPB requested comment on whether this category was sufficiently detailed to support situations where a consumer is trying to switch recurring bill payments to a new asset account, such as transferring a monthly credit card payment to a new bank.

Comments

Some data provider commenters stated that upcoming bill information should not be included or should be significantly narrowed. These commenters asserted that this information is outside the CFPB's section 1033 statutory authority, is burdensome to collect and share, is unrelated to the covered consumer financial product or service, is sensitive

[58] *See, e.g.,* Plaid, *Statements, https://plaid.com/docs/statements/* (last visited Oct. 16, 2024).

because it contains payee data, is subject to change, and would not support account switching. A few data providers stated that it is unclear whether this information also includes payments scheduled through a third party, rather than being limited to bill payments scheduled through the data provider's platform. One data provider commenter stated that this information should be excluded as confidential commercial information because contracts with billers and bill service provider prohibit its disclosure. One commenter stated that this information should be limited to bills related to financial products, like mortgage bills.

Final Rule

For the reasons discussed herein, the CFPB is finalizing this provision as proposed, including the example discussing information about third party bill payments scheduled through the data provider and any upcoming payments due from the consumer to the data provider. Upcoming bill information will support several important consumer use cases, including personal financial management and account switching. In response to comments regarding whether payments scheduled through a third party are also meant to be covered, the CFPB confirms that data providers are not required to make available information that is not in the control or possession of the data provider, and upcoming bill payments scheduled outside of the data provider's bill payment platform may not be in their control or possession and thus are not considered covered data. For example, when a consumer uses a cell phone company's website to schedule a bill payment from their bank account, the consumer's bank may not control or possess that information unless the cell phone company is sharing that preauthorization information with the bank. In contrast, a bank does control or possess information about a cell phone payment a consumer scheduled through the bank's consumer interface, and so is required to make available that bill payment information under § 1033.201(a)(1). Contrary to commenters' assertions about the scope of the data access right, information about scheduled bill payments is squarely within the scope of CFPA section 1033(a); specifically, upcoming bill payments relate directly to a ''series of transactions''—*i.e.,* the consumer's pattern of paying bills through the data provider. As discussed in the context of the general limitation standard in subpart D, third parties will be limited to collecting, using, and retaining covered data only to the extent it is reasonably necessary to provide the consumer's requested product or service, and therefore sharing of covered data will be limited to what is reasonably necessary. The CFPB notes that the general exceptions under CFPA section 1033(b) continue to apply, subject to the anti-evasion provision in § 1033.201(a)(2).

Basic Account Verification Information (§ 1033.211(f))

The CFPB proposed in § 1033.211(f) to require basic account verification information be made available as covered data, which would be limited to the name, address, email address, and phone number associated with the covered consumer financial product or service.

The CFPB discussed how certain pieces of identifying consumer information are commonly shared with third parties today to support several beneficial use cases. For example, a lender may seek to verify that loan disbursements will be deposited into an account that belongs to the consumer who is applying for the loan, or a mortgage underwriter may seek to verify that funds in a savings account belong to the mortgage applicant. On the other hand, third parties have raised concerns during the SBREFA process that data providers sometimes limit access to this information, and requested that the CFPB require that account verification information be shared.

The CFPB preliminarily concluded that requiring data providers to share basic account verification information is necessary to ensure the usability of the covered data. For example, confirming that funds in a savings account do, in fact, belong to the consumer applying for a mortgage loan is necessary to determine whether the mortgage underwriter can rely on that information. Similarly, a loan provider is mitigating fraud risks when it ensures that the name, address, email address, and phone number on a recipient account matches the information of the loan applicant; matching information helps ensure that the funds are going to the correct account, and that the account opening notifications are not going to someone who stole the consumer's identity. Email addresses and phone numbers are increasingly being used as substitutes for consumer and account identifiers, particularly in the payments market where such information can be used to send a person-to-person payment. Accordingly, the CFPB preliminarily determined that limiting basic account verification information to the name, address, email address, and phone number associated with the covered consumer financial product or service would facilitate the most common use cases and is consistent with market practices today.

The CFPB considered whether to include SSNs as part of basic account verification information, as SSNs are shared for some beneficial consumer use cases, like mortgage underwriting. However, the sharing of SSNs is not ubiquitous. The CFPB preliminarily concluded that SSNs may continue to be shared as appropriate but, given the risks to consumers, the proposed rule did not require data providers to make them available.

The CFPB requested comment on whether the proposed basic account verification information category would accommodate or unduly interfere with beneficial consumer use cases. Given privacy and security concerns about unintentionally covering other kinds of information that are not typically shared today, the CFPB also requested comment on whether it is appropriate to limit this category to only a few specific pieces of information.

Comments

Both consumer advocate and bank data providers generally supported the CFPB's approach to allowing some basic account verification information but limiting the category to specified data fields. These commenters agreed that this approach would appropriately balance supporting common beneficial use cases with limiting consumer privacy risks and data provider implementation costs. Many of these commenters also specifically requested that the CFPB not expand the category to include SSN or other personally identifiable information. A trade association representing data providers asked that the CFPB not expand this category to any information a data provider uses to securely authenticate the identity of its customer as part of a payment initiation process, such as a one-time verification code, as such information would pose significant risks to the integrity of various payment security standards and would conflict with the FFIEC's guidance on Authentication and Access to Financial Institution Services and Systems. Some data provider commenters opposed sharing any basic account verification information, asserting that such information presents fraud risks, has no benefit, and can be obtained directly from consumers. A trade association representing large depository data providers stated that additional account information could help consumers identify which account data they would

like to share. This commenter asserted that the CFPB could add ''number of the account'' to this category, with an allowance for use of tokens or truncated account numbers, and that it is common practice today for truncated account numbers to be used for this purpose. A third party commenter stated that account identification is necessary for underwriting so that a third party knows whether a consumer's assets have already been accounted for. Another third party commenter asked the CFPB to include a consumer identification number that could be linked to all consumer accounts, a consumer's date of birth, the date an account was opened, an account's transferability status, and other account status information.

Final Rule

For the reasons discussed herein, the CFPB is finalizing basic account verification information as proposed, with the addition of certain account-identifier information for situations where a data provider directly or indirectly holds a Regulation E or Regulation Z account.

The CFPB has determined that this approach sufficiently enables beneficial consumer use cases in the market today and avoids introducing risks from adding account verification information that is not commonly made available. The information specified in § 1033.211(f) supports a variety of use cases and thus is appropriate to require, including ensuring that loan proceeds are being deposited into an account belonging to the consumer, confirming that the consumer applying for credit does hold the asset accounts being used for underwriting, and reducing friction during account opening. In order to verify an account, third parties often need to match the information provided by the consumer with the identification information held by the data provider. Consumers and third parties may need to identify an account in order to permission access and differentiate a consumer's assets.

In response to comments about the need to differentiate accounts, the CFPB is adding language to require that if a data provider directly or indirectly holds a Regulation E or Regulation Z account belonging to the consumer, the data provider must also make available a truncated account number or other identifier for that account. Given the more sensitive nature of other personally identifiable information requested by some commenters, such as SSN, at this time the CFPB is limiting this category to name, address, email address, and phone number associated with the covered consumer financial product or service, and, as applicable, account identifier. Data providers are permitted to provide additional information as appropriate and the CFPB will monitor whether to expand the scope of required information as account verification practices evolve.

4. Exceptions (§ 1033.221)

Proposal

The CFPB proposed, in § 1033.221, four exceptions to the requirement that data providers make data available under the proposed rule, along with some clarifications of data that do not fall within these exceptions. The exceptions would implement section 1033(b) of the CFPA by restating the statutory language and providing certain interpretations. The first exception was for any confidential commercial information, including an algorithm used to derive credit scores or other risk scores or predictors. Some data providers have asserted that certain account information falls within this statutory exception because such information is an input or output to a proprietary model. The CFPB proposed to clarify that such information would not qualify for this exception merely because it is an input to, or an output of, an algorithm, risk score, or predictor. For example, APR and other pricing information are sometimes determined by an internal algorithm or predictor, but such information would not fall within this exception.

The second exception was for any information collected by a data provider for the purpose of preventing fraud or money laundering, or detecting, or making any report regarding other unlawful or potentially unlawful conduct. During the SBREFA process, a third party stated that at least one data provider has cited this exception when declining to provide general account information, such as the name on the account. To avoid misuse of this exception where information has multiple applications, the CFPB proposed to clarify that information collected for other purposes does not fall within this exception. For example, name and other basic account verification information would not fall within this exception.

The third exception was for information required to be kept confidential by any other provision of law. Information would not qualify for this exception merely because the data provider must protect it for the benefit of the consumer. The proposed example to this exception stated that the data provider cannot restrict access to the consumer's own information merely because that information is subject to privacy protections.

The final exception was for any information that a data provider cannot retrieve in the ordinary course of its business with respect to that information.

The CFPB explained that the definition of covered data in § 1033.211 would generally include information made available to consumers and authorized third parties today or that is required to be disclosed under other laws. The CFPB noted that the exceptions proposed in § 1033.221 were narrow, and the information specified as covered data would not typically qualify for any of these exceptions.

The CFPB requested comment on whether it should include additional examples of data that would or would not fall within the exceptions, and whether this provision sufficiently mitigates concerns that data providers may cite these exceptions on a pretextual basis.

Comments

Comments on the exceptions took a variety of positions. With respect to the CFPB's implementation of the statutory exceptions overall, some data provider and related trade association commenters asked the CFPB to add more examples of excepted information and expand the exception provisions. These commenters stated that the statutory exceptions should be interpreted broadly to allow data providers discretion in denying access to covered data. One commenter stated that it is premature to have concerns about data provider abuse of the exceptions. A bank trade association commenter asked the CFPB to except any data that is not available in the consumer interface, explaining that such data pose an undue burden on financial institutions and introduce data security risks and operational challenges. In contrast, many third party commenters asserted that the CFPB should interpret the exceptions narrowly as they are vulnerable to pretextual use by data providers. One large bank trade association commenter asked the CFPB to finalize the exceptions as exemptions to make clear that data described under the statutory exceptions are not covered by the rule.

On the first proposed exception for confidential commercial information, many data provider commenters asserted that rewards programs terms and credits are proprietary and should fall under this exception, and that the rule should prohibit reverse engineering. A large data aggregator also

requested that the rule prohibit reverse engineering of confidential commercial information, suggesting that such a prohibition could be incorporated into the data privacy protections. A trade association representing data providers asked that the CFPB distinguish between data that might be useful for a consumer for consumer purposes versus data that would be of primarily commercial value (such as metadata regarding the exact time and place of transactions), and stated that data providers should not be required to reveal analytically enriched data if the consumer does not ordinarily see such data and cannot be said to substantially rely upon it when making decisions about the selection of consumer products or services. This commenter asserted that the exception must make clear that it also extends to information that cannot be shared for contractual reasons and attorney work product related to an account and any active litigation.

A large data aggregator commenter supported the proposed examples for the first exception as sufficient and appropriate, stating that the proposed clarification that the exception for proprietary algorithms only applies to the algorithm itself, and not to the covered data that goes into or is an output from the algorithm, appropriately balances a data provider's right to protect its trade secrets and intellectual property with a consumer's right to data access and portability. Absent this clarification, the commenter cautioned that the exception could swallow the rule, explaining that today myriad terms, conditions, rates, fees, and features of an account are the result of some proprietary algorithmic decision making by the financial institution. A few consumer advocate commenters asked the CFPB to narrow this exception to clarify that credit scores and other risk scores are not considered confidential commercial information, and therefore must be made available.

On the second proposed exception for any information collected by a data provider for the purpose of preventing fraud or money laundering, or detecting, or making any report regarding other unlawful or potentially unlawful conduct, a bank trade association commenter asserted that it was too narrow and should be revised to remove the term ''sole.'' This commenter explained that very limited information is collected solely for fraud prevention. Another data provider trade association offered examples of information it believes fall within the statutory exception, such as information related to security incidents and internal account flags, and requested that the CFPB reconsider its approach to this exception.

On the third exception for information required to be kept confidential by any other provision of law, a few data provider commenters requested that the exception be expanded. One asked for examples of laws that would require a data provider to withhold information from a consumer, and a few urged the CFPB to add a good faith compliance standard for data providers to withhold information if they reasonably believe that the information must be kept confidential by law.

On the fourth exception regarding information that a data provider cannot retrieve in the ordinary course of its business, one research institute commenter requested that it be narrowed as it may allow data providers to find loopholes or shield themselves from disclosing information that they should be required to provide to consumers. A data aggregator commenter requested changes so that data providers cannot evade their obligations to provide covered data by deliberately making it difficult to retrieve data in the ordinary course of business. The commenter suggested adding a presumption that all covered data are retrievable in the ordinary course at least for a period stretching from the present back at least 24 months and adopt an interpretation of the phrase ''in the ordinary course'' that relies on an objective industry standard and would not permit a data provider to adopt an unreasonable policy to evade data access obligations. A data provider commenter asked the CFPB to add examples of information that are within the scope of this exception, explaining that it believes terms and conditions and payments scheduled through third parties would be excepted. Another data provider commenter stated that 24 months of historical transaction data are not retrievable in the ordinary course of business, and that a shorter safe harbor of six months would be more appropriate.

One Member of Congress commenter cited the discussion in the proposal of how the exceptions proposed in § 1033.221 are narrow and that proposed § 1033.351(b)(1) would require a data provider to create a record of what covered data are not made available pursuant to an exception in proposed § 1033.221 and explain why the exception applies. This commenter asserted that proposed § 1033.221 and the interaction with proposed § 1033.351(b)(1) will ensure that consumer data are not withheld for anticompetitive reasons.

Final Rule

For the reasons discussed herein, the CFPB is finalizing the exceptions, including the examples of data that do not fall within the exceptions, as proposed. The CFPB has concluded that additional examples of information that fall within the exceptions, as requested by some commenters, are not necessary at this time. The CFPB intends to monitor the market for pretextual use of the CFPA section 1033 exceptions and more generally for violations of the prohibition against evasion in § 1033.201(a)(2).With respect to a commenter's request to use rulemaking authority to reclassify the statutory term ''exceptions'' to ''exemptions,'' the commenter did not explain why this change from the statute was necessary to clarify that these data types are not covered by the rule. The CFPB is thus finalizing the heading for § 1033.221 using the statutory language.

Confidential Commercial Information

Final § 1033.221(a) restates the exception at section 1033(b)(1) for any confidential commercial information, including an algorithm used to derive credit scores or other risk scores or predictors. Final § 1033.221(a) further clarifies that information does not qualify for this exception merely because it is an input to, or an output of, an algorithm, risk score, or predictor. Final § 1033.221(a) includes an example of APR and other pricing terms as data that are sometimes determined by an internal algorithm or predictor but do not fall within this exception.

With respect to comments that rewards programs terms, rewards credits, and terms and conditions are proprietary and should fall under the first exception for confidential commercial information, the CFPB has determined that these data do not fall within the definition of confidential commercial information. Today, rewards program terms are a factor in how consumers decide to use and select credit cards. They concern the covered consumer financial product or service obtained from the data provider, and they support important consumer use cases like comparison shopping, personal financial management, and account switching. These terms are commonly shared with consumers, just like general terms and conditions for an account—similarly, the credits that a consumer has in a rewards program are shared with the consumer, and are necessary in order for the consumer to be able to use those rewards. Because

these data are shared with consumers, must be shared for rewards programs and products to function, and are necessary for consumers to comparison shop and make informed choices about how to use their account, they are not confidential commercial information.

With respect to a commenter that suggested the CFPB should further define confidential commercial information on the basis of data's utility to a consumer relative to its commercial value to a data provider, the CFPB has determined that this suggested additional restriction of data availability is inconsistent with Congress's delineation of limited exceptions to the consumer access data right. Congress did not include an additional balancing test in CFPA section 1033, and imposing one in this final rule would risk subverting consumers' right to access data. However, the CFPB notes that the § 1033.421(a) general limitation standard limits third parties' collection, use, and retention of covered data to that which is reasonably necessary to provide the product or service that the consumer requested. If particular data points are not relevant to any product or service that a consumer might request, then a third party would generally not be able to request those data points. In this way, the final rule already accommodates the commercial usefulness of covered data without the inclusion of an explicit balancing test.

With respect to information that cannot be shared for contractual reasons and attorney work product related to an account and any active litigation, commenters did not identify specific items of covered data that would potentially fall under these conditions. A data provider cannot limit a consumer's access to data simply because the consumer and the data provider are engaged in a legal dispute. While there is a separate exception for data that must be kept confidential by any other provision of law, as discussed later in this section this exception does not apply merely because the data provider must protect it for the consumer. Furthermore, if a data provider were to structure legal arrangements with the intent of subjecting covered data to this exclusion with the likely effect of frustrating consumers' data access rights, such behavior could violate the anti-evasion provision in final § 1033.201(a)(2).

For a discussion of comments related to reverse engineering of covered data, see part IV.D.3.

Information Collected for the Sole Purpose of Preventing Fraud and Certain Other Unlawful Activities

Final § 1033.221(b) restates the exception at section 1033(b)(2) any for information collected by the data provider for the ''sole'' purpose of preventing fraud or money laundering, or detecting, or making any report regarding other unlawful or potentially unlawful conduct. Final § 1033.221(b) further clarifies that information collected for other purposes does not fall within this exception, and states that, for example, name and other basic account verification information do not fall within this exception. The final rule retains the word ''sole'' because the CFPB understands that data providers use a variety of data in the context of identifying and preventing unlawful activity, and therefore expanding the exception to cover all information used for these purposes would create an exception that risks swallowing the rule.

Similarly, basic account verification information is necessary to support a variety of use cases for which the third party needs to ensure that the name on the account matches the name of the consumer. Expanding the exception to cover this kind of basic data—which is collected by data providers for a variety of reasons unrelated to preventing unlawful activity—would frustrate consumers' data access right in a way that would conflict with Congress's intent.

Information Required To Be Kept Confidential

Final § 1033.221(c) restates the exception at section 1033(b)(3) for any information required to be kept confidential by any other provision of law. Final § 1033.221(c) further clarifies that information does not qualify for this exception merely because the data provider must protect it for the consumer. Final § 1033.221(c) also states, as an example, that the data provider cannot restrict access to the consumer's own information merely because that information is subject to privacy protections. In response to comments requesting that the CFPB identify laws that might require information to be kept confidential, the final rule does not include specific examples, because of the potential for both over- and under-inclusiveness. However, the CFPB notes that, as an example, financial institutions are prohibited from notifying an individual that a suspicious activity report has been filed against them, and this might constitute an example of when a data provider would be required to keep that specific information confidential.

In response to comments requesting a good faith compliance standard for data providers to withhold information if they reasonably believe that the information must be kept confidential by law, the CFPB notes that, under final § 1033.351(b)(1), indicia of whether a data provider's record of data fields it makes available complies with the policies and procedures requirement of final § 1033.351(b) include whether that record conforms to a consensus standard. Thus, to the extent that a data provider conforms with a consensus standard in making particular data fields available (and not making other data fields available), conformance with the consensus standard would carry some indication of compliance.

Information That Cannot Be Retrieved in the Ordinary Course of Business

Final § 1033.221(d) restates the exception at CFPA section 1033(b)(4) for any information that the data provider cannot retrieve in the ordinary course of its business with respect to that information.

Terms and conditions information is typically retrievable in the ordinary course of business as data providers are required to disclose and make available such information under other laws, including but not limited to Regulation E and Regulation Z.[59] The other suggestions raised by commenters—such as security incident information and one-time verification codes—generally do not fall within the covered data definition in § 1033.221 or otherwise are not in the control or possession of the data provider. For example, as discussed above in part IV.B.3 with respect to upcoming bill information, bill payments scheduled directly with merchants or other payees—and not on the data provider's bill payment platform—are not typically in the control or possession of the data provider. Generally, a data provider would not be permitted to categorically refuse access to data specifically included in the definition of covered data under this exception, absent some additional showing that the data were

[59] For example, 12 U.S.C. 4303(a) of the Truth in Savings Act (TISA), 12 U.S.C. 4301 *et seq.* states: ''Each depository institution shall maintain a schedule of fees, charges, interest rates, and terms and conditions applicable to each class of accounts offered by the depository institution, in accordance with the requirements of this section and regulations which the [CFPB] shall prescribe.'' Further, 12 U.S.C. 4305(a) requires a depository institution to make the required schedule available to any person upon request. TISA is implemented in the CFPB's Regulation DD (12 CFR part 1030) and the NCUA's 12 CFR part 707.

not retrievable in the ordinary course of its business with respect to that information. The CFPB understands from comments that historical terms and conditions information may sometimes be stored as image files. If it would require extraordinary, manual effort to collect and translate this information into a machine-readable, electronic form, that information may not be retrievable in a data provider's ordinary course of business with respect to that information. However, the CFPB does not expect current terms and conditions to be subject to any such exception given the legal requirements noted above.

One commenter asked the CFPB to lower the historical transaction data safe harbor in § 1033.211(a) from 24 months to 6 months because it does not believe that 24 months of transaction data are retrievable in the ordinary course of business. As discussed above in § 1033.211(a), the CFPB understands that data providers generally retain 24 months of transaction data according to their record retention requirements in Regulation E and Regulation Z. If a data provider cannot retrieve 24 months of data in the ordinary course of business notwithstanding its other compliance obligations, it cannot take advantage of the safe harbor but would be able to make available less information. With regard to comments requesting that this section include a prohibition on reverse engineering, such a prohibition would not be appropriate for exceptions to the requirement to make available covered data. However, third party use of data for reverse engineering of proprietary algorithms is addressed in the discussion of § 1033.421(a)(2).

In response to the comments suggesting that the final rule narrow this exception to avoid evasion of the final rule, this concern is addressed in the anti-evasion provision in final § 1033.201(a)(2). A data provider that designs its systems to make data less available to access, with the intent of evading the requirements of subparts B and C of part 1033, or that the data provider knows or should know is likely to render unusable covered data or is likely to prevent, interfere with, or materially discourage a consumer or authorized third party from accessing covered data, would violate the anti-evasion provision.

C. Subpart C—Data Provider Interfaces; Responding to Requests

1. Overview

Subpart C establishes how covered data are to be made available and the mechanics of data access, including basic operational, performance, and security standards, and other policies and procedures. In particular, certain provisions ensure that data providers make covered data available to authorized third parties through functionality fit for that purpose—labeled a ''developer interface''—rather than through screen scraping of a consumer interface. Other provisions require data providers to disclose information that helps third parties request data and to establish and maintain written policies and procedures reasonably designed to achieve the objectives of subparts B and C. In addition, to prevent data providers from inhibiting consumers' exercise of their statutory data access right, subpart C prohibits data providers from charging fees for establishing or maintaining the required interfaces or for receiving requests or making available covered data in response to requests.

2. General Requirements (§ 1033.301)

Requirement To Maintain Interfaces (§ 1033.301(a))

The CFPB proposed in § 1033.301(a) to require a data provider subject to the requirements of part 1033 to maintain a consumer interface and to establish and maintain a developer interface. The CFPB preliminarily determined that the requirement would carry out the objectives of CFPA section 1033 by ensuring consumers and authorized third parties can make requests for and receive timely and reliable access to covered data in a usable electronic form. Proposed § 1033.301(a) also stated that the consumer interface and the developer interface must satisfy the requirements set forth in § 1033.301 (*i.e.,* § 1033.301(b) and (c), discussed in this part IV.C.2 below) and that the developer interface must satisfy the additional requirements set forth in § 1033.311 (discussed in part IV.C.3 below).

Requirement To Maintain Consumer Interface

Under the CFPB's proposal, not every interface that a data provider might offer—such as a mobile banking portal and an online banking portal—would have been required to satisfy all of the proposed requirements that would apply to consumer interfaces (discussed below), as long as collectively the provider's interfaces satisfy the requirements. The CFPB requested comment on whether data providers inform consumers using mobile banking applications that additional information might be available through providers' online banking applications.

All commenters, including data providers, third parties, and consumer advocate commenters, who addressed the requirement to maintain a consumer interface supported it. Data providers stated that they maintain those interfaces today. Consumer advocates suggested that the CFPB adopt additional requirements for consumer interfaces, such as being intuitive or user friendly. They also suggested that the rule require a data provider to disclose in the consumer interface the third parties accessing a consumer's covered data and, if the data provider provides a mechanism for the consumer to revoke such access, how the consumer can revoke such access. They argued that these disclosures are important to facilitate consumer awareness of the third parties with which they have shared their data and consumer action if they do not want the data sharing to continue. In response to the CFPB's request for comment, they requested that the CFPB require a data provider to provide through its mobile application the same information as through a desktop application, because many low- and moderate-income consumers only have a mobile phone for internet access.

For the reasons discussed herein, final § 1033.301(a) requires a data provider to maintain a consumer interface. This is necessary and appropriate to implement the statutory requirement in CFPA section 1033(a) that data providers make covered data available to consumers in a usable electronic form. The requirement will impose limited cost on data providers because they generally maintain these interfaces today. It will ensure that consumers benefit from ready access to their own financial data.

The CFPB declines to adopt the additional requirements for the interfaces suggested by consumer advocates. Under the final rule, as under the proposal, not every data provider consumer interface must satisfy the requirements of part 1033, as long as collectively the provider's consumer interfaces satisfy the requirements. Competition among data providers for customers will continue to appropriately incentivize them to invest in and improve the various consumer interfaces they make available to consumers. In contrast, the CFPB is adopting more prescriptive requirements for developer interfaces in § 1033.311 (discussed below) because consumers are unlikely to comparison shop among data providers based on the performance of those interfaces.

Requirement To Maintain Developer Interface

The CFPB received numerous comments related to its proposal in § 1033.301(a) to require data providers to establish and maintain a developer interface. Third party commenters requested clarification as to how the provision would apply to a service provider that the data provider employs to establish and maintain the data provider's developer interface. More specifically, they requested that the rule clarify that, in such a situation, the data provider's service provider may not impose any conditions or restrictions on interface access that the data provider itself may not impose and must comply with all rule provisions applicable to developer interfaces. Commenters of all types—including third parties, consumer advocates, research and academic institutions, data providers and associations thereof—expressed general support for the CFPB's framework in part 1033 of moving away from screen scraping for data access, but requested technological neutrality for how a data provider may implement the required interface. Some commenters, including both data providers and third parties, stated that implementing APIs would be overly difficult or costly for some data providers such as small depository institutions. These commenters requested that the rule allow data providers the choice of implementing a developer interface, permitting screen scraping of the consumer interface, or prohibiting access to covered data by all third parties.

Some data provider commenters and a data aggregator questioned or objected to the CFPB's proposal to require data providers to establish a developer interface. These commenters asserted that the requirement is beyond the authority CFPA section 1033 provides to the CFPB and that it is in their view not appropriate for a regulation, as opposed to a statute, to require entities to implement what they characterized as a new financial product such as a developer interface. In particular, these commenters asserted that the CFPB had incorrectly interpreted the term ''consumer'' to include consumers' third party representatives. They also asserted that the CFPB lacked authority to require data providers to enable ''open banking,'' which they described as a matter of vast economic and political significance subject to the ''major questions'' doctrine.

One commenter stated that Congress could not have intended this broad result because in 2010, when Congress adopted the CFPA, the data sharing market did not include the wide variety of third party fintech firms that the CFPB proposed to include as consumers. The commenter also stated that the proposal was inconsistent with the structure of CFPA section 1033 because it would require a developer interface that is exclusively accessible to third parties and a consumer interface that is exclusively accessible by consumers. The commenter also maintained that Congress would not have intended section 1033 to authorize the CFPB to launch open banking unilaterally without providing for a greater role for other agencies, beyond what it described as a narrow degree of consultation about certain topics. The commenter did not believe the CFPB had given those agencies a meaningful role in the process. Finally, the commenter stated that efforts to create an open banking system would restrict technological innovation and consolidate the number of incumbent data aggregators in the market.

For the reasons discussed herein, the CFPB is finalizing the requirement in § 1033.301(a) that a data provider maintain a developer interface. No change in substance from the proposal is intended or effected by simplifying the proposed rule's ''establish and maintain'' to ''maintain'' in final § 1033.301(a). Under the proposed rule, a data provider was exempt from the proposal if it did not have a consumer interface. The CFPB proposed that a data provider with a consumer interface but without a developer interface would be required to ''maintain'' the consumer interface and to ''establish and maintain'' a developer interface. Under final part 1033, the question of whether a data provider has a consumer interface is not relevant to determining whether the data provider is subject to part 1033. A data provider subject to part 1033 must have functionality for making covered data available to consumers (a consumer interface) and functionality for making covered data available to authorized third parties (a developer interface). If a data provider subject to part 1033 does not currently have such functionality for authorized third parties, the part 1033 requirement that the data provider maintain such functionality—a ''developer interface''—includes and incorporates the proposed requirement that the provider establish the developer interface.

The requirement is necessary and appropriate to ensure data providers make available covered data upon request in a usable electronic form to third parties that are authorized to access covered data on behalf of consumers. The developer interface requirements in the rule, including the requirement that the interface not allow third parties to access covered data using consumer credentials, are not a requirement to use any specific technology to enable data access. As discussed under the definitions above, the term ''developer interface'' is simply a label of convenience for data access functionality that meets rule requirements. The technological means by which data providers choose to achieve that functionality is entirely up to providers.

The requirements and prohibitions in subparts B and C of part 1033 apply to data providers. A data provider may not by contract transfer its legal obligation to comply with the part 1033 requirements and prohibitions to a vendor. A data provider may enter into a contract with a vendor under the terms of which the vendor agrees to perform activities that satisfy the data provider's compliance obligations under part 1033, but in that situation it remains the data provider's legal responsibility to comply with the requirements and prohibitions of subparts B and C of part 1033, and the data provider violates part 1033 if its vendor fails to fully fulfill the relevant compliance obligations. For example, if the data provider and its vendor collectively fail to fully fulfill one or more of the data provider's obligations under part 1033, the CFPB (or other regulator) may supervise and enforce that compliance failure against the data provider.

In final part 1033, the CFPB has taken steps to ensure the feasibility and technological neutrality of the § 1033.301(a) requirement that a data provider maintain a developer interface, including for small data providers. The final rule does not require the use of any specific technology in order to comply. Specifically, in § 1033.311(e) (discussed in part IV.C.3 below), the CFPB is incorporating an example that makes explicit that a data provider may satisfy its obligation to maintain the required data access by entering into a contract with its service provider (for example, a core processor) pursuant to which the service provider screen scrapes covered data from the data provider's consumer interface and makes the covered data available to authorized third parties through a developer interface that the service provider maintains on behalf of the data provider. The CFPB believes that this ''self-scraping'' approach will meaningfully reduce the burden of the developer interface requirement through economies of scale: a small number of larger service providers will be able to

maintain developer interfaces on behalf of a large number of smaller data providers. In this situation, as discussed above, the obligation for the developer interface to satisfy the requirements and prohibitions of part 1033 nonetheless continues to rest with the data provider.

The CFPB has determined that the CFPA provides the CFPB with authority to require data providers to maintain developer interfaces and that the rule does not run afoul of the major questions doctrine. As proposed (and as discussed above), § 1033.131 defines ''developer interface'' as functionality through which a data provider receives requests for covered data from authorized third parties and makes covered data available electronically in response to the requests. Requiring data providers to maintain this functionality does not constitute requiring them to provide a new consumer financial product or service; instead, it merely requires them to maintain a secure mechanism through which they make consumers' covered data available to consumers' authorized third party representatives. Elsewhere in this document, the CFPB estimates the costs part 1033 will impose on data providers (including but not limited to the developer interface requirement). The costs are orders of magnitude lower than any level that would implicate the major questions doctrine. There is also no political controversy on the topic of developer interfaces of the magnitude that suggests it is a major question.

To the extent that commenters meant to argue that requiring data providers to provide covered data to consumers' authorized third party representatives implicates the major questions doctrine, the CFPB disagrees. As noted above, the costs of providing covered data to third parties are orders of magnitude lower than any level that would implicate the major questions doctrine, and there is also no political controversy of the kind that has supported a finding that there is a major question. Moreover, the plain meaning of CFPA section 1033, in combination with the CFPA's definition of consumer in CFPA section 1002(4), requires data providers to make covered data available to consumers' authorized third party representatives. Thus, any purportedly ''major'' consequences from that requirement flow from Congress' decision to enact 1033, not the CFPB's rule. This is not a situation where an agency discovers in a long-extant statute an unheralded power. Instead, this is simply the first CFPB rule to execute Congress' instructions on the topic, after a multiyear rulemaking process.

The CFPB notes that the U.S. consumer data sharing market encompassed consumers' authorized third party representatives at the time Congress enacted the CFPA in 2010. For example, many consumer-authorized third party representatives were providing personal financial management use cases well before 2010.[60] Thus, Congress in fact did intend that the 2010 CFPA and the CFPB's rule implementing it (as expressly authorized by CFPA section 1033(a)) would broaden and deepen the consumer-permissioned data sharing market that existed at that time by requiring data providers to share financial data with consumers' authorized third party representatives. And nothing in the language of CFPA section 1033 limits it to the use cases that existed in 2010.[61]

This view of congressional intent is fully consistent with the plain meaning of CFPA sections 1033 and 1002(4) described above, the interoperability objectives of CFPA section 1033(d), and the ongoing evolution of the U.S. data sharing market. That is, a rule requiring only that data providers make financial information available to individual consumers, as opposed to also requiring them to make the information available to third parties authorized by consumers, would significantly impair the uses to which consumers, through authorized third parties, are actually putting their financial data today. In sum, therefore, the CFPB can discern no textual, historical, or consumer-protection basis for limiting part 1033 in the artificially cramped way that these commenters suggest.

Similarly, ''open banking'' as the CFPB uses that term (which is not legally defined) already exists in the U.S. The proposed rule noted that the CFPB ''uses the term 'open banking' to refer to the network of entities sharing personal financial data with consumer authorization.'' 88 FR 74796, 74797 (Oct. 31, 2023). U.S. data providers already do that. Further, such sharing is what CFPA section 1033 mandates and what part 1033 requires. Of course, other jurisdictions might use the term ''open banking'' differently. For example, part 1033 does not require data providers to permit authorized third parties to *make changes* (commonly referred to as ''write access'') to consumers' financial data or to transfer funds to or from consumers' financial accounts. In contrast, other ''open banking'' frameworks around the world, such as the European Union Payment Services Directive and the United Kingdom's Open Banking framework, address write access. While these limitations might be in contrast to other jurisdictions' use of the term ''open banking,'' such semantics do not change the fact that part 1033 adheres closely and appropriately to the open-banking framework Congress enacted in CFPA section 1033.

The CFPB also finds that the part 1033 developer interface requirement is justified by the factual record and will not stifle innovation nor result in anti-consumer consolidation. Specifically, the rulemaking record provides ample evidence that a CFPB regulation condoning or requiring data provider provision of consumers' data to authorized third parties through the mechanism of screen scraping of data providers' consumer interfaces would present inappropriate data security and data accuracy risks to consumers, as well as to data providers, and would reduce consumers' control over the portion of their financial data that they share. The CFPB finds that the permitted self-scraping approach described above does not entail these risks because data providers contractually govern and are responsible for the ''self scraping'' that data providers' service providers, such as core processors, will conduct under that approach.

The CFPB considered a form of screen scraping known as ''tokenized'' screen scraping, which is more secure than regular screen scraping. However, even tokenized scraping results in third parties accessing a larger portion of consumers' financial data than they need to provide the financial services that consumers are requesting. Like non-tokenized screen scraping, it also requires third parties to parse and transpose financial information from human-readable form. The CFPB received feedback that this activity risks inaccuracy and undermines the interoperability benefit of standardized data formats, which CFPA section 1033(d) requires the CFPB to promote. Such data would not be usable to consumers or authorized third parties, as required by CFPA section 1033(a). The CFPB therefore is not adopting that alternative.

In light of the risks and imprecision of screen scraping, and within the bounds of the rulemaking discretion granted to it by CFPA section 1033(a), the CFPB has determined that the best way to effectuate the CFPA requirement that data providers make covered data

[60] Pre-2010 providers of these use cases include Mint, Mvelopes, Quicken, Wesabe, and Yodlee.

[61] To the contrary, Congress intended for the CFPB to have ''enough flexibility to address future problems as they arise,'' and that ''[e]xperience has shown that consumer protections must adapt to new practices and new industries.'' S. Rep. 111–176 at 11 (2010).

electronically available to consumers' authorized third party representatives, and also make the data available securely and accurately, is to require data providers to maintain a ''developer interface,'' *i.e.,* to maintain functionality fit for purpose through which they electronically receive and respond to requests for covered data from authorized third parties in accordance with the requirements of part 1033. As noted, CFPA section 1033(a), in combination with the CFPA's consumer definition, makes clear that the CFPA requires data providers to make covered data available to consumers' authorized third party representatives. The CFPB therefore declines to permit a data provider to comply with CFPA section 1033(a) by blocking all third party access to covered data.

Some commenters asserted that this approach would restrict technological innovation or result in consolidation of the data aggregation market. As noted above, the rule implements Congress' decision for data providers to make available consumer data to third parties directly. Further, the rule will foster competition and innovation, as many commenters believed it would. In particular, the standardization and machine-readability of data types and formats and communications protocols across data providers that is enabled by developer interface functionality, as opposed to screen scraping, will facilitate, not restrict, direct access to consumers' financial data by authorized third parties, including new entrants and those providing products and services that compete with those offered by the consumer's existing account provider. That is, it will reduce authorized third parties' reliance on data aggregators for accessing consumers' financial data from data providers. This is because screen scraping—the data ingestion, parsing, and mapping it entails (let alone all its risks and inaccuracies)—is not easy, which is why many smaller authorized third parties today rely on data aggregators to do it. Because the standardization enabled by developer interfaces will facilitate direct access by authorized third parties, the number of authorized third parties should increase (the opposite of consolidation) and the variety of products and services they offer should also increase (the opposite of restricting innovation). Further, competition among data aggregators for the business of authorized third parties should increase too.

It is also not true, in contrast to commenters' assertions, that part 1033 requires a data provider to maintain developer interface functionality that is *exclusively* accessible by authorized third parties and a consumer interface that is exclusively accessible by individual consumers. Instead, part 1033 permits (but does not require) data providers to grant developer interface access to individual consumers and to grant consumer interface access to authorized third parties. Further, part 1033 does not require that a data provider's consumer interface and its developer interface be separate and distinct from each other. Instead, part 1033 permits (but does not require) a data provider to provide its developer interface and its consumer interface through the same mechanism (or set of mechanisms), provided that the mechanism satisfies the part 1033 requirements applicable to developer interfaces and the requirements applicable to consumer interfaces.

The CFPB discusses elsewhere in this final rule the consultation processes that it has engaged in with Federal and State regulators. In contrast to commenters' assertions, the CFPB in fact gave other agencies a very meaningful role in the process and, in any event, has complied with the consultation obligations that the law places on the CFPB.

Machine-Readable Files (§ 1033.301(b))

The CFPB proposed in § 1033.301(b) to require a data provider to make available, upon specific request, covered data in a machine-readable file that can be retained by a consumer or an authorized third party and transferred for processing into a separate information system that is reasonably available to and in the control of the consumer or authorized third party. The CFPB also proposed an example of how data providers could make available covered data in a machine-readable file that can be retained. The CFPB preliminarily determined that § 1033.301(b) would provide important benefits to consumers, such as by enabling them to share their data with others, including providers of competing financial products and services.[62]

Consumer advocate and third party commenters generally did not address the proposed § 1033.301(b) requirement.[63] Data provider commenters did not object to it, but suggested modifications and clarifications. They requested that the provision differentiate more clearly between developer and consumer interfaces, arguing that their file formats are, and should remain, different from each other. They also requested that the rule define ''machine-readable,'' particularly with respect to the consumer interface. They noted that the proposed rule preamble stated the CFPB's view that today's consumer interfaces generally perform in an acceptable manner and that the CFPB did not intend its proposal to result in material changes to consumer interfaces. Some commenters asserted, however, that the proposed provision could be interpreted to include burdensome requirements for the consumer interface. They stated that data providers' consumer interfaces today typically make covered data available in PDF files that consumers can print and download, but do not make all covered data available in a single file, nor do they make all covered data available in files that are machine-readable (such as CSV, XLS, or XML files) but instead only make transaction history available in such files. They asserted that if proposed § 1033.301(b) were interpreted to include such requirements—*e.g.,* that all of a consumer's covered data be made available in a single machine-readable file through the consumer interface—the provision would result in costly modifications to data providers' consumer interfaces when only few consumers actually request machine-readable files through consumer interfaces. One commenter expressed fraud concerns with respect to making machine-readable files available through the consumer interface but did not elaborate.

The CFPB is finalizing § 1033.301(b) with certain changes. Except as discussed below, the provision requires that upon request for covered data in a machine-readable file, a data provider must make available to a consumer or an authorized third party covered data in a file that is machine-readable and that the consumer or authorized third party can retain and transfer for processing into a separate information system that is reasonably available to and in the control of the consumer or authorized third party. These requirements will provide important benefits to consumers, such as by ensuring that they continue to be able to share their data with others, including providers of competing financial products and services. However, to ensure these benefits without imposing inappropriate burden on data providers,

[62] *See, e.g.,* Michael S. Barr *et al., Consumer Autonomy and Pathways to Portability in Banking and Financial Services,* Univ. of Mich. Ctr. on Fin., L. & Policy Working Paper No. 1 (Nov. 1, 2019), *https://financelawpolicy.umich.edu/sites/cflp/files/2021-07/umich-cflp-working-paper-consumer-autonomy-and-data-portability-pathways-Nov-3.pdf.*

[63] One third party stated that machine-readable formats would advance self-sovereign-identity principles.

particularly with respect to their consumer interfaces, it is necessary and appropriate to differentiate between the consumer interface and the developer interface, to not apply certain requirements to the consumer interface, and to provide clarity regarding how the developer interface satisfies the requirements, as follows.

Data providers' consumer interfaces generally provide covered data to consumers in an acceptable manner. The CFPB intends and expects that its final rule will not require material changes to data providers' existing consumer interfaces. Unlike the proposal, the final rule for consumer interfaces, as set forth in § 1033.301(b)(1)(i), does not apply the machine-readability requirements of § 1033.301(b) to payment initiation information (described in § 1033.211(c)) or to account verification information (described in § 1033.211(f)). Nonetheless, the consumer interface is required to make that information available in an electronic form usable by consumers, such as a human-readable form, pursuant to the general availability requirement in § 1033.201(a). In contrast to how this information must be made available to third parties through the developer interface, requiring this information be made available directly to consumers in machine-readable files would provide limited additional utility to consumers relative to their ability to access this information in human-readable form.

Moreover, and also unlike the proposal, pursuant to § 1033.301(b)(1)(ii), the final rule does not require consumer interfaces to make available the account terms and conditions (described in § 1033.211(d)) in machine-readable form. Instead, that information need only be made available in a retainable form. Many data providers make terms and conditions available to consumers, as well as the general public, in retainable form. The CFPB understands that data providers generally also make certain important terms and conditions—such as the rates and fees applicable to accounts and balances—available in human-readable form in the consumer interface; additionally, many terms and conditions applicable to accounts are restated in periodic statement communications, which are also generally made available through consumer interfaces. The CFPB intends and expects that these changes from its proposed rule will mean that the requirements of § 1033.301(b) for consumer interfaces do not result in material burden for data providers; *i.e.,* do not result in material changes from data providers' current consumer interface systems and practices.

For consumer interfaces, the covered data that remains subject to § 1033.301(b) is the following: transaction information (described in § 1033.211(a)), account balances (described in § 1033.211(b)), and upcoming bill information (described in § 1033.211(e)). Data providers' consumer interfaces today generally make that portion of covered data available to consumers in machine-readable files. Accordingly, applying the requirements of § 1033.301(b) to that portion of covered data will not require material changes to data providers' existing consumer interfaces.

In final § 1033.301(b), the CFPB has deleted the word ''specific'' (*i.e.,* has deleted it from the proposal's phrase ''upon specific request''). The CFPB neither intends nor effectuates any change of substance by this revision. It remains the case, as under the proposal, that the consumer must explicitly request covered data in a machine-readable file in order for the requirements of § 1033.301(b) to be triggered. While the rule does not specify the functionality (or functionalities) that a data provider must supply to consumers through which they may request covered data in machine-readable form, the data provider must supply at least one readily discoverable mechanism through which consumers may do so. It is acceptable for a data provider to supply the mechanism only to consumers who have ''logged in.'' It is also acceptable for the data provider to guide consumers to the mechanism. For example, if a consumer calls the data provider, the provider may verbally guide the consumer to the mechanism. Similarly, if a consumer emails the data provider, the provider may reply by email with a link to or instructions for how to access the mechanism. Further, the data provider's mechanism should not require a consumer to say ''magic words'' in order for the data provider to deem the consumer to have requested data in machine-readable form. For example, if a consumer were to request ''a spreadsheet'' of transactions, the data provider should consider the consumer to have requested a machine-readable file.

Like the proposal, final § 1033.301(b) does not require a data provider to make all covered data available to a consumer in a single file—for example, the entirety of the consumer's transaction history with the data provider in one file. It does (like the proposal) require the provider to make the data available to the consumer in one or more files. Section 1033.211(a) provides that a data provider is deemed to make available sufficient historical transaction information if it makes available at least 24 months of such information. It is feasible for the provider to make available that amount of historical information in one file. The provider could also make the information available in multiple files if it chooses to do so.

The requirement to make portions of covered data available in machine-readable files through the consumer interface, as described above, will not result in inappropriate fraud risk. As noted, the requirement is consistent with data providers' existing practices for making data available through their consumer interfaces. Further, the requirements in part 1033 to make covered data available (whether in machine-readable files or otherwise) do not include any requirement to permit consumers or authorized third parties to initiate payments through the consumer interface. Instead, it remains up to a data provider's discretion—as opposed to a requirement of part 1033 or any other CFPB rule—whether to grant consumers permission to initiate payments through the data provider's consumer interface.

With respect to the requirement in proposed § 1033.301(b) that a data provider make covered data available through its *developer* interface in machine-readable form, the CFPB has determined that the requirement in § 1033.311(b) (discussed below) that the developer interface make the covered data available in a standardized and machine-readable format is sufficient. Section 1033.301(a) requires a data provider to maintain a developer interface, which § 1033.131 defines as an interface through which a data provider receives requests for covered data and makes available covered data in an electronic form usable by authorized third parties in response to the requests. Further, § 1033.311(b)(2) requires the developer interface to make available covered data in a standardized and machine-readable format. A data provider that maintains a developer interface, as required by § 1033.301(a) and defined by § 1033.131, that complies with § 1033.311(b) thereby makes available to authorized third parties covered data in a machine-readable form that the authorized third parties can retain and process in separate information systems reasonably available to them. Accordingly, § 1033.301(b)(2) states that a data provider's developer interface satisfies the requirements of § 1033.301(b) if the interface makes available covered data

in a form that satisfies the requirements of § 1033.311(b).

Fees Prohibited (§ 1033.301(c))

The CFPB proposed in § 1033.301(c) to prohibit a data provider from imposing any fees or charges on a consumer or authorized third party for establishing or maintaining the interfaces required by § 1033.301(a) or for receiving requests or making available covered data in response to requests as required by part 1033. The CFPB preliminarily determined that the proposed prohibition was necessary and appropriate to ensure that fees do not impede consumers and authorized third parties from exercising consumers' statutory rights. The CFPB requested comment on whether any clear parameters exist such that, subject to such parameters, data providers could charge reasonable, standardized fees that neither obstruct the access right due to cost nor impede third parties' access to data provider interfaces due to negotiations over fee amounts or schedules.

Few commenters addressed the prohibition of fees for providing covered data to individual consumers through the consumer interface. Those commenters who addressed this issue did not object and stated that data providers do not charge fees today for providing covered data through their consumer interfaces.

Many commenters addressed fees for providing covered data to authorized third parties through the developer interface. Third party and consumer advocate commenters generally supported the proposed fee prohibition on the grounds that covered data belongs to consumers and that the statute gives consumers the right to access and share the data with the authorized third parties that they choose. These commenters also suggested modifications to the prohibition to ensure that data providers do not evade it by, for example, charging higher fees for other financial products and services to consumers and authorized third parties for exercising their section 1033 data access rights. Third party commenters suggested that the CFPB make clear that the fee prohibition applies to data providers' service providers, in addition to applying to data providers themselves.

SBA Advocacy compared data providers' provision of covered data to Federal agencies' provision of information in response to Freedom of Information Act (FOIA), 5 U.S.C. 552, requests and stated that it seems inconsistent that agencies are permitted to charge for providing information whereas data providers are prohibited from doing so.

Data provider commenters opposed the developer interface fee prohibition. They asserted that the CFPB lacks authority to prohibit fees under CFPA section 1033. They also stated (as noted above) that they would incur costs to implement the developer interface and that, in light of those costs, the fee prohibition is an impermissible taking because it commandeers data providers' infrastructure and resources for the benefit of third parties, which may access covered data without paying a fee and then charge fees to other third parties for the data. These commenters also stated that the prohibition is inconsistent with the CFPB's 1034(c) advisory opinion, which permits large institutions to charge fees for providing data in some limited circumstances, such as where a consumer had already repeatedly requested and received the same information regarding their account. It is also inconsistent, they stated, with OCC regulations (12 CFR 7.4002), which according to the commenters give national banks discretion to set prices for the banking services they provide. No commenters provided any information regarding possible parameters for standardized fees.

For the reasons discussed herein, consistent with the proposal, final § 1033.301(c) prohibits a data provider from imposing any fees or charges on a consumer or authorized third party for establishing or maintaining the interfaces required by part 1033 or for receiving requests or making covered data in response to requests as required by part 1033. This prohibition ensures that data providers do not inhibit consumers' ability to access their data, authorize third parties to access their data, or choose which third parties to authorize to access their data.

The CFPB is issuing § 1033.301(c) pursuant to its authorities under sections 1033(a) and 1022(b)(1) of the CFPA. Section 1033(a) states that data providers ''shall'' make covered data available to consumers ''upon request,'' ''[s]ubject to rules prescribed by the Bureau,'' subject to certain statutory exemptions in section 1033(b), and without any other condition. Congress did not authorize fees. In fact, it specified in section 1033(b)(4) that a data provider need not make available information it ''cannot retrieve in the ordinary course of its business,'' which weighs against an argument that Congress intended data providers to be able to decide to condition data access on payment of a fee. Congress dealt with the policy issue of potential burden on data providers by cabining the information they are required to retrieve, rather than through compensation. Even assuming Congress did not foreclose fees when consumers exercise their statutory rights under section 1033, in exercising the CFFB's rulemaking authority to regulate the specifics of data sharing under section 1033, the CFPB is not permitting fees. In particular, the CFPB is concerned that allowing them would obstruct the data access right that Congress contemplated. As discussed later, the CFPB has not identified, and no commenter has put forward, a suitable alternative that protects the data access right.

The fee prohibition is also independently authorized by section 1022(b)(1) of the CFPA in order to prevent evasion of Federal consumer financial law. CFPA section 1033 and this final rule are both Federal consumer financial laws. If data providers could decide what fee to charge, they could limit or eliminate the right that CFPA section 1033 confers. Congress would not have enacted CFPA section 1033 if it trusted data providers to be fully forthcoming with covered data. And, in the CFPB's assessment, those data providers that perceive CFPA section 1033 to be a threat to their competitive positions have strong incentives to withhold information. The CFPB has not identified a suitable alternative that would prevent such evasion of the data access right.

The CFPB notes that the fee prohibition is far from a novel use of rulemaking authority. Other longstanding consumer financial regulations prohibit fees when consumers seek to exercise statutory rights under Federal consumer financial laws that are otherwise silent on whether an entity may charge fees. For example, Regulation E (12 CFR part 1005) and Regulation Z (12 CFR part 1026) both prohibit fees for error resolution when an error has occurred and require avoidance of ''any chilling effect on the good-faith assertion of errors that might result if charges are assessed when no billing error has occurred.'' [64]

The CFPB also notes that the fee prohibition is not inconsistent with FOIA. There, the applicable statute expressly permits fees, whereas here it does not. Further, the information agencies provide through FOIA typically does not pertain directly to the requestors of the information, whereas under CFPA section 1033 the information provided by data providers

[64] Regulation E comment 11(c)–3; Regulation Z comment 13–2.

pertains directly to the requestor—the consumer—because it is information about the financial product or service the consumer obtained from the data provider. Finally, FOIA addresses information that may not be readily available for agencies to find and disclose, whereas CFPA section 1033 addresses information that data providers can retrieve in the ordinary course of business.

The fee prohibition does not make this rule a taking. The addition of the fee prohibition does not make the rule a permanent physical invasion of property, nor does it limit data providers' control or discretion to the point that they are deprived of all economically beneficial use of property. Further, data providers do not generally charge consumers or third parties for data access today, indicating that the economic impact of the prohibition, along with any potential interference with investment-backed expectations, is not so large as to be considered a taking. Any hypothetical investment-backed expectations are further attenuated by the fact that Congress enacted section 1033 over fourteen years ago, and the CFPB has been engaged in a lengthy rulemaking process which will be followed by staggered compliance dates over a period of years. Data providers have long been on notice that a CFPB rulemaking will impact data sharing. The character of this rule is also far removed from a taking. The rule adjusts the benefits and burdens of economic life, specifically by providing consumers with greater access to data about their financial accounts, in some cases with the assistance of companies acting as their representatives.

The fee prohibition is not inconsistent with CFPA section 1034(c) which, as noted in the CFPB's advisory opinion, permits fees in certain limited circumstances, such as when a large bank or credit union charges a fee to a consumer who repeatedly requested and received the same information regarding their account. *See* 88 FR 71279, 71282 (Oct. 16, 2023). Section 1034(c) imposes an obligation to ''comply'' with a consumer request for information, and the CFPB explained that, in the context of repeated requests, the large bank or credit union would have already met its obligation under section 1034(c) by ''comply[ing]'' with the consumer's earlier requests. *Id.* By contrast, section 1033 imposes an obligation to ''make available'' information upon the consumer's request. 12 U.S.C. 5533(a). By referring to information being made ''available,'' section 1033 contemplates an ongoing obligation to grant consumers access to information, rather than an obligation that could be satisfied by providing information a single time.

Moreover, the CFPB did not promulgate the CFPA section 1034(c) opinion through the notice-and-comment rulemaking process. As such, the opinion was and is limited to setting forth the CFPB's interpretation of existing law. In contrast, the CFPB is establishing part 1033 in accordance with the Administrative Procedure Act's notice-and-comment rulemaking procedures. The CFPB's promulgation of part 1033 may therefore establish new requirements, including by limiting fees more strictly than does section 1034(c), if the CFPB determines that is warranted using the discretionary rulemaking authority that Congress has delegated.

The fee prohibition is also not inconsistent with the OCC regulation cited by commenters. The OCC regulation, 12 CFR 7.4002, generally provides that national banks have authority to charge their customers non-interest charges and fees but does not override other Federal laws or regulations that expressly bar specific charges and fees. For example, as noted above, when an error has occurred the CFPB's Regulation E and Regulation Z prohibit fees for resolving the error and the OCC's regulation does not override those prohibitions.

Data provider commenters additionally argued that part 1033 should permit them to charge fees because data providers' systems are key to making covered data available and establishing and maintaining those systems requires resources. They argued that a rule prohibiting them from offsetting those costs by charging fees to third parties could necessitate recoupment of the costs through fees to their consumer account holders for other banking services. They also argued that the fee prohibition would discourage data providers from implementing and investing in data sharing systems that exceed the minimum legal requirements. In contrast, they argued, permitting reasonable fees would incentivize both data provider investment and third party data minimization. That is, they argued, third parties accessing more data through developer interfaces would impose more burden on those interfaces and therefore should incur greater fees than those accessing less data. Data provider commenters also asserted that in other jurisdictions, such as the E.U., fee prohibitions have led to underinvestment and suboptimal open finance ecosystems. They further argued that in light of these considerations, E.U. rules proposed in November 2023 would permit data providers to request reasonable compensation when providing data to other businesses.

As part of the rulemaking process, the CFPB has taken steps to reduce data providers' data access costs, as reflected in the final rule. First, the CFPB proposed and is finalizing that data providers must make available a narrower set of covered data than the CFPB was considering at the SBREFA stage. Second, in contrast to the proposed rule, the final rule does not apply to depository institutions that are small businesses as defined in SBA's regulations (irrespective of whether those institutions have a consumer interface). These institutions therefore will not incur any data access costs under the final rule. Third, many depository institutions that are not small businesses, and are therefore subject to part 1033, already have developer interfaces and therefore should be able to bring those interfaces into compliance with part 1033 at reasonable cost. Fourth, the final rule adopts a substantially more extended implementation timeframe than the CFPB proposed. Fifth, the CFPB continues to develop guidance materials and to work with industry standard setters to foster appropriate standards. These steps will give data providers more certainty regarding how to come into compliance with the rule in the extended implementation timeframe, thereby reducing their costs. And sixth, § 1033.311(e) (discussed in part IV.C.3 below) makes clear that a data provider's developer interface may function by permitting the data provider's service provider (such as a core processor) to screen scrape the data provider's consumer interface and to make the data available through a developer interface that the service provider establishes and maintains on the data provider's behalf. This approach offers data providers a low-cost path to providing a developer interface and is widely used in the market today.

The CFPB does not expect that the fee prohibition will discourage data providers from implementing and investing in their data sharing systems. The CFPB is not aware that regulatory requirements or prohibitions in other areas, such as Regulation E and Regulation Z error resolution, inappropriately discourage investment in systems in those areas. To the contrary, regulatory requirements and prohibitions encourage robust systems and make it less likely that an industry participant with such systems will be driven from the market by participants without them. Additionally, data

providers generally invest significantly in continually improving their consumer interfaces, which data providers generally do not charge any kind of fees to access. The CFPB is also aware, including from the Provider Collection, that some data providers and service providers (such as core providers) made significant investments to develop, implement, and maintain developer interfaces even prior to this rulemaking, and, as noted above, data providers do not generally charge fees to third parties for accessing developer interfaces.

Data provider fees are not the appropriate means by which third parties' data minimization is incentivized and accomplished. Instead, third parties themselves must and should comply with part 1033's data minimization requirements. Section 1033.311(d) (discussed below) permits data providers to impose reasonable access caps, further undermining the appropriateness of permitting data providers to charge fees to third parties in order to achieve data minimization or, more broadly, to incentivize third parties to comply with part 1033.

By its terms, the § 1033.301(c) fee prohibition applies to data providers and will be supervised and enforced against data providers (just like all of the other provisions in subparts B and C). But the fee prohibition encompasses a data provider's vendor, in addition to the data provider itself. For example, assume a data provider asserts that it is complying with part 1033 because it makes covered data available to authorized third parties through a developer interface that the data provider's vendor maintains on behalf of the data provider. The data provider would not comply with the fee prohibition in § 1033.301(c) if its vendor charged (or sought to charge) fees to authorized third parties in connection with making covered data available to them through the developer interface that the vendor maintains on behalf of the data provider.

Data sharing in the U.S. is distinguishable in relevant respects from the E.U. American consumers already expect third party data access capabilities, and the U.S. market consists of a higher number of depository institutions (and card issuers) than most other jurisdictions. Further, the E.U. proposal to permit fees is only a proposal and, if adopted, would permit only limited, standardized fees. As a result, the CFPB believes it is premature to conclude that any difficulties that might have resulted from prohibiting fees for data access in the E.U. will be replicated here. As noted, the CFPB requested comment on parameters for reasonable, standardized fees that neither obstruct the access right nor impede access to interfaces. No commenters provided information in response to that request, and the CFPB does not currently have information to suggest it would be appropriate or feasible to use a standardized fee schedule to account for the wide variety of circumstances in the open banking system. The CFPB will continue to actively monitor and engage with open banking stakeholders. As the CFPB proceeds to implement this first rule under CFPA section 1033, and to ensure consumers' data rights are respected across consumer financial markets, it invites continuing input if entities believe that a regime of standardized fees along the lines of those described above is appropriate and feasible.

Data provider commenters also opposed the fee prohibition on the grounds that it would unfairly disadvantage them relative to data aggregators, which are not prohibited from charging fees to other third parties in connection with providing data they obtained through providers' developer interfaces. A few data providers, in addition to opposing it, asserted that if kept the prohibition must be accompanied by restrictions on third parties' secondary uses of covered data to ensure that the benefits of data sharing accrue to consumers, as opposed to data aggregators. These commenters argued that if the CFPB were to loosen such restrictions in the final rule then this ''consumer benefit'' principle would no longer apply and data provider fees to third parties should be permitted.

The fee prohibition does not unfairly advantage data aggregators relative to data providers. CFPA section 1033 describes a consumer right to access data from data providers—and gives no indication that providers may properly impinge on that right by charging for its exercise. In contrast, CFPA section 1033 does not include a right for consumers to require data aggregators to provide covered data. Instead, the data aggregators' participation in the data-sharing process is voluntary. Fundamentally, an authorized third party's choice to use a service provider, such as a data aggregator, and a consumer's exercise of a statutory right, are entirely different things—there is no equivalence and accordingly no unfairness. Moreover, a data provider controls consumers' covered data concerning the financial product or service that the consumer obtained from the data provider, such that competitive pressures do not readily limit the data access fees that data providers might seek to charge. In contrast, data aggregators are service providers chosen by authorized third parties, who can select a different aggregator for price reasons—or connect to the data provider directly. As a result, competition should naturally put downward pressure on fees that aggregators charge third party clients.

For reasons discussed under subpart D below, the final rule does not materially increase third parties' permissible secondary uses of covered data relative to the proposal. Accordingly, it is not necessary or appropriate to permit data providers to charge fees in light of possible secondary uses that the CFPB did not propose to permit and is not permitting in this final rule. In any event, the breadth (or narrowness) of data aggregators' and other third parties' potential uses of covered data does not logically control the issue of whether data providers should be prohibited from charging fees. Competitive pressure between third parties will naturally put downward pressure on fees they are able to charge. In light of this competitive pressure, permitting data providers to charge fees would not cause the benefits of data sharing to ''shift'' from third parties to consumers; instead, it would cause the benefits to shift from consumers to the data providers that hold and control consumers' financial data.

Allowing cost-based fees, regardless of whether or not they are charged on a per-request basis, would not better effectuate the consumer data access right described in section 1033. The CFPB received feedback during the SBREFA process that allowing data providers to charge fees, including fees to integrate with a developer interface, could pose a barrier to consumers' use of their data through smaller authorized third parties. *See* SBREFA Panel Report at 28. Data providers have the ability and incentive to restrict third party data access through fees and allowing data providers to charge different fees to different third parties also is likely to result in harm to consumers and third parties. *See* 88 FR 74796, 74814 (Oct. 31, 2023). In light of this, allowing data providers to charge what they see as commercially reasonable fees is likely to obstruct consumers' ability to use their data, particularly through smaller authorized third parties. In addition, as noted above, no stakeholder offered any concrete indication of a workable and administrable standard for ''reasonable

fees'' despite the CFPB's solicitation of comment on point.[65]

3. Requirements Applicable to Developer Interfaces (§ 1033.311)

General (§ 1033.311(a))

Proposed § 1033.311(a) stated that a developer interface required by § 1033.301(a) must satisfy the requirements set forth in § 1033.311. The CFPB received no comments objecting to this provision and the CFPB adopts it as proposed.

Standardized Format (§ 1033.311(b))

Proposal

The CFPB proposed in § 1033.311(b) to require a developer interface to make available covered data in a standardized format. The CFPB proposed that the interface would be deemed to satisfy this requirement if it makes covered data available in a format set forth in a qualified industry standard, or, in the absence of such a standard, if it makes available covered data in a format that is widely used by the developer interfaces of other similarly situated data providers with respect to similar data and is readily usable by authorized third parties. The CFPB preliminarily determined that this proposed requirement and accompanying safe harbors were necessary and appropriate to implement the mandate in CFPA section 1033(d) that the CFPB prescribe standards to promote the use and development of standardized formats. More specifically, the CFPB preliminarily determined that, consistent with CFPA section 1033(a) and (d), the proposal to require covered data to be made available in a usable and standardized format would reduce variation across the market and promote greater consistency of data formats. In particular, the proposed provision sought to ensure that the information systems of new-entrant and small-third parties can process covered data from the full range of data providers across the market by reducing varied formats that impel reliance on intermediaries to provide data in a usable format.

The CFPB did not propose a definition of ''format,'' requesting comment on whether one is needed and whether the term should be defined to mean the specifications for data fields, status codes, communication protocols, or other elements to ensure third party systems can communicate with the developer interface. The CFPB also requested comment on the above safe harbors that it proposed.

Comments

All commenters, including data providers, third parties, and consumer advocates, that addressed the proposed requirement that the developer interface make available covered data in a standardized format supported it. Further, all commenters that addressed the CFPB's request for comment stated that the rule should include a definition of format and that the definition should include, in addition to data field specifications, a data model and communication protocol for requests and responses for covered data to be exchanged.[66] Commenters stated that this broader approach to the standardized format requirement would help effectuate interoperability to support data sharing. Several data provider commenters stated that the rule should also apply its standardized format requirement to data aggregators. They argued that doing so would encourage competition and benefit consumers by facilitating the ability of an authorized third party to switch data aggregators.

Commenters' views were mixed on the CFPB's proposed approach to safe harbors for standardized formats. Commenters generally supported the proposed safe harbor for use of a standardized format set forth in a qualified industry standard, but were uncertain that one would exist by the time of the applicable compliance date for part 1033. Because of that uncertainty, commenters generally did not object to the proposed safe harbor for a widely used format, although views were mixed on that point. Specifically, some commenters expressed concern that a safe harbor for a widely used format could lead to more than one widely used format, which might not be an improvement over format differences in place today. Further, many commenters expressed concern with the CFPB's proposal that a widely used format would receive a safe harbor only in the absence of a qualified industry standard. These commenters expressed concern that this approach could make data providers reluctant to implement their developer interfaces now with a widely used format because, were they to do so and were a qualified industry standard later to adopt a different format, the providers with the widely used format would lose their safe harbor status and could feel compelled to redo their interfaces using the qualified industry standard formats. These commenters stated that the CFPB could reduce issues of multiple formats and incentivize faster deployment of developer interfaces—thereby increasing data quality and consumer safety relative to screen scraping—by working with industry participants to establish a consensus standard for data formats as soon as possible.

Final Rule

For the reasons discussed herein, the CFPB is adopting final § 1033.311(b) to require a data provider's developer interface to make available covered data in a standardized and machine-readable format. The final rule also provides that indicia that the format satisfies this requirement include that it conforms to a consensus standard. The final rule defines both ''format'' and ''standardized.'' Format is defined in § 1033.311(b)(1) to include structures and definitions of covered data and requirements and protocols for communicating requests and responses for covered data. Standardized is defined in § 1033.311(b)(2) to mean that it conforms to a format widely used by other data providers and designed to be readily usable by authorized third parties.

The CFPB is not providing examples of ''machine-readable'' file types because technology regarding automated, digital ingestion of data may evolve such that any such examples could become outdated. Section 1033.211, discussed above, defines covered data for purposes of part 1033. Section 1033.301(b), also discussed above, provides that a data provider's developer interface complies with part 1033's machine-readability requirement if it makes covered data available in a form that satisfies the requirements of § 1033.311(b). Further, as noted, § 1033.311(b) requires the developer interface to make covered data available in a format that is standardized and machine-readable and provides that indicia that the format satisfies this requirement include that the format conforms to a consensus standard.

The format definition that the CFPB is adopting gives a data provider some flexibility as to the structures and definitions of covered data made available via its developer interface so it can adapt over time to new and evolving use cases. Nonetheless, in all cases, the

[65] It is not just the fact or level of fees that impedes consumers' exercise of statutory rights, but their potential variance as well. For example, variation in fees across data providers and variation in fees at one data provider across third parties would likely introduce material negotiating costs to third parties, thereby further impeding consumers' ability to use their data.

[66] One commenter stated that the rule's standardized format requirement should include security standards applicable to authenticating and reviewing authorization of third parties. This comment is discussed in the preamble to § 1033.331(b), which addresses how those procedures factor into the final rule.

format must be standardized, *i.e.,* it must be widely used by other data providers and designed to be readily usable by authorized third parties. The CFPB believes that this level of flexibility is necessary and appropriate, both because, as noted, technology is rapidly evolving, and because there will inevitably be new use cases for which authorized third parties request covered data. As new uses cases develop, the best and most readily usable format for a given set of covered data could change.

For example, under § 1033.211(d) covered data includes account terms and conditions (as defined in that section), and terms and conditions include many components, some of which may be numerical and some of which may be natural language. As authorized third parties' use cases for covered data change over time, the best standardized and machine-readable format, or formats, for data providers' developer interfaces to use in making available the many components of terms and conditions will also likely change. More specifically, as authorized third parties' use cases change, the components of terms and conditions that are made available as machine-readable, discrete ''callable'' data fields will likely increase, and those components made available as machine-readable, lengthier ''text'' data fields will likely decrease.[67] Over the course of these ongoing changes in authorized third parties' use cases and pursuant to the ''readily usable by authorized third parties'' prong of the definition of ''standardized'' in § 1033.311(b), the CFPB expects that data providers will in good faith take reasonable steps to make the appropriate components of terms and conditions available through their developer interfaces as discrete callable data fields.

Defining format to include structures and definitions of covered data and requirements and protocols for communicating requests and responses for covered data will facilitate interoperability across data providers and third parties, including new-entrant third parties that wish to access covered data directly from data providers' developer interfaces, as opposed to through data aggregators. Interoperability is also facilitated by the two-pronged definition of standardized, under which format, to be standardized, must be both widely used by other data providers and designed to be readily usable by authorized third parties. The final rule includes a non-exhaustive list of components of format because whether a standard includes any particular component of format will depend to some degree on the standard selected.

The final rule's definition of format is necessary and appropriate to implement CFPA section 1033(a) and (d). Standardized structures and definitions of covered data and requirements and protocols for communicating requests and responses will help ensure covered data are readily made available in a usable electronic form to a wide array of authorized third parties. This facilitation of interoperability also implements the mandate of CFPA section 1033(d) that the CFPB by rule promote standardized formats for information, including through the use of machine-readable files. Without standard protocols for communicating requests and responses, data providers would forfeit the economies of scale they can achieve by making covered data available in common ways through their service providers, such as core processors, and authorized third parties would incur costs to build custom integrations to access covered data from various data providers. These costs would undermine the benefits of requiring data providers to make available covered data in the first place. Accordingly, the § 1033.311(b) requirement to use standard protocols for communicating requests and responses for covered data is necessary and appropriate to promote the development and use of standardized formats for covered data.

The CFPB proposed that a developer interface would be deemed to satisfy the standardized format requirement if it made covered data available in a format widely used by other data providers and readily usable by authorized third parties. The CFPB believes that those attributes of a format—that it is widely used by other data providers and designed to be readily usable by authorized third parties—go directly to what it means for a format to be ''standardized'' and best effectuate the statute's objectives of promoting interoperability of systems to process covered data and ensuring data providers make available covered data in a usable electronic form upon request. Accordingly, the final rule adopts those attributes as components of the definition of standardized in § 1033.311(b)(2). The CFPB emphasizes that, under the definition of standardized in § 1033.311(b)(2), wide use by other data providers of a format is necessary but not sufficient for the format to qualify as standardized. For the format to qualify as standardized, the format must also be one that is designed to be readily usable by authorized third parties. This two-pronged approach—widely used by data providers and readily usable by authorized third parties—is necessary and appropriate to ensure that third parties, including in particular new-entrant and small third parties, can process covered data from a wide range of data providers across the market.

Final § 1033.311(b) makes several changes from the text of proposed § 1033.311(b)(2) to address concerns from commenters that the proposed regulatory text could have resulted in fragmentation of data formats, and for additional clarity. The proposed provision would have deemed a format standardized in the absence of a qualified industry standard if the format is widely used by the ''developer interfaces of similarly situated data providers with respect to similar data'' and is readily usable by authorized third parties. The final rule replaces the phrase ''similarly situated data providers,'' with ''other data providers.'' This is intended to further promote the development and use of standardized data, whereas the proposed approach could have resulted in fragmentation of format standards. The final rule also omits the phrase ''with respect to similar data'' as superfluous because both the proposed and final regulatory text apply the standardized format requirement to ''covered data.'' In addition, the phrase ''with respect to similar data'' contained in the proposed text might have inadvertently resulted in fragmentation of data formats. The final rule also omits the phrase ''developer interface'' as superfluous, with no change in meaning intended.

The CFPB proposed that a data provider would be deemed to satisfy the standardized format requirement if it makes covered data available in a format set forth in a qualified industry standard. In contrast, under the final rule, indicia that the standardized format requirement is satisfied include that it makes covered data available in a format set forth in a consensus standard. The CFPB is making this change—from safe harbor of compliance

[67] If it is necessary for a data provider to make available a PDF file for the purpose of complying with § 1033.311(b), the PDF file should be machine-readable. While this may be possible for some PDF files, other PDF files, such as those that include covered data as images, would generally not be considered machine-readable. Section 1033.221(d), which restates the statutory exception for any information that the data provider cannot retrieve in the ordinary course of its business with respect to that information, might apply in limited circumstances when historical terms and conditions are stored as image files, as discussed in part IV.B.4 above. However, the CFPB does not expect current terms and conditions to be subject to any such exception given applicable legal requirements, as discussed with respect to § 1033.221(d) above.

to indicia of compliance—because, as described above, the CFPB is defining format (which the proposal did not) to include communications protocols and requirements, as opposed to only data structures and definitions. As noted, all commenters who addressed this issue—including data providers, third parties, and consumer advocates—supported defining format and defining it in this broader way. Nonetheless, in light of this broader definition, the CFPB believes that it is possible or even likely that a given consensus standard will address only certain aspects of format as defined. As a result, a data provider may reasonably seek to incorporate more than one consensus standard into its developer interface's systems and processes. For example, at a high level, the data provider might incorporate one standard for data structures and another for communication protocols. In addition, a given standard might have components within it that are not geared toward interoperability and therefore do not warrant safe harbor status. Accordingly, the CFPB has determined that it is more appropriate for conformance to a consensus standard to serve as indicia that the data provider's developer interface meets the standardized format requirement, rather than to serve as a safe harbor.

The change from the proposal's safe harbor approach to the final rule's indicia approach to consensus standards within § 1033.311(b) does not change the CFPB's determination that the objective of both CFPA section 1033(d) and the standardized format requirement in § 1033.311(b) is interoperability, *i.e.,* is to ensure that (1) a data provider's developer interface can expect and use a standardized data structure and communication protocol for receiving requests from and making covered data available to all third parties that request covered data through the interface[68] and (2) a third party can use and expect a standardized data structure and communication protocol for submitting requests to and receiving covered data from all data providers' developer interfaces. The CFPB does not anticipate taking action against data providers' and third parties' approach to achieving interoperability, so long as entities comply with the standardized format requirement of § 1033.311(b).

Incorporating ''widely used'' into the meaning of ''standardized'' and shifting to an approach in which a consensus standard serves as indicia of compliance (rather than a safe harbor) also addresses commenters' concerns that data providers might have responded to the rule as proposed by ''waiting'' to build their developer interfaces until a consensus standard format was adopted. Of course, the lengthening of compliance periods in the final rule provides more assurance that consensus standards will be available before compliance begins. But in any event a data provider will have certainty that its developer interface format complies with the requirement to be standardized, so long as the format is widely used by other data providers and designed to be readily usable by authorized third parties. In the event that an applicable consensus standard becomes available after the relevant compliance date, data providers can be assured of their continued compliance. They will not need to effectuate some instantaneous ''redo'' of the developer interface to match the consensus standard format, but, as appropriate, can simply take steps to transition to the consensus standard format in an orderly fashion.

Commercially Reasonable Performance (§ 1033.311(c))

The CFPB proposed in § 1033.311(c)(1) to require that performance of the interface must be commercially reasonable. All commenters who addressed the proposed requirement supported it. The CFPB has determined that the commercially reasonable performance requirement for the developer interface carries out CFPA section 1033(a) by establishing how a data provider satisfies the requirement in CFPA section 1033(a) that the data provider make covered data available in an electronic form usable by authorized third parties. The CFPB adopts the requirement, renumbered as § 1033.311(c), with technical non-substantive edits.

Response Rate; Quantitative Minimum Performance Specification (§ 1033.311(c)(1))

Proposal

The CFPB proposed in § 1033.311(c)(1)(i) a quantitative minimum performance specification for a data provider's developer interface beneath which the performance of the interface could not be commercially reasonable. Specifically, the proposed quantitative minimum performance specification was a response rate of at least 99.5 percent. The CFPB proposed to calculate the response rate as the number of proper responses by the interface divided by the total number of queries for covered data to the interface. For clarity and consistency with other provisions in part 1033, final § 1033.311(c)(1) uses ''request'' in lieu of ''query.'' The CFPB neither intends nor effectuates any change to the substance of the provision as a result.

The CFPB proposed in § 1033.311(c)(1)(i)(D) to define a proper response as a response, other than any message such as an error message provided during unscheduled downtime of the interface, that meets the following three criteria: (1) the response either fulfills the query or explains why the query was not fulfilled; (2) the response is consistent with the reasonable written policies and procedures the data provider establishes and maintains pursuant to § 1033.351(a); and (3) the response is provided by the interface within a commercially reasonable amount of time. The CFPB proposed that the amount of time cannot be commercially reasonable if it is more than 3,500 milliseconds.

The CFPB proposed in § 1033.311(c)(1)(i)(A) that responses by and queries to the interface during scheduled downtime for the interface must be excluded from the calculation of the proper response rate. The CFPB also proposed in § 1033.311(c)(1)(i)(C) that the total amount of scheduled downtime for the interface in the relevant time period, such as a month, must be reasonable and in § 1033.311(c)(1)(i)(B) that in order for any downtime of the interface to qualify as scheduled downtime, the data provider must have provided reasonable notice of the downtime to all third parties to which the data provider has granted access to the interface. Finally, the CFPB proposed for both § 1033.311(c)(1)(i)(B) and (C), that adherence to a consensus standard would be an indication that the amount and notice of downtime were reasonable.

Comments

Both third party and data provider commenters expressed certain concerns about the CFPB's proposed quantitative minimum requirements. Third party commenters generally supported the adoption of minimum quantitative performance requirements, but they saw the proposed rule as not including a broad enough set of such requirements. Those requirements it did include they described as too lax because they were below the performance levels actually being achieved in the market under third parties' extant data access agreements with data providers. They

[68] Consistent with § 1033.311(b), data providers may reasonably require authorized third parties to use standardized and machine-readable formats when submitting requests for covered data.

argued that the rule as proposed could unintentionally cause a race to the bottom in performance levels. More specifically, they argued that the proposed 3,500 millisecond response time was too slow and too vague. They suggested a better requirement would take the form ''less than x milliseconds at least x percent of the time'' and should be stricter for certain data request types, such as for authorization or account balance. Third parties also wanted quantified maximum scheduled downtimes and minimum advance notice of such downtimes.

Data provider commenters opposed the CFPB's adoption of minimum quantitative performance requirements. While not addressing current actual interface performance under their extant data access agreements, they asserted that the proposed 99.5 percent response rate would be too onerous and would impose costs without commensurate consumer benefit, particularly with respect to smaller providers that have fewer consumer account holders and that today do not have any developer interfaces. They also asserted that the proposed provisions underlying the response rate—such as downtimes, notices thereof, and 3,500 millisecond response times—were unclear and that the CFPB did not provide a sufficient factual justification for them. They argued, for example, that the CFPB needed to provide more specificity on how to measure an interface's response time (*e.g.,* when and how to calculate the beginning and end of the response period) and on whether and how the timeframe would apply to requests for large amounts of data where transmission might take longer than the proposed 3,500 milliseconds. They argued that to the extent the CFPB purported to justify the measurements it proposed by pointing to other jurisdictions, those other jurisdictions have different factual situations and are not properly comparable for these purposes. In addition, they argued that consensus standards should have no role in interface performance requirements because standards' role has traditionally been achieving interoperability, whereas the performance requirements do not pertain to interoperability. One argued that the CFPB is effectively promoting particular technologies, in contravention of CFPA section 1033(e), by requiring specific performance standards for the developer interface. Finally, they argued that the CFPA does not provide authority to adopt the proposed quantitative specifications.

Final Rule

For the reasons discussed herein, the CFPB is finalizing the quantitative minimum performance specification in proposed § 1033.311(c)(1)(i), renumbered as § 1033.311(c)(1), with certain modifications. First, the final rule does not include a numeric threshold for the time within which the interface must provide a response in order for the time to be commercially reasonable. Instead, the final rule (in § 1033.311(c)(1)(iv)(C)) requires that a proper response be provided within a commercially reasonable amount of time and that indicia that the response time is commercially reasonable include conformance to an applicable consensus standard. The CFPB adopts this approach in the final rule because the proposed 3,500 millisecond response time may not adequately take into account the variety of types and sizes of requests for covered data that data providers' developer interfaces will receive. In addition, final § 1033.311(c)(1) requires that the response rate be equal to or greater than 99.5 percent ''in each calendar month,'' as opposed to the proposed ''relevant time period, such as a month.'' The CFPB makes this change for two reasons: first, to prevent a data provider from calculating its developer interface's response rate over some other time period, or varying the time period, to make appear better its interface's response rate; and second, to align the calculation time period with the calendar month disclosure time period in § 1033.341(d).

Information available to the CFPB indicates that the performance of data providers' developer interfaces is neither uniform nor always on par with what one would reasonably expect given the state of technology. Specifically, the state of technology enables consumer interfaces to operate at consistently high availability, performance, and data freshness levels, which many data providers' developer interfaces do not meet. With respect to uniformity, data from the Provider Collection indicates that providers report widely varying uptime and response time or latency measurements. This non-uniformity persists both across similarly situated providers and across the various consumer or developer interfaces a data provider may make available. *See* 88 FR 74796, 74815–16 (Oct. 31, 2023). Accordingly, the performance of data providers' developer interfaces needs both to improve and to become more consistent and predictable from where that performance is today.

The quantitative minimum 99.5 percent response rate requirement in final § 1033.311(c)(1) reflects the CFPB's determination that developer interface performance beneath that level cannot constitute commercially reasonable performance. The requirement ensures that data providers' developer interfaces perform at a sufficiently consistent and predictable level. The requirement implements CFPA section 1033(a), which requires data providers to make covered data available in an electronic form usable by authorized third parties, and ensures consistent availability of covered data, while contemplating that limited, unscheduled downtimes may occur.

The CFPB has determined that the quantitative minimum 99.5 percent response rate is not too onerous. The minimum is in line with the results reported to the CFPB through the Provider Collection. *See* 88 FR 74796, 74816 (Oct. 31, 2023). Further, based on public comments from third parties and results reported to the CFPB through the Provider Collection and the Aggregator Collection, the minimum is below levels being achieved by larger data providers' developer interfaces today pursuant to their data access agreements with third parties. That is significant evidence that where a given data provider today has a developer interface in place, it will be reasonably feasible for the data provider's interface to continue to meet the quantitative minimum performance requirement established by § 1033.311(c)(1). It is possible over time that part 1033 going into effect will itself lead to an increased volume of data requests to larger data providers' extant developer interfaces. Nonetheless, in the CFPB's assessment, it is reasonably feasible for data providers to invest in and maintain their developer interfaces in a manner such that the increased volume does not degrade the interfaces' performance from their current levels, which, as noted, are above the quantitative minimum established in § 1033.311(c)(1). The CFPB's establishment of the 99.5 percent minimum response rate is based on the rulemaking record before it and does not rely on required performance levels in other jurisdictions. As the record demonstrates, the CFPB did consider other jurisdictions' requirements and factual situations. However, the U.S. data sharing market is differentiable from other jurisdictions (for example, the U.S. has more depository institutions than is typical in other jurisdictions) and the CFPB's legal authorities are of course specific to U.S.

law. The CFPB's determination that interface performance beneath the 99.5 percent minimum cannot be commercially reasonable appropriately reflects the rulemaking record, the U.S. data sharing market, and the CFPB's authority.

The 99.5 percent response rate minimum is below levels commonly achieved by data providers' consumer interfaces today, even for consumer interfaces maintained by data providers with no developer interface. As the CFPB noted in the proposed rule, data providers through their consumer interfaces commonly make available an amount and variety of data broader than the set of covered data that is subject to part 1033. *See* 88 FR 74796, 74816 (Oct. 31, 2023). These facts indicate that where a given data provider today has a consumer interface but does not have a developer interface, it will be reasonable for the data provider to implement a developer interface that meets the minimum performance level required by § 1033.311(c)(1). Moreover, the minimum will not apply to small depository institution data providers, because the final rule does not cover such depositories. All depository institutions subject to the final rule appear to maintain a consumer interface already and can reasonably implement a developer interface that meets the final rule's minimum performance requirements. In that regard, the final rule makes explicit that a data provider may be able to satisfy its developer interface obligation, including the 99.5 percent response rate requirement, through contract with its service provider under which the service provider screen scrapes covered data from the data provider's consumer interface and makes the covered data available to authorized third parties through a developer interface that the service provider maintains on behalf of the data provider. This type of approach can meaningfully reduce the burden of performance requirements—including the quantitative minimum—through economies of scale achieved by service providers.

The proper response definition in final § 1033.311(c)(1)(iv) underlies the required 99.5 percent response rate. The CFPB proposed (in § 1033.311(c)(1)(i)(D)) a proper response definition that excluded ''any message such as an error message provided during unscheduled downtime of the interface.'' The final rule (in § 1033.311(c)(1)(iv)) excludes from the proper response definition ''any message provided during unscheduled downtime of the interface.'' The CFPB neither intends nor effectuates any change to the substance of the proposed provision by omitting the clause ''such as an error message.'' Under the final rule, as under the proposal, the proper response definition excludes any message provided during unscheduled downtime of the interface.

The proper response definition does not require in every case that covered data be returned. For example, assume a data provider has in place reasonable access caps, which comply with § 1033.311(d), limiting the frequency with which the data provider receives and responds to requests for covered data from an authorized third party through its developer interface. Assume also the data provider has in place reasonable written policies and procedures, which comply with § 1033.351(a), setting forth and describing such frequency restrictions and setting forth and describing the explanations the data provider's interface may provide for why a request to the interface was not fulfilled. Further, assume that the interface receives a request in excess of the documented reasonable frequency restrictions. Finally, assume that the interface provides a response to that request that (1) explains why the request was not fulfilled (in accord with § 1033.311(c)(1)(iv)(A)), (2) is consistent with the reasonable § 1033.351(a) policies and procedures (in accord with § 1033.311(c)(1)(iv)(B)), and (3) is provided within a commercially reasonable amount of time (in accord with § 1033.311(c)(1)(iv)(C)). That response is a proper response under § 1033.311(c)(1)(iv) and counts favorably toward the 99.5 percent response rate set forth in § 1033.311(c)(1).

The CFPB has determined that the quantitative minimum 99.5 percent response rate in § 1033.311(c)(1) is sufficiently robust and will not result in a race to the bottom. Many smaller data providers that today do not have a developer interface will be required by the final rule to establish one. Section 1033.311(c)(1) establishes a necessary and appropriate floor for developer interface performance in these circumstances, beneath which interface performance cannot be commercially reasonable. At the same time, and particularly with respect to larger data providers, the CFPB emphasizes that the quantitative minimum is not a safe harbor. That is, it does not follow from a data provider's developer interface having met the quantitative minimum that the interface has satisfied the requirement of commercially reasonable performance established in § 1033.311(c). In addition to the quantitative minimum, § 1033.311(c)(2), discussed below, establishes indicia of what constitutes commercially reasonable performance. Those indicia include comparisons of a data provider's developer interface performance to consensus standards; to the developer interface performance of other similarly situated data providers, such as other larger data providers when the data provider is a larger data provider; and, to the performance of the data provider's consumer interface. These comparisons could indicate that a data provider's developer interface performance, and particularly a larger data provider's developer interface performance, is not commercially reasonable even if the performance meets the quantitative minimum. In other words, consideration of the indicia in § 1033.311(c)(2) could result in a determination, by an examiner for example, that a data provider's interface has not complied with the commercially reasonable performance requirement established in § 1033.311(c) notwithstanding that the interface met the quantitative minimum in § 1033.311(c)(1).

CFPA section 1021(b) states that the CFPA's objectives include, among other things, authorizing the CFPB to exercise its authorities under Federal consumer financial law, which includes CFPA section 1033, to ensure that consumers, defined in CFPA section 1002(4) to include consumers' authorized third party representatives, are provided with timely and understandable information. In addition, the title of CFPA section 1033 indicates that its objective is to establish a consumer right to access information. The requirements of § 1033.311(c)(1) carry out these CFPA objectives by ensuring data providers respond to consumers' authorized third party representatives upon request in a manner that is commercially reasonable and that enables the representatives to access covered data in a usable electronic form. The requirements are consistent with the objective stated in CFPA section 1033(e) of not requiring or promoting a particular technology; a data provider may use any technology or technologies it wishes so long as its systems perform at the required level. Further, the rulemaking record described in part II.A establishes that data providers' competitive incentives do not align with those of authorized third parties. In light of those differing incentives, the quantitative minimum performance requirement in § 1033.311(c)(1) is necessary and appropriate to ensure covered persons do not avoid the requirement to make

covered data available to authorized third parties through their developer interfaces. Beneath that minimum, performance levels would not be sufficient to enable effective realization of the CFPA's goals.

Indicia of Compliance (§ 1033.311(c)(2))

Proposal

The CFPB proposed in § 1033.311(c)(1)(ii) two indicia of whether performance of the interface is commercially reasonable. The first was whether performance meets the applicable performance specifications set forth in a qualified industry standard. The second was whether the interface's performance meets the applicable performance specifications achieved by the developer interfaces established and maintained by similarly situated data providers. As with the quantitative minimum discussed above, the CFPB proposed these indicia pursuant to its preliminary determination that the performance of data providers' developer interfaces should improve over time and become more consistent and predictable. The CFPB requested comment on whether additional indicia would be appropriate and, if so, what they should be. The CFPB also requested comment on whether the final rule, instead of referring broadly to ''applicable performance specifications,'' should name and describe certain specifications, such as the latency and uptime.

Comments

Data provider commenters opposed the indicia. They stated that the requirement of commercially reasonable performance is sufficient and appropriate in and of itself. They further argued that qualified industry standards should not serve as indicia of commercially reasonable performance because the general purpose of standards has traditionally been interoperability and the level of developer interface performance does not relate to interoperability. If qualified industry standards *were* to serve for measuring commercially reasonable performance, however, many data providers thought they should serve as a safe harbor to give providers greater compliance certainty. They also argued that the performance of similarly situated providers' interfaces should not be among the indicia, because that would result in an ever-spiraling-upward level of required performance. Moreover, they argued that under the CFPB's proposed rule they would have no way to ascertain the performance levels of similarly situated data providers' developer interfaces because there would be no public source for that information.

Third party commenters supported the indicia. They argued that the indicia should reflect all metrics incorporated in the quantitative minimum specification in proposed § 1033.311(c)(1)(i) (discussed above), such as response rate, response time, total downtime, total scheduled downtime, and notice of downtime. They also argued that the indicia of whether the interface meets the performance level of the interfaces of other providers should be supported by a regulatory disclosure mechanism for publicly reporting all of the metrics. This disclosure requirement is discussed under § 1033.341(d) below.

Final Rule

For the reasons discussed herein, the CFPB is finalizing § 1033.311(c)(1)(ii), renumbered as § 1033.311(c)(2), with modifications. Final § 1033.311(c)(2)(i) adds a third indicia: comparison to the performance of the data provider's consumer interface. As a result, under final § 1033.311(c)(2)(i), indicia that a developer interface's performance is commercially reasonable as required by § 1033.311(c) include (1) whether the interface's performance conforms to a consensus standard that is applicable to the data provider; (2) how the interface's performance compares to the performance levels achieved by the developer interfaces of similarly situated data providers; and (3) how the interface's performance compares to the performance levels achieved by the data provider's consumer interface.

The CFPB proposed in § 1033.311(c)(1)(ii) that these indicia would be based on ''applicable performance specifications.'' In lieu of the general reference to applicable performance specifications, final § 1033.311(c)(2)(ii) states that, for each of the above three indicia, relevant performance specifications include: (1) the interface's response rate as defined in § 1033.311(c)(1) through (c)(1)(iv) (discussed above); (2) the interface's total amount of scheduled downtime; (3) the amount of time in advance of any scheduled downtime by which notice of the downtime is provided; (4) the interface's total amount of unscheduled downtime; and (5) the interface's response time.[69]

The CFPB has determined that the specificity of final § 1033.311(c)(2), relative to the proposed rule, gives sufficient clarity to data providers for how commercial reasonability of developer interface performance will be assessed. So long as developer interfaces meet the quantitative minimum performance requirement in § 1033.311(c)(1), it is necessary and appropriate for commercial reasonability to be assessed against indicia that can take account of changing technological advancements and other factors that may bear on reasonableness in this context. By the same token, removing these indicia references altogether would result in an insufficiently robust and overly vague requirement.

It is appropriate for a consensus standard applicable to the data provider to serve as one of the three indicia of whether the performance of the data provider's developer interface is commercially reasonable. Standards bodies and the participants therein have expertise relevant to open banking issues, including but not limited to developer interface performance. The CFPB fully expects there will be give and take across industry participants in developing consensus standards for commercially reasonable developer interface performance. Consensus standards will serve as indicia, as relevant indicators, thereof, but will not be determinative. The CFPB believes it is appropriate for consensus standards to play this role.

It is also appropriate for the developer interface performance of similarly situated data providers to serve as the second of the three indicia. The CFPB believes that comparing interface performance to the interfaces of other providers will not result in too onerous (or unstable) a standard. Such performance is among other indicia, and does not create a requirement to be better than peer performance. But to the extent that performance lies outside that norm, that can fairly serve as indicia that performance may lack commercial reasonableness. Black's Law Dictionary defines ''commercially reasonable'' as ''conducted in good faith and in accordance with commonly accepted commercial practice.'' [70] Article 4A of the Uniform Commercial Code states that the commercial reasonableness of a security procedure is to be determined by considering, among other things, ''security procedures in general use by

[69] Section 1033.341(d) (discussed below) requires data providers to disclose each calendar month the response rates of their developer interfaces; nothing in part 1033 precludes data providers from reviewing such data to help them assess the commercial reasonableness of their own performance.

[70] *Commercially reasonable,* Black's Law Dictionary (12th ed. 2024).

customers and receiving banks similarly situated.'' UCC 4A–202(c).

The performance of the data provider's consumer interface also serves appropriately as indicia of compliance. Data providers' consumer interfaces today generally achieve a level of performance that is on a par with the standards of commercial reasonability set forth in § 1033.311(c). In light of the functionality of consumer interfaces, their performance indicates that it is reasonable to expect developer interfaces to perform at similar levels. In addition, as the performance of consumer interfaces improves over time due to ongoing technological advancements, that improvement and those advancements will also indicate that it is reasonable for the performance of providers' developer interfaces to improve similarly. With these indicia, competitive pressure on consumer interface performance can also help ensure that data providers appropriately maintain the performance of developer interfaces, and do not allow that to revert to some mean below the level of commercially reasonable performance.

Access Caps (§ 1033.311(d))

The CFPB proposed in § 1033.311(c)(2) to prohibit a data provider from unreasonably restricting the frequency with which it receives and responds to requests for covered data from an authorized third party through its developer interface. In other words, the CFPB proposed to permit a data provider to employ reasonable ''access caps.'' The CFPB preliminarily determined that this would appropriately effectuate data access rights by permitting the data provider to prevent an authorized third party from unduly burdening the data provider's interface and thereby negatively impacting its ability to respond to requests from other authorized third parties. At the same time, by prohibiting *un*reasonable caps, the proposed rule would have prevented the data provider from unduly impeding the data access of that authorized third party. The CFPB also proposed that access caps must be applied in a non-discriminatory manner and consistent with the reasonable written policies and procedures that the data provider establishes and maintains pursuant to § 1033.351(a). Finally, the CFPB proposed that indicia that access caps are reasonable include that they adhere to a qualified industry standard. The CFPB requested comment on whether the final rule should differentiate between ''consumer present'' data requests, where the consumer is online with the third party at the time of the request, versus other requests, where the third party is refreshing the consumer's data without the consumer being online at that time.

Many commenters addressed the proposed treatment of access caps. Third party commenters generally opposed it as insufficient to prevent data providers from using such caps for pretextual reasons. They argued that a consumer is the one requesting data through an authorized third party and that applying an access cap thereby harms the consumer. In their view, the final rule should prohibit access caps by default and require data providers to demonstrate the reasonableness of any departure from that default.

Data provider commenters generally supported the CFPB's proposal. One association representing small depository institutions argued that the CFPB should finalize the provision as proposed. Some argued, however, that data providers should have greater or total discretion to impose access caps. One questioned the CFPB's authority to impose any limit on such caps, asserting that automated batch requests from third parties do not count as consumer ''requests'' under CFPA section 1033(a). A few argued that qualified industry standards should have no bearing on the reasonability of an access cap, because standards to date have not played such a role.

Some third party and some data provider commenters stated that it would be appropriate for the CFPB's rule to distinguish between consumer-present requests versus other requests. These commenters stated that it would generally not be reasonable for a data provider to impose any cap on consumer-present data requests, whereas it would, or at least could, be reasonable in some circumstances for a data provider to impose such limits on other requests. Some also noted that third parties can and do address restrictions on consumer-not-present requests by, for example, submitting requests at off-peak times.

For the reasons discussed herein, the CFPB is finalizing § 1033.311(c)(2), renumbered as § 1033.311(d), as proposed, but with technical non-substantive edits for additional clarity. Reasonable access caps help ensure that requests from one authorized third party do not unduly burden the data provider's developer interface and thereby impede its ability to respond to requests from other authorized third parties. Barring unreasonable caps remains necessary to help ensure that caps do not unduly impede an authorized third party's data access.

Under the final rule, indicia of reasonableness include adherence to a consensus standard on point. The CFPB believes that this provision will appropriately incentivize industry participants—data providers and third parties, including data aggregators—to work together towards workable standards that can take account of evolving data access technology and thereby provide a useful and enduring compliance resource. At the same time, such standards do not unduly restrict data providers because they do not represent regulatory requirements.

On the basis of its own expertise and feedback from commenters of all types that access caps on consumer-present data requests would be detrimental to consumers and to the financial products and services that consumers are using or seek to use, the CFPB observes that access caps on consumer-present data requests generally will be unreasonable and that reasonable access caps will be confined to other requests such as ''batch'' requests—although that confinement is not enough, alone, to make them reasonable.[71] Consumer presence indicates that the failure to provide a response promptly would have an immediate harmful effect on the consumer, especially if a consumer were enrolling in a new product or service for the first time, such that access caps would be unreasonable for this type of request, at least in the absence of some exceptional justification specific to the facts at hand. Industry participants continue to work to ensure interface availability for consumer-present requests by implementing adjustments on consumer-not-present requests. Accordingly, permitting reasonable access caps, with consensus standards being indicia thereof, will encourage continued industry progress toward appropriate differentiation between consumer-present and consumer-not-present requests.

Security Specifications (§ 1033.311(e))

Access Credentials (§ 1033.311(e)(1))

The CFPB proposed in § 1033.311(d)(1) to prohibit a data provider from allowing third parties to access its developer interface by using any credentials that a consumer uses to access the consumer interface. The

[71] Contrary to some commenter assertions, the CFPB has the statutory authority to address access caps imposed on consumer-not-present requests, such as batch requests. The CFPA defines ''consumer'' to include consumers' representatives, such as authorized third parties. That a data request comes from an authorized third party, as opposed to from an individual consumer, accordingly has no bearing on whether the submission qualifies as a ''request'' as that term is used in CFPA section 1033. Similarly, that section does not differentiate between batched and non-batched consumer requests for data.

proposal explained that the possession and use of consumer credentials by third parties, such as through credential-based screen scraping, raises significant security, privacy, and accuracy risks to consumers and to the market for consumer-authorized data access. For example, consumers whose credentials are exposed in a third party data breach might suffer invasions of privacy or financial harms. The proposal covered funds-storing and payment accounts, so stolen credentials could enable bad actors to cause unauthorized transactions or fraudulent use of consumers' personal financial data. The proposal also explained that credential-based screen scraping posed challenges to risk-management, including the difficulty of distinguishing legitimate from illegitimate access attempts.

The CFPB requested feedback on two specific issues. First, the CFPB asked about arrangements in which a third party procures the consumer's authority to access data, then ''passes'' the consumer directly to the data provider, which then authenticates the consumer using the consumer's digital banking credentials, before ultimately providing the third party with a secure access token. Second, the CFPB asked about situations in which a third party acts as both a third party and a service provider that develops and maintains a developer interface on behalf of a data provider.

Although the proposal would have prevented data providers from using credential-based screen scraping to comply with their developer interface requirements, the proposal did not explicitly state whether data providers could block screen scraping. The proposal noted that during the rule's implementation period, and for data accessed outside its coverage, the CFPB plans to monitor the market to evaluate whether data providers are blocking screen scraping without a bona fide and particularized risk management concern or without making a more secure and structured method of data access available.

The CFPB received several comments on proposed § 1033.311(d)(1). Numerous commenters compared APIs to screen scraping in discussing proposed § 1033.311(d)(1). These commenters were nearly unanimous in stating that APIs have advantages over screen scraping in accuracy, consumer privacy, and data security. For example, a trade association commenter stated that APIs are created to limit access to specifically authorized consumer data, which prevents third parties from accessing unnecessary consumer data. Other commenters stated that high-volume screen scraping can impact the availability of financial institution consumer-facing websites. However, a few credit union commenters stated that APIs introduced security risks that could allow bad actors to compromise consumers' accounts. And a community bank trade association commenter said that discouraging screen scraping in favor of developer interface requirements could violate CFPA section 1033(e)'s provision regarding ''require[ing] or promot[ing] the use of any particular technology in order to develop systems for compliance.''

A data aggregator commenter asked for confirmation that consumer credentials may be used in access portals that redirect consumers to enter credentials on the data provider's website. Another data aggregator commenter asked the CFPB to allow arrangements in which third parties provide information sufficient for the data provider to authenticate the consumer rather than having data providers directly authenticate the consumer themselves. Another data aggregator commenter said that existing data access agreements that allow for credential-based access should be permitted while data providers establish their developer interfaces. A group of industry commenters and an academic institution requested clarity on whether existing data access connections would need to be re-established.

Several data providers and data provider trade association commenters asked the CFPB to authorize data providers to block screen scraping. One commenter stated that data providers should be required to take reasonable steps to prevent screen scraping once they have established developer interfaces. These commenters echoed many of the security, privacy, and accuracy risks of screen scraping discussed in the proposal. A few of these commenters asked whether data providers were obligated to permit screen scraping if their developer interfaces failed to meet the final rule's performance standards. One data provider commenter asked how data providers should treat screen scraping of non-covered data.

The CFPB is renumbering proposed § 1033.311(d)(1) as § 1033.311(e)(1) and finalizing the substance of the provision largely as proposed for the reasons discussed herein, with additional clarity regarding service providers. Final § 1033.311(e)(1) provides that a data provider must not allow a third party to access the data provider's developer interface by using any credentials that a consumer uses to access the consumer interface. Final § 1033.311(e)(1) also provides that a contract between a data provider and the data provider's service provider, pursuant to which the service provider establishes or maintains the data provider's developer interface, does not violate § 1033.311(e)(1) if the contract provides that the service provider will make covered data available, in a form and manner that satisfies the requirements of part 1033, to authorized third parties through the developer interface by means of the service provider using a consumer's credentials to access the data from the data provider's consumer interface.

As discussed in the proposal, credential-based screen scraping creates risks to consumer privacy, accuracy, and data security, and poses challenges to data providers' systems. A core objective of the final rule is to transition the market away from using screen scraping to access covered data. Final § 1033.311(e)(1) supports this goal by preventing data providers from relying on a third party's use of consumer credentials to access the developer interface.

The CFPB disagrees with the suggestion that final § 1033.311(e)(1) risks inappropriately promoting any particular technology. Final § 1033.311(e)(1) sets forth a requirement regarding the use of consumer credentials to access the developer interface, but it allows data providers to use any technology in designing their developer interfaces.

Entities that act as service providers to data providers may, on behalf of those data providers, develop, deploy, and maintain developer interfaces whose technical specifications and requirements entail those service providers retaining and using consumers' credentials. Final § 1033.311(e)(1) does not restrict a data provider from allowing its own service provider that develops, deploys, or maintains the data provider's developer interface to use or possess consumer credentials to facilitate the provision of covered data to a consumer, even if the data provider's service provider also operates as an authorized third party. The final rule clarifies this point by stating in § 1033.311(e)(1) that a contract between a data provider and the data provider's service provider, pursuant to which the service provider maintains the data provider's developer interface, does not violate § 1033.311(e)(1) if the contract provides that the service provider will make covered data available, in a form and manner that satisfies the requirements of part 1033, to authorized third parties through the developer interface by means of the service provider using a consumer's

credentials to access the data from the data provider's consumer interface.

The central factor in analyzing various arrangements between data provider and third party for providing access through the developer interface is whether the third party uses consumer credentials to access the developer interface. For example, a third party might procure the consumer's authority to access data, then ''pass'' the consumer directly to the data provider, which then authenticates the consumer using the consumer's consumer interface credentials. This arrangement would not violate final § 1033.311(e)(1) because the authorized third party itself never accesses, uses, or retains the consumer's credentials. But if a third party such as a data aggregator sought to access or retain consumer credentials as a service to support access to consumer permissioned data by a variety of additional third parties, such an arrangement would violate final § 1033.311(e)(1) because the third party itself accesses and retains the consumer's credentials.

Nothing in the proposal would have precluded data providers from blocking screen scraping, and nothing in the final rule does so. However, data providers may act improperly if they attempt to block screen scraping across the board without making the requested data available through a more secure alternative. Depending on the facts and circumstances, such interference with the consumer's ability to share their personal financial data may violate the CFPA's prohibition on acts or practices that are unfair, deceptive, or abusive. However, if a data provider has established a developer interface that complies with—or in markets not yet covered by this final rule, conforms to—the requirements of this final rule, then blocking screen scraping may further consumer privacy and data security while ensuring that consumers are able to authorize access to their financial data in a manner that is safe, secure, reliable and promoting of competition. Regarding third parties with prior arrangements that relied on credential-based access, once data providers have enabled the safe, secure, and reliable forms of data access envisioned in this rule, the CFPB cautions that screen scraping attempts by third parties to reach data covered by such arrangements could well be limited by the CFPA's prohibition on unfair, deceptive, or abusive acts or practices. 12 U.S.C. 5531.

Security Program (§ 1033.311(e)(2))

Proposed § 1033.311(d)(2)(i) would have required data providers to apply to their developer interfaces an information security program that satisfies the applicable rules issued pursuant to section 501 of the GLBA, 15 U.S.C. 6801. Under proposed § 1033.311(d)(2)(ii), a data provider that is not subject to section 501 of the GLBA would have been required to apply to its developer interface the information security program required by the FTC's Standards for Safeguarding Customer Information, 16 CFR part 314. The CFPB preliminarily determined that the GLBA Safeguards Framework appropriately addresses data security risks for developer interfaces in the market for consumer-authorized financial data. The CFPB requested comment as to whether a general policies-and-procedures requirement would be more appropriate than the GLBA Safeguards Framework.

In the proposal, the CFPB noted that the GLBA Safeguards Framework generally requires each financial institution to develop, implement, and maintain a comprehensive written information security program that contains safeguards that are appropriate to the institution's size and complexity, the nature and scope of the institutions' activities, and the sensitivity of the customer information at issue. These safeguards must address specific elements set forth in the GLBA Safeguards Framework. The CFPB noted the GLBA Safeguards Framework provides a process for ensuring that such a program is commensurate with the risks faced by the financial institution rather than a rigid list of prescriptions. The proposal noted that this flexible, risk-based approach allows the GLBA Safeguards Framework to adapt to changing technology and emerging data security threats.

Many commenters from different interest groups supported this use of the GLBA Safeguards Framework. One data provider commenter stated that the GLBA Safeguards Framework would ensure consistent data security standards for all ecosystem participants. Additionally, one consumer advocate commenter said the proposed rule would close gaps in data security coverage. On the other hand, some data provider commenters opposed the use of the GLBA Safeguards Framework on the grounds that the data providers are already subject to data security requirements. Additionally, some commenters pointed out that the FTC's Safeguards Rule was not identical to prudential regulators' Safeguards Guidelines and is not subject to FTC supervision. Specifically, commenters were concerned that the FTC lacks supervisory authority and cannot examine institutions under its jurisdiction for compliance with its Safeguards Rule.

For the reasons discussed herein, the CFPB is finalizing § 1033.311(e)(2) as proposed. As such, under § 1033.311(e)(2)(i), a data provider must apply to the developer interface an information security program that satisfies the applicable rules issued pursuant to section 501 of the GLBA, 15 U.S.C. 6801. Alternatively, under § 1033.311(e)(2)(ii), if the data provider is not subject to section 501 of the GLBA, the data provider must apply to its developer interface the information security program required by the FTC's Standards for Safeguarding Customer Information, 16 CFR part 314.

The CFPB has determined that the GLBA Safeguards Framework will best mitigate information security weaknesses within open banking transactions. The flexible nature of the Safeguards approach allows data providers some discretion in how they protect customers from emerging threats to their data. As noted in the proposal, the FTC's Safeguards Rule includes slightly more prescriptive requirements, such as encryption, for certain elements, because the Safeguards Rule must be usable by a financial institution to determine appropriate data security measures without regular interaction with an examiner from a supervising agency.

Additionally, subjecting data providers to the GLBA Safeguards Framework is not a duplicative requirement on data providers. The Safeguards Framework allows information security programs to adapt to risks specific to the developer interface. Without this provision and its specific application to the developer interface, it is not clear consumers would have the same protection over their data across different types of data provider entities. Further, the CFPB needs to be able to adequately supervise data providers for their data security compliance. Private rules such as NACHA data security requirements or Payment Card Industry Data Security Standards require a private entity to determine what conduct complies with the rule without oversight from the CFPB. Conversely, the GLBA Safeguards Framework provides a consistent, yet flexible approach that is not dictated by a private entity.

Section 1033.311(e)(2) implements CFPA section 1033(a) by clarifying how a data provider must make available data upon request to a consumer, including an authorized third party. Establishing a consistent set of data security requirements will help ensure that developer interfaces are only

making data available to consumers and authorized third parties consistent with the scope of a consumer's request and do not present unreasonable risks to the security, confidentiality, and integrity of covered data.

4. Interface Access (§ 1033.321)

The CFPB proposed in § 1033.321 to clarify the circumstances under which a data provider would be permitted to block a consumer's or third party's access to its consumer or developer interface without violating the general obligation of CFPA section 1033(a). The proposal explained that it would be inconsistent with CFPA section 1033(a) for a data provider to make available covered data to persons or entities that present unreasonable risks to the security of the data provider's safety and soundness, information systems, or consumers, or where a data provider could not take steps to ensure they are making available covered data to an actual consumer or authorized third party.

For the reasons discussed herein, the CFPB is finalizing § 1033.321 with several changes designed to clarify the operation of each paragraph, reduce the risk of unjustified denials, and reduce the burden on data providers of assessing third party risks. As discussed in greater detail below, final § 1033.321(a) generally provides that a data provider does not violate the general obligation in § 1033.201(a)(1) by denying a consumer or third party access to all elements of the interface described in § 1033.301(a) if granting access would be inconsistent with policies and procedures reasonably designed to comply with legal requirements described in § 1033.321(a)(1)(i) through (iii), and if the denial is reasonable pursuant to § 1033.321(b). Final § 1033.321(b) describes requirements that a denial must meet to be reasonable. Final § 1033.321(c) lists indicia bearing on the reasonableness of a denial pursuant to § 1033.321(b). And final § 1033.321(d) provides conditions that are each a sufficient basis for denying access to a third party.

Denials Related to Risk Management (§ 1033.321(a))

Proposal

Proposed § 1033.321(a) generally would have provided that a data provider could deny a consumer or third party access to its consumer or developer interface based on risk management concerns. Specifically, the proposal provided that, subject to a reasonableness standard described in proposed § 1033.321(b), a denial is not unreasonable if it is necessary to comply with the section 39 of the Federal Deposit Insurance Act or section 501 of the GLBA.

In proposing to allow data providers to deny access based on risk management concerns, the CFPB recognized that depository institutions have legal obligations to operate in a safe and sound manner, and both depository and nondepository institutions have other information security-related obligations.[72] The prudential regulators have issued supervisory guidance that sets forth risk management principles and other considerations that depository institutions can leverage when developing and implementing risk management practices. For example, in 2023 the prudential regulators issued the Interagency Guidance on Third-Party Relationships: Risk Management.[73] The proposal also recognized that consumers might suffer harm if the final rule did not allow data providers to deny a third party access to the data provider's developer interface where the data provider has legitimate risk management concerns. Indeed, the proposal stated that it would be inconsistent with CFPA section 1033(a) for a data provider to make available covered data to persons or entities that present unreasonable risks to safety and soundness or information security. At the same time, the CFPB expressed concern about risk management being used to frustrate a consumer's right to access data under CFPA section 1033, and about incentives that data providers might have to deny access. Proposed § 1033.321 was intended to accommodate these considerations.

The proposal also sought to illuminate various aspects of proposed § 1033.321's operation. For example, the CFPB generally described denials of access as applicable to third parties or consumers, rather than to specific data fields requested by third parties or consumers. This was because, in the CFPB's view, third parties are in the best position to determine what covered data are reasonably necessary to provide the consumer's requested product or service. *See* 88 FR 74796, 74823 (Oct. 31, 2023). And the CFPB explained that the exceptions under CFPA section 1033, set forth in proposed § 1033.221, generally would not be appropriate for data providers to use to address risk management concerns. *See* 88 FR 74796, 74820 (Oct. 31, 2023).

The CFPB requested comment on additional ways to harmonize the risk management obligations of data providers with CFPA section 1033's data access right for consumers and authorized third parties. The CFPB also requested comment on the extent to which CFPB rules or guidance, or other sources, should address whether a data provider's denial of third party access to a developer interface under § 1033.321(a) would be reasonable with respect to any particular risk management practices.

Comments

The CFPB received numerous comments on this proposed provision. Several commenters, mostly data providers and data provider associations, said the proposal properly incorporates third party risk management principles to third party access. Many data provider commenters asserted that their prudential regulators expect a relatively high degree of vetting of third parties accessing data with consumer authorization. Several data provider commenters, and a research institute commenter, stated that third party risk management obligations applied even to third party relationships not initiated by the data provider.

Although these commenters generally supported allowing data providers to deny access to third parties, most were concerned that the proposed grounds for reasonable denials might be too narrow. For example, several data provider trade association commenters sought clarification that reasonable grounds for denying access would include concerns over fraud, reputational risk, or safety and soundness.

Some of these commenters stated that safety and soundness risks might be raised by the volume of data requested by a third party, by an unmanageable pace in onboarding third parties, or by third parties with insufficient financial resources to reimburse the data provider for unauthorized transfers. Several data providers and trade association commenters said that data providers reasonably should be able to deny access consistent with interagency guidance on third party risk management. Several commenters stated that data providers should be able to

Sys, FDIC, OCC, *Conducting Due Diligence on Financial Technology Companies A Guide for Community Banks,* (Aug. 2021), *https://www.occ.gov/news-issuances/news-releases/2021/nr-ia-2021-85a.pdf.*

deny access based on the conduct of the third party, such as its data minimization practices, its compliance with EFTA and Regulation E, the content of its privacy policies, and its ability to manage downstream data recipients. Several commenters asked the CFPB to provide that a third party's refusal to agree to reasonable risk-related contractual terms would justify denying access. A group of data provider trade association commenters asked for guidance related to international third parties, and one trade association commenter stated that communicating denial reasons to a third party on an OFAC sanctions list might require a data provider to violate the law. A trade association commenter asked for general examples of reasonable and unreasonable denials, and a bank commenter asked for clarification that data providers may deny access to data aggregators. A bank commenter stated that the rule should clarify that the obligation on data providers to make covered data available to authorized third parties would apply only for authorized third parties domiciled in the U.S. The commenter stated that third parties that are not domiciled in the U.S. may be subject to different privacy or data protection laws and that sharing data with such entities could undermine consumer protections and complicate risk management and liability.

Many data providers and data provider trade association commenters stated that the proposed rule appeared to contemplate a level of vetting of third parties that is infeasible. These commenters stated that data providers could be overwhelmed by the number of third parties attempting to access consumer data and would lack the resources to vet each third party to the degree required for service providers.

These commenters recommended that the final rule include various changes to reduce the burden of vetting third parties. Several data providers and data provider trade association commenters stated that the rule should provide a safe harbor for data providers who grant access to third parties making representations of their data security practices. Other data provider commenters requested safe harbor from liability for any harm caused by third parties. A few commenters stated that data providers should be allowed to negotiate data access agreements with provisions governing indemnification, insurance, and other risk-related terms. Two commenters stated that data providers should be given a reasonable period of time to vet third parties. Finally, several commenters said that the CFPB should supervise data aggregators and third parties, which would reduce the perceived risk of third parties.

In contrast, other commenters, including many third parties, and a few consumer advocates and research organizations, stated that the proposal improperly suggests that data providers should vet third parties as if they were service providers. Unlike other third party relationships, these commenters said, in the context of consumer-authorized data sharing, a third party is operating as the consumer rather than providing services to the data provider. A data aggregator commenter stated that data providers' interests were often opposed to the interests of third parties, which incentivized denying access.

These commenters requested the final rule include additional changes designed to reduce the risk that data providers deny access on illegitimate grounds or otherwise impair consumer-authorized data access. Specifically, a research institute commenter stated that the rule should accommodate existing data access methods that are similar to the final rule's requirements so that data providers do not block them once the final rule takes effect. A few commenters recommended requiring data providers to use a standardized risk assessment method. One third party commenter stated that denials should be justified by policies and procedures that have been approved by the data provider's prudential regulator. A few of these commenters recommended prohibiting data access agreements between data providers and third parties because, they said, such agreements increase transaction costs and create inconsistent demands on third parties. Some of these commenters recommended changes related to the transparency of denials, such as requiring data providers to disclose information about their denials or the performance of their developer interfaces. Some commenters recommended changes to the process of onboarding, such as requiring data providers to operate in good faith, creating a presumption that delays in granting access of greater than two months violate the final rule, and requiring data providers to grant access once a third party has established a remediation plan for any risk identified by a data provider. Finally, a few commenters said that third parties and consumer advocates should be allowed to formally dispute any denials of access by reporting them to the CFPB.

Many types of commenters, including third parties and data providers, asked the CFPB to coordinate with the prudential regulators on risk management issues. Some of these commenters asked for guidance specific to consumer-authorized data access, while others offered specific suggestions. Several third parties and research institute commenters stated that the CFPB and prudential regulators should clarify that risk management for authorized third parties is limited to data security or that the agencies' third party risk management guidance is inapplicable. A data provider and a trade association commenter stated that the FFIEC should identify an accreditation standard for third party information security. One bank commenter stated that the CFPB should provide guidance on risk management for data providers not subject to prudential regulation. Two commenters recommended that the agencies provide guidance stating that Regulations E and Z sufficiently address liability for any harms resulting from third party data access. Two commenters asked the CFPB and the prudential regulators to develop a process for resolving any potential conflicts between the final rule and prudential standards.

Final Rule

For the reasons discussed herein, the CFPB is finalizing § 1033.321(a) with certain substantive, clarifying, and organizational changes. Final § 1033.321(a) provides that a data provider does not violate the general obligation in § 1033.201(a)(1) by denying a consumer or third party [74] access to all elements of the interface described in § 1033.301(a) if: (1) granting access would be inconsistent with policies and procedures reasonably designed to comply with: (i) safety and soundness standards of a prudential regulator, as defined at 12 U.S.C. 5481(24), of the data provider; (ii) information security standards required by section 501 of the GLBA, 15 U.S.C. 6801; or (iii) other applicable laws and regulations regarding risk management; and (2) the denial is reasonable pursuant to § 1033.321(b).

As discussed in the proposal, the CFPB recognizes that data providers have obligations regarding risk management. For example, depository institutions must operate in a safe and sound manner in compliance with applicable laws and regulations. And depository institutions and other data providers subject to the GLBA must ensure the security of the customer

[74] Regarding comments asking whether a data provider may deny access to a data aggregator, the term ''third party'' is defined in the final rule to include data aggregators.

information that they collect and maintain. A final rule that compels data access regardless of these other legal obligations would create risks to data providers and consumers. But the CFPB also understands that data providers face some competitive incentives to deny access to third parties in ways that could threaten a consumer's right to access their data under CFPA section 1033.

The CFPB has made several changes to clarify the operation of the different elements in § 1033.321(a). First, the CFPB has revised aspects of the general standard proposed in § 1033.321(a). Specifically, the proposed rule referred to denials ''based on risk management concerns'' but did not specify the nature of these concerns or the meaning of denying access ''based on'' these concerns. Commenters also sought clarity about the relationship between the authorities cited in proposed § 1033.321(a) and the section's general term for risk management obligations.

Final § 1033.321(a) has been restructured to clarify that safety and soundness standards and information security standards are two legal requirements that might justify denying access, rather than specify an exhaustive list of grounds for denial. The CFPB has modified the proposed description of safety and soundness by removing the reference to section 39 of the Federal Deposit Insurance Act. This change reflects the fact that safety and soundness standards originate from a broader array of legal authorities and avoids implying that banks and savings associations are the only depository institutions with safety and soundness obligations. The final rule provides these specific examples because the CFPB understands that they are especially relevant to decisions regarding third party access. But final § 1033.321(a)(2)(iii) also provides a catchall provision for other applicable laws and regulations regarding risk management to make clear that obligations regarding risk management may be found in other sources, including those raised by commenters. For example, denials may be justified by a third party's presence on a list released by OFAC, such as the Specially Designated Nationals and Blocked Persons list,[75] or by requirements to prevent money laundering and terrorist financing under the Bank Secrecy Act and the Corporate Transparency Act. *See* 31 U.S.C. 5311, 5336. This catchall provision also ensures that data providers that are not supervised by the prudential regulators are able to deny access when warranted under the rule.

In response to commenters who requested the ability to deny access using guidance issued by the prudential regulators, the CFPB has determined that denials must ultimately be grounded in legal requirements. The final rule implements consumers' data access rights in a binding, enforceable regulation. Failure to ground a denial in another legal obligation could allow non-binding, unenforceable guidance to override the final rule, which would frustrate Congress's purposes in enacting CFPA section 1033. The obligations enumerated in § 1033.321(a)(1)—safety and soundness standards, information security standards, and other laws and regulations regarding risk management—are all binding, enforceable legal requirements. However, the CFPB understands that data providers develop and apply risk management policies and procedures to support their compliance with underlying statutes and regulations, an exercise that may be informed by non-binding guidance, among other sources. To reflect the role of policies and procedures and avoid excessively restricting the sources of information relevant to compliance, final § 1033.321(a)(1) refers to ''policies and procedures reasonably designed to comply with'' legal requirements. The CFPB assesses that these changes answer many of the questions raised by commenters regarding the types of risks covered by § 1033.321(a), whether specific references to authorities are illustrative or exhaustive, and how agency guidance relates to denial decisions.

Final § 1033.321(a)(1) also provides that a denial is justified if granting access would be ''inconsistent'' with policies and procedures ''reasonably designed'' to comply with the enumerated legal requirements. In using the term ''necessary'' in reference to specific statutory obligations, the proposed rule could have been read to apply a strict necessity standard to risk management obligations that a data provider might use to justify a denial. The CFPB has determined that a different approach is more appropriate to the nature of risk management. The CFPB understands that requirements to avoid unsafe or unsound practices and threats to the security of customer information generally are not defined with precision. Instead, they are evaluated based on constantly changing factual circumstances and managed by programs that are flexible enough to consider various factors.

The final rule's approach is intended to account for the flexibility and discretion that data providers exercise in designing and implementing policies and procedures regarding risk management. In the context of consumers' data access rights, the CFPB has determined that it is appropriate for data providers to exercise this discretion by attempting to grant access unless doing so would be inconsistent with reasonably designed policies and procedures. Whether a denial is the result of policies and procedures that are ''reasonably designed'' will depend on the circumstances. If a data provider identifies a risk that might call for denying access to a third party, it must effectively consider how those policies and procedures can tailor any restriction on data access to the risk presented. In analyzing the extent of the risks presented by the third party, the data provider should take into account the fact that a consumer will have authorized the third party to access data, or that certain risks are mitigated by operation of part 1033. Policies and procedures would not be reasonably designed, for instance if they do not account for the protections of subpart D of this rule that address a third party's potential use of consumer-authorized data. In evaluating for whether policies and procedures are reasonably designed, the CFPB will closely evaluate whether the data provider has effectively considered how to avoid burdening the CFPA section 1033 access right while also complying with applicable laws and regulations regarding risk management. Policies and procedures will not be ''reasonably designed'' for purposes of § 1033.321(a)(1) if their design does not take account of whether alternative practices would be comparably effective but less burdensome to the CFPA section 1033 access right.

The final rule also separately enumerates the reasonableness element of a denial from the other requirements justifying the denial. Under final § 1033.321, a denial would have to be justified by at least one of three legal requirements provided in § 1033.321(a)(1) and would have to be reasonable pursuant to § 1033.321(a)(2). The reasonableness element in § 1033.321(a)(2) is elaborated on in § 1033.321(b), which provides requirements for reasonable denials. Final § 1033.321(a) also adds the new phrase ''all elements of'' the interface described in § 1033.301(a). This change better reflects the fact that denials of access under § 1033.321 involve a

[75] Off. of Foreign Asset Control, U.S. Dep't of Treas., *Sanctions List Service, https://ofac.treasury.gov/sanctions-list-service* (last visited Oct. 16, 2024).

denial of access in its entirety. A denial would not be appropriate if it applied only to certain aspects of the developer interface, or only to certain data fields, because it would not affect ''all elements'' of the interface. As stated in the proposal, the CFPB has determined that consumers and third parties are in the best position to know which covered data fields are reasonably necessary to provide a requested product or service. Similarly, a denial would not be reasonable if it were based on the volume of data a third party requested to provide the consumer's requested product or service. Concerns over the volume of data requested are appropriately addressed by final § 1033.311(d), which provides data providers flexibility regarding the frequency with which they receive or respond to requests for covered data, subject to certain limitations.

Final § 1033.321 does not require data providers to vet third parties. Instead, it recognizes that data providers will need to take account of their risk management obligations in this context. Several comments seemed premised on the existence of tension between granting third parties access to data with consumer authorization and managing risk. In general, the CFPB views data providers' risk management practices as fundamentally compatible with CFPA section 1033's data access obligations. Indeed, the final rule is designed to enable data access in a safe and secure manner, which will align the final rule with prudential imperatives. But in cases where a data provider's legal requirements regarding risk management would call for denying access, final § 1033.321 prevents data providers from having to choose between conflicting legal responsibilities.

The CFPB offers several additional points in response to comments regarding situations that might justify a denial. First, denials would be unjustified if they are based solely on a data provider's policies and procedures that override the substantive protections found in the final rule, such as asserting that the authorization procedures and obligations for third parties seeking to access covered data on consumers' behalf are insufficient. See part IV.D below. Depending on the circumstances, such a denial could be the result of policies and procedures that are not reasonably designed under § 1033.321(a)(1), or it could be unreasonable under § 1033.321(a)(2). The final rule provides a means for consumers to effectuate their right under CFPA section 1033 to authorize access to their covered data. And the final rule contains numerous provisions that the CFPB has determined will allow consumers to realize the benefits of data access while ensuring that third parties are acting on behalf of consumers. Denying access because a third party intends to follow the final rule's protections rather than a data provider's alternative protections would infringe on a consumer's data access rights. For example, it would be unreasonable for a data provider to deny access because a third party refuses to comply with a secondary use limitation that forbids the third party from using covered data to improve the product or service the consumer requested, as permitted under final § 1033.421(c). Similarly, it would be unreasonable for a data provider to deny access because a third party's certification statement reflects the fact that it is subject to the GLBA Safeguards Rule rather than the interagency Safeguards Guidelines.

Second, the CFPB intends for final § 1033.321 to give data providers sufficient flexibility to manage the onboarding of third parties. The CFPB understands that data providers may need to onboard third parties in a staggered manner, and that failure to manage this process could incapacitate data providers' systems and the security of consumers' data. Accordingly, denying access to a third party until it can be properly onboarded may be necessary to comply with a data provider's legal obligations regarding risk management. Moreover, as described in part I, most third party access is currently achieved through the use of data aggregators. The CFPB anticipates that this arrangement will continue for the immediate future, which should reduce any implementation burden on data providers associated with the volume of third party requests. Regarding onboarding third parties that are not domiciled in the U.S., final § 1033.321 gives data providers appropriate flexibility to deny access based on risk management obligations.

Regarding data access agreements, the final rule does not prohibit specific contractual arrangements. A blanket prohibition on such agreements would be unjustified because they may be a valid tool for managing risk. But denials based on failure to agree to certain arrangements would need to satisfy the requirements of final § 1033.321. For the same reason, the CFPB declines to create either express regulatory authorization for or prohibition against onboarding arrangements that seek third parties' assumption of particular allocations of liability. Similarly, the CFPB declines to create regulatory authorization for or prohibition against similar terms seeking specific warranties of insurance associated with such allocations. The same principles regarding denials under final § 1033.321 apply to denials in this context as well. If ''required'' onboarding arrangements are impermissible under final § 1033.321, a refusal to enable interface access would be improper. If such arrangements are permissible under final § 1033.321, a refusal to accept them can justify a denial of access.

Given the range of situations involving consumer-authorized data access, these principles do not yield simple one-size-fits-all requirements such as ''all liabilities run with the data'' or ''no liability allocation can be reached in onboarding agreements.'' In response to the range of comments provided, however, the CFPB is providing additional guidance here as to onboarding arrangements that it considers more likely to raise concerns under § 1033.321.

First, a data provider seeking to onboard a third party to a developer interface in accordance with obligations under this rule and under applicable risk management requirements is not engaged in an arms-length commercial transaction. As a result, any exertion of market power in seeking particular terms in an onboarding arrangement will raise significant concerns about the permissibility of a denial under § 1033.321. In this context, any arrangements not related to the effective implementation of this rule and associated risk management requirements would need to ensure they do not violate CFPA section 1033 or the anti-evasion provision of § 1033.201(a)(2).

Second, the CFPB also would have concerns under § 1033.321 if data providers demand arrangements that would effectively relieve them of their own obligations to follow the law. Such arrangements may indicate the data provider is not motivated by legal compliance, and such arrangements are likely not directly related to a specific risk presented by the third party. The potential liabilities that commenters raised, as a general matter, are provided for under applicable law, including existing law on how such liabilities may be allocated. To the extent that data providers and third parties are seeking to use onboarding arrangements to reduce the transaction costs associated with such back-end allocations, thereby lowering the systemic costs of open banking, such arrangements are less likely to raise concerns under § 1033.321. Permissibility in this context is likely to depend on whether

parties are mutually attempting to reduce transaction costs, or whether one party is instead seeking to undo or change the substantive allocative outcomes that existing legal regimes would otherwise produce for the parties involved, both in terms of where law would put the loss initially and where the loss would be allocated under law.

By the same token, wholesale indemnification or ''hold harmless'' terms, which a number of commenters requested be imposed by or given safe harbor status under the rule, also will raise significant concerns under § 1033.321. To the extent that an indemnity seeks, effectively, to recast one party's potential liability as another's, it almost inevitably seeks to undo the substantive outcome that existing law would otherwise realize.

Third, the CFPB is particularly skeptical of, and as a result intends to carefully scrutinize for reasonableness, data provider insistence on onboarding arrangements that would allocate to third parties liability for losses associated with unauthorized transactions from accounts maintained by that data provider and where that liability arises under Regulation E.[76] Under Regulation E, financial institutions have an obligation to protect their customers against unauthorized transactions. Private network rules provide a means for financial institutions to allocate that liability. Financial institutions should continue to manage liability through appropriately developed private network rules, not one-off agreements that may manifest some improper, unilateral exertion of market power. Depositories should not use the final rule's recognition that data access onboarding needs to proceed in accordance with risk management obligations as grounds to negate the effect of their own Regulation E obligations or the need to manage liability through private network rules.

Finally, the CFPB observes that onboarding arrangements that adhere to consensus standards will carry indicia of reasonableness under § 1033.321(b).[77] For example, their development by recognized standard setters means they are likely to be directly related to a specific risk, rather than an overbroad product of a data provider's or third party's market power. The use of standard form onboarding arrangements that have been developed through the kind of processes that recognized standard setters maintain can provide an efficient model for data providers and third parties.

Regarding comments about the potential burden on data providers of vetting third parties, the CFPB notes that final § 1033.321 does not require data providers to vet third parties. Any requirements regarding vetting are the result of data providers' existing requirements regarding risk management, such as the GLBA Safeguards Framework or safety and soundness standards. To be clear, acting on the authorization of a consumer to access their personal financial data pursuant to this final rule does not, in any way, make a third party a service provider to a data provider; and the same holds true for an aggregator with respect to its use by that third party. Authorized third parties interact with data providers for the limited purpose of accessing a consumer's covered data at the consumer's express direction, and do so within the final rule's procedural and substantive protections regarding the features of the developer interface and the collection, use, and retention of that data. This context differs from other contexts in which data providers are choosing third party business partners or service providers, or are providing data outside the safe, secure, and reliable framework that the final rule is intended to establish.

Additionally, the final rule includes various provisions designed to reduce the burden of vetting. In particular, final § 1033.321(c) allows for conformance with certain consensus standards and certifications to serve as indicia bearing on the reasonableness of a denial under § 1033.321(b), and final § 1033.321(d) lists conditions sufficient to justify a denial without the need for any further evaluation by the data provider. With respect to comments advocating CFPB supervision of data aggregators and third parties, as noted in part IV.5 above the CFPB intends to exercise its supervisory authorities in circumstances where that is appropriate. However, the CFPB's confidential supervisory process is distinct from any vetting that a data provider undertakes for its own risk management purposes.

The CFPB declines to make certain burden-related changes suggested by some commenters. Specifically, final § 1033.321 does not prescribe timing requirements applicable to denials. New timing standards would not be appropriate because final § 1033.321 is intended to work within data providers' existing processes for risk management. And the CFPB understands that risk management is an ongoing process that is difficult to reduce to a single decision point to which a deadline could be attached. Regarding liability, the CFPB declines to change the existing frameworks under Regulation E and Regulation Z for the reasons described in part IV.5 above. And the CFPB cannot create a safe harbor from data providers' existing legal obligations regarding risk management because those obligations are implemented and enforced by other agencies.

Regarding comments requesting additional changes designed to reduce the risk of improper denials, the CFPB has adopted several new indicia of reasonableness in final § 1033.321(c) that will help ensure that any denials are justified, as discussed below. These indicia, combined with the other requirements of final § 1033.321, will provide an appropriate check against improper denials. The CFPB believes that certain other suggestions are unnecessary because they are provided for elsewhere in the final rule. For example, nothing in the final rule prevents third parties, consumer advocates, or consumers from reporting denials to the CFPB or other appropriate officials, such as prudential regulators or State attorneys general. And as discussed in the analysis of final § 1033.351(b)(2), the final rule provides for transparency in denials by requiring data providers to adopt policies and procedures recording the basis for denial and communicating this basis to third parties. For commenters concerned about data providers blocking existing methods of data access before making developer interfaces available, the CFPB has explained in the discussion of final § 1033.311(e)(1) that such attempts could constitute unfair, deceptive, or abusive acts or practices under the CFPA.

Finally, the CFPB agrees with commenters that interagency coordination is essential to the successful operation of an open banking system. Such coordination is especially important here because data providers' legal obligations regarding risk management are generally implemented and enforced by other agencies such as the prudential regulators. Accordingly, the CFPB anticipates that it will continue to work closely with other regulators to implement the rule and provide additional guidance applicable to the consumer-authorized data sharing context.

Requirements for Reasonable Denials (§ 1033.321(b))

Proposed § 1033.321(b) would have provided that any denials under

[76] The CFPB has the same view with respect to comments raising concerns about the allocation of any liability under Regulation Z.

[77] The presence of such onboarding arrangements might also suggest that a data provider's policies and procedures are ''reasonably designed'' under § 1033.321(a)(1).

§ 1033.321 would be subject to a reasonableness standard. The proposed rule stated that to be reasonable pursuant to § 1033.321(a), a denial must, at a minimum, be directly related to a specific risk of which the data provider is aware, such as a failure of a third party to maintain adequate data security, and must be applied in a consistent and non-discriminatory manner.

A few commenters responded to proposed § 1033.321(b)'s requirement that a denial must, at a minimum, be directly related to a specific risk of which the data provider is aware. A bank and a trade association commenter asserted this condition was too narrow because, they said, data providers must anticipate potential risks that have yet to materialize. However, a data aggregator commenter said that the term ''specific risk'' might be overbroad if it encompasses concerns like reputational risk. A research organization requested more detail on the meaning of specific risk.

For the reasons discussed herein, the CFPB is finalizing § 1033.321(b) with certain changes for clarity about the role of this provision. Final § 1033.321(b) provides that a denial is reasonable pursuant to § 1033.321(a)(2) if it is: (1) directly related to a specific risk of which the data provider is aware, such as a failure of a third party to maintain adequate data security; and (2) applied in a consistent and non-discriminatory manner.

Final § 1033.321(b) describes these paragraphs as requirements for reasonableness rather than minimum conditions because satisfying both conditions is sufficient for a denial to be reasonable under this provision. Further guidance about the application of these requirements is found in the indicia of reasonableness are described in connection with § 1033.321(c).

The CFPB has determined that this approach provides greater clarity than the proposed use of the phrase ''at a minimum,'' which could have implied the existence of an unknown number of unstated additional conditions. The requirements in § 1033.321(b) are designed to ensure that data providers are making denial decisions in a principled manner. The CFPB has determined that denials made in violation of these procedures carry a significant risk of being pretextual or otherwise infringing consumers' access rights under CFPA section 1033.

Final § 1033.321(b)(1) provides that a denial must be directly related to a specific risk of which the data provider is aware, such as a failure of a third party to maintain adequate data security. This requirement is designed to ensure that the concerns motivating a denial are appropriately tailored and concrete to justify denying access to a third party. The CFPB disagrees with commenters who stated that requiring data providers to articulate a specific risk would prevent them from addressing risks that have yet to materialize. Final § 1033.321(b)(1) does not require that a given harm have actually occurred before a denial is justified; only that it be articulable with specificity and based on circumstances that the data provider is aware of.

The CFPB declines to state that certain safety and soundness risks can never be stated with specificity. Final § 1033.321(b)(1) provides a procedural limit on denials of access but does not substantively restrict the risks that a data provider may articulate. However, any denial must also be necessary to avoid being inconsistent with policies and procedures reasonably designed to comply with the legal requirements described in § 1033.321(a)(1). And final § 1033.321(c) lists indicia that can assist entities in complying with § 1033.321(b). Similarly, in response to concerns that the ''specific risk'' standard is insufficiently clear, the CFPB notes that it is designed to operate alongside the other provisions of this section.

Final § 1033.321(b)(1) provides that a denial must be ''directly related'' to a specific risk. In general, a denial is directly related to a risk if it is appropriately tailored to that risk. For example, if a data provider denies access to a third party during the onboarding process because it is missing information about that third party's information security practices, then it should grant access once it receives information that establishes the sufficiency of those practices. Under these circumstances, an indefinite denial would not be directly related to the risk justifying the denial.

Final § 1033.321(b)(2) also provides that a denial must be applied in a consistent and non-discriminatory manner. This provision is intended to ensure that data providers make similar denial decisions across third parties that present materially similar risk management concerns. As noted in the proposal, the term ''non-discriminatory'' in this provision carries its ordinary meaning and is not intended to refer to discrimination on a prohibited basis under Federal fair lending law.

Regarding comments recommending that the final rule require denials to be based on existing policies and procedures approved by a data provider's regulator, the CFPB believes that this comment relates to the consistency element of reasonableness. Specifically, denials based on previously adopted written policies and procedures may be more likely to be genuinely responsive to the risks described in those policies and procedures, while denials based on newly announced concerns raise heightened risks of being unreasonable under final § 1033.321(b).

Indicia Bearing on Reasonableness ((§ 1033.321(c))

Proposed § 1033.321(c) provided that indicia that a denial pursuant to § 1033.321(a) is reasonable would include whether access is denied to adhere to a qualified industry standard related to data security or third party risk management. The proposal explained that conformance with an industry standard alone would not necessarily settle the question of reasonableness.

Many commenters addressed the role of standard-setting bodies or credentialing bodies. Several commenters recommended that the CFPB itself develop, or encourage the development of, an accreditation process for third parties that entitles them to data access, while others supported a registry created by a standard-setting body or by the CFPB. However, data providers and data provider trade association commenters stated that any credentialing process or consensus standard should not be dispositive. These commenters stated that risk management is specific to each third party relationship and were concerned that industry standards might conflict with the prudential regulators' standards. A few commenters stated that no standard-setting body currently has plans to issue standards related to risk management or data security. A standard-setting body commented that they do not plan to pursue authentication and data security specifications, or liability determinations.

Other commenters recommended that the final rule include additional factors relevant to a denial of access. One data aggregator commenter recommended creating a presumption in favor of access for third parties that attest to following appropriate data security standards. This commenter also suggested including indicia of unreasonable denials for denials made despite a third party certifying to the adequacy of its security measures or conforming to an accreditation developed by the CFPB or a standard-setting body. A trade association commenter recommended that the final

rule give conclusive weight to similar factors related to unreasonable denials, such as certification by the third party, conformance to an industry standard, or supervision by a regulatory agency.

For the reasons discussed herein, the CFPB is finalizing § 1033.321(c) with several new indicia bearing on the reasonableness of a denial under § 1033.321(b). Final § 1033.321(c) states that indicia bearing on the reasonableness of a denial under § 1033.321(b) include: (1) whether the denial adheres to a consensus standard related to risk management; (2) whether the denial proceeds from standardized risk management criteria that are available to the third party upon request; and (3) whether the third party has a certification or other identification of fitness to access covered data that is maintained or recognized by a recognized standard setter or the CFPB.

The indicia listed in final § 1033.321(c) include factors that the can further guide compliance with § 1033.321(b). The indicia do not serve as conclusive evidence or presumptions of compliance because the CFPB understands that the circumstances surrounding a denial may render it unreasonable or reasonable for purposes of § 1033.321(b) despite the presence or absence of these indicia. For example, a third party might possess a certification regarding the adequacy of its information security program, but a data provider might nevertheless reasonably deny access if it discovers deficiencies in that program such that providing access would be inconsistent with policies and procedures reasonably designed to comply with a legal requirement regarding risk management.

Final § 1033.321(c)(1) largely restates the proposal's indicia related to qualified industry standards, with changes to conform to the final rule's use of the term ''consensus standard'' and § 1033.321's use of the term ''risk management'' to capture various legal obligations related to safe and sound practices, information security, and similar applicable statutory or regulatory obligations. A denial made according to a consensus standard may be likely to be reasonable because it reflects a consistent set of standards developed with the participation of a variety of stakeholders, including data providers and third parties. The CFPB believes this provision will promote safe and competitive third party access.

Final § 1033.321(c)(2) relates to whether the denial proceeds from standardized criteria regarding risk management available to the third party upon request. The CFPB agrees with commenters about the value of a standardized risk assessment method. Denials made according to standardized, knowable criteria may be likely to be reasonable because they are the product of a principled decision-making process. At the same time, the CFPB recognizes that in rare cases a data provider might face an unanticipated risk that justifies denying access. Additionally, there may be aspects of a risk management policy that would undermine the policy's effectiveness if disclosed to a third party. For that reason, final § 1033.321(c)(2) is among the indicia of reasonableness rather than a requirement of reasonableness.

Final § 1033.321(c)(3) relates to credentials or other identifications of fitness to access covered data. The CFPB agrees with commenters who stated that a credentialing or registry system could serve a useful role in the open banking system. But the CFPB also recognizes that such a credential could not supplant data providers' risk management obligations. Such credentials would reduce both the burden of vetting and the risk of unreasonable denials under § 1033.321(b). A denial of a credentialed third party may be likely to be unreasonable under § 1033.321(b) because, among other things, the third party has presented evidence of its fitness to access covered data, supported either directly or indirectly by a relevant regulator. Conversely, a denial of a noncredentialled third party may be likely to be reasonable under § 1033.321(b) if such credential were customary among third parties. Final § 1033.321(c)(3) allows for a broad range of credentials to serve as indicia, including lists of approved third parties, and for a broad range of entities that may produce or validate such a credential.

The CFPB acknowledges comments stating that no consensus standard or credentialing entity relevant to denials is likely to exist in the immediate future. Regarding comments requesting standards or entities directly approved by the CFPB, the CFPB believes that these measures would be most effective and efficient if done on a coordinated basis with other regulators. Final § 1033.321(c)(3) does not commit the CFPB (or other regulators) to recognizing such a credential or credentialing entity. But given the interest commenters expressed in this type of accreditation, the CFPB believes that developments in this direction would promote consistent and non-discriminatory practices with respect to managing third party data access. Therefore, final § 1033.321(c)(3) accommodates the creation of such standards or entities.

The CFPB believes the indicia provided in final § 1033.321(c) incorporate many of the suggestions made by commenters for improving the efficiency of third party data access. The CFPB declines to adopt all suggested indicia because the final rule prioritizes indicia the CFPB believes are likely to be most relevant and impactful to evaluating the reasonableness of a data provider's denial under § 1033.321(b). Final § 1033.321(c) is not an exhaustive list of factors that can guide compliance with § 1033.321(b).

Conditions Sufficient To Justify a Denial (§ 1033.321(d))

The CFPB proposed in § 1033.321(d)(1) to clarify that a data provider would have a reasonable basis for denying access to a third party under § 1033.321(a) if the third party does not present evidence that its data security practices are adequate to safeguard the covered data, provided the denial of access is not otherwise unreasonable. The CFPB explained that this provision was intended to alleviate the concerns related to the potential burden of vetting on smaller data providers because if the third party does not present such evidence, the data provider may deny access without vetting the third party.

The CFPB proposed in § 1033.321(d)(2) to clarify that a data provider would have a reasonable basis for denying a third party access if the third party does not make public certain information about itself. This information consisted of data that the CFPB believed would benefit the efficiency of the open banking system, such as the third party's legal name and any assumed name it is using when doing business with the consumer, a link to its website, and its LEI. Proposed § 1033.321(d)(2) would have also permitted the data provider to deny access if the information was not made available in both human-readable and machine-readable formats, and if the information is not readily identifiable to members of the public (meaning the information must be at least as available as it would be on a public website).

The CFPB requested comment on whether to specify the types of evidence a third party would need to present about its data security practices that would give a data provider a reasonable basis to deny access, and what types of evidence might provide such a basis. The CFPB also requested comment on whether developing an accreditation system could reduce diligence costs for both data providers and third parties and increase compliance certainty for

data providers, and on the steps necessary to develop such a credential and how the CFPB or other regulators could support such efforts.

The CFPB also requested comment on whether it should indicate that conformance to a specific standard or a qualified industry standard would be relevant indicia for a third party's machine-readability compliance; whether it should issue regulations or guidance that would make it easier for data providers and other members of the public to identify a particular third party's information; whether it should provide that a data provider is permitted to deny access if the third party does not submit to the CFPB the link to the website on which this information is disclosed; and whether data providers should have to provide information or notice to the CFPB regarding their procedures and decisions to approve or deny third parties for access to their developer interfaces.

Several commenters addressed proposed § 1033.321(d)(1). Several commenters, including third parties, research organizations, and consumer advocates, commented that the final rule should identify the types of evidence that would establish the adequacy of a third party's data security practices. Types of evidence suggested by these commenters typically included a credential issued by an independent entity or an industry standard provided by a standard-setting body. These commenters differed on whether such evidence should be dispositive. One trade association said that the CFPB should not specify the types of evidence that would establish that a third party's data security practices are adequate.

The CFPB also received several comments on proposed § 1033.321(d)(2). A bank commenter stated that the rule should not require a third party to provide a phone number that any outside party could use to inquire about security practices because doing so might compromise the third party's security. A consumer advocate commenter said that any directory should include only approved third parties to prevent public confusion. Regarding the LEI, one commenter stated that the LEI could be used to identify a third party's legal name, while another commenter said that an LEI was useful but not sufficient for verifying a third party's identity. A data aggregator commenter asserted that because many third parties currently lack LEIs and the process for obtaining one was difficult, the final rule should also permit third parties to use alternative identifiers such as a tax identification number or employer identification number.

For the reasons discussed herein, the CFPB is finalizing § 1033.321(d) with certain organizational and clarifying changes to improve the function of this provision in the broader context of § 1033.321. Final § 1033.321(d)(1) provides that each of the following is a sufficient basis for denying access to a third party: (1) The third party does not present any evidence that its information security practices are adequate to safeguard the covered data; or (2) The third party does not make the following information available in both human-readable and machine-readable formats, and readily identifiable to members of the public, meaning the information must be at least as available as it would be on a public website: (i) Its legal name and, if applicable, any assumed name it is using while doing business with the consumer; (ii) A link to its website; (iii) Its LEI that is issued by: (A) A utility endorsed by the LEI Regulatory Oversight Committee, or (B) A utility endorsed or otherwise governed by the Global LEI Foundation (or any successor thereof) after the Global LEI Foundation assumes operational governance of the global LEI system; and (iv) Contact information a data provider can use to inquire about the third party's information security and compliance practices.

Final § 1033.321(d) is intended to reduce burden on data providers by listing conditions that, if met, justify denying access without expending any further resources on vetting a third party. Accordingly, final § 1033.321(d)(1) clarifies that a denial is justified if a third party does not present ''any'' evidence of the adequacy of its information security practices. As proposed, the CFPB believes that this provision could have been read to require third parties to present a certain type of evidence regarding their information security practices that would entitle the third party to access consumer data. Understandably, many commenters focused on the kinds of evidence that could satisfy such a requirement. Many of these commenters discussed credentialling functions and consensus standards, and the CFPB has reflected this feedback in finalizing indicia related to this evidence in § 1033.321(c)(1) and (3). But the CFPB's intent for final § 1033.321(d)(1) is more limited. It is designed as a means of streamlining the vetting process by clarifying that data providers may deny third parties that failed to clear the minimum bar necessary for data providers to evaluate the third party's practices. Such evidence might take different forms, including a third party's policies and procedures, or audits or reports. But if a third party cannot present any evidence that its information security practices are adequate, then a data provider may deny access without additional investigation.

Final § 1033.321(d)(2) lists certain information that a third party must make available. As explained in the proposal, the CFPB finds that this information will aid the efficiency of the open banking system by helping data providers authenticate the identities of third parties and facilitating any outreach to the third party that may be required as part of the data provider's due diligence. The information required by final § 1033.321(d)(2) is largely the same as the information the CFPB proposed, with a minor change. Specifically, to avoid implying that data providers absolutely may not inquire about topics other than information security, final § 1033.321(d)(2)(iv) describes a third party's contact information as information a data provider can use to inquire about the third party's information security ''and compliance'' practices. The CFPB disagrees that such disclosing such contact information might compromise a third party's security. The final rule does not require disclosing any substantive information about a third party's information security program.

The CFPB declines to add alternative identifying information other than the LEI, such as tax identification number or employer identification number. An LEI allows users to link an entity to its corporate family, which improves data providers' ability to identify the third party seeking access. Additionally, the CFPB has not found that LEIs are unduly burdensome to obtain in its experience administering the Home Mortgage Disclosure Act and Small Business Lending rules, both of which require financial institutions to report an LEI.

5. Responding to Requests for Information (§ 1033.331)

Responding to Requests—Access by Consumers (§ 1033.331(a))

The CFPB proposed in § 1033.331(a) to prescribe the conditions that apply when consumers are seeking covered data. Under proposed § 1033.331(a), to comply with proposed § 1033.201(a), upon request from a consumer, a data provider would be required to make available covered data when it receives information sufficient to: (1) authenticate the consumer's identity and (2) identify the scope of the data

requested. The CFPB explained that proposed § 1033.331(a) is not a requirement to authenticate the consumer's identity and identify the scope of the data requested. Rather, proposed § 1033.331(a) identifies the point in time that a data provider must respond to the request. The CFPB received limited comments on this provision. Several commenters asked that the CFPB clarify how data providers may verify consumers' identities when consumers access information under the rule.

For the reasons herein, the CFPB is finalizing § 1033.331(a) as proposed with an updated cross-reference. Section 1033.331(a) carries out the objective of CFPA section 1033(a) for data providers to make covered data available upon request to a consumer by defining what information triggers a data provider's obligation to make covered data available to a consumer. As noted in the proposal, these conditions would be satisfied through procedures in use by most consumer interfaces today. With regard to the comments requesting clarification on how a data provider may verify a consumer's identity for purposes of § 1033.331(a), the CFPB notes that the only requirement in the rule related to how a data provider must authenticate a consumer's identity is the requirement at § 1033.311(e)(2) with respect to the GLBA Safeguards Framework.

Responding to Requests—Access by Third Parties (§ 1033.331(b))

Conditions That Apply to Requests From Third Parties (§ 1033.331(b)(1))

Proposal

Under proposed § 1033.331(b)(1), a data provider would have been required under § 1033.201(a) to make available covered data to a third party, when it receives certain information described in § 1033.311(b)(i) through (iv). The CFPB proposed in § 1033.331(b)(1)(i) that a data provider would need to receive information sufficient to authenticate the consumer's identity. The CFPB explained that before a data provider grants a third party access to covered data today, the consumer is typically redirected from a third party's interface to the data provider's interface to authenticate the consumer's identity, usually by providing account credentials. Where consumers provide their credentials directly to the data provider through such an interface, the data provider would generally receive information sufficient to authenticate the consumer's identity for purposes of proposed § 1033.331(b)(1)(i).

Under proposed § 1033.331(b)(1)(ii), the data provider would need to receive information sufficient to authenticate the third party's identity. The CFPB explained that an example of such information would include an access token obtained by the third party that has been approved to access the data provider's interface. Under proposed § 1033.331(b)(1)(iii), a data provider would need to receive information sufficient to confirm the third party has followed the authorization procedures in proposed § 1033.401. The CFPB explained that this step would generally be satisfied where the data provider receives a copy of the authorization disclosure the third party provided to the consumer and that the consumer has signed.

Finally, under proposed § 1033.331(b)(1)(iv), a data provider would need to receive information sufficient to identify the scope of the data requested. The CFPB explained that in certain situations, the scope of information requested by an authorized third party might be ambiguous. In these situations, under proposed § 1033.331(b)(1)(iv), a data provider could seek to clarify the scope of an authorized third party's request with a consumer. For example, the CFPB explained that there might be circumstances in which a data provider could seek to clarify whether a consumer intended to consent to share information from particular accounts or particular types of information not specified in the consumer's third party authorization.

The CFPB requested comment on the potential for technology to evolve such that a data provider could satisfy appropriate data security and other risk management standards without receiving a consumer's account credentials directly from the consumer. The CFPB also requested comment on whether clarifications are needed regarding what information would be sufficient to confirm the third party has followed the authorization procedures in the context of automated requests received through a developer interface. Finally, the CFPB requested comment on whether additional clarifications or procedures are needed to ensure a data provider does not design its developer interface to receive information sufficient to satisfy the conditions set forth in proposed § 1033.331(b)(1) but in a way that frustrates the ability of authorized third parties to receive timely responses to requests for covered data.

Comments

A consumer advocate commenter supported the proposed conditions in § 1033.331(b)(1) for data providers to verify a third party's authorization to access consumer data and authenticate the identity of third parties before they make available covered data. However, this commenter, along with others, seemed to interpret proposed § 1033.331(b)(1) as setting forth strict requirements, as opposed to conditions that define the trigger for when a request must be responded to by a data provider, which data provider commenters were concerned would be overly burdensome with respect to confirming a third party's authorization. This concern was twofold: (1) data providers would not have actual knowledge of how the third party received authorization, which they suggested could have been gathered through unfair, deceptive or abusive third party authorization procedures; and (2) confirming that every authorized third party complied with the authorization procedures would be resource-intensive. Further, bank commenters that interpreted the provision to be an obligation were generally unclear as to what was required of them to authenticate the consumer or third party or to confirm the third party followed the proposed § 1033.401 authorization procedures.

Bank commenters offered a number of suggestions for revisions. Some bank commenters recommended that the CFPB modify the regulatory text in proposed § 1033.331(b)(1)(iii) to clarify that a data provider has the right but not the obligation to ''confirm the third party has followed the authorization procedures in § 1033.401.'' One bank trade association commenter recommended that the CFPB change the ''confirm'' language in proposed § 1033.331(b)(1)(iii) to ''reasonably confirm,'' arguing that this would give data providers more discretion to determine whether the third party authorization actually represents the ''consumer's express informed consent'' as required by proposed § 1033.401(c). At least one bank commenter understood proposed § 1033.331(b) as setting forth requirements applicable every time a third party requests data from the developer interface, even where the consumer had authorized the third party to access data multiple times within an extended duration. In such cases, one data provider trade association commenter recommended that the CFPB distinguish between initial requests in which an authorization is first presented to the

data provider, and subsequent requests that were authorized under the initial request. The commenter stated that this would give data providers more flexibility with respect to reviewing subsequent requests. Specifically, the commenter suggested that data requests by authorized third parties relying on an existing, unchanged authorization should not require additional authentication by the data provider.

Third party commenters were generally concerned that data providers could unduly delay the processing of requests to promote the data provider's own product or service. One third party commenter suggested the final rule state that a data provider should provide a prompt response to legitimate requests by third parties. This commenter explained that some data providers have purposefully frustrated request procedures by ignoring requests to discuss API access or by misconstruing their direct data connection.

Final Rule

For the reasons discussed herein, the CFPB is finalizing § 1033.331(b)(1) with a minor change for clarity and an updated cross-reference. Section 1033.331(b)(1) carries out the objective of CFPA section 1033(a) for data providers to make covered data available upon request to a consumer by defining what information triggers a data provider's obligation to make covered data available to a third party purporting to be authorized to act on behalf of a consumer. Under § 1033.331(b)(1), to comply with the requirements in § 1033.201(a)(1), upon request from an authorized third party, a data provider must make available covered data when it receives certain information. This information consists of: information sufficient to authenticate the consumer's identity under § 1033.331(b)(1)(i); information sufficient to authenticate the third party's identity under § 1033.331(b)(1)(ii); information sufficient to document the third party has followed the § 1033.401 authorization procedures under § 1033.331(b)(1)(iii); and information sufficient to identify the scope of the data requested under § 1033.331(b)(1)(iv).

Consistent with the proposal, § 1033.331(b)(1) does not impose obligations on data providers to obtain certain information prior to responding to a request for covered data. Rather, § 1033.331(b)(1) sets forth the trigger for when a data provider is obligated to make covered data available to an authorized third party pursuant to the rule. Section 1033.331(b)(1) does not by its terms require a data provider to authenticate consumers or third parties, or confirm authorizations of third parties. However, the CFPB expects data providers generally will do so to ensure they are responding to consumers' requests and to comply with the GLBA Safeguards Framework (consistent with § 1033.311(e)(2)), any safety and soundness requirements, and other legal obligations, such as the CFPA prohibition against unfair, deceptive, or abusive acts or practices, as applicable. In particular, the CFPB does not believe § 1033.331(b)(1)(iii) imposes significant burden with respect to how a data provider processes information about a third party's compliance with the rule's authorization procedures. The CFPB has determined that data providers should not be responsible for obtaining a consumer's authorization for a third party because third parties are in the best position to determine what data elements are reasonably necessary. However, § 1033.331(b)(1)(iii) does not require a data provider to independently verify the third party has followed each of the § 1033.401 authorization procedures, but instead describes a condition in which the data provider receives information sufficient to document such authorization. As discussed in the proposal, receipt of a copy of the signed authorization disclosure should constitute information sufficient to confirm third party authorization, absent facts to the contrary. However, in light of comments, the CFPB appreciates that the use of ''confirm'' in proposed § 1033.331(b)(1)(iii) could suggest a rigorous due diligence obligation. Accordingly, the final rule uses ''document'' rather than ''confirm'' to clarify the nature of § 1033.331(b)(1)(iii).

In response to bank commenter questions about whether any particular method of authentication is necessary or sufficient, the final rule does not so specify. The final rule only requires data providers to satisfy the data security requirements in § 1033.311(e) regarding the use of consumer credentials and compliance with the Safeguards Framework. The CFPB believes the Safeguards Framework is sufficiently clear that data providers must take some reasonable steps to authenticate who is accessing the data, and the CFPB does not believe it is necessary to prescribe a single means of authentication in the final rule. The final rule does not preclude a data provider from applying different treatment to initial and subsequent data requests covered by the same authorization, if otherwise permissible under § 1033.311(e). The CFPB notes that standard-setting bodies have created standards in this space and consensus standards could be useful to demonstrating whether a trigger has been met. Accordingly, indicia that bear on whether a trigger in § 1033.331(b) has been met include conformance to a consensus standard.

Third party commenters affirmed the concern identified by the CFPB in its request for comment that a data provider could frustrate the ability of authorized third parties to receive timely responses to requests. As discussed in detail above, final § 1033.201(a)(2) includes an anti-evasion provision limiting data providers' ability to frustrate an authorized third party's receipt of covered data. To illustrate how § 1033.201(a)(2) applies to § 1033.331(b), the rule includes an example of conduct that violates the anti-evasion provision in the context of requests, as discussed below with respect to § 1033.331(b)(2) below. The CFPB has determined the anti-evasion provision can more flexibly address the variety of conduct that could interfere with requests than more detailed procedural requirements.

A third party's authorization could extend to multiple requests, depending on the duration and frequency of access authorized by the consumer. As noted in the proposal, data providers today often issue third parties accessing their systems a token that can be presented for subsequent requests covered by a single authorization. If the data provider adequately designs its developer interface, review of the initial request by the third party should give the data provider adequate opportunity to obtain evidence of the third party's authorization including, if appropriate, confirmation by the consumer. In general, it should not be necessary to keep confirming the third party's authorization with the consumer in connection with each previously authorized request. If a data provider continues to request this information, then the data provider will raise concerns about interfering with the access right, in violation of the anti-evasion provision in § 1033.201(a)(2).

Confirmation of Third Party Authorization (§ 1033.331(b)(2))

The CFPB proposed in § 1033.331(b)(2) that a data provider would be permitted to confirm the scope of a third party's authorization to access the consumer's data by asking the consumer to confirm (1) the account(s) to which the third party is seeking access and (2) the categories of covered data the third party is requesting to

access, as disclosed by the third party pursuant to proposed § 1033.411(b)(4). The proposed rule explained that data providers might need to confirm the account(s) to which the third party is seeking access because that information might not be clear from the authorization disclosure, such as where a consumer has multiple accounts. Additionally, the proposed rule explained that permitting the data provider to confirm the categories of covered data would give the consumer an opportunity to review what data they would be authorizing and give data providers greater certainty that the consumer has authorized the request. The proposed rule requested comment on whether the final rule should instead permit data providers to confirm § 1033.331(b)(2) information with the consumer only where reasonably necessary.

In general, bank commenters supported proposed § 1033.331(b)(2). One consumer advocate commenter said the CFPB should require, rather than permit, the data provider to send a confirmation to the consumer when it receives a third party request. Third party commenters opposed proposed § 1033.331(b)(2) on the grounds that it would cause undue friction in the data access process and suggested certain revisions. For example, one third party commenter recommended that data providers not be allowed to confirm an authorization if the third party transmits a record of the consumer's account selection. Another commenter noted that the proposal did not set forth a requirement for how or how quickly the data provider confirm third party authorization, and noted that an anticompetitive data provider could decide to confirm each request via certified mail. Additionally, some third party commenters recommended that the CFPB revise proposed § 1033.331(b)(2) to require data providers to collect account confirmation via the developer interface and not from the consumer.

The CFPB is finalizing § 1033.331(b)(2) as proposed and has added an example to address concerns raised by commenters about interference by data providers, as discussed below. Section 1033.331(b)(2) carries out the objective of CFPA section 1033(a) by clarifying that data provider is permitted to take certain steps to confirm the scope of information requested by a third party purporting to be authorized to act on behalf of a consumer. Allowing data providers to confirm authorizations directly with the consumer, as described in § 1033.331(b)(2)(i) and (ii), can reduce the risk of unintended or fraudulent authorizations and may be a necessary part of data providers' risk management program. However, requiring data providers to obtain consumer confirmation in every case could impose an undue burden on the data provider and the access right, especially in light of the protections in § 1033.311(e)(2) and data providers' other applicable legal obligations. In response to third party commenters' suggestions for alternative procedures to obviate the need for data providers to confirm authorization, it is not clear that it would be feasible to require data providers to transmit records of consumers' accounts to third parties before a third party has initially requested access to covered data.

While data providers are permitted to confirm authorizations with consumers pursuant to § 1033.331(b)(2)(i) and (ii), data providers must avoid interfering with the statutory access right pursuant to § 1033.201(a)(2). As discussed above with respect to § 1033.331(b)(1), a data provider will create risks of violating the anti-evasion provision at § 1033.201(a)(2) if it seeks reconfirmation with consumers after it has already documented the third party's authorization to access covered data. In response to commenter concerns about undue friction introduce by data providers, the final rule includes an example that illustrates how a data provider would violate § 1033.201(a)(2) if a data provider knows or should know its confirmation procedures would be likely to prevent, interfere with, or materially discourage access to covered data.

Covered Data Not Required To Be Made Available (§ 1033.331(c))

Proposed § 1033.331(c) stated that, notwithstanding § 1033.331(a) and (b) (*i.e.,* the general triggers for making covered data available in response to consumer or third party requests), a data provider is not required to make covered data available in response to a request in four circumstances: if the data are withheld because an exception described in § 1033.221 applies (§ 1033.331(c)(1)); if the data provider has a basis to deny access pursuant to risk management concerns in accordance with § 1033.321(a) (§ 1033.331(c)(2)); if its interface is not available when the data provider receives a request, although the performance specifications at § 1033.311 would still apply (§ 1033.331(c)(3)); or if the request is for access by a third party but the consumer's authorization is not valid for one of three reasons: (1) the consumer has revoked the third party's authorization pursuant to proposed § 1033.331(e); (2) the data provider has received notice that the consumer has revoked the third party's authorization pursuant to proposed § 1033.421(h)(2); or (3) the consumer has not provided a new authorization to the third party after the maximum duration period, as described in proposed § 1033.421(b)(2) (§ 1033.331(c)(4)). The CFPB requested comment on whether additional clarification was needed to reduce the opportunity for data providers to deny requests without justification under the proposed provision.

One consumer advocate suggested limiting the scope of § 1033.331(c)(1) by narrowing the scope of the exceptions under § 1033.221(a) and (d), discussed above in part IV.B.4. The commenter asserted fewer exceptions to the requirement that data providers make information available make it more transparent to consumers how data providers use their data. Several data provider commenters recommended that final § 1033.331(c) clarify that failure to meet the conditions in § 1033.331(a) and (b) does not require a data provider to make covered data available in response to a request. Further, some bank commenters suggested that small data providers would be overburdened by what they interpreted as a requirement under proposed § 1033.331(c) to track all individual authorization and access requests.

For the reasons discussed herein, the CFPB is finalizing § 1033.331(c) with certain revisions. Final § 1033.331(c) lists five circumstances under which a data provider is not required to make covered data available in response to a request. The final rule adopts § 1033.331(c)(1), (3), and (4) as proposed. As discussed below, final § 1033.331(c)(2) now lists the circumstance in which data are not in the data provider's control or possession, consistent with the requirement in § 1033.201(a)(1). Also as discussed below, the final rule also includes new § 1033.331(c)(5), which describes the circumstance in which the data provider has not received information sufficient to satisfy the conditions in § 1033.331(a) or (b), with conforming changes to the first sentence of § 1033.331(c). The final rule also revises the heading to paragraph § 1033.331(c), from ''Response not required,'' to ''Covered data not required to be made available.'' The final language more accurately reflects the operation of the rule because certain responses are required even if covered data are not available, pursuant to policies and procedures required under

§ 1033.351(b). Section 1033.331(c) carries out the objective of CFPA section 1033(a) for data providers to make covered data available ''upon request'' by clarifying when a data provider is not required to make data available in response to a request.

Proposed § 1033.331(c)(2) would have stated that a data provider is not required to respond to a request when the data provider has a basis to deny access pursuant to risk management concerns in accordance with proposed § 1033.321(a). As discussed in the proposal, proposed § 1033.321 was intended to apply to a consumer's or third party's access to the interface as a whole, rather than access to specific data fields requested. In terms of the operation of § 1033.331, where a third party that previously had been granted access to an interface is subsequently denied access pursuant to § 1033.321, the data provider would be denying the request because it could not authenticate the third party's identity pursuant to § 1033.331(b)(1)(ii). Consistent with the purpose of the clarification in final § 1033.321(a) that data providers can deny a consumer or a third party access to ''all elements'' of the interface, the CFPB is revising final § 1033.331(c) to treat a denial by operation of § 1033.321 as a failure to authenticate under § 1033.331(a) or (b). For these reasons, the CFPB is not adopting § 1033.331(c)(2) as proposed. This change does not alter the operation of § 1033.321 that was intended by the proposal. In place of the text in proposed § 1033.331(c)(2) regarding § 1033.321, the final rule includes new § 1033.331(c)(2) to specify a circumstance that had not been identified in the proposal but that nonetheless would justify a denial of information requested: when the data are not in the data provider's control or possession, consistent with the general requirement in § 1033.201(a)(1). This change is intended to clarify the operation of the rule as a whole, rather than identify a new basis that a data provider could deny a request.

Additionally, the final rule includes new § 1033.331(c)(5) in response to comments requesting clarification that § 1033.331(a) and (b) do not require a data provider to make covered data available in response to a request. The CFPB agrees with commenters that this addition would facilitate compliance by clarifying the operation of the rule. The general conditions that trigger a data provider's obligation to make covered data available are set forth in § 1033.331(a) with respect to consumer requests and § 1033.331(b) with respect to third party requests. A data provider would not be required to make information available if those conditions were not met. The proposed rule did not list those explicitly as bases under § 1033.331(c), but generally explained that a data provider would not be required to make covered data available in response to a request as set forth in paragraphs (c)(1) through (4) ''[n]otwithstanding the general rules in § 1033.331(a) and (b).'' The CFPB believes that identifying these bases more directly will better facilitate compliance with the rule, including with respect to § 1033.351(b)(3), discussed below in part IV.C.7. Thus, final § 1033.331(c) no longer includes the introductory clause, ''[n]otwithstanding the general rules in paragraphs (a) and (b) of this section.''

Responses to comments regarding the exceptions in § 1033.221 are discussed in part IV.B.4. Regarding commenters' concern that small data providers would be overburdened by what they interpreted as a requirement under proposed § 1033.331(c) to track all authorizations and data access requests of their customers, § 1033.331(c) does not require recordkeeping. With respect to concerns regarding the burden of policies and procedures requirements in § 1033.351(b) and (d) regarding responses to denials and record retention, the CFPB believes these requirements will not overburden data provider, as discussed more fully below in part IV.C.7 below. Additionally, as discussed in part IV.A.4, the final rule does not cover small depository institution data providers.

Jointly Held Accounts (§ 1033.331(d))

CFPA section 1033(a) generally requires data providers to make available ''to a consumer, upon request, information in the control or possession of the covered person concerning the consumer financial product or service that the consumer obtained.'' The statute does not directly address how this obligation applies with respect to jointly held accounts. The CFPB proposed in § 1033.331(d) to require a data provider that receives a request for covered data from a consumer that jointly holds an account or from an authorized third party acting on behalf of such a consumer to make available covered data to that consumer or authorized third party, subject to the other requirements of § 1033.331. The CFPB noted that this provision would not affect data providers' existing obligations to provide information directly to consumers under other Federal consumer financial laws, such as EFTA, TISA, and TILA, and their implementing regulations. Those regulations generally permit data providers to satisfy the relevant information disclosure requirements by providing the information to any one of the consumers on the account.[78] The CFPB requested comment on whether other account holders should receive authorization disclosures or otherwise be notified, or should have an opportunity to object, when an account holder authorizes access to consumer information. The CFPB also requested comment on whether the rule should specifically address whether authorized users of credit cards should have similar access, even if they are not a joint holder of the credit card account.

A nondepository commenter requested that the CFPB clarify that authorization from a single account holder is sufficient and that there is no requirement to notify other account holders. The commenter stated that this approach is consistent with other activity by an account holder, such as writing a check or accessing the account through a consumer interface, and that providing other account holders with notice and an opportunity to object would create legal questions and consumer friction for data access. A trade association for nondepository entities recommended that other account holders not be required to approve when an account holder authorizes access but that they should be notified and receive authorization disclosures. Another trade association for nondepository entities stated that the rule should require all account holders to provide authorization for access to covered data. The commenter stated that if the rule does not require authorization from all account holders, the other account holders should be notified and have an opportunity to object and prevent the authorization. A consumer advocate commenter stated that other account holders should not have the right to object but that they should receive notice unless the consumer authorizing access actively indicates that such notice would be harmful because it poses a risk to their safety.

For the reasons discussed herein, the CFPB is adopting § 1033.331(d) as proposed with one minor change. As finalized, § 1033.331(d) provides that a data provider that receives a request for covered data from a consumer that jointly holds an account or from an authorized third party acting on behalf of such a consumer must make available covered data to that consumer or authorized third party, subject to the other provisions of § 1033.331. The final rule changes ''requirements'' to

[78] *See* 12 CFR 1005.4(c), 1030.3(d), 1026.5(d).

''provisions'' in the last phrase in § 1033.331(d) because the other parts of the rule that identify circumstances in which a data provider may not be obligated to make available covered data are more accurately described as ''provisions'' than ''requirements.'' Section 1033.331(d) carries out the objectives of CFPA section 1033(a) by clarifying whether a data provider must make available covered data in response to a request by one consumer with respect to covered data concerning a jointly held account.

Allowing a single account holder to request covered data or to authorize a third party to access covered data on behalf of the account holders is consistent with the broad authority that joint account owners have over the account. Given that broad authority, the CFPB concludes it would be unnecessarily burdensome at this time to require that other account holders approve in advance a request for covered data or authorize a third party to access covered data on behalf of a joint account holder. Likewise, the data provider or authorized third party is not required to provide notice or a copy of the authorization disclosure to other account holders. While a notice or authorization disclosure would inform the other account holders that account information is being accessed, the benefits of such a disclosure or notice are unclear and would depend on the circumstances, including the terms of the account and the relationship of the account holders. Each joint account holder already has significant authority over the account, including the ability to provide account information or expend funds. Moreover, when a joint account holder authorizes a third party to access covered data, the consumer protections in § 1033.421, including the limitations on collection, retention and use by authorized third parties, impose boundaries on the data that can be accessed by third parties and how that data can be used. Accordingly, the data provider is not required to provide a notice or copy of the disclosure to all joint account holders, though nothing in the rule prohibits data providers from doing so if they see fit.

Data Provider Revocation (§ 1033.331(e))

Proposed Rule

The CFPB proposed in § 1033.331(e) to permit a data provider to make available to the consumer a reasonable method by which the consumer could revoke any third party's authorization to access all of the consumer's covered data. Under the proposed rule, to be reasonable, the revocation method would need to be, at a minimum, unlikely to interfere with, prevent, or materially discourage consumers' access to or use of the data, including access to and use of the data by an authorized third party. Indicia that the data provider's revocation method was reasonable would include its conformance to a qualified industry standard. Finally, under the proposed rule, a data provider that received a revocation request from consumers through a revocation method would be required to notify the authorized third party of the request.

The proposal stated that this provision, along with the proposed third party revocation requirements in § 1033.421(h), were intended to ensure consumers would have multiple outlets through which they could revoke third party authorization to access covered data. But the CFPB preliminarily determined that requiring data providers to make a revocation method available might burden smaller entities. The proposed rule also noted that stakeholders had expressed concerns during SBREFA about anticompetitive behaviors from data providers. Accordingly, the proposed rule would not have permitted data providers to make available a method through which the consumer could partially revoke a third party's access to covered data, as this would be inconsistent with proposed § 1033.201(a), requiring data providers to make covered data available upon request based on the terms of the consumer's authorization. The proposed rule stated that partial revocations could result in consumers losing utility of data access for certain use cases. To further account for anticompetitive concerns, proposed § 1033.331(e) included a list of non-exhaustive requirements to ensure the optional revocation method would be reasonable, which were drawn from the definition of ''information blocking'' in section 3022(a) of the Public Health Service Act. The proposed rule stated that this language would promote consumers' ability to access and share their data by ensuring data providers do not impose obstacles that effectively evade their obligations to make available covered data under CFPA section 1033. Regarding the proposed notification requirement, the proposed rule explained that a third party whose authorization to access data is revoked by a consumer would need to understand that the consumer has chosen to end their authorization, and that the data provider did not terminate the access for another reason.

Comments Received

The concept of revocation, including permitting data providers to provide consumers with a revocation method, received general support from commenters, with many agreeing that consumers benefit significantly from multiple opportunities to revoke third party authorizations. Some commenters, including a consumer advocate, a trade association for banks, and a third party commenter, stated that the CFPB should require, rather than permit, revocation through a data provider. A trade association for data providers stated that requiring revocation through data providers would not be a burden for smaller entities because core processors can supply interfaces that include revocation methods.

Some banks and consumer advocates expressed concerns about qualified industry standards related to revocation, stating that qualified industry standards are inappropriate for revocation and could conflict with federally supervised entities' regulatory obligations. Additionally, some data provider, third party, and data aggregator commenters expressed concern about the proposed notification requirement, and suggested the following changes: require notification in as close to real-time as possible; require data providers to provide 24-hour notice to the third party before terminating access in case of pending transactions or fraud attempts; require consumers to notify all parties of their revocation and free data providers from possible liability that results from revocation; and ensure data providers do not have to furnish notification to any third party but the authorized third party. Third party commenters suggested that without more guardrails around the notification requirement, or around data providers' ability to solicit revocations from consumers, the rule would not adequately account for the potential for anticompetitive activities from data providers. In contrast, a trade association for banks requested that the CFPB make clear that a reasonable revocation method would allow the data provider to provide clear disclosures about data access to their customers.

Commenters also provided feedback on whether the permitted revocation method should allow partial revocations. Some data providers and data provider trade associations stated that the final rule should allow for partial revocations through the data provider for the consumer's added control. They also stated that the proposed rule overstated concerns about consumers not realizing the impacts of revocation on data access, commenting

that consumers making post-authorization decisions to revoke reflect intention to control and terminate third party authorizations. Other data provider and credit union trade association commenters stated that partial revocation is costly and burdensome and could result in unfair competition.

A trade association for third parties and other stakeholders raised concerns about consumer revocation through the data provider in relation to TANs. Several third parties stated that consumer revocation could result in the consumer, intentionally or unintentionally, causing the data provider to revoke the consumer's TAN after the consumer obtains the third party product or service but before the payment settles. Commenters suggested that the proposed rule's strict all-or-nothing revocation method for data providers could contribute to the unintended consequence of third party payment failure when a consumer had authorized a third party to access a TAN and other covered data.

Finally, commenters suggested that the CFPB: clarify that data providers must recognize revocation requests in joint accounts if one account holder makes the request; clarify the ''all or nothing'' requirement and how revocation works for joint account holders; clarify what constitutes a ''reasonable method'' and provide examples of when revocation mechanisms are likely to interfere with, prevent, or materially discourage consumers and how deceptive design might manifest in revocation mechanisms.

Final Rule

For the reasons discussed herein, the CFPB is finalizing § 1033.331(e) with certain changes and one technical correction described below, to provide that a data provider does not violate the general obligation in § 1033.201(a)(1) by making available to the consumer a reasonable method to revoke any third party's authorization to access all of the consumer's data, provided that such method does not violate § 1033.201(a)(2). Indicia that the data provider's revocation method is reasonable include its conformance to a consensus standard. A data provider that receives a revocation request from a consumer through a revocation method it makes available must revoke the authorized third party's access and notify the authorized third party of the request in a timely manner. Section 1033.331(e) carries out the objectives of CFPA section 1033(a) by clarifying that a data provider is permitted to establish certain procedures allowing a consumer to communicate efficiently and directly with the data provider when a third party is no longer authorized to act on the consumer's behalf to access covered data.

While consumers benefit from multiple methods of revoking third party authorization to access covered data, the CFPB has determined that requiring data providers to make available a revocation method would not be necessary and could be burdensome for some data providers. The CFPB expects that consumers seeking to revoke access to a requested product or service are most likely to do so from the third party with whom they have the ongoing customer relationship. As discussed above, while one commenter stated that requiring revocation through data providers would not be burdensome because entities could request core processors to include a method as part of their consumer interfaces, other commenters raised concerns about the burdens associated with maintaining an optional revocation method that adheres to the rule's requirements. Though providing a revocation method itself could be relatively straightforward, the CFPB acknowledges commenters' concerns that ongoing costs associated with maintaining it could be burdensome. As such, the final rule permits, but does not require, data providers to provide a revocation method to consumers.

The proposed rule stated that, to be reasonable, the revocation method would, at a minimum, need to be unlikely to interfere with, prevent, or materially discourage consumers' access to or use of the data, including access to and use of the data by an authorized third party. This language was intended to ensure data providers offering an optional revocation method did not impose obstacles that evade their obligations to make available covered data under CFPA section 1033. The final rule instead states that data providers do not violate their general obligation in the rule by making available to the consumer a reasonable method to revoke any third party's authorization to access all of the consumer's covered data, provided that such method does not violate § 1033.201(a)(2). This change is meant to ensure that any revocation method a data provider offers to consumers adheres to the prohibition against evasion, which applies to all other data provider activities, and is meant to achieve the same effect behind the proposed rule's language: data providers must not violate their general obligation to make available covered data through the offering of the optional revocation method. Potential examples of actions that might violate the prohibition against evasion in providing an optional method for consumers to revoke third party authorizations are intentionally soliciting consumers to revoke authorizations based on misleading statements about the third parties' collection, use, or retention of covered data, or providing granular revocations or disabling a TAN without the consumer's consent, discussed further below.

As discussed above, some commenters were concerned that consensus standards could be inappropriate for revocation and could conflict with federally supervised entities' regulatory obligations. The CFPB notes that consensus standards are indicia of compliance, not mandatory for compliance, and the revocation method itself is optional. Without suggesting that any such conflict exists, the CFPB is accordingly confident that data providers can avoid any hypothesized conflict with other obligations.

The CFPB remains concerned that data providers are likely to have commercial interests contrary to those of authorized third parties offering competing products or services. As such, the final rule requires data providers that provide consumers a revocation method to make available a method through which the consumer can revoke access to all of the consumer's covered data, adhere to the final rule's anti-evasion provision in § 1033.201(a)(2) and notify the authorized third party of the request in a timely manner. This language will ensure that any revocation method provided to consumers is provided in accordance with the anti-evasion provision in § 1033.201(a)(2).

While some commenters argued that data providers should be allowed to provide consumers the option to request partial revocations through the data provider, the final rule only allows for all-or-nothing revocations. Commenters did not describe in detail data providers' view into the functionality of products or services, and therefore it remains unclear how a data provider could effectively determine how to provide partial revocations that do not result in harms to consumers or authorized third parties as they continue to access covered data for products and services for which the authorization is intended to remain in place. As discussed above regarding data providers responding to requests under § 1033.331(b)(1), some data provider commenters expressed concern that data providers were not positioned

to have actual knowledge of third parties' receipt of authorization from consumers. The CFPB has determined that, just as data providers are not in the best position to manage third party authorizations, data providers are likewise not in the best position to allow consumers to seek partial revocations, a consequence of which would be termination of third parties' access to potentially reasonably necessary data elements. Further, data providers' incentives to provide partial revocations are unclear, and may not be aligned with consumers' incentives to control the authorizations they provide to third parties in order to receive products or services. As discussed above regarding data providers responding to requests under § 1033.331(b)(1), data providers may have strong incentives to limit the scope of data available to third parties, especially those providing a competing product or service. These potentially competing incentives may result in competition harms or consumer harms if data providers are permitted to provide consumers with the ability to only partially revoke third party authorizations to access covered data.

Additionally, as described above, some commenters suggested that the proposal's all-or-nothing revocation method for data providers could contribute to the unintended consequence of third party payment failure when a consumer had authorized a third party to access a TAN and other covered data and the consumer subsequently requests revocation of that information. Commenters expressed concern that a consumer's revocation of TAN information would also result in a data provider disabling a TAN's functionality. However, there are multiple reasons a consumer might revoke a third party's access to TAN information. A consumer may revoke access to the TAN information because they do in fact want to stop a third party's ability to initiate payments—therefore, the revocation would be intended for both the information and the functionality. Sometimes the consumer may just intend to revoke the third party's ability to access information, but intend for the TAN to remain functional. To avoid violating the anti-evasion provision in § 1033.201(a)(2), data providers must be aware that disabling a TAN without the consumer's consent might render unusable the covered data that the data provider makes available or prevent, interfere with, or materially discourage a consumer in accessing covered data. Whether revocation of TAN information or TAN functionality following a consumer's revocation request is a material interference with the third party's access to covered data will depend on the facts. However, general awareness of the possibility of unintended consequences of revocation, without more, will not be enough to violate this standard.

Further, the CFPB agrees with commenters that § 1033.331(e) should specify that revocation must occur in a timely manner and thus has included language to that effect in the final rule. Failure to timely revoke data access is likely to interfere with a consumer's express desire to revoke a third party's authority to access covered data. Similarly, failure to notify third parties of consumers' revocation requests in a timely manner could result in the third party continuing to seek access to covered data and receiving denials to those requests. As such, to ensure revocation is timely following a revocation request, and that notification is provided to the authorized third party in a timely manner, the final rule requires that: (1) the third party's access to the data must be revoked in a timely manner; and (2) a data provider that receives a revocation request from a consumer through a revocation method it makes available must notify the authorized third party of the request in a timely manner. While commenters suggested other specific changes to the notification requirements, described above, the CFPB has determined that additional changes are unnecessary.

Finally, a data provider commenter and trade associations for banks asked that the final rule provide information about how revocation works for joint account holders. As discussed related to § 1033.331(d), a consumer that jointly holds an account may request access to covered data or may authorize third party access to covered data. Likewise, the revocation method described in § 1033.331(e) pertains to a consumer that jointly holds an account. Any consumer that jointly holds an account may revoke third party authorization to access covered data related to that account, if provided for under the terms of the account. The CFPB has made a technical correction to the last sentence in proposed § 1033.331(e) to refer to revocation requests received from ''a consumer,'' instead of the plural ''consumers,'' which could have otherwise implied both joint account holders always need to provide the revocation request.

6. Public Disclosure Requirements (§ 1033.341)

Public Disclosure and Human- and Machine-Readability Requirements (§ 1033.341(a))

Proposed § 1033.341(a) would have required data providers to make the information described in proposed § 1033.341(b) through (d)—which address identifying information about the data provider, developer interface documentation, and performance specification—readily identifiable to members of the public. Proposed § 1033.341(a)(1) defined this to mean that the information must be at least as available as it would be on a public website. Under proposed § 1033.341(a)(2), the information would have been required to be available in both human- and machine-readable formats. The CFPB preliminarily determined that making the data available in a machine-readable format could enable third parties and other stakeholders to use automated processes to ingest the relevant information into their systems for processing and review, which will make the process of obtaining this information more efficient. The CFPB requested comment on whether it should indicate that conformance to a specific standard or a qualified industry standard would be relevant indicia for a data provider's compliance with the machine-readability requirement in proposed § 1033.341(a)(2). Additionally, the CFPB requested comment on whether it should issue rules or guidance that would make it easier for third parties and other members of the public to identify a particular data provider's information.

Commenters generally supported the requirement to make information about the data provider readily identifiable. Some commenters recommended the rule go further regarding public disclosure requirements. One bank commenter recommended that the rule allow for multiple data providers to publish their required disclosures in one location. The commenter suggested that this may be more efficient for data providers and might reduce search costs for members of the public seeking to access disclosures from multiple data providers. Further, one standard-setting body commenter suggested that an already-existing registry where data providers self-report data to help third parties connect to their data might also function as a repository for disclosures of developer interface documentation.

Regarding the proposed requirement to make information available in both human-readable and machine-readable

formats, a research institute and a trade association suggested that data provider disclosures should meet the proposed machine-readability requirement if a data provider makes the information available in a format that consumers can print or retain. In response to the request for comment, one industry commenter recommended that the CFPB should either provide a standard for machine-readability or make conformance with a consensus standard indicia of compliance.

For the reasons discussed herein, the CFPB is finalizing § 1033.341(a) as proposed. The CFPB agrees with the commenters that a central repository could benefit the public by reducing search costs. A data provider could comply with § 1033.341(a) by publishing on its website a link, readily identifiable to members of the public, that redirects consumers to the disclosures required in § 1033.341(b) through (d), published on a publicly available central repository, provided the data provider does not otherwise impede the public's ability to readily locate the disclosures.

In response to comments, information that is only available in a human-readable format that a consumer can print or retain, but that is not also available in a machine-readable format, would not comply with § 1033.341(a). As explained in the proposal, making the data available in a machine-readable format enables third parties and other stakeholders to use automated processes to ingest the relevant information into their systems for processing and review, which will make the process of obtaining this information more efficient.

Final § 1033.341(a), as well as final § 1033.341(b) through (c), will carry out the objectives of CFPA section 1033 by ensuring that third parties can efficiently access information necessary to make requests for covered data and use a developer interface. By enabling third parties to obtain information about how to use the developer interface, § 1033.341(a) through (c) also promotes the use and development of standardized formats available through the developer interface.

Disclosure of Identity Information and Contact Information (§ 1033.341(b))

The CFPB proposed in § 1033.341(b) to require data providers to disclose certain identifying information in the manner described in proposed § 1033.341(a). Specifically, proposed § 1033.341(b)(1) through (3) would require data providers to publicly disclose certain identifying information: their legal name and, if applicable, any assumed name they are using when doing business with the consumer; a link to their website; and an LEI issued by a utility endorsed by the LEI Regulatory Oversight Committee or a utility endorsed or otherwise governed by the Global LEI Foundation (or any successor thereof) after the Global LEI Foundation assumes operational governance of the global LEI system. Proposed § 1033.341(b)(4) would have required data providers to disclose contact information that enables a consumer or third party to receive answers to questions about accessing covered data under part 1033.

Commenters provided little feedback about proposed § 1033.341(b). One LEI nondepository entity commenter supported the requirement for data providers to disclose their LEI, noting that consistent use of these identifiers will enable a more efficient data sharing process. Two credit union trade association commenters suggested that smaller data providers that use a separate vendor to maintain their developer interface should be able to provide that vendor's contact information for inquiries related to the interface.

For the reasons discussed herein, the CFPB is finalizing § 1033.341(b) as proposed. A data provider is permitted to provide the contact information for the vendor that maintains the developer interface for inquiries related to the developer interface. The rule does not require that a data provider itself respond to inquiries related to its developer interface. The rule does not require that a data provider itself respond to such inquiries. Rather, it requires that data providers provide contact information that enables a consumer or third party to receive answers to questions about accessing covered data, which reasonably allows a data provider to direct such inquiries to a vendor that develops and maintains the interface.

Disclosure of Developer Interface Documentation and Access Location (§ 1033.341(c))

The CFPB proposed to require in § 1033.341(c) that a data provider disclose for its developer interface, in the manner described in proposed § 1033.341(a), documentation, including metadata describing all covered data and their corresponding data fields, and other documentation sufficient for a third party to access and use the interface. Under proposed § 1033.341(c), a data provider would need to maintain and update documentation as the developer interface is updated. The CFPB also proposed that the documentation include information on how third parties can get technical support and report issues with the interface. Finally, the CFPB generally proposed to require that developer interface documentation must be easy to understand and use. The CFPB preliminarily determined that it is common practice for data providers that have interfaces to disclose such metadata and documentation. Additionally, the CFPB preliminarily determined that a requirement to publicly disclose documentation and metadata would not materially increase the cost of compliance and would substantially enhance the usability of the interface.

One commenter that provides services to data providers highlighted generally the types of challenges industry participants might have in accessing data from a data provider. The commenter did not identify any particular challenges stemming from the proposal but emphasized the importance of industry alignment on the type of information needed to access and use APIs effectively. The commenter focused on the challenges of accessing and using a production API when its specifications are not publicly available and regularly maintained.[79] Another industry commenter supported the proposed requirement that data providers disclose information sufficient for a third party to access and use the interface.

However, several data provider commenters and a research institute commenter were critical of the proposed requirement that data providers disclose developer interface documentation and metadata sufficient for a third party to access and use the interface. These commenters stated that it is not common practice for data providers to make developer interface metadata and documentation available to the public and would subject data providers to security risks. These commenters recommended that the information required to be disclosed publicly should not be sufficient, on its own, for a third party to access and use the interface.

A bank commenter, research institute commenter, and bank trade association commenter opposed the requirement in proposed § 1033.341(c)(1) to update documentation as the developer interface is updated. These commenters

[79] *See, e.g.,* Dr. Paul M. Cray, *Open API Specifications in the Real World,* at 5–15 (APIContext, White Paper, Aug. 2024), *https://www.regulations.gov/comment/CFPB-2023-0052-11139* (noting, generally, that public disclosure of performance specifications poses some challenges for data providers, but overall is the correct approach for industry).

explained that this requirement would be unduly burdensome to data providers. These commenters noted that a developer interface typically requires frequent, minor changes that do not significantly affect access or use, and the proposed requirement would be costly to implement. These commenters suggested instead that data providers be required to reasonably cooperate with authorized third parties to make available documentation in a timely manner that enables the connectivity requirements provided in part 1033.

For the reasons discussed herein, the CFPB is finalizing § 1033.341(c) with certain revisions to address commenters' concerns about the information security risks and burden. Specifically, final § 1033.341(c) requires a data provider to disclose in the manner required by § 1033.341(a) documentation about its developer interface, including metadata describing all covered data and their corresponding data fields, and other documentation sufficient for a third party to access and use the interface. Final § 1033.341(c) provides that a data provider is not required to make publicly available information that would impede the data provider's ability to deny a third party access to its developer interface, consistent with § 1033.321. Indicia that documentation is sufficient for a third party to access and use a developer interface include conformance to a consensus standard.

Final § 1033.341(c) also provides that the documentation must be maintained and updated as reasonably necessary for third parties to access and use the interface in accordance with the terms to which data providers are subject under part 1033. Further, the documentation must include how third parties can get technical support and report issues with the interface. In addition, the documentation must be easy to understand and use, similar to data providers' documentation for other commercially available products. Publishing information about how third parties can access and use the developer interface, including metadata describing all covered data and their corresponding data fields, will promote the development and use of standardized formats of information, consistent with CFPA section 1033(d).

In proposing § 1033.341(c), the CFPB did not intend for data providers to make publicly available access keys to the developer interface or other information that would undermine the purpose of § 1033.321. To address commenters' concerns that the proposal might interfere with their ability to engage in appropriate risk management, the final rule clarifies that a data provider is not required to make publicly available information that would impede its ability to reasonably deny a third party access to its developer interface, consistent with § 1033.321. The final rule's inclusion of a consensus standard as indicia for what documentation is sufficient to access and use a developer interface is intended to promote standardization with respect to the type of documentation that facilitates third parties' access to and use of covered data, while accounting for information security risks to data providers.

The proposal would have required documentation to be updated ''as the developer interface is updated.'' To address concerns regarding the potential burden of documenting frequent minor updates to developer interfaces, final § 1033.341(c)(1) provides that such documentation must be maintained and updated ''as reasonably necessary for third parties to access and use the interface in accordance with the terms to which data providers are subject'' under part 1033. This change from the proposal provides flexibility for data providers to make minor updates to their interfaces without requiring an update to the corresponding documentation, as long as third parties can still access and use the interface as required by the final rule.

The CFPB declines to adopt commenters' recommendation to require data providers to cooperate with third parties to make documentation available in a timely manner. The CFPB is concerned this could imply that third parties engage in some affirmative conduct to obtain updated documentation, which could undermine the rule's affirmative requirement to make the information publicly available, which could create inefficiencies for many third parties. Further, the CFPB does not believe this change is necessary in light of revisions to § 1033.341(c)(1).

Performance Disclosure (§ 1033.341(d))

Proposed § 1033.341(d) would have required that a data provider disclose, in the manner described in proposed § 1033.341(a), information about the performance of its developer interface for each month. Specifically, the CFPB proposed that on or before the 10th calendar day of each month, the data provider would disclose the quantitative minimum performance specification in proposed § 1033.311(c)(1)(i) achieved in the previous calendar month. The CFPB proposed to require that the data provider's disclosure include at least a rolling 13 months of the required monthly figure, except that the disclosure need not include the monthly figure for months prior to the compliance date applicable to the data provider. The CFPB proposed to require that the data provider disclose the metric as a percentage rounded to four decimal places, such as ''99.9999 percent.''

The CFPB requested comment on whether the final rule should require data providers to disclose additional performance metrics, including those required to be disclosed in other jurisdictions' open banking systems, such as the volume of requests, the number of accounts and/or consumers with active authorizations, uptime, planned and unplanned downtime, and response time.

One data aggregator commenter recommended that a final rule include additional performance metrics. Specifically, this commenter suggested the disclosures include information about when access caps were put in place and how long they lasted, uptime, latency, days of planned and unplanned downtime, and days of notice for unplanned downtime. This commenter stated that disclosure of these metrics would help the CFPB determine whether consumers benefit from their data access rights and identify areas where further guidance or action is advisable. Finally, this commenter stated that these additional metrics would help third parties determine if they were being treated in a discriminatory manner compared to other third parties.

A bank commenter, a research institute commenter, and a bank trade association commenter stated that ten calendar days after the end of a month is not enough time to publish performance data for that month on the grounds that more time is necessary for the data provider to ensure the accuracy of the data being transmitted. These commenters stated that it can take more than a week for data providers' internal databases to populate the required information for the performance metrics. These commenters suggested that the period for data providers to disclose performance statistics should be 45 days or, at a minimum, ten business days after the close of the month. A data provider trade association also recommended that data providers be able to make these disclosures on a quarterly basis. By contrast, a data aggregator commenter suggested that performance data should be available in real time and on demand on the grounds that real-time availability would help data providers discover and address security

vulnerabilities in their developer interfaces.

A bank trade association commenter suggested that the CFPB use more precise language in § 1033.341(d) as to which disclosures are intended to be visible to the public, as opposed to disclosures that should be available only for third parties seeking access to the developer interface. A bank research institute commenter and a bank trade association commenter stated that the final rule should allow for multiple data providers to publish their disclosures of developer interface performance data in one location. These commenters suggested that a single location may be more cost-effective for data providers and might reduce search costs for members of the public seeking to access disclosures from multiple data providers. Additionally, these commenters recommended that the CFPB clarify that data providers would meet the requirements to make performance metrics readily identifiable to the public if multiple data providers published their metrics in one location. A bank trade association commenter stated that the proposed requirement to disclose performance metrics would not result in any consumer benefit. This commenter further stated that such a requirement would increase costs for data providers but that consumers cannot benefit from knowledge of metrics about a process in which consumers do not directly participate.

For the reasons discussed herein, the CFPB is finalizing the requirement in § 1033.341(d), with minor modifications. Publicly available performance data will inform consumers and authorized third parties about whether a data provider is maintaining commercially reasonable performance, which will promote data provider accountability. Contrary to some commenters' belief, performance metrics will also help consumers who struggle to connect a third party mobile banking application to their account with a data provider to understand the source of the issue. As an additional benefit, consistent with the CFPA's objective under section 1021 that markets for consumer financial products and services operate transparently and efficiently to facilitate access and innovation, availability of performance metrics should also help consumers select a data provider by allowing them to shop and select a data provider based on their developer interface performance.

Final § 1033.341(d) requires a data provider to disclose, on or before the final day of each calendar month, in the manner required by § 1033.341(a), the quantitative minimum performance specification for the response rate described in § 1033.311(c)(1)(i) through (iv) that the data provider's developer interface achieved in the previous calendar month. The data provider's disclosure must include at least a rolling 13 months of the required monthly figure, except that the disclosure need not include the monthly figure for months prior to the compliance date applicable to the data provider. The data provider must disclose the metric as a percentage rounded to four decimal places, such as ''99.9999 percent.'' The final rule also modifies the heading of § 1033.341(d) to ''Performance disclosure'' to more accurately reflect the requirement.

Final § 1033.341(d) does not require disclosure of developer interface performance metrics other than proper response, as defined in final § 1033.311(c)(1)(i) through (iv). Regarding a commenter's request that the CFPB require disclosure of additional performance metrics, the CFPB notes that it did not propose specific definitions for latency, uptime, or downtime, nor did the commenter provide definitions. The CFPB believes such metrics would benefit from further analysis to ensure disclosures are made consistently to enable meaningful comparisons and analysis of commercially reasonable performance. The CFPB likewise declines to add disclosures about data access caps to the final § 1033.341(d). Data access caps must be reasonable under final § 1033.311(d), but this requirement is not part of the quantitative minimum performance specification of § 1033.311(c). Access caps may vary based on a number of factors, including the threshold metric, the type of request, and the period of time they are in place The proposal did not define how an access cap (or caps) could be disclosed and the CFPB is concerned such a disclosure would be complex and disclosed inconsistently, and thus would not provide meaningful information to the public.

To address commenters' concerns regarding the timing for disclosures, final § 1033.341(d) provides that data providers must make their disclosures by the final day of each calendar month, rather than by the tenth calendar day as proposed. Requiring disclosure by the end of the next month should give data providers a reasonable amount of time to run and audit the required reports to calculate the quantitative minimum performance specification, as this is longer than the ten business days some commenters suggested as the minimum time needed to perform these analyses. A full month to disclose the required performance metrics should promote quality control of the data and will ensure that the information will be made publicly available on a predictable basis. Requiring data providers make these disclosures less frequently, such as on a quarterly basis, would reduce the incentive for data providers to remedy performance deficiencies in a timely manner.

Requiring real-time reporting of the quantitative minimum performance specification as suggested by one commenter, however, is unlikely to assist in the identification of security vulnerabilities. This metric merely tracks the rate at which the developer interface gives proper responses to requests and would likely provide little insight into whether an update to the interface had introduced a security vulnerability. The CFPB is thus not adopting a real-time reporting requirement.

Final § 1033.341(d) carries out the objectives of CFPA section1033(a).[80] Publicly available performance data are relevant for consumers and authorized third parties seeking reliable access to consumer-authorized data. As an additional benefit, consistent with the CFPA's objective under section 1021 that markets for consumer financial products and services operate transparently and efficiently to facilitate access and innovation, availability of performance metrics should also help consumers select a data provider by allowing them to shop and select a data provider based on their developer interface performance.

7. Policies and Procedures (§ 1033.351)

Reasonable Written Policies and Procedures (§ 1033.351(a))

The CFPB proposed in § 1033.351(a) to set forth a general obligation that data providers establish and maintain written policies and procedures that are reasonably designed to achieve the objectives set forth in proposed subparts B and C of the rule, including proposed § 1033.351(b) through (d). Under the proposal, a data provider would need to periodically review the policies and procedures required by proposed § 1033.351 and update them as appropriate to ensure their continued effectiveness. The CFPB explained that, to minimize impacts on data providers, including avoiding conflicts with any overlapping compliance obligations, proposed § 1033.351(a) required data providers to tailor these policies and

[80] The proposal preliminarily relied on section 1032 of the CFPA, but it is not necessary to rely on that authority in this final rule.

procedures to the size, nature, and complexity of their activities.

Commenters including banks, third parties, and consumer advocacy groups, generally supported the proposed requirements for data provider policies and procedures. One data provider industry commenter specifically supported the statement that data provider policies and procedures be appropriate to the size, nature, and complexity of the data provider's activities. Some commenters recommended revisions to specific policies and procedures provisions or challenged the CFPB's authority to issue a particular policies and procedures requirement. These comments are discussed in more detail in this section below.

For the reasons discussed herein, the CFPB is finalizing § 1033.351(a) generally as proposed, with one clarification. Under the final rule, as proposed, a data provider must establish and maintain written policies and procedures that are reasonably designed to achieve the objectives set forth in subparts B and C of the final rule. Policies and procedures must be appropriate to the size, nature, and complexity of the data provider's activities. Further, as proposed, a data provider must periodically review the policies and procedures required by this section and update them as appropriate to ensure their continued effectiveness.

In light of comments, the final rule includes new language stating that a data provider has flexibility to design policies and procedures to avoid acting inconsistently with its other legal obligations or in a way that could reasonably hinder enforcement against unlawful or potentially unlawful conduct. This revision is discussed in more detail in the discussion of § 1033.351(b)(2), below.

Policies and Procedures for Making Covered Data Available and Responding to Requests (§ 1033.351(b))

Making Covered Data Available (§ 1033.351(b)(1))

Proposed § 1033.351(b) would have required data providers to establish policies and procedures reasonably designed to make covered data available. Proposed § 1033.351(b)(1) would have required that the policies and procedures required by proposed § 1033.351(a) are reasonably designed to ensure that data providers create a record of the data fields that are covered data in the data provider's control or possession, what covered data are not made available through a consumer or developer interface pursuant to an exception in § 1033.221, and the reasons the exception applies. The CFPB explained that documentation of the fields that are made available in accordance with the covered data definition could help the CFPB identify compliance gaps in what the data provider makes available, streamline negotiations between data providers and third parties by establishing the available data fields, and encourage the market to adopt more consistent data sharing practices.

Under the proposal, a data provider would have been permitted to comply with the proposed § 1033.351(b)(1) requirement by incorporating the data fields defined by a qualified industry standard, provided doing so is appropriate to the size, nature, and complexity of the data provider's activities. However, exclusive reliance on data fields defined by such a standard would not be appropriate if such data fields failed to identify all the covered data in the data provider's control or possession. The CFPB preliminarily concluded that allowing a data provider to cite data fields defined by a qualified industry standard, to the extent that standard identifies covered data in the data provider's control or possession, could ease the compliance burden on data providers and promote market standardization according to CFPA section 1033(d). The CFPB proposed these requirements to facilitate compliance with and enforcement of the general obligation in proposed § 1033.201.

The CFPB received some support for the provisions in proposed § 1033.351(b)(1). One Member of Congress supported this requirement, stating that it would help ensure that consumer data are not withheld for anticompetitive reasons. Some data provider commenters expressed concern that the provision's reference to qualified industry standards would be of little utility to data providers, on the grounds that data providers would not be able to rely on the qualified industry standard to demonstrate compliance because such standard likely would not define all the data in the control or possession of the data provider. One data provider trade association stated that neither the statutory text nor the congressional intent of CFPA section 1033 calls for data providers to create and maintain the enumerated records. This commenter suggested that data providers already have supervisory obligations and that the CFPB does not have the authority for streamlining the negotiations of private commercial actors.

For the reasons discussed herein, the CFPB is finalizing § 1033.351(b)(1) with modifications to further clarify what data fields are required to be made available. Final § 1033.351(b)(1) states that indicia that a data provider's record of applicable data fields complies with the requirements of § 1033.351(b)(1) include listing data fields that conform to those published by a consensus standard. The final rule does not include the proposed regulatory text that would have stipulated that exclusive reliance on data fields defined by a qualified industry standard would not be appropriate if such data fields failed to identify all the covered data in the data provider's control or possession. This change conforms § 1033.351(b)(1) to other parts of the rule that utilize consensus standards as indicia of compliance. Additionally, the indicia approach addresses commenters' concerns that such standards may not reflect all of the data in control or possession of a data provider, while signaling to data providers that they may have additional data fields beyond the consensus standard that must be disclosed under the rule. For example, some of the terms and condition examples in § 1033.211(d) might be data fields that are not included in a consensus standard but would still be required under § 1033.351(b)(1).[81]

The CFPB is finalizing the other provisions in § 1033.351(b)(1) largely as proposed. As such, under § 1033.351(b)(1) a data provider is required to maintain policies and procedures reasonably designed to ensure that the data provider creates a record of the data fields of covered data in the data provider's control or possession. Section 1033.351(b)(1) also requires a data provider to record what covered data are not made available through a consumer or developer interface pursuant to an exception in § 1033.221, and the reason(s) the exception applies.

The CFPB is finalizing § 1033.351(b)(1) pursuant to its authority provided by CFPA sections 1033(a) and 1022(b)(1). The policies and procedures in § 1033.351(b) will carry out the objectives of CFPA section 1033(a) to make available information upon request by ensuring data providers are accountable for their decisions to make available covered data in response to requests, and in granting third parties access to the developer interface.

[81] As discussed in part IV.A.6 (definition of consensus standard), as a general matter, the indicia of compliance framework maintains the final rule as the applicable legal standard while giving due weight to a fair, open, and inclusive consensus standard as evidence of compliance with the rule.

Importantly, the policies and procedures required in § 1033.351(b)(1) are intended to ensure ongoing, consistent availability of the consumer's covered data fields. While data providers may be subject to supervisory requests for information related to their current data fields, as one commenter suggested, such a supervisory inquiry would likely occur after a consumer is harmed. Conversely, with proposed § 1033.351(b)(1), the consumer or the consumer's authorized third party have the opportunity to understand why covered data was not made available and potentially raise an issue with the data provider, or alternatively to adjust their own future requests for covered data to avoid repeated denials.

Efficiencies in onboarding third parties onto data providers' developer interfaces will enable the CFPB to administer and carry out the objectives of CFPA section 1033(a) to make available information upon request as well as the standardization objectives of CFPA section 1033(d). Creating a record of what data fields are covered data in the control or possession of the data provider will further the objectives of CFPA section 1033(a) and § 1033.211, by defining what constitutes ''covered data'' with respect to the data provider under the rule. Further, the record of data fields required under § 1033.351(b)(1) will ensure that data providers carry out their obligation to make ''covered data'' available, and that data providers do so in a consistent, objective manner, that can be reviewed and compared with data providers' actual practices by regulators in the course of supervisory and enforcement activities. This will ensure data providers are consistently making data available to all third parties and will reduce the costs of the onboarding process, which has been a problem in the past. This standardization is consistent with the objectives of CFPA section 1033(d).

Denials of Requests for Developer Interface Access and Requests for Information (§ 1033.351(b)(2) and (3))

Proposed § 1033.351(b)(2) would have required data providers to have policies and procedures that are reasonably designed to ensure that when a data provider denies a third party access to a developer interface pursuant to § 1033.321, the data provider: (1) creates a record explaining the basis for denial; and (2) communicates to the third party, electronically or in writing, the reason(s) for the denial, and that the communication occurs as quickly as is practicable. Additionally, under proposed § 1033.351(b)(3) a data provider would have been required to reasonably design its policies and procedures to ensure that when it denies a request for information pursuant to § 1033.331, the data provider: (1) creates a record explaining the basis for denial; and (2) communicates to the consumer or the third party, electronically or in writing, the type(s) of information denied and the reason(s) for the denial, and that the communication occurs as quickly as is practicable. The CFPB requested comment on whether the final rule should provide examples or further clarify how data providers could reasonably design policies and procedures to account for data security or risk management concerns.

A third party commenter and a consumer advocacy group commenter recommended that the data provider be required to explain what actions or steps a consumer or third party must take to address a denial under proposed § 1033.351(b)(2) and (3). A bank trade association suggested that some third parties may be on a sanctions list [82] and asked the CFPB to clarify that the data provider does not need to engage with these third parties or inform them of the reason for the denial. Additionally, one bank commenter suggested that under proposed § 1033.351(b)(3) it would be difficult for a data provider to communicate to a consumer why a § 1033.331 denial occurred, on the grounds that this denial would typically happen before the data provider authenticated the consumer's identity. Finally, a bank trade association commenter suggested that the CFPB clarify that records explaining why a data provider denied a particular request do not need to include the data provider's specific risk management conclusions, on the grounds that divulging specific risk management information could present additional security risks to the data provider.

For the reasons discussed herein, the CFPB is finalizing § 1033.351(b)(2) and (3) with certain revisions discussed below. Section 1033.351(b)(2) and (3) will carry out the objectives of CFPA section 1033 by enabling consumers and prospective authorized third parties to understand and satisfy data provider conditions necessary to make requests. Additionally, these provisions will prevent evasion by ensuring data providers do not avoid their obligations under CFPA section 1033 by denying developer interface access or information requests for unstated impermissible reasons.

Under final § 1033.351(b)(2) a data provider is required to reasonably design its policies and procedures to ensure that when the data provider denies a third party access to a developer interface pursuant to § 1033.321, the data provider: (1) creates a record substantiating the basis for denial; and (2) communicates in a timely manner to the third party, electronically or in writing, the reason(s) for the denial. Likewise, under final § 1033.351(b)(3), a data provider is required to reasonably design its policies and procedures to ensure that when the data provider denies a request for information pursuant to § 1033.331, to the extent the communication of the denial is not required to be standardized by § 1033.311(b), the data provider: (1) creates a record substantiating the basis for denial; and (2) communicates in a timely manner to the consumer or third party, electronically or in writing, the type(s) of information denied, if applicable, and the reason(s) for the denial.

The final rule revises the ''as quickly as practicable'' language from proposed § 1033.351(b)(2) and (3) to ''in a timely manner'' to conform to similar language about timeliness used in the regulation in the example to § 1033.331(b) and in § 1033.331(e), and is not intended as a substantive change. For clarity, the final rule clarifies that the requirement for policies and procedures to be designed to communicate the reasons for denials applies to when a denial occurs for a reason described in § 1033.331(c), as discussed in part IV.C.5 above, § 1033.331(c) cross-references the provisions of the rule that allow a data provider to deny a request for information. Additionally, the final rule requires policies and procedures to provide information when information is denied pursuant to a consumer or third party request ''if applicable.'' A request for information will not always be denied for reasons related to specific information requested. For example, a denial under § 1033.331 could occur due to the data provider not having sufficient information to authenticate or confirm authorization under § 1033.331(a) and (b), or because the interface is unavailable, and thus there would be no specific information to be specified in those cases.

Section 1033.351(b)(2) and (3) will provide data providers rule with appropriate flexibility to allow them to comply with other regulatory obligations, while still generally enabling consumers and third parties to understand reasons for denials in a

[82] For example, a list released by the OFAC, such as the Specially Designated Nationals and Blocked Persons list.

timely manner and reduce the potential for pretextual denials. Without these policies and procedures requirements, compliance obligations with §§ 1033.321 and 1033.331 would be difficult to administer, ultimately harming the consumer as a result.

Revisions in § 1033.351(b)(3) are intended to distinguish denials from the standardized format requirement in § 1033.311(b). The text in § 1033.351(b)(3) retains the ability of the data provider to have flexible policies and procedures governing denials of information requests. These denials differ, somewhat, from § 1033.311(b) error codes, because the conditions of § 1033.331(b) are not intended to impose specific expectations as to how the data provider considers these conditions, whereas § 1033.311(b) error codes have more prescriptive requirements, as discussed in this section below.

For purposes of § 1033.351(b)(3), a denial of an information request occurs when the data provider does not make data available pursuant to § 1033.331(c). Such a denial might be communicated pursuant to standardized communication protocols under § 1033.311(b), such as through an error code. These communication protocols might also include communications of other responses that are not denials but are relevant to fulfilling the request. For example, when an authorized third party requests a nonexistent data field, under § 1033.311(b) a standardized response is required to be given to the requestor, informing them of the deficient request. Conversely, under a § 1033.351(b)(3) denial, a data provider is informing the requestor that they are not being granted access to particular information in the developer interface pursuant to § 1033.331. After this communication, the data provider's obligations to the consumer or third party are satisfied, save for the records to be retained under § 1033.351(d). Under § 1033.351(d)(2)(i) and (ii), discussed below, a data provider must establish and maintain policies and procedures to retain records of, among other things, requests for a third party's access to an interface and records of requests for information. Additionally, under final § 1033.351(d)(2)(v), a data provider must establish and maintain policies and procedures to retain records of § 1033.311(c)(2) commercially reasonable performance specifications. Accordingly, records of both standardized error code denials pursuant to § 1033.311(c)(2) and denials of information requests under § 1033.351(b)(3) must be retained.

For clarity, final § 1033.351(b)(2)(i) and (3)(i) uses ''substantiating'' in place of ''explaining.'' The proposed rule used the terms interchangeably. The use of ''substantiate'' in the final rule clarifies that associated evidence for the denial should be retained as part of the data provider's required policies and procedures. Additionally, this change will not create a substantial documentation burden for data providers, given that these records are already being kept. Including a requirement for data providers to explain the process for the consumer or third party to remedy a reason for denial, as suggested by some commenters, would be an unnecessary addition to the final rule. The CFPB did not propose these appeal processes, and, if there were a denial under § 1033.351(b)(3), the process would be for the consumer or third party to again request access to the covered data after correcting the deficiency explained under § 1033.351(b)(3)(ii). If the data provider denied a valid request, then the data provider would likely be in violation of the prohibition against evasion in § 1033.201(a)(2).

One commenter was concerned that it would be difficult for a data provider to communicate to a consumer why a § 1033.331 denial occurred when the denial occurs before the data provider has authenticated the consumer's identity. Proposed § 1033.351(b)(3) would not have required a data provider to communicate why a denial has occurred before the data provider has authenticated a consumer's identity. If a data provider denies a request because the data provider has not authenticated the consumer, § 1033.351(d)(3)(ii) would simply require that, pursuant to reasonable policies and procedures, the data provider communicate that the data provider had not authenticated the consumer.

The CFPB understands that in limited cases, disclosure of the specific reason for a denial of access to an interface or for information on an interface might be prohibited by law or otherwise be inconsistent with compliance obligations or hinder law enforcement. Proposed § 1033.351(a) sought to provide flexibility to data providers in designing their policies and procedures regarding denials of information or interface access by providing in § 1033.351(a) that policies and procedures must be ''appropriate to the size, nature, and complexity of the data provider's activities.''

The CFPB believes this language alone would have been sufficient to provide data providers flexibility to avoid acting in a manner inconsistent with legal obligations or effective law enforcement. However, given the nature of concerns in this context, the CFPB believes it will facilitate compliance to more clearly state in final § 1033.351(a) that a data provider has flexibility to design policies and procedures to avoid acting inconsistently with its other legal obligations, or in a way that could reasonably hinder enforcement against unlawful or potentially unlawful conduct. A reasonable policy and procedure designed to communicate the reasons for a denial of information or access would not mandate communication or disclosure of material that would require a data provider to violate the law or hinder law enforcement. For example, § 1033.351(b)(2) does not require a data provider to inform a third party that a ''Suspicious Activity Report'' was involved in a decision to deny information or interface access, because including such information could undermine ongoing and future law enforcement investigations by tipping off suspects or present other risks.

However, even if data providers have a legitimate basis not to communicate the reason for a denial, under § 1033.351(b)(2)(i) and (b)(3)(i) the data provider must create a record substantiating the basis for denial. For example, a data provider that denies a third party access pursuant to safety and soundness concerns, must create a record that substantiates the basis for the denial under § 1033.321(a). Under § 1033.351(d), the data provider's policies and procedures must account for retention of that record, but the final rule does not require that this record be disclosed to consumers or third parties. Denials of access or information present significant risks of frustrating congressional intent, and § 1033.351(b)(2)(i) and (3)(i) helps ensure compliance with data providers' core obligation under the rule to make covered data available.

Policies and Procedures for Ensuring Accuracy (§ 1033.351(c))

Under proposed § 1033.351(c)(1), the policies and procedures data providers would be required to establish and maintain by proposed § 1033.351(a) must be reasonably designed to ensure that covered data are accurately made available. Proposed § 1033.351(c)(2) listed elements that data providers would need to consider when designing their policies and procedures regarding accuracy, for example: (1) implementing the format requirements of proposed § 1033.311(b); and (2) addressing information provided by a consumer or a third party regarding inaccuracies in

the covered data made available through its developer interface. Under proposed § 1033.351(c)(3), indicia that a data provider's policies and procedures regarding accuracy are reasonable would include whether they conform to a qualified industry standard regarding accuracy. The proposed rule explained that a qualified industry standard regarding accuracy is relevant to the reasonableness of a data provider's policies and procedures because it reflects the openness, balance, consensus, transparency, and other requirements of proposed § 1033.141.

The CFPB preliminarily determined that a data provider's policies and procedures should focus on the accuracy of transmission rather than the underlying accuracy of the information in the data provider's systems. The CFPB clarified that this means the policies and procedures should be designed to ensure that the covered data that a data provider makes available through its developer interface matches the information that it possesses in its systems. The CFPB explained that it was likely the data provider was already subject to several legal requirements regarding accuracy, such as Regulation E's protection of consumers against errors, and Regulation Z's protection of consumers against billing errors. *See* 12 CFR part 1005; 12 CFR 1026.13. The CFPB sought comment on whether the final rule should include additional elements bearing on the reasonableness of a third party's policies and procedures regarding accuracy.

Few commenters expressed concerns regarding proposed § 1033.351(c). At least one bank trade association commenter, one research institute commenter and one Member of Congress supported the proposed rule's focus on the accuracy of transmission rather than the underlying accuracy of the information in the data provider's systems. The research institute commenter went further to say the CFPB should consider adding ''accuracy testing'' as an element of reasonableness for purposes of § 1033.351(c). A consumer advocacy group commenter recommended that the CFPB include dispute resolution requirements in § 1033.351(c), explaining that some regulatory regimes, such as the regulations enumerated in the proposal, have strict time limits for exercise of their dispute rights. Finally, a bank commenter opposed the reference to qualified industry standards in proposed § 1033.351(c)(3), stating that industry standard-setting organizations are not well positioned to weigh in on the adequacy of accuracy policies and procedures, and generally have not done so to date.

For the reasons discussed herein, the CFPB is finalizing § 1033.351(c) as proposed with one terminology change. Section 1033.351(c) is authorized under CFPA section 1033(a) for the reasons stated above in the discussion of § 1033.351(a) as well as under CFPA section 1033(d). Policies and procedures for accuracy will promote the use and development of standardized formats by ensuring data providers are taking reasonable measures to share covered data in standardized formats. The CFPB has determined the mechanisms in part 1033, including the requirements in § 1033.311(b) with respect to standardized formats (discussed in part IV.C.3), are sufficient to ensure data providers transmit information accurately. There is insufficient information in the current rulemaking record that establishes that more detailed procedures are necessary to resolve disputes regarding inaccurately transmitted covered data. The CFPB will monitor the market and engage in future rulemaking, as necessary.

With respect to the role of consensus standards in § 1033.351(c), recognized standard setters are well-suited to address the adequacy of accuracy policies and procedures. A consensus standard (as revised from the term qualified industry standard used in the proposal) regarding accuracy may be relevant to the reasonableness of a data provider's policies and procedures because it is produced through a process that takes into account the perspectives of all parties making available, receiving, and using covered data, consistent with the openness, balance, consensus, transparency, and other requirements of § 1033.141. Such standards, used in connection with accuracy policies and procedures, may indicate that covered data transmitted pursuant to an applicable consensus standard will be usable by authorized third parties.

Policies and Procedures for Record Retention (§ 1033.351(d))

Proposed § 1033.351(d) would have provided that the policies and procedures required by § 1033.351(a) must be reasonably designed to ensure retention of records that are evidence of compliance with proposed subparts B and C of part 1033. The proposal's preamble explained that these requirements would give data providers flexibility to craft policies and procedures that are appropriate to the ''size, nature, and complexity'' of the individual data provider's activities, as required by proposed § 1033.351(a). The CFPB explained that this flexibility was intended to help data providers avoid conflicts with other legal obligations, manage data security risks, and minimize unnecessary impacts, consistent with the SBREFA Panel's recommendation.

Additionally, under proposed § 1033.351(d)(1), records related to a data provider's response to a consumer's or third party's request for information or a third party's request to access a developer interface would have had to be retained for at least three years after a data provider has responded to the request. The CFPB explained that this duration would provide sufficient time to administer enforcement of proposed subparts B and C. The proposed rule also stated that all other records that are evidence of compliance with subparts B and C of part 1033 would need to be retained for a reasonable period of time.

To mitigate the risk that the flexibility of the record retention policies and procedures proposal might result in the absence of critical evidence of compliance, proposed § 1033.351(d)(2) identified examples records that would need to be retained. Proposed § 1033.351(d)(2) would have required that records retained pursuant to policies and procedures under proposed § 1033.351(a) include, without limitation: (1) records of requests for a third party's access to an interface, actions taken in response to such requests, and reasons for denying access, if applicable; (2) records of requests for information, actions taken in response to such requests, and reasons for not making the information available, if applicable; (3) copies of a third party's authorization to access data on behalf of a consumer; and (4) records of actions taken by a consumer and a data provider to revoke a third party's access pursuant to any revocation mechanism made available by a data provider. The CFPB requested comment on the types of records that should be retained, the length of the retention period, and the date from which the retention obligation should be measured.

Commenters generally supported the proposal. Some bank trade association commenters supported proposed § 1033.351(d)'s measuring of the retention period from the time of response, and at least one such commenter supported the proposed three-year retention period. Some data provider commenters suggested that the retention period be for a shorter duration, such as two years, which they stated would be similar to the record retention requirements of Regulations E and Z and would reduce the amount of

time records could be exposed to security risks. One trade association recommended that the final rule reduce the retention period applicable to responses to requests made through the developer interface. Some third party commenters recommended that the final rule include records of data providers' limitations of third party access, and that all communications of denials be submitted to the CFPB on a rolling basis. A trade association stated that retaining records on all third party requests would be unduly burdensome for data providers. Data provider commenters recommended that the final rule clarify that the provision does not require the retention of every login to the consumer interface or copies of data made available through the developer interface, explaining that such a retention would lead to significant costs. One bank commenter suggested that the final rule clarify what is meant by ''copies of a third party's authorization'' in proposed § 1033.351(d)(2)(iii). The commenter stated this could be interpreted by some data providers as a requirement to obtain and retain a copy of the full authorization disclosure provided by the third party to the consumer on the third party's own website or mobile application, which would be very hard for data providers to operationalize. Additionally, one trade association recommended that retaining records on all third party requests would be unduly burdensome for data providers. Further, some data provider commenters asserted that proposed § 1033.351(d) conflicts with CFPA section 1033(c), which provides that ''[n]othing in [CFPA section 1033] shall be construed to impose any duty on a covered person to maintain or keep any information about a consumer.''

For the reasons discussed herein, the CFPB is finalizing § 1033.351(d) with revisions to conform terminology and clarify the types of records to be retained, as well as revisions to specify the duration for which records should be retained pursuant to policies and procedures.

Retention Period (§ 1033.351(d)(1))

Final § 1033.351(d)(1) provides that records that are evidence of a data provider's actions in response to a consumer's or third party's request for information or a third party's request to access a developer interface must be retained for at least three years after a data provider has responded to the request. All other records that are evidence of compliance with subparts B and C of part 1033 must be retained for a reasonable period of time of at least three years from the date of the action required under subparts B and C of part 1033.

Final § 1033.351(d)(1) revises the proposed language to the general obligation to clarify the nature of records to be retained pursuant to policies and procedures. The proposal described records ''related to'' a data provider's response to a consumer's or third party's request for information or a third party's request to access a developer interface. The final rule contains new language clarifying that data providers must retain records ''that are evidence of'' a data provider's ''actions in response to'' a consumer's or third party's request for information or access to a developer interface.'' Including the phrase ''evidence of'' in the first sentence of § 1033.351(d)(1) is more consistent with the language used in the second sentence of that paragraph. For purposes of § 1033.351(d), relevant records are those that demonstrate overall fulfillment of requests for information. The final rule does not require retention of metadata related to individual consumer logins or activity on the consumer interface. Similarly, data providers do not need to retain copies of every request to the developer interface, or copies of data elements made available in response to each request, to the extent requests are fulfilled.

Section 1033.351(d)(1) must be read together with § 1033.351(a), which states, ''[p]olicies and procedures must be appropriate to the size, nature, and complexity of the data provider's activities.'' For example, to the extent data providers fulfill consumer or third party requests, accurate aggregate data evidencing fulfillment, such as evidence of general availability of a consumer interface or a developer interface, would comply with § 1033.351(d). Of course, additional records would be necessary to the extent data providers do not make data available to consumers or third parties. For instance, if all or part of a consumer or developer interface is unavailable for a period of time to all consumers and third parties, data providers could retain records of the general unavailability of the interface. More detailed records will need to be retained to demonstrate maintenance of other policies and procedures requiring the creation of records, such as § 1033.351(b)(2)(i) and (b)(3)(i) with respect to records of denials of interface access and information requests. A data provider also might need to retain detailed information for some period of time as part of other policies and procedures required under § 1033.351. For instance, data providers might need to retain some information about responses to third party requests as part of maintaining accuracy-related policies and procedures pursuant to § 1033.351(c)(2)(ii).

Section 1033.351(d)(1) requires that records providing evidence of a data provider's actions in response to a consumer's or third party's requests for information and records of a third party's request to access a developer interface must be retained for at least three years after a data provider has responded to the request. The nature of the records retained will determine the most appropriate method of demonstrating compliance with this retention period.

In response to requests for clarity of the phrase ''reasonable period of time'' in the second sentence of § 1033.351(d)(1), final § 1033.351(d) includes new language specifying a more concrete period. Final § 1033.351(d) states, ''[a]ll other records that are evidence of compliance with subparts B and C of this part must be retained for a reasonable period of time of at least three years from the date of the action required under subparts B and C of this part.'' This aligns with the time period referenced in the first sentence with respect to responses to requests for information and access.

The CFPB believes a three-year record retention period set forth in § 1033.351(d)(1) is an appropriate duration to ensure retention of records that evidence compliance with data provider obligations under subparts B and C. Regulations E and Z, as codified in 12 CFR part 1005 and 12 CFR part 1026, respectively, implement EFTA and TILA, and the record retention requirements under Regulations E and Z offered for comparison by commenters are substantively different from that under § 1033.351(d). Records required under Regulation E and Regulation Z relate to regulated entities' disclosures to consumers pertaining to electronic fund transfers and consumer credit, respectively. Such disclosures to individual consumers are likely to be stale after a period of two years. Three years of records will allow for analysis of the patterns in a data provider's compliance with part 1033 over time. Moreover, based on the CFPB's supervisory and enforcement experience, a three-year retention period is an appropriate amount of time to enable the CFPB and other enforcement agencies to examine or conduct enforcement investigations. A shorter record retention period would make it more difficult to ensure that the necessary records are available.

The CFPB is issuing final § 1033.351(d) pursuant to CFPA section 1022(b)(1), which authorizes the CFPB to prescribe rules as may be necessary or appropriate to enable the CFPB to administer and carry out the purposes and objectives of the Federal consumer financial laws, including carrying out the objectives of CFPA section 1033, and to prevent evasions thereof. Section 1033.351(d) will assist the CFPB and other enforcement agencies with administering CFPA section 1033 by ensuring records are available to evaluate compliance with data providers' obligations under the rule. CFPA section 1033(c) does not indicate otherwise, for two independent reasons. First, § 1033.351(d) is a rule issued pursuant to CFPA section 1022(b)(1), while section 1033(c) is a rule of construction concerning ''this section,'' *i.e.,* CFPA section 1033. Second, § 1033.351(d) does not require data providers to keep records ''about a consumer.'' Rather, it requires data providers to establish policies and procedures to maintain records related to their compliance with part 1033.

Final § 1033.351(d) does not override congressional intent with respect to CFPA section 1033(b)(4) or (c). Final § 1033.351(d) only requires records providing evidence of compliance with subparts B and C of part 1033, and pursuant to § 1033.221, data providers are not required to make available any covered data that falls under the statutory exceptions at CFPA section 1033(b). Nor does § 1033.351(d) require data providers to maintain the underlying covered data that must be made available pursuant to CFPA section 1033(a).

Certain Records Retained Pursuant to Policies and Procedures (§ 1033.351(d)(2))

As proposed, final § 1033.351(d)(2) provides, ''Records retained pursuant to policies and procedures required under paragraph (a) of this section must include'' categories enumerated in subsequent paragraphs, ''without limitation.'' The CFPB is finalizing the enumerated categories under § 1033.351(d)(2) with revisions to clarify the types of records to be retained, and other revisions to clarify how the three-year period in § 1033.351(d)(1) applies to those records. In response to questions about the types of records required and to conform to language in final § 1033.351(d)(1), some provisions refer to requiring records ''providing evidence of'' certain activity, discussed below. To provide greater clarity on how the three-year time period applies to the requirements of subparts B and C, final § 1033.351(d) includes additional categories of records that a data provider's policies and procedures must include and how the three-year period applies, as discussed below.

Final § 1033.351(d)(2)(i) specifies records documenting requests for a third party's access to an interface, actions taken in response to such requests, and reasons for denying access, if applicable, for at least three years after the data provider has responded to the request. Proposed § 1033.351(d)(2)(i) specified that data provider policies and procedures must include ''records of'' requests for a third party's access to an interface, actions taken in response to such requests, and reasons for denying access, if applicable; and did not specify a retention period.

Final § 1033.351(d)(2)(i) revises this language to clarify that data providers' policies and procedures must include records ''documenting'' requests for third party access, actions taken, and reasons for denying access, if applicable. The term ''documenting'' is intended to clarify that policies and procedures must be designed to capture documentary evidence of requests to access the interface, and can include but does not require retention of actual copies of information. The CFPB is making this revision in light of how consequential granting access to a third party is, with respect to the number of consumers potentially affected by the decision, the risks of pretextual denials, and the complex factors involved in granting access, as discussed in part IV.C.4 with respect to § 1033.321. The final rule also includes new language clarifying how the three-year period applies to these records. Records documenting decisions around onboarding will be particularly important for enforcement of §§ 1033.201 and 1033.321.

Final § 1033.351(d)(2)(ii) specifies records providing evidence of fulfillment of requests for information, actions taken in response to such requests, and reasons for not making the information available, if applicable, for at least three years after the data provider has responded to the request. Proposed § 1033.351(d)(2)(ii) would have required a data provider's policies and procedures to include ''records of'' requests for information, actions taken in response to such requests, and reasons for not making the information available, if applicable; and did not specify a retention period. The final rule revises the language with respect to requests for information to records ''providing evidence of fulfillment of requests.'' This revision is intended to clarify the scope of records required, as discussed above with respect to § 1033.351(d)(1).

Final § 1033.351(d)(2)(iii) specifies records documenting that the third party has followed the authorization procedures in § 1033.401 to access data on behalf of a consumer, for at least three years after such records are generated. Proposed § 1033.351(d)(2)(iii) would have required data provider policies and procedures to include ''[c]opies of a third party's authorization to access data on behalf of a consumer,'' and would not have specified a retention period. The final rule revises that language to refer to ''[r]ecords documenting that the third party has followed the authorization procedures,'' to conform to the language in § 1033.331(b)(1)(iii). The final rule recognizes that, by virtue of its transmission to the data provider through the developer interface, the authorization disclosure received by the data provider might not be identical to the form received by the third party.

Final § 1033.351(d)(2)(iv) specifies records providing evidence of actions taken by a consumer and a data provider to revoke a third party's access pursuant to any revocation method made available by a data provider, for at least three years after the revocation. Proposed § 1033.351(d)(2)(iv) would have required data provider policies and procedures to include ''records of'' actions taken by a consumer and a data provider to revoke a third party's access pursuant to any revocation ''mechanism'' made available by a data provider; and would not have specified a retention period. Final § 1033.351(d)(2)(iv) uses the phrase ''records providing evidence of'' to clarify that identical records are not required. In addition, § 1033.351(d)(2)(iv) uses the term ''method'' rather than ''mechanism,'' to conform this provision to final § 1033.331(e).

The final rule also specifies in § 1033.351(d)(2) three categories of records that would need to be retained for a three-year period: evidence of commercially reasonable performance specifications (§ 1033.351(d)(2)(v)), written policies and procedures required under § 1033.351 (§ 1033.351(d)(vi)), and disclosures made under proposed § 1033.341 (§ 1033.351(d)(2)(vii)). Although the proposal did not specify that data providers' policies and procedures regarding recordkeeping include these records, proposed § 1033.351(d)(2) indicated that the records specified were not exhaustive. As noted above, proposed § 1033.351(d) stated that ''[t]he policies and procedures required

by paragraph (a) of this section must be reasonably designed to ensure retention of records that are evidence of compliance with subparts B and C of this part.'' Proposed § 1033.351(d)(2) stated that records retained pursuant to policies and procedures required under paragraph (a) of this section must include, ''without limitation,'' certain categories of records.

Final § 1033.351(d)(2)(v) specifies records of commercially reasonable performance described in § 1033.311(c)(2)(ii), for at least three years after the period recorded, which will enable enforcement and supervision of final § 1033.311(c). Final § 1033.351(d)(2)(vi) specifies written policies and procedures required under § 1033.351 for three years from the time such material was last applicable. And final § 1033.351(d)(2)(vii) specifies disclosures required under § 1033.341, for three years from the time such material was disclosed to the public.

A commenter's suggestion to explicitly require data providers to keep records that demonstrate justification for limiting third party access is already covered in the rule. As proposed, final § 1033.351(d)(2)(ii) requires policies and procedure to create ''[r]ecords of requests for information,'' as well as the ''actions taken in response to such requests.'' The final rule does not require data providers to report access denials monthly. Such a requirement would be burdensome without significant additional benefit. Data providers must have policies and procedures to substantiate reasons for denying access under § 1033.351(b) and the CFPB believes administrative enforcement and supervision will be sufficient to monitor compliance.

D. Subpart D—Authorized Third Parties

1. Overview

Subpart D establishes authorization procedures and obligations for third parties seeking to access covered data from data providers pursuant to the final rule's framework. The authorization procedures require a third party to obtain the consumer's express informed consent to the third party's access of the consumer's covered data. The third party must provide the consumer with an authorization disclosure that meets certain content and other requirements set forth in subpart D. Among other things, the authorization disclosure must include a statement whereby the third party certifies that it will meet the third party obligations set forth in subpart D, including limits on the third party's collection, use, and retention of the consumer's covered data. Subpart D also includes specific requirements that apply when the third party is using a data aggregator, and policy and procedure requirements related to record retention that apply if the third party is also a covered person or service provider pursuant to the CFPA.

Similar to the final rule, the proposed rule would have included authorization procedures and third party obligations designed to ensure that third parties accessing covered data pursuant to the rule's framework are acting on behalf of the consumer whose covered data are being accessed. It would have also included specific requirements that apply when a third party is using a data aggregator and policy and procedure requirements related to retaining evidence of compliance. A wide variety of commenters, including data providers, third parties, research institutes, consumer advocates, and a Member of Congress, generally supported the proposed approach to authorized third party data access in subpart D. As discussed below, other commenters expressed concerns about the proposed approach, including concerns related to the CFPB's legal authority.

Legal Authority

Some commenters asserted that the CFPB lacks the legal authority for some or all of the provisions in proposed subpart D. Specifically, a law firm commenter described authorized third parties as consumers' agents and asserted that the CFPB lacks authority to prescribe how consumers authorize agents to access data or how agents later use that data. A trade association for nondepositories argued that the third party obligations should not limit a third party's collection and use of covered data. This commenter argued that the proposed rule conflicted with traditional agency law, which permits an agent to take an action that does not necessarily benefit the principal.[83] They further contended that the proposed rule would impermissibly override consumers' choices regarding how third parties authorized to receive data may later use that data.

Other commenters criticized subpart D but for opposite reasons. Specifically, these commenters argued that the proposed approach exceeded the CFPB's authority because it would give an overly broad set of third parties access to covered data. According to one third party commenter, the term ''representative'' should be read as similar to, and connected with, ''agent'' and ''trustee'' in accordance with the interpretive canon that ''a word is known by the company it keeps'' and the canon that when ''a more general term follows more specific terms in a list, the general term is usually understood to embrace only objects similar in nature to those objects enumerated by the preceding specific words.'' [84] According to this commenter, representatives must have a fiduciary relationship with the consumer similar to a principal-agent and trustor-trustee relationship.[85] The commenter argued that it would be inappropriate to allow entities that deal with consumers at arm's length in the marketplace and are not in a fiduciary relationship with the consumer to act as authorized third parties. Similarly, two trade associations for credit unions asserted that third party access on behalf of a consumer should be limited to situations where the third party and consumer have a legal relationship that necessitates the access.

As discussed in more detail below in part IV.D.4 regarding third party obligations, some commenters asserted that the CFPB lacked authority regarding certain proposed limits on an authorized third party's use of covered data.

After considering the comments discussed above as well as other relevant comments discussed throughout part IV.D, the CFPB has determined that the provisions in subpart D align with congressional intent and are within the CFPB's rulemaking authority. The plain language of CFPA section 1033(a) provides that, subject to rules prescribed by the CFPB, a covered person shall make available to a ''consumer,'' upon request, certain information in the control or possession of the covered person. CFPA section 1002(4) defines ''consumer'' as ''an individual or an agent, trustee, or representative acting on behalf of an individual.'' [86] For convenience, part 1033 generally refers to the individual as the ''consumer'' and an agent, trustee, or representative acting on behalf of that individual as an ''authorized third party.'' As noted elsewhere, the substance of the rule aligns with the CFPA's definition of

[83] This commenter cited the Restatement (Third) of Agency (2006).

[84] The commenter quoted *Dubin* v. *United States,* 599 U.S. 110 (2023), and *Epic Sys. Corp.* v. *Lewis,* 584 U.S. 497 (2018).

[85] The commenter cited the Restatement (Third) of Agency (2006) and also the Restatement (Third) of Trusts (2003).

[86] For example, Merriam Webster defines ''on behalf of'' to mean ''in the interest of.'' *https://www.merriam-webster.com/dictionary/on%20behalf%20of.*

consumer, and nothing in the CFPA prevents the CFPB from using different vocabulary within the rule.

The provisions in subpart D are designed to ensure that, consistent with carrying out the objectives of CFPA section 1033, consumers provide informed consent to third parties that access covered data pursuant to the final rule's framework, that consumers retain control over third parties' access, and that third parties act on behalf of consumers when collecting, using, and retaining covered data pursuant the final rule's framework. Accordingly, the final rule requires third parties accessing covered data pursuant to the final rule's framework to adhere to the authorization procedures and third party obligations in subpart D, including the specific requirements for data aggregators (as applicable). These authorization procedures and third party obligations ensure that third parties accessing a consumer's covered data are acting on the consumer's behalf. They ensure the consumer is effectively informed about and has provided meaningful consent for the third party's collection, use, and retention of the consumer's covered data, and that the consumer retains the ability to control access to that covered data. The authorization procedures and third party obligations also ensure that the third party's access to covered data accords with the consumer's intent and reasonable expectations and is for the consumer's benefit.

As noted above, commenters relied upon an analogy between the definition of ''consumer'' in CFPA section 1002(4) and agency law, but they drew opposite conclusions from that analogy. The final rule establishes that a third party has a duty to act for the principal's benefit in its collection, use, and retention of data, which is in line with well-established principles of agency law. Under agency law, an agent is required to subordinate the agent's interests to those of the principal and to place the principal's interests first on all matters connected with the agency relationship.[87] Similarly, here, the final rule limits third party collection, use, and retention of covered data to what is reasonably necessary to provide the consumer's requested product or service. Furthermore, as a commenter indicated, agency law does sometimes permit a principal to consent to conduct by an agent that would otherwise breach the agent's duties to the principal, but only if the consent is the product of an adequately informed judgment by the principal.[88] Likewise, as explained below, the final rule permits third parties to access covered data for certain purposes, including targeted advertising, cross-selling of other products or services, and data sales, if data access for these purposes are separately authorized as a standalone product or service. Including those purposes as part of an authorization for the consumer's requested product or service would run contrary to the third party's obligations to the consumer. However, where the consumer affirmatively requests targeted advertising, cross-selling of other products and services, or data sales, the third party can obtain meaningful consent through a separate authorization for a standalone product or service. Thus, the final rule is consistent with common law agency principles.

The CFPB does not agree with some commenters that the effect of subpart D is to override consumers' choices. Instead, subpart D establishes a framework to ensure that consumers have a meaningful opportunity to understand and consent to uses of data on their behalf. The evident congressional purpose of CFPA section 1033(a) is to give consumers greater control of data concerning their financial accounts, and this purpose would be fatally undermined if third parties could use the data in ways that consumers would not expect and would reject if given an unobstructed choice. As part of its rulemaking role assigned by Congress, the CFPB has crafted a framework in subpart D to ensure that consumers are able to make informed choices.

The CFPB does not agree with other commenters that suggest that only a narrow class of certain fiduciaries should be recognized as authorized third parties. The CFPB has framed subpart D precisely to ensure that covered data are available only to agents, trustees, and representatives acting on behalf of the consumer. Regardless of whether entities engaged in the current open banking system would qualify for that category, if an entity satisfies the final rule's conditions—including the obligations to act on behalf of the consumer—it is appropriate to recognize it as an authorized third party.

Accordingly, subpart D is consistent with CFPA section 1033 and with the definition of ''consumer'' in CFPA section 1002(4). Moreover, even assuming for the sake of argument that commenters' narrower or broader readings of CFPA section 1002(4) were accepted, the CFPB notes that Congress has conferred express rulemaking authority on the CFPB in CFPA section 1033(a) and has done so in broad terms. Because all data sharing under section 1033 of the CFPA is ''[s]ubject to rules prescribed by the Bureau,'' the CFPB has authority to place conditions on data access in order to carry out CFPA section 1033 and realize its objective of meaningful consumer control of the data that is shared pursuant to the statute.

Finally, although commenters did not specifically challenge the basis for the proposed provision requiring certain third parties to establish and maintain policies and procedures for record retention, this provision is authorized under CFPA sections 1022(b)(1) and 1024(b)(7), as discussed in part IV.D.6.

Other Concerns Related to the Proposed Approach to Authorizing Third Party Data Access

Some commenters raised concerns with the general approach to third party access to covered data in proposed subpart D. As further discussed elsewhere in this part IV.D, the CFPB concludes that the general approach to third party access to covered data in subpart D of the final rule, including the authorization procedures and third party obligations, best aligns with congressional intent to ensure that third parties accessing covered data are acting on behalf of consumers. Additional discussion of these comments and the rationale for the CFPB's determination can be found in the remainder of this part IV.D as well as in the *General Comments Received on the Proposal* discussion of part IV and in part IV.C.5.

Some data providers and trade associations for data providers stated that the rule should mandate that third parties certify that they accept liability in certain circumstances, are adequately capitalized, and carry sufficient indemnity insurance to fulfill their liability obligations. However, the purpose of the third party obligations in subpart D is to ensure that third parties accessing covered data are doing so on the consumer's behalf. Content related to the allocation of liability between data providers and third parties would be outside the scope of this purpose. This is also the case for capitalization and indemnity insurance requirements.

A bank commenter suggested that once the rule becomes effective, it should apply to covered data currently held by third parties, to ensure that data are uniformly and consistently protected. However, the third party authorization procedures in subpart D provide procedures and obligations for

[87] *See* Restatement (Third) of Agency section 8.01 (2006).

[88] *See id.* section 8.06 and section 8.06 cmt. b.

third parties seeking to access covered data pursuant to the final rule's framework. As such, the final rule does not apply to covered data accessed by third parties prior to the final rule's effective date.

Third Party Access Outside the Subpart D Framework

Two trade associations representing nondepository entities commented that the CFPB should clarify that the rule does not prohibit third parties from accessing covered data outside the rule's data access framework. One of these trade association commenters stated that the scope of CFPA section 1033 is limited and does not authorize the rule to prohibit third parties from obtaining a consumer's financial information outside the rule's framework. The commenter requested that the CFPB clarify that the rule does not establish the exclusive means for a third party to obtain covered data and does not impose restrictions on third parties that access such data without relying on the CFPA section 1033 access right. Another bank commenter stated the rule does not address how it affects existing contracts providing for access to consumer financial data and recommended that the CFPB provide for the grandfathering of such contracts.

Several bank commenters and bank trade association commenters stated that the rule's protections should apply to third parties attempting to access covered data, even if those third parties do not attempt to become authorized third parties and rely on the rule's framework to obtain access to covered data. They stated that third parties could evade the rule's protections by declining to become authorized third parties, by not trying to access covered data through the rule's framework, and by relying on other methods to access covered data.

CFPA section 1033 provides consumers, and third parties acting on behalf of consumers, with a right to access their data, and the rule creates a framework to implement that right. The CFPB expects that third parties and covered data providers will employ the rule's framework for arranging third party access to covered data authorized by the consumer. The CFPB has determined that the rule's framework will provide significant benefits to data providers, third parties, and consumers. Data providers will receive assurance that third parties have authorization from the consumer to access data and a commitment from third parties that they will comply with certain consumer protections and other obligations, which will promote data minimization and sound risk management. Moreover, as noted above, the CFPB would not consider data providers under this final rule to be furnishers solely by virtue of permitting data access pursuant to an authorization that is consistent with the final rule. Third parties seeking to access covered data on behalf of consumers to provide products or services generally will receive that access if they comply with the authorization procedures and other conditions of the rule. Most importantly, the rule will provide significant protections to consumers by ensuring that third parties are accessing covered data on behalf of consumers—as the CFPA envisions—and are taking appropriate steps to protect their covered data. The rule does not address the topic of any data sharing outside the rule's framework, including through existing contracts. However, the prohibitions in the CFPA against unfair, deceptive, or abusive acts or practices will bear on any claimed effort to proceed outside of the safe, secure, reliable and competitive open banking framework that is enabled by this final rule. The CFPB will closely monitor the market to determine whether attempts to arrange for consumer authorized access to covered data outside the framework constitute unfair, deceptive, or abusive acts or practices.

Screen Scraping by Third Parties

In the proposal, the CFPB expressed the goal of transitioning the market away from screen scraping and noted the nearly universal consensus that developer interfaces should supplant screen scraping. The proposed rule also discussed the overcollection, data security, accuracy, and infrastructural burden concerns related to screen scraping. As discussed in part IV.C.3 above, to facilitate a transition, the CFPB proposed to prevent data providers from relying on screen scraping as a means of enabling third parties to access consumer data, even though it did not formally prohibit screen scraping. The CFPB did not propose requiring that data providers permit screen scraping as an alternative method of access, such as to address unavailability when the data provider's system interface is down for maintenance. The proposed rule explained that screen scraping generally presents risks to consumers and the market and that relying on credential-based screen scraping would complicate the mechanics of data access, particularly with respect to authentication and authorization procedures.

Several commenters addressed screen scraping by third parties. Some data provider and data provider trade association commenters asked the CFPB to prohibit third parties from screen scraping or to require third parties to include commitments to avoid screen scraping in their certification statements. These commenters generally stated that screen scraping can be difficult for data providers to identify and prevent. According to these commenters, detecting and preventing screen scraping requires significant resources even for large banks, and cannot be accomplished with certainty. Given the risks involved in screen scraping, these commenters stated, the obligation to prevent it should rest with the third party, which is most directly able to control the practice.

Several commenters tied their concerns regarding screen scraping to the coverage of the rule. For example, several data providers and trade associations for data providers stated that because the proposal would not require all third parties to access data through the developer interface, and would apply only to covered data, some third parties could still attempt to screen scrape outside the scope of the rule. One bank commenter stated that third parties that scrape non-covered data could easily scrape covered data at the same time. A data aggregator commenter asked for clarity on the use of screen scraping for non-covered data or when developer interfaces are unavailable.

Several other commenters suggested that the incentive to access data through a developer interface might be insufficient to channel data flows through the framework in the proposed rule. For example, a researcher and a service provider commenter stated that screen scraping persisted in Australia and Europe despite the development of API access. One of these commenters asserted that poor API quality caused the persistence of screen scraping in Australia, while the other claimed that the lack of a ban on screen scraping was responsible for the continuation of the practice in Europe.

In contrast, several commenters, mainly third parties and nonprofit organizations, recommended that the final rule expressly permit screen scraping in limited circumstances. These commenters generally suggested two circumstances to permit screen scraping: (1) when developer interfaces are unavailable; and (2) when data made available through developer interfaces is unreliable. A few commenters recommended allowing screen scraping until data providers have established

developer interfaces. A nonprofit organization commenter suggested that the possibility of screen scraping would serve as a check on anticompetitive conduct by data providers and a way of incentivizing developer interface quality. Another nonprofit organization commenter recommended allowing tokenized screen scraping as a more secure alternative to traditional screen scraping. A researcher commenter stated that any prohibition on third parties using consumer credentials to access developer interfaces risked leaving third parties without means of accessing data if the interface is unavailable. A nonprofit organization commenter stated that screen scraping might be the only means of accessing non-covered data from some data providers. Finally, some community banks, credit unions, and related trade association commenters also requested that the final rule permit screen scraping. These commenters generally believed that data providers should have the flexibility to permit screen scraping by trusted third parties instead of enabling access through developer interfaces.

Conversely, many large data providers and trade associations for data providers opposed any screen scraping exception. These commenters generally stated that any fallback option for screen scraping would create the same consumer transparency, control, security, and privacy risks the proposal was trying to avoid. Finally, some community banks, credit unions, and related trade association commenters also requested that the final rule permit screen scraping. These commenters generally believed that data providers should have the flexibility to permit screen scraping by trusted third parties or build developer interfaces.

The CFPB has determined that specifically prohibiting third parties from screen scraping when they obtain covered data through the final rule, or requiring them to make a certification to that effect, is unnecessary. The final rule's authorization and authentication requirements do not accommodate data access arrangements in which a third party retains consumers' access credentials. And the final rule imposes limitations on the collection, use, and retention of covered data that third parties could not feasibly meet through screen scraping.

Once data providers have enabled the safe, secure, and reliable forms of data access envisioned in this rule, the CFPB cautions that screen scraping attempts by third parties to reach data covered by such arrangements could well be limited by the CFPA's prohibition on unfair, deceptive, and abusive acts or practices.[89] As discussed throughout this document, screen scraping poses risks to consumer privacy and data security. The CFPB understands that in some circumstances, screen scraping may be the only practical means by which third parties can access consumer data. For example, a third party might seek to access non-covered data or data held by a financial institution that has not established a developer interface. But if a third party attempts to screen scrape consumer data when a more secure, structured alternative means of access is available, such as the developer interface or a substantially similar interface, then the third party would be needlessly exposing consumers to harm. Depending on the facts and circumstances, such activity might well constitute an unfair, deceptive, or abusive act or practice.

Finally, the CFPB has decided against providing for screen scraping as a fallback means of third party access under the final rule. The final rule attempts to reduce the risks of screen scraping by facilitating the market's transition toward more secure methods of consumer-authorized data access. Providing for screen scraping as an alternative method of data access would undermine this important goal. Certain technologies, such as tokenized screen scraping, could mitigate some of the risks of credential-based screen scraping. But even tokenized screen scraping would not alleviate the risks to privacy and accuracy, or meaningfully advance the statutory mandate to promote the development and use of standardized formats.

Regarding concerns that the absence of a screen scraping alternative might leave consumers without a means of authorizing access to their covered data, the CFPB has determined that the performance standards for developer interfaces will ensure that consumers and third parties have reliable access to covered data. To the extent that such access is interrupted by maintenance or reliability issues, it is not clear that screen scraping would serve as a practical alternative. If third parties collected consumer credentials in advance of a potential availability issue, the resulting mass accumulation of consumer credentials by third parties would effectively undermine the final rule's efforts to encourage safer and more structured means of data access. But waiting until the developer interface is unavailable might also be impractical because the sudden request for credentials might confuse consumers, and the unavailability might extend to the interface the third party seeks to screen scrape.

To the extent that small data provider commenters viewed screen scraping as a way to alleviate the burden of implementation, the CFPB has provided alternative means of reducing burden on small entities. For example, part IV.C.3 discusses how data providers may use service providers that rely on screen scraping to facilitate access to the developer interface. And part IV.A.5 discusses the tiered compliance dates designed to ease the burden on smaller data providers.

2. Third Party Authorization Procedures (§ 1033.401)

Proposed § 1033.401 specified what requirements a third party would have to satisfy to become an authorized third party entitled to access covered data on behalf of a consumer. The CFPB preliminarily determined that these proposed requirements would, among other things, help ensure that a consumer understands and would be able to exercise control over what covered data the third party would collect and how it would be used. The CFPB also preliminarily determined that the proposed procedures would help ensure that the third party would take appropriate steps to protect the consumer's data and that the consumer would provide express informed consent for the third party to collect, use, and retain the covered data. The CFPB preliminarily determined that these requirements would help ensure that a third party accessing covered data is doing so on behalf of a consumer and not for the third party's own benefit, consistent with the definition of consumer in CFPA section 1002(4) and as used in section 1033.

Proposed § 1033.401 would have provided that, to become an authorized third party, the third party must seek access to covered data from a data provider on behalf of a consumer to provide a product or service the consumer requested. This proposed requirement was intended to ensure that the third party is acting on behalf of the consumer—by accessing covered data to provide the product or service requested by the consumer—and is not seeking access to covered data for its own purposes.

Proposed § 1033.401 also provided that a third party would have to satisfy the prescribed authorization procedures to become an authorized third party. Under proposed § 1033.401, the three-part authorization procedures would require a third party to: (a) provide the consumer with an authorization disclosure as described in proposed

[89] *See* 12 U.S.C. 5531.

§ 1033.411; (b) provide a statement to the consumer in the authorization disclosure, as provided in proposed § 1033.411(b)(5), certifying that the third party agrees to the obligations described in proposed § 1033.421; and (c) obtain the consumer's express informed consent to access covered data on behalf of the consumer by obtaining an authorization disclosure that is signed by the consumer electronically or in writing.

The proposed requirement in § 1033.401(a) that a third party provide an authorization disclosure to the consumer was intended to help ensure that the consumer understands the key terms of access and can make an informed decision about whether to grant the third party access to the consumer's financial data. The proposed requirement in § 1033.401(b) that a third party provide a statement to the consumer certifying that the third party will comply with certain obligations would help ensure that the third party is acting on behalf of the consumer in accessing the covered data. The proposed requirement in § 1033.401(c) that the third party obtain the consumer's express informed consent to access covered data would ensure that the consumer has agreed to allow the third party to access that data on the consumer's behalf.

As discussed above in connection with § 1033.331(d), the CFPB proposed that a data provider that receives a request for covered data from a consumer that jointly holds an account or from an authorized third party acting on behalf of such a consumer must provide covered data to that consumer or authorized third party. Consistent with that proposed approach, for a jointly held account, a third party would have to comply with the third party authorization procedures in proposed § 1033.401 for the joint account holder on whose behalf the third party is requesting access. The CFPB requested comment on whether other account holders should receive authorization disclosures or otherwise be notified, or should have an opportunity to object, when an account holder authorizes a third party to access covered data from a jointly held account.

The CFPB also requested comment on whether the authorization procedures in proposed § 1033.401 would be sufficient to ensure that a third party is acting on behalf of a consumer in obtaining access to covered data or whether the CFPB should consider alternative procedures. The CFPB additionally requested comment on whether the authorization disclosure, including the statement that the third party will comply with certain third party obligations, would be sufficient to ensure that the consumer would be able provide express informed consent for the third party to access covered data on behalf of the consumer. The CFPB requested comment on whether the rule should include other protections or clarifications, such as express prohibitions on false or misleading representations or omissions to induce the consumer to consent to the third party's access to covered data.

Additionally, the CFPB proposed in § 1033.401 to apply a consistent set of procedures to all third parties attempting to access covered data. The CFPB requested comment about whether there are certain third parties, such as smaller or non-commercial parties, for which proposed § 1033.401 would not be appropriate. The CFPB also requested comment about whether the authorization procedures described in proposed § 1033.401 should be streamlined for certain third parties. In addition, the CFPB requested comment on whether there are certain circumstances involving the transmission of data to third parties for which proposed § 1033.401 would not be appropriate. Finally, to help the CFPB assess the need for potential exemptions to proposed § 1033.401, the CFPB requested comment on how individuals who are not account owners currently use existing legal mechanisms to directly access covered data.

Several nondepository entity commenters supported the proposed authorization procedures. One stated that the proposed authorization procedures will help consumers understand and consent to third parties accessing their data and that the procedures are sufficiently clear and flexible.

Commenters generally did not oppose the three-step authorization procedures, but some commenters recommended certain revisions or clarifications. One nondepository entity commenter urged the CFPB to consider streamlined authorization procedures when the consumer already has authorized access and is seeking to change the authorization by, for example, giving access to more or less data or permissioning data to additional parties. A bank trade association commenter recommended that the CFPB clarify the third party authorization procedures when material terms in the authorization change, such as when aspects of the requested product change, additional data are needed, or the service provider or data aggregator changes. This commenter urged the CFPB to require new disclosures and a new authorization when material terms in the authorization change. A trade association commenter stated that it was unclear whether third parties are required to comply with the proposed certification, disclosure, and use limitation requirements for non-covered data.

Several commenters stated that data providers should play a more significant role in the third party authorization process. Several commenters, including banks and a trade association, maintained that data providers, rather than third parties, are best positioned to obtain consumers' authorizations. A trade association commenter stated that data providers hold consumers' accounts and have account verification and access procedures to verify consumers' requests.

Several commenters addressed whether, as part of the authorization procedures, the rule should impose regulatory obligations directly on third parties, including data aggregators. Several bank and bank trade association commenters recommended that the rule impose obligations directly on third parties, rather than requiring them to certify that they will abide by certain obligations as a condition for becoming authorized to access covered data. These commenters raised concerns about how the obligations would be enforced against third parties. They also stated that the CFPB should supervise third parties, particularly data aggregators, to ensure that they comply with the third party obligations in the rule.

Several commenters recommended that the rule include additional consumer protections. A consumer advocate commenter requested that the CFPB consider additional provisions to ensure that consumers provide express informed consent for third parties accessing covered data. That commenter recommended that the rule include prohibitions on false or misleading representations to induce the consumer to provide consent to the third party's access to the consumer's covered data. Another consumer advocate commenter recommended additional consumer protections, including requiring privacy impact statements and authorizing private rights of action for consumers to pursue penalties that violate third party obligations. A consumer advocate commenter and a data aggregator commenter recommended that the privacy protections apply to any parties subject to the rule. Finally, a consumer advocate commenter suggested that the CFPB require a waiting period of fourteen days before allowing third parties to solicit any additional products or services or at least before requesting

authorization for certain additional uses, like debt collection, marketing for harmful high-cost credit products, and others.

A bank trade association requested that the rule clarify that a consumer's electronic signature on an authorization disclosure is intended to comport with the ESIGN Act. One commenter suggested that the rule should permit ''clear affirmative consent.'' This commenter asked that the rule clarify that a clear affirmative action that a consumer takes on a digital interface, such as clicking ''Agree'' or ''Continue,'' after being presented with the authorization disclosure, would satisfy the requirement that an authorization disclosure be signed electronically. The commenter suggested that ''full electronic signatures'' are an unusual method of obtaining express informed consent on a digital interface, such as an internet browser or application, would be inconsistent with seeking innovative products and services, and could create a barrier for consumers. Another commenter requested that the rule confirm a third party may rely on ''click through acceptance'' of the authorization disclosure and suggested that clicking ''agree'' or ''proceed'' should satisfy the express informed consent requirement. Conversely, a consumer advocate commenter suggested that the rule not permit the use of click through boxes and suggested toggles for ''on/off'' authorization.

Several commenters addressed how the authorization procedures should function for joint accounts. These comments are described in part IV.C in connection with the discussion of § 1033.331(d).

Several commenters addressed whether the authorization procedures should apply to all third parties or whether there should be exceptions for certain third parties, such as smaller third parties or non-commercial third parties. A bank trade association commenter stated that data providers already have procedures for providing information to natural third parties, such as agents, attorneys, accountants, and guardians. This commenter argued that such individuals should not be required to go through a developer interface, and that the rule should exempt natural third parties. A consumer advocate commenter stated that the CFPB should consider whether there should be exceptions for verified non-commercial third parties, such as family members or nonprofit counselors, that may need read-only access to data to help consumers manage their finances. Another consumer advocate commenter and a bank commenter recommended that the rule not provide any exceptions for third parties. The consumer advocate commenter stated that there may be situations in which non-commercial users, such as executors or guardians, should be able to access covered data through a consumer interface.

For the reasons discussed herein, the CFPB is finalizing the three-step authorization procedures as proposed. To become an authorized third party, under proposed § 1033.401, a third party must: (a) provide the consumer with an authorization disclosure as described in § 1033.411; (b) provide a statement to the consumer in the authorization disclosure certifying that the third party agrees to certain obligations described in § 1033.421; and (c) obtain the consumer's express informed consent to access covered data on behalf of the consumer by obtaining an authorization disclosure that is signed by the consumer electronically or in writing.

The CFPB has determined that the authorization procedures, as described in more detail below, appropriately ensure that a third party accessing covered data pursuant to the rule is doing so on behalf of a consumer and not for the third party's own benefit, consistent with the definition of consumer in CFPA section 1002(4) and used in section 1033. The authorization procedures will help ensure that a consumer understands and can exercise full control over what covered data the third party collects and how that data will be used. The authorization procedures also will help ensure that consumers are not unknowingly or reluctantly acquiescing to forms of data access that they do not want. In addition, the authorization procedures will help ensure that the third party will take appropriate steps to protect the consumer's data and that the consumer provides express informed consent for the third party to collect, use, and retain the covered data. The authorization procedures clearly apply only to third parties that are attempting to access covered data through the rule's framework and the CFPB has concluded that additional clarification is not needed to specify that the authorization procedures do not apply when entities are attempting to access non-covered data.

As noted above, some commenters recommended that data providers play a larger role in the authorization process and have primary responsibility for consumer authorizations. The CFPB has determined that it is appropriate for third parties to obtain consumer authorization for third party access to covered data. The third party is providing the product or service to the consumer and understands what covered data are reasonably necessary for providing that product or service. Assigning responsibility for consumer authorization to the data provider could create friction and impair access to covered data by authorized third parties. The third party authorization procedures ensure that third parties are acting on behalf of consumers and that consumers understand and maintain control over third party access to their covered data. While the third party is responsible for obtaining the consumer's authorization, as discussed in part IV.C.5, a data provider must make available covered data when it receives certain information, including, as provided in § 1033.331(b)(1)(iii), information sufficient to document the third party has followed the § 1033.401 authorization procedures.

The CFPB has concluded that streamlined authorization procedures would not be appropriate when the consumer or authorized third party seek to change the terms of the authorization, such as to expand or narrow the scope of access to covered data. When the parties seek to change the terms of the authorization, the authorized third party must obtain a new authorization to ensure that the consumer understands and provides express informed consent for new terms for the authorized third party's access to covered data.

The CFPB also has concluded that the approach in § 1033.401(b) to require third parties to certify to abide by certain obligations related to the data access is appropriate. As part of the authorization procedures, third parties must certify to consumers that they will comply with certain obligations as condition of becoming authorized third parties entitled to access covered data on behalf of consumers. Similarly, data aggregators also must certify to consumers that they will comply with certain obligations. The CFPB concludes that this certification-based approach is the appropriate approach for ensuring that third parties are acting on behalf of consumers when they are accessing covered data. Some commenters had urged the CFPB to impose obligations directly on third parties, including data aggregators, and to supervise third parties, including data aggregators, to ensure compliance. They raised concerns about how the obligations could be enforced under a certification-based approach if the authorized third party or data aggregator fails to comply with their obligations. The CFPB has concluded that these obligations can be

enforced effectively under the certification-based approach in various ways, including by the CFPB using its authority to prevent unfair, deceptive, or abusive acts or practices; by other regulators; and potentially by consumers under other applicable statutes or common law. With respect to supervision of third parties, as discussed in part IV.5, the CFPB's supervisory authority is defined by the CFPA. The CFPB will continue to monitor the market, including by using its supervisory authority, and will consider whether additional rulemakings are appropriate to expand the scope of the CFPB's supervision with respect to part 1033.

The CFPB declines to include in the final rule additional protections requested by commenters. The authorization procedures provide significant protections for consumers to ensure that third parties accessing covered data are acting on behalf of the consumers. The CFPB has concluded that it is unnecessary to include in the rule specific prohibitions on false or misleading representations or omissions to induce consumers to consent to third party access to covered data. Other provisions of law, including the protections of the CFPA against unfair, deceptive, or abusive acts or practices, already would address such conduct. The CFPB also declines to impose a waiting period before a third party can solicit additional authorizations. The limitation on a consumer's requested product or service is intended to be flexible for consumers to determine for themselves if they want multiple products or services, which they can authorize separately through the authorization procedures. The CFPB also notes that the rule includes a clear limitation that third parties must not expand collection, use, or retention of covered data beyond the scope of the product or service described in the consumer's authorization.

To avoid being overly prescriptive, and in light of CFPA section 1033(e)'s objective of technological neutrality, the final rule does not specify methods or mechanisms that third parties must use to obtain express informed consent electronically. Regardless of the method or mechanism used, the third party must obtain a written or electronic signature that the consumer executes or adopts with the intent to sign the authorization disclosure. When determining the method or mechanism that it will use to obtain an authorization disclosure signed in writing or electronically by the consumer, a third party must consider all of the final rule's provisions related to the authorization disclosure as well as the CFPA's prohibition on unfair, deceptive, or abusive acts or practices and other applicable law. For example, under final § 1033.411(a), the third party must provide the authorization disclosure electronically or in writing. Under final § 1033.421(g), a third party must certify that it will provide a consumer with a copy of the authorization disclosure that has been signed by the consumer electronically or in writing and that reflects the date of the consumer's electronic or written signature. Certain third parties also must establish and maintain written policies and procedures that are reasonably designed to ensure retention of records that are evidence of compliance with the requirements of subpart D. A third party may not be able to satisfy these requirements if it obtains a consumer's electronic signature by certain methods or mechanisms. For example, the CFPB expects that in order to ensure accuracy, record integrity, and to preserve the ability to access the signed authorization disclosure, the authorization disclosure and the electronic signature establishing consumer consent cannot as a matter of regular course be provided orally and still satisfy all of the final rule's requirements.[90]

The final rule has adopted the proposed approach to authorization by joint account holders. As provided in § 1033.331(d), a data provider that receives a request for a covered data from a consumer that jointly holds an account or from an authorized third party acting on behalf of that consumer must provide covered data to that consumer or authorized third party. When a third party is seeking covered data on behalf of a consumer that jointly holds an account, the third party must comply with the authorization procedures for the joint account holder on whose behalf the third party is requesting access. Consistent with the discussion in part IV.C.5 in connection with § 1033.331(d), an authorization from a single account holder is sufficient for an authorized third party to access covered data, and the CFPB declines to require that other joint account holders be notified or receive copies of the authorization disclosure.

Finally, the CFPB declines to establish any exceptions to the authorization procedures for certain third parties, such as smaller third parties or non-commercial third parties. The CFPB has concluded that it would be difficult to define the appropriate scope of any such exceptions at this time and is concerned that such exceptions could create loopholes. The CFPB has designed the authorization procedures so that they should not be overly difficult for third parties to navigate. Moreover, the rule does not prohibit persons such as attorneys or accountants from making arrangements for the consumer to provide financial information, included covered data.

3. Authorization Disclosure (§ 1033.411)

Proposed § 1033.411 specified format and content requirements for the authorization disclosure that third parties would provide to consumers in order to be authorized to access covered data on behalf of the consumer, as set forth in proposed § 1033.401. As discussed below, the final rule maintains format and content requirements for the authorization disclosure with several adjustments.

General Requirements (§ 1033.411(a))

Proposed § 1033.411(a) would have required that, to comply with proposed § 1033.401(a), a third party must provide the consumer with an authorization disclosure electronically or in writing. It also would have set forth general format requirements for the authorization disclosure. Specifically, the CFPB proposed that the authorization disclosure must be clear, conspicuous, and segregated from other material. The CFPB preliminarily determined that these requirements would facilitate consumer understanding of the authorization disclosure. The CFPB also preliminarily determined that requiring the authorization disclosure to appear segregated from other material would help ensure consumers read and understand the authorization disclosure by avoiding overwhelming consumers with extraneous information and diluting the informational value of the authorization disclosure.

The CFPB sought comment on whether these formatting requirements would aid consumer understanding and whether additional requirements should be included in the rule. Specifically, the CFPB sought comment on whether the rule should contain more prescriptive requirements, such as specifying a word count or setting a reading level. The CFPB also sought comment on whether the rule should include a timing requirement, such as a requirement that the authorization disclosure be provided close in time to when the third party

[90] Programs, goods, and services provided to the general public must be accessible to consumers with disabilities. Third parties should ensure that their authorization and consent procedures enable, when appropriate, the use of assistive technologies that may be warranted under the ADA or other applicable law.

would need consumer data to provide the product or service. Additionally, the CFPB sought comment on whether indicia that the authorization disclosure is clear, conspicuous, and segregated from other material should include utilizing a format or sample form that is set forth in a qualified industry standard.

As stated in the proposed rule, the CFPB considered proposing specific guidance for accessibility of the authorization disclosure for individuals with disabilities but preliminarily determined that the Americans with Disabilities Act (ADA) and its implementing regulations [91] would already require that the authorization disclosure be provided in an accessible format. The CFPB sought comment on whether the rule should contain requirements relating to the accessibility of the authorization disclosure.

The CFPB received a number of comments on the authorization disclosure's general requirements. A variety of commenters, including data providers and trade associations for certain data providers, some third parties and trade associations for certain third parties, and a research institute, supported the proposed formatting requirements because the commenters thought that the proposed requirements are clear, straightforward, and meaningful. A commenter suggested that the proposed provisions related to written authorization disclosures should be removed because they are unnecessary.

A variety of commenters, including data providers and trade associations for certain data providers, some third parties, consumer advocates, and a research institute, supported adding various requirements for the authorization disclosure, including plain language, reading level, or understandability requirements. One consumer advocate commenter supported a word count limit for consumer understandability, but a research institute commenter opposed a word count limit. This commenter said that a word count limit would not be feasible based on the amount of information that may need to be included in the authorization disclosure.

A consumer advocate commenter and two data provider commenters supported adding authorization disclosure timing requirements to the rule. The consumer advocate commenter suggested that the rule specify that the authorization disclosure be provided no earlier than 14 days prior to the time that the third party begins providing the product or service to the consumer. One of the data provider commenters suggested that the authorization disclosure should be provided close in time to when the third party would need covered data to provide a product or service, and the other data provider commenter similarly suggested that the authorization disclosure be provided close in time to when the third party first accesses covered data. The consumer advocate commenter and two data provider commenters suggested that timing standards could increase the chances that a consumer is making an informed choice to authorize a third party to access covered data and reduce the risk that a consumer forgets that they previously authorized a third party to access covered data.

A variety of commenters, including data providers, third parties, a consumer advocate, and a research institute, suggested adding other formatting requirements to increase consumer understanding. Some data providers, trade associations for certain data providers, and a third party commenter requested additional clarity on the meaning of ''clear and conspicuous.'' A trade association for data providers requested that the final rule prohibit extraneous language that could cause consumer confusion or obscure key terms of access. One third party commenter expressed concern that the proposed requirement to segregate the disclosure from other material would cause consumers to over-focus on the authorization disclosure. This commenter supported allowing the authorization disclosure to be combined with other materials, including disclosures required under Regulation E or Regulation Z. However, several commenters supported requiring that the authorization disclosure be segregated from other material.

A standard-setting body commenter asserted that the use of qualified industry standards regarding the authorization disclosure would not be appropriate for establishing regulatory compliance or as indicia of compliance, but stated that specifications and best practices might evolve to match the final rule and be used as suggestive tools. Some trade association commenters and a credit union commenter supported a role for industry standards in authorization disclosure formatting because, they said, it would improve consistency in the disclosures. A third party commenter stated that when consumers have multiple accounts, the rule should ensure that consumers check a box or similarly identify the accounts to which consumers are granting access, noting that this requirement could be defined by industry standards.

Commenters also provided feedback on whether the CFPB should provide model forms for the authorization disclosure in addition to setting forth general formatting requirements in the rule. A variety of commenters, including data providers, consumer advocates, and a research institute, suggested that the CFPB provide model forms or clauses for all or part of the authorization disclosure to save time and resources and ensure effectiveness, consistency, and compliance. Two consumer advocate commenters and a bank commenter suggested that model forms would be beneficial for consumers. A bank trade association commenter and a data aggregator commenter suggested that use of model forms should provide a safe harbor. Conversely, one trade association commenter specifically opposed model forms. This commenter opposed over-engineered and overly prescriptive requirements for the authorization disclosure. One third party commenter preferred flexible standards that would allow authorization disclosures to shift with market innovations and new technologies.

A consumer advocate commenter requested a disability accessibility requirement to prevent any ambiguity in case there is a disagreement about the applicability of the ADA.

For the reasons discussed herein, the CFPB is finalizing the language of § 1033.411(a) as proposed, with an additional requirement. Specifically, the CFPB is adding to final § 1033.411(a) a requirement that the names included in the authorization disclosure, as required by §§ 1033.411(b)(1) and (2) and by § 1033.431(b), must be readily understandable to the consumer. The CFPB has determined that this requirement will help ensure that consumers are able to easily identify the entities in the authorization disclosure. Unlike a legal or trade name which may or may not be familiar to a consumer depending on the particular entity, the ''readily understandable'' requirement directly addresses consumer understanding to facilitate informed consent.

The CFPB is not eliminating the option for third parties to provide the authorization disclosure in writing as suggested by a commenter. Retaining this option permits flexibility in circumstances that may necessitate the authorization disclosure to be provided in a non-electronic form.

[91] *See* 42 U.S.C. 12132, 12182(a); 28 CFR 35.130, 35.160(a), 36.201, 36.303(c).

The CFPB is not including the additional formatting requirements requested by commenters, including plain language or reading level requirements or word count limits, because ''clear and conspicuous'' is a common standard that is flexible enough to cover a variety of circumstances and ensure consumer understanding of the authorization disclosure. The meaning of ''clear and conspicuous'' in this final rule should be informed by how the standard has been interpreted in other contexts, including by the FTC in assessing whether disclosures in advertisements are clear and conspicuous.[92]

The CFPB is not including timing requirements, as suggested by some commenters, in order to maintain flexibility in light of the variety of products and services for which third parties may seek to access covered data. For example, a third party may need to access covered data periodically, may only need to access covered data at or near the time that the consumer obtains the product or service, or may only need to access covered data at a later time. Additionally, the final rule's duration and reauthorization requirements act as added protections against potential harms related to third parties accessing covered data based on long-term authorizations.

The CFPB is maintaining the proposed segregation requirement for the authorization disclosure. Combining disclosures or other materials that serve varying purposes in the manner that a third party commenter suggested could result in consumer confusion. Although Regulation E and Regulation Z disclosures provide important consumer protections, they do not serve the same purposes as the authorization disclosure, which is to ensure that third parties are acting on behalf of consumers when accessing covered data. Simply placing the authorization disclosure at the top of a combined disclosure form would not sufficiently alleviate the risk of consumer confusion. Moreover, segregating the authorization disclosure from other material, including other important disclosures, allows the consumer to consider the content of each disclosure or other document in turn.

The CFPB is not providing model forms or clauses for the authorization disclosure. The final rule provides flexibility in how third parties meet the disclosure requirements given the range of potential third parties that may seek authorization to access covered data pursuant to the final rule's framework and the potential for innovation and the development of new technologies. As one research institute commenter noted when discussing a word count limit, there may be feasibility issues with providing a model disclosure because it potentially would need to be useable for multiple different types of products and services, multiple data providers, and multiple third parties. The CFPB will monitor the market and consider developing model forms or clauses in the future, as appropriate.

The final rule does not reference a consensus standard regarding authorization disclosure format because the clear and conspicuous standard is well established in Federal consumer financial law, as well as other consumer protection frameworks in both State and Federal law. Additionally, the CFPB encourages third parties and other interested stakeholders to apply to test authorization disclosures through the CFPB's Trial Disclosure Policy.[93]

The CFPB is not including disability accessibility requirements in the final rule because the ADA addresses these requirements, and the CFPB does not want to create potentially conflicting requirements.

Authorization Disclosure Content (§ 1033.411(b))

Proposed § 1033.411(b) would have required inclusion of the following key terms of access in the authorization disclosure: (1) the name of the third party that will be authorized to access covered data pursuant to the third party authorization procedures in proposed § 1033.401; (2) the name of the data provider that controls or possesses the covered data that the third party seeks to access on the consumer's behalf; (3) a brief description of the product or service that the consumer has requested the third party provide and a statement that the third party will collect, use, and retain the consumer's data only for the purpose of providing that product or service to the consumer; (4) the categories of covered data that will be accessed; (5) the certification statement described in proposed § 1033.401(b); and (6) a description of the revocation mechanism described in proposed § 1033.421(h)(1). Additionally, proposed § 1033.431(b) would have required the authorization disclosure to include the name of any data aggregator that would assist the third party with accessing covered data and a brief description of the services the data aggregator would provide.

The proposed content requirements for the authorization disclosure aimed to strike a balance between providing consumers with sufficient information to enable informed consent to data access and keeping the disclosure sufficiently short to increase the likelihood that consumers will read and understand it. The CFPB preliminarily concluded that the proposed requirements would be important for consumers to understand the terms of data access and would help ensure that third parties accessing covered data are acting on behalf of consumers by enabling informed consent.

The CFPB sought comment on any obstacles to including the proposed authorization disclosure content and on whether additional content was needed to ensure consumers have enough information to provide informed consent. Specifically, the CFPB sought comment on whether the rule should include any additional requirements to ensure: (1) the consumer can identify the third party and data aggregator, such as by requiring inclusion of legal names, trade names, or both; (2) the description of the consumer's requested product or service is narrowly tailored and specific such that it accurately describes the particular product or service that the consumer has requested; (3) the consumer can locate the third party obligations, such as by requiring a link to the text of proposed § 1033.421; and (4) the consumer can readily understand what types of data will be accessed, such as by requiring third parties to refer to the covered data they will access using the categories in proposed § 1033.211. The CFPB also sought comment on whether the authorization disclosure should include additional content such as the names of other parties with whom data may be shared, the third party's contact information, or how frequently data will be collected from the consumer's account(s).

A variety of commenters supported the authorization disclosure content included in the proposed rule on the grounds that it would provide consumers with information that would enable informed consent. A variety of commenters also stressed the importance of keeping the authorization disclosure short to avoid information overload for consumers. One research

[92] The FTC has articulated the ''4 Ps''—prominence, presentation, placement, and proximity—as a way of evaluating whether disclosures are clear and conspicuous. Lesley Fair, *Full Disclosure,* FTC Bus. Blog (Sept. 23, 2014), *https://www.ftc.gov/business-guidance/blog/2014/09/full-disclosure.*

[93] Consumer Fin. Prot. Bureau, *Competition and innovation at CFPB, https://www.consumerfinance.gov/rules-policy/competition-innovation/* (last visited Oct. 16, 2024). Under this policy, companies can obtain a safe harbor for testing disclosures that improve upon existing disclosures for a limited period of time while sharing data with the CFPB.

institute commenter requested harmonization of the authorization disclosure with other privacy laws to reduce compliance challenges and consumer confusion.

A variety of commenters suggested that additional content be included in the authorization disclosure.[94] A bank, bank trade association, and a consumer advocate also recommended that additional content be included through a hyperlink on the authorization disclosure.

Other commenters, including a data aggregator, a trade association for certain third parties, a data provider, a consumer advocate, and a research institute, suggested that the content should be limited. Two of these commenters expressed concern about information overload, and two commenters expressed concern about the burden of including additional information in the authorization disclosure. A data provider commenter requested that the final rule remove the requirement to include the data provider's name in the authorization disclosure.

Some commenters, including a credit union commenter, trade association commenters, and a consumer advocate commenter, supported additional requirements to ensure the description of the consumer's requested product or service is narrowly tailored and specific. One data aggregator commenter requested clarification on the description needed to identify the categories of data that will be accessed. This commenter suggested that it should be sufficient to use categories such as ''transactional history'' or ''account balance'' and that it should not be necessary to describe more specific data fields.

For the reasons discussed herein, the CFPB is finalizing § 1033.411(b) with modifications. First, the final rule adds a requirement, as § 1033.411(b)(6), that the authorization disclosure include a brief description of the expected duration of data collection and a statement that collection will not last longer than one year after the consumer's most recent reauthorization. The content of proposed § 1033.411(b)(6) is finalized as § 1033.411(b)(7). Second, the final rule removes the word ''covered'' from § 1033.411(b)(4) and specifies that the disclosure for categories of data that will be accessed must have a substantially similar level of specificity as the categories in § 1033.211. The other modifications are non-substantive adjustments for clarity and consistency.

The CFPB is finalizing in § 1033.411(b)(6) a requirement that third parties include a description of the expected duration of data access because this requirement is important for consumers to understand the terms of data access. In particular, including information about the revocation method in the authorization disclosure without information about the duration of collection could leave consumers under the mistaken impression that the only way for data access to end is through utilizing the revocation method. Duration is also a key term that may help consumers decide whether to consent to third party data access. In the case of a one-time data pull, this additional information lets consumers know the data sharing will not continue. In the case of authorizing data access without a set duration, this additional information ensures consumers know about the one-year reauthorization requirement.

By removing the word ''covered'' from § 1033.411(b)(4), the final rule allows the authorization disclosure to include categories of non-covered data. This gives third parties the flexibility to utilize the authorization procedures to access non-covered data in addition to covered data. The additional requirement that the categories used in the authorization disclosure must have a substantially similar level of specificity as the categories in § 1033.211 will help ensure that consumers have enough information about what types of data are being accessed while also ensuring that the authorization disclosure does not become too lengthy due to a long list of very specific data types.

Beyond these modifications, the CFPB is not adding or eliminating content requirements for the authorization disclosure in the final rule, as requested by some commenters. The content requirements strike an appropriate balance between providing consumers with sufficient information to enable informed consent to data access and keeping the disclosure sufficiently short to increase the likelihood that consumers will read and understand it. Regarding the commenter suggesting clarification on the description of the categories of data to be accessed, the CFPB notes that the categories of data that will be accessed must have a substantially similar level of specificity as the categories in § 1033.211. Finally, the CFPB has determined that third parties can comply with the authorization disclosure content requirements in § 1033.411(b) while also complying with other applicable privacy laws.

Language Access (§ 1033.411(c))

Proposed § 1033.411(c)(1) would have required that the authorization disclosure be provided in the same language as the communication in which the third party conveys the authorization disclosure to the consumer. It also would have required any translation of the authorization disclosure to be complete and accurate. Proposed § 1033.411(c)(2) stated that if the authorization disclosure is in a language other than English, it must include a link to an English-language translation. Additionally, proposed § 1033.411(c)(2) stated that, if the authorization disclosure is in English, it would be permitted to include links to translations in other languages.

The proposed rule stated that consumers with limited English proficiency may benefit from receiving a complete and accurate translation of the authorization disclosure, and some third parties may want to respond to the needs of consumers with limited English proficiency using translated disclosures. At the same time, the CFPB preliminarily determined that requiring third parties to identify such consumers and provide complete and accurate translations in the myriad languages that consumers speak may impose a significant burden on third parties.

The proposed rule stated that some consumers who receive translated disclosures may also want to receive English-language disclosures, either because they are fluent in English, or because they wish to share the disclosures with an English-speaking family member or assistance provider. It also stated that English-language disclosures may also allow consumers to confirm the accuracy of the translation.

The CFPB received few comments on the proposed language access provisions. One trade association for nondepositories indicated that the

[94] One or more commenters requested that one or more of the following be included in the authorization disclosure: the legal and trade name of the third party; a description of the data security and privacy standards to which the third party will adhere in relation to the consumer's data; contact information for the third party, aggregator, and/or the CFPB; a link to the third party's website; information about the frequency (how often data are accessed), recurrence (such as one time data access or recurring access), and duration of data access or retention (time period when data are accessed or retained); a description of any alternatives to sharing covered data that would allow a consumer to access the product or service (for example, providing a credit score for credit underwriting or microtransfers to the consumer's bank account to verify the account); the names of other third parties with whom data may be shared; a brief explanation of the ways in which data that identifies the consumer can be used by the third party accessing the data; and the specific purposes for which the third party collects and uses the consumer's data.

language access provision is satisfactory. A consumer advocate commenter requested that the CFPB require the authorization disclosure to be translated into languages used in marketing. Another consumer advocate commenter requested a Spanish language disclosure and stated that the rule should require third parties to automatically provide the authorization disclosure and other documents in Spanish to all consumers. This commenter also suggested that the rule improve language access throughout the entirety of the data gathering process and hold data aggregators and lenders to comparable standards. A bank trade association commenter suggested that the language access provision in the proposed rule necessitated additional discussion or clarity regarding how principles regarding unfair, deceptive, or abusive acts or practices apply more generally to financial products and services on an end-to-end basis.

For the reasons discussed herein, the CFPB is finalizing the language access provisions in § 1033.411(c) as proposed, with nonsubstantive clarifying changes. The final rule's language access requirement applies to the authorization disclosure and, where applicable, the data aggregator certification. The language access provisions in the final rule ensure that a consumer understands and is able to exercise control over what covered data the third party would collect, use, and retain. The CFPB has determined that it would not be appropriate to require authorization disclosures to be provided to all consumers in Spanish, as requested by one commenter. The requirement in § 1033.411(c)(1) to provide the authorization disclosure in the same language as the communication in which the authorization disclosure is conveyed to the consumer should help ensure that consumers receive the disclosure in a language they understand, without a broad requirement that all authorization disclosures be provided in Spanish, which would result in additional burden on third parties. A broad statement about the interaction of principles regarding unfair, deceptive, or abusive acts or practices and language access more generally is outside the scope of this rulemaking.

4. Third Party Obligations (§ 1033.421)

Proposed § 1033.421 described obligations to which third parties would be required to certify in order to be authorized to access covered data. The proposed third party obligations included: a limit on third party collection, use, and retention of covered data to what is reasonably necessary to provide the consumer's requested product or service; a maximum duration of collection of one year after the consumer's most recent authorization unless the consumer provides a new authorization; and certifications that the third party would provide consumers a simple way to revoke access, maintain certain accuracy and data security obligations, and ensure consumers have access to information about the third party's authorization to access data. The CFPB stated that it was proposing these certification requirements to ensure that third parties accessing covered data are acting on behalf of the consumer.

The proposed third party obligations received a range of feedback from commenters, with some commenters offering general support for the proposed approach to requiring third parties to certify to the obligations in proposed § 1033.421, while other commenters expressed concern with the proposed obligations and the associated privacy protections.[95] Some commenters suggested that aspects of the proposed obligations do not accord with congressional intent to ensure consumers can use their own data for their own preferences, and that the CFPB lacks authority to prescribe the proposed obligations. Other commenters said the obligations are not strong enough to protect consumers' privacy. Specific comments are discussed in more detail in the sections regarding third party obligations, below.

The CFPB is prescribing the third party obligations in § 1033.421 to ensure that third parties accessing covered data are acting on behalf of consumers, consistent with CFPA section 1033. As explained above in the legal authority discussion in part IV.D.1, the plain language of CFPA section 1033(a) provides that, subject to rules prescribed by the CFPB, a covered person shall make available to a ''consumer,'' upon request, certain information in the control or possession of the covered person. CFPA section 1002(4) defines ''consumer'' as ''an individual or an agent, trustee, or representative acting on behalf of an individual.'' For convenience, part 1033 generally refers to the individual as the ''consumer'' and an agent, trustee, or representative acting on behalf of that individual as an ''authorized third party.'' Congress intended, through CFPA section 1033, that the consumer would have the right to access their covered data for their own benefit, and would be able to authorize representatives to act on their behalf to that end. As such, the final rule requires third parties accessing covered data to adhere to the procedures and obligations in subpart D, including certifying to limit collection, use, and retention of covered data to what is reasonably necessary to provide the consumer's requested product or service, so as to ensure that the third party is accessing data as a representative acting on behalf of the consumer and that the consumer is the primary beneficiary of that data access. In addition, as noted above, the CFPB has rulemaking authority to adopt § 1033.421 to carry out the objectives of CFPA section 1033.

By adhering to the obligations in § 1033.421, a third party, as a representative acting on behalf of the consumer, ensures consumers are best positioned to understand the data access they are authorizing and accordingly are best positioned to exercise meaningful control with respect to such access. As such, the obligations in § 1033.421 ensure the consumer is effectively informed about the scope of the third party's access to covered data and ensure that the third party's access accords with the intent and reasonable expectations of the consumer. For example, the third party's adherence to § 1033.421(a) ensures the consumer understands and clearly directs how and for what purposes their data will be collected, used, and retained.

For the reasons discussed herein, final § 1033.421 generally adopts the proposed third party obligations. Changes related to specific aspects of the proposed obligations are described in detail below.

General Standard To Limit Collection, Use, and Retention (§ 1033.421(a))

Under proposed § 1033.421(a)(1), third parties would have been required to limit collection, use, and retention of covered data to what is reasonably necessary to provide the consumer's requested product or service. Proposed § 1033.421(a)(2) would have provided that, for purposes of the limitation in proposed § 1033.421(a)(1), certain listed activities would not be part of, or reasonably necessary to provide, any other product or service. Under these proposed provisions, third parties would seek and obtain consumer authorization to access covered data only as reasonably necessary for the provision of the product or service that the consumer requested, and not for uses that are secondary to that purpose.

[95] A research institute commenter stated that the final rule should clarify that data generated by a third party in the course of providing the consumer's requested product or service is not subject to the third party obligations. Use of generated data is discussed below related to § 1033.421(c).

The proposed rule explained that the limit on collection, use, and retention of covered data in § 1033.421(a) was designed to ensure that, consistent with carrying out the objectives of CFPA section 1033, third parties that access covered data would act on behalf of consumers, and that third party collection, use, and retention of covered data would proceed in alignment with consumer control and truly informed consent. Specifically, proposed § 1033.421(a) was aimed at ensuring that third parties access covered data for the consumer's benefit, that consumers retain meaningful control over their data when authorizing third party access to that data, and that consumers are best positioned to understand the scope of that authorization. In addition, proposed § 1033.421(a) was aimed at ensuring consumers do not unknowingly or reluctantly acquiesce to data collection, use, and retention that they do not want. Further, the proposed rule noted that covered data that third parties would collect, use, and retain pursuant to consumer authorization would include sensitive financial data that might subject consumers to fraud or identity theft if it were exposed.[96] The proposed rule stated that the limitation in § 1033.421(a) was designed to ensure that third parties would act on behalf of consumers when accessing that sensitive data.

The CFPB is generally finalizing § 1033.421(a) as proposed. Feedback from commenters, and the CFPB's approach in the final rule, are discussed further below related to each aspect of the general data limitation standard.

In General (§ 1033.421(a)(1))

The CFPB is finalizing § 1033.421(a)(1) as proposed. Under final § 1033.421(a)(1), third parties must certify to limit collection, use, and retention of covered data to what is reasonably necessary to provide the consumer's requested product or service. Specific aspects of the standard in § 1033.421(a)(1), including comments received and rationale for the final provisions, are discussed below.

Reasonably Necessary

As described in the proposed rule, the reasonably necessary standard was designed to ensure that the consumer is the primary beneficiary of any authorized data access, and that the resulting collection, use, and retention of covered data align with consumer control and informed consent. The CFPB considered a range of alternatives to this standard, including evaluating limitation standards in other data privacy regimes.[97] For example, the CFPB considered whether data collection, use, and retention should be limited to what is ''strictly necessary,'' ''adequate,'' ''relevant,'' or ''legitimate.'' The CFPB preliminarily determined that a reasonably necessary standard would be flexible enough that third parties could use data for a variety of purposes to provide the product or service the consumer requested, but would still sufficiently minimize third party collection, use, and retention to ensure third parties accessing covered data are acting on behalf of the consumer.

The reasonably necessary standard received general support from many commenters, including data providers, consumer advocates, third parties, data aggregators, Members of Congress, trade associations for data providers, and others. These commenters expressed support for third parties generally limiting their collection, use, and retention of data based on what is reasonably necessary. Some commenters who supported the reasonably necessary standard offered for consideration various clarifications or feedback on other aspects of the rule, like how the standard might apply to collection, use, or retention separately. These comments are discussed below related to those provisions.

Some commenters—mostly third parties and related trade associations, but also some banks, trade associations for data providers, and consumer advocates—expressed concerns about the proposed reasonably necessary standard. Some of these commenters posited that the proposed standard is stricter than other privacy regimes, might result in unintended consequences for consumers, does not give consumers meaningful control, or would result in an unlevel playing field between data providers and third parties. Other commenters suggested that the reasonably necessary standard does not go far enough to constrain downstream data uses not requested by consumers or to curb activities by data aggregators that would not be necessary for the provision of the product or service. Other commenters suggested alternative standards, either from industry or from other privacy laws, regulations, and principles. Some commenters suggested that collection, use, and retention each should be governed by different standards. In contrast, some third party commenters stated that the reasonably necessary standard for collection is too rigid and impractical for some products and services. Comments related to the application of the general limitation standard to collection, use, and retention are discussed separately below in more detail.

For the reasons discussed herein, the CFPB is finalizing the reasonably necessary standard in § 1033.421(a) as proposed. The CFPB considered whether a stricter standard should apply to more sensitive types of data, and generally whether other standards would be more consumer protective. After considering comments received and the CFPB's evaluation of alternatives, the CFPB has determined that the reasonably necessary standard is sufficiently flexible for third parties to collect, use, and retain covered data for a variety of purposes to provide the product or service the consumer requested, but will still sufficiently minimize third party collection, use, and retention to ensure third parties accessing covered data are acting on behalf of the consumer. The CFPB disagrees with commenters that suggested the standard is too rigid or impractical, or too permissive for third parties such that it would not protect consumers from downstream uses or result in other unintended consequences. The reasonably necessary standard will protect consumers from unwanted data collection, use, and retention while giving third parties sufficient flexibility to collect, use, and retain data to provide consumers the products or services they request. As such, the CFPB declines to make commenters' suggested changes to the proposed standard.

As described further below, the CFPB has determined that collection, use, and retention of covered data beyond what is reasonably necessary for the product or service the consumer requested would undermine the consumer's understanding of the authorizations they provided and would thus undermine a consumer's ability to control their data. The third party obligations, including the limit on collection, use, and retention of covered data, are designed to ensure that the third party is accessing covered data for the consumer and that accordingly the

[96] These sensitive data also could impact persons or entities besides the consumer from whom they are sourced, especially when collected, used, and retained in large amounts, such as where the data are matched with other consumer data sets.

[97] The proposed rule stated that the reasonably necessary standard in proposed § 1033.421(a)(1) would be similar to standards in several data privacy frameworks that minimize third parties' collection, use, and retention of data. *See, e.g., Competition and Consumer (Consumer Data Right) Rules 2020,* div. 1.3 (Austl.) (minimizing consumer data requests to what is ''reasonably needed''); Reg. 2016/679, art. 5(1)(c), 2016 O.J. (L 119) 7 (EU) (''Personal data shall be . . . limited to what is necessary in relation to the purposes for which they are processed.'').

consumer is the primary beneficiary of that data access. Third parties can benefit from access to covered data, but only by collecting, using, and retaining data as reasonably necessary to provide the consumer's requested product or service.[98] A third party that collects, uses, or retains data in a manner that benefits the third party but that is not reasonably necessary for the product or service the consumer requested would not be acting on behalf of the consumer. In that situation, the third party would be advancing their own the interests, and not the interests of the consumer, and as such would not be acting as a representative acting on behalf of the consumer within the meaning of CFPA section 1002(4).

Consumer's Requested Product or Service

Under proposed § 1033.421(a)(1), third parties would have been required to limit collection, use, and retention of covered data to what is reasonably necessary to provide the consumer's requested product or service. The second aspect of this standard, ''the consumer's requested product or service,'' was designed to carry out the objectives of CFPA section 1033. The proposed rule explained that consumers generally go into the market seeking the core function of a product or service and, when authorizing data access, intend for their data to be accessed for that purpose. The proposed rule explained further that third parties can significantly benefit from accessing consumers' covered data, and consumers often do not know about various data uses, do not want companies to use their data broadly, and also generally lack bargaining power to adequately protect their data privacy. The proposed rule stated that, as a result of this imbalance, third parties often broadly collect, use, and retain covered data for their own benefit. The CFPB preliminarily determined that the proposed standard being grounded in the ''consumer's requested product or service'' would ensure third parties only collect, use, and retain covered data on consumers' behalf, pursuant to informed consent.

To avoid circumvention of this standard, the CFPB proposed to treat the product or service as the core function that the consumer sought in the market and that accrues to the consumer's benefit. The preamble to the proposed rule explained that the scope of the product or service would not be defined by disclosures, and the CFPB noted its concern that disclosures could be used to create technical loopholes by expanding the scope of the product or service the consumer requested to include any activity the company would choose, including those that would benefit the third party, not the consumer. As such, proposed § 1033.421(a)(1) was intended to help ensure that third parties act for the benefit of consumers, that consumers retain control over their authorizations for data access, and that consumers are best positioned to provide meaningfully informed consent to third party collection, use, and retention of their covered data.

Some commenters requested clarifications or suggested that the proposed general standard should be changed with respect to its approach to the consumer's requested product or service. A data aggregator commenter stated that the final rule should rely on ''reasonably necessary'' only, and should not limit collection, use, or retention by the consumer's requested product or service. This commenter stated that this change would allow third parties to use previously collected data as reasonably necessary to provide additional products or services the consumer requests at a later time. Other commenters requested clarifications about the proposal's approach to the consumer's requested product or service. For example, a trade association for data providers, a data provider, and a third party requested that the phrase ''consumer's requested product or service'' be defined or clarified. A trade association for data providers further stated that the description of the consumer's requested product or service in the preamble to the proposed rule gave the impression that the CFPB intended to decide on a case-by-case basis, based on specific consumer understanding, what the scope of a requested product or service is and then determine whether data access based on that scope was reasonably necessary. A third party stated that the scope of a consumer's requested product or service would be unclear in light of how products or services are currently offered to consumers in the market, as the preamble to the proposed rule potentially would have divided a product or service by its core functions or component parts.

For the reasons discussed herein, the CFPB is finalizing § 1033.421(a) as proposed. Under final § 1033.421(a), a third party's collection, use, and retention of covered data must be reasonably necessary to provide the ''consumer's requested product or service.'' By limiting third party collection, use, and retention of covered data based on ''the consumer's requested product of service,'' the final rule ensures that such collection, use, and retention is for the consumer's benefit, that consumers retain control over their authorizations for data access, and that consumers are best positioned to providing meaningfully informed consent to third party collection, use, and retention of covered data. As such, the CFPB declines to adopt commenters' suggestions to finalize the general limitation standard without reference to the ''consumer's requested product or service,'' or to otherwise expand the general limitation standard in ways that would allow for covered data to be used for additional products or services or other purposes.

To address commenters' concerns about potential confusion, the CFPB notes that ''the consumer's requested product or service'' in § 1033.421(a) is not intended to result in a case-by-case inquiry into a specific consumer's understanding of the requested product or service. Rather, what constitutes a consumer's requested product or service is informed by context, such as general public understanding of what attributes a given product or service has or how the product or service functions in the market. The third party cannot rely on disclosures to expand the scope of a consumer's requested product or service or use disclosures to create technical loopholes and include any purposes the company chooses. The CFPB notes that, in the course of seeking authorization to access covered data, some third parties might attempt to expand the scope of products or services offered to consumers in an effort to access covered data for purposes that do not primarily benefit consumers. Along those same lines, some third parties might purport to offer a product or service to a consumer that is merely a pretext for collecting, using, and retaining covered data from the consumer.[99] Where third parties seek to use data to advance their own interests, rather than to act for the consumer, such actions would not be on

[98] Consumers benefit by authorizing third parties to collect, use, or retain their data for the product or service they request, and from having confidence third parties will not do so other purposes. The third party's obligations to the consumer do not prevent the third party from benefiting from access to covered data. As noted above, third parties can benefit from such access by collecting, using, and retaining data as reasonably necessary to provide the consumer's requested product or service. In other words, the way a third party can benefit is through the opportunity to provide the consumer the product or service that they are requesting.

[99] The CFPB notes that such a practice would be inconsistent with § 1033.401, which provides that third parties must seek access to covered data on behalf of the consumer to provide a product or service the consumer requested.

behalf of the consumer, and thus would not be in accordance with the text of sections 1002 and 1033 of the CFPA.

Additionally, the CFPB notes that the discussion in the proposal's preamble related to the product or service's core function was not intended to suggest that each product or service would necessarily have only a single attribute. As described above, if a consumer requests a product or service with a commonly understood set of attributes, the third party cannot expand the scope of the product or service for purposes of § 1033.421(a) by including in its disclosures to consumers attributes that are not consistent with the general public understanding of that product or service or how that product or service functions in the market. Whether attributes are associated with a product or service could be indicated if those attributes are widely available as, or generally compose, those products or services. While a third party might offer to a consumer, even within a single mobile application, two products or services for which a consumer might authorize data access, like a budgeting service and a payments service, these services are sufficiently different as to necessitate two separate authorizations for the purposes of § 1033.421(a). Similarly, while a credit card and a prepaid card share many attributes, they are, and are commonly understood to be, different types of products. Accordingly, authorization for data access to provide a credit card would not be sufficient authorization for data access to provide a prepaid card.

Specific Purposes (§ 1033.421(a)(2))

Proposed Rule

In addition to the general limitation on collection, use, and retention of covered data in § 1033.421(a)(1), proposed § 1033.421(a)(2) stated that targeted advertising, cross-selling of other products or services, or the sale of covered data would not be part of, or reasonably necessary to provide, any other product or service. Relying on stakeholder feedback and research, the proposed rule described that third parties generally do not include these activities in products or services for consumers' benefit, but instead do so for their own benefit.[100] These activities are pervasive in the market, consumers often lack choices about whether their data can be used for these purposes, and consumers often do not expect their data to be used for them. In addition, the CFPB stated that consumers often do not understand these activities' potential for harm, while also noting that third parties can greatly benefit from these activities. For all these reasons, the CFPB preliminarily determined that when a third party combines targeted advertising, cross-selling, and data sales with any other consumer requested products or services, it is generally doing so for its own benefit, and that such combination would interfere with consumer control and understanding. The CFPB also preliminarily determined that it would not be consistent with carrying out the objectives of CFPA section 1033 for a third party to consider collection, use, or retention of data for these purposes to be within the scope of the consumer's requested product or service for purposes of proposed § 1033.421(a)(1).

The CFPB explained that proposed § 1033.421(a)(2) would not prevent third parties from engaging in the specified activities as standalone products. To the extent the core function that the consumer seeks out in the market is such an activity, a third party could potentially provide that core function to the consumer consistent with, and subject to, the terms of the proposed rule. Any such offering would be subject to other applicable laws, including the CFPA's prohibition on unfair, deceptive, and abusive practices.

Comments Received

Commenter feedback on the proposed limitation on targeted advertising, cross-selling of other products or services, and data sales was varied. Some consumer advocates, data providers, and trade associations representing data providers expressed support for the proposed limitation in § 1033.431(a)(2). For example, some trade associations representing data providers stated that dark patterns or other deceptive practices from third parties result in consumers giving consent to activities consumers are not aware of, especially related to data sales and targeted marketing, and that requiring third parties to separately follow the authorization procedures to obtain consumer authorizations for these activities would be beneficial to consumers. An individual commenter similarly stated that consumers should not become subject to ''surveillance capitalism'' through authorization of third parties' use of covered data.

Various commenters, including trade associations for data providers, data providers, trade associations for nondepositories, data aggregators, consumer advocates, and others, appeared to have different understandings about whether the proposed limitation in § 1033.421(a)(2) would prohibit consumers from authorizing their data to be accessed for these purposes. Some commenters appeared to interpret the proposal as a prohibition on such authorization. Others appeared to understand the proposal as permitting third parties, using covered data pursuant to consumer authorization, to engage in targeted advertising, cross-selling, and data sales as standalone products the consumer seeks out in the market. At least one trade association for data providers appeared unsure if the proposal would prohibit these activities, stating that the meaning of the phrase in the rule ''any other product or service'' is unclear.

Various commenters, including data providers, trade associations for data providers, consumer advocates, and other trade associations, asked for definitions of targeted advertising, cross-selling, and data sales. A consumer advocate and a trade association representing data providers proffered potential definitions. These commenters suggested that, without clarity on the bounds of these terms, the rule would lack sufficient clarity because the terms have broad and varied meaning in the market. For example, these commenters said the term targeted advertising is potentially broad and could cover advertising that uses consumers' personal characteristics and could also potentially include other concepts like contextual marketing that does not require precise identifiers. These commenters were also concerned about the definition of cross-selling because, as described by these commenters, the term could include some traditional attributes of personal financial management services that offer recommendations to consumers. A data provider commenter noted that the CFPB has not previously defined cross-selling of other products or services or data sales. A consumer advocate commenter suggested that the CFPB define data sales as the ''sale, rental, exchange, or other transfer or use not otherwise authorized.'' Finally, two trade associations representing data

[100] *See, e.g.,* Rodney John Garratt & Michael Junho Lee, *Monetizing Privacy,* at 4, Fed. Rsrv. Bank of N.Y. Staff Rep. No. 958 (Jan. 2021), *https://www.newyorkfed.org/medialibrary/media/research/staff_reports/sr958.pdf* (''Most of the gains from consumer data do not go to consumers.''); Raheel A. Chaudhry & Paul D. Berger, *Ethics in Data Collection and Advertising,* 2 GPH Int'l J. of Bus. Mgmt. 1, 5–6 (2019), *http://www.gphjournal.org/index.php/bm/article/view/240/110* (stating that targeted advertising and data monetization allow companies to collect, use, and retain ''consumer data without the user being any the wiser,'' and that targeted advertising and data monetization elevate ''the risk involved in data breaches and malicious parties buying consumer data on the secondary data market'').

providers requested that the CFPB develop a clear concept or definition of what ''any other product or service,'' means, and what ''standalone product'' means, as these terms may not have been clear in the proposed rule.

Some commenters, including research organizations and third parties, expressed concern that proposed § 1033.421(a)(2) might result in a prohibition on targeted ads, cross-selling, and data sales because, at least in some circumstances, they may not be traditionally offered as standalone products or services. A research organization and a third party commenter stated that the proposal might preclude third parties from using covered data for these purposes where they are traditionally a component of a product or service and are not standalone products or services. These commenters offered examples of products or services that might benefit consumers and might include targeted advertising or cross-selling. Some commenters, like trade associations for nondepositories, third parties, research institutes, consumer advocates, and data aggregators, asserted that proposed § 1033.421(a)(2) could result in consumer harms, such as higher prices, hindered choice, and others. These commenters expressed concerns about competition harms, like increased barriers to market entry for new companies who would traditionally rely on targeted advertising and cross-selling to generate growth, decreased innovation of new products, services, or business models, and increased consolidation in existing market players. These commenters stated that the CFPB did not account for the benefits to consumers through targeted advertising and cross-selling, and overstated potential harms. For example, some of these commenters cited studies they characterize as showing that consumers consistently authorize targeted advertising when given choices, significantly benefit from targeted advertising, and benefit from the competition that targeted advertising generates within the market.[101]

Some trade associations and third parties stated that the proposed limitation on targeted advertising, cross-selling of other products and services, and data sales would not ensure consumers are able to consent to third party products or services consumers might want and would therefore be a restriction on consumer choice. A trade association for nondepositories also stated that, if a consumer consents to third party collection of covered data for certain uses, like targeted advertising, then a prohibition on that use would run afoul of the First Amendment.

Finally, some commenters, including trade associations for nondepositories, a law firm, third party commenters, and data aggregators suggested that proposed § 1033.421(a)(2) is contrary to the congressional intent of CFPA section 1033 to ensure consumers can access data to use for their own preferences. These commenters stated that the CFPB generally lacks authority to prescribe limitations on the use of covered data, especially as it relates to targeted advertising, cross-selling of other products and services, and data sales. These commenters also objected to the CFPB's rationale for these proposed provisions and stated that the proposed rule did not evidence reasoned decision making or meaningful consideration of the consequences of intrusion into private, consent-based consumer relationships with third parties. Specifically, a trade association and law firm stated that CFPA section 1033 provides consumers an affirmative right to access their financial data but does not permit the CFPB to limit a third party's collection, use, and retention of covered data if the consumer has agreed to it. These commenters also stated that Congress intended that representatives acting on behalf of consumers would adhere to principles of agency law, which they said would result in authorizations from consumers to third parties that would carry regardless of whether the consumer benefits from the authorization. These commenters stated that if the consumer agrees to terms of data access, then the third party is acting on the consumer's behalf.

Final Rule

For the reasons discussed herein, the CFPB is finalizing § 1033.421(a)(2) with minor modifications. Final § 1033.421(a)(2) provides that, for the purposes of the general limitation standard § 1033.421(a)(1), the following are not part of, or reasonably necessary to provide, any other product or service: (i) targeted advertising; (ii) cross-selling of other products or services; or (iii) the sale of covered data. For clarity, the CFPB is removing the term ''activities'' from the text of final § 1033.421(a)(2) and replacing the term with ''purposes'' in that provision's heading.

With respect to commenter concerns regarding consumer authorization for the purposes listed in § 1033.421(a)(2), the CFPB notes that § 1033.421(a)(2) does not prevent third parties from obtaining authorizations from a consumer to collect, use, and retain their covered data for any one of these specified purposes if offered as a standalone product or service. To the extent that the consumer seeks a product or service in the market which functions as targeted advertising, cross-selling of other products or services, or the sale of covered data, a third party could obtain a consumer's authorization to collect, use, and retain their covered data to provide that product or service to the consumer consistent with, and subject to, the terms of subpart D of part 1033.[102] Collection, use, and retention of covered data to provide such a product or service would be subject to other applicable laws, including the CFPA's prohibition on unfair, deceptive, and abusive practices.

To be a ''standalone'' product or service, it must be clear that the targeted advertising, cross-selling, or sale of covered data is a distinct product or service the consumer could obtain in the market without obtaining other products or services.[103] As such, one provider could offer multiple products to a consumer, including targeted advertising, cross-selling, or sale of covered data as standalone products, obtain separate authorizations for consumer's data to be used for those

[102] The CFPB has previously issued guidance related to commingling of targeting and delivery of advertisements to consumers. *See generally* Consumer Fin. Prot. Bureau, *Limited Applicability of Consumer Financial Protection Act's 'Time or Space' Exception With Respect to Digital Marketing Providers,* 87 FR 50556 (Aug. 17, 2022).

[103] As described above related to the consumer's requested product or service, the CFPB does not intend to suggest a ''standalone product or service'' would necessarily have only a single attribute. While many standalone products or services might have only one attribute, as in cases where third parties sell covered data, others may have more than one attribute. A third party might provide to consumers a standalone product or service of targeted advertising, which could have multiple attributes to ensure the consumer is receiving the product or service they would expect. For example, a ''standalone product'' that involves targeted advertising might both evaluate a consumer's data for the purpose of identifying lower cost credit cards for a particular consumer and send that consumer advertisements for such lower cost credit cards.

products or services, and provide those products or services to the consumer. This would be similar to a bank that may offer checking accounts, savings accounts, and credit cards to a consumer, even while allowing those services to be managed on one banking app.

Further, as described in the proposed rule, the CFPB is concerned that consumers do not seek in the market targeted advertising, cross-selling of other products and services, and data sales.[104] Commenters suggested that consumers can significantly benefit specifically from, and continue to sign up for, targeted advertising and cross-selling in various contexts. As described above, commenters provided some evidence that consumers sign up for targeted advertising and cross-selling and receive certain benefits from them. Other research suggests that any such benefits are uncertain at best and may be difficult to quantify. Regardless, the CFPB recognizes that consumers might continue to sign up for, and in some cases can benefit from, targeted advertising, cross-selling, and data sales. However, this does not indicate that consumers understand the consequences of third parties using data for these purposes,[105] are the primary beneficiary of collection, use, and retention for these purposes,[106] or that consumers specifically sought them out.[107] Instead, this might indicate that consumers have little choice but to sign up for, or unknowingly or reluctantly acquiesce to, targeted advertising and cross-selling to receive more preferable or free services.[108]

The CFPB understands that it is possible for consumers to benefit from targeted advertising, cross-selling, and data sales and the final rule ensures that consumers can authorize their covered data to be collected, used, and retained for these purposes, with provisions to ensure consumers are able to make a meaningful choice to do so.[109] The final rule recognizes that consumers should not have to unknowingly or reluctantly acquiesce to their covered data being collected, used, and retained for these purposes in order to receive a product or service they have sought in the market. As such, the CFPB affirms that, under the final rule, consumers can authorize their data to be collected, used, and retained for targeted advertising, cross-selling, or data sales if offered as standalone products or services—this authorization simply cannot be combined in one authorization for data access for other products or services.

As noted above, some commenters stated that proposed § 1033.421(a)(2) was contrary to the congressional intent of CFPA section 1033 to ensure consumers can access their own data for their own preferences. These commenters also stated that the proposed rule would otherwise result in a restriction of consumer choice. However, § 1033.421(a)(2) does not restrict consumer choice or inhibit consumers from accessing their data for their own preferences. Under the final rule, third parties can, pursuant to consumer authorization, collect, use, and retain covered data to provide, targeted advertising, cross-selling of other products or services, or data sales as standalone products or services.

As described above, a trade association for nondepositories argued that the provision related to cross-selling, targeted advertising, and data sales would violate the First Amendment's protections on commercial speech if it prohibited data to be collected, used, and retained by third parties for these purposes when a consumer otherwise consents. However, the final rule does not infringe on any First Amendment rights. Even assuming the final rule could be construed to restrain speech, it would readily survive the applicable standard of scrutiny for commercial speech. Under the Supreme Court's commercial speech framework, if the speech is not misleading and relates to lawful activity, the government may impose restrictions that advance a substantial government interest and are no more extensive than is necessary to serve that interest. As explained elsewhere, the final rule advances several substantial interests,

J.L. & Tech. 617, 637 (2021) (positing that consumers who consent to products or services might struggle to understand the differences of primary uses from secondary uses where the two are bundled into contracts of adhesion, of which consumers might only want some aspects but not all of what they authorized).

[109] *See generally* Alessandro Acquisti *et al., Behavioral Advertising and Consumer Welfare,* at 16 (2023), *https://dx.doi.org/10.2139/ssrn.4398428* (''The results suggest that a search will, on average, make consumers who are price focused and have low search costs (relative to the price of the product) better off. These results also highlight that display advertisements may be a useful channel for smaller vendors to reach consumers: some of these vendors may seldom (if ever) appear in organic search. Such results highlight the complex nature of consumer welfare effects from targeted advertising. If search costs are sufficiently low and consumers are generally aware of the product categories which interest them, targeted ads are unlikely to improve their surplus. Surplus gains are even less likely to accrue to consumers if they need to vet the lesser known vendors that appear in display advertising. More than likely, this additional effort is better used seeking out relevant products via traditional search.'').

including the need for consumer control of personal financial data and privacy protections. The requirements set forth in the rule are also appropriately tailored to achieve these interests. As previously noted, the CFPB affirms that collection of covered data for certain uses, including cross-selling, targeted ads, and data sales, may be separately authorized as a standalone product or service. This regulatory structure provides the appropriate balance to ensure consumers are given a meaningful choice before engaging in targeted advertising, cross-selling, and data sales, and that they are shielded from signing up for purposes that they do not understand or do not request.

Additionally, as described above, commenters asked for and suggested definitions for targeted advertising, cross-selling of other products or services, and data sales. For the purposes of § 1033.421(a)(2), the CFPB intends to take the position that targeted advertising is advertising that comprises the identification or selection of prospective customers or the selection or placement of content to affect consumer engagement, including purchase or adoption behavior. Cross-selling of other products and services is the advertising, sale, or referral of the third party's own products or services to the third party's existing customers. Data sales is selling, renting, releasing, disclosing, disseminating, making available, transferring, or otherwise communicating personal information for monetary or other valuable consideration.

Limitations on Collection of Covered Data (§ 1033.421(b))

Proposed § 1033.421(b) contained third party obligations related to collection of covered data. Under proposed § 1033.421(b), as a condition of being authorized to access covered data on a consumer's behalf, the third party would be required to (1) limit its collection of covered data, including the scope of covered data, to what is reasonably necessary to provide the consumer's requested product or service, consistent with § 1033.421(a); (2) limit the duration of collection of covered data to the maximum durational period; (3) obtain a new authorization from the consumer, in a reasonable manner, to collect covered data beyond the maximum durational period; and (4) abide by certain limitations on collection, use, and retention of covered data beyond the maximum durational period if the third party does not obtain a new authorization from the consumer.

The specific provisions of § 1033.421(b) are discussed below.

In General (§ 1033.421(b)(1))

Proposed § 1033.421(b)(1) stated that, for purposes of the general limitation on collection, use, and retention of covered data in proposed § 1033.421(a), collection of covered data would include the scope of covered data collected and the duration and frequency of collection of covered data.

Some commenters, including consumer advocates, data providers, trade associations for data providers, and research organizations, stated general support for the proposed limitations on collection. Some commenters, including consumer advocates and third parties, suggested that consumers should have more control than what the proposed rule would have required over how long and how often third parties collect covered data, and that the proposed standard to limit collection might not adequately account for third parties' ongoing relationships with consumers. Other commenters, particularly data providers and third parties, suggested that data providers should have a role in ending third party access if collection exceeds the scope of the consumer's authorization.

For the reasons discussed herein, the CFPB is generally finalizing § 1033.421(b) as proposed, with one modification. The CFPB has determined that third parties are the commercial actors in the best position to understand the covered data they need to collect from the data provider to facilitate provision of products or services, and to therefore limit that collection to only what is reasonably necessary to provide the consumer's requested product or service. The CFPB has also determined that the standard to limit collection to what is reasonably necessary provides third parties with sufficient flexibility to account for the needs of the requested product or service.

The CFPB is revising the language of proposed § 1033.421(b)(1) to state that collection includes the scope of covered data ''requested,'' instead of the proposed ''collected.'' This clarifies that, in certifying to limit the collection of covered data pursuant to § 1033.421(a), third parties must tailor their request for covered data to only what is reasonably necessary to provide the consumer's requested product or service.

The CFPB notes that, in some circumstances, the third party might receive from the data provider more data than the third party requests. For example, this could happen when, pursuant to § 1033.211(d), the third party requests terms and conditions data from the data provider and the data provider provides more data elements than the third party requested, or more than is reasonably necessary to provide the consumer's requested product or service consistent with § 1033.421(a). Additionally, third parties could receive data after a consumer has revoked the third party's access to the data pursuant to § 1033.421(h), before the data provider has processed the request. In circumstances where the third party receives more data than they request, the general limitation on use and retention in § 1033.421(a) would not allow third parties to use that data if such use is not reasonably necessary. Section 1033.421(a) would allow a third party to retain covered data for as long as reasonably necessary to locate and delete the data.

Further, pursuant to the certifications related to collection in § 1033.421(a) and (b), if a third party receives information that indicates the consumer may no longer expect to receive the product or service, the third party should confirm collection of covered data remains reasonably necessary.

Maximum Duration (§ 1033.421(b)(2))

Under proposed § 1033.421(b)(2), third parties would be required to certify to limit the duration of collection of covered data to a maximum period of one year after the consumer's most recent authorization. The proposed rule described this as the maximum durational limit.

Regarding the maximum durational limit, the proposed rule noted that some products or services, like bill pay, overdraft prevention, or personal financial management, require long-term access. For such products or services, the proposed rule stated that the general limitation standard may not be sufficient to ensure that third parties act on behalf of consumers when collecting data longer term. The proposed rule stated that consumer needs or expectations may change in ways that may not be apparent to the third party, as could happen when a consumer stops using a product or service and forgets that they authorized third party data access. The proposed rule stated that, in other cases, consumers may have attempted to end third party access without actually doing so, such as when a consumer deletes an application from a device with the intent of stopping data collection, use and retention. At the same time, the proposed rule also acknowledged that there are other cases where consumers request products or

services that require long-term data collection and want to authorize ongoing third party data access. In those cases, the CFPB preliminarily determined that it would frustrate consumer intent and burden third parties to terminate third party access or require frequent reauthorizations. The proposed rule stated that a maximum durational limitation would provide a helpful backstop on the duration of third party authorization for these consumers.

Comments were mixed between supporting the proposed provision and recommending changes. Commenters that supported a maximum durational limitation, mostly banks, credit unions, community banks, trade associations for data providers, and research institutes, stated that such a limit promotes consumer control by requiring third parties to seek periodic reauthorization. Commenters that were critical of the proposal to impose a maximum durational period, mostly third parties, trade associations for third parties, and consumer advocates, stated that, if implemented, a maximum duration requirement would ultimately result in consumer harms, like: increased and unhelpful friction because of required reauthorization; disruption of valuable products and services that require ongoing collection, use, and retention in cases where consumers do not reauthorize; and disruption to the user experience if consumers utilize a product or service continually but must still reauthorize.

Commenters who supported a one-year maximum duration limitation commended the provision for reducing friction as compared to other privacy regimes that require shorter durational periods and therefore increased requests for reauthorization. In contrast, a trade association for third parties stated the CFPB did not provide adequate support for the proposed one-year maximum durational period and would not be consistent with the consumer's consent for the third party to continually collect their data. A data aggregator suggested amending the maximum durational period to 13 months, rather than 12, to better account for products and services that may have a slightly longer cycle of relevance for consumers, like tax preparation software. Further, various third parties and trade associations for nondepository commenters suggested the CFPB account for payments products or services through more narrow or more flexible durational limits, including by incorporating flexibilities based on the consumer's use of the product or service. These commenters suggested consumer authorization should last as long as consumers actively use the product or service, or suggested other activity-based flexibilities or restrictions. Finally, a trade association for community banks stated that the final rule should make clear that the general limitation standard of reasonable necessity would mean many short-term products and services would end before the maximum durational period ends.

For the reasons discussed herein, the CFPB is finalizing in § 1033.421(b)(2) a maximum durational limit of one year after the consumer's most recent authorization. This approach protects consumers by helping prevent unwanted, long term data collection, and also ensures consumers are able to periodically revisit the authorizations they have provided to third parties and ensure third party data access reflects consumers' wishes. Specifically, the one-year durational limit provides a helpful backstop to consumers who sign up for products or services that include ongoing data collection. For these reasons, the CFPB declines to allow for authorizations longer than 12 months when a consumer is actively using a product or service, as requested by some commenters. While, as described above, some commenters raised concerns about added friction for consumers related to a maximum durational limit, some of this friction is a necessary and helpful aspect of the consumer's relationship with the authorized third parties, as it provides consumers opportunities to carefully consider their choices. The maximum durational limit and the general obligation to limit collection to what is reasonably necessary to provide the consumers' requested product or service account for the wide variety of products or services the consumer might seek. For products or services that necessitate shorter durations of collection, like traditional underwriting and identity verification, the general data limitation standard will result in collection of covered data for a shorter period than one year. And, as noted above and in the proposed rule, consumers benefit from a one-year maximum durational period in cases where the general limitation standard may not be sufficient to ensure that third parties act on behalf of consumers when collecting data longer term.

Reauthorization After Maximum Duration (§ 1033.421(b)(3))

Under proposed § 1033.421(b)(3), the third party would certify that, to collect covered data beyond the one-year maximum durational period, the third party would obtain a new authorization from the consumer no later than the anniversary of the most recent authorization from the consumer. Under the proposed rule, the third party would be permitted to ask the consumer for a new authorization in a reasonable manner. The proposed rule stated that indicia that a new authorization request would be reasonable would include its conformance to a qualified industry standard.

The proposed rule stated that consumers would benefit from the combination of a maximum durational limit of one year and from the control that reauthorization requirements might provide. The proposed rule further stated that the CFPB preliminarily determined that third parties might need to seek new authorizations multiple times or otherwise explain to consumers why they are seeking new authorizations, but that this might unnecessarily burden consumers if they receive too many requests, or requests for products or services they no longer want. The proposed rule stated that the CFPB sought to strike a balance between these competing considerations. The proposed rule also acknowledged that additional guidelines regarding reauthorization requests might facilitate compliance. As such, the proposed rule stated that indicia that a new authorization request is reasonable include its conformance with a qualified industry standard.

Some commenters—including banks, trade associations for credit unions, and third parties—offered support for the proposed reauthorization provision, stating that consumers often forget about their connections and could benefit from opportunities to reauthorize. Some data aggregators, trade associations for banks, consumer advocates, and research organizations did not clearly oppose the proposed rule but offered narrow critiques or suggested changes, discussed below.

Some trade associations for third parties and data aggregators expressed concern that consumers would not provide a new authorization at the end of a maximum duration limit when they might otherwise want their authorizations to continue, which could result in harm to consumers. For example, one third party suggested that if a consumer never reauthorizes, the consumer might be directly harmed by the cut-off of the maximum durational period before the consumer accrues the benefits of long-term data collection.

Commenters' suggested modifications, clarifications, or additions to the implementation of reauthorization include: specify in the rule that a consumer's most recent authorization includes when a consumer requests a third party to refresh their data, or every time a payment goes through; finalize more specific limitations for requesting reauthorization, including limiting pop-ups and notices, the number of requests, or requests that could be threatening, misleading, or otherwise negatively impact consumers; allow the consumer to provide more streamlined reauthorizations as compared the initial authorization, or fewer reauthorization for certain products or services with which consumers regularly interact, like peer-to-peer or periodic payment products; allow flexibility for reasonable reauthorization methods, including directly to consumers via electronic means; allow third parties to simply notify the consumer of ongoing collection, use, and retention; and clarify the reasonable manner requirement related to reauthorization.

For the reasons discussed herein, the CFPB is finalizing § 1033.421(b)(3) as proposed with a terminology change to conform to the final rule's use of the term ''consensus standard.'' Specifically, final § 1033.421(b)(3) provides that, to collect covered data beyond the one-year maximum period described in § 1033.421(b)(2), the third party will obtain a new authorization from the consumer pursuant to § 1033.401 no later than the anniversary of the most recent authorization from the consumer. Final § 1033.421(b)(3) further provides that the third party is permitted to ask the consumer for a new authorization pursuant to § 1033.401 in a reasonable manner. Final § 1033.421(b)(3) further provides that indicia that a new authorization request is reasonable include its conformance to a consensus standard.

The CFPB acknowledges that this approach may result in some increased friction for consumers, but it will also allow consumers to periodically confirm their previous choices, including that they continue to want the third party to access their data for the requested product or service. Commenters appeared to assume that consumers generally will not reauthorize at the end of one year, but did not provide evidence that consumers, on the whole, will not reauthorize after a maximum duration period of one year, at least in circumstances in which they want data access to continue. As such, after considering this feedback, the CFPB is not making changes to the proposed reauthorization requirement.

Some commenters suggested the final rule should allow third parties to provide streamlined reauthorization requests to consumers, including suggesting that facilitated payments could serve as periodic reauthorizations for consumers. The CFPB has determined that consumers could benefit significantly from the authorization procedures as described in § 1033.401, including the authorization disclosure, and that streamlined reauthorization procedures would not effectively ensure consumers remain informed and in appropriate control of data access. The CFPB is thus not adopting commenters' suggested modifications to streamline reauthorization requests.

Effects of Maximum Duration (§ 1033.421(b)(4))

Proposed § 1033.421(b)(4) would have required the third party to certify that, if a consumer does not provide a new authorization before the maximum durational periods, the third party would (1) no longer collect covered data pursuant to the most recent authorization, and (2) no longer use or retain covered data that was previously collected pursuant to the most recent authorization unless use or retention of that covered data remains reasonably necessary to provide the consumer's requested product or service under proposed § 1033.421(a). The CFPB is finalizing these provisions, without substantive change, in § 1033.421(i), discussed below. Comments regarding proposed § 1033.421(b)(4) are discussed in detail below related to § 1033.421(i).

Limitations on Use of Covered Data (§ 1033.421(c))

Proposed Rule

As discussed above, the CFPB proposed in § 1033.421(a) that, to be authorized to access covered data, a third party must certify to using covered data only as reasonably necessary to provide the consumer's requested product or service. Preamble to the proposed rule explained that use of covered data that is not reasonably necessary to provide the consumer's requested product or service would be ''secondary use,'' and would not be permitted as part of the third party's authorization to access the consumer's covered data. The proposed rule specified in § 1033.421(c) that, in addition to limiting the third party's own use of covered data, third parties would not be able to provide covered data to other third parties unless doing so would be reasonably necessary to provide the consumer's requested product or service.

Further, for clarity, proposed § 1033.421(c) provided the following examples of uses of covered data that would be permitted as reasonably necessary under proposed § 1033.421(a): (1) uses that are specifically required under other provisions of law, including to comply with a properly authorized subpoena or summons or to respond to a judicial process or government regulatory authority; (2) uses that are reasonably necessary to protect against or prevent actual or potential fraud, unauthorized transactions, claims, or other liability; and (3) servicing or processing the product or service the consumer requested. The proposed rule stated that these examples would provide third parties with additional clarity on how the limitation standard would apply with respect to certain business activities. The CFPB sought feedback on whether it should include in the final rule other examples of business activities that are reasonably necessary to provide consumer requested products or services.

The proposed rule also sought feedback on whether the final rule should permit third parties to solicit consumers' opt-in consent to some secondary uses of consumer data to provide flexibility to third parties while maintaining important consumer protections. For example, the proposed rule sought feedback on whether the final rule should permit third parties to solicit consumers' opt-in consent to secondary uses as part of a third party's authorization to access covered data, while requiring third parties to certify not to use covered data for certain higher-risk secondary uses. The proposed rule also sought feedback on whether the final rule should permit third parties to solicit a consumer's opt-in consent to engage in secondary uses with de-identified data, and if so, what de-identification standard the rule should provide. The proposed rule sought feedback on how any opt-in approach could be structured to ensure that consumers are providing express informed consent to any secondary data uses, and whether the proposed authorization disclosure would be an appropriate vehicle for soliciting granular consumer choices about data use, such as through a secondary use opt-in mechanism. Finally, the proposed rule sought feedback on how opt-in mechanisms could be implemented to prevent third parties from using ''dark patterns'' or deceptive practices aimed at soliciting consumer consent.

Comments Received

Commenter feedback on the proposed limitation on use was varied. Regarding the examples in proposed § 1033.421(c), many commenters, including third parties and third party trade associations, privacy organizations, Members of Congress, and data aggregators, requested that the CFPB specify additional uses that would be permissible under the final rule. Other examples of additional uses that commenters requested the CFPB specify in the final rule included product improvement, new product development, prevention of crime or illegality, offering beneficial products or services to consumers, supplemental primary uses, reporting of data, and internal and external research. Some research institutes, a third party, and a trade association raised concerns about the proposed examples of reasonably necessary uses set forth in proposed § 1033.421(c), and specifically raised concerns that the example for servicing or processing the consumer's requested product or service was too narrow. These commenters suggested additions that would broaden that example, like ''assessing the consumer's eligibility for or delivering, servicing, or processing the product or service the consumer requested,'' allowing third parties to service or process products or services on which the consumer's requested product or service relies, or providing more elaboration or clarification about the meaning of servicing or processing.

Regarding the proposed limitation on secondary uses, a wide range of commenters, including data providers, consumer groups, and research organizations, were generally supportive of strong restrictions on secondary use, but most commenters asserted that the proposed secondary use limitation would be overly restrictive. Many commenters stated that a prohibition on secondary use, without modification and limited exceptions, would negatively affect product innovation, overly restrict consumer choices for potentially beneficial products, and put third parties at a significant competitive disadvantage to data providers that are unrestricted by the limitation. Some of these commenters suggested alternative approaches, including categories of permissible uses that are not primary or secondary. Some third parties, Members of Congress, and research institutes raised concerns about how a strict limitation on secondary uses might impact beneficial products or services for consumers, like cash-flow underwriting. Some third party commenters requested that the final rule permit more expansive uses related to fraud prevention. And many third parties asserted that the proposed secondary use restrictions would harm consumers and raise costs or reduce revenues for third parties. They stated that such restrictions would reduce competition and innovation, limit their ability to detect and prevent fraud, and prevent third parties from improving their products and services. Some commenters asserted that the prohibition on secondary use would be an outlier among existing privacy regimes. A few third party commenters recommended that the final rule allow uses that are also permitted by the GLBA and Regulation P because, these commenters claimed, different use limitations would unfairly disadvantage third parties and confuse consumers.

Commenters suggested a range of revisions to address these concerns in the final rule, including that the CFPB permit some secondary uses, like those listed above, and should more strictly prohibit some specific uses. For example, some commenters, like data providers and trade associations for data providers, stated that the CFPB should specifically prohibit certain uses, like uses of data for reverse engineering of proprietary algorithms.

Some commenters, including third parties, third party trade associations, and some privacy organizations, advocated for the final rule to permit consumers to opt into secondary data uses. These commenters stated that opt-in consents would benefit consumers and could increase consumer control over the uses of their data. Some of these commenters identified certain high-risk uses to which consumers should not be permitted to opt in. For example, consumer advocates and trade associations stated that certain types of loans that have resulted in enforcement actions, targeted marketing for predatory products, uses of wealth indicators that result in discriminatory algorithms, and behavioral insights derived from location, among others, are high risk uses that should not be permitted under the final rule, even through opt-in consent. And one trade association for data providers also stated that financial institutions, when acting as third parties, should be permitted to solicit opt-ins from consumers for some secondary uses of covered data, because such institutions must adhere to regulations to maintain sensitive data.

Other commenters, including third parties, data aggregators, trade associations, and research institutes, offered support for an opt-out option for consumers, citing examples from other privacy regimes that rely on opt-out mechanisms. These commenters stated that third parties should permit consumers to opt out of secondary uses that would be allowed in certain contexts, like when compatible with the product or service or through streamlined consent frameworks that benefit consumers. A data aggregator provided an example of a third party cross-selling a savings account to a consumer who already has a checking account with the third party, and stated that consumers should be able to opt out from these kinds of secondary uses.

In contrast, some commenters, including research institutes and third parties, expressed caution about an opt-in or opt-out approach. For example, a research institute stated that consumers presented with granular choice options would experience choice overload and decision paralysis and elect not to proceed with a transaction.[110] A third party stated that authorizations for any secondary uses should include enhanced disclosure requirements and should prohibit other parties from additional secondary uses, and suggested that these kinds of protections are not compatible with opt-in methods. A research institute stated that evidence shows opt-in consents result in significantly reduced participation rates.[111] Some commenters recommended that the final rule address concerns about the secondary use proposal being overly restrictive through additional clarifications of reasonably necessary uses and exceptions for certain secondary uses. Further, commenters stated that there might be significant limits to the benefits of opt-in approaches. For example, as described in more detail below, a group of academic researchers and consumer advocates stated their concerns that employing opt-ins for

research might significantly degrade the quality of the data.

Many commenters addressed the use of de-identified data by third parties. Numerous commenters, including research organizations, consumer advocates, and third parties, supported allowing third parties to use de-identified data for secondary purposes. These commenters stated that de-identified data enables a variety of uses that benefit consumers. For example, commenters said that de-identified data allows businesses to develop new products and services, improve existing products and services, and improve account security and fraud prevention. Commenters also said that de-identified data allows for research that serves the public interest. For example, a third party and a data aggregator commenter said that third parties had shared de-identified data with government agencies to improve policymaking. A research institute commenter stated that the CFPB's Consumer Credit Panel and credit card agreement database use de-identified data. However, a consumer advocate commenter stated that even de-identified data could be exploited for commercial ends like marketing, and therefore recommended limiting the use of de-identified data to research purposes.

Some commenters addressed the consent standard that should apply to uses of de-identified data. Academic, research institute, and consumer advocate commenters stated that opt-in consent would impair the value of any de-identified data used for research purposes. These commenters stated that frequent opt-in requests could overwhelm consumers and that consumers who opt in to sharing their data are non-representative of the general population, which undermines the validity of any research based on such consumers. However, a government commenter and a consumer advocate commenter said that opt-out frameworks have been shown to minimize sample biases and preserve the utility of data in other research contexts. A data provider commenter said that opt-in consent should be required for any use of de-identified data.

Some third party commenters were concerned about what they described as anticompetitive effects of the proposed limitation on using de-identified data. For example, a research institute and several third party commenters said that new market entrants need access to de-identified data to train machine learning models or otherwise ensure that their products function properly. Third party commenters also said that the proposed rule would limit their use of covered data in ways that existing law does not limit data providers' use of the same data. One third party commenter stated that it was not fair that a bank could use de-identified data for nearly any purpose if obtained directly from a customer, but a third party could not use the same data for any secondary purposes if obtained under the rule as proposed.

Commenters also stated that allowing third parties to use de-identified data would also create consistency between the final rule to implement CFPA section 1033 and various State, Federal, and international privacy regimes. One research institute commenter stated that GLBA and FCRA allow greater flexibility in using de-identified data. Several commenters believed that U.S. businesses would face a competitive disadvantage if the final rule were more restrictive than the E.U. General Data Protection Regulation (GDPR).

However, a few data providers and trade associations for data providers opposed allowing third parties to use de-identified data for secondary purposes. Two bank commenters asserted that de-identified data could be re-identified, which would invade consumer privacy. In contrast, a research institute commenter stated that most high-profile examples of re-identification involved data that was never properly de-identified initially. This commenter also said that risks of re-identification were low if the data was limited to internal use and not shared with other third parties.

Final Rule

For the reasons discussed herein, the CFPB is finalizing § 1033.421(c) with an additional example of reasonably necessary uses. Final § 1033.421(c) states that use of covered data for purposes of § 1033.421(a) includes both the third party's own use of covered data and provision of covered data by that third party to other third parties. Final § 1033.421(c) further states that examples of uses of covered data that are permitted under § 1033.421(a) include: uses that are specifically required under other provisions of law, including to comply with a properly authorized subpoena or summons or to respond to a judicial process or government regulatory authority; uses that are reasonably necessary to protect against or prevent actual or potential fraud, unauthorized transactions, claims, or other liability; servicing or processing the product or service the consumer requested; and uses that are reasonably necessary to improve the product or service the consumer requested. The CFPB has determined that, generally, consumers expect covered data might be used for these purposes and that third parties will benefit from additional clarity, provided by these examples, on uses that are reasonably necessary to provide the consumer's requested product or service under the standard in § 1033.421(a). The examples in § 1033.421(c) are illustrative and are not comprehensive of uses of covered data that will be reasonably necessary under the general limitation standard.

The CFPB is aware that third parties might need to use covered data to comply with legal requirements or to protect against fraud, unauthorized transactions, and similar purposes. The final rule is not intended to restrict uses of covered data that effect compliance with applicable laws, like anti-money laundering laws or other applicable rules or regulations, or to block criminal law enforcement activity. For example, in many cases, it would be reasonably necessary for third parties to use basic account verification information to confirm that the consumer is authorizing information from an account that does in fact belong to that particular consumer. One third party commenter explained that third parties might use covered data to determine the likelihood of consumers' future payments failing by monitoring past instances of consumers freezing their accounts or inability to transfer funds, describing those uses of data as being for fraud prevention purposes. The CFPB cautions that the example in § 1033.421(c)(2) is limited to uses to protect against or prevent actual or potential fraud, unauthorized transactions, claims, or other liability if such uses are reasonably necessary. The examples in § 1033.421(c) do not expand the scope the general limitation standard in § 1033.421(a) and, to be permissible, the uses described in the examples in § 1033.421(c) must be reasonably necessary in a given context.

After considering comments, the CFPB is finalizing in § 1033.421(c) an additional example of permitted uses of covered data: uses that are reasonably necessary to allow for improvement of the consumer's requested product or service. The CFPB agrees with commenters that the reasonably necessary standard of § 1033.421(a) would generally permit third parties to use covered data to improve the requested product or service. Generally, consumers expect that products or services they have requested that rely on consumer-permissioned data will be improved over time and, as such, the CFPB is finalizing this additional

example in § 1033.421(c)(4) to provide clarity, which will assist third parties providing products and services that consumers request.

The CFPB considered commenters' suggestions to add other examples of uses that are permissible under the general standard in § 1033.421(a) but declines to do at this time. The CFPB believes the examples in the final rule provide sufficient guidance to third parties on uses that are permissible as reasonably necessary to provide the consumer's requested product or service. The examples provided in the final rule are non-exhaustive, and other uses are permissible as reasonably necessary to provide the consumer's requested product or service.

The CFPB considered comments suggesting additional prohibitions related to certain uses, like uses of data for reverse engineering of proprietary algorithms, price discovery in capital markets, or behavioral monitoring and algorithm development. As stated in the proposed rule, uses that are not reasonably necessary to provide the consumer's requested product or service are secondary uses, and are not permitted as part of the third party's authorization to access the consumer's covered data for purposes of providing that product or service. Many of commenters' suggested additions would generally be considered secondary uses in as much as they would not be reasonably necessary to provide the consumer's requested product or service.[112] And other uses of covered data for the purposes of targeted advertising, cross-selling of other products or services, and data sales are sufficiently limited by the requirement in § 1033.421(a)(2) that those purposes are not part of, or reasonably necessary for, any other product or service and therefore must be offered as a standalone product.

The CFPB considered additional flexibilities, like providing consumers an opt-in to certain secondary uses or permitting secondary uses through the use of de-identified data. The CFPB agrees with commenters who described opt-in, or opt-out, approaches as not sufficiently protective to consumers. The CFPB declines to allow third parties, including financial institutions acting as third parties under this rule, to solicit opt-in or opt-out consents from consumers to use covered data obtained pursuant to consumer authorization for secondary uses. The CFPB is concerned that consumers might not receive adequate information through granular choice mechanisms that would result in meaningful consent.[113] The CFPB is also concerned that if offered too many opt-in choices in the course of a single authorization process, consumers might experience decision fatigue or choice paralysis, and therefore might agree to terms they have not considered or instead might not complete authorization.[114] The CFPB also agrees with commenters' concerns regarding opt-in or other granular choice options for consumers, particularly related to de-identified data, as these choices might result in selection bias issues that make the use of the data consumers opted into sharing unhelpful for research purposes. Additionally, the CFPB is concerned that when consumers experience decision fatigue or choice paralysis, an opt-in or opt-out approach might result in greater data sharing than they would choose if in a position to make a considered choice. Generally, the authorization procedures pursuant to § 1033.401 are designed to ensure both that consumers understand the scope of a requested product or service and that third parties do not impermissibly expand the scope of their collection, use, and retention beyond what is reasonably necessary to provide that product or service. In addition, the rule does not prevent third parties from offering consumers more than one product by means of additional, separate authorizations that comply with subpart D. The CFPB determines that separate authorizations pursuant to the procedures in § 1033.401 will afford consumers with more meaningful consent to data access than consumers would have through traditional opt-in requests, which the CFPB understands to combine requests for data access for a product or service the consumer is seeking with requests for consumer consent for data access for additional purposes. Such combined requests might not allow consumers to make considered choices to the same degree as separate authorizations, and therefore the procedures in § 1033.401 will provide consumers more control over their data access authorizations.

At this time, the CFPB is not including a provision that would allow third parties to use de-identified data for purposes that are not reasonably necessary to provide the consumer's requested product or service. As discussed with regard to the general limitation standard in final § 1033.421(a), limiting third parties to using covered data only as reasonably necessary for the provision of the product or service that the consumer requested ensures that consumers understand the scope of their authorization and retain control over their data. The CFPB is concerned, based on the current rulemaking record, that an exception to the secondary use prohibition for de-identified data would be inconsistent with the kind of meaningful consumer control that the final rule seeks to achieve, and might enable third parties to offer products and services that are primarily designed to accumulate large amounts of de-identified consumer data. Additionally, the CFPB notes that, as with identifiable covered data, the final rule does not prohibit third parties from using de-identified data as reasonably necessary to provide the consumer's requested product or service, or from seeking a separate authorization to use de-identified data for other purposes that the consumer may choose. Indeed, to the extent that covered data can be de-identified and still used to provide the product or service, the CFPB expects that third parties may take that step because it will provide a better means of safeguarding data.

Importantly, many of the beneficial purposes for which commenters seek to use de-identified data typically would not be secondary uses under the general limitation standard provided in § 1033.421(a). For example, § 1033.421(c) includes as an example that covered data—whether identifiable or de-identified—could be used as reasonably necessary to prevent fraud, service or process the consumer's requested product or service, and to improve the consumer's requested product or service. These examples of uses that are reasonably necessary to

[112] With respect to the comment suggesting the CFPB prohibit uses of data for reverse engineering of proprietary algorithms, the CFPB expects that such uses would not be reasonably necessary for a consumer's requested product or service. The CFPB will closely monitor the market to determine whether third parties are using covered data for these purposes.

Rev. 1461, 1479–1486 (2019), *https://openscholarship.wustl.edu/cgi/viewcontent.cgi?article=6460&context=law_lawreview* (describing numerous ways in which a consumer might consent to choice options without understanding what they are authorizing); Woodrow Hartzog & Neil Richards, *Privacy's Constitutional Moment and the Limits of Data Protection,* 61 B.C. L. Rev. 1687, 1734 (2020) (stating that even when the consumer is functioning under ideal circumstances when giving consent, consumers' ability to give informed and meaningful consent is finite and cannot scale to all the privacy choices a consumer must make).

[114] *See* Neil Richards & Woodrow Hartzog, *The Pathologies of Digital Consent,* 96 Wash. U.L. Rev. 1461, 1484, 1486 (2019), *https://openscholarship.wustl.edu/cgi/viewcontent.cgi?article=6460&context=law_lawreview* (describing how a consumer might experience decision fatigue if presented with detail to provide sufficient information to make granular choices).

provide the consumer's requested product or service pursuant to § 1033.421(a) generally address the data uses described by commenters. For example, with appropriate safeguards pursuant to their third party obligations, third parties are generally permitted to use data, including de-identified data, to train a fraud detection algorithm or to improve the budgeting recommendation attribute of a personal financial management service.[115]

The CFPB acknowledges commenters' representations regarding the value of de-identified data for research purposes. Indeed, the CFPB uses de-identified data itself for research and market monitoring. But the use limitations in § 1033.421(a) and (c) operate in a particular context, where it is necessary to ensure that third parties that represent that they are acting on a specific consumer's behalf are actually doing so. Importantly, nothing prohibits a third party from seeking the consumer's separate authorization to use de-identified data for research purposes if that purpose is properly presented as an authorization for data access for a standalone product or service. Nonetheless, the CFPB recognizes that public interest research may present unique considerations not developed in the current rulemaking record. Accordingly, the CFPB will consider whether a follow-on rulemaking would be appropriate to allow for public interest research uses of de-identified data outside of the general standard finalized in this rule.

The CFPB disagrees with commenters' assertions that the restrictions on secondary use would harm competition and therefore consumers by overly limiting potentially beneficial data uses. Under the final rule, third parties can use covered data as reasonably necessary to provide consumer-requested products and services, including uses that are reasonably necessary to improve those products and services. The CFPB expects that this will result in robust competition with respect to consumer-requested products and services. Further, the CFPB notes that the final rule does not restrict a third party's ability to obtain or use data in other ways unrelated to the final rule's data-access procedures, nor does the final rule prevent third parties from obtaining authorization from consumers to use covered data for additional products and services, including for research purposes. In addition, to the extent it is reasonably necessary to provide the consumer's requested product or service, third parties may use covered data as one input to the generation of new data that is not subject to the requirements of subpart D, including the limitations on secondary use (although other State and Federal laws may impose applicable restrictions).

For these same reasons, the CFPB also disagrees with comments suggesting that the rule, including not adopting the GLBA's privacy standard, creates an illogical or unfair distinction between data providers and third parties. Both data providers and third parties may use data that result from direct consumer relationships without adhering to the general limitation standard in § 1033.421(a), such as by using it as permitted under the GLBA and Regulation P, to the extent applicable. The final rule also does not treat covered data providers differently than other third parties when they act as authorized third parties themselves—while they may use the data they generate in the course of providing their products or services in any manner allowable by law, they are still subject to the prohibition on secondary uses when accessing data from other data providers pursuant to the rule's procedures. The CFPB considers the final rule's approach to the use of generated data to be straightforward, but to the extent parties seek any additional guidance, the CFPB may publish responsive guidance as appropriate.

Accuracy (§ 1033.421(d))

Proposed § 1033.421(d) would have required third parties to establish and maintain written policies and procedures that are reasonably designed to ensure that covered data are accurately received from a data provider and accurately provided to another third party, if applicable. Under the proposed rule, a third party would have flexibility to determine its policies and procedures in light of the size, nature, and complexity of its activities, but the third party would be required to periodically review its policies and procedures and update them as appropriate to ensure their continued effectiveness. The proposed rule provided two examples of elements in § 1033.421(d)(3) that third parties would have been required to consider when developing their policies and procedures regarding accuracy: (1) accepting covered data in the format required by the standards for developer interfaces in § 1033.311(b) and (2) addressing information provided by a consumer, data provider, or another third party regarding inaccuracies in the covered data. Finally, the proposed rule stated that indicia that a third party's policies and procedures are reasonable would include whether the policies and procedures conform to a qualified industry standard regarding accuracy.

The CFPB explained that proposed § 1033.421(d) would limit the scope of a third party's required policies and procedures to the accuracy of transmission—that is, receiving covered data from a data provider and, if applicable, subsequently providing it to another third party. The CFPB provided several reasons for limiting this scope. First, existing Federal law already protects consumers against some of the most harmful inaccuracies in the use of financial data.[116] Second, the CFPB noted that most SBREFA comments addressing accuracy focused on transmission of data from data providers to third parties as the source of accuracy issues. In adopting a similar focus, proposed § 1033.421(d) reflected this feedback. Finally, the CFPB explained many third parties are small entities, and accuracy requirements covering all aspects of the collection, use, and provision of consumer data might be overly burdensome.

The CFPB sought comment on whether any additional elements bearing on the reasonableness of a third party's policies and procedures regarding accuracy should be included.

One Member of Congress expressed support for the proposed accuracy requirements. This commenter stated that inaccuracies would limit the ability of covered data to serve consumers and the financial system. On the other hand, some commenters opposed the inclusion of certain requirements. Some commenters believed that industry standards would be poorly suited to accuracy requirements. For example, a bank trade association stated that standardizing accuracy across the diverse universe of third parties may not be possible, given the broad array of interests.

Additionally, while not opposing the proposed requirement, a number of data provider and data provider trade association commenters recommended

[115] Additionally, as described elsewhere, the general standard to retain covered data as reasonably necessary would allow third parties to retain covered data used for these purposes for as long as reasonably necessary to locate the data and delete it. The CFPB is aware that it could be practically infeasible for third parties to delete data in certain circumstances, and as such, it would be consistent with the general limitation standard for the third parties to retain the data. In one such circumstance, for example, it might be practically infeasible for a third party using covered data in fraud prevention and product improvement models to extract from those models data no longer connected to a consumer who requests revocation.

[116] For example, Regulation E protects consumers against unauthorized electronic fund transfers and other errors, and Regulation Z protects consumers against certain billing and servicing errors. *See* 12 CFR part 1005; 12 CFR part 1026.

that the final rule do more to account for the fact that most third parties will receive data from data aggregators using proprietary formats rather than directly from data providers. Specifically, a few commenters recommended that the CFPB either prescribe a standardized format or remove the provision requiring third parties to consider accepting data in the format required for data providers' developer interfaces. One research organization commented that the CFPB might want to more clearly distinguish the obligations of third party data recipients and third party data aggregators.

Further, some third party commenters and one consumer advocate group commenter recommended the final rule contain a more robust dispute process. In particular, the consumer advocate group recommended a dispute process similar to that provided under the FCRA, wherein the consumer can dispute inaccuracies and require that a reasonable investigation is conducted.

For the reasons discussed herein, the CFPB is finalizing § 1033.421(d) as proposed, with one clarifying change to conform to the final rule's use of the term ''consensus standard.''

Accurate transmission of covered data is important for the effective functioning of the market for consumer-authorized data sharing. Inaccuracies in covered data impair third parties' ability to use that data for innovative purposes, undermining the benefits of data sharing for consumers. Accuracy standards also help ensure that authorized third parties are acting on behalf of consumers. Third parties that fail to take reasonable steps to ensure accuracy when receiving or transmitting covered data would not be acting in the interests of the consumers to whom the data relates. The specific arrangement that a third party makes to receive covered data affects the reasonableness of its policies and procedures regarding accuracy. For example, the CFPB understands that third parties frequently use data aggregators to obtain access to consumers' covered data. Such third parties should account for the involvement of a data aggregator by ensuring that their policies and procedures include measures to reduce inaccuracies that might be introduced by using an intermediary.

Standard-setting bodies can facilitate a comprehensive set of policies and procedures for accuracy that may be used by third parties throughout the consumer-authorized data sharing market. In particular, standard-setting bodies are likely to develop standards that are relevant to reasonable policies and procedures for accuracy—such as standardized data formats—that will increase the interoperability of the final rule. Further, recognized standard setters will need to consider input from both data providers and third parties, and as part of the balance attribute of § 1033.141(a), will specifically need to consider the input of small entity data providers. Accordingly, a recognized standard setter can—contrary to the suggestion of one commenter—issue consensus standards flexible enough to accommodate the wide array of third party data recipients.

Regarding comments concerning transmission of standardized formats, accepting data in the format in which it is transferred is relevant to ensuring accuracy. Section 1033.421(d)(3) does not preclude third parties from accepting covered data from a data aggregator in a standardized format. The flexibility provided by the policies and procedures allows the third party to accept covered data in a way that is best for the size and nature of the third party.

Additionally, CFPA section 1033(d) requires the CFPB to prescribe standards applicable to covered persons to promote the development and use of standardized formats for information. As discussed in more detail under § 1001.2(b) below, CFPA section 1002(15)(A)(vii) defines as a financial product or service ''providing payments and other financial data processing to a consumer by any technological means'' and data aggregators are therefore covered persons under the CFPA.[117] The CFPB intends to monitor the market to evaluate whether data aggregators and authorized third parties are using standardized and machine-readable formats for covered data.

Regarding comments for a more robust dispute process, the CFPB has determined that forgoing overly prescriptive dispute requirements can facilitate consistency with robust accuracy requirements.[118] As the CFPB has noted, third parties are likely to be highly diverse in size and sophistication. The dispute requirement attempts to ensure that the burden of considering disputes is appropriate to the role that a third party played in the ecosystem. All third parties will need to consider ''addressing information provided by a consumer, data provider, or another third party regarding inaccuracies in the covered data,'' but what is ''reasonable'' will depend on the size and sophistication of the third party. For example, data aggregators will likely have more extensive dispute processes than third parties that merely receive data. Further, the overall flexible nature of the policies and procedures accuracy requirement will allow third parties leverage existing systems for addressing disputes to the extent that such disputes also relate to the transfer of covered data.

The CFPB has determined that consumers will benefit from accuracy requirements for third parties. Third parties that fail to accurately receive data from a data provider, or fail to accurately provide data to another third party (when that is appropriate under the general limitation on data use), limit the effectiveness of the data access right fundamental to CFPA section 1033. Such inaccuracies also impair the development of an innovative, competitive market for alternative consumer financial products and services. Third party accuracy requirements also benefit third parties that rely on intermediaries to facilitate consumer-authorized access.

Data Security (§ 1033.421(e))

Proposed § 1033.421(e)(1) would have required a third party to certify that it will apply to its systems for the collection, use, and retention of covered data an information security program that satisfies the applicable rules issued pursuant to section 501 of the GLBA (15 U.S.C. 6801). Under proposed § 1033.421(e)(2), if the third party is not subject to section 501 of the GLBA, the third party will apply to its systems for the collection, use, and retention of covered data the information security program required by the FTC's Standards for Safeguarding Customer Information, 16 CFR part 314. The CFPB preliminarily determined that the GLBA Safeguards Framework could be used by third parties to appropriately protect consumer-authorized financial data.

A range of commenters supported the use of the GLBA Safeguards Framework for third party data security. One bank commenter stated that the GLBA Safeguards Framework would ensure consistent data security standards for all ecosystem participants. Additionally, one consumer advocate group commenter said the proposed rule would close gaps in data security coverage. Another bank commenter stated that third parties should, at a

[117] CFPA section 1002(4) defines ''consumer'' to include ''an agent, trustee, or representative acting on behalf of'' a consumer. Therefore, when a data aggregator provides financial data processing to an authorized third party, the aggregator is also necessarily providing financial data processing to a consumer.

[118] As discussed above in part IV.4, certain entities, such as data aggregators, may have dispute resolution obligations under other statutes, such as the FCRA. The analysis for this provision is limited to obligations arising under part 1033 and does not supplant other accuracy dispute requirements.

minimum, follow the GLBA Safeguards Framework.

On the other hand, one third party commenter argued that the Safeguards Framework should not be applied to third parties, because compliance would be overly burdensome for third parties. Additionally, some commenters believed the final rule should add more specificity to the Safeguards requirements, for example, by creating a presumption of compliance for previously utilized standards, or consensus standards.

A number of bank commenters argued that the final rule should apply the same GLBA Safeguards Framework guidelines used by the Federal functional regulators [119] to supervise financial institutions. In particular, some data providers and trade associations for data providers stated that the FTC Safeguards rule was less prescriptive and not supported by regular supervision. Similarly, a few commenters requested that the final rule address liability by subjecting third parties to additional data security obligations, such as the FFIEC Information Technology Examination Handbook because, they said, it was more detailed than the FTC Safeguards Rule.

Additionally, one third party merchant commenter and one third party commenter argued that the final rule should not require third parties that are merchants to certify to follow the GLBA framework when they use consumer-permissioned data to facilitate payments for services provided by the merchant. These commenters' concern was threefold. First, the commenters argued that the proposed rule was inconsistent with the CFPA's limits on the CFPB's authority with respect to merchants. Second, the commenters stated that merchants are already subject to data security requirements under the National Automated Clearing House Association (NACHA) and the payment card industry data security standards (PCI DSS), and, given these previous compliance obligations, adding the safeguards condition would be overly burdensome for the merchant third party. Finally, the commenters stated that, under the proposed rule, merchants could be incentivized to avoid GLBA Safeguards Rule standards by asking the consumer to go around the open banking transaction, for example, by requiring the consumer to type in their ACH account and routing number, or by asking the consumer for a payment card rather than using an open finance application.

For the reasons discussed herein, the CFPB is finalizing § 1033.421(e) as proposed. Final § 1033.421(e)(1) requires a third party to apply to its systems for the collection, use, and retention of covered data an information security program that satisfies the applicable rules issued pursuant to section 501 of the Gramm-Leach-Bliley Act (15 U.S.C. 6801). Under § 1033.421(e)(2), if the third party is not subject to section 501 of the Gramm-Leach-Bliley Act, the third party will apply to its systems for the collection, use, and retention of covered data the information security program required by the Federal Trade Commission's Standards for Safeguarding Customer Information, 16 CFR part 314.

Requiring third parties to certify that they will comply with the GLBA Safeguards Framework will appropriately protect covered data. The rule's requirement for third parties to certify that they will follow the GLBA Safeguards Framework ensures consistency in protection as covered data moves from a data provider to one or more third parties because all or substantially all data providers are already subject to the GLBA Safeguards Framework,[120] most likely the Interagency Guidelines Establishing Information Security Standards issued by the Federal functional regulators.

The CFPB declines to include greater specificity in the data security certification for third parties, as requested by some commenters. Regarding comments requesting incorporation of industry standards into third party data security provisions, the CFPB notes that changing the security framework beyond the proposed approach would create a new, CFPA section 1033-specific data security standard, which could add complexity for third parties. The CFPB has determined that by not incorporating industry standards or overly prescriptive standards relating specifically to data security, the rule better facilitates compliance with CFPA section 1033.

Regarding comments on the inadequacy of the FTC Safeguards Rule compared to the Safeguards Guidelines, for reasons stated in the proposed rule, the CFPB has determined the FTC Safeguards Rule provides adequate protection. The commenters failed to engage with the proposed rule's explanation that the FTC's Safeguards Rule includes slightly more prescriptive requirements, such as encryption, for certain elements, because the Safeguards Rule must be usable by a financial institution to determine appropriate data security measures without regular interaction with an examiner from a supervising agency. Additionally, concerning third party liability, the CFPB finds that the final rule's data security requirements will help protect against data breaches and any ensuing losses that third parties or data providers might suffer.

The CFPB has determined merchant third parties that are authorized third parties under the rule should be required to certify to comply with the same data security obligations as other third parties. Although merchant commenters expressed concern that merchants are already subject to data security requirements through NACHA and PCI rules, the CFPB has determined the relative similarities between these rules and the FTC Safeguards Rule suggests that the burden imposed on the merchants by the final rule would be minor. The FTC Safeguards Rule requires financial institutions to design an information security program that addresses several elements, including designating a qualified individual, performing a risk assessment, implementing controls such as encryption and multi-factor authentication, and testing or monitoring the effectiveness of the program's controls. Similarly, NACHA and PCI rules requires covered financial institutions to develop, implement, and maintain an information security program with administrative, technical, and physical safeguards designed to protect customer information.

Further, contrary to one merchant commenter's concern with what it felt was a one-size-fits-all approach in the proposed rule, the flexibility of the Safeguards Rule would allow for some discretion in how the merchant third parties structure their data security systems. Additionally, treating NACHA or PCI standards as sufficient for purposes of a third party's data security certification would allow a private entity to determine the substance of the final rule's data security standards. This approach creates a risk that future NACHA or PCI standards might diverge from the CFPB's views about the proper data security obligations for authorized third parties.

Regarding comments stating that the CFPB does not have the authority over merchant third parties to require those third parties to certify to comply with the FTC Safeguards rule, the CFPB notes

[119] The term ''functional regulators'' is the term that the GLBA uses to identify applicable agencies.

[120] Section 501 of the GLBA (15 U.S.C. 6801) applies to financial institutions, which are defined as companies that offer consumers financial products or services like loans, financial or investment advice, or insurance.

that the certification requirement in § 1033.421(e), for merchants and all third parties, is a condition to access covered data and not a freestanding requirement.

Provision of Covered Data to Other Third Parties (§ 1033.421(f))

The CFPB proposed in § 1033.421(f) to require a third party to certify that, before providing covered data to another third party, it will require that other third party by contract to comply with certain obligations. The proposed rule noted that, in some circumstances, third parties that are authorized to access covered data from a data provider on behalf of a consumer would need to share that data with another third party. The authorized third party's ability to share covered data would be limited by the conditions in proposed § 1033.421(a) and (c), under which the authorized third party would limit its use of covered data, including sharing data with other third parties, to what is reasonably necessary to provide the consumer's requested product or service. Subject to that limitation, the authorized third party would be permitted to provide the data to another third party.

The CFPB proposed that the consumer protections provided by the third party obligations in proposed § 1033.421 generally would apply when the covered data are provided by the authorized third party to another third party. The CFPB noted that, otherwise, the third party that receives the data from the authorized third party would not be subject to, for example, the limitations on use or the requirements for data privacy and data security that apply to the authorized third party, and the consumer would lose these important protections for the covered data, which ensure that data are used on their behalf.

Accordingly, the CFPB proposed in § 1033.421(f) that, before providing the covered data to another third party, the authorized third party would certify that it will require the other third party by contract to comply with the third party obligations in proposed § 1033.421(a) through (g) and the condition in proposed § 1033.421(h)(3), upon receipt of the notice described in proposed § 1033.421(h)(2). Proposed § 1033.421(f) stated that any provision of covered data to another third party would be subject to the restriction in proposed § 1033.421(c), which specifies that provision of data to other third parties is a type of use of covered data that would be limited by proposed § 1033.421(a) to what is reasonably necessary to provide the consumer's requested product or service requested. Proposed § 1033.421(f) did not require the authorized third party to certify that it will bind the other third party by contract to comply with all of the third party obligations in proposed § 1033.421. The CFPB preliminarily determined that certain of the third party obligations would be of limited applicability to the other third party, including the obligation to provide certain information to the consumer in proposed § 1033.421(g) and the revocation obligation in proposed § 1033.421(h). The CFPB requested comment on whether the approach in proposed § 1033.421(f) would provide sufficient protection to consumers and their covered data when an authorized third party provides that data to another third party. The CFPB also requested comment on which third party obligations in proposed § 1033.421 should be included in this approach.

A number of commenters addressed the proposed approach in § 1033.421(f). A bank trade association commenter and a trade association representing nonbank entities both supported the proposed rule's approach to applying third party obligations when third parties provide covered data to downstream parties. Other commenters, including a bank trade association, a bank, and a consumer advocate, maintained that the proposed approach in § 1033.421(f) would not provide sufficient protections for consumers' covered data when an authorized third party provided that data to downstream parties. The bank and bank trade association commenters and the bank commenter stated that the proposed approach of requiring the authorized third party to certify that it will include contractual provisions obligating downstream parties to comply with certain obligations in proposed § 1033.421 would be insufficient and that the rule should impose those obligations directly on downstream parties. The trade association commenter recommended that, at a minimum, the rule should provide that, in addition to including contractual provisions requiring a downstream party to comply with the obligations, the authorized party must also ensure that the downstream parties comply with the obligations. The bank trade association commenter and a bank commenter also recommended that the rule should require the authorized third party to disclose to the consumer and the data provider which other third parties will be provided with the covered data. The bank trade association commenter stated that disclosing this information would provide consumers with transparency and control over their data and would allow data providers to conduct risk assessments of downstream parties.

Some commenters, including a bank, a bank trade association, and a consumer advocate, recommended that the rule clarify when an authorized third party may share covered data with a downstream party. They noted that an authorized third party would be permitted to access covered data only for the purpose of providing the consumer's requested product or service, so they stated that it is not clear when it would be permissible for the authorized third party to share the covered data with additional third parties. A research institute commenter stated that proposed § 1033.421(f) would not appear to be flexible enough to permit sharing with a downstream third party when the authorized third party accesses the covered data for certain products that involve the sharing of covered data. For example, the research institute commenter stated that it was not clear if the proposed approach would permit an authorized third party to access covered data to identify rent, cell phone, and utility payments and share that information by reporting those payments to CRAs to help build the consumer's credit.

For the reasons discussed herein, the CFPB is adopting § 1033.421(f) as proposed with two minor changes. As finalized, § 1033.421(f) provides that, before providing covered data to another third party, subject to the limitation described in § 1033.421(a) and (c), the third party must certify that it will require the other third party by contract to comply with the third party obligations in § 1033.421(a) through (f) and the condition in § 1033.421(i) upon receipt of the notice described in § 1033.421(h)(2).

Under the proposed rule, third parties also would have been required to certify that they would require downstream parties to comply with the provisions in § 1033.421(g) (related to keeping consumers informed). However, the provisions in § 1033.421(g) would be of limited relevance for downstream parties and the CFPB concludes that an authorized third party therefore should not be required to certify that it will include them in contracts with downstream parties with which it will share covered data. Section 1033.421(g)(1) requires a third party to provide the consumer with a copy of the authorization disclosure. The downstream third party would be receiving the covered data for the purpose of providing the product or

service requested by the consumer from the authorized third party, and the authorized third party, not the downstream party would have provided the authorization disclosure to the consumer. Section 1033.421(g)(2) also requires a third party to provide contact information that enables a consumer to receive answers to questions about the third party's access to the consumer's covered data. The authorized third party, not a downstream party, is more likely to have a relationship with the consumer and the consumer is more likely to attempt to contact the authorized third party with questions about access to the consumer's covered data. Section 1033.421(g)(3) requires the third party to establish and maintain reasonable policies and procedures to ensure that the third party, upon request, provides certain information to the consumer. Again, the consumer is more likely to contact the authorized third party to obtain information and the information listed in § 1033.421(g)(3) is primarily information possessed by the authorized third party. Accordingly, the final rule does not require an authorized third party to include the obligations in § 1033.421(g) in contractual provisions with downstream parties. In addition, the final rule changes the reference from § 1033.421(h)(3) to § 1033.421(i) because, as described below, the final rule includes a new § 1033.421(i) that includes provisions from proposed § 1033.421(b)(4) and (h)(3).

The CFPB has determined that requiring a third party to certify that it will include contract provisions requiring downstream parties to abide by the specified obligations will provide sufficient protections, including protections that impose limitations on use and requirements for data security. As discussed above in connection with the authorization procedures in § 1033.401, requiring a third party to certify that it will include contractual provisions requiring downstream parties to abide by the specified obligations will provide sufficient protection. If a downstream party breaches the obligation, the CFPB could enforce those obligations using its authority to prevent unfair, deceptive, or abusive acts or practices, and other regulators, the consumer, and the data provider also may be able to enforce those provisions.

The CFPB has concluded that further clarification of when an authorized third party may share covered data with downstream parties is not necessary. Section 1033.421(f) specifically references the limitations in § 1033.421(a) and (c), so the authorized third party is able to share data with other third parties only as reasonably necessary to provide the product or service requested by the consumer from the authorized third party. Accordingly, downstream parties will be able to use the data only to assist the authorized third party with providing the requested product or service and not for their own purposes. The CFPB also has determined that the approach in § 1033.421(f) is sufficiently flexible to accommodate products like those suggested by the research institute commenter for which sharing of data is part of the product. Sharing the data in those circumstances would be reasonably necessary to provide the product requested by the consumer.

The CFPB declines to require that the authorized third party certify that it will disclose the identity of any third parties with which it will share the consumer's covered data. With respect to data aggregators, § 1033.431(b) requires the authorization disclosure to include the name of any data aggregator that will assist the third party seeking authorization with accessing covered data and a brief description of the services the data provider will provide. However, at the time of the authorization, the third party seeking authorization may not know if it will be sharing covered data with other third parties and, if it will, the identity of those third parties. Moreover, the limitations in § 1033.421(a) and (c) restrict the circumstances in which an authorized third party is permitted to share covered data with other third parties. Finally, a consumer that wants to obtain additional information from the authorized third party about such data sharing may do so, as provided in § 1033.421(g). Accordingly, the CFPB has determined that it is not necessary to provide information during authorization about sharing covered data with downstream parties.

As noted above, a bank trade association recommended that § 1033.421(f) require the authorized third party to certify that it also will ensure that any downstream parties that they provide with covered data are abiding by their contractual obligations. The CFPB expects that, in addition to certifying that they will include contract provisions obligating downstream parties with which they share data to comply with certain obligations, authorized third parties will take reasonable steps to ensure that those downstream parties are complying with those obligations. Authorized third parties are permitted to share covered data with downstream parties only as reasonably necessary to provide the consumer's requested product or service. The CFPB expects that authorized third parties will, in the interest of maintaining relationships with consumers and avoiding potential liability for violating their own certifications to consumers, including the certification that covered data will only be collected, used, and retained as reasonably necessary to provide the consumer's requested product or service, perform due diligence in determining which downstream parties they select to assist in providing the consumer's requested product or service and take reasonable steps to monitor those downstream parties.

Ensuring Consumers Are Informed (§ 1033.421(g))

The CFPB proposed in § 1033.421(g) to require a third party to certify that it agrees to certain obligations designed to ensure that consumers can obtain information about the third party's access to their data.

Under proposed § 1033.421(g)(1), a third party would have been required to certify that it would provide the consumer with a copy of the authorization disclosure that is signed or otherwise agreed to by the consumer and reflects the date of the consumer's signature or other written or electronic consent. Upon obtaining authorization to access covered data on the consumer's behalf, the third party would deliver a copy to the consumer or make it available in a location that is readily accessible to the consumer, such as the third party's interface. The proposed rule specified that, if the third party made the authorization disclosure available in such a location, the third party also would have been required to certify that it would ensure it is accessible to the consumer until the third party's access to the consumer's covered data terminates. The CFPB sought comment on whether this is the right time period. The CFPB proposed § 1033.421(g)(1) because it preliminarily determined that consumers would benefit from being able to access authorization disclosures they have previously signed. For example, the consumer may not recall which third parties are accessing their data, what data are being accessed, and for what reasons. Without this information, it would be difficult for a consumer to decide whether to continue authorizing data access.

Under proposed § 1033.421(g)(2), a third party would have been required to certify that it would provide readily identifiable contact information that enables a consumer to receive answers to questions about the third party's

access to the consumer's covered data. The proposal stated that a third party could satisfy proposed § 1033.421(g)(2) through its existing customer service functions, provided that this function is equipped to handle the relevant questions. The CFPB proposed § 1033.421(g)(2) because it preliminarily determined that the consumer should be able to contact the third party to receive answers to questions about the third party's access to the consumer's covered data. The proposed rule stated that the authorization disclosure would contain a limited amount of information pursuant to proposed § 1033.411(b), so it may not address every question the consumer has about the third party's data access. The CFPB sought comment on additional requirements regarding the nature of the contact that the consumer can access through the contact information provided by the third party, such as whether the consumer must be able to access a human contact or whether the consumer must receive a response within a specified timeframe.

Under proposed § 1033.421(g)(3), third parties would have been required to certify that they would establish and maintain reasonable written policies and procedures designed to ensure that the third party provides to the consumer, upon request, the following information about the third party's access to the consumer's covered data: (1) categories of covered data collected; (2) reasons for collecting the covered data; (3) names of parties with which the covered data was shared; (4) reasons for sharing the covered data; (5) status of the third party's authorization; and (6) how the consumer can revoke the third party's authorization to access the consumer's covered data and verification the third party has adhered to requests for revocation. Proposed § 1033.421(g)(3) stated that the third party had flexibility to determine its policies and procedures in light of the size, nature, and complexity of its activities, and the third party would periodically review its policies and procedures and update them as appropriate to ensure their continued effectiveness. The CFPB proposed § 1033.421(g)(3) because it preliminarily determined that, at any time during the third party's access to the consumer's data, the consumer should be able to obtain this information from the third party. The CFPB proposed to require a third party to certify that it would provide the names of parties with whom the covered data are shared because the CFPB preliminarily determined that this information would be valuable for consumers to know to protect their privacy, exercise control over which parties are accessing their covered data, and evaluate whether to continue sharing data with the third party. The CFPB proposed to require a third party to certify that it would provide information about the status of the third party's authorization because it may not be apparent to the consumer whether the third party's authorization is still active or whether the third party is currently collecting data.

With respect to the information about the categories of covered data the third party is collecting, the reasons for collecting the covered data, and information about how the consumer can revoke the third party's access to the consumer's data, the proposed rule stated that some consumers may want to obtain this information by contacting the third party. The CFPB preliminarily determined that it would be appropriate to require the third party to certify that it would provide this information on request given that the third party originally provided this information on the authorization disclosure. The CFPB sought comment on whether the list in proposed § 1033.421(g)(3) should be modified, including whether additional categories of information should be added.

The CFPB received a few comments on proposed § 1033.421(g). A bank trade association commenter, a Member of Congress, and a consumer advocate commenter supported the proposed rule's general approach to requiring third parties to keep consumers informed because it would allow consumers to make decisions with respect to their sensitive financial data.

The bank trade association commenter requested that the method for accessing this information be easy and intuitive and that information on the duration of data sharing be made available to consumers. The Congressmember's comment supported information about data security being made available to consumers.

A different bank trade association commenter requested that any separate data aggregator certification be available to the consumer upon request from either the third party or the data aggregator. A consumer advocate commenter requested more formal requirements for transparency into downstream data flows, detailing each onward transfer as well as the purposes of the transfer to allow consumers visibility and control on how financial information would get subsequently utilized. Another consumer advocate commenter and an individual commenter asserted that third parties should be required to provide information on how the third party makes decisions using data, including what data are used. A data provider commenter requested that the data provider name be made available on a platform such as a consumer revocation dashboard rather than on the authorization disclosure.

For the reasons described herein, the CFPB is finalizing § 1033.421(g) with modifications. First, the CFPB is finalizing in § 1033.421(g)(3)(vii) an additional requirement that the third party certify to maintain policies and procedures to provide to consumers, upon request, a copy of any data aggregator certification statement that was provided to the consumer separate from the authorization disclosure, pursuant to § 1033.431(c)(2). The CFPB is finalizing § 1033.421(g)(3)(vii) to ensure that consumers have access to the same information regardless of whether a data aggregator certification was included in the authorization disclosure or in a separate data aggregator certification. Second, the CFPB is modifying the language of proposed § 1033.421(g)(3)(iii) to specify that names of any parties with which covered data was shared must be made available in a form that is readily understandable to consumers for consistency with the authorization disclosure. Third, the CFPB is modifying the language of proposed § 1033.421(g)(3)(iii) to better align with the requirements in §§ 1033.401(c) and 1033.411(a). Final § 1033.401(c) does not include language stating that a third party can obtain a consumer's express informed consent by having the consumer ''otherwise agree'' to the authorization disclosure. Finally, the final rule makes non-substantive changes to the language of proposed § 1033.421(g)(3).

The CFPB is not modifying its approach regarding downstream data flows or notification of sharing with downstream parties because the proposed rule required third parties to provide the ''names of parties with which the covered data was shared.'' The CFPB is not adding a requirement to provide information about how the third party uses data to make decisions because doing so would be outside the intended scope of a provision regarding providing information about data access. Additionally, such information may be, in whole or in part, proprietary information. The CFPB is not modifying § 1033.421(c) to include the data provider's name or information about duration of data access because the consumer will have this information in the authorization disclosure. Finally,

the CFPB is not adding a requirement to include information about data security because this information may be highly technical and is unlikely to be useful to consumers.

Revocation of Authorization (§ 1033.421(h))

Proposed § 1033.421(h) included three components related to the third party's certification to provide the consumer with a mechanism to revoke the third party's authorization to access the consumer's covered data. These components are discussed below.

Provision of Revocation Method (§ 1033.421(h)(1))

Under proposed § 1033.421(h)(1), the third party would certify to provide the consumer with a mechanism to revoke the third party's authorization to access the consumer's covered data that is as easy to access and operate as the initial authorization. Proposed § 1033.421(h)(1) also stated that the third party would also ensure the consumer is not subject to costs or penalties for revoking the third party's authorization.

The proposed rule stated that the CFPB preliminarily determined that for the consumer's authorization for third party data access to be meaningful, consumers need to be able revoke that authorization at any time. The proposed rule also stated that a mechanism being as easy as the initial authorization would ensure third parties would not bury the revocation mechanism or otherwise obfuscate consumers' ability to utilize it. Additionally, the proposed rule stated that, for revocation of authorization to be free of cost or penalties to the consumer, consumers should be able to revoke their authorization to data access for purposes of one product or service but maintain that same third party's data access for purposes of another product or service. Therefore, as part of proposed § 1033.421(h)(1), third parties would certify to allow consumers to revoke consent to data access for a particular product or service and maintain consent to data access for any others.

Comments about this aspect of the proposed rule from a Member of Congress, consumer advocates, research organizations, trade associations for credit unions and banks, third parties, data aggregators, and individuals were generally supportive of the proposed approach to requiring third parties to provide consumers with a method to revoke third party authorizations to access covered data. Commenters' suggested amendments, clarifications, or additions to the proposed rule included: consumers' ability to revoke should be nonwaivable and the mechanism should be provided ''without friction or delay;'' the mechanism should allow revocations at the granular level, including allowing consumers to expressly select the account for which authorization is revoked; the mechanism should allow the consumer to revoke authorization for any entity involved with the data sharing transaction; the final rule should specify a time limit by which third parties must notify other parties of the revocation request; and data aggregators should be required to provide consumers with a revocation request.

After considering comments, and for the reasons discussed herein, the CFPB is finalizing proposed § 1033.421(h)(1) without substantive change. The CFPB is making a non-substantive modification to change ''mechanism to revoke'' to ''method to revoke'' for consistency with the provision that allows data providers to provide a revocation method to consumers. As described above, some commenters suggested the CFPB should state that revocation is nonwaivable and should be provided without friction or delay, or should allow for more granular choices. The CFPB declines to make these changes because § 1033.421(h)(1) sufficiently ensures consumers may revoke third party authorizations at any point. Further, the CFPB has determined that third parties are in the best position to understand the covered data they need to collect to facilitate provision of a consumer's requested product or service. Offering consumers granular revocations might confuse consumers or frustrate the third parties' ability to provide that product or service.

The CFPB affirms that, for revocation of authorization to be free of cost or penalties to the consumer, consumers should be able to revoke their authorization to data access for purposes of one product or service but maintain that same third party's data access for purposes of another product or service they are receiving from the third party. In other words, third parties conditioning the provision of one product or service on the consumer providing consent to data access for another product or service is a cost or penalty on the consumer. Therefore, as part of § 1033.421(h)(1), third parties must certify that they will allow consumers to revoke consent to data access for a particular product or service and maintain consent to data access for any others.

For the consumer's authorization for third party data access to be meaningful, consumers need to be able revoke that authorization at any time. For this reason, § 1033.421(h)(1) is designed to ensure consumers can provide meaningful authorization to third party data access and can easily and effectively revoke that authorization whenever they choose. Ensuring the revocation method is as easy to access and operate as the initial authorization ensures third parties do not bury the revocation mechanism or otherwise obfuscate, block, or interfere with consumers' ability to utilize it.

Notice of Revocation (§ 1033.421(h)(2))

Under proposed § 1033.421(h)(2), the third party would certify to notify the data provider, any data aggregator, and other third parties to whom it has provided the consumer's covered data when the third party receives a revocation request from the consumer. The CFPB proposed to require authorized third parties to certify that they will notify other third parties of the consumer's revocation to ensure that those third parties that receive covered data from the authorized third party are aware of the status of the consumer's authorization and can, accordingly, meet applicable certifications related to use and retention of that data. The CFPB also proposed in § 1033.421(h)(2) to require authorized third parties to notify data providers of the consumer's revocation to ensure data providers are aware of the status of the consumer's authorization.

For the reasons discussed herein, the CFPB is finalizing § 1033.421(h)(2) as proposed. As described above, some commenters suggested that the final rule specify a time limit by which third parties must notify other parties of the revocation request. The CFPB has considered these comments but concludes that § 1033.421(h)(1) sufficiently addresses the timing of the third party's notice of consumer revocation to other third parties, since it requires such notification when the third party receives the consumer's revocation request.

Effect of Revocation

Proposed § 1033.421(h)(3) would have required the third party to certify that, upon receipt of a consumer's revocation request or notice of a revocation request pursuant to proposed § 1033.331(e), the third party will (1) no longer collect covered data pursuant to the most recent authorization, and (2) no longer use or retain covered data that was previously collected pursuant to the most recent authorization unless use or retention of that covered data remains reasonably necessary to provide the consumer's requested product or service

under proposed § 1033.421(a). The CFPB is finalizing these provisions without substantive change in § 1033.421(i), discussed below. Comments regarding proposed § 1033.421(h)(3) are discussed in detail below related to § 1033.421(i).

Effects of Maximum Duration and Revocation on Collection, Use, and Retention (§ 1033.421(i))

Proposed Rule

As described above, proposed § 1033.421(b)(4) and (h)(3) addressed the effects of maximum duration and receipt of a revocation notice on collection, use, and retention of consumers' covered data. With respect to the effect of maximum duration and revocation on use and retention, proposed § 1033.421(b)(4)(ii) and (h)(3)(ii) would have specified, consistent with the general limitation in proposed § 1033.421(a), that when the maximum durational period ends and the consumer does not provide a new authorization, or upon receipt of a consumer's revocation request or notice of a revocation request pursuant to proposed § 1033.331(e), the third party may no longer use or retain covered data that was previously collected unless use or retention remains reasonably necessary to provide the consumer's requested product or service under proposed § 1033.421(a). The proposed rule stated that, in the current market, third parties use and retain consumer data for reasons unrelated to providing a consumer-requested product or service, including after a consumer no longer receives the product or service from the third party. The proposed rule further stated that such residual use and retention, which seldom occurs with consumer awareness, can result in significant privacy and security risks to consumers and can undermine the consumer's ability to control access to their covered data. Proposed § 1033.421(b)(4)(ii) and (h)(3)(ii) would address this concern by making clear that the general limitation on use and retention in proposed § 1033.421(a) applies to use and retention of covered data after a one-year maximum durational period ends and the consumer does not provide a new authorization, or when a consumer requests revocation pursuant to proposed § 1033.421(h) or § 1033.331(e).

The proposed rule stated that, while use and retention of covered data will not be reasonably necessary for most purposes after the third party's authorization ends, it may continue in some circumstances. The proposed rule provided the following examples for when use and retention might continue: a subpoena could require the retention, beyond the maximum period, of specific data collected in that period; meeting such legal requirements can continue to remain reasonably necessary even if only in connection with providing the product prior to the expiration of the maximum period. The proposed rule also stated that the consumer could provide a clear, affirmative indication that they want to continue to use the product beyond the maximum period in a manner supported by the use and retention of data collected prior to expiration of that period. In that context, use and retention of some or all of the data could meet the general standard in proposed § 1033.421(a) even as the consumer no longer makes use of the product in any manner that would require continued data collection.

The proposed rule explained that the CFPB preliminarily determined that proposed § 1033.421(b)(4)(ii) and (h)(3)(ii) would provide third parties with sufficient flexibility to address circumstances in which continued use or retention of previously collected data might be permitted under the general standard in proposed § 1033.421(a), while ensuring that consumer data are not used and retained in a manner that does not properly reflect the control afforded the consumer under that same general standard.

Comments Received

Support for the standard in proposed § 1033.421(a) included support for the general limitation principles as they would apply to third party retention of covered data. For example, a Member of Congress, a third party, and a trade association for data providers supported the general standard as it applies to retention. The third party stated that data should not be retained except to fulfill the service requested, while the trade association said cybersecurity risks increase when third parties can accumulate and store data.

Feedback on this aspect of the proposed rule fell into various categories, most notably: (1) seeking an exception to, or variation of, the general limitation standard related to retention; (2) asserting that consumers should have a role in determining how long data are retained; (3) asserting that the general limitation standard and the proposed rule's explanation do not provide enough clarity as to when third parties must no longer retain covered data; and (4) asserting that the retention standard is too general and not strong enough.

Commenters who requested an exception or variation on the limitation standard in the context of retention, mostly trade associations for third parties and research organizations, suggested that the proposed rule on retention is too restrictive. Commenters with this view stated that the final rule should allow retention of de-identified or pseudonymized data for specific purposes, like supplemental primary uses, public secondary uses, or research, or allow retention of historical data for some period so the product, service, or tool remains populated if a consumer reauthorizes shortly after the durational period expires. Commenters also stated that a restrictive retention limit would be harmful to beneficial products and services that rely on historical data, like cash-flow underwriting. A trade association for banks asked that the final rule allow third parties to retain data as long as necessary to defend themselves from consumer complaints. Finally, a research organization suggested the final rule should implement affirmative data deletion deadlines and require that data retention beyond three years be supported by documentation that the data continues to be reasonably necessary for the provision of the consumer's requested products or services, unless retention is required for compliance with other laws.

Commenters that suggested that consumers should have a role in determining how long data are retained—mostly trade associations for banks and research organizations—stated that consumers should be able to consent to how long data are retained or should be able to opt in to retention of de-identified data. The same commenters suggested that the proposed rule was too vague for consumers to understand what will be retained or for third parties to know how to comply. Some commenters in this category suggested finalizing an explicit requirement to delete upon the expiration of duration or when a consumer revokes.

Some commenters, including research organizations and trade associations for banks, asserted that the retention standard is too general and not strong enough. One commenter stated that the proposed rule would only discourage indefinite retention and that the final rule should be more prohibitive. Another suggested the final rule should implement mandatory time periods by which third parties must delete all data.

Finally, one third party commenter asked that the final rule clarify what happens to ''copied data'' held by authorized third parties and data aggregators.

Final Rule

For the reasons described herein, the CFPB is finalizing in § 1033.421(i) the provision related to the effect of maximum duration on collection, use, and retention in proposed § 1033.421(c)(4) and consumers' revocation requests in proposed § 1033.421(h)(3). As such, under § 1033.421(i), if a consumer does not provide a new authorization as described in § 1033.421(b)(3), or if a third party receives a revocation request as described in § 1033.421(h)(1) or notice of a consumer's revocation request as described in § 1033.331(e), a third party will: (1) no longer collect covered data pursuant to the most recent authorization; and (2) no longer use or retain covered data that was previously collected pursuant to the most recent authorization unless use or retention of that covered data remains reasonably necessary to provide the consumer's requested product or service under § 1033.421(a).

With respect to § 1033.421(i)(1), the CFPB has determined that the general limitation in § 1033.421(a) will require third parties to stop collecting covered data when the maximum durational period ends and the consumer has not provided a new authorization or when the consumer requests revocation. In those circumstances, collection would no longer be reasonably necessary to provide the consumer's requested product or service. Ensuring that collection stops at these points affords consumers control over the collection of covered data.

With respect to § 1033.421(i)(2), the CFPB has determined that the general limitation in § 1033.421(a) will, in most circumstances, require the third party to no longer use or retain covered data when the maximum durational period ends and the consumer has not provided a new authorization or when the consumer requests revocation. The consumer revoking third party authorization or not providing a new authorization after one year, all other things being equal, indicates that the existing authorization, without more, no longer supports use or retention of covered data that has been collected under its terms. However, specific circumstances may justify departure from this normal course and, consistent with the general standard in § 1033.421(a), allow continued use or retention of some or all previously collected covered data, even when collection of new covered data has stopped.[121]

As described above, one commenter asked that the final rule clarify what happens to ''copied data'' that third parties might have following revocation. The commenter did not elaborate on the meaning of ''copied data,'' but assuming copied data refers to copies of covered data that third parties receive or make, the CFPB notes that the general limitation under § 1033.421(a) would apply and such copied data could only be used or retained as reasonably necessary to provide the consumer's requested product or service.

Additionally, as described related to § 1033.421(b), in unusual circumstances a data provider might provide a third party more data than the third party requested. This may result in the third party involuntarily collecting more data than is reasonably necessary to provide the consumer's requested product or service. The CFPB notes that, in those circumstances, the general limitation on use and retention in § 1033.421(a) would apply to that data. While use of that data would not be reasonably necessary to provide the consumer's requested product or service, the general limitation standard would allow third parties to retain covered data for as long as reasonably necessary to locate and delete that data.

Finally, as noted above in § 1033.421(b) regarding collection, when the third party receives information that indicates the consumer may no longer expect to receive the product or service, the third party should confirm collection of covered data remains reasonably necessary. In those circumstances, use and retention of covered data may no longer be reasonably necessary. The CFPB has determined that § 1033.421(i)(2) provides third parties with sufficient flexibility to address circumstances in which continued use or retention of previously collected data might be justified under the general limitation. The certification in § 1033.421(i)(2) also ensures that covered data are not used and retained in a manner that does not properly reflect the control afforded the consumer when they do not provide a new authorization after a maximum durational period has ended or when they request revocation.

5. Use of Data Aggregator (§ 1033.431)

The CFPB proposed certain requirements for the third party authorization procedures when a third party uses a data aggregator to assist with accessing covered data on behalf of a consumer. Currently, many third parties rely on data aggregators to assist with accessing and processing consumer financial data. The CFPB proposed in § 1033.431 to assign certain responsibilities for the authorization procedures and impose certain conditions on the third party and the data aggregator.

A number of commenters addressed how the rule generally should treat data aggregators. Several commenters, including bank and bank trade association commenters stated that the rule should impose strong limitations on data aggregators. One bank trade association commenter stated that data aggregators often possess far greater bargaining power than third parties, so they can dictate terms, and that the final rule should provide that data aggregators are jointly and severally liable for issues that occur at the third party to which it is providing services. A bank commenter stated that the proposal underestimates the systemic risks posed by data aggregators, noting that they likely have more consumer data than the largest banks and will continue to control vast amounts of data after the rule takes effect. Another bank trade association commenter and a credit union commenter stated that data aggregator should face even more stringent controls on their use of covered data because consumers have no meaningful choice over the aggregator that is used. Two bank trade association commenters recommended that the rule prohibit data aggregators from using covered data for their own purposes. Several commenters, including bank and bank trade association commenters, maintained that the rule should impose obligations directly on data aggregators, stating that the CFPB should be responsible for enforcing those obligations, rather than relying on the certification-based approach and relying on authorized third parties, consumers or data providers to ensure that data aggregators comply with the obligations. Several commenters, including bank and bank trade association commenters, requested that the CFPB exercise supervisory authority over data aggregators to ensure that they comply with the rule.

For the reasons discussed herein, the CFPB is generally adopting the approach to data aggregators as proposed, with certain changes in § 1033.431(c) regarding data aggregator certification. Those provisions are described in more detail below.

As finalized, § 1033.431 imposes various obligations on data aggregators, including the requirement in

[121] A third party commenter suggested that the proposed rule contained a technical error that would not provide sufficient flexibility for third parties to retain previously collected data for permissible uses. However, as noted, the final rule contains flexibility when circumstances justify such continued retention.

§ 1033.431(c) that data aggregators must certify to the consumer that they will comply with specified obligations. The CFPB declines to provide that data aggregators are jointly and severally liable for issues that occur at the third party to which the data aggregator is providing services. Depending on the context, those issues could arise from conduct unrelated to the services provided by the data aggregator, so the CFPB has determined that generally imposing joint and several liability would not be appropriate. The rule does, however, require data aggregators to certify to the consumer that they will comply with specified obligations, and in the event that data aggregators breach those obligations, the CFPB can use its authority to prevent unfair, deceptive, or abusive acts or practices, as appropriate, to enforce those obligations against data aggregators. For the reasons discussed in part IV.D.2, the CFPB has determined that the certification-based approach is appropriate for third parties, including data aggregators, and declines to impose additional obligations on third parties in this rule.

As noted above, some commenters urged the CFPB to impose additional restrictions on data aggregator use of covered data. The obligations in § 1033.421(a) and (c) limit the circumstances in which third parties can collect, use and retain covered data, and data aggregators must certify to consumers that they will comply with those obligations. Among other things, the covered data can only be used as reasonably necessary to provide the product or service requested by the consumer from the authorized third party. Accordingly, these provisions will prevent a data aggregator from using the covered data for its own purposes, and the CFPB has determined that additional restrictions on data aggregator use of covered data are unnecessary. With respect to supervision of data aggregators, as discussed in part IV.5, the CFPB's supervisory authority is defined by the CFPA. The CFPB will continue to monitor the market, including by using its supervisory authority, and will consider whether additional rulemakings are appropriate to expand the scope of the CFPB's supervision with respect to part 1033.

Responsibility for Authorization Procedures (§ 1033.431(a))

The CFPB proposed in § 1033.431(a) to allow, but not require, a data aggregator to perform the third party authorization procedures on behalf of the third party. Proposed § 1033.431(a) also provided that the third party would remain responsible for compliance with the third party authorization procedures and that data aggregators would have to comply with the data aggregator certification requirements in proposed § 1033.431(c).

The CFPB preliminarily determined that the third party should be responsible for compliance with the third party authorization procedures. The CFPB noted that the third party is providing a product or service to the consumer and is likely to have the primary relationship with the consumer, so the consumer may be more comfortable receiving and responding to communications from the third party. The third party also likely would be more involved in using and retaining covered data and therefore may play a greater role than the data aggregator. Moreover, the data aggregator is assisting the third party in accessing covered data, so the CFPB preliminarily determined that the third party should be responsible for compliance with the third party authorization procedures.

The CFPB noted, however, that some third parties may want to rely on data aggregators to perform the authorization procedures on their behalf and that, in some circumstances, it may be more efficient for data aggregators to do so. Therefore, the CFPB proposed to allow, but not require, a data aggregator to perform the authorization procedures on behalf of a third party. The CFPB noted that if a data aggregator performs the authorization procedures on behalf of the third party, the consumer's authorization would grant authority to the third party to access covered data on behalf of the consumer. The third party would retain the flexibility to discontinue using the data aggregator or switch to a different aggregator.

Several commenters addressed how to allocate responsibility for the authorization procedures when a data aggregator is involved. Commenters including a bank, a bank trade association, and a nondepository entity all supported the proposed approach of assigning responsibility for the authorization procedures to the third party seeking authorization but permitting the data aggregator to perform the authorization procedures on behalf of the third party.

A number of commenters recommended that the CFPB revise or clarify how the authorization procedures can be performed when an authorized third party retains a data aggregator. A bank commenter stated that the CFPB should clarify which authorization procedures may be performed by a data aggregator and which ones must be performed by the authorized third party. The bank commenter stated that the authorized third party should be responsible for describing the product or service to the consumer and providing a certification statement. The bank commenter also urged the CFPB to clarify that the requested product or service is referring to the product or service offered by the authorized third party and not a product or service offered by the data aggregator. The bank commenter also stated that the CFPB should clarify that when a data aggregator performs the authorization procedures on behalf of the authorized third party, the authorized third party remains responsible for its own compliance with the specified obligations. The bank commenter also urged the CFPB to distinguish the data aggregator's role when it is acting as an intermediary on behalf of an authorized third party from when it is attempting to become an authorized third party. The bank commenter also recommended that when a data aggregator is acting on behalf of an authorized third party, the data aggregator must fulfill all of its obligations under the rule independent of other connections the data aggregator may have fulfilled for the same consumer on behalf of a different third party. A credit union commenter recommended that the CFPB remove all references to data aggregators from the rule and instead require data aggregators to comply with all of the requirements of an authorized third party. A third party commenter stated that the rule should clarify that data aggregators may perform the authorization procedures on their own behalf when they are operating as authorized third parties. A research institute commenter stated that the rule should encourage data aggregators to take on additional roles and responsibilities to support open banking and provide better experiences to consumers. The research institute commenter urged the CFPB to clarify when data aggregators can become authorized third parties.

For the reasons discussed herein, the CFPB is adopting § 1033.431(a) as proposed. Section 1033.431(a) allows, but does not require, a data aggregator to perform the third party authorization procedures described in § 1033.401 on behalf of the third party seeking authorization under § 1033.401 to access covered data. Under § 1033.431(a), the third party seeking authorization remains responsible for compliance with the third party authorization procedures described in § 1033.401. Data aggregators must comply with the data aggregator certification requirements in § 1033.431(c).

As indicated in § 1033.431(a), the authorized third party remains responsible for complying with the authorization procedures, including certifying to the consumer that it will comply with the obligations in § 1033.421. However, the data aggregator may perform the certification procedures on behalf of the authorized third party. If the data aggregator performs the authorization procedures on behalf of the authorized third party, the data aggregator must complete the authorization procedures for the authorized third party and provide the authorization disclosure with the content required in § 1033.411(b). The data aggregator must also obtain the consumer's express informed consent for the authorized third party to access covered data on behalf of the consumer as required in § 1033.401(c). As discussed below in connection with § 1033.431(c), the data aggregator must also certify that it will comply with the certification requirements specified in § 1033.431(c).

The CFPB recognizes that third parties may play different roles in different transactions. A third party may be a data aggregator in one transaction and an authorized third party in a different transaction. However, a third party cannot perform both roles in the same transaction. If a third party is serving as a data aggregator, it cannot collect, use, and retain the consumer's covered data for its own purposes. It is limited to accessing the information only as reasonably necessary for providing the product or service requested by the consumer from the authorized third party. When a data aggregator performs the authorization procedures on behalf of an authorized third party, those authorization procedures apply only to that authorized third party. If the data aggregator is assisting a second authorized third party in accessing covered data from the same consumer, the second authorized third party or the data aggregator acting on behalf of that second authorized third party must perform the authorization procedures separately for that second authorized third party.

The CFPB concludes that it is appropriate to identify and adopt specific provisions applicable for data aggregators separately from authorized third parties. Data aggregators perform a different role than authorized third parties, and the CFPB has determined that the rule should highlight that the authorized third party is responsible for obtaining the consumer's authorization to access the consumer's data.

Disclosure of the Name of the Aggregator (§ 1033.431(b))

The CFPB proposed in § 1033.431(b) to require that the authorization disclosure include the name of any data aggregator that will assist the third party seeking authorization under proposed § 1033.401 with accessing covered data and a brief description of the services the data aggregator will provide. The proposed rule stated that, unlike other downstream parties that may access a consumer's covered data after a third party has completed the authorization procedures, a data aggregator is typically known to the third party at the time of authorization and a consumer may directly interact with a data aggregator when the data aggregator performs the authorization procedures on behalf of the third party. Therefore, the CFPB preliminarily determined that identifying and describing the services of a data aggregator would reduce consumer confusion and better equip consumers to provide informed consent when authorizing data access. The proposed rule requested comment on any obstacles to including a data aggregator's name in the authorization disclosure.

A consumer advocate commenter and a credit union commenter supported including information about the data aggregator in the authorization disclosure to provide sufficient transparency. The credit union commenter requested that both the legal and trade names of the data aggregator be included in the authorization disclosure.

For the reasons discussed herein, the CFPB is finalizing § 1033.431(b) as proposed. Including the data aggregator name and a description of the data aggregator's services in the authorization disclosure provides consumers with a key term of access that may reduce consumer confusion and better equip consumers to provide informed consent. Commenters did not raise concerns with this approach.

The CFPB is not modifying § 1033.431(b) to require the inclusion of a data aggregator's legal and trade names, as suggested by one commenter. The final rule does not require authorized third parties to include their own legal and trade names, and it would be inconsistent to require authorized third parties to provide the legal and trade names of data aggregators. Additionally, including multiple names for a single data aggregator would make the authorization disclosure longer, and it is not clear that this added information would make a significant impact on a consumer's ability to identify the data aggregator. Finally, as discussed above, the CFPB is finalizing a requirement that the name of the data aggregator must be ''readily understandable'' to consumers, which will help ensure that consumers are able to identify the data aggregator.

Aggregator Certification (§ 1033.431(c))

The CFPB proposed in § 1033.431(c) that when a third party seeking authorization under § 1033.401 will use a data aggregator to assist with accessing covered data on behalf of a consumer, the data aggregator must certify to the consumer that it agrees to the conditions on accessing the consumer's data in proposed § 1033.421(a) through (f) and the condition in proposed § 1033.421(h)(3) upon receipt of the notice described in proposed § 1033.421(h)(2) before accessing the consumer's data. However, the data aggregator would not have been required to certify that it would provide a revocation method or certify to the requirements related to ensuring consumers informed.

The CFPB explained it was proposing to require data aggregators to certify that they agree to these conditions because, when a third party uses a data aggregator, the aggregator may play a significant role in accessing the consumer's data. Data aggregators may, among other things, process the consumer's login credentials, obtain the consumer's data from the data provider, and transmit the consumer's data to the third party. The CFPB stated that, if data aggregators were not required to agree to these conditions, there could be a significant gap in the protections afforded to consumers.

In addition, as with the third party's certification statement, the CFPB wanted the consumer to receive a clear statement of the conditions that the data aggregator must follow. The certification statement to the consumer would help consumers, the CFPB, and other regulators to enforce the obligations to which data aggregators would be required to certify. The CFPB stated that these considerations are equally applicable to data aggregators that are retained by the authorized third party after the consumer has completed the authorization procedures, so proposed § 1033.431(c) would require those data aggregators to also provide a certification to the consumer.

The CFPB also proposed in § 1033.431(c) that any data aggregator that is retained by the authorized third party after the consumer has completed the authorization procedures must also satisfy this aggregator certification

requirement. For this requirement to be satisfied, either (1) the third party seeking authorization under proposed § 1033.401 must include this aggregator certification in the authorization disclosure described in proposed § 1033.411 it provides the consumer, or (2) the data aggregator must provide to the consumer a separate certification. The CFPB stated that, for example, the aggregator certification requirement in proposed § 1033.431(c) would be satisfied where the authorization disclosure includes a statement that both the third party and the data aggregator agree to the applicable third party obligations described in proposed § 1033.421. The CFPB further stated that this requirement would also be satisfied where the data aggregator provides the certification to the consumer in a separate communication. When a data aggregator is retained by the authorized third party after the consumer has completed the authorization procedures, proposed § 1033.431(c) would not require the consumer to receive a new authorization disclosure or provide consent. The CFPB sought comment on whether to include formatting or language access requirements for an aggregator certification that is provided in a separate communication from the authorization disclosure.

Regarding the format of the separate data aggregator certification, a consumer advocate commenter requested that the CFPB include the following formatting and language access requirements in the final rule: require model forms, including mobile-friendly versions; require provision in any language that the authorization was required to be provided in; set a maximum reading level; and specify timing.

Regarding content of the data aggregator certification, several bank commenters and a consumer advocate commenter requested that data aggregators provide a revocation mechanism to ensure that consumers have the ability to revoke authorization with any entity involved in the data sharing transaction. Several bank commenters and a consumer advocate commenter also requested that data aggregators comply with the requirements related to ensuring consumers are informed in § 1033.421(g) given data aggregators' significant involvement in the handling of consumer data. These commenters stated that, because of data aggregators' significant role, consumers may want to contact data aggregators with questions about the services the data aggregator provides.

For the reasons discussed herein, the CFPB is finalizing § 1033.431(c) with certain modifications. The CFPB is finalizing the required content of the aggregator certification in the introductory text of § 1033.431(c) with non-substantive changes. Consistent with the proposal, the CFPB is not requiring data aggregators to certify to comply with § 1033.421(g) (the certification related to ensuring consumers are informed) because this would require the data aggregator to significantly increase coordination with the third party, such as by finding out with which downstream parties the third party has shared the consumer's covered data. This would result in little benefit to consumers because consumers would already receive this information from third parties. Requiring data aggregators to certify to comply with the § 1033.421(g) requirements could also result in consumers receiving unwanted duplicative information, such as two copies of the authorization disclosure (one from the third party and one from the data aggregator). The CFPB is also not requiring a data aggregator to certify that it will provide consumers with a revocation mechanism because a data aggregator would potentially have to create a consumer-facing interface to create a revocation mechanism which is not otherwise required by final rule. However, data aggregators are permitted to provide a revocation mechanism if they choose to do so.

The final rule includes non-substantive changes to the introductory text to § 1033.431(c), including, in the list of provisions that must be included in the certification, changing the reference from § 1033.421(h)(3) to § 1033.421(i) because, as described above, the final rule includes a new § 1033.421(i) that includes provisions from proposed § 1033.421(b)(4) and (h)(3). The introductory text of proposed § 1033.431(c) stated that any data aggregator that is retained by the authorized third party after the consumer has completed the authorization procedures must also satisfy this requirement. This substantive requirement is moved to final § 1033.431(c)(2) to clarify that the certification for a data aggregator retained by an authorized third party after the consumer has completed the authorization procedures would have to be provided pursuant to § 1033.431(c)(2).

The CFPB is finalizing as proposed § 1033.431(c)(1), requiring that if the data aggregator does not provide its certification to the consumer as set forth in § 1033.431(c)(2), the third party seeking authorization under § 1033.401 must include the data aggregator's certification in the authorization disclosure described in § 1033.411.

Final § 1033.431(c)(2) provides that, consistent with the general requirements for the authorization disclosure, the data aggregator must provide its certification to the consumer, electronically or in writing, separate from the authorization disclosure. As is also consistent with the requirements for the authorization disclosure and for the reasons explained above in part IV.D.3 in connection with the requirements for the authorization disclosure, the certification must be in the same language as the authorization disclosure and must be clear, conspicuous, and segregated from other material. The final rule does not require model forms, reading level, or timing requirements for the aggregator certification, consistent with the final rule's approach to the authorization disclosure in § 1033.411(a), described above.

Final § 1033.431(c)(2) also provides that the name of any data aggregator in the certification must be readily understandable to the consumer. As explained above in the discussion of § 1033.411(a), this requirement will help ensure that consumers are able to easily identify the entities in the certification. As noted above, final § 1033.431(c)(2) also provides that if, after the consumer has completed the authorization procedures, the authorized third party retains a data aggregator to assist with accessing covered data on behalf of the consumer, this data aggregator must provide its certification in accordance with § 1033.431(c)(2).

6. Policies and Procedures for Third Party Record Retention (§ 1033.441)

Proposed § 1033.441(a) would have required a third party that is a covered person or service provider, as defined in 12 U.S.C. 5481(6) and (26), to establish and maintain written policies and procedures that are reasonably designed to ensure retention of records that are evidence of compliance with the requirements of proposed subpart D. Under proposed § 1033.441(b), records required under proposed § 1033.441(a) would have to be retained for a reasonable period of time, not less than three years after a third party obtains the consumer's most recent authorization under proposed § 1033.401(a).

Proposed § 1033.441(b) based the retention period on the date of the consumer's most recent authorization because that event would determine when compliance with proposed subpart D would begin to be required. The CFPB explained that the minimum three-year period should be sufficient

for the CFPB and others to evaluate compliance with respect to any given authorization because proposed § 1033.421(b)(3) would require third parties to obtain a new authorization each year. The CFPB clarified that proposed § 1033.421(b)(4) and (h)(3) were not designed to impact the requirement for a third party to maintain policies and procedures to retain records for a reasonable period proposed in § 1033.441, noting that proposed § 1033.441 covered records that evidence compliance with proposed subpart D. In contrast, proposed § 1033.421(b)(4) and (h)(3) covered data collected from data providers to provide a requested product or service.

Under proposed § 1033.441(c), a third party covered under proposed § 1033.441(a) would have flexibility to determine its policies and procedures in light of the size, nature, and complexity of its activities. The CFPB explained that this flexibility would help third parties avoid conflicts with other legal obligations (including other record retention and data security obligations), manage data security risks, and minimize unnecessary impacts.

To mitigate the risk that the flexibility of proposed § 1033.441(c) might result in the absence of critical evidence, proposed § 1033.441(e)(1) and (2) would have identified examples of records that would need to be retained. Specifically, proposed § 1033.441(e) would have provided that records retained pursuant to policies and procedures required under proposed § 1033.441 must include, without limitation (1) a copy of the authorization disclosure that is signed or otherwise agreed to by the consumer and reflects the date of the consumer's signature or other written or electronic consent and a record of actions taken by the consumer, including actions taken through a data provider, to revoke the third party's authorization; and (2) with respect to a data aggregator covered under proposed § 1033.441(a), a copy of any data aggregator certification statement provided to the consumer separate from the authorization disclosure pursuant to proposed § 1033.431(c)(2).

Proposed § 1033.441(d) would have required a third party covered under proposed § 1033.441(a) to periodically review its policies and procedures and update them as appropriate to ensure their continued effectiveness to evidence compliance with the requirements of proposed subpart D.

The CFPB explained that the flexible policies and procedures approach of proposed § 1033.441 would be consistent with the SBREFA Panel's recommendation that the CFPB evaluate record retention requirements for consistency with other requirements and the avoidance of unnecessary data security risks, while still ensuring all evidence of compliance by a third party is retained.

The CFPB requested comment on the proposed length of the retention period and whether it should be based on another event, such as the termination of a third party's authorization or a third party's request for information from a data provider. The CFPB also requested comment on whether the final rule should identify other examples of records to be retained. Additionally, the CFPB requested comment on whether additional guidance was needed on the potential intersections of the record retention requirements in proposed § 1033.441 and limitations on retention in proposed § 1033.421(b)(4) and (h)(3).

Commenters generally supported the proposed requirement for third parties to establish and maintain policies and procedures reasonably designed to ensure retention of records that evidence compliance with proposed subpart D. One bank industry group supported measuring the retention period beginning at the time the third party obtains the consumer's most recent authorization. Another such group supported the three-year record retention requirement. On the other hand, some bank industry commenters suggested that the retention period should be two years. These commenters stated that this would make the retention requirement consistent with similar requirements to which data providers are already subject under Regulation E and Regulation Z. Further, they stated that the additional year does not pose any benefit to consumers and that the additional length to retain presents unnecessary security risks.

For the reasons discussed herein, the CFPB is finalizing § 1033.441(a) through (d) as proposed. The CFPB is finalizing § 1033.441(e) generally as proposed, with minor non-substantive edits for consistency with other revisions elsewhere in the final rule. Specifically, records retained pursuant to policies and procedures required under § 1033.441 must include, without limitation: (1) a copy of the authorization disclosure that is signed by the consumer electronically or in writing and reflects the date of the consumer's signature and a record of actions taken by the consumer, including actions taken through a data provider or another third party, to revoke the third party's authorization; and (2) with respect to a data aggregator covered under § 1033.441(a), a copy of any data aggregator certification statement that was provided to the consumer pursuant to § 1033.431(c)(2). The CFPB expects that in order to ensure accuracy, record integrity, and to preserve the ability to access the signed authorization disclosure, the authorization disclosure and the electronic signature establishing consumer consent cannot as a matter of regular course be provided orally and still satisfy all of the final rule's requirements.

Section 1033.441 is authorized under CFPA section 1022(b)(1) because it will enable the CFPB and others to evaluate a third party's compliance with subpart D and would prevent evasion. To the extent that § 1033.441 applies to CFPB-supervised nondepository covered persons, it is additionally authorized by CFPA section 1024(b)(7) because it will facilitate supervision of such persons and enable the CFPB to assess and detect risks to consumers.

The CFPB determines that the three-year length of the retention requirement in § 1033.441(b) is appropriate and the CFPB declines to align it with the retention requirements in Regulation E and Regulation Z, as requested by some commenters. The retention requirements under Regulation E and Regulation Z are substantively different from those in § 1033.441. Records required under Regulation E and Regulation Z relate to regulated entities' disclosures to consumers pertaining to electronic fund transfers and consumer credit, respectively. Such disclosures to individual consumers are likely to be stale after a period of two years. Three years of records contemplated by § 1033.441 will allow for analysis of a third party's compliance with part 1033, including patterns in third party actions in requesting access to a data provider's interface and the authorizing consumer's data over time. Moreover, based on the CFPB's supervisory and enforcement experience, a three-year retention period is an appropriate amount of time to enable the CFPB and other enforcement agencies to examine or conduct enforcement investigations.

12 CFR Part 1001

Providing Financial Data Processing Products or Services (§ 1001.2(b))

Proposed § 1001.2(b) would have defined providing financial data processing products or services by any technological means, including processing, storing, aggregating, or transmitting financial or banking data, alone or in connection with another product or service, as a financial

product or service under the CFPA. The proposed provision included certain limited exclusions. After considering public comments, the CFPB is finalizing the provision as proposed.

Statutory Framework

Under CFPA section 1002(15)(A)(xi)(II), the CFPB may issue a regulation to define as a financial product or service ''such other financial product or service'' that the CFPB finds is ''permissible for a bank or for a financial holding company to offer or to provide under any provision of a Federal law or regulation applicable to a bank or a financial holding company, and has, or likely will have, a material impact on consumers.'' The CFPB is issuing § 1001.2(b) pursuant to this authority. In turn, under the CFPA, a financial product or service under § 1001.2(b) would qualify as a ''consumer financial product or service'' under CFPA section 1002(5)(A) if it ''is offered or provided for use by consumers primarily for personal, family, or household purposes.''

As the CFPB explained in the proposal, the activities in § 1001.2(b) would have already been within scope of the CFPA's definition of financial product or service. Specifically, CFPA section 1002(15)(A)(vii) defines as a financial product or service ''providing payments and other financial data processing to a consumer by any technological means.'' The language of this provision extends beyond payment processing to broadly include other forms of financial data processing. Accordingly, consumers already receive the protections of the CFPA when entities process their potentially sensitive data, whether payments or any other category of financial or banking data.[122] On this issue, a trade association of the nonbank money services industry submitted a comment agreeing that the activities in § 1001.2(b) are already within the scope of the CFPA. Consistent with the proposed rule, the CFPB is using its rulemaking authority under CFPA section 1002(15)(A)(xi)(II) to provide even greater certainty regarding CFPA coverage.[123]

Overview of § 1001.2(b)

By conferring authority on the CFPB to define additional financial products or services, the CFPA accounts for the possibility that the enumerated list of financial products and services in CFPA section 1002(15)(A)(i) through (x) may not completely capture the markets for financial products or services that are significant for consumers, especially as market developments lead to emerging concerns for consumers. As already noted, the final rule has the potential to expand access to personal financial data and subject such data to a wider variety of data processing activities. The CFPB is adding to the definition of financial product or service the category of ''providing financial data processing products or services'' to ensure that activities involving consumers' potentially sensitive personal financial information are subject to the CFPA and its prohibition on unfair, deceptive, or abusive acts or practices to the full extent authorized by Congress.[124] The definition includes examples to illustrate the activities that fall within the term financial data processing. Section 1001.2(b) clarifies that the financial data processing products or services that are covered by the definition could be offered either alone or in connection with another financial or nonfinancial product or service, and so it does not cease to be covered simply because it is offered in connection with the latter.[125]

Statutory Factors

Consistent with the proposal, the CFPB has determined that § 1001.2(b) meets the two factors set forth in CFPA section 1002(15)(A)(xi)(II). First, these activities are permissible for financial holding companies under the Federal Reserve Board's Regulation Y and for national banks under OCC regulations.[126] Both financial holding companies and national banks are permitted to engage, among other things, in data processing, data storage, and data transmission services by any technological means, so long as the data to be processed are financial, banking, or economic.[127]

No commenter disputed that the defined activities satisfy the first CFPA factor of being permissible for financial holding companies or banks. A research institute commenter did express concern that the definition could encompass activities that, in the commenter's view, are not financial. This commenter advocated that the CFPB borrow a test for financial activities from certain FTC regulations implementing the GLBA. However, this commenter did not argue that the financial data processing products or services covered by § 1001.2(b) are not permissible for financial holding companies or banks, which is the standard selected by Congress in the context of the CFPA. The commenter did not explain why the CFPB should use a test from a different regulatory framework instead of the CFPA standard, and accordingly the CFPB is relying on the CFPA standard.

With respect to the second CFPA factor, the processing of personal financial information has, or is likely to have, a material impact on consumers. As already discussed in the proposal and above in part I, use of personal financial data has become an even more important part of consumer finance than it was at the time that the CFPA was enacted in 2010. The processing of personal financial data, including storing, aggregating, and transmitting such data, has the potential to provide benefits to consumers but also expose them to a number of substantial risks. Financial data processing activities that are provided to consumers, assuming they are not already included within the definition of a financial product or service under CFPA section 1002(15)(A)(vii), raise the same type of consumer protection concerns as activities that do fall within this definition.

No commenter disputed the material impact of the activities covered by § 1001.2(b) on consumers. A bank expressed support for § 1001.2(b) as regulating nonbanks in a like manner as banks. A bank trade association argued that the provision should do more to cover data aggregators. However, the CFPB notes that § 1001.2(b) includes aggregating financial or banking data as an example of a financial data processing product or service.

Exclusions

Section 1001.2(b) states that it does not apply where the financial data processing is offered or provided by a

[122] Many of these activities could also fall within other categories of financial product or service. *E.g.,* CFPA section 1002(15)(A)(ix), 12 U.S.C. 5481(15)(A)(ix) (''collecting, analyzing, maintaining, or providing consumer report information or other account information'' under specified circumstances).

[123] Accordingly, the scope of § 1001.2(b) is independent of how CFPA section 1002(15)(A)(xi)(II) is construed.

[124] 12 U.S.C. 5531, 5536.

[125] The CFPB notes that the scope of a ''covered consumer financial product or service,'' as defined under § 1033.111(b) for purposes of part 1033, is not dependent on adopting § 1001.2(b). The products and services listed in § 1033.111(b) are already covered by existing statutory provisions such as CFPA sections 1002(15)(A)(i), (iv), (v), and (vii).

[126] 12 CFR 225.28(b)(14), 7.5006(a); *see also* 68 FR 68493, 68495–96 (Dec. 9, 2003) (explaining that 12 CFR 225.28(b)(14) permits bank holding companies to engage in a ''wide range'' of data processing activities, including bill pay services, financial data processing for marketing purposes, and delivering financial products or services over the internet, among other activities).

[127] *Id.*

person who, by operation of CFPA section 1002(15)(A)(vii)(I) or (II), is not a covered person. As background, CFPA section 1002(15)(A)(vii) provides that a person shall not be deemed to be a covered person with respect to financial data processing solely because the person engages in certain narrowly prescribed processing activities. CFPA section 1002(15)(A)(vii)(I) excludes from coverage certain merchants, retailers or sellers of non-financial products or services that are solely engaged in certain activities related to initiating payment instructions, whereas CFPA section 1002(15)(A)(vii)(II) excludes persons that solely provide access to a host server for websites. The CFPB is paralleling these exclusions in § 1001.2(b).

A research institute commenter argued that § 1001.2(b) should be amended to reflect CFPA section 1002(15)(C)(ii), which excludes ''electronic conduit services'' (as further defined in CFPA section 1002(11)) from the statutory definition of ''financial product or service.'' However, it is unnecessary to specifically amend § 1001.2(b) along these lines, because, like other categories of financial product or service, § 1001.2(b) remains subject to the exclusion for electronic conduit services in CFPA section 1002(15)(C)(ii).[128] A trade association generally supported clarifying that financial data processing is a financial product or service under the CFPA. But it argued that ''transmitting'' financial data should be excluded from § 1001.2(b), because the trade association viewed it as distinct from financial data processing. However, financial data transmission is expressly covered by the applicable longstanding provisions of Regulation Y and OCC regulations, and it is within the scope of the CFPB's statutory authority if it is not an electronic conduit service as defined in CFPA section 1002(11).

Another trade association supported covering certain ''retail'' financial data services that are ''consumer facing,'' but it advocated excluding what it described as ''non-retail'' services. The trade association argued that covering ''non-retail'' entities would reduce competition by limiting those entities' ability to efficiently use data. However, the CFPB cannot discern from the comment why the commenter believes this to be the case. The CFPB notes that Congress has already established a boundary for a ''consumer financial product or service'' based on whether the product or service is ''offered or provided for use by consumers primarily for personal, family, or household purposes'' under CFPA section 1002(5)(A). Within that boundary, assuming a given financial data processing product or service would not have already been covered by CFPA section 1002(15)(A)(vii), the principal consequence of § 1001.2(b) is to protect consumers from unfair, deceptive, or abusive acts or practices under the CFPA. The CFPB does not agree that Congress's prohibition on subjecting consumers to unfair, deceptive, or abusive acts or practices interferes with fair competition.[129]

Finally, a consumer advocate commenter requested that the CFPB clarify that when an entity is covered by the CFPA through § 1001.2(b), that does not imply the entity is not covered by the Fair Credit Reporting Act. However, CFPA coverage does not foreclose an entity from being covered by other laws the CFPB administers, so the CFPB does not see a need to amend § 1001.2(b) to address the stated concern.

V. Effective and Compliance Dates

The effective date of the final rule is 60 days after the rule is published in the **Federal Register**. The CFPB proposed this effective date and did not receive any comments. As set forth in 12 CFR 1033.121, data providers must comply with the requirements in subparts B and C beginning April 1, 2026; April 1, 2027; April 1, 2028; April 1, 2029; or April 1, 2030, depending on the criteria set forth in § 1033.121(c). See part IV.A.5 for a discussion of the comments received with respect to compliance dates. In the case of the amendment to part 1001, the proposal explained that the activities covered by the amendment are already within the scope of the CFPA's definition of financial product or service, and it stated that no compliance date is necessary.[130] The CFPB received no comments on the implementation period for the amendment to part 1001, and accordingly it is finalizing the 60-day effective date as proposed.

VI. CFPA Section 1022(b) Analysis

A. Statement of Need

In section 1033 of the CFPA, Congress authorized and directed the CFPB to adopt regulations governing consumers' data access rights. The CFPB is issuing this final rule to implement CFPA section 1033 with respect to certain covered persons under the CFPA. The CFPB is also relying on other CFPA authorities for specific aspects of the rule.

Because the primary purpose of this rule is to implement section 1033 of the CFPA, the role of this CFPA section 1022(b) analysis is to evaluate the benefits, costs, and impacts of the specific policies within the rule and potential alternatives to those policies. This *Statement of Need* summarizes the CFPB's understanding of the gaps between Congress's intended outcome for consumers' financial data access rights and current practices, and describes the overall goals of the rule in closing those gaps. The remainder of the CFPA section 1022(b) analysis discusses the benefits, costs, and impacts of the specific provisions, and potential alternatives.

CFPA section 1033 requires data providers to make financial data available in electronic form upon request to consumers and third parties authorized to act on their behalf. Today, consumer financial data may be accessed by third parties through methods that raise data security and privacy risks, and consumers may have little to no knowledge of or control over how the data are used by third parties that have access to it. In addition, the market has been slow to implement secure and efficient methods for sharing data with third parties, and data providers may not be motivated to provide in a timely and readily usable manner all the data fields that consumers may want to access. The result is that access to consumer financial data can be unreliable, or that financial data held by some providers may be unavailable to some consumers or their authorized third parties.

When data are made available, there is a general lack of consistency across data providers in the terms and conditions for access and the technical specifications used. This creates

[128] *See* 12 CFR 1001.2 (introductory language stating that definitions apply except ''as otherwise provided in [the CFPA]''). This commenter also argued that § 1001.2(b) should be amended to exclude certain persons who are excluded from the definition of ''service provider'' under CFPA section 1002(26)(a)(ii). That exclusion from the definition of ''service provider'' has similarities to the exclusion of electronic conduit services from the definition of ''financial product or service.'' However, the commenter did not explain why the exclusion from the distinct statutory definition of ''service provider'' should be imported into the definition of ''financial product or service,'' and the CFPB is not aware of a reason to do so. If the ''service provider'' exclusion applies to an entity, it would not be a service provider under the terms of the statute.

[129] *E.g.,* CFPA section 1031(c)(1)(B) (citing countervailing benefits to consumers and to competition as a factor when identifying unfair acts or practices).

[130] Even assuming the activities covered by the amendment to part 1001 were not already within the scope of the CFPA's definition of financial product or service, the CFPB notes that it has no reason to believe a 60-day implementation period would be insufficient.

inefficiencies for market participants, and often entails substantial levels of cost.

This rule aims to (1) expand consumers' access to their financial data across a wide range of financial institutions, (2) ensure privacy and data security for consumers by limiting the collection, use, and retention of data that are not needed to provide the consumer's requested service, and (3) push for greater efficiency and reliability of data access across the industry to reduce industry costs, facilitate competition, and support the development of new products and services beneficial to consumers.

B. Data and Evidence

The CFPB's analysis of costs, benefits, and impacts is informed by data from a range of sources. These include data collected in the Provider Collection and Aggregator Collection,[131] as well as data obtained from other regulatory agencies [132] and publicly available sources.[133]

In 2016, the CFPB released and received comments on an RFI on consumer rights to access financial data. In 2020, the CFPB held a symposium titled ''Consumer Access to Financial Records'' and released a summary of the proceedings. Later in 2020, the CFPB released and received comments on an ANPR. In 2023, the CFPB convened a SBREFA Panel to gather input from small businesses and the Panel issued the SBREFA Panel Report.[134] The CFPB also solicited and received comments from other industry participants on the SBREFA Outline.[135] Later in 2023, the CFPB issued its proposed rule, and received comments from the public in response.[136] In addition to these sources of information, these impact analyses are informed by consultations with other regulatory agencies, industry, consumer advocates, and researchers. Part II.A further describes the CFPB's outreach.

For the types of financial data and access generally covered by this rule, the information obtained through the Provider Collection and Aggregator Collection allow the CFPB to estimate: the number of data providers consumer-authorized data are accessed from; the number of third parties accessing or using consumer-authorized data; the number of consumers granting third parties permission to access data on their behalf; the total number of permissioned access attempts; and information about the technologies used and the purposes of the permissioned data access. The Provider Collection and Aggregator Collection also allow the CFPB to estimate the operational costs of providing direct and third party data access, and the costs of establishing data access agreements. To maintain the confidentiality of the respondents to these data collections, the CFPB provides approximate or bounded estimates derived from these data, rather than precise totals or figures specific to any one respondent.[137]

In the proposal, the CFPB requested additional information or data that could refine these estimates. Where commenters provided such information, it is discussed in the relevant part and incorporated into the analysis and estimates.

For data on the number and characteristics of covered depository institutions, the CFPB relies on data from FFIEC and NCUA Call Reports.[138] These sources provide quarterly information on the number of institutions, dollar amount of institution-level assets, number of deposit accounts, dollar volume of credit card lending, and other characteristics. Notably, these data provide information on the number of deposit accounts insured by the FDIC or NCUA, which are imperfect, but nonetheless the best available proxy for the number of covered financial accounts held by depositories. While this measure includes covered depository accounts, it also includes business accounts and other accounts that are not covered by the rule. It also does not include certain covered financial accounts, such as credit card accounts and non-bank products. The FFIEC data also provide information on the websites and digital banking capabilities for banks. The CFPB supplemented this information with comparable information in NCUA Profile (Form 4501A) data for credit unions.[139]

To estimate costs to small entities of the provisions, the CFPB relies on information gathered from the SBREFA process and from comments on the proposal. This includes written feedback on the SBREFA Outline submitted by small entity representatives, the discussions at the SBREFA Panel summarized in the SBREFA Panel Report, and comments on the proposal.

C. Coverage of the Rule

Part VII.B.4 provides a discussion of the number and types of entities affected by the rule. Relative to the proposal, the most substantial change in coverage is that depositories with assets below specified size standards defined by the SBA are not covered as data providers under the rule.

D. Baseline for Consideration of Costs and Benefits

In evaluating the rule's benefits, costs, and impacts, the CFPB considers the impacts against a baseline in which the CFPB takes no regulatory action. This baseline includes existing regulations, State laws, and the current state of the market. In addition, because the market is still developing rapidly, the analysis assumes that the market trends toward greater data access and increased adoption of developer interfaces would continue under the baseline, but assumes no change in the State laws and regulations currently in effect that are related to consumers' data access rights for either direct access or access through third parties.

A large and growing number of consumers currently access their financial data through consumer-

[131] For information about the data collected in the Provider Collection and Aggregator Collection, respectively, *see* Consumer Fin. Prot. Bureau, *Generic Order for Data Providers, https://files.consumerfinance.gov/f/documents/cfpb_generic-1022-order-data-provider_2023-01.pdf;* and Consumer Fin. Prot. Bureau, *Generic Order for Data Aggregators, https://files.consumerfinance.gov/f/documents/cfpb_generic-1022-order-data-aggregator_2023-01.pdf* (both last visited Oct. 16, 2024). Because data providers and data aggregators vary substantially in size and business practices, the data from these collections are likely not representative of the market as a whole. The data are informative about the practices of some large data providers and a selection of data aggregators and third parties.

[132] In particular, these include entity-level FFIEC and NCUA data on characteristics of depository institutions.

[133] The analysis is informed by academic research papers, reports on research by industry and trade groups, practitioner studies, and comment letters received by the CFPB. Where used, these specific sources are cited in this analysis.

authorized third parties. This access is provided by a range of technologies, including credential-free APIs, APIs that require third parties to retain consumer credentials (credential-based APIs), and credential-based access through consumer-facing digital banking interfaces such as online banking websites or mobile applications (screen scraping). As discussed in part I.B, with respect to the state of the open banking system, the CFPB estimates that more than 100 million consumers have used consumer-authorized data access, authorizing thousands of third parties to access their financial data at thousands of data providers, often through intermediaries such as data aggregators.[140]

In total, the CFPB estimates that there were between 50 billion and 100 billion total consumer-authorized access attempts in 2022.[141] Usage has grown substantially in recent years, as the annual number of consumer-authorized access attempts approximately doubled from 2019 to 2022, and usage has continued to grow since 2022.[142]

This third party financial data access enables numerous use cases for consumers. In 2022, data available to the CFPB show that there were more than two billion access attempts to facilitate payment services, more than one billion access attempts for the purpose of identity verification (typically for opening new accounts), tens of billions of access attempts for account monitoring and personal financial management use cases, and over one billion access attempts facilitating other use cases, including fraud risk assessments, loan underwriting, and asset and income verification.

While the share of consumer-authorized data accessed through dedicated credential-free APIs has grown sharply, many access attempts still rely on either credential-based APIs or screen scraping. As a share of all access attempts made by firms in the Aggregator Collection, the use of credential-free APIs grew from less than 1 percent in 2019 and 2020 to 9 percent in 2021 and 24 percent in 2022. At the same time, the share of access attempts using screen scraping declined from 80 percent in 2019 to 50 percent in 2022. Credential-based APIs saw a slight increase from 20 percent in 2019 to 27 percent in 2022.

The recent growth in traffic through credential-free APIs reflects the adoption of this technology by some of the largest data providers, covering tens of millions of covered accounts. All depository data providers with more than $500 billion in assets have established, or in the near future will establish, a credential-free API. However, despite recent growth, the total share of data providers offering credential-free access methods remains limited. At the end of 2022, an estimated 5 to 10 percent of all data providers offered credential-free APIs, up from less than 1 percent in 2021. The adoption of credential-free APIs by core banking service providers and other vendors that serve hundreds of smaller depository institutions contributed to this growth.[143] While adoption is relatively high for the largest depository data providers, the CFPB estimates that only 10 to 20 percent of depositories with more than $10 billion in assets had credential-free APIs at the end of 2022.

The future evolution of the marketplace enabled by the exchange of consumer financial data is uncertain. Based on the data and market trends available, the CFPB makes the following assumptions for the baseline in this impact analysis. The analysis assumes that most of the largest data providers have adopted or likely would in the near future adopt credential-free APIs, which would meet many—but likely not all—requirements contained in the rule. Awareness of CFPA section 1033 may have contributed to this, though adoption is also influenced by data providers' desire to shift third party access away from screen scraping and towards more secure and efficient technologies, as well as the demand for third party access from data providers' customers. The analysis also assumes that some share of smaller institutions would adopt credential-free APIs, depending on their technology and business models, over a longer-term horizon. Based on past trends, larger institutions would be more likely to adopt such interfaces sooner. However, adoption may be easier for (1) depositories whose systems are already well integrated in-house or with large core banking or online banking service providers and (2) nondepositories and newer depositories that do not have complex legacy systems, irrespective of the sizes of these types of institutions. In addition, in the current market some data providers block screen scraping access under certain circumstances, including for third party risk management, and the CFPB expects this would continue under the baseline.

The CFPB understands that all or most third parties seeking to access consumer-authorized information and data providers are subject to the GLBA, specifically either the FTC's Safeguards Rule or the prudential regulators' Safeguards Guidelines. Additionally, third parties that operate in one of the at least 11 States with consumer data privacy legislation may be subject to other data security requirements and data usage restrictions. These State laws have all been passed since 2018. Depository data providers also have third party risk management obligations required by their prudential regulators, which will impose data security requirements on third parties seeking to access consumer-authorized data. As a result, at baseline, the CFPB expects that many third parties are already subject to statutory and regulatory data privacy and security obligations, and third parties have adopted or would adopt some basic standards related to risk management, data security, and data use. These standards likely have some degree of overlap with the requirements in the rule, though individual company systems or policies will depend on the size, location, practices, and other circumstances of each third party.

Several commenters expressed concerns about how the rule may interact with other existing or future regulations. A credit union and a bank trade association asserted that the CFPB estimated costs in isolation of other regulations, including those from prudential regulators. Two data aggregators commented that data providers will invoke third party risk management obligations to deny access in anticompetitive ways. SBA Advocacy and a trade association commented that the CFPB should consider current or

[140] Unless described otherwise, the estimates in this part VI.D are derived from the total numbers of consumers, connections, and access attempts reported by data providers in the Provider Collection and third parties in the Aggregator Collection. These estimates are necessarily approximate, as the CFPB aims to protect the confidentiality of the respondents, account for the substantial share of consumer-authorized data sharing that is not captured by the respondents, and account for the likely potential overlap in counts for consumers, connections, and access attempts that involve respondents to both the Provider Collection and the Aggregator Collection.

[141] An access attempt is defined here as an individual instance in which a single consumer-authorized third party requests or attempts to pull data about a single consumer's accounts from a single data provider's systems. Not all attempts will lead to a successful data transfer, but the number of access attempts is used as an indicator for the overall size and growth of the open banking system.

future State laws that may have similar requirements.

The CFPB has considered existing regulations and laws that interact with the rule, as these are part of the baseline for this impact analysis. Any costs of complying with existing regulations and laws are thus included in the baseline, and this analysis is of changes in costs relative to that baseline. The impact analysis does not consider the effects of potential future laws or regulations that may interact with the rule, as this would be overly speculative given the uncertainty around them.

The impact analysis generally includes the major elements of costs to firms of complying with the rule. It also includes a discussion of how some of these costs likely would have been borne under the baseline as data providers either would have adopted or already have adopted systems or policies similar to those required by the rule. For example, where data providers have adopted some form of credential-free third party access under the baseline, the analysis discusses how the rule will impact the terms, costs, and features of such functionality.

Finally, in the context of direct access, the proposal assumed for its baseline that all covered data providers offer consumers some digital banking interface and that these interfaces typically provide all or nearly all data fields required to be made available by the proposal. The CFPB maintains this assumption in the final rule, as the CFPB understands that all or nearly all data providers within the rule's revised coverage offer consumer interfaces. Comments related to the costs of building and maintaining such interfaces for direct access from data providers are discussed in part VI.E.1. The analysis considers how the rule will impact the costs and features of data providers' consumer interfaces.

E. Potential Benefits and Costs to Consumers and Covered Persons

The analysis below describes the potential benefits and costs to consumers and covered persons in the following order: costs to data providers, costs to third parties, costs to consumers, benefits to data providers, benefits to third parties, benefits to consumers, and alternatives considered.

A service provider for credit unions asserted that the CFPB should engage in a more thorough cost-benefit analysis and that the CFPB did not gather enough input or data from core providers. Trade associations for credit unions and businesses claimed that the proposal's analysis was incomplete, some elements had not been justified, and that the CFPB had failed to engage in a thorough and accurate analysis. The CFPB considered all of the data and evidence described in part VI.B, including all comments on the proposal, in analyzing the potential benefits and costs of the rule. The CFPB does not have the data to precisely determine every potential benefit and cost of the rule, but requested comment on the proposal for additional data or evidence that could refine the estimates of benefits and costs. The CFPB has reasonably evaluated all such evidence provided, and updated its estimates where appropriate.

Where commenters stated that the CFPB had failed to justify or address the benefits and costs of particular provisions of the proposal, those comments are discussed in this part.

1. Costs to Covered Persons

Costs to Data Providers

As a result of the rule, covered data providers may face increased costs related to maintaining consumer interfaces and establishing and maintaining developer interfaces, including modifying their existing systems to comply with the rule. The CFPB expects the largest costs to data providers to come from establishing and maintaining data access for authorized third parties in accordance with rule requirements. Covered data providers will also incur costs related to developing and implementing policies and procedures governing those systems. The rule may have additional costs to covered data providers related to changes in the frequency, scope, or method of consumer-authorized data access relative to the baseline. These changes may have secondary effects on the profitability of certain business models or practices, including by facilitating competition and enabling new products and services. The estimation of data providers' costs described in this section broadly uses the same methodology that the CFPB used in the proposal unless otherwise noted. The primary differences are adjustments to the costs of developing policies and procedures that are informed by comments.

Maintaining Direct Consumer Access

The rule requires covered data providers to make covered data available through consumer interfaces and to allow consumers to export certain information in machine-readable formats. As discussed in part IV.A.2, small depository institutions are not required to comply with the final rule's requirements applicable to data providers. During the SBREFA Panel meetings, the CFPB received feedback that certain categories of information under consideration in the SBREFA Outline are not typically made available directly to consumers, and thus would be costly to provide.[144] Based on this feedback, the rule covers a more limited set of information, which the CFPB understands is currently provided through existing consumer interfaces by all or nearly all data providers. Therefore, for most data providers, the CFPB expects limited additional costs due to the rule's direct consumer access requirements. For those data providers that do not provide all required information under the baseline, the CFPB expects that such information could be added at relatively low cost because the required information is generally already necessary for compliance with other regulatory requirements, like providing account opening disclosures. The CFPB does not have sufficient data to quantify the levels of these costs.

In the proposed rule, the CFPB sought comment or information on the costs of adding data fields to the consumer interfaces but did not receive any. A trade association for nondepository service providers commented that the costs would be high to create a consumer interface for nondepository institutions that do not have one already but did not provide additional information on the magnitude of the cost. A few other commenters asserted that the rule will raise costs and barriers to entry for retailers to develop and use pass-through digital wallets, if those products are covered as data providers. The CFPB expects that few nondepository data providers that are covered by the rule do not already have a consumer interface. The CFPB acknowledges that those few nondepository data providers could incur additional costs associated with creating a consumer interface but does not have sufficient data to determine the magnitude of these costs.

Maintaining Third Party Access

The rule requires data providers to maintain data access through a compliant developer interface. Although many data providers already maintain similar functionality, others would need to establish new interfaces, likely integrated with existing infrastructure that supports their consumer interfaces. However, unlike the proposal, the rule does not require small depositories to maintain data access for authorized third parties, meaning many fewer

[144] SBREFA Panel Report at 24.

institutions than estimated in the proposal will need to provide data access functionality under the rule. The CFPB expects that the costs of modifying existing infrastructure to ensure compliance with the rule will depend on the scope and nature of the necessary modifications but would generally be lower than the cost of establishing a new interface.[145]

In general, data providers must either contract with a vendor for the required functionality or develop and maintain it in-house. The analysis below estimates compliance costs under these two approaches. Some data providers may comply with the rule through a combination of contracted services and in-house development. Because data providers will generally choose the lowest-cost approach, their costs will generally be at or below the lower of the costs of the two feasible alternatives analyzed here.

The CFPB understands that data providers' costs depend on many factors and the extent to which they vary is impossible to fully capture. To produce cost estimates that are practical, meaningful, and transparent, where feasible, the CFPB estimates initial upfront costs and annual costs that generally scale with the size of the data provider for each of the contracted services and in-house approaches. All else equal, a data provider's annual cost per account or per customer is likely to decrease with a greater number of accounts or customers due to economies of scale. During the SBREFA process and in the Provider Collection, some data providers provided cost estimates per account while others estimated costs per customer. Therefore, the analysis below discusses estimates of the annual cost per account or per customer of operating a compliant developer interface that are likely to be appropriate for data providers of different sizes.

Under the contracted services approach, data providers would primarily contract with a vendor for the necessary functionality. At baseline, many covered data providers contract with core banking providers or other vendors for transaction processing, online banking systems, or other key banking functions. Some core banking providers currently offer services to enable developer interfaces for data providers. The CFPB understands that some large core banking providers provide their clients with a basic developer interface at no additional cost.[146] Based on comments received during the SBREFA process and market research, the CFPB understands that other core banking providers charge flat monthly fees or per-account fees.[147] The CFPB understands that these fees vary but generally estimates that fees can be up to $24 per account per year.[148]

Data providers taking this approach will generally have minimal upfront costs to enable the required third party access. However, some data providers use service providers that do not currently offer this kind of functionality. Although other options exist and the CFPB expects service providers would face strong competitive pressure to offer compliant developer interfaces to their clients, the lowest cost option for some data providers may involve changing their core banking provider. The fixed costs of changing core banking providers can be high. Several small entity representatives stated that the upfront costs at a new core banking provider can range from $50,000 to $350,000 depending on the scale and complexity of the system, with up to $200,000 in additional decommissioning costs to retrieve information from the old core banking provider. While small depository institutions are not required to comply with this final rule, many medium-sized depository institutions also rely on core providers. The CFPB expects that the medium-sized depository institutions may pay closer to $350,000 due to scale and complexity if they need to switch to a new core provider that offers a compliant developer interface. Based on its market research, the CFPB understands that core banking providers that offer a developer interface have a combined market share exceeding 67 percent.[149] Therefore, at most, 33 percent of depository data providers would need to change core banking providers to obtain a compliant interface that is bundled with their other core banking services. However, the CFPB expects that the true share of covered depository data providers that pay these costs will be much lower than 33 percent. Data aggregators and other software vendors offer developer interfaces and the CFPB expects that some data providers will obtain the necessary functionality through these channels and will not need to change their core banking provider. Furthermore, core banking providers will face strong competitive pressure to offer compliant developer interfaces to retain their clients and potentially capture additional market share. The CFPB expects that these forces are likely to cause the cost of obtaining compliant interfaces to decline over time, which may reduce compliance costs most substantially for smaller covered depository data providers, given that they have the latest compliance date.

The CFPB requested information related to the developer interfaces offered by core banking providers and other vendors and how such interfaces are priced. The CFPB received several comments on the costs associated with the contracted services approach. Several banks and credit unions confirmed that depository institutions will depend on core banking providers to obtain the necessary functionality. A credit union trade association and two banks asserted that these core providers are likely to charge additional fees to provide these services. A credit union suggested that an API could cost between $50,000 and $125,000 from a core provider. A bank commented that they may also incur associated personnel costs but did not provide additional information on the magnitude of the costs. A credit union asserted that, if a depository institution is required to switch to a new core provider to obtain a developer interface, the waiting period to switch is about two years and thus the depository would not be able to comply by the mandatory compliance dates. Another credit union, however, commented that core providers would be implementing solutions for all depositories and, thus, expects costs per data provider to be manageable. Similarly, a consumer advocate commented that they expect industry utilities and cloud providers could keep costs manageable. Finally, a service provider for credit unions commented that the CFPB did not gather enough input from core providers in estimating these costs.

The CFPB acknowledges that core providers may charge data providers to provide the required functionality. The CFPB developed its cost estimates in the proposal based in part on feedback from small entity representatives received through the SBREFA process, and considers the information provided by commenters about core providers to be broadly consistent with the CFPB's estimated costs. Furthermore, the

[145] For example, some data providers with existing interfaces may need to provide additional data fields, change the way their data are formatted, or make additional investments to ensure their interfaces meet the performance specifications required by the proposed rule.

[146] For example, *see* Jack Henry & Assocs., Inc., *Secure Data Connection: take back control of account connection, https://banno.com/data-aggregators/* (last visited Oct. 16, 2024).

commenters most concerned about the costs of contracting with core providers to enable the required third party access were small depository institutions that will not be required to comply with the data provider requirements of this final rule.

Under the in-house approach, data providers would primarily employ software developers or similar staff to build and operate the necessary functionality. The estimates below are based on a fully in-house approach for developing of a compliant developer interface. Some data providers may instead contract with software providers for the initial development of their in-house developer interface. The CFPB anticipates that data providers would purchase their systems only if they could do so at a lower cost than the estimate of building a compliant interface provided here.

The CFPB expects that most data providers that have already developed and have been maintaining consumer interfaces in-house would also develop and maintain the required developer functionality in-house.[150] In the proposal, the CFPB estimated that for smaller data providers, developing a compliant interface for third party access would likely require between 2,600 and 5,200 hours of work by software developers or similar staff, equivalent to five full-time employees over a period of three to six months, resulting in an estimated total upfront staffing cost of $237,000 to $475,000, which the CFPB has updated to $247,000 to $494,000 for the final rule based on more recent labor cost data.[151] However, these estimates strongly depend on the needs and capabilities of specific entities. For example, based on feedback from nondepository small entity representatives, the CFPB estimated in the proposal that nondepository data providers may require only 480 hours of work by software developers at a total cost of $44,000, which the CFPB has updated to $46,000 based on more recent labor cost data.[152]

In addition to these upfront costs, the CFPB estimated that data providers taking the in-house approach would incur ongoing costs. In the proposal, the CFPB estimated that small data providers (both depository and nondepository) would incur ongoing annual technology costs of $20,000 as well as ongoing staffing costs of $45,000 to $91,000, which the CFPB has updated to $48,000 to $95,000 based on more recent labor cost data.[153] Under the final rule, small depositories will not have costs for complying with the data provider requirements of the rule. For medium-sized data providers with more accounts, the CFPB estimated ongoing costs of $5 per account per year to maintain the required functionality in-house, based on evidence from the Provider Collection described below.

The Provider Collection contains information on costs for a sample of large depository data providers. This complements the information on costs for small data providers gathered through the SBREFA process. For context, data provider small entity representatives generally may have up to a few tens of thousands of accounts, while data providers in the Provider Collection have millions of accounts.

In the Provider Collection, several data providers stated that it was difficult to disaggregate the costs of developer interfaces from their consumer interfaces and other information technology systems. These data providers also generally provided estimates of ongoing annual costs or total costs since the deployment of their developer interfaces, rather than upfront costs to build an interface. Reported estimates of the cost of establishing and maintaining a developer interface varied widely, from $2 million to $47 million per year, with a median of $21 million per year. Of the data providers providing disaggregated estimates, the median cost of developer interfaces as a share of the cost of their consumer interfaces was 2.3 percent. An additional data provider did not provide a disaggregated estimate but reported their developer interface constituted a ''small portion of the total consumer-portal costs.''

These data providers are larger and more complex than most data providers. Therefore, the CFPB adopts the cost of a compliant developer interface per account as the relevant metric for estimating the costs for data providers generally. The reported cost of an in-house developer interface per customer or account ranges from $0.25 to $8 per year, with a median of $3.37 per year, substantially lower than the $24 per year reported by small entity representatives as the potential cost for the contracted services approach. Within the sample, the per account cost generally declined as the number of accounts increased.[154] Based on this evidence, the CFPB estimates that annual costs per account to maintain an in-house developer interface are likely to be approximately $3 for large depository data providers and $5 for medium-sized depository data providers. Although the Provider Collection sample is relatively limited, the pattern of per-account costs declining with the number of accounts suggests that—relative to the alternative of contracting for a developer interface—data providers developing and maintaining interfaces in-house likely have larger upfront fixed costs but smaller ongoing per account costs. These estimated costs are generally for depository institutions rather than nondepositories. Given feedback from small entity representatives of nondepository institutions that would qualify as data providers under the rule, the CFPB expects that nondepository data providers would generally have less need to integrate across multiple systems and would be less likely to have legacy software that is difficult to update, resulting in lower costs on average.

The estimates above relate to the costs of developing and maintaining a developer interface for data providers without such existing interfaces. Covered data providers with existing developer interfaces that are not fully compliant with the proposed rule would incur smaller costs to modify their interfaces and existing third party access agreements to align with the

[150] As discussed below, large depository data providers have generally indicated that the resources required to maintain the required third party access in-house are a small fraction of the resources required to maintain consumer interfaces in-house. Therefore, the CFPB expects that data providers that have already invested in the capacity to operate a consumer interface in-house will take a similar approach to providing the required third party access. However, it is likely that some data providers will find it less costly to contract with service providers. As the industry develops, it is possible that it will become more common for data providers to enable third party access through service providers.

[151] This estimate was derived from BLS data showing a mean hourly wage for software developers of $66.40. BLS data also show that wages account for 70 percent of total compensation for private industry workers, leading to a $94.86 estimate for total hourly compensation, which was multiplied by the expected total number of hours of work required.

[152] Costs for depository and nondepository data providers are likely to differ for several reasons, including that depository data providers are generally more likely to have multiple legacy information technology systems that are more technically difficult to integrate with a developer interface.

[153] The CFPB estimates that small data providers choosing the in-house approach would require 500 to 1,000 hours per year of staff time by software developers. BLS data from May 2023 shows a mean hourly wage for software developers of $66.40. BLS data also show that wages account for 70 percent of total compensation for private industry workers, leading to a $94.86 estimate for total hourly compensation, which was multiplied by the expected total number of hours of work required.

[154] For the data providers in the Provider Collection that provided both cost estimates and numbers of accounts, there was a negative correlation coefficient of approximately –0.6 between per account costs and number of accounts.

requirements of the rule. The cost for such covered data providers would depend on the extent to which their developer interfaces do not comply with the requirements of the proposed rule. Without granular data on the nature of partially compliant interfaces, the CFPB cannot provide a precise estimate of the cost of bringing such systems into compliance with the rule. However, that cost will generally be a fraction of the cost of developing and maintaining a new interface.

In the proposal, the CFPB sought comment or additional data on the costs associated with modifying an existing developer interface or establishing a new compliant developer interface, including how those costs compare to contracting with a service provider. Many community banks, credit unions, and related trade associations commented that they expect the costs of the required functionality to be much higher for small depository institutions than those estimated by the CFPB. These commenters did not provide additional data or information that would allow the CFPB to precisely update the costs for small depositories estimated in the proposal. The CFPB acknowledges that small depository institutions may have faced additional challenges to implement the rule at this time and is not requiring small depository institutions to comply with the final rule's requirements on data providers. Accordingly, the CFPB has not updated the estimates for small depository institution data providers.

Several banks, credit unions, and their respective trade associations asserted that the CFPB underestimated compliance costs for data providers, failed to consider all costs, and underestimated the technical challenges associated with the proposal. A bank and a credit union asserted that the incremental costs associated with the increased number of data requests will not be minimal on a per-account basis. A credit union and several credit union trade associations asserted that the CFPB's per-account cost estimates were not appropriate for smaller depository institutions because those estimates were primarily derived from information provided by large data providers. These commenters generally did not provide additional data or information that the CFPB could use to modify the cost estimates and instead requested additional study before finalizing the rule. One bank requested that the CFPB estimate expected transaction volumes, customer service staffing, IT systems and security protocols, and how these may depend on the size of the data provider.

The CFPB acknowledges that some data providers may incur larger costs than those discussed in this section. The costs associated with implementing the rule will be data provider-specific and the estimated costs discussed here should be considered the average expected costs for a data provider. Had small depositories been required to comply with the final rule's requirements on data providers, the CFPB acknowledges that they may have faced higher or more uncertain costs than discussed here to comply with the final rule. The CFPB has considered the information from the comments, together with the Provider Collection and SBREFA panel, and has determined that the estimates discussed in this section are appropriate for the data providers that are covered by the rule.

Commenters representing bank trade associations stated that some data providers would incur significant costs to comply with the rule, even if they already have an existing interface for third party access. Several bank trade associations noted that banks have already spent hundreds of hours assessing compliance and designing potential solutions and modifications that may be needed to comply with the rule. One trade association asserted that the rule could cost as much as $100 million in the first year and an additional $15 million each year to update and maintain a compliant developer interface, although the trade association did not specify how they obtained these estimates. The CFPB acknowledges that data providers that already have a third party interface may incur costs to update and maintain that interface to comply with the rule and notes that $15 million in annual ongoing costs is consistent with the CFPB's estimates for large data providers with millions of accounts. However, given the information contained in the comment, the CFPB considers the magnitude of the provided estimate of costs for the first year to be overstated, particularly given the rule's extended compliance timelines for large data providers relative to the proposal.

A bank commented that the CFPB failed to account for compliance costs of reviewing requests and monitoring consumer authorizations. In this analysis, these costs are accounted for in the ongoing costs associated with maintaining a developer interface, but the CFPB acknowledges that some data providers may incur higher levels of cost than others.

Two credit unions commented that the CFPB underestimated costs of the revocation mechanism. Data providers are permitted but not required to offer a developer interface that lets consumers revoke third party access. The CFPB does not include costs associated with an optional feature.

Many data providers and SBA Advocacy commented that the lack of clarity on what the proposal had referred to as a ''qualified industry standard'' would create confusion and increase compliance costs, particularly for smaller data providers, and requested additional guidelines for the consensus standards and standard-setting bodies. As discussed in part II.C, the Industry Standard-Setting Final Rule finalized in June 2024 specifies the attributes standard-setting bodies must satisfy to receive CFPB recognition as a recognized standard setter capable of adopting consensus standards (referred to under the proposal as a qualified industry standard). Under the final rule, conformance with consensus standards serve as indicia of compliance for various provisions of the final rule. The CFPB has determined that the Industry Standard-Setting Final Rule and the references to consensus standards in this rule will mitigate the cost concerns of these commenters (assuming the consensus standards comply with the final rule), particularly given the extended compliance timelines in the final rule.

Developing and Implementing Policies and Procedures

The rule includes disclosure and recordkeeping requirements for all covered data providers related to consumer-authorized data access. The rule requires data providers to calculate and disclose the response rate for third party data access on a monthly basis. The CFPB understands that a variety of performance metrics, including the response rate, may be calculated in the normal course of operating an API or other digital interface for diagnostic purposes. Therefore, the cost of this provision is included in the cost of developing and maintaining a compliant developer interface estimated above. Data providers may incur an additional upfront cost of developing and testing a system to regularly disclose required performance metrics on their website. The CFPB estimates that this process would take less than 80 hours of staff time at an estimated cost of $7,600 per data provider.[155] The CFPB expects that

[155] This estimate was derived from BLS data showing a mean hourly wage for software developers of $66.40. BLS data also show that wages account for 70 percent of total compensation for private industry workers, leading to a $94.86 estimate for total hourly compensation, which was multiplied by the expected total number of hours of work required.

once the disclosure system is implemented it would be maintained at minimal incremental cost as part of the overall cost of operating data providers' websites.

The rule requires data providers to have policies and procedures such that the developer interface is reasonably designed to ensure that data are accurately transferred to third parties. The CFPB expects that data providers would comply with this requirement as part of establishing and maintaining a compliant developer interface. Therefore, the costs of ensuring that the developer interface is reasonably designed to transfer data accurately are included in the analysis above.

The rule also requires data providers to have policies and procedures reasonably designed to ensure that the reason for the decision to decline a third party's request to access its interface is communicated to the third party. The requirements to inform third parties when and why access was not permitted would generally be satisfied as part of the onboarding process in cases of reasonable denials related to risk management or built into a data provider's developer interface, as automated responses to third party data access requests. Similarly, the requirements to retain records to demonstrate compliance with certain requirements of the proposal would generally be built into a data provider's developer interface. As a result, the CFPB considers the costs of complying with these requirements as part of the overall costs of the onboarding process or implementing a compliant developer interface, as described elsewhere. The CFPB has previously estimated that, to comply with a rule of similar complexity, a data provider will require several categories of one-time costs.[156] The CFPB has added several categories of one-time costs relative to the proposal in response to the comments discussed below. The CFPB has also adjusted the estimates to account for inflation. Each covered data provider is expected to incur the following costs: $9,000 to $25,000 for preparation and planning; $3,100 to $5,200 for developing policies and procedures; $3,700 to $8,900 for legal and compliance review; $3,900 to $5,600 for developing forms and disclosures; and $3,800 to $6,500 for training staff and vendors on the new policies and procedures.[157] The CFPB estimates a total one-time cost of developing and implementing policies and procedures as required by the proposed rule of $23,500 to $51,200 per data provider.

A nondepository entity trade association commented that the proposal's cost estimates for updating policies and procedures were too low. A bank requested that the CFPB determine the costs associated with developing disclosures and account agreement changes. The CFPB has adjusted the costs associated with developing policies, procedures, disclosures, and agreements in the final rule. A bank commented that it was not practical to provide some information, such as terms and conditions, in a machine-readable format. As discussed in part IV.C.2., the rule does not apply the machine-readability requirements to terms and conditions and some other consumer information provided through the consumer interface. However, the CFPB has determined that it is necessary to make that information available in a machine-readable form through the developer interface.

Two trade associations for depositories asserted that the proposed record retention requirements for data providers would require providers to keep track of, and report on, all data collected about consumers, which would create large costs. The rule does not require that data providers keep records about all data collected about consumers. Instead, the rule requires that data providers retain records related to third party requests for access to its interface, requests for information, third party authorizations, revocation requests made through the data provider, and performance specifications, as discussed in part IV.C.7. Additionally, some bank commenters suggested a shorter retention period than three years for information related to data accessed through the developer interface, though at least one bank trade association commenter supported the three-year retention period. The CFPB has determined that the record retention requirements will provide the data necessary to facilitate effective supervision and enforcement of compliance with the rule.

Indirect Costs

In addition to the direct costs described above, data providers are likely to incur indirect costs as a result of the rule. The CFPB expects costs related to onboarding additional third parties relative to baseline as well as changes in the frequency, scope, or method of consumer-authorized data access relative to the baseline. These changes may have secondary effects on the profitability of certain business models or practices, including by facilitating competition and enabling new products and services.

Costs From Onboarding Additional Third Parties

The rule generally requires data providers to grant access to their developer interface, except for reasonable denials related to risk management or the absence of certain information about themselves. Although the rule does not require formal data access agreements, the CFPB expects the rule to lead to more third parties requesting and being granted access to data providers' developer interfaces relative to the baseline. The CFPB expects that this is likely to require data providers to enter into more onboarding arrangements with third parties. In the Aggregator Collection responses, which reflect costs applicable under the baseline, aggregators reported that negotiating a data access agreement with a data provider could take between 50 and 4,950 staff hours for business relationship managers, software developers, lawyers, compliance professionals, and senior management, depending on the complexity of the negotiation. The median estimated time was 385 staff hours per agreement. The CFPB expects that data providers currently spend roughly equivalent time and resources negotiating and signing data access agreements at baseline.

These costs are likely to decrease under the rule relative to the baseline because many features of interface onboarding arrangements are now regulated by the rule and not subject to negotiation, including requirements for interface reliability, fees, the scope of data accessible via the interface, authorization procedures, and the duration of access to consumers' covered data. One firm in the Aggregator Collection stated that in cases where data providers agree to use existing industry-defined standards there is essentially no need for negotiation. The CFPB expects that under the rule nearly all data providers will use standardized onboarding arrangements and the costs of establishing data access will generally be limited to ensuring third party risk management standards are satisfied and performing any administrative tasks to provide third parties with access to the developer interface. In the proposal, the CFPB estimated that this process would require 80 staff hours on average, representing approximately $6,800. These costs may be further reduced if industry accreditations or consensus standards develop to streamline data providers' required efforts on third party risk management, or to the extent that

[156] 88 FR 35150, 35497 (May 31, 2023).

[157] *Id.* at 35150.

prudential regulators provide further guidance applicable to sound risk management in the specific context of consumer-authorized data access. While some data providers and third parties may choose to use a customized arrangement that respects the terms of the rule, they will generally only do so when both parties perceive that the benefits exceed the costs. Because the choice to negotiate a costly but more customized arrangement is a business decision not required by the rule, the additional costs of doing so are voluntarily acceded to and are generally outside the scope of this analysis.[158]

The total cost of entering into onboarding arrangements will depend on the difference between the number of agreements that would be negotiated under the baseline and the number of onboarding arrangements that would be entered into under the rule. Because the consumer-authorized data access system is developing rapidly, it is not possible to precisely estimate the number of additional connections that would be established by the rule. However, in the near term, the CFPB anticipates that most data providers will continue to provide third parties access to consumer-authorized data through specialized intermediaries like data aggregators, as they would have under the baseline. As a result, the CFPB estimated in the proposal that, on average, large data providers would need to enter into 10 or fewer additional onboarding arrangements in the years immediately following implementation of the rule, at a maximum cost of $68,000 per large data provider.[159] In contrast, medium sized entities are likely to rely on core banking providers or other vendors to facilitate onboarding on their behalf at minimal incremental cost. Over time, data providers are likely to enter into additional onboarding arrangements due to entry by new third parties and other changes in the market.[160]

The CFPB requested comment on how the proposed rule would change both the cost of onboarding third parties and the number of data access arrangements between data providers and third parties. A bank, a credit union, and two research institutes commented that the costs to vet third parties will be substantial, with the bank and credit union further asserting the CFPB has underestimated those costs. A nondepository entity trade association commented that there will be an increase in costs stemming from the increase in the number of data agreements caused by the rule. Another credit union asserted that small credit unions do not have the necessary legal resources to vet third parties. Two banks asserted that the CFPB underestimated the costs of negotiating connection agreements. In contrast, a data aggregator estimated that the rule will reduce the cost of these agreements by at least 30 percent.

The CFPB acknowledges that data providers may incur costs associated with vetting third parties but expects that consensus standards will eventually develop around the rule's requirements and the ways that third parties can demonstrate compliance, which will mitigate costs for data providers by putting the onus on third parties to show they are credible and secure. Furthermore, the CFPB expects that data aggregators will continue to act as intermediaries between data providers and third parties over the short to medium term, which will reduce the costs to data providers of onboarding additional third parties to compliant developer interfaces. However, based on the information provided by commenters, the CFPB is increasing its estimate of the number of hours required to finalize an onboarding arrangement from 80 hours to 120 hours on average, representing an average cost per agreement of $10,800.[161] Given the CFPB's expectation that large data providers would need to enter into 10 or fewer additional onboarding arrangements in the years immediately following implementation of the rule, the CFPB estimates a maximum cost of $108,000 per large data provider.[162]

Prohibition on Fees for Access

The rule does not permit data providers to charge fees for access to covered data through their interfaces. To the limited extent that data providers are currently charging such fees, the rule would eliminate these revenues. Based on the Aggregator Collection, the Provider Collection, and its market research, the CFPB understands that fees for consumer and third party access are currently rare.

The CFPB understands that third parties have in some cases made payments to data providers to incentivize data providers that are reluctant or unable to provide a developer interface of sufficient quality sufficiently quickly. While rare in the current market, the rule eliminates such fees that might have been charged in the future under the baseline.

The CFPB does not have representative data on the prevalence or size of payments to data providers and therefore cannot precisely estimate the cost of eliminating them. However, as described above, the information available to the CFPB indicates that few data providers currently charge third parties for access and that the total cost to data providers of eliminating such charges would be minimal.

The CFPB received many comments on the costs associated with the prohibition of fees. Many banks, credit unions, and bank or credit union trade associations commented that the prohibition of fees means that data providers will not be able to recoup the costs of complying with the rule. One trade association and a bank asserted that the CFPB has failed to fully consider the costs associated with a prohibition of fees but did not provide additional information upon which to base updated estimates. SBA Advocacy suggested that the CFPB could allow small entities to charge fees to recoup costs.

The CFPB acknowledges that covered data providers that would charge fees for receiving requests or making available consumer-authorized covered data to third parties under the baseline will not be able to do so under the rule, including to establish or maintain interfaces required under the rule. The prohibition on fees for data access would be costly for such covered data providers. The information available to the CFPB indicates that few, if any, covered data providers currently charge these fees or would charge these fees in the future under the baseline.

[158] To the extent that data providers choose to voluntarily enter into additional customized arrangements in response to the rule, the CFPB expects the benefits to data providers of such arrangements to exceed any additional upfront costs from establishing the arrangements.

[159] This estimate was derived from the $6,800 estimate from the proposal for the cost of establishing a data access agreement multiplied by the up to 10 additional agreements that may need to be established due to the rule.

[160] For example, this final rule and the Industry Standard-Setting Final Rule aim to accelerate the development and adoption of consensus standards covering myriad aspects of open banking. This would likely reduce the frictions and costs associated with establishing and maintaining connections between data providers and third parties, potentially increasing the number of access agreements negotiated by data providers but reducing the costs of each agreement.

[161] This estimate was derived from BLS data showing a mean hourly wage for compliance officers ($38.55), general and operations managers ($62.18), lawyers ($84.84), and software developers ($66.40), for an average hourly wage of $62.99. BLS data also show that wages account for 70 percent of total compensation for private industry workers, leading to an $89.99 estimate for total hourly compensation, which was multiplied by the expected total number of hours of work required.

[162] This estimate was derived from the $10,800 estimate for the cost of establishing a data access agreement multiplied by the up to 10 additional agreements that may need to be established due to the rule.

The CFPB acknowledges that covered data providers will incur costs associated with the rule and may seek new sources of revenue to offset those costs. The prohibition on fees for data access forecloses one possible new source of revenue. However, to the extent that covered data providers would charge these fees in order to pass some compliance costs through to other market participants, these costs are appropriately accounted for in the discussion of these costs. Under an alternative where there is no fee prohibition, some covered data providers would likely require third parties or consumers to pay fees in order to access consumer-authorized covered data. As few, if any, covered data providers currently charge these fees, the CFPB cannot anticipate with certainty how common fees would be if permitted, which data providers would be most likely to charge fees, or how these fees would be set in equilibrium. In general, covered data providers would benefit from the option to charge fees. If fees were charged directly to consumers, consumers would incur the cost of paying the fees or the cost of forgoing the benefits of products and services enabled by consumer-authorized covered data. To the extent that consumers would not exercise their right to access their covered data due to fees, third parties would also incur costs related to a smaller potential market for their products and services. If fees were instead charged to third parties, third parties would incur the direct cost of paying the fees. Third parties would likely pass through some of those fees on to consumers. Depending on how they were structured, fees would change third parties' incentives in ways that might limit consumers ability to access third party products and services or degrade the quality of products and services. For example, if data providers charged fees based on the number of consumer accounts accessed, third parties would have an incentive to deter or deny less profitable consumers from using their product or service. As another example, if data providers charged fees for each access attempt, third parties would have an incentive to reduce the frequency with which they update consumer-authorized covered data, which would diminish the benefits to consumers of products and services that rely on real-time consumer data.

As discussed in part IV.C.2, the CFPB considered allowing fees for data access, but determined that the potential for data providers to set fees that are not reasonable and that inhibit consumers' access posed too great of a risk to the benefits of the rule as a whole. Further, small depositories, the institutions currently least able to absorb these costs and therefore potentially most likely to seek to offset them with new fees, are not required to comply with the rule's requirements on data providers.

More Frequent Access by Third Parties

Based on responses to the Provider Collection, the CFPB is aware that covered data providers sometimes impose access caps, such as limiting the number of allowable data requests or the frequency with which authorized third parties can access consumer data. For example, the CFPB is aware that some data providers cap the number of data requests per day per connection. The CFPB understands that in some cases access caps prevent third parties from accessing consumer data as often as is reasonably necessary to provide the requested service. For example, one firm in the Aggregator Collection reported spending ''significant resources'' to manage its traffic in order to avoid access cap limits. Another firm in the Aggregator Collection reported spending resources to persuade large financial institutions to raise or eliminate access caps. Therefore, the prohibition on unreasonably limiting the frequency of third party requests for covered data or delaying responses to those requests is likely to increase total data requests for some covered data providers and may therefore increase digital infrastructure costs for those data providers relative to the baseline.[163] This increase is likely to be larger for data providers with more restrictive access caps at baseline, if such access caps are not reasonable under the rule. The CFPB expects that for most data providers, any increase in traffic due to such increases in the number of data requests will generally be more than offset by declines in screen scraping, which the CFPB understands to typically involve heavier traffic loads per request than requests through a developer interface. A small number of large data providers have already restricted screen scraping under the baseline and may experience net increases in developer interface traffic.

A bank trade association commented that a lack of access caps for developer interfaces would increase compliance costs and potentially degrade interface performance. As discussed in part IV.C.3., the CFPB has determined that data providers are permitted to impose reasonable access caps, to ensure that requests from one authorized third party do not unduly burden the data provider's developer interface. Given this determination, the CFPB expects that incremental costs from any increased data requests are likely to be minimal on a per-account basis.

Reduced Information Advantages

Through their role in providing financial products and services, data providers possess ''first party'' data on the accounts held by their customers. These data are a valuable source of information for data providers in developing, pricing, and marketing products and services, but authorized data access may reduce this information advantage. The CFPB expects that the rule will generally increase third party access relative to the baseline and thus diminish data providers' informational advantages from first party data. This may enable third parties to more effectively compete with products or services offered by data providers, potentially limiting the prices data providers can charge for their own products and services or reducing data providers' market shares or data providers' profits. For example, the CFPB understands that an important use case for consumer-authorized financial data is transaction-based underwriting. At baseline, many data providers sell credit products to their depositors. To the extent that the rule facilitates entry into the lending market or improves the quality of the products and services offered by nondepository lenders or other depository lenders that use consumer-authorized data, data providers that enjoyed informational advantages relative to their peers may lose market share and therefore profits. As another example, consumer-authorized data sharing is likely to facilitate faster new account openings. As it becomes easier for consumers to compare account terms, transfer recurring payments, move funds, and have their identity verified, depository data providers may face pressure to pay higher deposit rates or make costly investments in service quality in order to retain deposits, as discussed in the section on *Benefits to consumers* in part VI.E.4.

In general, accurately predicting how changes in the availability of consumer-authorized financial data will change the structure of the market for consumer financial services or how changes in market structure will impact the profitability of individual firms or industries is very difficult, in large part because firms that are data providers in some cases also operate as third parties accessing data from other data

[163] As discussed in the section on *Benefits to data providers* in part VI.E.3, other features of the proposed rule are likely to decrease the frequency and scope of data requests and therefore digital infrastructure costs for covered data providers.

providers, and the CFPB expects more data providers to act as third parties over time. As a result, the CFPB is not able to quantify the impacts of reduced informational advantages that stem from the proposal.

The rule is likely to increase the quality of services that use consumer-authorized financial data to facilitate competition, including by comparing or recommending products or services to consumers. This may impact data providers. For example, a consumer might use a comparison shopping service that would recommend credit cards likely to minimize their costs from interest and fees or maximize their benefits from rewards programs given their historical spending patterns. The CFPB is not able to accurately predict how many firms would develop services that facilitate competition in this way, how many consumers would use such services, or how the availability of such services would impact individual firms or industries.

Many data providers and bank or credit union trade associations expressed concern that the rule would advantage third parties at the expense of data providers. A credit union trade association asserted that the CFPB did not properly assess the risks from the growth of non-bank lenders.

The CFPB notes that data providers may also act as third parties. Furthermore, the rule places substantial restrictions on how third parties can use and retain these data, relative to the baseline of screen scraping and no restrictions on the use or retention of the data. The CFPB acknowledges that there may be growth in nondepository lending but has determined that the rule's restrictions and existing regulations that apply to nondepository lenders under the baseline will mitigate the risks associated with this growth.

Potential Costs Related to Liability or Fraud

Several data providers and bank or credit union trade associations commented on the high costs of resolving disputes, dealing with third parties lacking appropriate security, and the costs of liability falling disproportionately on data providers. Two credit union trade associations expressed concern that, even when a third party is responsible for a data breach, data providers will face reputational risk, losses due to fraud, and costs to resolve the breach. The SBA Office of Advocacy commented that the lack of clarity in the rule regarding liability could lead to confusion and expensive litigation. A few data providers and a bank trade association asserted that the CFPB did not fully account for the costs associated with security breaches and liability. A few bank trade associations and data providers asserted that the absence of a ban on screen scraping will create costs for data providers to block screen scraping. The CFPB notes that these risks exist under the baseline and are likely worse in the current marketplace, as discussed in the *Benefits to data providers* part, because of the widespread storage of credentials, the lack of rules on data retention, and downstream data sharing or sales by third parties. A credit union commented that they have already spent resources on increasing security and blocking screen scraping under the baseline. The CFPB expects that the allowance for reasonable denials in the rule and the role of consensus standards related to third party data security will also mitigate these risks by allowing data providers to deny access for third parties that have not established sufficient security protocols. The CFPB acknowledges that some institutions, especially those without developer interfaces, may face higher costs to develop and maintain data security systems, but the CFPB expects that the majority of data providers will see a net decrease in fraud risks and reputational risks relative to the baseline with widespread screen scraping and no restrictions on data collection, retention, and use.

Potential Costs From Increased Account Switching

In general, consumers prefer financial institutions that provide better prices or customer experiences. As discussed in the section on *Effects of increased data sharing on innovation and competition* in part VI.E.4, the CFPB expects that the rule will improve consumers' ability to switch financial institutions. As a result, financial institutions that offer covered products with less competitive prices and customer experiences may lose market share due to the rule. In addition, if greater competition on price leads to lower margins on covered accounts, profits for data providers that lower their margins in response to the rule will be decreased.

Costs to Third Parties

Third parties accessing data under the rule will be required to modify existing procedures, so they are consistent with the proposal's authorization procedures for accessing covered data on behalf of a consumer, such as providing the authorization disclosure; implementing the limitations on data collection, use, and retention; developing mechanisms for revocation of authorization; providing the annual reauthorization of access; and executing record retention requirements. In addition to these upfront and ongoing compliance costs, the rule may impose further costs on third parties through the transition away from screen scraping access, increased data interface onboarding costs with data aggregators and data providers, restrictions on data use and retention. Potential effects of the new financial data processing products or services definition are also discussed.

Implementing Mechanisms for Data Deletion and Record Retention

The rule requires third parties to establish and maintain systems that receive data access revocation requests, track duration-limited authorizations, and delete data when required due to revoked authorizations, durational periods ending, or because retaining the data is no longer reasonably necessary. Third parties will also need to retain records as required by the rule. Many of these requirements overlap with the requirements of other State or international data privacy laws. For example, third parties that operate in the State of California and have gross annual revenues greater than $25 million may already have similar systems if they are subject to the California Consumer Privacy Act (CCPA),[164] which requires that businesses delete consumer personal data upon consumer request. Though many State privacy laws exclude businesses or data covered by the GLBA, third parties that are regulated by State privacy laws may need to modify their systems, incorporate authorization duration limits, and process more revocation requests, but they will likely have lower costs than third parties that must establish such a system from scratch. The CFPB estimated in the SBREFA Panel Report, and described in the proposal, that establishing and maintaining an appropriate data system would cost up to $75,000 based on analysis of the Standardized Regulatory Impact Assessment for the CCPA.[165]

[164] Cal. Civ. Code section 1798.198(a) (2018).

[165] The Standardized Regulatory Impact Assessment for the CCPA estimated that the average technology cost would be $75,000. However, the CFPB estimates that the cost for many third parties would be lower, as the CCPA figure was based on a survey of the top one percent of California businesses by size (those with more than 500 employees), and the CCPA has more requirements than the proposed rule. *See* Off. of the Att'y Gen., Cal. Dep't of Just., *Standardized Regulatory Impact Assessment: California Consumer Privacy Act of 2018 Regulations* (Aug. 2019), *https://dof.ca.gov/wp-content/uploads/sites/352/Forecasting/Economics/Documents/CCPA_Regulations-SRIA-DOF.pdf.*

The CFPB understands that some third parties already retain records related to consumer data access requests. The rule will require third parties to retain records that demonstrate compliance with the rule, including a copy of the authorization disclosure and, if a data aggregator accessed consumer-authorized data, a copy of the certification statement. The CFPB expects that the costs of implementing record retention requirements would be small relative to the costs of implementing deletion requirements.

As described in the SBREFA Panel Report, several small entity representatives provided cost estimates of implementing data retention limits. At the low end, one third party small entity representative that had implemented de-identification and deletion systems stated that it took between 240 and 480 hours of staff time,[166] and another third party small entity representative stated that it developed a system to comply with the CCPA in about 480 hours. At the high end, one third party small entity representative estimated that building a system to comply with retention limits would take 1,000 hours. If a third party chose not to establish a system to implement the retention limits of the rule and instead chose to manually delete data to comply with the retention limits, the CFPB understands that the time cost would be substantially higher: one third party small entity representative explained that, as an organization of fewer than 50 people, complying with a single deletion request could require 480 hours. Based on this feedback, the CFPB estimates that the one-time cost of implementing data retention limits and retaining relevant records will be between $22,800 and $94,900.[167] The three-year record retention requirement of the rule will impose limited additional electronic storage costs annually.

One nondepository entity trade association commented that record retention requirements on third parties will impose far higher annual costs than estimated in the proposed rule, especially for smaller entities. The CFPB requested additional data or other information to further refine its estimates but did not receive cost estimates specific to revocation of authorization systems, implementing data retention limits, or record retention. The CFPB expects that the cost will be lower for third parties that already comply with existing data privacy laws. Third parties that do not retain any consumer-authorized data will be unaffected by data retention limits but will still need to follow record retention policies under the rule. The CFPB has determined that these record retention requirements are necessary to ensure compliance with the other components of the rule.

Annual Reauthorization Process

The rule limits the duration of third party collection of covered data to no more than one year after a consumer's most recent authorization. Third parties will be required to obtain a new authorization from the consumer before the first anniversary of the consumer's most recent authorization to continue to collect the consumer's covered data without disruption. Because this new authorization will have the same legal requirements as the first authorization, most of its implementation costs would be captured by the costs described for the initial authorization and data retention systems. The CFPB expects that reauthorization reminders will typically be delivered electronically—such as a within-app notification or an email—at minimal additional direct cost.

The reauthorization and retention limits may limit the quantity of data available for product improvement or other permissible uses of data. Some third parties may experience indirect costs due to service disruptions if they do not obtain a new authorization from the consumer before the anniversary of the consumer's most recent authorization, as they would not be able to request the consumer's data from data providers until the new authorization was obtained if more than one year has passed since the most recent authorization. If the consumer provides a new authorization after one year, any gaps in the scope of data collected would likely be filled, as the third party could then access two years of retrospective data.

The costs associated with the reauthorization requirement will depend on the third party's business model. Two small entity representatives suggested in the SBREFA process that periodic reauthorization requirements on third parties could lead to reduced customer retention. One small entity representative stated that this would ''frustrate'' consumers, and another stated that only 0.32 percent of its users prompted to reconnect to their bank account ever did so. A nondepository entity trade association commented that annual reauthorization would limit the value of pay-by-bank use cases, especially for recurring payments, and noted that card payments are not subject to reauthorization requirements. However, the CFPB understands that consumers are often required to reenter their card information for reoccurring payments after a card is lost, stolen, or expired, so consumers are not unfamiliar with reauthorizing payment methods.

Studies indicate that onerous reauthorization requirements have impacted open banking usage and attrition in other countries. Reauthorization requirements created friction for third parties in the United Kingdom's open banking regime after the implementation of a 90-day reauthorization requirement. One United Kingdom trade association estimated an attrition rate between 20 percent and 40 percent, while another trade association found an attrition rate between 35 percent and 87 percent.[168] These attrition rates are likely to be different than those expected under the rule both because a 90-day reauthorization requirement is more burdensome than an annual reauthorization requirement and because more consumers may still be actively using a product or service after 90 days than after one year. The CFPB expects that, while some third parties would incur costs from consumer attrition, third parties will be more likely to obtain a new authorization from a consumer when that relationship is more valuable, and the reauthorization process will be relatively easy for consumers who wish to continue the relationship. These factors will generally limit the cost of disruptions due to the reauthorization requirements, particularly for third parties providing the most valuable services. The CFPB does not have data to estimate the costs to third parties of lost customers due to the annual reauthorization requirements.

Providing Authorization Disclosure and Certification Statement

The rule requires third parties to provide the authorization disclosure and certification statement when seeking to access covered data. When a

[166] The small entity representative reported that the task took its team two to four weeks. Based on other small entity representative team sizes, the CFPB assumes that the team included three people.

[167] The CFPB assumes that implementing deletion requirements would require between 240 and 1,000 hours of work by a software developer. The cost estimate was derived from BLS data showing a mean hourly wage for software developers of $66.40. BLS data also show that wages account for 70 percent of total compensation for private industry workers, leading to a $94.86 estimate for total hourly compensation.

[168] *See* Fin. Conduct Auth., *Changes to the SCA–RTS and to the guidance in 'Payment Services and Electronic Money—Our Approach' and the Perimeter Guidance Manual* (Nov. 2021), *https://www.fca.org.uk/publication/policy/ps21-19.pdf.*

third party seeking authorization uses a data aggregator to assist with accessing covered data on behalf of a consumer, the rule requires the data aggregator to make its own certification statement to the consumer, though both the aggregator and third party certifications will be permitted to be made in the same disclosure. The CFPB expects that some data aggregators will provide the required authorization disclosure and certification statement on behalf of third parties seeking authorization. However, some third parties seeking authorization, including those that do not partner with data aggregators, may instead provide the authorization disclosure and certification statement through their own systems.

For data aggregators and other third parties that choose to provide the authorization disclosure and certification statement through their own systems, and have not previously provided any disclosure statements to consumers, the CFPB estimates that building such a system would require approximately 1,000 hours of work by software developers or similar staff. This estimate is based on cost estimates in other consumer financial markets related to requirements for tailored disclosures provided at service initiation.[169] The CFPB estimates that this will result in a one-time cost for a third party of $94,900.[170] However, if third parties already provide disclosures at authorization under the baseline, the costs of modifying these disclosures to satisfy the proposal's requirements may be reduced. One data aggregator stakeholder stated that modifying the content of its existing disclosures would involve 30 to 40 hours of employee time, representing an equivalent cost for a third party of between $2,900 and $3,800.[171]

Data aggregators may pass through these costs to third parties that contract with them. One data aggregator stated in its response to the Aggregator Collection that disclosures for third parties that contract with data aggregators would be largely uniform and easily adapted, and the CFPB anticipates that this will be the case under the rule. The CFPB does not have data to estimate these disclosure costs. However, because data aggregators' disclosure costs would be spread across many third parties, the CFPB expects the burden of these requirements on any single third party that contracts with data aggregators to be small.

Policies and Procedures

To implement the requirements of the rule, third parties will need to develop and maintain policies and procedures in several distinct areas to ensure compliance with the rule. These include: applying existing information security programs to their systems for the collection, use, and retention of covered data; ensuring the accuracy of the information that they collect; governing the limits on collection, use, and retention of consumer-authorized information; and record retention requirements. The CFPB understands that most authorized third parties and data aggregators are currently subject to the GLBA Safeguards Framework and so they already have policies and procedures regarding information security programs and will have lower costs for developing and maintaining similar requirements of the rule. However, a small portion of third parties may need to develop new GLBA-compliant systems and would face greater costs. In other consumer financial markets, the CFPB has estimated that nondepository institutions would face a one-time cost of $5,300 to develop new policies and procedures and a one-time cost of $4,800 for a legal/compliance review.[172] Assuming comparable costs for the requirements of the rule yields a total cost of roughly $10,100 for developing and implementing policies and procedures. Maintaining these policies and procedures once they are implemented is likely to involve limited ongoing costs for third parties.[173]

Transition Away From Screen Scraping

The CFPB expects that third parties may face costs from the transition away from screen scraping. At baseline, screen scraping is a frequently used method of accessing consumer data: in 2022, roughly half of data access attempts by third parties in the Aggregator Collection were made through screen scraping. However, the share of access attempts made through screen scraping declined by approximately one-third between 2019 and 2022. The CFPB expects that screen scraping will continue to decline for non-covered financial products as data providers and third parties generally transition to data access under the terms of the rule. The CFPB expects that third parties will have strong incentives to avoid using screen scraping to access covered data from data providers that have compliant interfaces for third parties. In the SBREFA process, multiple small entity representatives expressed that the transition away from screen scraping would limit data accessibility. Relative to the baseline, the CFPB does not expect the transition away from screen scraping to negatively impact data availability for most data fields. The CFPB expects that data providers that provide third party access in compliance with rule requirements will block screen scraping for covered accounts, so third parties may not be able to access non-covered data fields from covered accounts. The CFPB requested comment on any specific data fields that may be less available due to the transition away from screen scraping, and the specific impacts of those changes, but did not receive relevant comments. The CFPB expects that the rule will not directly impact how third parties access non-covered data.

At baseline, some third parties use screen scraping as a back-up access method when other data access systems are inoperable. The need for a back-up access method may be reduced under the rule because the rule imposes performance requirements for third party access. However, nondepository entity and researcher commenters expressed concern that these requirements could still reduce the quality of information provided and drive a market-wide race to the bottom, contending that data providers would have little incentive to drive performance higher. These commenters asserted that the proposal's performance requirements might permit lower performance than in their extant data access agreements with data providers. However, the rule would impose a general reasonableness requirement in addition to minimum performance requirements. Because data providers cannot only meet the minimum performance requirements, and instead must additionally demonstrate reasonable performance, indicia of which include performance comparable to other data providers, the CFPB expects there would be upward pressure on performance levels over time. Additionally, a third party small entity

[170] This estimate was derived from BLS data showing a mean hourly wage for software developers of $66.40. BLS data also show that wages account for 70 percent of total compensation for private industry workers, leading to a $94.86 estimate for total hourly compensation, which was multiplied by the expected total number of hours of work required.

[171] This estimate was derived from BLS data showing a mean hourly wage for software developers of $66.40. BLS data also show that wages account for 70 percent of total compensation for private industry workers, leading to a $94.86 estimate for total hourly compensation, which was multiplied by the expected total number of hours of work required.

[172] Inflation-adjusted estimates from 88 FR 35150 (May 31, 2023).

[173] SBREFA Panel Report at 12.

representative stated in the SBREFA process that its customers lose access to services when data providers' interfaces are unavailable. The CFPB expects that consensus standards regarding performance, which also can serve as indicia of commercially reasonable performance, will also help improve the reliability of access over time. Furthermore, the value of screen scraping as an alternative option may be limited by its relatively low success rates: in the Aggregator Collection, 40 percent of initial account connection attempts made through screen scraping were successful in 2022, compared to 51 percent of initial account connection attempts made through interfaces for third parties. The CFPB does not have data to quantify any net change in data access reliability stemming from the combination of reduced screen scraping and increased availability of interfaces for third parties. However, with respect to nondepository entity comments that the proposed 3,500 millisecond response time was too slow and vague, the final rule instead requires a proper response within a commercially reasonable time. The CFPB did not change other performance standards outlined in the proposed rule after considering nondepository entity comments in conjunction with those from data provider commenters, detailed in the section on *Costs to data providers* in part VI.E.1.

Cost of Onboarding Arrangements With Authorized Third Parties and Data Providers

Third parties that previously accessed covered data through screen scraping without negotiating the terms of their access with data providers will now need to arrange for onboarding to the newly required developer interfaces. The CFPB expects that many of these arrangements will be established between data aggregators and data providers, though some would occur between authorized third parties that do not contract with data aggregators and data providers. As described in the section on *Costs to data providers* in part VI.E.1, the CFPB has updated its estimate of the average cost of this process between data aggregators and data providers to $10,800.

Third parties may be denied data access based on risk management concerns or other permissible grounds, such as, for example, if the requested information is not covered data or falls into an exception. The CFPB expects that third parties may incur costs from responding to data providers' risk management information requests. Two research institutes stated that third parties would incur costs from responding to data providers' due diligence requests. Because prudential regulators require banks to follow certain risk management practices in contracting with third parties, the CFPB understands that authorized third parties that contract with either a data aggregator or a data provider at baseline provide due diligence information and will not face increased costs under the proposed rule. Third parties that comply with the GLBA Safeguards Framework are also unlikely to face increased costs. Though third parties that access consumer data solely through screen scraping at baseline will need to begin providing this information to the entities with which they contract, the CFPB expects that future consensus standards may limit the costs for third parties. The CFPB expects that third parties that comply with data providers' due diligence requirements will not be denied access to data providers' interfaces and so very few third parties would incur costs related to the loss of access entirely.

Use of TANs

Under the rule, data providers will be permitted to make available a TAN instead of, or in addition to, a non-tokenized account number. Several nondepository entity and data aggregator commenters provided examples of TANs enabling consumer payment revocation and stated that the use of TANs could increase costs for merchants and processers, which could be at least in part passed through to consumers. One nondepository entity estimated that the payments industry could face cumulative annual losses in the hundreds of millions of dollars if TANs were permitted under the rule. However, other data provider commenters described how TANs can mitigate fraud risk, including the ability for data providers to identify the point of compromise in case of a breach, the ability to revoke compromised payment credentials without disrupting other payment account activity, and limited risk of bank fraud because TANs are restricted to a particular third party.

Restrictions on Use and Retention

The rule limits certain existing uses of both identifiable and de-identified consumer data by third parties, including for the sale of covered data, cross-selling of other products or services, and targeted advertising, by specifying that these activities are not part of, or reasonably necessary to provide, any other product or service. Therefore, consumers must separately authorize third parties to collect, use, and retain covered data for these activities. This limitation may eliminate or lessen the profitability of certain business models. Third parties that generate revenue from sharing covered data with fourth parties—such as firms with no authorization to access data from the consumer—may lose much of that source of revenue. The CFPB does not have data on the number of third parties that share covered data, or the amount of revenue generated by sharing covered data. However, the CFPB notes that a survey of German app developers after the European General Data Protection Regulation (GDPR) was implemented found that while the share of app developers selling data was small, nearly all the developers that sold data experienced a decline in revenue post-GDPR.[174] This finding may imply reductions in revenue for third parties that sell covered data under the rule. Several nondepository entity trade association commenters stated that small and mid-size businesses rely on targeted advertising and will lose revenue due to the proposed rule. Third parties that use covered data for the marketing of other products and services may also lose a source of revenue. Commenters did not provide quantitative data on the expected scope of potential revenue losses. The CFPB acknowledges that third parties may incur costs from altering business practices, or may lose revenue, as a result of these limitations. The CFPB does not have the necessary information to quantify this impact, but expects the overall impact on third parties will be small, as most third parties' revenue streams are not dependent on using covered data for these activities. Furthermore, third parties can still seek consumer authorization for covered data to be used for these activities as standalone products or services, or first party data could be used.

In addition to these specific requirements, third parties will be required to collect, use, and retain covered data only as reasonably necessary to provide the consumer's requested product or service under the rule. The limits on retention of consumer data when consumers submit a revocation request or do not provide a new authorization within 12 months may reduce the data available for product improvement. Several third party small entity representatives highlighted through the SBREFA process how consumer data can enable

[174] Rebecca Janßen *et al., GDPR and the Lost Generation of Innovative Apps,* Nat'l Bureau of Econ. Rsch. Working Paper No. 30028 (May 2022), *https://www.nber.org/papers/w30028.*

the development of new products and services and can inform research and public policy, even when only de-identified data are used for these secondary purposes. A nondepository entity trade association stated that there would be substantial costs to rework algorithms and product operations, which could not be used in their current form without de-identified consumer data. Firms in the Aggregator Collection also reported using consumer data for functions other than transmitting data to data recipients, including the improvement of existing products, the development of new products, and risk management assessments. One nondepository entity commented that using properly de-identified or aggregated data for modeling or developing new products leads to no harm to consumers. Several commenters, including nondepository entities, nondepository entity trade associations, research institutes, data aggregators, and data providers commented that secondary use restrictions would reduce competition and innovation under the proposed rule. One research institute commented that current models and algorithms would become stagnant and could not be further improved without the use of covered data. Multiple research institutes and a consumer advocate commented that disallowing the use of de-identified data for product development would result in more expensive and less innovative products. Additionally, multiple data aggregators commented that the inability to use de-identified data would limit the ability to detect fraud.

Though the rule may limit third parties' use of consumers' covered data for some extant purposes, the CFPB does not have data that would allow it to estimate the size of any costs due to the limitations on use, but notes that the rule permits uses that have separate product authorizations, and permits uses that are reasonably necessary to protect against or prevent fraud. The rule also allows the use of covered data for servicing or processing the product or service authorized by the consumer, or uses that are reasonably necessary for the improvement of the consumer's requested product or service, without a separate product authorization.

Costs may be mitigated because third parties can continue to use data that they generate in providing their products and services. One bank trade association commented that there would be costs to tracking which data are subject to secondary use restrictions and which data are not. The CFPB acknowledges there could be such costs, but expects that these tracking costs would be small given that all consumer-authorized covered data would be subject to secondary use restrictions, and all first party data would not be subject to secondary use restrictions under the final rule. The cost estimates in the section on *Implementing mechanisms for data deletion and record retention* in part VI.E.1 would include such costs.

New Financial Data Processing Products or Services Definition

The CFPB expects that the activities covered by the new financial data processing products or services definition in 12 CFR part 1001 are already within the scope of the CFPA's definition of financial product or service. As a result, the CFPB does not expect the new definition to impose costs on covered persons. However, to the extent that there are firms offering products or services that are within the new definition but outside of the existing financial product or service definition, the new definition could impose some potential costs. Such firms would be subject to the CFPA and its prohibition on unfair, deceptive, or abusive acts or practices, including potential enforcement by the CFPB. Under the baseline, the CFPB expects that such firms would already be subject to a prohibition on unfair or deceptive acts or practices under section 5 the Federal Trade Commission Act.[175] Relative to the baseline, the new definition would add potential enforcement against unfair and deceptive acts or practices by the CFPB and require firms to be compliant with the prohibition on abusive acts or practices. Given the overlap with existing prohibitions, the CFPB expects the potential costs would be limited, and would include developing and maintaining policies and procedures to ensure compliance with the prohibition on abusive practices for firms that are not compliant with the CFPA at baseline. The CFPB does not have data to quantify these potential costs. The CFPB requested comment on whether any firms offer products or services that would be covered by the new definition but fall outside the definition of financial product or service, and if so, what potential costs those firms may face, but the CFPB did not receive any comments with this information.

2. Costs to Consumers

The rule may increase costs for data providers and third parties, potentially leading to higher prices for consumers or reduced access to certain products or services. The rule is likely to increase the availability of consumer-authorized data overall. While this may benefit many consumers, it could lead to higher credit costs for some consumers with data indicative of higher risk if the use of this data becomes standard for underwriting purposes. The rule would also require consumers to reauthorize access to their financial data annually, which involves relatively minor costs. In addition, consumers may incur small costs because of unintentional lapses in authorization. Finally, restrictions on secondary use of data may reduce revenues for some third parties, leading to changes in product offerings or pricing, and limiting not-for-profit research analyses that may benefit consumers.

Changes in Industry Structure

Data providers will face additional compliance costs as a result of the rule. Some of these costs may be passed on to consumers in the form of higher prices for credit, lower deposit rates, or higher account fees. The CFPB does not have the data necessary to determine the extent to which additional compliance costs may be passed through to consumers, which depends on a number of factors including market competition.

The rule does not require depository data providers that have assets below size standards specified by the Small Business Administration, which are currently set at $850 million, to comply with subparts B and C. Several data provider commenters and trade associations representing them, along with a nondepository entity trade association and a consumer advocate commented that the rule may lead to consolidation among depository institutions, which may lead to higher prices and less choice for consumers. One credit union commented that costs relative to net income would force about half of credit unions to cease operations. The CFPB expects that the noncoverage of depository entities with assets below $850 million addresses the concern that small depository institutions would be unable to operate profitably and in compliance with the rule. For example, the median credit union in 2024 had $57 million in assets and would thus not be covered by the data provider provisions of the rule, and overall, 89 percent of credit unions are below the coverage threshold. While it is possible that the rule could influence decisions about consolidation for some institutions above the coverage threshold, the CFPB expects any effect to be small given the relatively large size of covered institutions. The CFPB did

[175] 15 U.S.C. 45.

not receive any other data in comments that allows for a more precise estimation of whether institutions would choose to consolidate as a result of the rule.

Many of the largest depository data providers either already offer third party data access that meets many of the requirements of the rule or are developing such functionality, and thus their additional costs of complying with the rule will be more limited. While the CFPB does not have information to precisely estimate the number of consumers with accounts at such data providers, the available data suggest that the number is large. The Provider Collection indicates that, as of 2022, at least 51 million consumers had connected accounts to third parties through credential-free interfaces. This count of 51 million consumers likely understates the true number of consumers who have such access for two reasons. First, it does not include the consumers at institutions in the Provider Collection who have access to, but have not yet connected to, this type of access functionality. Second, it does not include consumers at other institutions—not included in the Provider Collection—that have established interfaces for third party access that meet many of the requirements of the proposal. It could, however, count consumers more than once if they have an account at more than one institution included in the Provider Collection. Overall, the CFPB expects that substantially more than 51 million consumers already have accounts at institutions that will face more limited costs of complying with the provisions. Consumers who only have accounts at these institutions are likely to incur minimal costs passed on by data providers due to the rule because the institutions where they have accounts will face smaller costs. One credit union trade association commenter stated that the rule will accelerate a transition to digital services and reduce the number of branches, which some populations, such as older consumers, rely on. The CFPB does not have data to precisely analyze this claim but finds it unlikely that the rule will result in many branch closures. In 2023, only 9 percent of Americans said that they most often managed their bank account by visiting a branch.[176] Thus, the industry has already experienced a dramatic shift toward online services, and the margin for consumers to transition toward digital banking and cease visiting bank branches, leading to branch closures that affect older consumers, is small. Since the CFPB expects that all or nearly all covered data providers already have a consumer interface, it is likely that consumers interested in online services already conduct much of their banking online. Despite few consumers preferring to manage an account by visiting a branch, the number of bank branches nationwide has declined only 16 percent from its peak in 2012 and actually grew slightly between 2022 and 2023.[177] Further, branches serve small businesses in addition to consumers, so are not supported by consumers alone.[178] A credit union trade association commented that financial institutions could be discouraged from adopting a consumer interface if they do not already have one because of the costs associated with the proposed rule. As discussed in part IV.A.3., the CFPB has determined that all or nearly all depositories that do not currently have a consumer interface are small depository institutions and therefore will not be required to comply with the final rule's requirements for data providers. In addition, coverage in the final rule is no longer determined by the presence of a consumer interface, and thus there is no disincentive to adopt a consumer interface created by the final rule.

Effects of Greater Information Sharing

The rule will enhance third party access to consumers' financial data, which may be used in third parties' credit underwriting decisions. The ability for firms to screen customers using information generally increases total value in the market but may transfer value from some consumers to firms. Some consumers will likely benefit, but other consumers may be worse off. While the CFPB understands that, currently, lenders do not commonly use cash-flow data in underwriting to identify consumers who are a higher risk than the information on traditional credit reports would predict, it is possible that the market will evolve to use cash-flow data in this way as it becomes more accessible. As a benefit, increased information about consumers could lead lenders to offer some consumers cheaper credit, if, for example, the information accessed from data providers is viewed by third party lenders as indicating that the consumer is a lower credit risk than a traditional credit report would reveal. More information, however, could result in some consumers being charged higher prices or not being offered credit if the cash-flow information reveals what a lender views as a signal that a consumer is a higher credit risk than the lender would have assessed without the consumer-authorized information.[179] Even though it will be the consumer's choice whether to authorize access to their covered data, it is possible that a lender may view a consumer's decision not to authorize the sharing of their data as a negative signal of credit risk and raise the price of credit or refuse to offer a loan.[180]

[177] *See* Fed. Deposit Ins. Corp., *BankFind Suite: Find Annual Historical Bank Data, https://banks.data.fdic.gov/explore/historical/?displayFields=STNAME%2CTOTAL%2CBRANCHES%2CNew_Char&selectedEndDate=2023&selectedReport=CBS&selectedStartDate=1934&selectedStates=0&sortField=YEAR&sortOrder=desc* (last visited Oct. 16, 2024).

[178] For example, Community Reinvestment Act data suggests that branches are important in small business lending. Elliot Anenberg *et al., The Branch Puzzle: Why Are there Still Bank Branches?,* FEDS Notes (Aug. 20, 2018), *https://www.federalreserve.gov/econres/notes/feds-notes/why-are-there-still-bank-branches-20180820.html.*

[179] For example, Jansen *et al.* (2022) study an opposite shock—the removal of information, instead of the addition—and find that removing bankruptcy information from credit reports redistributes consumer surplus from consumers who have never experienced bankruptcy to consumers with a previous bankruptcy. Mark Jansen *et al., Data and Welfare in Credit Markets* (Jan. 28, 2022), *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4015958.* Nelson (2023) finds that limiting the information that credit card issuers were able to use decreased prices for some high-risk borrowers and increased prices for some low-risk borrowers, but on aggregate raised consumer surplus. These are two examples of how the removal of information that can be used in crediting decisions may shift surplus towards consumers who appear to have lower repayment risk after the information removal. Scott T. Nelson, *Private Information and Price Regulation in the US Credit Card Market,* Univ. of Chic. Booth Sch. of Bus. (Aug. 4, 2023), *https://faculty.chicagobooth.edu/-/media/faculty/scott-nelson/research/private-information-and-price-regulation-in-the-us.pdf.* The CFPB expects that the following effects would occur under the rule: third parties will have access to more information which will increase total surplus and will likely increase surplus for those who appear to have lower repayment risk with the additional information relative to those who appear to have higher repayment risk with the additional information.

[180] He, Huang and Zhou (2023) develop a model in which consumers who choose not to share data are worse off under an open banking system due to lenders taking opting out of data sharing as a sign that a consumer is a high credit risk. Zhiguo He *et al., Open banking: Credit market competition when borrowers own the data,* 147 J. Fin. Econ. 449 (2023), *https://doi.org/10.1016/j.jfineco.2022.12.003.* Similarly, Babina *et al.* (2023) develop a model showing that when open banking policies enable the addition of banking data to screening or pricing decisions, higher-cost consumers can be worse off even if they opt out of sharing information because opting out sends a negative signal to lenders. Tania Babina *et al., Customer Data Access and Fintech Entry: Early*

Continued

Overall, the increased availability of consumer-authorized data will allow lenders to underwrite and price more efficiently. This will likely lead to greater credit access overall, with relatively greater access or lower prices for lower risk borrowers who share data, but relatively less credit access or higher prices for borrowers who are higher risk or choose not to share data. The CFPB does not have the data necessary to quantify these effects.

Time Cost of Reauthorizing Third Party Access Annually

Under the rule, a third party will need to limit the duration of collection of covered data to a maximum period of one year after the consumer's most recent authorization. To collect covered data beyond the one-year period, the third party will need to obtain a new authorization from the consumer no later than the anniversary of the consumer's most recent authorization. The reauthorization process should not be more burdensome than the initial authorization certification, but consumers will incur a small time cost to reauthorize the collection of their data. As discussed in the section on *Costs to third parties* in part VI.E.1 above, existing evidence suggests that many consumers may choose not to reauthorize a third party's access to their covered data. The CFPB interprets this evidence as suggesting that many consumers do not value the continued use of the third party product or service enough to continue authorizing the access of their covered data by the third party or that, given the quickly evolving market of third party products and services, consumers decide to access products or services through a different third party. One nondepository entity trade association commenter stated that the annual reauthorization limits the utility of pay-by-bank use cases for consumers. Instead, the CFPB interprets a consumer's decision to not provide a new authorization as evidence that they do not value the service more than the relatively small time cost incurred to reauthorize access. Further, consumers who currently pay by credit or debit card may face a similar reauthorization cost when a card expires or is replaced due to fraud, so these types of costs are not unique to the pay-by-bank model.

Potential Changes in Pricing Models Due To Use and Retention Limitations

Changes that third parties make to their business models as a result of the rule may be passed on to consumers through higher prices for services provided by third parties. For example, the CFPB understands that some third parties obtain revenue by selling data that consumers provide to them with other third parties or, more commonly, by selling marketing information derived from such data. This may allow third parties to provide services to consumers free of charge. As discussed in the *Costs to third parties* part, there is evidence that firms in Europe that were sharing customers' data experienced a decline in revenue after data protection laws were enacted, suggesting that they may need to seek alternative sources of revenue.[181]

The CFPB expects that the rule will reduce the amount of targeted advertising using covered data. Several nondepository entity trade association commenters stated that consumers benefit from targeted advertising and prefer ad-supported services to fee-based services, and so the prohibition of the use of covered data for targeted advertising under the rule will harm consumers. But this overlooks that the rule does not prohibit targeted advertising. Providers can still use other forms of data for this purpose. And they can use covered data for this purpose, so long as they do so in the form of a standalone product or service, consistent with the terms of the rule. To the extent consumers benefit from targeted advertising, the rule provides means to realize such benefits.

To the extent that the rule leads to third parties changing their business models, it is possible that some third parties will charge consumers directly for services that used to be free. The CFPB does not have data to estimate the share of consumers impacted or the magnitude of any corresponding price increases.

Reduction in Not-for-Profit Research Analyses

Multiple research institutes and researchers commented that restrictions on secondary uses of consumer data would eliminate the use of open banking data in not-for-profit research analyses, which may harm consumers. Research institutes and researchers considered the possibility of an ''opt-in'' option for consumers to choose to share their covered data for the purpose of not-for-profit research, but expressed that research limited to this population would not generally be representative and therefore would be of limited value. These commenters requested an exception that would permit non-commercial secondary uses for de-identified data. The CFPB acknowledges that the rule will likely reduce the availability of consumer-permissioned data for nonprofit research purposes, and that this could have some indirect costs for consumers. The CFPB does not have data or evidence that would allow it to quantify these potential indirect costs.

3. Benefits to Covered Persons

Benefits to Data Providers

At baseline, many third parties use screen scraping to access consumer data. The CFPB expects that screen scraping will decline under the rule. This is likely to benefit data providers because screen scraping involves security risks and heavy web traffic. By standardizing the terms of access and reducing the scope of negotiation, the rule is also likely to decrease the per-arrangement cost of enabling access to the developer interface. Finally, data providers that provide competitive service offerings, including potentially community banks and credit unions, could benefit from increased account switching by consumers.

Reduced Screen Scraping

The CFPB understands that credential-based screen scraping creates data security, fraud, and liability risks for data providers, particularly because the credentials shared to facilitate data access also typically can be used to move funds. Furthermore, screen scraping can be used to gather data without data providers establishing a relationship with third parties or assessing data security risks. The CFPB cannot disaggregate fraud costs resulting from credential-based screen scraping from general costs of fraud, including measures to prevent fraud or insure against fraud-related damages. However, depository data providers have reported extensive costs related to preventing fraud and unauthorized transactions generally, and reimbursing consumers when such fraud occurs. During the SBREFA process, one small depository institution reported debit card fraud losses of 28 percent of their total revenue. Small entity representatives also noted that data providers typically pay premiums for insurance against catastrophic fraud losses, with plans typically covering losses in excess of $25,000, subject to certain restrictions. Through conversations with industry participants, the CFPB understands that account takeover fraud is the most likely

Evidence from Open Banking, Stanford Univ. Graduate Sch. of Bus. Rsch. Paper (Sept. 7, 2023), *https://dx.doi.org/10.2139/ssrn.4071214.*

[181] Rebecca Janßen *et al., GDPR and the Lost Generation of Innovative Apps,* Nat'l Bureau of Econ. Rsch. Working Paper No. 30028 (May 2022), *https://www.nber.org/papers/w30028.*

fraud risk that could be exacerbated by credential-based data access methods such as screen scraping.[182] In this form of fraud, the bad actor gains access to the consumer's account and transfers funds, makes purchases, or opens accounts without authorization. The CFPB expects that the reduction in credential-based access due to the rule would lower the risk of account takeover fraud, providing a benefit to data providers through reductions in direct liability and decreased fraud insurance premiums, although it is unclear how much account takeover fraud is attributed to credential-based screen scraping. The CFPB does not have sufficient data to estimate how much the rule will lower account takeover fraud risk. However, even a small reduction would have large benefits for data providers.[183]

Along with the requirements to access only the data fields necessary to provide the specific product or service, the shift away from credential-based screen scraping will also tend to reduce overall traffic loads on the consumer-facing system and may reduce traffic loads overall. The CFPB does not have systematic data with which to estimate the net change in web traffic and the resulting decrease in necessary expenditures on digital infrastructure. The CFPB understands that the incremental cost of additional web traffic is small, and that reasonably anticipated reductions in traffic are likely to provide minimal benefits to data providers. In a comment, a data aggregator concurred with the CFPB that transitioning to developer interfaces should generally reduce the number of data requests and traffic relative to screen scraping, thus reducing costs for data providers.

Reduced Onboarding Costs and More Standardized Terms of Access

The CFPB understands that onboarding third parties is often resource intensive for data providers. In the Aggregator Collection responses, aggregators reported that negotiating an access agreement with a data provider could take between 50 and 4,950 staff hours of business relationship managers, software developers, lawyers, compliance professionals, and senior management, depending on the complexity of the negotiation. The median estimated time was 385 staff hours per agreement. Based on these responses, under the baseline the CFPB estimated a total cost of between $4,260 and $422,000, which varies depending on the complexity of the negotiation, with a median cost of around $32,825. Although these estimates were provided by data aggregators, the CFPB expects that these costs are also representative for data providers at baseline.

For contract negotiations that would have occurred under the baseline, the CFPB expects that onboarding costs will decrease under the rule because many features of access agreements would be regulated by the rule and not subject to commercial negotiation, including requirements for interface reliability, interface queries, and the scope of data accessible via the interface. One market participant stated that in cases where data providers agree to use existing industry-defined standards there is essentially no need for negotiation and data providers can immediately begin updating their developer interfaces in line with the standard specifications. The CFPB expects that consensus standards will reduce onboarding costs in this way. The CFPB expects that under the rule nearly all data providers will use standardized onboarding arrangements that meet rule terms and the costs of establishing data access will be limited to ensuring third party risk management standards are satisfied and reviewing the arrangements. A non-small entity representative third party commenter stated that concluding this type of onboarding arrangement represents approximately 20 percent of total negotiation time under the baseline.[184] Based on this, the CFPB estimated in the proposal that negotiations under the rule would require roughly 80 staff hours on average. The required time to onboard third parties to developer interfaces may decline substantially over time as consensus standards are developed for certifying compliance with third party risk management standards. While some data providers and third parties may choose to enter into customized access arrangements that respect the terms of the rule, they will generally only do so when the perceived benefits exceed the costs described here. As discussed in the section on *Costs to data providers* in part VI.E.1 above, commenters stated that the CFPB had underestimated the costs of establishing data access arrangements. In response to the information in these comments, the CFPB is updating its estimate to 120 staff hours on average to onboard a third party to a developer interface. Therefore, the CFPB estimates that the rule is likely to reduce the cost of onboarding arrangements by $24,000 on average.[185] Under the baseline, data providers would have continued to negotiate commercial access agreements with third parties and these benefits would not have applied to those agreements. As discussed in the section on *Costs to data providers* in part VI.E.1 above, the CFPB expects that the rule will cause data providers to onboard additional third parties relative to baseline. The cost of additional onboarding arrangements is analyzed in that part.

Restrictions on Third Parties' Use and Retention of Data

The rule will also have some indirect effects on the value of first party data held by data providers. Under the baseline, third and first party data are both used for marketing and new product development.[186] The rule will limit third party collection of consumer-authorized data to what is reasonably necessary to provide the consumer's requested product or service. Third party use and retention of covered data will also be subject to that limitation, which will limit the availability of covered data for marketing and for the development of new products outside the scope of the original authorization, to the extent that third parties cannot obtain or use data for these purposes through other means. While the CFPB does not have data to quantify the benefits to data providers, all else equal, this is likely to increase the value of first party covered data held by data providers, which generally does not have these restrictions.

Required Data Security Representations by Third Parties

The rule will require authorized third parties to represent that they have reasonable security practices, in particular by representing that they implement the GLBA Safeguards

[182] For example, consumers' account credentials may not be securely stored by third parties or fraudsters may induce consumers to share their credentials by impersonating a legitimate third party.

[183] For example, a 3 percent reduction in ATO fraud risks would generate an expected annual benefit of $330 million for data providers, based on industry research finding ATO fraud risks of approximately $11 billion annually. *See* PaymentsJournal, *Javelin's Identity Fraud Study Highlights the Changing Nature of Fraud* (May 24, 2023), *https://www.paymentsjournal.com/javelins-identity-fraud-study-highlights-the-changing-nature-of-fraud/*.

[184] *See https://www.regulations.gov/comment/CFPB-2023-0011-0042.*

[185] This estimate is based on estimated total hourly compensation of $89.99 multiplied by the difference between the median expected hours required at baseline, 385 hours, and the expected hours required under the rule, 120 hours.

[186] For example, a firm might target advertising towards consumers who qualify for a particular credit product or who are likely to be particularly profitable customers or develop new products based on insights from a dataset of consumer transaction histories.

Framework. These practices are likely to benefit data providers by increasing certainty regarding their potential third party risks, and generally will require minimum data security standards among third parties. The CFPB expects this to generally reduce the likelihood of data security breaches or other incidents, but the CFPB does not have data to quantify the size of this benefit.

Potential Benefits From Increased Account Switching

In general, consumers prefer financial institutions that provide better prices or customer experiences. As discussed in the section on *Effects of increased data sharing on innovation and competition* in part VI.E.4, the CFPB expects that the rule will improve consumers' ability to switch financial institutions. As a result, financial institutions that offer covered products with competitive prices and customer experiences may increase their market share due to the rule. This could particularly benefit community banks or credit unions that operate at a smaller scale and thus would have had comparatively smaller informational advantages relative to larger data providers under the baseline, as discussed in the section on *Reduced informational advantages* in part VI.E.1.

Benefits to Third Parties

Right to Access Data on Behalf of Consumers

Under the rule, covered data providers are required to provide data to authorized third parties. Third parties will be able to access data from data providers that had not made data available under the baseline. Further, the rule's data reliability requirements will ensure that data access is consistently available across all data providers. The CFPB understands that, at baseline, connectivity failure rates between third parties and data providers are high, in part because many data providers do not facilitate data sharing with many third parties, so these requirements may lead to large increases in the proportion of consumers who are successfully able to share their data under the rule. Firms in the Aggregator Collection reported initial connectivity failure rates ranging from 28 percent up to 60 percent. The CFPB understands that some of these initial connectivity failure rates occur because the data provider denies the third party's request for data access, rather than because of low interface reliability, and so third parties will be able to reach more consumers under the rule's requirement that authorized third parties have access to covered data.

Prohibition on Data Access Fees

The rule prohibits data providers from imposing fees on third parties for costs associated with covered data provision. Firms in the Aggregator Collection generally did not report paying fees to data providers for access to covered data per customer or per interface call, though a small number of annual or one-time payments were reported. Though these costs are currently limited, the provisions will ensure that the absence of fees under the baseline continues in the future, providing more certainty to third parties about their costs of accessing covered data. The CFPB does not have data to estimate the benefit to third parties of this prohibition on fees because of the uncertainty in how fees might have evolved under the baseline.

Reduced Negotiation Costs

As described in the *Benefits to data providers* part, based on data and comments provided by third parties, the CFPB estimates that negotiation costs will fall by 70 percent under the rule, or an average savings of $24,000 per negotiated connection agreement. This will bring about substantial savings for third parties, particularly data aggregators. The reduction in negotiation costs may also allow additional third parties to enter into access agreements with data providers directly, potentially saving on expenses paid to aggregators under the baseline.

More Frequent Access to Data

The rule prohibits covered data providers from unreasonably limiting the frequency of third party requests for covered data and from delaying responses to those requests. Based on responses to the Provider Collection and conversations with industry participants, the CFPB is aware that some large covered data providers that offer developer interfaces currently impose access caps. Third parties would benefit from the ability to access consumer data as often as is reasonably necessary to provide the requested service. One firm in the Aggregator Collection reported spending ''significant resources'' to manage its traffic in order to avoid access cap limits. Additionally, an aggregator in the Aggregator Collection reported spending resources to persuade large financial institutions to raise or eliminate access caps.

In addition to reducing costs associated with managing and limiting traffic, third party services may become more valuable to consumers when third parties can access consumer data more often.[187] As a result, the CFPB expects that third party revenue will increase from the removal of unreasonable access caps under the rule. The CFPB does not have data to quantify these benefits for third parties.

Improved Accuracy of Data

The rule will require that data providers have policies and procedures reasonably designed to ensure the accuracy of data transmitted through their interfaces. In addition, the rule provides a consensus standards framework for several factors that third party small entity representatives reported as reducing accuracy, including data access reliability, inconsistencies in data field availability and formatting, and inaccuracies in screen scraped data.

The CFPB understands from the Aggregator Collection that access caps can prevent consumers from obtaining their most up-to-date data when a third party has surpassed its data limit. The removal of unreasonable access caps under the rule will reduce such issues. The rule will also require that a data provider make available the most recently updated covered data that it has in its control or possession at the time of a request, further ensuring that third parties will be more likely to have up-to-date data than under the baseline.

The transition away from screen scraping will lead to more consistency in the data fields that are available across all data providers and in data field formatting, and may reduce costs associated with ensuring that consumer data are accurate, particularly once consensus standards are established. One data aggregator reported more frequent inaccuracies for data accessed through screen scraping, as well as the need to allocate more resources to meet accuracy standards for screen scraped data. The CFPB understands that once compliant developer interfaces are established, third parties will need to transition away from screen scraping, which will reduce the costs associated with maintaining accuracy in screen scraped data.

Costs associated with maintaining accuracy in consumer data will not be eliminated altogether, as the rule will require that third parties ensure that covered data are accurately received from data providers, and accurately provided to other third parties, if applicable. The CFPB expects that the increased accuracy of data received

[187] For example, an app that warns consumers when the funds in their checking account fall below a predetermined threshold is generally more valuable to consumers when it can access data about their checking accounts more often.

from data providers will simplify third party procedures for meeting data accuracy standards. Third party products and services are likely to become more valuable to consumers when data received from data providers is more accurate and reliable. The CFPB expects that this will increase third party revenue.

Improved Service Quality Due To Improved Data Access

As discussed in the *Benefits to third parties: Prohibition on data access fees* part, the rule will prevent data providers from charging fees to consumers or third parties for access to covered data, provide third party access to data from all covered data providers through compliant developer interfaces that meet reliability standards, eliminate unreasonable access caps, and improve the accuracy of received data. Furthermore, the rule clarifies that third parties are required to obtain authorization from consumers to access covered data, while data providers are permitted to confirm the scope of the third party's authorization. This will allow third parties to request the information that is reasonably necessary to deliver their product or service. These effects reduce third party costs of providing services to consumers and improve the quality of the services that they can provide. The CFPB expects that the ability to provide more valuable services to consumers at a lower cost would, over the short- to medium-term increase profits for existing third parties and lead to increased entry into the market for third parties' services.[188]

The rule is likely to enhance third party access to consumers' financial data, which could be used in third parties' credit underwriting decisions. Access to this data is likely to allow lenders to better differentiate between borrowers with different likelihoods of repayment and charge prices that are more aligned with potential borrowers' repayment risk, increasing underwriting profitability. As an example, the CFPB understands that access to consumer financial data enables some third party lenders to incorporate information about consumers' cash flow (*i.e.,* depository account inflows and outflows) into their underwriting models. Industry research has shown that cash flow is predictive of serious delinquency, and that models including cash flow can distinguish between the repayment risks of consumers with similar traditional credit profiles.[189] The CFPB expects that some third party lenders will be able to identify and reach more consumers with low repayment risk under the rule, and may therefore experience an increase in profits. The CFPB does not have data to quantify these benefits for third parties.

Reduced Costs of Establishing and Maintaining Screen Scraping Systems

The CFPB expects that third parties will cease screen scraping for covered data from covered data providers under the final rule. Based on the Aggregator Collection, the CFPB understands that maintaining screen scraping systems is more costly than maintaining developer interface connections. The reported ratio of staff hours spent on maintaining screen scraping data access to staff hours spent on maintaining interface data access ranged between 2.5 and 12. For aggregators that separately reported costs of maintaining data provider connections through both screen scraping and developer interfaces, the dollar cost of screen scraping ranged between $1.6 million and $7 million, or between $0.0005 and $0.0216 per access attempt; for developer interfaces, the reported dollar cost was between $1.5 million and $1.6 million, or between $0.0001 and $0.0194 per access attempt. Each request made through a developer interface rather than through screen scraping leads to expected savings between $0.0004 and $0.0022. Cumulatively, the firms in the Aggregator Collection reported nearly 16 billion screen scraping attempts in 2022. Under the rule, these screen scraping attempts would instead be made through requests to developer interfaces, leading to at least $6.4 million to $35.9 million worth of annual savings for data aggregators, based only on information supplied by firms in the Aggregator Collection. Aggregators' savings may be passed on to data recipient third parties through lower prices for aggregator services. The CFPB expects that third parties' cost per access attempt will fall under the rule because screen scraping is more costly for third parties than accessing data through developer interfaces, and third parties will transition to only accessing covered financial data through interfaces.

Increased Standardization

The CFPB expects that the cost of accessing consumer data will decrease not only through reductions in onboarding arrangement costs and screen scraping costs, but also because the rule incentivizes the industry to adopt consensus standards and requires standardized formats, including formats of data and communication protocol formats. The rule also clarifies which party is responsible for obtaining authorization from the consumer. The CFPB expects that increased standardization will be facilitated by one or more standard-setting bodies recognized by the CFPB, as outlined in the Industry Standard-Setting Final Rule.[190] One nondepository entity commenter expressed an expectation that this standardization will lead to increased market consolidation for data aggregator services. However, in order to deny covered data access to a third party, data providers will need to meet the rule's requirements for reasonable denials. Data providers will also need to apply their covered data access denial standards in a consistent and non-discriminatory manner under the rule. This will limit the scope for data providers to partner with only a small number of dominant data aggregators if other data aggregators seek to access covered data and meet the requirements for covered data access. Additionally, the data provider will need to provide covered data in a standardized and machine-readable format and use standardized communication protocols to confirm with consumers the scope of a third party's authorization to the consumer's covered data. This increased standardization of data access will reduce the cost of providing data aggregator services under the rule, further reducing barriers to entry and increasing competition for data aggregator services. The CFPB further expects that increased standardization of data access may reduce the costs for third parties integrating with data providers and allow some third parties that provide services to consumers to bypass data aggregators. An increase in

[188] Third parties may experience an increase in investment under the proposed rule, in addition to a reduction in costs and improvement in service quality. Babina *et al.* (2023) study open banking polices adopted across 49 countries and find that fintechs, which include third party recipients of data, raised significantly more funding from venture capital following the implementation of open banking policies that require banks to share data with third parties. *See* Tania Babina *et al., Customer Data Access and Fintech Entry: Early Evidence from Open Banking,* Stanford Univ. Graduate Sch. of Bus. Rsch. Paper (rev. Sept. 2023), *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4071214.*

[189] One credit scoring company found that adding cash flow data to its traditional model improved predictiveness by 5 percent for consumers with thin or new credit profiles. Supporting this finding, FinRegLab studied six non-bank lenders in the current system and found the cash flow variables in their underwriting models were predictive of serious delinquency. *See* Can Arkali, *Icing on the Cake: How the FICO Score and alternative data work best together,* FICO Blog (June 2023), *https://www.fico.com/blogs/icing-cake-how-fico-score-and-alternative-data-work-best-together;* FinRegLab, *The Use of Cash-Flow Data in Underwriting Credit: Empirical Research Findings* (July 2019), *https://finreglab.org/wp-content/uploads/2019/07/FRL_Research-Report_Final.pdf.*

[190] 89 FR 49084 (June 11, 2024).

the share of third parties accessing data under access agreements with data providers would tend to reduce any degree of market power that data aggregators would enjoy under the baseline and will tend to reduce access prices for third parties. One small entity representative shared in the SBREFA process that aggregator costs represent its single largest budgetary line item, at approximately 10 percent of monthly expenditures. Data aggregators in the Aggregator Collection reported a wide range in fees charged to data recipient third parties depending on the recipient's size, minimum commitments, and access volume. Reported median annualized fees ranged between $2,000 and $6,000. Average annualized fees ranged between $40,000 and $70,000, demonstrating that a small number of data recipients pay substantially more fees than average.[191]

The rule may make it comparatively less expensive for third parties to connect directly with data providers, rather than contracting with one or more data aggregators. Because a direct connection with a data provider is a substitute for aggregator services, a decrease in the cost of direct connections would likely decrease the price of aggregator services. However, because aggregators spread the costs of establishing data access agreements with each data provider across many authorized third parties, aggregators are likely to retain an advantage from scale in providing access. This advantage may decline over time with consensus standard development, which may reduce friction and cost associated with establishing and maintaining bespoke connections to each data provider. The CFPB does not have data to estimate the net benefits to data aggregators or data recipients due to increased standardization of data access.

4. Benefits to Consumers

The rule will likely increase consumers' ability to access their covered data through third parties as desired. This increase may result in more third party products and services that consumers find useful in the marketplace. The use of credential-free data access will make this sharing possible without consumers revealing their credentials to third parties, reducing the potential harms that consumers may experience due to data breaches or similar incidents. Consumers will also have increased control over how third parties use their data, since third parties will no longer have indefinite authorization to use a consumer's covered data or to use it for reasons other than what is reasonably necessary to provide the product or service. The rule will likely have important secondary benefits for consumers as well, for example through the development of new underwriting methods or increasing competition among data providers or third parties. Finally, the potential effects of the new financial data processing product or service definition are discussed below.

Right to Third Party Data Access

The rule will require data providers to facilitate consumer instructions to provide authorized third parties with covered data. As discussed in the section on *Benefits to third parties* in part VI.E.3, consumers' initial account connection attempts through authorized third parties experience high failure rates, and the rule benefits both consumers and third parties by guaranteeing authorized third parties the right to access covered data. Under the rule, data providers will be required to offer a developer interface with commercially reasonable performance, including a proper response rate in excess of 99.5 percent. This will benefit consumers by increasing the quality of third party products and services as well as the likelihood that consumers are able to use them at all. As discussed in the section on *Benefits to third parties* in part VI.E.3, the CFPB expects that third parties' costs of establishing connections with data providers will decline as a result of the rule, and this may benefit consumers to the extent that lower costs are passed through to them.

Further, guaranteed access to consumer authorized covered data will likely increase investment in third parties that request that data, providing consumers with more options in the marketplace and increasing competition.[192] As evidenced by the estimated 100 million consumers who have authorized third party data access discussed in the section on *Baseline* in part VI.D above, consumers have substantial demand for financial products and services offered by third parties, which may feature more convenient and automated means of gathering and using consumers' financial data relative to legacy financial service providers.[193] The CFPB expects that an expanded range of third party products and services will increase competition and innovation, offering important secondary benefits to consumers, including improved credit access and lower prices, discussed below.

Several bank commenters argued that the costs of the rule exceed the consumer benefits, and a bank and bank trade association argued that the costs of the developer interface exceed consumer benefits, especially for small data providers. The CFPB acknowledges, as discussed in the section on *Costs to data providers* in part VI.E.1 above, that data providers will incur costs associated with meeting developer interface requirements. The CFPB expects consumers to enjoy substantial benefits as a result of the ability to share consumer-authorized data with third parties as provided by the rule, such as the benefits described in the *effects of increased data sharing on innovation and competition* part. These benefits could reach over $1 billion annually even with relatively small increases in competition and account switching, as discussed in a more detailed analysis in this part. In addition, the non-coverage of depository institutions with assets below $850 million described in the rule alleviates the compliance costs for small depository institutions and substantially reduces the costs of the rule as a whole.

Commenters questioned the coverage of many data elements, but the CFPB expects that all data elements required by the rule provide consumer benefit. One bank argued that the costs of providing certain data elements, such as whether a borrower entered into an arbitration agreement as contained in account terms and conditions, is not outweighed by the benefits. Additionally, bank trade association, research institute, and credit union commenters stated that the consumer benefits of the requirement to provide terms and conditions do not outweigh the costs. The CFPB expects that as a general matter the provision of terms and conditions will benefit consumers

[191] For example, responses in the Aggregator Collection suggested that a smaller number of data recipients may pay annualized fees totaling several million dollars.

[192] For example, Babina *et al.* (2023) find that after other countries implemented open banking policies, venture capital investment in fintech companies increased significantly on average and the number of new entrants in the financial advice and mortgage markets increased. Tania Babina *et al., Customer Data Access and Fintech Entry: Early Evidence from Open Banking,* Stanford Univ. Graduate Sch. of Bus. Rsch. Paper (rev. Jan. 22, 2024), *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4071214.*

[193] As an example of how this can potentially increase access to credit for underserved populations, Howell *et al.* (2022) find that automation of underwriting processes for small business lending are associated with a higher share of loans being made to Black borrowers. Sabrina T. Howell *et al., Lender Automation and Racial Disparities in Credit Access,* Nat'l Bureau of Econ. Rsch. Working Paper No. 29364 (Nov. 2022), *https://www.nber.org/papers/w29364.*

by, for example, facilitating comparison shopping. Consumer knowledge of whether or not they are subject to an arbitration agreement will aid consumers in understanding their legal rights, which is a benefit in itself. The same commenters also argued against the inclusion of pending transactions stating that, for example, pending transactions may change in amount once settled. The CFPB expects that providing information about pending transactions can benefit consumers by, for example, alerting them about potential fraudulent charges, alerting them if they might be close to overdrafting, or allowing them to view their remaining credit limit on credit cards. These features have clear use cases in, for example, account monitoring and personal financial management. Based on the Aggregator Collection, tens of millions of inquiries were submitted for personal financial management and account monitoring in 2022. A bank trade association commented that providing data on rewards credit per transaction would be costly and that no evidence of benefits was provided. The CFPB expects that rewards programs information will help consumers comparison shop, and use any awards they accrue optimally. The CFPB does not have the data to perform a quantitative analysis, but the benefits from providing this information accrue to consumers over the long run, whereas the marginal cost of providing this information is limited and mostly incurred as a one-off, or fixed, expense. Accordingly, the CFPB has determined that the potential consumer benefits can be significant in relation to costs, warranting the inclusion of this information. Some nondepository entity trade association, bank, and research institute commenters stated that the risks of requiring information to initiate payments outweighs the benefits to consumers. While the CFPB does not have data to perform a quantitative analysis, the CFPB has determined that requiring information to initiate payments supports highly beneficial consumer use cases such as account switching and making payments.

A credit union trade association commented that the CFPB should analyze whether data on non-covered products like mortgages is less beneficial to consumers than included data like credit card rewards, scheduled bill payments, and terms and conditions. The CFPB expects access to these types of covered data will benefit consumers. For example, information on scheduled bill payments has a clear personal financial planning benefit. The CFPB may pursue another rule in the future to cover other products, and has determined that the products and data covered by the current rule benefit consumers, as described in this part and in part IV.A.2.

One bank trade association argued that there is no consumer benefit to the requirement that data providers provide public quantitative performance metrics. The CFPB expects that this requirement will enable consumers and others to verify that data access is being provided consistently with the rule's requirements, and that consumers will benefit indirectly as the metrics will facilitate supervision and improve compliance with the rule. A commenter also stated that there is no consumer benefit to requiring three years of record retention instead of two. The CFPB has determined that a three-year record retention period provides sufficient information to conduct its exams and investigations, which, by enhancing compliance, benefit consumers.

One nondepository entity and two nondepository trade organizations argued that there is no benefit to covering digital wallets because transaction information is available more directly from bank account or credit card providers. As described in part IV.A.2, the CFPB expects that consumers will benefit from the rule's coverage of digital wallets because digital wallets may possess data from several depository institutions and account types, and because a digital wallet may offer a more convenient method for some consumers to provide third parties with consumer-authorized data. Further, a digital wallet may include information not available to the account-holding data provider, such as the time and location of the payment.

One community bank trade association commented that there is no evidence of significant demand among community bank customers for sharing data with third parties. The rule does not cover small depository institutions, and given the substantial demand for data sharing demonstrated in the Aggregator Collection and Provider Collection and the increasing availability of third party services, the CFPB finds it unlikely that there are institutions covered under the rule with little or no demand for data sharing among its customers.

Credential-Free Access—Increased Privacy, Reduced Data Breach Risks

Under the rule, data providers will be required to create an interface that can be used to share covered data with third parties without consumers' credentials being held by the third party. Many third parties currently use screen scraping techniques or credential-based APIs to access consumer information, which requires the consumer to provide the third party with their username and password for the data provider's website. This current practice may expose consumers to greater risk if a third party experiences a data breach. Such data breaches can be very costly for consumers. While the CFPB does not have data to estimate the resulting consumer benefits of credential-free access, the academic and practitioner literature indicates that the associated benefits can be substantial.[194] Courts have approved large settlements in cases where data breaches affected financial service providers.[195] It is common for consumers to have their personal information compromised. For example, a 2019 Pew Research Center survey found that in the past 12 months, 28 percent of respondents reported having someone make fraudulent charges on their debit or credit card, take over a social media or email account without permission, or attempt to open a credit account in their name.[196] Under the rule, consumers would benefit from a reduced likelihood that third party data breaches would expose their account login information, since they would no

[194] Albon *et al.* (2016) surveyed more than 6,000 consumers and found that in the previous year, 26 percent reported receiving a data breach notification. When asked about the costs that the data breach imposed on them, 68 percent of consumers whose data was breached estimated a nonzero financial loss, with a median value of $500. Lillian Ablon *et al., Consumer Attitudes Toward Data Breach Notifications and Loss of Personal Information,* RAND Corp. (2016), *https://www.rand.org/content/dam/rand/pubs/research_reports/RR1100/RR1187/RAND_RR1187.pdf.* A study of identity fraud by Javelin Strategy found that the average consumer who identified as a victim of identity fraud lost $1,551 and spent nine hours resolving the issue. Javelin Strategy, *Identity Fraud Losses Total $52 Billion in 2021, Impacting 42 Million U.S. Adults* (Mar. 29, 2022), *https://javelinstrategy.com/press-release/identity-fraud-losses-total-52-billion-2021-impacting-42-million-us-adults.* Consumers' liability for ATO fraud may be limited under Regulation E, but it is possible that not all consumers can or do successfully exercise their rights to limited liability.

[195] In 2019, a settlement for $190 million was approved in a data breach at Capital One that affected approximately 100 million consumers. Capital One, *Information on the Capital One cyber incident* (Apr. 22, 2022), *https://www.capitalone.com/digital/facts2019/.* A settlement of $425 million for consumers was reached in the 2017 Equifax data breach, which affected approximately 147 million consumers. Fed. Trade Comm'n, *Equifax Data Breach Settlement* (Dec. 2022), *https://www.ftc.gov/enforcement/refunds/equifax-data-breach-settlement.*

[196] Brooke Auxier *et al., Americans and Privacy: Concerned, Confused and Feeling Lack of Control Over Their Personal Information,* Pew Rsch. Ctr. (Nov. 15, 2019), *https://www.pewresearch.org/internet/2019/11/15/how-americans-think-about-privacy-and-the-vulnerability-of-their-personal-data/.*

longer have to give third parties their account credentials in order for the third party to access covered data. If the third party experienced a data breach it would be less likely to compromise the consumer's account since the breach would no longer potentially include the consumer's account access credentials. This in turn may reduce the risks of unauthorized transfers or other fraudulent account activity.

One nondepository entity commenter argued that since the market is already shifting towards APIs, the added benefit of the rule does not outweigh the costs. As discussed in this part, the CFPB has determined that there are large potential benefits to consumers as a result of providers transitioning to credential-free access, and to the extent that data providers have already implemented interfaces meeting the requirements of the rule, the CFPB expects that these data providers will have lower costs of compliance. Further, the popularity of third party services and APIs highlights the need for safeguards to ensure consumer privacy. Another nondepository entity commenter stated that because some developer interfaces provide worse performance than legacy connection methods, shifting away from those legacy connection methods harms consumers. The CFPB has determined that the privacy and data security benefits of shifting to credential-free access outweigh any potential performance advantages of legacy methods under the baseline. Further, the CFPB expects the rule's performance standards for developer interfaces to improve the reliability of data access relative to screen scraping under the baseline. One third party and one consumer advocate commentator expressed concern that disallowing PII-based authentication methods could harm consumers without online accounts or credentials. The CFPB expects that all or nearly all consumers who wish to share consumer-authorized covered data with third parties either have an online account or the ability to create one. One data aggregator commentator expressed a concern that the transition away from screen scraping would harm consumers' ability to access accounts not covered by the rule, like mortgage and student loan accounts. However, the final rule does not affect screen scraping for accounts not covered by the final rule. Whether or not such screen scraping is permissible depends on other laws, such as the prohibition on unfair, deceptive, or abusive acts or practices, that form part of the baseline.

In addition, for a range of reasons, as this final rule takes operational effect, the CFPB expects some data providers and third parties to have compelling incentives to transition voluntarily to credential-free interfaces for non-covered products that would have been accessed using credentials under the baseline. This would yield additional data security benefits to consumers.

Several commenters expressed concern about potential fraud risks that may occur even under credential-free authorization of third parties. One consumer advocate commenter and one credit union commenter said that if data are more readily available as a result of the rule, it could increase the risk of financial abuse and fraud, particularly for older consumers. Two consumer advocate commenters also expressed concern that the rule could increase availability of joint account information to domestic abusers. Two research entity commenters and a bank commenter stated that consumers might particularly be vulnerable to fraudulent pay-by-bank transactions. The CFPB acknowledges that a bad actor could potentially gain fraudulent access to consumer-permissioned data, but this risk exists under the baseline. The rule mitigates these risks through its authentication requirements and requirements for credential-free third party access. Practically, the CFPB expects that in order to connect a bank account to a new third party service, a bad actor would need access to the consumer's credentials for their covered account and potentially access to additional information or devices required for authorization, such as codes issued as part of two-factor authentication. These risks exist under the baseline, and the CFPB expects that any increased risks from greater use of consumer-permissioned data access are outweighed by the data security and privacy benefits of the rule.

Third Party Limitations on Collection, Use, and Retention—Ability To Be Forgotten, Increased Privacy, More Control Over Use of Own Data

The rule will increase consumers' control over how their covered data are used by third parties. There is strong evidence that consumers value meaningful control over how their personal information is used and thus consumers will benefit from the rule. In a 2015 survey, the Pew Research Center found that 93 percent of Americans said that it was very or somewhat important to be ''in control of who can get information about you.'' [197] One consumer advocacy stakeholder stated that under the baseline, consumers may not understand how third parties share their data due to difficult-to-understand disclosures and may also not understand the rights they may have to limit how their data are shared. The Pew Research Center found in another study that 70 percent of Americans feel that their personal information is less secure than it was five years ago, 79 percent are very or somewhat concerned about how their personal information is being used by companies, and only 18 percent feel that they have a great deal of or some control over the data that companies collect about them.[198] Eighty-one percent feel that the potential risks of personal data collection by companies outweigh the benefits. This evidence suggests consumers have a strong desire for meaningful control over how their personal information is used and thus consumers will benefit substantially from the rule. The CFPB does not have sufficient data to provide a quantitative estimate of these benefits to consumers.

Effects of Increased Data Sharing on Innovation and Competition

Increased availability of consumer-authorized data to third parties could have a number of other indirect—but potentially large—benefits for consumers. For example, as discussed in the section on *Costs to consumers* in part VI.E.2 above, while increased availability of data could result in lenders assessing some consumers as higher credit risk than they would be otherwise and charging them higher prices, it is also likely to result in lenders assessing some consumers as lower credit risk and charging them lower prices. It is possible that a consumer could be denied a loan that they would have been granted in the absence of the use of consumer-authorized data in underwriting. If the loan was not affordable for the consumer, then this denial could benefit the consumer in the long term.

Consumer-authorized data may be particularly useful for consumers who have a limited credit history or do not have a credit file with a nationwide consumer reporting company. Among consumers who do have credit scores, a study by FinRegLab found that cash-flow underwriting can help identify consumers who have low traditional credit scores but are actually a low

[197] Pew Rsch. Ctr., *Americans Hold Strong Views About Privacy in Everyday Life* (May 19, 2015), *https://www.pewresearch.org/internet/2015/05/20/americans-attitudes-about-privacy-security-and-surveillance/pi_15-05-20_privacysecurityattd00/.*

[198] Brooke Auxier *et al., Americans and Privacy: Concerned, Confused and Feeling Lack of Control Over Their Personal Information,* Pew Rsch. Ctr. (Nov. 2019), *https://www.pewresearch.org/internet/2019/11/15/how-americans-think-about-privacy-and-the-vulnerability-of-their-personal-data/.*

credit risk for lenders.[199] It is possible that many consumers will experience increased access to credit or lower prices under the rule, to the extent that they are less able to share covered data with third parties under the baseline.[200] Even without the rule, the Aggregator Collection shows that in 2022, tens of millions of data requests were made through those data aggregators for consumer data to be used for underwriting purposes.[201]

The use of consumer-authorized covered data by third parties may also benefit consumers through increased availability and quality of payment services. The availability of consumer-authorized covered data may improve payment services by, for example, making it easier to sign up for such services and allowing the service to verify a consumer's balance before initiating a payment to ensure that they are not overdrafting the consumer's account. In 2022, the Aggregator Collection shows nearly two billion requests for consumer data for facilitating payment services. Increased use of payment services is likely to benefit consumers.[202] Easier person-to-person payments may help consumers send or receive money from friends and family to avoid overdrafting their bank accounts or incurring fees through other forms of borrowing. In addition to providing benefits for person-to-person payments, consumer-authorized data are increasingly used to facilitate consumer-to-business ''pay-by-bank'' purchases, with lower fees relative to some alternatives, some of which may be passed through as benefits to consumers. One consumer advocate commenter expressed a concern that consumer-authorized covered data could be used to determine eligibility for government benefits, and that inaccuracy in the data could harm consumers. The CFPB expects that if widespread inaccuracies were a problem with an application using consumer-permissioned data to determine an eligibility for a program, it is unlikely that such an application would be used. A bank commenter raised a concern that covered data could be used to offer less competitive products by third parties. The CFPB acknowledges that third parties learn more about consumers though covered data, but notes that third parties' use of this data is limited by the rule to what is reasonably necessary to provide the consumer's requested service or product.

Increased availability of consumer-authorized covered data may also lower the costs for a consumer switching financial institutions in search of higher deposit rates, lower fees, better service, or lower rates on credit products. Recent research has found that digital banking technology affects the movement of deposits into and out of banks in response to market pressures.[203] The provisions may make it easier for a consumer to move to a new institution by easing the transfer of funds and account information from the old institution to the new institution.

Even marginal improvements in consumers' ability to shop for and transfer deposits could have large potential benefits for consumers, given the substantial size of the deposit market and the dispersion in prices across institutions. Consumers with sizeable savings may benefit most from accounts offering higher interest rates, while consumers with limited funds may benefit most from accounts with low or no fees. Recent studies suggest there is potential for substantial gains on both measures. On interest rates, researchers have documented high average savings interest rates available from large online banks, substantially above average savings interest rates.[204] On fees, the CFPB has found that although deposit account fees are trending lower since 2019, banks with over $1 billion in assets collectively earned $7.7 billion in revenue from overdraft and insufficient funds (NSF) fees in 2022.[205] This is despite the availability of at least 397 deposit account products with zero overdraft and NSF fees, with options available in every state.[206]

The rule will likely improve consumers' ability to switch providers. As a result, the rule will have two benefits. First, those consumers who switch may earn higher interest rates or pay lower fees. To estimate the potential size of this benefit, the CFPB assumes for this analysis that of the approximately $19 trillion [207] in domestic deposits at FDIC- and NCUA-insured institutions, a little under a third ($6 trillion) are interest-bearing deposits held by consumers, as opposed to accounts held by businesses or noninterest-bearing accounts.[208] If, due

[199] FinRegLab, *The Use of Cash-Flow Data in Underwriting Credit* (July 2019), *https://finreglab.org/wp-content/uploads/2019/07/FRL_Research-Report_Final.pdf.*

[200] For example, using data from a German fintech lender, Nam (2024) finds that borrowers across the credit score distribution benefit on average when they choose to share data with the lender, with lower credit score borrowers experiencing a larger increase in acceptance rates and higher credit score borrowers experiencing a larger decrease in interest rates. *See* Rachel J. Nam, *Open Banking and Customer Data Sharing: Implications for Fintech Borrowers,* SAFE Working Paper No. 364 (Mar. 20, 2024), *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4278803.* One credit union trade association commenter stated that the CFPB did not consider data the effects of open banking in Europe. While the CFPB does not have primary data to analyze the effects of open banking on firms and consumers in other countries, it considered studies such as this one in its analysis.

[201] These requests include requests for information relating to existing accounts, like credit card limit increases, as well as the underwriting of new loans.

[202] For example, Balyuk and Williams (2023) find that low-income consumers with increased exposure to a person-to-person payment platform are less likely to overdraft their bank accounts and more likely to borrow from family and friends using the platform if they have a low balance relative to their needs. *See* Tetyana Balyuk & Emily Williams, *Friends and Family Money: P2P Transfers and Financially Fragile Consumers* (Dec. 12, 2023), *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3974749.*

[203] Koont, Santos and Zingales (2023) find that in response to Federal Funds rate changes, deposits flow out of banks with an online platform more quickly. Naz Koont *et al., Destabilizing Digital Bank Walls* (Oct. 2023), *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4443273.* Erel, Liebersohn, Yannelis, and Earnest (2024) found that primarily online banks saw larger inflows of interest-bearing deposits when Federal Funds rates increased. Isil Erel *et al., Monetary Policy Transmission Through Online Banks,* Fisher Coll. of Bus. Working Paper No. 2023–03–015 & Charles A. Dice Ctr. Working Paper No. 2023–15 (June 3, 2024), *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4459621.*

[204] Erel, Liebersohn, Yannelis, and Earnest (2023) found that in April 2023, there were at least 15 large online banks offering an average savings interest rate of 2.17 percent, compared to 0.28 percent at other banks. Similarly, FDIC data from April 2023 show that, weighted by share of deposits, average savings interest rates were 0.39 percent. The authors also find that the online banks offer substantially higher rates for other products like certificates of deposit, individual retirement accounts, and money market deposit accounts. Isil Erel *et al., Monetary Policy Transmission Through Online Banks,* Fisher Coll. of Bus. Working Paper No. 2023–03–015 & Charles A. Dice Ctr. [208] Derived from several data sources, the assumption that slightly under one third of total

Continued

to the rule, even one percent of consumer deposits were shifted from lower earning deposit accounts to those with interest rates one percentage point (100 basis points) higher, consumers would earn an additional $600 million annually in interest. Similarly, if due to the rule, consumers were able to switch accounts and thereby avoid even one percent of the overdraft and NSF fees they currently pay, they would pay at least $77 million less in fees per year.[209]

The second potential way consumers could benefit is through improved prices and service even for consumers who do not switch providers, due to the rule's effects on competition. Increased competition from improved online banking services and open banking services under the baseline may have already contributed to consumers receiving higher interest rates on deposits and paying lower fees in recent years.[210] To estimate the scale of potential benefits from the provisions, if the rule further increases these competitive pressures such that average offered interest rates on deposits increase by even one basis point (0.01 percentage points), consumers would accrue an additional $600 million in annual benefits from interest even without moving their deposits. Similarly, if increased competitive pressures due to the rule caused banks to lower overdraft and NSF fees by one percent on average, consumers would benefit from at least $77 million in reduced fees annually.

In addition to the effects in the deposit market, under the rule, a consumer's depository institution will no longer have a potential advantage in underwriting a loan based on the consumer's transaction data, which may increase competition and potentially lower interest rates on loan products for consumers. While these potential impacts are difficult to quantify, even marginal improvements in the interest rates or fees paid by consumers could have substantial benefits, given the size of consumer lending markets.

The provisions will also make it easier for consumers to access their data through personal financial management platforms. This increased ability to access and monitor information about their personal finances could benefit consumers.[211] The CFPB does not have data to quantify the resulting consumer benefit.

New Financial Data Processing Products or Services Definition

The CFPB expects that activities covered by the new financial data processing products or services definition are already within the scope of the CFPA's definition of financial product or service. As a result, the CFPB does not expect the new definition to have benefits to consumers. However, to the extent that there are firms offering products or services that are within the new definition but outside of the financial product or service definition, the new definition would benefit consumers by increasing protections against unfair, deceptive, or abusive acts or practices. The CFPB does not have data to quantify these potential benefits. The CFPB requested comment on whether any firms offer products or services that would be covered by the new definition but fall outside the definition of financial product or service, and if so, what potential benefits to consumers could result from the new definition but did not receive any such comments.

5. Alternatives Considered

The CFPB considered the impacts of several alternatives to the rule. These include alternatives that would allow secondary use of data by third parties in certain circumstances (*i.e.,* through an opt-in mechanism allowing the consumer to consent to specific uses, while retaining a prohibition on certain high-risk secondary uses) or allow retention and use of de-identified data as an exception to the general limitation standard that otherwise limits retention.[212] The CFPB considered covering Electronic Benefit Transfer accounts in the rule. The CFPB also considered alternatives specific to small entities, such as exemptions or longer compliance timelines, which are discussed in part VII.B.

Rather than prohibiting secondary uses, the CFPB considered allowing some secondary uses through an opt-in mechanism while prohibiting certain high-risk secondary uses. Relative to the proposal, this alternative would generally benefit third parties by allowing additional uses of data and potentially impose costs on consumers by reducing their privacy and their control of how their data are used. If these secondary uses lead to new beneficial products and services offered by third parties, this alternative could benefit consumers relative to the proposal. If, however, the additional secondary uses are detrimental to consumers despite the consumer's opt-in consent, allowing such uses could harm consumers relative to the baseline.

deposits are interest-bearing deposits held by consumers is based on assuming slightly under half of all deposits are held by consumers, and about 70 percent of consumers' deposits are interest bearing. First, in the most recent available 2019 data from the Survey of Consumer Finances, households' mean savings in transaction accounts and certificates of deposit was $48,803; *see* Bd. of Governors of the Fed. Rsrv. Sys., *Survey of Consumer Finances (SCF), https://www.federalreserve.gov/econres/scfindex.htm* (last updated Apr. 5, 2024). The 2020 Census estimates that there were 127 million U.S. households, and the product of these two numbers yields an estimate of $6.2 trillion in deposits held by consumers; *see* Thomas Gryn *et al., Married Couple Households Made Up Most of Family Households,* America Counts: Stories, *https://www.census.gov/library/stories/2023/05/family-households-still-the-majority.html.* This is slightly under half of the $14 trillion in deposits based on Call Report data for 2019; Fed. Deposit Ins. Corp., *2019 Summary of Deposits Highlights,* 14(1) FDIC Quarterly (2020), *https://www.fdic.gov/analysis/quarterly-banking-profile/fdic-quarterly/2020-vol14-1/fdic-v14n1-4q2019-article.pdf,* Nat'l Credit Union Admin., *Quarterly Credit Union Data Summary* (2019 Q4), *https://ncua.gov/files/publications/analysis/quarterly-data-summary-2019-Q4.pdf.* The estimate for share of deposits that are interest bearing is derived from Figure A.3 in Erel, Liebersohn, Yannelis, and Earnest (2023). Isil Erel *et al., Monetary Policy Transmission Through Online Banks,* Fisher Coll. of Bus. Working Paper No. 2023–03–015 & Charles A. Dice Ctr. Working Paper No. 2023–15 (May 26, 2023), *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4459621.*

[209] Survey evidence suggests that a small share of consumers value overdraft as a form of borrowing while a majority would prefer that the transactions were declined; *see* The Pew Ctr. on the States, *Overdraft America: Confusion an Concerns about Bank Practices* (May 2012), *https://www.pewtrusts.org/~/media/legacy/uploadedfiles/pcs_assets/2012/sciboverdraft20america1pdf.* In addition, the CFPB has found that some overdraft practices can be unfair, if they could not be reasonably anticipated; Consumer Fin. Prot. Bureau, *Unanticipated overdraft fee assessment practices,* Consumer Financial Protection Circular (Oct. 26, 2022), *https://www.consumerfinance.gov/compliance/circulars/consumer-financial-protection-circular-2022-06-unanticipated-overdraft-fee-assessment-practices/.* This analysis assumes that those consumers who prefer overdraft would stay with institutions offering these services, while those switching would prefer accounts without overdraft fees.

[210] Kang-Landsberg, Luck and Plosser (2023) find that the pass-through of the Federal Funds rate to deposit rates is increasing and nearing the levels seen in the early 2000s. Alena Kang-Landsberg *et al., Deposit Betas: Up, Up, and Away?,* Liberty St. Econ. (Apr. 11, 2023), *https://libertystreeteconomics.newyorkfed.org/2023/04/deposit-betas-up-up-and-away.*

[211] Carlin, Olafsson, and Pagel (2023) find that increased access to a personal financial management platform substantially lowers overdraft fees. Bruce Carlin *et al., Mobile Apps and Financial Decision-Making,* 27 Rev. Fin. 977 (2023), *https://academic.oup.com/rof/article/27/3/977/6619575.* The evidence on this subject is mixed, however, as Medina (2021) finds that reminders to consumers to make credit card payments in a personal financial management platform increased the probability that consumers incurred overdraft fees and slightly increased overall net fees paid by consumers, since consumers were more likely to overdraft their bank account to pay their credit card bill. Paolina C Medina, *Side Effects of Nudging: Evidence from a Randomized Intervention in the Credit Card Market,* 34 Rev. Fin. Stud. 2580 (2021), *https://academic.oup.com/rfs/article/34/5/2580/5903746.*

[212] Some additional alternatives are considered and discussed in part IV. For example, alternatives to the prohibition on fees for establishing and maintaining interfaces and for accessing data through interfaces are discussed in part IV.C.2.

The CFPB requested comment on whether any secondary uses should be allowed through an opt-in mechanism. The CFPB also requested comment on how potentially harmful secondary uses could be defined and prohibited under this alternative.

Comments on whether any secondary uses should be allowed through an opt-in mechanism and on how potentially harmful secondary uses could be defined and prohibited are discussed in parts IV.D.4, VI.E.1, and VI.E.2. In general, commenters' arguments about the benefits, costs, and impacts of allowing some secondary uses were in line with the CFPB's analysis of the benefits, costs, and impacts of this alternative, with data provider commenters generally opposed to allowing secondary uses, third party commenters generally in favor of allowing some secondary uses, and with varied support for this alternative from consumer advocate and research organization commenters. For the reasons discussed in parts IV.D.4, VI.E.1, VI.E.2, VI.E.3, and VI.E.4, the CFPB has determined that the rule as finalized better achieves the intended outcome of section 1033 of the CFPA than this alternative.

The CFPB also considered an exception to the general limitation standard for retention and use of de-identified data. Relative to the proposal, this alternative would generally benefit third parties by allowing the continued retention and use of de-identified consumer data after the general limitation standard would normally require the deletion of identified data. For example, de-identified data could potentially be used for product development, which would benefit third parties. These uses could also potentially benefit consumers through improved or new products. However, if the risk of reidentification remains for the consumers in de-identified data, the retention of such data creates a potential cost to consumers in privacy and fraud risks in the case of a data breach or misuse of data. In the proposal, the CFPB requested comment on whether there should be an exception to the general limitation standard for de-identified data, and if so, how de-identification should be defined to limit risks to consumers.

Comments on whether there should be an exception to the general limitation standard for de-identified data, and if so, how de-identification should be defined are discussed in parts IV.D.4, VI.E.1, and VI.E.2. In general, commenters' arguments about the benefits, costs, and impacts of an exception for de-identified data were in line with the CFPB's analysis of the benefits, costs, and impacts of this alternative, with data provider commenters generally opposed to an exception, third party commenters and research organization commenters generally in favor of an exception, and with varied support for this alternative from consumer advocate commenters. For the reasons discussed in parts IV.D.4, VI.E.1, VI.E.2, VI.E.3, and VI.E.4, the CFPB has determined that the rule as finalized better achieves the intended outcome of section 1033 of the CFPA than this alternative.

Finally, the CFPB considered including EBT accounts as covered accounts under the rule. Commenters stated that the impact analyses in the proposal did not consider the impact on EBT accountholders of not including EBT accounts in the rule. The CFPB considered the impacts of covering EBT accounts in the proposal, but found that several factors weighed against covering EBT accounts at this time. The CFPB acknowledges that many consumers use EBT accounts, and may not have reliable, convenient access to their account data provided by data providers. One nondepository entity commenter that provides third party data access to EBT accounts provided data on the prevalence and reliability of data sharing under their existing account connections. These data show that, under the baseline, rates of successfully accessing EBT data via existing third party connection methods range from 92 to 99 percent across EBT technology providers. Under the alternative in which such accounts were covered, consumers with EBT accounts would likely benefit from improved access through consumer interfaces, and improved third party access through developer interfaces. This improved access would benefit consumers by making it easier to monitor their account balances and transactions. However, improved data access for EBT accounts would generally not provide the type of account switching and competition benefits quantified in the rule for deposit and credit card accounts, as EBT accounts are generally provided by government agencies, rather than through competing private firms. Based on these considerations and those described in part IV.A.3, the CFPB declines to expand coverage to EBT accounts at this time.

F. Potential Impacts on Insured Depository Institutions and Insured Credit Unions With $10 Billion or Less in Total Assets, as Described in Section 1026

Under the final rule, depository institutions (including credit unions, and including both federally insured and non-federally insured institutions) that satisfy the SBA definition of a small entity will not be required to maintain a consumer interface or developer interface. This is a change from the proposal. The final rule will require depository institutions with $10 billion or less in total assets (community banks and credit unions) but that do not satisfy the SBA definition of a small entity to maintain a consumer interface and a developer interface through which they receive requests for covered data and make that data available in an electronic form usable by consumers and authorized third parties. Compared to larger data providers, these institutions likely are more reliant on core banking providers and other service providers to comply, have fewer consumers and thus reduced efficiencies of scale, and may be less likely to act as data recipients in addition to being data providers. Compared to nondepository data providers of all sizes, these institutions may have more legacy systems that may be costly to modify to come into compliance with the proposal.

As discussed in part VI.E.1, the CFPB expects that most depositories of this size will contract with a vendor for their interfaces for consumers and third parties. To examine the types of vendors used by covered institutions with $10 billion or less in total assets, the CFPB uses a data field in the NCUA Profile data which asks credit unions to indicate ''the name of the primary share and loan information processing vendor.'' [213] While the vendor that provides core banking services to a credit union is not always the same vendor that provides digital banking services to the credit union, the CFPB expects that in many cases the same vendor provides both services. Based on the reported information for credit unions with between $850 million and $10 billion in assets, the CFPB estimates that at least 83 percent of such covered credit unions already use a vendor that offers interfaces for third parties. To measure the size of vendors used, the CFPB estimates that 97 percent of credit unions with between $850 million and $10 billion in assets use a vendor with

[213] A ''share'' denotes a deposit account held by a credit union, and thus will include the Regulation E covered accounts under the proposal.

at least 100 credit union clients, and 99 percent of such credit unions use a vendor with at least 50 credit union clients. The CFPB expects that many of these vendors would likely offer interfaces for third parties by the compliance date applicable for community banks and credit unions. However, the 1 percent of credit unions using smaller vendors are more likely to need to either switch vendors or build a developer interface in house. This could lead to higher costs, as the costs of switching to a new vendor may be larger as a proportion of total assets or revenues for smaller depositories relative to larger depositories.

The CFPB does not have data on the vendors used by community banks, but expects that they may have a similar distribution of vendors as the comparably sized credit unions, and thus will face comparable costs to establish a developer interface.

The CFPB requested comment on its analysis in the proposal of the potential impact on depository institutions and credit unions with $10 billion or less in total assets. The CFPB did not receive comments specifically on its analysis of potential impacts on insured depositories and insured credit unions with less than $10 billion in assets, but comments that addressed impacts on small depositories, credit unions, and community banks are discussed in parts VI.E.1, VI.E.3, and VII.B.

G. Potential Impacts on Consumers in Rural Areas, as Described in Section 1026

Relative to the proposal, the CFPB expects that the change in coverage for depositories that satisfy the SBA definition of small entities and the extended compliance timelines will substantially reduce the impacts of the rule on consumers in rural areas.

Under the baseline, smaller banks hold a larger share of deposits in rural areas. For example, analysis by the Federal Reserve Board in 2017 found that the market share of community banks (defined as assets of less than $10 billion) in rural areas is nearly 80 percent on average, compared with nearly 40 percent in urban areas.[214]

Rural consumers are substantially less likely to use online banking than those who live in urban areas, defined to include all MSAs. For example, Benson *et al.* (2020) find that 56 percent of consumers in rural areas use online banking compared to 75 percent in large MSAs.[215] This may generally mean that rural consumers could experience less of both the costs and the benefits of the rule. Some of the difference in online banking use may be explained by differences in access to high-speed internet, since as of 2018 consumers in rural areas were 20.8 percentage points less likely to have the option of subscribing to high-speed internet.[216] Given that rural consumers are less likely to use online banking, they may also be less likely to use third party online services. The CFPB does not have comprehensive data on the geographic distribution of the use of third party products and services, though since rural consumers are less likely to have high-speed internet access, they may be less likely to use third party products and services. The 2021 FDIC National Survey of Unbanked and Underbanked Households found that 68.7 percent of consumers with bank accounts outside of MSAs had linked their bank account to a third party online payment service, compared with 72.3 percent in MSAs, showing that rural consumers are slightly less likely to use at least one type of third party product.[217]

The CFPB requested comment on its analysis in the proposal of potential impacts on consumers in rural areas. One consumer advocate commenter noted that consumers in rural areas may be more likely to live in banking deserts and thus more reliant on online financial services like those offered by third parties. The CFPB expects that the final rule will increase the availability of such online services for consumers in rural areas who bank at covered data providers. The rule also implements additional protections for consumers using third party services. For consumers who bank at data providers not covered by the rule, the CFPB expects that data access will generally continue to improve as it has under the baseline, through voluntary adoption of new methods of third party data access.

More general comments on impacts on consumers, including consumers who bank at community banks or credit unions, are discussed in parts VI.E.2 and VI.E.4.

VII. Regulatory Flexibility Act Analysis

The Regulatory Flexibility Act (RFA)[218] generally requires an agency to conduct an IRFA and a FRFA of any rule subject to notice-and-comment requirements. These analyses must ''describe the impact of the proposed rule on small entities.''[219] An IRFA or FRFA is not required if the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities.[220] The CFPB also is subject to certain additional procedures under the RFA involving the convening of a panel to consult with small business representatives prior to proposing a rule for which an IRFA is required.[221] The CFPB did not certify that the proposed rule would not have a significant economic impact on a substantial number of small entities within the meaning of the RFA. Accordingly, the CFPB convened and chaired a Small Business Review Panel under SBREFA to consider the impact of the proposed rule on small entities that would be subject to that rule and to obtain feedback from representatives of such small entities. The Small Business Review Panel for the proposal is discussed in part VII.A. The CFPB is also publishing a FRFA. Among other things, the FRFA estimates the number of small entities that will be subject to the rule and describes the impact of that rule on those entities. The FRFA for this rule is set forth in part VII.B.

A. Small Business Review Panel

Under section 609(b) of the RFA, as amended by SBREFA and the CFPA, the CFPB must seek, prior to conducting the IRFA, information from representatives of small entities that may potentially be affected by its proposed rules to assess the potential impacts of that rule on such small entities.

The CFPB complied with this requirement. Details on the SBREFA Panel and SBREFA Panel Report for the proposal are described in part II.A.

---

[219] 5 U.S.C. 603(a). For purposes of assessing the impacts of the proposed rule on small entities, the term ''small entities'' is defined in the RFA to include small businesses, small not-for-profit organizations, and small government jurisdictions. 5 U.S.C. 601(6). A ''small business'' is determined by application of SBA regulations and reference to the NAICS classifications and size standards. 5 U.S.C. 601(3). A ''small organization'' is any ''not-for-profit enterprise which is independently owned and operated and is not dominant in its field.'' 5 U.S.C. 601(4). A ''small governmental jurisdiction'' is the government of a city, county, town, township, village, school district, or special district with a population of less than 50,000. 5 U.S.C. 601(5).

[220] 5 U.S.C. 605(b).

[221] 5 U.S.C. 609.

B. Final Regulatory Flexibility Analysis

1. Statement of the Need for, and Objectives of, the Rule

In section 1033 of the CFPA, Congress authorized and directed the CFPB to adopt regulations governing consumers' data access rights. The CFPB is issuing this rule primarily to implement CFPA section 1033 with respect to certain covered persons under the CFPA, although the CFPB is also relying on other CFPA authorities for specific aspects of the rule. This rule aims to (1) expand consumers' access to their financial data across a wide range of financial institutions, (2) ensure privacy and data security for consumers by limiting the collection, use, and retention of data that is not needed to provide the consumer's requested service, and (3) push for greater efficiency and reliability of data access across the industry to reduce industry costs, facilitate competition, and support the development of beneficial products and services. The CFPB is issuing this rule pursuant to its authority under the CFPA. The specific CFPA provisions relied upon are discussed in part III. See part VI.A for additional discussion of the objectives of the rule.

2. Significant Issues Raised by Public Comments in Response to the IRFA, a Statement of the Assessment of the Agency of Such Issues, and a Statement of Any Changes Made in the Proposed Rule as a Result of Such Comments

Trade associations representing small depository institutions requested that the CFPB provide flexibilities or less costly alternatives for small entities. Comments from such organizations and from small depository data providers themselves stated that the CFPB conducted an incomplete analysis of the disproportionate costs of the proposal on smaller entities. Data provider commenters also stated that the costs from the rule would work against small and mid-sized banks, since larger banks already have the functionality and are able to take advantage of scale. A data provider industry association commenter stated that the CFPB did not take into account the feedback received through the SBREFA process, and that the CFPB should consider how increased competition from fintechs will impact credit unions. A credit union industry association commented that the RFA analysis in the proposal was flawed in how it approached credit union's costs as data providers because it did not take into account the cumulative regulatory impact of different rulemakings on credit unions.

The CFPB has determined that it is appropriate to not finalize the proposed coverage of the rule, such that small entity depositories are not covered as data providers. As a result, under the final rule, small entity depositories will not face any costs to maintain a consumer or developer interface due to the rule.

The CFPB expects that this change will address the concerns of small entity commenters, but notes that the impact analyses in the proposal did account for feedback received through the SBREFA process and did provide a complete analysis of the differential costs to small entities. Based on its analysis and the feedback received during that process, the proposal reduced the number and complexity of required data fields in the proposal relative to the SBREFA Outline, and established longer compliance timelines for small entities. These provisions of the proposal were an acknowledgement of the reliance of small depository data providers on service providers to comply with the rule and the scale advantages of large data providers. Regarding increased competition from fintechs, the proposal acknowledged that there would likely be increased competition for covered accounts, due to easier account switching and enhanced services offered by third parties under the rule. The trend of greater competition from third parties is likely heightened under the rule, although it is present under the baseline as well; this trend also stands to benefit small data providers with competitive account offerings. The CFPB expects that many small entity data providers will adopt developer interfaces voluntarily due to competitive pressures, as they have done prior to the rule, but the change in coverage will allow small data providers to forgo or delay the deployment of a developer interface if it is especially costly for them based on the characteristics of their institution. Regarding the comment asserting there is a cumulative impact of different rulemakings on credit unions, small entities that are credit unions are not data providers under the final rule.

3. Response of the Agency to Any Comments Filed by the Chief Counsel for Advocacy of the Small Business Administration in Response to the Proposed Rule, and a Detailed Statement of Any Change Made to the Proposed Rule in the Final Rule as a Result of the Comments

The Chief Counsel for Advocacy of the Small Business Association (Advocacy) provided comments on several aspects of the proposal. Advocacy stated that the exemptions in the proposal were too narrow, and that the CFPB should consider exemptions for small third parties in addition to any exemptions for data providers. Advocacy commented that implementation timelines should be longer. Advocacy also commented that the CFPB did not discuss the possibility that firms may reduce their offerings to customers rather than comply, and that the CFPB should analyze the impact if small entities decide to exit rather than comply with the rule. Advocacy stated that the CFPB should consider State laws that have similar requirements, and evaluate if the rule is necessary or creates additional burden. Advocacy commented that the CFPB should clarify the role of industry standards and the responsibility or liability for data security issues or misuse of data. Advocacy commented that small entities should be permitted to charge fees for making covered data available, and that the CFPB should reduce the definition of covered data for transaction information to 12 months, rather than the ''safe harbor'' of 24 months in the proposal.

In the final rule, the CFPB has revised the proposed coverage such that small entity depositories are not covered as data providers. With regards to small depository data providers, this change also addresses Advocacy's comments about the possibility that firms may reduce their service offerings or decide to exit the market in response to the rule.

The CFPB considered exemptions for small nondepository data providers, but generally understands that these firms do not have the technological complexities that make complying with the data provider requirements as burdensome as for depositories. Rather than exempt some small nondepository data providers, the CFPB has instead extended the compliance deadlines for such entities from one year in the proposal to approximately 2.5 years in the final rule. The CFPB expects this change to substantially mitigate the burden of compliance for small nondepository data providers.

The CFPB considered exemptions for small third parties in the proposal, but remains concerned that allowing third parties to access covered data via the rule without requiring the data security, data privacy, and secondary use restrictions in the rule would significantly reduce the benefits to consumers and would create risks for data providers—including small entity data providers. In addition, unlike covered data providers, small entities that are potential third parties have a

choice over whether to access covered data, and can choose not to access such data if they find that complying with the rule's authorization requirements and secondary use restrictions are too costly. As described in part VI.E, the CFPB expects that compliance costs for third parties will be less burdensome than costs for data providers and that benefits to third parties will outweigh the costs. As a result, the CFPB does not expect the rule's requirements on third parties to deter the development of beneficial third party products and services.

Regarding the consideration of State laws that have similar requirements, the CFPB considered such laws, as described in part VI.D. These primarily include State-level data privacy and data security laws, which are closest in effect to some of the rule's requirements on third parties. The CFPB expects the rule's requirements on third parties to be complementary to these State laws, and necessary to impose on all third parties, regardless of where they operate or where their consumers are located, to limit data privacy and security risks to consumers. In addition, State laws generally do not require data providers to provide consumers with access to their financial data, which is the core objective of CFPA section 1033 and this rule.

Regarding the clarity of industry standards, as discussed in part II.C, the CFPB published the Industry Standard-Setting Final Rule in June 2024 to try to provide clarity on industry standards sooner and to ease compliance burden for industry participants, including small entities.

The potential costs related to liability or fraud for data providers are discussed in part VI.E.1. As discussed in that part, the CFPB expects that the majority of data providers will see a net decrease in fraud risks and reputational risks relative to the baseline of current market practices, in which screen scraping is widespread and there are no restrictions on data collection, retention, and use by third parties. Small depository entities are not covered as data providers under the final rule, and the CFPB generally expects that liability and fraud risks will be reduced for the majority of small nondepository data providers, based on the evidence discussed in part VI.E.1.

Regarding permitting small data providers to charge fees for access, the CFPB has declined to permit such fees for the reasons discussed in parts IV.C.2 and VI.E.1. The CFPB has also declined to change the definition of covered data for transaction information held by small entity data providers, for the reasons discussed in part IV.B.3. The CFPB has instead addressed burden on small entities through revisions to coverage, compliance timelines, and other revisions relative to the proposal as discussed in this part.

4. Description of and an Estimate of the Number of Small Entities to Which the Rule Will Apply or an Explanation of Why No Such Estimate Is Available

The small entities affected by the rule will be those that meet the definitions of data provider, third party, or data aggregator. Data providers include depository institutions and nondepository institutions, although, as discussed above, small depository institutions are not covered. The new financial data processing product or service definition will apply to third parties, data aggregators, or others that provide financial data processing products or services for consumer purposes.

Nondepository financial institutions and entities outside of the financial industry may also be affected, though it is important to note that entities within these industries will only be subject to the rule if they meet the definitions of data provider, third party, or data aggregator. Examples of potentially affected small third parties include entities using consumer-authorized data to underwrite loans, offer budgeting or personal financial management services, or facilitate payments.

For the purposes of assessing the impacts of the rule on small entities, ''small entities'' are defined in the RFA to include small businesses, small nonprofit organizations, and small government jurisdictions. A ''small business'' is defined by the SBA's Office of Size Standards for all industries in the NAICS. The CFPB has identified several categories of small entities that may be subject to the proposals under consideration. These include depository institutions (such as commercial banks, savings associations, and credit unions), credit card issuing nondepositories, sales financing companies, consumer lending companies, real estate credit companies, firms that engage in financial transactions processing, reserve, and clearinghouse activities, firms that engage in other activities related to credit intermediation, investment banking and securities dealing companies, securities brokerage companies, and commodities contracts brokerage companies. Other potentially affected small entities include software publishers, firms that provide data processing and hosting services, firms that provide payroll services, firms that provide custom computer programming services, and credit bureaus. According to the SBA's Office of Size Standards, depository institutions are small if they have less than $850 million in assets. Nondepository firms that may be subject to the rule have a maximum size of $47 million in receipts, but the threshold is lower for some NAICS categories.[222] Table 1 shows the number of small businesses within NAICS categories that may be subject to the rule based on December 2023 NCUA and FFIEC Call Report data and 2017 Economic Census data from the U.S. Census Bureau. Entity counts are not provided for the specific revenue amounts that the SBA uses to define small entities and are instead usually provided at multiples of five or ten million dollars. Table 1 includes the closest upper and lower estimates for each revenue limit (*e.g.,* a NAICS category with a maximum size of $47 million in receipts has both the count of entities with less than $50 million in revenue and the count of entities with less than $40 million in revenue). Not all small entities within each included NAICS category will be subject to the rule.

BILLING CODE 4810–AM–P

[222] SBA regularly updates its size thresholds to account for inflation and other factors. The SBA Size Standards described here reflect the thresholds in effect at the publication date of this final rule. The 2017 Economic Census data are the most recently available data with entity counts by annual revenue. *See* Small Bus. Admin., *SBA Size Standards* (effective Mar. 17, 2023), *https://www.sba.gov/sites/sbagov/files/2023-06/Table%20of%20Size%20Standards_Effective%20March%2017%2C%202023%20%282%29.pdf.*

Table 1: Number of small businesses within NAICS industry codes that may be subject to the rule

	Number of Entities	Percent of Entities
A. Small Depository Firms		
Commercial Banking (522110), Savings Institutions (522120), and Credit Card Issuing (522210)	4,587	
< $850M (Assets)	3,422	74.6%
Credit Unions (522130)	4,702	
< $850M (Assets)	4,202	89.4%
B. Small Nondepository Firms		
Software Publishers (511210)	10,014	
< $40M (Revenue)	9,395	93.8%
< $50M (Revenue)	9,461	94.5%
Data Processing, Hosting, and Related Services (518210)	10,860	
< $40M (Revenue)	9,930	91.4%
Sales Financing (522220)	2,367	
< $40M (Revenue)	2,112	89.2%
< $50M (Revenue)	2,124	89.7%
Consumer Lending (522291)	3,037	
< $40M (Revenue)	2,905	95.7%
< $50M (Revenue)	2,915	96.0%
Real Estate Credit (522292)	3,289	
< $40M (Revenue)	2,872	87.3%
< $50M (Revenue)	2,904	88.3%
Financial Transactions Processing, Reserve, and Clearinghouse Activities (522320)	3,068	
< $40M (Revenue)	2,916	95.0%
< $50M (Revenue)	2,928	95.4%
Other Activities Related to Credit Intermediation (522390)	3,772	
< $25M (Revenue)	3,610	95.7%
< $30M (Revenue)	3,621	96.0%
Investment Banking and Securities Dealing (523110)	2,394	
< $40M (Revenue)	2,214	92.5%
< $50M (Revenue)	2,227	93.0%
Securities Brokerage (523120)	6,919	
< $40M (Revenue)	6,703	96.9%
< $50M (Revenue)	6,717	97.1%
Commodities Contracts Brokerage (523140)	856	
< $40M (Revenue)	825	96.4%
< $50M (Revenue)	829	96.8%
Payroll Services (541214)	4,328	
< $35M (Revenue)	4,111	95.0%

Table 2 provides the CFPB's estimate of the actual number of affected entities within the categories of depositories, nondepository data providers, and third parties, and the NAICS codes these entities may fall within. As described in

part VII.B.6, with regard to the requirements of the rule applicable to data providers, the final rule does not cover depositories that are small entities based on SBA's definition. As a result, there will be no small entity depositories covered by the rule, in their capacity as data providers. If any of these entities operate as third parties, they will be covered and counted as third parties. The CFPB is not able to estimate with precision the number of small nondepository entities that will be subject to the rule, but expects that approximately 100 small nondepository institutions will be data providers under the rule. In addition, based on data from the Provider Collection and Aggregator Collection, the CFPB estimates that between 6,800 and 9,500 small entities are third parties that access consumer-authorized data.

	Number of Entities	Percent of Entities
< $40M (Revenue)	4,116	95.1%
Custom Computer Programming Services (541511)	62,205	
< $30M (Revenue)	60,959	98.0%
< $35M (Revenue)	61,088	98.2%
Credit Bureaus (561450)	307	
< $35M (Revenue)	279	90.9%
< $75M (Revenue)	283	92.2%

Table 2: Estimated number of affected entities and small entities by category

Category	NAICS	Small Entity Threshold	Est. Total Affected Entities	Est. Number of Small Entities
Depository institution data providers	522110, 522120, 522130, 522210	$850 million in assets	1,665	0
Nondepository financial institution data providers	511210, 522291, 522320	Varies, less than $47 million in annual receipts	120	100
Third parties	511210, 518210, 522110, 522120, 522130, 522210, 522220, 522291, 522292, 522320, 522390, 523110, 523120, 523140, 541214, 541511, 561450	Varies, less than $47 million in annual receipts, or less than $850 million in assets for depository third parties	7,000–10,000	6,800–9,500

BILLING CODE 4810–AM–C

5. Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Rule, Including an Estimate of the Classes of Small Entities Which Will Be Subject to the Requirement and the Type of Professional Skills Necessary for the Preparation of the Report or Record

The rule will impose new reporting, recordkeeping, and other compliance requirements on small entities subject to the rule, which excludes small depository data providers. These requirements generally differ for small entities in two classes: nondepository data providers and third parties. Part VI.E provides a detailed description of the requirements and estimated compliance costs that will be faced by affected small entities under the rule. These requirements will be imposed on an estimated 100 small nondepository data providers and between 6,800 and 9,500 small third parties, as shown in table 2. The requirements and their costs are summarized in this section.

Requirements for Nondepository Data Providers

The rule will require nondepository data providers to calculate and disclose the response rate for third party data access on a monthly basis. The CFPB estimates that data providers may face a $7,600 cost of developing and testing a system to regularly disclose this information on their websites. The CFPB expects these reports will generally be automated and will have minimal ongoing costs after the system is implemented.

The rule will require nondepository data providers to have policies and procedures to retain records to demonstrate compliance with certain other requirements of the rule. Data providers will also be required to have policies and procedures designed to ensure that the reason for the decision to decline a third party's request to access its developer interface is communicated to the third party. The CFPB expects that these recordkeeping requirements will likely be built into a data provider's developer interface and the cost methodology described in part IV.E.1 includes these in the overall cost of establishing and maintaining a compliant developer interface. Incremental costs of these requirements are limited to developing and implementing reasonable policies and procedures, which the CFPB estimates will cost $23,500 to $51,200 per data provider.

The rule requires nondepository data providers to maintain a consumer interface that allows consumers to directly access their data. As discussed in part VI.E.1, the CFPB expects that data providers subject to this requirement generally already provide the required information under the baseline and estimates that the incremental costs of this requirement will be minimal.

The rule requires nondepository data providers to maintain a developer interface. As described in part VI.E.1, the CFPB expects that most nondepository data providers will develop and maintain their developer interfaces in-house. For small nondepository data providers that choose to build their developer interface in-house, the estimated upfront cost is $46,000. Estimated annual costs for in-house developer interfaces include technology costs of $20,000 as well as ongoing staffing costs of $48,000 to $95,000.

The rule requires data providers to have policies and procedures to ensure that data are accurately transferred to third parties. In the cost methodology described in part IV.E.1, the CFPB includes these costs in the estimate for establishing and maintaining a compliant developer interface.

Satisfying these requirements for data providers would generally involve professional skills related to software development, general and operational management, legal expertise, compliance, and customer support.

Requirements for Third Parties

Third parties are not subject to reporting requirements but will be required to retain records of consumer data access requests and actions taken in response to these requests, reasons for not making the data available, and data access denials under the rule. The CFPB understands that most third parties maintain similar records and costs will be limited to a one-time change to existing systems and small storage costs. The CFPB estimates a one-time cost of $10,100 for third parties to develop and implement appropriate policies and procedures, with minimal ongoing costs.

The rule requires third parties to establish and maintain systems that receive data access revocation requests, track duration-limited authorizations, delete data when required due to revoked or lapsed authorizations, and retain the relevant records. The CFPB estimates that the one-time cost to establish these systems will be between $22,800 and $94,900, with minimal ongoing costs.

The rule requires third parties to provide authorization disclosure and certification statements. The CFPB estimates that the one-time cost to third parties of establishing an automated system to provide these disclosures would be $94,000. However, the CFPB expects that small third parties will generally use another third party to provide these disclosures and this cost will not be incurred. If third parties currently provide disclosures, modifying the content to comply with the proposed rule is estimated to cost between $2,900 and $3,800.

Satisfying these requirements for data providers will generally involve professional skills related to software development, general and operational management, legal expertise, compliance, and customer support.

As discussed in part VI.E.1, the CFPB does not expect the new financial data processing products or services definition to impose costs on small entities.

6. Description of Steps the Agency Has Taken To Minimize the Significant Economic Impact on Small Entities Consistent With the Stated Objectives of Applicable Statutes, Including a Statement of the Factual, Policy, and Legal Reasons for Selecting the Alternative Adopted in the Final Rule and Why Each One of the Other Significant Alternatives to the Rule Considered by the Agency Which Affect the Impact on Small Entities Was Rejected

In the proposal, the CFPB considered several alternatives to the proposal that would minimize economic impacts on small entities. These alternatives generally fell into four categories: (1) limiting coverage of small data providers, (2) permitting small data providers to charge fees for making covered data available, (3) exemptions from the proposed rule for small third parties, or (4) alternative compliance dates for small depository data providers.

In the final rule, small depositories are not covered data providers. While the CFPB considered more limited alternatives for excluding depository data providers from coverage in the proposal, comments from the SBA Office of Advocacy and data provider commenters nearly universally favored coverage definitions that would reduce burden for a larger number of small depository data providers. The CFPB has revised the coverage of depository data providers in the final rule to reduce the burden on small depository data providers, thereby addressing these comments.

The CFPB considered not covering small nondepository data providers.

However, as discussed in part VII.B.3, the CFPB has determined that compliance burdens are likely to be lower for these small entities as compared to small depositories, and that extended compliance timelines would better address burden on small nondepositories while still accomplishing the goals of the rulemaking.

The CFPB also considered the alternative of permitting small data providers to charge fees for making covered data available through developer interfaces. Given the change in coverage in the final rule, this alternative would only affect small nondepository data providers. The CFPB has determined that a data provider charging such fees would be inconsistent with the data provider's statutory obligation under CFPA section 1033 to make covered data available to consumers and to their authorized third party representatives. Further, consumers at covered small data providers could be harmed through reduced access to third parties' products and services if the CFPB were to permit only small data providers to charge fees.

The CFPB also considered exemptions as a means to reduce burden for small entity third parties. Based on data from the Aggregator Collection, the CFPB estimates that there are approximately 6,800 to 9,500 third parties with fewer than 100,000 connected accounts, many of which may be small entities. However, exempting third parties from certain conditions of access under the rule, such as the requirements on collection, use, and retention, would likely create risks of harm for consumers on data security and privacy grounds, provide unfair competitive advantages for exempt versus non-exempt third parties, and increase the risks of losses from data security incidents for consumers and data providers.

Finally, the CFPB considered alternative compliance dates for small entities to reduce burden. The proposed rule had a compliance date of approximately four years after the final rule is published in the **Federal Register** for depository data providers with less than $850 million in assets. In the final rule, small depositories are not covered as data providers. For small nondepository data providers, the CFPB has extended the compliance date from approximately one year after the final rule is published in the **Federal Register** to approximately 2.5 years after publication. The CFPB expects this will substantially reduce compliance burden on small nondepository data providers. Regarding potential burden for small third parties, the CFPB has also extended the earliest compliance dates that apply to the largest data providers from six months to approximately 1.5 years and published the Industry Standard-Setting Final Rule in June 2024 to encourage the establishment of consensus standards in the near future. The CFPB expects these changes to effectively increase the amount of time small third parties have to come into compliance with the rule, reducing their compliance burden.

7. Description of the Steps the Agency Has Taken To Minimize Any Additional Cost of Credit for Small Entities

The CFPB expects that the rule may have some limited impact on the cost or availability of credit for small entities but does not expect that the impact will be substantial. The CFPB expects there are several ways the rule could potentially impact the cost or availability of credit to small entities. First, the provisions of the rule could impact the availability of credit to small entities if small businesses are using loans from lenders (either data providers or third parties) affected by the provisions and the provisions lead to a contraction of the offered services. Second, the rule could potentially increase the cost of credit for small businesses if the costs of implementing the rule are passed through in the form of higher prices on loans from lenders. Third, for small business owners that use consumer-authorized data to qualify for or access credit, the provisions could potentially increase credit availability or lower costs for small entities by facilitating increased data access.[223] Small entity representatives did not provide feedback on this topic during the SBREFA process.[224] The CFPB did not have data to quantify these potential impacts in the proposal.

The CFPB requested comment on its analysis of the proposal's impact on the cost of credit for small entities, and requested data or evidence on these potential impacts. One consumer advocate commenter stated that open banking and access to online providers give small businesses access to new services, but cited a study finding that surveyed small businesses had lower satisfaction with online lenders than with small banks.[225] The CFPB expects that the rule will generally improve small businesses' ability to use online financial services, increasing their options for credit. The CFPB also expects that the final rule's coverage and extended implementation periods will reduce compliance burden on small depositories relative to the proposal, mitigating negative effects on credit access.

VIII. Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA),[226] Federal agencies are generally required to seek, prior to implementation, approval from OMB for information collection requirements. Under the PRA, the CFPB may not conduct or sponsor, and, notwithstanding any other provision of law, a person is not required to respond to, an information collection unless the information collection displays a valid control number assigned by OMB.

As part of its continuing effort to reduce paperwork and respondent burden, the CFPB conducted a preclearance consultation program to provide the general public and Federal agencies with an opportunity to comment on the information collection requirements in accordance with the PRA. This helps ensure that the public understands the CFPB's requirements or instructions, respondents can provide the requested data in the desired format, reporting burden (time and financial resources) is minimized, information collection instruments are clearly understood, and the CFPB can properly assess the impact of information collection requirements on respondents.

The rule amends and adds to 12 CFR part 1033 and amends 12 CFR part 1001. The rule contains seven new information collection requirements.

1. Obligation to make covered data available (§ 1033.201), including general requirements (§ 1033.301) and requirements applicable to developer interface (§ 1033.311).
2. Information about the data provider (§ 1033.341).
3. Policies and procedures for data providers (§ 1033.351).
4. Third party authorization; general (§ 1033.401), including the authorization disclosure (§ 1033.411).
5. Third party obligations (§ 1033.421).
6. Use of data aggregator (§ 1033.431).
7. Policies and procedures for third party record retention (§ 1033.441).

The information collection requirements in this final rule are mandatory.

---

[223] As an example, Howell *et al.* found that more automated fintech lenders facilitated a higher share of Paycheck Protection Program loans to small, Black-owned firms relative to traditional lenders. Sabrina T. Howell *et al., Lender Automation and Racial Disparities in Credit Access,* 79 J. Fin. 1457–1512 (202), *https://doi.org/10.1111/jofi.13303.*

[225] Fed. Rsrv. Banks, *2023 Report on Employer Firms: Findings from the 2022 Small Business Credit Survey* (Mar. 2023), *https://doi.org/10.55350/sbcs-20230308.*

[226] 44 U.S.C. 3501 *et seq.*

The collections of information contained in this rule, and identified as such, have been submitted to OMB for review under section 3507(d) of the PRA. A complete description of the information collection requirements (including the burden estimate methods) is provided in the information collection request (ICR) that the CFPB has submitted to OMB under the requirements of the PRA. The ICR submitted to OMB requesting approval under the PRA for the information collection requirements contained herein is available at *www.regulations.gov* as well as on OMB's public-facing docket at *www.reginfo.gov.*

Title of Collection: 12 CFR part 1033.

OMB Control Number: 3170–XXXX.

Type of Review: New collection.

Affected Public: Private sector.

Estimated Number of Respondents: 10,285.

Estimated Total Annual Burden Hours: 1,435,650 annually and 5,664,085 one-time.

The CFPB will publish a separate **Federal Register** notice once OMB concludes its review announcing OMB approval of the information collections contained in this final rule.

In the proposal, the CFPB invited comments on: (1) Whether the collection of information is necessary for the proper performance of the functions of the CFPB, including whether the information will have practical utility; (2) the accuracy of the CFPB's estimate of the burden of the collection of information, including the validity of the methods and the assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

An industry association representing nondepositories commented that the PRA analysis in the proposal underestimated the burden of the information collection, particularly the costs estimated for policies and procedures for data providers and third party record retention, and the costs for data providers' obligations to make data available to third parties. The commenter stated that the cost and burden of the information collection would exceed the CFPB's estimate of 120 hours annually per entity and would be prohibitively expensive for smaller entities, and encouraged the CFPB to reconsider its estimate of the burden from the information collection.

As discussed in part VI.E.1, the CFPB has increased its estimates for the costs of developing policies and procedures for data providers; these costs are estimated to be between $23,500 and $51,200 per data provider. Regarding the estimated annual burden per entity of the information collection, the CFPB expects that most burdens related to record retention and making data available will be one-time costs to develop and implement compliant systems. This is reflected in the CFPB's estimate of larger one-time costs from the information collection as compared to annual costs. Comments related to the one-time and annual costs of record retention, making data available, and policies and procedures are discussed in part VI.E.1. The CFPB did not receive data or evidence that would allow it to further refine its estimates of per entity annual costs, but notes that the overall costs of the information collection have been reduced due to changes in the coverage of the final rule.

The other comments on the rule generally are summarized above.

IX. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the CFPB will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States at least 60 days prior to the rule's published effective date. The Office of Information and Regulatory Affairs has designated this rule as a ''major rule'' as defined by 5 U.S.C. 804(2).

X. Severability

The CFPB intends that, if any provision of the final rule, or any application of a provision, is stayed or determined to be invalid, the remaining provisions or applications are severable and shall continue in effect.[227]

However, this is subject to the following significant exception. The CFPB considers data providers' obligations to provide data under 12 CFR part 1033 to authorized third parties to be inseparable from the protections the CFPB is establishing in subpart D to ensure that authorized third parties are acting on behalf of consumers. Accordingly, if any of the provisions in subpart D were stayed or determined to be invalid, the CFPB intends that subpart D, together with references to third parties and authorized third parties elsewhere in part 1033, shall not continue in effect. This would not affect direct access by consumers to covered data under the remainder of part 1033, and it would also not affect the definition of financial product or service under § 1001.2(b).

The CFPB did not receive any comments opposing its approach to severability.[228]

List of Subjects

12 CFR Part 1001

Consumer protection, Credit.

12 CFR Part 1033

Banks, banking, Consumer protection, Credit, Credit Unions, Electronic funds transfers, National banks, Privacy, Reporting and recordkeeping requirements, Savings associations, Voluntary standards.

Authority and Issuance

For the reasons set forth in the preamble, the CFPB amends 12 CFR parts 1001 and 1033 as set forth below:

PART 1001—FINANCIAL PRODUCTS OR SERVICES

■ 1. The authority citation for Part 1001 continues to read as follows:

Authority: 12 U.S.C. 5481(15)(A)(XI); AND 12 U.S.C. 5512(B)(1).

■ 2. Amend § 1001.2 by adding paragraphs (b) and (c) to read as follows:

§ 1001.2 Definitions.

* * * * *

(b) Providing financial data processing products or services by any technological means, including processing, storing, aggregating, or transmitting financial or banking data, alone or in connection with another product or service, where the financial data processing is not offered or provided by a person who, by operation of 12 U.S.C. 5481(15)(A)(vii)(I) or (II), is not a covered person.

(c) [Reserved]

■ 3. Revise part 1033 to read as follows:

PART 1033—PERSONAL FINANCIAL DATA RIGHTS

Subpart A—General

Sec.

[227] As non-exhaustive examples to illustrate the above, the following are severable from the remainder of the rule: the applicability of the rule to any type of data provider; the applicability of the rule to any type of covered consumer financial product or service; the applicability of the rule to any type of covered data; the reference in any provision of the rule to consensus standards; the fee prohibition in § 1033.301(c); any of the requirements for a developer interface under § 1033.311; and the applicability of § 1001.2(b) to any activity. Moreover, part 1033 and § 1001.2(b) are each severable from the other.

[228] The CFPB notes that this severability clause is not codified but forms an operative part of the rule.

1033.101 Authority, purpose, and organization.
1033.111 Coverage of data providers.
1033.121 Compliance dates.
1033.131 Definitions.
1033.141 Standard-setting bodies.

Subpart B—Making Covered Data Available

1033.201 Availability and prohibition against evasion.
1033.211 Covered data.
1033.221 Exceptions.

Subpart C—Data Provider Interfaces; Responding to Requests

1033.301 General requirements.
1033.311 Requirements applicable to developer interface.
1033.321 Interface access.
1033.331 Responding to requests for information.
1033.341 Information about the data provider.
1033.351 Policies and procedures.

Subpart D—Authorized Third Parties

1033.401 Third party authorization; General.
1033.411 Authorization disclosure.
1033.421 Third party obligations.
1033.431 Use of data aggregator.
1033.441 Policies and procedures for third party record retention.

Appendix A to Part 1033—Personal Financial Data Rights Rule: How To Apply for Recognition as a Standard Setter

Authority: 12 U.S.C. 5512; 12 U.S.C. 5514; 12 U.S.C. 5533.

Subpart A—General

§ 1033.101 Authority, purpose, and organization.

(a) *Authority.* The regulation in this part is issued by the Consumer Financial Protection Bureau (CFPB) pursuant to the Consumer Financial Protection Act of 2010 (CFPA), Pub. L. 111–203, tit. X, 124 Stat. 1955.

(b) *Purpose.* This part implements the provisions of section 1033 of the CFPA by requiring data providers to make available to consumers and authorized third parties, upon request, covered data in the data provider's control or possession concerning a covered consumer financial product or service, in an electronic form usable by consumers and authorized third parties; and by prescribing standards to promote the development and use of standardized formats for covered data, including through industry standards developed by standard-setting bodies recognized by the CFPB. This part also sets forth obligations of third parties that would access covered data on a consumer's behalf, including limitations on their collection, use, and retention of covered data.

(c) *Organization.* This part is divided into subparts as follows:

(1) Subpart A establishes the authority, purpose, organization, coverage of data providers, compliance dates, and definitions applicable to this part.

(2) Subpart B provides the general obligation of data providers to make covered data available upon the request of a consumer or authorized third party, including what types of information must be made available.

(3) Subpart C provides the requirements for data providers to establish and maintain interfaces to receive and respond to requests for covered data.

(4) Subpart D provides the obligations of third parties that would access covered data on behalf of a consumer.

(5) Appendix A to this part provides instructions for how a standard-setting body would apply for CFPB recognition.

§ 1033.111 Coverage of data providers.

(a) *Coverage of data providers.* A data provider has obligations under this part if it controls or possesses covered data concerning a covered consumer financial product or service that the consumer obtained from the data provider, subject to the exclusion in paragraph (d) of this section.

(b) *Definition of covered consumer financial product or service. Covered consumer financial product or service* means a consumer financial product or service, as defined in 12 U.S.C. 5481(5), that is:

(1) A *Regulation E account,* which means an account, as defined in Regulation E, 12 CFR 1005.2(b);

(2) A *Regulation Z credit card,* which means a credit card, as defined in Regulation Z, 12 CFR 1026.2(a)(15)(i); or

(3) Facilitation of payments from a Regulation E account or Regulation Z credit card, excluding products or services that merely facilitate first party payments. For purposes of this part, a first party payment is a transfer initiated by the payee or an agent acting on behalf of the underlying payee. First party payments include payments initiated by loan servicers.

(c) *Definition of data provider. Data provider* means a covered person, as defined in 12 U.S.C. 5481(6), that is:

(1) A *financial institution,* as defined in Regulation E, 12 CFR 1005.2(i);

(2) A *card issuer,* as defined in Regulation Z, 12 CFR 1026.2(a)(7); or

(3) Any other person that controls or possesses information concerning a covered consumer financial product or service that the consumer obtained from that person.

Example 1 to paragraph (c): A digital wallet provider is a data provider.

(d) *Coverage threshold—Certain depository institutions.* The requirements of subparts B and C of this part do not apply to data providers defined under paragraphs (c)(1) through (3) of this section that are depository institutions that hold total assets equal to or less than the Small Business Administration (SBA) size standard, as determined in accordance with this paragraph (d). If at any point a depository institution that held total assets greater than that SBA size standard as of or at any point after January 17, 2025 subsequently holds total assets below that amount, the requirements of subparts B and C of this part continue to apply.

(1) *Determining SBA size standard.* For purposes of paragraph (d) of this section, the SBA size standard is the SBA size standard for the data provider's appropriate North American Industry Classification System (NAICS) code for commercial banking, credit unions, savings institutions and other depository credit intermediation, or credit card issuing, as codified in 13 CFR 121.201.

(2) *Calculating total assets.* For purposes of paragraph (d) of this section, total assets held by a depository institution are determined by averaging the assets reported on its own four preceding quarterly call report submissions to the Federal Financial Institutions Examination Council or National Credit Union Association, as applicable, or its submissions to the appropriate oversight body to the extent it does not submit such reports to the Federal Financial Examination Council or National Credit Union Administration.

(3) *Merger or acquisition—coverage of surviving depository institution when there are not four quarterly call report submissions.* After a merger or acquisition the surviving depository institution shall determine quarterly assets prior to the merger or acquisition by using the combined assets reported on the quarterly call report submissions by all predecessor depository institutions. The surviving depository institution shall determine quarterly assets after the merger or acquisition by using the assets reported on the quarterly call report submissions by the surviving depository institution. The surviving depository institution shall determine total assets by using the average of the quarterly assets for the four preceding quarters, whether the quarterly assets are the combined assets of the predecessor depository institutions or from the surviving depository institution.

§ 1033.121 Compliance dates.

(a) *Determining assets and revenue for purposes of initial compliance dates.* A data provider's compliance date in paragraph (b) of this section is based on the calculation of total assets or total receipts, as appropriate, described in paragraphs (a)(1) and (2) of this section.

(1) With respect to a depository institution data provider, total assets are determined by averaging the assets reported on its 2023 third quarter, 2023 fourth quarter, 2024 first quarter, and 2024 second quarter call report submissions to the Federal Financial Institutions Examination Council or National Credit Union Administration, as applicable, or its submissions to the appropriate oversight body to the extent it does not submit such reports to the Federal Financial Examination Council or National Credit Union Administration. If, as a result of a merger or acquisition, a depository institution data provider does not have the named four quarterly call report submissions, the depository institution data provider shall use the process set out in § 1033.111(d)(3) to determine total assets for the time period named in this paragraph (a)(1).

(2) With respect to a nondepository institution data provider, total receipts are calculated based on the SBA definition of receipts, as codified in 13 CFR 121.104(a).

(b) *Initial compliance dates.* A data provider defined under § 1033.111(c)(1) through (3) must comply with the requirements in subparts B and C of this part beginning on:

(1) April 1, 2026, for depository institution data providers that hold at least $250 billion in total assets and nondepository institution data providers that generated at least $10 billion in total receipts in either calendar year 2023 or calendar year 2024.

(2) April 1, 2027, for data providers that are:

(i) Depository institutions that hold at least $10 billion in total assets but less than $250 billion in total assets; or

(ii) Nondepository institutions that did not generate $10 billion or more in total receipts in both calendar year 2023 and calendar year 2024.

(3) April 1, 2028, for depository institution data providers that hold at least $3 billion in total assets but less than $10 billion in total assets.

(4) April 1, 2029, for depository institution data providers that hold at least $1.5 billion in total assets but less than $3 billion in total assets.

(5) April 1, 2030, for depository institution data providers that hold less than $1.5 billion in total assets but more than $850 million in total assets.

(c) *Compliance dates for depository institution data providers that subsequently cross coverage threshold.* A depository institution data provider under § 1033.111(c)(1) through (3) that has total assets as calculated in § 1033.111(d)(2) equal to or less than the SBA size standard as determined in accordance with § 1033.111(d)(1), but that subsequently holds total assets that exceed that SBA size standard, as measured in § 1033.111(d)(2), must comply with the requirements in subparts B and C of this part within a reasonable amount of time after exceeding the size standard, not to exceed five years.

§ 1033.131 Definitions.

For purposes of this part, the following definitions apply:

Authorized third party means a third party that has complied with the authorization procedures described in § 1033.401.

Card issuer is defined at § 1033.111(c)(2).

Consensus standard means a standard that is adopted by a recognized standard setter and that continues to be maintained by that recognized standard setter.

Consumer means a natural person. Trusts established for tax or estate planning purposes are considered natural persons for purposes of this definition. *Consumer* also includes guardians, trustees, custodians, or other similar natural persons acting on behalf of a consumer pursuant to State law.

Consumer interface means an interface through which a data provider receives requests for covered data and makes available covered data in an electronic form usable by consumers in response to the requests.

Covered consumer financial product or service is defined at § 1033.111(b).

Covered data is defined at § 1033.211.

Data aggregator means a person that is retained by and provides services to the authorized third party to enable access to covered data.

Data provider is defined at § 1033.111(c).

Depository institution means any depository institution as defined by the Federal Deposit Insurance Act, 12 U.S.C. 1813(c)(1), or any credit union as defined by 12 CFR 700.2.

Developer interface means an interface through which a data provider receives requests for covered data and makes available covered data in an electronic form usable by authorized third parties in response to the requests.

Financial institution is defined at § 1033.111(c)(1).

Recognized standard setter means a standard-setting body that has been recognized by the CFPB under § 1033.141.

Regulation E account is defined at § 1033.111(b)(1).

Regulation Z credit card is defined at § 1033.111(b)(2).

Third party means any person that is not the consumer about whom the covered data pertains or the data provider that controls or possesses the consumer's covered data.

§ 1033.141 Standard-setting bodies.

(a) *Recognition of a standard-setting body.* A standard-setting body may request CFPB recognition. Recognition will last up to five years, absent revocation. The CFPB will not recognize a standard-setting body unless it demonstrates that it satisfies the following attributes:

(1) *Openness.* The sources, procedures, and processes used are open to all interested parties, including: consumer and other public interest groups with expertise in consumer protection, financial services, community development, fair lending, and civil rights; authorized third parties; data providers; data recipients; data aggregators and other providers of services to authorized third parties; and relevant trade associations. Parties can meaningfully participate in standards development on a non-discriminatory basis.

(2) *Balance.* The decision-making power is balanced across all interested parties, including consumer and other public interest groups, and is reflected at all levels of the standard-setting body. There is meaningful representation for large and small commercial entities within these categories. No single interest or set of interests dominates decision-making. Achieving balance requires recognition that, even when a participant may play multiple roles, such as data provider and authorized third party, the weight of that participant's commercial concerns may align primarily with one set of interests. The ownership of participants is considered in achieving balance.

(3) *Due process and appeals.* The standard-setting body uses documented and publicly available policies and procedures, and it provides adequate notice of meetings and standards development, sufficient time to review drafts and prepare views and objections, access to views and objections of other participants, and a fair and impartial process for resolving conflicting views. An appeals process is available for the impartial handling of procedural appeals.

(4) *Consensus.* Standards development proceeds by consensus,

which is defined as general agreement, though not necessarily unanimity. During the development of consensus, comments and objections are considered using fair, impartial, open, and transparent processes.

(5) *Transparency.* Procedures or processes for participating in standards development and for developing standards are transparent to participants and publicly available.

Subpart B—Making Covered Data Available

§ 1033.201 Availability and prohibition against evasion.

(a) *Obligation to make covered data available*—(1) *General.* A data provider must make available to a consumer and an authorized third party, upon request, covered data in the data provider's control or possession concerning a covered consumer financial product or service that the consumer obtained from the data provider, in an electronic form usable by consumers and authorized third parties.

(2) *Prohibition against evasion.* A data provider must not take any action:

(i) With the intent of evading the requirements of subparts B and C of this part;

(ii) That the data provider knows or should know is likely to render unusable the covered data that the data provider makes available; or

(iii) That the data provider knows or should know is likely to prevent, interfere with, or materially discourage a consumer or authorized third party from accessing covered data consistent with this part.

(b) *Current data.* In complying with paragraph (a) of this section, a data provider must make available the most recently updated covered data that it has in its control or possession at the time of a request. A data provider must make available information concerning authorized but not yet settled transactions.

§ 1033.211 Covered data.

Covered data in this part means, as applicable:

(a) Transaction information, including historical transaction information in the control or possession of the data provider. A data provider is deemed to make available sufficient historical transaction information for purposes of § 1033.201(a)(1) if it makes available at least 24 months of such information.

Example 1 to paragraph (a): This category includes amount, transaction date, payment type, pending or authorized status, payee or merchant name, rewards credits, and fees or finance charges.

(b) Account balance information.

(c) Information to initiate payment to or from a Regulation E account directly or indirectly held by the data provider. This category includes an account and routing number that can be used to initiate an Automated Clearing House transaction.

(1) In complying with its obligation under § 1033.201(a)(1), a data provider is permitted to make available a tokenized account number instead of, or in addition to, a non-tokenized account number, as long as the tokenization is not used as a pretext to restrict competitive use of payment initiation information.

(2) This paragraph (c) does not apply to data providers who do not directly or indirectly hold the underlying Regulation E account. For example, a data provider that merely facilitates pass-through payments would not be required to make available account and routing number for the underlying Regulation E account.

(d) Terms and conditions. For purposes of this section, terms and conditions are limited to data in agreements evidencing the terms of the legal obligation between a data provider and a consumer for a covered consumer financial product or service, such data in the account opening agreement and any amendments or additions to that agreement, including pricing information.

Example 2 to paragraph (d): This category includes the applicable fee schedule, any annual percentage rate or annual percentage yield, credit limit, rewards program terms, whether a consumer has opted into overdraft coverage, and whether a consumer has entered into an arbitration agreement.

(e) Upcoming bill information.

Example 3 to paragraph (e): This category includes information about third party bill payments scheduled through the data provider and any upcoming payments due from the consumer to the data provider.

(f) Basic account verification information, which is limited to the name, address, email address, and phone number associated with the covered consumer financial product or service. If a data provider directly or indirectly holds a Regulation E or Regulation Z account belonging to the consumer, the data provider must also make available a truncated account number or other identifier for that account.

§ 1033.221 Exceptions.

A data provider is not required to make available the following covered data to a consumer or authorized third party:

(a) Any confidential commercial information, including an algorithm used to derive credit scores or other risk scores or predictors. Information does not qualify for this exception merely because it is an input to, or an output of, an algorithm, risk score, or predictor. For example, annual percentage rate and other pricing terms are sometimes determined by an internal algorithm or predictor but do not fall within this exception.

(b) Any information collected by the data provider for the sole purpose of preventing fraud or money laundering, or detecting, or making any report regarding other unlawful or potentially unlawful conduct. Information collected for other purposes does not fall within this exception. For example, name and other basic account verification information do not fall within this exception.

(c) Any information required to be kept confidential by any other provision of law. Information does not qualify for this exception merely because the data provider must protect it for the consumer. For example, the data provider cannot restrict access to the consumer's own information merely because that information is subject to privacy protections.

(d) Any information that the data provider cannot retrieve in the ordinary course of its business with respect to that information.

Subpart C—Data Provider Interfaces; Responding to Requests

§ 1033.301 General requirements.

(a) *Requirement to maintain interfaces.* A data provider subject to the requirements of this part must maintain a consumer interface and a developer interface. The consumer interface and the developer interface must satisfy the requirements set forth in this section. The developer interface must satisfy the additional requirements set forth in § 1033.311.

(b) *Machine-readable files upon request.* Upon request for covered data in a machine-readable file, and subject to paragraphs (b)(1) and (2) of this section, a data provider must make available to a consumer or an authorized third party covered data in a file that is machine-readable and that the consumer or authorized third party can retain and transfer for processing into a separate information system that is reasonably available to and in the control of the consumer or authorized third party.

(1) *Consumer interface.* With respect to covered data provided through its consumer interface, a data provider is not required to comply with:

(i) The requirements of this paragraph (b) for the covered data described in § 1033.211(c) (payment initiation information) and (f) (account verification information); and

(ii) The requirement of this paragraph (b) to provide in a file that is machine-readable the covered data described in § 1033.211(d) (terms and conditions).

(2) *Developer interface.* With respect to covered data provided through its developer interface, a data provider satisfies the requirements of this paragraph (b) if it makes available covered data in a form that satisfies the requirements of § 1033.311(b).

(c) *Fees prohibited.* A data provider must not impose any fees or charges on a consumer or an authorized third party in connection with:

(1) *Interfaces.* Establishing or maintaining the interfaces required by paragraph (a) of this section; or

(2) *Requests.* Receiving requests or making available covered data in response to requests as required by this part.

§ 1033.311 Requirements applicable to developer interface.

(a) *General.* A developer interface required by § 1033.301(a) must satisfy the requirements set forth in this section.

(b) *Standardized format.* The developer interface must make available covered data in a standardized and machine-readable format. Indicia that the format satisfies this requirement include that it conforms to a consensus standard.

(1) *Meaning of format.* For purposes of this section, *format* includes structures and definitions of covered data and requirements and protocols for communicating requests and responses for covered data.

(2) *Meaning of standardized.* For purposes of this section, *standardized* means conforms to a format widely used by other data providers and designed to be readily usable by authorized third parties.

(c) *Commercially reasonable performance.* A developer interface's performance must be commercially reasonable.

(1) *Response rate; quantitative minimum performance specification.* The performance of the interface cannot be commercially reasonable if it does not meet the following quantitative minimum performance specification regarding its response rate: The number of proper responses by the interface divided by the total number of requests for covered data to the interface must be equal to or greater than 99.5 percent in each calendar month. For purposes of this paragraph (c)(1), all of the following requirements apply:

(i) Any responses by and requests to the interface during scheduled downtime for the interface must be excluded respectively from the numerator and the denominator of the calculation.

(ii) In order for any downtime of the interface to qualify as scheduled downtime, the data provider must have provided reasonable notice of the downtime to all third parties to which the data provider has granted access to the interface. Indicia that the data provider's notice of the downtime may be reasonable include that the notice conforms to a consensus standard.

(iii) The total amount of scheduled downtime for the interface in a calendar month must be reasonable. Indicia that the total amount of scheduled downtime may be reasonable include that the amount conforms to a consensus standard.

(iv) A proper response is a response, other than any message provided during unscheduled downtime of the interface, that meets all of the following criteria:

(A) The response either fulfills the request or explains why the request was not fulfilled;

(B) The response is consistent with the reasonable written policies and procedures that the data provider establishes and maintains pursuant to § 1033.351(a); and

(C) The response is provided by the interface within a commercially reasonable amount of time. Indicia that a response is provided in a commercially reasonable amount of time include conformance to an applicable consensus standard.

(2) *Indicia of compliance*—(i) *Indicia.* Indicia that a developer interface's performance is commercially reasonable as required by paragraph (c) of this section include:

(A) Whether the interface's performance conforms to a consensus standard that is applicable to the data provider;

(B) How the interface's performance compares to the performance levels achieved by the developer interfaces of similarly situated data providers; and

(C) How the interface's performance compares to the performance levels achieved by the data provider's consumer interface.

(ii) *Performance specifications.* For each of the three indicia set forth in paragraph (c)(2)(i) of this section, relevant performance specifications include:

(A) The interface's response rate as defined in paragraphs (c)(1) through (iv) of this section;

(B) The interface's total amount of scheduled downtime;

(C) The amount of time in advance of any scheduled downtime by which notice of the downtime is provided;

(D) The interface's total amount of unscheduled downtime; and

(E) The interface's response time.

(d) *Access caps.* Except as otherwise permitted by §§ 1033.221, 1033.321, and 1033.331(b) and (c), a data provider must not unreasonably restrict the frequency with which it receives or responds to requests for covered data from an authorized third party through its developer interface. Any frequency restrictions must be applied in a manner that is non-discriminatory and consistent with the reasonable written policies and procedures that the data provider establishes and maintains pursuant to § 1033.351(a). Indicia that any frequency restrictions applied are reasonable include that they conform to a consensus standard.

(e) *Security specifications*—(1) *Access credentials.* A data provider must not allow a third party to access the data provider's developer interface by using any credentials that a consumer uses to access the consumer interface. A contract between a data provider and the data provider's service provider, pursuant to which the service provider establishes or maintains the data provider's developer interface, does not violate this paragraph (e)(1) if the contract provides that the service provider will make covered data available, in a form and manner that satisfies the requirements of this part, to authorized third parties through the developer interface by means of the service provider using a consumer's credentials to access the data from the data provider's consumer interface.

(2) *Security program.* (i) A data provider must apply to the developer interface an information security program that satisfies the applicable rules issued pursuant to section 501 of the Gramm-Leach-Bliley Act, 15 U.S.C. 6801; or

(ii) If the data provider is not subject to section 501 of the Gramm-Leach-Bliley Act, the data provider must apply to its developer interface the information security program required by the Federal Trade Commission's Standards for Safeguarding Customer Information, 16 CFR part 314.

§ 1033.321 Interface access.

(a) *Denials related to risk management.* A data provider does not violate the general obligation in § 1033.201(a)(1) by denying a consumer or third party access to all elements of the interface described in § 1033.301(a) if:

(1) Granting access would be inconsistent with policies and procedures reasonably designed to comply with:

(i) Safety and soundness standards of a prudential regulator, as defined at 12 U.S.C. 5481(24), of the data provider;

(ii) Information security standards required by section 501 of the Gramm-Leach-Bliley Act, 15 U.S.C. 6801; or

(iii) Other applicable laws and regulations regarding risk management; and

(2) The denial is reasonable pursuant to paragraph (b) of this section.

(b) *Requirements for reasonable denials.* A denial is reasonable pursuant to paragraph (a)(2) of this section if it is:

(1) Directly related to a specific risk of which the data provider is aware, such as a failure of a third party to maintain adequate data security; and

(2) Applied in a consistent and non-discriminatory manner.

(c) *Indicia bearing on reasonable denials.* Indicia bearing on the reasonableness of a denial pursuant to paragraph (b) of this section include:

(1) Whether the denial adheres to a consensus standard related to risk management;

(2) Whether the denial proceeds from standardized risk management criteria that are available to the third party upon request; and

(3) Whether the third party has a certification or other identification of fitness to access covered data that is issued or recognized by a recognized standard setter or the CFPB.

(d) *Conditions sufficient to justify a denial.* Each of the following is a sufficient basis for denying access to a third party:

(1) The third party does not present any evidence that its information security practices are adequate to safeguard the covered data; or

(2) The third party does not make the following information available in both human-readable and machine-readable formats, and readily identifiable to members of the public, meaning the information must be at least as available as it would be on a public website:

(i) Its legal name and, if applicable, any assumed name it is using while doing business with the consumer;

(ii) A link to its website;

(iii) Its Legal Entity Identifier (LEI) that is issued by:

(A) A utility endorsed by the LEI Regulatory Oversight Committee, or

(B) A utility endorsed or otherwise governed by the Global LEI Foundation (or any successor thereof) after the Global LEI Foundation assumes operational governance of the global LEI system; and

(iv) Contact information a data provider can use to inquire about the third party's information security and compliance practices.

§ 1033.331 Responding to requests for information.

(a) *Responding to requests—access by consumers.* To comply with the requirements in § 1033.201(a)(1), upon request from a consumer, a data provider must make available covered data when it receives information sufficient to:

(1) Authenticate the consumer's identity; and

(2) Identify the scope of the data requested.

(b) *Responding to requests—access by third parties.* (1) To comply with the requirements in § 1033.201(a)(1), upon request from an authorized third party, a data provider must make available covered data when it receives information sufficient to:

(i) Authenticate the consumer's identity;

(ii) Authenticate the third party's identity;

(iii) Document the third party has followed the authorization procedures in § 1033.401; and

(iv) Identify the scope of the data requested.

(2) The data provider is permitted to confirm the scope of a third party's authorization to access the consumer's data by asking the consumer to confirm:

(i) The account(s) to which the third party is seeking access; and

(ii) The categories of covered data the third party is requesting to access, as disclosed by the third party pursuant to § 1033.411(b)(4).

Example 1 to paragraph (b): An authorized third party that a data provider has authenticated requests covered data on behalf of an authenticated consumer through the data provider's developer interface. The data provider asks the consumer to confirm the scope of the third party's authorization using a means of communication that the consumer is not accustomed to using with the data provider and that the data provider knows or should know will take a long period of time to reach the consumer and allow the consumer to respond with the confirmation. As a result of the long wait time, the consumer cannot provide a timely confirmation, delaying the third party's access to the covered data. This data provider has violated the § 1033.201(a)(2) prohibition against evasion by taking an action that the data provider knows or should know is likely to interfere with an authorized third party's access to covered data.

(c) *Covered data not required to be made available.* A data provider is not required to make covered data available in response to a request when:

(1) The data are withheld because an exception described in § 1033.221 applies;

(2) The data are not in the data provider's control or possession, consistent with the requirement in § 1033.201(a)(1).

(3) The data provider's interface is not available when the data provider receives a request requiring a response under this section. However, the data provider is subject to the performance specifications in § 1033.311(c);

(4) The request is for access by a third party; and

(i) The consumer has revoked the third party's authorization pursuant to paragraph (e) of this section;

(ii) The data provider has received notice that the consumer has revoked the third party's authorization pursuant to § 1033.421(h)(2); or

(iii) The consumer has not provided a new authorization to the third party after the maximum duration period, as described in § 1033.421(b)(2).

(5) The data provider has not received information sufficient to satisfy the conditions in paragraph(a) or (b) of this section.

(d) *Jointly held accounts.* A data provider that receives a request for covered data from a consumer that jointly holds an account or from an authorized third party acting on behalf of such a consumer must make available covered data to that consumer or authorized third party, subject to the other provisions of this section.

(e) *Method to revoke third party authorization to access covered data.* A data provider does not violate the general obligation in § 1033.201(a)(1) by making available to the consumer a reasonable method to revoke any third party's authorization to access all of the consumer's covered data, provided that such method does not violate § 1033.201(a)(2). Indicia that the data provider's revocation method is reasonable include its conformance to a consensus standard. A data provider that receives a revocation request from a consumer through a revocation method it makes available must revoke the authorized third party's access and

notify the authorized third party of the request in a timely manner.

§ 1033.341 Information about the data provider.

(a) *Requirement to make information about the data provider readily identifiable.* A data provider must make the information described in paragraphs (b) through (d) of this section:

(1) Readily identifiable to members of the public, meaning the information must be at least as available as it would be on a public website; and

(2) Available in both human-readable and machine-readable formats.

(b) *Identifying information.* A data provider must disclose in the manner required by paragraph (a) of this section:

(1) Its legal name and, if applicable, any assumed name it is using while doing business with the consumer;

(2) A link to its website;

(3) Its LEI that is issued by:

(i) A utility endorsed by the LEI Regulatory Oversight Committee, or

(ii) A utility endorsed or otherwise governed by the Global LEI Foundation (or any successor thereof) after the Global LEI Foundation assumes operational governance of the global LEI system; and

(4) Contact information that enables a consumer or third party to receive answers to questions about accessing covered data under this part.

(c) *Developer interface documentation.* For its developer interface, a data provider must disclose in the manner required by paragraph (a) of this section documentation, including metadata describing all covered data and their corresponding data fields, and other documentation sufficient for a third party to access and use the interface. A data provider is not required to make publicly available information that would impede its ability to deny a third party access to its developer interface, consistent with § 1033.321. Indicia that documentation is sufficient for a third party to access and use a developer interface include conformance to a consensus standard. The documentation must:

(1) Be maintained and updated as reasonably necessary for third parties to access and use the interface in accordance with the terms to which data providers are subject under this part;

(2) Include how third parties can get technical support and report issues with the interface; and

(3) Be easy to understand and use, similar to data providers' documentation for other commercially available products.

(d) *Performance disclosure.* On or before the final day of each calendar month, a data provider must disclose in the manner required by paragraph (a) of this section the quantitative minimum performance specification for the response rate described in § 1033.311(c)(1)(i) through (iv) that the data provider's developer interface achieved in the previous calendar month. The data provider's disclosure must include at least a rolling 13 months of the required monthly figure, except that the disclosure need not include the monthly figure for months prior to the compliance date applicable to the data provider. The data provider must disclose the metric as a percentage rounded to four decimal places, such as ''99.9999 percent.''

§ 1033.351 Policies and procedures.

(a) *Reasonable written policies and procedures.* A data provider must establish and maintain written policies and procedures that are reasonably designed to achieve the objectives set forth in subparts B and C of this part, including paragraphs (b) through (d) of this section. Policies and procedures must be appropriate to the size, nature, and complexity of the data provider's activities. A data provider has flexibility to design policies and procedures to avoid acting inconsistently with its other legal obligations, or in a way that could reasonably hinder enforcement against unlawful or potentially unlawful conduct. A data provider must periodically review the policies and procedures required by this section and update them as appropriate to ensure their continued effectiveness.

(b) *Policies and procedures for making covered data available.* The policies and procedures required by paragraph (a) of this section must be reasonably designed to ensure that:

(1) *Making available covered data.* A data provider creates a record of the data fields of covered data in the data provider's control or possession, what covered data are not made available through a consumer or developer interface pursuant to an exception in § 1033.221, and the reasons the exception applies. Indicia that a data provider's record of such data fields complies with the requirements of this paragraph (b)(1) include listing data fields that conform to those published by a consensus standard.

(2) *Denials of developer interface access.* When a data provider denies a third party access to a developer interface pursuant to § 1033.321, the data provider:

(i) Creates a record substantiating the basis for denial; and

(ii) Communicates in a timely manner to the third party, electronically or in writing, the reason(s) for the denial.

(3) *Denials of information requests.* When a data provider denies a request for information for a reason described in § 1033.331(c), to the extent the communication of the denial is not required to be standardized by § 1033.311(b), the data provider:

(i) Creates a record substantiating the basis for the denial; and

(ii) Communicates in a timely manner to the consumer or third party, electronically or in writing, the type(s) of information denied, if applicable, and the reason(s) for the denial.

(c) *Policies and procedures for ensuring accuracy*—(1) *In general.* The policies and procedures required by paragraph (a) of this section must be reasonably designed to ensure that covered data are accurately made available through the data provider's developer interface.

(2) *Elements.* In developing its policies and procedures regarding accuracy, a data provider must consider, for example:

(i) Implementing the format requirements of § 1033.311(b); and

(ii) Addressing information provided by a consumer or a third party regarding inaccuracies in the covered data made available through its developer interface.

(3) *Indicia of compliance.* Indicia that a data provider's policies and procedures regarding accuracy are reasonable include whether the policies and procedures conform to a consensus standard regarding accuracy.

(d) *Policies and procedures for record retention.* The policies and procedures required by paragraph (a) of this section must be reasonably designed to ensure retention of records that are evidence of compliance with subparts B and C of this part.

(1) *Retention period.* Records that are evidence of a data provider's actions in response to a consumer's or third party's request for information or a third party's request to access a developer interface must be retained for at least three years after a data provider has responded to the request. All other records that are evidence of compliance with subparts B and C of this part must be retained for a reasonable period of time of at least three years from the date of the action required under subparts B and C of this part.

(2) *Certain records retained pursuant to policies and procedures.* Records retained pursuant to policies and procedures required under paragraph (a) of this section must include, without limitation:

(i) Records documenting requests for a third party's access to an interface, actions taken in response to such requests, and reasons for denying access, if applicable, for at least three years after the data provider has responded to the request;

(ii) Records providing evidence of fulfillment of requests for information, actions taken in response to such requests, and reasons for not making the information available, if applicable, for at least three years after the data provider has responded to the request;

(iii) Records documenting that the third party has followed the authorization procedures in § 1033.401 to access data on behalf of a consumer, for at least three years after such records are generated;

(iv) Records providing evidence of actions taken by a consumer and a data provider to revoke a third party's access pursuant to any revocation method made available by a data provider, for at least three years after the revocation;

(v) Records providing evidence of commercially reasonable performance described in § 1033.311(c)(2)(ii), for at least three years after the period recorded;

(vi) Written policies and procedures required under this section for three years from the time such material was last applicable; and

(vii) Disclosures required under § 1033.341, for three years from the time such material was disclosed to the public.

Subpart D—Authorized Third Parties

§ 1033.401 Third party authorization; general.

To become an authorized third party, the third party must seek access to covered data from a data provider on behalf of a consumer to provide a product or service the consumer requested and:

(a) Provide the consumer with an authorization disclosure as described in § 1033.411;

(b) Provide a statement to the consumer in the authorization disclosure, as provided in § 1033.411(b)(5), certifying that the third party agrees to the obligations described in § 1033.421; and

(c) Obtain the consumer's express informed consent to access covered data on behalf of the consumer by obtaining an authorization disclosure that is signed by the consumer electronically or in writing.

§ 1033.411 Authorization disclosure.

(a) *In general.* To comply with § 1033.401(a), a third party must provide the consumer with an authorization disclosure electronically or in writing. The authorization disclosure must be clear, conspicuous, and segregated from other material. The names included in the authorization disclosure as required by paragraphs (b)(1) and (2) of this section and by § 1033.431(b) must be readily understandable to the consumer.

(b) *Content.* The authorization disclosure must include:

(1) The name of the third party that will be authorized to access covered data pursuant to the third party authorization procedures in § 1033.401.

(2) The name of the data provider that controls or possesses the covered data that the third party identified in paragraph (b)(1) of this section seeks to access on the consumer's behalf.

(3) A brief description of the product or service the consumer has requested from the third party identified in paragraph (b)(1) of this section and a statement that the third party will collect, use, and retain the consumer's data only as reasonably necessary to provide that product or service to the consumer.

(4) The categories of data that will be accessed. Categories must have a substantially similar level of specificity as the categories in § 1033.211.

(5) The certification statement described in § 1033.401(b).

(6) A brief description of the expected duration of data collection and a statement that collection will not last longer than one year after the consumer's most recent reauthorization.

(7) A description of the revocation method described in § 1033.421(h)(1).

(c) *Language access*—(1) *In general.* The authorization disclosure must be in the same language as the communication in which the authorization disclosure is conveyed to the consumer. Any translation of the authorization disclosure provided to the consumer must be complete and accurate.

(2) *Additional languages.* If the authorization disclosure is in a language other than English, it must include a link to an English-language translation, and it is permitted to include links to translations in other languages. If the authorization disclosure is in English, it is permitted to include links to translations in other languages.

§ 1033.421 Third party obligations.

(a) *General limitation on collection, use, and retention of consumer data*—(1) *In general.* The third party will limit its collection, use, and retention of covered data to what is reasonably necessary to provide the consumer's requested product or service.

(2) *Specific purposes.* For purposes of paragraph (a)(1) of this section, the following are not part of, or reasonably necessary to provide, any other product or service:

(i) Targeted advertising;

(ii) Cross-selling of other products or services; or

(iii) The sale of covered data.

(b) *Collection of covered data*—(1) *In general.* Collection of covered data for purposes of paragraph (a) of this section includes the scope of covered data requested and the duration and frequency of collection of covered data.

(2) *Maximum duration.* In addition to the limitation described in paragraph (a) of this section, the third party will limit the duration of collection of covered data to a maximum period of one year after the consumer's most recent authorization.

(3) *Reauthorization after maximum duration.* To collect covered data beyond the one-year maximum period described in paragraph (b)(2) of this section, the third party will obtain a new authorization from the consumer pursuant to § 1033.401 no later than the anniversary of the most recent authorization from the consumer. The third party is permitted to ask the consumer for a new authorization pursuant to § 1033.401 in a reasonable manner. Indicia that a new authorization request is reasonable include its conformance to a consensus standard.

(c) *Use of covered data.* Use of covered data for purposes of paragraph (a) of this section includes both the third party's own use of covered data and provision of covered data by that third party to other third parties. Examples of uses of covered data that are permitted under paragraph (a) of this section include:

(1) Uses that are specifically required under other provisions of law, including to comply with a properly authorized subpoena or summons or to respond to a judicial process or government regulatory authority;

(2) Uses that are reasonably necessary to protect against or prevent actual or potential fraud, unauthorized transactions, claims, or other liability;

(3) Servicing or processing the product or service the consumer requested; and

(4) Uses that are reasonably necessary to improve the product or service the consumer requested.

(d) *Accuracy.* A third party will establish and maintain written policies and procedures that are reasonably designed to ensure that covered data are

accurately received from a data provider and accurately provided to another third party, if applicable.

(1) *Flexibility.* A third party has flexibility to determine its policies and procedures in light of the size, nature, and complexity of its activities.

(2) *Periodic review.* A third party will periodically review its policies and procedures and update them as appropriate to ensure their continued effectiveness.

(3) *Elements.* In developing its policies and procedures regarding accuracy, a third party must consider, for example:

(i) Accepting covered data in a format required by § 1033.311(b); and

(ii) Addressing information provided by a consumer, data provider, or another third party regarding inaccuracies in the covered data.

(4) *Indicia of compliance.* Indicia that a third party's policies and procedures are reasonable include whether the policies and procedures conform to a consensus standard regarding accuracy.

(e) *Data security.* (1) A third party will apply to its systems for the collection, use, and retention of covered data an information security program that satisfies the applicable rules issued pursuant to section 501 of the Gramm-Leach-Bliley Act (15 U.S.C. 6801); or

(2) If the third party is not subject to section 501 of the Gramm-Leach-Bliley Act, the third party will apply to its systems for the collection, use, and retention of covered data the information security program required by the Federal Trade Commission's Standards for Safeguarding Customer Information, 16 CFR part 314.

(f) *Provision of covered data to other third parties.* Before providing covered data to another third party, subject to the limitation described in paragraphs (a) and (c) of this section, the third party will require the other third party by contract to comply with the third party obligations in paragraphs (a) through (f) of this section and the condition in paragraph (i) of this section upon receipt of the notice described in paragraph (h)(2) of this section.

(g) *Ensuring consumers are informed.* (1) Upon obtaining authorization to access covered data on the consumer's behalf, the third party will provide the consumer with a copy of the authorization disclosure that the consumer has signed electronically or in writing and that reflects the date of the consumer's electronic or written signature. The third party will deliver that copy of the authorization disclosure to the consumer or make it available in a location that is readily accessible to the consumer, such as the third party's interface. If the third party makes the authorization disclosure available in such a location, the third party will ensure it is accessible to the consumer until the third party's access to the consumer's covered data terminates.

(2) The third party will provide contact information that enables a consumer to receive answers to questions about the third party's access to the consumer's covered data. The contact information must be readily identifiable to the consumer.

(3) The third party will establish and maintain reasonable written policies and procedures designed to ensure that the third party provides to the consumer, upon request, the information listed in this paragraph (g)(3) about the third party's access to the consumer's covered data. The third party has flexibility to determine its policies and procedures in light of the size, nature, and complexity of its activities, and the third party will periodically review its policies and procedures and update them as appropriate to ensure their continued effectiveness. The policies and procedures must be designed to ensure that the third party provides the following to the consumer, upon request:

(i) Categories of covered data collected;

(ii) Reasons for collecting the covered data;

(iii) Names of parties with which the covered data was shared. The names must be readily understandable to the consumer;

(iv) Reasons for sharing the covered data;

(v) Status of the third party's authorization;

(vi) How the consumer can revoke the third party's authorization to access the consumer's covered data and verification the third party has adhered to requests for revocation; and

(vii) A copy of any data aggregator certification statement that was provided to the consumer pursuant to § 1033.431(c)(2).

(h) *Revocation of third party authorization*—(1) *Provision of revocation method.* The third party will provide the consumer with a method to revoke the third party's authorization to access the consumer's covered data that is as easy to access and operate as the initial authorization. The third party will also ensure the consumer is not subject to costs or penalties for revoking the third party's authorization.

(2) *Notice of revocation.* The third party will notify the data provider, any data aggregator, and other third parties to whom it has provided the consumer's covered data when the third party receives a revocation request from the consumer.

(i) *Effect of maximum duration and revocation on collection, use, and retention.* If a consumer does not provide a new authorization as described in paragraph (b)(3) of this section, or if a third party receives a revocation request as described in paragraph (h)(1) of this section or notice of a consumer's revocation request as described in § 1033.331(e), a third party will:

(1) No longer collect covered data pursuant to the most recent authorization; and

(2) No longer use or retain covered data that was previously collected pursuant to the most recent authorization unless use or retention of that covered data remains reasonably necessary to provide the consumer's requested product or service under paragraph (a) of this section.

§ 1033.431 Use of data aggregator.

(a) *Responsibility for authorization procedures when the third party will use a data aggregator.* A data aggregator is permitted to perform the authorization procedures described in § 1033.401 on behalf of the third party seeking authorization under § 1033.401 to access covered data. However, the third party seeking authorization remains responsible for compliance with the authorization procedures described in § 1033.401, and the data aggregator must comply with paragraph (c) of this section.

(b) *Disclosure of the name of the data aggregator.* The authorization disclosure must include the name of any data aggregator that will assist the third party seeking authorization under § 1033.401 with accessing covered data and a brief description of the services the data aggregator will provide.

(c) *Data aggregator certification.* When the third party seeking authorization under § 1033.401 will use a data aggregator to assist with accessing covered data on behalf of a consumer, the data aggregator must certify to the consumer that it agrees to the conditions on accessing the consumer's data in § 1033.421(a) through (f) and the condition in § 1033.421(i) upon receipt of the notice described in § 1033.421(h)(2) before accessing the consumer's data. For this requirement to be satisfied:

(1) The third party seeking authorization under § 1033.401 must include the data aggregator's certification in the authorization disclosure described in § 1033.411; or

(2) The data aggregator must provide its certification to the consumer, electronically or in writing, separate from the authorization disclosure. The certification must be in the same language as the authorization disclosure and must be clear, conspicuous, and segregated from other material. The name of any data aggregator in the certification must be readily understandable to the consumer. If, after the consumer has completed the authorization procedures, the authorized third party retains a data aggregator to assist with accessing covered data on behalf of the consumer, this data aggregator must provide its certification in accordance with this paragraph (c)(2).

§ 1033.441 Policies and procedures for third party record retention.

(a) *General requirement.* A third party that is a covered person or service provider, as defined in 12 U.S.C. 5481(6) and (26), must establish and maintain written policies and procedures that are reasonably designed to ensure retention of records that are evidence of compliance with the requirements of subpart D of this part.

(b) *Retention period.* Records required under paragraph (a) of this section must be retained for a reasonable period of time, not less than three years after a third party obtains the consumer's most recent authorization under § 1033.401(a).

(c) *Flexibility.* A third party covered under paragraph (a) of this section has flexibility to determine its policies and procedures in light of the size, nature, and complexity of its activities.

(d) *Periodic review.* A third party covered under paragraph (a) of this section must periodically review its policies and procedures and update them as appropriate to ensure their continued effectiveness to evidence compliance with the requirements of subpart D of this part.

(e) *Certain records retained pursuant to policies and procedures.* Records retained pursuant to policies and procedures required under this section must include, without limitation:

(1) A copy of the authorization disclosure that is signed by the consumer electronically or in writing and reflects the date of the consumer's signature and a record of actions taken by the consumer, including actions taken through a data provider or another third party, to revoke the third party's authorization; and

(2) With respect to a data aggregator covered under paragraph (a) of this section, a copy of any data aggregator certification statement that was provided to the consumer pursuant to § 1033.431(c)(2).

Appendix A to Part 1033—Personal Financial Data Rights Rule: How to Apply for Recognition as a Standard Setter

If you want the CFPB to designate your organization as a recognized standard setter, you should follow the steps described below.

We may amend this process from time to time.

Step One: Requesting Recognition

Submit a written request for recognition.[1]

This should include key contact information, evidence of your organization's policies and practices,[2] and an explanation of how your organization satisfies each of the requirements in the Personal Financial Data Rights rule to be a recognized standard setter.[3] Your request should also describe how current and/or anticipated standards issued by your organization relate to open banking.

In advance of filing your request, you can seek a pre-filing meeting with us. We can walk you through the application process and help you make a complete submission.

Send formal submissions, as well as requests for pre-filing meetings, to: *openbankingstandards@cfpb.gov.*

Step Two: Additional Information and Public Comment

After reviewing your submission, we may request additional information to ensure that your application is complete.

We may publish your application.

We may also seek public input on your application and invite your responses to any information we receive on that basis.

Step Three: Our Review

When reviewing your application, we consider whether your policies and practices meet all the requirements for recognition. We also evaluate whether your application is accurate and complete.

We prioritize and review applications based on the extent to which recognizing your organization helps us to implement open banking.[4]

Step Four: Application Decision

CFPB recognition will be publicly disclosed on our website, along with the applicable terms and conditions of such recognition, such as its duration.

If the CFPB declines to recognize your organization, we will notify you.

You may withdraw your application at any time or for any reason.

If we determine that your organization is close to meeting, but does not yet meet, the requirements for CFPB recognition, we may ask you to provide a written plan specifying how and when you will take the steps required for full recognition. If that plan is satisfactory, we may state on our website that your organization has received contingent recognition. Once you provide us with evidence that you have successfully executed on that plan (or otherwise addressed the relevant contingences), the CFPB may extend full recognition.

Step Five: Recognition

There are several points to keep in mind about recognition.

As a recognized standard setter, you agree that the CFPB may monitor your organization and that you will provide information that we request.

You must also provide us, within 10 days, written explanation of any material change to information that was submitted with your application or during recognition, as well as any reason your organization may no longer meet underlying requirements for recognition.

In addition, you must meet any other specified terms and conditions of your recognition, which may include our reserving the right to observe or participate in standard setting.

If your recognition is set to expire, you can apply for re-recognition by re-starting at Step One at least 180 days before expiration. We may temporarily extend your recognition while we consider your request for re-recognition.

We may modify or revoke your recognition. The CFPB expects to notify you of the reasons it intends to revoke or modify recognition, and to provide your organization with an opportunity to address the CFPB's concerns.

Rohit Chopra,

Director, Consumer Financial Protection Bureau.

Covered Clearing Agency Resilience and Recovery and Orderly Wind-Down Plan; Final Rule

SECURITIES AND EXCHANGE COMMISSION

17 CFR Part 240

[Release No. 34–101446; File No. S7–10–23]

RIN 3235–AN19

Covered Clearing Agency Resilience and Recovery and Orderly Wind-Down Plans

AGENCY: Securities and Exchange Commission.

ACTION: Final rule.

SUMMARY: The Securities and Exchange Commission (''Commission'') is adopting amendments to certain rules in the Covered Clearing Agency Standards (''CCA Standards'') under the Securities Exchange Act of 1934 (''Exchange Act'') and the Dodd-Frank Wall Street Reform and Consumer Protection Act (''Dodd-Frank Act''). The amendments strengthen existing rules by adding new requirements related to the collection of intraday margin by a covered clearing agency (''CCA'') and the use of substantive inputs in its risk-based margin system. The Commission is also adopting a new rule to establish required elements of a CCA's recovery and orderly wind-down plan (''RWP'').

DATES:

Effective date: January 17, 2025.

Compliance date: The applicable compliance dates are discussed in Part III.

FOR FURTHER INFORMATION CONTACT: Elizabeth Fitzgerald, Assistant Director, Matthew Lee, Assistant Director, Jesse Capelle, Special Counsel, Adam Allogramento, Special Counsel, Haley Holliday, Attorney-Adviser, and David Li, Senior Financial Analyst, at (202) 551–5710, Office of Clearance and Settlement, Division of Trading and Markets; Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–7010.

SUPPLEMENTARY INFORMATION: Pursuant to section 17A of the Exchange Act,[1] as well as the Payment, Clearing, and Settlement Supervision Act (''Clearing Supervision Act'') in Title VIII of the Dodd-Frank Act,[2] the Commission is adopting amendments to 17 CFR 240.17ad–22(e)(6) and adding new § 240.17ad–26. Below is a table of citations to the rules referenced in this release, including all rules being amended or adopted:

Rule 17Ad–26(a)(9)	§ 240.17ad–26(a)(9).
Rule 17Ad–26(b)	§ 240.17ad–26(b).

The amendments to Rule 17Ad–22(e)(6)(ii) establish new requirements with respect to a CCA's policies and procedures regarding the collection of intraday margin, specifically, to (i) include a new requirement to monitor intraday exposures on an ongoing basis, (ii) modify the preexisting reference to making intraday calls ''in defined circumstances'' to making intraday calls ''as frequently as circumstances warrant'' and identifying examples of such circumstances, and (iii) require that a CCA document when it determines not to make an intraday margin call pursuant to its written policies and procedures required under paragraph (e)(6)(ii). The amendments to Rule 17Ad–22(e)(6)(iv) establish new requirements for a CCA relying upon substantive inputs to its risk-based margin model, including when such substantive inputs are not readily available or reliable.

New Rule 17Ad–26 prescribes requirements for the contents of a CCA's RWP. While Rule 17Ad–22(e)(3)(ii) currently requires a CCA's written policies and procedures to include the CCA's RWP, Rule 17Ad–22(e)(3)(ii) did not include requirements for the content of RWPs.[3] New Rule 17Ad–26 identifies elements that a CCA's RWP must contain, including: (i) elements related to planning, including the identification and use of scenarios, triggers, tools, staffing, and service providers, as discussed in Parts II.C.1 through 5; (ii) timing and implementation of the plans,

[3] 17 CFR 240.17ad–22(e)(3)(ii).

as discussed in Parts II.C.6 and 7; and (iii) testing and board approval of the plans, as discussed in Parts II.C.8 and 9. Definitions included in new Rule 17Ad–26 are discussed in Part II.D.

In developing these final rules, Commission staff has consulted with the Financial Stability Oversight Council (''FSOC''), the Commodity Futures Trading Commission (''CFTC''), the Federal Deposit Insurance Corporation (''FDIC''), and the Board of Governors of the Federal Reserve System (''FRB'').[4]

The compliance dates for the amendments to Rule 17Ad–22(e)(6) and new Rule 17Ad–26 are discussed in Part III.

I. Introduction

CCAs are an essential part of the infrastructure of the U.S. securities markets.[5] While central clearing and other important functions provided by clearing agencies benefit the markets they serve,[6] clearing agencies can pose systemic risk to the financial system,[7] due in part to the fact that such clearing functions concentrate risk in the clearing agency.[8] Disruption to a clearing agency's operations, or failure on the part of a clearing agency to meet its obligations, could therefore serve as a potential source of contagion, resulting in significant costs not only to the clearing agency itself or its members but also to other market participants and the broader U.S. financial system.[9] As a result, proper management of the risks associated with CCAs is necessary to help ensure the stability of the U.S. securities markets and the broader U.S. financial system.[10]

Whether in normal or stressed market conditions, the effective functioning of the securities markets requires a regulatory framework for CCAs that can promote effective risk management, help preserve financial stability, and help ensure the continuity of critical CCP and CSD functions for the markets they serve, participants in those markets, and investors more generally. Since the enactment of the Dodd-Frank Act,[11] the Commission has adopted a series of rules designed to support its ongoing supervision and oversight of clearing agencies and to help ensure that CCAs are robust and resilient under normal market conditions and in periods of market stress.[12] The potential for CCAs to spread contagion through the financial system, particularly in periods of market stress, has necessitated that the Commission continue to consider and adopt new rules over time to improve the regulatory framework for CCAs. These series of rules help ensure an effective regulatory response to evolving risks that could threaten the U.S. financial system.[13]

Since the Commission first adopted the CCA Standards, supervisory authorities, CCAs, and market participants have continued to pursue further consideration of several topics,

[4] *See, e.g.,* 12 U.S.C. 5464(a)(2); 5472.

[5] *See* Release No. 34–78961 (Sept. 28, 2016), 81 FR 70786, 70789 (Oct. 13, 2016) (''CCA Standards Adopting Release''), *https://www.govinfo.gov/content/pkg/FR-2016-10-13/pdf/2016-23891.pdf; see also* 15 U.S.C. 78q–1(a)(1)(A) (finding that the prompt and accurate clearance and settlement of securities transactions, including the transfer of record ownership and the safeguarding of securities and funds related thereto, are necessary for the protection of investors and persons facilitating transactions by and acting on behalf of investors). CCAs are a subset of clearing agencies registered with the Commission. *See* 17 CFR 240.17ad–22(a) (defining ''covered clearing agency''); *see also infra* note 6 (explaining further the definition of ''covered clearing agency'' and two functions of a CCA).

[6] Two functions are that of the central counterparty (''CCP'') and the central securities depository (''CSD''), each of which constitutes a financial market infrastructure (''FMI''). A CCP is a clearing agency that interposes itself between the counterparties to securities transactions, acting functionally as the buyer to every seller and the seller to every buyer. 17 CFR 240.17ad–22(a). A CSD is a clearing agency that is a securities depository as described in section 3(a)(23)(A) of the Exchange Act. *Id.* CCAs are clearing agencies registered with the Commission that provide CCP or CSD services. *See* 17 CFR 240.17ad–22(a).

[13] *See infra* Part II (discussing the rule amendments and new rules in greater detail). In addition, when designated as systemically important by the FSOC, CCAs are also subject to requirements set forth in Title VIII of the Dodd-Frank Act and rules thereunder. *See, e.g.,* 12 U.S.C. 5461–72.

including the collection of margin generally, the collection of intraday margin specifically, the potential effects of such margin collection on market liquidity, and the need for some transparency into the margin collection process so that market participants that use or rely on CCAs for risk management functions can monitor and manage their own financial and other risks.[14]

Although the CCA Standards adopted in 2016 included several provisions directed to a CCA's margin system generally,[15] and specifically the modeling of financial risk and the collection of margin within it,[16] the Commission has identified two areas of focus that support strengthening these pre-existing rules: (i) ensuring effective monitoring of intraday exposures and specifying particular circumstances for collection of margin intraday, and (ii) ensuring that CCAs have effective tools for margin modelling even when inputs to the margin system become unreliable or unavailable. Ongoing monitoring by the CCA is necessary to help ensure that a CCA collects sufficient margin to cover its exposures throughout the day, as portfolios and positions may change after margin is collected at the start of the day. This requirement should help ensure that the CCAs have the appropriate policies and procedures to address market events featuring large intraday price and position changes, such as the events in the equity and options markets in early 2021.[17] In addition, establishing backup procedures if a substantive input to a margin model is unavailable or unreliable is especially relevant to ensuring that a CCA can continue to meet its regulatory obligations and calculate margin appropriately.

Accordingly, in the RWP Proposing Release,[18] the Commission proposed new requirements to ensure that CCAs monitor intraday margin on an ongoing basis and to facilitate intraday margin collection not only in ''defined'' circumstances but as frequently as circumstances warrant.[19] The Commission also defined two circumstances in which a CCA should have policies and procedures for applying intraday margin: (i) when specific risk thresholds have been breached, and (ii) when the products cleared or markets served display elevated volatility.[20] As the Commission explained in the RWP Proposing Release, these requirements would help ensure that the CCA has an effective process for monitoring margin and avoiding circumstances in which a participant becomes under-margined, which undermines the ability of a CCA to mitigate risk.[21] In addition, with respect to the inputs into a CCA's margin system, the Commission proposed to expand existing requirements requiring timely and reliable price data beyond that limited topic to also encompass other substantive inputs to a CCA's risk-based margin system, to help ensure that mechanisms are in place to calculate margin during periods where inputs become unavailable, such as if a data feed becomes interrupted or corrupted.[22] In Parts II.A and B, the Commission discusses these new requirements in greater detail, in addition to addressing the comments received on the proposed rules.

Importantly, to be resilient in times of market stress, a CCA will need to monitor intraday risk on an ongoing basis and use timely and accurate data inputs to its margin system. Each helps ensure that a CCA can, in turn, calculate and collect margin in a timely manner, managing its exposures to its participants throughout the day. In times of rapidly evolving or stressed market conditions, a CCA must be able to monitor risk and collect margin while also effectively analyzing the potential impact of any intraday collections on market liquidity and financial stability.

Even a robust and resilient CCA may face stressed market conditions or other events so extreme that the resources it has reserved for potential loss scenarios will prove insufficient. For example, depending on the markets they serve, CCAs may hold financial resources sufficient to withstand the default of the one or two largest participant families from among their clearing participants.[23] Such CCAs may not have sufficient prefunded resources to withstand defaults beyond these,[24] and would, in such a circumstance, be charged with allocating losses among their non-defaulting participants to close out the portfolios of its defaulting participants.[25] CCAs may also find that stressed market conditions lead to liquidity shortfalls or that certain events drain other capital sources that impair the functioning of the CCA. Accordingly, to help preserve financial stability and ensure the continuity of critical CCP and CSD functions in periods of extreme stress, a resilient CCA still needs to plan effectively to replenish financial resources when depleted, address and allocate losses when they accrue, and, if the CCA is unable to allocate losses and replenish depleted resources, implement an orderly wind-down and cessation or transfer of its business. If a CCA is unable to take these steps in a transparent, orderly, and effective way, it will serve as a source of contagion, resulting in the potential for significant costs not only to the CCA itself or its clearing members but also to other market participants and the broader U.S. financial system.[26]

[26] The RWP Proposing Release discusses in greater detail the relationship between RWPs implemented by CCAs and the considerations related to orderly resolution of financial companies

Although the CCA Standards adopted in 2016 included a requirement for CCAs to have policies and procedures that provide for plans for recovery and orderly wind-down, the Commission did not include in the rule the specific elements to be required as part of such plans.[27] The Commission stated that, given the nature of recovery and resolution planning, the RWP would likely reflect the specific characteristics of the CCA (*e.g.,* its ownership, organizational, and operational structures, as well as its size, systemic importance, global reach, and/or the risks inherent in the products it clears).[28] Since that time, each CCA has developed an RWP pursuant to the requirement for such plans in Rule 17Ad–22. In addition, the Commission has, through its supervisory process and through its participation in the ongoing consideration of issues regarding CCP recovery and resolution,[29] identified several elements that should be included in any RWP regardless of the market served or the products cleared, to help ensure that planning is effective, thoughtful, and thorough.

Accordingly, in the RWP Proposing Release,[30] the Commission proposed new requirements directed to establishing specific elements of all RWPs across CCAs, including: requirements to identify critical systems and service providers and related staffing that would support these functions, to be maintained in a recovery or wind-down scenario; [31] the identification and analysis of scenarios and triggers that could necessitate implementation of a recovery or wind-down; [32] the identification and analysis of which tools would be appropriate in certain scenarios in order to facilitate recovery or an orderly wind-down; [33] requirements for effecting implementation of the plan; [34] notification to the Commission; [35] robust annual testing with participants and key stakeholders, as appropriate; [36] and provisions for board review and approval of the plan and any material changes thereto.[37] As discussed in the RWP Proposing Release, these new requirements draw from existing practices at CCAs.[38] In Parts II.C and D, the Commission discusses in greater detail these new requirements, codified in new Rule 17Ad–26, in addition to addressing the comments received on the proposed rules. New Rule 17Ad–26 promotes three important objectives: (i) bolstering the existing RWPs at CCAs; (ii) codifying some existing RWP elements to ensure that these elements remain in the plans over time; and (iii) establishing that the RWP of any new CCA would contain each of the elements specified in the rule.[39] By advancing these objectives, new Rule 17Ad–26 helps ensure that, in times of extreme market stress, the recovery or wind-down of a CCA can preserve financial stability and ensure the continuity of critical CCP or CSD functions.[40]

The Commission received comments on the RWP Proposing Release from CCAs, industry groups (representing both clearing agencies and their participants), other market participants, academics, individual investors, and other interested parties.[41] Commenters were generally supportive of the proposal, though some commenters also expressed concerns regarding specific elements of the proposed rules. In Part II, the Commission discusses these comments in detail and the modifications made to the final rules to address comments received. As discussed further in Part II, the Commission is adopting each of the proposed rules, some substantially as proposed and others with certain modifications.

In addition, and separate from the Commission's proposed rules for CCAs, the CFTC also has proposed rules directed to the RWPs of systemically important derivatives clearing organizations (''SIDCOs'') under the Commodity Exchange Act.[42] Like the Commission's final rules for CCAs adopted in this release, the CFTC's proposed rules are intended to codify certain common elements of RWPs across SIDCOs. With respect to some elements of final Rule 17Ad–26, the Commission has taken a different approach from the CFTC's proposed rule. For example, given the range of products cleared and markets served across CCAs, the Commission has not included in Rule 17Ad–26 requirements for scenarios at the same level of granularity as the CFTC. Nonetheless, the final Rule 17Ad–26 and the CFTC's proposal are aligned in their objectives and promote substantially similar outcomes. The differing approaches are discussed further in Part II.C.10.[43]

II. Discussion of Comments Received and Final Rules

A. Collection of Intraday Margin

1. Proposed Amendment to Rule 17Ad–22(e)(6)(ii)

The RWP Proposing Release proposed to strengthen the preexisting requirements in Rule 17Ad–22(e)(6)(ii) for a CCA to have policies and procedures reasonably designed to cover its credit exposures to its participants by establishing a risk-based margin system that, among other things, includes the operational capacity to make intraday margin calls in defined circumstances.[44] Specifically, the proposed amendments to Rule 17Ad–22(e)(6)(ii) required a CCA that provides CCP services to establish, implement, maintain and enforce written policies and procedures reasonably designed to cover its credit exposures to establish a risk-based margin system that, among other things, includes the authority and operational capacity to (i) monitor intraday exposure on an ongoing basis, and (ii) to make intraday margin calls as

by the FDIC pursuant to Title II of the Dodd-Frank Act. RWP Proposing Release, *supra* note 18, at 34712.

[27] *See* 17 CFR 240.17ad–22(e)(3)(ii) (requiring ''plans for the recovery and orderly wind-down of the CCA necessitated by credit losses, liquidity shortfalls, losses from general business risk, or any other losses'').

frequently as circumstances warrant, including when risk thresholds specified by the CCA are breached or when the products cleared or markets served display elevated volatility.[45]

2. Discussion of Comments

a. Monitoring Intraday Exposure on an Ongoing Basis: Rule 17Ad–22(e)(6)(ii)(B)

When adopted in 2016, preexisting Rule 17Ad–22(e)(6)(ii) included the requirement that CCAs have the authority and operational capacity to make intraday margin calls.[46] In the RWP Proposing Release, the Commission stated that the ''operational capacity'' to make intraday margin calls ''includes the ability to monitor intraday exposure; otherwise, it would be impossible for a CCA to make appropriate intraday margin calls if it were not monitoring its intraday exposure.'' [47] Therefore, as originally adopted, Rule 17Ad–22(e)(6)(ii) required a CCA to have some ability to monitor for intraday exposure and make intraday margin calls but did not include a specific requirement to monitor for intraday exposure or regarding the frequency at which to monitor intraday exposures.[48]

In the RWP Proposing Release, the Commission stated its continued belief, consistent with its statements when adopting the CCA Standards, that it is essential that a CCA monitor its intraday exposures because the CCA faces a risk that a CCA's exposure to its participants can change rapidly because of intraday changes in prices, positions, or both.[49] The Commission further stated that a requirement that such monitoring occur on an ongoing basis would contribute to ensuring that the CCA is sufficiently informed and situated to take appropriate actions to manage any intraday exposure that arises.[50] The Commission also stated that being able to monitor, on an ongoing basis, any decrease in the margin coverage (as compared to the changes in intraday credit exposures in its participants' portfolios) should help a CCA ensure that it is able to collect margin sufficient to cover its participants' exposures.[51] The Commission further stated that this requirement to monitor intraday exposure on an ongoing basis should provide each CCA with some flexibility to determine what monitoring frequency is appropriate in the market served by the CCA. Therefore, the Commission did not specify a particular time period or frequency for monitoring on an ongoing basis because a CCA ''should be able to tailor its monitoring to the particular products cleared and markets served.'' [52]

Commenters generally recognized the importance of monitoring intraday exposure.[53] Several commenters agreed with the approach in the proposal not to prescribe a particular monitoring frequency that would constitute an ''ongoing basis,'' because of the need for a CCA to be able to tailor its monitoring to the particular products cleared and markets served.[54] For example, one such commenter stated that, rather than the Commission prescribing a monitoring frequency, a CCA's monitoring ''should align with each [CCA's] scheduled settlement, initial margin, and variation margin practices to support financial stability in both normal and volatile market conditions.'' [55]

By contrast, one commenter stated that the Commission should prescribe some particular universal, minimum monitoring frequency (*i.e.,* establishing a maximum time between instances of a CCA's intraday monitoring of its credit exposures).[56] This commenter acknowledged the benefit that would arise from deferring ongoing monitoring assessments to a CCA, but supported that the Commission include a universal, minimum monitoring frequency in this requirement.[57] Specifically, this commenter stated that ''every 15 minutes should be the absolute minimum'' for frequency of monitoring intraday exposures related to any possible intraday margin collection.[58]

The Commission is adopting the requirement to monitor intraday exposures on an ongoing basis as proposed.[59] As stated in the RWP Proposing Release, a CCA should be able to tailor its risk monitoring to the particular products cleared and the markets served.[60] Accordingly, the proposed requirement to monitor intraday exposures on an ongoing basis is designed to allow a CCA to determine what monitoring frequency is appropriate for its particular market.[61] A CCA needs this flexibility because ''more frequent monitoring may be necessary for a CCA that operates in markets where intraday trading may be more prevalent'' (such as, for example, in the U.S. Treasury market),[62] or

[45] *Id.* at 34712–14. The preexisting requirement in Rule 17Ad–22(e)(6)(ii) to establish written policies and procedures that provide for marking participant positions to market and collecting margin, including variation margin or equivalent charges if relevant, at least daily, would be unchanged under the amendments being adopted in this release.

[50] *Id.; see also* CPMI–IOSCO Resilience Guidance, *supra* note 14, at 5.2.2 (discussing how a CCP addresses intraday exposure in its margin system and stating that ''a CCP faces the risk that its exposure to its participants can change rapidly as a result of intraday changes in prices, positions, or both; ie [sic], adverse price movements, as well as participants building larger positions through new trading (and settlement of maturing trades). For the purposes of addressing these and other forms of risk that may arise intraday, a CCP should address and monitor on an ongoing basis how such risks affect all components of its margin system, including initial margin, variation margin and add-on charges.'').

[51] RWP Proposing Release, *supra* note 18, at 34713. The Commission also explained that a CCA ''generally should consider whether its intraday monitoring considers how participants' exposures would affect all risks faced by the CCA, including those that may already by contemplated by variation margin, initial margin, or add-on charges.'' *Id.*

[59] The Commission is adding paragraph divisions to Rule 17Ad–22(e)(6)(ii) to better delineate the sections of the rule, for clarity. The portion of the rule text regarding monitoring intraday exposure would be Rule 17Ad–22(e)(6)(ii)(B). The Commission is also adding ''(A)'' before the portion of the rule that relates to marking participant positions to market and collecting margin at least daily and changing the punctuation at the end of that section to a semi-colon, as opposed to a comma. The Commission is also revising the punctuation at the end of Rule 17Ad–22(e)(6)(ii)(B) to a semicolon, as opposed to a comma.

alternatively where a CCA's ''intraday exposures may tend to be larger because of specific features, such as the settlement process.'' [63]

In response to the commenter seeking a required mandatory minimum frequency for intraday monitoring, the Commission does not agree that such a requirement is necessary. Previously, the Commission stated that a CCA generally should consider whether its policies and procedures for intraday monitoring address how participants' exposures would affect financial risks faced by the CCA.[64] For example, some CCA margin methodologies may be designed to account for some intraday price and position changes, which could have an impact on the appropriate intraday monitoring frequency. Therefore, the Commission is not adopting a minimum monitoring frequency. The Commission, however, would be able to consider whether a particular CCA's intraday monitoring frequency is reasonably designed to meet this requirement within the proposed rule change process when changes thereto are filed as a proposed rule change, including what the CCA has identified as the appropriate ongoing basis for the products cleared and the markets served and in light of the entirety of the CCA's margin methodology (that is, whether it has other components which account for some intraday price and position changes).[65] More generally, whether a CCA has established, implemented, maintained and enforced written policies and procedures reasonably designed to comply with Rule 17Ad–22(e) is subject to examination.

When designing its intraday margin monitoring, a CCA generally should consider whether its monitoring encompasses all aspects of intraday exposures, including how such exposures affect all components of a CCA's margin model, including initial margin, variation margin, and add-on charges.[66] A CCA also generally should consider whether its basis to recalculate margin intraday accounts for both position changes and price volatility.

b. Circumstances for Intraday Margin Calls

Preexisting Rule 17Ad–22(e)(6)(ii) also required that a CCA's written policies and procedures be reasonably designed to include the authority and operational capacity to make intraday margin calls ''in defined circumstances.'' [67] However, preexisting Rule 17Ad–22(e)(6)(ii) did not define what constitutes ''defined circumstances.'' [68] In proposing the requirement regarding collecting intraday margin as frequently as ''circumstances warrant,'' the Commission stated that the proposed requirement would build upon and expand this preexisting requirement (*i.e.,* to have the authority and operational capacity to make intraday margin calls in ''defined circumstances''). Specifically, the proposed requirement would identify two particular circumstances: (1) when risk thresholds specified by the CCA are breached or (2) when the products cleared or markets served display elevated volatility. The proposed requirement would also continue to provide flexibility to CCAs to make intraday margin calls as frequently as circumstances warrant.[69]

Commenters generally agreed with the need for thresholds regarding when a CCA would make intraday margin calls. However, commenters raised several concerns which are addressed below.[70]

i. Scheduled vs. Unscheduled Intraday Calls

Several commenters suggested that intraday margin calls generally should be scheduled, with unscheduled intraday margin calls limited to extreme circumstances.[71] One such commenter specified that scheduled intraday margin calls should be at the same time every day, in the early afternoon.[72] This commenter explained that the unpredictability of unscheduled intraday margin calls may require a fund (which is a participant in a CCA) to keep a portion of its assets in lower-yielding, highly liquid assets.[73]

In response to these comments seeking additional requirements for scheduled intraday margin calls and to limit unscheduled intraday margin calls, the Commission recognizes that scheduled intraday margin calls provide certainty for market participants about when resources will be needed. However, there may be circumstances that arise intraday, such as in times of elevated volatility or significant position changes, where a CCA needs to manage its exposure to a participant through an unscheduled margin call.[74] In such circumstances, scheduled intraday margin calls may not be sufficient to ensure that a CCA collects margin to cover its exposure to its participants. To ensure strong risk management in such circumstances, CCAs need to have the ability to make unscheduled intraday margin calls. It would not be appropriate to mandate that CCAs only make scheduled intraday margin calls, and, therefore, the Commission is not adopting such a requirement to require scheduled intraday margin calls.

However, the Commission understands the need for market participants to plan for the potential resources needed to meet intraday margin calls. To that end, the amended Rule 17Ad–22(e)(6)(ii)(C) states that a CCA must establish policies and procedures regarding at least two particular circumstances in which a CCA would make intraday margin calls, that is, when risk thresholds specified by the CCA are breached and when products cleared or markets served display elevated volatility, as discussed in Part II.A.2.b *infra.* For example, a CCA could specify that its risk threshold is breached when the difference between a member's start of day margin and a calculation of its intraday margin based on its new positions exceeds a predetermined percentage or dollar amount. Thus, market participants should be able to plan for their potential resource needs to meet intraday margin calls because, as discussed in Part II.A.2.b.ii *infra,* a CCA is required to have certain transparency around its margin model. This transparency will allow a market participant to understand those specified circumstances in which a CCA would make intraday margin calls and would therefore allow the market participant to make arrangements for additional liquidity in such circumstances, such

[72] SIFMA at 8.

[73] *Id.*

[74] For example, if a CCA schedules intraday margin collection at noon every day, there may be instances when thresholds are triggered after that scheduled time, and the CCA would then make an unscheduled margin call to avoid significant exposure being carried overnight.

as, for example, securing additional financing to cover such margin calls.

ii. Need for Clear Thresholds and Transparency

Commenters also requested that the Commission revise the proposal to mandate that a CCA define its criteria for any unscheduled intraday margin call in advance of any unscheduled intraday margin call and to require additional disclosures regarding intraday margin calls.[75] These commenters stated that requiring clear and transparent policies regarding the conditions under which a CCA might make an intraday margin call, both on a scheduled and unscheduled basis, would enhance participants' ability to prepare for these margin calls and understand any potential demands on their liquidity arising from such a call.[76]

The Commission agrees with the commenters that it is essential that a CCA determine and clearly communicate *ex ante* in what circumstances it would make both scheduled and *ad hoc* intraday margin calls. However, as discussed further below, CCAs already are subject to such requirements in preexisting Rule 17Ad–22(e)(6)(ii) and (e)(23) and 17 CFR 240.19b–4 (''Rule 19b–4''). Further, by specifying two instances in which CCAs must establish, implement, maintain and enforce policies and procedures to collect intraday margin, the amendments being adopted in this release will identify for clearing participants conditions under which a CCA would make an intraday margin call.[77]

First, with respect to the commenters' request to require that CCAs determine the circumstances for intraday margin calls, a CCA already is required, under preexisting Rule 17Ad–22(e)(6)(ii), to have certain policies and procedures regarding intraday margin. These policies and procedures are the framework that a CCA uses when determining whether to make intraday margin calls, and these policies and procedures must identify the circumstances in which a CCA would make intraday margin calls.[78] This requirement will be strengthened by the amendments adopted in this release, which provide more specificity that the CCA must have policies and procedures to be able to make intraday margin calls as frequently as circumstances warrant and in two particular circumstances identified in the rule. Specifically, the amendments to preexisting Rule 17Ad–22(e)(6)(ii) require that a CCA have written policies and procedures to cover its credit exposures to its participants by establishing a risk-based margin system, which, among other things, includes the authority and operational capacity to make intraday margin calls ''as frequently as circumstances warrant'' including in two particular situations: when risk thresholds specified by the CCA are breached and in times of elevated volatility. This requirement should ensure that the CCA develops *ex ante* policies and procedures to determine risk thresholds for intraday margin and when it considers volatility to be elevated above typical levels in a manner specific to the products cleared and the markets served. Because these amendments would identify specific circumstances in which a CCA must have the authority and operational capacity to make intraday margin calls which would be part of a CCA's overall disclosure requirements regarding its margin methodology, as discussed further below,[79] these amendments should improve participants' ability to understand when they may be subject to additional margin calls. This improved understanding should further allow participants to be better able to prepare to provide additional financial resources in anticipation of additional margin calls.[80]

Second, with regard to the commenters' request to clearly communicate *ex ante* the circumstances in which a CCA would make intraday margin calls, the Commission agrees that such *ex ante* transparency is essential for a CCA's participants, but disagrees that any additional requirements are necessary to achieve such transparency. A CCA's participants already have such transparency for several reasons. As a registered clearing agency, a CCA is a self-regulatory organization (''SRO'') under the Exchange Act,[81] subject to the provisions of section 19(b) of the Exchange Act which requires public notice and an opportunity for public comment on any rule changes that an SRO seeks to adopt.[82] In addition, a CCA potentially is a ''designated financial market utility'' (alternatively, a ''systemically important financial market utility'' or ''SIFMU'') subject to section 806(e) of the Dodd-Frank Act regarding advance notice of material changes to its rules, procedures, or operations that could materially affect the nature or level of risks presented. Further, the CCA Standards impose requirements related to transparency and disclosure to its participants.

A CCA's margin methodology, which would include, among other things, the criteria used to determine whether to make intraday margin calls, constitutes a material aspect of its operations, meaning that it is part of a CCA's stated policies, practices, or interpretations under Exchange Act Rule 19b–4.[83] As such, a CCA's margin methodology is subject to the filing obligations applicable to SROs under section 19(b) of the Exchange Act regarding any proposed rule or proposed change to its rules.[84] The proposed rule filing process provides transparency into an SRO's proposed changes, through notice and comment. An SRO is obligated to file its proposed rule changes in a manner consistent with the requirements in Form 19b–4, which is intended to elicit information necessary for the public to

[75] The Associations at 2; Better Markets at 8; ICI at 10–11; SIFMA at 9.

[76] The Associations at 2–3 (requesting ''clear and transparent policies with regards to the conditions under which a [CCA] might call intraday margin''); Better Markets at 8 (requesting ''full transparency for triggers of intraday margin calls''); SIFMA at 9 (requesting ''published triggers and thresholds to calculate both start of day and intraday margin requirements''); ICI at 11 (requesting a CCA ''communicate to market participants the thresholds that would trigger both scheduled and ad hoc [sic] intraday margin calls'').

[77] The Commission is adding paragraph divisions to Rule 17Ad–22(e)(6)(ii) to better delineate the sections of the rule, for clarity. The portion of the rule text regarding the authority and operational capacity to make intraday margin calls is in Rule 17Ad–22(e)(6)(ii)(C).

[78] This framework is not required to foreclose or prohibit the use of any discretion in such determinations, as discussed further in Part II.A.2.b.iii, *infra.*

[79] *See infra* notes 81–100 and accompanying text (discussing several Commission requirements that promote disclosure and transparency).

[81] 15 U.S.C. 78c(a)(26) (''The term 'self-regulatory organization' means any [. . .] registered clearing agency'').

[82] *See, e.g., infra* note 87 (discussing such changes that previously have been considered by the Commission); *infra* note 119 (describing Commission rules that promote transparency regarding margin practices at registered clearing agencies).

[83] 17 CFR 240.19b–4(a)(6)(i) (defining ''stated policy, practice, or interpretation'' to include, *inter alia,* ''[a]ny material aspect of the operation of the facilities of the self-regulatory organization''). Additionally, Rule 19b–4 would also apply to certain statements that a CCA issues concerning its margin methodology. Specifically, this rule would cover any CCA statement ''made generally available to the membership of [. . . the CCA] that establishes or changes any standard, limit, or guideline, with respect to: (a) the rights, obligations, and privileges of its membership; or (b) the meaning, administration, or enforcement of an existing rule.'' 17 CFR 240.19b–4(a)(6)(ii).

[84] 15 U.S.C. 78s(b)(1) (requiring each SRO to ''file with the Commission, in accordance with such rules as the Commission may prescribe, copies of any proposed rule or any proposed change in, addition to, or deletion from the rules of such self-regulatory organization''); *see also* 17 CFR 240.19b–4. In addition, a stated policy, practice, or interpretation of an SRO (*e.g.,* written policies and procedures) would generally be deemed to be a proposed rule change. *See* 17 CFR 240.19b–4(c).

provide meaningful comment on the proposed rule change and for the Commission to determine whether the proposed rule change is consistent with the requirements of the Exchange Act and the rules and regulations thereunder.[85] The Commission then publishes all proposed rule changes for comment. In this way, the rule filing process promotes transparency to market participants and the public by ensuring notice is provided regarding a CCA's new initiatives or changes to governance, operations, and risk management.[86] With respect to a CCA's margin methodology, the rule filing process should provide transparency about how and when a CCA would calculate margin, including on an intraday basis, which is consistent with the requirements sought by commenters.

The Commission has considered numerous proposed rule changes regarding CCAs' margin methodologies. Notably, these proposed rule changes have addressed CCAs' intraday margin policies and procedures, and these proposed rule changes have identified thresholds and criteria that a CCA would use in determining whether to make an intraday margin call, similar to what the commenters have requested.[87] The notice and comment process provided by section 19(b) of the Exchange Act therefore provides for transparency into a CCA's margin methodology, including input from participants.

In addition, when a CCA is a SIFMU,[88] it is also subject to the regulatory framework of the Clearing Supervision Act.[89] Once designated by FSOC, CCAs that are SIFMUs are required to publicly file 60-days advance notice with the Commission of changes to rules, procedures, and operations that could materially affect the nature or level of risk presented by the designated clearing agency (''advance notice''), and, pursuant to the Commission's rules, the Commission shall provide for prompt publication of such an advance notice, and then the public has the opportunity to comment on such an advance notice.[90] Rule 19b–4(n) defines the term ''materially affect the nature or level of risk presented'' to mean matters as to which there is a reasonable possibility that the change could affect the performance of essential clearing and settlement functions or the overall nature or level of risk presented by the designated clearing agency, and it further provides examples of such potential changes as including, among other things, changes that could materially affect risk management or financial resources of the designated clearing agency.[91] When adopting this requirement, the Commission identified changes to the ''methods for making margin calculations'' as among the additional examples of such matters.[92] Therefore, any changes to the intraday margin policies and procedures of a CCA that has been designated as a SIFMU could also be subject to the advance notice process if the changes constitute a material change to the nature or level of risk presented by the CCA, and the advance notice process would bring additional transparency into such changes.

Moreover, under the CCA Standards, a CCA is obligated to establish, implement, maintain and enforce written policies and procedures reasonably designed to provide for publicly disclosing all relevant rules and material procedures, including key aspects of its default rules and procedures.[93] Such public disclosures generally should include a discussion of a CCA's margin methodology, which could include how the CCA determines intraday margin, and they should, in turn, allow a market participant to understand how a CCA calculates margin, including any margin add-ons

[85] *See* General Instructions for Form 19b–4, at Instruction B, *https://www.sec.gov/files/form-19b4-general-instructions.pdf.* The Form 19b–4 specifies the contents that must be included in a proposed rule change filing includes, among other items, a statement of purpose for the proposed rule change, which describes the reasons for adopting the proposed rule change, any problems the proposed rule change is intended to address, the manner in which the proposed rule change will operate to resolve those problems, the manner in which the proposed rule change will affect various persons (*e.g.,* brokers, dealers, issuers, and investors), and any significant problems known to the SRO that persons affected are likely to have in complying with the proposed rule change. *Id.* at Information to Be Included in the Completed Form, Item 3(a). The SRO must also include in its proposed rule change the complete text of the proposed rule. *Id.* at Information to Be Included in the Completed Form, Item 1(a). The SRO may request confidential treatment of any portion of its filing, *see* 17 CFR 240.24b–2, but it would still have to comply with the requirements of Form 19b–4 with respect to describing the contents of the proposed rule change for public comment.

[86] *See* RWP Proposing Release, *supra* note 18, at 34711.

[87] *See, e.g.,* Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 1, To Implement Changes to the Required Fund Deposit Calculation in the GSD Rulebook, Release No. 34–83362 (June 1, 2018), 83 FR 26514 (June 7, 2018) (File No. SR–FICC–2018–001) (approving proposed rule change to provide transparency with respect to GSD's existing authority under GSD Rule 4 to calculate and assess intraday margin amounts, by identifying the three criteria that GSD uses to calculate the intraday amount due ((i) the dollar threshold, which evaluates whether a member's intraday VaR Charge equals or exceeds a set dollar amount when compared to the VaR Charge that was included in the most recent margin collection: (ii) the percentage threshold, which evaluates whether the intraday VaR Charge equals or exceeds a percentage increase of the VaR Charge that was included in the most recent collection; and (iii) the coverage target, which evaluates whether a member is experiencing backtesting results below a 99% confidence level), and stating that FICC assesses intraday margin when all three criteria are breached and, under certain market conditions when the thresholds in (i) and (ii) are breached); FICC Important Notice GOV1244–22 (Apr. 11, 2022) (stating that, consistent with its Rule 4 authority, GSD will assess an Intraday Supplement Fund Deposit on a Netting Member if (i) a change in the Netting Member's Intraday VaR Charge equals or exceeds $1 million when compared to its most recent VaR Charge calculation, (ii) the Netting Member's Intraday VaR Charge equals or exceeds 100% of its most recent VaR Charge calculation, and (iii) the Netting Member's backtesting coverage is below 100%. Additionally, Netting Members who breached the thresholds for (i) and (ii) and have fewer than 100 trading days in a rolling 12-month period will be assessed an Intraday Supplemental Fund Deposit regardless of their backtesting coverage); Order Approving Proposed Rule Change to Adopt Intraday Volatility Charge and Eliminate Intraday Backtesting Charge, Release No. 34–97129 (Mar. 13, 2023), 88 FR 16681 (Mar. 20, 2023) (File No. SR–NSCC–2022–009) (adopting an intraday volatility charge as part of NSCC's margin methodology that would increase the margin collected from members whose trading portfolios experience large and unexpected intraday volatility).

[88] Specifically, the Clearing Supervision Act provides for the enhanced regulation of a CCA that qualifies as a ''financial market utility'' that the FSOC designates as ''systemically important'' (a ''designated financial market utility''). *See* 12 U.S.C. 5462(6)(A) (defining a ''financial market utility'' to include ''any person that manages or operates a multilateral system or the purpose of transferring, clearing, or settling payments, securities or other financial transactions among financial institutions or between financial institutions and the person'') and 12 U.S.C. 5462(4)(defining a ''designated financial market utility'' to mean ''a financial market utility'' that FSOC has designated as ''systemically important''); *see also* 12 U.S.C. 5463 (discussing FSOC's ability to designate entities as ''systemically important''). On July 18, 2012, FSOC designated four CCAs as systemically important financial market utilities: The Depository Trust Company (''DTC''); Fixed Income Clearing Corporation (''FICC''); National Securities Clearing Corporation (''NSCC''); and The Options Clearing Corporation (''OCC''). FSOC, *2012 Annual Report: Appendix A: Designation of Systemically Important Financial Market Utilities* (July 18, 2012), *https://home.treasury.gov/system/files/261/2012-Annual-Report.pdf.*

[89] *See* 12 U.S.C. 5461 *et seq.*

[90] The Clearing Supervision Act defines a ''designated clearing entity'' to include a ''designated financial market utility'' that is a clearing agency registered with the Commission (of which a CCA is a subset). *See* 12 U.S.C. 5462(3). The Clearing Supervision Act defines the Commission as the ''Supervisory Agency'' for the four designated clearing agencies that are CCAs (*i.e.,* DTC, NSCC, FICC, and OCC). *See* 12 U.S.C. 5462(8)(A)(i). The Commission published a final rule concerning the filing and publication of advance notices for designated clearing agencies in 2012. *See* 17 CFR 240.19b–4(n); Release No. 34–67286 (June 28, 2012), 77 FR 41602 (July 13, 2012) (File No. S7–44–10) (''Filing of Advance Notices''), *https://www.govinfo.gov/content/pkg/FR-2012-07-13/pdf/2012-16233.pdf.*

[91] 17 CFR 240.19b–4(n)(2)(i), (ii).

[92] *See* Filing of Advance Notices, *supra* note 90, at 41620.

[93] 17 CFR 240.17ad–22(e)(23)(i).

and cross-margin arrangements with other clearing agencies. In addition, under Rule 17Ad–22(e)(23)(ii), these policies and procedures must provide sufficient information to enable participants to identify and evaluate the risks, fees, and other material costs they incur by participating in the CCA.[94]

Rule 17Ad–22(e)(23)(iv) also requires that a CCA produce a comprehensive public disclosure that describes its material rules, policies, and procedures regarding its legal, governance, risk management, and operating framework (a ''Disclosure Framework''), accurate in all material respects at the time of publication, that includes, among other things, a standard-by-standard summary narrative for each applicable standard set forth in paragraphs (e)(1) through (23) of the CCA Standards with sufficient detail and context to enable a reader to understand the CCA's approach to controlling the risks and addressing the requirement in each standard.[95] Therefore, a CCA must issue a public document addressing each of the CCA Standards, including those with respect to margin under Rule 17Ad–22(e)(6).[96] A CCA generally should consider whether its disclosures regarding its margin methodology, through its Disclosure Framework and/or other publicly available documents, allows participants to understand how the model reacts to market conditions and to assess with some reasonable degree of certainty whether it will be subject to a margin call and in what amount. In addition, a CCA generally should consider whether it could provide a public-facing margin calculator to allow its participants, and market participants more generally, to understand the potential amount of any intraday margin calls on their portfolios, including with respect to add-on charges and any applicable cross-margin arrangements.

In light of the existing requirements with respect to transparency in the SRO rule filing process, the advance notice process, and Rule 17Ad–22(e)(23), the Commission does not believe additional mandatory disclosures are necessary at this time. For example, every CCAs' Disclosure Framework discusses the CCAs' margin methodologies.[97] Several CCAs have published documents further outlining their margin methodologies, including the formulas used in calculating margin.[98] A CCA generally should consider whether it provides such information, *i.e.,* the formulas used in calculating margin, to market participants, such that a market participant could make such calculations on its own. Finally, at least one CCA has developed a public calculator to provide market participants with the ability to calculate potential margin obligations on a simulated portfolio, for given positions and market value, using its Value at Risk methodology.[99] Although not a substitute for a market participant's ability to understand a CCA's margin methodology on its own, such a public calculator is a helpful tool for determining how a CCA's margin methodology operates, particularly if the calculator is able to provide information related to add-on charges and any applicable cross-margin arrangements. A CCA generally should consider whether it sufficiently identifies in its Disclosure Frameworks and any other documentation that it makes available the circumstances required under the amendments adopted to Rule 17Ad–22(e)(6)(ii) regarding when a CCA must collect intraday margin. Commenters requested that the Commission require a CCA's intraday margin model to be transparent such that a CCA's participants could anticipate a CCA's future intraday margin calls.[100] As discussed above, a CCA should generally consider whether it sufficiently identifies when Rule 17Ad–22(e)(6)(ii) would require an intraday margin call. Such transparency could improve the ability of a CCA's participants to understand when participants may be subject to additional margin calls. However, participants cannot expect to be able to predict every intraday margin call with complete certainty, and being able to do so may create moral hazard that would undermine the CCA's ability to manage risk effectively.

Finally, one commenter stated that CCAs should proactively engage with clearing members ahead of applying intraday margin calls to alleviate the potential liquidity risk for clearing members.[101] The Commission acknowledges that it could be helpful for a CCA to engage with its clearing members regarding potential upcoming intraday margin calls. Given the potentially fluid nature of circumstances necessitating the need for an intraday margin call and the possibility that such engagement would not be possible in a time of market stress, imposing such engagement as an obligation would not be appropriate. However, a CCA generally should consider whether its written policies and procedures provide for engagement with a CCA ahead of applying an intraday margin call, as circumstances permit.

iii. Determinations by CCAs To Collect Intraday Margin

Several commenters addressed the role of discretion in the proposed requirement for a CCA to have the authority and operational capacity to make intraday margin calls as frequently as circumstances warrant, including when risk thresholds specified by the CCA are breached or when the products cleared or markets served display elevated volatility.[102] Specifically, while generally supportive of the proposal, several commenters sought confirmation that a CCA could use discretion when deciding to issue intraday margin calls.[103] These

[100] *See supra* note 80 and accompanying text.

[101] SIFMA at 9. This commenter also suggested that the Commission should require that a CCA provide the Commission (and to the extent possible, its clearing participants) with an explanation for any discretionary intraday margin calls. *Id.* at 10.

[102] *See* DTCC; ICE; OCC; CCP12.

[103] DTCC at 4 (requesting additional clarity regarding a CCA's discretion and flexibility and stating that a CCA must maintain the discretion and flexibility to determine if intraday margin calls are required based on the totality of all circumstances the CCA may consider relevant and appropriate); ICE at 2 (stating that a CCA should be allowed the discretion on when and how to use its authority to make intraday margin calls under the particular circumstances); OCC at 4 (seeking explicit confirmation that a CCA may ''exercise judgment when determining whether and when to actually make intraday margin calls, based on all relevant circumstances and using predefined criteria);

commenters stated that such discretion was necessary to allow the CCA to consider the potential procyclical impacts of an intraday margin call and/or any financial stability impacts.[104] In this context, procyclicality refers to ''changes in risk-management practices that are positively correlated with market, business, or credit cycle fluctuations and cause or exacerbate financial instability.'' [105] For example, margin calls during periods of declining asset prices may cause participants to sell assets, putting further negative pressure on asset prices and the market.[106] Such events could negatively affect other CCA participants, as well as other CCAs and their markets.[107]

As discussed above, a CCA's margin methodology includes the criteria that a CCA uses to determine whether to make intraday margin calls.[108] Because a CCA's margin methodology constitutes aspects of the CCA's stated policies, practices, or interpretations under Rule 19b–4, a CCA is required to file a proposed rule change when the CCA revises its margin methodology (including, for example, revisions related to how its risk management concerns may affect a CCA's determination to issue an intraday margin call).[109] In such a filing, the CCA would describe how any such revisions are consistent with the requirements of Exchange Act and the rules thereunder, including Rule 17Ad–22(e)(6).

The Commission agrees with these commenters that a CCA's policies and procedures regarding intraday margin generally should be, under Rule 17Ad–22(e)(6)(ii), reasonably designed to address such risk management concerns, such as procyclicality. The Commission confirms that a CCA's consideration of such concerns (and more generally, of a CCA's understanding of its participants' activity and overall market conditions) in its policies and procedures regarding intraday margin (including a CCA's decision to collect or not collect margin in response to such consideration) is permissible and consistent with the requirements of both preexisting Rule 17Ad–22(e)(6)(ii) and the amendments being adopted in this release. The requirement to adopt policies and procedures that include the authority and operational capacity to make intraday margin calls as frequently as circumstances warrant, including when risk thresholds specified by the CCA are breached or when the products cleared or markets served display elevated volatility,[110] should ensure that a CCA establishes the criteria and thresholds that it would consider when determining whether to make an intraday margin call. Such criteria are subject to the transparency and disclosure requirements discussed above in Part II.A.2.b.ii, and as an SRO, a CCA is obligated to follow its own rules. But the CCA's criteria and thresholds are not required to be inflexible or self-executing. A CCA generally should consider how its policies and procedures specify what factors the CCA would consider when determining when to make an intraday margin call when thresholds are breached or there is elevated volatility.[111]

The Commission is adopting this requirement as proposed.[112] A CCA's determination to issue intraday margin calls, consistent with its *ex ante* policies and procedures, should improve risk management outcomes by enabling a CCA to apply its risk management expertise to changing intraday circumstances, such as the extreme price volatility or significant position changes recently experienced in January 2021.[113] A CCA should be better positioned to respond to a market event more effectively by developing policies and procedures that provide a clear framework for the timing and collection of intraday margin, but that also allows for the CCA to use its expertise (in specific products and markets) to analyze the particular facts and circumstances related to the market event and the affected market participants.

Commenters observed the importance of avoiding procyclicality in margin calls generally and the importance of considering the impact an intraday margin call may have on a CCA's participant.[114] The Commission agrees that a CCA generally should consider these issues when determining whether to issue an intraday margin call, consistent with the applicable regulatory requirement to consider, and produce margin levels commensurate with, the risks and particular attributes of each relevant product, portfolio, and market, and to calculate margin sufficient to cover its potential future exposure to participants in the interval between the last margin collection and the close out of positions following a participant default.[115]

Therefore, in this analysis, a CCA generally should consider, consistent with its policies and procedures, how its approach to intraday margin aligns with broader systemic objectives, such as minimizing potential procyclical effects and avoiding liquidity drains on

CCP12 at 2 (supporting the proposed approach to intraday margin, but also stating that a CCA needs the ability to exercise discretion when issuing intraday margin calls, including the ability to tailor [its] intraday margin call processes to the characteristics of the market it clears (*e.g.,* market structure)); *see also* Davidson at 11. *But see id.* at 9 (explaining that a CCA would only have an ''occasional need'' for an unscheduled intraday margin call'' for only ''truly extreme market moves''); and 10 (warning that unfettered issuances of intraday margin calls could become ''liquidity sinks'' and ''absorb[ ] liquidity like a giant sponge'').

[104] DTCC at 4 (stating discretion is necessary when considering issuing an intraday market call to consider various factors, such as persistent exposure to a participant during normal market conditions, general market conditions, and any possible procyclical effects a margin collection may trigger); ICE at 2 (stating that discretion is needed for a CCA to consider the procyclical effects of any possible intraday margin call, such as ''exacerbating credit and liquidity concerns with clearing members,'' or ''in extreme cases[,] causing market participant defaults); OCC at 4 (stating that, among other things, a CCA's discretion should include considerations related to anti-procyclicality (by maximizing predictability of liquidity demands) and financial market stability); CCP12 at 2 (stating that this discretion would allow a CCA to consider any potential intraday margin call's ''negative procyclical effects'' and/or ''impacts to the stability of the financial system'').

[105] PFMI, *supra* note 9, at 47; *see also* Committee on the Global Financial System, *The role of margin requirements and haircuts in procyclicality* (Mar. 23, 2010) at 8 (defining procyclicality as ''the mutually reinforcing interactions between the financial and real sectors of the economy that tend to amplify business cycle fluctuations and cause or exacerbate financial instability''), *https://www.bis.org/publ/cgfs36.pdf*.

[106] *See infra* Part IV.C.2.a (discussing the relationship between procyclicality and intraday margin calls).

[107] *Id.*

[108] *See supra* note 83 and accompanying text.

[109] *Id.*

[110] *See supra* Part II.A.2.ii (discussing elevated volatility under Rule 17Ad–22(e)(6)(ii) as when a CCA considers volatility to be elevated above typical levels in a manner specific to the products cleared and the markets served); *contra* CCA Standards Adopting Release, *supra* note 5, at 70815 (stating that what would constitute ''high volatility [. . .] may vary across asset classes'').

[111] As discussed above, *supra* note 101, one commenter sought for the Commission to require disclosure to the Commission and, if practicable, a CCA's participants, of the explanation for any ''discretionary'' intraday margin calls. SIFMA at 10. However, such disclosure is not necessary because these policies and procedures should clearly indicate when the CCA would make an intraday margin call. By contrast, the Commission is requiring that a CCA document when it determines *not* to make an intraday margin call when its policies and procedures would otherwise indicate as such. *See infra* note 118 and accompanying text.

[112] The Commission is making several clarifying changes to Rule 17Ad–22(e)(6)(ii)(C): (1) capitalizing the first word of the rule text to read ''Monitors''; (2) adding after the word ''including'' the language ''in the following circumstances'', followed by a semi-colon; (3) adding (1) and (2) to separate the two circumstances described in the rule text; and (4) adding the word ''and'' following the text of the rule.

[113] *See supra* note 17 and accompanying text (further discussing the response to heightened volatility in GME and other equity securities).

[114] SIFMA at 8–9.

[115] 17 CFR 240.17ad–22(e)(6)(i), (iii).

its participants. For example, a CCA may choose not to issue an intraday margin call triggered by the thresholds set forth in its policies and procedures (*i.e.,* when risk thresholds specified by the CCA are breached or when the products cleared or markets served display elevated volatility) if, in the CCA's judgment, the intraday call is not required to effectively manage the risks posed to the CCA. A CCA's decision not to issue an intraday margin call could, therefore, avoid unnecessarily worsening market conditions by fostering procyclicality, and drawing on its members' capital more than needed (*i.e.,* avoiding ''liquidity sinks'').[116]

A commenter also stated that the Commission should require that a CCA provide to the Commission, and to the extent possible, its clearing members, an explanation of the reasons for discretionary intraday margin calls because such explanation would allow for an evaluation of whether the need to make such a call might have been averted by improved procedures.[117] The Commission does not agree that, as the commenter suggests, an obligation to provide an explanation and disclosure is necessary when a CCA makes an intraday margin call, because its policies and procedures already must identify and document the circumstances in which such a call would be made. However, a CCA should be subject to an obligation to document when it, consistent with its policies and procedures, determines not to make an intraday margin call in circumstances identified in such policies and procedures. A requirement to document when a CCA determines not to make such an intraday margin call, pursuant to its written policies and procedures, is broadly consistent with the goal identified by the commenter: that the CCA should be able to evaluate the implementation of its policies and procedures with respect to intraday margin. By keeping a record of such instances in which a CCA determines not to make an intraday margin call, pursuant to its written policies and procedures, it should be easier for a CCA to review its determination not to make an intraday margin call and to determine whether a breach of the thresholds that triggered an intraday call could have been averted by changed procedures. It also should better allow the CCA to holistically consider the procyclical impacts of intraday margin calls, which, as commenters stated, should be considered as part of a CCA's analysis about such calls.

Therefore, the Commission is further amending Rule 17Ad–22(e)(6)(ii) to add paragraph (e)(6)(ii)(D) to require that a CCA's risk-based margin system ''[d]ocuments when the covered clearing agency determines not to make an intraday margin call pursuant to its written policies and procedures required under paragraph (e)(6)(ii)(C)''.[118]

A CCA generally should review, on a regular basis, any documentation created pursuant to this requirement of Rule 17Ad–22(e)(6)(ii)(D). Such documentation can be used to identify the CCA's rationale for not making an intraday margin call. In addition, a CCA generally should consider whether (and how) to disclose the information required under this documentation requirement to its participants, to provide additional transparency to its participants about when a CCA chooses not to make intraday margin calls, including whether such disclosure is necessary pursuant to Rule 17Ad–25(j), which requires that the CCA establish, implement, maintain, and enforce written policies and procedures reasonably designed to require the board of directors to solicit, consider, and document its consideration of the views of participants and other relevant stakeholders of the registered clearing agency regarding material developments in its risk management and operations on a recurring basis.[119] Consistent with this obligation under Rule 17Ad–25(j), a CCA generally should consider how best to solicit the views of participants and other relevant stakeholders regarding intraday margin calls, which could include how they were applied in the past by the CCA.

c. Other Comments

The Commission proposed requirements related to monitoring for intraday exposure and providing further specificity as to the circumstances when an intraday margin call could be made. However, one commenter addressed three additional issues related to more granular details within the calculation of an intraday margin call. First, this commenter addressed the nature of an intraday margin call, stating that any margin determination, including any intraday determination, should be made with respect to a clearing member's current positions and the current value of those positions, to the extent practicable.[120] A CCA generally should determine margin based on its participants' positions, including a participant's total portfolio (that is, not just positions at end of day or intraday).[121]

Second, this commenter also requested that a CCA net against each other any amounts owing to a clearing member from, on the one hand, initial margin and, on the other hand, variation margin.[122] Third, this commenter also requested that intraday margin calls be bidirectional to return margin cash or collateral to a CCA's participants.[123]

In response to these points, the Commission reiterates that the circumstances that could give rise to intraday margin calls at a CCA may vary significantly (*e.g.,* intraday volatility, large changes in participant positions), and may present varied challenges. Accordingly, although there may be circumstances where it would be appropriate for a CCA to take the approach suggested by the commenter, the Commission's approach to Rule 17Ad–22(e) is to provide flexibility to CCAs, subject to their obligations and responsibilities as SROs under the Exchange Act, to design and structure their policies and procedures to take into account the differences among clearing agencies and the markets and products it clears. Accordingly, the Commission is not adopting any requirements in response to this commenter.

This commenter also stated that the establishment of intraday margin

[118] *See supra* note 111.

[119] 17 CFR 240.17ad–25(j).

[120] SIFMA at 9. The Commission understands this commenter to be referring to the difference between initial margin, which is typically collected to cover potential changes in the value of each participant's position (that is, potential future exposure) over the appropriate close-out period in the event that the participant defaults, as compared to variation margin, which is collected and paid out to reflect current exposures resulting from actual changes in market prices and is typically calculated by marking open positions to current market prices. *See, e.g.,* PFMI, *supra* note 9, at 51. The commenter stated that an intraday call should clearly separate the initial margin and variation margin components of such a call. SIFMA at 9.

[121] *See, e.g.,* CPMI–IOSCO Resilience Guidance, *supra* note 14, sec. 5.2.22 (''A CCP faces the risk that its exposure to its participants can change rapidly as a result of intraday changes in prices, positions, or both; ie adverse price movements, as well as participants building larger positions through new trading (and settlement of maturing trades). For the purposes of addressing these and other forms of risk that may arise intraday, a CCP should address and monitor on an ongoing basis how such risks affect all components of its margin system . . .'').

[122] SIFMA at 9.

[123] *Id.* at 7–8, 10; Davidson at 2, 11 (stating that such a bidirectional flow would allow the participants to avoid ''unnecessary liquidity timing gaps''); *see also* The Associations at 2 (requesting prompt return of margin to clearing members and clients to alleviate liquidity constraints).

procedures cannot be viewed separately from the establishment of margin procedures as a whole, and that the reduction of ''surprises'' with respect to intraday margin depends on having transparent margin procedures generally and on having the start of day margin be as near correct as possible (meaning that the margin collected at the established start of day time period, as opposed to an intraday margin call, should be as accurate as possible).[124] The commenter provided several suggestions regarding the calculation of margin more generally.[125] The Commission proposed requirements related to monitoring for intraday exposure and providing further specificity as to when the CCA must consider an intraday margin call. The suggestions provided by the commenter relate to granular details within the calculation of margin. Rule 17Ad–22(e)(6) already contains requirements related to these issues raised by the commenter, most notably, that the CCA's risk-based margin system must consider, and produce margin levels commensurate with, the risks and particular attributes of each relevant product, portfolio, and market, and calculate margin sufficient to cover its potential future exposure to participants between the last margin collection and the close out of positions following a participant default, and use an appropriate method for measuring credit exposure that accounts for relevant product risk factors and portfolio effects across products.[126] Although there may be circumstances where it would be appropriate for a CCA to incorporate policies and procedures such as those suggested by the commenter, the Commission's approach to Rule 17Ad–22(e) is to provide flexibility to CCAs, subject to their obligations and responsibilities as SROs under the Exchange Act, to design and structure their policies and procedures to take into account each clearing agency's unique characteristics. In addition, the transparency requirements discussed in Part II.A.2.b.ii apply to all components of a CCA's margin model, including those discussed by the commenter.

One commenter recommended that the Commission require a CCA to disclose particular aspects of its risk models used in the calculation of initial margin.[127] As discussed *supra* in Part II.A.2.b.ii, CCAs are already required to provide disclosure of key aspects of their margin models under Exchange Act Rule 17Ad–22(e)(23)(iv) and to file their rules as part of the SRO and/or SIFMU rule filing processes, which further provides transparency.[128] Therefore, additional disclosure requirements are not required because of the current requirements that a CCA must disclose key aspects of its margin model.

Another commenter stated that a CCA should be required to publish regular statistics in a consistent format as to the performance of margin requirements, including how many clearing members were subject to margin calls of what size, did clearing members go into a margin deficit, and how frequently.[129] However, CCAs already include, as part of their public disclosures under Rule 17Ad–22(e)(23)(iv)(C), a description of basic data and performance statistics on their services and operations, such as basic volume and value statistics by product type, average aggregate intraday exposures to its participants, and statistics on the CCA's operational reliability.[130] As such, the Commission is not adopting any additional disclosure requirements. However, CCAs generally provide such public information regarding their margin models' performance as part of their periodic disclosures.[131] For example, these disclosures include, with respect to margin, identification of the number of times over the past 12 months that margin coverage held against any account fell below the actual mark-to-market exposure of that member account based on daily backtesting results and, in the event of a breach of initial margin coverage, a report on the size of the uncovered exposure, both of which are data points consistent with the commenter's request to identify whether clearing members went into a margin deficit and how frequently.[132] Accordingly, the Commission is not adopting additional requirements. However, a CCA generally should consider what disclosures regarding its policies and procedures for margin collection can be useful to market participants to facilitate their understanding of the performance of its margin model.

B. Inputs to Margin System

1. Proposed Amendment to Rule 17Ad–22(e)(6)(iv)

In the RWP Proposing Release, the Commission proposed to amend Rule 17Ad–22(e)(6)(iv) to strengthen its requirements that a CCA have policies and procedures reasonably designed to cover its credit exposures to its participants by establishing a risk-based margin system that, among other things, uses reliable sources for its price data and uses procedures for addressing circumstances in which price data are not readily available or reliable.[133] Specifically, the Commission proposed expanding the rule's scope beyond price data to also include other substantive inputs to a CCA's risk-based margin system,[134] meaning that the CCA's procedures would also have to address when such a substantive input is not readily available or reliable.[135] The unavailability or unreliability of any substantive input to a CCA's margin system could potentially affect the CCA's ability to calculate margin.[136] Citing as justification the current requirement of ''reliable sources'' of price data,[137] the Commission stated that there is a need to use reliable sources for substantive inputs other than price data.[138] In response, the Commission proposed to expand this requirement to substantive inputs other than price data.[139] The Commission stated that this proposal ''should help ensure that the CCA can continue to calculate and collect margin'' pursuant to its obligations under Rule 17Ad–22(e)(6).[140]

The Commission also proposed two new requirements on a CCA's backup procedures when price data and other

[134] *See id.* at 34715 (stating that ''substantive'' refers to ''any inputs used by the covered clearing agency that are necessary for the risk-based margin system to calculate margin'').

[135] *Id.* at 34714.

[136] *Id.*

[137] *Id.* (explaining that a reliable source of timely price data was necessary because a CCA's ''margin system needs such data to operate with a high degree of accuracy and reliability, given the risks that the CCA's size, operation, and importance pose to U.S. securities markets'').

[138] *Id.*

[139] *Id.* at 34714–15 (''The Commission is therefore proposing to amend Rule 17Ad–22(e)(6)(iv) to expand its scope beyond price data to encompass other substantive inputs to its risk-based margin system and to impose requirements on a [CCA] to have procedures when such substantive inputs are not readily available or reliable'').

[140] *Id.* at 34714.

substantive inputs are not readily available or reliable. First, the Commission proposed these procedures to help ensure that the CCA can meet its obligations under Rule 17Ad–22(e)(6).[141] Second, the Commission proposed that these procedures must include either: (i) the use of price data or other substantive input from an alternate source; or (ii) the use of an alternate risk-based margin system that does not similarly rely on the same unavailable or unreliable substantive input.[142]

In proposing this amendment, the Commission included the following guidance: an alternate source ''generally should meet the same level of reliability of the primary source;'' and an ''alternate risk-based system needs to be an alternate margin model that does not rely on the same data source that is unavailable or unreliable'' to ensure to compliance with Rule 17Ad–22(e)(6).[143] The Commission also stated that an alternate risk-based margin system would be subject to the requirements of 17 CFR 240.17ad–22(e)(6)(vi) and (vii), with respect to monitoring, review, testing, verification, and model validation.[144] Additionally, the Commission stated that a CCA should ''consider its reliance on any third party sources for purposes of its risk-based margin system and consider whether an alternate system or source of data or other inputs that is internal to the CCA, and does not rely upon any third party provider, would be appropriate.'' [145]

The Commission is adopting the requirement as proposed, with minor modifications discussed in Part II.B.2 below. The Commission is also making clarifying technical changes.[146]

[141] *Id.* at 34715.

[142] *Id.*

[143] *Id.*

[144] *Id.*

[145] *Id.*

[146] Specifically, the Commission is: (1) adding paragraph markers (in the form of capital letters) to separate the clauses of the rule text into (A), (B), and (C); (2) changing the punctuation from a comma to a semi-colon and deleting the word ''and'' at the end of paragraph (e)(6)(iv)(A); (2) adding parenthesis around the text ''and, with respect to price data, sound valuation models'', deleting the comma at the end of that language, and changing the period to a semi-colon at the end of paragraph (e)(6)(iv)(B); (3) adding additional paragraph markers (*1*) and (*2*) to paragraph (e)(6)(iv)(C) before each of the two alternatives listed in this paragraph (*i.e.,* ''the use of price data or substantive inputs from an alternate source; or'' and ''if it does not use an alternate source, the use of a risk-based margin system that does not rely on the unavailable or unreliable substantive input;'') and capitalizing the first word in each new paragraphs (e)(6)(iv)(C)(*1*) and (*2*) (''The'' and ''If'', respectively); (4) adding a clarifying, internal cross-reference (''such procedures under paragraph (e)(6)(iv)(B)'') in paragraph (e)(6)(iv)(C); and (5) replacing the word ''shall'' in new Rule 17Ad–22(e)(6)(iv)(C) (*i.e.,* ''Such procedure under paragraph (e)(6)(iv)(B) of this section *shall*'') with ''must'' to use more plain language.

2. Discussion of Comments

a. Inclusion and Definition of Substantive Inputs

As discussed above, the Commission proposed expanding the scope of Rule 17Ad–22(e)(6)(iv) beyond price data to also include substantive inputs to a CCA's margin methodology.[147] Based on its supervisory experience, the Commission understands that such substantive inputs could include: (i) portfolio size; (ii) volatility, (iii) sensitivity to various risk factors that are likely to influence security prices; (iv) duration; (v) convexity; and/or (vi) the results of models run by third parties.[148]

Several commenters addressed this proposed modification to Rule 17Ad–22(e)(6)(iv).[149] One commenter agreed generally with the proposed extension of the rule's scope to include ''substantive inputs.'' [150] The commenter supported extending the requirement for ''reliable sources'' to include substantive inputs because a CCA's margin systems need ''to operate with a high degree of accuracy and reliability, given the risk that [its] size, operation, and importance posed to the securities market.'' [151]

Several commenters requested that the Commission provide more guidance regarding its statement about what inputs may be ''substantive.'' [152] One commenter requested that ''the term 'substantive' as used in this context be further refined to avoid confusion over the inputs that are 'necessary' and those that are 'non-consequential.' '' [153] In addition, several commenters stated that the CCA should determine what constitutes a substantive input.[154] One such commenter also stated that, if the Commission prescribed a definition of ''substantive input,'' a CCA may be forced to ''obtain, often at great expense, alternate data sources for inputs with limited utility and minimal or no impact on margin calculations.'' [155]

However, another commenter stated that the Commission's rules around substantive inputs should be principles based, identifying one such principle that ''every input that affects margin requirements by [x]% is deemed substantive.'' [156]

The Commission is not making any amendments to define what constitutes a substantive input. A CCA is responsible for developing its own policies and procedures, including its margin methodology, and it is best positioned to determine what constitutes a substantive input into its margin methodology. As stated in the RWP Proposing Release, ''substantive'' for the purposes of Rule 17Ad–22(e)(6)(iv), ''refers to any inputs used by the CCA that are necessary for the risk-based margin system to calculate margin'' and ''is meant to distinguish from other potential inputs that may not be consequential to the calculation of margin.'' [157] Accordingly, as requested by some commenters, the Commission confirms that a CCA has the discretion to determine what is a ''substantive'' input, based on its knowledge of its risk-based margin system, as compared to those that it determines to be non-consequential.[158] When establishing and maintaining its risk-based margin system, each CCA must have the ability to consider its own unique characteristics and circumstances, as well as those of the market it serves.[159] Rather than have the Commission define the term ''substantive'' prescriptively for each CCA, this discretion corresponds with the Commission's principles-based approach in Rule 17Ad–22(e), which helps each CCA effectively meet the evolving risks and challenges in the markets that each CCA serves.[160] Therefore, no further clarifications or guidance are necessary to distinguish a substantive input from those inputs that are non-consequential.

Further, the Commission is not adopting any amendments to Rule 17Ad–22(e)(6)(iv) to incorporate the principle that ''every input that affects margin requirements by [x]% is deemed substantive.'' [161] This type of requirement would not be principles-

[147] In addition, to improve clarity and consistency of terms, the Commission proposed technical edits standardizing references to ''price data'' in Rule 17Ad–22(e)(6)(iv), which currently refers to both ''price data'' and ''pricing data,'' to refer only to price data. The Commission previously used the two words interchangeably in preexisting Rule 17Ad–22(e)(6)(ii). RWP Proposing Release, *supra* note 18, at 34714 n.59. The Commission received no comments on this proposed technical change of ''pricing data'' to ''price data'' in this provision and is adopting as proposed.

[148] RWP Proposing Release, *supra* note 18, at 34714.

based and instead would prescribe a particular scope of what constitutes ''substantive,'' which the Commission does not seek to do. Based on its supervisory experience, the Commission understands that a wide range of margin models exists among the CCAs. This wide range of margin models exists due to each CCA's different participants, different products cleared, and different markets served. Given these distinctions among the CCAs, and consistent with the principles-based approach in Rule 17Ad–22(e) more generally, the Commission believes it would be inappropriate to include in Rule 17Ad–22(e)(6)(iv) a quantitative threshold defining those inputs that would be ''substantive.'' Such a specific percentage threshold likely would fail to identify all the inputs for all CCAs' margin models that are necessary to ensure every CCA's margin model can meet the requirements of Rule 17Ad–22(e)(6) (*i.e.,* covering its credit exposures to its participants). Therefore, the Commission is not adopting modifications responsive to the commenter requesting ''substantive'' to correspond to a percentage impact on margin requirements.

b. Use of an Alternate Source or an Alternate Risk-Based Margin System

As proposed, the changes to Rule 17Ad–22(e)(6)(iv) required that the procedures for when price data or substantive inputs are not readily available or reliable must include the use of price data or substantive inputs from an alternate source or, if it does not use an alternate source, the use of an alternate risk-based margin system (that does not similarly rely on the unavailable or unreliable substantive input).[162]

One commenter expressed support for this proposed requirement,[163] and other commenters acknowledged the importance of ensuring that a CCA's risk-based margin system be able to perform even when certain sources of pricing data or other inputs become unavailable.[164]

However, several commenters disagreed with the requirement of a sole means of contingency (that is, the use of alternate sources) and stated that CCAs should have the flexibility to develop their own backup procedures and/or appropriate substitutions for unavailable inputs in their margin models, depending on the products cleared and the markets served.[165] These commenters stated that it may not always be possible to have a ''like-for-like'' substitution of an alternate source.[166] One commenter stated that the Commission should not restrict choices in an emergency situation by requiring that an alternate source be independent of the third-party provider, and that CCAs should simply have a ''credible fallback'' in the event of unavailable price data or substantive inputs.[167] Another such commenter recommended that the proposal be modified to allow for ''substantive inputs from an alternate source, and/or of appropriate alternate inputs.'' [168]

In response to the commenters who sought revisions to the proposed requirement's obligation to use an alternate source, the requirement of an alternate source does not mean that such an alternate source must be external to a CCA or that the alternate source must be of the same nature as the original substantive input (that is, the alternate source need not be a ''like-for-like'' substitute). As stated in the RWP Proposing Release, ''alternate source[s] generally should meet the same level of reliability of the primary source, *whether that alternate is sourced from an external provider or created internally*.'' [169] By acknowledging that an alternate source may be created internally, the Commission recognized that an alternate source means, simply, an alternate to the primary input and does not require an entirely independent, third-party source to provide the same input. Similarly, the recognition that the alternate source may be created internally means that the Commission also recognized that the alternate source may, in fact, be the result of internal policies and procedures that the CCA designs to develop an internal alternate source and meet the needs of its margin methodology.

Further, in response to the commenters seeking flexibility to develop their own backup procedures, this requirement does not prevent a CCA from using its discretion to determine the most appropriate substitution for any price data or substantive input to its risk-based margin system.[170] This requirement also does not preclude the use of policies and procedures that establish a methodology or approach to determine the appropriate price,[171] so long as, as discussed in Part II.B.2.c *infra,* the CCA can still meet the obligations of Rule 17Ad–22(e)(6), including meeting its credit obligations to its participants.[172] Therefore, revisions to or deletion of the rule text regarding alternate sources, including those suggested by one commenter to allow for ''substantive inputs from an alternate source, and/or of appropriate alternate inputs,[173] are not necessary, as the rule text does not require an externally provided alternate source.

One commenter stated that the Commission should ''refocus[ ]'' the final rule on policies and procedures, as opposed to requiring policies and procedures that include an alternate source or risk-based margin system.[174] The Commission agrees that the

[162] RWP Proposing Release, *supra* note 18, at 34715.

[163] Better Markets at 9 (stating that this proposed requirement would ensure that the backup procedures available to a CCA ''are sufficiently distinct from the impaired data source that they will serves as reliable alternatives'').

[164] *See* OCC at 4; ICE at 2; CCP12 at 2.

[165] DTCC at 4 (stating that a CCA should have ''the flexibility to develop reasonable backup procedures and contingency plans for these types of circumstances, which will depend on the cleared products and market structure at issue, and may not in all cases include the use of third-party secondary vendors or data sources''); OCC at 5 (stating that a CCA should be permitted to use its informed judgment to determine the appropriate substitutions for unavailable inputs in its margin system, which would ensure that CCAs have sufficient flexibility to address the need for alternative data sources in a manner that addresses the Commission's policy objectives, is tailored to the markets served and products cleared by the [CCA], and is not unnecessarily burdensome).

[166] DTCC at 4–5 (stating that requiring an alternate source would not always be the most practical or effective means to ensure a CCA meets its participants' credit obligations under Exchange Act Rule 17Ad–22(e)(4), due to the possible absence of an alternate source of pricing data or other substantive inputs (*e.g.,* because of industry consolidation among vendors), and the inability to use discretion to develop a solution to unavailable price data or other substantive input); OCC at 4 (stating that alternate sources may not exist, or may be prohibitively expensive or technically difficult to implement when compared to the impact of the input on the margin model). One such commenter suggested that a CCA may find it appropriate if its policies and procedures incorporated the use of an alternative pricing vendor, where applicable, or in the absence of such an alternative provider, pursuant to the CCA's policies and procedures to ensure that timely pricing data is applied, with such procedures including, for example, recording ''the last available price'' in the CCA's pricing database with such price consumable to applicable participants (citing to its recent update to its Clearing Agencies' Securities Valuation Framework). *Id.* at 5.

[167] The Associations at 9.

[168] OCC at 5.

[169] RWP Proposing Release, *supra* note 18, at 34715 (emphasis added).

[170] *Id.*

[171] For example, one CCA commenter stated that its existing policy provided that backup pricing may more accurately be sourced from an alternative pricing vendor or may also be determined, in the absence of an alternative pricing vendor, pursuant to the CCA's applicable policies and procedures to ensure that timely pricing data is applied, with such procedures including, for example, using the last available price which is consumable to applicable participants. DTCC at 5.

[172] RWP Proposing Release, *supra* note 18, at 34715.

[173] *See* OCC at 5.

[174] CCP12 at 2.

requirement should allow for flexibility in how CCAs address the unavailability or unreliability of an input to their margin model. The requirement being adopted does not mandate that a specific alternate source be used, but rather that the CCAs have policies and procedures to ensure that some alternate source is available, even if that source is determined internally by the CCA.

With respect to the requirement of a potential alternate risk-based margin system, one commenter stated that requiring CCAs to develop and maintain an entire alternate risk-based margin system would be prohibitively expensive and operationally burdensome.[175] However, the Commission disagrees with the commenter's characterization that such costs are necessary because the proposed rule does not require the development and maintenance of a second risk-based margin system separate from its current risk-based margin system, as discussed below.[176] Another commenter suggested that the Commission should remove the requirement of a potential alternate risk-based margin system from the rule text.[177] The Commission disagrees that the proposed rule requires a second risk-based margin system separate from a CCA's current risk-based margin system, and the Commission is modifying the term ''alternate risk-based margin system'' to make this point clear.[178] Specifically, the proposed requirement for backup procedures when substantive inputs ''are not readily available or reliable'' should help a CCA ensure it ''can continue to calculate and collect margin commensurate with, the risks and particular attributes of each relevant product, portfolio, and market, as required under Rule 17Ad–22(e)(6)(i).'' [179]

Similarly, another commenter disagreed with the proposed additional requirement that a CCA have advance plans ''to use an alternate risk-based margin system because of the unavailability or unreliability of a particular input,'' which ''would impose a significant burden on a [CCA] solely for the purpose of addressing a problem with an input that may be transitory.'' [180] The commenter stated that it ''is not aware of circumstances where a [CCA] has been unable to address a problem with an input price through its normal business practices and procedures.'' [181] The commenter also stated that it ''does not believe that the Commission has articulated a problem (other than a theoretical one)'' that the proposal is designed to address and ''has not recognized the considerable costs to'' CCAs, clearing firms, and other market participants ''that would be required to develop and implement alternate margin models to address a remote and theoretical problem with price or other data inputs.'' [182] The commenter suggested that this clause be removed from the rule text.[183] In addition, one commenter requested that the Commission confirm that any final rule does not create an expectation that CCAs should develop an alternate risk-based margin system.[184]

The Commission disagrees with the commenter that the failure of a CCA's margin model (*i.e.,* its risk-based margin system) due to an unavailable or unreliable input is a ''theoretical'' problem. Rather, the unavailability or unreliability of a substantive input could impact a CCA's ability to establish, implement, maintain, and enforce a risk-based margin system that Rule 17Ad–22(e)(6) requires. Moreover, contrary to the commenter's assertion, the Commission is not requiring that CCAs develop and implement alternate margin models, but rather, is requiring that the CCA establish, implement, maintain and enforce written policies and procedures to address particular issues that could affect the functioning of its margin model. The requirement also allows for the use of an alternate source in the existing risk-based margin system, and a CCA may determine the alternate source using its own policies and procedures.[185] An alternate source from a third-party provider is not required. More generally, this requirement is designed to expand the scope of the preexisting rule and ensure that a CCA establishes, implements, maintains and enforces written policies and procedures to address the unavailability of a substantive input to its margin model and meet its obligations under Rule 17Ad–22(e)(6). As stated in the RWP Proposing Release, when substantive inputs are unavailable or unreliable, CCAs must be able to continue to calculate and collect margin commensurate with, the risks and particular attributes of each relevant product, portfolio, and market.[186] Additionally, the Commission analyzed the costs of the requirement in Part IV, *infra,* and in the RWP Proposing Release. Given the analysis, the Commission disagrees with the commenter's suggestion to remove the clause from the proposal.

The Commission is making several technical changes to the rule text to clarify that an alternate risk-based margin system is not required in all instances. Specifically, the Commission deletes the word ''alternate'' from ''an alternate risk-based margin system'' in Rule 17Ad–22(e)(6)(iv)(C)(*2*) (and changes ''an'' to ''a'' before ''risk-based margin system'' for grammatical reasons). This revision responds to commenters' concerns that the rule requires that a CCA develop an alternate risk-based margin system separate from a CCA's current risk-based margin system.[187] The rule does not include such a requirement. The Commission is also adding the term ''either'' after ''must include'' to clarify that satisfying either paragraph (e)(6)(iv)(C)(*1*) or (*2*) fulfills paragraph (e)(6)(iv)(C)'s requirement.[188]

c. Obligation To Meet a CCA's Obligations Under Rule 17Ad–22(e)(6)

The proposed amendment to Rule 17Ad–22(e)(6)(iv) also provided that the procedures discussed in Part II.B.2.b must ensure that the CCA is able to meet its obligation to cover credit exposures to its participants under Rule 17Ad–22(e)(6).[189] In the RWP Proposing Release, the Commission explained that, by specifying how these procedures must perform (*i.e.,* to allow a CCA to continue to cover its credit exposures), this proposed amendment helps ensure that a CCA adopts sufficiently robust procedures.[190] As such, this proposed amendment would, with respect to both

[184] CCP12 at 3 (stating that the development of such an alternate system would require a CCA to effectively maintain two very distinct margin systems, which is likely very resource intensive and time consuming).

[185] RWP Proposing Release, *supra* note 18, at 34715.

[186] *Id.* at 34714.

[187] *See supra* notes 175, 184 and 177 and accompanying text.

[188] The Commission also removes from Rule 17Ad–22(e)(6)(iv)(C) the word ''similarly'' from between the words ''not'' and ''rely'' (*i.e.,* ''the use of a risk-based margin system that does *not rely* on the unavailable or unreliable substantive input'') to remove redundancy (as the word ''similarly'' was unnecessary to convey the meaning that the prohibited reliance was on the unavailable or unreliable substantive input in question). The Commission also revises the reference to ''the unavailable or unreliable substantive input'' to ''substantive inputs that are unavailable or reliable'' for the same reasons.

[189] RWP Proposing Release, *supra* note 18, at 34715.

[190] *Id.*

price data and other substantive inputs, require that such procedures should address circumstances in which price data or substantive inputs are not readily available or reliable, in order to ensure that the CCA be able to meet its requirements under Rule 17Ad–22(e)(6) and cover its credit exposures to its participants.[191]

The Commission received no comments on this requirement and is adopting as proposed.

C. Contents of Recovery and Orderly Wind-Down Plans

The Commission received several overarching comments on proposed Rule 17Ad–26 that were generally supportive of the approach, particularly the addition of new and more specific requirements applicable to a CCA's RWP. One commenter stated that a detailed RWP is essential, as the inability of a CCA to recover from severe losses, or the disorderly wind-down of a CCA, could have significant repercussions not only for the sector in which the CCA operates but for the markets and the economy as a whole.[192] The commenter also stated that CCAs must have comprehensive RWPs because even sound risk management may not prevent a CCA's default in extreme circumstances.[193] The commenter continued by stating the obvious strength of recovery and orderly wind-down planning is the *ex ante* development of a strategy to maintain as a going concern the critical operations of the CCA, even in the face of losses that would otherwise have caused its insolvency, or to ensure the orderly transfer of functions.[194] The commenter stated that not aligning RWPs to uniform requirements introduces risk, and that the proposed rule mitigates that risk by requiring all RWPs to incorporate at least nine specific elements.[195] Another commenter explained that CCAs face no meaningful competitive pressure when they are the sole clearing agency for the products they clear and can be a source of systemic risk.[196] The commenter stated that, in such cases, to improve CCAs, regulatory mandates must effectively codify existing best practices to enhance resiliency and create a level playing field for resiliency, and that such improvements will only occur if the Commission imposes specific regulatory requirements.[197]

One commenter cautioned that the proposed upgrades and focus on RWP design and testing may create unrealistic expectations and over-reliance on RWPs. The commenter also stated that care is needed to ensure that confidence in such plans is well grounded and that the efficient implementation of RWPs is properly stressed, accounting for rapidly evolving market risk and for the ever-increasing speed of market-moving data.[198] In the Commission's view, effective planning can help preserve financial stability and ensure the continuity of critical CCP and CSD functions for the markets served by CCAs, and the availability of tools and resources in the RWP generally reserved for recovery and wind-down scenarios would not lead to an ''over-reliance'' on such tools in practice. In practical terms, default management, recovery, and wind-down exist as distinct points across a spectrum from normal market conditions to highly stressed market conditions. As such, a CCA would deploy its RWP either (i) in a default scenario, only after its business-as-usual default management tools had failed to close out any defaulting portfolios and, likely, after the CCA had fully exhausted its prefunded resources, or (ii) in a non-default scenario, after resources set aside for business risk (*e.g.,* six months of operating expenses) or for other purposes had been exhausted. Commission rules impose a high standard for resilience in normal and stressed market conditions across both default and non-default loss scenarios, consistent with the international standards set forth in the PFMI, of which planning for recovery and orderly wind-down is but one part of a multi-part and comprehensive regulatory framework. Given this dynamic, CCAs would not have incentives to ''activate'' their RWPs early.

More generally, the Commission agrees with commenters expressing the view that thoughtful recovery and wind-down planning is necessary, even when effective risk-management measures are in place, because of the potential systemic risk implications of the failure of a CCA. Given the evolving nature of recovery and orderly wind-down planning, as well as the annual review and testing requirements included in Rule 17Ad–26, the concern that adding more robust requirements for development and testing of RWPs will lead to ''over-reliance'' on RWPs is misplaced. Effective RWPs, with robust consideration of scenarios, triggers, and processes for testing and board approval, help promote recovery. Such planning for recovery is essential because, as other commenters have stated, the wind-down of systemic functions often would not leave alternative providers of clearance and settlement services to support continued market function.[199] To reach the stage where a CCA would consider implementing its RWP, in the context of a default loss, the CCA would have to incur default losses greater than the financial resources maintained pursuant to policies and procedures required by Rule 17Ad–22(e)(4),[200] or in a non-default loss context, incur losses greater than the liquid net assets funded by equity held pursuant to the policies and procedures required by Rule 17Ad–22(e)(15)(ii) to cover potential business losses.[201] As such, neither CCAs nor market participants are in danger of ''over-reliance'' on the policies and procedures that undergird RWPs. In addition, although many systemic functions are not currently offered by alternative providers, RWPs can, in establishing robust policies and procedures for orderly wind-down, help facilitate the orderly transfer of systemic functions to a new entity to maintain clearance and settlement services for the market served.

[199] *See, e.g.,* Davidson at 1. This concern regarding the feasibility or advisability of wind-down in the context of CCAs is discussed further in Part II.D.1.c.

[200] *See* 17 CFR 240.17ad–22(e)(4)(i) (requiring a CCA to maintain sufficient financial resources to cover its credit exposure to each participant fully with a high degree of confidence); *see also* 17 CFR 240.17ad–22(e)(4)(ii) (requiring a CCA that provides CCP services and is either systemically important in multiple jurisdictions or a clearing agency involved in activities with a more complex risk profile to maintain additional financial resources at the minimum to enable it to cover a wide range of foreseeable stress scenarios that include, but are not limited to, the default of the two participant families that would potentially cause the largest aggregate credit exposure for the CCA in extreme but plausible market conditions); 17 CFR 240.17ad–22(e)(4)(iii) (requiring a CCA that is not subject to Rule 17Ad–22(e)(4)(ii) to maintain additional financial resources at the minimum to enable it to cover a wide range of foreseeable stress scenarios that include, but are not limited to, the default of the participant family that would potentially cause the largest aggregate credit exposure for the CCA in extreme but plausible market conditions).

[201] *See* 17 CFR 240.17ad–22(e)(15)(ii) (requiring a CCA, at a minimum, to hold liquid net assets funded by equity equal to the greater of either six months of the CCA's current operating expenses, or the amount determined by the board of directors to be sufficient to ensure a recovery or orderly wind-down of the CCA).

Another commenter stated that the RWP Proposing Release has not met the burden of proof required by the Administrative Procedure Act. More specifically, the commenter stated that the Commission has not demonstrated that the rule amendments are necessary or in the public interest because the proposed amendments are to existing rules that already more than adequately cover the areas in question, and there have been no examples of CCAs or clearing agency participants that failed or of CCAs that executed recovery plans or parts thereof. [202] The commenter further explains that the existing SRO rules of the CCAs relating to RWPs have been approved by the Commission, and that the Commission has conducted multiple examinations of CCAs under those rules, where any deficiencies found have been subject to, or are in the process of, review and remediation.

Although rare, CCPs both in the U.S. and abroad have experienced highly stressed market conditions that led to participant defaults, and CCP failures have occurred outside the U.S. Examples of such participant defaults include three CCP failures in other jurisdictions in recent history, as well as the market stress that CCPs faced in response to the 1987 market break and in response to the beginning of the COVID–19 pandemic in 2020.[203] These defaults and failures could happen again and underscore the importance of the Commission's ongoing efforts to ensure effective supervision and regulation of CCAs following the enactment of the Dodd-Frank Act, as discussed in Part I.[204] These examples also reinforce the possibility that even a robust and resilient CCA holding a sizeable pool of prefunded resources and other liquid resources may experience stressed market conditions or other events so extreme that the resources it has reserved for potential loss scenarios will prove insufficient, potentially necessitating actions beyond ''business-as-usual'' default management. By establishing requirements related to core services and service providers, the identification of scenarios, triggers, and tools for recovery and orderly wind-down, and robust processes for implementation, notification, testing and board review and approval, new Rule 17Ad–26 helps ensure that CCAs can successfully plan for, and navigate highly stressed or extreme market conditions, where events may occur or conditions deteriorate rapidly.[205]

Pursuant to the Exchange Act, the Commission is directed to facilitate the ongoing development of the national system for clearance and settlement, which includes ensuring effective risk management at CCAs. As discussed throughout the RWP Proposing Release, and in this release, the Commission has proposed and is now adopting new Rule 17Ad–26 to codify certain elements that have emerged across some RWPs that must be included in all RWPs to help ensure a CCA can effectively allocate uncovered losses, manage liquidity shortfalls, and address capital shortfalls arising from other causes. As such, new Rule 17Ad–26 sets forth these elements. While existing RWPs at CCAs may contain several of these elements, new Rule 17Ad–26 requires each CCA to have every element in its RWP. As previously discussed,[206] new Rule 17Ad–26 also promotes three important objectives consistent with its statutory mandates: (i) bolstering the existing RWPs at CCAs; (ii) codifying some existing RWP elements to ensure that these elements remain in the plans over time; and (iii) establishing that the RWP of any new CCA would contain each of the elements specified in the rule. In so doing, the Commission is establishing a higher minimum standard for the quality and effectiveness of RWPs, designed to help ensure that planning for recovery and orderly wind-down is effective and can promote financial stability in periods of market stress. The Commission will continue to review rule filings and advance notices submitted by CCAs under the rules adopted in this release to help ensure the regulatory framework is an effective tool that can advance the evolving process of recovery and resolution planning for CCPs and other CCAs.

Below the Commission addresses comments regarding specific elements of proposed Rule 17Ad–26.[207]

1. Core Services: Rule 17Ad–26(a)(1)

Proposed Rule 17Ad–26(a)(1) required a CCA to identify and describe in its RWP the CCA's critical payment, clearing, and settlement services and address how the CCA would continue to provide such critical services in the event of a recovery and during an orderly wind-down, including the identification of the staffing necessary to support such critical services and analysis of how such staffing would continue in the event of a recovery and during an orderly wind-down.

In the RWP Proposing Release, the Commission explained that the first step in effective recovery and orderly wind-down planning must be identification of the critical services provided to market participants because market participants rely on these services to facilitate payment, clearing, and settlement in the U.S. securities markets. The Commission also stated that such planning helps ensure that RWPs focus on a CCA's ability to provide these services on an ongoing basis, even under stress.[208] Furthermore, the Commission stated its belief that the CCA generally should consider the impact that any interruption to particular services would have on the CCA's participants and the smooth functioning of the market it serves, as well as whether the service is available from any substitute provider. In the proposed rule, ''critical'' referred to the importance of the service to participants and to the proper functioning of the markets, where an inability to provide the service would implicate financial stability concerns. As such, the Commission also proposed definitions of ''recovery'' and ''orderly wind-down'' focused on the need to continue to provide the critical payment, clearance, and settlement services provided by a CCA through the recovery or wind-down event.[209]

Several commenters generally supported the requirement to identify the critical payment, clearance, and settlement services provided by a CCA and address how the CCA would continue to provide such critical services.[210]

[202] Davidson at 1–3.

[203] *See, e.g.,* Staff Report on the Regulation of Clearing Agencies (Oct. 1, 2020) at 18, n.93, *https://www.sec.gov/files/regulation-clearing-agencies-100120.pdf* (describing recent examples of participant defaults); Bank for International Settlements (''BIS''), *CCP Failure: A Rare but Present Danger* (Dec. 16, 2018), *https://www.bis.org/publ/qtrpdf/r_qt1812z.htm* (describing three CCP failures over the last 50 years); ''The October 1987 Market Break, A Report by the Division of Market Regulation'' (Feb. 1988), *https://www.sechistorical.org/collection/papers/1980/1988_0201_MarketBreak_01.pdf* (describing the market stress associated with the 1987 market crash and the stress it placed on CCPs at the time).

[210] *See* SIFMA at 14 (''strongly supports the requirement that Clearing Agencies ensure that they are able to maintain access to services''); ICE at 3 (''supports the requirement to identify critical payment, clearing, and settlement services and to address continued use of such services during a

a. Replacing ''Critical'' With ''Core''

The Commission is modifying the final rule to refer to ''core payment, clearance, and settlement services'' rather than ''critical payment, clearance, and settlement services'' (hereinafter, referred to as ''core services'') to improve clarity and consistency with terminology in other rules, such as Rule 17Ad–25(i),[211] which concerns the governance of ''service providers for core services.'' Furthermore, the use of ''core'' as opposed to ''critical'' helps distinguish a CCA's obligations under Rule 17Ad–26 from those under 17 CFR 242.1000 through 242.1007 (''Regulation SCI''), which addresses, in the context of clearing agencies subject to the rule, ''critical systems'' that support clearance and settlement.[212]

Use of the descriptive term ''core'' rather than ''critical'' does not affect the Commission's guidance stated in the RWP Proposing Release on identifying those services.[213] Accordingly, when identifying a core service, the CCA generally should consider the impact that any interruption to a particular service would have on the CCA's participants and the smooth functioning of the markets that it serves, as well as whether the service is available from any substitute provider.[214]

b. Modification to ''Staffing'' Element

Several commenters stated that identifying staffing or staffing resources is a necessary part of addressing how a CCA may continue providing its core services.[215] One of those commenters stated that it is not necessary to identify specific personnel or positions required to be maintained, and a CCA should have flexibility to determine the staff needed in a particular situation, including taking into consideration the availability and willingness of personnel to perform services at the time of a recovery or wind-down.[216] The commenter suggested the proposed rule be amended to clarify that the CCA is not required to identify specific personnel or positions required to be maintained.[217] Similarly, another commenter stated that lists of specific employees may become dated quickly due to a shift in responsibility or normal attrition.[218] Another commenter stated, given the volume of employee turnover and new initiatives, personnel designations likely change with regularity, making specific identification of personnel in the RWP superfluous.[219]

The Commission agrees with the commenters that identifying specific personnel or employees is not necessary in planning and recognizes that changes may occur in the staffing at a CCA. However, it is important for planning purposes to identify those positions, roles, or personnel functions that are necessary for the continuation of core services, regardless of who or how many staff fills the role in ordinary circumstances, to avoid unnecessary disruptions. As such, the Commission is modifying the final rule from the proposal to refer to the identification of ''staffing roles'' instead of ''staffing,'' the latter of which could have been interpreted as requiring the identification of specific individuals.

Several commenters responded to the clause requiring ''analysis of how such staffing would continue in the event of a recovery and during an orderly wind-down.'' One commenter stated that the process for preparing to retain and incentivize critical employees under adverse circumstances is the critical piece of information necessary for the CCA and its supervisory and resolution authorities.[220] The commenter stated that what is most important in this aspect of planning are the retention tools the CCA uses, how it considers retention when setting and negotiating employment terms with essential personnel, and how it tracks the terms of each such employee's employment.[221] The commenter suggested a minor wording change to proposed Rule 17Ad–26(a)(1) to state ''analysis of how the CCA prepares for such staffing to continue in the event of a recovery and during an orderly wind-down.'' [222] Another commenter stated that it is important to have sufficient going concern resources to allow a CCA to retain its key personnel, claiming that the inability to keep personnel from leaving after a prior high profile insolvency event in the 2008 financial crisis contributed to large losses.[223] Another commenter stated that not even the most lucrative employment agreements can be sufficient to retain highly in-demand skilled employees on a ''sinking ship,'' and furthermore stated that certain CCAs have organized labor agreements in place with many employees that would require time consuming renegotiation to satisfy this clause in the proposed rule.[224]

To address the above concerns regarding the potentially unpredictable or evolving circumstances of employment during a recovery or wind-down event, the Commission is modifying the clause related to analyzing the continuation of staffing roles in a recovery and during an orderly wind-down. The clause has been modified in the final rule to state ''analyzing how such staffing roles necessary to support such core services would continue in the event of a recovery and during an orderly wind-down.'' [225] In response to commenters generally focused on concerns that a CCA could not guarantee the circumstances of employment during a recovery or wind-down event, the rule only requires that a CCA conduct an analysis, through which it would be able to identify potential challenges and potential ways to address those challenges. The final rule does not require the CCA to guarantee or compel specific staff or personnel to remain in place. Rather, the requirement promotes preparation for recovery and wind-down events, helping to ensure that from a staffing perspective the necessary roles or functions have been identified and established so that core services can continue uninterrupted. As one commenter stated, there may be organized labor agreements in place with employees. Pursuant to the final rule, to address such circumstances, a CCA is required in its RWP to analyze any such arrangements to see whether and how they might impact staffing during a recovery or an orderly wind-

recovery or wind-down''); OCC at 6 (''agrees that identification of critical services and planning for their continuation in a recovery or orderly wind-down should be the core content of a CCA's RWP'').

[225] To eliminate extraneous words and align the text grammatically, the Commission has replaced the phrase ''analysis of'' with ''analyze.'' *See infra* note 228 and accompanying text (describing other grammatical changes to the rule text).

down, consistent with the terms of the rule requirement. The rule does not require a CCA to renegotiate such arrangements.

In addition, and separate from the requirements in Rule 17Ad–26(a)(1), a CCA is required by Rule 17Ad–22(e)(15)(ii) to have written policies and procedures to cover potential general business losses by holding liquid net assets funded by equity equal to the greater of either six months of the covered clearing agency's current operating expenses, or the amount determined by the board of directors to be sufficient to ensure a recovery or orderly wind-down of critical operations and services of the covered clearing agency.[226] As such, a CCA generally should estimate the potential costs associated with ensuring its core services, which could include the staffing necessary to support those services, to ensure that it can meet the requirements in Rule 17Ad–22(e)(15) related to implementing the recovery or orderly wind-down of critical operations and core services.

One commenter suggested a ''process'' approach to retain employees with an associated wording change in the rule.[227] By focusing on ''roles'' in the final rule, the modified rule text achieves the same result. In addition to the substantive change from ''staffing'' to ''staffing roles necessary to support such core services'' discussed above, the Commission has made technical edits to the rule text to add paragraph markers (i) and (ii), aligning the text grammatically.[228]

2. Service Providers: Rule 17Ad–26(a)(2)

Proposed Rule 17Ad–26(a)(2) required the RWP of a CCA to identify and describe any service providers upon which the CCA relies to provide the services identified in paragraph (a)(1) of proposed Rule 17Ad–26, specify to what services such service providers are relevant and address how the CCA would ensure that such service providers would continue to perform in the event of a recovery and during an orderly wind-down, including consideration of contractual obligations with such service providers and whether those obligations are subject to alteration or termination as a result of initiation of the recovery and orderly wind-down plan.

The Commission, based on its supervisory experience, has observed that CCAs rely upon some service providers to deliver core services.[229] For those service providers that are necessary for the provision of core services, the failure of those service providers to perform could pose significant operational risks and have substantial effects on a CCA's ability to provide core services. In a recovery or wind-down event, the continued performance of such a service provider would be essential for the continuity of core services. Thus, the Commission proposed to require a CCA to identify and describe the subset of its service providers necessary to ensure the continued delivery of core services throughout a recovery or wind-down event.

Final Rule 17Ad–26(a)(2) refers to ''its written agreements'' instead of ''contractual obligations'' for the reasons discussed in the modifications to the definition of ''service provider for core services'' in final Rule 17Ad–26(b) in Part II.D.2, *infra.*[230] The Commission is also making technical changes to Rule 17Ad–26(a)(2) by adding paragraph markers to separate the clauses of the rule text into paragraphs (a)(2)(i) and (ii).

The Commission received comments on proposed Rule 17Ad–26(a)(2) and is making the modifications to the rule discussed below.

a. Identify and Describe Service Providers for Core Services

One commenter, agreeing with the Commission that continued performance of a service provider as part of the RWP would be essential, stated that the requirements of proposed Rule 17Ad–26(a)(2) and the related proposed definition of ''service provider'' in proposed Rule 17Ad–26(b) are circular in nature and overly broad, resulting in too many service providers being captured and the requirement being overly burdensome.[231] Specifically, the commenter stated that the phrases ''. . . upon which the covered clearing agency relies to provide the services identified in paragraph (a)(1) of this section . . .'' in proposed Rule 17Ad–26(a)(2) and ''. . . in any way related to the provision of critical services, as identified by the covered clearing agency in paragraph (a)(1) of this section . . .'' in the definition of ''service provider'' in proposed Rule 17Ad–26(b) are superfluous and unnecessary, and thus, both are not needed.[232] The commenter further stated that by including the term ''in any way'' as well as ''relies'' in these two sections of the proposed rules, the Commission broadened the scope of ''service provider'' to a point that renders the term functionally useless for identifying those service providers that are critical to the business operations of a CCA.[233] By contrast, another commenter stated that the term as used in proposed Rule 17Ad–26(a)(2) appears to limit the subset of providers to be addressed in the RWP.[234]

Commenters differed in their interpretation of these phrases in proposed Rule 17Ad–26(a)(2) and the definition of ''service provider'' in proposed Rule 17Ad–26(b). The phrase ''upon which the covered clearing agency relies to provide the services identified in paragraph (a)(1) of this section'' has been deleted in final Rule 17Ad–26(a)(2) to avoid any duplication of, or inconsistency with, the definition of ''service providers for core services'' in final Rule 17Ad–26(b).[235] Along with the modifications to the definition of ''service provider for core services'' in final Rule 17Ad–26(b) discussed in Part II.D.2 *infra,* the scope of service providers captured is appropriate for recovery and orderly wind-down planning purposes.

b. Ensure Continued Performance of Service Providers for Core Services

One commenter disagrees that CCAs can reasonably ''ensure'' that there will be continuation of services by service providers.[236] The commenter stated that it interprets Rule 17Ad–22(e)(15)(ii) to require a CCA to have sufficient resources to continue to pay service providers through the entirety of an execution of a CCA's RWP, and therefore states that this existing requirement should adequately address

[226] Pursuant to Rule 17Ad–22(e)(15)(iii), these liquid assets are in addition to resources held by the CCA to cover participant defaults or other risks covered by Rules 17Ad–22(e)(4)(i) through (iii), as applicable, and to cover the liquidity risks identified in Rules 17Ad–22(e)(7)(i) and (ii).

[227] OCC at 6.

[228] Specifically, the phrase ''the identification of'' has become ''by: identifying'' and ''analysis of'' has become ''analyzing.'' *See supra* note 225 (describing other grammatical changes to the rule text).

[229] RWP Proposing Release, *supra* note 18, at 34719.

[230] The Commission is also modifying in final Rule 17Ad–26(a)(2) the clause ''and whether those obligations'' to ''and whether the obligations under those written agreements'' for consistency with the written agreements modification.

[231] DTCC at 5–6.

[232] *Id.* at 5.

[233] *Id.* at 6.

[234] OCC at 6.

[235] To improve grammar and clarity, the Commission has also modified the phrase ''specify to what services such service providers are relevant'' to ''specifying which core services each service provider supports'' in final Rule 17Ad–26(a)(2).

[236] DTCC at 8–9 (The commenter stated that the proposed requirement ''overestimates the negotiating leverage that CCAs have when entering contracts with service providers or assumes that CCAs would be able to unilaterally require service providers to continue performance during a recovery or orderly wind-down.'').

the Commission's goals for this aspect of the proposal and recommends that the Commission revise proposed Rule 17Ad–26(a)(2) by removing any requirement that a CCA ''ensure'' continuation of services.[237] Alternatively, the commenter requested that the Commission adopt a standard that acknowledges these limitations of a CCA to ensure continued performance of service providers and that requires a CCA to establish, implement, maintain, and enforce written policies and procedures reasonably designed to facilitate considerations of contractual provisions with service providers that, subject to continued payment by the CCA (or successor) obligates them to continue to perform in the event of a recovery or during an orderly wind-down.[238]

Another commenter stated it ''does not believe it is possible for a CCA to 'ensure' that a service provider would perform.'' The commenter also stated that a CCA can and should analyze whether a service provider has any termination rights or other contractual basis for not performing in a recovery or wind-down situation. The commenter also stated that a CCA should assess and document how it would handle the situation where a service provider has a right to terminate or otherwise not perform in a recovery or wind-down situation.[239] Accordingly, the commenter suggested that proposed Rule 17Ad–26(a)(2) be modified to require a CCA evaluate whether the service provider would continue to perform in the event of a recovery or orderly wind-down and address how the CCA would handle any termination or alternation of performance by the service provider.

The Commission acknowledges that, while a CCA can, and generally should, include provisions in its written agreements so that it can contractually require that a service provider for core services continues to perform during a recovery or wind-down, a CCA may not be able to compel a service provider to continue to perform in all circumstances. However, as proposed, Rule 17Ad–26(a)(2) addresses planning for a recovery or wind-down scenario by requiring written policies and procedures reasonably designed to address how a CCA *would* ensure that service providers for core services would continue to perform in the event of a recovery and during an orderly wind-down.[240] Thus, even though a CCA may not be able to compel a service provider to continue performing in all circumstances, such planning and any related contractual provisions designed to continue performance under the contract help limit the potential for abrupt or unanticipated disruptions in services during a recovery or wind-down event.[241] Achieving this requirement would likely involve an evaluation of whether the service provider would continue to perform in the event of a recovery or orderly wind-down and address how the CCA would handle any termination or alteration of performance by the service provider. As previously discussed above, a CCA generally should consider when and how to include provisions in its written agreements with service providers that acknowledge and help ensure that service providers can continue to perform their services during a recovery or wind-down event to avoid potential disruptions in core services. In so doing, a CCA generally should consider the terms to which its service providers may be willing or unwilling to agree, so that the CCA can evaluate its options effectively and develop its written agreement accordingly. As this requirement concerns actions taken at the planning stage and does not require a CCA to compel another entity to act, the Commission is not making further modifications to Rule 17Ad–26(a)(2).

One commenter, while agreeing that proposed Rule 17Ad–26(a)(2) identifies a key component of planning for recovery and orderly wind-down, stated that the Commission would best accomplish its objective of ensuring continued performance by service providers for core services by amending the proposed rule to focus on the CCA's relevant processes for third-party engagement and management rather than on conditions at a snapshot point in time, as the nature of a CCA's relationship with a service provider, the services provided, and the roster of relevant service providers necessarily evolves over time.[242] The commenter recommended slightly altering the language of the relevant portion of proposed Rule 17Ad–26(a)(2) to state the following:

> . . . address *the process by which* ~~how~~ the CCA *seeks to* ~~would~~ ensure that service providers would continue to provide such critical services in the event of a recovery and during an orderly wind-down, including consideration *and tracking* of contractual obligations with such service providers and whether those obligations are subject to alteration or termination as a result of initiation of the recovery and orderly winddown plan.'' [243]

As stated by the commenter, a CCA's roster of service providers for core services evolves over time as does the relationship with each such service provider and the services provided by it. However, a CCA is not required to outline any process or other means it uses to track relationships with service providers for core services in its RWP. Accordingly, final Rule 17Ad–26(a)(2) requires only the identification and description of such service providers, and a CCA has discretion on how to address any changes or updates to the service providers, which could be addressed in the reviews of a CCA's RWP required by final Rule 17Ad–26(a)(9).[244]

One commenter raised the possible interaction with the U.S. Bankruptcy Code in connection with the transfer of critical services to another legal entity as part of an orderly wind-down strategy.[245] The commenter stated that the Bankruptcy Code would stay any vendors from terminating their agreements subject to getting paid, which could allow for an assignment to the other legal entity.[246] According to the commenter, this effectively would address the concern without an unnecessary and overly prescriptive rule.[247]

The Commission agrees that, in a scenario involving the transfer of services from a CCA to another legal entity, bankruptcy proceedings may facilitate continuity of services by, for example, staying any vendors from terminating their agreements. The Commission also acknowledges that, during a recovery or wind-down, service providers, affected participants, or other stakeholders in the CCA may attempt to initiate bankruptcy proceedings themselves for any number of reasons. Ultimately, the requirements in Rule 17Ad–26 are designed to promote effective planning for a recovery or

[237] DTCC at 9.

[238] *Id.*

[239] ICE at 4.

[240] The requirements of Rule 17Ad–26 lay out necessary elements of a RWP, while the requirement for the RWP itself resides in Rule 17Ad–22(e)(3)(ii), which requires reasonably designed written policies and procedures.

[241] A CCA designated systemically important generally should consider also whether and how such agreements may be impacted by the resolution or transfer of services conducted by the resolution authority pursuant to Title II.

[242] OCC at 6.

[243] *Id.* at 7.

[244] In addition, board oversight of service provider relationships is subject to the requirements of Rule 17Ad–25(i), 17 CFR 240.17ad–25(i), which can also help ensure that relationships continue without sudden disruption in the event of a recovery or wind-down scenario.

[247] *Id.*

orderly wind-down, and the possibility of bankruptcy proceedings do not reduce a CCA's obligations to plan effectively.

3. Scenarios: Rule 17Ad–26(a)(3)

Proposed Rule 17Ad–26(a)(3) required a CCA's RWP to identify and describe scenarios that may potentially prevent the CCA from being able to provide its critical payment, clearing, and settlement services identified in proposed Rule 17Ad–26(a)(1) as a going concern, including uncovered credit losses (as described in paragraph (e)(4)(viii) of 17 CFR 240.17ad–22), uncovered liquidity shortfalls (as described in paragraph (e)(7)(viii) of 17 CFR 240.17ad–22), and general business losses (as described in paragraph (e)(15) of 17 CFR 240.17ad–22).

Commenters differed on the level of granularity that was appropriate in the rule. One commenter stated that it supported the proposed rule, agreed that appropriate scenarios will vary across different CCAs serving different markets, and stated that the Commission has provided appropriate discretion to a CCA to identify the scenarios most appropriate to its unique circumstances.[248] The commenter also stated that the Commission should not identify particular scenarios for a CCA to address in its RWP.[249] The Commission agrees with this commenter, and reiterates that the risks that may potentially prevent a CCA from being able to provide its core services vary across different types of CCAs and even across CCAs of the same type, resulting in identified scenarios that differ from CCA to CCA.[250]

Another commenter stated that the enumerated list of scenarios in Request for Comment No. 22 in the RWP Proposing Release [251] is comprehensive and in line with international standard setting guidance and further stated that the list should be considered a minimum, and supported a more granular list of scenarios that a CCA should consider.[252] The Commission is not including such a further list of specific scenarios in final Rule 17Ad–26(a)(3). The rule requires a CCA to identify and describe scenarios for uncovered credit losses, uncovered liquidity shortfalls, and general business losses.[253] Under these broad categories, each CCA must identify scenarios considering the unique circumstances of CCA, including the market served and products cleared. Furthermore, a more granular list of scenarios may not be appropriately applied to all CCAs, considering the variance in the circumstances each individual CCA faces, and such a prescriptive approach with a granular list of scenarios would be contrary to the principles-based approach to Rule 17Ad–22(e), which contains the requirement for a CCA to have a RWP.[254] The commenter also stated that it could be a worthwhile analysis to see if plans would still be viable under a combination of scenarios, as there is potential for simultaneous shocks to occur.[255] A CCA, considering the unique circumstances faced by it, may identify combinations of scenarios in its analysis to achieve the requirements of final Rule 17Ad–26(a)(3). The discretion to consider combinations of scenarios arising from the potential of simultaneous shocks best remains with a CCA in its planning for a recovery or orderly wind-down. In addition, the commenter recommended that the Commission consider greater transparency around the distinction between default and non-default losses and the tools used under these scenarios.[256] However, information available in current rulebooks of the CCAs and through the SRO rule filing and advance notice processes provides transparency on the RWPs of CCAs, including how a CCA would address a default or non-default loss and the tools available in such scenarios.[257] As a result, additional mechanisms to promote transparency are not necessary, as a clearing member or market participant may obtain from these publicly available documents a general understanding of the scenarios a CCA has identified for default and non-default losses and the tools that could be used under such scenarios.

One commenter stated that the requirement of explicit consideration in the recovery plan of what might lead to each scenario coming into being and how the scenario might take shape (including prerequisite contemplated market conditions) imposes a small burden on compliance and risk functions in the entity while creating greatly-enhanced transparency to investors and regulators around how, how quickly, and under what conditions the entity may fail to meet obligations.[258] The Commission agrees that explicit consideration of what might lead to a scenario coming into being and how the scenario might take shape are important elements of identifying *and describing* scenarios, and accordingly, Rule 17Ad–26(a)(3) requires a CCA to both identify and describe such scenarios.[259] In identifying and formulating the description of such scenarios, the CCA can share information and analysis with its participants and other key stakeholders to develop its own

[259] RWP Proposing Release, *supra* note 18, at 34721 (explaining that the set of scenarios would include scenarios arising from a participant default and from events not related to a participant default, and that potential scenarios not related to a participant default could include the realization of investment or custody losses, the failure of a third party, such as a settlement bank, to perform a critical function for the covered clearing agency, or scenarios caused by a systems compliance and integrity (SCI) event or other significant operational disruption, such as a significant cybersecurity incident); *id.* (explaining that each scenario generally should be analyzed individually in the recovery plan, with the analysis including: a description of the scenario; the events that are likely to trigger the scenario; the covered clearing agency's process for monitoring such events; the market conditions, operational and financial issues, and other relevant circumstances that are likely to result from the scenario; the potential financial and operational impact of the scenario on the covered clearing agency and its participants, internal and external service providers, and relevant affiliated companies, both in an orderly and stressed market (*e.g.,* where markets are unavailable or there are limited solvent counterparties); and the specific steps that the covered clearing agency would expect to take if the scenario occurs or appears likely to occur, including, without limitation, any governance or other procedures that may be necessary to implement the relevant tools or use the relevant resources and to ensure that such implementation occurs in sufficient time to achieve the intended effect).

understanding, as well as the understanding of its participants and other key stakeholders, regarding the potential causes of recovery and wind-down scenarios. Various mechanisms under other Commission rules may facilitate this process, such as those requiring testing of its RWP,[260] consideration by its risk management committee of matters related to the RWP,[261] and general solicitation of stakeholder viewpoints regarding risk management topics.[262] As discussed further in Part IV.C.1 and V.B, the burden associated with such planning is appropriate considering the risks associated with the potential failure of a CCA.

Consistent with the above discussion, the Commission is adopting Rule 17Ad–26(a)(3) as proposed, except that it has replaced the term ''critical payment, clearing, and settlement services'' with ''core services'' consistent with the modifications to uses of ''critical'' services as discussed in Part II.C.1.

4. Triggers: Rule 17Ad–26(a)(4)

Proposed Rule 17Ad–26(a)(4) required a CCA's RWP to identify and describe criteria that would trigger the implementation of the recovery and orderly wind-down plans and the process that the CCA uses to monitor and determine whether the criteria have been met, including the governance arrangements applicable to such process.

One commenter proposed that the Commission provide a list of triggers that are required to be covered in the RWP and another list of triggers that a CCA should consider for inclusion in the RWP.[263] In contrast, another commenter stated that prescribing bright line, quantitative triggers that would apply to all CCAs, irrespective of their unique structures and the features of the markets they serve and products they clear, would run the risk of creating market instability by potentially forcing a CCA to initiate its RWP even when the CCA has not yet made the determination that it is necessary.[264] For that reason, the commenter stated that it supports the Commission's determination to allow CCAs to identify appropriate triggers for their individual circumstances.[265] The Commission is not specifying a list of triggers in the rule for inclusion in an RWP. As stated in the RWP Proposing Release, for some circumstances, the trigger is obvious (*e.g.,* uncovered default losses),[266] and the Commission is not explicitly including such triggers in the final rule because it has already required in Rule 17Ad–26(a)(3) that CCAs identify and describe scenarios based on the most obvious types of triggers (*e.g.,* uncovered default losses, as well as uncovered liquidity shortfalls and general business losses) and also included each of these triggers in the definitions of ''recovery'' and ''orderly wind-down'' to ensure that CCAs consider these types of circumstances throughout the development of their RWPs.[267] For other circumstances, as the Commission stated in the RWP Proposing Release, a CCA may have to employ more judgment to develop appropriate triggers,[268] and discretion should be afforded to a CCA in the planning process to develop these triggers instead of having the Commission delineate a list of triggers that a CCA should consider. This view generally aligns with the latter commenter, in that the final rule provides for a CCA to identify appropriate triggers for its individual circumstances.[269] The Commission further agrees with the latter commenter that the risk of having bright-line triggers could result in forcing a CCA to initiate its RWP even when the CCA has not yet made the determination that it was necessary, which could lead to market instability.

Regarding CCA discretion to trigger the RWP, one commenter proposed that the general assumption should be that triggers are automatic, unless the CCA makes the determination that discretion is appropriate for a certain trigger.[270] The Commission disagrees and is not requiring in the rule that triggers execute automatically. As suggested by the commenter,[271] automatically triggering a RWP without discretion could adversely affect market stability. In the RWP Proposing Release, the Commission stated that the identification of triggers does not mean that such triggers should be self-executing; instead, the importance of identifying triggers lies in ensuring that a CCA considers and identifies *ex ante* when it would initiate its RWP.[272] The Commission also stated that it believes that the RWP must identify and describe the process that the CCA uses to monitor and determine whether the criteria have been met, including the governance arrangements applicable to such process.[273] The final rule provides a CCA with discretion to consider this guidance and to identify and describe triggers appropriate to its RWP and whether any such triggers are automatic or discretionary.

The Commission is replacing the word ''would'' with ''could'' in final Rule 17Ad–26(a)(4) to avoid any presumption that triggers are self-executing and to reiterate the Commission's statement in the RWP Proposing Release that the identification of triggers ''does not mean that such triggers should be self-executing.'' [274]

5. Tools: Rule 17Ad–26(a)(5)

Proposed Rule 17Ad–26(a)(5) required the RWP of a CCA to identify and describe the rules, policies, procedures, and any other tools or resources the CCA would rely upon in a recovery or orderly wind-down. The Commission is adopting Rule 17Ad–26(a)(5) as proposed.[275]

In the RWP Proposing Release, the Commission stated that the proposed requirement to describe rules, policies, procedures, and any other tools or resources that may be used in advance for certain situations would provide some level of predictability in such a situation and avoid unexpected actions because it would allow participants to understand the potential of tools or resources that could be used, including whether any of the tools would require participant involvement or resources (such as a cash call).[276] While stating that rules, policies, procedures, and any other tools or resources should address shortfalls arising from the stress scenarios identified by the CCA, the Commission declined to prescribe particular tools, such as tear-up or margin haircutting, that a CCA would be

[275] To improve grammar and clarity, the Commission is adopting a technical amendment to the final rule text. Specifically, the Commission is removing use of the word ''upon,'' and adding the phrase ''on which,'' such that final Rule 17Ad–26(a)(5) states: ''Identify and describe the rules, policies, procedures, and any other tools or resources on which the covered clearing agency would rely in a recovery or orderly wind-down.''

[276] *Id.* at 34722.

required to include in its RWP.[277] The Commission stated its belief that this proposed requirement preserved discretion for each CCA to consider the full range of available recovery tools and select those most appropriate for the circumstances of the CCA, including the products cleared and the markets served.[278]

a. Discretion for CCAs in Selection of Tools

One commenter stated that the rule should preserve discretion for each CCA to consider the full range of available recovery tools and select those most appropriate for the circumstances of the CCA.[279] Another commenter agreed with the Commission's decision not to mandate or prescribe the use of tools in certain situations and ''believes that [CCAs] should have the discretion to determine the appropriate mix of tools to be used.'' [280] Another commenter ''believe[s] that the clearing agency should be free to select the right or most appropriate tools for the markets and products it clears without any regulation constraints.'' [281] The Commission generally agrees with these commenters and is adopting the rule as proposed, which allows for discretion by a CCA in the selection of tools that are most appropriate for the circumstances of the CCA.

One commenter stated that the proposal would continue to provide CCAs with ''unbridled authority to inappropriately allocate default losses to non-defaulting customers through tools such as partial tear-ups (PTUs) or variation margin gains haircutting (VGMH).'' [282] The commenter further stated that the Commission should prescribe the tools that a CCA must use during recovery or wind-down, claiming that specifying the tools a CCA must deploy in those scenarios would be most effective at protecting non-defaulting customers' assets, a critical priority of an RWP in the commenter's view.[283] The commenter added that ''[u]nfortunately, the proposals continue to provide broad discretion to a clearing entity to determine its recovery and orderly wind-down tools, which effectively sanctions the use of tools that may result in the inappropriate allocation of non-defaulting customers' assets.'' [284]

A CCA does not have ''unbridled authority'' to select the tools in its RWP. The selection of tools in each RWP has been and is subject to the SRO rule filing process, which provides for public comment and Commission review and approval before inclusion of a tool in the RWP.[285] Under section 19(b)(2)(C) of the Exchange Act,[286] the Commission will approve, and has approved,[287] proposed rule changes concerning the availability of a tool where the Commission finds that the proposed rule change is consistent with the requirements of the Exchange Act and the applicable rules and regulations thereunder.

The Commission also disagrees that prescribing the tools a CCA must deploy in recovery and wind-down scenarios would be most effective at protecting non-defaulting customers' assets. As the Commission has previously explained, a ''one-size-fits-all'' approach specifying recovery and orderly wind-down tools is not productive, and it is not possible to assess the utility of a particular tool in isolation without considering the context of RWP as a whole and the particular circumstances of a CCA.[288] Furthermore, the discretion afforded a CCA in developing the tools available for use in its RWP would not enable the CCA to engage in the ''inappropriate'' allocation of non-defaulting customers' assets. Instead, tools included in its RWP to allocate losses to non-defaulting customers may be necessary to prevent the potential transmission of systemic risk, and the planning facilitated by the RWP helps the CCA weigh the strengths and weaknesses of respective tools. In this way, the CCA has considered *ex ante* the set of tools that will be the most appropriate to address different scenarios.[289] Accordingly, when a CCA has determined to allocate losses to non-defaulting customers, it has likely passed the point where other resources or tools are available to address the loss. Although a certain tool may appear drastic in the way that it allocates losses, such allocation may be appropriate to prevent the systemic transmission of risk in extreme circumstances.

b. Safeguards, Prescriptions, and Limitations on Tools and Resources

One commenter stated that ''recovery tools and provisions should be designed in a way that allows clearing participants to limit their liability to the CCA and to ensure that recovery tools can only be used in a limited manner (in time and dollar value) to ensure that the impact of such tools is predictable and reliable during stress, and do not further destabilize the market.'' [290] The commenter further stated that ''limited use of recovery tools under regulatory oversight, in the interest of the whole market'' warrants codification.[291] Another commenter stated that certain recovery tools and procedures involve allocating losses to its clearing members or market participants, and therefore the tools must be transparent, predictable, and implemented with appropriate limitations and oversight so that the tools do not inappropriately assign losses to clearing members and market participants in a way that is destabilizing.[292] The commenter continued that it is important to ensure that loss allocation procedures appropriately balance the incentives of a CCA's owners and market participants to manage risk effectively and prevent a crisis from occurring.[293] The commenter stated loss allocation procedures should be well defined and that a CCA should not have autonomy to allocate losses away from its shareholders.[294]

As discussed in the prior section, certain tools may appear drastic in the way that they allocate losses. Because of this, the Commission agrees with commenters that transparency and predictability regarding the use of tools for recovery and wind-down is important. However, the Commission disagrees that additional rule text changes are necessary because transparency regarding the tools that may be used in a recovery or wind-down scenario, and a level of predictability regarding the use of such tools, are already provided through existing rules.[295] When a CCA proposes

to add or modify the tools available in its RWP, such modifications are subject to Commission review and approval, pursuant to the SRO rule filing and advance notice processes, which includes public notice and an opportunity for public comment and, if approved, an approval order describing how the modifications are consistent with the Exchange Act.[296] Furthermore, to achieve compliance with existing Rule 17Ad–22(e)(23), a CCA is obligated to establish, implement, maintain, and enforce written policies and procedures reasonably designed to provide for publicly disclosing all relevant rules and material procedures, including key aspects of its default rules and procedures, and provide sufficient information to enable participants to identify and evaluate the risks, fees, and other material costs they incur by participating in the CCA.[297] Such policies and procedures should provide participants with relevant rules and procedures to evaluate the risks, fees, and other material costs that participants could incur in a recovery or wind-down scenario. In addition, new requirements in Rule 17Ad–26 related to scenarios, triggers, tools, testing, and implementation of the RWP also help ensure that the CCA is providing transparency to its participants and others as to whether and when certain tools may be used, based on the scenarios developed by the CCA and in a way that is informed by periodic testing of the RWP, which includes participation by a subset of clearing participants and other relevant stakeholders.

Regarding the limitations sought by certain commenters, any appropriate limitations on tools proposed for inclusion in a CCA's RWP would be addressed through the SRO rule filing process, where specific tools would be subject to Commission review and approval, as well as public comment. Furthermore, to approve the addition of such tools, the proposed rule change must be consistent with the requirements of the Exchange Act and any advance notice must also be consistent with the standard for advance notices set forth in the Dodd-Frank Act.[298] Among the rules and regulations applicable to a CCA is Rule 17Ad–22(e)(2)(vi), which requires a CCA to establish, implement, maintain, and enforce written policies and procedures reasonably designed to consider the interests of participants' customers, securities issuers and holders, and other relevant stakeholders of the CCA.[299] To the extent that participants oppose the use of a tool either as a general matter or under certain conditions, a CCA would be obligated under Rule 17Ad–22(e)(2)(vi) to consider those concerns when modifying its RWP to include such a tool. Such required considerations, which would include input from clients of clearing participants, securities issuers, transfer agents, and other market infrastructure to which the CCA is linked, generally should help ensure that a CCA considers and includes limitations on certain tools included in the RWP where appropriate and consistent with its obligations under the Exchange Act. Ultimately, whether limitations on specific tools will be appropriate depends on the circumstances in which the tools would be deployed, and so the Commission is not adopting limitations as to specific tools in this release.

Regarding the comment related to a CCA having the ''autonomy'' to allocate losses away from its shareholders, as explained above, whenever a CCA seeks to add or modify a tool available in its RWP, the CCA must obtain prior Commission approval for any tools that it may deploy in a recovery or wind-down scenario through the previously described SRO rule filing and advance notice processes, which provide for public notice and comment. In those processes, a CCA is attempting to gain approval of tools to have in place in advance of a recovery or wind-down scenario to prevent the losses incurred by the CCA from becoming a transmission mechanism for systemic risk. This necessarily requires the CCA to seek an appropriate balance between affording participants predictability and certainty, on one hand, and ensuring that the CCA can effectively manage risk to continue its risk mitigating function within the broader financial system, on the other.[300] While a CCA will retain discretion consistent with its rules, policies, and procedures regarding the ways to implement its RWP if a recovery or wind-down scenario arises, the CCA's discretion to allocate losses to its participants will always be limited by the requirements of the Exchange Act and Commission rules and regulations thereunder. Accordingly, a CCA would not have complete autonomy to allocate losses away from its shareholders.

c. Specific Limitations or Bans on Certain Tools

Several commenters requested the Commission place limitation on or ban certain recovery tools. Two commenters generally stated that partial tear-ups should be subject to appropriate limitations and restrictions.[301] One commenter stated that forced allocation should be completely barred.[302] For variation margin gains haircutting, commenters generally stated that the Commission should place restrictions on the time and amount, and that this tool should only be deployed with regulatory approval.[303] Commenters generally requested that the Commission ban initial margin haircutting.[304] For assessments on clearing members to replenish resources, commenters generally stated that there needs to be a maximum amount for assessments set at a reasonable level that is defined *ex ante.*[305]

The CCAs under the Commission's supervision vary in markets served, products cleared, and ownership structures. These differences, among others, make it imprudent for the Commission to *ex ante* ban or explicitly limit certain tools, for the same reasons discussed in Part II.C.5.b, *supra,* regarding whether safeguards, prescriptions, and other limits on tools and resources generally are appropriate. Rather, by establishing new requirements related to scenarios, triggers, tools, testing, and implementation of the RWP, Rule 17Ad–26 helps ensure that the CCA is providing transparency to its participants and others as to whether and when certain tools may be used, based on the scenarios developed by the CCA and in a way that is informed by periodic testing of the RWP, which includes participation by a subset of clearing participants and other relevant stakeholders.

d. Level of Specificity of Description in RWP

In the RWP Proposing Release, the Commission stated that the requirement to describe rules, policies, procedures,

transparency to clearing participants and other key stakeholders).

and any other tools or resources that may be used in advance for certain situations would provide some level of predictability in such a situation and avoid unexpected actions because it would allow participants to understand the potential of tools or resources that could be used, including whether any of the tools would require participant involvement or resources (such as a cash call).[306] The Commission also provided guidance for a CCA to generally consider when it is identifying and evaluating the appropriateness of tools and other resources for a particular recovery scenario or an orderly wind-down that may be included in its RWP.[307] Furthermore, the Commission laid out nine items that a CCA generally should consider when analyzing the tools to be included in its RWP.[308]

One commenter strongly supported the proposed requirement to describe tools a CCA would use in a recovery or wind-down scenario. [309] Another commenter stated that the Commission should require CCAs to provide further specificity on the use of recovery tools in the RWP to provide transparency and predictability for their clearing members, market participants, and the broader market and to ensure that these tools are not procyclical.[310] Several commenters stated that the Commission should make the guidance provided in the RWP Proposing Release mandatory.[311]

Requiring further specificity on the use of recovery tools in the RWP is not necessary as information on the recovery tools of a CCA is publicly available. As previously explained above, when a CCA proposes to add or modify the tools available in its RWP, such modifications are subject to Commission review and approval, pursuant to the SRO rule filing and advance notice processes, which includes public notice and an opportunity for public comment and, if approved, an approval order describing how the modifications are consistent with the Exchange Act.[312] Furthermore, to achieve compliance with existing Rule 17Ad–22(e)(23), a CCA is obligated to establish, implement, maintain, and enforce written policies and procedures reasonably designed to provide for publicly disclosing all relevant rules and material procedures, including key aspects of its default rules and procedures (which includes the tools that would be deployed pursuant to the RWP), and provide sufficient information to enable participants to identify and evaluate the risks, fees, and other material costs they incur by participating in the CCA. With this information, clearing members, market participants, and the broader market can consider whether such tools are procyclical.

With respect to the comment stating that tools should not be procyclical, whether a tool is procyclical will necessarily depend on the way it is designed and applied, the products to which it is applied, and the market in which it would be used. In Part II.A.2.b.iii, the Commission discussed how a CCA might need to consider procyclical effects when collecting intraday margin, and commenters expressed support for ensuring that CCAs had appropriate discretion to apply margin to avoid procyclical effects. Similarly to that context, the Commission believes that discretion to select tools is a better approach than prescribing limits or imposing bans on certain tools in Rule 17Ad–26. Providing such discretion helps enable CCAs to apply their expertise and consider the range of tools they have developed in their RWPs for addressing a recovery or wind-down scenario that may minimize procyclical effects.

In the case of a recovery or wind-down scenario, procyclical effects may facilitate the unnecessary onward transmission of systemic risk. As such, when a CCA seeks to add or modify the tools available in a recovery or wind-down scenario, those modifications would be subject to the proposed rule change and advance notice processes, where the specific facts and circumstances of a particular CCA (such as its organizational structure, markets served, or products cleared) and public comments on the proposed modification can help the Commission and the CCA identify whether any tools would be inappropriate, or appropriate only with certain limitations, consistent with the CCA's obligations under the Exchange Act and the Dodd-Frank Act.[313]

The guidance in the RWP Proposing Release to identify and analyze tools for inclusion in the RWP is not being incorporated into the text of final Rule 17Ad–26(a)(5). This rule is part of the framework of rules applicable to CCAs that takes a principles-based approach, which does not prescribe specific arrangements to meet the required principles.[314] Given that each CCA, serves different markets, clears different products, and deploys different ownership structures, the Commission is not incorporating the guidance into the rule text.

e. Allocation of Non-Default Losses

One commenter stated that procedures should clearly distinguish between treatment of default losses resulting from the failure of a clearing member and non-default losses (''NDLs'') caused by a CCA's internal business decisions.[315] The commenter further stated that financial responsibility for NDLs should be borne by the CCA and not by clearing members and market participants, that CCAs should be required to specify tools that would be used in an NDL scenario, and that a rule is needed to require CCAs to reserve appropriate amounts for NDL.[316] Another commenter stated that a CCA's rulebooks and RWPs should make clear that the CCA is responsible for NDLs, for it is not generally appropriate for clearing members or participants to bear NDLs because they are not responsible for choices that lead to those losses.[317] The commenter also stated that regulators require CCAs to manage, monitor, and hold sufficient capital against NDLs to ensure that such losses do not disrupt a CCA's ability to perform obligations, and that RWPs should be required to demonstrate a CCA's ability to cover such NDLs.[318] Another commenter strongly recommended that the Commission ensure that the RWPs distinguish between the CCA's approach to default and non-default scenarios.[319] The commenter also strongly recommended that the Commission require that the recovery tools a CCA uses in a NDL scenario ensure that the CCA and its shareholders are fully responsible for non-default losses, reflecting the principle that CCA and its shareholders are responsible for NDLs because such losses result directly from business decisions of CCA's management.[320]

While the Commission's regulatory framework for CCAs does not use ''non-

default losses'' to describe losses other than default losses, existing Rule 17Ad–22(e)(15) requires a CCA to implement risk management measures to address ''general business losses,'' [321] which generally includes what the commenters refer to as ''NDL.'' Having a requirement specific to address general business loss does distinguish those losses from other losses such as default losses.

Rule 17Ad–22(e)(15) requires a CCA to have policies and procedures reasonably designed to mitigate the risk that business losses result in the disruption of clearing services. Under these policies and procedures, CCAs are required to hold liquid net assets funded by equity sufficient to cover potential general business losses, including by holding the greater of either six months of the covered clearing agency's current operating expenses, or the amount determined by the board of directors to be sufficient to ensure a recovery or orderly wind-down of critical operations and services of the covered clearing agency.[322] Accordingly, Rule 17Ad–22(e)(15) already requires a CCA to reserve appropriate resources to address general business losses and help ensure that the CCA internalizes financial responsibility for such losses by applying its own resources to general business losses. The particular mechanisms at each CCA for identifying the amount and holding appropriate resources under the rule have been set by the CCAs through the SRO rule filing and advance notice processes and are subject to examination.

Consistent with existing Commission rules, however, the CCA itself is not required to be ''fully responsible'' for general business losses.[323] Rather, such losses could trigger implementation of a CCA's RWP, as Rule 17Ad–22(e)(3)(ii) includes requirements directed to planning for recovery and orderly wind-down for ''losses from general business risk.'' [324] As previously discussed, Rule 17Ad–22(e)(15) requires a CCA to have policies and procedures for holding liquid net assets funded by equity sufficient to cover potential general business losses, including by holding the greater of either six months of the covered clearing agency's current operating expenses, or the amount determined by the board of directors to be sufficient to ensure a recovery or orderly wind-down of critical operations and services of the covered clearing agency, as set forth in its RWP. Where such losses from general business risk prevent the CCA from continuing as a going concern and liquid net assets funded by equity held pursuant to Rule 17Ad–22(e)(15) have failed to cover potential business losses, a CCA may need to implement its RWP to fully address such losses. In such a case, the CCA would deploy resources held pursuant to Rule 17Ad–22(e)(15) to implement its RWP but may also,[325] pursuant to its RWP and any rules for loss allocation approved pursuant to the Rule 19b–4 process deploy tools that draw upon other resources of the CCA, including mutualized resources, to avoid it from becoming a transmission mechanism for systemic risk. Participation in a clearing agency where resources, and the loss allocation mechanisms that draw upon them, have been mutualized among the CCA and its participants, necessarily means that the CCA and its participants have agreed to mutualize losses, and such loss allocation mechanisms are explained in publicly available sources, including the CCA's rules, notices and approval orders published as part of the SRO rule filing process, and public disclosures made by the CCAs as required by Rule 17Ad–22(e)(23).[326]

f. Skin-in-the-Game Requirement

One commenter stated that Commission rules are needed to ensure that each CCA contributes equity to its default waterfall, even if the amount is not a meaningful loss absorbing resource, to serve as an additional risk management tool, and the commenter provided several accompanying recommendations to determine the appropriate amount that should be required.[327] Another commenter stated that it is important for a CCA to maintain a second tranche of equity to apply to losses before the CCA allocates losses beyond its allocation of losses above the funded default reserve to better align the interests of the CCA and its clearing members.[328] Another commenter stated that tools should ensure that a CCA designates a material amount of its own capital to cover default losses.[329]

The Commission is not adopting a ''skin-in-the-game'' (''SITG'') requirement.[330] In the context of a participant default, SITG may assist a CCA in addressing the resulting losses because a CCA will apply a designated amount of its own equity capital to address certain losses prior to allocating any prefunded resources of non-defaulting participants to the loss, or prior to applying an assessment to non-defaulting participants directing them to contribute additional resources because all other prefunded resources of the CCA have been exhausted.[331] The Commission has considered comments regarding SITG previously, stating that such new SITG requirements can help successfully manage the divergent incentives of a CCA's owners and participants and could be appropriate in the future.[332] While SITG generally can play a role in helping to ensure the proper alignment of incentives between the owners of a clearing agency and its participants,[333] in the context of this rulemaking regarding the planning for recovery and wind-down by CCAs, SITG would be a specific tool that a CCA may choose to incorporate into its RWP. As such, the Commission is not adopting a requirement for SITG to be a specific tool because the appropriateness of the tool in the context of planning for recovery and wind-down by CCAs will vary depending on the particular design and implementation of the RWP. Even though Commission rules for clearing agencies do not include an explicit requirement for SITG, CCAs generally have incorporated SITG into their respective default waterfalls.[334]

g. Compensation for Contributing Clearing Members

One commenter stated that the externalization of losses to non-defaulting clearing members and market participants should be treated as ''financing resources'' recoverable by those that contributed, which would make a distinction between loss

absorbing and financing resources.[335] Another commenter stated that the Commission should include a requirement for compensation of clearing members that cover losses during a recovery or a wind-down.[336]

Treatment of resources obtained from clearing members in a recovery or wind-down scenario would be subject to the CCA's rules, policies, and procedures, which would have been approved on an *ex ante* basis in the applicable SRO rule filing and advance notice processes. A CCA should be afforded discretion to structure its loss allocation rules, policies, and procedures in light of the needs of its unique ownership or governance structures, provided that those rules, policies, and procedures are consistent with the requirements of the Exchange Act and rules and regulations thereunder.

As previously discussed, disclosures that already must be publicly provided by CCAs under Rule 17Ad–22(e)(23)(ii) require a CCA to provide participants with sufficient information to enable the participants to evaluate the risks, fees, and other material costs they may incur by participating in the CCA. With that information, a participant may determine whether the CCA would compensate non-defaulting participants for contributions made during a recovery or an orderly wind-down.

h. Governance

One commenter stated that a CCA's RWP should include governance practices that obtain and address input from market participants on relevant risk issues and entail oversight by the systemic regulator in relation to tools like partial tear-up that may have broader market impact.[337]

Existing Commission requirements already address this concern for input and oversight.[338] First, the SRO rule filing and advance notice processes provide for public notice and comment allowing for market participants to provide input on changes to rules, policies and procedures regarding recovery tools, and such processes require review and approval by the Commission. Second, Rule 17Ad–22(e)(2) includes requirements designed to provide for governance arrangements that clearly prioritize the safety and efficiency of the CCA, support the public interest requirements in section 17A of the Exchange Act applicable to clearing agencies, and support the objectives of owners and participants. Third, the requirement in section 17A(b)(3)(F) of the Exchange Act to have rules designed, in general, to protect investors helps ensure that a CCA's risk management functions are appropriately aligned with the goal of risk mitigation and responsive to the legitimate concerns of the relevant constituents.

i. Other Comments on Resources

Several comments concerned resources in general that should be available in a recovery or a wind-down scenario. One commenter stated that rules are needed to require a CCAs to arrange *ex ante* resources for use in RWPs, that the Commission should require application of equity-funded assets to implement RWPs, that CCA capital should be available in full before entry into resolution, that rules should be explicit that equity is fully loss absorbing in resolution and shareholders claims are fully subordinate to other creditors, and that it is critical that resolution authorities require CCAs to set aside *ex ante* resources for recapitalization to be bailed-in by the resolution authority to continue to operate the resolved CCA.[339] Another commenter recommends including disclosures of external sources of liquidity (lenders, creditors, liquidity providers) and when applicable, where they sit in the waterfall.[340]

A CCA already is required to hold equity-funded assets to implement its RWP under Rule 17Ad–22(e)(15)(ii), which requires a CCA to hold liquid net assets funded by equity equal to the greater of either six months of the CCA's current operating expenses or the amount sufficient to ensure a recovery or orderly wind-down.[341] Other resources of the CCA available to cover certain losses before entry into resolution are those included in the current rules of the CCAs, which include SITG contributions [342] and liquid net assets funded by equity of the CCA to cover potential business losses under Rule 17Ad–22(e)(15).[343]

Comments were received regarding the resolution of a CCA, and as described in the RWP Proposing Release, the FDIC would be appointed as the resolution authority of a CCA in the event the CCA was placed into resolution under Title II.[344] Ultimate decisions regarding resolution would be determined pursuant to the requirements of Title II,[345] and it is likely that a CCA's RWP would guide the resolution authority in evaluating any decisions to be made in support of an orderly resolution.

Regarding the disclosures of external sources of liquidity and where they sit in the waterfall, a CCA's rules, SRO rule filing notices and approval orders, and disclosures under Rule 17Ad–22(e)(15) provide transparency regarding the structure and composition of the default waterfalls across the CCAs.

6. Implementation: Rule 17Ad–26(a)(6)

Proposed Rule 17Ad–26(a)(6) required a CCA's RWP to address how the rules, policies, procedures, and any other tools or resources identified in Rule 17Ad–26(a)(5) would ensure timely implementation of the recovery and orderly wind-down plan.

Commenters expressed support for the rule as proposed.[346] One commenter encourages the Commission to be internally prepared and in a proactive position to receive, consider, and approve any necessary regulatory requests from CCAs in a timely manner when RWPs have been implemented.[347] As previously discussed, the Commission engages in ongoing supervision and oversight of CCAs to ensure that it is prepared to receive, consider, and act upon any requests related to RWPs. As discussed further in response to comments regarding Rule 17Ad–26(a)(7) below,[348] policies and procedures that ensure the timely implementation of the RWP pursuant to Rule 17Ad–26(a)(6) would necessarily include provisions that ensure timely notification to affected parties that the CCA will implement its RWP. Such affected parties generally should include clearing participants, service providers for core services, other key stakeholders, the Commission, and other regulatory authorities, as appropriate.

Another commenter recommended ''the implementation of rigorous governance around the use of tools or emergency powers.'' [349] The

[347] DTCC at 13. This concern is also relevant to the requirement in Rule 17Ad–26(a)(7) to provide notification to the Commission when a CCA is ''considering'' implementation of its RWP. *See infra* Part II.C.7.

[348] *See infra* Part II.C.7 (further explaining and distinguishing the requirement for ''timely implementation'' in Rule 17Ad–26(a)(6) from the requirement for notification specifically to the Commission when a CCA is ''considering implementing'' its RWP).

[349] The Associations at 19–20.

Commission has recently adopted rules intended to bolster the governance of CCAs through requirements regarding board composition and director independence, the nominating and risk management committees of the board, conflicts of interest, oversight of service providers, and the solicitation of stakeholder viewpoints.[350] Through these existing requirements, as well as the rule filing and advance notice requirements applicable to CCAs, the appropriate governance processes exist to help ensure that further development of the RWPs is consistent with the rules adopted in this release. The Commission is adopting Rule 17Ad–26(a)(6) as proposed.

7. Notification to Commission: Rule 17Ad–26(a)(7)

Proposed Rule 17Ad–26(a)(7) required a CCA's RWP to include procedures for informing the Commission as soon as practicable when the CCA is considering initiating a recovery or orderly wind-down. In the RWP Proposing Release, the Commission stated it is critical that notice of potential recovery and wind-down be provided to the Commission as soon as practicable.[351] The Commission explained that the systemic risk concerns raised by a recovery or orderly wind-down of a CCA are significant. With notice being provided to the Commission when a CCA is considering implementing its RWP, the Commission has the opportunity to consider whether the CCA engages the potential recovery or wind-down event consistent with its established RWP and the requirements of Commission rules to help mitigate the potential onward transmission of systemic risk and help ensure that a wind-down, if necessary, is orderly. Furthermore, such early notice would help the Commission ensure that it has information that it can share with other relevant authorities, such as the resolution authority, regarding the potential need for resolution.[352] As discussed in the RWP Proposing Release, the Commission already maintains regular contact with each of the CCAs through its supervisory program, and this is a communication channel through which the CCA could provide notice to the Commission.[353]

One comment in support of Rule 17Ad–26(a)(6) as proposed stated that it was important for the Commission to be in a proactive position to receive, consider, and approve any necessary regulatory requests from CCAs in a timely manner when RWPs have been implemented.[354] Several commenters asked for clarification or further guidance on the ''considering initiating'' phrase in the proposed rule text. One commenter, agreeing that open communication is critical, stated that the ''considering initiating'' phrase introduces subjectivity and uncertainty into the requirement, which could expose a CCA and its responsible personnel to potential enforcement action if their interpretation differs from the Commission.[355] The commenter recommends changing the phrase to make the obligation to notify the Commission when the CCA has ''determined to initiate'' its RWP.[356] Similarly, other commenters stated that the proposed standard is vague and could lead to uncertainty about when the notification is required, and suggested, for clarity and consistent application, that the trigger to notify the Commission should be the formal decision to implement the plan.[357]

In requesting that the Commission remove ''considering'' from the rule text, these commenters misconstrue the purpose of the requirement in Rule 17Ad–26(a)(6) regarding timely implementation of the RWP with the requirement in Rule 17Ad–26(a)(7) regarding notice to the Commission. To ensure timely implementation of the RWP under Rule 17Ad–26(a)(6), a CCA generally should have policies and procedures that can ensure affected parties, including clearing participants, service providers, other relevant stakeholders, and other market infrastructure to which it is linked, as well as the Commission and other relevant authorities, receive notification that the CCA has begun to implement elements of its RWP. However, requiring a CCA to notify the Commission *only* when it has decided to implement its RWP would limit the Commission's ability to evaluate market conditions and the decision-making process of the CCA in the time between when it begins to consider implementing and before it has decided to implement. Once a CCA decides to implement its RWP, it will likely have numerous contractual obligations to share information regarding the implementation of its RWP with its participants, service providers, other key stakeholders, and other market infrastructure to which it is linked. Given these obligations, requiring notification only upon implementation would primarily serve the purpose of documenting and announcing the fact of implementation, rather than the separate but equally important purpose of informing the Commission, as market conditions are deteriorating or other events are occurring at the CCA that may trigger implementation of the RWP so that the Commission can consider whether it too should take action in response to the event.

In contrast to Rule 17Ad–26(a)(6)'s requirement that CCAs provide timely notice of the RWP's implementation, Rule 17Ad–26(a)(7) helps ensure that the Commission receives *advance* notice that stressed market conditions or other events have raised the potential for implementation of the RWP. This requirement for timely notification when the CCA is considering implementation of its RWP will significantly enhance the Commission's ability to conduct effective supervision and market oversight and to share information on a timely basis, as appropriate, with other authorities. While the Commission regularly engages with CCAs as part of its supervisory process to anticipate the need for potential regulatory requests, Rule 17Ad–26(a)(7) further helps the Commission should it need to act by promoting timely *advance* notification that a CCA may implement its RWP.

In addition, in contrast to the phase of a stressed market or other event where a CCA is considering implementation of its RWP, once a CCA has begun to implement its RWP the ability of the Commission to take steps of its own, consistent with its supervisory authority, and to coordinate with other authorities, may be more limited because the CCA will already be taking action in response to the event. For example, if a CCA is considering implementation of its RWP to deploy a certain recovery tool, to allocate losses, or to replenish resources, the Commission or other authorities may evaluate other available actions or tools that could also address or mitigate financial stability concerns in response to market events than the action planned by the CCA. In this regard, the Commission can best ensure that actions appropriate to maintaining financial stability can be made if it is notified when a CCA is ''considering'' action, rather than when a CCA has already begun to implement its RWP.

As explained above, commenters also sought clarification regarding ''consider

initiating.'' [358] In response to concerns that the Commission and the CCA may differ regarding the exact moment when a CCA begins to ''consider'' implementing its RWP, CCAs generally should seek to provide notification to the Commission that establishes an open line of communication, enabling the Commission, and other relevant authorities with which the Commission may be coordinating, time to evaluate market conditions and the potential financial stability implications of any decision under the RWP. The ability for the Commission or other relevant authorities to act potentially could help mitigate the need for a recovery or wind-down. When market conditions are deteriorating rapidly, the CCA may be the first party in a position to identify a potential scenario that could trigger implementation of the RWP, and so providing advance notice to the Commission can help the CCA, the Commission, and other potentially relevant authorities, navigate market events. Accordingly, a CCA generally would be ''considering'' implementing a recovery when the clearing agency determines that a market event may result in uncovered losses, liquidity shortfalls, or general business losses at the CCA following end-of-day settlement, or if the CCA anticipates that it will need to deploy prefunded financial resources or liquidity arrangements following end-of-day settlement in order to continue meeting its regulatory obligations.[359] Similarly, if a clearing agency is faced with circumstances in which its status as a ''going concern'' may be in doubt following end-of-day settlement, resulting in the potential for a permanent cessation, sale, or transfer of one of more of its core services, a CCA would be ''considering'' implementation of its orderly wind-down plan.[360] Whether a CCA is ''considering'' implementing its RWP also depends on governance and decision-making processes within the CCA, and so CCAs generally should consider at what levels decisions regarding RWP can be made within their organization. For example, a CCA generally should consider whether decisions regarding RWP implementation and Commission notification are made by senior management, a specific senior officer, or the board of directors. The appropriate governance level may vary depending on the specific type of event or element of the RWP. For example, in considering implementing a recovery, questions regarding the potential for liquidity shortfalls may fall primarily to management or specific senior officers, whereas decisions regarding cessation or transfer of the business are likely to require board input before considering implementation. Accordingly, the Commission is retaining the ''considering'' language as proposed.

Some commenters also expressed views on the means of notification. One commenter stated that the notification should be made in a way that leaves an audit trail and can be better directed, avoiding a potential for the notification to not reach the right destination or receive the appropriate level of attention.[361] One commenter recommended that a CCA be permitted to select the particular means of communication that would be used to notify the Commission, including dedicated phone numbers, email addresses, or other forms of electronic communication.[362] Because Commission staff already remains in regular contact with each of the CCAs as part of its supervisory program,[363] the purpose of the requirement in Rule 17Ad–26(a)(7), in part, is to facilitate a line of communication between the Commission and the CCA regarding the event, so that the Commission can evaluate the circumstances of a potential recovery or wind-down and its potential transmission of systemic risk. In this sense, the timeliness of notification is paramount, while the form of notification or the process of notification may vary under the circumstances so long as the CCA establishes a line of communication. Accordingly, the Commission is modifying the rule in response to these comments to replace the rule text stating ''Include procedures for informing'' with ''Require the covered clearing agency to inform.'' This modification removes the need to codify specific notification forms or procedures, providing the CCA with discretion to assess the best method for communication and the level of formality in the communication that is most appropriate under the circumstances, while ensuring that the timeliness of notification is the primary focus of the CCA. To ensure an appropriate audit or record of its decision, a CCA generally should consider memorializing the steps that it took to notify the Commission. In some circumstances, it may be appropriate to complete this documentation after the fact of notification, while in others, as described by the commenter, it may be appropriate to document notifications internally to ensure a proper audit trail. Any such correspondence with the Commission constitutes a record of a clearing agency and would be subject to the requirements of 17 CFR 240.17a–1.[364]

Two commenters stated that the Commission should require CCAs to notify clearing participants when the CCA is considering implementation of its RWP and when it has done so, in addition to providing notification to the Commission.[365] Commission rules already provide for notification to participants regarding a range of issues, which generally would include the implementation of the RWP. As previously discussed, requirements for timely implementation of the RWP under Rule 17Ad–26(a)(6) generally should include notification to participants and other stakeholders. In addition, other rules also promote the timely sharing of information between CCAs and clearing participants regarding their participation in the clearing agency. For example, Rule 17Ad–22(e)(23)(ii) requires that a CCA establish, implement, maintain and enforce written policies and procedures reasonably designed to provide sufficient information to enable participants to identify and evaluate the risks, fees, and other material costs they incur by participating in the CCA. Because implementing a recovery or orderly wind-down may involve the use or replenishment of prefunded resources, as well as the potential allocation of losses from default or non-default loss scenarios to participants, a CCA generally would need to inform its participants regarding those aspects of a recovery or wind-down event at the time of implementation pursuant to Rule 17Ad–26(a)(6). In addition, a CCA

[358] The Commission is making a technical modification to the rule to replace ''initiating'' with ''implementing.'' ''Implementing'' is consistent with language used in other requirements in Rule 17Ad–26, as well as in the RWP Proposing Release and in the comments received more generally when referring to the implementation of the RWP. For example, Rules 17Ad–26(a)(4), (6), and (8) all use ''implementing'' rather than ''initiating.''

[359] *See, e.g.,* FSB Analysis, *supra* note 24, at 1–2 (analyzing CCP services across seven entities and, in so doing, identifying hypothetical default and non-default loss scenarios that would have required the use of, or exhausted the use of, recovery tools in some scenarios for some of entities' service lines).

[363] RWP Proposing Release, *supra* note 18, at 34723.

[364] Rule 17a–1.

[365] The Associations at 5; ICI at 5, n.15.

generally should discuss with its participants and other key stakeholders planning and development with respect to the RWP, as well as the results of testing. Two such venues for discussion of the RWP are already required by existing rules, as follows: Rule 17Ad–25(d), requiring the establishment of a risk management committee,[366] and Rule 17Ad–25(j), regarding the solicitation of stakeholder viewpoints.[367] These venues already require the CCA to share information regarding risk management topics, which necessarily would include the risk management implications of its RWP, with the risk management committee and with relevant stakeholders, respectively. In both cases, clearing participants would receive information regarding the RWP and have an opportunity to provide input (either as members of the risk management committee when reviewing matters regarding the RWP before the committee, or in providing viewpoints when solicited by the CCA).

In contrast, the purpose of the notification requirement in Rule 17Ad–26(a)(7) is to ensure that the Commission specifically has timely information regarding the potential for a CCA to implement recovery or wind-down. As previously discussed above, this helps ensure that the Commission can use the information in a timely manner to consider appropriate regulatory responses to market events, as well as to share information, as appropriate, with other authorities, such as the resolution authority, that also may be monitoring stressed market events alongside the Commission and may need to consider the potential for resolution. In addition, pursuant to clearing agency rules, clearing participants generally will be notified of circumstances related to a participant default, the potential for a portfolio auction, and the use of default management tools that may precede a recovery or wind-down event. While existing Commission rules,[368] as well as participant agreements or other arrangements between CCAs and their participants are likely to facilitate timely notification regarding the planning, development, and implementation of key aspects of the RWP, as discussed above, it may not be appropriate in all circumstances for a CCA to provide *advance* notice to participants that it is considering implementing its RWP because such notification could increase market stress or accelerate deteriorating conditions, precipitating the very recovery or wind-down event that, in the absence of such increase or acceleration, the CCA, the Commission, or another authority could take appropriate steps to mitigate and avoid. Accordingly, the Commission is not adding a provision specifically requiring notification that the CCA is considering implementing its RWP to clearing participants as part of Rule 17Ad–26(a)(7).

8. Testing: Rule 17Ad–26(a)(8)

Proposed Rule 17Ad–26(a)(8) required a CCA's RWP to include procedures for testing the CCA's ability to implement the recovery and wind-down plans at least every 12 months, including by requiring the CCA's participants and, when practicable, other stakeholders to participate in the testing of its plans, providing for reporting the results of the testing to the CCA's board of directors and senior management, and specifying the procedures for, as appropriate, amending the plans to address the results of the testing.

In the RWP Proposing Release, the Commission explained that a testing requirement is important since it should help ensure that a CCA's RWP will be effective in the event of an actual recovery or orderly wind-down.[369] The testing would likely be similar to that required under Rule 17Ad–22(e)(13), in that it would test how the RWP would perform in crisis situations, including the participation of senior management and the board of directors. The Commission stated that testing must involve the CCA's participants and, where applicable, other stakeholders. This inclusion should help to make sure that procedures will be practical and effective in the face of a recovery or orderly wind-down, noting that coordination will be required in such a situation.

The Commission also explained that testing every 12 months was an appropriate frequency because annual testing is already required for many other aspects of a CCA's risk management. Accordingly, a requirement for testing every 12 months for RWPs strikes an appropriate balance between the need to test an RWP and the desire to avoid duplicative requirements. The Commission further stated that a CCA may choose to conduct this RWP testing in conjunction with default testing for Rule 17Ad–22(e)(13) or business continuity testing. Due to the possibility of leveraging existing default management testing, the Commission believed that costs associated with RWP testing may not be too high for CCAs and likely would be moderate for participants, as they are already involved in the default management testing.[370]

a. Support for Testing Requirement

Several commenters expressed their agreement with or support of the proposed requirement to annually test the ability to implement a CCA's RWP.[371] One commenter agreed with the importance of ensuring that a CCA's RWP is workable for a potential crisis situation, stating that it is essential for the CCA, its members and customers, and regulators all have confidence that the RWP will operate as designed.[372] The commenter also stated that the value of periodic testing is to reduce the burden on a CCA when the need for implementing the RWP arises, a time when resources may be stretched thin, ensuring that there is a workable roadmap to address the situation at hand.[373] Similarly, a different commenter emphasized that it is critical for a CCA to be confident that the RWP would be effective in an actual recovery or orderly wind-down event.[374] Another commenter agrees that RWP testing is generally appropriate, provided that annual RWP testing can be combined with existing default management testing.[375] One other commenter echoed this point and agrees that plans need to be tested on a regular basis, and a test every 12 months would be in line with requirements for default testing.[376]

b. Scope of Testing and Interaction With Other Testing Requirements

Some commenters sought more clarity regarding the scope of the ''testing'' requirement in proposed Rule 17Ad–

[366] Specifically, Rule 17Ad–25(d)(2) requires that the risk management committee, in the performance of its duties, be able to provide a risk-based, independent, and informed opinion on all matters presented to the committee for consideration in a manner that supports the overall risk management, safety and efficiency of the registered clearing agency. 17 CFR 240.17ad–25(d)(2).

[367] Specifically, Rule 17Ad–25(j) requires that each registered clearing agency must establish, implement, maintain, and enforce written policies and procedures reasonably designed to require the board of directors to solicit, consider, and document its consideration of the views of participants and other relevant stakeholders of the registered clearing agency regarding material developments in its risk management and operations on a recurring basis.

[368] *See, e.g., supra* notes 366–367 and accompanying text.

[376] The Associations at 21.

26(a)(8), recommending baseline standards and discretion to test different scenarios or aspects of the plan each year.[377]

Several commenters specifically stated that CCAs should have discretion and flexibility to determine an appropriate approach to testing so that testing would not become duplicative, unnecessary, or burdensome.[378] One commenter stated that a new testing requirement would require significant investment of time and resources from a CCA's most critical personnel, both to plan and execute the testing, which is a highly manual process.[379] Similarly, another commenter explained that RWP testing at CCAs typically includes various types of exercises, and suggested that any final rule make clear that a CCA has discretion to rely on such practices to satisfy Rule 17Ad–27(a)(8).[380]

The definitions in Rule 17Ad–26(b) regarding ''recovery'' and ''orderly wind-down'' provide much of the direction that commenters seek regarding the scope of testing contemplated under Rule 17Ad–26(a)(8). Specifically, RWP testing would involve testing a CCA's plans for recovery (*e.g.,* actions the CCA would take to address an uncovered loss, liquidity shortfall, or capital inadequacy, whether arising from a participant default or other causes, including actions to replenish any depleted prefunded financial resources and liquidity arrangements), and for wind-down (*e.g.,* actions the CCA would take in scenarios that exhaust the CCA's ability to replenish resources and necessitate that it effect the permanent cessation, sale, or transfer of one or more of its core services).[381] As such, testing of RWPs generally should include scenarios that consider both default and non-default scenarios. When testing the RWP against a default scenario, the clearing agency generally should consider the effects of exhausting prefunded resources, to ensure that the clearing agency also tests its ability replenish those resources (*i.e.,* complete recovery). In the context of a default scenario, such a test may have similar elements to a default management testing exercise, though it would necessarily consider steps related to replenishing prefunded resources deployed in response to the scenario. In contrast, testing that considers non-default losses generally could not leverage existing testing related to default management, and so testing exercises developed for RWPs under Rule 17Ad–26(a)(8) would also need to include testing of non-default loss scenarios to demonstrate that RWP testing was reasonably designed, consistent with the rule requirements. Because of the range of scenarios that may implicate RWPs, including scenarios in both default and non-default scenarios, or a combination thereof, a CCA retains discretion under the annual testing requirement to organize and design its testing scenarios to ensure that testing exercises produce effective tests of the elements of the RWP, in such a way that the CCA can review its testing results and consider improvements over time.

With respect to the investment of time and resources necessary to plan and execute testing, and the charge that RWP testing is ''unnecessary'' or ''burdensome,'' the commitment of such time and resources is critical to ensuring an effective RWP.[382] The circumstances in which a CCA may need to implement its RWP are of such systemic consequence that CCAs should test their rules, policies, and procedures so that, should real world conditions arise, the CCA is prepared to implement its RWP in an effective manner, thereby helping to ensure the CCA does not become a mechanism for spreading contagion through the financial system or otherwise endangering financial stability. Similar to the way that default management testing under Rule 17Ad–22(e)(13) helps a CCA test its close-out procedures for a defaulted portfolio so that policies and procedures are sufficiently developed to promote a smooth and successful process,[383] RWP testing can help a CCA ensure that its policies and procedures for recovery and orderly wind-down are sufficiently developed and can be effective in completing loss allocation and replenishment tasks, in the case of a recovery, or a cessation of services, in the case of a wind-down. A CCA that does not engage in regular testing of its RWP may find, in a moment where stressed market conditions are likely to be extreme and the viability of the CCA is itself in question, that it is under-prepared to implement its plan, potentially negating the benefits of the planning process. The Commission agrees that effective planning for RWP testing is likely to be a manual process that draws upon critical personnel because RWP planning requires careful consideration of the procedures and tools upon which a CCA would draw in extreme market circumstances to maintain the ongoing viability of the CCA itself. As such, critical personnel, who may be directed in the RWP to make loss allocation or other critical decisions during a recovery or wind-down scenario, generally should participate in RWP testing conducted by the CCA to help ensure the design and execution of testing scenarios resemble, as well as can be estimated during the planning and testing process, anticipated real-world conditions necessitating a recovery or wind-down.

[377] Davidson at 5 (explaining that ''testing'' needs to be clearly defined, pragmatic, and cost effective, and that it comes in many varieties, listing among the different types of testing conducted by CCAs business continuity tests, margin model and clearing fund testing and validations, default management testing, compliance testing, and internal audit testing); SIFMA at 11 (urging the Commission to set baseline standards for testing that would require CCAs to adhere to standards based on common best practices rather than establishing voluntary disparate practices); The Associations at 21 (stating that not every recovery scenario needs to be tested annually but that a CCA should pick material and significant scenarios and endeavor to test different scenarios or different parts of the plan each year).

[378] ICE at 4–5; OCC at 10–11 (identifying its existing regular and periodic testing efforts (*e.g.,* default simulations, table-top exercises, monthly analysis and monitoring for assessment capability) used to assess and enhance the operational capacity and effectiveness of risk management processes and tools, and stating that they are appropriately designed to ''help ensure that the RWP will be effective in the event of an actual recovery or orderly wind-down''); DTCC at 10–11; CCP12 at 4–5.

[379] OCC at 10.

[380] CCP12 at 4.

[381] More specifically, Rule 17Ad–26(b) defines ''recovery'' to mean the actions of a covered clearing agency, consistent with its rules, procedures, and other *ex ante* contractual arrangements, to address any uncovered loss, liquidity shortfall, or capital inadequacy, whether arising from participant default or other causes (such as business, operational, or other structural weaknesses), including actions to replenish any depleted prefunded financial resources and liquidity arrangements, as necessary to maintain the covered clearing agency's viability as a going concern and to continue its provision of core services, as identified by the covered clearing agency pursuant to Rule 17Ad–26(a)(1). It defines ''orderly wind-down'' to mean the actions of a CCA to effect the permanent cessation, sale, or transfer of one or more of its core services, as identified by the CCA pursuant to Rule 17Ad–26(a)(1), in a manner that would not increase the risk of significant liquidity, credit, or operational problems spreading among financial institutions or markets and thereby threaten the stability of the U.S. financial system.

[382] *See infra* Part IV.C.1.h (further discussing the benefits and costs associated with the testing requirement) and V.B (further discussing the paperwork burdens associated with Rule 17Ad–26).

[383] Separate from any obligations under Rule 17Ad–22(e)(13) with respect to default management testing, 31 CCPs voluntarily participated in a default management exercise led by CCP Global in 2023 to share best practices, identify areas for follow-on work, and highlight insights from the testing process. Another exercise is planned for 2025. Such efforts suggest that, even where testing efforts require a commitment of time, personnel and resources, CCPs are eager to engage in testing as an effective mechanism to improve their rules, policies and procedures. CCP Global, Default Simulation Exercises by CCPs, *https://ccp-global.org/defaultsimulation/* (describing an exercise completed in 2023).

Including these critical personnel in RWP testing may increase the overall cost of testing but is necessary because these critical personnel are best positioned to identify the planning and procedures that can help ensure timely and effective implementation under real-world conditions.

With respect to whether such testing may be duplicative, commenters also requested clarification as to the extent testing under Rule 17Ad–26(a)(8) could be conducted as part of existing default management testing required under Rule 17Ad–22(e)(13) or business continuity testing required by Commission rules.[384] One commenter stated that it would not object to the proposed frequency of annual RWP testing if it could be combined with existing default testing.[385] Another similarly stated that the RWP and default management testing requirements could be combined into one, noting that both contemplate annual testing.[386] One commenter, citing an operational concern in the potential overlap of the testing requirements, stated that it is unclear RWP testing would differ noticeably from default management testing, and encouraged combining both to reduce the potential for duplicative efforts that would be costly and perfunctory.[387] Citing the potential cost-effectiveness of leveraging existing practices pursuant to default management testing under Rule 17Ad–22(e)(13), another commenter stated that the Commission should more closely harmonize the proposed RWP testing requirement with the requirement in Rule 17Ad–22(e)(13), which would give CCAs flexibility to design testing procedures to properly fit the particular markets, cleared products, and participants that they serve.[388]

As discussed above, regular, annual testing is necessary to facilitate the timely implementation of the RWP when a recovery or wind-down scenario arises, as such scenario is likely to include stressed market conditions where clearing agency participants have defaulted or a non-default loss event that may contribute to market stress, strained organizational resources at the CCA, and market events that progress rapidly. The purpose of such testing is not to be duplicative; rather, it may well be complementary to, for example, the default management testing required by Rule 17Ad–22(e)(13). Accordingly, as explained further below, the Commission is modifying Rule 17Ad–26(a)(8) to explicitly distinguish default management testing from RWP testing because the CCA's role in default management would be distinct from its role implementing a recovery or wind-down.

Nonetheless, as one commenter explained, CCAs may engage in one set of testing exercises designed to address multiple testing procedures or scenarios.[389] Such an approach to harmonizing default management testing with RWP testing is consistent with the requirements of the rule; namely, a CCA can conduct one exercise with multiple tests, such as one that tests both default management and implementation of RWPs. Under Rule 17Ad–26(a)(8), a CCA retains discretion to conduct a single testing exercise intended to address multiple testing requirements under Commission rules, so long as the testing exercise addresses the distinct elements of separate testing requirements, including the possibility that some RWP testing scenarios would include non-default losses, as opposed to losses arising during a CCA's default management process.

For example, rather than conducting a narrow test of ''business as usual'' default management, a CCA may instead choose to conduct a more comprehensive testing exercise intended to cover not only its rules, policies and procedures for default management but scenarios and triggers for loss allocation that would activate the need for a recovery or orderly wind-down. Such an approach may be more efficient than conducting RWP testing that is wholly distinct from default management testing, given that participant defaults can be one of the scenarios or triggers that lead to a recovery or wind-down scenario. A more comprehensive testing exercise may also make it less costly to assemble a representative set of participants and other key stakeholders, as well as the board, producing a more effective testing exercise. As previously discussed above, and in contrast to default management testing, RWP testing may require consideration of scenarios and testing of procedures that go beyond default management because, for example, recovery includes the actions taken to address uncovered losses and replenishment of prefunded resources,[390] and wind-down includes actions taken when resources have been exhausted, necessitating the permanent cessation, sale, or transfer of one or more of the CCA's core services.

Accordingly, as discussed above, and because RWP testing is necessarily distinct from, if in ways complementary to, default management testing under Rule 17Ad–22(e)(13), the Commission is modifying Rule 17Ad–26(a)(8) at adoption to add new language stating, as follows: ''[r]equiring that such testing be in addition to testing pursuant to § 240.17ad–22(e)(13).'' As previously explained, this language clarifies that, although a CCA may choose for efficiency purposes to combine default management and RWP testing into a single exercise, RWP testing should include testing of the procedures specific to its RWP.[391] In addition, the existing requirement regarding default management testing in Rule 17Ad–22(e)(13) is unchanged; it is not replaced or superseded by the separate and distinct requirement for RWP testing.

c. Participation by Clearing Agency Participants and Other Stakeholders

In the RWP Proposing Release, the Commission proposed to require that RWP testing include participation by clearing agency participants and, when practicable, other stakeholders.[392] One commenter stated that involvement of clearing members is not necessarily appropriate for certain scenarios or tools related to general business losses or other non-default losses, and CCAs should have flexibility to determine the appropriate approach to testing and clearing member involvement in such

[384] RWP Proposing Release, *supra* note 18, at 34723–24.

[385] ICE at 4.

[386] The Associations at 21.

[387] CFA at 4.

[388] DTCC at 11.

[389] OCC at 10.

[390] For example, in contrast to a default management exercise, where the CCA likely assumes it has sufficient resources to close out a defaulting participant's portfolio, a recovery plan generally should be formulated on the presumption that any uncovered loss or liquidity shortfall will be borne by the CCA, its owners' and its participants' own resources and provide an effective means of achieving a matched book, where applicable, and a means of replenishing financial resources. *See* CPMI–IOSCO Recovery Guidance, *supra* note 25, at 2.3.1.

[391] To improve readability, the Commission is also adding paragraph headings to the rule and modifying the first reference to ''recovery and wind-down plans'' to the defined terms, so that it instead reads ''recovery and orderly wind-down plans.'' As such, final Rule 17Ad–22(a)(8) reads in full as follows: Include procedures for testing the CCA's ability to implement the recovery and orderly wind-down plans at least every 12 months, including by (a) requiring the CCA's participants and, when practicable, other stakeholders to participate in the testing of its plans, (b) requiring that such testing would be in addition to the testing required in paragraph (e)(13) of 17 CFR 240.17ad–22, (c) providing for reporting the results of the testing to the CCA's board of directors and senior management, and (d) specifying the procedures for, as appropriate, amending the plans to address the results of the testing.

[392] RWP Proposing Release, *supra* note 18, at 34716.

cases.[393] The commenter suggested that the Commission remove or qualify the reference to requiring participant participation in testing.[394] Another commenter stated that direct participation in testing of participants or other stakeholders is not necessarily the most effective way to test and requiring such participation may distract the CCA from optimizing its RWP testing.[395] The commenter explained their inclusion may not be appropriate or beneficial for aspects of an RWP that do not impact them and also stated that testing aspects of an RWP can involve confidential or highly sensitive information that could make the inclusion of clearing members and other stakeholders inappropriate.[396] The commenter stated that there are various other ways in which participants or other stakeholders can be educated in default management and recovery and orderly wind-down processes.[397] In conclusion, the commenter requested that the Commission clarify, for the avoidance of doubt, that testing should not require any participation of clearing member or other stakeholders, as CCAs must retain flexibility to determine how their testing should be conducted, including whether and how to include participants and third-party stakeholders.[398] Another commenter agreed that participants and other stakeholders should be included in tests if any action is required from them as part of the plan; however, such testing should not become unduly onerous for market participants and knowing the significant overlap in member bases at CCAs, consideration should be given that testing be done simultaneously with other CCAs.[399] One commenter stated that it was sensible to require that key external third parties participate.[400] Another commenter recommended that the participation of risk management committees and risk advisory working groups be required, as the market participants on those bodies would possess relevant perspectives and input to ensure that the tests are properly calibrated and administered.[401]

One commenter stated it does not believe that it is appropriate to prescribe a specified approach for the inclusion of CCA participants and, where applicable, other stakeholders in the testing of its RWP.[402] The commenter explained that it is important to recognize the differences in closing out a defaulting member at a CCA that clears cash-settled U.S. securities transactions versus a derivatives clearing agency.[403] Additionally, for a CCA with multiple participant types, the commenter stated it is unclear how each different type of participant would participate in annual testing.[404] The commenter recommends that CCAs be allowed to consider and implement approaches such as training and other educational outreach efforts to members and participants to satisfy any final requirement the Commission adopts for RWP testing.[405] Instead of mandating participation, the commenter recommends that the Commission apply the same guidance to RWP testing as it did for default management testing under Rule 17Ad–22(e)(13)—not specify that participants be included in the testing process, but that some or all participants could be included in some or all of the testing.[406]

Mindful of the requirements under Rule 17Ad–22(e)(13) for testing in the default management context, and consistent with the approach taken by the Commission there, Rule 17Ad–26(a)(8) has the same requirement for participant and other stakeholder involvement in RWP testing. Accordingly, the rule does not specify that all clearing agency participants participate in every test because, particularly for CCAs with large numbers of participants or multiple participant types, it may be impractical or counterproductive from a testing perspective and, as explained by commenters, given the wider range of topics covered as part of RWP planning, it may not always be appropriate to include participants in all aspects of testing.[407] Nonetheless, participation in testing by clearing members helps ensure that clearing members are familiar with the CCA procedures that will be followed in a recovery or wind-down scenario, creating positive feedback where both clearing members and the CCA can plan, share experiences, and consider whether existing plans would, in fact, be viable. While other efforts by a CCA, such as trainings and educational outreach to participants and other stakeholders, may assist in the preparation for recovery and wind-down scenarios, and may also help ensure that participants participate meaningfully in testing exercises, training and other education activities are no substitute for having participants and other categories of stakeholders participate in testing.

In designing its testing plan consistent with Rule 17Ad–26(a)(8), a CCA may choose to designate in its policies and procedures certain participants, or categories of participants, for participation in certain tests. For example, in testing of loss allocation tools, where losses could be assigned to a participant, it may be useful to include participants in the testing to allow them to understand when they can be expected to bear losses and how those losses would be absorbed. In testing that involves business losses or certain types of non-default losses, it may be less appropriate to have participants participate in the testing, though a recovery or wind-down scenario involving a cybersecurity event may benefit from participant testing even if the loss is categorized as a non-default loss. In developing testing scenarios, a CCA may at times also need to use confidential or highly sensitive information that could limit its ability to include clearing participants. In addition, for testing that implicates the risk management framework, such as RWP testing for default loss scenarios, it may be appropriate to facilitate participation by the risk management committee of the board of directors, or other risk committees or advisory working groups organized by the CCA. Over time, a CCA generally should consider how to help ensure that a wide range of participants and other categories of stakeholder have participated in at least those aspects of testing that would affect those participants and other categories of stakeholder so that the participants and

[403] *Id.* at 10. In the commenter's view, participant action and awareness of the defaulter's portfolio is not needed in such a case and would be counterproductive to the CCA's need for confidentiality around its market-facing close-out activity. The commenter also stated that cash-market clearing agencies have a relatively large number of participants, meaning that a prescriptive mandate for engagement by all participants in testing would be impractical, cost and resource intensive, and potentially antithetical to the underlying goals of testing. *Id.*

[407] For example, as discussed in Part II.C.8.d immediately below, testing of orderly wind-down plans may involve a tabletop exercise with the board and senior management focused on the considerations related to, *e.g.,* a bankruptcy filing.

other stakeholders are well informed as to the CCA's policies and procedures regarding recovery and wind-down. The requirements of the rule give discretion to CCAs to identify the appropriate scenarios, participants, and audiences for tests, and for the inclusion of participants and other stakeholders as appropriate so that the testing requirement is not unduly onerous, either on CCAs or their participants and other key stakeholders.

As with Rule 17Ad–22(e)(13), the Commission recognizes that under Rule 17Ad–26(a)(8), a CCA may have limited ability to require participation by all stakeholders in all circumstances, but a CCA generally should make efforts to secure participation of relevant stakeholders, such as liquidity providers or settlement banks. It may also consider including supervisory and resolution authorities as observers. Accordingly, the Commission is not modifying proposed Rule 17Ad–26(a)(8) to remove requirements related to participation by clearing members and other key stakeholders.

d. Testing of Orderly Wind-Down Processes

One commenter requested that the Commission provide additional guidance on how CCAs would implement the wind-down portion of their RWPs.[408] The commenter asked for clarification that end-to-end testing obligations in the proposal do not require testing of steps related to effectuating legal processes and related decision-making, as those steps are operational in nature and do not lend themselves to standardized testing scripts or protocols.[409] Other commenters echoed this statement that legal processes do not lend themselves to standardized testing processes, requesting that CCAs have discretion to determine whether it is necessary or feasible to test.[410]

For the portion of annual testing pertaining to orderly wind-down, a CCA generally should consider that elements of the legal processes associated with a wind-down may vary depending on the circumstances of the scenario and so the CCA may need to decide the order in which services wind down to help ensure an orderly process. In deciding in what order to wind down services, a CCA generally should consider the steps it would need to take to help ensure the wind-down is orderly. Additionally, as part of its orderly wind-down plan, a CCA generally should explore the steps that could achieve recovery and thereby avoid wind-down, to ensure all available tools and resources intended to prevent a wind-down have been exhausted before implementing the orderly wind-down of the CCA. Even though they are operational in nature, this aspect of testing may differ from other testing in that it could involve considering which legal documents to prepare or file, rather than engaging in an exercise that progresses through the CCA's default waterfall and related tools. Wind-down testing may also include, for example, tabletop exercises with senior management that consider when and how to execute bankruptcy proceedings or transfer of core functions to another entity.[411] In addition, a CCA generally should consider whether different wind-down scenarios necessitate that a CCA consider winding down services in different sequences, so that the overall wind-down effort remains orderly across different scenarios.

e. Board Review and Sharing of Testing Results

One commenter agreed that testing results should be provided to the board and senior management of the CCA to enable them to effectively oversee the RWP and its implementation.[412] Another commenter stated that testing results should also be shared with risk advisory committees to ensure that participants are educated and can provide feedback to enhance procedures, as well as with regulatory authorities who can review and challenge the quality of testing scenarios, outputs, and the adequacy of resources.[413]

While the Commission agrees that CCAs generally should consider ways to share information effectively throughout their organizations, as well as with their participants and regulatory authorities, other existing requirements already address the concerns raised by these commenters. For example, Rule 17Ad–25(j) establishes an obligation of the board to solicit and consider viewpoints of participants and other relevant stakeholders, such as through risk advisory committees. Under Rule 17Ad–25(j), each registered clearing agency must establish, implement, maintain, and enforce written policies and procedures reasonably designed to require the board of directors to solicit, consider, and document its consideration of the views of participants and other relevant stakeholders of the registered clearing agency regarding material developments in its risk management and operations on a recurring basis. A CCA generally should consider material changes to, and annual testing of, its RWP as material developments in the CCA's risk management and operations under Rule 17Ad–25(j). In addition, Rule 17Ad–22(e)(23)(ii) also requires a CCA to establish, implement, maintain and enforce written policies and procedures reasonably designed to provide sufficient information to enable participants to identify and evaluate the risks, fees, and other material costs they incur by participating in the CCA. Under this requirement, a CCA generally should consider the ways in which information regarding its RWP, changes thereto, and testing thereof, should be provided to participants to satisfy the requirements of Rule 17Ad–22(e)(23)(ii). Furthermore, records related to RWP testing would be available to the Commission as records of the CCA pursuant to 17 CFR 240.17a–1, including the results of testing provided to the board pursuant to Rule 17Ad–26(a)(8). In addition, as part of its supervisory program for CCAs, Commission staff generally do participate in existing default management exercises, which also address matters related to RWPs.

9. Board Approval: Rule 17Ad–26(a)(9)

Proposed Rule 17Ad–26(a)(9) required a CCA's RWP to include procedures requiring review and approval by the board of the plans at least every 12 months or following material changes to the CCA's operations that would significantly affect the viability or execution of the plans, with such review informed, as appropriate by the CCA's testing of the plans.

Three commenters supported the proposed approach.[414] In addition, one

[408] DTCC at 9.

[409] DTCC at 11 (explaining that, as a practical matter for a CCA, other than internal governance requirements necessary to determine whether to trigger the implementation of the orderly wind-down plan, implementation would include preparation of Bankruptcy Court filings, the provisioning of legal advice as a result of entering into the bankruptcy process, and then entering into various agreements and other processes that are operational in nature).

[410] CCP12 at 4–5; OCC at 11, n.27 (stating that some aspects of an RWP do not lend themselves to full simulation testing in any event, such as the contemplation of a potential transaction with an as-yet-identified third-party for a merger or acquisition).

[411] A CCA designated systemically important also generally should consider the extent to which recovery and wind-down scenarios may result in resolution by the resolution authority pursuant to Title II.

[412] OCC at 10.

[413] The Associations at 21.

[414] OCC at 11 (also supporting the fact that the cadence of testing matches that of board review); The Associations at 22 (citing the importance of RWPs to the overall business of the CCA); Davidson at 12.

commenter stated that the board should consult with the risk management committee when developing or amending its RWP.[415] Commission rules already require the board of a registered clearing agency to establish a risk management committee to assist the board in overseeing the risk management of the registered clearing agency.[416] Given that many elements of the RWP would closely implicate the risk management of a CCA, and that the risk management committee is a committee of the board, a CCA generally should consider whether and how the risk management committee should assist in the review and approval of material changes to RWPs and review of RWP testing results. Accordingly, because Rule 17Ad–26(a)(9) already requires the board to review and approve the RWP, it is unnecessary to separately also require the board to consult the risk management committee as part of its review and approval.

Consistent with the above, the Commission is adopting the rule as proposed, with two technical modifications to improve clarity.[417]

10. Other Comments

a. Harmonization With CFTC Proposal

Several commenters recommended that the Commission and CFTC coordinate to ensure that any final rules are aligned or structured so that dually registered entities (*i.e.,* CCAs registered with the Commission and SIDCOs registered with the CFTC) can efficiently comply with both Commission and recently proposed CFTC rules,[418] which two of these commenters stated include more prescriptive elements than the Commission's proposed rules.[419]

In developing Rule 17Ad–26, and consistent with its obligations under Title VIII of the Dodd-Frank Act, the Commission has consulted with the CFTC to ensure that regulatory requirements are effective and consistent.[420] The Commission's final Rule 17Ad–26 is highly aligned with the CFTC's proposal. While commenters have identified some aspects of the CFTC's approach that differ in terms of the level of granularity, prescriptiveness, or in the use of particular language, these differences generally result from differences in historical approach or regulatory scope between the Commission and CFTC. For example, requirements proposed by the CFTC identify specific scenarios beyond those described in Rule 17Ad–26(a)(3), which focuses on scenarios involving uncovered credit losses, uncovered liquidity shortfalls, and general business losses, consistent with other requirements in Rule 17Ad–22. Such differences reflect non-substantive differences in approach between SIDCO regulations and the Commission's rules for CCAs, and it is important for the Commission's regulatory framework to align the new requirements in Rule 17Ad–26 with existing requirements in Rule 17Ad–22. In addition, the Commission's approach reflects the range of markets served and products cleared by CCAs and the principles-based approach generally taken in both Rule 17Ad–22 and new Rule 17Ad–26. As with the other requirements set forth in rules for CCAs, which are also consistent with comparable CFTC rules,[421] the requirements in Rule 17Ad–26 related to the scenarios that might be implicated, and the tools that would be applied, in a recovery or wind-down scenario necessarily depend, in part, on the risk profile of the products cleared and the structure of the markets served. Accordingly, such differences in approach as to the granularity of certain requirements are, as one commenter stated, non-substantive,[422] and as such could not result in conflicting or confusing regulatory requirements for dually registered clearinghouses.

b. International Standards

One commenter, addressing the discussion in the RWP Proposing Release stating that CCAs consider new policy statements from standard-setting bodies, asked the Commission to reaffirm that international policy statements are non-binding guidance and considering when and how to implement such non-binding guidance remains within the discretion of the CCA.[423]

As a general matter, international standing-setting bodies provide guidance that is helpful for regulatory authorities to consider when establishing and implementing changes to their regulatory frameworks in their respective jurisdictions. While not required by the rule, as discussed in the RWP Proposing Release, CCAs generally should consider policy statements and other guidance issued by standard-setting bodies when reviewing and considering updates to their rules, policies, and procedures related to RWPs.[424]

c. Other Topics

One commenter reiterated its recommendation that the Commission impose very restrictive investment and credit policies for CCA margin and default funds.[425] Preexisting Commission rules already establish requirements designed to minimize custody and investment risk consistent with international standards.[426] Specifically, Rule 17Ad–22(e)(16) requires a CCA to establish, implement, maintain and enforce written policies and procedures reasonably designed to safeguard the CCA's own and its participants' assets, minimize the risk of loss and delay in access to these assets, and invest such assets in instruments with minimal credit, market, and liquidity risks.[427] This requirement applies to margin and guaranty fund contributions held by the CCA on behalf of its participants.

Another commenter stated that RWPs should allow for positions to be ported to other CCAs.[428] Preexisting Commission rules already establish requirements for segregation and portability consistent with international standards.[429] Specifically, Rule 17Ad–22(e)(14) requires a CCA to establish, implement, maintain and enforce

[415] ICI at 8.

[416] 17 CFR 240.17ad–25(d)(1).

[417] The Commission is making two technical modifications to the rule: for clarity and grammatical correctness, the final rule text modifies the phrase ''review and approval by the board of directors of the plans'' to ''review and approval of the plans by the board of directors of the covered clearing agency'' and includes an additional comma after the phrase ''as appropriate'' and before ''by the CCA's testing of the plans.''

[418] ICE at 5; ICI at 5 (also stating that, although the Commission and CFTC proposals differ regarding non-substantive matters, such differences may cause confusion and redundancy regarding the standards for RWPs and result in inefficiencies and harmonization would better facilitate compliance and consistency, certainty, and efficiency); OCC at 5, n.14; The Associations at 12; SIFMA at 5. The Options Clearing Corporation (''OCC'') and ICE Clear Credit (''ICC'') are each a CCA that is also registered as a SIDCO with the CFTC. *See infra* Part IV.B.1 (further describing each of the CCAs registered with the Commission).

written policies and procedures reasonably designed to enable the segregation and portability of positions of a participant's customers and the collateral provided to the CCA with respect to those positions and effectively protect such positions and related collateral from the default or insolvency of that participant.[430]

One commenter requested that the Commission and CFTC continue to move forward with important regulatory reforms to address several other areas related to clearinghouses, including CCP margin methodologies, CCP transparency and disclosures, CCP liquidity risk and stress testing, and CCP capital and SITG.[431] Each such topic is the subject of or closely related to existing workstreams underway at the Basel Committee on Banking Supervision,[432] CPMI–IOSCO,[433] and the FSB,[434] and Commission staff currently participate in each.

Another commenter remains concerned with challenges resulting from the concentration of exposures at CCAs, stating that such concentration could potentially jeopardize the priorities for efficient clearing, settlement, and payment functions that CCAs must ensure pursuant to Title VIII of the Dodd-Frank Act.[435] As discussed in Part I,[436] the Commission has long acknowledged that, while central clearing and other important functions provided by CCAs generally benefit the markets they serve, CCAs can also pose systemic risk due in part to the fact that the clearing function concentrates risk. To mitigate this potential risk, the Commission has adopted a series of rules since the enactment of the Dodd-Frank Act designed to promote the resilience of CCAs. These rules include Rule 17Ad–22(e), which sets forth standards for CCAs that address all aspects of a CCA's operations, including financial risk management, operational risk, default management, governance, and participation requirements.[437] These features of the regulatory framework, made more robust by the requirements adopted in this release, help ensure that CCAs benefit the markets they serve and do not create contagion events that could pose a systemic danger to the U.S. financial system.

D. Defined Terms in Rule 17Ad–26

1. Definition of ''Orderly Wind-Down''

Proposed Rule 17Ad–26(b) defined ''orderly wind-down'' to mean the actions of a CCA to effect the permanent cessation, sale, or transfer of one or more of its critical services in a manner that would not increase the risk of significant liquidity, credit, or operational problems spreading among financial institutions or markets and thereby threaten the stability of the U.S. financial system.

In the RWP Proposing Release, the Commission explained that the proposed definition would help identify the specific goals of an orderly wind-down: that the actions of a CCA should not increase the risk of significant liquidity, credit, or operational problems spreading among financial institutions or markets and thereby threaten the stability of the U.S. financial system, and that these actions would serve as a final and binding solution to whatever circumstance necessitated the wind-down (*i.e.,* not a temporary stopgap measure).[438] These considerations help distinguish the difference between an *orderly* wind-down, as opposed to a wind-down where the goal is to cease operations as quickly as possible. As discussed in the RWP Proposing Release, to be orderly, a wind-down generally should include providing notice to participants sufficient to allow them to transition to alternative arrangements in an orderly manner, as well as maintaining the operation of the CCA's critical services.[439] Moreover, for a wind-down involving the sale or transfer of all or a portion of the CCA to be orderly, the CCA generally should consider the separability of the parts of the CCA and whether there are certain portions of the CCA's business that could be sold or transferred as separate businesses.[440]

a. Meaning of ''Orderly''

Two commenters expressed the view that, despite the best efforts of all involved, a distressed CCA may be unable to wind-down in an ''orderly'' manner without increasing the risk of significant liquidity, credit, or operational problems spreading among financial institutions or markets, thereby threatening the stability of the U.S. financial system.[441] As the Commission acknowledged in the CCA Standards Adopting Release, wind-down may not always be advisable, and strategies based on recovery (rather than wind-down) may prove more feasible or workable in certain circumstances.[442] Nonetheless, one purpose of Rule 17Ad–22(e)(3)(ii)—and now also of Rule 17Ad–26—is to ensure that CCAs have developed sufficient *plans* for both recovery and orderly wind-down to facilitate effective engagement and decision-making with its supervisory and resolution authorities as they consider implementing their RWPs. Key to such engagement is ensuring that planning by the CCA has considered a range of scenarios, across circumstances that include both recovery and wind-down. Such planning, therefore, generally should focus on identifying strategies that can facilitate wind-down while mitigating to the greatest extent possible the risk of significant liquidity, credit, or operational problems spreading to other entities. Accordingly, in the CCA Standards Adopting Release, the Commission reiterated the importance of having plans for both recovery and orderly wind-down, explaining that a CCA generally should consider many factors across a range of potential considerations related to recovery and wind-down, including consideration of which options may be the most workable.[443] Importantly, final Rule 17Ad–26 requires *planning* for an orderly wind-down, having considered significant liquidity, credit, or operational problems spreading among financial institutions or markets should a wind-down become necessary. It also requires timely implementation of the RWP so that the CCA, participants in the clearing agency, and other stakeholders, including its supervisory and resolution authorities, can assess the impact of different scenarios. Such planning will be most effective when the CCA considers ways to effect the permanent cessation, sale, or transfer of one or more of its services in a manner that would not increase the risk of significant liquidity, credit, or operational problems spreading among financial institutions or markets and thereby threaten the stability of the U.S.

[443] *Id.*

financial system. Accordingly, it is appropriate for the final rule to require planning designed to effect an orderly wind-down that mitigates the risk of significant liquidity, credit, or operational problems arising from the wind-down scenario.

b. Applying a ''Reasonably Designed'' Standard

One of the commenters recommended that the Commission modify the definition to incorporate a ''reasonably designed'' standard, suggesting that the definition be revised to state ''in a manner that is *reasonably designed* to not increase the risk of significant liquidity, credit, or operational problems spreading among financial institutions or markets and thereby threaten the stability of the U.S. financial system, while seeking the continuity of critical services provided by the CCA and limiting any related disruptions'' (emphasis added) (hereinafter the ''in a manner'' clause).[444]

With respect to requiring that an orderly wind-down be ''reasonably designed,'' Rule 17Ad–22(e)(3)(ii) already applies a ''reasonably designed'' standard for the development of RWPs.[445] Accordingly, a CCA must establish, implement, maintain and enforce written policies and procedures reasonably designed to, as applicable, include plans for the recovery and orderly wind-down of the CCA necessitated by credit losses, liquidity shortfalls, losses from general business risk, or any other losses.[446] This ''reasonably designed'' standard effects the outcome desired by the commenter, and adding a second ''reasonably designed'' standard into the definition of ''orderly wind-down'' would make the definition less clear, since the definition itself only defines what constitutes an ''orderly'' wind-down. Accordingly, the Commission is retaining the ''in a manner'' clause as proposed.

c. Feasibility of Wind-Down

One commenter stated that wind-down of a CCA is infeasible because suitable alternatives do not exist and the time it would take to establish or transfer critical functions to a ''bridge'' or new entity would cause permanent damage to the markets served by the CCA.[447] When the Commission adopted preexisting Rule 17Ad–22(e), which includes in paragraph (e)(3)(ii) the requirement for CCAs to have RWPs, it addressed comments expressing concern with the feasibility of winding down a CCA. As explained above, the Commission reiterated in the CCA Standards Adopting Release the importance of having plans for both recovery and orderly wind-down, explaining that a CCA generally should consider many factors in a range of potential considerations related to recovery and orderly wind-down, including consideration of which options may be the most feasible or workable.[448] One commenter to the CCA Standards Adopting Release, representing three CCAs, stated its view that, while CCAs should analyze the feasibility of an orderly wind-down in their plans and include it when appropriate, in the commenter's view, recovery strategies (rather than wind-down) most effectively promote financial stability, ensure the continuation of services, and distribute losses in a fair and economically efficient manner.[449] The Commission continues to agree that the steps to be taken in a recovery or wind-down scenario must promote financial stability, the continuity of systemically important services, and the fair and efficient allocation of losses.[450] Consistent with this view, the requirements related to orderly wind-down in Rule 17Ad–26 include elements focused on planning and timely implementation, to help ensure that, if a CCA were to enter recovery or become unable to continue as a going concern, the relevant supervisory authorities, and, in the case of a resolution, the relevant resolution authorities, could rely on the planning set forth in the CCA's RWPs. Such elements can help those authorities evaluate the most effective course of action under the circumstances while ensuring that systemically important functions continue to serve the affected markets.[451] Accordingly, the definition of ''orderly wind-down'' seeks to identify those circumstances where a permanent cessation, sale, or transfer of one or more of its critical services could occur in a manner that would not increase the risk of significant liquidity, credit, or operational problems spreading among financial institutions or markets. In this way, although it may be unworkable to fully wind down systemically important functions provided by a CCA such that markets lose continuity of access to these functions, planning for the orderly wind-down of a CCA can help ensure that the CCA itself, as well as the markets it serves, have planned for and developed the mechanisms that can facilitate the continuity of such systemically important functions even if the CCA itself is unable to continue as a going concern. The Commission is therefore adopting the definition of ''orderly wind-down'' in final Rule 17Ad–26 as proposed, with certain technical modifications to ensure consistency across the elements of Rule 17Ad–26, as discussed immediately below.

d. Other Modifications for Consistency

The Commission is modifying the definition of ''orderly wind-down'' to ensure consistency with other modifications made in Rule 17Ad–26 with respect to the defined term ''service providers for core services,'' as discussed above. Accordingly, the Commission is replacing the reference to ''critical services'' in the proposed definition with ''core services, as identified by the covered clearing agency pursuant to paragraph (a)(1) of this section.'' As such, final Rule 17Ad–26(b) defines ''orderly wind-down'' to mean the actions of a CCA to effect the permanent cessation, sale, or transfer of one or more of its core services, as identified by the CCA pursuant to Rule 17Ad–26(a)(1), in a manner that would not increase the risk of significant liquidity, credit, or operational problems spreading among financial institutions or markets and thereby threaten the stability of the U.S. financial system.

2. Other Defined Terms and Introductory Clause

In addition to the definition of ''orderly wind-down,'' the Commission proposed definitions for the terms ''affiliate,'' ''recovery,'' and ''service provider.''

The definition of ''affiliate'' as proposed meant a person that directly or indirectly controls, is controlled by, or is under common control with the CCA. The Commission received no comments on this definition and is adopting the definition of ''affiliate'' as proposed.

The definition of ''recovery'' as proposed meant the actions of a CCA, consistent with its rules, procedures, and other *ex ante* contractual arrangements, to address any uncovered loss, liquidity shortfall, or capital

[444] DTCC at 11–12.

[445] 17 CFR 240.17ad–22(e)(3)(ii).

[451] For example, the RWP would include information that can assist the resolution authority in the context of resolution planning.

inadequacy, whether arising from participant default or other causes (such as business, operational, or other structural weaknesses), including actions to replenish any depleted prefunded financial resources and liquidity arrangements, as necessary to maintain the CCA's viability as a going concern and to continue its provision of critical services. The Commission received no comments on this definition. To align this definition with modifications to paragraph (a)(1) of Rule 17Ad–26, as well as corresponding modifications to the definitions of ''service provider for core services'' and ''orderly wind-down,'' the Commission is modifying the definition of ''recovery'' at adoption by replacing the language regarding ''critical services'' with ''core services, as identified by the covered clearing agency pursuant to paragraph (a)(1) of this section.'' Accordingly, as adopted, the definition of ''recovery'' means the actions of a CCA, consistent with its rules, procedures, and other *ex ante* contractual arrangements, to address any uncovered loss, liquidity shortfall, or capital inadequacy, whether arising from participant default or other causes (such as business, operational, or other structural weaknesses), including actions to replenish any depleted prefunded financial resources and liquidity arrangements, as necessary to maintain the CCA's viability as a going concern and to continue its provision of core services, as identified by the CCA pursuant to Rule 17Ad–26(a)(1).

The definition of ''service provider'' as proposed meant any person, including an affiliate or a third party, that is contractually obligated to the CCA in any way related to the provision of critical services, as identified by the CCA in 17 CFR 240.17ad–26(a)(1). Several commenters stated that the proposed definition was overly broad, capturing service providers that would not directly support critical services, and that it would be burdensome to map to such a wide scope of service providers to critical services.[452] Commenters made suggestions to narrow the scope of the definition, several of which the Commission is adopting,[453] as discussed in Parts II.C.1 and 2.

To narrow the scope of the definition and consistent with the changes previously discussed in Parts II.C.1 and 2 regarding Rule 17Ad–26(a)(1) and (2), the Commission is modifying the defined term ''service provider'' to be ''service provider for core services.'' The Commission is also modifying the definition to narrow the scope to include only those services providers that have a written agreement to provide, on an ongoing basis, services that directly support the core services of the CCA. Specifically, the Commission is replacing the clause ''any person . . . that is contractually obligated to the CCA in any way related to the provision of critical services'' with ''any person . . . that, through a written agreement for services provided to or on behalf of the CCA, on an ongoing basis, directly supports the delivery of core services[.]'' [454] These changes closely link the scope of ''service providers'' with the requirement in Rule 17Ad–26(a)(1) to identify core services. The modifications to the definition also align the approach in Rule 17Ad–26 with the approach in existing Rule 17Ad–25, which establishes requirements, in part, for the board of directors of a registered clearing agency to oversee service providers for core services.

Finally, the Commission is also modifying the introductory clause of paragraph (b) of Rule 17Ad–26 to state: ''All terms used in this section have the same meaning as in the Securities Exchange Act of 1934, and, unless the context otherwise requires, the following definitions apply for purposes of this section[.]'' This modification clarifies that the terms defined in Rule 17Ad–26(b) are for the purpose of Rule 17Ad–26 and intended to be consistent with terms used in the Exchange Act.

III. Compliance Date

The Commission did not receive any comments regarding compliance dates for the proposed rule amendments and new rules being adopted in this release.[455] The Commission is adopting two compliance dates regarding these final rule amendments and new rules, as follows: (1) each covered clearing agency will be required to file with the Commission any proposed rule changes required under Rule 19b–4 and any Advance Notices required under Title VIII of the Dodd-Frank Act and Rule 19b–4(n) no later than April 17, 2025, and (2) the proposed rule changes and the Advance Notices must be effective by December 15, 2025. These compliance dates provide sufficient time for CCAs to consider changes to their rules, policies, and procedures necessary to ensure consistency with the rules amended and adopted in this release because, as discussed above and further in the Economic Analysis and Paperwork Reduction Act analysis below, CCAs generally have policies and procedures consistent with many of the elements of the final amendments to 17Ad–22(e)(6) and new Rule 17Ad–26. As such, while these new requirements likely require a CCA to review and update existing policies and procedures, it does not require a CCA to develop new systems, technologies, or processes. Because these rules promote iterative and incremental updates to existing policies and procedures, generally based on existing practices at some or all of the current set of CCAs, these compliance dates provide a sufficient time period to facilitate the filing, publication, and Commission review and approval, as appropriate, of any incremental changes to policies and procedures consistent with the processes for proposed rule changes under Rule 19b–4 and Advance Notices under Title VIII and Rule 19b–4(n).

IV. Economic Analysis

A. Introduction

The Commission is sensitive to the economic consequences and effects of the final rule and amendments, including their benefits and costs.[456] Since the final rule and amendments could require a CCA to adopt new policies and procedures, the Commission acknowledges that the development and implementation of those new policies and procedures will have economic effects.

This section addresses the economic effects of the final rule and amendments, including their anticipated and estimated benefits and costs and their effects on efficiency, competition, and capital formation. It is not feasible to quantify many of the

[452] DTCC at 6; ICC at 3–4; OCC at 6–7; CCP12 at 3.

[453] DTCC at 7; ICC at 4.

[454] The Commission is also making a technical edit to the definition of ''service provider for core services'' in final Rule 17Ad–26(b): replacing ''in 17 CFR 240.17ad–26(a)(1)'' with ''pursuant to paragraph (a)(1) of this section.''

[455] In determining compliance dates, the Commission considers the benefits of the rules as well as the costs of delayed compliance dates, and potential overlapping compliance dates. For the reasons discussed throughout the release, to the extent that there are costs from overlapping compliance dates, the benefits of the rule justify the costs. *See infra* sections IV.B. and IV.C.3 in the Economic Analysis for a discussion of the interaction of the final rule with certain other Commission rules.

[456] Under section 3(f) of the Exchange Act, whenever the Commission engages in rulemaking under the Exchange Act and is required to consider or determine whether an action is necessary or appropriate in the public interest, it must consider, in addition to the protection of investors, whether the action will promote efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f). In addition, section 23(a)(2) of the Exchange Act prohibits the Commission from adopting any rule that would impose a burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act. *See* 15 U.S.C. 78w(a)(2).

benefits and costs. For example, risk management is an area of key concern for all clearing agency stakeholders. Perceptions of risk affect how clearing agencies are operated, and those operations, in turn, affect perceptions of risk. Any change to the policies and procedures about how clearing agencies act in times of crisis affects the behavior of clearing agencies and participants in complex ways not only during a crisis but also before the crisis, and those behavioral changes may affect the likelihood and severity of a crisis. While the Commission has attempted to quantify economic effects where possible, much of the discussion of economic effects is qualitative in nature. The Commission also discusses the potential economic effects of certain alternatives to the final rule and amendments.

B. Economic Baseline

To consider the effect of the final rule and amendments, the Commission first explains the current situation in the market (*i.e.,* the economic baseline). All the benefits and costs of the final rule and amendments are calculated relative to the economic baseline. The economic baseline in this analysis considers: (1) the current market for CCA activities, including the number of CCAs, the distribution of participants across these clearing agencies, and the level of activity these clearing agencies process; (2) the current regulatory framework for CCAs; (3) the current recovery and orderly wind-down plans of CCAs; and (4) the current risk-based margin systems of CCAs. The Commission did not receive any comments on the economic baseline.

We have considered the potential effects on entities that are implementing other recently adopted rules during the compliance period for these amendments. Recently adopted rules that may place compliance obligations on some of the same entities with obligations under these amendments include the 17 CFR 240.10c–1a (''Rule 10c–1a'') Adopting Release,[457] the CA Governance Adopting Release,[458] and the Treasury Clearing Adopting Release.[459]

1. Description of Market

Of the eight registered clearing agencies, six are currently in operation.[460] Five provide central counterparty (''CCP'') services,[461] and one provides central securities depository (''CSD'') services.[462] National Securities Clearing Corporation (''NSCC''), Fixed Income Clearing Corporation (''FICC''), and Depository Trust Company (''DTC'') are all CCAs that are subsidiaries of Depository Trust & Clearing Corporation (''DTCC''). NSCC offers clearance and settlement services for equities, corporate and municipal debt, American depositary receipts, exchange traded funds, and unit investment trusts (''UITs''). FICC's Mortgage-Backed Securities Division (''MBSD'') provides clearing, netting, and risk management services for trades in the mortgage-backed securities market. FICC's Government Securities Division (''GSD'') provides clearing,

[457] *Reporting of Securities Loans,* Release No. 34–98737 (Oct. 13, 2023) [88 FR 75644 (Nov. 3, 2023)] (''Rule 10c–1a Adopting Release''). This rule requires any covered person who agrees to a covered securities loan on behalf of itself or another person to report specified information about the covered securities loan to a registered national securities association (currently FINRA is the only registered national securities association)—or rely on a reporting agent to do so—and requires the registered national securities association to make certain information it receives available to the public. Covered persons will include market intermediaries, securities lenders, and broker-dealers, while reporting agents include certain brokers, dealers, or registered clearing agencies. The rule's compliance dates required that the registered national securities association propose rules pursuant to Rule 10c–1a(f) by May 2, 2024, and the proposed rules shall be effective no later than Jan. 2, 2025; that covered persons report Rule 10c–1a information to a registered national securities association on or by Jan. 2, 2026 (which requires that the registered national securities association have implemented data retention and availability requirements for reporting); and that the registered national securities association publicly report Rule 10c–1a information by Apr. 2, 2026. *See* Rule 10c–1a Adopting Release, section VIII.

[458] CA Governance Adopting Release, *supra* note 12. The CA Governance Adopting Release establishes Rule 17Ad–25 for new governance requirements for registered clearing agencies. These include requirements for independent directors and for the composition of a registered clearing agency's board of directors, nominating committee, and risk management committee; requirements to identify and document existing or potential conflicts of interest involving directors or senior managers, and mitigate or eliminate and document the mitigation or elimination of such conflicts; and requirements for policies and procedures obligating directors to report conflicts of interest, managing risks from relationships with service providers, and requiring boards to solicit, consider, and document their consideration of the views of participants and other relevant stakeholders. The compliance date for Rule 17Ad-25 is Dec. 5, 2024, except that the compliance date for the independence requirements of the board and board committees in Rules 17Ad–25(b)(1), (c)(2), and (e) is Dec. 5, 2025. *See* CA Governance Adopting Release, section III.

[459] Treasury Clearing Adopting Release, *supra* note 62. Among other things, the amendments require CCAs for U.S. Treasury securities to have written policies and procedures reasonably designed to require that every direct participant of the CCA submit for clearance and settlement all eligible secondary market transactions in U.S. Treasury securities to which it is a counterparty. The compliance date was Mar. 18, 2024, for CCAs to file any proposed rule changes pursuant to Rule 17Ad–22(e)(6)(i) and (e)(18)(iv)(C) and 17 CFR 240.15c3–3 (''Rule 15c3–3''), which must be effective by Mar. 31, 2025. With respect to the changes to Rule 17Ad–22(e)(18)(iv)(A) and (B), (i) CCAs were required to file any proposed rule changes regarding those amendments no later than June 14, 2024, and (ii) those changes must be effective by Dec. 31, 2025, for cash market transactions encompassed by section (ii) of the definition of an eligible secondary market transaction, and by June 30, 2026, for repo transactions encompassed by section (i) of the definition of eligible secondary market transactions. Finally, the Commission amended the broker-dealer customer protection rule to permit margin required and on deposit with CCAs for U.S. Treasury securities to be included as a debit in the reserve formulas for accounts of customers and proprietary accounts of broker-dealers, subject to certain conditions. Compliance by the direct participants of a U.S. Treasury securities CCA with the requirement to clear eligible secondary market transactions is not required until Dec. 31, 2025, and June 30, 2026, respectively, for cash and repo transactions. *See* Treasury Clearing Adopting Release, section III.

[460] There are two registered but inactive clearing agencies: Boston Stock Exchange Clearing Corporation (''BSECC'') and Stock Clearing Corporation of Philadelphia (''SCCP''). Neither has provided clearing services in well over a decade. *See* Self-Regulatory Organizations; The Boston Stock Clearing Corporation; Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Amend the Articles of Organization and By-Laws, Exchange Act Release No. 63629 (Jan. 3, 2011), 76 FR 1473, 1474 (Jan. 3, 2011) (BSECC ''returned all clearing funds to its members by September 30, 2010, and [ ] no longer maintains clearing members or has any other clearing operations as of that date. [ ] BSECC [ ] maintain[s] its registration as a clearing agency with the Commission for possible active operations in the future.''); Self-Regulatory Organizations; Stock Clearing Corporation of Philadelphia; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to the Suspension of Certain Provisions Due to Inactivity, Exchange Act Release No. 63268 (Nov. 8, 2010), 75 FR 69730, 69731 (Nov. 15, 2010) (SCCP ''returned all clearing fund deposits by September 30, 2009; [and] as of that date SCCP no longer maintains clearing members or has any other clearing operations. [ ] SCCP [ ] maintain[s] its registration as a clearing agency for possible active operations in the future.''). Because they do not provide clearing services, BSECC and SCCP are not included in the economic baseline or the consideration of benefits and costs. ICE Clear Europe Limited withdrew its registration in Nov. 2023. *See* Exchange Act Release No. 98902 (Nov. 9, 2023), 88 FR 78428 (Nov. 15, 2023).

[461] A CCP is a type of registered clearing agency that acts as the buyer to every seller and the seller to every buyer, providing a trade guaranty with respect to transactions submitted for clearing by the CCP's participants. *See supra* note 6. A CCP may perform a variety of risk management functions to manage the market, credit, and liquidity risks associated with transactions submitted for clearing. For example, CCPs help manage the effects of a participant default by closing out the defaulting participant's open positions and using financial resources available to the CCP to absorb any losses. In this way, the CCP can prevent the onward transmission of financial risk. *See, e.g.,* Shortening the Securities Transaction Settlement Cycle, Exchange Act Release No. 94196 (Feb. 9, 2022), 87 FR 10436, 10448 (Feb. 24, 2022).

[462] A CSD is a type of registered clearing agency that acts as a depository for handling securities, whereby all securities of a particular class or series of any issuer deposited within the system are treated as fungible. Through use of a CSD, securities may be transferred, loaned, or pledged by bookkeeping entry without the physical delivery of certificates. A CSD also may permit or facilitate the settlement of securities transactions more generally. *See supra* note 6.

netting, and risk management services for trades in U.S. Government debt, including buy-sell transactions and repurchase agreement transactions. DTC provides end-of-day net settlement for clients, processes corporate actions, provides securities movements for NSCC's net settlements, and it provides settlement for institutional trades.

ICE Clear Credit LLC (''ICC'') is a CCA for credit default swaps (''CDS''), and it is a subsidiary of Intercontinental Exchange, Inc. (''ICE''). LCH SA is another CCA that offers clearing for CDS, and it is a France-based subsidiary of LCH Group Holdings Ltd, which, in turn, is majority owned by the London Stock Exchange Group plc. The sixth CCA, Options Clearing Corporation (''OCC''), offers clearing services for exchange-traded U.S. equity options.

CCAs operate under one of two broad ownership models. In one model, the CCA is member-owned,[463] while in the other model, the CCA is publicly traded.[464]

CCAs currently operate specialized clearing services and face limited competition in their markets.[465] For each of the following asset classes, for example, there is only one CCA serving as a central counterparty: exchange-traded equity options (OCC), government securities (FICC), mortgage-backed securities (FICC), and equity securities (NSCC). There is also only one CCA providing central securities depository services (DTC). CCA activities exhibit high barriers to entry and economies of scale.[466] These features of the existing markets, and the resulting concentration of clearing and settlement services within a handful of entities, inform the Commission's examination of the effects of the final rule and amendments on competition, efficiency, and capital formation (see Part IV.C.3). Table 1 summarizes the most recent data on the number of participants at each CCA.[467]

TABLE 1[a]—NUMBER OF PARTICIPANTS AT CCAS IN AUGUST 2024

CCA	Number of participants

CCAs have become an essential part of the infrastructure of the U.S. securities markets due to their role as intermediaries. Over the last several years, CCAs have become increasingly important in financial markets as they clear an increasing fraction of market transactions.[468] For example, in the 12-month period from October 2021 to September 2022, approximately 65 percent, or $1.3 trillion notionally, of all single-name CDS transactions in the United States were centrally cleared,[469] and the Commission adopted in December 2023 rule changes which, among other things, require CCAs for U.S. Treasury securities to have written policies and procedures reasonably designed to require that every direct participant of the CCA submit for clearance and settlement all eligible secondary market transactions in U.S. Treasury securities to which it is a counterparty.[470] The average daily value of equities trades cleared by NSCC in 2023 was $1.9 trillion; at FICC, the total net value of government securities transactions in 2023 was $2,019 trillion and the total net par value for mortgage backed securities in 2023 was $58 trillion; and the total value of transactions settled by DTC in 2023 was $446 trillion.[471] In addition, in 2023,

[463] *See, e.g.,* Release No. 34–52922 (Dec. 7, 2005), 70 FR 74070 (Dec. 14, 2005) (explaining that participants of DTC, FICC, and NSCC that make full use of the services of one or more of these clearing agency subsidiaries of DTCC are required to purchase DTCC common shares).

[464] OCC is owned by certain options exchanges, which are all publicly traded. ICC is a subsidiary of ICE (a publicly traded company). LCH SA is a subsidiary of LCH Group Holdings, Ltd., which is majority-owned by London Stock Exchange Group plc (a publicly traded company).

[465] *See* SIFMA at 10.

[466] *See* Alistair Milne, *Central Securities Depositories and Securities Clearing and Settlement: Business Practice and Public Policy Concerns, in* Analyzing the Economics of Financial Market Infrastructures 334, 335 (Martin Diehl, et al. eds., 2016), *available at https://doi.org/10.4018/978-1-4666-8745-5.ch017* (''Clearing and settlement operations have evolved over time to become remarkably complex. This complexity creates business challenges, especially for management of liquidity, which could potentially have systemic consequences for the wider financial system. This complexity may also increase the barriers to entry that can discourage competition in trade settlement and securities services.'').

[467] Membership requirements vary across the CCAs. For example, the self-clearing minimum net-capital requirement is $500 thousand for NSCC, while OCC's net capital requirement is $2.5 million. Multiple memberships by the same firm are much more common at NSCC than at the other CCAs.

[468] *See* Better Markets at 10 (''Since [the 2008 financial crisis], more and more connections in the global financial system run through CCPs. This growing interconnectedness has benefits but also poses risks.''). *See* SIFMA at 2 (''In this regard, the SEC's Proposal is increasingly relevant in light of the SEC's recent proposal to require increased clearing of the Treasury market, which would occur through a single SEC-regulated Clearing Agency.'').

[469] Data from DTCC's Trade Information Warehouse, compiled by Commission staff. At the time of adoption, 2023 data were not available.

[470] *See supra* note 459.

[471] *See* DTCC, *Annual Report* (2023), *available at https://www.dtcc.com/-/media/Files/Downloads/Annual%20Report/2023/DTCC-2023-AR-Print.pdf.* The total value of transactions settled in 2021 was $432 trillion. The proposing release reported the related statistic of the total value of *securities* transactions settled in 2021, which was $152 trillion.

OCC cleared 11.1 billion options contracts.[472]

Central clearing benefits the markets by significantly reducing participants' counterparty risk and through more efficient netting of margin requirements. Consequently, central clearing also benefits the financial system by increasing financial resilience and the ability to monitor and manage risk.[473] The role of a clearing agency in promoting resilience highlights its central importance in the functioning of markets.[474] If a CCP is unable to perform its risk management functions effectively, it can transmit risk throughout the financial system. Similarly, if a CSD is unable to perform its functions, market participants may be unable to settle their transactions, which may transmit risk throughout the financial system.

Disruption to a clearing agency's operations, or failure on the part of a clearing agency to meet its obligations, could serve as a source of contagion, resulting in significant costs not only to the clearing agency itself and its participants but also to other market participants and the broader U.S. financial system.[475] Absent proper risk management, a clearing agency failure could destabilize the financial system.[476] As a result, proper management of the risks associated with central clearing helps ensure the stability of the U.S. securities markets and the broader U.S. financial system.[477]

2. Overview of the Existing Regulatory Framework

The existing regulatory framework for clearing agencies registered with the Commission includes section 17A of the Exchange Act, the Dodd-Frank Act, and the related rules adopted by the Commission.[478]

Clearing agencies registered with the Commission may also be subject to other domestic or foreign regulation.[479] Specifically, clearing agencies operating in the U.S. may also be subject to regulation by the CFTC (as designated clearing organizations, or DCOs, for futures or swaps that are dually registered with the CFTC and SEC) and the Board of Governors (as SIFMUs or State member banks).[480] Additionally, LCH SA is regulated by l'Autorité des marchés financiers, l'Autorité de Contrôle Prudentiel et de Résolution, and the Banque de France, and it is subject to European Market Infrastructure Regulation (EMIR).[481]

3. Current Recovery and Orderly Wind-Down Plans

Each CCA, as part of a sound risk-management framework, is currently required to establish and maintain plans for the recovery and orderly wind-down of the CCA necessitated by credit losses, liquidity shortfalls, losses from general business risk, or any other losses (such plans are referred to as recovery and wind-down plans, or RWPs).[482] The CCA may have one RWP document, or it may maintain two separate documents, referring to one as the recovery plan and the other as the orderly wind-down plan. Although the Commission did not include specific requirements for RWPs in the CCA Standards Adopting Release, the Commission did offer guidance about what CCAs should consider when

[472] *See* OCC, *Press Release OCC Reports December 2023 and Total 2023 Volume Data* (Jan. 4, 2024), *available at https://www.theocc.com/newsroom/press-releases/2024/1-03-occ-reports-december-2023-and-total-2023-volume-data.*

[473] *See* Darrell Duffie, *Still the World's Safe Haven? Redesigning the U.S. Treasury Market After the COVID–19 Crisis* 15 (Hutchins Center Working Paper, Paper No. 62, 2020), *available at https://www.brookings.edu/wp-content/uploads/2020/05/wp62_duffie_v2.pdf* (''Central clearing increases the transparency of settlement risk to regulators and market participants, and in particular allows the CCP to identify concentrated positions and crowded trades, adjusting margin requirements accordingly. Central clearing also improves market safety by lowering exposure to settlement failures. . . . As depicted, settlement failures rose less in March [2020] for [U.S. Treasury] trades that were centrally cleared by FICC than for all trades involving primary dealers. A possible explanation is that central clearing reduces 'daisy-chain' failures, which occur when firm A fails to deliver a security to firm B, causing firm B to fail to firm C, and so on.'').

[479] *See supra* Part III.D.2.

[480] *See* 12 U.S.C. 5472, 5469. Currently, ICC, LCH SA, and OCC are regulated by the Commission and the CFTC. The CFTC is the primary supervisory regulator for ICC and LCH SA, while the Commission is the primary supervisory regulator for OCC. DTC, FICC, NSCC, ICC, and OCC have been designated systemically important financial market utilities by the FSOC (*see infra* note 517 and the accompanying text). DTC is also a state member bank of the Federal Reserve System and a New York State registered trust company and is therefore also regulated by the New York Department of Banking and Finance. LCH SA is not regulated by the Board of Governors. The Board of Governors addresses certain recovery and orderly wind-down plans in Regulation HH (*see* RWP Proposing Release, *supra* note 18, at 34710 n.68 and accompanying text), and the CFTC requires certain derivatives clearing organizations to maintain recovery and orderly wind-down plans through Regulation § 39.39(b) and subsequent guidance (*see* RWP Proposing Release, *supra* note 18, at 34716 n.69 and accompanying text).

[481] *See* LCH, *Company Structure, available at https://www.lch.com/about-us/structure-and-governance/company-structure.*

[482] *See* RWP Proposing Release, *supra* note 18, at 34710 n.16 and accompanying text.

creating their RWPs.[483] The RWPs are subject to the rule filing requirement of Rule 19b–4, and all six active CCAs have submitted their plans and subsequent modifications to the Commission for review, public comment, and approval.[484] Additionally, all of the CCAs have submitted confidential treatment requests with their RWPs pursuant to 17 CFR 240.24b–2. The Commission has also reviewed these confidential treatment requests and concluded that the redacted material could be withheld from the public under the Freedom of Information Act.[485] Due to the confidential treatment of the RWPs, the current release includes aggregated, anonymized analyses of the RWPs submitted to the Commission by the clearing agencies. Additionally, Form 19b–4, which is public, requires a description of the proposed rule change for public comment.[486] To the extent that information in the baseline has been drawn from public sources, such as the CCAs' SRO rule filings, we have included attribution accordingly. All six active CCAs have approved RWPs in place, and the plans differ in, for example, length, style, emphasis, and specificity. In the remainder of Part IV.B. 3, we summarize CCAs' current RWPs in terms of nine elements that are part of final Rule 17Ad–26.

a. Core Services

Each RWP currently includes what the CCA has identified and described as its core payment, clearing, and settlement services,[487] as well as the criteria that the CCA employs to make such a determination as to what constitutes core services.[488] Depending on their operations and the structure of their RWPs, CCAs currently identify between one and a dozen or more core services in those RWPs. Currently, no CCA has analyses in its RWP regarding the staffing roles necessary to support the core services that they list or how such staffing roles necessary to support such core services would be available to continue operating the CCA in the event of a recovery and during an orderly wind-down.

b. Service Providers

Each RWP identifies and describes, to varying degrees, certain service providers, including both affiliates and third parties, upon which the associated CCA relies to provide its core payment, clearing, and settlement services. Most plans do not explicitly link the identified service providers to the CCAs' core payment, clearing, and settlement services. Some of the RWPs state that they assume core service providers will continue to perform in the event of a wind-down; at least one RWP states that it analyzes its contractual arrangements with respect to continuing to provide services during a recovery; [489] and at least one RWP states that it is reducing dependencies on third parties.

c. Scenarios

Each RWP generally identifies and describes certain scenarios that may potentially prevent the CCA from being able to provide its core payment, clearing, and settlement services as a going concern.[490] The RWPs differ in the number of scenarios identified and described as well as the extent of the specificity with which each scenario is discussed. For example, some RWPs present short qualitative analyses of member defaults, while others present long, detailed quantitative analyses of member defaults.

d. Criteria That Could Trigger Implementation

Each RWP identifies and describes criteria that could trigger the CCA's implementation of the recovery and orderly wind-down plans.[491] The RWPs differ in the number of identified triggering criteria and in the detail in which they discuss each triggering

[483] CCA Standards Adopting Release, *supra* note 5, at 70810; *see also* RWP Proposing Release, *supra* note 18 at Part II.A (discussing the guidance).

[484] *See* RWP Proposing Release *supra* note 18, at 34711 n.32 (regarding Form 19b–4); *id.* at 34712 n.41 (regarding proposed rule changes).

[485] *See, e.g., https://www.sec.gov/rules/sro/nscc/2018/34-82430-ex5a.pdf* (as an example of the redacted filing materials posted for SR–NSCC–2017–017); *see also id.* A commenter stated that CCA members will manage key risks better if they have transparency into the RWPs of their CCAs. *See* ICI Letter at 8 (''It is critical for clearing members and end-user customers, such as funds, to have greater transparency into the content of RWPs. Such transparency could allow participants to determine the extent of their potential liabilities and predictably manage exposures to a clearing entity.'').

[486] *See* RWP Proposing Release, *supra* note 18, at 34711 n.32.

[487] In a change from Proposed Rule 17Ad–26(a)(1), instead of referring to ''critical payment, clearing and settlement services,'' the final rule refers to ''core payment, clearing, and settlement services.'' Use of the descriptive term ''core'' rather than ''critical'' does not affect the Commission's prior guidance on identifying those services. *See supra* Part II.C.1.

[488] *See, e.g.,* Exchange Act Release Nos. 82462 (Jan. 2, 2018), 83 FR 884, 885 (Jan. 8, 2018) (SR–DTC–2017–021) (stating that the RWP provided a description of its services and the criteria to determine which services are considered critical) (''DTC 2017 Notice''); 82431 (Jan. 2, 2018), 83 FR 871, 872 (Jan. 8, 2018) (SR–FICC–2017–021) (stating that the RWP provided a description of its services and the criteria to determine which services are considered critical) (''FICC 2017 Notice''); 34–91806 (May 10, 2021), 86 FR 26561 (May 14, 2021) (SR–ICC–2021–005) (''ICC 2021 Order'') (stating that the ICC recovery plan explains that ICC's sole critical operation is provides credit default swap clearing services); 82316 (Dec. 13, 2017), 82 FR 60246, 60247 (Dec. 19, 2017) (SR–LCH SA–2017–012) (stating that LCH SA performed an assessment on identification of critical functions and shared services in accordance with Financial Stability Board guidance) (''LCH 2017 Notice''); 82430 (Jan. 2, 2018), 83 FR 841, 842 (Jan. 8, 2018) (SR–NSCC–2017–017) (stating that the RWP provided a description of its services and the criteria to determine which services are considered critical) (''NSCC 2017 Notice''); 82352 (Dec. 19, 2017), 82 FR 61072, 61074–75 (Dec. 26, 2017) (SR–OCC–2017–021) (stating that OCC's RWP identifies critical services and critical support functions) (''OCC 2017 Notice'').

[489] For example, OCC's plan discusses the critical vendors for each of the identified critical services, the critical support functions, and the critical external interconnections that OCC maintains with other FMUs, exchanges (including designated contract markets), clearing and settlement banks, custodian banks, letter of credit banks, clearing members and credit facility lenders, and the appendices to the plan identifies key vendors and service providers, as well as key agreements to be maintained. OCC 2017 Notice, *supra* note 488, at 61075. ICC's plan categorizes its critical services by those that are provided to ICC by its parent company versus those that are provided by external third parties, and it also details the IT systems and applications critical to ICC's clearing operations, including those provided by ICE, those provided by external third parties, and those that ICC itself provides. Further, the plan analyzes ICC's contractual arrangements in the context of continuing services under those contracts during recovery. 34–79750 (Jan. 6, 2017), 82 FR 3831 (Jan. 12, 2017) (SR–ICC–2016–013). In addition, NSCC's, FICC's, and DTC's plans identify external service providers for which the relationships are managed by a particular office within DTCC. *See, e.g.,* Securities Exchange Act Release Nos. 91428 (Mar. 29, 2021), 86 FR 17440, 17442 (Mar. 29, 2021) (SR–NSCC–2021–004) (''NSCC 2021 Notice''); 91430 (Mar. 29, 2021), 86 FR 17432, 17433–34 (Apr. 2, 2021) (SR–FICC–2021–002) (''FICC 2021 Notice''); 91429 (Mar. 29, 2021), 86 FR 17421, 17422 (Mar. 29, 2021) (SR–DTC–2021–004) (''DTC 2021 Notice'').

[490] For example, OCC's plan identifies and considers scenarios that may potentially prevent it from being able to provide its critical services as a going concern. *See* OCC 2017 Notice, *supra* note 488, at 61073. ICC's plan describes potential stress scenarios that may prevent it from being able to meet obligations and provide services and the recovery tools available to it to address these stress scenarios. *See* Securities Exchange Act Release No. 91439 (Mar. 30, 2021), 86 FR 17649, 17650 (Apr. 5, 2021) (SR–ICC–2021–005) (''ICC 2021 Notice''). LCH SA's plans categorizes potential stress scenarios in two ways as a result of either: (i) Clearing member defaults and (ii) non-clearing member events. *See* LCH 2017 Notice, *supra* note 488, at 60248. In addition, each of the plans for NSCC, FICC, and DTC discuss, at a general level, scenarios in terms of uncovered losses or liquidity shortfalls that could result from the default of one or more of its members as well as losses that could arise from non-default events. *See, e.g.,* NSCC 2021 Notice, *supra* note 489, at 17441; FICC 2021 Notice, *supra* note 489, at 17433; DTC 2021 Notice, *supra* note 489, at 17421.

[491] *See* OCC 2017 Notice, *supra* note 488, at 61079–80 (discussing OCC's identification of qualitative trigger events for both recovery and wind-down); 83 FR 34183, 34221, and 44970 (stating the DTC, NSCC, and FICC have identified wind-down triggers and that a CCA would have entered ''recovery phase'' when it issues its first loss allocation round); ICC 2021 Order, *supra* note 488, at 26562.

criterion. There are also differences in the descriptions of the processes that CCAs use to monitor and determine whether the triggering criteria have been met, thus causing their RWPs to be implemented.

e. Rules, Policies, Procedures, and Other Tools or Resources

Each RWP describes, to varying degrees, the rules, policies, procedures, and other tools or resources the CCA could rely upon in a recovery or orderly wind-down to address the scenarios identified in the RWP.[492]

f. Procedures To Ensure Timely Implementation

Each RWP mentions, to varying degrees, mechanisms that would ensure timely implementation of the RWP.[493] Some of the RWPs include specific procedures to ensure timely implementation of the recovery and orderly wind-down plan after specific criteria have been triggered. One of the RWPs has taken steps to ensure timely completion of its recovery and orderly wind-down plan.

g. Informing the Commission

Each RWP generally refers to informing the Commission about recovery or orderly wind-down activities. Some of the RWPs state that they will inform the Commission *after* a recovery or wind-down has been initiated.

h. Testing

Three RWPs provide for annual plan testing but with varying degrees of specificity about the participants' involvement as well as the frequency of such testing. One such RWP specifically refers to sharing the results of the testing with its board of directors, and another states that the RWP would be updated as appropriate as a result of the testing.[494] The remaining CCAs do not mention testing in their RWPs.

i. Board Review and Approval

Each RWP provides for periodic plan reviews, typically annually or biennially.[495] Two RWPs provide for non-scheduled reviews. In the existing plans, the boards of directors of the CCA are responsible for the review and approval of the RWPs, but the plans vary in whether they specify that such review will also occur after material changes to the CCA's operations or in response to the results of periodic testing of the RWPs.

4. Current Risk-Based Margin

As discussed in Part II.A *supra* and Part II.B *supra,* Rule 17Ad–22(e)(6) requires CCAs that provide central counterparty services to establish written policies and procedures reasonably designed to cover their credit exposure to their participants by establishing risk-based margin systems with certain characteristics. Intraday margining is an important tool used by CCAs to manage risk exposures on a real-time basis because it permits the CCAs to make quick changes in required collateral from their participants to cover actual and potential losses in response to volatility spikes.

a. Monitoring Exposure and Intraday Margin Calls

Each CCA currently has some ability to monitor for intraday exposure and to make certain intraday margin calls. The frequency of intraday monitoring and margin calls varies across markets, and it is responsive to the risk characteristics of the underlying markets and participants. Participants are generally required to post margin within an hour of notification or at specified times pursuant to the CCA's rules and procedures. The current practice of CCAs is to release excess margin to participants only once a day at a pre-scheduled time. CCAs have existing policies and procedures around the collection of intraday margin,[496] and some CCAs document when they determine not to make an intraday call pursuant to their written policies and procedures required under Rule 17Ad–22(e)(6)(ii).

For example, OCC revalues its participants' portfolios throughout the day to calculate updated account net asset value, and its rules provide it the authority to issue intraday margin calls.[497] Its intraday calls are generally issued between 11 a.m. and 1:30 p.m. when unrealized losses of an account, based on its start-of-day positions, exceed 50 percent of the account's total margin. NSCC's rules provide the authority to impose intraday mark-to-market charges, and NSCC tracks intraday market price and position changes in 15-minute intervals. NSCC generally collects additional margin if the difference between the most recent mark-to-market price of a participant's net positions and the most recent observed market price exceeds a predetermined threshold, which is currently 80 percent of the participant's volatility charge and may be reduced if NSCC determines that a reduction of the threshold is appropriate to mitigate risk during volatile market conditions.[498]

FICC's GSD and FICC's MBSD have the authority to make intraday margin calls.[499] FICC monitors changes in

[492] *See, e.g.,* 83 FR 34220–21 (identifying NSCC's recovery tool characteristics); FICC 2017 Notice, *supra* note 488, at 878 (identifying FICC's recovery tool characteristics); 83 FR 44970 (identifying DTC's recovery tool characteristics); OCC 2017 Notice, *supra* note 488, at 61075–80 (identifying OCC's enhanced risk management and recovery tools); ICC 2021 Order, *supra* note 488, at 26562 (identifying ICC's recovery tools); 83 FR 28886–87 (describing LCH SA's tools).

[493] Each of the plans for NSCC, FICC, and DTC provides a description of the governance and process around management of a stress event along a ''Crisis Continuum'' timeline. *See, e.g.,* NSCC 2017 Notice, *supra* note 488, at 842; FICC 2017 Notice, *supra* note 488, at 872; DTC 2017 Notice, *supra* note 488, at 886. OCC's recovery plan outlines an escalation process for the occurrence of a ''Recovery Trigger Event'' as well as provides general descriptions of how it would anticipate deploying its recovery tools in response to the six stress scenarios it identified. OCC 2017 Notice, *supra* note 488, at 61079–80. The ICC recovery plan describes the governance arrangements that provide oversight and direction of the plan. *See* ICC 2021 Notice, *supra* note 490, at 17649. The LCH SA recovery plan identifies the groups and individuals within LCH SA that are responsible for the various aspects of plan. *See* LCH 2017 Notice, *supra* note 488, at 60250.

[494] *See* ICC 2021 Order, *supra* note 488, at 26562 (referencing testing its Recovery Plan at least annually, as part of its annual default management drills and providing the results of such testing, as well as any changes it recommends due to such testing, to the ICC Board and Risk Committee); ICCEU, 83 FR 2857 (referencing testing elements of the Recovery Plan as part of normal operations and risk management procedures); LCH 2017 Notice, *supra* note 488, at 60250 (referencing fire drills intended to simulate all aspects of a member default, including the auctioning of the defaulting members portfolio to non-defaulting members (where appropriate) and involving the participation of members and relevant functions within the LCH SA organization, with revisions to the recovery plan as appropriate in light of the testing).

[495] NSCC, FICC, and DTC review their respective RWPs biennially. *See* NSCC 2021 Notice, *supra* note 489, at 17441; FICC 2021 Notice, *supra* note 489, at 17433; DTC 2021 Notice, *supra* note 489, at 17421. OCC conducts an annual review of its RWP. *See* Securities Exchange Act Release No. 90315 (Nov. 3, 2020), 85 FR 71384, 71385 (Nov. 9, 2020) (SR–OCC–2020–013); *see also* OCC 2017 Notice, *supra* note 488, at 61080. ICC's RWP describes governance arrangements that provide for oversight and direction in respect to review and testing of the plans. *See* ICC 2021 Notice, *supra* note 490, at 17651–52. LCH SA decided to review its wind-down plan on an annual basis or more frequently, if required. *See* Securities Exchange Act Release No. 88297 (Feb. 27, 2020), 85 FR 12814 (Mar. 4, 2020) (SR–LCH SA–2020–001).

[496] Rule 17Ad–22(e)(6)(ii).

[497] *See* OCC, Disclosure Framework *supra* note 96 at 50; OCC Rule 609 (regarding intra-day margin calls).

[498] *See* NSCC Disclosure Framework *supra* note 96 at 58; NSCC Rules, Procedure XV (defining intraday mark-to-market charge). *See* DTCC at 3.

[499] *See* FICC's GSD Rule 4, section 2a (regarding the intraday supplemental fund deposit); FICC's MBSD Rule 1 (defining intraday VaR and intraday mark-to-market charges) and Rule 4, section 2(b) (regarding the daily margin requirement) and section 3a (regarding the intraday requirements). In addition, FICC's GSD collects margin twice a day under its current rules, notwithstanding any additional intraday margin calls. *See* FICC's GSD Rules, schedule of timeframes.

pricing and positions frequently throughout the day, and it may collect intraday margin to cover the price movement from those participants with a significant exposure in an identified security or net portfolio and the market value of those positions.[500]

ICC also monitors each participant's intraday profit and loss to determine if its intraday exposure is covered by the margin on deposit, and it may issue margin calls to participants that are not sufficiently collateralized.[501] LCH SA also has the ability and authority to make intraday margin calls that are based on intraday positions and valuations.[502]

b. Reliable Sources of Timely Price Data and Other Substantive Inputs

CCAs use price data as well as other data sources and other substantive inputs in their risk-based margin systems, which is expected given the substantive differences in the markets and participants they serve. Based on its supervisory experience, the Commission understands that all CCAs generally have policies and procedures in place to use a risk-based margin system that uses reliable sources of timely price data and includes procedures and sound valuation models for addressing circumstances in which price data are not readily available or reliable. The Commission also understands that if a CCA uses other substantive inputs, such as portfolio size, asset price volatility, duration, convexity, and outputs from external model vendors, which are not required by the Commission's rules, not all CCAs have policies and procedures for addressing circumstances in which those substantive inputs are not readily available or reliable so that the CCA can continue to meet its requirements under Rule 17Ad–22(e)(6).The policies and procedures used when price data or other substantive inputs are not available vary from one RWP to another. For example, the largest component of margin at FICC's GSD is typically its ''VaR Charge.'' The VaR Charge is based on the potential price volatility of unsettled positions using a sensitivity-based Value-at-Risk (''VaR'') methodology over a ten-year historical look-back period. In addition, FICC's GSD also uses an alternative ''Margin Proxy'' calculation as a backup VaR Charge calculation to the sensitivity approach in the event that FICC experiences a data disruption with the third-party vendor upon which FICC relies to produce the sensitivity-based VaR Charge.[503] In a similar fashion, FICC's MBSD uses both a VaR Charge and, as a backup in the event of a data disruption from its third-party vendor, a Margin Proxy [504] NSCC relies upon a parametric VaR model to determine the potential future exposure of a given portfolio based on historical price movements, using 153 days as the minimum sample period for the historical data. For certain securities, including fixed income securities, UITs, illiquid securities, securities that are amendable to statistical analysis only in a complex manner, and securities that are less amenable to statistical analysis, a haircut-based volatility charge is applied in lieu of the VaR Charge.[505]

C. Consideration of Benefits and Costs as Well as the Effects on Efficiency, Competition, and Capital Formation

The following discussion sets forth the potential economic effects stemming from the final rule and amendments, including the anticipated effects on efficiency, competition, and capital formation. The benefits and costs discussed in this section are relative to the economic baseline discussed previously, which includes the CCAs' current RWPs and their current risk-based margin practices. A commenter agrees that there is a large benefit flowing from requiring the CCAs to better define their risk management procedures.[506]

The level of change a CCA makes to its RWP and risk management practices to bring itself into alignment with the final rule and amendments will impact the size of the benefits and costs, both direct and indirect, for the CCAs, their members, and the broader market. As stated in the baseline, each CCAs' plans differ in, for example, length, style, emphasis, and specificity, and each CCA has a current risk-based margin system that it has designed to manage certain idiosyncratic risks that it faces. Additionally, the final rules and amendments are designed to provide a CCA with discretion and flexibility, which means that the CCAs will be able to tailor their RWPs and risk-based margin systems to their particular situations.

To the extent that a CCA determines that it does not have to make changes to its RWP or risk-based margin system in response to a particular part of the final rule and amendments, the CCA, its participants, and the broader market will have already absorbed the benefits and costs of those parts of the final rule and amendments and, therefore, they may not experience any direct benefits or costs from those parts of the final rule and amendments.[507]

Sufficiently large disruptions in the operations at any of the CCAs would cause significant negative externalities in the markets they serve, which would likely spill over into other markets. These ripple effects would negatively affect numerous market participants, including investors. Because CCAs may not internalize the full cost of these externalities due in part to the structure of the clearing markets, their investments in their RWPs and risk-based margin systems might be suboptimal from a public welfare perspective.[508] An important benefit of the final rule and amendments is that they require CCAs to maintain a higher investment in risk management than they might otherwise choose if they

[506] *See* SIFMA at 3 (''Our members are in agreement with the Commissions' determination that there is a very significant benefit to requiring the Clearing Agencies to better define their risk management procedures'').

[507] They may experience indirect benefits to the extent other CCAs make risk-reducing changes that reduce the risk of negative spillovers.

[508] *See* SIFMA at 14 and 22 (''With the combination of clearing mandates and single product provider status, there is very limited business pressure on Clearing Agencies to invest in the optimum level of risk management. Rather, the impetus must come from regulatory oversight.'').

have not already adopted the requirements of the rule and amendments.

The Commission has sought to strike a balance between requirements that enhance risk management practices and recovery and winddown procedures and maintaining some flexibility in the design and implementation of these requirements. For example, while CCAs will be required to test their ability to implement the RWPs at least every 12 months, each CCA may structure the planning, execution, and analysis of each test in a way that reduces its aggregate testing costs for itself, its participants, and its other stakeholders, so long as the testing exercise addresses the distinct elements of the separate testing requirements.

The costs discussed in Part IV.C will be borne by CCAs and their participants. For CCAs owned by participants, all the costs will ultimately be passed on to participants because they are residual beneficiaries of the CCA. For CCAs not owned by participants, the level of pass-through will depend upon several factors, including the level of competition among clearing agencies and the existence of mandates that force market participants to clear. In both cases, the participants will likely pass through some of these costs to their customers, the level of which will depend on factors such as the customers' sensitivities to costs and the amount of competition between participants for customers. Generally, if a CCA does not face significant competition, it will have an incentive to absorb part of the cost increase. In the extreme case of a perfectly competitive market, on the other hand, an increase in costs will be fully passed through to the customer because there are no economic profits and price equals marginal costs.[509]

To the extent that a CCA's current practices are misaligned with the final rule and amendments, the CCA, as discussed in the remainder of this subsection, will need to modify its RWP or risk-based margin system to comply with the new standards. The resulting benefits and costs will increase with the number of modifications. Because the Commission has previously stated that RWPs are rules for purposes of a CCA's SRO obligations, and because the CCAs already have filed such RWPs with the Commission for approval, any such modifications will be subject to Commission review and public comment pursuant to Rule 19b–4.[510] Similarly, the Commission considers changes to a CCA's risk-based margin system as part of the SRO rule filing process, making any such modifications also subject to Commission review and public comment pursuant to Rule 19b–4.[511] The final rule and amendments could also cause a clearing agency to make different business decisions, such as capital expenditure decisions, that may not be subject to the same Commission review process.

One commenter stated that participants and end-user customers need ''greater transparency into the content of RWPs'' for several reasons, including allowing participants to better manage their exposure to the CCA and positively affecting the CCA's risk management functions.[512] The new rule and the final amendments will increase transparency because they impose a public minimum standard that all CCAs must follow and also because, as described in the baseline, CCAs are subject to a public notice and comment process before making certain changes, including changes to their rule books.[513]

1. Final Rule 17Ad–26

Final Rule 17Ad–26 sets forth nine elements that must be included in a CCA's RWP. The remainder of this subsection discusses each of these elements in turn, explaining how some will make RWPs more effective in guiding the CCAs during times of recovery or wind-down while others will help participants and regulators better understand how the CCAs will prepare for and respond to stress. The final rule will reduce systemic risk to the extent that it reduces the risk of unsuccessful recoveries, disorderly wind-downs, and negative spillovers to other clearing agencies and to other markets.[514] These benefits likely will increase with the amount of change each CCA makes to align itself with the final rule because, as stated in the baseline analysis, some RWPs are more aligned with the nine elements that are part of final Rule 17Ad–26 than are other RWPs. Final Rule 17Ad–26 will require CCAs to modify their RWPs to the extent their RWPs do not already align with the final rule. One commenter stated that the benefits are purely hypothetical because they would only accrue in the event of the implementation of a recovery plan.[515] The Commission disagrees with this assessment and anticipates that these changes may result in the CCAs being more aware of potential risks and the associated costs of certain factors under their control, which could, in turn, lead to the CCA making risk-reducing changes to certain business practices. A few commenters stated that CCAs' current risk-management efforts may be suboptimal from a public welfare perspective.[516] The final new rule includes a set of risk-focused requirements that RWPs must meet in the future, which will ensure that CCAs maintain a higher investment in risk management than they might otherwise choose.

[509] More specifically, the market clearing quantity of the good or service supplied will adjust and the extent of industry-wide cost pass-through in a perfectly competitive market depends on the elasticity of demand relative to supply. The more elastic is demand, and the less elastic is supply, the smaller the extent of pass-through, all else being equal. *See* RBB Economics, *Cost Pass-Through: Theory, Measurement and Potential Policy Implications,* 4 (Feb. 2014), *available at https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/320912/Cost_Pass-Through_Report.pdf.*

[511] *See infra* section IV.C.2.c for cost estimates of written policies and procedures associated with final Rule 17Ad–22(e)(6) and the Rule 19b–4 approval process.

[512] *See* ICI at 8 (''It is critical for clearing members and end-user customers, such as funds, to have greater transparency into the content of RWPs. Such transparency could allow participants to determine the extent of their potential liabilities and predictably manage exposures to a clearing entity. Importantly, increased transparency could facilitate input from participants that may serve to enhance a clearing entity's risk management functions. While requiring clearing entities to maintain and submit RWPs for regulatory purposes provides the agencies with needed visibility and can increase confidence in cleared markets, such requirements alone fail to provide these important benefits to market participants.''). *Id.* at 9 (''At a minimum, clearing members and customers should be aware of (1) the criteria that may trigger implementation, (2) the tools and strategies that a clearing entity plans to use, and (3) the source of capital or funds to be applied in a recovery or wind-down scenario. Providing access to these material portions of RWPs would help market participants have a more complete understanding of the risks presented by clearing with a particular clearing entity and allow them to better manage their exposures'').

[513] *See supra* note 484. Additionally, Rule 19b–4 would also apply to certain statements that a CCA issues concerning its margin methodology. *See supra* note 83.

[514] *See supra* note 475 and accompanying text. *See* Better Markets at 9 (''Requiring that the recovery and wind-down plans of covered clearing agencies include certain specific elements is likely to reduce the risk of unsuccessful recoveries, disorderly wind downs, and negative spillovers to other clearing agencies and other markets.'').

[515] Davidson at 2.

[516] *See supra* note 508 and accompanying text; *see also* Muth at 2 (''A complex cocktail of incentives familiar to the Commission but too labyrinthine to elucidate here causes management to (1) underestimate the risk of entity failure, (2) underestimate the range of scenarios that might threaten entity survival, and (3) underestimate the amount of information that needs to be communicated effectively to 'relevant authorities' to illuminate threats to the entity's solvency, especially when those threats are high-magnitude, low-frequency risks.'').

The Commission did not receive any comments on the costs each CCA will incur to bring its RWP into alignment with proposed Rule 17Ad–26(a)(4), (5), and (6).

a. Core Clearing and Settlement Services

Final Rule 17Ad–26(a)(1) requires RWPs to identify and describe their core payment, clearing, and settlement services and to address how the CCA would continue to provide such core services in the event of a recovery and during an orderly wind-down, including the (a) identification of the staffing roles necessary to support such core services, and (b) analysis of how such staffing roles necessary to support such core services would continue in the event of a recovery and during an orderly wind-down.

CCAs play an important role as financial market utilities. By virtue of the unique services that they offer, the network effects under which they operate, and their specialization by asset class, any failure of the CCAs to provide their core services might affect the stability of U.S. financial markets.[517] Accordingly, policies and procedures that increase the resiliency of CCAs are expected to improve the stability of these markets.

Each of the CCAs' RWPs currently identifies its core services, as stated in the baseline analysis, but they differ in the degree to which they address continuation in the event of a recovery and during an orderly wind-down.

Markets in which the dominant CCAs are currently less comprehensive in addressing continuation in their RWPs likely will benefit from this requirement because these CCAs will be required to work through and memorialize in their RWPs how the CCA will continue to provide its core services in the event of a recovery and during an orderly wind-down.

As mentioned in the economic baseline section, none of the CCAs currently identifies the staffing roles necessary to support core services or provides in their RWPs analyses of how such staffing roles necessary to support such core services would continue in the event of a recovery and during an orderly wind-down. Because CCAs do not currently identify the staffing roles that are necessary to support core services and how such staffing roles would continue during times of crisis, this new requirement likely will provide benefits to the market. Forward-looking analyses around issues related to potential staffing shortfalls should provide each CCA with additional certainty and clarity around who would deploy the RWP and supervise its implementation. The RWP might contemplate tools that help with the retention of certain personnel, the development of other internal personnel who could stand in for those personnel, the recruitment of replacement personnel, possibly from its own participants or from other domestic or international CCAs. In all cases, the tools should be robust regardless of the financial situation of the CCA. A CCA that retains its personnel and its ability to service external relationships in the event of a recovery or orderly wind-down may be able to reduce not only potential losses for its participants but also further market disruptions by ensuring its critical clearance and settlement services continue.[518]

The current lack of staffing role analyses in RWPs means that CCAs will incur costs, related to drafting the analyses and implementing the resulting conclusions from the analyses. For example, were the CCA to undertake a recovery or wind-down that significantly affects its operations or structure, a CCA may determine that certain personnel would be likely to leave the CCA. The CCA may determine that it is appropriate to strengthen its employee agreements so that those employees have more incentives to remain at the CCA during a recovery or wind-down even if this includes a sale or transfer of one or more of its core services to another entity or a receiver. Alternatively, or additionally, a CCA may choose to invest in internal development programs and processes so other employees acquire skills that are necessary during recovery and wind-down events, making the loss of any employee less costly via internal redundancy. Commenters stated that attracting and retaining skilled employees is costly; one commenter stated that some employees might chose to leave in certain circumstances despite having very lucrative employment contracts; another commenter stated CCAs with sufficient resources will be able to retain their key personnel.[519] The Commission recognizes that it may be costly to ensure that employees in essential staffing roles are available to support core services in the event of a recovery and during an orderly wind-down. The final rules do not require retention of any employee, but they do require the identification of staffing roles and an analysis of how those roles would continue. The final rules allow CCAs to use a variety of human resource management tools, which will better enable CCAs to find cost-effective tools that enable them to maintain their core services in the event of a recovery and during an orderly wind-down.

b. Service Providers

Final Rule 17Ad–26(a)(2) requires RWPs (i) to identify and describe any service providers for core services, specifying which core services each service provider support, and (ii) to address how the CCA would ensure that service providers for core services would continue to perform in the event of a recovery and during an orderly wind-down, including consideration of its written agreements with such service providers and whether the obligations under those written agreements are subject to alteration or termination as a result of initiation of the recovery and orderly wind-down plan.

One commenter stated that it is critical that CCAs have service contracts that cannot be terminated in the aftermath of an insolvency event,[520] whereas other commenters stated that CCAs cannot ''ensure'' that service providers would continue to perform in the event of a recovery and during an

[517] Five of the six CCAs have been designated by the FSOC as SIFMUs because the failure or disruption to the functioning of the financial market utility could create or increase the risk of significant liquidity or credit problems spreading among financial institutions or markets. *See Designations,* U.S. Dep't Treasury, *https://home.treasury.gov/policy-issues/financial-markets-financial-institutions-and-fiscal-service/fsoc/designations; see also supra* note 88.

[518] *See* SIFMA at 14 (''In fact, one of the lessons that can be drawn from the Lehman Brothers failure that precipitated the 2008 financial crisis is that the largest losses may not be the ones that lead up to the insolvency event, but rather those that follow the insolvency event. In the case of Lehman Brothers, its inability following the insolvency event to keep its personnel from leaving and the difficulty it had in continuing servicing relationships were in large part the cause of the financial losses to its customers and market disruptions.'').

[519] *See* Donaldson at 5 (''Likewise, the required skills, the demands on retention, and the time to identify, attract and train new staff to the necessary level of expertise in virtually all the relevant departments is very substantial.''). *See* SIFMA at 14 (''It is important that a Clearing Agency have service contracts that cannot be terminated in the aftermath of an insolvency event and that it has sufficient going concern resources that will allow it to retain its key personnel.''). *See* Donaldson at 6 (''The recent experience at a large household name social media company should make clear that even the most lucrative employment agreements are rarely sufficient to get highly in demand skilled employees to stay on board a 'sinking ship.' Furthermore, certain CCAs have organized labor agreements in place with many of their employees which would likely require time consuming renegotiation in order to satisfy this provision.'').

[520] *See* SIFMA at 14 (''It is important that a Clearing Agency have service contracts that cannot be terminated in the aftermath of an insolvency event and that it has sufficient going concern resources that will allow it to retain its key personnel.'').

orderly wind-down.[521] The Commission acknowledges that a CCA cannot ensure that a service provider for core services will continue to perform throughout a recovery and an orderly wind-down; nevertheless, if its analysis indicates that the service provider might not continue to perform in those events, it could address how it would handle any termination or non-performance by the service provider, which could satisfy the new requirements.[522]

Some commenters stated that the proposed definition of ''service provider'' was too broad and would unnecessarily increase CCA costs by capturing too many non-essential service providers.[523] The Commission generally agrees with the comments on this point and therefore made corresponding changes to the proposed rule text. The reduced scope of service providers captured by the revised rule is appropriate for recovery and orderly wind-down planning purposes and helps ensure that the CCA focuses its RWPs on the key risks and its responses to those risks.[524]

One commenter stated that due to differences across CCAs, markets, and members, CCAs must be afforded flexibility to interpret and implement the final Rule 17Ad–26(a)(2).[525] The Commission acknowledges that there are important differences across CCAs in terms of products cleared and markets served. The principles-based Rule 17Ad–26(a)(2) allows CCAs to take approaches in their RWPs that differ from those taken by other CCAs in their RWPs.

As stated in the baseline analysis, the RWPs differ in their degree of alignment with the final rule and the level of descriptiveness of service providers. The markets that likely will benefit the most from this new requirement are the ones in which the dominant CCAs' RWPs are currently the least comprehensive in identifying and describing the required service providers and identifying how those service providers will perform in the event of a recovery and during an orderly wind-down because those CCAs would have to negotiate with service providers to ensure their continued performance or find other alternatives. CCAs that make more changes in identifying the service providers and the core payment, clearing, and settlement services provided by each service provider likely will bring more benefits to the markets they serve by putting themselves in a better position to manage their service providers in the event of a recovery or during an orderly wind-down. One commenter stated that in the event that one of the service providers fails, it may not be possible to switch to another service provider because the remaining service providers might not be able to quickly scale up their operations.[526] The Commission recognizes that switching vendors may be difficult in certain circumstances such as during times of crisis and when other CCAs are switching in or out of the same service providers en masse. A key benefit of final Rule 17Ad–26(a)(2) is that CCAs will consider these sorts of costs and incorporate appropriate prophylactic responses to them into their RWPs. This will make the CCAs more resilient, by having more robust RWPs, which will, in turn, reduce the risk and/or size of systemic events.

Each CCA will incur costs to bring its RWP into alignment with the new rule, and these costs are estimated in Part IV.C.1.j, *infra.* These alignment costs will depend on the extent of the enhancements the CCA makes to its RWP, including any contractual changes with its service providers. The underlying costs of the contractual changes may be affected by the relative market power of the CCA versus the service provider in light of the regulatory requirement to meet these new standards. For example, the amendments require the consideration of the CCA's written agreements with its service providers and whether the obligations under those written agreements are subject to alteration or termination as a result of initiation of the recovery and orderly wind-down plan. Consequently, a service provider that has market power or offers a service for which there are high switching costs could potentially earn economic profits by increasing its fees to sign a written agreement with a CCA that ensures the continuation of a core service in the event of a recovery and orderly wind-down.

c. Scenarios

Final Rule 17Ad–26(a)(3) requires RWPs to identify and describe scenarios that may potentially prevent the CCA from being able to provide its core services identified in Rule 17Ad–26(a)(1) as a going concern, including (a) uncovered credit losses, (b) uncovered liquidity shortfalls, and (c) general business losses. As stated in the baseline analysis, each of the CCAs' RWPs currently identifies and describes, to varying degrees, certain relevant scenarios.

The more significant benefits of being required to identify these scenarios will accrue to those markets in which the dominant CCAs lack breadth and specificity in identifying and describing their scenarios. By better understanding the circumstances that could threaten their ability to provide their core services, these CCAs can take steps to reduce the likelihood of these scenarios and, should they materialize, be better prepared to achieve a recovery or orderly wind-down.[527]

Each CCA will incur costs to bring its RWP into alignment with the new rule. The alignment costs will depend on the extent of the enhancements the CCA makes to its RWP. The costs to modify plans that require changes, including those that need to be expanded to

[521] *See* CCP12 at 4 (''CCAs cannot 'ensure' that such service providers would continue to perform in the event of a recovery and during an orderly winddown.''). *See* DTCC at 8 (''This proposed requirement overestimates the negotiating leverage that CCAs have when entering contracts with service providers or assumes that CCAs would be able to unilaterally require service providers to continue performance during a recovery or orderly winddown.''). *See* ICE at 4 (''ICE does not believe it is possible for a [clearing agency] to 'ensure' that a service provider would perform.'').

[522] *See supra* Part II.C.2.

[523] *See* DTCC at 6 (''[The proposed rule] would capture large numbers of service providers to DTCC that are not immediately necessary to the ongoing operations of the critical services of DTCC's CCAs. We believe that this would result in a significant burden upon our CCAs (and likely other CCAs) with minimal benefit to the development of effective RWP.''). *See* ICE at 4 (''ICE believes that the proposed definition of 'critical services' would include third parties that are [not] 'in any way related to the provision of a critical service' and believes this definition is overly broad. In particular, the definition would cover service providers that are only tangentially related to clearing services and have no practical impact on recovery or wind-down planning which would be burdensome for CAs and provide minimal, if any, benefit.'').

[524] *See supra* Parts II.C.2.a and II.D.2.

[525] *See* DTCC at 2 (''DTCC continues to stress, as it has in prior comment letters to the Commission, that CCAs must be afforded the discretion and flexibility to interpret and implement rules based on the risk profiles, markets, and products that respective CCAs serve. Aspects from the Proposal that would benefit from this discretion include . . . the proposed requirement to include contractual terms and conditions that would prevent automatic termination by service providers in the event of a recovery or orderly wind-down.'').

[526] *See* Davidson at 7 (''[a]t present, while it is possible to operate separate genre of application software on different 'Cloud' providers, it is extremely challenging, requiring significant time for deployment and rigorous testing, to move a set of tightly woven operational software applications from one 'Cloud' provider to another. While the existence of several major competitors in the 'Cloud' computing space would appear to support the ability to move among providers in the highly improbable event of a catastrophic failure of one of them, the above constraints make that a time-consuming process for all users. . . . Notwithstanding their tremendous scale and ability to support existing customers with 'capacity on demand,' such vendors do not make a habit of operating with sufficient spare capacity to accommodate a significant piece of their competitors' business quickly and easily.'').

[527] *See supra* note 514.

include additional scenarios, will be modest, but they will vary across CCAs because of differences in the markets and participants they serve.

A commenter stated that CCAs underestimate the range of scenarios that might threaten their survival [528] and that scenario analyses impose small costs while yielding greatly enhanced transparency benefits.[529] A key benefit of final Rule 17Ad–26(a)(3) is that each CCA will revisit the question of what might threaten its ability to carry out its core services. As certain CCAs update their RWPs in response to this new rule, they may conclude that they need to add new scenarios and that they need to discuss their scenarios in more detail. That notwithstanding, it will not be costly for CCAs to comply with the new rule, which is shown by the cost estimates that are presented in Part IV.C.1.j *infra*. The Commission is not mandating that all CCAs include a common list of specific scenarios in their RWPs because of differences across CCAs and the products cleared and markets served—scenarios that are essential at one CCA might be irrelevant at another CCA—and because the list of scenarios is likely to change through time and is thus not suited for a static list.[530]

d. Criteria That Could Trigger Implementation

Final Rule 17Ad–26(a)(4) requires RWPs to identify and describe (a) criteria that could trigger the CCA's implementation of the recovery and orderly wind-down plans and (b) the process that the CCA uses to monitor and determine whether the criteria have been met, including the governance arrangements applicable to such process.

As stated in the baseline analysis, each CCA's RWP identifies and describes, to varying degrees, criteria that could trigger the implementation of a recovery or orderly wind-down. The largest benefits of this rule likely will accrue to the markets in which the dominant CCAs currently have the least comprehensive RWPs in identifying and describing appropriate triggers. The *ex ante* identification and description of triggers likely will have the benefit of being a disciplining mechanism that signals when and how the CCA may act during periods of market stress. The Commission further believes that the ex-ante identification and description of triggers likely will lead CCAs to anticipate and prepare for market stress or other events that could lead to a recovery or wind-down. Each CCA will incur costs to bring its RWP into alignment with the final rule. The alignment costs will depend on the extent of the enhancements the CCA makes to its RWP.

e. Rules, Policies, Procedures, and Other Tools or Resources

Final Rule 17Ad–26(a)(5) requires RWPs to identify and describe the rules, policies, procedures, and any other tools or resources on which the CCA could rely in a recovery or orderly wind-down. The markets that likely will benefit the most from this requirement are the ones in which the dominant CCAs have the least comprehensive RWPs in describing how the rules, policies, procedures, tools, and other resources could be used during a recovery or wind-down. Making these changes to their RWPs likely will enable the CCAs to anticipate more fully how future crises might affect their operations, which should enhance their ability to respond and, accordingly, decrease the expected costs borne by CCAs, the participants, and other stakeholders in future crises. For example, if a CCA determines that it needs a new rule to respond to a specific scenario, the CCA may be better positioned to respond appropriately to that scenario if it arises.

Each CCA will incur costs to bring its RWP into alignment with the final rule. The alignment costs will depend on the extent of the enhancements the CCA makes to its RWP. CCAs that determine that they need to include more responses, different resources, or better descriptions will incur more costs as they make appropriate modifications to their RWPs. The costs to modify plans that require changes, including those that need to be expanded, will increase with the number of required changes such as the number of new rules the CCA adopts.

f. Procedures To Ensure Timely Implementation

Final Rule 17Ad–26(a)(6) requires RWPs to address how the rules, policies, procedures, and any other tools or resources identified in Rule 17Ad–26(a)(5) would ensure timely implementation of the RWP. As stated in the baseline analysis, each RWP mentions the concept of timeliness in either recovery or wind-down, but most RWPs do not list specific procedures to ensure the timely implementation of the RWP. A key benefit of this rule is that CCAs will address in their RWPs how the RWP will be implemented in a timely manner when the need arises. A timely start will increase the chance that the CCA is able to address the underlying problem quickly and with low costs to the various stakeholders. The benefits of this rule likely will accrue primarily to the markets in which the dominant CCAs add more or better rules, policies, procedures, tools, or other resources to ensure timely implementation of their RWPs.

Each CCA will incur costs to bring its RWP into alignment with the final rule. The alignment costs will depend on the extent of the enhancements the CCA makes to its RWP. The costs to modify plans that require changes, including those that need to be expanded to include additional rules, policies, procedures, or any other tool or resource will be modest because current RWPs already place some focus on timeliness as a desired feature.

g. Informing the Commission

Final Rule 17Ad–26(a)(7) requires the CCA to inform the Commission as soon as practicable when the CCA is considering implementing a recovery or orderly wind-down. As stated in the baseline analysis, each RWP generally refers to informing the Commission, but some plans inform the Commission *after* initiating a recovery or orderly wind-down. Providing notice to the Commission when the CCA is considering implementing a recovery or orderly wind-down may help ensure that the Commission can, from the start, dynamically monitor how a CCA engages the recovery or wind-down event consistent with its established RWPs and the requirements of Commission rules, to help mitigate the potential onward transmission of system risk and help ensure that a wind-down, if necessary, is orderly. These benefits likely will accrue primarily to the markets in which the dominant CCAs currently do not have a plan in place for informing the Commission as soon as practicable when the CCA is considering implementing a recovery or orderly wind-down.

One cost of the new rule is that CCAs will need to decide whether they have begun considering an implementation of either a recovery or an orderly wind-down. The marginal cost of such a determination is small, and it would

[528] *See* Muth at 2 (''A complex cocktail of incentives familiar to the Commission but too labyrinthine to elucidate here causes management to . . . underestimate the range of scenarios that might threaten entity survival'').

[529] *See id.* at 3 (''The requirement of explicit consideration in the recovery plan of what might lead to each scenario's coming into being and how the scenario might take shape (including prerequisite contemplated market conditions) imposes a small burden on compliance and risk functions in the entity while creating greatly-enhanced transparency to investors and regulators around how, how quickly, and under what conditions the entity may fail to meet obligations.'').

[530] *See infra* Part IV.D.1.

occur in the normal course of business, separate from the new requirement. For example, a CCA generally would be ''considering'' implementing a recovery when the clearing agency determines that a market event may result in uncovered losses, liquidity shortfalls, or capital inadequacies at the CCA following end-of-day settlement, or when the CCA anticipates that it will need to deploy prefunded financial resources or liquidity arrangements following end-of-day settlement in order continue meeting its regulatory obligations.[531] Those determinations would be made in absence of the final notification rule, and they do not therefore affect the rule's costs. Additionally, the primary focus for the CCA is on the timeliness of the notification to the Commission and not on its method or form.[532] The Commission can best ensure that actions appropriate to maintaining financial stability can be made if it is notified when a CCA is ''considering'' action, rather than when a CCA has already begun to implement its RWP. For example, the Commission or other authorities may evaluate the available actions or tools to address or mitigate financial stability concerns in response to market events.

A commenter stated that CCA management may face disincentives to candid communication with the Commission about considering implementing a recovery or orderly wind-down because of concerns about other implications of such reporting, including the potential for harm in future shareholder litigation.[533] We acknowledge that there may be conflicting incentives for individual managers regarding any regulatory reporting, but we do not believe that these conflicting incentives would undermine the intended benefits nor do they alter the reporting and disclosure obligations of CCAs or their publicly-traded affiliates. These conflicting incentives are already present in the regulatory structure. All CCAs currently maintain frequent communication with Commission staff about potentially sensitive information. And CCAs are already required to disclose key information about their operations to various third parties that may be considerably more extensive than that which is mandated by new Rule 17Ad–26(a)(7). Pursuant to Commission rules, for example, clearing participants generally will be notified of circumstances related to a participant default, the potential for a portfolio auction, and the use of default management tools that may precede a recovery or wind-down event.[534] Finally, while CCAs' publicly-traded affiliates will need to consider whether public disclosure to investors is appropriate when considering implementing a recovery or orderly wind-down, those considerations exist regardless of any required notification to the Commission.

Each CCA will incur costs to bring its RWP into alignment with the final rule. The alignment costs will depend on the extent of the enhancements the CCA makes to its RWP. The costs to modify plans that require changes, including those that need to change their RWPs to notify the Commission before the RWP implementation, likely will be modest because current RWPs already place some focus on informing the Commission. If the CCA ever experiences an event that causes it to consider implementing a recovery or orderly wind-down, it will have to devote nominal resources to inform the Commission as soon as practicable.

h. Testing

Final Rule 17Ad–26(a)(8) requires RWPs to include procedures for testing the CCA's ability to implement the RWPs at least every 12 months, including by (a) requiring the CCA's participants and, when practicable, other stakeholders to participate in the testing of its plans; (b) requiring that such testing would be in addition to testing pursuit to paragraph (e)(13) of 17 CFR 240.17ab–22; (c) providing for reporting the results of the testing to the CCA's board of directors and senior management; and (d) specifying the procedures for, as appropriate, amending the plans to address the results of such testing.

A few commenters stated that CCAs need considerable latitude in designing and executing their testing obligations because including participants and certain other stakeholders in plan testing may be inefficient and perhaps inappropriate due to costs, sharing of private and confidential information, and other reasons.[535] The Commission recognizes that there are certain efficiencies from allowing each CCA to customize its testing due to differences between markets, cleared products, participant types, and testing obligations from other regulators and final Rule 17Ad–26(a)(8) allows a CCA to designate in its policies and procedures that certain participants, or categories of participants, be designated for participation in certain tests. It may not always be appropriate to include certain participants in all aspects of testing.[536] The different types of products that each CCA clears helps determine the type, resources, and expertise of stakeholders that participate in these testing exercises. For example, in testing of loss allocation tools, where losses could be assigned to a participant, it may be useful to include participants in the testing to allow them to understand when they can be expected to bear losses and how those losses would be absorbed. In testing that involves business losses or certain types of non-default losses, it may be less appropriate to have participants participate in the testing.

One commenter stated that new testing requirements would require significant investment of time and resources by a CCA's most critical personnel, both in the planning of the test and in the likely manual execution of the test for many CCAs.[537] The Commission acknowledges that CCAs will incur costs every 12 months to plan and execute their tests. The CCAs' most critical personnel will likely need to be actively engaged in the execution of the tests, including monitoring both market conditions and the CCAs' resources as the situation develops. As stated above, including critical personnel in testing may increase the overall cost of testing, but it is necessary because these critical personnel are best positioned to identify the planning and procedures that can help ensure timely and effective implementation of the RWP in the event of a future recovery or orderly wind-down.[538] Plan testing benefits CCAs because it helps them identify weakness during the testing that can be used to update their RWPs and it helps them gain practical skills that may be used during an actual recovery or wind-down event. These effects, in turn, improve the stability of the CCAs, which benefits not only their participants but also the broader financial markets. A key cost to the CCA during plan testing is the

[538] *See supra* Part II.C.8.b.

opportunity cost of the critical personnel being less available to attend to other matters, and participants will incur related costs from their participation.

In the RWP Proposing Release, the Commission requested comment on how costly it will be for CCAs to test their plans as required in Rule 17Ad–26(a)(8).[539] No commenter, including the CCAs, provided estimated plan-testing costs or other information that would aid the Commission in quantifying the costs for CCAs to test their RWPs every 12 months.[540] Because under the final rule the nature and scope of the required testing is dependent on the needs of each CCA, it would be impracticable to estimate the cost of testing without particularized information about the elements and testing scenarios of each CCA's RWP after the RWPs have been brought into alignment with the final rule. Final Rule 17Ad–26(a)(8) allows a CCA to retain discretion to organize and design its testing scenarios to ensure that testing exercises produce effective tests of the elements of the RWP. This discretion means that each CCA may test different default and non-default scenarios from one another. Additionally, final Rule 17Ad–26(a)(8) does not create parameters around the number of scenarios a CCA is required to test. Final Rule 17Ad–26(a)(8) also allows a CCA to designate in its policies and procedures certain participants, or categories of participants, for participation in certain tests. Each CCA will rely on different resources and expertise of stakeholders depending on its market and the type of products that the CCA clears, and the number and identity of those participants will also vary.[541] The Commission would need more information about the type and number of scenarios each CCA is testing or the type and number of participants each CCA will be designating in order to quantify the cost of testing.

A few commenters also stated that testing requirements in Rules 17Ad–22 and 17Ad–26 should be harmonized to the extent possible due to high testing costs that outweigh benefits of independent testing.[542] The testing requirements in new Rule 17Ad–26(a)(8) are in addition to those in Rule 17Ad–22(e)(13), and each test must be performed because RWP testing may require consideration of scenarios and testing of procedures that go beyond default management. For example, recovery includes the actions taken to address uncovered losses and replenishment of prefunded resources, and wind-down includes actions taken when resources have been exhausted, necessitating the permanent cessation, sale, or transfer of one or more of the CCA's core services. Nevertheless, each CCA is allowed to structure the planning, execution, and analysis of each test in a way that improves efficiency and reduces its aggregate testing costs for itself, its participants, and its other stakeholders so long as the testing exercise addresses the distinct elements of the separate testing requirements.[543] A more comprehensive testing exercise may make it less costly to assemble a representative set of participants and other key stakeholders, as well as the board, producing a more effective testing exercise.

The new test required by final Rule 17Ad–26(a)(8) cannot be subsumed by the default management tests under Rule 17Ad–22(e)(13) because it goes beyond default management by including, for example, recovery, which includes the actions taken to address uncovered losses and replenishment of prefunded resources, and wind-down, which includes actions taken when resources have been exhausted, necessitating the permanent cessation, sale, or transfer of one or more of the CCA's core services.

As stated in the baseline analysis, only a few RWPs refer to plan testing. The markets that likely will benefit the most from this requirement are those in which the dominant CCAs have the least comprehensive policies around testing in their RWPs because those CCAs likely will create procedures for more frequent testing and the inclusion of more stakeholders, and those changes likely will help ensure that those RWPs remain current and take into account changing system and market conditions. Additionally, the testing will help the test participants and other stakeholders better understand the recovery and orderly wind-down processes, and it may make them more efficient in the event of an actual recovery or wind-down event because of their practice going through a dry-run recovery and orderly wind-down. Contrary to the suggestion of a commenter, the participation in a real test yields benefits for the various stakeholders that they cannot learn through other methods, including reading the CCAs' RWPs.[544]

The upfront costs to begin testing as required by the new rule may not be large for the four CCAs that do not mention plan testing in their RWPs because they might be able to leverage existing requirements around default management testing under Rule 17Ad–22(e)(13) as they develop their new plans that are distinct from those existing requirements.[545] The corresponding testing costs for the CCAs' participants and, when practicable, other stakeholders likely will be moderate, in part because the CCAs are already required to include such entities in their default procedures testing under Rule 17Ad–22(e)(13). The costs for any subsequent RWP amendments in response to the annual testing likely will be small.

i. Board Review and Approval

Final Rule 17Ad–26(a)(9) requires RWPs to include procedures requiring review and approval of the plans by the board of directors of the CCA at least every 12 months or following material changes to the CCA's operations that would significantly affect the viability or execution of the plans, with such review informed, as appropriate, by the CCA's testing of the plans. As stated in the baseline analysis, each RWP refers to periodic plan reviews, typically annually or biennially.

The markets that likely will benefit the most from this requirement are those in which the dominant CCAs currently have the least comprehensive RWPs in addressing plan review because they would create more frequent procedures for review, and more frequent reviews, in turn, should help ensure that RWPs remain current and consider any changes to the CCAs' operations.

There are costs associated to this new requirement. The board of directors of some CCAs will need to devote additional time and resources as they move to a review cycle of at least every 12 months, and they will need to review material changes to the CCA's operations that would significantly affect the viability or execution of the plans. For those CCAs that review every two years, moving to a review at least every 12 months will increase their

[539] RWP Proposing Release, *supra* note 18, at 34740 (''44. How costly will it be for covered clearing agencies to test their plans as required in proposed Rule 17ad–26(a)(8)? What costs will be incurred by the participants and, when practicable, other stakeholders? Will any of these costs substantively vary based on whether or not the current RWP includes testing?'').

[540] *See infra* note 542.

[541] *See supra* Table 1 for the number of participants at CCAs as of Aug. 2024.

[542] *See* DTCC at 10–11; ICE at 4–5; OCC at 10–11 (concluding that imposing additional testing requirements or mandating a separate, RWP-designed test would be duplicative of ongoing testing and would introduce unnecessary and potentially significant burdens without a proportionate benefit); CCP12 at 4–5; CFA at 4.

[543] *See supra* Part II.C.8.b.

[544] CCP12 at 4.

[545] *See* 17 CFR 240.17ad–22(e)(13); *supra* Part II.C.8.b.

costs by as much as a factor of two. We estimate that the cost of the additional time and resources for each additional review will be minor because we do not anticipate that this type of review will take many hours or many board resources.

Material changes to the CCA's operations may result in changes to the RWP. Those RWP changes that are material will be reviewed by the board. We estimate that the cost of the additional time and resources by the CCA to determine which RWP changes are material will be minor because we do not anticipate that this determination will take many hours or many resources.

Each CCA will incur costs to bring its RWP into alignment with the final rule. The alignment costs will depend on the extent of the enhancements the CCA makes to its RWP. The costs to modify plans that have biennial reviews to replace them with annual reviews will be modest. The costs to review RWPs after material changes to the CCAs' operations will depend on the nature and number of material changes that result in new reviews.

j. Quantified Costs of Written Policies and Procedures Associated With Final Rule 17Ad–26

The Commission has estimated the implementation and ongoing cost of final Rule 17Ad–26. The estimated average implementation cost for one CCA to review and update existing policies and procedures is about $49,000.[546] These approximate costs are the same as those estimated at the proposal stage for final Rule 17Ad–26 adjusted for inflation, and we did not receive any specific comments on this estimate.

One commenter provided feedback on the additional cost of obtaining Commission approval for any updated policies and procedures pursuant to Rule 19b–4.[547] The commenter stated that a two order of magnitude multiplier should be applied to the Commission's cost estimate because the rule-change process requires a broad cross-section of a CCA management and staff, as well as interactions with SEC staff.[548] The Commission acknowledges that once a CCA has reviewed and updated its policies and procedures the CCA will have to submit its plan modifications to the Commission for review, public comment, and approval as required by Rule 19b–4, which requires time and effort from both CCA management and staff. As the number of consultations between CCA management and SEC staff increases during the process of submitting the CCA's plan modifications, there will be corresponding increases in costs, as the commenter suggested. But the magnitude of these costs will be far less than the commenter suggested (*i.e.,* 100 times more than the costs associated with reviewing and updating policies and procedures). Instead, the Commission estimates this process will conservatively cost about $74,000 per CCA.[549] In addition, to the extent that a CCA must submit an advance notice, the Commission estimates a cost of about $73,000 per CCA.[550]

Final Rule 17Ad–26 will also impose ongoing costs on a CCA. The rule will require ongoing monitoring and compliance activities with respect to the written policies and procedures created in response to the rule. Based on the Commission's previous estimates for ongoing monitoring and compliance costs with respect to existing 17 CFR 240.17ad–22(e)(2) (''Rule 17Ad–22(e)(2)''),[551] the Commission estimates that the ongoing monitoring and compliance activities required by final Rule 17Ad–26 will impose an annual cost on CCAs of $19,000 per CCA.[552] These approximate costs are the same as those estimated at the proposal stage for final Rule 17Ad–26 adjusted for inflation, and we did not receive any specific comments on this estimate.

2. Amendments to Rule 17Ad–22(e)(6)

Rule 17Ad–22(e)(6) requires CCAs that provide central counterparty services to establish a risk-based margin system to manage their credit exposures to their participants. The final amendment to Rule 17Ad–22(e)(6)(ii) will strengthen the requirements: (a) by requiring that CCAs monitor intraday risk exposures to their participants on an ongoing basis, and (b) by providing additional specificity to the circumstances in which CCAs should have policies and procedures in place to make intraday margin calls. The final amendment to Rule 17Ad–22(e)(6)(iv) will strengthen the requirements by ensuring that CCAs can meet their Rule 17Ad–22(e)(6) obligations when their price data or other substantive inputs are not available by including procedures to use price data or other

[546] The $49,000 estimate is based on the following calculations: $11,460 (blended hourly rate for assistant general counsel at $573 for 20 hours) + $22,450 (blended hourly rate for compliance attorney at $449 for 50 hours) + $8,575 (blended hourly rate for business risk analyst at $245 for 35 hours) + $6,600 (blended hourly rate for senior risk management specialist at $440 for 15 hours) ≈ $49,000. Salaries for estimates presented in this section are derived from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified to account for an 1,800-hour work-year and inflation, and multiplied by 5.35 to account for bonuses, firm size, employee benefits and overhead. *See infra* note 610. As stated in the baseline analysis, some RWPs are more aligned with the nine elements that are part of final Rule 17Ad–26 than are other RWPs, so the estimated cost may vary.

[547] Davidson at 12 (''As a general matter the cost estimates in the document for the CCAs to conform to the proposed rules are ridiculously low. Rule change processes require the participation by a much broader cross-section of CCA management and staff . . . . A two order of magnitude multiplier on the current document's estimates would not overcount the cost to comply.'').

[548] *Id.* (''Furthermore, the 'informal' interaction with [Trading & Markets] staff frequently continues for multiple months, always involving Legal Department staff and frequently requiring the engagement of domain experts as well. All this happens before a formal submission is permitted, and the post formal submission process also requires a significant amount of interaction, although that process draws more on Legal than domain expert resources.'').

[549] Assuming that the distribution of responsibility among CCA staff for completing the Rule 19b–4 submission process is similar to the distribution for reviewing and updating policies and procedures, *see supra* note 546 (estimating 120 hours of total CCA staff time), the commenter's estimate would imply that CCA staff would spend an average of approximately 12,000 hours per submission, inclusive of the 120 hours to review and update policies and procedures. The Commission disagrees that this is a reasonable estimate of the number of hours for the process. Rather, the Commission has previously estimated—after receiving no comments on a similar estimate in the proposing release—that submitting a proposed rule change through the Rule 19b–4 process takes a CCA 34 hours for an average rule change filing and 129 hours for a novel or complex rule change filing. *See* Process for Submissions for Review of Security-Based Swaps for Mandatory Clearing and Notice Filing Requirements for Clearing Agencies; Technical Amendments to Rule 19b–4 and Form 19b–4 Applicable to All Self-Regulatory Organizations, Release No. 34–67286 (June 28, 2012) 77 FR 41602, 41631 & n.211 (July 13, 2012). Using the time for a novel or complex rule change filing as a conservative estimate, the Commission assumes that the CCA staff with the highest hourly cost involved in reviewing and updating CCA policies and procedures (*i.e.,* an assistant general counsel) performs all 129 hours of tasks associated with the Rule 19b–4 submission process, resulting in an estimated cost of $74,000. Specifically, the $74,000 estimate is based on the following calculations: $73,917 (blended hourly rate for assistant general counsel at $573 for 129 hours) ≈ $74,000. If instead the estimated time for an average rule change filing were used, the estimated cost would be $19,000 based on the following calculations: $19,482 (blended hourly rate for assistant general counsel at $573 for 34 hours) ≈ $19,000.

[550] The Commission estimates an additional cost of $73,000 based on the following calculations: $52,716 (blended hourly rate for assistant general counsel at $573 for 92 hours) + $20,440 (blended hourly rate for attorney at $511 for 40 hours) ≈ $73,000. *See id.* at 41632 & nn.213–14 (estimating time for Advance Notice).

[551] *See* CCA Standards Adopting Release, *supra* note 5, at 70892 (discussing Rule 17Ad–22(e)(2)).

[552] The $19,000 estimate is based on the following calculations: $5,730 (blended hourly rate for assistant general counsel at $573 for 10 hours) + $13,470 (blended hourly rate for compliance attorney at $449 for 30 hours) ≈ $19,000. *See infra* note 611. As stated in the baseline analysis, some RWPs are more aligned with the nine elements that are part of final Rule 17Ad–26 than are other RWPs, so the estimated cost may vary.

substantive inputs from an alternate source or to use a risk-based margin system that does not similarly rely on the unavailable or unreliable substantive inputs.

a. Monitoring Exposure and Intraday Margin Calls

CCAs use intraday margin calls as one of their tools to manage their credit exposures to their participants. The final amendment to Rule 17Ad–22(e)(6)(ii) requires CCAs to monitor exposure on an ongoing basis and to make intraday margin calls as frequently as circumstances warrant, possibly including when risk thresholds specified by the CCA are breached or when the products cleared or markets served display elevated volatility, which would help reduce, but not eliminate, their credit exposure to their participants. When facing special circumstances such as these, the CCA is required to document when it determines not to make an intraday call pursuant to its written policies and procedures required under amended Rule 17Ad–22(e)(6)(ii)(C).

Two commenters stated that members' intraday actions can create large negative externalities with respect to other participants and the CCA itself that the CCA could mitigate through its margin policies.[553] One commenter stated that margin calls benefit participants and the CCA, which, in turn, serves the interests of broader market stability.[554] The Commission recognizes that the structure of these clearing markets may permit certain negative externalities, and it has crafted the amendment to Rule 17Ad–22(e)(6)(ii) to reduce those externalities, which will, in turn, improve market stability. The final amendment affords CCAs latitude in crafting their updated margin procedures that will better reduce these negative externalities given their products cleared and markets served.

Each CCA will have to determine how to operationalize ''on an ongoing basis'' and ''as frequently as circumstances warrant'' given its own market and participants. Each CCA will also need to ensure that its systems can monitor exposure and make margin calls at those frequencies. As discussed in the baseline analysis, each CCA is already capable of monitoring exposure and collecting margin on an intraday basis; nevertheless, some CCAs might need to make changes to align with the final amendment, such as increasing the frequency of exposure monitoring and improving their information technology, so they can process more frequent scheduled and *ad hoc* intraday margin calls. As facts and circumstances change through time, CCAs might need to change how they operationalize these new requirements, including changing the frequency of potential scheduled and *ad hoc* intra-day margin calls.

To the extent a CCA currently aligns with the final amendment, it will not experience new benefits from the final amendment. Nevertheless, the amendment will have incremental benefits for the market because it will ensure that the CCAs continue to meet the standard of the final amendment with which they are currently aligned and that any new CCA that provides central counterparty services meets the same standard.

In addition to updating policies and procedures surrounding the risk-based margin systems that require changes, some CCAs might need to update IT and other systems in order to assess, impose, and collect intraday margin on a more frequent basis. The costs to modify the risk-based margin systems that require changes will be modest because CCAs have already incurred the initial costs of building their risk management infrastructure, including the ability to make intraday margin calls based on some sort of intraday monitoring. Once those costs have been incurred and amortized, the variable costs of modifying the *frequency* of the monitoring, and of additional margin calls, are likely low.

To the extent that the final amendment results in CCAs being positioned to make more unscheduled margin calls, participants may face increased liquidity-management costs whether or not the CCAs actually make more unscheduled margin calls. Several commenters highlighted the potential for increased margin calls to impose increased liquidity costs on the CCAs' participants and their clients,[555] and several commenters explicitly stated that CCAs, in order to reduce participants' liquidity costs, must make the triggers for intraday margin calls known to their participants.[556] A CCA's margin methodology constitutes a material aspect of its operations, meaning that it should be considered part of a CCA's stated policies, practices, or interpretations under Exchange Act Rule 19b–4. As such, a CCA's margin methodology is subject to the filing obligations applicable to SROs under section 19(b) of the Exchange Act regarding any proposed rule or proposed change to its rules. Through the notice and comment process, market participants and the general public will have transparency into a CCA's margin call methodology. This information will enable the participants to reduce their liquidity costs to the extent they incorporate it into their liquidity models. That notwithstanding, a CCA's policies and procedures regarding intraday margin generally should consider concerns such as procyclicality, so not every margin call can be perfectly predicted by the participants.

One commenter stated that it is more costly for participants to respond to margin calls late in the trading day than early in the trading day because, in part, the United States is the last major market to close each day due to the geographic position of the International Date Line.[557] The Commission recognizes that margin calls are costly for participants, that those costs may potentially rise near the end of the trading day, and that those costs may potentially be higher during times of market stress; nevertheless, these time-varying costs are not unique to the clearing market. Some participants might adjust their liquidity models to control for the costs of late-in-day *ad hoc* margin calls that CCAs might make.

A few commenters stated that CCAs should be quick to return margin if markets revert during the trading day, and no commenter recommended against it.[558] The Commission is unaware of any CCA that routinely returns margin on an intraday basis today even though no SEC rule would

[553] *See* Better Markets at 2 (''The requirement that covered clearing agencies monitor intraday exposure responds to the risks that may arise intraday. A CCP faces the risk that its exposure to its participants can change rapidly as a result of intraday changes in price, positions, or both, including adverse price movements, as well as participants building larger positions through new trading (and settlement of maturing trades). For these reasons, a CCP must monitor and address such risks on an ongoing basis.''); *see also* SIFMA at 4 (''Failure to collect and maintain adequate margin from one clearing member transfers the risk of that deficiency to the other clearing members and market participants.'').

[554] *See* SIFMA at 6 (''SIFMA believes that the making of such calls is essential to prudent risk management by a Clearing Agency and thus provides meaningful benefits not only to the Clearing Agency, but also to market participants and serves the interests of financial stability by protecting the Clearing Agency from default risk.'').

[555] *See* Davidson at 9; Better Markets at 7; ICI at 10 (stating ''the unpredictability of such margin calls means that funds must keep a portion of their assets in highly liquid assets in anticipation of potential ad hoc intraday margin calls, which may lower returns for fund investors''), 11; SIFMA at 9; The Associations at 2; ICE at 2.

[556] *See* Better Markets at 7; ICI at 11; SIFMA at 5, 9.

[557] *See* Davidson at 9.

[558] *See* The Associations at 2; Davidson at 2; SIFMA at 8.

prohibit it. The Commission is not requiring CCAs to return some or all the newly collected intraday margin in the event of a same-day reversion, and it is instead leaving that decision to each CCA. The CCA will need to balance the benefits of potentially reduced liquidity costs to the participant from returning intraday margin against the benefits of potentially decreased risk to the CCA and its members from retaining intraday margin during periods of heightened asset volatility. The Commission's approach to Rule 17Ad–22(e) is to provide flexibility to CCAs, subject to their obligations and responsibilities as SROs under the Exchange Act, to design and structure their policies and procedures to take into account the differences among clearing agencies and their participants and differences through time.

Increased intraday margin calls may potentially result in procyclicality problems that exacerbate market stress: margin calls during periods of declining asset prices may cause participants to sell assets, putting further negative pressure on asset prices and the market that may negatively affect not just other participants but also may spill over into other CCAs and their markets.[559] This stress may be transmitted by participants that are members of more than one CCA when, for example, a margin call in one market makes a participant sell assets in a different market. The stress may also be transmitted by assets that are linked between markets, such as the link between option prices (OCC) and equity prices (NSCC). Various industry participants have expressed concerns that excessive intraday margin calls, especially unanticipated ones, have the potential to exacerbate liquidity issues for clearing members who would have to post new liquid collateral to the CCA with little notice,[560] and one commenter stated that the unanticipated margin call itself might cause the member firm to default.[561] On the other hand, such intraday margin calls reduce immediate credit risk for the CCAs during periods of market stress, which, in turn, reduces risk for the other participants of those CCAs.

CCAs, when deciding whether to make an intraday margin call exception, generally should consider these concerns about procyclicality and potential participant default.[562] Notwithstanding their written policies and procedures that would require a CCA to issue a margin call in a particular situation, the CCA may choose to make an exception to its policies and procedures and not make a call, including in a situation where the CCA believes that procyclicality is a substantive risk or that the risk of the default of a particular participant is transient, perhaps due to the CCA's knowledge of the participant's portfolio. CCAs' ability to make exceptions based on their particular facts and circumstances allows them to balance these competing risks during future crises.[563]

b. Reliable Sources of Timely Price Data and Other Substantive Inputs

CCAs have risk-based margin systems that, to different degrees, align with the final amendment to Rule 17Ad–22(e)(6)(iv), with the exception of at least one CCA that likely would need to implement additional changes to its risk-based margin system to ensure that it could continue to meet its obligations under Rule 17Ad–22(e)(6) in the event of the unavailability of a substantive input from a third party. If that one CCA were to lose access to its price data or other inputs, it may be unable to perform its core payment, clearing, and settlement services, and that, in turn, may force it into an orderly wind-down, which would have negative implications for its participants and the broader financial system.

The incremental benefits of the final amendment beyond the baseline lie primarily in expanding the scope of this rule beyond price data and further specifying the nature of the procedures that a CCA uses if such data or inputs are not readily available or reliable and in ensuring that any new CCA has that same standard of the final amendment. These benefits are substantial because the final amendment reduces the risk that the CCA fails to provide its core payment, clearing, and settlement services in future periods of high market stress.[564] For example, the Options Clearing Corporation cleared a year-to-date average daily volume of 47.4 million contracts through April 2024, and DTCC reported that the average daily cleared broker-to-broker transactions was $1.9 trillion in 2023.[565] Because there is increased activity in the financial markets at the end of the trading day,[566] even a one-hour price data feed malfunction near the end of the trading day could affect the normal processing of millions of options contracts and hundreds of billions of dollars of equity transactions. Moreover, the unavailability of price data at one CCA that is closely interconnected to another CCA [567] could result in negative spillover effects that spread to that other CCA.

In the RWP Proposing Release, the Commission requested comment on how costly it will be for CCAs to secure the use of price data or substantive inputs from an alternate source.[568]

---

[559] One commenter agrees with the Commission's analysis of procyclicality. *See* The Associations at 2 (''Intraday margin calls can cause procyclical impacts to markets, especially if these calls are unpredictable for clearing participants.'').

[560] *Revisiting Procyclicality: The Impact of the COVID Crisis on CCP Margin Requirements,* Futures Indus. Ass'n (Oct. 2020), *available at https://www.fia.org/sites/default/files/2020-10/FIA_WP_Procyclicality_CCP%20Margin%20Requirements.pdf.*

[561] *See* ICE at 2 (''ICE does not believe the Commission has considered the costs associated with the procyclical effects that intraday margin calls can have, potentially exacerbating credit and liquidity concerns with clearing members and in extreme cases causing market participant defaults.'').

[562] *See* Part II.A.2.b.iii.

[563] *See* OCC at 4 (''However, while OCC agrees with goal of ensuring that this capability can be exercised when and as needed, we are concerned that imposing a requirement to establish strict quantitative thresholds that will trigger an otherwise unscheduled margin call would prevent the CCA from applying its judgment and expertise to determining whether the benefit of collecting that margin for its own purposes at that moment outweighs these possible procyclical impacts.'').

[564] One commenter stated that the proposed amendment to Rule 17Ad–22(e)(6)(iv) should be scaled back because, in part, no CCA has ever had an input-price failure that it was unable to resolve through its normal business operations (*see* ICE at 3); nevertheless, evolving market conditions, including high levels of growth in some cleared markets, justify regulatory changes to reduce the risk of future failures.

[565] *See* OCC, *Press Release OCC April 2024 Monthly Volume Data* (May 2, 2024), *available at https://www.theocc.com/newsroom/views/2024/05-02-occ-april-2024-monthly-volume-data* and *DTCC 2023 Annual Report, supra* note 471.

[566] The two busiest trading periods for both equities and equity options are usually immediately after the opening bell and immediately before the closing bell.

[567] For instance, OCC and NSCC have an information-sharing agreement to facilitate the settlement and delivery of physically-settled stock options cleared by OCC via NSCC. *See* Securities Exchange Act Release No. 37731 (Sept. 26, 1996), 61 FR 51731 (Oct. 3, 1996) (SR–OCC–96–04 and SR–NSCC–96–11) (Order Approving Proposed Rule Change Related to an Amended and Restated Options Exercise Settlement Agreement Between the Options Clearing Corporation and the National Securities Clearing Corporation); Securities Exchange Act Release No. 43837 (Jan. 12, 2001), 66 FR 6726 (Jan. 22, 2001) (SR–OCC–00–12) (Order Granting Accelerated Approval of a Proposed Rule Change Relating to the Creation of a Program to Relieve Strains on Clearing Members' Liquidity in Connection With Exercise Settlements); and Securities Exchange Act Release No. 58988 (Nov. 20, 2008), 73 FR 72098 (Nov. 26, 2008) (SR–OCC–2008–18 and SR–NSCC–2008–09) (Notice of Filing and Order Granting Accelerated Approval of Proposed Rule Changes Relating to Amendment No. 2 to the Third Amended and Restated Options Exercise Settlement Agreement).

[568] RWP Proposing Release, *supra* note 18, at 34739 (''40. How costly is it for covered clearing agencies to secure the use of price data or substantive inputs from an alternate source? Must the data or substantive inputs subscription be purchased outright, or can the covered clearing agency, for a lower fee, purchase an option to use

Several commenters addressed the costs of the proposed amendments to Rule 17Ad–22(e)(6)(iv). Some commenters stated that (a) alternate data sources are too costly and unlikely to substantively affect margin calculations,[569] (b) the alternate data may not be available in the market for the desired circumstances,[570] and (c) it may not be feasible to switch to a new source at the desired time due to capacity, timing, and other constraints.[571] No commenter presented estimated data costs, and no commenter presented any data, methodology, or basis for estimating such costs.

In the RWP Proposing Release, the Commission requested comment on how costly it will be for CCAs to secure the use of alternate risk-based margin systems.[572] Several commenters stated that developing an alternate risk-based margin system is too costly.[573] The amendments being adopted in this release do not mandate the use or development of an alternate risk-based margin system. Rather, the amendments require that a CCA must use procedures for addressing scenarios when price data or other substantial inputs become unavailable or unreliable to ensure that the CCA can meet its credit obligations to its participants, and that such procedures must include either: (i) price data or substantive inputs from an alternate source; or (ii) if the CCA does not use an alternate source, a risk-based margin system that does not rely on the unavailable or unreliable substantive input. As discussed in the baseline analysis, several CCAs already use one or both of these alternatives in their current margin systems. Even for a CCA that does not have policies and procedures developed to address this issue, the costs to develop such policies and procedures will not be very large because their experience dealing with periodic input failures means that they are already familiar with the risks of failures and the processes for dealing with those failures.

c. Quantified Costs of Written Policies and Procedures Associated With Final Amendments to Rule 17Ad–22(e)(6)

The estimated costs for the final amendment to Rule 17Ad–22(e)(6) may require a CCA to make fairly substantial changes to its policies and procedures. Based on the similar policies and procedures requirements and the corresponding estimates previously made by the Commission for several rules in the CCA Standards where the Commission anticipated similar costs,[574] the Commission estimates that each CCA will incur a one-time cost of about $59,000.[575] Additionally, the Commission estimates that the cost of obtaining Commission approval for any updated policies and procedures pursuant to Rule 19b–4 will conservatively cost about $23,000 per CCA.[576]

The final amendments to Rule 17Ad–22(e)(6) will also impose annual costs on the CCAs. The final rule will require ongoing monitoring and compliance activities with respect to the written policies and procedures created in response to the final rule. Based on the similar reporting requirements and the corresponding estimates previously made by the Commission for several rules in the CCA Standards where the Commission anticipated similar costs,[577] the Commission estimates that the ongoing activities required by the amendments to Rule 17Ad–22(e)(6) will impose an annual cost of about $31,000.[578]

3. Other Compliance Costs

We have considered the potential effects on entities that are implementing other recently adopted rules during the compliance period for these amendments.

Consistent with its long-standing practice, the Commission's economic analysis in each adopting release considers the incremental benefits and costs for the specific rule—that is, the benefits and costs stemming from that rule compared to the baseline. The Commission acknowledges that complying with more than one rule in the same time period may entail compliance costs that will be higher than if the rules were to be complied with separately. The Commission identified several rules for which the compliance periods overlap, in part, with the compliance periods for the amendments, but the compliance dates adopted by the Commission in recent rules are generally spread out over a period extending to January 2026.[579]

Entities subject to the amendments may be subject to one or more other recently adopted rules depending on whether those entities' activities fall within the scope of the other rules. Specifically, the Treasury Clearing Adopting Release applies to certain clearing agencies for U.S. Treasury securities and certain participants of the CCAs.[580] The Rule 10c–1a Adopting Release also applies to certain CCAs [581]—although due to differing requirements, these rules may not all apply to any given CCA. Where overlap in compliance periods exists, the Commission acknowledges that there may be additional costs on those entities that are subject to one or more other rules.

the data and substantive inputs only when its primary sources prove inadequate?'').

[569] *See* CCP12 at 2 (stating that if the Commission prescribed a definition of ''substantive input,'' a CCA may be forced to ''obtain, often at great expense, alternate data sources for inputs with limited utility and minimal or no impact on margin calculations.''); OCC at 5 (stating that requiring CCAs to develop and maintain an entire alternate risk-based margin system would be prohibitively expensive and operationally burdensome); *id.* at 2 and 4.

[570] *See* DTCC at 4.

[571] *See* Davidson at 7.

[572] RWP Proposing Release, *supra* note 18, at 34740 (''41. How costly is it for covered clearing agencies to secure the use of alternate risk-based margin systems? Would covered clearing agencies create their own alternate risk-based margin systems, or would they secure access to one from a third party, and, if so, at what cost?'').

[573] *See* ICE at 2–3 (stating that the Commission has not ''recognized the considerable costs to [CCAs], clearing firms and other market participants that would be required to develop and implement alternative margin models to address a remote and theoretical problem with price or other data inputs''); OCC at 2, 4–5; CCP12 at 3.

[574] *See* CCA Standards Adopting Release, *supra* note 5, at 70892, 70895–97 (discussing Rules 17Ad–22(e)(2) and (13)). Although the rule amendment is with respect to Rule 17Ad–22(e)(6), these Rules present the best overall comparison to the current rule amendment, in light of the nature of the changes needed to implement the proposal here and what was proposed in the CCA Standards.

[575] The $59,000 estimate is based on the following calculations: $11,460 (blended hourly rate for assistant general counsel at $573 for 20 hours) + $17,960 (blended hourly rate for compliance attorney at $449 for 40 hours) + $6,504 (blended hourly rate for computer operations manager at $542 for 12 hours) + $8,160 (blended hourly rate for senior programmer at $408 for 20 hours) + $11,000 (blended hourly rate for senior risk management specialist at $440 for 25 hours) + $4,056 (blended hourly rate for senior business analyst at $338 for 12 hours) ≈ $59,000. Salaries for estimates presented in this section are derived from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified to account for an 1,800-hour work-year and inflation, and multiplied by 5.35 to account for bonuses, firm size, employee benefits and overhead. *See infra* note 603.

[576] See supra note 549.

[577] *See* CCA Standards Adopting Release, *supra* note 5, at 70893, 70895–96 (discussing Rules 17Ad–22(e)(6) and (13)).

[578] The $31,000 estimate is based on the following calculations: $11,674 (blended hourly rate for compliance attorney at $449 for 26 hours) + $10,045 (blended hourly rate for business risk analyst at $245 for 41 hours) + $9,240 (blended hourly rate for senior risk management specialist at $440 for 21 hours) ≈ $31,000. *See infra* note 604.

[579] *See supra* Part IV.B (listing recent rule adoptions and their respective compliance dates) and Part III (listing compliance dates).

[580] *See* Treasury Clearing Adopting Release, *supra* note 62, at 2717, 2791.

[581] *See* Rule 10c–1a Adopting Release, *supra* note 457, at 75647, 75717–18. The final rule adds ''registered clearing agencies'' to the proposed rule's scope of entities that are permitted to act as reporting agents, which was limited to brokers or dealers. *Id.* at 75656. However, a registered clearing agency may elect not to be a reporting agent. *Id.* at 75733.

4. Efficiency, Competition, and Capital Formation

a. Efficiency

CCAs current policies and procedures, at a high level, largely align with final Rule 17Ad–26. As stated in the baseline, all CCAs make at least some reference in their current RWPs to each of the nine required elements of this new rule with the exception of plan testing.[582] Therefore, the Commission does not expect substantive efficiency changes due to the final rule.

The final amendment to Rule 17Ad–22(e)(6)(ii) will benefit participants by providing increased specificity around the methods used by CCAs to assess intraday margin calls, thus enabling more efficient planning in the use of scarce margin funds. This will reduce any negative effects on participants' liquidity costs, as previously described.[583]

The final amendment to Rule 17Ad–22(e)(6)(iv) will increase informational efficiency by promoting the quick and reliable dissemination of information that allows for price discovery during periods when price data or other substantive inputs are not available to the CCA. Calculating margin and managing and disseminating risk information are core competencies of all CCAs, and various stakeholders rely on those data outputs. By requiring secondary sources, the final amendment may mitigate the reduction in efficiency that would otherwise happen when primary sources fail at a CCA that does not have secondary sources. Having the ability to continue calculating margin and disseminating that information to participants even when primary data are not available will prevent a reduction in informational efficiency when price data or other substantive inputs are not available.

b. Competition

As described in the baseline, CCAs are currently not subject to strong competitive pressures given high start-up costs, the network effects that are inherent in the clearing business, their subsequent historical consolidation by market segments (options clearing for OCC, equities clearing for NSCC, fixed income clearing for FICC, etc.), and clearing mandates that require the use of clearing services.[584] In terms of potential new entrants in the market for clearing and settlement services, the incremental costs of the final Rule 17Ad–26 and the final amendment to Rule 17Ad–22(e)(6)(ii) are small and, therefore, unlikely to be noteworthy barriers to entry. The final amendment to Rule 17Ad–22(e)(6)(iv) may have a modest effect on competition because it imposes additional start-up costs that a new competitor would have to assume to enter the CCA market.

As discussed above, the Commission acknowledges that overlapping compliance periods may in some cases increase costs. We acknowledge that to the extent overlap occurs between the compliance periods of this rule and the compliance periods of other rules, there could be costs that could affect competition. However, the compliance dates are spread over a period extending to January 2026. We therefore do not expect the risk of negative competitive effects from increased compliance costs from overlapping compliance periods to be significant.

c. Capital Formation

The Commission expects the effects of the final rule and amendments on capital formation to be ancillary because the final rule and amendments focus on issues related to secondary market trading and not on issues related to primary market issuances. To the degree that market participants view equity and fixed-income CCAs as more reliable venues for risk transfer, they may increase their activity and therefore signal a demand for more capital-creating securities.

D. Reasonable Alternatives to the Final Rule and Amendments

1. Establish Precise Triggers for Implementation of RWPs Across All CCAs

Instead of requiring CCAs to identify and implement their own triggers to recovery and orderly wind-down procedures, the Commission could adopt a more prescriptive approach and determine specific triggers that all CCAs would be required to follow. For example, the Commission could specify that exhausting prefunded financial resources in the waterfall structure of a CCA would immediately trigger a recovery or wind-down procedure.[585] Alternatively, the Commission could require a trigger when unfunded commitments to the CCP are called upon and reach a specific dollar number.

In the RWP Proposing Release, the Commission asked, ''[s]hould the Commission prescribe any particular triggers, whether qualitative or quantitative? For example, should the Commission require that a CCA should consider using the exhaustion of its prefunded resources as a trigger?'' [586] One commenter proposed both a list of required triggers and a list of triggers that each CCA should consider.[587] This alternative would harmonize triggers across all CCAs, and it would create a single standard that market participants could rely on, eliminating any confusion or ambiguity attendant to different triggers. Nevertheless, CCAs are active in different markets (equities, bonds, options, CDS, etc.), have different organizational structures, and focus on different risks. As an example, one of the OCC's focus areas is monitoring option sensitivities, and, as a result, its margin models and waterfall structure are responsive to that consideration while FICC, on the other hand, focuses on duration and convexity so its waterfall structure is more responsive to those risks. Having this more prescriptive approach would be unresponsive to the characteristics of each market and could expose CCAs to recovery or wind-down triggers that are not aligned with its actual risks. One

[582] Three CCAs do not mention plan testing in their RWPs. *See supra* Part IV.B.3.h.

[583] SIFMA at 4 (''Failure to collect and maintain adequate margin from one clearing member transfers the risk of that deficiency to the other clearing members and market participants.'').

[584] *See* SIFMA at 10–11.

[585] *See* John W. McPartland and Rebecca Lewis, *The Goldilocks Problem: How to Get Incentives and Default Waterfalls ''Just Right'',* 41 Econ. Persps. 1, 2 (Mar. 2017), *available at https://www.chicagofed.org/publications/economic-perspectives/2017/1-mcpartland-lewis* (''All CCPs have a default waterfall that provides financial resources for managing a clearing member default. The waterfall consists of both prefunded resources and unfunded obligations. When a clearing member defaults, the CCP must continue to meet defaulter's financial obligations, whose performance it guarantees, to the non-defaulting clearing members, attempt to find clearing members willing accept the defaulter's clients, and return to a matched book status by liquidating or auctioning off the defaulter's positions. If the CCP cannot find other clearing members willing to onboard the defaulter's clients, then the clients' positions must be liquidated to restore the CCP to a matched book status. The default waterfall provides funding to cover the cost of meeting the defaulter's obligations and liquidating the defaulter's positions, as well as, if necessary, those of its clients.'').

[586] RWP Proposing Release, *supra* note 18, at 34725 (''25. Proposed Rule 17ad–26 would also require that the RWP identify triggers but does not prescribe a list of specific triggers. Should the Commission prescribe any particular triggers, whether qualitative or quantitative? For example, should the Commission require that a covered clearing agency should consider using the exhaustion of its prefunded resources as a trigger?'').

[587] The Associations at 17 (''We propose for the Commission to provide a list of triggers that are required to be covered in the RWP, and ideally another list of triggers that a clearing agency should consider. For this second list, a clearing agency could determine (yet explain) that a trigger is not relevant for the products cleared and/or markets served by the clearing agency.'').

commenter agreed with the Commission's conclusion.[588]

2. Establish Specific Scenarios and Analyses

Instead of requiring CCAs to identify scenarios that may prevent them from being able to provide their core payment, clearing, and settlement services, the Commission could adopt a more prescriptive approach and identify specific scenarios in new Rule 17Ad–26 that each CCA must include in its RWP. For example, the Commission could identify the scenario of the default of the CCA's one or two largest participants and scenarios of specific business risks such as the default of a custodian bank or a significant cyber-attack.[589] The Commission could also require more detail regarding how each of the CCAs analyzes these scenarios.[590]

This alternative approach may reduce compliance costs by establishing the precise scope of the rule, which could allow CCAs to tailor their RWPs to the enumerated requirements for identifying scenarios and analyses. In addition, the inclusion of elements similar to those prescribed by other agencies that also regulate several CCAs could result in certain efficiencies and reduced costs for those CCAs.[591]

However, the adopted rule's approach retains flexibility compared with this alternative by permitting the scenarios to vary across CCAs because the underlying risks vary across markets and participants. Because participants vary in size and economic significance across CCAs, scenarios invoking a pre-determined number of failures or fixed dollar amounts may have significantly different effects in one CCA than in another.

3. Establish Specific Rules, Policies, Procedures, Tools, and Resources

Instead of requiring CCAs to describes the rules, policies, procedures, and any other tools or resources the CCA would rely upon in the event of a recovery or during an orderly wind-down to address the scenarios identified in their RWPs, the Commission could adopt a more prescriptive approach and identify in new Rule 17Ad–26 the rules, policies, procedures, and any other tools or resources for all CCAs. The Commission could also require in new Rule 17Ad–26 more detail regarding how a CCA analyzes its rules, policies, procedures, tools, and resources.[592]

This alternative approach may reduce compliance costs by establishing the precise scope of the rule, which could allow CCAs to tailor their RWPs to the enumerated requirements for describing rules, policies, procedures, and other tools or resources. In addition, the inclusion of elements similar to those prescribed by other agencies that also regulate several CCAs could result in certain efficiencies and reduced costs for those CCAs.[593]

However, it is better to permit the rules, policies, procedures, and any other tools or resources to vary across CCAs because the underlying risks and resources vary across CCAs. For example, a CCA that clears products of longer duration may have a greater need for a tear-up tool that extinguishes a participant's positions in certain circumstances than a CCA that clears contracts with a relatively short duration. In addition, the overall volume of transactions settled by a CCA may affect the choice of its liquidity tools or resources, as the CCA would have to ensure that it had sufficient liquidity resources to complete settlement.

4. Require the Identification of Interconnections and Interdependencies

In addition to the requirements with respect to service providers set forth in final Rule 17Ad–26(a)(2), the Commission could require that the CCA's RWP identify any financial or operational interconnections and interdependencies that the CCA has with other market participants. This would allow for consideration of the effect of the multiple roles and relationships that a single financial entity may have with respect to the CCA including affiliated entities and third parties (*e.g.,* a single entity that acts as both a clearing member and a settlement bank and a liquidity provider).[594]

A CCA is already required to establish, implement, maintain, and

[588] OCC at 8 (''Prescribing bright line, quantitative triggers that would apply to all CCAs, irrespective of their unique structures and the features of the markets they serve and products they clear, would run the risk of creating market instability by potentially forcing a CCA to initiate its RWP even when the CCA has not yet made the determination that it was necessary. For this reason, we support the Commission's determination to allow CCAs to identify appropriate triggers for their individual circumstances.'') (citation omitted).

[589] Additional such scenarios that could be enumerated in new Rule 17Ad–26 could include any or all of the following scenarios: (A) credit losses or liquidity shortfalls created by single and multiple clearing member defaults; (B) liquidity shortfall created by a combination of clearing member default and a failure of a liquidity provider to perform; (C) settlement bank failure; (D) custodian or depository bank failure; (E) losses resulting from investment risk; (F) losses from poor business results; (G) financial effects from cybersecurity events; (H) fraud (internal, external, and/or actions of criminals or of public enemies); (I) legal liabilities, including those not specific to the CCA's business as a CCA; (J) losses resulting from interconnections and interdependencies among the CCA and its parent, affiliates, and/or internal or external service providers; (K) losses resulting from interconnections and interdependencies with other CCAs; and (L) losses resulting from issues relating to services that are ancillary to the CCA's critical services. It could also include scenarios involving multiple failures (*e.g.,* a member default occurring simultaneously, or nearly so, with a failure of a service provider) that, in the judgment of the CCA, are particularly relevant to its business.

[590] That is, the Commission could require in new Rule 17Ad–26 that the RWP include an analysis that includes: (A) a description of the scenario; (B) the events that are likely to trigger the scenario; (C) the CCA's process for monitoring for such events; (D) the market conditions, operational and financial difficulties and other relevant circumstances that are likely to result from the scenario; (E) the potential financial and operational impact of the scenario on the CCA and on its clearing members, internal and external service providers and relevant affiliated companies, both in an orderly market and in a disorderly market; and (F) the specific steps the CCA would expect to take when the scenario occurs, or appears likely to occur, including, without limitation, any governance or other procedures that may be necessary to implement the relevant recovery tools and to ensure that such implementation occurs in sufficient time for the recovery tools to achieve their intended effect.

[591] *See supra* Part IV.B.2; RWP Proposing Release *supra* note 18, at 34716–7 nn.68–69; *id.* at 34724–25 (discussing Request for Comment 15, and 21–23); *see also supra* notes 418 and 419 for commenters who recommended that the Commission and CFTC coordinate to ensure that any final rules are aligned or structured so that dually registered clearinghouses (*i.e.,* CCAs registered with the Commission and SIDCOs registered with the CFTC) can efficiently comply with both Commission and CFTC rules.

[592] For example, the Commission could require in new Rule 17Ad–26 that the RWP include an analysis that includes: (A) a description of the tools that the CCA would expect to use in each scenario; (B) the order in which each tool would be expected to be used; (C) the time frame within which the tool would be used; (D) the governance and approval processes and arrangements within the CCA for the use of each of the tools available, including the exercise of any available discretion; (E) the processes to obtain any approvals external to the CCA (including any regulatory approvals) that would be necessary to use each of the tools available, and the steps that might be taken if such approval is not obtained; (F) the steps necessary to implement the tools; (G) the roles and responsibilities of all parties, including non-defaulting participants; (H) whether the tool is mandatory or voluntary; (I) an assessment of the associated risks from the use of each tool to non-defaulting clearing members and their customers, linked financial market infrastructures, and the financial system more broadly; and (J), for wind-down, an assessment of the likelihood that the tool would result in orderly wind-down.

[593] *See supra* Part IV.B.2; RWP Proposing Release *supra* note 18, at 34716–7 nn.68–69; *id.* at 34724–25 (discussing Request for Comment 15, 20–22, and 27; *see also supra* notes 418 and 419 for commenters who recommended that the Commission and CFTC coordinate to ensure that any final rules are aligned or structured so that dually registered clearinghouses (*i.e.,* CCAs registered with the Commission and SIDCOs registered with the CFTC) can efficiently comply with both Commission and CFTC rules.

[594] More specifically, a bank holding company structure may operate through a set of legal entities (*e.g.,* a broker-dealer/futures commission merchant separate from a bank, which is in turn distinct from an information technology service provider), each of which has different relationships with the CCA.

enforce written policies and procedures reasonably designed to identify, monitor, and manage risks related to any link the CCA establishes with one or more other clearing agencies, financial market utilities, or trading markets.[595] This requirement, in conjunction with the requirement to identify and describe service providers for core services and to specify to which core service they relate, should accomplish the same general objective, making this reasonable alternative redundant to the final policy choice.

5. Establish a Specific Monitoring Frequency for Intraday Margin Calls

The final amendment to Rule 17Ad–22(e)(6)(ii) expressly incorporates the requirement of intraday monitoring to ensure that such monitoring is done on an ongoing basis. One reasonable alternative is to prescribe the necessary frequency of monitoring as opposed to ''on an ongoing basis.'' For example, CCAs could be required to monitor exposure every 5 or 15 minutes.

However, monitoring on an ongoing basis is preferable because a fixed, pre-specified monitoring frequency may not be responsive enough to risk differences that exist across the markets served by the CCAs or to volatility changes that may happen through time.

6. Adopt Only Certain Elements of Rule 17Ad–26

Instead of adopting all nine elements of Rule 17Ad–26, the Commission could adopt a subset of the elements. For example, the Commission could drop the element to identify service providers or the element to address how the CCA would ensure that the service providers would continue to perform in the event of a recovery and during an orderly wind-down. Alternatively, the Commission could drop the element for plan review or the element for plan testing.

It is better to adopt all nine elements of Rule 17Ad–26 because each element helps ensure that the plan is fit for purpose and the combination of all components provides sufficient and comprehensive identification of how a CCA would perform in the event of a recovery and during an orderly wind-down. As described above, compliance with each of the nine elements by CCAs will contribute to reducing systemic risk and benefit other CCAs, other market participants, and investors in the event of a recovery or wind-down.[596]

7. Focus Intraday Margin Requirements on a Subset of CCAs

As an alternative to implementing the intraday margin amendments on a blanket basis, the Commission could adopt a more tailored approach that imposes the requirements only on a subset of CCAs that operate in certain markets such as those markets with the highest levels of activity [597] or those markets that have only one CCA.[598] A more tailored market-level risk-based approach would adjust to the size and systemic importance of each market, which would reduce, under this alternative, the compliance costs for the CCAs in the markets with less activity or with more than one available clearing agency.

However, the amendments already include an appropriate adjustment for market-level risk insofar as they would require the CCAs to consider their own particular facts and circumstances when aligning with the final rules. For example, the final amendment to Rule 17Ad–22(e)(6)(ii) would require CCAs to have the operational capacity to make intraday margin calls ''as frequently as circumstances warrant,'' and that frequency is expected to vary across markets and through time.

V. Paperwork Reduction Act

As discussed in the RWP Proposing Release, the amendments to Rule 17Ad–22(e)(6) and new Rule 17Ad–26 contain ''collection of information'' requirements within the meaning of the Paperwork Reduction Act of 1995 (''PRA'').[599] The Commission submitted the proposed collections of information to the Office of Management and Budget (''OMB'') for review in accordance with the PRA. With respect to Rule 17Ad–22(e)(6), the title of the information collection is ''Clearing Agency Standards for Operation and Governance'' (OMB Control No. 3235–0695). With respect to Rule 17Ad–26, the title of the information collection is ''Rule 17Ad–26: CCA Recovery and Orderly Wind-Down Plans'' (OMB Control No. OMB 3235–0811). An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

A. Amendments to Rule 17Ad–22(e)(6)

As discussed in the RWP Proposing Release, respondents under Rule 17Ad–22(e)(6) are CCAs that provide CCP services, of which there are currently five.[600] The Commission continues to anticipate that one additional entity may seek to register as a clearing agency to provide CCP services in the next three years, and so for purposes of this adoption the Commission has assumed six respondents.

As discussed in the RWP Proposing Release,[601] the purpose of this collection of information is to enable a CCA to have the authority and operational capacity to monitor intraday exposures on an ongoing basis and to collect intraday margin in certain specified circumstances. The collection is mandatory. To the extent that the Commission receives confidential information pursuant to this collection of information, such information would be kept confidential subject to the provisions of applicable law.[602]

As discussed further in Part II, the amendments to Rule 17Ad–22(e)(6) require a CCA to establish, implement, maintain, and enforce written policies and procedures. The rule amendment contains similar provisions to preexisting rules for CCAs (*i.e.,* Rule 17Ad–22(e)(6)(ii) and (iv)), but also imposes additional requirements that did not appear in preexisting Rule 17Ad–22(e)(6). As a result, a respondent CCA will incur burdens of reviewing and updating existing policies and procedures to consider whether it complies with the amendments to Rule 17Ad–22(e)(6) and, in some cases, may need to create new policies and procedures to comply with the amendments to Rule 17Ad–22(e)(6). For example, a CCA likely will need to review its existing margin methodology

[595] 17 CFR 240.17ad–22(e)(20).

[596] *See supra* Part IV.C.1.

[597] Activity could be measured in different ways, including the number or value of cleared transactions. Average daily settlement value is much higher in the equity market (NSCC) than it is in the fixed income market (FICC). DTCC Annual Report, *supra* note 471.

[598] The following securities markets have only one central counterparty: exchange-traded equity options (OCC), government securities (FICC), mortgage-backed securities (FICC), and equity securities (NSCC). The market for central securities depository services has only one provider (DTC). The credit default swaps market is served by LCH SA and ICC.

[599] *See* 44 U.S.C. 3501 *et seq.*

[600] Since the Commission issued the RWP Proposing Release, one CCA that provides CCP services has withdrawn its registration. *See* Release No. 34–98902 (Nov. 9, 2023), 88 FR 78428 (Nov. 15, 2023).

[601] RWP Proposing Release, *supra* note 18, at 34740.

[602] *See, e.g.,* 5 U.S.C. 552. Exemption 4 of the Freedom of Information Act provides an exemption for trade secrets and commercial or financial information obtained from a person and privileged or confidential. *See* 5 U.S.C. 552(b)(4). Exemption 8 of the Freedom of Information Act provides an exemption for matters that are contained in or related to examination, operating, or condition reports prepared by, on behalf of, or for the use of an agency responsible for the regulation or supervision of financial institutions. *See* 5 U.S.C. 552(b)(8).

and consider whether any additional changes are necessary to ensure that it can meet the additional requirements of the rule.

The estimated PRA burdens for the amendment to Rule 17Ad–22(e)(6) will require a respondent CCA to make fairly substantial changes to its policies and procedures. The amendments to Rule 17Ad–22(e)(6) also would impose ongoing burdens on a respondent CCA by requiring ongoing monitoring and compliance activities with respect to the written policies and procedures created or modified in response to the rule.

The Commission received no comments regarding the PRA estimates in the RWP Proposing Release; however, in addressing other comments on the proposed rule, the Commission has modified the rule text to add a requirement to document when the CCA determines not to make an intraday margin call, pursuant to its written policies and procedures for intraday margin collection, and this affects the burdens with respect to ongoing activities under the rule. Accordingly, the Commission continues to estimate that respondent CCAs would incur an aggregate one-time burden of approximately 774 hours to review existing policies and procedures and create new or modified policies and procedures.[603] With respect to ongoing activities required by the amendments to Rule 17Ad–22(e)(6), the Commission now estimates that the final rule amendments will impose an aggregate annual burden on respondent CCAs of 528 hours.[604]

B. New Rule 17Ad–26

As discussed in the RWP Proposing Release,[605] respondents under Rule 17Ad–26 are CCAs, of which there are currently six. The Commission anticipates that one additional entity may seek to register as a CCA in the next three years, and so for purposes of this adoption the Commission has assumed seven respondents.

As discussed in the RWP Proposing Release,[606] the purpose of the collections under Rule 17Ad–26 is to ensure that CCAs include a set of particular items in the RWPs currently required under Rule 17Ad–22(e)(3)(ii). The collections are mandatory. To the extent that the Commission receives confidential information pursuant to this collection of information, such information would be kept confidential subject to the provisions of applicable law.[607]

Because Rule 17Ad–22(e)(3)(ii) already required CCAs to maintain RWPs, Rule 17Ad–26 will impose on a CCA similar burdens as when, for example, Rule 17Ad–22(e)(2) was proposed and CCAs generally had governance arrangements in place at that time.[608] Based on the Commission's review and understanding of the CCAs' existing RWPs,[609] respondent CCAs generally have written rules, policies, and procedures similar to the requirements that will be imposed under Rule 17Ad–26. The PRA burden imposed by the rule will therefore be minimal and will likely be limited to the review of current policies and procedures and updating existing policies and procedures where appropriate to ensure compliance with the rule.

Rule 17Ad–26 will also impose ongoing burdens on a respondent CCA by requiring ongoing monitoring and compliance activities with respect to the written policies and procedures created or modified in response to the rule.

The Commission received no comments regarding the PRA estimates in the RWP Proposing Release and estimates that respondent CCAs will incur an aggregate one-time burden of approximately 840 hours to review and update existing policies and procedures.[610] The Commission also continues to estimate that the ongoing activities required by Rule 17Ad–26 will impose an aggregate annual burden on respondent CCAs of 280 hours.[611]

C. Chart of Total PRA Burdens

Name of information collection	Type of burden	Number of respondents	Initial burden per entity	Aggregate initial burden	Ongoing burden per entity	Aggregate ongoing burden
17Ad–22(e)(6)	Recordkeeping	[a] 6	129	774	88	528
17Ad–26	Recordkeeping	7	120	840	40	280

[a] *See supra* notes 600, 605, and accompanying text (explaining that Rule 17Ad–22(e)(6) applies only to CCAs that provide CCP services, whereas Rule 17Ad–26 applies to all CCAs, which includes those that provide both CCP and CSD services).

VI. Regulatory Flexibility Act

The Regulatory Flexibility Act (''RFA'') requires the Commission, in promulgating rules, to consider the impact of those rules on small entities.[612] Section 603(a) of the Administrative Procedure Act,[613] as amended by the RFA, generally requires the Commission to undertake a regulatory flexibility analysis of all proposed rules to determine the impact of such rulemaking on ''small

[603] This figure was calculated as follows: (Assistant General Counsel for 20 hours) + (Compliance Attorney for 40 hours) + (Computer Operations Manager for 12 hours) + (Senior Programmer for 20 hours) + (Senior Risk Management Specialist for 25 hours) + (Senior Business Analyst for 12 hours) = 129 hours × 6 respondent clearing agencies = 774 hours. When compared to the estimates in the RWP Proposing Release, this reflects a reduction in the number of respondents from seven to six.

[604] This figure was calculated as follows: (Compliance Attorney for 26 hours + Business Risk Analyst for 41 hours + Senior Risk Management Specialist for 21 hours) = 88 hours × 6 respondent clearing agencies = 528 hours. When compared to the estimates in the RWP Proposing Release, this reflects an increase of one burden hour for each of the Compliance Attorney, Business Risk Analyst, and Senior Risk Management Specialist, as well as a reduction in the number of respondents from seven to six.

[605] RWP Proposing Release, *supra* note 18, at 34741.

[606] *Id.*

[607] *See, e.g.,* 5 U.S.C. 552 *et seq.* Exemption 4 of the Freedom of Information Act provides an exemption for trade secrets and commercial or financial information obtained from a person and privileged or confidential. *See* 5 U.S.C. 552(b)(4). Exemption 8 of the Freedom of Information Act provides an exemption for matters that are contained in or related to examination, operating, or condition reports prepared by, on behalf of, or for the use of an agency responsible for the regulation or supervision of financial institutions. See 5 U.S.C. 552(b)(8).

[608] *See* CCA Standards Adopting Release, *supra* note 5, at 70892 (discussing Rule 17Ad–22(e)(2)).

[609] *See, e.g., supra* Part IV.B.3 (providing an overview of current RWPs).

[610] This figure was calculated as follows: ((Assistant General Counsel for 20 hours) + (Compliance Attorney for 50 hours) + (Business Risk Analyst for 35 hours) + (Senior Risk Management Specialist for 15) = 120 hours × 7 respondent clearing agencies = 840 hours. When compared to the estimates in the RWP Proposing Release, this reflects a reduction in the number of respondents from eight to seven.

[611] This figure was calculated as follows: ((Assistant General Counsel for 10 hours) + Compliance Attorney for 30 hours)) × 7 respondent clearing agencies = 280 hours. When compared to the estimates in the RWP Proposing Release, this reflects a reduction in the number of respondents from eight to seven.

[612] *See* 5 U.S.C. 601 *et seq.*

[613] 5 U.S.C. 603(a).

entities.'' [614] Section 605(b) of the RFA states that this requirement shall not apply to any proposed rule which, if adopted, would not have a significant economic impact on a substantial number of small entities.[615] The Commission certified in the RWP Proposing Release, pursuant to section 605(b) of the RFA, that the proposed rules would not, if adopted, have a significant impact on a substantial number of small entities. The Commission received no comments on this certification.

A. Clearing Agencies

The amendments to Rule 17Ad–22(e)(6) and new Rule 17Ad–26 apply to CCAs, which are registered clearing agencies that provide the services of a CCP or CSD. For the purposes of Commission rulemaking and as applicable to these rule amendments and new rule, a small entity includes, when used with reference to a clearing agency, a clearing agency that (i) compared, cleared, and settled less than $500 million in securities transactions during the preceding fiscal year, (ii) had less than $200 million of funds and securities in its custody or control at all times during the preceding fiscal year (or at any time that it has been in business, if shorter), and (iii) is not affiliated with any person (other than a natural person) that is not a small business or small organization.[616]

Based on the Commission's existing information about the clearing agencies currently registered with the Commission,[617] all such registered clearing agencies exceed the thresholds defining ''small entities'' set out above. While other clearing agencies may emerge and seek to register as clearing agencies with the Commission, no such entities would be ''small entities'' as defined in 17 CFR 240.0–10 (''Exchange Act Rule 0–10'').[618] In any case, registered clearing agencies can only become subject to the rule amendments and new rule adopted in this release when they meet the definition of a CCA, as described above. Accordingly, the Commission preliminarily believes that any such registered clearing agencies will exceed the thresholds for ''small entities'' set forth in Exchange Act Rule 0–10.

B. Certification

For the reasons described above, the Commission certifies that the amendments to rule 17Ad–22(e)(6) and new Rule 17Ad–26 do not have a significant economic impact on a substantial number of small entities for purposes of the RFA.

VII. Other Matters

The Commission considers the provisions of the final amendments to be severable to the fullest extent permitted by law. ''If parts of a regulation are invalid and other parts are not,'' courts ''set aside only the invalid parts unless the remaining ones cannot operate by themselves or unless the agency manifests an intent for the entire package to rise or fall together.'' *Bd. of Cnty. Commissioners of Weld Cnty.* v. *EPA,* 72 F.4th 284, 296 (D.C. Cir. 2023); see *K Mart Corp.* v. *Cartier, Inc.,* 486 U.S. 281, 294 (1988). ''In such an inquiry, the presumption is always in favor of severability.'' *Cmty. for Creative Non-Violence* v. *Turner,* 893 F.2d 1387, 1394 (D.C. Cir. 1990). Consistent with these principles, while the Commission believes that all provisions of the final amendments are fully consistent with governing law, if any of the provisions of these amendments, or the application thereof to any person or circumstance, is held to be invalid, the Commission intends that such invalidity shall not affect other provisions or application of such provisions to other persons or circumstances that can be given effect without the invalid provision or application. In particular, the amendments to Rule 17Ad–22(e)(6) pertaining to a CCA's written policies and procedures for its risk-based margin system operate independently from new Rule 17Ad–26 pertaining to a CCA's written policies and procedures for its RWPs.

Pursuant to the Congressional Review Act,[619] the Office of Information and Regulatory Affairs has designated these rules as a not a ''major rule,'' as defined by 5 U.S.C. 804(2).

Statutory Authority

The Commission is adopting amendments to Rule 17Ad–22(e)(6) and new Rule 17Ad–26 under the Commission's rulemaking authority in the Exchange Act, particularly section 17(a), 15 U.S.C. 78q(a), section 17A, 15 U.S.C. 78q–1, and section 23(a), 15 U.S.C. 78w(a), and the Dodd-Frank Act, particularly section 805 of the Clearing Supervision Act, 15 U.S.C. 5464.

Section 240.17ad–22 is also issued under 12 U.S.C. 5461 *et seq.*

* * * * *

■ 2. Amend § 240.17ad–22 by revising paragraphs (e)(6)(ii) and (iv) to read as follows:

§ 240.17ad–22 Standards for clearing agencies.

* * * * *

(e) * * *

(6) * * *

(ii)(A) Marks participant positions to market and collects margin (including variation margin or equivalent charges if relevant) at least daily;

(B) Monitors intraday exposures on an ongoing basis;

---

[614] Section 601(b) of the RFA permits agencies to formulate their own definitions of ''small entities.'' *See* 5 U.S.C. 601(b). The Commission has adopted definitions for the term ''small entity'' for the purposes of rulemaking in accordance with the RFA. These definitions, as relevant to this rulemaking, are set forth in 17 CFR 240.0–10.

[615] *See* 5 U.S.C. 605(b).

[616] *See* 17 CFR 240.0–10(d).

[617] The average daily value of equities trades cleared by NSCC in 2023 was $1.932 trillion; at FICC, the total net value of government securities transactions in 2022 was $2.019 trillion and the total net par value for mortgage-backed securities in 2023 was $58 trillion; and DTC settled a total of $446 trillion of securities in 2023. *See* DTCC, *2023 Annual Report,* at 39–40, *https://www.dtcc.com/-/media/Files/Downloads/Annual%20Report/2023/DTCC-2023-AR-Print.pdf.* In 2023, OCC cleared 11.052 billion options contracts. *See* OCC, *2023 Annual Report: 2023 Year in Review, https://annualreport.theocc.com/2023/year-in-review.* In addition, the notional value of CDS cleared by ICE was $18.8 trillion and $23.8 trillion in 2023 and 2022, respectively. *See* ICE, *2023 Annual Report,* at 60, *https://s2.q4cdn.com/154085107/files/doc_financials/2023/ar/597756_002_bmk.pdf.* The notional value of CDS cleared by LCH SA was €4,975 billion and €3,367 billion in 2023 and 2022, respectively. *See* LCH Group Holdings Ltd., *2023 Annual Report,* at 3, *https://www.lch.com/system/files/media_root/lch-group-holdings-limited-financial-statements.pdf.* In each case, these volumes exceed the $500 million threshold for small entities.

[618] *See* 17 CFR 240.0–10(d). The Commission based this determination on its review of public sources of financial information about registered clearing agencies.

[619] 5 U.S.C. 801 *et seq.*

(C) Includes the authority and operational capacity to make intraday margin calls, as frequently as circumstances warrant, including the following circumstances:

(*1*) When risk thresholds specified by the covered clearing agency are breached; or

(*2*) When the products cleared or markets served display elevated volatility; and

(D) Documents when the covered clearing agency determines not to make an intraday call pursuant to its written policies and procedures required under paragraph (e)(6)(ii)(C) of this section;

* * * * *

(iv)(A) Uses reliable sources of timely price data and other substantive inputs;

(B) Uses procedures (and, with respect to price data, sound valuation models) for addressing circumstances in which price data or other substantive inputs are not readily available or reliable, to ensure that the covered clearing agency can continue to meet its obligations under this section; and

(C) Such procedures under paragraph (e)(6)(iv)(B) of this section must include either:

(*1*) The use of price data or substantive inputs from an alternate source; or

(*2*) If it does not use an alternate source, the use of a risk-based margin system that does not rely on substantive inputs that are unavailable or unreliable;

* * * * *

■ 3. Section 240.17ad–26 is added to read as follows:

§ 240.17ad–26 Recovery and orderly wind-down plans of covered clearing agencies.

(a) The plans for the recovery and orderly wind-down of the covered clearing agency referenced in § 240.17ad–22(e)(3)(ii) must:

(1) Identify and describe the covered clearing agency's core payment, clearing, and settlement services and address how the covered clearing agency would continue to provide such core services in the event of a recovery and during an orderly wind-down, including by:

(i) Identifying the staffing roles necessary to support such core services; and

(ii) Analyzing how such staffing roles necessary to support such core services would continue in the event of a recovery and during an orderly wind-down;

(2)(i) Identify and describe any service providers for core services, specifying which core services each service provider supports; and

(ii) Address how the covered clearing agency would ensure that service providers for core services would continue to perform in the event of a recovery and during an orderly wind-down, including consideration of its written agreements with such service providers and whether the obligations under those written agreements are subject to alteration or termination as a result of initiation of the recovery and orderly wind-down plan;

(3) Identify and describe scenarios that may potentially prevent the covered clearing agency from being able to provide its core services identified in paragraph (a)(1) of this section as a going concern, including uncovered credit losses (as described in § 240.17ad–22(e)(4)(viii)), uncovered liquidity shortfalls (as described in § 240.17ad–22(e)(7)(viii)), and general business losses (as described in § 240.17ad–22(e)(15));

(4) Identify and describe criteria that could trigger the covered clearing agency's implementation of the recovery and orderly wind-down plans and the process that the covered clearing agency uses to monitor and determine whether the criteria have been met, including the governance arrangements applicable to such process;

(5) Identify and describe the rules, policies, procedures, and any other tools or resources on which the covered clearing agency would rely in a recovery or orderly wind-down;

(6) Address how the rules, policies, procedures, and any other tools or resources identified in paragraph (a)(5) of this section would ensure timely implementation of the recovery and orderly wind-down plan;

(7) Require the covered clearing agency to inform the Commission as soon as practicable when the covered clearing agency is considering implementing a recovery or orderly wind-down;

(8) Include procedures for testing the covered clearing agency's ability to implement the recovery and orderly wind-down plans at least every 12 months, including by:

(i) Requiring the covered clearing agency's participants and, when practicable, other stakeholders to participate in the testing of its plans;

(ii) Requiring that such testing be in addition to testing pursuant to § 240.17ad–22(e)(13);

(iii) Providing for reporting the results of such testing to the covered clearing agency's board of directors and senior management; and

(iv) Specifying the procedures for, as appropriate, amending the plans to address the results of such testing; and

(9) Include procedures requiring review and approval of the plans by the board of directors of the covered clearing agency at least every 12 months or following material changes to the covered clearing agency's operations that would significantly affect the viability or execution of the plans, with such review informed, as appropriate, by the covered clearing agency's testing of the plans.

(b) All terms used in this section have the same meaning as in the Securities Exchange Act of 1934, and unless the context otherwise requires, the following definitions apply for purposes of this section:

Affiliate means a person that directly or indirectly controls, is controlled by, or is under common control with the covered clearing agency.

Orderly wind-down means the actions of a covered clearing agency to effect the permanent cessation, sale, or transfer of one or more of its core services, as identified by the covered clearing agency pursuant to paragraph (a)(1) of this section, in a manner that would not increase the risk of significant liquidity, credit, or operational problems spreading among financial institutions or markets and thereby threaten the stability of the U.S. financial system.

Recovery means the actions of a covered clearing agency, consistent with its rules, procedures, and other *ex ante* contractual arrangements, to address any uncovered loss, liquidity shortfall, or capital inadequacy, whether arising from participant default or other causes (such as business, operational, or other structural weaknesses), including actions to replenish any depleted prefunded financial resources and liquidity arrangements, as necessary to maintain the covered clearing agency's viability as a going concern and to continue its provision of core services, as identified by the covered clearing agency pursuant to paragraph (a)(1) of this section.

Service provider for core services means any person, including an affiliate or a third party, that, through a written agreement for services provided to or on behalf of the covered clearing agency, on an ongoing basis, directly supports the delivery of core services, as identified by the covered clearing agency pursuant to paragraph (a)(1) of this section.

By the Commission.

Dated: October 25, 2024.

J. Matthew DeLesDernier,

Deputy Secretary.

37 CFR Parts 2 and 7

Setting and Adjusting Trademark Fees During Fiscal Year 2025; Final Rule

DEPARTMENT OF COMMERCE

Patent and Trademark Office

37 CFR Parts 2 and 7

[Docket No. PTO–T–2022–0034]

RIN 0651–AD65

Setting and Adjusting Trademark Fees During Fiscal Year 2025

AGENCY: United States Patent and Trademark Office, Department of Commerce.

ACTION: Final rule.

SUMMARY: The United States Patent and Trademark Office (USPTO) sets or adjusts trademark fees, as authorized by the Leahy-Smith America Invents Act (AIA), as amended by the Study of Underrepresented Classes Chasing Engineering and Science Success Act of 2018 (SUCCESS Act). The fee adjustments will provide the USPTO sufficient aggregate revenue to recover the aggregate costs of trademark operations in future years (based on assumptions and estimates found in the agency's Fiscal Year 2025 Congressional Justification (FY 2025 Budget)), including implementing the USPTO 2022–2026 Strategic Plan (Strategic Plan).

DATES: This rule is effective on January 18, 2025.

FOR FURTHER INFORMATION CONTACT: Brendan Hourigan, Director, Office of Planning and Budget, at 571–272–8966 or *Brendan.Hourigan@uspto.gov;* or C. Brett Lockard, Director, Forecasting and Analysis Division, at 571–272–0928 or *Christopher.Lockard@uspto.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Introduction

The USPTO publishes this final rule under section 10 of the AIA (section 10), Public Law 112–29, 125 Stat. 284, available at *https://www.congress.gov/112/plaws/publ29/PLAW-112publ29.pdf,* as amended by the SUCCESS Act, Public Law 115–273, 132 Stat. 4158, available at *https://www.congress.gov/115/plaws/publ273/PLAW-115publ273.pdf,* which authorizes the Under Secretary of Commerce for Intellectual Property and Director of the USPTO (Director) to set or adjust by rule any trademark fee established, authorized, or charged under the Trademark Act of 1946 (the Trademark Act), 15 U.S.C. 1051 *et seq.,* as amended, for any services performed or materials furnished by the agency. 35 U.S.C. 41 note. Section 10 prescribes that trademark fees may be set or adjusted only to recover the aggregate estimated costs to the USPTO for processing, activities, services, and materials relating to trademarks, including administrative costs of the agency with respect to such trademark fees. Section 10 authority includes flexibility to set individual fees in a way that furthers key policy factors, while considering the cost of the respective services. Section 10 also establishes certain procedural requirements for setting or adjusting fee regulations, such as public hearings and input from the Trademark Public Advisory Committee (TPAC), a public comment period, and congressional oversight.

B. Purpose of This Action

Based on a biennial review of fees, costs, and revenues that began in fiscal year (FY) 2021, the USPTO concluded that fee adjustments are necessary to provide the agency with sufficient financial resources to facilitate the effective administration of the U.S. trademark system, including implementing the Strategic Plan, available on the agency website at *https://www.uspto.gov/StrategicPlan.*

The individual fees set or adjusted in this rule align with the USPTO's fee structure philosophy, including the agency's four key fee setting policy factors: (1) promote innovation strategies, (2) align fees with the full cost of trademark services, (3) set fees to facilitate the effective administration of the trademark system, and (4) offer application processing options. The fee adjustments will enable the USPTO to accomplish its mission to drive U.S. innovation, inclusive capitalism, and global competitiveness by delivering high-quality and timely trademark examination and review proceedings that produce accurate and reliable trademark rights for domestic and international stakeholders.

C. Summary of Provisions Impacted by This Action

The USPTO sets or adjusts 28 trademark fees, including the introduction of seven new fees in this rule. The agency is also discontinuing four fees.

Under the fee schedule in this rule, the routine fees to obtain and maintain a trademark registration (*e.g.,* application filings, intent-to-use/use (ITU) filings, and post-registration maintenance fees) will increase relative to the current fee schedule, in order to ensure financial sustainability and provide for improvements needed relative to trademark filings and registration. Additional information describing the fee adjustments is included in Part V: Individual Fee Rationale in this rulemaking and in the ''Table of Trademark Fees: Current, Final Trademark Fee Schedule, and Unit Cost'' (Table of Trademark Fees), available on the fee setting section of the USPTO website at *https://www.uspto.gov/FeeSettingAndAdjusting.*

II. Background

Section 10(a) of the AIA, available at *https://www.congress.gov/112/plaws/publ29/PLAW-112publ29.pdf,* authorizes the Director to set or adjust by rule any fee established, authorized, or charged under the Trademark Act for any services performed or materials furnished by the agency. Section 10 provides that trademark fees may be set or adjusted only to recover the aggregate estimated costs to the USPTO for processing, activities, services, and materials relating to trademarks, including administrative costs of the agency with respect to such trademark fees. Provided that the fees in the aggregate achieve overall aggregate cost recovery, the Director may set individual fees under section 10 at, below, or above their respective cost. Section 10(e) requires the Director to publish the final fee rule in the **Federal Register** and the USPTO's *Official Gazette* at least 45 days before the final fees become effective.

Section 4 of the SUCCESS Act, available at *https://www.congress.gov/115/plaws/publ273/PLAW-115publ273.pdf,* amended section 10(i)(2) to provide that the Director's authority to set or adjust any fee under section 10 will end on September 16, 2026. While the fees established by this rule will remain in effect in perpetuity or until adjusted by a future rulemaking, the Director's authority to initiate new rulemakings to set or adjust fees will expire on that date.

When adopting fees under section 10 of the AIA, the Director must provide the proposed fees to TPAC, which advises the Director on the management, policies, goals, performance, budget, and user fees of trademark operations, at least 45 days prior to publishing the proposed fees in the **Federal Register**. TPAC then has 30 days within which to deliberate, consider, and comment on the proposal, as well as hold a public hearing on the proposed fees. Then, TPAC must publish a written report setting forth in detail the comments, advice, and recommendations of the committee regarding the proposed fees. The USPTO must consider and analyze any comments, advice, or

recommendations received from TPAC before setting or adjusting fees.

Accordingly, on May 8, 2023, the Director notified TPAC of the USPTO's intent to set and adjust trademark fees and submitted a preliminary trademark fee proposal with supporting materials. The preliminary trademark fee proposal and associated materials are available on the fee setting section of the USPTO website at *https://www.uspto.gov/FeeSettingAndAdjusting.*

TPAC held a public hearing at the USPTO's headquarters in Alexandria, Virginia, on June 5, 2023, and members of the public were given an opportunity to provide oral testimony. Transcripts of the hearing are available for review on the USPTO website at *https://www.uspto.gov/sites/default/files/documents/TPAC-Fee-Setting-Hearing-Transcript-20230605.pdf.* Members of the public were also given an opportunity to submit written comments for TPAC to consider, and these comments are available on *Regulations.gov* at *https://www.regulations.gov/docket/PTO-T-2023-0016.* On August 14, 2023, TPAC issued a written report setting forth their comments, advice, and recommendations regarding the preliminary proposed fees. The report is available on the USPTO website at *https://www.uspto.gov/sites/default/files/documents/TPAC-Report-on-2023-Fee-Proposal.docx.*

The USPTO considered and analyzed all comments, advice, and recommendations received from the TPAC before publishing the notice of proposed rulemaking (NPRM), ''Setting and Adjusting Trademark Fees during Fiscal Year 2025,'' in the **Federal Register** on March 26, 2024, at 89 FR 20897. The NPRM and associated materials are available on the fee setting section of the USPTO website at *https://www.uspto.gov/FeeSettingAndAdjusting.* Likewise, before issuing this final rule, the agency considered and analyzed all comments, advice, and recommendations received from the public during the 60-day comment period on the NPRM that closed on May 28, 2024. The agency's response to comments received is available in Part VI: Discussion of Comments.

III. Estimating Aggregate Costs and Revenue

Section 10 of the AIA provides that trademark fees may be set or adjusted only to recover the aggregate estimated costs to the USPTO for processing, activities, services, and materials relating to trademarks, including administrative costs with respect to such trademark fees. The following is a description of how the agency estimates aggregate costs and revenue.

Step 1: Estimating Aggregate Costs

Estimating prospective aggregate costs is accomplished primarily through the annual budget formulation process. The annual budget is a five-year plan for carrying out base programs and new initiatives to deliver on the USPTO's statutory mission and implement the agency's strategic goals and objectives.

First, the USPTO projects the level of demand for trademark services, which depends on many factors that are subject to change, including domestic and global economic activity. The agency also considers non-US trademark-related activities, policies, and legislation, and known process efficiencies. The number of trademark application filings (*i.e.,* incoming work to the USPTO) drives examination costs, which make up the largest share of trademark operating costs. The USPTO looks at indicators including the expected growth in real gross domestic product (RGDP), a leading indicator of incoming trademark applications, to estimate prospective workloads. The RGDP is reported quarterly by the Bureau of Economic Analysis and forecasted each February by the Office of Management and Budget (OMB) in the Economic and Budget Analyses section of the Analytical Perspectives, and twice annually by the Congressional Budget Office in the Budget and Economic Outlook.

The expected workload is then compared to the current examination capacity to determine any required staffing and operating costs (*e.g.,* salaries, workload processing contracts, and publication) adjustments. The agency uses a trademark pendency model that estimates trademark production output based on actual historical data and input assumptions, such as incoming trademark applications, number of examining attorneys on board, and overtime hours. Key statistics regarding pendency, application filings, and current inventory used to inform the model can be viewed on the data visualization center section of the USPTO website at *https://www.uspto.gov/dashboard/trademarks.*

Next, the USPTO calculates budgetary spending requirements based on the prospective aggregate costs of trademark operations. First, the agency estimates the costs of status quo operations (base requirements), then adjusts that figure for anticipated pay increases and inflationary increases for the budget year and four out years. The USPTO then estimates the prospective costs for expected changes in production workload and new initiatives over the same period. The agency then reduces cost estimates for completed initiatives and known cost savings expected over the same five-year horizon. A detailed description of budgetary requirements, aggregate costs, and related assumptions for the Trademarks program is available in the FY 2025 Budget.

The USPTO estimates that trademark operations will cost $594 million in FY 2025, including $293 million for trademark examining; $24 million for trademark trials and appeals; $50 million for trademark information resources; $22 million for activities related to intellectual property (IP) protection, policy, and enforcement; and $204 million for general support costs necessary for trademark operations (*e.g.,* the trademark share of rent, utilities, legal, financial, human resources, other administrative services, and agency-wide information technology (IT) infrastructure and support costs). See Appendix II of the FY 2025 Budget. In addition, the agency will transfer $280 thousand to the Department of Commerce, Inspector General, for audit support for the Trademarks program.

Table 1 below provides key underlying production workload projections and assumptions from the FY 2025 Budget used to calculate aggregate costs. Table 2 (see Step 2) presents the total budgetary requirements (prospective aggregate costs) for FY 2025 through FY 2029 and the estimated collections and operating reserve balances that would result from the adjustments contained in this final rule. These projections are based on point-in-time estimates and assumptions that are subject to change. There is considerable uncertainty in outyear budgetary requirements. There are risks that could materialize over the next several years (*e.g.,* adjustments to examination capacity, time allotted to examining attorneys and other personnel to perform their work, higher contracting costs, changes in workload, and other inflationary increases, etc.) that could increase the USPTO's budgetary requirements. These estimates are refreshed annually during the formulation of USPTO's budget.

TABLE 1—TRADEMARK PRODUCTION WORKLOAD PROJECTIONS, FY 2025–2029

Production measures	FY 2025	FY 2026	FY 2027	FY 2028	FY 2029
Applications	774,000	817,000	863,000	912,000	964,000
Application growth rate	4.6%	5.5%	5.6%	5.7%	5.7%
Balanced disposals	1,552,600	1,680,000	1,740,000	1,850,000	1,930,000
Unexamined trademark application inventory	463,756	442,627	418,438	402,622	401,645
Examination capacity*	806	841	876	913	948
Performance measures:					
Avg. first action pendency (months)	7.5	6.3	5.9	5.5	4.9
Avg. total pendency (months)	13.5	11.3	10.9	9.5	8.9

* In this table, examination capacity is the number of examining attorneys on board at end of year, as described in the FY 2025 Budget.

Step 2: Estimating Prospective Aggregate Revenue

As described above in Step 1, the USPTO's prospective aggregate costs (as presented in the FY 2025 Budget) include budgetary requirements related to planned production, anticipated initiatives, and a contribution to the trademark operating reserve required for the agency to maintain trademark operations and realize its strategic goals and objectives for the next five years. Prospective aggregate costs become the target aggregate revenue level that the new fee schedule must generate in a given year and over the five-year planning horizon. To estimate aggregate revenue, the USPTO uses the same production models used to estimate aggregate costs and also analyzes relevant factors and indicators to calculate prospective fee workloads (*i.e.,* number of times each fee for a service or product will be paid).

The same economic indicators used to forecast incoming workloads also provide insight into market conditions and the management of IP portfolios, which influence application processing requests and post-registration decisions to maintain trademark protection. When developing fee workload forecasts, the USPTO also considers other factors including fraud and scams impacting trademark filings, overseas activity, policies and legislation, court decisions, process efficiencies, and anticipated applicant behavior.

As required by law, the USPTO collects fees for trademark-related services and products at different points in time within the application examination process and over the life of the pending trademark application and resulting registration to finance the associated work for providing those services. Trademark application filings are a key driver of trademark fee collections, as initial filing fees account for more than half of total trademark fee collections. Changes in application filing levels immediately impact current year fee collections. Fewer application filings mean the USPTO collects fewer fees to devote to production-related costs in the current pipeline. The resulting reductions also create an outyear revenue impact because less output in one year leads to fewer ITUs and maintenance fee payments in future years. Historically, fee collections from ITUs and maintenance fees account for about one third of total trademark fee collections, which the agency uses to subsidize costs for filing and examination activities not fully covered by initial filing fees.

The USPTO's five-year estimated aggregate trademark fee revenue (see table 2) is based on, for each fiscal year, the number of trademark applications it expects to receive, work it expects to process (an indicator of the ITU fee workloads), expected examination and process requests, and the expected number of post-registration filings to maintain trademark registrations. The USPTO forecasts the same number of future year applications filed under the final fee schedule compared to the current fee schedule because outside research suggests that demand for trademark applications is inelastic. See Gaétan De Rassenfosse, ''On the Price Elasticity of Demand for Trademarks,'' Social Science Research Network, Jan. 28, 2018, *https://doi.org/10.2139/ssrn.2628646;* Benedikt Herz and Malwina Mejer, ''On the Fee Elasticity of the Demand for Trademarks in Europe,'' Oxford Economic Papers, Jul. 3, 2016, *https://doi.org/10.1093/oep/gpw035.* The USPTO does anticipate a larger share of filers will take measures to avoid the surcharges compared to the share of filers that take advantage of the Trademark Electronic Application System (TEAS) Plus option under the current fee schedule. The USPTO's Office of the Chief Economist periodically conducts economic studies and may, in the future, develop trademark fee price elasticity estimates for use in rulemakings.

Within the iterative process for estimating aggregate revenue, the USPTO adjusts individual fee rates up or down based on cost and policy decisions, estimates the effective dates of new fee rates, and then multiplies the resulting fee rates by appropriate workload volumes to calculate a revenue estimate for each fee. Using these figures, the USPTO sums the individual fee revenue estimates, and the result is a total aggregate revenue estimate for a given year (see table 2). The aggregate revenue estimate also includes collecting $10 million annually in other income associated with recoveries and reimbursements from other Federal agencies (offsets to spending). The aggregate revenue estimates presented below are based on assumptions and data found in the FY 2025 Budget including assuming that all final rule fee rates would take effect on November 15, 2024. The effective date of the final rule fee rates has since been changed from that original assumption to January 18, 2025, except the increased fee for Madrid applications will be owed on applications with a receipt date on or after February 18, 2025, and the increased fee for renewing an international registration at the World Intellectual Property Organization (WIPO) will be owed on requests made on or after February 18, 2025, as well.

TABLE 2—TRADEMARK FINANCIAL OUTLOOK, FY 2025–2029

	Dollars in millions				
	FY 2025	FY 2026	FY 2027	FY 2028	FY 2029
Projected fee collections	583	642	668	697	725

TABLE 2—TRADEMARK FINANCIAL OUTLOOK, FY 2025–2029—Continued

	Dollars in millions				
	FY 2025	FY 2026	FY 2027	FY 2028	FY 2029
Other income	10	10	10	10	10
Total projected fee collections and other income	593	652	678	707	735
Budgetary requirements	594	611	635	664	690
Funding to (+) and from (−) operating reserve	(1)	41	43	43	45
End-of-year operating reserve balance	85	126	169	213	258
Over/(under) minimum level	(51)	(14)	23	60	99
Over/(under) optimal level	(212)	(179)	(148)	(119)	(87)

IV. Rulemaking Goals and Strategies

A. Fee Setting Strategy

The strategy of this final rule is to establish a fee schedule that generates sufficient multiyear revenue to recover the aggregate costs of maintaining USPTO trademark operations as required by law. The overriding principles behind this strategy are to operate within a sustainable funding model that supports the USPTO's strategic goals and objectives, such as optimizing trademark application pendency through the promotion of efficient operations and filing behaviors, issuing accurate and reliable trademark registrations, and encouraging access to the trademark system for all stakeholders.

The USPTO assessed this final rule's alignment with four key fee setting policy factors that promote important aspects of the U.S. trademark system: (1) promoting innovation strategies seeks to ensure barriers to entry into the U.S. trademark system remain low, encourage high-growth and innovation-based entrepreneurship, and incentivize innovation and entrepreneurship by issuing registrations to stimulate additional entrepreneurial activity; (2) aligning fees with the full costs of products and services recognizes that some applicants may use particular services in a more costly manner than other applicants (*e.g.,* trademark applications cost more and take longer to examine when identifications of goods and services include thousands of characters) and charges those applicants appropriately rather than sharing the costs among all applicants; (3) facilitating the effective administration of the trademark system seeks to encourage efficient prosecution of trademark applications, reducing the time it takes to obtain a registration; and (4) offering application processing options provides multiple paths, where feasible, in recognition that trademark applications and their prosecution are not a one-size-fits-all process. The reasoning for setting and adjusting individual fees is described in Part V: Individual Fee Rationale.

In the event any provision is invalidated or held to be impermissible as a result of a legal challenge, the ''remainder of the regulation could function sensibly without the stricken provision.'' *Belmont Mun. Light Dep't* v. *FERC,* 38 F.4th 173, 187 (D.C. Cir. 2022) (quoting *MD/DC/DE Broad. Ass'n* v. *FCC,* 236 F.3d 13, 22 (D.C. Cir. 2001)). The USPTO views each fee in this final rule as able to stand on its own and to ''function sensibly'' without the others. This means that in the event that a reviewing court were to find that any one fee setting or fee adjustment was invalid, that finding would not affect the fees or adjustments enacted elsewhere in the rule. Therefore, in the event that any portion of this final rule is held to be invalid or impermissible, the USPTO intends that the remaining aspects of the regulatory provisions, and fees set and adjusted therein, remain valid.

B. Fee Setting Considerations

The balance of this subsection presents the specific fee setting considerations the USPTO reviewed in developing the final trademark fee schedule: (1) historical cost of providing individual services; (2) the balance between projected costs and revenue to meet the USPTO's operational needs and strategic goals; (3) ensuring sustainable funding; and (4) the comments, advice, and recommendations offered by TPAC on the agency's initial fee setting proposal and the public comments received in response to the March 2024 NPRM. The USPTO carefully considered the comments, advice, and recommendations offered by TPAC and the public. Collectively, these considerations informed the agency's chosen rulemaking strategy.

1. Historical Cost of Providing Individual Services

The USPTO sets individual fee rates to ensure recovery of aggregate costs and to further key policy considerations while considering the cost of a particular service. For instance, the USPTO has a longstanding practice of setting application filing fees below the actual cost of processing and examining applications to encourage brand owners to take advantage of the protections and rights offered by trademark registration; these costs are subsidized by aggregate trademark revenues elsewhere.

The USPTO considers unit cost accounting data provided by its Activity Based Information (ABI) program to evaluate the cost to provide specific services and then decide how to best align fees for particular services to recover the aggregate costs of all products and services. Using historical cost data, the USPTO can align fees to the costs of specific trademark products and services. When the USPTO implements a new process or service, historical activity-based information data is typically not available. However, the USPTO will use the historical cost of a similar process or procedure as a starting point to estimate the full cost of a new activity or service.

The document titled ''Setting and Adjusting Trademark Fees During Fiscal Year 2025: Activity Based Information and Trademark Fee Unit Expense Methodology,'' available on the fee setting section of the USPTO website at *https://www.uspto.gov/FeeSettingAndAdjusting,* provides additional information on the agency's costing methodology in addition to the last three years of historical cost data. Part V: Individual Fee Rationale of this final rule describes the reasoning and anticipated benefits for setting some individual fees at cost, below cost, or above cost such that the USPTO recovers the aggregate cost of providing services through fees.

2. Balancing Projected Costs and Revenue

In developing the final trademark fee schedule, the USPTO considered its current estimates of future year workload demands, fee collections, and costs to maintain core USPTO operations and meet its strategic goals,

as found in the FY 2025 Budget and the Strategic Plan. The USPTO's strategic goals include driving inclusive U.S. innovation and global competitiveness, promoting the efficient delivery of reliable IP rights, promoting the protection of IP against new and persistent threats, bringing innovation to impact, and generating impactful employee and customer experiences by maximizing agency operations. The following subsections provide details regarding updated revenue and cost estimates, cost saving efforts taken by the USPTO, and planned strategic improvements.

a. Updated Revenue and Cost Estimates

Projected revenue from the current fee schedule is expected to fall below future budgetary requirements (costs) due largely to lower-than-expected demand for trademark services compared to prior forecasts and higher-than-expected inflation in the broader U.S. economy in recent years that has increased the USPTO's operating costs. Consequently, aggregate operating costs will exceed aggregate revenue for the Trademarks program under the current fee schedule. The USPTO is required by law to finance operations by recovering fees for the services offered by the agency. Not implementing the final rule would result in insufficient fee collections to process the anticipated work volumes, impacting stakeholders and failing to deliver on the USPTO mission.

Forecasts for aggregate revenue using current demand estimates are lower than prior forecasts. This lower-than-expected demand has coincided with changes to trademark owners' filing and renewal patterns, resulting in imbalances in the overall fee structure. The USPTO sets application filing fees below its examination costs to maintain a low barrier to entry into the trademark registration system and relies on fees collected for post-registration maintenance and ITU extensions to subsidize the agency's losses on each application examined. However, changes in the mix of filers and their preferences have upset the traditional balance of the trademark fee structure. The share of applicants filing ITU applications is declining. Also, the percentage of registrants that choose to maintain their trademark registration is declining as a larger share of filers are groups that are historically less likely to renew their registrations at a rate that would be sufficient to recover examination costs. The USPTO believes these changes in the mix of filers are systemic and will continue.

Following an unprecedented application surge in FY 2021, trademark application filings declined and began returning to historic filing levels in FY 2022, in line with the USPTO's expectations. Application filings were largely unchanged in FY 2023. Given the current economic outlook for the broader economy and filing activity over the past two years, the USPTO projects trademark application filings to decline slightly in FY 2024 and increase in line with historic growth rates in FY 2025.

Higher-than-expected inflation in the broader U.S. economy starting in 2021 increased the USPTO's operating costs above previous estimates for labor and nonlabor activities such as benefits, service contracts, and equipment. Salaries and benefits comprise about two-thirds of all trademark-related costs, and employee pay raises enacted across all U.S. government agencies in FY 2023–24—including the USPTO—were much larger than previously budgeted. Federal General Schedule (GS) pay was raised by 4.6% in 2023 and 5.2% in 2024; before 2023 the last time GS pay was raised by at least 4.0% was in 2004. The FY 2025 Budget includes an estimated 2.0% civilian pay raise planned in calendar year (CY) 2025 and assumed 3.0% civilian pay raises in CY 2026–29, as well as inflationary increases for other labor and nonlabor activities.

b. Cost-Saving Measures

The USPTO recognizes that fees cannot simply increase for every improvement deemed desirable. The agency has a responsibility to stakeholders to pursue strategic opportunities for improvement in an efficient, cost-conscious manner. Likewise, the USPTO recognizes its obligation to reduce spending when appropriate.

The USPTO's FY 2025 Budget submission includes cost reducing measures such as giving up leased space in Northern Virginia. In FY 2025, the USPTO estimates $4,569 million in total spending for patent and trademark operations. This is a $122 million net increase from the agency's FY 2024 estimated spending level of $4,447 million. The net increase includes a $224 million upward adjustment for prescribed inflation and other adjustments and a $102 million downward adjustment in program spending and other realized efficiencies. This estimate builds on the $40 million in annual real estate savings assumed in the FY 2024 Budget submission to include additional annual cost savings of $12 million through releasing more leased space in Northern Virginia. The combined reduction in real estate space amounts to almost 1 million square feet and an estimated annual cost savings of approximately $52 million. Also, the USPTO is actively pursuing IT cost containment. The FY 2025 budget includes a relatively flat IT spending profile despite upward pressure from inflation, supply chain disruptions, and government-wide pay raises; ongoing IT improvements that offer business value to fee-paying customers; and data storage costs increasing proportionally with the USPTO's forecasted growth in patent and trademark applications.

c. Efficient Delivery of Reliable IP Rights: Quality, Unexamined Inventory, and Pendency

The USPTO's strategic goal to ''promote the efficient delivery of reliable IP rights'' recognizes the importance of innovation as the foundation of American economic growth and global competitiveness. Toward this end, the USPTO is committed to continuously improving trademark quality, as well as the accuracy and reliability of the trademark register. The agency will continue equipping trademark examining attorneys with updated tools, procedures, and clarifying guidance to effectively examine all applications. The USPTO will also retire legacy systems and integrate the use of emerging technologies to streamline work processes for greater efficiencies, adjust staffing levels, and refine core duties to ensure its ability to meet significant changes in filing volumes and a variety of improper filing behaviors.

Also, the USPTO is committed to improving trademark application pendency. The agency recognizes that applying for trademark registration is a key step for creators, entrepreneurs, and established brand owners as they move from generating ideas for new products and services to commercializing the resulting innovations in the marketplace. The USPTO is focused on incentivizing creativity and product innovation by removing unnecessary impediments or delays in securing IP rights, thereby bringing goods and services to impact for the public good more quickly.

The agency's recent trademark pendency challenge is the result of several years of sustained increases in trademark application filings punctuated by an unprecedented, year-long influx during FY 2021 that created a significant increase in unexamined inventory. In addressing these challenges, the USPTO will continue to reevaluate its operating posture to maximize efficiency, set data-driven pendency goals, realign the trademark workforce to maintain stability during

workload fluctuations and optimize pendency goals, and use available technology solutions to streamline and automate trademark work processes.

The agency is working diligently to balance timely examination with trademark quality. Improvements include the deployment of a new browser-based, end-to-end examination system (TM Exam) designed to improve examination quality and efficiency and establishment of a dedicated Trademark Academy to improve the training experience for new examiners.

Also, the USPTO is developing and implementing several strategies to combat trademark scams, address fraudulent filings, and protect the trademark register. For example, the agency is implementing robotic process automation to validate trademark application addresses against the U.S. Postal Service's database, mitigating a key fraud risk. In addition, the USPTO recently formed the Register Protection Office (RPO), a new organization within the Office of the Deputy Commissioner for Trademark Examination Policy dedicated to register protection and fraud risk management through efforts like scam education and prevention.

The USPTO is also leveraging the Trademark Modernization Act (TMA) cancellation provisions to help clear the trademark register of registrations not in use. See Public Law 116–260, available at *https://www.congress.gov/116/plaws/publ260/PLAW-116publ260.pdf.* The agency implemented the TMA nonuse cancellation provisions in December 2021 and in December 2022 implemented additional provisions that shortened the applicant response period for Office actions from six to three months. See ''Changes To Implement Provisions of the Trademark Modernization Act of 2020,'' 86 FR 64300 (Nov. 17, 2021).

3. Sustainable Funding

The USPTO's five-year forecasts of aggregate trademark costs, aggregate trademark revenue, and the trademark operating reserve are inherently uncertain. The Government Accountability Office (GAO) recommends operating reserves as a best practice for fee-funded agencies like the USPTO, and the trademark operating reserve allows the agency to align long-term fees and costs and manage fluctuations in actual fee collections and spending.

The USPTO manages the trademark operating reserve within a range of acceptable balances and assesses options when projected balances fall either below or above the range. The agency develops minimum planning targets to address immediate, unplanned changes in the economic or operating environment as the reserve builds toward the optimal level. The USPTO reviews both its minimum and optimal planning targets every three years to ensure the reserve's operating range mitigates an array of financial risks. Based on the current risk environment, including various factors such as economic and funding uncertainty and the Trademarks program's high percentage of fixed costs, the agency recently established a minimum operating reserve planning level at 23% of total spending—about three months' operating expenses (estimated at $137 million and $159 million from FY 2025 through FY 2029)—and an optimal long-range target of 50% of total spending—about six months' operating expenses (estimated at $297 million and $345 million from FY 2025 through FY 2029).

Based on cost and revenue assumptions in the FY 2025 Budget, the USPTO forecasts that aggregate trademark costs will exceed aggregate trademark revenue during FY 2024. The agency will finance the shortfall in trademark operations via the trademark operating reserve. The USPTO projects that the fee adjustments contained in this final rule will increase trademark fee collections to sufficiently recover budgeted spending requirements; modest fee collections above budgeted spending requirements will replenish and grow the operating reserve each year from FY 2025 to FY 2029.

These projections are point-in-time estimates and subject to change. For example, the FY 2025 Budget includes assumptions regarding filing levels, renewal rates, federally mandated employee pay raises, workforce productivity, and many other factors. A change in any one of these variables could have a significant cumulative impact on the trademark operating reserve balance. As shown in table 2, presented in Part III: Estimating Aggregate Costs and Revenue, the operating reserve balance can change significantly over a five-year planning horizon. This variation highlights the agency's financial vulnerability to various risk factors and the importance of its fee setting authority.

The USPTO will continue assessing the trademark operating reserve balance against its target balance annually, and at least every three years, the agency will evaluate whether the minimum and optimal target balances remain sufficient to provide stable funding. Per USPTO policy, the agency will consider fee reductions if projections show the operating reserve balance will exceed its optimal level by 25% for two consecutive years. In addition, the USPTO will continue to regularly review its operating budgets and long-range plans to ensure the prudent use of trademark fees.

4. Comments, Advice, and Recommendations From TPAC and the Public

As detailed in the NPRM, in the report prepared in accordance with AIA fee setting authority, TPAC conveyed overall support for the USPTO's efforts to secure adequate revenue to recover the aggregate estimated costs of trademark operations, stating ''[w]e have no doubt that overall increases are needed to ensure that the USPTO complies with its statutory mandate to set fees at a level commensurate with anticipated aggregate costs.'' TPAC Report at 3. The agency considered and analyzed the comments, advice, and recommendations received from TPAC before publishing this final rule.

Likewise, the USPTO considered and analyzed the comments, advice, and recommendations received from the public during the 60-day comment period before publishing this final rule. The agency's response to comments received is available in Part VI: Discussion of Comments.

C. Summary of Rulemaking Goals and Strategies

The USPTO estimates that the final trademark fee schedule will produce sufficient aggregate revenue to recover the aggregate costs of trademark operations and ensure financial sustainability for effective administration of the trademark system. This final rule aligns with the USPTO's four key fee setting policy factors and supports the agency's mission-focused strategic goals.

V. Individual Fee Rationale

Where data is available, the USPTO sets some fees at, above, or below unit cost to balance the agency's four key fee setting policy factors as described in Part IV: Rulemaking Goals and Strategies. The USPTO does not maintain individual historical cost data for all fees; therefore, it sets some fees based solely on policy factors. For example, the USPTO sets initial filing fees below unit cost to promote innovation strategies by reducing barriers to entry for applicants. To balance the aggregate revenue loss of fees set below cost, the USPTO must set other fees above unit cost in areas less likely to impact entrepreneurship (*e.g.,* renewal fees). By setting fees at particular levels to facilitate effective administration of the trademark system,

the USPTO aims to foster an environment where examining attorneys can provide, and applicants can receive, prompt, high-quality examination decisions while the agency recovers costs for workload-intensive activities.

This final rule maintains existing cost differentials for all paper filings; their processing is generally more costly than electronic submissions, and current fees do not recover these costs.

1. Trademark Application Filing Fees

TABLE 3—TRADEMARK APPLICATION FILING FEES

Description	Current fee	Final rule fee	Dollar change	Percent change	FY 2023 unit cost
Application (paper), per class	$750	$850	$100	13	$1,457
Base application (electronic), per class	n/a	350	n/a	n/a	n/a
Application (TEAS Plus), per class	250	Discontinue	n/a	n/a	402
Application (TEAS Standard), per class	350	Discontinue	n/a	n/a	532
Fee for failing to meet TEAS Plus requirements, per class	100	Discontinue	n/a	n/a	4
Application fee filed with WIPO (section 66(a)), per class	500	600	100	20	890
Subsequent designation fee filed with WIPO (section 66(a)), per class	500	600	100	20	863

The USPTO is changing application filing fees to incentivize more complete and timely filings and improve prosecution. Trademark applicants currently have two filing options via the Trademark Electronic Application System (TEAS): TEAS Plus and TEAS Standard. TEAS Plus is the lowest-cost filing option currently provided by the USPTO but comes with more stringent initial filing requirements. These applications reduce manual processing and potential for data entry errors, making them more efficient and complete for both the filer and the agency. The USPTO incurs fewer costs and impediments during their examination, thereby expediting processing and reducing pendency. About half of all trademark applications are filed using TEAS Plus. Fees for TEAS Standard are higher than those for TEAS Plus and offer applicants more options during filing; the higher fees relate to the USPTO's higher processing and examination costs.

The USPTO is implementing a single electronic application filing option that will discontinue both TEAS Plus and TEAS Standard filing options, as well as the processing fee for failing to meet the requirements of a TEAS Plus application. This final rule will replace TEAS Plus and TEAS Standard fees with a single electronic filing option and corresponding base application fee plus new surcharges based on application attributes. Similar to TEAS, applicants choosing to comply with the requirements detailed in this final rule in their initial filing (comparable to TEAS Plus) will pay the lowest fees under the final fee schedule, compared to applicants who choose not to comply with all requirements (comparable to TEAS Standard). The USPTO does not anticipate the total number of applications filed each year to change under the final schedule compared to the current schedule. The agency does anticipate that a larger share of applicants will take measures to avoid the surcharges in this rule as compared to the share of applicants who use the TEAS Plus option under the current fee schedule. Applications that do not meet all requirements for the lowest cost electronic filing option are discussed below.

The final fee schedule sets the fee for a base application filed electronically at $350, $100 more than a TEAS Plus application, to help the agency recover its costs. The USPTO anticipates a base application will have a unit cost similar to a TEAS Plus application for the agency. The USPTO is increasing the paper application fee by $100 to maintain the existing cost differential between a paper filing and the lowest cost electronic application.

As part of the final fee schedule, the USPTO is discontinuing the processing fee for failing to meet the requirements of a TEAS Plus application on the effective date of the final rule. Therefore, on or after that date, any pending TEAS Plus applications that would have been subject to the TEAS Plus processing fee will be subject to the insufficient information surcharge fee if the application fails to satisfy any of the requirements for a base application in paragraphs (a)(1) through (19) of § 2.22. These requirements are the same as the requirements for a valid TEAS Plus application under the current TEAS system, and the fee rate for the insufficient information surcharge is identical to the processing fee for failing to meet the requirements of a TEAS Plus application, *i.e.,* $100 per class.

The USPTO is making revisions to the regulatory text in 37 CFR to incorporate the base application fee and discontinuation of TEAS application fees. These revisions include replacing references to ''TEAS'' and ''ESTTA'' with ''electronically'' in sections 2.6 and 7.6 to reflect the discontinuation of TEAS fees under this final rule. These generalized references for electronic filings are more dynamic and will more easily accommodate any future changes to the USPTO's electronic filing system.

In the NPRM, the USPTO also proposed using this system for filing an application under section 66(a) (Madrid Protocol) of the Trademark Act. However, this final rule alters that proposal. Article 8(2) of the Madrid Protocol and rule 10 of the Madrid regulations require the payment of all application fees before the International Bureau may record an international registration or subsequent designation. Due to technological and administrative limitations, WIPO is currently unable to collect surcharges prior to recordation and has requested delayed implementation of any surcharges for Madrid filers.

In this final rule, the USPTO is dropping the proposed structure for 66(a) filings and instead adjusting the existing flat application fee for Madrid applications to $600 per class, as paid in Swiss francs to WIPO. Article 8(7) of the Madrid Protocol permits individual countries to establish their own fee for Madrid applications, subject to the Protocol's requirement that the fee for Madrid filers does not exceed that for domestic filers. The $600 fee is commensurate with what Madrid applicants would expect to pay, on average, if filing directly under the base application and surcharge system.

The approach enacted in this final rule conforms with feedback received from WIPO and other commenters. The USPTO will reconsider a base filing and surcharge system for Madrid applications in the future after WIPO develops the capacity to implement surcharges.

The increased fee will be owed on Madrid applications with a receipt date on or after February 18, 2025, because the Madrid Agreement Concerning the

International Registration of Marks requires three months' advance notice to WIPO before an increase in the amount of the international application or subsequent designation fee may enter into force.

2. Trademark Application Filing Surcharge Fees

TABLE 4—TRADEMARK APPLICATION FILING SURCHARGE FEES

Description	Current fee	Final rule fee	Dollar change	Percent change	FY 2023 unit cost
Fee for insufficient information (sections 1 and 44), per class	n/a	$100	n/a	n/a	n/a
Fee for using the free-form text box to enter the identification of goods/services (sections 1 and 44), per class	n/a	200	n/a	n/a	n/a
For each additional group of 1,000 characters beyond the first 1,000 (sections 1 and 44), per class	n/a	200	n/a	n/a	n/a

The USPTO is implementing surcharges to the base application filing fee in this final rule to enhance the quality of incoming applications, encourage efficient application processing, ensure additional examination costs are paid by those submitting more time-consuming applications, and reduce pendency. Only those applicants submitting applications that do not comply with the base filing requirements would pay the surcharges. The system set by this final rule would impose individual surcharges for unmet application requirements, as compared to the current TEAS Standard fee and TEAS Plus processing fee for applications with one or more unmet TEAS Plus requirements. As discussed above, applications filed under section 66(a) (Madrid Protocol) will not be subject to these surcharges and will instead be assessed a higher flat fee commensurate with what Madrid applicants would expect to pay, on average, if filing directly under the base application and surcharge system.

(i) Insufficient Information Fee

Trademark applications that include the information listed below allow for more efficient prosecution. Accordingly, applicants who submit more complete applications benefit from the final fee schedule by avoiding this surcharge, as the USPTO and its stakeholders benefit from efficient delivery of reliable IP rights. This final rule sets a $100 fee per class, in addition to the base fee, on applications under sections 1 and 44 that do not include required information at the time of filing. As discussed above, applications filed under section 66(a) (Madrid Protocol) will not be subjected to this surcharge.

The information required for a base application is the same as current TEAS Plus requirements; therefore, applicants are not expected to expend more than a de minimis amount of additional resources compared to the current system. The USPTO is reordering and retitling these requirements as ''Requirements for a base application,'' as provided in § 2.22(1) through (20):

- The applicant's name and domicile address;
- The applicant's legal entity;
- The citizenship of each individual applicant, or the state or country of incorporation or organization of each juristic applicant;
- If the applicant is a domestic partnership, the names and citizenship of the general partners, or if the applicant is a domestic joint venture, the names and citizenship of the active members of the joint venture;
- If the applicant is a sole proprietorship, the state of organization of the sole proprietorship and the name and citizenship of the sole proprietor;
- One or more bases for filing that satisfy all the requirements of § 2.34. If more than one basis is set forth, the applicant must comply with the requirements of § 2.34 for each asserted basis;
- If the application contains goods and/or services in more than one class, compliance with § 2.86;
- A filing fee for each class of goods and/or services, as required by § 2.6(a)(1)(ii) or (iii);
- A verified statement that meets the requirements of § 2.33, dated and signed by a person properly authorized to sign on behalf of the owner pursuant to § 2.193(e)(1);
- If the applicant does not claim standard characters, the applicant must attach a digitized image of the mark. If the mark includes color, the drawing must show the mark in color;
- If the mark is in standard characters, a mark comprised only of characters in the Office's standard character set, typed in the appropriate field of the application;
- If the mark includes color, a statement naming the color(s) and describing where the color(s) appears on the mark, and a claim that the color(s) is a feature of the mark;
- If the mark is not in standard characters, a description of the mark;
- If the mark includes non-English wording, an English translation of that wording;
- If the mark includes non-Latin characters, a transliteration of those characters;
- If the mark includes an individual's name or likeness, either (1) a statement that identifies the living individual whose name or likeness the mark comprises and written consent of the individual, or (2) a statement that the name or likeness does not identify a living individual (see section 2(c) of the Act);
- If the applicant owns one or more registrations for the same mark, and the owner(s) last listed in Office records of the prior registration(s) for the same mark differs from the owner(s) listed in the application, a claim of ownership of the registration(s) identified by the registration number(s), pursuant to § 2.36;
- If the application is a concurrent use application, compliance with § 2.42;
- An applicant whose domicile is not located within the United States or its territories must designate an attorney as the applicant's representative, pursuant to § 2.11(a), and include the attorney's name, postal address, email address, and bar information; and
- Correctly classified goods and/or services, with an identification of goods and/or services from the Office's Acceptable Identification of Goods and Services Manual within the electronic form.

The insufficient information surcharge will apply if an application fails to satisfy any of the first 19 requirements in this list. See Part VII: Discussion of Specific Rules for more information.

The agency will not impose this fee on applications denied a filing date for failure to satisfy the requirements under § 2.21.

As discussed above, any previously filed TEAS Plus applications that remain pending on or after the effective date of this final rule will be subject to the insufficient information surcharge

fee if the application fails to satisfy any of the above requirements because the requirements for a base application under the final rule are the same as the requirements for a TEAS Plus application. Under either system, TEAS or base plus surcharges, affected applications would be subject to a fee of $100 per class for failing to meet the requirements.

(ii) Entering Identifications of Goods and/or Services in the Free-Form Text Box Fee

Section 2.22(a)(20) requires applicants to identify goods and/or services using identifications from the agency's Acceptable Identification of Goods and Services Manual (ID Manual) within the electronic form. Applicants may choose goods and/or services identifications by selecting directly from the ID Manual in the electronic application or entering manually in a free-form text box. The USPTO is setting a new $200 fee per class for applicants who choose to enter descriptions of goods and services in the free-form text box. To avoid the surcharge, applicants may use the ID Manual within the electronic application, which includes thousands of identifications. As discussed above, applications filed under section 66(a) (Madrid Protocol) will not be subject to this surcharge.

Generally, examining attorneys do not need to review identifications of goods and/or services selected directly from the ID Manual within the electronic application form. Conversely, examining attorneys must carefully consider identifications entered in a free-form text box to determine whether the descriptions are acceptable as written or require amendment to sufficiently specify the nature of the goods and/or services. Examining attorneys must review each entry to determine its acceptability, even in situations where an applicant types or pastes the ID Manual identification, because they do not know if wording in the free-form text box came from the ID Manual.

Identifying an applicant's goods and/or services with sufficient specificity is necessary to provide adequate notice to third parties regarding the goods and/or services in connection with which the applicant intends to use, or is using, the mark. It also ensures the applicant pays the corresponding fee for each class of goods and/or services. Examining attorneys often spend substantial time reviewing identifications provided in the free-form text box and may initiate multiple communications with the applicant before determining an acceptable identification and collecting appropriate fees. This surcharge will help recover the additional costs associated with these more extensive reviews.

(iii) Each Additional 1,000 Characters Beyond the First 1,000 Fee

When entering identifications in the free-form text box, some applicants submit extensive lists of goods and/or services. In more egregious cases, a list may comprise multiple pages and include goods and/or services in multiple classes. To ensure that applicants who submit lengthy identifications pay the costs of their review, the USPTO is setting a new fee of $200 for each additional group of 1,000 characters beyond the first 1,000 characters in the free-form text box, including punctuation and spaces. Currently, less than 5% of directly filed applications contain custom identifications of goods and/or services that exceed 1,000 characters per class. Applicants who enter identifications directly from the ID Manual within the electronic application will not incur this fee, even if the identification exceeds 1,000 characters. As discussed above, applications filed under section 66(a) (Madrid Protocol) will not be subject to this surcharge for now.

The USPTO selected a character-based limit for operational efficiency, as the electronic application system can perform character counts in real time and alert the applicant when they exceed the limit. A limit based on other criteria, such as a count of separate goods and/or services, would require examiner review, as automating such counts is not technologically feasible. Such reviews by an examining attorney would increase the cost of examination and counteract the purpose of the fee, which is to ensure that applicants who submit lengthy identifications pay the costs of reviewing them.

After review and consideration of the comments, the USPTO will not apply this fee to amended identifications that exceed the character limit in a response to an Office action.

3. Amendment to Allege Use (AAU) and Statement of Use (SOU) Fees

TABLE 5—AAU AND SOU FEES

Description	Current fee	Final rule fee	Dollar change	Percent change	FY 2023 unit cost
Amendment to allege use (AAU), per class (paper)	$200	$250	$50	25	n/a
Statement of use (SOU), per class (paper)	200	250	50	25	n/a
Amendment to allege use (AAU), per class (electronic)	100	150	50	50	$152
Statement of use (SOU), per class (electronic)	100	150	50	50	129

The USPTO is increasing fees for the AAUs and SOUs to $150 per class for electronic filings and $250 per class for paper filings. The agency has not adjusted the AAU and SOU fees since 2002, even as processing costs increased during the subsequent two decades. The examination time for the AAUs and SOUs has grown due to the increased submission of questionable specimens, resulting in the issuance of more Office actions. These final fees will improve cost recovery and help rebalance the fee structure.

4. Post-Registration Maintenance Fees

TABLE 6—POST-REGISTRATION MAINTENANCE FEES

Description	Current fee	Final rule fee	Dollar change	Percent change	FY 2023 unit cost
Section 9 registration renewal application, per class (paper)	$500	$525	$25	5	n/a
Section 8 declaration, per class (paper)	325	425	100	31	$95
Section 15 declaration, per class (paper)	300	350	50	17	n/a
Section 71 declaration, per class (paper)	325	425	100	31	n/a
Section 9 registration renewal application, per class (electronic)	300	325	25	8	$24

TABLE 6—POST-REGISTRATION MAINTENANCE FEES—Continued

Description	Current fee	Final rule fee	Dollar change	Percent change	FY 2023 unit cost
Section 8 declaration, per class (electronic)	225	325	100	44	48
Section 15 declaration, per class (electronic)	200	250	50	25	11
Section 71 declaration, per class (electronic)	225	325	100	44	48
Renewal fee filed at WIPO	300	325	25	8	n/a

In the NPRM, the USPTO proposed increasing the section 9 registration renewal fee to $350 per class and the section 8 and 71 declaration fees to $300 per class. After further consideration in light of public comments and the USPTO's financial outlook, the agency is reallocating some of the section 9 renewal fee increase to section 8 and 71 declaration fees. This final rule aligns these fees at $325 per class for electronic filings.

The percentage of trademark registrants choosing to maintain their registrations has declined, as the share of applications from groups that have been historically less likely to maintain their registrations has increased. The USPTO expects these trends to continue. Additionally, costs to process maintenance filings have increased due to higher inflationary costs, post-registration audits, and elevated legal review to address potential fraud or improper filing behaviors.

The USPTO has an obligation to recover the aggregate costs of trademark operations through user fees. The above-cost post-registration maintenance fees recover costs incurred by the USPTO during examination. Given changes in demand and filing behaviors, the agency is rebalancing aggregate revenue derived from renewals and post-registration maintenance fees to keep barriers to entry low for new applicants.

The increased fee for renewing an international registration at WIPO will be owed on requests made on or after February 18, 2025, because the Madrid Agreement Concerning the International Registration of Marks requires three months' advance notice to WIPO before an increase in the amount of the international renewal fee may enter into force.

5. Letter of Protest Fee

TABLE 7—LETTER OF PROTEST FEE

Description	Current fee	Final rule fee	Dollar change	Percent change	FY 2023 unit cost
Letter of protest	$50	$150	$100	200	$893

The USPTO is increasing the fee for filing a letter of protest from $50 to $150. The cost to process a letter of protest exceeds the adjusted fee, and the agency will continue subsidizing this service from aggregate trademark fee collections, setting the fee rate to encourage the filing of relevant, well-supported letters of protest and discourage frivolous filings. Letters of protest allow a third party to bring evidence to the USPTO on the registrability of a mark in a pending application without filing an opposition with the Trademark Trial and Appeal Board (TTAB). The letter of protest procedure is not a substitute for the statutory opposition and cancellation procedures available to third parties who believe they would be damaged by registration of the involved mark. Instead, it is intended to assist examination without causing undue delay or compromising the integrity and objectivity of the ex parte examination process, which involves only the applicant and the USPTO.

The USPTO's estimated FY 2023 costs for reviewing and processing each letter of protest were $893, $843 more than the current $50 fee. The agency's costs are high because of the specialized staff who review letters of protest and the time required to determine whether: (1) the letters comply with submission requirements and (2) should be forwarded to an examining attorney. In addition, under the TMA, the USPTO is required to review and act on letters of protest within 60 days of receipt. The total subsidy for performing this service has grown due to a substantial increase in letters of protest forwarded to the USPTO each year. Letters of protest have risen from about 2,300 in FY 2016 to nearly 4,000 in FY 2023. The agency estimates this volume will grow to more than 5,000 letters annually by FY 2029, resulting in more cost to the USPTO.

When viewed in the context of USPTO actions due to letters of protest, the agency's costs are considerable, while the letters have a minor impact on examination outcomes. During FY 2022, the USPTO decided 4,557 letters of protest, of which 1,433 (31%) were not in compliance with § 2.149 and therefore not included in the record of examination. Of the letters entered into the record, examining attorneys issued a refusal based on the asserted ground(s) in 1,213 cases (27% of letters decided). Examining attorneys likely would have issued a refusal in these cases even without a letter of protest. The USPTO identified only 27 (0.59%) letters in FY 2022 that corresponded to an error in publishing a mark for opposition, similar to historical shares of letters decided each year.

TABLE 8—LETTERS OF PROTEST FILED AND LETTERS CORRESPONDING TO SITUATIONS WHERE THE USPTO PUBLISHED A MARK FOR OPPOSITION IN ERROR, BY FISCAL YEAR

Fiscal year	Letters of protest decided	Letters corresponding to a mark published in error	Share of total letters decided (%)
2016	2,258	17	0.75
2017	2,726	13	0.48

TABLE 8—LETTERS OF PROTEST FILED AND LETTERS CORRESPONDING TO SITUATIONS WHERE THE USPTO PUBLISHED A MARK FOR OPPOSITION IN ERROR, BY FISCAL YEAR—Continued

Fiscal year	Letters of protest decided	Letters corresponding to a mark published in error	Share of total letters decided (%)
2018	3,386	28	0.83
2019	4,106	43	1.05
2020	3,534	22	0.62
2021	3,756	39	1.04
2022	4,557	27	0.59

In accordance with the USPTO's fee setting policy factors, this adjustment recovers more of the costs associated with letters of protest, although the agency's full costs for this service will continue to be subsidized by aggregate trademark revenues.

6. Other Petition Fees

TABLE 9—OTHER PETITION FEES

Description	Current fee	Final rule fee	Dollar change	Percent change	FY 2023 unit cost
Petition to the Director (paper)	$350	$500	$150	43	n/a
Petition to revive an application (paper)	250	350	100	40	n/a
Petition to the Director (electronic)	250	400	150	60	$3,300
Petition to revive an application (electronic)	150	250	100	67	61

Optional petitions are a valuable, though costly, part of the trademark registration process, and other trademark fees subsidize the optional petition processing costs. The new fee amounts would recover more costs associated with the extensive and lengthy review these services require.

VI. Discussion of Comments

In response to the March 26, 2024, NPRM, the USPTO received comments from 27 associations and individuals including intellectual property organizations, law firms, attorneys, and others. These comments are available on *Regulations.gov* at *https://www.regulations.gov/docket/PTO-T-2022-0034.*

The summaries of comments and the agency's responses to the written comments follow.

General Fee Setting Approach

Comment 1: Commenters recognized the need for the USPTO to set fees at a level necessary to recover aggregate costs and ensure financial sustainability.

Response: The USPTO appreciates the commenters' feedback.

Comment 2: In principle, commenters supported fee increases needed to maintain effective and efficient operations, including efforts to lower pendency, combat fraud, and ensure the accuracy and reliability of the trademark register.

Response: The USPTO appreciates the commenters' feedback and is committed to pursuing the goals and objectives in the Strategic Plan in a fiscally responsible manner.

Comment 3: Commenters expressed appreciation for the USPTO's receptivity to feedback given during the public hearing and making adjustments to the fee proposals in response to that feedback.

Response: The USPTO appreciates the commenters' feedback and remains committed to analyzing, considering, and incorporating feedback from our stakeholder community.

Comment 4: One commenter noted that it was important for the USPTO to strike a balance between financial sustainability and accessibility to the trademark system in setting fees.

Response: The USPTO agrees that financial sustainability and stakeholder accessibility are crucial fee setting considerations. The overriding principle behind this rulemaking is to provide the agency with a sustainable funding model that supports the USPTO's strategic goals and objectives, including providing affordable access to the trademark system for all stakeholders.

Comment 5: Commenters emphasized that the fee schedule should be clear and transparent.

Response: The USPTO strives to ensure that the costs associated with obtaining a federal trademark registration are clear and that examination is consistent for all applicants. Similar to a TEAS Plus application, the base application established by this final rule will indicate what information is required for a complete application, as well as the addition of indicators meant to alert applicants of additional surcharges based on information provided on the application at the time of filing. The USPTO expects that, in most cases, any incurred surcharges will be assessed and known to the applicant upon submission of the initial application.

Comment 6: Commenters noted there should be greater agency transparency surrounding the budget, particularly around increased IT costs. Commenters asserted that the public is entitled to know more details about scheduled and upcoming IT improvements and why costs and delays have escalated over previous projections.

Response: The USPTO is committed to providing stakeholders with financial and performance data that are complete, reliable, accurate, and consistent. The USPTO posts congressional budget justifications, agency financial reports, and annual performance plan and annual performance reports on the financial and performance section of the USTPO website at *https://www.uspto.gov/about-us/financial-and-performance.* Also, the General Services Administration's *ITDashboard.gov* enables stakeholders to understand the health of IT investments, the impact of IT portfolios, and other key IT indicators. Finally, the TPAC holds quarterly public meetings to review USPTO policies, goals, performance, budget, and user fees. During these meetings the USPTO presents the latest plans and updates regarding IT

improvements and other administrative matters.

Although the USPTO strives to provide the most accurate cost and revenue estimates in the five-year forecast summary of each congressional budget submission, these forecasts reflect point-in-time planning assumptions and budget priorities. The agency routinely updates forecasts, tracks operational and financial performance, and monitors changes in the economy to mitigate uncertainty. The USPTO has earned 31 consecutive years of unmodified (clean) audit opinions on its annual financial statements.

Comment 7: Commenters asserted that it was too soon to raise trademark fees because fees were raised in 2021, and new fees were also introduced as part of the Trademark Modernization Act. One commenter suggested these actions raise concerns about the ability of the USPTO to establish effective budgetary frameworks, project future operational outcomes, and maintain efficient operations.

Response: The USPTO decided to adjust trademark fees at this time after conducting a deliberate and thorough review of fees, costs, and revenues. Based on this review, the agency concluded that fee adjustments are necessary to generate sufficient financial resources to facilitate the effective administration of the U.S. trademark system.

The USPTO's budget projections reflect point-in-time estimates and assumptions that are subject to change, with considerable uncertainty in outyear forecasts and risks that could materialize. Fee collections and operational costs are affected by internal factors, including changes in examination processes and procedures, and also by external factors outside the USPTO's control, such as legislation, court decisions, and changes to the broader economy. As detailed in the Updated Revenue and Cost Estimates section of this rule, the USPTO has experienced a number of unanticipated circumstances since the current fee schedule took effect in January 2021. These factors include higher-than-expected inflation in the broader U.S. economy leading to higher costs for supplies and contract services and employee pay raises enacted across all U.S. government agencies in FY 2023–24—including the USPTO—that were larger than previously planned for during the January 2021 fee change.

Comment 8: One commenter asserted that previous fee increases have not improved operations, as processing times for applications have risen sharply since the last time fees were increased in 2021; therefore, the USPTO should not increase fees, as a fee increase is unlikely to improve agency efficiency.

Response: The USPTO acknowledges that processing times and pendency have increased for trademark applications. These delays are the result of several years of sustained increases in trademark application filings, punctuated by an unprecedented year-long influx during FY 2021 that created a significant unexamined application inventory. The cost of processing and examining applications is subsidized by other fees, so this surge has further stressed the USPTO's finances. Addressing this unexamined inventory has required and will continue to require significant investments in time and agency resources, making fee increases necessary to effectively administer the trademark system.

Comment 9: One commenter stated that trademark registration costs have historically disproportionately affected minority-owned small businesses and the proposed increases will make matters worse. The commenter urged the USPTO to petition Congress to appropriate taxpayer funding rather than raising fees paid by small businesses and innovators.

Response: The USPTO acknowledges that a growing body of research has revealed unequal innovation participation rates for women, people of color, veterans, and other underserved individuals. Working to address these concerns, the agency is developing its own equity initiatives and programs and is also partnering with organizations in both the public and private sectors to collectively advance inclusion in innovation. For more information on the USPTO's inclusive innovation initiatives, visit *https://www.uspto.gov/Equity.*

Comment 10: One commenter asserted that the Initial Regulatory Flexibility Act (IRFA) analysis did not sufficiently describe or estimate the number of small entities the rule would affect and every small business in the United States is impacted by the proposed fee changes.

Response: The USPTO disagrees that this rulemaking would impact every small business in the United States. Many small businesses do not hold any trademarks or may choose not to register their trademarks with the USPTO for reasons unrelated to the agency's fees.

The USPTO does not collect or maintain statistics in trademark cases on small- versus large-entity applicants, and this information would be required to determine the number of small entities affected by this rule. However, the agency does not anticipate that the final rule will have a disproportionate impact on any particular class of small or large entities. The USPTO chose the fee schedule in the final rule because it will enable the agency to achieve its goals effectively and efficiently without unduly burdening small entities, erecting barriers to entry, or stifling incentives to innovate.

Comment 11: Commenters recommended that the USPTO include an exception or reduce fees for small and micro businesses, similar to the small and micro entity discounts offered for patent applicants and holders.

Response: Section 10(a) of the AIA authorizes the Director to set or adjust any fee established, authorized, or charged under the Trademark Act, but it does not include the authority to provide entity discounts for trademark fees.

Comment 12: The Office of Advocacy for the Small Business Administration (SBA) recommended that the USPTO create more clear and accessible guidance for small businesses seeking to apply for or renew a trademark.

Response: The USPTO is committed to improving the resources offered to small businesses and entrepreneurs, including expanding our partner pro bono services and IP law school clinic programs. Resources for inventors and entrepreneurs are available on the USPTO website at *https://www.uspto.gov/Inventors.* The USPTO's Trademark Assistance Center (TAC), *https://www.uspto.gov/TrademarkAssistance* can answer questions on a variety of trademark topics for first-time filers.

Comment 13: The SBA commented that the unit cost recovery or across-the-board adjustment alternatives analyzed in the IRFA were better options than the proposed fee structure.

Response: The USPTO is adopting the fee schedule detailed in this rulemaking because it will enable the agency to achieve its goals effectively and efficiently without unduly burdening small entities, erecting barriers to entry, or stifling incentives to innovate.

The unit cost recovery alternative would produce a structure in which application and processing fees would increase significantly for all applicants, and post-registration maintenance filing fees would decrease dramatically when compared with current fees. The USPTO rejected this alternative because it does not reflect improvements in fee design to accomplish the agency's stated objectives of encouraging broader use of IP rights-protection mechanisms and participation by more trademark

owners, as well as practices that improve process efficiency. In contrast, the fee schedule in the final rule sets application filing fees below the unit cost of those services to encourage broader use of IP rights-protection mechanisms and participation by more trademark owners, including small businesses and individual filers.

The USPTO also considered a 27% across-the-board increase for all fees. This fee schedule would have continued to promote innovation strategies and allow applicants to gain access to the trademark system through fees set below cost, while registrants pay maintenance fees above cost to subsidize the below-cost front-end fees. However, the agency ultimately rejected this proposal because, unlike the fee schedule outlined in the final rule, it would not enhance the efficiency of trademark processing and offers no new incentives for users to file more efficient and complete applications.

Comment 14: One commenter suggested that before raising fees, the USPTO should assess the impact of recent agency measures like the U.S. counsel rule, the requirement for filers to log in with *myUSPTO.gov*, the TTAB's expedited cancellation program, the Trademark Modernization Act, and the three-month response deadline for Office actions.

Response: The agency implemented the measures identified in the comment to improve the quality of both trademark applications and the trademark register and to reduce trademark pendency. In developing the most judicious fee adjustments possible, the USPTO followed its fee setting process that includes a comprehensive review that identifies, assesses, and integrates fraud risk controls, recent initiatives and measures (including those identified in the comment), and trends. Thus, the USPTO incorporated the impact of these initiatives into the new fee structure by considering filing patterns, capacity, and financial implications.

Comment 15: Commenters expressed opposition to the fee proposals and claimed any problems the USPTO faces are the result of ''bad trademark applications being filed by the incompetent automated trademark service 'mills' and the unethical trademark attorneys.'' In lieu of the proposed fee changes, commenters stated the USPTO should require comprehensive legal research before filing.

Response: The USPTO enforces compliance with the Trademark Act's requirements for applications through a number of methods. Both the Trademark Act and the rules of practice require a verified statement alleging that ''to the best of the signatory's knowledge and belief, the facts recited in the application are accurate.'' 15 U.S.C. 1051(a)(3), (b)(3), and 1126; 37 CFR 2.33 and 2.34. If the filing basis is section 1(b), section 44(d), or section 44(e), the statement must also assert that the verifier believes the applicant is entitled to, and has a bona fide intent to, use the mark in commerce on or in connection with the goods or services specified in the application, and that to the best of the signatory's knowledge and belief, no other person has the right to use the mark in commerce, either in the identical form or in such near resemblance as to be likely, used on or in connection with the goods or services of such other person, to cause confusion or mistake, or to deceive. If the filing basis is section 1(a), the verification must also state that the applicant believes it is the owner of the mark and that it is in use in commerce.

In addition, the USPTO is currently working to combat fraudulent applications through the recently created Register Protection Office (RPO). For example, in FY 2024, the RPO increased its capacity and improved its workflow to monitor and shutter *USPTO.gov* accounts for user agreement violations.

Comment 16: One commenter stated the best course of action the USPTO can take to promote efficiency and reduce pendency is to better train examining attorneys. The commenter suggested that the USPTO instruct their examining attorneys that the ID Manual is not binding, and there is no need for conformity if an identification is acceptable as written. The commenter also stated that the USPTO should teach its examining attorneys not to issue unnecessary refusals.

Response: The USPTO agrees that custom identifications may be acceptable as written, and that the agency should not issue unnecessary refusals. The new surcharge for entering identifications manually in a free-form text box is not an indication that custom identifications are unacceptable but reflects the extra work required by examining attorneys (and costs to the USPTO) to review each entry to determine its acceptability.

As part of objective 2.2 in the 2022–2026 Strategic Plan, issuing and maintaining accurate and reliable trademark registrations, the agency is continuously enhancing training programs to keep pace with changing filing demands and with emerging issues and challenges.

Comment 17: Commenters requested clarification on whether the proposed application and filing surcharge fees would apply to existing applications or only to applications filed after the effective date of the final rule.

Response: In general, the proposed fees would apply only to applications filed after the effective date of the final rule. However, as discussed in Part IV: Individual Fee Rationale of this rule, any previously filed TEAS Plus applications that remain pending on or after the effective date of this final rule will be subject to the insufficient information surcharge fee if the application fails to satisfy any of the above requirements because the requirements for a base application are the same as the requirements for a TEAS Plus application. Under either system (TEAS or base plus surcharges), affected applications would be subject to a fee of $100 per class for failing to meet the requirements.

Comment 18: One commenter noted the fee proposal would require a significant learning curve for legal and non-legal parties involved in the trademark registration process and will likely lead to more applicants seeking out legal assistance at law clinics. The commenter suggested that the USPTO establish clinical relationships with more Historically Black Colleges and Universities (HBCUs).

Response: As part of objective 1.2 in the 2022–2026 Strategic Plan, the agency is continuing to expand its partner pro bono services and IP law school clinic programs to ensure greater access to counsel and to assist in procuring IP protection. Currently, about one third of law schools accredited by the American Bar Association (ABA), including three of six of HBCU law schools, participate in the USPTO's Law School Clinic Certification Program. All three HBCU law schools participating have both patent and trademark clinics. Participating clinics provide legal services pro bono to the public, including to inventors, entrepreneurs, and small businesses. More information on the program is available on the USPTO's website at *https://www.uspto.gov/LawSchoolClinic*.

Regarding the learning curve, the required information for a base application is the same as required for TEAS Plus applications. The new base filing plus surcharge filing solution will flag all information required for filing, much like the TEAS Plus application today.

Comment 19: Commenters expressed concern that the fee increases will disproportionately affect lower-income filers such as small businesses, startups, and pro se filers, many of whom may be

sensitive to cost changes and lack the means to secure legal counsel. One commenter suggested that the proposed free-form text box surcharge, in particular, will negatively impact small businesses.

Response: The agency strives to keep front-end initial filing fees below cost to encourage broader participation and open access to the trademark system. The new fees reflect higher inflationary costs but will remain below the net cost of examination and further minimize undue burdens by shifting higher fee requirements to applicants who trigger higher examination costs due to lengthy or less clear identifications of goods and services or missing information. The USPTO expects that a majority of filers will avoid the surcharges and pay only the base application fee because they will provide all required information, select their identifications from the ID Manual, and not exceed the 1,000-character limit for each class.

Comment 20: One commenter expressed concern that higher fees may push more applicants to file pro se and cause applicants to unknowingly give up their rights or to file in a manner that does not reflect their actual use, thereby damaging the accuracy of the trademark register.

Response: As noted in response to comment 12, the USPTO provides resources for applicants and registrants that explain trademark rights on the agency's website at *https://www.uspto.gov/Inventors.* Applicants and registrants may find these resources helpful in understanding their rights and how to file in a manner that best reflects their actual use. In addition, although the USPTO cannot provide legal advice, the TAC, *https://www.uspto.gov/TrademarkAssistance,* can answer questions on a variety of trademark topics.

The USPTO's Law School Clinic Certification Program, *https://www.uspto.gov/LawSchoolClinic,* includes over 60 participating law school clinics that provide patent or trademark legal services pro bono to qualified members of the public who are accepted as a client of a clinic. Each participating law school has requirements for accepting new clients and accepts new clients at their discretion. The agency is continuing to expand its partner pro bono services and IP law school clinic programs to ensure greater access to counsel and to assist in procuring IP protection.

Comment 21: The SBA suggested that the introduction of surcharges will make it harder for applicants and legal counsel to accurately predict the overall cost associated with trademark applications. The SBA asserted that surcharges will negatively impact small businesses, which may lack resources for legal counsel or the ability to absorb unexpected costs.

Response: The agency expects that the majority of filers will avoid surcharges and pay only the base application fee because they will provide all required information, select their identifications from the ID Manual, and not exceed the 1,000-character limit for each class. The USPTO further believes that applicants and legal counsel should be able to anticipate which applications will require custom identifications or excess characters based on their knowledge of the complexity of the application and the covered classes. Prior to submitting their application, applicants will be presented with the entire application cost—including surcharges—and have the opportunity to provide complete information and identifications from the ID manual or custom identifications that are 1,000 characters or fewer in length, thus avoiding the surcharges.

As discussed above, the USPTO endeavors to keep front-end initial filing fees below cost to encourage broader participation and open access to the trademark system. The new fees reflect higher costs but will remain below the net cost of examination and further minimize undue burdens by shifting higher fee requirements to applicants who trigger higher examination costs due to lengthy or less clear identifications of goods and services or missing information.

The USPTO's Law School Clinic Certification Program, *https://www.uspto.gov/LawSchoolClinic,* includes over 60 participating law school clinics that provide patent or trademark legal services pro bono to qualified members of the public who are accepted as a client of a clinic. Each participating law school has requirements for accepting new clients and accepts new clients at their discretion. The agency is continuing to expand its partner pro bono services and IP law school clinic programs to ensure greater access to counsel and to assist in procuring IP protection.

Targeted Fee Adjustments

Trademark Application Filing Fees

Comment 22: One commenter suggested that any increase to basic filing fees should be limited to budgetary changes for inflation and cost of living.

Response: Projected revenue from the current fee schedule is insufficient to meet future budgetary requirements (costs), due largely to higher-than-expected inflation in the broader U.S. economy that has increased the agency operating costs. Consequently, the USPTO's aggregate operating costs will exceed aggregate revenue for the Trademarks program under the current schedule.

The USPTO chose the adjustments established in this final rule, including application filing fees, because they will enable the agency to achieve its goals effectively and efficiently without unduly burdening small entities, erecting barriers to entry, or stifling incentives to innovate. If the USPTO were to set the fee rate for a base application lower than prescribed in the final rule, the lower application filing fee would need to be offset by raising other fees, reducing spending on core mission and strategic priorities, or depleting the operating reserves, thereby significantly increasing agency financial risk.

Comment 23: Commenters expressed concern that higher application fees may deter many potential applicants from filing for trademarks, reducing the overall number of applications and registrations.

Response: The USPTO raised trademark fees in 2017 and 2021, with effective dates of January 14, 2017, and January 2, 2021, respectively. From FY 2016 to FY 2017, filings increased by about 60,000. During the fourth quarter of FY 2020 and the first quarter of FY 2021, the agency experienced a surge in filings in advance of the fee increase. Outside of that surge, the USPTO notes that filings in each of the last three quarters of FY 2021 (after the new fees took effect) were higher than filings in the third quarter of FY 2020 or any prior quarter. Therefore, the data indicate that fee increases have not impacted the long-term trend of growth in trademark filings.

As noted in the NPRM, outside research also suggests that demand for trademark applications is inelastic. See Gaétan De Rassenfosse, ''On the Price Elasticity of Demand for Trademarks,'' Social Science Research Network, Jan. 28, 2018, *https://doi.org/10.2139/ssrn.2628646;* Benedikt Herz and Malwina Mejer, ''On the Fee Elasticity of the Demand for Trademarks in Europe,'' Oxford Economic Papers, Jul. 3, 2016, *https://doi.org/10.1093/oep/gpw035.*

Comment 24: One commenter expressed concern that increases to the base application fee, as compared to TEAS Plus and TEAS Standard fees, were too high and would be a significant burden for stakeholders, especially small businesses. The commenter noted that the effective fee

increases range from 40% (base application fee compared to TEAS Plus application fee) to 114% (base application fee plus all three surcharge fees compared to TEAS Standard application fee), depending on whether the applicant incurs any additional surcharges.

Response: The new fees reflect higher costs that have accumulated over the years and will remain below the net cost of examination, further minimizing undue burdens by shifting higher fee requirements to applicants who trigger higher examination costs.

Individuals and small businesses comprise the majority of trademark filers, and many are one-time filers. The USPTO expects that the majority of these filers will avoid the surcharges and pay only the base application fee because they will provide all required information, select their identifications from the ID Manual, and not exceed the 1,000-character limit for each class.

Comment 25: Commenters disagreed with the USPTO's decision to move away from the two-tiered TEAS system. These commenters suggested that the TEAS system allows customers to explore various options with different prices based on their needs and financial capacity. In contrast, commenters suggested that the proposed fees act as a barrier to entry by increasing application costs, removing other cost options from the process, and losing the advantage of an earlier filing date strategy because of the time required to comply.

Response: The new system will allow customers to explore various options with different prices based on their needs and financial capacity. In addition, it is designed to make application fees more equitable by aligning filing costs with the work required for examination. It is similar to the existing system in that applicants who comply with the base requirements in their initial filing (comparable to TEAS Plus) will pay the lowest fees, as compared to applicants who fail to meet all requirements (comparable to TEAS Standard). The USPTO does not anticipate the total number of applications filed each year will change under the schedule enacted herein. The agency does anticipate that a larger share of applicants will seek to avoid the proposed surcharges, as compared to the share of applicants who used the TEAS Plus option under the existing fee schedule.

Comment 26: Commenters expressed concern about the potential complexity and unpredictability of the new system, as it appears to create new procedures and requirements to apply for and obtain registration.

Response: Although the new system introduces changes, as noted above it is similar to the prior system in that applicants complying with the base requirements in their initial filing (comparable to TEAS Plus) will pay the lowest fees under the new fee schedule, as compared to applicants who fail to meet all requirements (comparable to TEAS Standard). Prior to submitting their application, applicants will be presented with the entire cost, including surcharges. Applicants can avoid some or all of these surcharges by providing complete information and identifications from the ID Manual or custom identifications of 1,000 characters or less per class. The information required to avoid the insufficient information surcharge fee is the same as that required for the TEAS Plus application.

Comment 27: One commenter believed the fee for a base application is too high and should be set at the current rate for a TEAS Plus application ($250) because it has essentially the same requirements.

Response: Maintaining the initial filing fee at $250 would not accommodate cost increases and would likely undermine the timeliness and the quality of the examination and registration processes. When the agency introduced the TEAS Plus option in 2005, the fee was $275, and that costs for examination have risen significantly since that time.

In addition, the USPTO is setting the fee for the base application at a rate greater than the current TEAS Plus fee to recover some additional examination costs earlier in the trademark life cycle. The new base application fee remains below the net cost of examination, and the new surcharges will further minimize undue burdens by shifting higher fee requirements to applicants who trigger higher examination costs.

Comment 28: Commenters questioned why the USPTO did not include a greater increase to fees for paper applications, given the larger costs associated with these types of filings.

Response: Under § 2.23, the USPTO requires electronic filing of all trademark correspondence, including applications. Filers may petition for special circumstances, but paper applications make up fewer than 1% of current filings. In addition to a higher filing fee, paper filers also incur an additional petition fee for requesting acceptance of a paper submission. Because the vast majority of filings are electronic, the higher cost of processing paper applications has little marginal impact on the USPTO's overall costs.

Comment 29: One commenter suggested that if the USPTO's intent is to generate publication-ready applications to improve pendency, it should evaluate why pendency has increased rather than raise fees.

Response: The USPTO is working diligently to balance timely examination with trademark quality.

As discussed in the NPRM and in Part IV: Rulemaking Goals and Strategies of this rule, the agency's recent trademark pendency challenge is the result of several years of sustained increases in trademark application filings punctuated by an unprecedented, year-long influx during FY 2021 that created a significant unexamined application inventory. In addressing these challenges, the USPTO will continue to reevaluate its operating posture to maximize efficiency, set data-driven pendency goals, realign the trademark workforce to maintain stability during workload fluctuations and optimize pendency goals, and use available technology solutions to streamline and automate trademark work processes. Although new trademark application filings have since softened and inventory is stabilizing, unexamined inventory remains high and will take several years to address.

Promoting efficient delivery of reliable IP rights is just one of the USPTO's goals; another is to recover the aggregate costs of trademark operations through user fees. Without raising fees, the agency projects that the trademark operating reserve will fall below minimum levels in the next few years with a consequent impact on timeliness, application quality, and the integrity of the trademark register. The USPTO designed the new fee structure to enhance application quality and streamline the examination process, resulting in lower pendency and greater cost recovery.

Trademark Application Filing Surcharge Fees

Comment 30: Commenters expressed concern that the new surcharges could make it difficult for attorneys to provide clients with an accurate estimate of costs.

Response: The USPTO expects that the majority of filers will avoid surcharges and pay only the base application fee because they will provide all required information, select their identifications from the ID Manual, and not exceed the 1,000-character limit per class. The USPTO further believes that applicants and legal counsel should be able to anticipate which applications

will require custom identifications or excess characters based on their knowledge of the complexity of the application and the covered classes. Prior to submitting their application, applicants will be presented with the entire cost, including surcharges, and have the opportunity to update before filing to potentially avoid the surcharges. The electronic application system will clearly indicate the fields required to avoid the incomplete information surcharge, and there will be no surcharge for IDs selected from the ID Manual within the application. Attorneys should be aware that IDs entered within the free-form text box will generate a surcharge, as will those that exceed the 1,000-character limit if entered in that box, and advise their clients accordingly.

Comment 31: Commenters sought clarification on whether use of the free-form text box will subject applicants to both the insufficient information surcharge and the free-form text surcharge.

Response: Use of the free-form text box will not trigger the insufficient information surcharge. As detailed in Part VII: Discussion of Specific Rules, the insufficient information surcharge will apply if an application fails to satisfy any of the requirements in paragraphs (a)(1) through (19) in the list of requirements for a base application under § 2.22. Applicants will incur the free-form text surcharge when they enter identifications of goods and/or services in the free-form text box (paragraph (a)(20) under § 2.22), and there will be no surcharge for IDs selected from the ID Manual within the application.

Comment 32: Commenters sought clarification on when the insufficient information surcharge would be assessed: at filing, when applications are acted upon by the USPTO, or when amended.

Response: The USPTO expects that if the insufficient information surcharge is assessed, the vast majority of applicants will be assessed the surcharge at filing, and the electronic filing system will display total filing cost prior to submission. Some filers could be assessed the surcharge after filing if the examining attorney determines that required information was missing on the original application.

Comment 33: One commenter requested clarification on whether the insufficient information surcharge will be assessed per class or on each piece of missing information per class.

Response: The insufficient information surcharge is a per-class fee that applies to applications that do not include required information at the time of filing. The surcharge is not per requirement; it is $100 per class, regardless of the number of requirements an applicant fails to satisfy.

Comment 34: One commenter requested clarification regarding whether an applicant who uses the ID Manual that requires a fill-in (*e.g.,* software) will be charged the insufficient information fee if the examining attorney does not approve the language used to describe the nature and function of the goods and/or services.

Response: As with TEAS Plus, the agency will not require an additional fee if the identification of goods or services has a fill-in-the-blank element and the applicant inserts information that reasonably attempts to satisfy requirements in accordance with the instructions but requires amendment because the inserted information: (1) sets forth goods and/or services in another class (*e.g.,* headwear, namely, football helmets); (2) is indefinite (*e.g.,* maternity clothing, namely, sportswear); (3) includes indefinite wording from the parenthetical guidance provided for instructional purposes (*e.g.,* ''specify,'' ''indicate,'' ''etc.''); or (4) is inaccurate.

Applicants will incur the free-form text surcharge if they leave the fill-in-the-blank element empty, insert information that is clearly inappropriate for the selected identification, or insert additional goods and/or services unrelated to the selected identification. For example, applicants also will incur the additional fee if they identify the goods and/or services in the original application as ''processed meat, namely, laptop computers''; ''bicycle parts, namely, bicycle parts''; or ''sound recordings featuring music, and sunglasses.'' In these situations, the applicant has, in effect, failed to submit an identification from the ID Manual, and the additional fee will apply even if the applicant deletes the unacceptable terminology.

Comment 35: One commenter requested clarification regarding whether applicants will be assessed the insufficient information surcharge for not satisfying ''all of the requirements of § 2.34'' in an application filing basis if the specimen of use is deemed unacceptable in a use-based application.

Response: Similar to the guidance for TEAS Plus applications, as long as the specimen depicts the mark, the applicant will not incur an additional fee for registrations refused because the specimen is unacceptable. The insufficient information surcharge will apply if the mark on the specimen is materially different from the mark on the drawing. If the mark on the specimen and the drawing are materially different, the applicant has, in effect, failed to submit a specimen showing use of the mark sought to be registered. The surcharge will not apply if the difference between the mark on the specimen and the mark on the drawing is not material.

Comment 36: Commenters, including the SBA, expressed concern regarding the difficulty of anticipating whether the insufficient information fee will apply for an applicant, given that many of the requirements are subjective to the examining attorney's opinions and discretion, rather than objective factual standards. Commenters included color claim, description of a mark, identification of form of applicant, and translation of a mark as examples of subjective determinations where a fee could be imposed later in examination. Commenters suggested these questions will lead to accounting disputes, thus inhibiting the quality and timeliness of prosecution progress.

Response: The USPTO acknowledges the commenters' concerns and offers assurance that the agency strives to ensure consistent examination. An applicant may request that the USPTO review situations where, in their opinion, the agency has acted inconsistently in its treatment of their pending application(s) or recent registration(s). Applicants also may submit a request for review when a substantive or procedural issue has been addressed in a significantly different manner in different cases, subject to requirements on the Consistency Initiative page on the USPTO website at *https://www.uspto.gov/trademarks/trademark-updates-and-announcements/consistency-initiative.* If the applicant believes that the agency incorrectly imposed an insufficient information fee and has discussed the issue with the examining attorney, they may also contact the managing or senior attorney in the examining attorney's law office.

Comment 37: One commenter expressed concern that the list of criteria that would impose an insufficient information surcharge fee is not in line with the Trademark Manual of Examining Procedure.

Response: The current Trademark Manual of Examining Procedure (May 2024) provides guidance regarding TEAS Plus and TEAS Standard applications, including guidance regarding the processing fee for applications that do not meet the requirements for a TEAS Plus application under § 2.22(a). The information required to avoid the

insufficient information surcharge fee is the same as that required for the TEAS Plus application. After implementation of this final rule, the agency will update the manual in accordance with the requirements enacted herein.

Comment 38: Commenters questioned why the insufficient information fee will be imposed on a per class basis when most basic information requirements are not class-based.

Response: The USPTO has a longstanding practice of charging trademark fees on a per-class basis. The insufficient information surcharge mirrors the per-class processing fee for TEAS Plus applications that do not meet filing requirements. Any unmet requirements in a submitted application complicate the examination of every class claimed in the application.

Comment 39: One commenter expressed concern regarding the insufficient information surcharge, given what they assert are the current application system's limitations.

Response: The new TM Center electronic filing system is capable of meeting the demands of the new fee structure and will clearly indicate the fields required to avoid the incomplete information surcharge. The agency also notes that prior to submitting their application, applicants will be presented with the entire cost, including surcharges, and have the opportunity to update their application before filing to potentially avoid the surcharges.

Comment 40: One commenter suggested that the USPTO consider whether the insufficient information fee is appropriate in instances where an applicant makes a good-faith effort to supply required information, such as when they have no knowledge of a term's non-English meaning.

Response: Requiring the fee is appropriate in the situation described in the comment because § 2.32(a)(9) requires an applicant to research a mark that is comprised of or includes non-English wording to determine whether there is a transliteration or translation of the wording. If there is, and the applicant omits the translation or transliteration, the examining attorney will issue an Office action requiring the insufficient information surcharge and submission of the translation and/or transliteration, as appropriate. If the initial application includes a translation or transliteration, the surcharge will not apply for later amendment of the translation or transliteration. The surcharge will apply if the translation or transliteration comprises or contains inappropriate material.

Comment 41: Commenters noted that it is often in an applicant's best interests to submit an application without signing the supporting verified statements or providing every piece of information in order to get the earliest possible filing date. They suggested that if the information is provided after filing but before examination, there has been no inconvenience to the USPTO, and therefore the insufficient information fee will be strategically restrictive and needlessly burdensome to applicants.

Response: To qualify for the reduced base application fee, applicants must include all required information at filing, as with TEAS Plus and TEAS Standard. Applicants also must individually assess when to file their applications and what information they wish to provide at filing beyond the requirements for receipt of a filing date in § 2.21.

Comment 42: One commenter expressed concern that there is no avenue to appeal or refund the insufficient information surcharge fee in cases where an applicant could prove their provided information was, in fact, sufficient.

Response: If an examining attorney issues an Office action requiring payment of the surcharge for insufficient information, the applicant may respond with arguments and proof that the information was sufficient or that no information was required in that particular field. In such cases, the agency would not have collected the surcharge at filing. Therefore, no refund would be necessary for applicants who successfully overcome the surcharge requirement.

Comment 43: Commenters requested clarification regarding when applicants will be assessed the free-form text surcharge: at filing, when the USPTO acts upon an application, or when amended.

Response: The agency will assess the free-form text surcharge at any of the following points: at filing, when the application is amended to add a class(es) that was included in the free-from text box and not paid for, or when it is determined upon examination that the applicant has, in effect, failed to submit an identification from the ID Manual. See the response to comment 34 and Part V: Individual Fee Rationale for more information.

Comment 44: One commenter requested clarification regarding how the USPTO will address amendments to descriptions selected from the ID Manual that are later modified to incorporate exclusionary language to differentiate from the goods or services of third parties, including prior registrants, whether in the context of agency refusals for an alleged likelihood of confusion under section 2(d), or opposition, cancellation, litigation, or other inter partes proceedings.

Response: If the applicant originally selected the identification from the ID Manual within the electronic application, the addition of exclusionary language will not trigger the insufficient information or character count surcharges.

Comment 45: One commenter requested clarification on whether use of the ID Manual drop-downs will result in the character limit surcharge.

Response: Items selected from the ID Manual will not be subject to the character limit surcharge.

Comment 46: One commenter requested clarification on the difference in substance between the agency's Acceptable Identification of Goods and Services Manual and the Trademark Next Generation ID Manual.

Response: There is no difference in substance between the two versions of the ID Manual.

Comment 47: One commenter acknowledged that additional work is involved in examining free-form text identifications but questioned whether the fee is proportionate to the work performed by the USPTO.

Response: The USPTO appreciates the commenter's acknowledgement that examining free-form text identifications requires additional work. Examining attorneys often spend substantial time reviewing identifications provided in the free-form text box and may initiate multiple communications with the applicant before determining an acceptable identification. The USPTO believes this surcharge is proportionate to the additional costs associated with these more extensive reviews.

Comment 48: Commenters, including the SBA, expressed concern that the free-form text surcharge may result in lower quality applications, as the ID Manual options for many industries are insufficient or too inaccurate to define their goods or services. Commenters asserted that this issue may cause some applicants to mistakenly narrow their goods and/or services identifications, choose the wrong goods and/or services identifications, or abandon their applications and rely on common law protections. They suggest that a review and cleanup of the ID Manual would make it more useful.

Response: The USPTO currently has no plans for a comprehensive review of the ID Manual, but if it does not contain options relevant to applicants, they may submit new entries as described on the USPTO website at *https://www.uspto.gov/trademarks/guides-and-manuals/trademark-identification-*

goods-and-services-manual-suggestions. As noted on the website, after the agency receives a proposed identification or recitation, it is reviewed by the Administrator for Trademark Classification Policy and Practice. The Administrator will determine whether to include the proposed identification or recitation, or a modified version, in the ID Manual. In addition, the Administrator will inform the submitting party whether the suggestion is accepted, rejected, or accepted in a modified form, typically within one to two business days. If accepted, the ID generally will appear in the next available weekly update.

Comment 49: Commenters expressed concern regarding the process for updating the ID Manual. Specifically, they note that the free-form text box surcharge will likely cause an influx of requests and expressed concern that the USPTO may not have the capacity to address the requests in a timely manner. Additionally, these commenters believed the process to update the ID manual is slow and lacks transparency. The commenters expressed concern that the surcharge will negatively impact innovation and originality, while imposing a burden on applicants whose goods and services cannot accurately be described through standardized descriptions.

Response: The USPTO is committed to timely and transparent updates to the ID manual. The Administrator for Trademark Classification Policy and Practice will, typically within one to two business days, inform the submitting party whether the suggestion is accepted, rejected, or accepted in a modified form. If accepted, the ID generally will appear in the next available weekly update. Should an influx of requests occur, the USPTO will monitor the requests to ensure that responses remain timely.

Comment 50: One commenter suggested that it is more efficient for an applicant to copy and paste an ID Manual entry into the free-form text box than to individually search each entry from the drop-down menu. The commenter believed the surcharge will increase the time and legal costs charged to clients.

Response: As discussed in the NPRM and in Part V: Individual Fee Rationale of this rule, examining attorneys generally do not need to review identifications of goods and/or services selected directly from the ID Manual within the electronic application form. Conversely, examining attorneys must carefully consider identifications entered in the free-form text box to determine whether the descriptions are acceptable as written or require amendment to sufficiently specify the nature of the goods and/or services. Applicants will still have the option to copy and paste into the free-form text box rather than select from the ID Manual, but those who do so will pay the surcharge to help offset the increased costs of examination, similar to applicants who chose not to file via TEAS Plus in the legacy system. Applicants may conduct an advanced search of the ID Manual to narrow results by following instructions provided on the USPTO website at *https://www.uspto.gov/trademarks/guides-and-manuals/searching-trademark-id-manual.*

Comment 51: One commenter questioned the rationale for the free-form text box surcharge since examining attorneys use a feature that color codes free-text identifications that are identical to the ID Manual.

Response: As discussed in the NPRM and in Part V: Individual Fee Rationale of this rule, examining attorneys must carefully consider identifications entered in the free-form text box to determine whether the descriptions are acceptable as written or require amendment to sufficiently specify the nature of the goods and/or services. This applies even in situations where an applicant types or pastes the ID Manual identification. The USPTO believes this surcharge is proportionate to the additional costs associated with these more extensive reviews.

Comment 52: One commenter disagreed with the free-form text box surcharge on the basis that applicants have historically had the ability to identify goods and/or services in the TEAS Standard application.

Response: The USPTO acknowledges that applicants may identify goods and services in the TEAS Standard application. In order to do so, these applicants have paid a higher filing fee than for a TEAS Plus application, in which the goods and/or services must be chosen from the ID Manual within the form. Therefore, the additional surcharge for listing goods and/or services in the free-form text box of the base application versus selecting from the ID Manual is consistent with the higher TEAS Standard filing fee.

Comment 53: Commenters requested clarification regarding when the character count surcharge will apply: at filing, when applications are acted upon by the agency, or when amended. Other commenters asked specifically about a USPTO-imposed requirement to further specify goods and/or services and the addition of exclusionary language to differentiate from the goods and/or services of third parties whose registrations or applications are cited during examination or asserted in an inter partes proceeding.

Response: As discussed in Part V: Individual Fee Rationale of this rule, the character count surcharge will apply only at filing. A requirement to amend the identification to ensure it is sufficiently specific to provide adequate notice to third parties regarding the goods and/or services in connection with which the applicant intends to use or is using the mark will not trigger the surcharge, even if the amended identification exceeds 1,000 characters. The amendment of an identification to add exclusionary language also will not trigger the character count surcharge.

Comment 54: Commenters requested clarification whether the character count surcharge will apply only to free-form descriptions or also to pre-approved descriptions from the ID Manual.

Response: The character count surcharge will apply to free-form descriptions only. It will not apply to items selected from the ID Manual within the electronic application, including fill-ins.

Comment 55: One commenter suggested that the surcharge for exceeding the 1,000-character limit, per class, would shift the burden of application examination from the examining attorney to the applicant at the preliminary filing stage.

Response: As discussed in the NPRM, some identifications comprise many pages and include goods and/or services in multiple classes. In some cases, the applicant has paid the fee for only one class, although the listed goods and/or services are classified in multiple classes. Even when the goods and/or services are separated into classes, the examining attorney must carefully review the entire identification to ensure each item is sufficiently definite and properly classified. The surcharge does not shift any burden of proper examination from the examining attorney; rather, it ensures that applicants who submit lengthy identifications pay the costs of their review.

Comment 56: Commenters, including the SBA, expressed concern that the character count surcharge may create inequities between applicants in different industries, with certain industries having easy-to-describe goods or services that will not trigger the character count surcharge, while applicants in newer, more innovative industries may claim only two to three goods or services before incurring the surcharge.

Response: As discussed above, applications with descriptions of goods and/or services comprising thousands of characters generate additional work for examining attorneys to determine whether the descriptions are acceptable as written or require amendment for sufficient specification. The increased costs of this additional work have historically been borne by all trademark owners, and the tiered system is designed to make application fees more equitable by aligning them with the required work.

To avoid incurring the character count surcharge, applicants may submit new entries for inclusion in the ID Manual as described on the USPTO website at *https://www.uspto.gov/trademarks/guides-and-manuals/trademark-identification-goods-and-services-manual-suggestions.* As noted in responses to comments 48 and 49, the Administrator for Trademark Classification Policy and Practice will, typically within one to two business days, inform the submitting party whether the suggestion is accepted, rejected, or accepted in a modified form. If accepted, the ID generally will appear in the next available weekly update. If the entry is included in the ID Manual, the applicant may then choose it directly without incurring the character count surcharge, even it if exceeds 1,000 characters.

Comment 57: The SBA noted that since goods and/or services cannot be added after submission of an application, it is common practice to file with a broader list and then refine it later. Therefore, the character count surcharge could be strategically restrictive to applicants.

Response: Under this final rule, applicants may still submit broad lists by selecting items from the ID Manual. Identifications chosen from the ID Manual within the electronic application are not subject to the character count surcharge even if they exceed 1,000 characters. Applicants may also submit broad lists in the free-form text box but must pay the associated surcharge plus the character count surcharge for lists exceeding 1,000 characters to compensate for the additional time spent on those applications. To avoid these surcharges, applicants should make every effort to use the ID Manual within the electronic application, which includes thousands of identifications, or submit their custom identification for inclusion in the manual.

Comment 58: One commenter suggested that the character limit surcharge may lead to more applications with less thorough descriptions, which could then result in more challenges related to the searching and clearing of marks.

Response: The USPTO agrees that submitting indefinite or broad identifications could result in more Office actions that require sufficiently definite identifications and, in some cases, more likelihood-of-confusion refusals. Therefore, the agency encourages applicants to use identifications in clear, concise terms that the general public will easily understand and that accurately and completely describe the goods or services. Further, the USPTO notes that applicants may use the ID Manual within the electronic application, which includes thousands of identifications, to avoid the surcharge or submit their custom identification for inclusion in the manual.

Comment 59: Commenters offered several alternatives for the USPTO to consider in place of the 1,000-character limit. The alternatives offered include a 2,000-character limit, a 3,000-character limit, and a limit on the number of goods and/or services separated by semicolons.

Response: Based on an internal analysis, the USPTO determined that the 1,000-character limit strikes the balance of assessing a surcharge on applications that require more resources to examine without impacting a majority of applicants. As noted in Part V: Individual Fee Rationale, less than 5% of trademark applications contain custom identifications of goods and/or services that exceed 1,000 characters per class.

Comment 60: One commenter suggested that if the USPTO institutes the free-form text box surcharge, then the character count surcharge is unnecessary.

Response: Each surcharge serves a different purpose. As discussed in the NPRM and Part V: Individual Fee Rationale of this rule, examining attorneys generally do not need to review identifications of goods and/or services selected directly from the ID Manual within the electronic application. Conversely, examining attorneys must carefully consider identifications entered in the free-form text box to determine whether the descriptions are acceptable as written or require amendment to sufficiently specify the nature of the goods and/or services. In several cases, the identification comprised multiple pages and included goods and/or services in multiple classes. The character count surcharge ensures that applicants who submit lengthy identifications pay the costs of their review.

Comment 61: One commenter expressed concern with spacing and punctuation being included in the character limit, suggesting that a word count would be a more equitable metric.

Response: The USPTO considered both options and found that character counts are straightforward and predictable, and clearly reflect the customer's actions. Word counts are more complex and variable.

Madrid Application Filing Fees

Comment 62: One commenter argued that it is not possible to implement the necessary operational, financial, and IT changes in a timely manner that would allow WIPO to determine if an international applicant should be charged the custom ID/free-form text surcharge.

Response: Of the comments on various aspects of the Madrid Application Filing Fee system proposed in the NPRM, perhaps the most notable was regarding the inability of WIPO to institute a system to collect surcharges prior to recordation of the international registration or subsequent designation in the proposed timeframe. As a result, as discussed in Part V: Individual Fee Rationale, the USPTO will continue charging a flat application fee for Madrid applications. To align Madrid fees with domestic fees, per treaty obligations, the USPTO is adjusting the flat application fee to $600, which is commensurate with what applicants would expect to pay, on average, if filing directly under the base application and surcharge system. The USPTO will reconsider a base filing and surcharge system for Madrid applications when WIPO develops the capacity to implement surcharges.

Comment 63: One commenter suggested an alternative way to implement the proposed application fee structure for Madrid applications, with applicants charged a flat application filing fee (that does not exceed the amount applicants would have paid to the USPTO) until WIPO is able to implement the necessary operational, financial, and IT changes required for the proposed fee structure. At that time, Madrid applicants would be charged a base application fee and the relevant surcharges, but the commenter suggested that the insufficient information surcharge is incompatible with the Madrid Protocol, and therefore applicants would not be charged this fee at any point.

Response: The USPTO is implementing these suggestions in this final rule as discussed in the response to comment 62 and in Part V: Individual Fee Rationale. The USPTO will

reconsider a base filing and surcharge system for Madrid applications in the future when WIPO develops the capacity to implement surcharges. If so, the agency will ensure it complies with all treaty obligations when developing such a system.

Comment 64: Commenters disagreed with charging Madrid applicants the insufficient information surcharge, claiming there is no legal basis for demanding any information beyond what is foreseen under Article 2 of the Madrid Protocol or for requiring additional payments for missing information.

Response: As discussed in response to comment 62 and in Part V: Individual Fee Rationale, the agency is maintaining a flat application fee for Madrid applications at this time. The USPTO may reconsider a base filing and surcharge system for Madrid applications in the future if WIPO develops the capacity to implement surcharges. If so, the USPTO will ensure it complies with all treaty obligations when developing such a system.

Comment 65: Commenters disagreed with the surcharge system on the basis that there are no provisions in the Madrid System legal framework that would allow either WIPO or the USPTO to require additional fees after the international registration or subsequent designation has been recorded.

Response: As discussed in response to comment 62 and in Part V: Individual Fee Rationale, the agency is maintaining a flat application fee for Madrid applications at this time. The USPTO may reconsider a base filing and surcharge system for Madrid applications in the future if WIPO develops the capacity to implement surcharges. If so, the USPTO will ensure it complies with all treaty obligations when developing such a system.

Comment 66: Commenters expressed concern about the burden application surcharges will place on foreign filers, asserting that the proposal could lead to unexpected charges for Madrid applicants who are unaware of USPTO guidelines. Commenters also suggested the surcharges could lead to unreasonable delays due to Office actions required to collect surcharge fees.

Response: As discussed in response to comment 62 and in Part V: Individual Fee Rationale, the agency is maintaining a flat application fee for Madrid applications at this time. Thus, there will be no delay in prosecuting Madrid applications because an Office action will not be needed to collect any surcharges after application submission. The USPTO may reconsider a base filing and surcharge system for Madrid applications in the future if WIPO develops the capacity to implement surcharges.

Comment 67: One commenter asserted that the character count surcharge is prejudiced against foreign applicants and will price them out of registering marks in the United States.

Response: As discussed in response to comment 62 and in Part V: Individual Fee Rationale, the agency is maintaining a flat application fee for Madrid applications at this time. The USPTO may reconsider a base filing and surcharge system for Madrid applications in the future if WIPO develops the capacity to implement surcharges. Further, for applicants who file directly with the agency rather than using the Madrid Protocol, the character count surcharge will be applied to both foreign and domestic applicants.

Comment 68: One commenter suggested that Madrid applicants should be given a clear and satisfactory method to satisfy the requirements of the proposed application system to avoid incurring any surcharges.

Response: As discussed in response to comment 62 and in Part V: Individual Fee Rationale, the USPTO is maintaining a flat application fee for Madrid applications at this time. The USPTO may reconsider a base filing and surcharge system for Madrid applications in the future if WIPO develops the capacity to implement surcharges.

Comment 69: Some commenters expressed concern that Madrid filers may be given an advantage over domestic filers with the proposed application system because it is unclear how and when the proposed fees will be collected from Madrid applicants.

Response: As discussed in response to comment 62 and in Part V: Individual Fee Rationale, the agency is maintaining a flat application fee for Madrid applications at this time. In accordance with the Madrid Protocol's requirement that the fee for Madrid filers does not exceed that for domestic filers, the USPTO set this flat application fee commensurate with what applicants would expect to pay, on average, if filing directly with the USPTO under the base application and surcharge system. The agency may reconsider a base filing and surcharge system for Madrid applications in the future if WIPO develops the capacity to implement surcharges.

Comment 70: Commenters expressed support for higher fees for Madrid applications. One commenter suggested that a flat fee priced at or above the estimated unit cost is the best option in the interests of American innovators and that strong arguments exist for pricing fees higher across the board for foreign filers, regardless of filing basis. Another commenter based their support on their belief that Madrid applications are more complex and have historically had higher processing costs than domestic applications.

Response: As discussed in response to comment 62 and in Part V: Individual Fee Rationale, the USPTO is maintaining a flat application fee for Madrid applications at this time. The agency may reconsider a base filing and surcharge system for Madrid applications in the future if WIPO develops the capacity to implement surcharges.

The agency notes that the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) requires that, with very limited exceptions, World Trade Organization (WTO) members provide national and most-favored-nation treatment to the nationals of other WTO members with regard to the protection and enforcement of IP rights. Higher fees for international filers from WTO member countries may conflict with this obligation.

Finally, while the adjusted fee for Madrid applications remains below the estimated unit cost, the USPTO believes the new fees will be a step toward addressing the higher costs for such applications. The agency expects that ongoing collaboration with WIPO and other stakeholders will help harmonize applications and better align fees with costs.

Comment 71: One commenter offered suggestions to improve implementation of the proposed application fee structure, assuming the proposed fees are in compliance with the Madrid Protocol. They suggested amending the WIPO designation forms to include explicit notices that failure to provide the required information will incur additional fees. They also suggested allowing Madrid applicants an additional three months from time of filing to find and appoint a U.S. attorney to amend, supplement, or otherwise provide any additional information to avoid incurring the surcharges.

Response: As discussed in response to comment 62 and in Part V: Individual Fee Rationale, the USPTO is maintaining a flat application fee for Madrid applications at this time. The agency may reconsider a base filing and surcharge system for Madrid applications in the future if WIPO develops the capacity to implement surcharges. The USPTO cannot make changes to forms submitted to WIPO but looks forward to ongoing collaboration

with WIPO and other stakeholders to help harmonize applications.

Comment 72: One commenter argued that, regarding the free-form text and character count surcharges, brand owners who hold marks in multiple countries should continue to have freedom to choose how to draft a description of goods and services, including the degree of comprehensiveness.

Response: As discussed in response to comment 62 and in Part V: Individual Fee Rationale, the agency is maintaining a flat application fee for Madrid applications at this time. The USPTO may reconsider a base filing and surcharge system for Madrid applications in the future if WIPO develops the capacity to implement surcharges.

Applicants filing directly with the USPTO will continue to have freedom to choose how to draft a description of goods and/or services, but the free-form text box and character count surcharges will help recover the additional costs associated with more extensive reviews.

Comment 73: One commenter noted that the ID Manual is not integrated with either the Madrid Goods and Services Database (MGS) administered by WIPO or the Harmonized Database available via the European Union Intellectual Property Office's (EUIPO) TMClass tool. The commenter asserted that it would be beneficial if these issues were addressed in the framework of global collaborative initiatives on classification.

Response: This suggestion is outside the scope of this rulemaking.

Amendment To Allege Use and Statement of Use Fees

Comment 74: Commenters supported charging identical fees for filing an amendment to allege use (AAU) or a statement of use (SOU).

Response: The USPTO appreciates the commenters' support for this change.

Comment 75: One commenter disagreed with the USPTO's decision to charge identical fee rates for filing an AAU or SOU, arguing that these fees should be set closer to their individual processing costs. The commenter also asserted that the agency should charge less for an AAU to incentivize applicants, because the AAUs create a stronger application since they are filed before initial examination.

Response: Fees for the AAUs and SOUs remain aligned under this rulemaking to continue longstanding practice and because the ABI data suggest the agency's costs of examining the AAUs and SOUs are similar. The agency disagrees with the commenter's statement that the AAUs create a stronger application prior to examination. Although, in some cases, an AAU may be filed prior to initial examination, it is generally filed during the examination process or in response to an Office action. An SOU is filed during a defined statutory period after publication. Further, it is not clear that a lower fee for the AAUs will incentivize their filing versus the SOUs. In many cases, applicants are not prepared to show use of their mark in commerce prior to publication and will not benefit from lower fees for filing an allegation of use during that time.

Comment 76: Commenters supported the USPTO's decision to not move forward with a proposal to increase the fees for a fourth or fifth request for an extension of time to file an SOU.

Response: The USPTO appreciates the commenters' support for this decision.

Comment 77: Commenters asserted that the increase to fees for filing an AAU or SOU are too high, with one commenter suggesting any increases should be limited to an inflationary adjustment because the work involved in processing them has not changed.

Response: The USPTO appreciates the commenters' feedback. Examination time for the AAUs and SOUs has grown due to the increased submission of questionable specimens, resulting in the issuance of more Office actions. Further, the USPTO has not adjusted the AAU and SOU fees since 2002, and unit costs for these items continue to increase; the unit costs for FY 2023 are already close to or exceeding the adjusted rates.

Comment 78: One commenter expressed concern that increasing the AAU and SOU fees may cause applicants to prematurely abandon their applications prior to registration, which would further decrease maintenance filings in the future.

Response: The $50 increase in AAU and SOU fees is relatively small compared to both the overall costs of pursing trademark registration and the value of a registered trademark. Therefore, this fee increase should have little impact on the number of applicants who abandon their applications prior to registration.

Comment 79: One commenter stated that fee increases for applications filed under section 1(b) of the Trademark Act were inappropriate and asserted that such applications save time during the initial examination compared to applications filed under section 1(a).

Response: Applications filed under section 1(b) do not save time during the initial examination, as an AAU filed during the prosecution of a section 1(b) application (*i.e.,* prior to publication) requires the examining attorney to, in essence, perform a second initial examination to ensure that the specimen of use submitted with the AAU shows use in commerce for the mark and goods and/or services identified in the application and that the dates of use and other required elements are acceptable. Similarly, an SOU filed after an issued notice of allowance requires the examining attorney to perform a similar review for acceptability.

Post-Registration Maintenance Fees

Comment 80: Commenters stated that the increases to maintenance fees are too high, and any increases should be more aligned with the cost of providing these services.

Response: The agency has an obligation to recover the aggregate costs of trademark operations through user fees, and above-cost post-registration maintenance fees recover costs incurred by the USPTO during examination. If the agency were to set fee rates for maintenance fees lower than prescribed in this final rule, the change would need to be offset by raising other fees such as base application fees, reducing spending on core mission and strategic priorities, or depleting the operating reserves, significantly increasing financial risk to the agency.

The share of applications from groups that have been historically less likely to maintain their registrations has increased. This shift in registration patterns generates less revenue. Therefore, the USPTO must adjust the balance between aggregate revenue derived from application fees and post-registration maintenance fees to sustain low barriers to filing new applications. Also, costs to process maintenance filings have increased due to higher inflationary costs, post-registration audits, and elevated legal review to address potential fraud or improper filing behaviors.

Comment 81: Commenters suggested that the increases to application fees, including the new surcharges, should be sufficient to address the higher costs of processing applications without increasing maintenance fees.

Response: The USPTO has purposefully maintained initial fees below cost to reduce barriers to entry, resulting in a shortfall. Fees for post-registration activities help recover that shortfall. The agency reviews fees on a biennial basis, allowing the agency to balance costs associated with the services it provides stakeholders.

The USPTO is increasing the fees for section 8 and section 71 declarations of use because of the elevated level of effort and expertise involved in their

examination, which includes determining acceptability of their proof of use and whether the registration should be subject to audit. However, in light of comments raised by the public, the agency has reallocated some of the proposed fee increase from section 9 renewal applications to section 8 and section 71 declarations by lowering the proposed section 9 renewal fee and aligning it with section 8 and section 71 declarations, setting all of these fees at $325 per class when filed electronically.

Comment 82: One commenter suggested that lowering maintenance fees could increase the number of maintained registrations, potentially lowering the number of incoming applications and reducing overall costs to the USPTO.

Response: While the agency has not conducted a full elasticity study, experience indicates that long-term maintenance trends are not due to fee rate changes. Maintenance trends vary from year to year, but when the USPTO lowered section 9 renewal fees in FY 2015, renewal rates decreased rather than increased. When the agency increased section 8 declaration of use fees in FY 2017 and FY 2021, there was not a noticeable impact on maintenance rates.

Comment 83: Commenters expressed concern that increases to maintenance fees will result in fewer trademark owners maintaining their registrations, making the register less reliable and leading to more owners relying on their common law rights, which could be problematic.

Response: As noted in response to comment 82, registration renewal rates did not appreciably change in response to previous changes to post-registration maintenance fees.

Comment 84: One commenter suggested that the increases to section 8 and section 9 fees could lead to registrants filing new applications, rather than maintaining their existing registrations.

Response: Although this result could happen, the registrant would bear the risks of losing their registration and the legal presumptions that accompany registration. Further, as noted in response to comment 82, registration renewal rates did not appreciably change in response to the agency's previous changes to post-registration maintenance fees.

Comment 85: One commenter asserted that the USPTO provided no data in the NPRM to support the assertion that setting renewal fees above unit cost is ''less likely to impact entrepreneurship.''

Response: As noted in response to comment 82, registration renewal rates did not appreciably change in response to previous changes to post-registration maintenance fees. These fees are due at a time when the registrant has experienced several years of the benefits of registration. Further, fee collections from post-registration maintenance fees help the USPTO set initial filing fees below cost to encourage broader participation and open access to the trademark system. If the agency were to set fee rates for maintenance fees lower than prescribed in this final rule, the change would need to be offset by raising other fees such as base application fees, reducing spending on core mission and strategic priorities, or depleting the operating reserves, significantly increasing financial risk to the agency. The USPTO expects no negative impact on entrepreneurship from this rule.

Letter of Protest Fee

Comment 86: One commenter expressed support for the $150 fee for letters of protest proposed in the NPRM, and the USPTO's responsiveness to the feedback from the public hearing after initially submitting to TPAC a fee of $250. The commenter suggested that the proposed smaller fee increase reflects the USPTO welcoming the public's support of and enthusiasm for the agency and its work.

Response: The USPTO appreciates the commenter's support of its adjustment to the proposed fee.

Comment 87: One commenter supported the proposed fee increase for letters of protest because they rarely alter an application's outcome.

Response: The USPTO appreciates the commenter's support for the increased fee for letters of protest.

Comment 88: Commenters suggested that the letters of protest fee should be either partially or fully refunded if the USPTO forwards the letter to an examining attorney.

Response: The fee structure is designed to encourage the filing of relevant, well-supported letters of protest instead of frivolous filings. A relevant, well-supported letter of protest provides objective evidence bearing on the registrability of a mark. The unit costs for letters of protest are high because they are reviewed by specialized staff who must determine whether they comply with the requirements for submission and should be forwarded to the examining attorney. In addition, under the TMA, the USPTO must review and act on letters of protest within 60 days of receipt. The agency bears the costs of processing these letters regardless of whether they are forwarded to an examining attorney. In addition, the USPTO's refund authority is generally limited to fees paid by mistake or in excess of requirements.

Comment 89: Commenters, including the SBA, asserted that the proposed increase to the letter of protest fee is too high and will discourage valuable submissions. They noted that letters of protest are valuable for filers and the USPTO because they provide industry expertise to examining attorneys and preserve the integrity of the trademark register. Some commenters suggested that well-founded letters of protest are a useful tool to avoid additional costs to the USPTO and can result in fewer challenges to registrability decisions.

Response: As noted in the response to comment 88, the fee increase reflects the resources required to consider letters of protest. Specialized staff must determine if a letter of protest complies with submission requirements and whether to forward the letter to an examining attorney. In addition, under the TMA, the agency must review and act on letters of protest within 60 days of receipt.

On the other hand, the commenters' statements regarding the value of letters of protest are not easily quantified. Many issues identified in letters of protest such as likelihood of confusion, descriptiveness, and non-use may have been identified independently without submission of the letter. Moreover, although examining attorneys may take into account evidence submitted in a letter of protest, they must still perform a complete examination of the relevant application. Finally, although the USPTO has not performed an elasticity analysis related to letters of protest, it notes that the number of letters decided has increased since it first introduced a letter of protest fee in 2021.

Comment 90: One commenter stated the USPTO should create more detail positions for current USPTO employees to assist with the review of letters of protest and further automate the procedure for acceptance of these letters. The commenter asserted that this approach would reduce the overall processing costs for letters of protest.

Response: Specialized staff must review and determine whether a letter of protest complies with submission requirements and whether to forward the letter of protest to the examining attorney, limiting opportunities for details or automation.

Other Petition Fees

Comment 91: One commenter expressed concern that the increase to the fee for petitions to the Director is

unduly burdensome, because some petitions may be unavoidable due to actions outside of an applicant's control or needed to correct an error made by the USPTO. The commenter noted that some filers use petitions to protect themselves from scams, such as keeping a home address off the public record or requesting the withdrawal of an unauthorized filing. The commenter suggested that the USPTO provide separate forms at no or reduced cost for correcting errors made by third parties that are outside of the applicant's control.

Response: If the need to file a petition is caused by the actions of a third party, such as a petition to withdraw an unauthorized filing, the agency does not require a petition fee, as long as the petitioner selects the appropriate option on the electronic form. If the petitioner pays the fee up front by mistake, the agency will refund it when the petition is granted.

The fee is required for petitions to waive the domicile address requirement based on an extraordinary situation. However, if entered in the proper field, the domicile address is not part of the public record, and no petition would be required. Applicants and registrants may then designate a separate correspondence email address to receive information from the USPTO relating to their trademark. Applicants and registrants must always be cautious of communications regarding their application or registration. Scammers and private companies often use publicly viewable trademark information to call, mail, or email applicants and registrants with solicitations and scams, including posing as the USPTO.

Comment 92: One commenter stated the increase to the fee for petitions to revive is too high because it is not proportional to the work being done, asserting that these petitions are automatically processed (*i.e.* processed without review) by the USPTO. The commenter further suggested that the USPTO should provide a refund in situations where the petition was required to correct an error made by the USPTO.

Response: Only some petitions to revive an abandoned application under § 2.66 are automatically processed. Also, in the case of agency error resulting in an abandoned application or a canceled or expired registration, the applicant or registrant may file a request to reinstate the application or registration under § 2.64. There is no fee for a request for reinstatement. In addition, the USPTO's refund authority is generally limited to fees paid by mistake or in excess of what is required.

VII. Discussion of Specific Rules

The following section describes the changes to the CFR for all fees set or adjusted in this final rule, including all fee amendments, fee discontinuations, and changes to the regulatory text.

Section 2.6

Section 2.6 is amended by revising paragraph (a) to set forth trademark process fees as authorized under section 10 of the AIA. The changes to the fee amounts indicated in § 2.6 are shown in table 10.

To clarify fees paid for filling applications under section 66(a) (Madrid Protocol) and renewing international registrations at WIPO, the USPTO adds paragraphs (a)(1)(ii)(A) and (B) and (a)(5)(iii).

The USPTO amends paragraph (a)(1)(iii) to provide for filing ''an application electronically'' rather than filing ''a TEAS Standard application.''

The USPTO amends paragraph (a)(1)(iv) to add the surcharge for insufficient information.

The USPTO amends paragraph (a)(1)(v) to add the surcharge for adding goods and/or services in the free-form text box.

The USPTO adds paragraph (a)(1)(vi) to add the surcharge for each additional 1,000 characters.

The USPTO amends paragraphs (a)(2)(ii), (a)(3)(ii), (a)(4)(ii), (a)(5)(ii), (a)(6)(ii), (a)(7)(ii), (a)(8)(ii), (a)(9)(ii), (a)(10)(ii), (a)(11)(ii), (a)(12)(ii) and (iv), (a)(13)(ii), (a)(14)(ii), (a)(15)(ii) and (iv), (a)(16)(ii), (a)(17)(ii), (a)(18)(ii), (v), and (vii), (a)(19)(ii), (a)(20)(ii), (a)(21)(ii), (a)(22)(ii), (a)(23)(ii), (a)(27), and (a)(28)(ii) by replacing references to ''TEAS'' or ''ESTTA'' with ''electronically.''

To clarify fees paid for services provided by the TTAB, the USPTO amends paragraphs (a)(18)(i) and (ii) by removing references to the TTAB and adding references to the TTAB to paragraphs (a)(16) through (18).

TABLE 10—§ 2.6 FEE CHANGES

CFR section	Fee code	Description	Paper or electronic	Current fee	Final rule fee
2.6(a)(1)(i)	6001	Application (paper), per class	Paper	$750	$850
2.6(a)(1)(ii)(A)	7931	Application fee filed with WIPO (section 66(a)), per class.	Electronic	500	600
2.6(a)(1)(ii)(A)	7933	Subsequent designation fee filed with WIPO (section 66(a)), per class.	Electronic	500	600
2.6(a)(1)(iii)	7009	Application (TEAS Standard), per class	Electronic	350	Discontinue
2.6(a)(1)(iii)	New	Base application, per class	Electronic	n/a	350
2.6(a)(1)(iv)	7007	Application (TEAS Plus), per class	Electronic	250	Discontinue
2.6(a)(1)(iv)	New	Fee for insufficient information (sections 1 and 44), per class.	Paper	n/a	100
2.6(a)(1)(iv)	New	Fee for insufficient information (sections 1 and 44), per class.	Electronic	n/a	100
2.6(a)(1)(v)	6008	Fee for failing to meet TEAS Plus requirements, per class.	Paper	100	Discontinue
2.6(a)(1)(v)	7008	Fee for failing to meet TEAS Plus requirements, per class.	Electronic	100	Discontinue
2.6(a)(1)(v)	New	Fee for using the free-form text box to enter the identification of goods/services (sections 1 and 44), per class.	Paper	n/a	200
2.6(a)(1)(v)	New	Fee for using the free-form text box to enter the identification of goods/services (sections 1 and 44), per class.	Electronic	n/a	200

TABLE 10—§ 2.6 FEE CHANGES—Continued

CFR section	Fee code	Description	Paper or electronic	Current fee	Final rule fee
2.6(a)(1)(vi)	New	For each additional group of 1,000 characters beyond the first 1,000 (sections 1 and 44), per class (paper).	Paper	n/a	200
2.6(a)(1)(vi)	New	For each additional group of 1,000 characters beyond the first 1,000 (sections 1 and 44), per class.	Electronic	n/a	200
2.6(a)(2)(i)	6002	Amendment to allege use (AAU), per class.	Paper	200	250

2.6(a)(15)(ii)	7005	Petition to the Director	Electronic	250	400
2.6(a)(15)(iii)	6010	Petition to revive an application	Paper	250	350
2.6(a)(15)(iv)	7010	Petition to revive an application	Electronic	150	250
2.6(a)(25)	7011	Letter of protest	Electronic	50	150

Section 2.22

Section 2.22 is amended by revising the section heading and paragraph (a) to set forth the requirements for a base application fee.

The USPTO is amending the section heading to read ''Requirements for a base application.''

The USPTO is amending the introductory text to paragraph (a) to reflect the requirements for an application for registration under section 1 or section 44 of the Act that meet the requirements for a filing date under § 2.21 to pay the base application fee.

The USPTO removes paragraph (a)(7) and redesignates paragraphs (a)(8) through (20) as paragraphs (a)(7) through (19).

The USPTO amends redesignated paragraph (a)(11) by replacing the reference to ''TEAS Plus form'' with ''application.''

The USPTO amends paragraph (a)(17) by replacing references to ''portrait'' with ''likeness'' to maintain consistency within the paragraph.

The USPTO adds paragraph (a)(20) which establishes the requirement of using correctly classified goods and/or services from the ID Manual.

The USPTO amends paragraph (b) to provide that an applicant must pay the fee for insufficient information, per class, if the application fails to satisfy any of the requirements in paragraphs (a)(1) through (19).

The USPTO amends paragraph (c) to provide that an applicant must pay the fee for using the free-form text box to enter the identification of goods/services, per class, if the application fails to satisfy the requirements of paragraph (a)(20).

The USPTO amends paragraph (d) to provide that an applicant must pay the fee for each additional group of 1,000 characters beyond the first 1,000, per class, if the application fails to satisfy the requirements of paragraph (a)(20) and the identification of goods and/or services in any class exceeds 1,000 characters.

Section 7.6

Section 7.6 is amended by revising paragraph (a) to set forth the schedule of U.S. process fees as authorized under section 10 of the AIA. The changes to the fee amounts in § 7.6 are shown in table 11.

The USPTO amends paragraph (a)(1)(ii), (a)(2)(ii), (a)(3)(ii), (a)(4)(ii), (a)(5)(ii), and (a)(6)(ii) and (iv) by replacing references to ''TEAS'' or ''ESTTA'' with ''electronically.''

TABLE 11—§ 7.6 FEE CHANGES

CFR section	Fee code	Description	Paper or electronic	Current fee	Final rule fee
7.6(a)(6)(i)	6905	Section 71 declaration, per class	Paper	$325	$425
7.6(a)(6)(ii)	7905	Section 71 declaration, per class	Electronic	225	325

VIII. Rulemaking Considerations

A. America Invents Act

This final rule seeks to set and adjust fees under section 10(a) of the AIA as amended by the SUCCESS Act. Section 10(a) authorizes the Director to set or adjust by rule any trademark fee established, authorized, or charged under the Trademark Act for any services performed by, or materials furnished by, the USPTO (see section 10 of the AIA, Pub. L. 112–29, 125 Stat. 284, 316–17, as amended by Pub. L. 115–273, 132 Stat. 4158). Section 10 authority includes flexibility to set

individual fees in a way that furthers key policy factors, while taking into account the cost of the respective services.

Section 10(e) sets forth the general requirements for rulemakings that set or adjust fees under this authority. In particular, section 10(e)(1) requires the Director to publish in the **Federal Register** any proposed fee change under section 10 and include in such publication the specific rationale and purpose for the proposal, including the possible expectations or benefits resulting from the proposed change. For such rulemakings, the AIA requires that the USPTO provide a public comment period of not less than 45 days.

TPAC advises the Under Secretary of Commerce for Intellectual Property and Director of the USPTO on the management, policies, goals, performance, budget, and user fees of trademark operations. When adopting fees under section 10, the AIA requires the Director to provide TPAC with the proposed fees at least 45 days prior to publishing them in the **Federal Register**. TPAC then has at least 30 days within which to deliberate, consider, and comment on the proposal, as well as hold a public hearing(s) on the proposed fees. TPAC must make a written report available to the public of the comments, advice, and recommendations of the committee regarding the proposed fees before the USPTO issues any final fees. The USPTO is required to consider and analyze any comments, advice, or recommendations received from TPAC before finally setting or adjusting fees.

Consistent with this framework, on May 8, 2023, the Director notified TPAC of the USPTO's intent to set and adjust trademark fees and submitted a preliminary trademark fee proposal with supporting materials. The preliminary trademark fee proposal and associated materials are available on the fee setting section of the USPTO website at *https://www.uspto.gov/FeeSettingAndAdjusting.* TPAC held a public hearing at the USPTO's headquarters in Alexandria, Virginia, on June 5, 2023, and members of the public were given the opportunity to provide oral testimony. A transcript of the hearing is available on the USPTO website at *https://www.uspto.gov/sites/default/files/documents/TPAC-Fee-Setting-Hearing-Transcript-20230605.pdf.* Members of the public were also given the opportunity to submit written comments for TPAC to consider, and these comments are available on *Regulations.gov* at *https://www.regulations.gov/docket/PTO-T-2023-0016.* On August 14, 2023, TPAC issued a written report setting forth in detail its comments, advice, and recommendations regarding the preliminary proposed fees. The TPAC Report is available on the USPTO website at *https://www.uspto.gov/sites/default/files/documents/TPAC-Report-on-2023-Fee-Proposal.docx.* The USPTO considered and analyzed all comments, advice, and recommendations received from TPAC before publishing the NPRM on March 26, 2024 (89 FR 20897). The NPRM comment period closed on May 28, 2024. Section 10(e) of the Act requires the Director to publish the final fee rule in the **Federal Register** and the *Official Gazette* of the USPTO at least 45 days before the final fees become effective. Pursuant to this requirement, this rule is effective on January 18, 2025.

B. Regulatory Flexibility Act (RFA)

The USPTO publishes this Final Regulatory Flexibility Analysis (FRFA) as required by the RFA (5 U.S.C. 601 *et seq.*) to examine the impact of the USPTO's changes to trademark fees on small entities. Under the RFA, whenever an agency is required by 5 U.S.C. 553 (or any other law) to publish an NPRM, the agency must prepare and make available for public comment an initial regulatory flexibility analysis (IRFA), unless the agency certifies under 5 U.S.C. 605(b) that the proposed rule, if implemented, will not have a significant economic impact on a substantial number of small entities (see 5 U.S.C. 603, 605).

The agency published an IRFA, along with the NPRM, on March 26, 2024 (89 FR 20897). Given that the final trademark fee schedule, based on the assumptions found in the FY 2025 Budget, is projected to result in $696.8 million in additional aggregate revenue over the current fee schedule (baseline) for the period including FY 2025 to FY 2029, the USPTO acknowledges that the fee adjustments will impact all entities seeking or maintaining a trademark registration. The $696.8 million in additional aggregate revenue results from an additional $102.5 million in FY 2025, $146.0 million in FY 2026, $143.2 million in FY 2027, $149.5 million in FY 2028, and $155.7 million in FY 2029. This implies annualized effects of $138.9 million using a 3% discount rate and $138.0 million using a 7% discount rate.

Items 1–6 below discuss the six items specified in 5 U.S.C. 604(a)(1)–(6) to be addressed in an FRFA. Item 6 below discusses alternatives to this final rule that the agency considered.

1. A Statement of the Need for, and Objectives of, the Rule

Section 10 of the AIA authorizes the Director of the USPTO to set or adjust by rule any trademark fee established, authorized, or charged under title 35 U.S.C., for any services performed, or materials furnished, by the USPTO. Section 10 prescribes that trademark fees may be set or adjusted only to recover the aggregate estimated costs for processing, activities, services, and materials relating to trademarks, including USPTO administrative costs with respect to such trademark fees. The final rule will recover the aggregate costs of trademark operations while enabling the USPTO to predictably finance the agency's daily operations and mitigate financial risks.

2. A Statement of the Significant Issues Raised by the Public Comments in Response to the Initial Regulatory Flexibility Analysis, a Statement of the Assessment of the Agency of Such Issues, and a Statement of Any Changes Made in the Final Rule as a Result of Such Comments

The USPTO received two public comments in response to the IRFA. Details of those comments and the USPTO's responses are discussed and analyzed above in Part VI: Discussion of Comments, specifically comments 10 and 13. No changes were made in the final rule as a result of these comments.

3. The Response of the Agency to Any Comments Filed by the Chief Counsel for Advocacy of the Small Business Administration in Response to the Proposed Rule, and a Detailed Statement of Any Change Made to the Proposed Rule in the Final Rule as a Result of the Comments

The Office of Advocacy for the Small Business Administration submitted a comment on the proposed rule on May 28, 2024, and it is available on *Regulations.gov* at *https://www.regulations.gov/comment/PTO-T-2022-0034-0025.* Summaries of the SBA's comments and the USPTO's responses are detailed above in Part VI: Discussion of Comments, specifically comments 12, 13, 21, 36, 48, 56, 57, and 89. No changes were made in the final rule as a result of these comments.

4. A Description of and, Where Feasible, an Estimate of the Number of Small Entities to Which the Rule Will Apply or an Explanation of Why No Such Estimate Is Available

The USPTO does not collect or maintain statistics in trademark cases on small- versus large-entity applicants, and this information would be required

to determine the number of small entities affected by this final rule.

This final rule applies to any entity filing trademark documents with the USPTO. The USPTO estimates, based on the assumptions in the FY 2025 Budget, that during the first full fiscal year under the fees as proposed (FY 2026), the USPTO would collect approximately $146 million more in trademark processing and TTAB fees compared to projected fee collections under the current fee schedule. The USPTO would receive an additional $100 million in application filing fees, including applications filed through the Madrid Protocol and application surcharges; $4 million more from petitions, letters of protest, and requests for reconsideration; $7 million more from SOU and AAU fees; and $35 million more for post-registration maintenance fees, including sections 9 and 66 renewals and sections 8, 71, and 15 declarations.

The USPTO collects fees for trademark-related services at different points in the trademark application examination process and over the registration life cycle. In FY 2023, application filing fees made up about 54% of all trademark fee collections. Fees for proceedings and appeals before the TTAB comprised 3% of revenues. Fees from other trademark activities, petitions, assignments and certifications, and Madrid processing totaled approximately 5% of revenues. Fees for post-registration and intent-to-use filings, which subsidize the costs of filing, search, examination, and the TTAB, comprised 38%.

The USPTO bases its five-year estimated aggregate trademark fee revenue on the number of trademark applications and other fee-related filings it expects for a given fiscal year, work it expects to process in a given fiscal year (an indicator of fees paid after the agency performs work, such as SOU fees), expected examination and process requests in a given fiscal year, and the expected number of post-grant decisions to maintain trademark protection in a given fiscal year. Within its iterative process for estimating aggregate revenue, the USPTO adjusts individual fee rates up or down based on policy and cost considerations and then multiplies the resulting fee rates by appropriate workload volumes to calculate a revenue estimate for each fee, which is then used to calculate aggregate revenue. Additional details about the USPTO's aggregate revenue, including projected workloads by fee, are available on the fee setting section of the USPTO website at *https://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.*

5. A Description of the Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Rule, Including an Estimate of the Classes of Small Entities Which Will Be Subject to the Requirement and the Type of Professional Skills Necessary for Preparation of the Report or Record

This final rule imposes no new reporting or recordkeeping requirements. The main purpose of this final rule is to set and adjust trademark fees.

6. A Description of the Steps the Agency Has Taken To Minimize the Significant Economic Impact on Small Entities Consistent With the Stated Objectives of Applicable Statutes, Including a Statement of the Factual, Policy, and Legal Reasons for Selecting the Alternative Adopted in the Final Rule and Why Each One of the Other Significant Alternatives to the Rule Considered by the Agency Which Affect the Impact on Small Entities Was Rejected

The USPTO considered several alternative approaches to this final rule based on the assumptions found in the FY 2025 Budget. These alternatives are: (1) a description of the fee schedule adopted in this final rule; (2) fees set at the unit cost of providing individual services based on FY 2022 costs; (3) an across-the-board fee adjustment of 27%; and (4) no change to the baseline of current fees. The four alternatives are explained here with additional information regarding the development of each proposal and aggregate revenue estimate. A description of the Aggregate Revenue Estimating Methodology is available on the fee setting section of the USPTO website at *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.*

a. Alternative 1: Final Trademark Fee Schedule—Setting and Adjusting Trademark Fees During Fiscal Year 2025

The USPTO is setting or adjusting trademark fees codified in 37 CFR parts 2 and 7. Fees are adjusted for all application filing types (*i.e.,* paper applications, electronic applications, and requests for extension of protection under section 66(a) of the Trademark Act (15 U.S.C. 1141f)), including new surcharge fees. The USPTO also is increasing other trademark fees to promote effective administration of the trademark system, including fees for post-registration maintenance under sections 8, 9, and 71, certain petitions to the Director, and filing a letter of protest.

The USPTO chose the adjustments established in this final rule because they will enable the agency to achieve its goals effectively and efficiently without unduly burdening small entities, erecting barriers to entry, or stifling incentives to innovate. The alternative established here finances the USPTO's objectives for meeting its goals outlined in the Strategic Plan. These goals include optimizing trademark application pendency through the promotion of efficient operations and filing behaviors, issuing accurate and reliable trademark registrations, and encouraging access to the trademark system for all stakeholders. All applicants and registrants will benefit under this final rule because it will allow the agency to grant registrations sooner and more efficiently. All trademark applicants should benefit from the efficiencies realized under the final rule.

The USPTO anticipates that the impact of an increased fee on letter of protest filers would be small. The fee of $150 is set at a level low enough to enable the filing of relevant, well-supported letters, but high enough to recover some additional processing costs. The USPTO enacted the current fee for letters of protest on November 17, 2020, (85 FR 73197) and implemented it on January 2, 2021. Despite this fee, the USPTO received almost 4,000 letters in each of the last two fiscal years and expects the volume will grow to more than 5,000 letters per year by FY 2029.

The fee schedule under this final rule is available on the fee setting section of the USPTO website at *https://www.uspto.gov/FeeSettingAndAdjusting,* in the document titled ''Setting and Adjusting Trademark Fees During Fiscal Year 2025: Final Regulatory Flexibility Act Tables.''

b. Other Alternatives Considered

In addition to the final fee schedule set forth in Alternative 1, the USPTO considered three other alternative approaches. The agency calculated proposed fees and the resulting revenue derived from each alternative scenario. The proposed fees and their corresponding revenue tables are available on the fee setting section of the USPTO website at *https://www.uspto.gov/FeeSettingAndAdjusting.* Please note, only the fees outlined in Alternative 1 are set or adjusted in this final rule; other alternative scenarios are shown only to demonstrate the analysis of other options.

Alternative 2: Unit Cost Recovery

The USPTO considered an alternative that would set all trademark fees to recover 100% of unit costs associated with each service, based on historical unit costs. The USPTO uses the ABI to determine the unit costs of activities that contribute to the services and processes associated with individual fees. It is common practice in the Federal Government to set a particular fee at a level that recovers the cost of a given good or service. OMB Circular A–25, User Charges, states that user charges (fees) should be sufficient to recover the full cost to the Federal Government of providing the particular service, resource, or good when the Government is acting in its capacity as sovereign. Under the USPTO's unit cost recovery alternative, fees are generally set in line with the FY 2022 costs of providing the service. The agency recognizes that this approach does not account for changes in the fee structure or inflationary factors that could likely increase the costs of certain trademark services and necessitate higher fees in the outyears. However, the USPTO contends that FY 2022 data is the best available to inform this analysis.

This alternative does not align well with the strategic and policy goals of this final rule. It would produce a structure in which application and processing fees would increase significantly for all applicants, and post-registration maintenance filing fees would decrease dramatically when compared with current fees. The USPTO rejected this alternative because it does not address improvements in fee design to accomplish the agency's stated objectives of encouraging broader usage of IP rights-protection mechanisms and participation by more trademark owners, as well as practices that improve process efficiency.

The fee schedule for this alternative is available on the fee setting section of the USPTO website at *https://www.uspto.gov/FeeSettingAndAdjusting,* in the document titled ''Setting and Adjusting Trademark Fees During Fiscal Year 2025: Final Regulatory Flexibility Act Tables.''

Alternative 3: Across-the-Board Adjustment

The USPTO considered a 27% across-the-board increase for all fees. This alternative would maintain the status quo structure of cost recovery, where processing and examination costs are subsidized by fees for ITU extensions and post-registration maintenance filings (which exceed the cost of performing these services), given that all fees would be adjusted by the same escalation factor. This fee schedule would continue to promote innovation strategies and allow applicants to gain access to the trademark system through fees set below cost, while registrants pay maintenance fees above cost to subsidize the below-cost front-end fees. This alternative would also generate sufficient aggregate revenue to recover aggregate operating costs.

The USPTO ultimately rejected this proposal. Unlike the final fee schedule, it would not enhance the efficiency of trademark processing and offer no new incentives for users to file more efficient and complete applications.

The proposed fee schedule for this alternative is available in the document titled ''Setting and Adjusting Trademark Fees During Fiscal Year 2025: Final Regulatory Flexibility Act Tables'' at *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.*

Alternative 4: Baseline (Current Fee Schedule)

The final alternative the USPTO considered would leave all trademark fees as currently set. The USPTO rejected this alternative because, due to changes in demand for certain services and rising costs, a fee increase is necessary to meet future budgetary requirements as described in the FY 2025 Budget. Under this alternative, the USPTO would expect to collect sufficient revenue to continue executing only some, but not all, trademark priorities. This approach would not provide sufficient aggregate revenue to accomplish the USPTO's rulemaking goals as stated in Part IV: Rulemaking Goals and Strategies. Improvement activities, including better protecting the trademark register, enhanced IT, and tactical management programs would continue, but at a significantly slower rate as increases in core trademark examination costs crowd out funding for other improvements. Likewise, without a fee increase, the USPTO would deplete its trademark operating reserve, leaving the agency vulnerable to fiscal and economic events. This alternative would expose core operations to unacceptable levels of financial risk and position the USPTO to return to making inefficient, short-term funding decisions.

The fee schedule for this alternative is available on the fee setting section of the USPTO website at *https://www.uspto.gov/FeeSettingAndAdjusting,* in the document titled ''Setting and Adjusting Trademark Fees During Fiscal Year 2025: Final Regulatory Flexibility Act Tables.''

C. Executive Order 12866 (Regulatory Planning and Review)

This rulemaking has been determined to be significant for purposes of Executive Order (E.O.) 12866 (Sept. 30, 1993), as amended by E.O. 14094 (April 6, 2023), Modernizing Regulatory Review.

D. Executive Order 13563 (Improving Regulation and Regulatory Review)

The USPTO has complied with E.O. 13563 (Jan. 18, 2011). Specifically, the USPTO has, to the extent feasible and applicable: (1) made a reasoned determination that the benefits justify the costs of this final rule; (2) tailored this final rule to impose the least burden on society consistent with obtaining the regulatory objectives; (3) selected a regulatory approach that maximizes net benefits; (4) specified performance objectives; (5) identified and assessed available alternatives; (6) involved the public in an open exchange of information and perspectives among experts in relevant disciplines, affected stakeholders in the private sector, and the public as a whole, and provided online access to the rulemaking docket; (7) attempted to promote coordination, simplification, and harmonization across government agencies and identified goals designed to promote innovation; (8) considered approaches that reduce burdens and maintain flexibility and freedom of choice for the public; and (9) ensured the objectivity of scientific and technological information and processes.

E. Executive Order 13132 (Federalism)

This rulemaking does not contain policies with federalism implications sufficient to warrant preparation of a Federalism Assessment under E.O. 13132 (Aug. 4, 1999).

F. Executive Order 13175 (Tribal Consultation)

This rulemaking will not: (1) have substantial direct effects on one or more Indian Tribes; (2) impose substantial direct compliance costs on Indian Tribal governments; or (3) preempt Tribal law. Therefore, a Tribal summary impact statement is not required under E.O. 13175 (Nov. 6, 2000).

G. Executive Order 13211 (Energy Effects)

This rulemaking is not a significant energy action under E.O. 13211 because this final rulemaking is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

Therefore, a Statement of Energy Effects is not required under E.O. 13211 (May 18, 2001).

H. Executive Order 12988 (Civil Justice Reform)

This rulemaking meets applicable standards to minimize litigation, eliminate ambiguity, and reduce burden as set forth in sections 3(a) and 3(b)(2) of E.O. 12988 (Feb. 5, 1996).

I. Executive Order 13045 (Protection of Children)

This rulemaking does not concern an environmental risk to health or safety that may disproportionately affect children under E.O. 13045 (Apr. 21, 1997).

J. Executive Order 12630 (Taking of Private Property)

This rulemaking will not affect a taking of private property or otherwise have taking implications under E.O. 12630 (Mar. 15, 1988).

K. Congressional Review Act

Under the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*), the USPTO will submit a report containing the rule and other required information to the United States Senate, the United States House of Representatives, and the Comptroller General of the GAO. The changes in this final rule are expected to result in an annual effect on the economy of $100 million or more, a major increase in costs or prices, or significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets. Therefore, this final rule meets the criteria in 5 U.S.C. 804(2).

L. Unfunded Mandates Reform Act of 1995

The changes set forth in this rulemaking do not involve a Federal intergovernmental mandate that will result in the expenditure by State, local, and Tribal governments, in the aggregate, of $100 million (as adjusted) or more in any one year, or a Federal private sector mandate that will result in the expenditure by the private sector of $100 million (as adjusted) or more in any one year and will not significantly or uniquely affect small governments. Therefore, no actions are necessary under the provisions of the Unfunded Mandates Reform Act of 1995. See 2 U.S.C. 1501 *et seq.*

M. National Environmental Policy Act

This rulemaking will not have any effect on the quality of the environment and is thus categorically excluded from review under the National Environmental Policy Act of 1969. See 42 U.S.C. 4321 *et seq.*

N. National Technology Transfer and Advancement Act

The requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) are not applicable because this rulemaking does not contain provisions that involve the use of technical standards.

O. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) requires that the USPTO consider the impact of paperwork and other information collection burdens imposed on the public. The collection of information involved in this final rule has been reviewed and previously approved by OMB under control numbers 0651–0009, 0651–0050, 0651–0051, 0651–0054, 0651–0055, and 0651–0061. In addition, updates to the aforementioned information collections as a result of this final rule will be submitted to the OMB as non-substantive change requests.

Notwithstanding any other provision of law, no person is required to respond to nor shall any person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB control number.

P. E-Government Act Compliance

The USPTO is committed to compliance with the E-Government Act to promote the use of the internet and other information technologies, to provide increased opportunities for citizen access to government information and services, and for other purposes.

List of Subjects

37 CFR Part 2

Administrative practice and procedure, Courts, Lawyers, Trademarks.

37 CFR Part 7

Administrative practice and procedure, Trademarks.

For the reasons set forth in the preamble, and under the authority contained in section 10(a) of the AIA, 15 U.S.C. 1113, 1123, and 35 U.S.C. 2, as amended, 37 CFR parts 2 and 7 are amended as follows:

PART 2—RULES OF PRACTICE IN TRADEMARK CASES

■ 1. The authority citation for part 2 continues to read as follows:

Authority: 15 U.S.C. 1113, 1123; 35 U.S.C. 2; sec. 10, Pub. L. 112–29, 125 Stat. 284; Pub. L. 116–260, 134 Stat. 1182, unless otherwise noted. Sec. 2.99 also issued under secs. 16, 17, 60 Stat. 434; 15 U.S.C. 1066, 1067.

■ 2. Section 2.6 is amended by revising paragraphs (a)(1), (2), and (3), (a)(4)(ii), (a)(5), (a)(6)(ii), (a)(7)(ii), (a)(8)(ii), (a)(9)(ii), (a)(10)(ii), (a)(11)(ii), (a)(12)(i), (ii), and (iv), (a)(13), (a)(14)(ii), (a)(15), (a)(16) heading, (a)(16)(ii), (a)(17) heading, (a)(17)(ii), (a)(18) heading, (a)(18)(i), (ii), (v), and (vii), (a)(19)(ii), (a)(20)(ii), (a)(21)(ii), (a)(22)(ii), (a)(23)(ii), (a)(25) and (27), and (a)(28)(ii) to read as follows:

§ 2.6 Trademark fees.

(a) * * *

(1) *Application filing fees.* (i) For filing an application on paper, per class—$850.00

(ii) For filing an application under section 66(a) of the Act, per class:

(A) For an international application having a receipt date that is on or after February 18, 2025—$600

(B) For an international application having a receipt date that is before February 18, 2025—$500.00

(iii) For filing an application electronically, per class—$350.00

(iv) Additional fee under § 2.22(b), per class—$100.00

(v) Additional fee under § 2.22(c), per class—$200.00

(vi) Additional fee under § 2.22(d) for each additional 1,000 characters in identifications of goods/services beyond the first 1,000 characters, per class—$200.00

(2) *Amendment to allege use.* (i) For filing an amendment to allege use under section 1(c) of the Act on paper, per class—$250.00

(ii) For filing an amendment to allege use under section 1(c) of the Act electronically, per class—$150.00

(3) *Statement of use.* (i) For filing a statement of use under section 1(d)(1) of the Act on paper, per class—$250.00

(ii) For filing a statement of use under section 1(d)(1) of the Act electronically, per class—$150.00

(4) * * *

(ii) For filing a request under section 1(d)(2) of the Act for a six-month extension of time for filing a statement of use under section 1(d)(1) of the Act electronically, per class—$125.00

(5) *Application for renewal of a registration fees.* (i) For filing an

application for renewal of a registration on paper, per class—$525.00

(ii) For filing an application for renewal of a registration electronically, per class—$325.00

(iii) For filing an application for renewal of a registration electronically, pursuant to § 7.41 of this chapter:

(A) On or after February 18, 2025, per class—$325.00

(B) Before February 18, 2025, per class—$300.00

(6) * * *

(ii) Additional fee for filing a renewal application during the grace period electronically, per class—$100.00

(7) * * *

(ii) For filing to publish a mark under section 12(c), per class electronically—$100.00

(8) * * *

(ii) For issuing a new certificate of registration upon request of registrant, request filed electronically—$100.00

(9) * * *

■ 3. Section 2.22 is revised and republished to read as follows:

§ 2.22 Requirements for a base application.

(a) An application for registration under section 1 and/or section 44 of the Act that meets the requirements for a filing date under § 2.21 will be subject only to the filing fee under § 2.6(a)(1)(iii) if it includes:

(1) The applicant's name and domicile address;

(2) The applicant's legal entity;

(3) The citizenship of each individual applicant, or the state or country of incorporation or organization of each juristic applicant;

(4) If the applicant is a domestic partnership, the names and citizenship of the general partners, or if the applicant is a domestic joint venture, the names and citizenship of the active members of the joint venture;

(5) If the applicant is a sole proprietorship, the state of organization of the sole proprietorship and the name and citizenship of the sole proprietor;

(6) One or more bases for filing that satisfy all the requirements of § 2.34. If more than one basis is set forth, the applicant must comply with the requirements of § 2.34 for each asserted basis;

(7) If the application contains goods and/or services in more than one class, compliance with § 2.86;

(8) A filing fee for each class of goods and/or services, as required by § 2.6(a)(1)(ii) or (iii);

(9) A verified statement that meets the requirements of § 2.33, dated and signed by a person properly authorized to sign on behalf of the owner pursuant to § 2.193(e)(1);

(10) If the applicant does not claim standard characters, the applicant must attach a digitized image of the mark. If the mark includes color, the drawing must show the mark in color;

(11) If the mark is in standard characters, a mark comprised only of characters in the Office's standard character set, typed in the appropriate field of the application;

(12) If the mark includes color, a statement naming the color(s) and describing where the color(s) appears on the mark, and a claim that the color(s) is a feature of the mark;

(13) If the mark is not in standard characters, a description of the mark;

(14) If the mark includes non-English wording, an English translation of that wording;

(15) If the mark includes non-Latin characters, a transliteration of those characters;

(16) If the mark includes an individual's name or likeness, either:

(i) A statement that identifies the living individual whose name or likeness the mark comprises and written consent of the individual; or

(ii) A statement that the name or likeness does not identify a living individual (see section 2(c) of the Act);

(17) If the applicant owns one or more registrations for the same mark, and the owner(s) last listed in Office records of the prior registration(s) for the same mark differs from the owner(s) listed in the application, a claim of ownership of the registration(s) identified by the registration number(s), pursuant to § 2.36;

(18) If the application is a concurrent use application, compliance with § 2.42;

(19) An applicant whose domicile is not located within the United States or its territories must designate an attorney as the applicant's representative, pursuant to § 2.11(a), and include the attorney's name, postal address, email address, and bar information; and

(20) Correctly classified goods and/or services, with an identification of goods and/or services from the Office's Acceptable Identification of Goods and Services Manual within the electronic form.

(b) If an application fails to satisfy any of the requirements of paragraphs (a)(1) through (19) of this section, the applicant must pay the fee required by § 2.6(a)(1)(iv).

(c) If an application fails to satisfy the requirements of paragraph (a)(20) of this section, the applicant must pay the fee required by § 2.6(a)(1)(v).

(d) If an application fails to satisfy the requirements of paragraph (a)(20) of this section, and the identification of goods and/or services in any class exceeds 1,000 characters, the applicant must pay the fee required by § 2.6(a)(1)(vi) for each affected class.

PART 7—RULES OF PRACTICE IN FILINGS PURSUANT TO THE PROTOCOL RELATING TO THE MADRID AGREEMENT CONCERNING THE INTERNATIONAL REGISTRATION OF MARKS

■ 4. The authority citation for part 7 continues to read as follows:

Authority: 15 U.S.C. 1123, 35 U.S.C. 2, Pub. L. 116–260, 134 Stat. 1182, unless otherwise noted.

■ 5. Section 7.6 is amended by revising paragraphs (a)(1)(ii), (a)(2)(ii), (a)(3)(ii), (a)(4)(ii), (a)(5)(ii), (a)(6)(i), (ii), and (iv), (a)(7)(ii), and (a)(8)(ii) to read as follows:

§ 7.6 Schedule of U.S. process fees.

(a) * * *

(1) * * *

(ii) For certifying an international application based on a single basic application or registration filed electronically, per class—$100.00

(2) * * *

(ii) For certifying an international application based on more than one basic application or registration filed electronically, per class—$150.00

(3) * * *

(ii) For transmitting a subsequent designation under § 7.21, filed electronically—$100.00

(4) * * *

(ii) For transmitting a request to record an assignment or restriction, or release of a restriction, under § 7.23 or § 7.24 filed electronically—$100.00

(5) * * *

(ii) For filing a notice of replacement under § 7.28 electronically, per class—$100.00

(6) * * *

(i) For filing an affidavit under section 71 of the Act on paper, per class—$425.00

(ii) For filing an affidavit under section 71 of the Act electronically, per class—$325.00

Waste Emissions Charge for Petroleum and Natural Gas Systems: Procedures for Facilitating Compliance, Including Netting and Exemptions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is promulgating a regulation to facilitate compliance with the requirements of the Waste Emissions Charge in the Clean Air Act's (CAA) Methane Emissions Reduction Program (MERP). Enacted as part of the Inflation Reduction Act (IRA), this program requires the EPA to impose and collect an annual charge on methane emissions that exceed waste emissions thresholds specified by Congress.

DATES: This final rule is effective January 17, 2025.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OAR–2023–0434. All documents in the docket are listed in the *https://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *e.g.,* confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy. Publicly available docket materials are available either electronically in *https://www.regulations.gov* or in hard copy at the EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Ave. NW, Washington, DC. This Docket Facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744 and the telephone number for the Air Docket is (202) 566–1742.

FOR FURTHER INFORMATION CONTACT: Jennifer Bohman, Climate Change Division, Office of Atmospheric Protection (MC–6207A), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 343–9548; email address: *merp@epa.gov.*

World wide web (WWW). In addition to being available in the docket, an electronic copy of this final rule will also be available through the WWW. Following the Administrator's signature, a copy of this final rule will be posted on the EPA's Inflation Reduction Act Methane Emissions Reduction Program website at *https://www.epa.gov/inflation-reduction-act/methane-emissions-reduction-program.*

SUPPLEMENTARY INFORMATION:

Regulated entities. This final regulation affects certain owners or operators of facilities in certain segments of the petroleum and natural gas systems industry that report more than 25,000 metric tons (mt) of carbon dioxide equivalent (CO_2e) pursuant to the requirements codified at 40 Code of Federal Regulations (CFR) part 98, subpart W (Petroleum and Natural Gas Systems) (hereafter referred to as ''part 98, subpart W''). Per the requirements of CAA section 136(d), the industry segments to which the waste emissions charge may apply are offshore petroleum and natural gas production, onshore petroleum and natural gas production, onshore natural gas processing, onshore gas transmission compression, underground natural gas storage, liquefied natural gas storage, liquefied natural gas import and export equipment, onshore petroleum and natural gas gathering and boosting, and onshore natural gas transmission pipeline. Regulated categories and entities include, but are not limited to, those listed in Table 1 of this preamble:

TABLE 1—EXAMPLES OF AFFECTED ENTITIES BY CATEGORY

Category	North American Industry Classification System (NAICS)	Examples of affected facilities
Petroleum and Natural Gas Systems	486210	Pipeline transportation of natural gas.
	221210	Natural gas processing and transmission compression.
	211120	Crude petroleum extraction.
	211130	Natural gas extraction.

Table 1 of this preamble is not intended to be exhaustive, but rather provides a guide for readers regarding facilities likely to be affected by this final rule. This table lists the types of facilities that the EPA is now aware could potentially be affected by this action. Other types of facilities than those listed in the table could also be subject to requirements. To determine whether you would be affected by this action, you should carefully examine the applicability criteria found in 40 CFR part 99, subpart A (General Provisions) and the applicability criteria found in 40 CFR part 98, subpart A (General Provisions) and subpart W (Petroleum and Natural Gas Systems). If you have questions regarding the applicability of this action to a particular facility, consult the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

The EPA must collect charges from owners or operators of applicable facilities that both: (1) Report more than 25,000 metric tons (mt) of carbon dioxide equivalent (CO_2e) of greenhouse gases (GHGs) per year pursuant to the petroleum and natural gas systems source category requirements of the Greenhouse Gas Reporting Rule, and (2) exceed methane emissions intensity thresholds set forth in CAA section 136 for different types of applicable facilities. This final rule facilitates compliance with provisions of the CAA, including those related to netting of emissions for purposes of determining the charge and various exemptions to the charge; establishes confidentiality determinations for data elements included in waste emissions charge filings; and establishes filing and auditing procedures to facilitate compliance with the statutory requirements.

I. Background

A. How is this preamble organized?

This first section (section I) of this preamble contains background information regarding the final rule. This section also discusses the EPA's legal authority under the Clean Air Act (CAA) to promulgate implementing regulations for aspects of the waste emissions charge, codified at 40 CFR part 99 (hereafter referred to as ''part 99''). Section I of the preamble also discusses the EPA's legal authority to make confidentiality determinations for new data elements included in waste emissions charge filings (WEC filings) required by the final rule. Section II. of this preamble contains detailed information on the provisions in this final rule to facilitate implementation of CAA section 136(c) through (g), in particular the netting and exemption provisions. Section II. of this preamble also contains information on the revisions to 40 CFR part 98, subpart A to harmonize part 99 and part 98 reporting obligations. Section III. of this preamble describes the general requirements for the final rule, including procedures to facilitate filing and compliance. Section IV. of this preamble discusses the final confidentiality determinations for new data reporting elements for the proposed part 99 and also discusses confidentiality determinations for two data elements reported under part 98, subpart W. Section V. of this preamble discusses the impacts of this action. Section VI. of this preamble describes the statutory and Executive order requirements applicable to this final action.

B. Executive Summary

In August 2022, Congress passed, and President Biden signed, the Inflation Reduction Act of 2022 (IRA) into law. Section 60113 of the IRA created the Methane Emission Reduction Program (MERP) and amended the Clean Air Act (CAA) by adding section 136, ''Methane Emissions and Waste Reduction Incentive Program for Petroleum and Natural Gas Systems''. CAA section 136, as designed by Congress, establishes a three-part framework to help States, industry, and communities reduce methane (CH_4) emissions from the oil and gas sector. It further complemented a recently finalized rule under section 111 of the CAA (that was proposed at the time the Inflation Reduction Act was passed) to reduce methane emissions from new and existing oil and gas facilities. Oil and natural gas facilities are the nation's largest industrial source of methane, a greenhouse gas (GHG) that is 28 times more potent than carbon dioxide (CO_2) and is responsible for approximately one third of all warming resulting from anthropogenic emissions of greenhouse gases.[1] The three-part framework established by Congress in CAA section 136 addresses these emissions by: (1) directing the EPA to impose and collect a ''Waste Emissions Charge'' (WEC) on methane emissions from high-emitting and inefficient oil and gas operations; (2) directing the EPA to update subpart W of the Greenhouse Gas Reporting Program to ensure accurate reporting of methane emissions by oil and natural gas facilities that is based on empirical data; and (3) providing over $1 billion in financial and technical assistance to assist the industry, States, and communities in deploying methane mitigation and monitoring solutions. By implementing provisions of the WEC, this final rule helps to fulfill one of the pillars of this three-part framework. As Congress intended, the WEC, including the provisions finalized in this final rule, will incentivize a variety of near-term actions to reduce methane emissions from oil and natural gas operations while the EPA and States

work to implement the EPA's recently finalized CAA section 111 methane standards.

This action is also intended to work hand-in-hand with the other two elements of the CAA section 136 framework. Earlier this year, the EPA finalized a rule (89 FR 42062, May 14, 2024) (hereafter referred to as the ''2024 Subpart W Final Rule'') that fulfills Congress's directive in CAA section 136 to improve the reporting of GHG emissions under subpart W of the Greenhouse Gas Reporting Program and ensure that oil and gas facilities' reporting requirements are based on empirical data and more accurately reflect emissions. Because CAA section 136 requires that the EPA utilize subpart W emissions reports as the basis for determining the applicability of the WEC and calculating WEC obligations for owners and operators of applicable facilities, the EPA's recent revisions to subpart W are an important adjunct to this final rule that will ensure WEC obligations are based on the most accurate and comprehensive emissions data available. In addition, to implement the third part of the CAA section 136 framework, the EPA is partnering with the U.S. Department of Energy (DOE) to provide up to $1.36 billion in financial and technical assistance to a broad range of stakeholders to identify, measure, and mitigate emissions from the oil and gas sector. As described in section I.C.2. of this preamble, the EPA and its partners are acting expeditiously to award this funding through a combination of formula and competitive grant processes. These funds will accelerate the deployment of methane monitoring and mitigation technologies that will reduce methane emissions from oil and natural gas facilities and, potentially, help reduce or eliminate WEC obligations for certain applicable facilities by lowering their emissions intensity.

The WEC final rule requirements in this action are designed to meet Congress's directive to provide an incentive for the early adoption of methane emission reduction practices and technologies, including those that are required under the Standards of Performance for New, Reconstructed, and Modified Sources and Emissions Guidelines for Existing Sources: Oil and Natural Gas Sector Climate Review (NSPS/EG), which Congress expected to be promulgated pursuant to CAA section 111 at the time it created the WEC. CAA section 136 makes this connection to the oil and gas methane emission standards clear by including an exemption from the charge for operations that are subject to and in compliance with final methane emissions requirements promulgated pursuant to CAA sections 111(b) and (d). The WEC is thus an important piece of a comprehensive national strategy established by Congress via the IRA to reduce methane emissions. The WEC advances the reduction of methane emissions from the oil and gas sector by providing for sources covered under the CAA section 111 rules a set of emissions reduction incentives that are in effect until full implementation of oil and gas methane emissions standards promulgated by the EPA on March 8, 2024. Those standards were, as Congress specifically acknowledged via explicit reference in the IRA, under development at the time the WEC was enacted. For methane emissions sources not covered by the CAA section 111 rules, the emission reduction incentives created by the WEC remain in place after full implementation of the CAA section 111 methane standards.

On January 26, 2024, the EPA proposed a regulation to facilitate implementation of the provisions of the WEC, following the requirements of CAA section 136(c)–(g) (89 FR 5318). The WEC program applies to applicable facilities that report more than 25,000 mt CO_2e of greenhouse gases emitted per year pursuant to the Greenhouse Gas Reporting Rule's requirements for the petroleum and natural gas systems source category (codified as 40 CFR part 98, subpart W).[2] An applicable facility, as defined in CAA section 136(d), is a facility within the following industry segments (as the following industry segments are defined in part 98, subpart W): onshore petroleum and natural gas production, offshore petroleum and natural gas production, onshore petroleum and natural gas gathering and boosting, onshore natural gas processing, onshore gas transmission compression, onshore natural gas transmission pipeline, underground natural gas storage, liquefied natural gas import and export equipment, and liquefied natural gas storage.[3]

CAA section 136 defines three important elements of the WEC program: (1) waste emissions thresholds; (2) netting of emissions across different facilities; and (3) exemptions for certain emissions and facilities. Facilities may owe a WEC obligation if their subpart W reported emissions exceed the waste emissions thresholds specified in CAA section 136(f) and they are not eligible for an exemption.[4] The waste emissions threshold is a facility-specific amount of metric tons of methane emissions calculated using the methane intensity thresholds specified by Congress in CAA section 136(f)(1) through (3) and a facility's natural gas throughput (or oil throughput in certain circumstances).

Congress specifically laid out certain requirements in the text of the statute. The waste emissions charge is specified in CAA section 136(e) to begin for emissions occurring in 2024 at $900 per metric ton of methane exceeding the threshold, increasing to $1,200 per metric ton of methane in 2025, and to $1,500 per metric ton of methane in 2026 and subsequent years. The WEC only applies to the subset of a facility's emissions that are above the waste emissions threshold.

Congress structured the WEC so that it focuses on high-emitting and inefficient oil and gas facilities (*i.e.,* those with emissions greater than 25,000 mt CO_2e of greenhouse gases emitted per year and that have a methane emissions intensity in excess of the statutory waste emissions threshold). Facility efficiency, reflected in the amount of methane emissions per unit of production or throughput, can directly affect a facility's WEC obligations since more efficient facilities have emissions below the thresholds at which facilities are required to pay a charge. The WEC therefore incentivizes more efficient operations because the charge applies only to the least efficient and most wasteful of oil and gas facilities (and only to the subset of their emissions that exceed thresholds and are not exempt). CAA section 136(f)(4) allows facilities subject to the WEC that are under common ownership or control to net emissions across those facilities, which could result in a reduced total charge, or avoidance of the charge.[5]

In addition, Congress created three exemptions that may lower a facility's WEC obligation or exempt the facility entirely from the charge. The first exemption, found in CAA section 136(f)(5), exempts from the charge

[2] 42 U.S.C. 7436(c) (''The Administrator shall impose and collect a charge on methane emissions that exceed an applicable waste emissions threshold under subsection (f) from an owner or operator of an applicable facility that reports more than 25,000 metric tons of carbon dioxide equivalent of greenhouse gases emitted per year pursuant to of part 98 of title 40, Code of Federal Regulations, regardless of the reporting threshold under that subpart.'').

[3] 42 U.S.C. 7436(d).

[4] 42 U.S.C. 7436(f)(1)–(3).

[5] 42 U.S.C. 7436(f)(4) (''In calculating the total emissions charge obligation for facilities under common ownership or control, the Administrator shall allow for the netting of emissions by reducing the total obligation to account for facility emissions levels that are below the applicable thresholds within and across all applicable segments identified in subsection (d).'').

emissions occurring at facilities in the onshore or offshore petroleum and natural gas production industry segments that are caused by eligible delays in environmental permitting of gathering or transmission infrastructure.[6] The second exemption, found in CAA section 136(f)(6), exempts from the charge, if certain conditions are met, those facilities that are subject to and in compliance with final methane emissions requirements promulgated pursuant to CAA sections 111(b) and (d).[7] This exemption becomes available only if a determination is made by the Administrator that such final requirements are approved and in effect in all States with respect to the applicable facilities, and that the emissions reductions resulting from those final requirements will achieve equivalent or greater emission reductions as would have resulted from the EPA's methane emissions requirements proposed in 2021.[8] The third exemption, found in CAA section 136(f)(7), exempts from the charge reporting year emissions from wells that are permanently shut in and plugged.[9]

As a result of these key design features of the WEC, the EPA anticipates that many facilities in the oil and natural gas sector will not be subject to WEC obligations. Many oil and natural gas facilities already fall below the annual emissions threshold and waste emissions thresholds that would cause them to be subject to the WEC, or are likely to avail themselves of the netting provisions in this final rule to reduce or eliminate WEC obligations. Further, as the EPA and States implement the CAA section 111 2024 Final NSPS/EG for new and existing sources, many oil and natural gas facilities are likely to qualify for the regulatory compliance exemption. The CAA section 111 2024 Final NSPS/EG as well as the financial and technical assistance the EPA is administering under section 136 of the CAA, are also expected to drive methane emission reductions that will help applicable facilities reduce or eliminate their WEC obligations. The charge, then, will primarily serve as an incentive, particularly to high-emitting and inefficient facilities, to reduce their emissions of methane.

The EPA received over 50,000 comments in response to the proposal. After consideration of the public comments, the EPA has made several changes in this final rule that are described in section I.B. and in sections II. and III. of this preamble. While some of these changes represent a meaningful shift from the proposed approach, all changes were within the scope of notice provided through the EPA's request for comment, and discussion, at proposal. Moreover, these changes result in a final rule that better aligns with the statutory purpose and structure of the WEC. Specifically, the final rule is designed to achieve several goals: (1) Provide a strong incentive for early action to reduce methane by States, companies, and facilities, as Congress directed; (2) appropriately implement the exemptions specified by Congress; (3) give additional clarity to regulated entities; and (4) streamline implementation. By harmonizing the WEC regulations with implementation of the CAA section 111 requirements, this final rule encourages early emissions reductions and reduces the WEC burden on facilities that are in compliance with applicable CAA section 111 requirements. Furthermore, this final rule aims to increase flexibility so that accessing the exemptions created by Congress is not unduly restrictive, while still maintaining the integrity of the program. Finally, this rulemaking allows for expanded netting compared to the proposal while providing more specificity on the conditions under which netting may occur to minimize the potential for fraud.

The EPA is revising the regulatory compliance exemption in response to the many commenters that suggested changes to better align with Congress' purpose to incentivize States to move promptly toward full implementation of the CAA section 111 program, and to motivate regulated facilities to achieve emissions reductions as quickly as possible. This Congressional intent is illustrated in the language of the law and in the suite of incentives for expeditious methane emissions reductions it creates. The principal change to the regulatory compliance exemption in this final rule addresses when the exemption becomes available. The EPA concludes that allowing the exemption to be available for each State once it has fully implemented the methane emissions requirements promulgated pursuant to CAA sections 111(b) and (d), rather than all at once after the last State's plans are approved, is both a better reading of the law and has greater fidelity to the Congressional purpose. Industry commenters emphasized that a State-by-State approach would incentivize States to move quickly to develop and submit approvable State plans implementing the section 111 emissions guidelines, furthering Congress's intent in enacting the compliance exemption. Making the compliance exemption available to facilities in a State as soon as all CAA section 111(b) and (d) facilities within that State are subject to all of their applicable methane emissions requirements will provide an incentive for every State to move expeditiously, and avoid delays in effectuating the compliance exemption that might occur if the slowest State sets the pace. At the same time, to fully implement Congress' intention that the WEC serve as a mechanism for incentivizing emissions reductions until sources begin to comply with all of their emissions control obligations, the final rule provides that the regulatory compliance exemption becomes available in each State only after sources are required to comply with all of their State plan requirements. As described in more detail in section II.D.2. of this preamble, these changes ensure the regulatory compliance exemption reflects the facts on the ground for facilities operating in each State, while tying the exemption to the date actual emissions reductions are achieved as Congress intended.

In response to the information provided in comments, the EPA is also finalizing other changes to the regulatory compliance exemption that help ensure the WEC and the CAA section 111 rules work together as intended. As noted by commenters, it is important that the WEC incentivize early action before compliance deadlines and then relieve from the charge those facilities operating in compliance with the CAA section 111 rules. In this final rule, as many

[6] 42 U.S.C. 7436(f)(5) (''Charges shall not be imposed pursuant to paragraph (1) on emissions that exceed the waste emissions threshold specified in such paragraph if such emissions are caused by unreasonable delay, as determined by the Administrator, in environmental permitting of gathering or transmission infrastructure necessary for offtake of increased volume as a result of methane emissions mitigation implementation.'').

[7] 42 U.S.C. 7436(f)(6) (''Charges shall not be imposed pursuant to subsection (c) on an applicable facility that is subject to and in compliance with methane emissions requirements pursuant to subsections (b) and (d) of section 7411 of this title upon a determination by the Administrator that—(i) methane emissions standards and plans pursuant to subsections (b) and (d) of section 7411 of this title have been approved and are in effect in all States with respect to the applicable facilities; and (ii) compliance with the requirements described in clause (i) will result in equivalent or greater emissions reductions as would be achieved by the proposed rule of the Administrator entitled ''Standards of Performance for New, Reconstructed, and Modified Sources and Emissions Guidelines for Existing Sources: Oil and Natural Gas Sector Climate Review'' (86 FR 63110 (November 15, 2021)), if such rule had been finalized and implemented.'').

[8] *Id.*

[9] 42 U.S.C. 7436(f)(7) (''Charges shall not be imposed with respect to the emissions rate from any well that has been permanently shut-in and plugged in the previous year in accordance with all applicable closure requirements, as determined by the Administrator.'').

commenters suggested, the EPA is limiting the types of noncompliance that would cause a facility to lose the regulatory compliance exemption, reducing the timeframe for which the exemption would be lost in the event of noncompliance, and narrowing the scope of emissions that would lose the exemption in the event of noncompliance for facilities in segments with unique, basin-wide facility definitions. The final rule will thereby create a stronger incentive for facilities to meet the requirements of the CAA section 111 rules while making the regulatory compliance exemption more accessible.

To reflect comments persuasively suggesting that a more expansive approach to netting would reflect a better reading of the legislative text, the final rule changes the approach from the proposal to apply netting to encompass facilities under common ownership or control at the parent company level. One of the key provisions of the WEC created in CAA section 136(f) relates to the ability of facilities under common ownership or control to net emissions, such that facilities with emissions below the waste emissions threshold can offset emissions from facilities above the threshold to reduce the overall WEC burden. The EPA proposed that a facility's owner or operator would be the regulated entity under WEC as well as the entity used for netting of emissions across facilities under common ownership or control. As commenters highlighted, the text of section 136(f) suggests Congress supported broad application of netting, and commenters also noted that broader application of netting may help incentivize emission reductions by allowing companies to take advantage of cost-effective reduction opportunities across their entire operations rather than being limited by reductions that can be achieved across a smaller number of facilities. The EPA received significant comments that restricting the netting provisions to the owner or operator was inconsistent with the intent of the provision, since parent companies both own and control subsidiaries. As described in more detail in section II.B.1., the final regulations continue to define a facility's owner or operator as the regulated entity under WEC (*i.e.,* responsible for the payment of the WEC), consistent with CAA section 136(c). However, these final regulations reflect that the best reading of the statute entails a broader interpretation of the term ''common ownership or control,'' and so the final rule expands the use of netting to the parent company level by allowing owners and operators with a common parent to transfer negative emissions amongst each other. This approach of maintaining the WEC regulatory obligations at the owner and operator level, while allowing the transfer of negative emissions or ''netting'' across owners and operators with a common parent, reconciles the difference in statutory language in CAA sections 136(c) and 136(f).

The EPA is also making a number of changes to improve the implementation of the WEC in response to logistical and feasibility concerns raised in response to the proposal. For example, the EPA is specifying WEC filing and resubmittal deadlines of August 31 and December 15, respectively. These dates are later than the proposed deadlines, thereby allowing for more accurate reporting prior to WEC submission, reducing the number of resubmissions and corrections, and reducing overall burden.

In this final rule, the EPA is also making modifications to the implementation of the unreasonable delay and plugged well exemptions, as well as revisions to definitions and calculations to support the finalized rule. We are also finalizing revisions to 40 CFR part 98, subpart A (general provisions) for all facilities that report under subpart W to harmonize reporting responsibilities in part 98 with the reporting responsibilities and WEC obligation in part 99 such that responsibility to report and resubmit reports under part 98 if errors are identified in the part 98 report align with the obligated party under part 99. The final provisions of part 99 and part 98 under this rulemaking are described in further detail in sections II. and III. of this preamble.

C. Background and Related Actions

Congress designed the WEC to work in tandem with several related EPA programs. Together, these actions are expected to greatly reduce methane emissions. This section discusses the impacts of methane on public health and welfare and provides more details on the EPA programs relevant to methane emissions from oil and gas systems.

1. How does methane affect public health and welfare?

Elevated concentrations of greenhouse gases (GHGs) including methane have been warming the planet, leading to harmful changes in the Earth's climate that are occurring at a pace and in a way that threatens human health, our economy and infrastructure, and the natural environment, both in the United States (U.S.) and at a global level. While the EPA is not statutorily required to make any particular scientific or factual findings regarding the impact of GHG emissions on public health and welfare in support of the WEC, the EPA is providing in this section a brief scientific background on methane and climate change to offer additional context for this rulemaking and to help the public understand the environmental impacts of GHGs such as methane.[10]

As a GHG, methane in the atmosphere absorbs terrestrial infrared radiation, which in turn contributes to increased global warming and continuing climate change, including increases in air and ocean temperatures, changes in precipitation patterns, retreating snow and ice, increasingly severe weather events, such as hurricanes of greater intensity, and sea level rise, among other impacts. Methane also contributes to climate change through chemical reactions in the atmosphere that produce tropospheric ozone and stratospheric water vapor. In 2023, atmospheric concentrations of methane increased by nearly 11 parts per billion (ppb) over 2022 levels to reach 1922 ppb.[11] Concentrations are now more than two and a half times larger than the preindustrial level of 729 ppb.[12] Methane is responsible for about one third of all warming resulting from human emissions of well-mixed GHGs,[13] and due to its high radiative efficiency compared to carbon dioxide, methane mitigation is one of the best opportunities for reducing near-term warming. In the U.S., the oil and gas sector is the largest source of industrial methane emissions.[14]

[10] The EPA did not and is not reopening previous determinations regarding endangerments to public health and welfare in providing this background in this rulemaking.

Major scientific assessments continue to be released that further advance our understanding of the climate system and the impacts that methane and other GHGs have on public health and welfare both for current and future generations. According to the Intergovernmental Panel on Climate Change (IPCC) Sixth Assessment Report, ''it is unequivocal that human influence has warmed the atmosphere, ocean and land. Widespread and rapid changes in the atmosphere, ocean, cryosphere and biosphere have occurred.'' [15] Recent EPA modeling efforts [16] have also shown that impacts from these changes are projected to vary regionally within the U.S. For example, large damages are projected from sea level rise in the Southeast, wildfire smoke in the Western U.S., and impacts to agricultural crops and rail and road infrastructure in the Midwest and Northern Plains. Scientific assessments, the EPA analyses, and updated observations and projections document the rapid rate of current and future climate change and the potential range impacts both globally and in the United States,[17] presenting clear support regarding the current and future dangers of climate change and the importance of GHG emissions mitigation. The Methane Emissions Reduction Program is intended to respond to and mitigate these impacts by improving availability of and access to monitoring and emission reduction technologies and incentivizing methane emissions reductions from oil and gas systems.

2. Related Actions

Congress designed the WEC to work in tandem with several related EPA programs, in particular the Greenhouse Gas Reporting Program and the CAA section 111 requirements. As mandated by CAA section 136(c) and (d), the scope and effect of the WEC is closely related to the EPA's long-standing Greenhouse Gas Reporting Program requirements for oil and natural gas facilities, which are codified in subpart W of the EPA's GHGRP regulations. Specifically, the applicability of the WEC is based upon the quantity of metric tons of CO_2e emitted per year pursuant to the requirements of subpart W. Further, CAA section 136(e) requires that the WEC amount be calculated based upon methane emissions reported pursuant to subpart W. In order to ensure that WEC charges are based on methane emissions data that is as accurate and comprehensive as possible, section 136(h) further required the EPA to undertake a rulemaking to review and revise subpart W as necessary to ensure that reporting is ''based on empirical data,'' ''accurately reflect[s] the total methane emissions and waste emissions from applicable facilities,'' and ''allow[s] owners and operators of applicable facilities to submit empirical emissions data.'' As a result, this final action builds upon previous subpart W rulemakings.

In the 2024 Subpart W Final Rule, the EPA finalized revisions to subpart W consistent with the authority and directives set forth in CAA section 136(h) as well as the EPA's authority under CAA section 114. In that rulemaking, the EPA finalized revisions to require reporting of additional emissions or emissions sources to address potential gaps in the total methane emissions reported by facilities to subpart W. For example, these revisions added a new emissions source, referred to as ''other large release events,'' to capture large emission events that are not accurately accounted for using the existing methods in subpart W.[18] See section II.B. of the preamble to the 2024 Subpart W Final Rule (89 FR 42062) for more information on this source category. The emissions from these events and other newly added sources are required to be included in the total emissions reported under subpart W starting with reporting year 2025. The EPA also finalized revisions to add or revise existing calculation methodologies to improve the accuracy of reported emissions, incorporate additional empirical data, and allow owners and operators of applicable facilities to submit empirical emissions data that could appropriately demonstrate the extent to which a charge is owed in implementation of CAA section 136, as directed by CAA section 136(h). The EPA also finalized revisions to existing reporting requirements to collect data that will improve verification of reported data, ensure accurate reporting of emissions, and improve the transparency of reported data. For clarity of discussion within this preamble, unless otherwise stated, references to provisions of subpart W (*i.e.,* 40 CFR 98.230 through 98.238) reflect the language of that subpart as effective January 1, 2025.

Under the Greenhouse Gas Reporting Program, the EPA also finalized a separate rule (89 FR 31802, April 25, 2024), which included updates to the General Provisions of the Greenhouse Gas Reporting Rule to reflect revised global warming potentials (GWPs), reporting of GHG data from additional sectors (*i.e.,* non-subpart W sectors), and revisions to source categories other than subpart W that improve implementation of the Greenhouse Gas Reporting Rule. The revision to the GWP of methane (from 25 to 28) is expected to lead to a small increase in the number of facilities (<188 facilities) [19] that exceed the subpart W 25,000 mt CO_2e threshold and thus become subject to the part 99 requirements. This final Greenhouse Gas Reporting Program rule is not expected to otherwise impact subpart W reporting requirements as they pertain to the applicability or implementation of the part 99 requirements.

Separately, on November 15, 2021 (86 FR 63110), the EPA proposed under CAA section 111(b) standards of performance regulating GHGs (in the

inventory-us-greenhouse-gas-emissions-and-sinks-1990-2022.

[18] As defined at 40 CFR 98.238, effective January 1, 2025, an other large release event means any planned or unplanned uncontrolled release to the atmosphere of gas, liquids, or mixture thereof, from wells and/or other equipment that result in emissions for which there are no methodologies in 40 CFR 98.233 other than under 40 CFR 98.233(y) to appropriately estimate these emissions. Other large release events include, but are not limited to, well blowouts, well releases, pressure relief valve releases from process equipment other than hydrocarbon liquids storage tanks, storage tank cleaning and other maintenance activities, and releases that occur as a result of an accident, equipment rupture, fire, or explosion. Other large release events also include failure of equipment or equipment components such that a single equipment leak or release has emissions that exceed the emissions calculated for that source using applicable methods in 40 CFR 98.233(a) through (h), (j) through (s), (w), (x), (dd), or (ee) by the threshold in 40 CFR 98.233(y)(1)(ii). Other large release events do not include blowdowns for which emissions are calculated according to the provisions in 40 CFR 98.233(i).

[19] In the 2024 Final GHGRP Rule, the EPA estimated that 188 additional facilities would be subject to subpart W due to the increase in GWP. However, many of these facilities would also report under other subparts, such as subpart C, and for some of these facilities, reported emissions to subpart W will be below the WEC applicable threshold of 25,000 metric tons CO_2e.

form of limitations on emissions of methane) and volatile organic compounds (VOCs) for certain new, reconstructed, and modified sources in the oil and natural gas source category (proposed as 40 CFR part 60, subpart OOOOb) (hereafter referred to as ''NSPS OOOOb''), as well as emissions guidelines regulating emissions of methane under CAA section 111(d) for certain existing oil and natural gas sources (proposed as 40 CFR part 60, subpart OOOOc) (hereafter referred to as ''EG OOOOc''). The November 15, 2021 proposal (covering both NSPS OOOOb and EG OOOOc)—which Congress explicitly referred to in section 136(f)(6)—will be referred to hereafter as the ''2021 NSPS/EG Proposal.'' The 2021 NSPS/EG Proposal sought to strengthen standards of performance previously in effect under section 111(b) of the CAA for new, modified and reconstructed oil and natural gas sources, and to establish emissions guidelines under section 111(d) of the CAA for States to follow in developing plans to establish standards of performance for existing oil and natural gas sources.

On December 6, 2022, the EPA issued a supplemental proposal to update, strengthen, and expand upon the 2021 NSPS/EG Proposal (87 FR 74702). This supplemental proposal modified certain standards proposed in the 2021 NSPS/EG Proposal and added proposed requirements for sources not previously covered.[20] Among other things, the supplemental proposal sought to encourage the deployment of innovative and advanced monitoring technologies by establishing more flexible performance requirements than the 2021 NSPS/EG Proposal, and also included provisions to establish a process for certified expert monitoring to identify ''super-emitters'' for prompt mitigation.

On March 8, 2024, the final NSPS OOOOb and EG OOOOc rules (hereafter referred to as the ''2024 Final NSPS/EG'') were published in the **Federal Register** (89 FR 16820). First, the EPA finalized NSPS OOOOb regulating methane and VOCs emissions from new, modified, and reconstructed sources in the Crude Oil and Natural Gas source category pursuant to CAA section 111(b)(1)(B). Second, the EPA finalized emission guidelines, including presumptive standards in EG OOOOc that would limit methane emissions from existing sources in the Crude Oil and Natural Gas source category, as well as requirements under the CAA section 111(d) for States to follow in developing, submitting, and implementing State plans to establish performance standards.[21] Among other things, the final rule strengthens standards, phases out routine flaring of natural gas from new oil wells, requires all well sites and compressor stations to be routinely monitored for leaks, requires storage vessels to reduce emissions by 95 percent, sets standards for certain facilities that have not been previously regulated, and provides companies greater flexibility to use innovative and cost-effective methane detection technologies. It will also utilize data collected by certified third parties to identify and address ''super emitting'' sources and eliminate or minimize emissions from common pieces of equipment used in oil and gas operations such as process controllers, pumps, and storage tanks.

Congress envisioned a strong connection between EPA programs for methane emissions from oil and gas systems. The 2024 Final NSPS/EG is relevant to this WEC final rule in two ways: first, implementation of the CAA section 111(b) and (d) standards will help drive methane emissions reductions that can help many facilities achieve methane emission levels that are below the thresholds specified by Congress (described in section II.B. of this preamble), thereby enabling applicable facilities to reduce or avoid charges under the WEC program; and second, compliance with the CAA section 111(b) and (d) standards may (if certain criteria are met) exempt facilities from the WEC under the regulatory compliance exemption outlined at CAA section 136(f)(6) (discussed in section II.D.2. of this preamble). The WEC thus serves as an important bridge and backstop to the full implementation of the 2024 Final NSPS/EG, and an additional incentive thereafter to continue to comply with the CAA section 111 rules.

In addition to creating the WEC and directing the EPA to revise subpart W, Congress also established the MERP under section 136 of the CAA to provide financial and technical assistance to reduce methane emissions from the oil and gas sector. To implement this program, the EPA is partnering with the U.S. Department of Energy (DOE) to provide up to $1.36 billion in financial and technical assistance. On December 15, 2023, the EPA and the DOE announced the award of $350 million in formula grant funding to 14 States help measure and reduce methane emissions, supporting industry efforts to cut methane emissions from low-producing, marginal conventional wells on non-Federal lands and support environmental restoration of well sites. On June 21, 2024, the EPA and the DOE announced the availability of $850 million in federal funding to help measure and reduce methane emissions from the oil and gas sectors. This competitive solicitation will enable a broad range of eligible U.S. entities to apply, including industry, academia, non-governmental organizations, Tribes, State and local government, and others. As designed by Congress, these resources and incentives were intended to complement the regulatory programs and to help facilitate the transition to a more efficient petroleum and natural gas industry.

D. Legal Authority

In August 2022, the IRA was signed into law. Section 60113 of the IRA amended the CAA by adding section 136, and the EPA is finalizing this rulemaking under the authority provided by that section. As noted in section I.B. of this preamble, the IRA added CAA section 136, ''Methane Emissions and Waste Reduction Incentive Program for Petroleum and Natural Gas Systems,'' which requires that the EPA impose and collect an annual specified charge on methane emissions that exceed an applicable waste emissions threshold from an owner or operator of an applicable facility that reports more than 25,000 mt CO_2e of greenhouse gases emitted per year pursuant to subpart W of the GHGRP. Under CAA section 136, an ''applicable facility'' is a facility within nine of the ten industry segments subject to subpart W, as currently defined in 40 CFR 98.230 (excluding natural gas distribution).

The EPA is also finalizing elements of this rulemaking under its authority provided in CAA section 114. CAA section 114(a)(1) authorizes the Administrator to require emissions sources, persons subject to the CAA, or persons whom the Administrator believes may have necessary information to monitor and report emissions and provide other information the Administrator requests for the purposes of carrying out any provision of the CAA (except for a provision of title II with respect to

[20] Examples of some of the changes the 2022 Supplemental proposed included proposed requirements that all well sites are monitored for leaks, requirements to ensure the proper operation of flares, zero-emission requirement for process controllers and pumps, standards for dry seal centrifugal compressors, and a super-emitter response program, among other things.

[21] In this action, the EPA also finalized several related actions stemming from the joint resolution of Congress, adopted on June 30, 2021, under the CRA, disapproving the 2020 Policy Rule, and also finalized a protocol under the general provisions for use of Optical Gas Imaging.

manufacturers of new motor vehicles or new motor vehicle engines). Thus, CAA section 114(a)(1) additionally provides the EPA authority to require the information in this final rule because the information is relevant for carrying out CAA section 136.

The Administrator has determined that this action is subject to the provisions of section 307(d) of the CAA. Section 307(d) contains a set of procedures relating to the issuance and review of certain CAA rules.

In addition, pursuant to sections 114, 301, and 307 of the CAA, the EPA is publishing final confidentiality determinations for the new data elements required by this final regulation.

II. Procedures for Facilitating Compliance, Including Netting and Exemptions

A. Final Definitions To Support WEC Implementation and Associated Revisions to Part 98, Subpart A

In accordance with CAA section 136(d), applicable facilities under part 99 are those facilities within certain industry segments as defined under part 98, subpart W. To support implementation of the WEC, we are finalizing several definitions within the general provisions of 40 CFR 99.2 which follow from the statutory text.

1. Applicable Facility and WEC Applicable Facility Definitions

The EPA received comments expressing support for the proposed definitions for ''applicable facility'' and ''WEC applicable facility.'' Certain commenters disagreed that the statutory text requires alignment of the definition of an ''applicable facility'' in the proposed WEC rule with the subpart W facility definitions, and stated that CAA section 136(d) leaves room for interpretation as to the definition of an ''applicable facility.'' After consideration of comments received, the EPA is finalizing as proposed a definition of ''applicable facility'' as specified by the statute to mean a facility within one or more of the following industry segments: onshore petroleum and natural gas production, offshore petroleum and natural gas production, onshore petroleum and natural gas gathering and boosting, onshore natural gas processing, onshore natural gas transmission compression, onshore natural gas transmission pipeline, underground natural gas storage, Liquified Natural Gas (LNG) import and export equipment, or LNG storage, as those industry segments are defined in 40 CFR 98.230 of subpart W.[22] The EPA does not agree with the commenters that the statute leaves open for interpretation the meaning of ''applicable facility;'' rather, the agency concludes that the statute expressly defines ''applicable facility'' in the same manner as the term ''facility'' has long been defined under 40 CFR part 98 and applied to the nine industry segments listed in CAA section 136(d). In addition to reflecting the plain language of the statutory text, aligning the definition of an applicable facility with the definitions of a facility within the industry segments in subpart W, for each corresponding industry segment, simplifies implementation and reduces burden on industry and the EPA. The approach supported by some commenters would have established different definitions of ''facility'' for subpart W and WEC, requiring the EPA to establish new reporting requirements for certain industry segments and requiring industry to calculate and report emissions for the same equipment twice. The EPA also received comments requesting that we clearly state that oil and gas producers generating less than 25,000 tons of CO_2 equivalent are not required to submit documentation to the regulatory body proving that the emissions threshold was not exceeded. After consideration of comments, the EPA is finalizing with clarifying revisions a definition of ''WEC applicable facility'' in 40 CFR 99.2, which means an applicable facility, as defined in this section, for which the owner(s) or operator(s) of a part 98 reporting facility was required to report GHG emissions under part 98, subpart W of this chapter of more than 25,000 metric tons CO_2e for the reporting year. This final definition clarifies that the obligation for reporting under part 98 may apply to multiple owners or operators for a facility, that the status as a WEC applicable facility is based upon reporting in compliance with part 98, and that whether or not a part 98 reporting facility is a WEC applicable facility is based upon a specific reporting year. This definition is taken from the threshold set in the statute. Only WEC applicable facilities are required to report under part 99.

A single reporting facility under part 98, subpart W, typically consists of operations within a single petroleum and natural gas industry segment. However, a single reporting facility may represent operations in two or more industry segments. Facilities that may potentially have operations representing multiple industry segments and would report as the same facility if co-located include facilities that have co-located operations in the onshore natural gas processing, onshore natural gas transmission compression, underground natural gas storage, LNG import and export equipment, and LNG storage industry segments. We are finalizing as proposed that such operations would be considered a single WEC applicable facility under part 99.

In cases where a subpart W facility reports under two or more of the industry segments listed in the previous paragraph, the EPA is finalizing as proposed that the 25,000 mt CO_2e threshold is evaluated based on the total facility GHG emissions reported to subpart W across all the relevant industry segments (*i.e.,* the facility's total subpart W GHGs). As discussed in section II.C.1. of this preamble, the waste emissions threshold is the facility-specific quantity of annual emissions, based upon the relevant intensity thresholds specified by Congress, above which the EPA must impose and collect the WEC. For the purposes of determining the waste emissions threshold for a WEC applicable facility that operates within multiple industry segments, the EPA is finalizing as proposed that each industry segment is assessed separately (*i.e.,* using industry segment-specific throughput and methane intensity threshold) and then summed together to determine the waste emissions threshold for the facility. The EPA is finalizing as proposed that this approach is used in all cases where a WEC applicable facility contains equipment in multiple subpart W industry segments.

The EPA considered an alternative definition of WEC applicable facility as it applies to subpart W facilities that report under two or more industry segments. This alternative approach would have assessed these facilities against the 25,000 mt CO_2e applicability threshold using the CO_2e reported under subpart W for each individual segment at the facility rather than the total facility subpart W CO_2e reported across all segments. CAA section 136(d) defines an applicable facility as ''a facility within the [nine] industry segments'' subject to the WEC and does not specify that an applicable facility is in one and only one industry segment. The EPA understands this to mean that an applicable facility constitutes an entire subpart W facility, including those that report under more than one segment. Thus, based on the statutory text, the EPA is finalizing as proposed to assess WEC applicability based on the entire subpart W facility's emissions that are reported under subpart W.

[22] *See* 42 U.S.C. 7436(d).

Based on subpart W data for the 2022 reporting year, no more than two dozen facilities report data for multiple segments, and when total subpart W CO_2e is summed across all segments at these facilities, almost all of these facilities remain below the 25,000 mt CO_2e threshold. Historic data also show that the industry segments (onshore natural gas processing, onshore natural gas transmission compression, and underground natural gas storage) located at these facilities that report data for multiple segments generally have methane emissions below the waste emissions thresholds. The final approach of using total subpart W facility CO_2e for determining WEC applicability therefore should not result in a significant number of facilities being subject to the WEC compared to an approach that assessed applicability using subpart W CO_2e for each individual industry segment at a facility. Based on historic data, the EPA does not expect the very small number of facilities with operations in multiple subpart W segments that could be subject to the WEC under the final approach to experience a substantially different financial impact than they would have under this alternative approach.

2. Facility Applicable Emissions, WEC Applicable Emissions, Net WEC Emissions, and Net WEC Emissions After Transfers Definitions

We are finalizing as proposed a definition for ''facility applicable emissions'' in 40 CFR 99.2 which means the annual methane emissions from a WEC applicable facility that are either equal to, below, or exceeding the waste emissions threshold for the facility prior to consideration of any applicable exemptions. We are also finalizing as proposed a definition for ''WEC applicable emissions'' in 40 CFR 99.2, which means the annual methane emissions from a WEC applicable facility after consideration of any applicable exemptions. The calculation methodology for WEC applicable emissions is addressed in section II.C.3. of this preamble.

The EPA is also finalizing definitions of ''net WEC emissions'' and ''net WEC emissions after transfers'' to clarify the total amount of methane that is subject to charge and to account for revisions from the proposal to netting requirements. The EPA is finalizing a definition of ''net WEC emissions'' in 40 CFR 99.2 to mean the sum of WEC applicable emissions from facilities with the same WEC obligated party, as calculated pursuant to 40 CFR 99.22 using equation B–8. If a WEC obligated party only has one WEC applicable facility, net WEC emissions are equal to that facility's WEC applicable emissions. The EPA is finalizing a definition of ''net WEC emissions after transfers'' to mean the total quantity of methane emissions subject to charge for a WEC obligated party. If the WEC obligated party is not eligible to, or elects not to, transfer or receive negative net WEC emissions pursuant to 40 CFR 99.23, the net WEC emissions after transfers are determined pursuant to 40 CFR 99.22 and are equal to net WEC emissions. If the WEC obligated party transfers or receives negative net WEC emissions pursuant to 40 CFR 99.23, the net WEC emissions after transfers reflect such transfers subject to the requirements of 40 CFR 99.23. If a WEC obligated party does not participate in any transfer of net WEC emissions with other WEC obligated parties with a common parent company, that WEC obligated party's net WEC emissions after transfers are equal to its net WEC emissions.

3. WEC Obligated Party Definition

We are finalizing the definitions of ''WEC obligated party'' and ''WEC applicable facility''. The EPA received comment requesting that we recognize the differences between ownership and operatorship as well as the complexity of ownership and operator agreements, including acknowledging the dynamics of these across basins, facilities, and individual wells. After consideration of the comments received, and in addition to finalizing the definition for WEC applicable facility discussed earlier in this section, we are finalizing with revision a definition for the term ''WEC obligated party'' in 40 CFR 99.2. As finalized, the term WEC obligated party refers to the owner or operator of one or more WEC applicable facilities. The WEC obligated party of a WEC applicable facility must be one of the owners or operators of that facility under subpart W, as reported under 40 CFR 98.3(c)(14). We note that although there are differences in the common definitions of ownership and operatorship and there may be complex agreements between owners and operators, for the purposes of subpart W, there are specific definitions for owner(s) and operators(s) in subpart A and subpart W of part 98, with some segments, such as onshore natural gas production, having unique definitions.[23] We are finalizing the term ''WEC obligated Party'' to be consistent with these definitions. For WEC applicable facilities that have more than one owner or operator, we are finalizing that the WEC obligated party is an owner or operator selected by a binding agreement among the owners and operators of the WEC applicable facility. The EPA anticipates that such an agreement would be similar to those used in carrying out 40 CFR 98.4(b) under the GHGRP. We are finalizing as proposed that the WEC obligated party must be one of the owners or operators of the WEC applicable facility as of December 31 of the reporting year, with one exception. This exception is related to the circumstances in which a WEC applicable facility is involved in a transaction(s) subsequent to the end of the reporting year (*i.e.,* between January 1 and December 31 of the year following the reporting year) that results in all of the owners or operators (of the facility as of December 31 of the reporting year) ceasing to exist prior to the WEC filing date. In this case, the WEC obligated party would be one of the owner(s) or operator(s) that acquired the facility as a result of the transaction(s) to be selected by mutual agreement among all of the acquiring owner(s) or operator(s). This revision is necessary to avoid cases in which there is no eligible owner or operator to serve as the WEC obligated party. We note that in case of transactions where only one owner or operator ceases to exist and that entity was the WEC obligated party, the remaining owners or operators of the WEC applicable facility that were the owners or operators as of December 31 of the reporting year would need to select a new WEC obligated party. Additionally, we have finalized clarifying language in the definition of WEC obligated party to make clear that each WEC applicable facility must have only one WEC obligated party for a reporting year. This requirement was included in the proposed rule under proposed 40 CFR 99.4, but we are further clarifying by making it explicit in the definition of WEC obligated party. The EPA notes that WEC obligated parties may only net for the applicable

[23] For example, 40 CFR 98.238 defines *Facility with respect to onshore petroleum and natural gas production for purposes of reporting under this subpart and for the corresponding subpart A requirements* as all petroleum or natural gas equipment on a single well-pad or associated with a single well-pad and CO_2 EOR operations that are under common ownership or common control including leased, rented, or contracted activities by an onshore petroleum and natural gas production owner or operator and that are located in a single hydrocarbon basin as defined in 40 CFR 98.238. Where a person or entity owns or operates more than one well in a basin, then all onshore petroleum and natural gas production equipment associated with all wells that the person or entity owns or operates in the basin would be considered one facility.

reporting year for which they are reporting; in other words, emissions occurring before December 31 should not be netted with emissions occurring after December 31.

In addition to establishing the entity regulated under the WEC, the EPA is finalizing the temporal bounds for which a WEC obligated party is responsible for its facilities and their associated emissions, as well as establishing obligations for transacted assets. For the purposes of submitting the WEC filing, we are finalizing that the WEC obligated party's (including through binding agreement) WEC applicable facilities are the WEC applicable facilities for which it is the owner or operator, as of December 31 of each reporting year. Under the final rule, the WEC obligated party is responsible for any WEC applicable emissions from facilities for which it was the facility owner or operator as of December 31 of the corresponding reporting year. The EPA recognizes that facilities may be acquired or divested at any time in a given reporting year, and that under the final rule the year-end WEC obligated party, or the WEC obligated party selected by mutual agreement among all of the acquiring owner(s) or operator(s) if the existing WEC obligated party ceases to exist, would be responsible for data and any corresponding WEC obligation for the entire reporting year. The EPA believes that this approach is both reasonable and necessary for implementation of the WEC program. Subpart W data reporting uses the same approach for circumstances where facilities are acquired or divested during a given reporting year; the facility owner or operator as of December 31 is responsible for reporting emissions for the entire year. Because the subpart W data is inextricably linked to the WEC filing, the EPA assessed that it would complicate and potentially be inappropriate to have different parties be liable for the legal obligations of the same facility under each regulation. Specifically, different entities being legally liable for the same facility under subpart W and the WEC program could lead to challenges for WEC filings and associated data verification, increase industry burden by requiring significant coordination between different companies, and lead to situations where separate entities are responsible for reporting subpart W data and paying any charge calculated from that data. The EPA therefore believes it would be neither practical nor accurate for the reporting responsibility and potential WEC obligation for a single facility to be split among multiple WEC obligated parties in such circumstances.

The EPA also recognizes that a facility's owner or operator may change between December 31 of a given reporting year and August 31 of the following year, when WEC filings are due, or later in the year and prior to when corrections may occur. In such situations, under the final rule the WEC obligated party associated with a facility as of December 31 of a given reporting year is responsible for accounting for that facility in its WEC filing and is responsible for any WEC obligation associated with that facility for that reporting year. The new owner or operator after the transaction would only become the new WEC obligated party starting with the year of purchase, assuming they are still the owner or operator as of December 31 of the year of the transaction. The EPA received several comments related to the acquiring of a WEC obligated party by another WEC obligated party prior to the WEC filing such that the WEC obligated party as of December 31 for the applicable reporting year ceases to exist. One commenter stated that the proposal was ambiguous as to whether companies that purchase WEC applicable facilities (and thus would become WEC obligated parties, as of December 31 of the reporting year) would be responsible for retaining records, and all associated obligations, that were generated by the previous owners or operators of those facilities. Another commenter suggested that the responsibility for reporting emissions under the WEC should remain with the party responsible for recordkeeping for a facility at the time the emissions occur at the facility, rather than the time reporting would be required. After consideration of the comments received, we are further clarifying from proposal that under this final rule, in cases where a facility has a single owner or operator and that WEC obligated party is acquired by single WEC obligated party such that the WEC obligated party as of December 31 for the applicable reporting year ceases to exist, the acquiring WEC obligated party assumes responsibility for the acquired WEC obligated party's WEC applicable facilities for that reporting year. In cases where a facility has a single owner or operator and that WEC obligated party is acquired by multiple owners or operators following a transaction that results in the WEC obligated party as of December 31 for the applicable reporting year to no longer exist, the post-transaction owners or operators must select among themselves by binding agreement which owner or operator will be the facility's WEC obligated party for that reporting year.

4. Gathering and Boosting Related Definitions

The EPA is revising the definitions for ''gathering and boosting system'' and ''gathering and boosting system owner or operator'' under 40 CFR part 99. The EPA received comments indicated that proposed definitions of ''gathering and boosting system'' and ''gathering and boosting system owner or operator'' under part 99 do not match the revisions under subpart W. The EPA agrees these definitions should align with subpart W. Therefore, the EPA is revising from proposal the definition for ''gathering and boosting system'' to mean a single network of pipelines, compressors and process equipment, including equipment to perform natural gas compression, dehydration, and acid gas removal, that has one or more connection points to gas and oil production or one or more other gathering and boosting systems and a downstream endpoint, typically a gas processing plant, transmission pipeline, LDC pipeline, or other gathering and boosting system. Additionally, the EPA is revising from proposal the definition of ''gathering and boosting system owner or operator'' to mean any person that holds a contract in which they agree to transport petroleum or natural gas from one or more onshore petroleum and natural gas production wells or one or more other gathering and boosting systems to a downstream endpoint, typically a natural gas processing facility, another gathering and boosting system, a natural gas transmission pipeline, or a distribution pipeline, or any person responsible for custody of the petroleum or natural gas transported.

5. Revisions to 40 CFR Part 98, Subpart A Related to WEC Obligated Party Definition

As part of these final amendments, the EPA is also finalizing revisions to 40 CFR part 98, subpart A, for all facilities that are subject to the GHGRP and report under subpart W. On August 1, 2023 (88 FR 50282), the EPA proposed revisions to 40 CFR 98.4 to address changes in the owner or operator of a facility in the four industry segments in subpart W (Petroleum and Natural Gas Systems) that have unique definitions of facility. The proposed provisions would define which owner or operator is responsible for current and future reporting years' reports and clarify how to determine responsibility for revisions to annual reports for reporting years prior to

owner or operator changes for specific industry segments in subpart W, beginning with RY2025 reports. In the 2024 Subpart W Final Rule, the EPA finalized the provisions regarding current and future reporting years' reports in 40 CFR 98.4(n). However, the EPA did not take action on proposed amendments related to responsibility for revisions to annual reports for reporting years prior to owner or operator changes for specific industry segments in subpart W and indicated the intent to consider those proposed revisions in coordination with the 2024 WEC rulemaking and take action, if finalized, on these requirements at the same time.

The current regulations at 40 CFR 98.4(h), which cover changes in owners and operators, absent the changes being finalized in this rulemaking, state that in the event an owner or operator of the facility or supplier is not included in the list of owners and operators in the certificate of representation under this section for the facility or supplier, such owner or operator shall be deemed to be subject to and bound by the certificate of representation, the representations, actions, inactions, and submissions of the designated representative and any alternate designated representative of the facility or supplier, as if the owner or operator were included in such list. 40 CFR 98.4(h) goes on to additionally state that within 90 days after any change in owners or operators of the facility or supplier (including the addition of a new owner or operator), the designated representative or any alternate designated representative shall submit a certificate of representation that is complete under this section except that such list shall be amended to reflect the change. Thus the owners and operators of facilities are bound to the actions, inactions and submissions of the designated representative of the facility when they become an owner or operator of the facility, as defined in 40 CFR part 98. The current regulations at 40 CFR 98.4(g), absent the changes being finalized in this rulemaking, state that if there is a change in the designated representative or alternate designated representative, then all representations, actions, inactions, and submissions by the previous designated representative or the previous alternate designated representative of the facility are binding on the new designated representative and the owners and operators of the facility or supplier. Thus, any new owners and operators are bound to the actions and submissions of the previous designated representatives, including historical submissions for the facility prior to becoming an owner or operator. However, the responsibility for reporting under part 98 could potentially be inconsistent with the WEC obligated party responsible for reporting under 40 CFR part 99, as described earlier in this section.

Many commenters recommended that no new owner should be responsible for the WEC generated by the prior owner and that emissions reporting should remain the responsibility of the owner or operator who generated the reportable emissions. The EPA believes that preparation and submission of multiple reports by different entities related to the same emission sources would lead to duplicative burden and raise the potential for inconsistencies in reported data. After consideration of comments received, and in alignment with 40 CFR part 99, in this final rule, the EPA is making changes to the regulations for facilities that report under subpart W to specify that, with two exceptions, the owner(s) and operator(s) as of December 31 of the reporting year, will remain responsible for that reporting year, even after sale of the facility. These changes are intended to ensure that the entity responsible for subpart W data for specific reporting years under various transaction scenarios is aligned with the WEC obligated party responsible for WEC filing and any WEC obligation in those years. The EPA is also clarifying that for the first transaction after January 1, 2025, the sellers will also remain responsible for historic reporting, (*i.e.,* reporting years prior to 2024). Specifically, in this final rule, the EPA is adding 40 CFR 98.4(o), which applies in lieu of the last sentence of 40 CFR 98.4(g) for facilities that report under subpart W, starting with transactions that occur on or after January 1, 2025, to address responsibility for reporting years prior to a year in which there is a change in the owners and operators. According to the new paragraph, when there is a change in the owner(s) or operator(s) of a subpart W facility on or after the effective date of this final rule that involve the owner(s) or operator(s) as of December 31 of the year prior to the year of the transaction, the owners and operators as of December 31 of the year prior to the year of the transaction, *i.e.,* the sellers, must select a historic reporting representative who will be responsible after the transaction(s) for that reporting year and if it is the first transaction after January 1, 2025, for all prior years. In these cases, the owner(s) and operator(s) of the facility as of December 31 of the year prior to the year in which the facility is sold are bound to the actions of the historic reporting representative and any previous designated representative or historic reporting representative for the relevant years. The historic reporting representative is selected by an agreement binding on the selling owner(s) and operator(s), unless the owner(s) or operator(s) selling the facility ceases to exist and/or is acquired as a result of a transaction(s), in which case all of the owners or operators involved in that transaction shall select at the time of sale a historic reporting representative by an agreement binding on each of the owners and operators involved in the transaction. The second exception is that for changes in owners or operators that occur after December 31, 2024 and before the effective date of this final rule that involve the owner(s) and operator(s) as of December 31, 2024, the buying and selling owners and operators must jointly select a historic reporting representative. In these cases, the owners and operators of the facility as of December 31 of the year prior to the year in which the facility is sold and the acquiring owners and operators are bound to the actions of the historic representative. In any of these scenarios, it is the EPA's intent for this person to be the WEC obligated party designated representative or represent the WEC obligated party corresponding to the applicable part 98 reporting year, for a facility that is a WEC applicable facility as defined in 40 CFR 99.2, so that there is alignment between WEC obligated parties and the owner(s) and operator(s) responsible for reporting for facilities that report under subpart W while also clarifying historical reporting requirements. The final provisions of 40 CFR 98.4(o) also specify that for cases where an entire facility is merged or acquired by a new owner(s) or operator(s), the seller must notify the EPA of the date of the last transaction resulting in the change to the owner(s) or operator(s) and that the acquiring owner or operator must notify the EPA of the e-GGRT ID number of the facility acquired in transaction. This additional information is necessary to determine when a historical reporting representative is required and maintain the ability to verify year-to-year changes in annual emissions for facilities post-transaction.

The final provisions of 40 CFR 98.4(o)(6) specify the reporting years for which a historic reporting representative is responsible. Based on the effective date of these amendments, these provisions will first apply to transactions that occur in calendar year 2025. For the first transaction that occur after January 1, 2025, the historic

reporting representative is responsible for submissions (if they have not occurred prior to the transaction) and revisions to annual GHG reports under 40 CFR 98.3(h) for all reporting years prior to the reporting year in which the transaction occurred. For subsequent transactions, the owners or operators of a facility that reports under subpart W as of December 31 of each reporting year are responsible for reporting and revisions to annual GHG reports corresponding to that reporting year. We note that these revisions do not impact how reporting responsibility for years prior to reporting year 2024 transfer upon a change in ownership prior to the effective date of this final rule. The existing provisions of subpart A (specifically 40 CFR 98.4(g)) continue to apply, so that the designated representative or alternate designated representative or historic reporting representative, as applicable, of the facility for reporting year 2024 maintain responsibility for the submissions of the previous designated representative and any necessary revisions to reports for reporting year 2024 and earlier. The final provisions of 40 CFR 98.4(o)(6) also specify that if the responsible owner(s) or operators(s) are acquired such that the owner(s) or operator(s) cease to exist as a result of a transaction, the acquiring owners would become responsible for submission (if not already submitted before the transaction) and any revisions to annual reports for the reporting year prior to the transaction and, if applicable, annual GHG reports under 40 CFR 98.3(h) for additional reporting years prior to the transaction as specified in paragraphs 40 CFR 98.4(o)(6)(i) and (ii).

6. Additional Definitions To Support WEC Implementation

The EPA is adding definitions in 40 CFR 99.2 for ''parent company,'' ''United States parent company,'' ''qualified professional engineer,'' and ''well identification (ID) number,'' which were not included as proposed part 99 regulatory definitions in the proposed rule. Commenters stated that definitions are necessary to implement CAA section 136 and create regulatory harmony. After consideration of comments, the EPA believes it will provide clarity to add definitions for these terms to implement the WEC. In alignment with part 98 subpart A, we are finalizing the definition of ''United States parent company'' to mean the highest-level United States company, as reported under 40 CFR 98.3 for a WEC applicable facility, with an ownership interest in the facility as of December 31 of the year for which data are being reported. Additionally, for ease of understanding, the EPA is finalizing the definition of ''parent company'' to be the United States parent company.

We are also finalizing a definition for the term ''Administrator'' to mean the Administrator of the United States Environmental Protection Agency or the Administrator's authorized representative. This definition is aligned with the definition of the same term in part 98 subpart A. We proposed to define the term ''e-GGRT ID number'' as the identification number assigned to a facility by the EPA's electronic Greenhouse Gas Reporting Tool for submission of the facility's part 98 report. We are instead finalizing the defined term as ''Facility ID number'' for consistency of terminology in the final rule and with revised definition referring to the Greenhouse Gas Reporting Program where the proposal referred to the associated reporting tool and omitting the reference to submission of reports as these identifiers are not used solely for report submission.

The EPA also received comments stating that the proposed rule did not include sufficient detail regarding the certification criteria for third-party auditors. After consideration of comments and as discussed in section III.B.2., the EPA is requiring that auditors be qualified professional engineers, and is finalizing the definition for ''qualified professional engineer,'' in alignment with the definition of ''qualified professional engineer'' in NSPS OOOOb, to mean an individual who is licensed by a State as a Professional Engineer to practice in one or more disciplines of engineering and who is qualified by education, technical knowledge, and experience to review and interpret the records required under 40 CFR 99. Additionally, to align with the definition under part 98 subpart W, we are also finalizing the definition for ''well ID number,'' to mean the unique and permanent identification number assigned to a petroleum or natural gas well. Under the final definition, if the well has been assigned a U.S. Well Number, the well ID number required in this subpart is the US Well Number. Under the final definition, if a U.S. Well Number has not been assigned to the well, the well ID number is the identifier established by the well's permitting authority.

B. Common Ownership or Control for Netting of Emissions

One of the important flexibilities created by Congress in section 136(f)(4) allows for facilities to reduce their overall WEC payments by transferring emissions from facilities that are below the waste emissions threshold to facilities that have emissions that are above the waste emissions threshold (otherwise known as ''netting''). The EPA proposed that the owner or operator of the facility should be both the WEC obligated party (*i.e.,* the entity responsible for paying the WEC obligation) and the highest-level organization across which this netting should be allowed. The EPA received numerous comments arguing that netting should be allowed at the parent company level to maximize flexibility in implementation. After careful consideration of the comments and further review of the statutory language, the EPA is finalizing provisions that increase access to the netting provisions by allowing for the netting of emissions across facilities that are under common ownership or control of a parent company, rather than an owner or operator as proposed. However, the EPA is finalizing as proposed that the owner or operator is the WEC obligated party, thereby making a distinction in this final rule that the WEC obligated party and the corporate level at which netting may occur do not have to be one and the same. Although the EPA is allowing for additional access to netting in this final rule by allowing netting to occur at the parent company level, the EPA is also providing more specificity on the parameters and conditions under which this netting may occur. Additionally, the EPA is finalizing requirements for the treatment of net WEC emissions used in netting that are subsequently revised or invalidated.

1. EPA Interpretation To Implement ''Common Ownership or Control'' for the Purposes of Part 99

CAA section 136(c), which establishes the methane charge, states that ''the Administrator shall impose and collect a charge on methane emissions that exceed an applicable waste emissions threshold under subsection (f) from an owner or operator of an applicable facility. . .'' Congress directly requires that a facility owner or operator, which has a distinct and established legal meaning, be the entity on which the WEC is imposed and from which a charge is collected. Therefore, the EPA is finalizing its determination that the WEC obligated party for a particular applicable facility shall be the owner or operator of that applicable facility; or if more than one owner or operator exists, the owners or operators of that facility must designate an entity to be the WEC obligated party. The netting provision at CAA section 136(f)(4), meanwhile, allows WEC applicable facilities under

''common ownership or control'' to net ''emissions by reducing the total obligation to account for facility emissions levels that are below the applicable thresholds within and across all applicable segments'' listed in section 136(d) and as defined in subpart W. In this final rulemaking, the EPA is interpreting this language to allow netting at the parent company level. Notably, sections 136(c) and 136(f)(4) employ different language—while 136(c), which establishes the WEC obligated party, refers specifically to an ''owner or operator'' of an applicable facility, section 136(f)(4) refers to facilities ''under common ownership or control.'' The statute therefore requires that the facility owner or operator must be the WEC obligated party but provides for netting at the parent company level. The final requirements for netting are designed to align with both of these statutory directives. In this section, the EPA details the overall approach for application of common ownership or control and the justification for use of a facility's owner or operator as the WEC obligated party with netting based on common parent company.

The EPA proposed that netting would be limited to the WEC obligated party level. That is, the owner or operator would be both the WEC obligated party and the highest-level entity across which emissions could be netted. We received comments on the proposed use of the owner or operator as the highest-level entity across which facilities could net their emissions. Certain commenters disagreed with the proposed interpretation to define ''common ownership or control'' at the owner or operator level and stated that a parent company approach would not only reflect Congressional intent but would also align with legal precedent and the EPA's application of ''common ownership or control'' under other programs. These commenters also stated that a parent company approach would better incentivize methane emissions reductions, as parent companies could more effectively allocate resources across their operations for methane mitigation—and would have an incentive to do so if netting were allowed at the parent company level. Other commenters were supportive of the proposed approach and believed it was aligned with the statutory text. After consideration of comments received, the EPA is finalizing revisions from the proposed approach such that the facility owner or operator remains the WEC obligated party, but netting is allowed across owners or operators with the same parent company.

The EPA interprets the netting provision at CAA section 136(f)(4) to mean that amongst WEC obligated parties with a common parent company, WEC obligated parties with metric tons of methane below the waste emissions thresholds (*i.e.,* the difference between emissions equal to the waste emissions threshold and reported emissions) may transfer ''negative net WEC emissions'' to one or more WEC obligated parties with facilities with metric tons of methane emissions that exceed the waste emissions thresholds (*i.e.,* positive net WEC emissions).[24] For the purposes of establishing common ownership or control under CAA section 136(f)(4), the EPA is finalizing a definition of ''WEC obligated party'' in 40 CFR 99.2. The EPA is finalizing that each WEC applicable facility be associated with a single WEC obligated party (though each WEC obligated party may be associated with multiple WEC applicable facilities), which is reported under the requirements at 40 CFR 99.7.

As discussed in section II.A. of this preamble, the EPA is finalizing the definition of ''WEC obligated party'' to mean the WEC applicable facility's ''owner or operator'' as defined in 40 CFR 99.2 for the applicable industry segment as of December 31 of the reporting year or that became an owner or operator of the WEC applicable facility in a transaction occurring subsequent to the end of the reporting year (*i.e.,* between January 1 and December 31 of the year following the reporting year) that resulted in the owner or operator of the facility as of December 31 of the reporting year ceasing to exist. For WEC applicable facilities with more than one owner and/or operator, the WEC obligated party must be selected by binding agreement following the provisions of 40 CFR 99.4. Each WEC applicable facility must have only one WEC obligated party for any given reporting year. WEC obligated parties may only net for the applicable reporting year for which they are reporting. The EPA is finalizing definitions for owner or operator that are applicable to the onshore petroleum and natural gas production, offshore petroleum and natural gas production, onshore petroleum and natural gas gathering and boosting, onshore natural gas processing, onshore natural gas transmission compression, onshore natural gas transmission, underground natural gas storage, LNG import and export equipment, and LNG storage industry segments at 40 CFR 99.2. These definitions are identical to the corresponding definitions in 40 CFR part 98; that is, the owner or operator (or one of the owners or operators, selected by binding agreement between all existing owners or operators) associated with a subpart W facility as reported under 40 CFR 98.3(c)(14) and included in the relevant COR as directed in 40 CFR 98.4(i)(3) would also be the WEC obligated party for that facility.

In some cases, a WEC applicable facility may have multiple owners and/or operators. In these situations, the EPA is finalizing as proposed a system by which the facility owner or operators must designate one of the owners and/or operators as the WEC obligated party for that facility, as detailed in 40 CFR 99.4. The process for selection of the WEC obligated party at facilities with multiple owners or operators is similar to the approach for selecting a designated representative under 40 CFR part 98. This process requires selection of a single WEC obligated party for the WEC applicable facility by an agreement binding on each of the owners or operators associated with the facility. The final requirements for facilities with multiple owners or operators allocate all facility-level methane emissions below or exceeding the waste emissions thresholds to a single WEC obligated party for each facility.

The EPA proposed that a facility owner or operator would be both the WEC obligated party, and the entity used to define common ownership or control. Comments received by the EPA on the proposed approach focused on the entity used for netting, and did not distinguish between the concepts of the WEC obligated party and the netting entity. Many of these comments focused on the proposed interpretation of common ownership or control rather than the WEC obligated party; though it is likely that commenters assumed that they would be the same entity. In other words, the EPA did not receive comments critical of defining the WEC obligated party as a facility's owner or operator outside the broader discussion of common ownership or control. Instead, commenters supported defining the WEC obligated party as the parent company because they supported the

[24] As further explained in section II.C.3., to calculate the amount by which a WEC applicable facility is below or exceeding the waste emissions threshold, the EPA is finalizing as proposed to use equation B–6 of 40 CFR 99.21(a), in which the facility waste emissions threshold, as determined in 40 CFR 99.20, is subtracted from total methane emissions from the WEC applicable facility. This calculation results in a value of metric tons of methane, the total facility applicable emissions, that is positive for facilities exceeding the waste emissions threshold (''positive net emissions'') and negative for facilities below the waste emissions threshold (''negative net emissions'').

use of netting at the parent company level.

In this final rule, the EPA recognizes that the appropriate corporate level at which netting is allowed need not be the same as the WEC obligated party. The EPA is finalizing the use of facility owner or operator as the WEC obligated party for three reasons. First, the plain text of the statute specifies that an ''owner or operator of an applicable facility'' is the entity on which a charge is imposed and from which a charge is collected. Second, as noted in the proposed rule, designating the owner or operator as the WEC obligated party aligns with the approach used in subpart W of the Greenhouse Gas Reporting Program, under which the facility owner or operator is responsible for reporting the annual emissions which, pursuant to requirements under CAA section 136(c), will be used to calculate the charge under this program. Third, the agency appreciates that a parent company is often a separate legal entity from a facility's owner or operator, which could be a wholly owned subsidiary or company of which a parent company has partial ownership.[25] Depending on the structure of the corporate family and the applicable corporate laws, the liabilities of an owner or operator may not transfer to the parent corporate company, even if that parent company fully owns the owner or operator. Furthermore, while a parent company may have ownership or control over certain aspects of a subsidiary's operations or corporate decisions, it does not necessarily have control over the subsidiary's assets (such as a facility). In light of Congress's specific reference to the ''owner or operator of an applicable facility'' as the entity from which the WEC be imposed and collected, and the limitations on the extent to which parent companies can assume liabilities held by their corporate subsidiaries, the EPA does not believe it is consistent with the statute to define the WEC obligated party as a parent company.

Although the statute expressly requires the EPA to treat the owner or operator of an applicable facility as the WEC obligated party, it does not limit netting solely to facilities belonging to the same owner or operator. Further, based upon our consideration of the public comments, the EPA has concluded that netting amongst WEC obligated parties with the same parent company, rather than at the level of an owner or operator, is best supported by the statutory text. There is no language in CAA section 136(f)(4), or any other part of CAA section 136, that limits the definition of ''common ownership or control'' for the purposes of netting. The proposed approach of limiting netting solely to facilities belonging to the same owner or operator would have represented a narrower interpretation of ''common ownership or control'' than the statute requires, and in many instances reduced the number of ''common'' facilities available for netting relative to a parent company approach. In this case, the complete text 136(f)(4) states that ''in calculating the total emissions charge obligation for facilities under common ownership or control, the Administrator shall allow for the netting of emissions by reducing the total obligation to account for facility emissions levels that are below the applicable thresholds within and across all applicable segments identified in subsection (d).'' The EPA believes that the best reading of this provision would allow for netting at the parent company level, because the statutory text does not put any limitations on the definition of ''common ownership or control.'' Instead, the full text of the provision suggests that the term ''common ownership or control'' should be read broadly in this context because 136(f)(4) directs the EPA to allow for netting ''with and across all applicable segments . . .'' The number of ''common'' facilities will usually be higher when the parent company approach is used, and lower when the owner or operator approach is used—and owners or operators under common ownership or control of a parent company will tend to have operations across more applicable segments; the owner or operator of a facility is less likely to also own or operate facilities in different industry segments. Congress's reference to netting ''within and across'' all applicable segments indicates an intent that netting be available across a broader geographic area, which supports the parent company approach.

Therefore, the EPA is finalizing that netting may occur via transfer of negative net WEC emissions from a WEC obligated party to one or more WEC obligated parties with the same parent company that have positive net emissions, since these WEC obligated parties (*i.e.,* owners or operators) are under common ownership or control. The requirements finalized in this rulemaking define the WEC obligated party at the owner or operator level while allowing for netting to occur across owners or operators with a common parent company. This approach reconciles the statutory language in CAA section 136(c) and 136(f)(4) in a manner that is implementable and provides the EPA with a means to verify netting activities to ensure the integrity of the final WEC rule. The use of parent company for determining ''common ownership or control'' in this final rule is specific to part 99 and the WEC program and does not affect how ''common ownership or control'' is defined under other existing EPA or Federal regulations, or in any way limit how ''common ownership or control'' may be defined in future regulations.

While the EPA is finalizing a regulatory structure that allows for netting to occur across owners or operators with a common parent company, the EPA understands that the control a parent company has over its subsidiaries (*i.e.,* owners or operators) to take action and to participate in netting may vary. Parent/subsidiary relationships are heterogeneous and governed by various corporate law structures and/or other legal constraints that this rulemaking is not intended to impact or alter. Although commenters stated that parent companies have control over subsidiaries and make resource allocations across the subsidiaries, the EPA cannot confirm whether that is true in all cases. This rulemaking allows owners and operators with a common parent company to net emissions, provided such netting is not constrained or prohibited by other rules or laws.

2. Facilities Eligible for the Netting of Emissions

The EPA is finalizing which facilities are eligible to participate in netting, as allowed by CAA section 136(f)(4). We are finalizing netting eligibility criteria based on a facility's total reported subpart W GHG emissions, status in relation to the regulatory compliance exemption, and overall regulated status under the GHGRP. In our final approach to netting, we chose interpretations which are the most consistent with a plain reading of the CAA, were reasonable from a policy perspective, and were the most transparent and straightforward to implement. As described in more detail in the following sections, the final approach establishes that if a facility's emissions are not subject to the WEC, either because the facility is not a WEC applicable facility, or because a WEC applicable facility has zero WEC applicable emissions, as a result of application of one or more eligible exemptions, that facility's emissions

[25] The EPA notes that in some cases, the owner or operator of a facility may be a parent company. In these instances, the WEC obligated party would by default be a parent company.

would not factor into the netting of emissions for a WEC obligated party. In other words, only WEC applicable facilities may net, and only WEC applicable emissions may be netted. As explained further in this section of the preamble, we believe this interpretation is consistent with CAA section 136(f)(4), ''the Administrator shall allow for the netting of emissions by reducing the total obligation to account for facility emissions levels that are below the applicable thresholds within and across all applicable segments identified in subsection (d),'' since the reference to ''applicable thresholds'' and ''applicable segments'', which reflect other subsections under CAA section 136, implies that only WEC applicable emissions should be considered in the netting calculation. We note that for applicable facilities eligible for any exemptions, emissions associated with these exemptions are removed from any emissions exceeding the waste emissions threshold prior to netting calculations.

The WEC proposal explained that certain categories of subpart W facilities are not eligible for netting because they are out of the scope of the WEC program. There are two categories of subpart W facilities that report annually under the GHGRP but may have subpart W emissions less than or equal to 25,000 mt CO_2e. These include subpart W-only facilities that are on the GHGRP offramp due to an emissions level below 25,000 mt CO_2e, and subpart W facilities with total emissions from all GHGRP subparts equal to or exceeding 25,000 mt CO_2e but subpart W emissions less than or equal to 25,000 mt CO_2e. The EPA proposed that these facilities would not be subject to the WEC, would not be WEC applicable facilities, and would not be eligible for netting. The EPA received comments supporting an approach that would allow these facilities to net with facilities under common ownership or control whose subpart W emissions are above 25,000 mt CO_2e (*i.e.,* WEC applicable facilities). Commenters also supported allowing facilities not required to report under subpart W to voluntarily report emissions and include those facilities in netting. In all of these suggested approaches, only those emissions below the waste emissions thresholds would be brought into the netting pool; any additional facilities with subpart W emissions equal to or less than 25,000 mt CO_2e would not increase potential exposure to charge because charges for such facilities are specifically prohibited by the statute. A facility with subpart W emissions equal to or less than 25,000 mt CO_2e would, by statute, not be subject to charge. Other commenters were supportive of the proposed approach to only allow facilities with subpart W emissions greater than 25,000 mt CO_2e to participate in netting. After consideration of comments received, the EPA is finalizing the proposed requirements delineating the types of facilities that are eligible for netting. Sections II.B.2.a–d of this preamble provide detailed information on the final requirements for netting eligibility and the EPA's justification for not expanding netting eligibility.

a. Facilities Required To Report to GHGRP and That Have Subpart W Emissions Greater Than 25,000 Metric Tons of CO_2e

In accordance with CAA section 136(c) and the definition of ''WEC applicable facility'' in 40 CFR 99.2, we are finalizing as proposed that subpart W facilities that have subpart W emissions greater than 25,000 mt CO_2e are eligible for netting, with the exception of those that are receiving the regulatory compliance exemption for the entire year (as discussed in section II.D.2. of this preamble). Facilities that report 25,000 mt CO_2e or less under subpart W are not subject to the WEC, and the EPA is finalizing as proposed that such facilities are not eligible for netting. These types of facilities are discussed in greater detail in section II.B.2.c. of this preamble. The final approach follows what the Agency considers to be the best reading of the plain text of, and the relationship between, CAA sections 136(d), 136(c), and 136(f) (which includes subsections 136(f)(4) and 136(f)(1)–(3)). The final approach also represents a reasonable policy choice in line with the EPA's understanding of Congress's intent that the WEC program constitute a meaningful incentive to reduce methane emissions. Accordingly, the following sections provides an overview of the relevant statutory text, and the corresponding legal basis for the final approach under which only WEC applicable facilities may net, and only WEC applicable emissions may be netted, under CAA section 136(f)(4). This section also explains the policy rationale behind the EPA's final approach.

CAA section 136(d) introduces the nine industry segments within which all subpart W facilities must fall in order to be evaluated for WEC applicability. Importantly, facilities within these segments are ''applicable facilities'', per CAA section 136(d), but they are not necessarily ''WEC applicable facilities'', subject to possible WEC obligation, unless they report over 25,000 mt CO_2e per year under subpart W. CAA section 136(c) clarifies this point. Specifically, CAA section 136(c) requires the Administrator to impose and collect a charge on the owner or operator ''of an applicable facility that reports more than 25,000 metric tons of carbon dioxide equivalent of greenhouse gases emitted per year pursuant to subpart W''. Thus, building upon the CAA section 136(d) definition, CAA section 136(c) establishes that only facilities which both fall within one or more of the nine CAA section 136(d) industry segments *and* report more than 25,000 mt CO_2e under subpart W are subject to the WEC program. For clarity, in this rulemaking the EPA refers to these facilities as ''WEC applicable facilities''.

CAA section 136(f), which is entitled ''Waste Emissions Threshold'', includes a series of subsections under this heading. Subsections 136(f)(1)–(3) illustrate the meaning of ''waste emissions threshold'' in this context and explain that these are actually a series of thresholds which determine when and how to impose a charge on methane emissions from WEC applicable facilities, depending on which industry segment or segments they fall under. Specifically, the nine CAA section 136(d) industry segments are categorized into four groups, and a waste emissions threshold is applied to each of the four. CAA section 136(f)(1) covers offshore and onshore petroleum and natural gas production (industry segments (1) and (2) under CAA section 136(d)), and further divides this category depending on whether or not natural gas is sent to sale: ''With respect to imposing and collecting the charge under subsection (c) for an applicable facility in an industry segment listed in paragraph (1) or (2) of subsection (d), the Administrator shall impose and collect the charge on the reported metric tons of methane emissions from such facility that exceed (A) 0.20 percent of the natural gas sent to sale from such facility; or (B) 10 metric tons of methane per million barrels of oil sent to sale from such facility, if such facility sent no natural gas to sale.'' [26]

CAA sections 136(f)(2) and (3) follow the same model: section 136(f)(2) establishes thresholds for nonproduction petroleum and natural gas systems (industry segments (3), (6), (7), and (8) under section 136(d),[27]) and

[26] 42 U.S.C. at 7436(f)(1).

[27] Specifically: (3) onshore natural gas processing; (6) liquefied natural gas storage; (7) liquefied natural gas import and export equipment; and (8) onshore petroleum and natural gas gathering and boosting.

imposes a charge on ''the reported metric tons of methane emissions that exceed 0.05 percent of the natural gas sent to sale from or through such facility''; [28] and section 136(f)(3) establishes thresholds for natural gas transmission (industry segments (4), (5), and (9)) [29] and imposes a charge on ''the reported metric tons of methane emissions that exceed 0.11 percent of the natural gas sent to sale from or through such facility.'' [30] But each industry-specific threshold is introduced in the same way: ''With respect to *imposing and collecting the charge under subsection (c) for an applicable facility in an industry segment listed* in paragraph (x) of subsection (d), [charges shall be imposed as follows].'' Following this plain text, it is clear that the CAA section 136(f) waste emission thresholds apply *only to WEC applicable facilities*—that is, facilities within one or more of the nine WEC industry segments listed in CAA section 136(d) which emit more than 25,000 mt per year CO_2e under subpart W, and thus may be subject to charge under CAA section 136(c).

Finally, the netting provision itself, CAA section 136(f)(4), states that ''in calculating the total emissions charge obligation for facilities under common ownership or control, the Administrator shall allow for the netting of emissions by reducing the total obligation to account for facility emissions levels that are below the applicable thresholds within and across all applicable segments identified in subsection (d).'' The EPA is finalizing as proposed that this netting provision applies to WEC applicable facilities and WEC applicable emissions only, for three reasons.

First, the EPA believes that under the best reading of the statute, the term ''applicable thresholds'' refers to the waste emission thresholds outlined in CAA section 136(f)(1)–(3). This is important because, the waste emissions thresholds apply *only* to WEC applicable facilities—they determine whether, and how, a charge shall be imposed on methane emissions from a facility which has already been triggered into the WEC program by virtue of its emissions being greater than 25,000 mt per year CO_2e in subpart W. The thresholds do not apply to facilities which emit 25,000 or fewer metric tons per year of CO_2e under subpart W, because under CAA section 136(c), no charge may be imposed or collected on such facilities. Because methane emissions from facilities that emit 25,000 or less metric tons per year of CO_2e under subpart W are not WEC applicable emissions, they cannot be compared to the waste emissions thresholds, and they cannot be considered to fall either above or below these thresholds.

As previously stated, the EPA's conclusion that the term ''applicable thresholds'' in CAA section 136(f)(4) refers to the waste emissions thresholds outlined in CAA section 136(f)(1)–(3) is supported by both the text and structure of the statute. The structure of the statute strongly supports the presumption that CAA section 136(f)(4) refers to netting based on a facility's relationship to the waste emissions thresholds because CAA section 136(f)(4) appears as part of CAA section 136(f), under the ''waste emissions threshold'' heading, and immediately following CAA section 136(f)(1)–(3)'s establishment of the specific waste emissions thresholds for each industry segment. It follows that CAA section 136(f)(4)'s reference to ''applicable thresholds'' refers to these industry segment-specific requirements, and accordingly ''applicable segments'' refers to the industry segments identified in CAA section 136(f)(1)–(3).

The text also strongly supports this interpretation because CAA section 136(f)(4) refers to facility emissions levels that are ''below the *applicable thresholds,*'' plural. The use of the plural, and the use of the term ''applicable,'' both indicate that Congress was referring here to the multiple waste emissions thresholds introduced in CAA sections 136(f)(1) through (3), which specifically and separately apply to WEC applicable facilities within various subsets of industry segments, defined in CAA section 136(d). Again, these separate thresholds *only* apply to WEC applicable facilities, which emit over 25,000 metric tons per year of CO_2e.

In addition to the ''applicable thresholds'' question, the EPA believes that Congress's use of the term ''applicable segments'' in stating that the EPA may ''redu[ce] the total obligation to account for facility emissions levels that are below the applicable thresholds *within and across all applicable segments identified in subsection (d),*'' is significant here. While CAA section 136(d) introduces the nine relevant ''industry segments'' within which all WEC applicable facilities must fall, CAA section 136(f)(4) classifies these segments into four groups, and is the only provision to use the term ''applicable segments.'' CAA section 136(f) establishes a set of requirements determining when and how to impose a charge on those facilities triggered into the program, depending on their industry segment and the amount of methane they emit. It follows that CAA section 136(f)(4)'s reference to ''applicable thresholds'' refers to these four group-specific thresholds, and ''applicable segments'' refers to the nine segments within the four segment groups. In other words, each group of segments constitutes the ''applicable'' segments to their corresponding applicable threshold. This is important, again because the four groups laid out under CAA section 136(f) include only WEC applicable facilities.

Finally, Congress's statement that netting shall be employed ''in calculating the total emissions charge obligation for facilities under common ownership or control'', further indicates that only WEC applicable facilities may be netted. Logic indicates that only WEC applicable facilities, with WEC applicable emissions, would be relevant to a determination of total emissions charge obligation. As regards the WEC program, WEC obligated parties are concerned with methane emissions for the WEC applicable facilities for which they are responsible—not various other subpart W facilities for which a WEC charge can never be imposed.

In addition to this stated legal rationale, the final approach also represents a reasonable policy choice in line with the EPA's understanding of Congress's intent that the WEC program constitute a meaningful incentive to reduce methane emissions. Specifically, should the WEC program allow netting from subpart W facilities emitting 25,000 mt CO_2e per year or less under subpart W, WEC obligated parties would lose an incentive to reduce emissions at WEC applicable facilities that exceed their waste emissions thresholds. Negative emissions from facilities with subpart W emissions of 25,000 mt CO_2e or less could be used to net out positive emissions from WEC applicable facilities, allowing WEC obligated parties to zero out WEC obligations without actually reducing emissions overall. Given that many subpart W facilities that report 25,000 mt CO_2e or less under subpart W would also be well below their waste emissions threshold, allowing these facilities to net could add significant negative tons to the WEC program such that actual methane emissions from WEC applicable facilities could increase without increasing WEC obligations.

[30] *Id.* at section 7436(f)(3).

b. Facilities With Subpart W Emissions Greater Than 25,000 Metric Tons of CO_2e That Are Receiving the Regulatory Compliance Exemption

The EPA is finalizing as proposed that during such time that a facility receives the regulatory compliance exemption, that facility would have zero WEC applicable emissions and thus would not be able to participate in the netting of methane emissions across facilities under common ownership or control of a WEC obligated party. The final approach is based on a plain reading of the statutory text, and follows the same reasoning outlined in section II.B.2.a. of this preamble, which explains that under the best reading of the text, only WEC applicable facilities may net. This section will further expand upon the EPA reasoning that only WEC applicable emissions may be netted, and clarify this point for purposes of the regulatory compliance exemption.

CAA section 136(f)(6)(A) states that ''[c]harges shall not be imposed pursuant to subsection (c) on an applicable facility that is subject to and in compliance with methane emissions requirements pursuant to subsections (b) and (d) of section 111'' if specific criteria are met (these criteria are discussed in section II.D.2. of this preamble). The EPA's interpretation of the regulatory compliance exemption is that, for a WEC applicable facility meeting the exemption criteria, the entire facility is exempted, and therefore the facility does not generate WEC-applicable emissions. In order to net, facilities must be WEC applicable facilities (they must emit over 25,000 mt CO_2e per year under subpart W) and they must also generate WEC applicable emissions (methane emissions, as reported under subpart W, below or above the WEC emissions thresholds *that are subject to charge*.) Again, this follows from the text. Section 136(f)(4) applies ''in calculating the total emissions charge obligation'' only. Emissions which are subject to an exemption are by definition not subject to charge. WEC applicable emissions are only those subpart W methane emissions subject to charge under section 136(c). Because WEC applicable facilities that receive the regulatory compliance exemption for the entire year would have zero WEC applicable emissions, these facilities would by default not be able to participate in netting (*i.e.,* they would have no emissions to net). The approach of facilities with the regulatory compliance exemption for the entire year having zero WEC applicable emissions allows for the practical implementation of the exemption within the broader framework of the WEC calculations. Clarifying that, pursuant to the statutory directive, exempted facilities generate zero WEC applicable emissions ensures that charges shall not be imposed on these facilities without interfering with netting calculations or removing facility-specific reporting elements necessary for WEC implementation. Such facilities continue to be included in WEC filings reported under part 99 as long as they remain WEC applicable facilities. Further, if such facilities fall out of compliance such that the regulatory compliance exemption no longer applies and they again generate WEC applicable emissions, such facilities can again be included in netting. Similarly, for WEC applicable facilities that have partial eligibility for the regulatory compliance exemption, as described in section II.D.2.f. of this preamble, such that they have positive WEC applicable emissions, those facilities would also be included in netting.

The EPA notes that facilities with emissions below the waste emissions threshold would not have positive WEC applicable emissions and therefore would not benefit from the exemption. In this final rule, facilities with emissions below the waste emissions threshold would not receive the regulatory compliance exemption, and thus these facilities would always have WEC applicable emissions and be able to participate in netting across facilities under common ownership or control. Section II.D.2.f. of this preamble discusses the regulatory compliance exemption in relation to facilities that are below the waste emissions threshold.

c. Exclusion of Facilities Reporting 25,000 or Fewer Metric Tons of CO_2e to Subpart W of Part 98

Per CAA section 136(c), the WEC shall only be imposed on owners or operators of applicable facilities that report more than 25,000 mt CO_2e under subpart W. A large number of facilities that report under the GHGRP have subpart W emissions below 25,000 mt CO_2e because they report emissions under multiple subparts (*e.g.,* subpart W and subpart C) and have total emissions greater than 25,000 mt CO_2e across multiple subparts. In addition, some part 98 subpart W facilities have reduced their emissions over time and are allowed to cease reporting or ''offramp'' due to meeting either the 15,000 mt CO_2e level or the 25,000 mt CO_2e level for the number of years specified in 40 CFR 98.2(i) based on the CO_2e reported, as calculated in accordance with 40 CFR 98.3(c)(4)(i) (*i.e.,* the annual emissions report value as specified in that provision).

We are finalizing as proposed that subpart W facilities with subpart W emissions equal to or below 25,000 mt CO_2e are not WEC applicable facilities and are therefore excluded from netting. This approach aligns with a plain reading of the requirement in CAA section 136(c) that only applicable facilities with subpart W emissions exceeding 25,000 mt CO_2e are subject to the WEC—facilities below this threshold are not subject to the WEC and therefore do not generate WEC applicable emissions and are not eligible to net emissions.

d. Exclusion of Facilities Not Required To Report to the GHGRP

Per CAA section 136(c) and (d), CAA section 136(f)(4), and the definition of ''WEC Applicable Facility'' in 40 CFR 99.2, which reflects the statutory text at CAA section 136(d), we are finalizing as proposed that facilities that are not required to report to the GHGRP, and thus are not WEC applicable facilities, are not eligible for netting. Again following the reasoning outlined in section II.B.2.a. of this preamble, this approach is based on a plain reading of CAA section 136(f)(4), which states that netting is allowed within and across the nine subpart W industry segments identified in CAA section 136(d); section 136(d), which states that ''applicable facility(ies)'' are facilities within industry segments ''as defined in subpart W''; and section 136(c), which states that the WEC is only applicable to subpart W facilities that report more than 25,000 mt CO_2e per year under subpart W. Following the plain text, only facilities subject to subpart W may be evaluated as possible WEC applicable facilities, and only WEC applicable facilities (subpart W facilities emitting over 25,000 mt CO_2e under subpart W) can have WEC applicable emissions that may be subject to charge. As explained in section II.B.2.a. of this preamble, only WEC applicable facilities are eligible to net, and only WEC applicable emissions may be netted. Further, CAA section 136(c) states that the WEC is only applicable to certain facilities that report under subpart W of the GHGRP.

C. Waste Emissions Thresholds

Congress established waste emissions thresholds for certain oil and gas operations to incentivize emissions reductions and efficient production, processing, and transport of hydrocarbons. These waste emissions thresholds are applied to individual oil and gas facilities; facilities that exceed

the thresholds may be subject to charge, while facilities that are below the threshold are not subject to charge. Building upon the definitions described in section II.A. of this preamble, this section explains the mechanics of the WEC calculations.

The waste emissions thresholds are defined in terms of industry segment-specific methane intensity thresholds applicable to certain facilities that report GHG emissions under subpart W of the GHGRP. The industry segment-specific methane intensity thresholds specified in CAA 136(f) and listed in Table 2 of this preamble are based on a rate of methane emissions per amount of natural gas or oil sent to sale from or through a facility. The industry segment-specific methane intensity thresholds are generally defined in terms of a percentage of throughput (*e.g.,* 0.002 percent of natural gas sent to sale). However, since the WEC is based on metric tons of methane (*e.g.,* $900/metric ton) that exceed the threshold, for the purposes of calculating the number of metric tons that are subject to charge, we are finalizing as proposed an approach that calculates the facility waste emissions thresholds in metric tons of methane.

The EPA proposed specific calculation methodologies and data input elements for the WEC calculations. The EPA received comments supportive of the proposed approaches for the WEC calculations. We also received comments suggesting revisions to the proposed approaches for the waste emissions threshold calculation, the methane emissions metric used to determine facility tons above or below the waste emissions threshold, and the treatment of facilities with zero throughput. However, the proposed changes suggested by commenters would not be consistent with the plain reading of the CAA and would make the calculations much more complicated to implement without necessarily improving accuracy. Therefore, the EPA is finalizing the approaches discussed in this section of the preamble as proposed, with the exception of the treatment of certain facilities with zero throughput.

For the onshore and offshore petroleum and natural gas production industry segments, CAA section 136(f) differentiates based on whether the facility is sending natural gas to sale or only sending oil to sale, and if the facility does not send natural gas to sale, the threshold is based on methane emissions per amount of oil sent to sale. For facilities that are not in the onshore or offshore production industry segments, the industry segment-specific methane intensity thresholds are based on the amount of natural gas sent to sale from or through the facility. The industry segment-specific methane intensity thresholds are applied to the natural gas or petroleum throughput attributable to that industry segment to calculate facility-specific waste emissions thresholds. See Table 2 for an overview of how the waste emissions thresholds are calculated. When determining whether a facility has WEC applicable emissions, the owner or operator of an applicable facility must compare the facility's reported methane emissions, as reported under subpart W, to the facility's waste emissions threshold. Facilities with methane emissions that exceed the waste emissions threshold may be subject to charge. For WEC applicable facilities with the same WEC obligated party, the WEC applicable emissions for each facility are summed to calculate the net WEC emissions for that WEC obligated party. For WEC obligated parties with the same parent company, WEC obligated parties with negative net emissions may transfer those negative emissions to WEC obligated parties with positive net emissions. A WEC obligated party's total WEC obligation is based on its total emissions at the end of this transfer of any negative emissions.

Subpart W requires reporting of natural gas throughput by thousand standard cubic feet, oil by barrels, and methane by metric ton. As a practical matter, since the WEC is based on a dollar per metric ton of methane, the waste emissions thresholds must generally be converted into metric tons of methane for comparison against reported methane, generally by multiplying the thresholds by the density of methane.

TABLE 2—INDUSTRY SEGMENT THROUGHPUT METRICS AND METHANE INTENSITIES

Industry segment	Throughput metric [a]	Industry segment-specific methane intensity
Onshore petroleum and natural gas production.	The quantity of natural gas produced from producing wells that is sent to sale in the calendar year, in thousand standard cubic feet 40 CFR 98.236(aa)(1)(i)(B); or the quantity of crude oil produced from producing wells that is sent to sale in the calendar year, in barrels, if facility sends no natural gas to sale under 40 CFR 98.236(aa)(1)(i)(C) [b].	0.20 percent of natural gas sent to sale from facility; or 10 metric tons of methane per million barrels of oil sent to sale from facility, if facility sends no natural gas to sale.
Offshore petroleum and natural gas production.	The quantity of natural gas produced from producing wells that is sent to sale in the calendar year, in thousand standard cubic feet 40 CFR 98.236(aa)(2)(i); or the quantity of crude oil produced from producing wells that is sent to sale in the calendar year, in barrels, if facility sends no natural gas to sale under 40 CFR 98.236(aa)(2)(ii).	
Onshore petroleum and natural gas gathering and boosting.	The quantity of natural gas transported through the facility to a downstream endpoint such as a natural gas processing facility, a natural gas transmission pipeline, a natural gas distribution pipeline, a storage facility, or another gathering and boosting facility in the calendar year, in thousand standard cubic feet under 40 CFR 98.236(aa)(10)(ii).	0.05 percent of natural gas sent to sale from or through facility.
Onshore natural gas processing	The quantity of residue gas leaving that has been processed by the facility and any gas that passes through the facility to sale without being processed by the facility in the calendar year, in thousand standard cubic feet under 40 CFR 98.236(aa)(3)(ix) [b].	
Onshore natural gas transmission compression.	The quantity of natural gas transported through the compressor station in the calendar year, in thousand standard cubic feet under 40 CFR 98.236(aa)(4)(i).	0.11 percent of natural gas sent to sale from or through facility.
Onshore natural gas transmission pipeline.	The quantity of natural gas transported through the facility and transferred to third parties such as LDCs or other transmission pipelines in the calendar year, in thousand standard cubic feet under 40 CFR 98.236(aa)(11)(iv).	
Underground natural gas storage	The quantity of natural gas withdrawn from storage and sent to sale in the calendar year, in thousand standard cubic feet under 40 CFR 98.236(aa)(5)(ii).	

TABLE 2—INDUSTRY SEGMENT THROUGHPUT METRICS AND METHANE INTENSITIES—Continued

Industry segment	Throughput metric [a]	Industry segment-specific methane intensity
LNG import and export equipment ..	For LNG import equipment, the quantity of LNG imported that is sent to sale in the calendar year, in thousand standard cubic feet; for LNG export equipment, the quantity of LNG exported that is sent to sale in the calendar year, in thousand standard cubic feet under 40 CFR 98.236(aa)(6) and (7).	0.05 percent of natural gas sent to sale from or through facility.
LNG storage	The quantity of LNG withdrawn from storage and sent to sale in the calendar year, in thousand standard cubic feet under 40 CFR 98.236(aa)(8)(ii).	

[a] Throughput metrics in this table are based on the subpart W reporting elements as effective January 1, 2025 and would apply for assessment of WEC beginning with reporting year 2025. Instances where the citation for the throughput metric for reporting year 2024 differs are noted in additional footnote. Note that in instances where there is no change to the citation for the segment-specific throughput metric, the EPA has amended the verbiage of subpart W, effective January 1, 2025, for consistency with CAA section 136. Refer to section III.U. of the preamble to the 2024 Subpart W Final Rule for full discussion of these amendments.

[b] For reporting year 2024, the applicable subpart W throughput reporting element for the onshore natural gas processing industry segment is 40 CFR 98.236(aa)(3)(ii).

1. Facility Waste Emissions Thresholds

CAA section 136(f)(1) through (3) establishes facility-specific waste emissions thresholds above which the EPA must impose and collect the WEC. The CAA defines waste emissions threshold requirements, and establishes the method for calculation of the charge, for nine segments of the oil and gas industry.

CAA section 136(f)(1) requires the EPA to impose and collect the WEC on facilities in the onshore petroleum and natural gas production and offshore petroleum and natural gas production industry segments with methane emissions, in metric tons, that exceed either 0.20 percent of the natural gas sent to sale from the facility or, if no natural gas is sent to sale, 10 metric tons of methane per million barrels of oil sent to sale from the facility. To determine the waste emissions threshold from a WEC applicable facility in the onshore petroleum and natural gas production and the offshore petroleum and natural gas production industry segments, the EPA is finalizing as proposed two equations based on whether the facility sends natural gas to sale, which reflect the statutory text at 136(f)(1)(A) and (B). For onshore and offshore petroleum and natural gas production WEC applicable facilities that send natural gas to sale, we are finalizing as proposed equation B–1 of 40 CFR 99.20(a). This equation multiplies the annual quantity of natural gas sent to sale from a WEC applicable facility by 0.002 (*i.e.,* 0.20 percent) and the density of methane (0.0192 metric tons per thousand standard cubic feet).[31] For onshore and offshore petroleum and natural gas production facilities that have no natural gas sent to sale, we are finalizing as proposed equation B–2 of 40 CFR 99.20(b). In equation B–2, the annual quantity of oil sent to sale from a WEC applicable facility is multiplied by 10 metric tons of methane per million barrels of oil.[32]

For WEC applicable facilities in the onshore petroleum and natural gas gathering and boosting, onshore natural gas processing, LNG import and export equipment, and LNG storage industry segments, CAA section 136(f)(2) requires the EPA to impose and collect a WEC on facilities with reported methane emissions, in metric tons, that exceed 0.05 percent of the natural gas sent to sale from or through such facility. To determine the waste emissions threshold from a WEC applicable facility in these industry segments, we are finalizing as proposed equation B–3 under 40 CFR 99.20(c). This equation multiplies the annual quantity of natural gas sent to sale from or through a WEC applicable facility by 0.0005 (*i.e.,* 0.05 percent) and the density of methane (0.0192 metric tons per thousand standard cubic feet) to determine the facility-level waste emissions threshold.[33] The EPA notes that certain facilities in the gathering and boosting and natural gas processing industry segments may have zero throughput values using this approach, because these facilities either receive no natural gas, or process or dispose of natural gas received in a manner that results in sending zero quantities of natural gas to sale. Treatment of these facilities is discussed in section II.C.6. of this preamble.

CAA section 136(f)(3) requires the EPA to impose and collect a waste emissions charge on WEC applicable facilities in the onshore natural gas transmission compression, onshore natural gas transmission pipeline, and underground natural gas storage industry segments with methane emissions, in metric tons, that exceed 0.11 percent of the natural gas sent to sale from or through such facility. We are finalizing as proposed equation B–4 under 40 CFR 99.20(d) to calculate the waste emissions threshold from a WEC applicable facility in these industry segments. Equation B–4 multiplies the annual quantity of natural gas sent to sale from or through a WEC applicable facility by 0.0011 (*i.e.,* 0.11 percent) and the density of methane (0.0192 metric tons per thousand standard cubic feet) to determine the facility-level waste emissions threshold.[34]

The annual quantity of natural gas sent to sale from or through a facility reported under subpart W is reported in units of thousand standard cubic feet of

[31] Equation B–1 reflects the statutory text at 136(f)(1)(A), which states: ''With respect to imposing and collecting the charge under subsection (c) for an applicable facility [in the onshore petroleum and natural gas production and offshore petroleum and natural gas production industry segments], the Administrator shall impose and collect the charge on the reported metric tons of methane emissions from such facility that exceed (A) 0.20 percent of the natural gas sent to sale from such facility. . .'' 42 U.S.C. 7436(f)(1)(A).

[32] Equation B–2 reflects the statutory text at 136(f)(1)(B), which states: ''With respect to imposing and collecting the charge under subsection (c) for an applicable facility [in the onshore petroleum and natural gas production and offshore petroleum and natural gas production industry segments], the Administrator shall impose and collect the charge on the reported metric tons of methane emissions from such facility that exceed. . . (B) 10 metric tons of methane per million barrels of oil sent to sale from such facility, if such facility sent no natural gas to sale.'' 42 U.S.C. 7436(f)(1)(B).

[33] Equation B–3 reflects the statutory text at 136(f)(2), which states: ''With respect to imposing and collecting the charge under subsection (c) for an applicable facility in [the onshore petroleum and natural gas gathering and boosting, onshore natural gas processing, LNG import and export equipment, and LNG storage industry segments], the Administrator shall impose and collect the charge on the reported metric tons of methane emissions that exceed 0.05 percent of the natural gas sent to sale from or through such facility.'' 42 U.S.C. 7436(f)(2).

[34] Equation B–4 reflects the statutory text at 136(f)(3), which states: ''With respect to imposing and collecting the charge under subsection (c) for an applicable facility in [the onshore natural gas transmission compression, onshore natural gas transmission pipeline, and underground natural gas storage industry segments], the Administrator shall impose and collect the charge on the reported metric tons of methane emissions that exceed 0.11 percent of the natural gas sent to sale from or through such facility.'' 42 U.S.C. 7436(f)(3).

natural gas per year, while facility methane emissions are reported in metric tons. The EPA interprets the industry segment-specific methane intensity thresholds (*i.e.,* 0.20 percent, 0.05 percent, and 0.11 percent) indicated in CAA section 136(f)(1) through (3) to be in units of thousand standard cubic feet of methane emissions per thousand standard cubic feet of natural gas. This requires reconciliation of methane emissions reported on mass basis and throughput reported on a volumetric basis. Because the waste emission charge is assessed using dollars per metric ton, the amount by which a facility is below or exceeding the waste emissions threshold must ultimately be converted to metric tons. The approach in equations B–1, B–3, and B–4 calculates facility waste emissions thresholds in metric tons by calculating the volume of gas at the given industry segment-specific methane intensity and then calculating what the mass of that volume would be if it were methane by multiplying by the density of methane (0.0192 metric tons per thousand standard cubic feet at standard temperature and pressure of 60 °F and 14.7 psia). This allows the waste emissions threshold to be directly compared to reported metric tons of methane. This approach is mathematically equivalent to, but simpler than, an approach that would convert reported methane emissions to volume, subtract a volumetric waste emissions threshold from that reported volume, and then convert the resulting value back to metric tons methane. The EPA notes that the approach used in this final rule does not require information on the constituents or density of natural gas throughput.

As described in this section of the preamble, the waste emissions thresholds are calculated at the facility level, using the industry segment-specific methane intensity threshold given in CAA sections 136(f)(1) through (3), and specific industry segment throughput metrics reported under part 98, subpart W. The vast majority of facilities report as a single subpart W facility to a single subpart W industry segment. However, as discussed in section II.A. of this preamble, there are a small number of reporters that report as a single subpart W facility to multiple subpart W industry segments. Specifically, for facilities that report to multiple industry segments under a single subpart W facility, we are finalizing in 40 CFR 99.20(e) that the facility-level waste emissions threshold is determined as the sum of the waste emissions thresholds for each industry segment within which the facility operates.

The EPA is finalizing as proposed its interpretation of ''natural gas sent to sale'' to mean the amount of natural gas sent to sale from a facility in the onshore or offshore petroleum and natural gas industry segments, as reported under subpart W. The EPA is finalizing as proposed its interpretation of ''natural gas sent to sale from or through'' to mean the natural gas throughput volume for a facility not in the onshore or offshore petroleum and natural gas industry segments that aligns with the movement of gas through a facility (*e.g.,* gas transported rather than gas received), as reported under subpart W. For facilities in the onshore and offshore petroleum and natural gas production industry segments that do not send natural gas to sale, the EPA is finalizing as proposed its interpretation of ''barrels of oil sent to sale'' to mean the quantity of crude oil sent to sale, as reported under subpart W.

The EPA is aware of and received comment on other approaches for calculating ''methane intensity'' currently in use. These include methodologies that allocate total methane emissions between the petroleum and natural gas value chains and/or use methane rather than natural gas as the throughput value. CAA section 136(f)(1) through (3) refers to reported facility emissions and does not discuss allocation of emissions between petroleum and natural gas. In the case of the methane charge program established in CAA section 136, the statutory text is clear that facilities that produce only oil are to calculate the waste emissions threshold based on only on the quantity of oil sent to sale. The statutory text is clear that in all other cases, the quantity of natural gas sent to sale is the appropriate throughput value.[35] Further, the final approach can be implemented with data currently reported under subpart W, while alternative methane intensity methodologies would require reporting of additional data and increase the burden on the oil and gas industry. For example, an approach that calculates intensity as methane emissions divided by the methane in natural gas throughput would require facilities to collect and report additional information of the methane content of natural gas. Again, this approach would not be aligned with the statute, which defines the intensity as methane emissions as a percentage of natural gas, not methane emissions as a percentage of methane. An approach that calculates methane intensity as the mass of methane emissions divided by the mass of natural gas would also not align with a plain reading of the statutory text or standard conventions. The natural gas sent to sale from or through a facility is reported under subpart W in thousand standard cubic feet, a volumetric unit of measure. Congress was aware of this metric when it established the waste emissions thresholds. Further, all percentage-based methane intensity metrics that the EPA is aware of are volume-based rather than mass-based, and while natural gas throughput is commonly reported both in terms of volume and energy content, it is not common practice to report throughput in terms of mass. Such an approach would also require facilities to collect and report detailed information on all of the constituents of natural gas throughput. Finally, an approach that allocates methane emissions between the petroleum and natural gas value chains based on energy content would not be aligned with the statute, which does not make any mention of allocating total facility methane emissions to the petroleum and natural gas value chains and assessing the WEC using a subset of total facility emissions. This approach would also require facilities to collect and report detailed data on the constituents and energy content of all hydrocarbon throughput. The EPA therefore believes that the approaches finalized in this rulemaking not only follow a plain reading of CAA section 136(f) but are also the best and most reasonable approaches.

2. Facility Methane Emissions

To determine the total methane emissions from a WEC applicable facility, the EPA is finalizing as proposed to use facility-level methane data as reported under subpart W. Facility methane emissions must be calculated using methods or data required by subpart W and by this final rule for the emissions year covered by the annual WEC filing. For example, for the first year of the WEC (2024 emissions), WEC calculations are based on the subpart W requirements effective for the 2024 reporting year, and emissions year 2025 emissions and beyond are based on subpart W requirements effective in reporting year 2025 or any future revisions. The final approaches for calculating waste emissions thresholds and facility methane emissions align with the text of CAA section 136(f). CAA section 136(f)(1) through (3) states that the WEC is to be calculated based ''on the

[35] See 42 U.S.C. 7436(f)(1)–(3).

reported metric tons of methane emissions from such facility that exceed'' specified percentages of the ''natural gas sent to sale from such facility'' or ''natural gas sent to sale from or through such facility'' (or for onshore and offshore petroleum facilities that do not send gas to sale, ''ten metric tons of methane per million barrels of oil sent to sale from such facility''). The EPA is finalizing its interpretation of ''reported metric tons of methane emissions'' to mean all reported methane emissions from a facility, as reported under subpart W, except in cases when emissions for stationary combustion emissions reported under 40 CFR 98.236(z) double-count emissions reported for an other large release event under 40 CFR 98.236(y), in which case the ''reported metric tons of methane emissions'' are adjusted according to the provisions finalized at 40 CFR 99.7(b)(2)(ix). This value, only adjusted to prevent double-counting as specified, is an input to equation B–6 of 40 CFR 99.21.

We are finalizing these provisions to adjust the subpart W methane emissions to prevent double-counting in the unlikely event that a stationary combustion source emits at the level requiring reporting as an other large release event in the subpart W report for a WEC applicable facility. In general, we did not expect that any stationary combustion source would have emissions above the threshold required to be reported under the provisions at 40 CFR 98.236(y) for other large release events. To qualify for reporting as an other large release event, the stationary combustion source must have methane emissions of 100 kg/hr or greater. We note that this emission rate would be evaluated on a per individual stationary combustion source basis unless they have a single root cause and we do not believe any single stationary combustion source would emit methane at this level unless it was significantly malfunctioning. Therefore, we expect that stationary combustion sources would be reported under the provisions of other large release events only under rare circumstances. For sources other than stationary combustion sources that have calculation methods in subpart W, the 100 kg/hr threshold is evaluated incremental to the emissions estimated using the methods in subpart W and subpart W contains provisions in 40 CFR 98.233(y)(1)(ii) to prevent double-counting of emissions reported under other large release events and these other subpart W calculation methods. However, stationary combustion emissions are subject to direct assessment of the 100 kg/hr threshold as specified in 40 CFR 98.233(y)(1)(i) with no provisions to revise emissions calculated under 98.233(z) for the period of time the stationary source was malfunctioning and emitting methane at rates exceeding 100 kg/hr. Therefore, it is possible, however unlikely, that there may be some double-counting of emissions being reported under 40 CFR 98.236(y) and (z) and we are finalizing part 99 provisions to ensure that the total methane emissions (and the total CO_2e emissions) for the facility are corrected for part 99 purposes to prevent this potential for double-counting of emissions under the WEC program. In the exceedingly unlikely event that the total CO_2e for a facility drops below the 25,000 mt CO_2e WEC reporting threshold as a result of this adjustment for double-counting of emissions, we are finalizing 40 CFR 99.7(b)(2)(ix) related to the reporting requirements and assessment of WEC for such facilities. In this circumstance, the total facility applicable emissions and WEC applicable emissions for the facility would be defined as zero, and the facility would not be subject to reporting requirements beyond those necessary to link the facility to subpart W reporting and substantiate the existence of double-counting of emissions due to the reporting of stationary combustion source emissions as an other large release event.

3. Facility WEC Calculation

To calculate the amount by which a WEC applicable facility is below or exceeding the waste emissions threshold, the EPA is finalizing as proposed to use equation B–6 of 40 CFR 99.21(a), in which the facility waste emissions threshold, as determined in 40 CFR 99.20, is subtracted from facility total methane emissions. This calculation results in a value of metric tons of methane, the total facility applicable emissions, that is negative for facilities below the waste emissions threshold and positive for facilities exceeding the waste emissions threshold. The remainder of 40 CFR 99.21 describes how to determine the WEC applicable emissions below or exceeding the waste emissions threshold considering any exemptions that may apply for WEC applicable facilities with total facility applicable emissions greater than 0 mt CH_4 (see section II.D. of this preamble for more information on the exemptions). As discussed in section II.D.2. of this preamble, the EPA is finalizing as proposed that WEC applicable facilities receiving the regulatory compliance exemption for the entire year are exempted from the WEC, and therefore have zero WEC applicable emissions. Section II.D.2.g. of this preamble also explains the facility-level WEC applicable emissions calculation for facilities with partial eligibility for the regulatory compliance exemption. For facilities with total facility applicable emissions greater than 0 mt CH_4 that are eligible for the unreasonable delay or plugged well exemptions, any methane emissions associated with those exemptions are subtracted to calculate WEC applicable emissions. See sections II.D.1.b and II.D.3.b of this preamble for explanation of how the quantity of methane emissions that qualify for exemption due to the unreasonable delay and plugged well exemptions, respectively, are calculated. These calculations rely upon methane emissions data reported to subpart W and calculation methodologies specified in this final rule. For all other facilities, facility applicable emissions are equal to WEC applicable emissions (unless the facility is receiving the regulatory compliance exemption).

4. Calculation Procedures for Netting

As described in section II.B., the EPA is finalizing that the owner or operator is the WEC obligated party while allowing for netting among WEC obligated parties with the same parent company. This structure creates a potential mismatch in liability should one owner or operator incorrectly calculate their subpart W emissions and/or their WEC obligation, and then magnifies this error by netting emissions with another owner or operator with the same parent company. Therefore, in this section, the EPA is providing additional details and restrictions on how the netting calculations must be done when netting is used, and how the netting transactions must be tracked and reported.

As described in section II.A.3. of this preamble, if a WEC applicable facility has multiple owners or operators, those entities must elect among themselves by binding agreement a single owner or operator as the WEC applicable facility's WEC obligated party for a given year. Similarly, if a WEC applicable facility has multiple parent companies, that facility's WEC obligated party must indicate in its certificate of representation for the reporting year and its annual WEC filing which parent company is selected for the purposes of designating the WEC obligated party's (*i.e.,* owner's or operator's) netting pool. If a WEC applicable facility has multiple owners or operators and multiple parent companies, the owner or operator selected as the WEC obligated party and

the parent company selected for netting must be related (*e.g.,* the WEC obligated party must be a subsidiary or at least partially owned by the parent company selected for netting). These requirements are included as part of the contents of the certificate of representation submitted by the WEC obligated party for the reporting year pursuant to the finalized requirements of 40 CFR 99.4(i) as well as the annual WEC filing pursuant to the finalized requirements of 40 CFR 99.7(b). Within the certificate of representation, the WEC obligated party must identify the WEC applicable facilities for which they are responsible for the reporting year as well as the parent company for which these facilities would be included in netting. Within the annual WEC filing, the WEC obligated party must indicate whether any of the WEC applicable facilities were acquired in transactions that resulted in the owners or operators for the facility as of December 31 of the reporting year ceasing to exist, and whether such facilities were associated with a parent company that is different from the WEC obligated party's parent company pursuant to the finalized requirements of 40 CFR 99.7(b)(1)(iv). This reporting is required because as a result of the finalized requirement of 40 CFR 99.4, a WEC obligated party may become responsible for the reporting of a WEC applicable facility for which they were not an owner or operator of as of December 31 of the reporting year, and which may not have been under the common ownership or control of the WEC obligated party's parent company as of December 31 of the reporting year.

The EPA is finalizing rules and requirements at 40 CFR 99.23 to govern the transfer of net WEC emissions across WEC obligated parties with a common parent company. The first step in the finalized netting process is the calculation of metric tons of methane emissions equal to, below, or exceeding the waste emissions threshold, or WEC applicable emissions, for each WEC applicable facility as specified in 40 CFR 99.21. The next step is summing WEC applicable emissions across all of a WEC obligated party's WEC applicable facilities. This calculation, finalized at 40 CFR 99.22(a) using equation B–8, yields net WEC emissions for each WEC obligated party. In circumstances where a WEC obligated party became responsible for facilities for which they were not an owner or operator of as of December 31 of the reporting year, the requirements at 40 CFR 99.2(b) and (c) would instead apply and the WEC obligated party would determine separate net WEC emission totals for their WEC applicable facilities that shared the same parent company as identified in the certificate of representation and those WEC applicable facilities that did not share the same parent company. The final step involves optional netting of emissions across WEC obligated parties with the same parent company. In this process, WEC obligated parties with negative net WEC emissions (as calculated using Equation B–8) may transfer those negative net WEC emissions to WEC obligated parties (with positive net WEC emissions) with the same parent company. After the negative net WEC emissions have been transferred as determined by each of the WEC obligated parties with a common parent company, each WEC obligated party's net WEC emissions after transfers, or total methane emissions above or below the waste emissions threshold is finalized. This final amount of metric tons methane is used to determine if a WEC obligated party owes a WEC obligation for the given year.

Since the owner or operator is the WEC obligated party, they are ultimately responsible for the entire WEC payment associated with their total emissions above the waste emissions threshold. Although an individual owner or operator's WEC obligation may be reduced based on netting with another owner or operator that has WEC applicable emissions below the waste emissions threshold within the parameters specified, if those negative quantities of net WEC emissions are later invalidated, the WEC obligated party who received the negative WEC emissions to reduce their WEC obligation would be required to resubmit their WEC filing to remove the negative WEC emissions from their calculations and would have to adjust their payment accordingly. Provisions applicable to this scenario are finalized at 40 CFR 99.23(f)(2).

A key element of WEC obligated party netting is that WEC obligated parties with zero or negative net WEC emissions cannot be subject to charge. A WEC obligated party with negative net WEC emissions may transfer negative quantities of net WEC emissions to WEC obligated parties with whom it shares the same parent company as finalized at 40 CFR 99.23(a), but it can never receive positive emissions. Similarly, the WEC obligation of a WEC obligated party can never exceed the charge that would be calculated using their net WEC emissions. The WEC obligated party's positive net WEC emissions after transfers can decrease but can never increase as a result of netting. In other words, only negative quantities of net WEC emissions can be transferred, and positive quantities of net WEC emissions cannot be transferred as finalized at 40 CFR 99.23(b). Further, negative net WEC emissions and negative net WEC emissions after transfers cannot be banked or otherwise saved for a future WEC filing year; all negative net WEC emissions and negative net WEC emissions after transfers are valid only for the WEC filing year in which they were created.

The EPA is also finalizing requirements to address impacts to netting that result from WEC filing resubmissions. While the EPA expects that most questions related to unverified subpart W data will be resolved by the time of the WEC filing, continued revisions to subpart W reports or WEC filing resubmissions that impact emissions (*e.g.,* revisions to exemption data) could impact a WEC obligated party's net WEC emissions and thus netting. These include situations in which revisions invalidate negative net WEC emissions that have been transferred and situations in which revisions result in additional negative net WEC emissions that become available for transfer. As discussed in section III.B. of this preamble, resubmissions of WEC filings, including the applicable subpart W data, will not be accepted after December 15 unless the resubmission is related to eligibility for the regulatory compliance exemption, resolution of the verification process (including third-party auditing), or otherwise permitted by the Administrator.

The EPA is finalizing that any WEC obligated party that receives negative net WEC emissions loses the benefit of those negative net WEC emissions if they are later invalidated. For example, if WEC obligated party A transferred negative 10 metric tons of methane to WEC obligated party B with the same parent company, but a revision to the WEC filing for the WEC obligated party A results in the 10 metric tons of negative emissions being eliminated, the final WEC emissions of the WEC obligated party B that received the emissions will revert to the number it was before the 10 metric tons were subtracted from the total. This means that in this circumstance, the final WEC emissions of receiving WEC obligated party B would increase by 10 metric tons.

To determine how previously transferred negative net WEC emissions that are later invalidated are removed from netting when multiple WEC obligated parties receive negative tons, the order in which transfers were approved by the designated

representative of the WEC obligated party receiving the transfer in accordance with the finalized requirement of 40 CFR 99.23(c) will be used on a ''last in first out'' basis. This indicates the order and amount of negative net WEC emissions that are removed from the net WEC emissions after transfers of a WEC obligated party that receives any negative net WEC emissions, should any of the negative net WEC emissions be invalidated. Affected WEC obligated parties would be required to submit a revised WEC filing and pay any new charge or increase in charge pursuant to the finalized requirements of 40 CFR 99.7(e) and 99.8(d). In situations where revisions to WEC filings result in *additional* negative net WEC emissions becoming available for netting, the applicable WEC obligated party with newly available negative net WEC emissions for transfer may transfer those negative net WEC emissions to another eligible WEC obligated party. The receiving WEC obligated party may then refile. The EPA will then provide any applicable refunds post verification of the amended report. Provisions applicable to the change in availability of transferred WEC emissions as a result of revisions to the WEC filing for the WEC obligated party that provided the transfers are finalized at 40 CFR 99.23(f). All of these requirements are designed to allow for netting at the parent company level while addressing the potential mismatch in WEC obligations should one owner or operator incorrectly calculate their WEC obligation and then magnify this error by netting with another owner or operator with the same parent company.

The EPA is finalizing reporting and recordkeeping requirements at 40 CFR 99.23 for WEC obligated party emissions netting. As finalized at 40 CFR 99.23(c), each transfer of negative quantities of net WEC emissions must be completed in an electronic format specified by the Administrator. The EPA anticipates that these transfers will occur in an electronic system similar to the existing e-GGRT system used by the GHGRP. Each transfer must be initiated by the designated representative of the WEC obligated party that is transferring the negative quantities of net WEC emissions. The transfer will be considered to have occurred at such time that the designated representative of the WEC obligated party that is receiving the transfer approves receipt of the transfer. The electronic system will record the metric tons of negative WEC emissions that are transferred, the WEC obligated parties involved in each transfer, and the time that the designated representative of the WEC obligated party receiving the transfer approved receipt. These records will establish the order of precedence for these metric tons under the finalized requirement of 40 CFR 99.23(f)(2) related to transfers that are later invalidated. These electronic records are essential to establish the requirements for facilities to participate in netting, as allowed by CAA section 136(f)(4). Finally, WEC obligated parties that transfer and receive negative net WEC emissions must maintain all records associated with the transactions, including but not limited to any value exchanged, if applicable, for emissions transferred to each WEC obligated party under the finalized requirement of 40 CFR 99.23(g).

5. Waste Emissions Charge Calculation

CAA section 136(e) establishes annual $/metric ton charges for all methane emissions for which a charge is owed. The EPA is finalizing as proposed that a WEC obligated party's total annual WEC obligation is calculated by multiplying its net WEC emissions after transfers, as determined by Equation B–8 and after any transfer of emissions pursuant to 40 CFR 99.23, by the annual $/metric ton charge. WEC obligated parties with net WEC emissions after transfers less than or equal to zero do not have a WEC obligation. WEC obligated parties with net WEC emissions after transfers greater than zero have a WEC obligation and are required to pay a waste emissions charge. WEC obligation calculations are to be made for calendar years 2024, 2025, 2026, and each year thereafter as per 40 CFR 99.24.

6. Gathering and Boosting and Processing Facilities With Zero Reported Throughput

The EPA is aware of a small number of gathering and boosting and natural gas processing facilities that emit methane and report under subpart W, but do not send gas to sale. As a result, these facilities would report zero natural gas volumes for the throughput metrics used in the waste emissions threshold calculations. For the gathering and boosting industry segment, these may be facilities that receive natural gas but then reinject it underground or otherwise do not transport any natural gas. For the processing industry segment, these may be fractionation plants that only receive and process natural gas liquids (NGLs) and do not handle natural gas. We proposed that all reported methane emissions from facilities with no reported throughput would be considered to be exceeding the waste emissions threshold. We received comments disagreeing with the EPA's proposed approach and interpretation of the statutory text, indicating that WEC applicable facilities that do not send gas to sale are not contemplated by the statute and that it is inappropriate for the EPA to impose a charge in the absence of an applicable threshold. After continued review of the statutory text and consideration of comments received on the treatment of these facilities, we are finalizing a determination that these facilities do not generate WEC applicable emissions, and therefore will not be subject to charge. Using Equation B–3 under 40 CFR 99.20(c), gathering and boosting and processing facilities with zero natural gas throughput would have a waste emissions threshold of 0 mt; all reported methane emissions from these facilities would therefore be exceeding the threshold. However, CAA section 136(f)(2), the statutory text from which Equation B–3 is derived, states that the waste emissions threshold is calculated using the ''natural gas sent to sale from or though'' a facility. These specific types of gathering and boosting and processing facilities do not send any natural gas to sale. Therefore, based on the language in CAA section 136(f)(2), it would not be appropriate to subject these facilities to charge. Although the EPA is not aware of facilities in industry segments other than gathering and boosting and processing that would report emissions to subpart W of more than 25,000 mt CO_2e while having zero throughput of natural gas or oil sent sales, the EPA believes the same interpretation should apply that they would not be subject to charge. The EPA is finalizing language at 40 CFR 99.21 that for a WEC applicable facility for which the waste emissions threshold is zero, the total facility applicable emissions (*i.e.,* the methane emissions equal to, below, or exceeding the waste emissions threshold for a WEC applicable facility prior to consideration of any applicable exemptions) and the WEC applicable emissions (*i.e.,* the methane emissions equal to, below, or exceeding the waste emissions threshold for a WEC applicable facility after consideration of any applicable exemptions) are both zero.

D. Exemptions to the Waste Emissions Charge

Congress created three exemptions to the WEC to reduce or eliminate the charge under certain circumstances. The first exempts emissions that result from eligible delays in environmental permitting. The second exempts from

charge those facilities that are in compliance with applicable CAA section 111 regulations, once certain criteria are met. The third exempts emissions from wells that are permanently plugged. The EPA received numerous comments indicating that the proposal made accessing the exemptions designed by Congress infeasible and impractical. In this final rule, the EPA has made a number of changes to the exemptions, in particular the regulatory compliance exemption, to ensure that access to, and implementation of, these exemptions is appropriate and consistent with the best reading of the statute. In addition, the EPA is clarifying in this final rule that a WEC obligated party may elect whether or not to submit a claim for exemption for a WEC applicable facility that meets the applicability requirements for each exemption.

1. Exemption for Emissions From Eligible Delays in Environmental Permitting (CAA Section 136(f)(5))

The permitting delay exemption created by CAA section 136(f)(5) allows for production facilities to reduce their WEC obligation if the permitting of natural gas offtake infrastructure is delayed unreasonably. Congress identified unreasonable delays in approval of permits for offtake infrastructure as a possible barrier to methane mitigation for WEC obligated parties, particularly because these delays could prevent increased volumes of natural gas from being routed to a sales line, and therefore directed the EPA to determine what constitutes an unreasonable delay. In this action, the EPA is finalizing provisions that clarify the definition of an unreasonable delay for the purposes of this exemption, under what circumstances the permitting delay exemption will be available to WEC obligated parties, and what emissions (*i.e.,* from what sources) are eligible for the exemption.

CAA section 136(f)(5) establishes an exemption for emissions resulting from delay in environmental permitting by stating, ''Charges shall not be imposed pursuant to paragraph (1) on emissions that exceed the waste emissions threshold specified in such paragraph if such emissions are caused by unreasonable delay, as determined by the Administrator, in environmental permitting of gathering or transmission infrastructure necessary for offtake of increased volume as a result of methane emissions mitigation implementation.''

This provision exempts from the charge certain emissions occurring at facilities in the onshore and offshore production segments where permitting has been unreasonably delayed. Paragraph (1) referenced in the exemption refers to CAA section 136(f)(1), which establishes the waste emissions threshold for applicable facilities in the production sector, as discussed in section II.B. of this preamble. The exemption is limited to emissions occurring as a result of certain delays in environmental permitting of gathering or transmission infrastructure necessary for offtake of increased volume as a result of methane emissions mitigation implementation. The EPA interprets ''gathering or transmission infrastructure necessary for offtake'' to include gathering and transmission pipelines and compressor stations, and ''increased volume as a result of methane emissions mitigation implementation'' to include increased amounts of natural gas at on- or offshore production facilities available for transport that would have otherwise been emitted if not for an unreasonable delay in the environmental permitting of offtake infrastructure.

a. Emissions Eligible for the Permitting Delay Exemption

To assist in defining and determining ''unreasonable delay'' related to environmental permitting, the EPA is finalizing a set of four criteria for applying the unreasonable delay exemption established by CAA section 136(f)(5). These criteria only apply in the context of determining eligible emission exemptions for the implementation of CAA 136(f)(5) and this final rulemaking; they are not intended to speak to the reasonableness of a permitting delay in any other context. The EPA understands that the issue of what constitutes an unreasonable delay is multi-faceted and may be quite different under different regulatory and factual circumstances. At the same time, the EPA believes it is important in the context of this program to provide a definition that is consistent with the statutory charge, practical for the EPA to administer, and straightforward for applicable facilities to follow. With those caveats in mind, the EPA is finalizing the following four criteria for implementing this exemption, largely as proposed: (1) the facility must have emissions that exceed the waste emissions threshold; (2) the entity seeking the exemption must have not contributed to the delay in permitting; (3) the exempted emissions must be those resulting from gas used as an onsite fuel source, gas used for another useful purpose that an otherwise purchased fuel or raw material would have served, gas reinjected into a well, or gas flared, if that gas would have been routed to a gas gathering flow line or collection system to a sales line without the permit delay; and (4) a period of 36 months must have passed from the time a submitted permit application was determined to be technically complete by the applicable permitting authority.

The EPA believes this approach aligns with the statutory text and meets the Congressional intent of this exemption, while also providing reporting facilities with a clear and predictable set of criteria that the EPA can apply in a timely manner. The EPA requested and received comment on numerous aspects of this exemption. Comments on the four proposed criteria for determining exemption eligibility are discussed in the following paragraphs. Several commenters recommended that the EPA retain strong and clear criteria in the final rule for operators seeking an exemption based on unreasonable environmental permitting delays. Separate from the four criteria, several commenters were opposed to the proposed approach of using defined criteria for assessing exemption eligibility and recommended that the EPA evaluate each eligibility claim on a case-by-case basis. These commenters stated that the circumstances of each individual permitting delay are unique such that they can only be assessed on a case-by-case basis. The EPA decided against such an approach in this final rule for several reasons. Reviews of the individual circumstances of each situation would run counter to Congressional intent because facilities would be unable to predict what they owe, take action to limit any applicable charge, or settle their WEC obligation in a timely manner, potentially leading to payments that were later found subject to this exemption. The approach the EPA is adopting means that payments are more likely to align with amounts owed, including applicable exemptions, and thus more closely track the purpose for which Congress included this exemption. A case-by-case approach would also create a significant time and resource burden for both regulated entities and for the EPA. We expect that many types of permitting situations can arise, with many permutations. If industry were required to demonstrate unreasonable delay on a case-by-case basis, the review process would have resulted in uncertainty for industry and could have led to a significant backlog, thus making the annual calculation of the WEC obligation unduly burdensome. In addition, case-by-case decision making would require repeated exercise of judgment, which could lead

to inconsistent results and protracted disputes, interfering with the Congressional purpose in including this exemption. In order to ensure that the unreasonable delay exemption can be administered in an efficient manner, and to provide industry with clear and predictable requirements that must be met to receive this exemption, the EPA is finalizing the proposed approach of utilizing four set criteria to evaluate eligibility for the unreasonable delay exemption. As described in this section, the EPA has finalized certain changes to the individual criteria, after consideration of comments, to increase the accessibility and practicality of implementing this exemption.

The EPA notes that the four criteria used to evaluate eligibility for the WEC unreasonable delay exemption, including the timeframe, are for the purpose of defining the emissions eligible for an exemption for the purposes of the implementation of CAA 136(f)(5) and this rulemaking only and are not applicable for defining an unreasonable delay outside of this context. The criteria in this section do not apply to the determination of unreasonable delay for purposes of the National Environmental Policy Act (NEPA), the Administrative Procedure Act (APA), or any other law involved in permitting processes or any other agency actions. In particular, the timeline criterion should not be considered applicable or informative to the determination of unreasonable delay in any context other than determining emission exemptions for the implementation of CAA 136(f)(5) and this rulemaking.

The first criterion, that the facility must have emissions that exceed the waste emissions threshold, is based on CAA 136(f)(5), which states that ''charges shall not be imposed pursuant to paragraph (1) on emissions that exceed the waste emissions threshold specified in such paragraph if such emissions are caused by unreasonable delay.'' A straightforward reading of this language limits the exemption to emissions exceeding the waste emissions threshold. Since charges will not be imposed if emissions are below the waste emissions thresholds, an exemption is unnecessary in such cases and, as per the statutory text, not applicable. For facilities that exceed the waste emissions threshold, emissions eligible for the permitting delay exemption will be subtracted from the facility emissions that exceed the waste emissions threshold. The exempted emissions will not be used to reduce emissions totals below the threshold (*i.e.,* the lowest possible WEC applicable emissions for a facility with the exemption are zero).

The second criterion relates to responsiveness on the part of the production sector WEC applicable facility that is reporting emissions caused by a delay in gathering or transmission infrastructure: the entity potentially eligible for the exemption (*i.e.,* a WEC obligated party's WEC applicable facility in the onshore or offshore production sector) cannot have contributed to the unreasonable delay in permitting. We proposed that neither the WEC obligated party seeking the exemption, nor the entity responsible for seeking the permit, may have contributed to the delay. Several commenters explained that the production facilities seeking the exemption are often separate from the midstream entities seeking the permit, and that the production companies may have no control or influence over the midstream company's interaction with permitting authorities. After consideration of comments received on this criterion, we recognize that there may be limited or no control by the WEC obligated party seeking the exemption over the responsiveness of a separate permittee. Therefore, to increase the accessibility of this WEC exemption, the EPA is finalizing that only the WEC obligated party seeking the exemption is relevant for the criteria of contribution to delay in the environmental permitting process.

Contributions to the delay by the WEC obligated party seeking to exempt a portion of their emissions from one or more WEC applicable facilities due to an unreasonable delay will be determined based upon the timeliness of response to requests for additional information or modification of the permit application, as applicable. A WEC obligated party seeking this exemption may or may not be the entity seeking the permit, but still may be required to provide permit relevant information. Delays in response by the WEC obligated party seeking the exemption exceeding the response time requested or agreed to by the permitting agency regarding requests for additional information or a permit application revision, or responses that exceed 30 days from the request if no specific response time is requested, are considered to contribute to the delay in processing the permit application. Upon review and consideration of comments regarding clarification on whether lawsuits contributing to delays in the permitting process would be included in this exemption, the EPA is finalizing that delays from litigation in the environmental permitting process of gathering or transmission infrastructure are generally eligible for this exemption, except in those cases when the entity requesting the exemption is a plaintiff in said lawsuit. Therefore, the EPA is finalizing that delays contributed by the entity seeking the exemption either through delayed response or unresponsiveness during the permitting process or through initiation of a lawsuit regarding the permitting process in question are ineligible for the exemption. Note that this determination of what constitutes a delay eligible for the exemption in environmental permitting is specific solely to implementation of CAA section 136(f)(5) and this rulemaking for part 99 and is not applicable to any other section of the CAA, or any permitting program administered by the EPA or other Federal permitting authorities, or by a State, Tribal or local permitting authority.

The third criterion is that the exempted emissions must be those resulting from specific emissions sources and activities. The EPA proposed that only flared emissions would be eligible for the exemption. The EPA received comment recommending that emissions from other sources also be eligible for the exemption. Specifically, commenters requested adding emissions resulting from activities that are compliance options for associated gas under NSPS OOOOb and EG OOOOc. The EPA agrees that emissions from the implementation of these additional methane emissions mitigation activities should be eligible for exemption, and notes that beneficial use and reinjection are often preferable to flaring, as demonstrated by the NSPS OOOOb and EG OOOOc associated gas compliance options' infeasibility determination requirement prior to routing gas to a control device. After consideration of these comments, the EPA is finalizing a revised list of emissions sources that are eligible for the exemption to more closely align the WEC with the 2024 NSPS/EG rule: the use of gas as an onsite fuel source, gas used for another useful purpose that an otherwise purchased fuel or raw material would have served, gas reinjected into a well, and flaring of gas. The EPA is finalizing that emissions from these sources must meet two criteria to be eligible for exemption: (1) all activities associated with these emissions must be in compliance with all applicable environmental local, State, and Federal regulations, and (2) the emissions must have only occurred as the result of an unreasonable delay in permitting, as

defined in this section of the preamble and 40 CFR 99.30. The EPA believes that this approach reasonably follows from the text of section 136(f)(5), which exempts emissions caused by unreasonable delay in the permitting of ''gathering or transmission infrastructure *necessary for offtake of increased volume as a result of methane emissions mitigation implementation.*'' [36] Other emissions occurring at the wellsite are not exempt because they are not associated with the delay or because they do not occur in compliance with applicable regulations. Any emissions from activities that are not in compliance with applicable regulations are ineligible for the exemption. This approach accords with the text of section 136(f)(5), which states that the exemption is for emissions occurring as a result of unreasonable delay in permitting required for the build out of infrastructure ''necessary for offtake of increased volume *as a result of* methane emissions mitigation'' [37] The EPA understands that this provision is designed to exempt emissions from activities done in compliance with regulations, where sources are prepared to capture gas but cannot yet do so due to lack of offtake infrastructure.

The fourth criterion is that an eligible ''unreasonable delay'' would be a delay that exceeds 36 months from the date that a submitted environmental permit application was determined to be technically complete by the relevant permitting authority. This time period is not tied to the timing of the WEC; a facility that meets all four criteria would be eligible for the exemption in the first year of the WEC if the time period requirement has been met. The relevant permitting authority could be the United States Federal Energy Regulatory Commission (FERC), or other Federal, State or local agencies that issue environmental permits. The environmental permitting process can require multiple steps, and target dates for permit actions can vary by regulatory agency and depend, for example, on whether the relevant permit is for a new or existing source, or whether the action is a major or minor modification. This 36-month timeframe for unreasonable delay is intended to provide a predictable process for determination of this exemption, given that there are so many different contexts in which it might apply, and the unreasonableness of each could vary widely, and is not specific to particular permitting actions or agency timelines.

The EPA proposed a timeline somewhere in the range of 30 to 42 months, with the default to be specified in this final rule after consideration of comments received. This preliminary range was based on the EPA's understanding of timelines for oil and gas permitting across Federal agencies. In particular, the preliminary range was informed by the EPA's review of data made available through the Federal Permitting Improvement Steering Council (FPISC) through Title 41 of the Fixing America's Surface Transportation Act (FAST–41). The ''Recommended Performance Schedules for 2020'' released by FPISC contains data for the Federal review and permitting of 18 pipeline projects under the FAST–41 program.[38] For these projects, the mean time from receipt by FERC of a complete application to the issuance of a certificate of public convenience and necessity for interstate natural gas pipelines was 23 months, with three of the 18 projects (17 percent) exceeding 30 months. Criteria for inclusion in the FAST–41 program include projects that are considered likely to require investment exceeding $200,000,000 and that do not qualify for abbreviated review under applicable law; or projects of a size and complexity that the FPISC determines are likely to benefit from inclusion.[39] On this basis, the EPA believes the FAST–41 dataset may be a conservative population (*i.e.,* require more complex environmental review and permitting) when compared to the total of all gathering or transmission infrastructure projects.

The proposed range of 30 to 42 months also took into account the 2023 Fiscal Responsibility Act, which set a limit under the National Environmental Policy Act of 1 year for completion of an Environmental Assessment and 2 years for completion of an Environmental Impact Statement unless extended by the lead agency in consultation with the applicant or project sponsor. However, the amount of time necessary to complete an Environmental Assessment or Environmental Impact Statement will vary depending on the specific agency action at issue, and the proposed timeline was not intended to reflect a determination of the reasonable length of a time necessary to complete such analysis in any specific instance. For projects requiring approval or permitting from a Federal agency, completion of an Environmental Assessment or Environmental Impact Statement must occur prior to the agency taking a final agency action. Additional steps in the process that must be completed following completion of review under NEPA may add several months to the overall timeframe (*e.g.,* convening of FERC to approve or deny a certificate of public convenience and necessity).

The EPA did not receive substantive comments supporting a specific number of months from the proposed range of 30 to 42 months. Considering our analyses, and in an effort to simplify and streamline requests for this exemption, we determined that an approach of 36 months is appropriate and in alignment with the Congressional intent of specifying delays that are *unreasonable,* only for the purposes of this unreasonable environmental permitting delay exemption under the WEC.

All four criteria must be met and verified by the EPA for emissions to be eligible for this exemption. No single factor, including timing, is determinative as to whether a delay is unreasonable in the context of this exemption. We are not assessing whether a delay of a period of 36 months alone (*i.e.,* in the absence of the other three criteria) should be considered unreasonable in the context of this exemption, and we are not assessing the reasonableness of a particular timeframe or collection of conditions outside of the context of this exemption specific to CAA section 136. An assessment of reasonableness in any other context depends on the circumstances specific to that context, which can vary considerably and there is no straightforward way to determine whether a delay is reasonable or unreasonable that applies to all contexts.

b. Calculation of Emissions Resulting From an Unreasonable Delay

Through the provisions at 40 CFR 99.32, the EPA is finalizing that exempted emissions are those resulting from gas used as an onsite fuel source, used for another useful purpose that an otherwise purchased fuel or raw material would have served, reinjected into a well, or flared, and these emissions were caused by the delay. Exempted emissions are the methane emissions (or a subset of the methane emissions from these activities) reported

[36] 42 U.S.C. 7436(f)(5) (emphasis added).

[39] Federal Permitting Improvement Steering Council, ''FAST–41 Fact Sheet.'' Federal Infrastructure Permitting Dashboard. September 13, 2022. *https://www.permits.performance.gov/documentation/fast-41-fact-sheet.* Accessed August 28, 2023.

under subpart W. To calculate the exempted emissions quantity, the entity must determine the time period within the reporting year associated with the emissions that occurred as a result of the delay. The delay begins when emissions would have been avoided through the operation of the gathering or transmission infrastructure, not when construction would have begun, as in many cases the infrastructure would not be immediately in place and operational at the time of permitting approval. For example, a permit to construct might be needed before construction begins, and construction could take months or more before the infrastructure would be in place. Where the exempted emissions cover the entire reporting year, the exempted emissions are the total reported to part 98 for the exempted sources. The exempted flaring emissions would be the total reported to part 98 for flare stacks, associated gas flaring, and the portion of offshore methane emissions attributable to flaring. Note that for reporting year 2024, where a continuous emissions monitoring system (CEMS) was used to measure emissions from a flare stack, the volume of gas sent to that flare stack and associated methane emissions would not be quantified under the final requirements of this part at 40 CFR 99.32(b)(4) and 99.32(c)(8), respectively. This is because pursuant to 40 CFR 98.236(n)(12), methane emissions are not reported for these flare stacks in reporting year 2024 and thus there is no associated quantity of emissions to exempt from charge. Regarding emissions from gas used as an onsite fuel source, the exempted emissions would be the total methane emissions reported to part 98 for onsite combustion and crankcase venting. For emissions from gas used for another useful purpose that an otherwise purchased fuel or raw material would have served, the exempted emissions would be the total methane emissions reported to part 98 for combustion, crankcase venting, and associated equipment leaks. For those emissions from the reinjection of excess gas into the well or injection into another well, the exempted emissions would be those methane emissions reported to part 98 associated with combustion from compressor drivers, crankcase venting, reciprocating or centrifugal compressor venting (associated with reinjection), and equipment leaks (for those components associated with well injection).

Where exempted emissions occur in only a fraction of a reporting year, the facility is to use data on applicable emissions over that timeframe if available, and if unavailable, the facility is to adjust applicable part 98 reported emissions using the fraction of the year that the exemption is available. Where applicable emissions impacted by permitting delay only account for a portion of the total emissions from exempted sources (*i.e.,* associated gas flaring, combustion, compressor emissions), the facility is to adjust their part 98 reported emissions for these sources using company records and/or engineering calculations. We sought comment but received none specifically on the provisions regarding the use of reported flaring emissions to determine exempted emissions, the use of part 98 data, and the approaches for quantifying emissions for fractions of the reporting year.

c. Reporting and Recordkeeping Requirements for the Exemption for Emissions Resulting From a Permit Delay

Through the provisions at 40 CFR 99.31, the WEC obligated party seeking to exempt a portion of their emissions from one or more WEC applicable facilities must provide information on each well pad or offshore platform impacted by the delay. This includes the type of permit, permitting authority, the company name and name of the facility that submitted the permit application, and the date that the permit application was complete. The WEC obligated party must report the planned timing of the commencement of the offtake of gas had the permit not been delayed. This includes a listing of the methane emissions mitigation activities that are impacted by the delay and the volumes of gas associated with and emissions from the use of gas as an onsite fuel source, the use of gas for another useful purpose that an otherwise purchased fuel or raw material would have served, reinjection of the gas into a well, and the flaring of gas, if that gas would have been routed to gathering or transmission infrastructure. This reporting also includes information used in the calculation of emissions from the use of gas as an onsite fuel source, the use of gas for another useful purpose that an otherwise purchased fuel or raw material would have served, reinjection of the gas into a well, and the flaring of gas that is necessary for verification of emissions calculations and is not reported to subpart W of the GHGRP. This also includes a certification of compliance with all applicable local, State, and Federal regulations regarding said emissions. While a listing of each of these applicable regulations is not required to be reported, retention of a record listing of all applicable local, State, and Federal regulations is required. The WEC obligated party must report the time period associated with the emissions that occurred as a result of the delay within the filing year. The WEC obligated party must also certify that the production segment entity impacted by the delay did not contribute to the unreasonable delay. The EPA requires this information for the verification of exemption eligibility and of exempted emission quantity. Reported information will be used to conduct verification as discussed in section III.A.4., and reported information, records and other information as applicable will be used to conduct any auditing that occurs under section III.E.1.

2. Regulatory Compliance Exemption Under CAA Section 136(f)(6)

The regulatory compliance exemption created in CAA section 136(f)(6) allows for WEC applicable facilities subject to methane emissions requirements pursuant to CAA section 111(b) and (d) to claim an exemption from paying the charge if certain criteria are met. As such, Congress explicitly exempts WEC applicable facilities that are in compliance with NSPS OOOOb and EG OOOOc-implementing plans from having to pay the charge. The criteria for exemption from the WEC established by Congress provide a strong incentive for States to develop timely and effective State plans under EG OOOOc and for facilities to comply with the regulations for new and existing sources. In this action, the EPA is finalizing provisions that clarify when the regulatory exemption will become available, under what conditions it can be claimed by a WEC applicable facility, and under what conditions it may be lost.

As described in further detail in this section, upon careful consideration of the public comments received on the numerous facets of the regulatory compliance exemption, the EPA is finalizing changes from proposal to some elements of the exemption in order to better align with Congressional objectives and the text of the statute. The final approach strengthens the incentives for early State action to implement EG OOOOc by taking a State-by-State approach to the required Administrator determinations and requiring that these emission standards be in place before the regulatory compliance exemption is available. At the same time, these changes provide reasonable access to the exemption for applicable facilities working to achieve and maintain compliance with methane

emissions requirements pursuant to CAA sections 111(b) and (d) by limiting the types of compliance deviations that would trigger a loss of the regulatory compliance exemption, by reducing the time period during which a facility that is not in compliance loses the exemption, and, for certain facilities, limiting the emissions that lose the exemption to those from the portion of the facility with noncompliance. In this section II.D.2., we summarize the final approach for all facets of the regulatory compliance exemption. Individual elements of the final exemption requirements are discussed in more detail in the following subsections.

The framework established by Congress in the regulatory compliance exemption statutory text encourages methane reductions in the period before State programs are in effect, and then exempts from charge WEC applicable facilities once they are in compliance with the methane emissions requirements of the final NSPS OOOOb/EG–OOOOc-implementing State and Federal plans.[40] The statutory framework also encourages timely submission of approvable EG OOOOc-implementing State plans and timely compliance with the emissions limitations therein (as well as compliance with the standards of performance in NSPS OOOOb) in order to ensure that those requirements achieve meaningful emissions reductions.

The WEC does not require, but rather incentivizes, methane emissions reductions and sustained emissions mitigation activity across the oil and gas industry. In particular, for WEC applicable facilities in industry segments that are covered by EG OOOOc, the WEC incentivizes emissions reductions earlier than may otherwise be required pursuant to EG OOOOc-implementing State and Federal plans. The EPA expects that, as CAA section 111(b) and (d) facilities implement and comply with the methane emissions requirements of NSPS OOOOb and EG OOOOc-implementing State and Federal plans, many of the WEC applicable facilities that contain those emissions sources subject to those regulations and plans would fall below the waste emissions thresholds, and thus will not be subject to the charge. However, the regulatory compliance exemption recognizes that certain WEC applicable facilities may remain above the waste emissions thresholds even after implementation of the requirements in the final NSPS OOOOb and approved State and Federal plans under EG OOOOc; the regulatory compliance exemption provides an opportunity for relief from charge to these WEC applicable facilities whose constituent CAA section 111(b) and (d) facilities are in compliance with their respective requirements.

Congress provided that the regulatory compliance exemption would only come into effect after a determination by the Administrator that ''(i) methane emissions standards and plans pursuant to subsections (b) and (d) of section 111 have been approved and are in effect in all States with respect to the applicable facilities'' and ''(ii) compliance with the requirements described in clause (i) will result in equivalent or greater emissions reductions as would be achieved by [the 2021 NSPS/EG Proposal], if such rule had been finalized and implemented'' (the ''equivalency determination'').[41] The EPA concludes that the best reading of the statute is that Congress intended to provide an incentive for the EPA to set standards for new methane emissions sources at least as strong as those it proposed, and for States to move promptly in adopting and implementing the standards of performance for existing sources in their EG OOOOc-implementing plans that likewise achieve reductions equal to or greater than those initially proposed. This intention is evident through the Administrator determinations that must be made before the regulatory compliance exemption becomes available. Additionally, the exemption is only available to WEC applicable facilities that are ''subject to and in compliance with methane emissions requirements pursuant to subsections (b) and (d) of section 111.'' [42] Collectively, the criteria in section 136(f)(6)(A) for invoking the exemption mean that if the final NSPS OOOOb and/or EG OOOOc-implementing State or Federal plans are not finalized, the methane emissions requirements therein are not implemented, or the standards are less stringent than those in the 2021 NSPS/EG Proposal, the exemption would not be available. In other words, WEC applicable facilities would not be eligible for the regulatory compliance exemption until all of the requisite conditions are met, and until that time, the WEC provides an incentive to reduce methane emissions.

In this final rule, the EPA is finalizing a determination that the prerequisite Administrator determinations for the regulatory compliance exemption in CAA section 136(f)(6)(A)(i) and (ii) will be made on a State-by-State basis after each State or Federal plan pursuant to CAA section 111(d) is approved and in effect. Also in the final rule, WEC applicable facilities located in a given State (or States, where the facility spans multiple States) will become eligible for the regulatory compliance exemption after the Administrator determination has been made for the State(s) in which the facility is located and at the point in time when the WEC applicable facility is subject to and in compliance with the requirements in the final NSPS OOOOb and applicable EG OOOOc-implementing State and Federal plan(s)—that is, when WEC applicable facilities must begin complying with all of the methane emissions requirements therein. These final requirements for the timing of regulatory compliance exemption availability include two key changes from the proposed rule. First, the final rule includes a shift from the proposed approach of making the exemption available to all WEC applicable facilities at the same time after *all* State plans are approved, to the final approach of making the exemption available on a State-by-State basis. Second, the final rule includes a shift from the proposed approach of making the exemption available upon the effective date of the State or Federal plans, to the final approach of making the exemption available when a WEC applicable facility is ''in compliance with methane emission requirements'' of both the NSPS OOOOb standards and EG OOOOc-implementing State or Federal plans—that is, the point in time when all of the CAA section 111(b) and (d) facilities are legally required to comply with the methane emissions standards therein. Together, these changes help achieve one of the overarching goals of encouraging early emission reductions.

[40] Under the Tribal Authority Rule (TAR), eligible Tribes may seek approval to implement a plan under CAA section 111(d) in a manner similar to a state. See 40 CFR part 49, subpart A. Tribes may, but are not required to, seek approval for treatment in a manner similar to a state for purposes of developing a Tribal implementation plan (TIP) implementing the EG codified in 40 CFR part 60, subpart OOOOc. The TAR authorizes Tribes to develop and implement their own air quality programs, or portions thereof, under the CAA. However, it does not require Tribes to develop a CAA program. Tribes may implement programs that are most relevant to their air quality needs. If a Tribe does not seek and obtain the authority from the EPA to establish a TIP, the EPA has the authority to establish a Federal CAA section 111(d) plan for designated facilities that are located in areas of Indian country. A Federal plan would apply to all designated facilities located in the areas of Indian country covered by the Federal plan unless and until the EPA approves a TIP applicable to those facilities. In this notice, all uses of the phrase ''state and Federal plans'' are intended to include any Tribal plans, to the extent that any Tribal plans are developed to implement EG OOOOc.

[41] CAA section 136(f)(6)(A).

[42] CAA section 136(f)(6)(A).

The EPA is also finalizing other elements of the Administrator determinations under CAA section 136(f)(6)(A)(i) and (ii), including establishing the relative points of comparison for the equivalency determination, in order to ensure that those elements align with the statutory requirements. Because NSPS OOOOb is already finalized and in effect in all States, the EPA is finalizing an approach wherein the Administrator will make these determinations for each individual State once each EG OOOOc-implementing State plan, or applicable Federal plan, is approved.

In this final rule, eligible WEC applicable facilities can seek exemption from the WEC through the regulatory compliance exemption when facilities subject to methane emissions requirements pursuant to NSPS OOOOb and EG OOOOc-implementing State and Federal plans are ''in compliance'' with those requirements. The EPA is finalizing that a WEC applicable facility's eligibility for the regulatory compliance exemption will be based on the compliance status of the CAA section 111(b) and (d) facilities contained within that WEC applicable facility, as indicated in annual reports required to be submitted under NSPS OOOOb and EG OOOOc-implementing State and Federal plans. The EPA proposed that the compliance status of these CAA section 111(b) and (d) facilities would be assessed to determine exemption eligibility, but the specific criteria used to evaluate eligibility are different in this final rule than in the WEC proposal. The EPA is also finalizing other changes to the applicability provisions for this exemption after consideration of comments received. First, the EPA is limiting the scope of noncompliance with NSPS OOOOb and plans pursuant to EG OOOOc that would cause a WEC applicable facility to no longer qualify for the regulatory compliance exemption. For self-reported noncompliance, noncompliance with monitoring requirements, emission limits and any surrogate limits, operating limits (including operating parameter limits), and work practice standards—the categories of noncompliance most likely to result in emissions increases—will disqualify a WEC applicable facility from the regulatory compliance exemption. Also, any violations of NSPS OOOOb or an NSPS OOOOc plan that are adjudicated in an administrative or judicial action will disqualify the WEC appliable facility from the regulatory compliance exemption. Second, the EPA is finalizing that for all WEC applicable facilities, exemption eligibility is assessed on a calendar quarterly basis (*i.e.,* January 1–March 31), compared to the proposal's approach, which would have assessed eligibility on an annual basis. Third, for all WEC applicable facilities defined at the basin-level (*i.e.,* facilities in the onshore production and gathering and boosting industry segments), the EPA is finalizing that loss of exemption availability would be applied at the ''site'' level rather than the facility level;[43] for facilities in all other industry segments, the EPA is finalizing as proposed that the exemption would be lost at the facility level.

In the following sections, the EPA describes in more detail the final determinations regarding the availability of the exemption, and specifically: (1) the point in time at which the Administrator will make the determination(s) pursuant to CAA section 136(f)(6)(A)(i)–(ii) and the process for how the determinations will be made; (2) the point in time at which the regulatory compliance exemption will become available to eligible applicable facilities; and (3) the process for resumption of the WEC pursuant to CAA section 136(f)(6)(B) if the criteria for the regulatory compliance exemption are no longer met. The EPA is also finalizing elements related to the administration of the regulatory compliance exemption, including: (1) how to interpret CAA section 136(f)(6)(A) to govern the interaction between WEC applicable facilities and both CAA section 111(b) affected facilities and CAA section 111(d) designated facilities (collectively referred to in this preamble as ''CAA section 111(b) and (d) facilities'') for the purposes of the regulatory compliance exemption; (2) how compliance with the methane emissions requirements promulgated under CAA sections 111(b) and (d) will be defined for the purposes of the regulatory compliance exemption; and (3) reporting requirements for applicable facilities claiming the regulatory compliance exemption.

[43] Each subpart W facility in the onshore production segment or the gathering and boosting segments is typically comprised of multiple well-pad sites or gathering and boosting sites. A well-pad site is defined in the 2024 Final Subpart W Rule as ''all equipment on or associated with a single well-pad'' and a gathering and boosting site is defined as ''a single gathering compressor station [. . .], centralized oil production site [. . .], gathering pipeline site [. . .], or other fence-line site within the onshore petroleum and natural gas gathering and boosting industry segment''.

a. Timing for the Administrator's Regulatory Compliance Exemption Determinations

Before an applicable facility may claim the regulatory compliance exemption, the Administrator must determine that: (1) ''methane emissions standards and plans pursuant to subsections (b) and (d) of section 111 have been approved and are in effect in all States with respect to the applicable facilities,'' and (2) ''compliance with the requirements described in clause (i) will result in equivalent or greater emissions reductions as would be achieved by the [2021 NSPS/EG Proposal], if such rule had been finalized and implemented.''[44] This framework indicates that Congress intended these prerequisites to exemption availability to encourage timely implementation of the emission reduction requirements in the 2024 Final NSPS/EG and to ensure that those requirements achieve meaningful emissions reductions.

The EPA proposed that both Administrator determinations would be made for the entire nation at one point in time when EG OOOOc-implementing plans were approved and in effect in each and every State that contained WEC applicable facilities. Because the Administrator determinations must be made before the exemption becomes available, under the proposed approach, the exemption would have become available to all States at the same time at a point after the approval of the last State or Federal plan. In other words, the regulatory compliance exemption would have become available to all eligible WEC applicable facilities in the country at the same time, and an applicable facility located in a State or States with an approved plan(s) would be required to wait until all plans in the country were approved and the EPA had then made the necessary Administrator determinations before it could become eligible for the regulatory compliance exemption. The EPA also sought comment on an alternative approach wherein the regulatory compliance exemption would become available on a State-by-State basis based on the finalization of plans for individual States. The EPA received a significant number of public comments on the proposed approach, with many commenters disagreeing with the EPA's proposed interpretation of the statutory text. Such commenters argued that the proposed approach disincentivized States from taking early action in the development of State plans, undercutting Congress' principal goal of

[44] CAA section 136(f)(6)(A).

limiting methane emissions as quickly as possible. They contended that ''proactive States'' would not realize any benefits for their regulated communities by acting early, discouraging quick action. In addition, many commenters stated that the availability of the exemption could be held back by ''lagging States,'' which would unreasonably and unfairly limit the availability of the exemption by making it subject to the action or inaction of the least responsive State. Commenters also argued that the EPA's proposal misinterpreted the phrase ''in all States with respect to the applicable facilities'' in CAA section 136(f)(6)(A)(1), and that this phrase commanded a reading of the statute that supported the alternative ''State-by-State'' approach to the Administrator determinations.

After consideration of public comments, the EPA is finalizing an alternative approach, on which the Agency solicited comment, regarding the timing of the Administrator determinations required in CAA section 136(f)(6)(A)(i)–(ii). As described in the proposed rule, such determinations will occur on a State-by-State basis as State plans are approved and, where appropriate, Federal plans issued pursuant to CAA section 111(d). This approach means that the Administrator will proceed in a State-by-State manner to make determinations that: (i) ''methane emissions standards and plans pursuant to subsections (b) and (d) of section 111 have been approved and are in effect in all States with respect to the applicable facilities,'' and (ii) ''compliance with the requirements described in clause (i) will result in equivalent or greater emissions reductions as would be achieved by the [2021 NSPS/EG Proposal], if such rule had been finalized and implemented.'' CAA section 136(f)(6)(A)(i)–(ii). Upon those determinations as to each State, the exemption will become available to the WEC applicable facilities located in that State when the final compliance dates have passed with respect to both (1) the NSPS OOOOb standards for new sources and (2) the standards established under that State's plan (or Federal plan, if applicable) pursuant to EG OOOOc. See section II.D.2.b. of this preamble for further discussion of when an applicable facility may claim the exemption.

The first Administrator determination is related to the timing of the promulgation of final methane emissions standards under CAA section 111(b) and in State and Federal plans pursuant to an EG issued under CAA section 111(d). The EPA is finalizing a determination that this temporal requirement in CAA section 136(f)(6)(A)(i) is met for all WEC applicable facilities in a particular State at the point in time when *both* (1) emission standards for new sources under CAA section 111(b) have been promulgated and are in effect and (2) a State's plan for existing sources pursuant to an EG issued under CAA section 111(d) has been fully approved by the EPA and is in effect—or if either no State plan or only a partial plan has been approved, a Federal plan is in effect.

Regarding Federal plans, the EPA is finalizing, as proposed, a determination that ''plans pursuant to subsection . . . (d) of section 111,'' CAA section 136(f)(6)(A)(i), includes the promulgation of a Federal plan where the EPA determines that a State has failed to submit a fully approvable State plan, as that is the only way a complete plan pursuant to CAA section 111(d) would take effect in those States. Accordingly, because the emissions standards for new sources under CAA section 111(b) have already been finalized by the EPA in the 2024 Final NSPS/EG, approval of the State (or Federal) plan for States with existing sources subject to the EG under CAA section 111(d) will determine the timing for when the determinations pursuant to CAA section 136(f)(6)(A)(i) and (ii) can be made for each State.

The EPA is finalizing this State-by-State approach based on the Agency's interpretation of the best reading of CAA section 136(f)(6). Specifically, the EPA concludes that the best interpretation of the phrase ''all States with respect to the applicable facilities'' in CAA section 136(f)(6)(A)(i) means that the determination is to be made for each State individually, and that State plans must be approved and in effect for all States in which a WEC applicable facility claiming the exemption is located. The EPA solicited comment on this alternative interpretation at proposal. *See* 89 FR 5338. At proposal, the EPA proposed ''to interpret 'all States' in CAA section 136(f)(6)(A)(i) to mean that every State with an applicable facility (*i.e.,* all States with WEC applicable facilities) must have an approved plan (State or Federal) before the determination [in CAA section 136(f)(6)(A)(i)] can be made.'' *Id.* at 5337. In addition, the EPA proposed to interpret the statutory text to mean that the Administrator must make only *one* determination as to both prongs in CAA section 136(f)(6)(A)(i) and (ii). Upon consideration of public comments received on this proposed statutory interpretation, and upon reexamining the text of the statute, the EPA no longer finds that the proposed approach is the best reading of the statute, and, concludes that the ''State-by-State'' approach to the Administrator determinations that the EPA is finalizing in this rulemaking is the best reading of the statute.

First, commenters contend, and the EPA agrees, that the proposed approach misinterpreted, and thus failed to give appropriate effect to, the modifier ''with respect to the applicable facilities'' in CAA section 136(f)(6)(A)(i). As one commenter noted:

> The term ''the applicable facilities'' [in CAA section 136(f)(6)(A)(i)] refers not to *all facilities* nationwide, but to the *specific* facilities whose eligibility for the Regulatory Compliance Exemption is in question. Giving meaning to all terms of the statute results in the conclusion that a facility is not eligible for the Regulatory Compliance Exemption until all States in which the applicable facility is located have a State or Federal OOOOc plan in effect. As for the words ''in all States,'' they refer not to *all* States that have any existing sources (as the EPA proposes to read them), but rather to all States in which the WEC obligated party has equipment in a given facility. The EPA itself in the proposal repeatedly notes that there are facilities which extend across State lines. *See, e.g.,* 89 [FR] at 5399. All that these words provide is that no facility is eligible for the Regulatory Compliance Exemption for existing sources until all States in which that facility is located have a State or Federal existing-source plan in effect.[45]

Upon reconsideration of the text, the EPA agrees with this commenter that ''with respect to applicable facilities'' is best interpreted to account for the fact that some applicable facilities straddle State lines and that this phrase should not be read to mean, as proposed, that every State in the country with a WEC applicable facility must have a plan pursuant to CAA section 111(d) ''approved and in effect'' before the Administrator can make a determination under CAA section 136(f)(6)(A)(i). This reading is a better interpretation of the statute because it gives meaning to this modifying phrase in the context of the subject identified in CAA section 136(f)(6)(A)—''an applicable facility'' seeking the exemption from the WEC. In other words, when Congress wrote that the exemption's availability depended, in part, on plans being in effect ''in all States with respect to the applicable facilities,'' it meant all the States in which the applicable facilities seeking the exemption operate.

Second, at proposal, the EPA interpreted the use of the singular in CAA section 136(f)(6)(A) directing the

[45] Comment of the American Exploration and Production Council, Document ID No. EPA–HQ–OAR–2023–0434–0276 at p. 20.

EPA to make ''a determination'' on the requirements outlined in CAA section 136(f)(6)(A)(i) and (ii) as limiting the EPA to *one* determination. At proposal, because the EPA believed that the Administrator could only make one determination, which, by necessity, could only be done once all standards and plans were in place, the EPA concluded that we were bound to make the determination only once EG OOOOc-implementing plans were in place in all states. However, upon consideration of the public comments challenging that interpretation and after reexamining the statutory text, the EPA now concludes that the statute does not *require* a reading that limits the Administrator to making only one determination. Rather, the best reading of the phrase ''a determination'' in CAA section 136(f)(6)(A) is that it was intended to ensure that the determination required by both prongs (i) and (ii) had been made with respect to the WEC applicable facility seeking the exemption described in CAA section 136(f)(6)(A). In other words, because ''applicable facility'' is framed in the singular in paragraph (A), it is logical that the prerequisite ''determination'' would also be framed in the singular as to that facility. But that does not indicate the Administrator is *precluded* from making more than one determination as necessary to effectuate availability of the exemption nationwide. We therefore do not read the statute to limit the Administrator to making one determination, but rather believe that the statute indicates that the Administrator is permitted to make multiple determinations. As one commenter explained:

> [T]he singular use of ''a'' within the phrase ''upon a determination by the Administrator'' is countered by the singular word ''an'' within the phrase ''[c]harges shall not be imposed pursuant to subsection (c) on an applicable facility that is subject to and in compliance with methane emissions requirements.'' This phrase clearly contemplates that the Regulatory Compliance Exemption is being made for particular applicable facilities, and *that* is the correct frame through which the subsequent phrase ''a determination'' should be made.[46]

As just described, the EPA agrees with this statutory interpretation. And further, because the first of the two Administrator determinations in CAA section 136(f)(6)(A)(i) hinges on the approval of each State's plan (which will apply to all WEC affected facilities within the State), the best approach to implementing this statutory directive is for the Administrator to make the determinations in CAA section 136(f)(6)(A(i) and (ii) on a State-by-State basis.

The EPA notes that while the best approach to meaningfully implementing these statutory provisions is for the EPA to make a determination under CAA section 136(f)(6)(A) upon the approval of each State plan, that does not preclude the EPA from reviewing and revising an Administrator determination if a standard or plan is later revised, in order to ensure that the conditions of CAA section 136(f)(6)(A) are still met, consistent with the resumption of charge language in CAA section 136(f)(6)(B). Moreover, the language in CAA section 136(f)(6)(B), which anticipates that ''the conditions in clause (i) or (ii)'' of CAA section 136(f)(6)(A) may at some point ''cease to apply,'' supports the EPA's interpretation in this final rule that the Administrator is not bound to making only one determination. Congress clearly anticipated that the EPA might revisit its determinations if the methane emissions standards pursuant to CAA section 111(b) and (d) change in the future. Given that possibility, the statute cannot be read to mean that the Administrator must be limited to making only one determination as to the conditions in CAA 136(f)(6)(A)(i) and (ii) and never again revisit it.

Many facets of the proposed approach to the regulatory compliance exemption flowed from the interpretation that the Administrator must make only one determination as to all States. The EPA no longer finds that interpretation to be persuasive or consistent with the statutory text in light of the many persuasive comments offering a different view. Accordingly, in light of the fact that the statute permits the Administrator to make more than one determination, and in order to give meaning to the phrase ''with respect to the applicable facilities,'' the EPA has concluded that finalizing a ''State-by-State'' approach to the Administrator determinations aligns with the best reading of CAA section 136(f)(6)(A).

The second determination that must be made before the regulatory compliance exemption becomes available to an applicable facility is whether the final ''methane emissions standards and plans'' provide equivalent or greater emissions reductions than would have been achieved by the 2021 NSPS/EG Proposal, had it been finalized and implemented as proposed. As the EPA explains in section II.D.2.d. of this preamble, the EPA has concluded that this determination should take into account the content of the final State plans. Because plans pursuant to CAA section 111(d) will not be finalized for several years, the EPA cannot make a final equivalency determination in this final action. Instead, the EPA is finalizing an approach wherein the equivalency determination will be made for each individual State with CAA section 111(b) or (d) facilities after the CAA section 111(d) plan (*i.e.,* State or Federal plan) for that State is approved. This timing will allow for evaluation of the emissions reductions achieved by the final NSPS OOOOb and by the final State or Federal plan pursuant to EG OOOOc. More details about the nature and scope of the equivalency determination are discussed in section II.D.2.d. of this preamble.

b. Timing of Regulatory Compliance Exemption Availability to WEC Applicable Facilities

The WEC program must also establish at what point in time a WEC applicable facility may claim the regulatory compliance exemption once the Administrator determinations have been made. CAA section 136(f)(6) provides that the charges shall not be imposed ''on an applicable facility that is subject to and in compliance with methane emissions requirements pursuant to subsections (b) and (d) of section 111.'' The EPA proposed that the exemption would become available to applicable facilities in a State once all of the standards pursuant to NSPS OOOOb and the EG OOOOc-implementing plan were effective, because at that point the facilities would be technically ''subject to'' emissions standards, even if the compliance dates were in the future.[47] This proposed approach, combined with the proposed approach for the timing of

[46] *Id.* at p. 22.

[47] An ''effective date'' is the date upon which a final rule and the associated amendments to the Code of Federal Regulations become legally effective after publication of the final rule in the **Federal Register**. *See, e.g.,* 5 U.S.C. 553(d) (establishing presumption that a final rule's effective date be 30 days after publication in the **Federal Register**, unless good cause is found for an earlier date); 5 U.S.C. 801(a)(3) (establishing requirement that a ''major'' rule take effect no sooner than 60 days after publication in the **Federal Register**). A ''compliance date'' is the date(s) included within the effective final rule upon which a regulated entity must comply with specified requirements of the regulations. *See, e.g.,* 40 CFR subpart Ba, 60.21a(g) (''*Compliance schedule* means a legally enforceable schedule specifying a date or dates by which a source or category of sources must comply with specific standards of performance contained in a plan or with any increments of progress to achieve such compliance.''). In some cases, a regulation's effective date and compliance date may be the same date. In other cases, a regulation may be in effect, but not yet require compliance with some or all of its provisions until a future date. Some regulations have multiple different compliance dates for different regulatory provisions.

the exemption's prerequisite determinations, meant that all WEC applicable facilities in the country would have had gained access to the exemption at the same time—as soon as the determinations required by CAA section 136(f)(6)(A)(i)–(ii) had been made.

Based on continued consideration of the statutory text and Congress's intent in promulgating the regulatory compliance exemption, the EPA is making revisions in this final rule from the proposed approach for when WEC applicable facilities may begin to claim the exemption. The EPA is finalizing that WEC applicable facilities will be able to claim the regulatory compliance exemption once the final compliance date for applicable CAA section 111(b) and (d) facilities has passed in the State(s) and Tribal lands in which the WEC applicable facility is located. The final compliance date is the date at which all CAA section 111(b) and (d) facilities are required to comply with all of the final specified requirements pursuant to NSPS OOOOb or an EG OOOOc-implementing plan. For example, if an approved plan establishes compliance dates for some CAA section 111(d) designated facilities in 2029 and compliance dates for other designated facilities in 2030, all WEC applicable facilities in that State could begin to claim the exemption as of the 2030 compliance date. In cases where the final compliance date applies to a CAA section 111(b) or (d) facility subject to a methane emissions standard that has phased-in requirements, the final compliance date is the date of the final requirement to be phased in.

The EPA is finalizing that for WEC applicable facilities in industry segments for which a facility is defined at the basin level in subpart W that span multiple States (*e.g.,* onshore production and gathering and boosting facilities), the exemption is not available until the final compliance date has passed for all States in which the facility is located. In cases where such a WEC applicable facility could span multiple States because it is located in a basin that covers multiple States, but the WEC applicable facility itself is only located in a single State, exemption availability for that facility will be based only on the final compliance deadline for the single State in which the WEC applicable facility is located. For purposes of implementation of the regulatory compliance exemption in this final rule, a WEC applicable facility in the onshore production or gathering and boosting industry segment is considered to be located in each State or Tribal lands that a well-pad site or gathering and boosting site, as applicable, was reported to subpart W for the reporting year. These approaches for facilities in industry segments with facility definitions that span multiple States also apply to facilities that span both States and Tribal lands. For example, in such cases where a WEC applicable facility is located both in a State and on Tribal land, the final compliance date across all of the applicable State, Federal, and Tribal EG OOOOc-implementing plans must pass before the exemption is available to the WEC applicable facility. Once the exemption is available to a WEC applicable facility under this framework, all CAA section 111(b) and (d) facilities contained within a WEC applicable facility will be required to demonstrate compliance in order to claim the exemption pursuant to CAA section 136(f)(6)(A). The requirements governing this compliance demonstration are discussed in more detail in section II.D.2.f. of this preamble.

The EPA is finalizing an approach in which all WEC applicable facilities with CAA section 111(b) and (d) facilities in a single State will be eligible for the regulatory compliance date at the same time. Establishing a single date for exemption availability for each State ensures that the exemption can be properly implemented and that the EPA can accurately verify exemption eligibility, while simultaneously reducing industry burden. Based on the data collected under subpart W and data to be collected under NSPS OOOOb and EG OOOOc-implementing plans, it is not feasible for the EPA to verify all applicable CAA section 111(b) and (d) facilities contained within each WEC applicable facility in order to determine a facility-specific compliance date. The complexity required for industry reporting and the EPA's verification render making the compliance exemption available at this granular of a level unworkable for several reasons. First, based on data submitted under subpart W, the EPA is not able to determine whether a particular source of emissions is regulated under NSPS OOOOb or an EG OOOOc-implementing plan (or neither), and therefore the EPA cannot determine which compliance deadlines are applicable. Further, the applicable compliance date would also be subject to change for a specific WEC applicable facility as individual assets are sold and/or acquired. In any event, the EPA anticipates that compliance dates in most State plans will be close together in time. To the extent that there are compliance dates for CAA section 111(d) facilities spanning more than 1 year, the WEC will continue to serve as bridge until the final compliance date has passed, with those facilities already in compliance or which have taken further actions to reduce methane emissions having the opportunity to reduce or eliminate their WEC obligation. Importantly, irrespective of CAA section 111 compliance, only WEC applicable facilities with methane emissions over the waste thresholds will be subject to charge. Thus, WEC obligated parties may choose to act early to reduce applicable emissions sufficient to avoid the charge, even before any compliance dates have passed.

The EPA is finalizing this ''compliance date'' approach both because it aligns with the best reading of the statute, and because it aligns with one of Congress's primary goals for the WEC—to continuously incentivize methane emission reductions across the oil and gas industry during the period leading up to the date at which the requirements in EG OOOOc-implementing plans are fully implemented. Although the EPA proposed to make the exemption available once all CAA section 111(b) and (d) standards were effective, the EPA also considered and sought comment on this alternative approach of making the regulatory compliance exemption available upon the date which CAA section 111(b) and (d) facilities are required to comply with requirements in NSPS OOOOb and the EG OOOOc implementing plans. *See* 89 FR 5339–40 (second and third discussed alternative approaches, considering both ''all States'' and ''State-by-State'' approaches). Specifically, the EPA noted that it ''considered an approach that would make the regulatory compliance exemption available to WEC applicable facilities meeting the criteria at a State-by-State level as the final compliance deadline in a State or Federal plan for CAA section 111(d) facilities was reached,'' and sought comment on such an approach. *Id.* As noted at proposal, under this approach, ''the EPA would read 'in compliance with methane emissions requirements' to mean that *all* compliance dates in the NSPS and the State and Federal plans have passed.'' *Id.* While the EPA stated at proposal that it believed that this ''approach that would make the regulatory compliance exemption available to WEC applicable facilities meeting the criteria at a State-by-State level as the final compliance deadline in a State or Federal plan for CAA section 111(d) facilities was reached'' was not as well aligned with the statute as the

proposed approach, the EPA now concludes that interpreting this phrase as described in the proposed alternative is, in fact, the better reading of the statute, particularly given the EPA's determination in this final rule that the statute also anticipates a State-by-State approach for the Administrator determinations. As one commenter stated:

> [T]he proposed approach of exemption availability once the plans are approved instead of after the plans are fully implemented only delays the reduction of methane emissions . . .
>
> Therefore, granting any regulatory compliance exemption before the passing of the ''upper bound'' compliance dates of the CAA section 111 rules, as the EPA is proposing to do, is in contradiction with the Congressional intent of the Inflation Reduction Act, will result in greater methane emissions than the alternative, and should be avoided.[48]

The EPA agrees with this commenter and, for the following reasons, the EPA is finalizing the alternative approach.

First, upon re-examining the text and in light of comments received, the EPA has concluded that applying the regulatory compliance exemption once State plans are implemented, rather than upon approval, is the best reading of the statutory text. Section 136(f)(6)(A) provides that ''charges shall not be imposed pursuant to subsection (c) on an applicable facility that is *subject to and in compliance with* methane emissions requirements pursuant to subsections (b) and (d),'' subject to the Administrator determinations. Notably, the text states that applicable facilities must be both ''subject to *and* in compliance with'' (emphasis added) methane requirements. It is a longstanding principle of statutory construction that every word or phrase in a statutory provision is to be given effect, and none should be ignored or assumed to be duplicative. *See, e.g, Reiter* v. *Sonotone Corp.,* 442 U.S. 330, 339 (1979); *Bennett* v. *Donovan*, 4 F. Supp. 3d 5, 10 (D.C. Cir. 2013) (acknowledging that the court must ''give effect, if possible, to every clause and word of a statute, avoiding, if it may [], any construction which implies that the legislature was ignorant of the meaning of the language it employed. Put differently, a court must not interpret a statute so as to render any words within that statute as 'mere surplusage.'') (citations omitted). Accordingly, the phrase ''subject to'' and the phrase ''in compliance with'' must have different legal meanings. It follows that this provision requires a WEC applicable facility to be both ''subject to'' methane emissions standards and plans under CAA section 111(b) and (d), and actively ''in compliance with'' the specific requirements therein, meaning that these requirements must actually have been implemented. In addition, the phrase ''in compliance with methane emission requirements'' indicates that the text is concerned with the contemporaneous implementation of standards at the CAA section 111(b) and (d) level. Being ''in compliance'' with a requirement, by necessity, means that a requirement mandate a regulated entity take a particular action or meet a particular standard. ''Methane emission requirements pursuant to [section 111(d)]'' will so mandate only upon the compliance date(s) in the section 111(d)-implementing State or Federal plan. This means that it is not sufficient that a standard be *effective* because it has been approved as part of an EG OOOOc-implementing State or Federal plan, if compliance with that standard is not required until some future date. There are no monitoring or reporting obligations by which one would measure compliance, for example, until that compliance date arrives. Similarly, some ''methane emission requirements pursuant to [section 111(b)],'' have tiered compliance dates, meaning that the compliance dates vary between emissions sources. In such case, the WEC applicable facility is only eligible for the regulatory compliance exemption once the compliance dates for all CAA section 111(b) and (d) sources have occurred and the Administrator determinations have been made. In sum, the EPA concludes that the best reading of ''in compliance'' means that an entity is presently subject to actual, emissions limits or work practice standards that require contemporaneous actions on the part of the regulated CAA section 111(b) and (d) sources to comply with the standards.

Second, the EPA concludes that this final approach is best aligned with Congressional intent to incentivize methane emissions reductions on an ongoing and continuous basis, both through the WEC and through compliance with CAA section 111(b) and EG OOOOc-implementing plans. This statutory scheme provides relief from the WEC for facilities once they are reducing methane emissions in compliance with requirements under CAA section 111. As noted at proposal, implementation of the requirements included in OOOOc-implementing State or Federal plans may not be mandated immediately upon the date at which the plan goes into effect. In other words, the plans may include requirements with compliance dates that occur at a future date after plan approval, and such requirements could be implemented over multiple compliance dates in a phased manner or include deadlines for various increments of progress. Under the proposed approach, there would likely have been a gap during which WEC applicable facilities would have been able to claim the regulatory compliance exemption, but the CAA section 111(d) facilities within those WEC applicable facilities would not have actually been required to reduce emissions pursuant to the State plan's methane emission requirements. For example, if under the proposed approach the exemption had become available to all States in the country with WEC applicable facilities in 2028, based on the approval of all State plans, but those approved plans did not require implementation of methane requirements until the presumptive compliance deadline of 2029,[49] or even later, a multi-year gap would have existed in which there would be no incentive for CAA section 111(d) existing facilities within a WEC applicable facility to reduce emissions in advance of the compliance deadline. This scenario would be contrary to the Congressional intent of the regulatory compliance exemption, which is to provide relief from the WEC to applicable facilities that are ''subject to and in compliance with methane emissions requirements pursuant to subsections (b) and (d) of section 111''—that is, those actually achieving the requirements and achieving the attendant emissions reductions therein.

In addition, the concerns that the EPA expressed at proposal about a ''compliance date'' approach are no longer concerns given that we have now concluded that the best reading of the statute is a State-by-State approach to the Administrator determinations, as explained in section II.D.2.a. of this preamble. Notably, because compliance dates for the relevant methane emissions standards for a particular WEC applicable facility may occur at different points in time (because there are varying compliance dates for

[48] Comment of Catherine Wolfram, Ph.D., William F. Pounds Professor of Energy Economics; Professor, Applied Economics, Massachusetts Institute of Technology, Document ID No. EPA–HQ–OAR–2023–0434–0266.

[49] The 2024 Final NSPS/EG rule establishes a final compliance deadline in 2029 for CAA section 111(d) facilities. States may elect to require earlier compliance deadlines, and approved plans may also extend compliance deadlines beyond 2029 via the ''remaining useful life and other factors'' provision, or RULOF.

individual methane emissions sources within NSPS OOOOb and it is possible that the same will be true for EG OOOOc-implementing plans), we noted at proposal that such an approach may have the result of delaying the availability of the regulatory compliance exemption for many years and could make the exemption available to States at different times. *See* 89 FR 5339–40. This was particularly true when combined with the proposed approach to the Administrator determination required by CAA section 136(f)(6)(A)(i) that would only make the exemption available once plans were approved and in effect for all States. In that case, a WEC applicable facility in a State with a promptly submitted and approved EG OOOOc-implementing plan with ambitious compliance deadlines would not have been able to access the exemption until not only all States had approved plans, but all States' plans' compliance deadlines had passed—which could vary amongst States. However, under the final rule, the fact that WEC applicable facilities in some States will be eligible for the regulatory compliance exemption at different points in time is inherent in, and consistent with, the statutory scheme and is the best interpretation of the text and policy goals of the WEC.

The approach adopted in this final rule alleviates the concerns voiced in response to the proposed approach to the Administrator determinations, in which all States with WEC applicable facilities would need to wait for every other State, even potentially ''lagging'' or ''delayed'' States, to have NSPS OOOOb standards and OOOOc-implementing plans approved and in effect before WEC applicable facilities in that State would be eligible for the exemption. By proceeding in a State-by-State manner for the Administrator determinations and making the regulatory compliance exemption available upon the final compliance date in NSPS OOOOb and the relevant EG OOOOc-implementing plan, the EPA is providing States with more control over when the regulatory compliance exemption will become available for applicable facilities within their jurisdictions, while also encouraging methane emissions reductions to occur sooner. The final approach also ensures that WEC applicable facilities can secure the regulatory compliance exemption once their constituent CAA section 111(b) and (d) facilities are actually achieving reductions under NSPS OOOOb and the relevant EG OOOOc-implementing plan(s). Under the final approach adopted in this final rule, States will be incentivized to promptly submit approvable EG OOOOc-implementing plans with timely compliance deadlines so that WEC applicable facilities within their borders gain access to the exemption. Individual States will decide how best to structure plans in terms of compliance dates consistent with EG OOOOc, and how quickly to submit proposed plans to the EPA for approval. The final approach aligns with the intent of the WEC to incentivize early reductions of methane emissions while providing flexibility to States to determine when the regulatory compliance exemption becomes available.

c. Emissions Year in Which Regulatory Compliance Exemption Takes Effect

While the data collected under subpart W for the purposes of WEC calculation are reported on a calendar-year basis (*i.e.,* a reporting year is a calendar year), the date at which all of the criteria for the regulatory compliance exemption will be met is not yet known and could fall at any point in the course of a reporting year. The EPA is finalizing that for WEC applicable facilities that contain any CAA section 111(d) facilities, once the applicable determinations required by CAA section 136(f)(6)(A)(i)–(ii) have been made, the regulatory compliance exemption will take effect in the reporting year of the final compliance date in the EG OOOOc-implementing plan(s) applicable to the to the State(s) in which the WEC applicable facility is located. For example, if the final compliance deadline in an approved State plan is in June 2029 and the Administrator has made the necessary determinations by 2029, all eligible WEC applicable facilities in that State meeting the compliance requirements discussed in section II.D.2.f. of this preamble would be exempt from the WEC for the entire 2029 reporting year. Comments on the proposed rule were supportive of the proposed approach to make the exemption take effect the same reporting year that the prerequisite requirements for the exemption are met (as opposed to another year). The final approach is aligned with the purpose of CAA section 136(f)(6)(A) to provide the regulatory compliance exemption as a means for WEC applicable facilities to avoid being subject to the charge when their constituent CAA section 111(b) and (d) facilities are all subject to and in compliance with their applicable methane emissions standards.

d. Approach for Regulatory Compliance Determinations

As described in section II.D.2.a., the Administrator must make two determinations before the regulatory compliance exemption can be claimed by a WEC applicable facility: one related to whether standards and approved plans are in effect and a second related to whether those standards and plans achieve equivalent reductions to the EPA's 2021 proposed NSPS and EG. While those determinations will necessarily need to be made at a later point, the EPA is finalizing certain elements related to the approach for the determinations required by CAA section 136(f)(6)(A). In this rulemaking, the EPA is finalizing a decision that both determinations will be made simultaneously for each individual State once both the NSPS OOOOb standards and EG OOOOc-implementing plans for that State are approved and in effect, as required by section 136(f)(6)(A)(i). The EPA is also finalizing a decision regarding the points of comparison for making the equivalency determinations, which are required under section 136(f)(6)(A)(ii). The EPA did not propose and is not taking final action on any other elements of the equivalency determination at this time. These elements, along with both determinations themselves, will be addressed in a future administrative action(s).

The EPA is finalizing a decision that, when the criteria for both Administrator determinations are met in a given State, the determinations for that State will be made through a single administrative action. As discussed in section II.D.2.a. of this preamble, the equivalency determination for each State will be made taking into consideration the EG OOOOc-implementing State or Federal plan that is approved for each State. Because the timing for both determinations will be aligned, making both determinations for each State via a single, State-specific administrative action will simplify implementation of these elements of the regulatory compliance exemption.

Consistent with the proposed approach of making the regulatory compliance exemption available to WEC applicable facilities once all States had CAA section 111(b) and (d) standards and plans approved and in effect, the EPA proposed that the equivalency determination would be conducted at a national level after all such NSPS OOOOb standards and EG OOOOc-implementing State or Federal plans for all States had been approved and were in effect. The EPA requested and

received comment on its proposed approach. Some commenters supported the proposed approach and recommended additional criteria that the EPA consider in its equivalency analysis, including means of ensuring that State-by-State reductions are equivalent and that year-by-year reductions are equivalent. Other commenters alternatively recommended that the EPA conduct the analysis now, using the 2024 Final NSPS/EG as the point of comparison against the 2021 NSPS/EG Proposal. Yet other commenters supported making both determinations at the same time, but recommended that they be made at the State level rather than at the national level.

After consideration of comments and the language of the statute, the EPA has concluded that it is not appropriate to make a single equivalency determination at the national level because the EPA has determined that the regulatory compliance exemption should be made available on a State-by-State basis, and therefore the equivalency determination should also be made on a State-by-State basis. While the EPA is not making a single nationwide determination, the EPA is finalizing as proposed a decision that the relevant points of comparison for the equivalency determination are between (a) the 2021 NSPS/EG Proposal and (b) the 2024 Final NSPS OOOOb and approved State plans, or Federal plans if applicable. Specifically, the comparison will be made between (a) the emissions reductions that *would have been* achieved if the 2021 NSPS/EG Proposal was finalized and implemented in each State as proposed, and (b) the emissions reductions that *will be* achieved when the final NSPS standards and plans are actually implemented in each State.

Some commenters argued that the EPA could make the equivalency determination simply by comparing the 2021 NSPS/EG Proposal with the 2024 Final NSPS OOOOb standards and EG OOOOc presumptive standards. The EPA disagrees with these comments. The statute requires that the equivalency determination be based on an assessment of the emissions reductions achieved by ''compliance with the requirements described in clause (i).'' CAA section 136(f)(6)(A)(ii). In turn, clause (i) references ''methane emission standards *and plans*'' pursuant to CAA section 111(b) and (d). *Id.* section 136(f)(6)(A)(i) (emphasis added). That is, the statutory text specifically requires that the EPA evaluate the emission reductions resulting from compliance with both the NSPS OOOOb standards and the EG OOOOc-implementing *plans*—not the emissions guidelines established by the EPA—and determine that they ''will result in equivalent or greater emissions reductions'' as would be achieved by the 2021 NSPS/EG Proposal ''if such rule had been finalized and implemented.'' [50] In addition, principles of fairness and consistency also counsel in favor of applying the equivalency determination on a State-by-State basis. Inherent in the State-by-State approach is an incentive for States to take early action in developing plans and for those plans to require timely emissions reductions. Making the equivalency determination on a national basis would negate that incentive. It would also tie the fate of all States together, and thus could unfairly penalize States that, if evaluated individually, would be able to demonstrate equivalency. The EPA is also finalizing as proposed that, to conduct the equivalency determination, we will compare the methane emission reductions resulting from compliance with the NSPS OOOOb standards and the EG OOOOc-implementing plans in each State against a baseline in which the proposed standards were finalized as drafted in the 2021 NSPS/EG Proposal and implemented in each State. For a number of reasons, the EPA believes this is the best reading of the statutory text. The statute requires the EPA to determine that compliance with these standards and plans ''will result in equivalent or greater emissions reductions as would be achieved by'' the 2021 NSPS/EG Proposal ''if such rule had been finalized and implemented.'' *Id.* at 136(f)(6)(A)(ii). As the EPA explained in the proposed rule, the most straightforward reading of this statutory text is that Congress set the baseline as the emissions that the EPA projected would be achieved by the 2021 NSPS/EG Proposal. Notably, Congress did not repeat the same language in setting the baseline as it did in setting out the point of comparison for the baseline. In particular, while Congress specified that the comparator is the methane emissions reductions that ''will'' be achieved by the ''methane standards *and plans,*'' Congress specified that the baseline is the 2021 NSPS/EG Proposal ''if such rule were finalized and implemented,'' without any specific mention of plans.

Moreover, in enacting CAA section 136, Congress clearly indicated that the proposed rule was to serve as the benchmark for the methane emissions reductions it wanted achieved before the regulatory exemption would be available. No other reading makes sense. The statutory text uses for the baseline of the equivalency determination the emissions reductions that ''would be achieved'' by the 2021 NSPS/EG Proposal ''if such rule were finalized and implemented.'' The EPA concludes that the best reading of the statute is that Congress wanted to guarantee the level of emissions reductions (*i.e.,* ''equivalent or greater'' than expected from the 2021 NSPS/EG Proposal) projected in the 2021 NSPS/EG Proposal before WEC applicable facilities could claim the exemption. At the time CAA section 136 was enacted, Congress expected the EPA to finalize and implement the proposal. Had simply finalizing and implementing the Proposal in whichever manner the EPA chose been sufficient to satisfy the equivalence requirement, then there would not have been any need for an equivalence requirement at all. All Congress would have needed to say was that a pre-condition to the regulatory compliance exemption was finalizing the 2021 NSPS/EG Proposal. But instead, Congress created an equivalency determination requirement, and in order to give that statutory requirement meaning, the EPA must assume that Congress was specifying the quantity of emissions reductions it wanted achieved before the regulatory compliance exemption took effect. And Congress chose the benchmark that was available to it at the time it enacted the WEC program—the 2021 NSPS/EG Proposal.

At proposal, the EPA acknowledged that it is possible that had the EPA finalized and implemented the 2021 NSPS/EG Proposal without change, some States would have set different methane standards of performance in their plans than in the presumptive standards proposed in the 2021 EG OOOOc proposal based on a provision in CAA section 111(d)(1), which permits States to ''take into consideration, among other factors, the remaining useful life of the existing source to which such standard applies.'' (The EPA refers to this provision as the ''remaining useful life and other factors'' provision, or RULOF.) The EPA regulations at 40 CFR part 60 subpart Ba establish a framework through which states may, with an adequate demonstration, establish standards less stringent than the degree of emission limitation otherwise required by an EG. In such circumstances, the emissions

[50] The use of the word ''compliance'' is also instructive: in practice, sources are not required to comply with the EG; instead, sources must comply with standards later established in state or federal plans.

reductions achieved by those State plans would have been less than if the State plans had adopted and implemented the presumptive standards in the final emissions guidelines, had they been finalized.

But the EPA believes that the best reading of the statute is that Congress did not anticipate that States' use of this provision would have significantly affected the emissions reductions achieved by the 2021 NSPS/EG Proposal if it had been finalized and implemented. Historically, the RULOF provision has not been frequently invoked by States that have submitted CAA section 111(d)-implementing State plans.[51] In addition, States have the option of enacting *more* stringent standards for certain sources under their State plans than would result from direct implementation of the emissions guidelines.[52] The 2021 NSPS/EG Proposal, explicitly referenced by Congress in CAA section 136, recognized these historical facts and further explained why the EPA did not anticipate at that time that States would use the RULOF factors to a significant extent.[53] These historical facts and context, along with the Congress's clear objective to set a benchmark for the emissions reductions it wanted achieved, lead the EPA to conclude that the best reading of the statute is that Congress expected the EPA's baseline for the equivalency determination to be the 2021 NSPS methane standards and the presumptive standards the EPA set out in the 2021 EG proposal, and did not expect the EPA to forecast how States might have chosen to use the RULOF provision had the EPA finalized and implemented the 2021 NSPS/EG Proposal. The impracticality of conducting such a forecast further supports the EPA's interpretation. Because State plans were never developed pursuant to the 2021 NSPS/EG Proposal, there is no practical means of projecting when States might have chosen to apply less-stringent standards in their State plans pursuant to the RULOF provision and what methane emissions reductions those standards might have achieved relative to the presumptive standards.

While the EPA is required to evaluate both the final NSPS OOOOb and EG OOOOc-implementing plans for each States' equivalency determination, the Agency's preliminary analysis indicates that the final NSPS OOOOb standards and final EG OOOOc presumptive standards are likely more stringent than their respective standards and presumptive standards that were proposed in 2021. The EPA therefore expects that any States that adopt the EG OOOOc presumptive standards in their EG OOOOc-implementing State plans will likely achieve equivalent or greater emissions reductions than would have been achieved by the 2021 NSPS/EG Proposal, had that proposal been finalized and implemented. To provide additional certainty to States as they develop EG OOOOc-implementing plans, the EPA will conduct a technical analysis comparing the emissions reductions achieved by the 2021 NSPS/EG Proposal and the 2024 Final NSPS/EG. The EPA expects that the results of this analysis will demonstrate that the 2024 Final NSPS/EG achieves equivalent or greater emissions reductions compared to the reductions that would have been achieved by the 2021 NSPS/EG Proposal. The results of this analysis will inform the equivalency determination that must be conducted for each State based on each State's approved plan; the EPA expects that it will also simplify the determination process and provide a general reference point for States. For example, if the EPA's analysis confirms that the 2024 Final NSPS/EG would result in equivalent or greater emissions reductions compared to the 2021 NSPS/EG Proposal, the EPA anticipates that where an approved EG OOOOc-implementing State plan directly relies on the presumptive standards in the final EG OOOOc model rule or an equivalent alternative, those State plans, in combination with the final NSPS, will also achieve equivalent or greater emissions reductions compared to those that would have occurred had the 2021 NSPS/EG Proposal been finalized and implemented. Importantly, however, each finalized EG OOOOc-implementing plan must still be evaluated based on the reductions achieved by the plan itself.

e. Application of the Regulatory Compliance Exemption to WEC Applicable Facilities

A key consideration for the design of the regulatory compliance exemption is how to align the performance of CAA section 111(b) and (d) facilities, which are the sources subject to regulation under NSPS OOOOb regulations and EG OOOOc-implementing State plans, with the WEC applicable facilities to which the exemption applies. For purposes of the WEC, and as discussed in section II.A., Congress was very clear that the term ''applicable facility'' refers to a subpart W facility within one or more of the nine industry segments listed in section 136(d). Specifically, section 136(c) states that ''the Administrator shall impose and collect a charge on methane emissions that exceed an applicable waste emissions threshold under subsection (f) from an owner or operator of an *applicable facility that reports more than 25,000 metric tons of carbon dioxide equivalent of greenhouse gases emitted per year* pursuant to subpart W.'' ''Applicable facility'' is then defined for purposes of the entirety of section 136 at section 136(d), which states that ''for purposes of this section, the term ''applicable facility'' means a facility within the following industry segments, *as defined in subpart W;*'' the statute then lists nine industry segments. The term ''applicable facility'' also appears at section 136(f)(6), which states that ''charges shall not be imposed pursuant to subsection (c) *on an applicable facility* that is subject to and in compliance with methane emissions requirements pursuant to subsections (b) and (d) of section 7411 of this title . . .'' Pursuant to section 136(d), which defined ''applicable facility'' ''*for purposes of this section*'', meaning the entirety of section 136, it is clear that section 136(f)(6)(A) directs the EPA to analyze the compliance of subpart W facilities which are subject to WEC—that is, subpart W facilities within one of nine industry segments which emit over 25,000 tons of CO_2e per year—*as a whole* with standards promulgated under sections 111(b) and (d). Notably, as explained in section II.A., an ''applicable facility'' as defined at section 136(d) could include any subpart W facility within the nine industry segments listed in section 136(d), even one emitting 25,000 CO_2e or less per year. However, the waste emissions charge, and thus the

[51] In the Supplemental Oil & Gas Proposed Rule, issued shortly after CAA section 136 was enacted, the EPA noted that ''it is not aware of any CAA section 111(d) EGs under which an EPA-approved state plan has previously considered RULOF to apply a standard of performance that deviates from the presumptive level of stringency.'' 87 FR 74818 (December 6, 2022); *accord* 87 FR 79197, [Proposed Rule: Adoption and Submittal of State Plans for Designated Facilities: Implementing Regulations under Clean Air Act Section 111(d)] (Dec. 23, 2022). The Subpart Ba Final Rule also reiterated the EPA's ''long-held interpretation of the RULOF provision as a limited variance,'' but noted that commenters on the proposed Oil and Gas EG ''suggested that there may be more of a role for RULOF than in past EGs.'' *Id. See* 88 FR 80512 (Nov. 17, 2023).

[52] *See* 88 FR 80531 (Nov. 17, 2023).

[53] In the Proposed Rule for NSPS OOOOb and EG OOOOc, the EPA discussed the role that the RULOF provision might play in state plans implemented under the Final EG, including the observation at the time of proposal that ''the sheer number and variety of designated facilities in the oil and natural gas industry could make a source-specific (or even a class-specific) evaluation of [RULOF]'' less likely to occur. *See* 86 FR 63251 (November 15, 2021). The EPA also discussed the ways in which states may set more stringent standards of performance than those in the Final EG. *Id.* at 63251–52.

regulatory compliance exemption from charge under section 136(f)(6)(A), applies only to those subpart W facilities within the nine industry segments which emit more than 25,000 CO_2e. In this rulemaking we refer to these subpart W facilities as ''WEC applicable facilities''. Thus, for purposes of discussion regarding the regulatory compliance exemption, the EPA uses the term ''WEC applicable facilities'' when discussing the ''applicable facilities'' to which section 136(f)(6)(A) refers. As an example of how subpart W facilities are defined, and were defined at the time Congress promulgated section 136 in 2022, a facility in the onshore natural gas processing segment under the GHGRP subpart W program means ''any physical property, plant, building, structure, source, or stationary equipment located on one or more contiguous or adjacent properties in actual physical contact or separated solely by a public roadway or other public right-of-way and under common ownership or common control, that emits or may emit any greenhouse gas'' [54] and meets the definition of onshore natural gas processing under subpart W. For reporting year 2024, facilities in the onshore natural gas processing segment under subpart W are required to report emissions from all of the following sources at the facility: reciprocating compressor venting, centrifugal compressor venting, blowdown vent stacks, dehydrator vents, acid gas removal vents, flare stack emissions, equipment leaks from valves, connectors, open ended lines, pressure relief valves, and meters. As another example, a GHGRP subpart W facility in the onshore petroleum and natural gas production segment includes all of the wells and associated equipment within a geological production basin, which can cover a geographic area spanning hundreds of miles. Meanwhile, the terms ''affected facility'' [55] and ''designated facility'' [56] are used by the EPA in the CAA section 111 2024 Final NSPS/EG regulations to refer to an individual emissions source or a group of emissions sources at a site (*e.g.,* a storage tank battery or a collection of pneumatic controllers) to which a standard applies. Thus, a single WEC applicable facility may contain hundreds or thousands of CAA section 111(b) and (d) facilities.

Importantly, Congress was well aware of the different ways in which a ''facility'' was defined under subpart W and in the context of the CAA section 111 program when it created the WEC program and the regulatory compliance exemption under section 136(f)(6), which purposely refers to the compliance of WEC applicable facilities—that is, subpart W facilities which are subject to WEC. The regulations defining ''facilities'' for the purposes of all nine relevant industry segments under subpart W have not been revised since 2015. The regulations defining ''affected facility,'' for purposes of CAA section 111(b), have remain unchanged since first promulgated in the 1970s. 40 CFR 60.2; 44 FR 55173, Sept. 25, 1979. Similarly, the regulations defining ''designated facility,'' for purposes of section 111(d) regulation, by reference to the definition of affected facility as ''any existing facility . . . which would be subject to a standard of performance . . . if the existing facility were an affected facility'' have also remained unchanged for decades. 40 CFR 60.21, 60.21a; 40 FR 53346, Nov. 17, 1975. Congress made its intentions clear in the plain text of section 136(f)(6) that for purposes of the regulatory compliance exemption, the EPA should consider the compliance status of WEC applicable facilities *as a whole* with standards promulgated under CAA section 111(b) and (d). Thus, due to the fact that when analyzing compliance in the CAA section 111 context, the EPA analyzes the performance of CAA section 111 affected and designated facilities, the different meanings of the term ''facility'' under these two different EPA programs is an important consideration in the context of the regulatory compliance exemption.

The EPA is finalizing as proposed to implement the regulatory compliance exemption such that a WEC applicable facility that contains any CAA section 111(b) or (d) facilities would have access to the exemption once all other criteria are met (*i.e.,* the Administrator determinations and compliance elements in 40 CFR 99.41). This means that all methane emissions from emissions sources in a WEC applicable facility—even those that are not regulated by section 111(b) or (d)—are eligible for the exemption. This ''all in'' approach is aligned with, and is the best interpretation of, the statutory text, which clearly states that the exemption is applied at the ''applicable facility'' level, not at the individual emissions source or CAA section 111(b) or (d) facility levels. Table 3 shows the subpart W industry segments applicable to the WEC that may contain CAA section 111(b) or (d) facilities. WEC applicable facilities in the offshore production, LNG storage, LNG import and export, and transmission pipeline industry segments do not contain CAA section 111(b) or (d) facilities under the Crude Oil & Natural Gas source category and are not eligible for the regulatory compliance exemption. The EPA is finalizing as proposed that if any future NSPS/EG rules are finalized such that additional industry segments contain CAA section 111(b) or (d) facilities, the WEC applicable facilities in those segments would be eligible for the regulatory compliance exemption.

TABLE 3—SUBPART W INDUSTRY SEGMENT AND CAA SECTION 111(b) AND (d) FACILITY OVERLAP

Subpart W industry segment subject to WEC	May contain CAA Section 111(b) and/or (d) facilities?
Onshore petroleum and natural gas production	Yes.
Offshore petroleum and natural gas production	No.
Onshore petroleum and natural gas gathering and boosting	Yes.
Onshore natural gas processing	Yes.
Onshore natural gas transmission compression	Yes.
Onshore natural gas transmission pipeline	No.
Underground natural gas storage	Yes.
LNG import and export equipment	No.

[54] 40 CFR 98.6

[55] ''Affected facility'' is defined for purposes of an NSPS at 40 CFR 60.2 to mean ''with reference to a stationary source, any apparatus to which a standard is applicable.''

[56] ''Designated facility'' is defined for purposes of an EG at 40 CFR 60.21a to mean ''any existing facility . . . which emits a designated pollutant and which would be subject to a standard of performance for that pollutant if the existing facility were an affected facility.''

TABLE 3—SUBPART W INDUSTRY SEGMENT AND CAA SECTION 111(b) AND (d) FACILITY OVERLAP—Continued

Subpart W industry segment subject to WEC	May contain CAA Section 111(b) and/or (d) facilities?
LNG storage	No.

Some commenters were supportive of the proposed approach for the regulatory compliance exemption becoming available at the WEC applicable facility level. The EPA considered other potential interpretations of the statutory text of the regulatory compliance exemption while developing the proposed approach. In particular, the EPA considered an approach that would only exempt the emissions from individual CAA section 111(b) and (d) facilities, rather than the emissions of the entire WEC applicable facility. For example, if certain pneumatic devices are regulated under 2024 Final NSPS/EG pursuant to CAA sections 111(b) and (d), all reported pneumatic device methane emissions from a WEC applicable facility, as reported under subpart W, would be subtracted from that facility's reported emissions. Under this considered alternative approach, only emission sources at subpart W facilities that are not also CAA section 111(b) and (d) facilities (*e.g.,* methane slip from engines) would be considered when determining whether a WEC applicable facility was above or below the waste emissions threshold. While this approach would exempt emissions associated with individual CAA section 111(b) and (d) facilities that are in compliance with the standards, as anticipated by the language in CAA section 136(f)(6)(A), the EPA does not believe that this approach would be consistent with the other text in that statutory provision, which clearly states that the exemption applies to the ''applicable facility,'' which CAA section 136(d) defines as an entire subpart W facility. In contrast to the final ''all in'' approach, this considered alternative would have been a ''some in'' approach wherein only a subset of the emissions sources within a WEC applicable facility were exempted. Further, it would not be practical to implement the regulatory compliance exemption in this manner because the individual emissions source types in subpart W do not always align with the individual CAA section 111(b) and (d) facilities. Exempting methane emissions from specific equipment or processes subject to reporting under subpart W that are also regulated as a CAA section 111(b) or (d) affected or designated facility may exclude a broader or narrower scope of equipment or components and associated emissions than those subject to the 2024 Final NSPS/EG. For example, although storage vessels are subject to both NSPS OOOOb and subpart W, the NSPS OOOOb provisions apply to equipment that exceed specific potential to emit emissions thresholds while subpart W requires reporting and quantification of emissions from all storage vessels at a subpart W facility, regardless of equipment's potential emissions. Methane emissions from CAA section 111(b) or (d) facilities therefore cannot be directly subtracted from reported subpart W data.

f. Determining Applicable Facility Eligibility for the Regulatory Compliance Exemption

It is expected that for many WEC applicable facilities, compliance with NSPS OOOOb standards and EG OOOOc-implementing plans will reduce methane emissions and therefore reduce and potentially eliminate any charge, even in the absence of an exemption. The EPA concludes that the best reading of the statutory language of the regulatory compliance exemption is that it provides relief from the charge for WEC applicable facilities that remain above the waste emissions threshold when their constituent CAA section 111(b) and (d) facilities (*i.e.,* emissions sources) are in full compliance with their applicable methane emissions requirements. The exemption thus provides a further incentive for compliance with the applicable methane emission requirements under CAA section 111.

The EPA is finalizing as proposed that the regulatory compliance exemption would only be available to WEC applicable facilities that exceed the waste emissions threshold. CAA section 136(f)(6)(A) states that ''charges shall not be imposed pursuant to subsection (c) on an applicable facility'' that meets the requirements of the regulatory compliance exemption. Subsection (c) in turn states that a charge shall be collected ''on methane emissions that exceed an applicable waste emissions threshold.'' Based on a plain reading of the statutory text, the EPA is finalizing as proposed that the exemption would not apply to WEC applicable facilities below the waste emissions threshold. Further, providing the exemption to WEC applicable facilities below the waste emissions threshold serves no purpose as these facilities do not have WEC applicable emissions, are not subject to the charge, and therefore do not benefit from the exemption. Excluding facilities below the waste emissions threshold from the exemption also reduces the reporting burden for those facilities, which are not required to report information related to CAA section 111(b) and (d) compliance status.

Compliance with CAA section 111(b) and (d) methane emission requirements. As discussed in this section, CAA section 136(f)(6)(A) does not specify the definition of ''compliance'' for the purposes of the regulatory compliance exemption. In light of the comments on this topic highlighting the practical implications of the definition of compliance, the EPA is finalizing provisions revising the proposed approach regarding what actions would constitute ''compliance with methane emissions requirements pursuant to [CAA section 111(b) and (d)],'' within CAA section 136(f)(A), for the purposes of implementing the regulatory compliance exemption. The final approach reflects the best reading of the statutory text. It is intended to provide a clear threshold for establishing compliance status and eligibility for the exemption in accordance with practice for compliance tracking under CAA section 111, while minimizing the burden on industry and facilitating ease of implementation. The EPA is also finalizing related reporting requirements for WEC applicable facilities that are necessary to implement the regulatory compliance exemption (see section II.D.2.h. of this preamble).

For the purpose of determining WEC applicable facility eligibility for the regulatory compliance exemption, the EPA is finalizing that the compliance status of CAA section 111(b) and (d) facilities contained within a WEC applicable facility will be assessed based on compliance with the applicable methane emissions requirements for the Oil & Natural Gas Source Category in NSPS OOOOb and in EG OOOOc-implementing State and

Federal plans. The EPA proposed that NSPS OOOOa compliance status would also be assessed while determining eligibility for the exemption. Several commenters disagreed with the proposed inclusion of NSPS OOOOa and recommended that exemption eligibility should only be based on compliance with NSPS OOOOb and EG OOOOc-implementing plans. After consideration of comment, as well as the language and intent of the statutory text, the EPA concludes that the best interpretation of the regulatory compliance exemption statutory language is that Congress was focused on methane emissions reductions achieved through NSPS OOOOb and EG OOOOc-implementing plans for the purpose of determining eligibility for the exemption—not prior standards already in place. While the text at CAA section 136(f)(6)(A) and 136(f)(6)(A)(i) refers to ''methane emissions standards and plans pursuant to subsections (b) and (d) of section 111,'' and while NSPS OOOOa includes standards promulgated pursuant to CAA section 111(b), the text at CAA section 136(f)(6)(A)(ii) makes clear that the equivalency determination is to be based solely on the standards in NSPS OOOOb and EG OOOOc-implementing plans. The EPA notes that most facilities regulated under NSPS OOOOa are expected to ultimately be regulated under NSPS OOOOb or EG OOOOc-implementing plans (*e.g.,* as NSPS OOOOa sources are modified or reconstructed or when the sources are regulated as existing sources once EG OOOOc-implementing plans are approved and in effect).[57] The EPA is therefore finalizing that only compliance with these methane emissions requirements, and not those in NSPS OOOOa, will be assessed.

The EPA proposed that any WEC applicable facility that contains CAA section 111(b) or (d) facilities would be eligible for the regulatory compliance exemption if each of the CAA section 111(b) and (d) facilities that constitute the WEC applicable facility had no deviations or violations of the methane emissions requirements promulgated pursuant to the applicable NSPS or EG-implementing plans. The EPA proposed that any noncompliance at any CAA 111(b) or (d) facilities contained within a WEC applicable facility would result in that entire WEC applicable facility being ineligible for the regulatory compliance exemption for the entire reporting year. The EPA received numerous comments objecting on two grounds: (1) that the definition of noncompliance was unnecessarily strict by including deviations that were not necessarily related to excess emissions; and (2) that non-compliance at one CAA section 111 affected or designated facility should not prevent use of the exemption by the entire WEC applicable facility. Many commenters stated that the proposed approach was so stringent that the regulatory compliance exemption would be essentially unavailable. Commenters focused mainly on the types of noncompliance that could make the compliance exemption unavailable, especially a comparatively minor reporting or notification deviation that is not likely to cause excess emissions. Many commenters noted that despite industry best efforts, noncompliance events do occur, especially for these reporting and notification requirements, and given that WEC applicable facilities may contain hundreds or thousands of CAA section 111(b) or (d) facilities, particularly in the onshore production and gathering and boosting segments where facilities are defined at the basin-level, some form of noncompliance is likely to occur within a WEC applicable facility at some point. Commenters stated that, under the proposed approach, these facilities could not claim the regulatory compliance exemption for the entire year, even if the deviation is quickly corrected or is a ''minor'' form of noncompliance. Commenters also noted that noncompliance with NSPS OOOOb and EG OOOOc-implementing plans may be limited to individual emissions sources within a WEC applicable facility, and the duration of those noncompliance events may vary. Commenters recommended that the EPA narrow the definition of noncompliance for the purposes of exemption eligibility, narrow the scope of equipment and associated emissions that could not claim the exemption in the event of noncompliance, and limit the loss of the exemption to the time duration of the noncompliance.

The EPA agrees with commenters that the proposed approach may have unduly limited access to the regulatory compliance exemption, which would be counter to Congressional intent. Congress included the exemption to provide relief from the charge if certain criteria were met, and the final rule should meet the Congressional purpose to incentivize emissions reductions and compliance with the law without undercutting the intent to allow exemptions when compliance is achieved. Accordingly, after consideration of comments received, the EPA is finalizing changes to the meaning of ''compliance'' in section 136(f)(6)(A) in several respects, as further explained, so that it reflects the best interpretation within the context of the statute as a whole and is aligned with the goals and purpose of the WEC.

The EPA is finalizing revisions to the proposed definition of ''compliance'' for the purpose of determining eligibility for the regulatory compliance exemption. As discussed in the proposal, Congress requires that facilities must be ''in compliance with requirements'' pursuant to 111(b) and (d), but Congress did not provide any specific definition for what it means to comply. Given Congress didn't provide a definition of ''compliance'' in the statutory text, we have examined the context in which the term is used and the objectives of the regulatory compliance exemption in the context of CAA section 136. As discussed throughout this section, the clear intent of Congress in creating the regulatory compliance exemption provision was to ensure continuous incentives to reduce methane emissions, and to relieve from the WEC those facilities that are successfully making methane emission reductions pursuant to applicable CAA section 111 standards. In other words, Congress did not intend to require the charge to apply where a WEC applicable facility was already reducing its emissions as intended by the 2024 Final NSPS/EG. Thus, it is most consistent within this statutory context to focus assessments of compliance on those deviations that indicate that a CAA section 111 facility is not reducing emissions as required by NSPS OOOOb and the applicable EG OOOOc-implementing State or Federal plan. However, where there is noncompliance with provisions of these programs that are not tied in some way to methane emission reductions, but rather some other requirement of NSPS OOOOb or the applicable EG OOOOc-implementing State or Federal Plan, it would not be consistent with the statutory context to subject the WEC applicable facility that is already responding as intended to the CAA section 111 requirements to reduce emissions, to also be subject to the charge. Accordingly, in this final rule,

[57] *See* 89 FR 16869; 2024 Oil & Gas Final Rule; section IX.C. *How will the final EG OOOOc impact sources already subject to NSPS KKK, NSPS OOOO, or NSPS OOOOa?; see also* 40 CFR 60.5365a (''An affected facility must continue to comply with the requirements of this subpart until it begins complying with a more stringent requirement, that applies to the same affected facility, in an approved, and effective, state or Federal plan that implements subpart OOOOc of this part, or modifies or reconstructs after December 6, 2022, and thus becomes subject to subpart OOOOb of this part.'') (emphasis added).

the EPA's framework for assessing compliance conforms with the objectives of the regulatory compliance exemption and focuses on compliance activities that directly affect methane emissions, in accordance with the WEC's objective of incentivizing reduced methane emissions. It also makes the exemption realistically available to WEC applicable facilities and implementable for the EPA.

The EPA is finalizing two categories of NSPS OOOOb and EG OOOOc requirements that will determine eligibility for the regulatory compliance exemption. Noncompliance with respect to either category will result in ineligibility for the regulatory compliance exemption. First, any self-reported deviation [58] from monitoring requirements, emissions limits or standards (or surrogate standards), operational limits (including operating parameter limits), or work practice standards is considered noncompliance for the purposes of the regulatory compliance exemption. This category is straightforward to implement in that exemption eligibility is determined based on information that companies are already collecting and reporting. By focusing regulatory compliance exemption eligibility on compliance with emissions limits, operational limits, work practice standards, and the monitoring necessary to demonstrate compliance with those standards, exemption eligibility is based on compliance with requirements that are directly linked to a facility's emission reduction requirements. This approach also aligns with Congressional intent for the regulatory compliance exemption to apply only to WEC applicable facilities where methane emissions are otherwise being controlled under CAA section 111(b) and (d). In instances where methane emissions are not appropriately controlled consistent with these standards, it is clear that Congress meant that the facility could not claim the exemption.

Additionally, the EPA is finalizing that any determination of a violation in an administrative or judicial action of any applicable NSPS OOOOb or EG OOOOc requirement, including reporting or recordkeeping, results in a WEC applicable facility being ineligible for the regulatory compliance exemption. This approach is necessary to account for any instances of noncompliance that are not included in annual NSPS OOOOb or EG OOOOc-implementing plan reports but are adjudicated in an administrative or judicial proceeding. The EPA is finalizing that any adjudication of reporting and recordkeeping violations results in exemption ineligibility because failing to comply with these requirements can be directly linked to noncompliance with emissions-related requirements. For example, a company could improperly fail to report or keep records of certain required information because that information would indicate violations of, for example, emission limits or work practice standards. Similarly, records maintained by companies are often key to verifying compliance with emissions limits or work practice standards. Failure to maintain these records not only prevents the EPA or other authorities from verifying compliance, but can also mask noncompliance and limit the ability to prove that noncompliance occurred. To account for these and other NSPS OOOOb and EG OOOOc violations that are not reported or improperly unreported in annual NSPS OOOOb and EG OOOOc reports, the EPA is finalizing that any adjudicated violation of NSPS OOOOb and EG OOOOc is also considered noncompliance for the purposes of exemption eligibility.

The EPA is finalizing that self-reported deviations from notification requirements are not considered a form of noncompliance that causes an applicable facility to lose exemption eligibility. For example, NSPS OOOOb includes notification requirements associated with well completions, well closures, and alternative fugitive emissions monitoring programs. These notification requirements are not necessarily directly linked to emissions reduction requirements for CAA section 111(b) and (d) facilities. The EPA is therefore finalizing that self-reported noncompliance with notification requirements in NSPS OOOOb or EG OOOOc-implementing plans does not result in ineligibility for the regulatory compliance exemption. This treatment of self-reported notification requirements is specific to implementation of the regulatory compliance exemption under CAA section 136, and does not affect any treatment of noncompliance under NSPS OOOOb or EG OOOOc-implementing plans.

A WEC applicable facility's eligibility for the regulatory compliance exemption based on the absence of deviations from the specified requirements in its annual reports does not constitute a determination of compliance for NSPS OOOOb or EG OOOOc-implementation plan. A WEC applicable facility's eligibility for the regulatory compliance exemption in no way precludes the EPA from later finding and enforcing violations of NSPS OOOOb or EG OOOOc-State plans, whether reported or unreported. If a WEC applicable facility claims the regulatory compliance exemption based on the absence of noncompliance in its annual report, but NSPS OOOOb or EG OOOOc-implementation plan violations are later discovered or adjudicated, the WEC applicable facility's WEC obligated party must recalculate its WEC obligation accounting for the methane emissions that are disqualified from the regulatory compliance exemption due to the adjudicated violations, resubmit its WEC filing, and pay any resulting charge.

Portion of the WEC Applicable Facility Affected by Noncompliance

In this final rule, for WEC applicable facilities in the natural gas processing, transmission compression, and underground storage industry segments, the EPA is finalizing as proposed that any NSPS OOOOb or EG OOOOc noncompliance within the WEC applicable facility results in the entire WEC applicable facility losing the regulatory compliance exemption.[59] The EPA proposed that any noncompliance at CAA section 111(b) or (d) facilities contained within a WEC applicable facility would cause the entire WEC applicable facility to lose the exemption. Some commenters contended that the proposed approach would unfairly restrict availability of the exemption, and that loss of the exemption should only apply to the emissions from the noncompliant CAA 111(b) or (d) facility contained within the WEC applicable facility. The EPA does not agree with these comments. Congress was clear throughout CAA section 136 that the term ''applicable facility'' for purposes of that entire section, including CAA section 136(f)(6), refers to a WEC applicable facility—that is, a subpart W facility within one of the nine listed industry segments which emits over 25,000 tons of CO_2e per year. Accordingly, a plain reading of CAA 136(f)(6)(A) indicates that the exemption is to be applied to an entire WEC applicable facility, not just portions of it: ''Charges shall not be

[58] Deviations are defined for NSPS OOOOb and EG OOOOc at 40 CFR 60.5430b and 40 CFR 60.5430c, respectively.

[59] WEC applicable facilities in the onshore production and gathering and boosting industry segments will be treated differently, as discussed in this section of the preamble. Note that the other defined WEC applicable facilities in CAA section 136(d)—the offshore production, transmission pipeline, LNG import and export, and LNG storage industry segments—are not eligible for the regulatory compliance exemption because they do not contain CAA section 111(b) or (d) facilities.

imposed pursuant to subsection (c) *on an applicable facility* that is subject to and in compliance with methane emissions requirements pursuant to subsections (b) and (d) of section 111.'' (Emphasis added).

The EPA is finalizing as proposed that WEC applicable facilities are eligible for the exemption if they contain *any* CAA section 111(b) or (d) facilities. While the EPA expects that most WEC applicable facilities in industry segments regulated under NSPS OOOOb and EG OOOOc contain CAA section 111(b) and (d) facilities, such WEC applicable facilities generally also contain equipment and emission sources that are not regulated under NSPS OOOOb and EG OOOOc. Emissions from both types of emissions sources within a WEC applicable facility—those facilities regulated under NSPS OOOOb and EG OOOOc and those sources that are not regulated—will be eligible for the regulatory compliance exemption by virtue of the fact that the exemption is applied to the entire WEC applicable facility. Some commenters recommended that once the exemption is first applied to the WEC applicable facility, only the emissions from noncompliant CAA sections 111(b) and (d) facilities should lose the exemption. In other words, these commenters argued that once the exemption is applied to the entire WEC facility, it should be lost at the CAA section 111 facility level. The EPA disagrees with this comment. First, such an approach would be contrary to the plain text of the statute, which requires the EPA to apply the exemption to the entire WEC applicable facility at once, because CAA section 136(f)(6)(A) states that ''charges shall not be imposed *on an applicable facility that is subject to and in compliance with*'' the CAA section 111 standards. According to ordinary meaning, established principles of statutory construction, and the general requirements under CAA section 136(c) that the EPA ''shall impose and collect a charge on methane emissions that exceed an applicable waste emissions threshold . . . from an owner or operator of an applicable facility that reports more than 25,000 metric tons'' of CO_2e under subpart W, the inverse must also be true: charges *shall* be imposed on a WEC applicable facility that is *not* subject to and in compliance with CAA section 111 standards. That is, the regulatory compliance exemption must be applied to, and withdrawn from, a WEC applicable facility as a whole.

Second, if the EPA were to take the approach suggested by the commenters, once the facility as a whole is first granted the exemption, emissions from those sources that are not subject to NSPS OOOOb and EG OOOOc (and thus not otherwise required to reduce emissions) would continue to benefit from the exemption forever, even while the CAA section 111 facilities are out of compliance. For example, under this approach advanced by some commenters, every CAA section 111(b) and (d) facility in a WEC applicable facility could be out of compliance, but methane emissions from every subpart W emission source that is not regulated under NSPS OOOOb or EG OOOOc would continue to receive the exemption. In this scenario, the unregulated sources would be exempted from the WEC and therefore subject to *no* incentive to reduce methane emissions even while the CAA section 111(b) and (d) facilities that permitted the WEC affected facility to apply the exemption are *also* not reducing methane emissions. It would be inconsistent to make the exemption available to these unregulated emissions sources by virtue of the fact that they are located within a WEC applicable facility that also contains CAA section 111(b) and (d) facilities, and then continue to allow them to access the exemption when the CAA section 111(b) and (d) facilities within the WEC applicable facility are in noncompliance. In other words, this would result in an ''all in'' approach for exemption eligibility, but a ''some out'' approach for loss of the exemption in the event of noncompliance. Such an approach would: not be consistent with the statute; arbitrary from a practical implementation standpoint; and counter to the intent of the WEC to incentivize methane emission reductions across the industry. Further, this approach is not practically implementable because there is no specific alignment between the definitions and scope of CAA section 111(b) and (d) applicable and designated facilities and the subpart W emissions sources at a WEC applicable facility, and therefore methane emissions from CAA section 111(b) or (d) facilities cannot be directly subtracted from reported subpart W data in order to assess the WEC against only those noncompliant facilities. Requiring collection and reporting of such data would significantly increase program complexity, as well as the burden on both industry and the EPA. The EPA therefore concludes that its proposed ''all in, all out'' approach for the portion of the WEC applicable facility that loses access to the regulatory compliance exemption is the best interpretation of the statute and is the most consistent with the WEC's goals of incentivizing methane emissions reductions, subject to the following exceptional circumstances, as described.

Onshore Production and Gathering and Boosting WEC Applicable Facilities: Portion of Facility Affected by Noncompliance. Notwithstanding the foregoing discussion and the EPA's general approach for application of the regulatory compliance exemption, based on compelling comments from commenters and upon reconsideration of the Congressional intent of the WEC within the context of this exemption, the EPA is finalizing a unique approach for the portion of the WEC applicable facility affected by noncompliance specific to the onshore production and gathering and boosting industry segments. Some commenters noted that facilities in these industry segments would be uniquely affected by the proposed approach (and, the finalized approach for the natural gas processing, transmissions compression, and underground storage industry segments) of the entire WEC applicable facility losing the exemption as the result of any section 111(b) or (d) noncompliance. WEC applicable facilities in the onshore production and gathering and boosting industry segments are defined at the geologic basin level and may consist of hundreds of well pads or dozens of compressor stations spread across a wide geographic area (*e.g.,* the Permian Basin is over 80,000 square miles or about the size of the State of Utah). By comparison, WEC applicable facilities in other industry segments that are eligible for the regulatory compliance exemption, such as gas processing plants or transmission compressor stations, are typically no larger than several city blocks and consist of co-located emission sources. As one commenter noted, because of the basin-wide scale of the WEC applicable facilities in the onshore production and gathering and boosting industry segments, they may contain hundreds or thousands of CAA section 111(b) and (d) affected and designated facilities. This makes these industry segments unique in how the approach for this exemption would affect them; other WEC applicable facility industry segments such as the natural gas processing, transmissions compression, and underground storage industry segments typically have between ten and one hundred CAA 111(b) or (d) facilities. This is notable because, under the proposed and final approach that the EPA is taking for the natural gas processing, transmissions compression, and underground storage industry segments, a single noncompliant CAA

section 111(b) or (d) facility at a single well pad in the onshore production industry segments or at a single gathering compressor station in the gathering and boosting industry segment at these WEC applicable facilities (which might contain hundreds of well pads or dozens of gathering compressor stations) would result in the entire basin-wide WEC applicable facility becoming ineligible for the exemption. As stated by commenters, given the widespread geographic span and potentially very large number of CAA section 111(b) and (d) facilities associated with basin-level WEC applicable facilities, the regulatory compliance exemption could turn out to be largely unavailable for WEC applicable facilities of this type.

In promulgating the requirements under CAA section 136, Congress was aware of the existing definitions of ''facility'' under subpart W for the various applicable industry segments, including the basin-wide definitions that apply to onshore production and gathering and boosting facilities. And pursuant to the plain text of CAA section 136(f)(6)(A), the exemption is intended to be applied and revoked facility wide. Nevertheless, the EPA understands that Congress's general intention in establishing the regulatory compliance exemption was to provide an incentive for regulatory compliance—and in order for such an incentive to exist, it must be reasonably possible for owners and operators to achieve such compliance to ensure that the exemption is realistically available as intended. However, in the unique case of basin-wide facilities, should the EPA withdraw the exemption on a facility-wide basis in response to any one instance of noncompliance at a CAA section 111 facility, the EPA agrees with commenters that it the exemption would not be as accessible to basin-wide facilities as intended by Congress under this provision.

Some occasional instances of noncompliance are to be expected over the span of a WEC applicable facility. After considering comments, however, the EPA appreciates that in the case of basin-wide facilities, because these facilities are so vast—often containing thousands of CAA section 111 facilities—and because there are numerous ways in which any one of these CAA section 111 facilities can be in noncompliance at any one time, universal compliance for every single CAA section 111 facility would be very challenging for basin-wide facilities. The result could be that a violation at one location could result in loss of the exemption for hundreds, or potentially thousands of other locations that are fully compliant. The EPA has concluded that such result does not comport with the Congressional intent of the WEC or with the overall purpose of the regulatory compliance exemption. Indeed, the EPA believes that such scenario would constitute an absurd result, and one not foreseen by Congress, which did not have the benefit of industry comment regarding the difficulty of universal compliance across thousands of CAA section 111 facilities, when it drafted its provision applying the regulatory compliance exemption to the WEC applicable facility as a whole, for all WEC applicable facilities to which the exemption would apply.

Historically, in cases where ''unambiguous statutory commands'' would nevertheless lead to ''absurd results'', the Supreme Court has seen fit to ''adjust[ ]'' these commands [60]—a theory of judicial review recognized in legal scholarship as the ''absurdity doctrine.'' [61] Where a certain interpretation would be reasonable in most cases but compel absurd results in a particular case, the Court may read an implicit exemption into the text to allow support for the plain text reading as a general matter but to avoid the specific absurd results.[62] In particular, the Court may read an implicit exemption into the text where failing to do so would be inconsistent with Congressional intent for the purpose of the provision at issue.[63] Accordingly, for the reasons explained in further detail, after consideration of comments, and in the interest of avoiding absurd results, the EPA is finalizing a specific approach for WEC applicable facilities in the onshore petroleum and natural gas production and onshore petroleum and natural gas gathering and boosting industry segments such that for WEC applicable facilities in these industry segments only, the loss of the exemption occurs at the site-level rather than the facility-level. The EPA notes that this distinction for basin-level onshore production and gathering and boosting industry segments does not change the definition of ''applicable facility'' under part 99 or the definitions of ''facility'' for these or other industry segments under 40 CFR part 98, because, as we discussed, Congress was well aware of the part 98 definitions when it defined applicable facility for purposes of calculating the charge by reference to the long-existing subpart W definitions—and Congress was clear in defining ''applicable facility'' for purposes of CAA section 136. There is nothing absurd about, for example, applying the 25,000 CO_2e WEC applicability threshold at the basin-wide facility level for these industry segments; thus, we don't find these consequences to be universal across the CAA section 136 framework. Structuring this final rule such that onshore production and gathering and boosting facilities will lose the regulatory compliance exemption at the site level is exclusively for the purpose of making the regulatory compliance exemption accessible to all of the relevant WEC applicable facilities that

[60] Manning, John, ''The Absurdity Doctrine'', 116 Harv. L. Rev. 2388, 2389 (Jun. 2003) (citing *Clinton* v. *City of New York,* 524 U.S. 417, 429 (1998); *Pub. Citizen* v. *U.S. Dep't* of Justice, 491 U.S. 440, 454–55 (1989); *Jackson* v. *Lykes Bros. S.S. Co.,* 386 U.S. 731, 735 (1967); *United States* v. *Brown,* 333 U.S. 18, 27 (1948); *Armstrong Paint & Varnish Works* v. *Nu-Enamel Corp.,* 305 U.S. 315, 333 (1938); *Sorrells* v. *United States,* 287 U.S. 435, 447–49 (1932); *United States* v. *Katz,* 271 U.S. 354, 362 (1926); *Hawaii* v. *Mankichi,* 190 U.S. 197, 2 13–14 (1903); *Church of the Holy Trinity* v. *United States,* 143 U.S. 457, 465, 472).

[61] *See id.* at 2388.

[62] *See Utility Air Regulatory Group* v. *EPA,* 573 U.S. 302, 321–22 (2014) (holding that the term ''air pollutant'', which—pursuant to a plain text reading and the EPA's endangerment finding for greenhouse gases encompasses greenhouse gases in most sections of the Clean Air Act—nevertheless excludes greenhouse gases in the context of the PSD program and Title V permitting, because to read the phrase ''air pollutant'' to include greenhouse gases in those sections would produce absurd results; specifically, such a reading would trigger millions of new previously unregulated sources into the program, ballooning the number of Title V regulated sources alone from 15,000 to 6.1 million, and increasing costs by factors of a thousand).

[63] *See id.* (''[the] EPA itself has repeatedly acknowledged that applying the PSD and Title V permitting requirements to greenhouse gases would be inconsistent with—in fact, would overthrow—the Act's structure and design . . . [because] 'the great majority of additional sources brought into the PSD and title V programs would be small sources that Congress did not expect would need to undergo permitting' [and] the EPA stated that these results would be so 'contrary to congressional intent,' and would so 'severely undermine what Congress sought to accomplish,' that they necessitated as much as a 1,000-fold increase in the permitting thresholds set forth in the statute.''). *See also Church of the Holy Trinity* v. *United States,* 143 U.S. 457 (1982) (holding that notwithstanding a federal statute declaring it ''unlawful for any person, company, partnership, or corporation, in any manner whatsoever, to prepay the transportation, or in any way assist or encourage the importation or migration of any alien or aliens, any foreigner or foreigners, into the United States . . . under contract or agreement . . . to perform labor or service of any kind in the United States . . .'', an Episcopal Church in New York City had not violated the law in contracting the services of an English pastor. *Id.* at 458. The Court stated that although ''it must be conceded that the act of the [church was] within the letter of this section'', applying the law to the church in this case would lead to ''absurd results'' which Congress surely had not intended. *Id.* at 459. Ultimately, the Court read an implicit exemption into the law applying to religious labor. *Id.* at 465–66.

Congress intended to receive the exemption.

For onshore production facilities, the site is the ''well-pad site,'' as defined by 40 CFR 98.238.[64] For gathering and boosting facilities, the site is the ''gathering and boosting site'', as defined by 40 CFR 98.238.[65] In the final rule, the loss of the regulatory compliance exemption at the site level for the onshore production and gathering and boosting industry segments is applied in the same manner as at the facility-level for natural gas processing, transmission compression, and underground storage industry segments, meaning that all methane emissions at the site with NSPS OOOOb or State/Federal plan noncompliance are ineligible for the exemption. This aligns with the general ''all in, all out'' approach for the exemption loss for natural gas processing, transmission compression, and underground storage industry segments, whereby emissions from all emission sources (*i.e.,* emissions from sources regulated under NSPS OOOOb and EG OOOOc as well as sources not regulated under NSPS OOOOb and EG OOOOc) lose the exemption in the event of noncompliance. The EPA notes that this approach is straightforward to implement as site-level emissions reporting is required under the 2024 Subpart W Final Rule and can be directly used to calculate any emissions that lose the exemption. Section II.D.2.g. of this preamble describes the emissions calculations applicable to loss of the regulatory compliance exemption.

Period of time for assessing the exemption in the event of noncompliance. In the final rule, the EPA is finalizing revisions to the proposal approach with respect to the period of time for which the exemption is applied in the event of any section 111(b) or (d) noncompliance. The EPA proposed that any noncompliance would result in loss of the exemption for the entire year. Several commenters noted that the duration of a NSPS OOOOb or EG OOOOc-implementing plan noncompliance event can vary, and that some noncompliance events may be very brief. Commenters stated that the proposed approach of assessing the exemption for the entire year was unreasonable. We agree with these commenters that withholding the exemption for an entire year in the instance of noncompliance goes beyond the Congressional purpose of making the exemption reasonably available to WEC applicable facilities that are in compliance with 111(b) and (d). Some commenters noted that under the proposed approach, where noncompliance occurred for a single 111(b) or (d) facility within a WEC applicable facility for an hour, that entire WEC applicable facility would lose the exemption for the entire calendar year. The best reading of the statute requires that the exemption be realistically available to WEC applicable facilities that are achieving compliance in accordance with the requirements in 111(b) and (d)—losing the exemption for an entire year would, in many instances be out of proportion to the extent of noncompliance and unduly constrain use of the exemption.

The EPA also received comments recommending that the length of time for which the exemption be lost in the event of noncompliance correspond with the period of noncompliance. The EPA disagrees with these commenters. A key consideration in establishing a temporal element for the regulatory compliance exemption is the data used to establish the duration of noncompliance. The EPA is finalizing that data from NSPS OOOOb and state/Federal plan annual reports will be used to calculate the duration of noncompliance for the purpose of exemption eligibility. Use of existing data reduces the burden on industry and increases consistency in regulatory requirements. Although deviations for purposes of WEC are based on the NSPS OOOOb and State/Federal plan reports, the EPA notes that because NSPS OOOOb and EG OOOOc do not provide specific direction on the calculation of the deviation duration, the deviation start and stop times included in NSPS OOOOb and state/Federal plan annual reports may be inconsistent and may not be reflective of the actual length of noncompliance. Significantly, the reported start times may be based on when a deviation was detected, not when the deviation began. Reported durations therefore can significantly underestimate the actual length of noncompliance. Considering the exemption at a smaller time interval, such as hourly or daily, assumes too much certainty with respect to the information in the annual reports, and could end up providing the exemption to WEC applicable facilities during periods of noncompliance for their constituent CAA section 111(b) and (d) facilities. The EPA also concludes that such an approach is inconsistent with Congressional intent of incentivizing meaningful emission reductions and compliance with section 111(b) and (d) methane emissions standards and plans.

The EPA has concluded that, where a WEC applicable facility has instances of noncompliance with section 111(b) and (d) methane emissions standards and plans, losing the exemption for an entire year unduly constrains use of the exemption contrary to Congressional intent. The EPA has also concluded that under such scenario, losing the exemption for the same amount of time as the noncompliance event is infeasible, impractical, and counter to Congressional intent. Attempting to define that period would go well beyond existing reporting and impose a large additional burden on both the regulated industry and on the EPA. Accordingly, after consideration of comments received, the EPA is finalizing an approach in the final rule that eligibility for the regulatory compliance exemption will be evaluated on a quarterly basis. Any NSPS OOOOb or State/Federal plan noncompliance results in the entire WEC applicable facility (or site within the WEC applicable facility for the onshore production and gathering and boosting industry segments only) losing the exemption for the entire quarter(s) in which the noncompliance occurs. Quarters are delineated based on the calendar year (*e.g.,* January through March). Quarterly compliance status is based on the start and stop dates of applicable deviations as reported in annual NSPS OOOOb and State/Federal plan annual reports. Where a noncompliance event spans multiple quarters, the exemption will be lost for those multiple quarters in which noncompliance occurs.

The EPA believes that WEC applicable facilities losing the exemption on a quarterly basis in the event of noncompliance is an appropriate approach that is consistent with the language and goals of the WEC, enables use of existing reporting, and avoids significant additional reporting and administrative burden. While the statute addresses when the charge should begin (for emissions reported for calendar year 2024) and when it should resume if the conditions in CAA section 136(f)(6)(A)(i) and (ii) cease to apply (the first calendar year in which those conditions are no longer met), it does not specify what length of time an applicable facility should lose eligibility for the regulatory compliance

[64] ''Well-pad site means all equipment on or associated with a single well-pad. Specifically, the well-pad site includes all equipment on a single well-pad plus all equipment associated with that single well-pad.'' 40 CFR 98.238.

[65] ''Gathering and boosting site means a single gathering compressor station as defined in this section, centralized oil production site as defined in this section, gathering pipeline site as defined in this section, or other fenceline site within the onshore petroleum and natural gas gathering and boosting industry segment.'' *Id.*

exemption in the face of noncompliance (pursuant to CAA section 136(f)(6)(A)). Given that Congress did not specify how long a WEC applicable facility would lose the exemption for in the event of noncompliance, the EPA concludes that proceeding on a quarterly basis is a reasonable approach for the practical considerations. The final approach increases flexibility so that access to the regulatory compliance exemption is not overly restrictive (*i.e.,* one deviation would not lead to loss of the exemption for an entire year, as proposed), while maintaining the integrity of the exemption such that it is unavailable to WEC applicable facilities during times of NSPS OOOOb or State/Federal plan noncompliance (as some commenters urged). The final approach also aligns with the intent of the WEC—to provide reasonable access to an exemption from the charge for WEC applicable facilities that are in compliance with their methane emission requirements without allowing the exemption for periods of noncompliance, while also incentivizing methane emission reductions.

Exemption Applicability under new or revised oil and gas NSPS or EG. The EPA is finalizing as proposed that, should additional or revised NSPS/EG regulations for the oil and natural gas industry source category be finalized in the future, the EPA will reassess compliance with the methane emissions requirements in those regulations for determining continued availability of the regulatory compliance exemption. As discussed in section II.D.2.i. of this preamble, the regulatory compliance exemption could become unavailable if future NSPS/EG revisions would, upon implementation, result in fewer emissions reductions than would have been achieved by the 2021 NSPS/EG Proposal, had that proposal been finalized and implemented. Similarly, the exemption could be reinstated upon adoption and implementation of NSPS/EG revisions that restore emissions reduction equivalency with, or improvement upon, the 2021 NSPS/EG Proposal.

It is also possible that the EPA may revise the 2024 Final NSPS/EG in the future to add requirements for equipment in industry segments that are not currently regulated. This creates the potential that the regulatory compliance exemption may become available to additional WEC applicable facilities, upon the appropriate Administrator determination. In such cases where a new or expanded regulation issued pursuant to CAA section 111(b) or (d) would apply to a methane emission source at a WEC applicable facility that is in a segment of the oil and natural gas industry not currently covered by the 2024 Final NSPS/EG, the EPA is finalizing as proposed that such regulation will not have any effect on those WEC applicable facilities with existing access to the regulatory compliance exemption. However, in such case, the Administrator would still need to make appropriate determinations for the additional industry segments pursuant to CAA section 136(f)(6)(A)(i) consistent with the framework finalized in this rulemaking. Such WEC applicable facilities would then be eligible to claim the exemption so long as they are they are subject to and in compliance with the applicable methane emissions requirements.

g. Calculation of Emissions for Partial Eligibility for the Regulatory Compliance Exemption

The EPA is finalizing calculation methodologies for the regulatory compliance exemption at 40 CFR 99.43. These calculation methodologies are necessary to account for the revisions from the proposed rule that the EPA is finalizing, including the assessment of the emissions qualifying for exemption at the site level for WEC applicable facilities in the onshore production and gathering and boosting industry segments and assessment of compliance on a quarterly basis for purposes of the exemption for all WEC applicable facilities. Under the proposed rule, exemption eligibility was assessed for the entire year and for the entire WEC applicable facility, therefore calculation methodologies accounting for partial year exemption as well as site level assessment were not required.

Because the final approach for the regulatory compliance exemption allows for partial exemption eligibility, the EPA is by necessity revising the calculation methodology from proposal to match the approach in the final rule. In the final rule, for facilities in the onshore production and gathering and boosting industry segments, methane emissions as reported under subpart W that would not qualify for the exemption are those from the individual site(s) where NSPS OOOOb or State/Federal plan noncompliance occurs. These site-level emissions (*i.e.,* the sum of emissions from all quarters in the year in which the noncompliance occurs) are compared to the entire WEC applicable facility's facility applicable emissions (*i.e.,* methane emissions at the WEC applicable facility above the waste emissions threshold prior to consideration of any applicable exemptions). If the sum of total methane emissions from the site(s) with noncompliance is less than the facility applicable emissions, the sum of methane emissions from the site(s) with noncompliance is the total amount of emissions that would not qualify for the regulatory compliance exemption. If the sum of methane emissions from the site(s) with noncompliance are greater than the WEC applicable facility's facility applicable emissions, the entire WEC applicable facility would not qualify to exempt any emissions under the regulatory compliance exemption for the reporting year. In this way, facility applicable emissions serve as a ceiling for the total amount of emissions that would not qualify for the regulatory compliance exemption because in the absence of the regulatory compliance exemption, this is the highest possible amount of methane that would potentially be subject to charge. For WEC applicable facilities in all other industry segments, we are finalizing as proposed that the entire WEC applicable facility would not qualify for the regulatory compliance exemption and thus its facility applicable emissions are the highest number of metric tons of methane potentially subject to charge.

As described in section II.D.2.f of. this preamble, the EPA is finalizing that eligibility for the regulatory compliance exemption will be evaluated on a calendar quarter basis. Emissions from all emissions sources contained within a WEC applicable facility (or site, for onshore production and gathering and boosting facilities) are not eligible for the regulatory compliance exemption during any calendar quarter in which there is noncompliance among any CAA section 111(b) or (d) facilities contained within the WEC applicable facility (or site, for onshore production and gathering and boosting facilities), as described in section II.D.2.f. of this preamble and detailed at 40 CFR 99.41(d) and 99.42(d). Quarterly emissions will be calculated by taking annual facility or site subpart W methane emissions, subtracting any emissions from other large release events, and dividing by four. If emissions from other large release events occur in a quarter with noncompliance, these emissions are added to the quarter's emissions that are ineligible for the exemption. If emissions from other large release events, as reported under 40 CFR 98.236(y), span across multiple quarters, emissions from these events are allocated to individual quarters by multiplying total methane emissions from each event by the ratio of event duration, in days, to total days in the

quarter. The removal of emissions from other large release events prior to calculating average quarterly emissions ensures that these emissions are not allocated to quarters when they are known not to have occurred, and ensures they are accounted for in quarters in which there is NSPS OOOOb or State/Federal plan noncompliance. The calculation of quarterly methane emissions as annual emissions divided by four (after removing emissions from other large release events) simplifies implementation and reduces burden for both industry and the EPA. An approach that attempted to estimate methane emissions that are directly emitted in each quarter would have significantly increased the reporting requirements for industry, would not be anticipated to meaningly differ from the final approach for all emissions sources, and would have generated emissions data that would be close to impossible to verify without further increasing reporting requirements.

For WEC applicable facilities with partial-year eligibility for the regulatory compliance exemption, the quantity of emissions that qualify for the regulatory compliance exemption is calculated as the facility applicable emissions minus the sum of quarterly facility or site-level methane emissions, as appropriate, for all quarters with NSPS OOOOb or State/Federal plan noncompliance. If this calculation results in a value equal to or less than zero, the facility does not have emissions that qualify for a claim under the regulatory compliance exemption (*i.e.,* facility applicable emissions serve as a ceiling, and if there are no other eligible exempted emissions, WEC applicable emissions are equal to facility applicable emissions). If the calculation results in a positive value, then the facility applicable emissions are reduced by this amount when determining the WEC applicable emissions for the facility pursuant to the final requirements of 40 CFR 99.21(d). The positive value represents the amount of methane emissions eligible for the exemption. The calculation procedures for WEC applicable facilities with partial-year eligibility for the regulatory compliance exemption have been finalized at 40 CFR 99.43(b), including equations D–1A, for onshore production and onshore gathering and boosting facilities, and D–1B for facilities in all other industry segments. The quantity of emissions that would qualify for exemption under both the regulatory compliance exemption and any other exemption are then subtracted from this value, as described later in this section.

As a result of the finalized approach for assessment of partial regulatory compliance exemption under this final rule, it would be possible for a WEC applicable facility in the onshore production segment to have exempted emissions due to eligible permitting delays and plugged wells at a facility that also has qualified emissions eligible for the regulatory compliance exemption. In order to avoid double-counting emissions eligible for exemption (*i.e.,* subtracting the same methane emissions twice when calculating WEC applicable emissions), we are finalizing requirements at 40 CFR 99.43(c) to determine the quantity of emissions that would qualify for exemption under both the regulatory compliance exemption and any other exemption. Emissions under this scenario are quantified by multiplying the total quantity of emissions claimed for plugged wells by the ratio of the number of calendar quarters for which the facility qualified for regulatory compliance exemption divided by four added to the total quantity of emissions claimed for unreasonable permitting delay multiplied by the ratio of the number of days (considering calendar quarters) the facility qualified for the regulatory compliance exemption divided by the total number of days eligible for unreasonable permitting delay. For example, a facility qualified to claim for exemption 100 mt of CH_4 due to eligible unreasonable permitting delay for 365 days, qualified for exemption of 4 mt of CH_4 emissions from plugged wells, and qualified for regulatory compliance exemption for three calendar quarters (273 days) (January 1–March 31; April 1–June 30; and July 1–September 30), this calculation would result in a value of 77.79 mt of CH_4. This value is subtracted when determining the emissions attributed to qualifying for the regulatory compliance exemption. In this way, these emissions are appropriately attributed to the eligible permitting delay and/or plugged well exemptions rather than being double-counted as part of the regulatory compliance exempted emissions. For facilities in the onshore production industry segment, this assessment is computed on a site-by-site basis and then totaled. The calculations for determination of the emissions that would qualify for exemption under both the regulatory compliance exemption and another exemption are finalized at Equation D–2A, applicable for facilities in the onshore production industry segment, and Equation D–2B, applicable for facilities in all other industry segments.

h. Reporting and Recordkeeping Requirements for the Regulatory Compliance Exemption

We are finalizing reporting requirements at 40 CFR 99.7(b)(2)(iv) relevant to the regulatory compliance exemption. Those requirements provide that once the Administrator has made the requisite determinations in CAA section 136(f)(6)(A)(i)–(ii) for a given State (or group of States, for facilities that span multiple States) and the final compliance date for CAA section 111 facilities in that State(s) has passed, each WEC filing submitted by a WEC obligated party for each WEC applicable facility in the State(s) that exceeds the waste emissions threshold that contains any CAA section 111(b) and (d) facilities and which are claiming the exemption must include certain information relevant to the regulatory compliance exemption. This final approach is conceptually similar to the proposed approach of initiating reporting requirements for the exemption only when the exemption becomes available, but it is changed in that it is now aligned with the timing of regulatory compliance exemption availability as finalized in this rulemaking. CAA section 136(f)(6)(A) mandates that the EPA shall not impose a charge upon WEC applicable facilities that qualify for the regulatory compliance exemption. Under the final approach for implementing the regulatory compliance exemption, WEC applicable facilities that are below the waste emissions threshold are ineligible for the exemption. The EPA therefore is finalizing as proposed that WEC obligated parties are not required to report information related to the compliance status of CAA section 111(b) and (d) facilities contained within WEC applicable facilities for WEC applicable facilities that are below the waste emissions threshold. The EPA is also finalizing that WEC applicable facilities that are not eligible for the regulatory compliance exemption, or that otherwise choose not to use the regulatory compliance exemption, are not subject to the reporting requirement at 40 CFR 99.7(b)(2)(iv).

The EPA is also finalizing, as proposed, reporting requirements for facilities that qualify for and elect to claim the regulatory compliance exemption at 40 CFR 99.42. We are finalizing that the WEC filing submitted by the WEC obligated party for each WEC applicable facility must include a certification of the NSPS and State and Federal plan compliance status for each

CAA section 111(b) and (d) facility located within a WEC applicable facility during the reporting year. This certification of compliance status must indicate if any CAA section 111(b) or (d) facilities contained within the WEC applicable facility had any noncompliance, as defined in this final rule, from methane requirements for monitoring, emissions limits or standards (surrogate parameters), operating limits (including operational parameter limits), or work practice standards in the reporting year, and must indicate in which quarter of the year those deviations occurred. WEC applicable facilities that meet regulatory compliance exemption eligibility requirements for the entire year or a portion of the year are required to report the ICIS–AIR ID (or if unavailable, the facility registry service (FRS) ID and EPA Registry ID from CEDRI) reporting identifiers for each CAA section 111(b) and (d) facility located within the WEC applicable facility. These identifiers provide links to reports, emissions, and compliance data for each CAA section 111(b) and (d) facility located within the WEC applicable facility, which is information necessary for the EPA to confirm the accuracy of the reported compliance status.

The EPA proposed that WEC applicable facilities that are not eligible for the exemption would be required to submit one report associated with the CAA section 111(b) and (d) facilities located within the WEC applicable facility that documents any instance of noncompliance for the reporting year. The EPA received comments stating that exemption-related reporting requirements should not apply to WEC applicable facilities that are not eligible for the exemption. The EPA agrees, and the final rule does not include reporting requirements for the regulatory compliance exemption for WEC applicable facilities that are not eligible for the regulatory compliance exemption or otherwise choose not to use the exemption. As supporting documentation for the certification of compliance status of WEC applicable facilities that are fully or partially eligible for the exemption, we are finalizing, as proposed, to require the submittal of report(s) associated with the CAA section 111(b) and (d) facilities located within the WEC applicable facility. The EPA recognizes that the compliance certification period for CAA section 111(b) and (d) facilities may not align with the reporting year for which the filing is being completed and that at the time of the WEC filing due on August 31 of each year, report(s) covering the complete preceding reporting year for WEC filing may not be available. To accommodate these cases where the NSPS OOOOb and State/Federal plan compliance status for the complete reporting year is not known at the time of the WEC filing, the EPA is finalizing that the WEC obligated party must provide compliance reports for the portion of the year for which they are available (including the period of time covered); for the remainder of the year, the WEC obligated party must provide a certification of compliance status for each CAA section 111(b) and (d) facility at the WEC applicable facility that is not available at the time of the WEC filing. It also is possible that the complete calendar year of WEC filing is covered by two annual reports, each covering a portion of the calendar year. In this case, the WEC applicable facility must submit both annual reports. The EPA further recognizes that a WEC applicable facility may contain CAA section 111(b) and (d) facilities that first became subject to requirements under CAA sections 111(b) and (d) during the reporting year associated with the filing and for which the first year of compliance is not completed. For these CAA section 111(b) and (d) facilities, we are finalizing as proposed to require that the filing identify the type of facility, the date that it became subject, and a certification of the compliance status for the portion of the year in which it was subject to requirements under CAA sections 111(b) and (d). In cases where the initial filing does not include a report covering the entire reporting year, we are finalizing as proposed to require that the WEC obligated party provide a revised filing once such a report becomes available. The EPA is finalizing that this revised filing under the final WEC rule would be required to be made within 30 calendar days of the date that the compliance report covering the remainder of the year would be due under the applicable requirements of NSPS OOOOb or a State/Federal plan. The deadlines for filing revisions to WEC filings as discussed in section III.A.4. do not apply for the submittal of compliance reports.

We are finalizing language at 40 CFR 99.41(e) clarifying that for purposes of 40 CFR part 99, ''affected facility(ies)'' or ''designated facility(ies)'' that are located at the WEC applicable facility means the affected facility(ies) or designated facility(ies) that was (were) part of the WEC applicable facility as of December 31 of the reporting year, as well as any facility(ies) that was (were) decommissioned during the reporting year without being transferred to another WEC applicable facility. This language serves to clarify that the basis for determining the CAA section 111 facilities for which submission of compliance reports is required and qualification for exemption of emissions is determined under the regulatory compliance exemption is aligned with the basis for reporting emissions under subpart W of the GHGRP. We are also finalizing an additional reporting requirement at 40 CFR 99.42(b)(7) necessary for verification and implementation of this basis of compliance report submittal under the regulatory compliance exemption. The EPA recognizes that the requirement to submit compliance reports covering the full calendar year for all CAA section 111 facilities located at a WEC applicable facility may result in submission of reports that include equipment that was not located at that WEC applicable facility during the year. For example, in the circumstance of a CAA section 111 facility that is purchased from another owner or operator during the reporting year, the compliance report prepared for that particular section 111 facility (*i.e.,* piece of equipment) may also include equipment that was not transferred. The reporting requirement of 40 CFR 99.42(b)(6) requires an indication of whether any compliance reports submitted pursuant to 40 CFR 99.42(b) include one or more CAA section 111 facilities that are not located at the WEC applicable facility, and for any such CAA section 111 facilities, an indication of whether the CAA section 111 facility was part of the WEC applicable facility for part of the reporting year and transferred to another facility prior to December 31 of the reporting year or if the affected or designated facility was not part of the WEC applicable at any time during the reporting year.

We are finalizing additional reporting requirements related to the regulatory compliance exemption beyond those that were proposed at 40 CFR 99.42(d), 99.42(e), and 99.42(f). These requirements are necessary to support implementation of the final approaches for assessment of noncompliance at the site level for the onshore petroleum and natural gas production and onshore petroleum and natural gas gathering and boosting industry segments, as well as quarterly assessment of whether a facility (or site) meets the criteria for exemption of emissions under the regulatory compliance exemption as discussed in section II.D.2.f. of this preamble. The final requirements at 40 CFR 99.42(d) require that for each submitted compliance report that

indicates a deviation or violation, the compliance reporting identifiers associated with the affected or designated facilities for which there was a deviation or violation are reported. Additionally, an indication for each calendar quarter is required as to whether the compliance report indicates that the criteria for exemption of emissions were met during that calendar quarter. The final requirements at 40 CFR 99.42(e) establish additional reporting for other large release events that occurred within or overlapped with a quarter in which the facility (or site) did not qualify for regulatory compliance exemption. These additional elements consist of the unique release event identification number as reported to subpart W for the release event and the duration of the event, in days, that occurred during calendar quarters in which the facility (or site) did not qualify for regulatory compliance exemption. These reported data elements are necessary for implementation of the calculation of emissions exempted under the regulatory compliance exemption that are associated with other large release events, as discussed in section II.D.2.g. of this preamble. The final requirements at 40 CFR 99.42(h) consist of the reporting of the quantity of methane emissions at the WEC applicable facility qualifying for regulatory compliance exemption, the total quantity of methane emissions that qualified for exemption under both the regulatory compliance exemption and another exemption, whether the facility (or site) did not meet the criteria for exemption of all emissions under the regulatory compliance exemption, and if so an indication for each calendar quarter of whether the facility (or site) met the criteria for exemption of emissions during that calendar quarter. In cases where multiple compliance reports are submitted for a facility, individual well-pad site (for the onshore petroleum and natural gas production industry segment) or individual gathering and boosting site (for the onshore petroleum and natural gas gathering and boosting industry segment), the calendar quarters reported under this requirement must reflect the periods of time in which the conditions for the exemption of emissions were met for the facility, well-pad site, or gathering and boosting site, as applicable, in its entirety. For example, if two reports were submitted that together represent all of the affected and designated facilities at a well-pad site, and one report indicates deviation during only the first calendar quarter (*i.e.,* January to March) while the other report indicates deviation during only the second calendar quarter (*i.e.,* April to June), the information reported would be that for the first (*i.e.,* January to March) and second (*i.e.,* April to June) calendar quarters the conditions for the exemption of emissions were not met, and for the third (*i.e.,* July to September) and fourth (*i.e.,* October to December) calendar quarters the conditions were met.

The EPA requires this information for the verification of regulatory compliance exemption eligibility. Reported information will be used to conduct verification as discussed in section III.A.4. as well as any auditing that occurs as discussed in section III.E.1.

The EPA is aware that these reporting requirements may result in cases where a WEC obligated party makes a good-faith representation that each CAA section 111(b) and (d) facility at the WEC applicable facility is in compliance but later independently discovers an instance(s) of noncompliance. The EPA is finalizing as proposed that such independent discoveries would be considered to be substantive errors within the WEC filing. The EPA is finalizing at 40 CFR 99.7(e)(1) that a revised WEC filing must be submitted within 30 days of the discovery that a previously submitted WEC filing contains a substantive error. Provided that timely submittal of a revised filing is made, if a revised regulatory compliance exemption filing results in the imposition of WEC obligation on a WEC applicable facility that previously qualified for exemption, the EPA is finalizing that the WEC obligated party would not be subject to any penalties.

However, later discoveries of deviations or violations by the EPA or another regulatory authority, or discoveries as a result of investigation by the EPA or another regulatory authority (including information requests), are not treated the same way as filing errors. Where a WEC obligated party represents that each CAA section 111(b) and (d) facility at the WEC applicable facility is in compliance, but the EPA or another regulatory authority subsequently discovers the existence of noncompliance, or the CAA section 111(b) and (d) facility identifies the noncompliance as a result of an EPA investigation (including information requests), the WEC obligated party is required to submit a revised WEC filing with corrected information, but may be subject to enforcement and required to pay any outstanding WEC fees and penalties. False statements may be subject to criminal enforcement.

i. Resumption of WEC Under CAA Section 136(f)(6)(B)

CAA section 136(f)(6)(B) provides that if, at any point after the Administrator has made the determinations required by CAA section 136(f)(6)(A)(i) and (ii), the conditions for any such determination cease to apply, the WEC applicable facility will ''again be subject to'' charge. Because the EPA is finalizing that the determinations required by CAA section 136(f)(6)(A)(i) and (ii) will occur on a State-by-State basis, we are finalizing that all WEC applicable facilities in a State would lose access to the exemption if either of the conditions in CAA section 136(f)(6)(A)(i) and (ii) ceased to apply for that State. For example, if a State plan were challenged in litigation and vacated by a court after the initial Administrator determinations for that State, a plan would no longer be ''approved and [] in effect'' in that State, and the regulatory compliance exemption would no longer be available to WEC applicable facilities in that State. Similarly, if after the initial equivalency determination methane emissions requirements promulgated under CAA section 111(b) or (d) (either the NSPS or the State/Federal plans) were modified such that they no longer resulted in equivalent or greater aggregate emissions reductions than the 2021 NSPS/EG Proposal in a particular State, the exemption would no longer be available in that State. For WEC applicable facilities that span multiple States or Tribal lands, the exemption would no longer be available if either of the conditions required by CAA section 136(f)(6)(A)(i) and (ii) ceased to apply in any of the States or Tribal lands in which a WEC applicable facility has operations. If a WEC applicable facility is in an industry segment where facilities may span multiple States or Tribal lands and the criteria in either CAA section 136(f)(6)(A)(i) or (ii) cease to be met in one of those States or Tribal lands, but the facility can demonstrate it is not located in the State where the conditions cease to exist based upon the reporting requirement finalized at 40 CFR 99.7(b)(2)(iv)(A), the exemption remains available to the facility.

The EPA is finalizing as proposed that any determination that the criteria in CAA section 136(f)(6)(A) are no longer met after the initial determination will be made through a future administrative action. Consistent with the statutory text CAA section 136(f)(6)(B), the EPA is finalizing that the exemption will not be available for the full calendar year in which the required criteria were no longer met. The EPA is finalizing, as

proposed, that if access to the regulatory compliance exemption were lost after it was initially made available because one of the two required conditions in CAA section 136(f)(6)(A) were no longer met, it will become available again following a subsequent determination that both conditions are once again achieved. Under such circumstances, the exemption will be available again for the reporting year in which the conditions are found to be met. The EPA is finalizing, as proposed, that if the conditions ceased to apply and were then met again in the same reporting year, the exemption will be available for the entire reporting year. The EPA has finalized revised language at 40 CFR 99.40(d) and (e) to clarify the timing of availability of the exemption in this circumstance.

3. Plugged Well Exemption Under CAA Section 136(f)(7)

Congress created an incentive for plugging and permanently shutting wells by including an exemption from the WEC in CAA section 136(f)(7): ''[c]harges shall not be imposed with respect to the emissions rate from any well that has been permanently shut-in and plugged in the previous year in accordance with all applicable closure requirements, as determined by the Administrator.'' Separately, in CAA section 136(a)(3)(D) and 136(b), Congress provided funding that can assist owners and operators who elect to permanently shut-in and plug wells on non-Federal land.[66]

In this rulemaking, we are finalizing that this exemption is applicable to wells in the onshore petroleum and natural gas production, offshore petroleum and natural gas production, and underground natural gas storage industry segments. We proposed that this exemption would apply to the production industry segments only and not to wells in the underground storage industry segment. After continued assessment of the statutory text and consideration of comments received, the EPA is finalizing the inclusion of wells in the underground storage industry segment in the plugged well exemption. CAA section 136(f)(7) does not restrict eligibility to wells in the production industry segments. In fact, the statutory text states that the exemption is applicable to the emissions rate ''from any well'' that has been plugged. To best align with the statutory text, the EPA is finalizing that plugged wells in the underground storage industry segment are also eligible for the plugged well exemption. Exempted emissions sources for plugged wells in the underground storage segment includes equipment leaks attributed to the wellhead. For the onshore petroleum and natural gas production and the offshore petroleum and natural gas production sectors, we are expanding the plugged well exemption to include other emissions sources reported on the well level that were not included in the proposal. To be more consistent with CAA section 136(f)(7), the final plugged well exemption includes all subpart W emissions sources attributable to an individual well, so the exemption better accounts for emissions associated with an individual well. As discussed further in section II.D.3.b. of this preamble, for onshore petroleum and natural gas production we are expanding the exemption to include well testing, associated natural gas venting and flaring, and drilling mud degassing. These emissions sources are added in addition to the wellhead equipment leaks, liquids unloading, and workovers with or without hydraulic fracturing for the onshore petroleum and natural gas production sector that were included in the proposal. For offshore petroleum and natural gas production, drilling mud degassing is included in the exemption, in addition to the component-level equipment leaks that were proposed.

We are finalizing as proposed that exempted emissions would be those from wells permanently shut-in and plugged in the previous year (*i.e.,* if a well is permanently shut-in and plugged in 2026, the exempted emissions would be deducted from the reporting year 2026 emissions totals that are filed under WEC in 2027). Taken all together, the changes being finalized in this rulemaking will help improve access to the plugged well exemption while also more closely aligning this exemption with the 2024 NSPS/EG Final rule.

a. Determining if the Exemption for Permanently Shut-In and Plugged Wells Applies to a WEC Applicable Facility

The EPA is finalizing as proposed two criteria for determining if the exemption for permanently shut-in and plugged wells applies to a WEC applicable facility.

Consistent with the other exemptions, the first criterion is that the facility must have emissions that exceed the waste emissions threshold. CAA section 136(f)(7) notes that ''charges shall not be imposed'' on emissions from permanently shut-in and plugged wells. Charges would not be imposed on emissions below the threshold and therefore an exemption is unnecessary in cases where facility emissions are below the threshold. The EPA is finalizing as proposed that emissions from facilities that are below the waste emissions threshold would not be exempted. The EPA is finalizing as proposed that for facilities that exceed the waste emissions threshold, emissions eligible for the plugged well exemption could be subtracted up to the point where facility emissions equal the waste emissions threshold (*i.e.,* the lowest possible WEC applicable emissions for a facility with the plugged well exemption would be zero).

Second, wells must meet the following definition of permanently shut-in and plugged in accordance with all applicable closure requirements. The EPA is finalizing as proposed that for the purposes of this exemption, a permanently shut-in and plugged well is one that has been permanently sealed to prevent any potential future leakage of oil, gas, or formation water into shallow sources of potable water, onto the surface, or into the atmosphere. For the purposes of this exemption, the EPA is finalizing as proposed that a well would be considered permanently shut-in and plugged, in accordance with all applicable closure requirements, if the owner or operator has met all applicable Federal, State, and local requirements for closure in the jurisdiction where the well is located. Although Federal, State, and local requirements for well closure may vary (*e.g.,* only some States require post-plugging reports, some States require initial checks by State environmental agency at time of plugging), wells are permanently shut-in and plugged in a similar manner. For the purposes of this exemption, we are finalizing as proposed that the date on which a well would be considered permanently shut-in and plugged is the date on which a metal plate or cap has been welded or cemented onto the casing end.

In addition to requirements specifying how to plug a well, relevant Federal, State, and local requirements often also specify requirements such as for notifications, reporting, and site remediation. For purposes of 40 CFR part 99, we are finalizing as proposed that the applicable closure requirements would include only the requirements

[66] On December 15, 2023, the EPA and the DOE announced the award of $350 million in formula grant funding to 14 states to help measure and reduce methane emissions, supporting industry efforts to cut methane emissions from low-producing, marginal conventional wells on non-Federal lands and environmental restoration of well sites. Press release: *https://www.epa.gov/newsreleases/biden-harris-administration-announces-350-million-14-states-reduce-methane-emissions*.

Inflation Reduction Act (IRA)—Mitigating Emissions from Marginal Conventional Wells, Funding Opportunity Number DE–FOA–003109.

specific to well plugging. We are finalizing as proposed that requirements for notifications, reporting, and site remediation are not included as part of the exemption eligibility criteria for following ''all applicable closure requirements'' in CAA section 136(f)(7) because the closure of the well is the key activity impacting methane emissions, which is the focus of the WEC, and these other aspects of closure, while important, are less relevant to methane emissions levels. We also note that had we included these additional requirements in our interpretation of ''all applicable closure requirements,'' the reporting requirements would increase for permanently shut-in and plugged wells and this may lead to recalculations of WEC years after the exemption was initially applied.

b. Calculations of Exempted Emissions From Permanently Shut-In and Plugged Wells

Calculations of Exempted Emissions from Permanently Shut-in and Plugged Wells at Onshore Petroleum and Natural Gas Production Facilities. The EPA is finalizing as proposed that only wellhead emissions are eligible for the plugged well exemption with some modifications from the proposal regarding what is included as eligible emissions for the onshore petroleum and natural gas production industry segment. In the proposal, the EPA included wellhead equipment leaks, liquids unloading, and workovers both with and without hydraulic fracturing, in the reporting year in which the well was plugged as methane emissions eligible for the exemption in the onshore petroleum and natural gas production industry segment. We are expanding the plugged well exemption for the onshore petroleum and natural gas production industry segment to include other emissions sources reported on the wellhead level (*i.e.,* well testing, associated natural gas venting and flaring, and drilling mud degassing) in addition to the emissions sources proposed.

The EPA received comments supporting expansion of the exemption to include emissions from additional sources, such as emissions from non-wellhead equipment that are co-located on the well pad. The statutory text does not describe or reference emissions from other emissions sources that may be co-located with a plugged well, and the EPA determined that the statutory text is best read to exclude these emissions. Moreover, as we noted in the proposal, methane emissions from other equipment onsite (*e.g.,* separator, compressor, flare) may result from co-mingled natural gas throughput from multiple wells and not just the wells that are plugged.

For the purposes of quantifying the methane emissions from eligible emissions sources associated with each permanently shut-in and plugged well, we are finalizing as proposed to use the methane emissions and throughput data reported to subpart W of part 98. The final amendments in the 2024 Subpart W Final Rule impact the data available to best estimate the exempted emissions from the permanently shut-in and plugged well. Therefore, as described in more detail in this section, for applicable emission sources and industry segments, different approaches are finalized for certain time periods.

For reporting year 2024, the current subpart W rule requires that onshore petroleum and natural gas production facilities report methane emissions from liquids unloading and workovers by sub-basin for each WEC applicable facility, as well as methane emissions from well testing, associated natural gas venting and flaring, and equipment leaks at the facility-level. Drilling mud degassing is not an emission source category collected under the current subpart W rule for reporting year 2024. Subpart W of part 98 also currently requires offshore petroleum and natural gas production facilities and onshore petroleum and natural gas production facilities to report facility-level throughput of gas and oil handled or sent to sale, respectively. Revisions included in the 2024 Subpart W Final Rule require onshore petroleum and natural gas production facilities to report additional elements that facilitate quantification of methane emissions from individual shut-in and plugged wells. Specifically, effective January 1, 2025, and applicable beginning with reporting for 2024, the 2024 Subpart W Final Rule requires onshore petroleum and natural gas production facilities to report well-level throughput volumes for gas and oil sent to sale from wells that are permanently shut-in and plugged. Additionally, beginning in reporting year 2025, the 2024 Subpart W Final Rule increases the granularity of methane emissions reporting for eligible equipment categories, except equipment leaks, to the well-level and methane emissions reporting for equipment leaks to the well-pad site level. Due to the differences in available reporting data for 2024 and future years, the final approach for quantifying methane emissions in part 99 for individual wells located at onshore petroleum and natural gas production facilities that are permanently shut-in and plugged in 2024 is different than the approach for quantifying methane emissions from wells located at onshore petroleum and natural gas production facilities that are permanently shut-in and plugged in 2025 and future years.

For reporting year 2024, the EPA is finalizing as proposed through 40 CFR 99.52 that WEC applicable facilities in the onshore petroleum and natural gas industry segment would quantify methane emissions from permanently shut-in and plugged wells by allocating the subpart W of part 98 reported facility-level methane emissions from eligible emissions sources using subpart W of part 98 reported production volumes of gas and oil sent to sale. We are finalizing as proposed that WEC applicable facilities in the onshore petroleum and natural gas industry segment would sum the total subpart W of part 98 reported methane emissions from methane emissions from eligible emissions sources, and multiply the sum of the methane emissions by the ratio of subpart W of part 98 reported production at the permanently shut-in and plugged well to the subpart W of part 98 reported facility-level total production.

For facilities with only gas production with exempt plugged well emissions, we are finalizing as proposed that the reported gas produced from the plugged wells be divided by the total gas production at the facility to develop the ratio. For facilities with only oil production with exempt plugged well emissions, we are finalizing as proposed that the reported oil produced from the plugged wells be divided by the total oil production at the facility to develop the ratio. For facilities with both gas and oil production with exempt plugged well emissions, we proposed and are finalizing that gas production that is reported to subpart W of part 98 by the WEC applicable facility in the onshore petroleum and natural gas industry segment would be converted to barrels of oil equivalent, such that throughput volumes will be on the same basis for facilities that report production of gas and oil. The EPA is finalizing as proposed to use a default value of 6,000 scf/barrel.

For reporting year 2025 and future years, we are finalizing as proposed that WEC applicable facilities in the onshore petroleum and natural gas industry segment must estimate well-level emissions in accordance with part 98 methods for the permanently shut-in and plugged well. As described in this section, for 2025 and future years, subpart W of part 98 requires reporting of methane emissions from liquids unloading, workovers, well testing, associated natural gas venting and

flaring, and drilling mud degassing to be at the well-level for facilities in the onshore petroleum and natural gas industry segment; therefore, we are finalizing as proposed that facilities in the onshore petroleum and natural gas industry segment would utilize the methane emissions as reported to subpart W part 98 in their part 99 exemption calculation for these emissions sources. Also, as described in this section, for 2025 and future years, subpart W of part 98 requires reporting of methane emissions from wellhead equipment leaks at the well-pad site level for facilities in the onshore petroleum and natural gas industry segment. In order to obtain a well-level estimate for the part 99 exemption calculation, we are finalizing as proposed to require facilities in the onshore petroleum and natural gas industry segment to utilize the subpart W of part 98 input data and emission estimation methods for wellhead equipment leaks, including the use of direct measurement surveys as specified in the 2024 Subpart W Final Rule, to calculate the methane emissions at the well level for the permanently shut-in and plugged well. For example, if equipment leak methane emissions included emissions from a permanently shut-in and plugged well or wells were estimated using the leaker emission factor method in 40 CFR 98.233(q) at the well-pad site, the WEC applicable facility would use the count of leakers by component type (*e.g.,* valve, connector) recorded for the permanently shut-in and plugged well, the time the components were leaking and operational at the well during the year, and the appropriate emissions factors from subpart W of part 98 to estimate the methane emissions from the permanently shut-in and plugged well. Similarly, if the equipment leak methane emissions at the well-pad site that includes the permanently shut-in and plugged well were estimated using the population count method in 40 CFR 98.233(r), the WEC applicable facility would use the operating time of the well during the year and the appropriate emissions factors from subpart W of part 98 to estimate the emissions from the permanently shut-in and plugged well.

Calculations of Exempted Emissions from Permanently Shut-in and Plugged Wells at Offshore Petroleum and Natural Gas Production Facilities. For offshore petroleum and natural gas production facilities, the current subpart W of part 98 reporting requirements are based on the facility's submission to the Bureau of Ocean Energy Management (BOEM), which includes methane emissions for component-level equipment leaks and drilling mud degassing. The methane emissions required to be reported by offshore facilities are unchanged by the 2024 Subpart W Final Rule as it pertains to this exemption in that these facilities will continue to report the data from their BOEM report. Subpart W of part 98 also currently requires offshore petroleum and natural gas production facilities to report facility-level throughput of gas and oil handled in the reporting year. Final revisions included in the 2024 Subpart W Final Rule for offshore petroleum and natural gas production facilities add requirements for the reporting of well-level throughput volumes for gas and oil sent to sale from wells that are permanently shut-in and plugged beginning in reporting year 2024. The 2024 Subpart W Final Rule also revised the terms in the current reporting elements for facility-level throughputs to refer to gas sent to sale, rather than handled, for consistency with the CAA language and with the onshore production industry segment. As noted in the preamble for the 2024 Subpart W Final Rule, these verbiage changes for facility-level throughput are not expected to impact the quantity of production volumes reported and were made for consistency and clarity. For the purposes of estimating the exempted emissions for permanently shut-in and plugged wells at offshore petroleum and natural gas production facilities, we are finalizing that facilities allocate the component level equipment leaks (*i.e.,* those from valves, connectors) at the wellhead, as proposed, and drilling mud degassing by the ratio of production from the well that has been permanently shut-in and plugged to the total facility-level production. Analogous to the approach for onshore petroleum and natural gas production facilities for reporting year 2024, in cases where a facility produced both oil and gas, we are finalizing as proposed that gas sent to sale be converted to barrels of oil equivalent and have provided an option to use 6,000 scf/barrel for the conversion.

Calculations of Exempted Emissions from Permanently Shut-in and Plugged Wells at Underground Natural Gas Storage Facilities. For underground natural gas storage facilities, the EPA is finalizing that equipment leaks at the wellhead level are eligible for the plugged well exemption. The exemption only includes wellhead equipment leaks because other emissions sources, such as liquids unloading or workovers as seen in the exemption for onshore production wells, do not occur at non-production wells.

To quantify the methane emissions associated with each permanently shut-in and plugged well, we are finalizing the use of methane emissions reported to subpart W of part 98. Subpart W of part 98 requires underground natural gas storage facilities to report methane emissions from equipment leaks associated with all wells at the facility, but emissions are not attributable to a particular wellhead. In order to obtain a well-level estimate of equipment leaks, we are finalizing that facilities in the underground natural gas storage industry segment must utilize the subpart W of part 98 input data and emission estimation methods for wellhead equipment leaks, including the use of direct measurement surveys as specified in the 2024 Subpart W Final Rule, to calculate the methane emissions at the well level for the permanently shut-in and plugged well.

Calculations of Exempted Emissions for Multiple Permanently Shut-in and Plugged Wells. For all reporting years and applicable industry segments, if the WEC applicable facility has more than one permanently shut-in and plugged well, we are finalizing as proposed that the part 99 emissions calculations would be performed for each well and summed to determine the net annual quantity of methane emissions at the WEC applicable facility eligible for the exemption.

c. Reporting and Recordkeeping Requirements for the Exemption for Permanently Shut-In and Plugged Wells

Through the provisions proposed at 40 CFR 99.51, the EPA is finalizing as proposed that the WEC obligated party receiving the exemption would provide for each well at a WEC applicable facility, the well ID number; the date the well was permanently shut-in and plugged; the statutory citation for each State, local, and Federal regulation stipulating requirements that were applicable to the closure of the permanently shut-in and plugged well; the emissions attributable to the well, and for each WEC applicable facility, and the total emissions attributable to all permanently shut-in and plugged wells at the facility. In the final rule, we are adding a reporting requirement of a certification by the designated representative for the WEC obligated party that all identified wells were closed in accordance with State, local, and Federal requirements. We are also finalizing additional reporting requirements to provide information related to the emissions calculations including an indication of the method

used to calculate wellhead equipment leaks, inputs to the methods to calculate wellhead equipment leaks, and the quantity of methane emissions attributable to the well from wellhead equipment leaks. Specifically for onshore production and underground storage wells, data inputs for wellhead equipment leaks were added to provide sufficient data to facilitate verification of the exempted emissions quantity. The data associated with underground natural gas storage facilities is reported to subpart W at the facility level; therefore, well level data will need to be reported to 40 CFR part 99 to ensure verification of the emissions can be performed. We are also finalizing additional reporting requirements related to associated gas flaring and completions and workovers without hydraulic fracturing. These requirements consist of reporting the volume of gas sent to a flare from the plugged well for which exemption is being sought as well as the calculated quantity of methane emissions attributable to the well from associated gas flaring and from completions and workovers without hydraulic fracturing and with flaring. We are finalizing as proposed that the information included in the report would be subject to the general recordkeeping requirements for part 99, meaning these records must be retained for 5 years following the WEC filing year of the exemption such that they can be made available to the EPA for inspection and review.

The EPA requires this information for the verification of exemption eligibility and of exempted emission quantity. Reported information will be used to conduct verification as discussed in section III.A.4., and reported information, records, and other information as applicable will be used to conduct any auditing that occurs under section III.E.1.

III. General Requirements of the Final Rule

A. WEC Filing Requirements

1. Required WEC Filers

The WEC obligated party is required to submit a WEC filing annually by August 31 that will include data collected from each WEC applicable facility for which it (the WEC obligated party, as defined in 40 CFR 99.2) is responsible as of December 31 of each reporting year. The WEC filing must include payment of any WEC obligation. The WEC filing provides the data necessary for the EPA to assess and verify the WEC obligation including certain part 98 emissions information and information on netting, as applicable, as well as supporting documentation for any WEC applicable facility exemptions.

2. Filing Deadlines

As required under the CAA sections 136(c) and (e), the assessment of the first WEC will be based on data collected under subpart W of the GHGRP for year 2024, beginning on January 1, 2024. The EPA proposed that the WEC filing would be due by March 31 of each year following each reporting year, and that any final revisions to the filing would be due by November 1 of each year following each reporting year. The proposed approach aligned the WEC filing and subpart W reporting deadlines. Many commenters were opposed to these proposed deadlines and recommended that the WEC filing occur later in the year. After consideration of comments received, the EPA is revising the WEC filing deadlines from the proposal in this final rule. The EPA is finalizing in 40 CFR 99.5 that the first WEC filing, for year 2024 emissions, is due September 2, 2025,[67] and would be required to be submitted annually by August 31 thereafter, as applicable. The EPA is finalizing a requirement that revisions to the August 31 WEC filing, with the exception of resubmissions to provide CAA section 111(b) or (d) compliance reports or revisions to previously reported compliance reports for the purposes of the regulatory compliance exemption, will be allowed through December 15 of the filing year. It is expected that with the final WEC filing date of August 31, there will be fewer resubmissions of WEC filings due to revised subpart W data compared to the proposed WEC filing deadline of March 31. The EPA is finalizing later WEC filing deadlines than proposed to simplify WEC implementation. The majority of the data used for WEC calculations are the facility-level methane emissions and hydrocarbon throughput volumes reported under subpart W. This information must be reported by March 31 of each year for the previous reporting (*i.e.,* calendar) year. After submission, these data go through the EPA verification process to identify potential errors and engage with facilities to correct them. This process generally concludes at the end of July or early August. In mid-August of each year, the EPA ''freezes'' the subpart W data set for publication in October. Facilities may continue to resubmit subpart W data after this point, but it is not included in that year's October data release.[68] As a result of the verification process and a desire by companies to ensure any corrected data is included in that year's public release of data, most, but not all, potential errors identified during the verification process are typically resolved by mid-August. Many commenters noted that requiring the WEC filing at the same time as subpart W reporting would lead to a cycle of WEC payments and refunds as the WEC filing was adjusted based on corrections and resubmissions resulting from the subpart W verification process, and that this cycle would be burdensome for both the EPA and industry. The EPA agrees and is therefore finalizing a WEC filing date of August 31. This date is after the majority of the yearly subpart W verification cycle is substantially complete and gives facilities sufficient time to make any corrections to their March 31 subpart W report and ensure accurate WEC calculations.

The EPA is also finalizing a final WEC resubmission date that is later in the calendar year than proposed. The final deadline of December 15 will provide time for the EPA to verify the initial WEC filings and time for WEC obligated parties to respond to any identified potential errors and resubmit WEC filings. The later WEC filing deadlines will also simplify reporting associated with the regulatory compliance exemption when it becomes available. Annual reporting deadlines for CAA section 111(b) and (d) facilities may fall at different times in the year. Many more WEC applicable facilities will know the compliance status of their constituent CAA section 111(b) and (d) facilities for the respective reporting year by August 31 compared to March 31. The EPA expects only a small number of annual reports for CAA section 111(b) and (d) would not be available by December 15. The final WEC filing dates will therefore reduce the need for WEC resubmissions to account for changes in CAA 111(b) and (d) compliance status for the purposes of determining eligibility for the regulatory compliance exemption.

3. Submission of the WEC Filing

The EPA is finalizing as proposed that each WEC filing must be submitted electronically in accordance with the

[67] August 31, 2025, falls on a Sunday, and Labor Day is the following day on September 1, 2025. Therefore, pursuant to final 40 CFR 99.5, the deadline for the initial WEC filing is September 2, 2025.

[68] The EPA publishes GHGRP data every October, covering both the most recently completed reporting year as well as changes impacting the 5 prior years. Changes made post-August would be reflected in the annual publication cycle the following calendar year.

requirements of 40 CFR 99.6 and in a format specified by the Administrator.

As noted previously in this section of the preamble, the EPA is finalizing that each WEC obligated party will submit a WEC filing annually. The WEC filing content provides the data necessary to complete the WEC calculations as described in section II.C. of the preamble. The EPA is finalizing WEC filing requirements to cover general company information including physical address, email, telephone number, list of associated WEC applicable facilities and their identifying information (*e.g.,* part 98, subpart W facility ID), as well as the net WEC emissions calculated in accordance with 40 CFR 99.22, the net WEC emissions after transfers resulting from the netting procedures pursuant to 40 CFR 99.23, and the WEC obligation as calculated pursuant to 40 CFR 99.24. The EPA is also finalizing that each WEC obligated party's WEC filing include certain information at the WEC applicable facility level. Specifically, the EPA is finalizing that for each WEC applicable facility that comprises the WEC obligated party, the filing requirements cover facility-level information including the facility's ID, the facility's industry segment(s), the facility's total subpart W GHG emissions in CO_2e, the facility's total subpart W methane emissions, and applicable natural gas or oil throughput as reported under subpart W, the facility's waste emissions threshold calculated in accordance with 40 CFR 99.20, and the facility's WEC applicable emissions calculated in accordance with 40 CFR 99.21.

The EPA received comments on the proposed reporting and recordkeeping requirements, including the contents of the WEC filing. Commenters recommended that the EPA add elements to the WEC filing related to the inputs to the WEC equations. After consideration of comments received, the EPA is adding WEC applicable facility filing requirements for total facility subpart W CO_2e, total subpart W methane, and total subpart W natural gas or oil throughput for the metric applicable to the facility's industry segment. These elements have been added to the final rule at 40 CFR 99.7(b)(2)(viii) through (xi). These additional data elements will support data verification and improve transparency by providing all of the primary WEC calculation data inputs in the WEC filing. The EPA notes that including these data elements, which are already reported under subpart W, will not increase the burden for industry as they will be automatically pulled from a WEC applicable facility's subpart W report into the electronic WEC filing system.

The EPA is also finalizing filing requirements for each WEC obligated party related to the three WEC exemptions, which are discussed in sections II.D.1. through 3. of this preamble. The EPA is finalizing as proposed that the exemptions are only available to WEC applicable facilities that exceed the waste emissions threshold. The EPA is therefore finalizing as proposed, with one clarifying revision, that these filing requirements would only apply to WEC applicable facilities that exceed the waste emissions threshold and are otherwise eligible for the exemption(s). The EPA is finalizing clarifying language at 40 CFR 99.7(b)(2)(iii) through (v) to allow a WEC obligated party to elect whether or not to submit a claim for exemption for a WEC applicable facility that meets the applicability requirements for each exemption. Coordinating revisions are being finalized at 40 CFR 99.31(a), and 99.42(a), along with a new paragraph 40 CFR 99.51(a). Comments received on the proposed filing requirements for each exemption are discussed individually for each exemption in sections II.D.1. through 3. of this preamble.

We are finalizing filing requirements related to stationary combustion source other large release events at 40 CFR 99.7(b)(2)(xiii). These reporting requirements are additions to those proposed and are necessary to address for purposes of 40 CFR part 99 the specified double-counting of emissions related to stationary combustion source other large release events as discussed in section II.C.2. of this preamble. For any combustion-related other large release events that were reported pursuant to subpart W, the WEC obligated party must report the unique release event identification number, and determine and report the quantities of CO_2, CH_4, and CO_2e emissions, in metric tons, that were reported under 40 CFR 98.236(z) for the duration of the other large release event as it was reported under 40 CFR 98.236(y)(4). These values represent the double-count of emissions present in the subpart W report for the WEC applicable facility. The determination of these quantities must be made using the applicable methods in subpart W and using measurement data, if available, or a combination of process knowledge, engineering estimates, and best available data when measurement data are not available.

4. Verification and WEC Filing Revisions

The foundation of the WEC obligated party's WEC filing will be the methane emissions and throughput reported by the WEC obligated party's WEC applicable facilities in their subpart W reports. As specified in 40 CFR 98.3(f) and (h) of this chapter, part 98 currently includes a verification process and resubmission process for resolving substantive error(s)[69] in reporting. These errors are either found through self-discovery by the facility or are found by the EPA during the verification process. In part 98, errors must be resolved within 45 days from discovery or notification of the error by the EPA. The EPA may grant a 30-day extension request if the request is timely, such that a total of 75 days may be provided for complete issue resolution. Additional extensions may be approved by the Administrator in specified limited circumstances. Resolution is either made by report revision and resubmission or by providing an adequate demonstration that the previously submitted report does not contain the identified substantive error or that the identified error is not a substantive error. Upon satisfying these requirements, the EPA determines that the error is resolved. If the requirements in 40 CFR 98.3 of this chapter are not satisfied, the EPA considers the part 98 report unverified.

Several commenters suggested strong verification protocols for WEC so that the charge obligations accurately reflect reported emissions. After consideration of comments received, the EPA is making one revision to the verification protocols to help ensure the charge obligations accurately represent emissions. Specifically, the EPA is finalizing that WEC filings will not be verified if they incorporate netted negative emissions generated from an unverified subpart W report. On all other aspects of the WEC verification protocols, the EPA is finalizing as proposed that the verification status of the WEC applicable facility with respect to the reporting in subpart W part 98 would be considered by the EPA when determining the verification status of the part 99 filing because the subpart W data would be the cornerstone of the WEC. In effect, a WEC filing may not achieve verified status until all errors associated with subpart W reports that impact the total WEC are corrected. For example, if the subpart W part 98 report

[69] 40 CFR 98.3(h)(3): A substantive error is an error that impacts the quantity of GHG emissions reported or otherwise prevents the reported data from being validated or verified.

of one WEC applicable facility contains errors related to reported emissions or throughput that affect the total WEC, the EPA could, by extension consider the WEC filing of the WEC obligated party that includes that WEC applicable facility to be unverified.

Separately, there are elements of the part 99 filing that are not directly tied to the subpart W report, such as the calculation of the WEC including netting and any exemption information. The EPA is finalizing as proposed to use a similar verification procedure under part 99 to that which exists under part 98. In implementing the verification of information submitted under part 99, the EPA will use a two-step process. First, the EPA will conduct an initial centralized review of the data that would help assure the completeness and accuracy of data. Second, the EPA will notify WEC obligated parties of potential errors, discrepancies, or make inquiries as needed concerning the WEC filing. Specifically, regarding the WEC filing, the EPA anticipates that there could be errors or clarifications with respect to the supporting documentation and quantification of emissions associated with exemptions from the WEC, which may require the EPA to review, evaluate, and confirm their validity and accuracy. The part 99 verification review will identify issues resulting from the calculation of WEC based on verified subpart W GHGRP reports and verified WEC filings to the extent possible. A thorough discussion of the separate process for unverified reports and approach for reassessment of WEC obligation due to resubmissions is discussed in section III.B. of this preamble.

The EPA is finalizing provisions that would require a WEC obligated party to respond to the EPA within 30 days of either being contacted in writing by the EPA notifying them of the presence of a substantive error in their WEC filing or by self-discovering that a previously submitted WEC filing contains one or more substantive errors (except as described later in this section) as opposed to 45 days as proposed. Initial submission, resubmission, and correspondence between parties will happen through an electronic system similar to the existing e-GGRT system used by the GHGRP, which will allow for back and forth between operators and the EPA prior to resubmissions. For the purposes of part 99, the EPA is finalizing as proposed to consider a substantive error to be an error that impacts the Administrator's ability to accurately calculate the WEC obligated party's obligation, which may include, but would not be limited to, the list of WEC applicable facilities associated with a WEC obligated party and corresponding data reported in each listed WEC applicable facility part 98 report(s), emissions associated with exemptions, and supporting information for each exemption to demonstrate its validity. The EPA is finalizing that a revised WEC filing must correct all substantive errors. If the WEC obligated party does not agree with the EPA's finding that the WEC filing contains substantive errors, the WEC obligated party must provide information demonstrating that the previously submitted report does not contain the identified substantive error or that the identified error is not a substantive error.

If a WEC applicable facility revises and resubmits their part 98 report, which results in impacts on the WEC calculations, the WEC obligated party is also required to submit a revised WEC filing. In the event that a subpart W report revision results in a change in the applicability of part 99 to the facility, the WEC obligated party must submit a revised WEC filing adding or removing any facilities, as appropriate. With the exception of resubmissions to provide CAA section 111(b) or (d) compliance reports or revisions to previously reported compliance reports for the purposes of the regulatory compliance exemption, part 99 resubmissions must be filed by December 15 of the year following the reporting year. Resubmissions related to CAA section 111(b) or (d) compliance reports for the purposes of the regulatory compliance exemption must be made as discussed in section II.D.2.h. of this preamble. Any part 98 resubmissions after this date that impact WEC calculations will not be required to be resubmitted in a revised WEC filing; facilities may continue to resubmit data under subpart W, as permitted. Under subpart W, facilities may resubmit data for historic reporting years via e-GGRT for the most recent five reporting years (*e.g.,* facilities may submit updates electronically to 2018–2023 data during calendar year 2024). Data resubmission for historic reporting years in the context of the WEC program is very complicated due to the potential changes in facility ownership over time and the implications this has on netting of emissions from facilities under common ownership or control. For example, a company or a facility owned by a company in one year may be owned in whole or in part by one or multiple different companies the next year. With such changes occurring annually to multiple facilities across multiple owners and operators with more than one facility under common ownership or control, there is no practical means of incorporating resubmitted data for historic reporting years in the WEC program. This could result in a very large administrative burden of reviewing recalculations and associated invoicing or refunds. The EPA therefore is finalizing a deadline of December 15 for each year, after which time no WEC resubmission filings initiated by the facility can be resubmitted. For example, resubmissions of subpart W data initially reported by March 31, 2025, or data from the WEC filing submitted September 2, 2025, that are used to assess WEC for the 2024 reporting year, must be submitted by December 15, 2025. This approach does not allow resubmissions for historic reporting years for WEC filings, even if the corresponding subpart W data is resubmitted for historic reporting years for purposes of subpart W. Subpart W facilities continue to be subject to part 98 requirements for resubmitting data for previous reporting years, but any data resubmitted under part 98 after December 15 of the calendar year following the respective reporting year will not be considered for the purposes of WEC under part 99. These approaches for WEC filing requirements and data verification are intended to incentivize complete and accurate WEC filings under part 99 by August 31 of each year, as well as complete and accurate reporting under part 98. The EPA is finalizing that it retains the right to re-evaluate WEC obligations in WEC filings after December 15 (*e.g.,* as part of the EPA audit of facility data, an enforcement investigation, or other relevant information). Similarly, the December 15 deadline would not apply to adjustments to WEC obligations resulting from the process to resolve unverified data, finalized at 40 CFR 99.8, should that resolution occur after December 15. Finally, in the event that annual CAA 111(b) or (d) compliance reports covering the entire previous WEC filing year are not available by December 15 due to the reporting schedule for those CAA 111(b) or (d) facilities, WEC obligated parties must revise their WEC filings after December 15 for the sole purpose of updating eligibility status for the regulatory compliance exemption.

B. Remittance and Assessment of WEC

We are finalizing as proposed that each WEC obligation payment must be submitted electronically in accordance with the requirements of 40 CFR 99.6 and in a format specified by the Administrator as part of the submission

of the WEC filing (*i.e.,* by August 31 each year covering the preceding reporting year).

Several commenters opposed any daily penalty for WEC obligated parties who fail to submit their annual filing by the deadline. Nevertheless, the EPA disagrees with the commenters since the absence of penalties would provide the perverse incentive for facilities to delay payment of the WEC. Therefore, the EPA is finalizing as proposed financial sanctions under 40 CFR 99.10 of subpart A. For WEC obligated parties that fail to submit their annual WEC filing by the deadline discussed in section III.A.2. of this preamble, the EPA is finalizing as proposed a daily penalty no greater than the rate associated with 42 U.S.C. 7413(d)(1) specified in Table 1 of 40 CFR 19.4, as amended. We are finalizing as proposed that this penalty will be invoiced by the EPA after the late filing is made. The EPA Finance Centers will assess interest, handling, and penalty charges in 30-day increments on any invoiced penalties. We are finalizing as proposed that the assessment of this penalty begins on the date that the WEC filing is considered past due (*i.e.,* September 1st) [70] and continue until such time that the WEC filing is submitted and certified by the WEC obligated party.

Under 31 U.S.C. 3717, there are interest, penalties, and costs that may be imposed on outstanding or delinquent debts arising under a claim owed by a person to the U.S. Government. Specifically, under 31 U.S.C. 3717(a)(1), agencies shall charge a minimum annual rate of interest on an outstanding debt on a United States Government claim owed by a person.[71] Under the EPA's implementing Policy Number 2540–9–P2, accounts are considered delinquent when the EPA does not receive payment by the due date specified on a bill or invoice. The EPA is finalizing as proposed to cite this Federal claims interest charge authority on any invoiced amounts past due. In the proposed rule, we included an equation (Equation A–1) detailing how interest would be assessed. To be consistent with other EPA regulations where interest is assessed, we have decided Equation A–1 is unnecessary and have removed it from the final rule.

Under 31 U.S.C. 3717(e)(1), agencies must collect an additional penalty charge of not more than six percent per year for failure to pay any part of an invoiced debt more than 90 days past due, as well as additional charge to cover the cost of processing delinquent claims. The EPA will assess interest, handling, and penalty charges in 30-day increments for late payments and will assess the six percent penalty with the third demand letter, invoice, or notice. The EPA is finalizing as proposed to include this additional six percent non-payment penalty charge for invoiced WEC debts that are more than 90 days past due.

1. Process for Reassessing WEC for WEC Filings Resubmitted After the Initial Waste Emission Charge Has Been Assessed

As discussed in section III.A.4. of this preamble, WEC obligated parties may need to resubmit their WEC filings and WEC applicable facilities may need to resubmit their GHGRP reports. These resubmittals have the potential to result in recalculation of the WEC obligation for the WEC obligated party. As discussed in section III.A.4. of this preamble, the EPA is finalizing that data resubmissions (initiated by facilities) for the previous reporting year would be required to be submitted by December 15 in order to be considered for WEC recalculations, with the exception of resubmissions related to CAA section 111(b) or (d) compliance reports for the purposes of the regulatory compliance exemption. If the recalculated WEC obligation is less than the original WEC obligation owed by the WEC obligated party, the EPA will authorize a refund to the WEC obligated party equal to the difference in WEC obligation. If the recalculated WEC obligation is greater than the original WEC obligation owed by the WEC obligated party, the WEC obligated party must resubmit their WEC filing and pay the additional charge. Finally, as noted above, notwithstanding the generally applicable deadline, the EPA is finalizing that it retains the right to reevaluate WEC obligations in WEC filings after December 15 (*e.g.,* as part of the EPA audit of facility data, an enforcement investigation, or other relevant information), and authorize refunds if and when appropriate.[72]

2. Process for Assessing WEC for Unverified Part 99 Filings

As discussed in section III.A.4. of this preamble, the EPA's verification review process for WEC will ideally end with the resolution of identified potential errors through either correction and resubmission of facilities' reports or justification provided through correspondence with reporters that no substantive error exists. When WEC applicable facilities or WEC obligated parties do not provide appropriate information to resolve the errors in their part 99 data after 30 days of either being contacted in writing by the EPA notifying them of the presence of a substantive error or by self-discovering that a WEC filing contains one or more substantive errors, the EPA considers their WEC filing to be unverified.

If a WEC filing is unverified but the EPA is able to correct the error(s) based on reported data to part 98 and part 99, we are finalizing as proposed that the EPA may recalculate the WEC obligation using available information and provide an invoice or refund to the WEC obligated party within 60 days of notifying the WEC obligated party that its WEC filing is unverified. If the WEC obligated party resubmits a WEC filing within that timeframe, the EPA will either accept the resubmission, or take the resubmission into account when calculating the WEC. The EPA received comments indicating that the proposed rule did not include sufficient detail on the standard for requiring a third-party audit. The EPA is therefore clarifying that, in cases where the EPA is unable to calculate the WEC with available information due to unresolved errors in either an included part 98 report(s) or the part 99 report, the WEC obligated party may be required to undergo a third-party audit. The WEC obligated party must make the information detailed in 40 CFR 99.8(c)(1)(v) available to the auditor for review. Comments also recommended that the EPA target auditing based on various factors that may be indicative of problems with WEC filings. The EPA is clarifying that the third-party auditor will primarily focus their review on resolving identified errors associated with part 98 and/or part 99 data elements required for calculation of the WEC that remain unverified, but the review should also include resolution of any additional errors identified during the course of their review. As defined in

[70] For reporting year 2024, the due date falls on a Sunday, August 31, 2025. Monday, September 1, 2025, is a Federal holiday, therefore, Tuesday, September 2, 2025, is the filing date after which WEC filings are considered past due.

[71] This rate of interest is known as the Current Value of Funds Rate, or CVFR, and is published prior to November 30th of each year by Treasury. The CVFR is based on the weekly average of the Effective Federal Funds Rate, less 25 basis points, for the 12-month period ending September 30th of each year, rounded to the nearest whole percent. This rate may be revised on a quarterly basis if the annual average, on a moving basis, changes by 2 percentage points or more.

[72] Note that 31 U.S.C. 1322(b)(2) creates a permanent indefinite appropriation for the Treasury to make refunds out of miscellaneous receipts for ''collections erroneously deposited that are not properly chargeable to another appropriation.'' In the event a reassessment is made for any of the reasons outlined above, this appropriation would apply.

40 CFR 99.8(c), these data elements may include records of total GHG emissions reported, facility methane emissions, facility hydrocarbon throughput, applied exemptions, and netting. The WEC obligated party will direct the third-party auditor to submit this information to the EPA and the WEC obligated party within 90 days of the EPA notifying the WEC obligated party that an audit is required. The EPA is adding this 90-day requirement to ensure timely resolution of unverified WEC data and to provide additional clarity to WEC obligated parties. After verifying data received by the third-party auditor, the EPA will notify the WEC obligated party. The WEC obligated party will have 30 days from this date of notification to resubmit their WEC filing, if necessary. Third-party audits may be required to be arranged by and conducted at the expense of the WEC obligated party.

The EPA also received comments stating that the proposed rule did not include sufficient detail regarding the certification criteria for auditors. In response to these comments, the EPA is providing additional detail in this final rule on the criteria for auditors. To be considered a third-party auditor, the EPA is requiring that the auditor have professional work experience in the petroleum engineering field or related to oil and gas production, gathering, processing, transmission, or storage. Additionally, the auditor must be a qualified professional engineer. The third-party auditor must be independent of the WEC obligated party (*e.g.,* not operated or employed by the WEC obligated party). The requirements for third-party auditors are defined at 40 CFR 99.8(c).

A WEC obligated party is required to pay an invoice received from the EPA for any updated WEC obligation or CAA penalty by the specified due date, or within 30 days of the date of the invoice or bill if a due date is not provided.

C. Authorizing the Designated Representative

The EPA is finalizing as proposed provisions for each affected WEC obligated party to identify a designated representative. Each WEC obligated party must have one designated representative who is an individual selected by an agreement binding on the WEC obligated party. This designated representative acts as a legal representative between the WEC obligated party and the Agency. The EPA is finalizing as proposed that the designated representative must submit a complete certificate of representation at least 60 days prior to the submission of the first WEC filing made by the WEC obligated party. Additionally, each WEC filing must contain a signed certification by a designated representative of the WEC obligated party. On behalf of the owner or operator, the designated representative certifies under penalty of law that the WEC filing has been prepared in accordance with the requirements of 40 CFR part 99 and that the information contained in the WEC filing is true and accurate, based on a reasonable inquiry of individuals responsible for obtaining the information. The EPA received a comment indicating that an employee serving as a designated representative could leave their position at a company before the end of the 60-day time period. However, the EPA notes that in these circumstances, the certificate of representation may be changed as subsequently explained in this section.

The EPA also is finalizing as proposed that the designated representative could appoint an alternate to act on their behalf, but the designated representative maintains legal responsibility for the submission of complete, true, and accurate emissions data and supplemental data. A part 99 designated representative or alternate designated representative may delegate one or more ''agents.'' The part 99 agent (*e.g.,* a part 98 subpart W designated representative could be delegated as an agent to provide facility-specific information) can enter data for a part 99 WEC filing, but an agent is not allowed to submit, certify, or sign a WEC filing. Pursuant to 40 CFR 99.4(f), only one alternate designated representative, who shall be an individual selected by an agreement binding on the owner and operator, and may act on behalf of the WEC obligated party designated representative (*e.g.,* submit, certify or sign a WEC filing) may be selected; however, either the designated representative or the alternate may be changed at any time following the requirements in 40 CFR 99.4(g).

The EPA is finalizing that within 90 days after any change in the WEC obligated party, the designated representative or any alternate designated representative of the new WEC obligated party must submit a certificate of representation that is complete under this section to reflect the change. These requirements ensure that the certificate of representation is updated to reflect changes to WEC obligated parties, and ensure alignment between the WEC obligated party and the certificate of representation's listed designated representative. In addition, as proposed, the EPA is finalizing the binding nature of the certificate of representation. Pursuant to 40 CFR 99.4(k) once a complete certificate of representation for a WEC obligated party has been received, the Administrator will rely on the certificate of representation unless and until a later signed, complete certificate of representation for the WEC obligated party is received by the Administrator.

The EPA is finalizing requirements for the contents of the certificate of representation at 40 CFR 99.4(i). These elements of the certificate of representation include certification statements for the designated representative and any alternative designated representative as well as information needed to implement the WEC. The final certificate of representation contents include elements that were not included in the proposed rule. These additional requirements are necessary due to changes from the proposal to allow netting at the parent company level. Including this information in the certificate of representation, and requiring the certificate to be updated annually, will allow the EPA to review data related to the relationships between WEC applicable facilities, WEC obligated parties, and parent companies prior to the WEC filing deadline. This will allow the EPA to engage with WEC obligated parties to correct any potential errors or conflicts in these data (*e.g.,* netting relationships) prior to the WEC filing deadline and therefore ensure efficient implementation of the rule.

D. General Recordkeeping Requirements

We are finalizing as proposed that WEC applicable facilities and WEC obligated parties must retain all required records for at least 5 years from the date of submission of the WEC report for the reporting year in which the record was generated. We are finalizing as proposed that the records shall be kept in an electronic or hard-copy format (as appropriate) and recorded in a form that is suitable for expeditious inspection and auditing. Under the final provisions, upon request by the Administrator, the records required under this section must be made available to the EPA or a third-party auditor if one is required. We are finalizing as proposed that records may be retained off site if the records are readily available for expeditious inspection and review. For records that are electronically generated or maintained, we are finalizing as proposed that the equipment or software necessary to read the records shall be made available, or, if requested by the EPA, electronic records shall be converted to paper documents. The

records that must be retained include, records prescribed in each applicable subpart of part 99, information required to be retained under part 98, including subparts A and W, any other information needed to complete the WEC filing, and all information required to be submitted as part of the WEC filing, including any supporting documentation. The EPA received comment indicating that the five-year retention requirement in the proposed rule did not clarify that companies who purchase WEC applicable facilities are not responsible for filings and errors made by previous owners. The EPA has revised from proposal 40 CFR 99.7(d) to more explicitly state that the WEC obligated party is the entity to which the recordkeeping requirement applies. Similar language was present at proposal given the use of the term ''you'' (defined as a WEC obligated party subject to part 99) in 40 CFR 99.7(d) as proposed. We are finalizing additional clarifying language that the general recordkeeping provision at 40 CFR 99.7(d) applies to all records prescribed in each subpart of part 99.

E. General Provisions, Including Auditing and Compliance and Enforcement

1. Auditing Provisions

Several commenters stated that small producers who are below the WEC reporting threshold and do not pay WEC obligation should be exempt from audits and enforcement actions related to the WEC. Since the EPA may want to conduct an audit to verify that the facility is accurately quantifying emissions and appropriately claiming to be exempt from the WEC obligation, we are finalizing as proposed that the EPA, or a party acting on behalf of the EPA, may conduct on-site audits of facilities, as indicated in 40 CFR 99.7(c), including of those facilities under the 25,000 mt CO_2e threshold. Under the general recordkeeping provision at 40 CFR 99.7(d), the records generated under this part must be available to the EPA, a party acting on behalf of the EPA, or a third-party auditor during an on-site audit and the records must be recorded in a form that is suitable for expeditious inspection and review upon request. The on-site audits may be conducted by private auditors contracted by the EPA or by Federal, State, or local personnel, as appropriate. The EPA proposed that audits conducted under 40 CFR 99.7(c) may be required to be arranged by and conducted at the expense of the WEC obligated party. In this final rule, the EPA is clarifying that WEC obligated parties would not be responsible for arranging and paying for audits conducted under 40 CFR 99.7(c). As described in section III.B.2. of this preamble, WEC obligated parties may be required to arrange and pay for third-party audits conducted to resolve unverified data necessary for calculation of the WEC.

2. Compliance and Enforcement

The EPA received comments supporting robust enforcement and verification protocols for WEC implementation. We are finalizing as proposed that any violation of any requirement of this part shall be a violation of the Clean Air Act, including section 114 (42 U.S.C. 7414) and section 136 (*42 U.S.C. 7436*). A violation would include but is not limited to failure to submit, or resubmit as required, a WEC filing, failure to collect data needed to calculate the WEC obligation (including any data relevant to determining the applicability of any exemptions and how the netting was conducted), failure to select a WEC obligated party, failure to retain records needed to verify the amount of WEC obligation, providing false or incorrect information in a WEC filing, and failure to remit WEC payment. Per 40 CFR 99.4(b), it is a violation to fail to authorize a designated representative for a WEC obligated party. In the case of a WEC applicable facility with more than one owner and/or operator, failure to select a WEC obligated party would constitute a violation on the part of each owner and each operator, as per 40 CFR 99.4. Each day of a violation constitutes a separate violation.

F. Other Final Minor Revisions or Clarifications

See Table 4 of this preamble for the miscellaneous minor technical corrections not previously described in this preamble that we are finalizing throughout part 99. These revisions from the proposed rule primarily include revisions to better reflect the EPA's intent of the proposed rule or editorial changes. Additionally, conforming edits to cross-references and paragraph designations in the final rule were made reflective of additional paragraphs that were finalized but not proposed as well as paragraphs that were proposed but are not being finalized, as discussed in detail in sections II and III of this preamble.

TABLE 4—FINAL TECHNICAL CORRECTIONS TO PART 99

Section (40 CFR)	Description of amendment
Revisions from Proposed Language that are Finalized	
99.7(b)(2)(iii), 99.7(b)(2)(v), 99.30(a), 99.50(b)	Revised use of the phrase ''as defined in 40 CFR 99.50'' to ''as those industry segment terms are defined in 40 CFR 98.230 of this chapter'' to tie industry segments to the definitions provided in subpart W and simply language from proposal.
99.7(d), 99.7(e), 99.8(c)	Revised instances of ''EPA'' to ''the EPA'' for consistency.
99.7(e)(2)(ii), 99.7(f)(2)	Revised instances of ''report'' to ''filing'' for consistency in terminology when referencing required submittals pursuant to part 99.
99.8(b)	Revised instances of ''WEC'' to ''WEC obligation'' for consistency in terminology.
99.40(b)(1)	Added ''or Tribal lands'' for accuracy of applicability.
99.40(c)	Added ''the emissions from'' to clarify the waste emissions charge is relevant to emissions.
99.41(a)	Deleted ''or (d)''. This was a typographical error noted by commenters.
99.42	Added headings to clarify contents of each paragraph.
99.42(g)	Revised instances of ''waste emissions charge'' to ''WEC obligation'' for consistency.

IV. Final Confidentiality Determinations for Certain Data Reporting Elements

A. Overview and Background

In this action, the EPA is finalizing requirements for WEC obligated parties to report the general information described in section III.A.3. of this preamble and the information specific to any applicable exemptions as described in sections II.D.1. through 3. of this preamble. This information is necessary for the EPA to verify the contents of the WEC filing, including confirming that all of the required WEC applicable facilities were included, each WEC applicable facility (or each site for WEC applicable facilities in the onshore production and gathering and boosting industry segments) is eligible for any exemptions that were applied, and the WEC applicable emissions and the amount of the WEC obligation were calculated correctly. As explained in the remainder of this section, the EPA is finalizing as proposed that for the data elements that are not inputs to emission equations, nearly all of the data reported will be either emission data or otherwise ineligible for confidential treatment. As a result of these determinations, information in these categories is not subject to the case-by-case or class determination processes under 40 CFR part 2 that the EPA typically uses to evaluate whether such information qualifies for confidential treatment. Where we codify a determination that information is emission data or otherwise not entitled to confidential treatment, it will be subject to disclosure to the public without further notice. Any determination that applies for submitted information continues to apply even if that information is carried into other documents that the EPA prepares for internal review or publication. The EPA also notes that the Agency is not making confidentiality determinations in this rulemaking for information included in supporting documentation required for eligible exemptions or additional information provided in software comments fields, which will remain subject to the case-by-case or class determination process under 40 CFR part 2, as established in this rulemaking under 40 CFR 2.301(j)(4).

The EPA did not propose that any of the reported information would be designated as ''inputs to emission equations.'' However, some of the additional reporting requirements being finalized include information that the EPA is designating as ''inputs to emission equations'' falling within the definition of ''emission data.'' For each element that falls in this category, we further designate that the data element will be directly reported to the EPA (see section IV.D. of this preamble for a discussion of ''inputs to emission equations'').

B. Final Confidentiality Determinations for New Data Elements

Pursuant to CAA section 114(c), the EPA proposed to make categorical emission data and confidentiality determinations for the categories of information reported under part 99. The EPA described the proposed emission data categories and confidentiality determinations for the reported information, as well as the basis for such proposed determinations, in this section of the proposed and final preamble. This approach is similar to the approach the EPA has taken for the GHGRP under 40 CFR part 98 (see 75 FR 39094, July 7, 2010, and 75 FR 30782, May 26, 2011, for more information).

The determinations the EPA is finalizing in this rulemaking serve as notification of the Agency's decisions concerning: (1) The categories of information the Agency will not treat as confidential because it is emission data; (2) the information that is not emission data but is not entitled to confidential treatment; and (3) the information that the submitter may claim as confidential but will remain subject to the existing 40 CFR part 2 process. The EPA is not making in this final rule a determination in favor of confidential treatment for any data elements collected under 40 CFR part 99. Instead, in responding to requests for information not determined in this final rule to be emission data or otherwise not entitled to confidential treatment, the EPA finalized as proposed to apply the default case-by-case process found in 40 CFR part 2.

The emission data and confidentiality determinations finalized in this rulemaking are intended to provide consistency in the treatment of the information collected by the EPA as part of the WEC filings. The EPA anticipates that making these determinations in advance through this rulemaking will provide predictability and transparency for both the public and submitters. The regulatory provisions regarding confidentiality determinations for these products are being codified broadly in 40 CFR 99.13. To provide additional clarity on the final confidentiality determinations for data elements under this rulemaking, individual data elements and their confidentiality determinations are provided in the memorandum, *Confidentiality Determinations and Emissions Data Designations in the Final Waste Emissions Charge Rule,* available in the docket to this rulemaking.

The EPA requested comment on the proposed confidentiality determinations, including the categories of information considered emission data, the placement of specific data elements under different categories of emission data, and the treatment of data elements that the EPA did not propose to be considered emission data. Several commenters disagreed that the name of a part 99 designated representative and their contact information should be considered emission data and not entitled to confidential treatment and stated that this information should not be made publicly available. The EPA is finalizing as proposed that this information is emissions data but is clarifying that because it includes personal identification information, it will not be published by the agency and may be subject to personal privacy rules in certain scenarios. This final approach is aligned with the treatment of identical data elements under part 98. Changes from the proposal are discussed in more detail in this section of the preamble.

The EPA is finalizing as proposed that the categories of information determined to be emission data, and therefore not eligible to be treated as confidential business information and available to be disclosed to the public, in this action are codified in 40 CFR 99.13(a) and include:

(1) Methane emissions;

(2) Calculation methodology; and

(3) Facility and unit identifier information.

The EPA is finalizing as proposed to group types of information (data elements) that WEC obligated parties must submit under part 99 that are considered emission data into these three categories based on their shared characteristics. For the sake of organization, for any information that logically could be grouped into more than one category, the EPA has chosen to label information as being in just one category where the Agency thinks it fits best. This approach will reduce redundancy within the categories that could otherwise lead to confusion and will ensure consistency in the treatment of similar information in the future.

For reporting elements that the EPA does not designate as ''emission data'' (including ''inputs to emission equations''), the EPA proposed to assess each individual reporting element according to the *Argus Leader* criteria (*i.e.,* whether the information is customarily and actually treated as private by the submitter) and 40 CFR 2.208(a) through (d). Therefore, the EPA

did not propose and is not finalizing categories and categorical confidentiality determinations for information that is not ''emission data.'' However, the EPA is finalizing as proposed descriptions of the type of information that is not eligible for confidential treatment in 40 CFR 99.13(b), including certain information demonstrating compliance with standards and information that is publicly available. The EPA also finalized as proposed in 40 CFR 99.13(c) and (d) to specify certain data elements and types of information that will remain subject to the Agency's general process for conducting confidentiality determinations on a case-by-case basis in 40 CFR part 2. The final provisions in 40 CFR 99.13(b) establish the proposed confidentiality determinations of the final data elements in part 99 and also provide clarity and ensure consistent treatment of new or substantively revised data elements if the content of the WEC filing is amended in a future rulemaking. Sections IV.B.2. and 3. of this preamble describe these final provisions, and our assessment of each individual reporting element that is not ''emission data.''

1. Emission Data

The EPA is finalizing as proposed to establish in 40 CFR 99.13(a) that certain categories of information the EPA will collect in the WEC filings are information that meets the regulatory definition of emission data under 40 CFR 2.301(a)(2)(i). The following sections describe the categories of information we are determining to be emission data, based on application of the definition at 40 CFR 2.301(a)(2)(i) to the shared characteristics of the information in each category, and our rationale for each determination. Final determinations for the individual data elements included in each category of emission data can be found in a memorandum, *Confidentiality Determinations and Emissions Data Designations in the Final Waste Emissions Charge Rule,* available in the docket for this rulemaking. The EPA is providing this memorandum to provide clarity on the final data elements that fall into each category, including some data elements that were not directly included in the proposal that meet the definition emission data. These additional data elements were necessary to add in the final version of the rule as a result of revisions made from the proposal in response to comments. For example, revisions made from the proposal to allow netting at the parent company level requires additional reporting associated with the transfer of net WEC emissions between WEC obligated parties. The EPA notes that these added data elements in the final rule are derived from or outgrowths of data elements that were proposed with confidentiality determinations finding that they were emission data. While these data elements were revised in the final version of the rule in what would be specifically reported to the Agency, the revisions did not change the Agency's rationale for the proposed emission data determinations and are being finalized under the same rationale.

The EPA also notes that many of the final data elements for which confidentiality determinations are being finalized in this rulemaking are identical to or derived from data elements reported under part 98 that have been determined to be emissions data under that subpart.

a. Information Necessary To Determine the Identity, Amount, Frequency, Concentration, or Other Characteristics of Emissions Emitted by the Source

Under 40 CFR 2.301(a)(2)(i)(A), emission data includes ''[i]nformation necessary to determine the identity, amount, frequency, concentration, or other characteristics (to the extent related to air quality) of any emission which has been emitted by the source (or of any pollutant resulting from any emission by the source), or any combination of the foregoing[.]'' The EPA is finalizing that the following categories of information are emission data under 40 CFR 2.301(a)(2)(i)(A):

(1) Methane emissions; and

(2) Calculation methodology.

Methane emissions. Data elements included in the Methane emissions data category are the net WEC emissions, net WEC emissions after transfers, facility waste emissions thresholds, industry segment waste emissions thresholds for each applicable industry segment within the facility (if more than one industry segment applies), and WEC applicable emissions, as well as the quantities of methane emissions that the WEC obligated party calculates should be exempted due to the unreasonable delay, regulatory compliance, and plugged well exemptions. The EPA has determined that the emissions at each reporting level constitute ''emission data.'' These data elements are information regarding the identity, amount, and frequency of any emission emitted by the WEC applicable facility, and, therefore, they are ''emission data'' and not eligible to be claimed as confidential.

Calculation methodology. The data element included in this category is the method used to determine the quantity of methane emissions that the WEC obligated party calculates should be exempt due to the unreasonable delay exemption, regulatory compliance exemption, and plugged well exemption. Most of the necessary calculations in part 99 do not include multiple equations or approaches that could be selected by a WEC obligated party, and in those cases, the calculation methodology used is readily apparent for any WEC obligated party. Calculations for the exemptions for unreasonable delay, regulatory compliance, and plugged wells do include multiple equations that facilities must use under different circumstances.

The EPA has concluded that the data elements in the calculation methodology category are ''emission data'' under 2.301(a)(2) because they are ''information necessary to determine . . . the amount'' of emissions emitted by the source. The method used to calculate emissions is emission data under 40 CFR 2.301(a)(2) because it is information necessary for the WEC obligated party to calculate the emissions and for the EPA and the public to verify that an appropriate method was used.

b. Information That is Emission Data Because It Provides a General Description of the Location and/or Nature of the Source to the Extent Necessary To Identify the Source and To Distinguish It From Other Sources

Under 40 CFR 2.301(a)(2)(i)(C), emission data includes ''a ''[g]eneral description of the location and/or nature of the source to the extent necessary to identify the source and to distinguish it from other sources (including, to the extent necessary for such purposes, a description of the device, installation, or operation constituting the source).'' The EPA is finalizing that the data elements in the facility and unit identifier information category of information are emission data under 40 CFR 2.301(a)(2)(i)(C).

The finalized part 99 regulations require WEC obligated parties to report in the WEC filing information needed to identify each facility as well as specific emission units (affected facilities) and/or well-pads associated with an exemption. Facility-identifying information must be reported for all facilities as specified in 40 CFR part 99, subpart A. Affected facility-specific identifying information is required for the regulatory compliance exemption. Well-pad-specific identifying information is reported if required by an applicable exemption for onshore

petroleum and natural gas production facilities.

Data elements in this category include the following data elements required under 40 CFR part 99, subpart A to be included in each annual WEC filing: WEC obligated party company name and address and a signed and dated certification statement of the accuracy and completeness of the report, which is provided by the designated representative of the owner or operator. The EPA proposed that the name and contact information for the designated representative of the WEC obligated party for each WEC applicable facility would be also included in the annual WEC filing. The EPA received comments disagreeing with the requirement to include the name and contact information for the designated representative of the WEC obligated party. After consideration of comments, the EPA is not finalizing that these data elements be included in the WEC filing, and therefore they will not be regularly published by the EPA. Because this information is not reported, it is not relevant to the confidentiality determinations discussed in this section of the preamble. The final part 99 regulations also require that the filing include specific information about each facility covered by the annual WEC filing, including the industry segment and facility ID. For each exemption, the facility and unit identifier information category include (as applicable) the facility identifier, the well-pad and/or well identifier reported under subpart W (if applicable), other facility or affected facility identifiers used to identify the facility/sources in other EPA systems (specifically, the ICIS–AIR ID or Facility Registry Service (FRS) ID and the EPA Registry ID from the Compliance and Emissions Data Reporting Interface (CEDRI)), emission source-specific methane mitigation activities impacted by an unreasonable permitting delay, and exemption-specific certification statements.

As discussed in section IV.A. of this preamble, emission data must be available to the public and is not entitled to confidential treatment under CAA section 114(c). ''Emission data'' is defined in 40 CFR 2.301(a)(2)(i)(C) to include ''[a] general description of the location and/or nature of the source to the extent necessary to identify the source and to distinguish it from other sources. . . .'' Consistent with this definition of emission data, the EPA considers facility and emission unit identifiers to be source information or ''information necessary to determine the identity . . . of any emission which has been emitted by the source,'' and therefore emission data under 40 CFR 2.301(a)(2)(i). Further, 40 CFR 2.301(a)(2)(i)(A) specifies that emission data includes, among other things, ''information necessary to determine the identity, amount, frequency, concentration, or other characteristics (to the extent related to air quality) of any emission which has been emitted by the source. . . .'' The EPA considers the term ''identity . . . of any emission'' as not simply referring only to the names of the pollutants being emitted, but to also include other identifying information, such as from what and where (*e.g.,* the identity of the emission unit) the pollutants are being emitted.

2. Reported Information That Cannot Be Claimed as Confidential

The EPA will assess the confidentiality of each individual part 99 reporting element that is not otherwise designated as emission data in this rulemaking according to the *Argus Leader* criteria (*i.e.,* whether the information is customarily and actually treated as private by the submitter) and 40 CFR 2.208(a) through (d). However, in this action, the EPA finalized as proposed descriptions of the type of information that would not be eligible for confidential treatment in 40 CFR 99.13(b), in part to establish the confidentiality determinations of the data elements in part 99 but also to provide clarity and consistency in the event that the content of the WEC filings are amended in a future rulemaking. The WEC obligation is calculated by multiplying the net WEC emissions by a set dollar amount, depending on the reporting year. As explained in section IV.B.1.a. of this preamble, the EPA determined that the net WEC emissions are emission data. Therefore, the EPA is finalizing that the WEC obligation, which is calculated as the net WEC emissions multiplied by a dollar per ton rate that is prescribed in CAA section 136, is not eligible for confidential treatment.

The EPA is also finalizing as proposed that certain information considered to be compliance information in part 99, regardless of whether it is or is not designated as emission data, is still not otherwise eligible for confidential treatment. Compliance information collected under part 99 includes information necessary to demonstrate compliance with the eligibility requirements for the exemptions for unreasonable permitting delay, regulatory compliance, and wells that have been permanently shut-in and plugged. Examples of the information collected include: for the unreasonable delay exemption, the date of the permit request, the estimated date to commence operation if the application had been approved within a set period of months, the first date that offtake to the gathering or transmission infrastructure from the implementation of methane emissions mitigation occurred once the application was approved, the beginning and ending date for which the eligible delay limited the offtake of natural gas associated with methane emissions mitigation activities, a listing of methane emissions mitigation activities that are impacted by the unreasonable permitting delay, and the quantity of methane emissions to be exempted due to the unreasonable delay for the reporting year. For the regulatory compliance exemption, copies of reports and other evidence of compliance with NSPS OOOOb or a State, Tribal, or Federal plan under 40 CFR part 62; and for the plugged well exemption, the date a well was permanently shut-in and plugged and the statutory citation for the requirements that were followed for that process. Operating and construction permits are available to the public through the State issuing the permits (as the delegated authority of the EPA), generally either through an online information system or website, or upon request to the State agency issuing the permits. These permits are expected to contain information about the type and size of process equipment operated at a facility, control devices or other measures undertaken to reduce emissions from each process, and the emission standards to which the facility is subject (including Federal standards as well as State or local standards). Reports submitted by owners and operators of facilities subject to NSPS OOOOb or a State, Tribal, or Federal plan under 40 CFR part 62 are available through the EPA's online repository ''WebFIRE.'' See *https://www.epa.gov/electronic-reporting-air-emissions/webfire.* Finally, well-specific information, including age, production rate, and operating status, is publicly available through State oil and gas commissions and/or State databases as well as sources such as Enverus. Because this information is already publicly available, it will not be eligible for confidential treatment.

The EPA is also finalizing in 40 CFR 99.13(b)(3) that any other information that has been published and made publicly available, including the publicly available reports submitted under the GHGRP and information on websites, are not eligible for confidential treatment. Information that is publicly available does not meet the criteria for information entitled to

confidential treatment specified in 40 CFR 2.208(c). Section IV.B.3. of this preamble specifies an additional type of information that is not eligible for confidential treatment when evaluating the confidentiality of supporting documentation submitted as described in 40 CFR 99.13(c) or (d).

3. Information for Which the EPA Is Not Finalizing a Confidentiality Determination

This section describes information for which the EPA is not finalizing a confidentiality determination. The EPA will initially treat this information as confidential upon receipt, if the submitter claimed it as such, until a case-by-case determination may be made by the Agency under the 40 CFR part 2 process.

The EPA does not expect emission data to be submitted in supporting documentation, but the Agency is finalizing as proposed that information in supporting documentation as described in 40 CFR 99.13(c) (*i.e.,* information not listed in 40 CFR 99.13(a) or (b) as not eligible for confidential treatment) will be treated as confidential if claimed as such until a case-by-case determination is made under the 40 CFR part 2 process. The EPA is also finalizing that information provided in software comments fields as described in 40 CFR 99.13(d) will not be eligible for confidential treatment if it is listed in 40 CFR 99.13(a) or (b) as not eligible for confidential treatment. Otherwise, the EPA will treat the information as confidential if claimed as such until a case-by-case determination is made under the 40 CFR part 2 process, as specified in 40 CFR 99.13(c). The EPA recognizes that supporting documentation and reporter comments may include information that is sensitive or proprietary, such as detailed process designs or site plans. Because the exact nature of this documentation cannot be predicted with certainty, the EPA will make case-by-case confidentiality determinations under CAA section 114(c) for any supporting documentation, or comments claimed confidential by applicants either upon receipt of such information or upon a request for such information after receipt.

C. Final Amendments to 40 CFR Part 2

Pursuant to CAA section 114(c), the EPA must make available to the public data submitted under part 99, except for data (other than emission data) that are considered confidential under CAA section 114(c). Accordingly, the EPA may publicly release part 99 data without further notice after submission to the EPA in accordance with the EPA's determinations of their confidentiality status in the final rule. Specifically, the EPA may publicly release part 99 data that are determined in this final rule to be emission data or not otherwise entitled to confidential treatment under CAA section 114(c) (*i.e.,* ''non-CBI''). For data elements that the EPA determined to be entitled to confidential treatment under CAA section 114(c), the EPA will release or publish such data only if the information can be aggregated in a manner that would protect the confidentiality of these data at the facility level. Existing regulations in 40 CFR part 2, subpart B set forth procedural steps that the EPA must follow before releasing any information, either on the Agency's own initiative or in response to requests made pursuant to the Freedom of Information Act (FOIA). In particular, the EPA is generally required to make case-by-case confidentiality determinations and to notify individual reporters before disclosing information that businesses have submitted with a confidentiality claim. As discussed in section IV.B of this preamble, in light of the voluminous data the EPA receives under subpart W of part 98 and the multiple procedural steps required under 40 CFR part 2, subpart B, the EPA would not be able to make part 99 data (determined to be emission data or non-CBI) publicly available in a timely fashion if it were required to make separate confidentiality determinations based on each submitter's individual claim of confidentiality.

To facilitate timely release of GHG data collected under part 99 that are emission data or non-CBI, the EPA is finalizing as proposed an amendment to 40 CFR 2.301, Special rules governing certain information obtained under the Clean Air Act. Specifically, the EPA is finalizing as proposed to revise 40 CFR 2.301(d) to specify that the special rules for data submitted under part 98 also apply to part 99. Under the final amendment, the EPA may release part 99 data that are determined to be emission data or information determined to be not entitled to confidential treatment upon finalizing the confidentiality status of these data. Consistent with the 40 CFR part 2 procedures, the approach finalized in this rulemaking provides the WEC obligated party an opportunity to justify and substantiate any confidentiality claim they may have for the data they are required to submit (except for emission data and other data not entitled to confidential treatment pursuant to CAA section 114(c)). In addition, WEC obligated parties have the benefit of seeing the EPA's rationales and analyses prior to submitting any justification, information that they would not otherwise have under the current 40 CFR part 2 procedures.

D. Final Reporting Determinations for Inputs to Emission Equations

In this section, we discuss data elements that the EPA is assigning to the ''Inputs to Emission Equations'' data category. This data category includes data elements that are the inputs to the emission equations used by WEC obligated parties to calculate their annual GHG emissions. See 75 FR 39094, July 7, 2010 for a full description of the ''Inputs to Emission Equations'' data category. As discussed in section VI.B.1. of the 2022 proposed *Revisions and Confidentiality Determinations for Data Elements Under the Greenhouse Gas Reporting Rule* (87 FR 36920, June 21, 2022), the EPA determined that the Argus Leader standard does not apply to our approach for handling data elements assigned to the ''Inputs to Emission Equations'' data category.

The EPA organizes data assigned to the ''Inputs to Emission Equations'' data category into two subcategories. The first subcategory includes ''inputs to emission equations'' that must be directly reported to the EPA. This is done in circumstances where the EPA has determined that the data elements do not meet the criteria necessary for them to be entered into verification software.[73] These ''inputs to emission equations,'' in the form received by the EPA, are not entitled to confidential treatment. The second subcategory includes ''inputs to emission equations'' that are entered into verification software. These ''inputs to emission equations'' are entered into verification software to satisfy the EPA's verification requirements. These data must be maintained as verification software records by the submitter, but the data are not included in the annual report that is submitted to the EPA. This is done in circumstances where the EPA has determined that the data elements meet the criteria necessary for them to be entered into the verification software. Refer to the memorandum, *Reporting Determinations for Data Elements Assigned to the Inputs to Emission Equations Data Category in the Final Waste Emissions Charge Rule,* available in the docket for this rulemaking, for a

[73] The term ''verification software'' refers to specific software and tools. For example, under part 98, the EPA provides an Inputs Verification Tool (IVT) in e-GGRT.

discussion of the criteria established in 2011 for evaluating whether data assigned to the ''Inputs to Emission Equations'' data category should be entered into the verification software.

After review of all the final data elements in this rulemaking, the EPA has determined that some of the final data elements are assigned to the ''Inputs to Emission Equations'' data category. The EPA evaluated each of the data elements assigned to the ''Inputs to Emission Equations'' data category and determined that none of these data elements meet the criteria necessary for them to be entered into verification software; therefore, these data elements will be directly reported to the EPA. The EPA has determined that some of these ''inputs to emission equations'' are identical to or derived from data elements reported under part 98 that have been determined to not be eligible for confidential treatment. The ''inputs to emission equations'' used to determine the quantities of methane emissions that the WEC obligated party calculates should be exempted due to the unreasonable delay, regulatory compliance, and plugged well exemptions must be directly reported to the EPA so that the EPA can fully verify the quantities. As ''inputs to emission equations'' are emissions data, these data elements will not be eligible for confidential treatment once directly reported to the EPA, and they may be published once received by the EPA. Refer to the memorandum, *Reporting Determinations for Data Elements Assigned to the Inputs to Emission Equations Data Category in the Final Waste Emissions Charge Rule,* available in the docket for this rulemaking, for a list of the data elements designated as ''inputs to emission equations'' that will be directly reported to the EPA and the EPA's rationale for the reporting determinations.

E. Changes to Confidentiality Determinations for Data Elements Reported Under Subpart W

The industry segment waste emissions thresholds are calculated pursuant to 40 CFR 99.20. Except for facilities in the Offshore Petroleum and Natural Gas Production industry segment or the Onshore Petroleum and Natural Gas Production industry segment that have no natural gas sent to sale, each threshold is calculated by multiplying the specified natural gas throughput for that industry segment by two constant values, the density of methane and the industry segment-specific methane intensity threshold (as summarized in Table 2 of this preamble). As noted in section IV.B.1.a. of this preamble, the EPA is finalizing as proposed that the facility waste emissions thresholds and industry segment waste emissions thresholds are emission data and will therefore be made publicly available. For two industry segments, Onshore Natural Gas Processing and Onshore Natural Gas Transmission Compression, throughput quantities similar to those specified in the industry segment waste emissions threshold calculations have historically not been made publicly available under subpart W. However, for WEC applicable facilities, once the industry segment-specific waste emissions thresholds are made publicly available, the throughputs can be calculated based on available information.

For the Onshore Natural Gas Processing industry segment, a new data element was finalized as part of the 2024 Subpart W Final Rule, the quantity of residue gas leaving that has been processed by the facility and any gas that passes through the facility to sale without being processed by the facility in the calendar year, in thousand standard cubic feet, reported under finalized 40 CFR 98.236(aa)(3)(ix). The EPA previously made a final determination in 79 FR 70352 (November 25, 2014) that the quantity of natural gas received at the gas processing plant in the calendar year (reported under 40 CFR 98.236(aa)(3)(i)) and the quantity of processed (residue) gas leaving the gas processing plant (reported under 40 CFR 98.236(aa)(3)(ii)), should be maintained as confidential. As explained in 79 FR 70352 (November 25, 2014), the reporting of this information to the Energy Information Administration is less frequent than required under subpart W, and the EPA had not identified any reliable public sources of the quantity of residue gas produced. In the June 2023 memorandum *Proposed Confidentiality Determinations and Emission Data Designations for Data Elements in Proposed Revisions to the Greenhouse Gas Reporting Rule for Petroleum and Natural Gas Systems* (Docket ID No. EPA–HQ–OAR–2023–0234–0167), the EPA stated that the proposed new data element under 40 CFR 98.236(aa)(3)(ix) would collect similar information to 40 CFR 98.236(aa)(3)(ii). As a result, the EPA determined that the information collected under 40 CFR 98.236(aa)(3)(ix) would be eligible for confidential treatment.

However, because the EPA is finalizing as proposed the determination that the industry segment-specific waste emissions thresholds are emission data, then those industry segment-specific waste emissions thresholds will be made publicly available as emission data. Therefore, the EPA is not finalizing a confidentiality determination for this throughput quantity data element (*i.e.,* the quantity of residue gas leaving that has been processed by the facility and any gas that passes through the facility to sale without being processed by the facility in the calendar year) under part 98. The confidentiality status of this data element will be evaluated on a case- by-case basis, in light of any publicly available information and in accordance with the existing regulations in 40 CFR part 2, subpart B, upon receipt of a public request for these data elements.

For Onshore Natural Gas Transmission Compression, the EPA previously decided in 2014 not to make a confidentiality determination that would apply for all facilities for 40 CFR 98.236(aa)(4)(i), the quantity of gas transported through a compressor station. In 79 FR 70352 (November 25, 2014), the EPA explained that the Agency proposed that this data element would not be eligible for confidential treatment because natural gas transmission sector is heavily regulated by FERC and State commissions, resulting in a lack of competition between companies. However, the EPA received comments on this November 2014 proposal noting that FERC Order 636 had introduced greater competition to this sector and that some companies charge customers less than the FERC approved rates because of competitive market pressures. The commenters indicated that quantity of gas transported through the compressor station would provide information on the quantity of gas transported by a specific pipeline, which may potentially cause competitive harm to some pipeline companies operating in more competitive market areas. Since the determination would depend on the particular market conditions for each company, the EPA did not make a determination for the data element from this industry segment.[74]

In this rulemaking, the EPA is not finalizing a change to that previous decision and is not finalizing a confidentiality determination for the quantity of natural gas transported through a compressor station. While the Supreme Court's 2019 decision in *Argus Leader* altered the review criteria for confidentiality determinations from the Agency's 2014 decision, the basis

[74] Prior to *Argus Leader,* the EPA considered whether the business had satisfactorily shown that disclosure of the information is likely to cause substantial harm to the business's competitive position when evaluating claims of confidentiality.

provided by commenters to justify the confidential nature of the information is still relevant to a finding that the information is eligible for confidential treatment. For information pertaining to the quantity of gas transported through a compressor station collected under part 99, the EPA will conduct reviews of any claims made under the existing regulations in 40 CFR part 2, subpart B, upon receipt of a public request for this information. Any such reviews will consider the public availability of the same or similar information, including WEC filings, as part of the determination process.

V. Impacts of the Final Rule

In accordance with the requirements of Executive Order 12866, the EPA projected the emissions reductions, costs, benefits, and transfer payments that may result from this action. These results are presented in detail in the *Regulatory Impact Analysis of the Waste Emission Charge* (RIA) accompanying this final rule developed in response to Executive Order 12866 and available in the docket to this rulemaking, Docket ID No. EPA–HQ–OAR–2023–0434. This section provides a summary of the RIA. The EPA notes that the EPA's duties and authority for this rulemaking are derived under CAA section 136 of the CAA, and its decisions in this rulemaking are made within the confines of that authority and justified under the EPA's record-based analysis and analysis of the statutory language of CAA section 136. The analysis in the final RIA prepared under Executive Order 12866 is entirely distinct from the statutory determinations, is not used to justify this action, and is presented solely for the purposes of complying with E.O. 12866. Congress did not authorize the EPA to consider a formal cost-benefits analysis in implementing CAA section 136, and the EPA's decisions were based on the best reading of the statutory directives that Congress did provide. Nevertheless, the EPA believes the results of the analysis in the final RIA prepared under Executive Order 12866 of the WEC final rule are reasonable.

The WEC does not directly require emissions reductions from applicable facilities or emissions sources. However, by imposing a charge on methane emissions that exceed waste emissions thresholds, oil, and natural gas facilities subject to the WEC are expected to perform methane mitigation actions and make operational changes where the costs of those changes are less than the WEC payments that could be avoided by reducing methane emissions. In addition, because volatile organic compound (VOC) and hazardous air pollutant (HAP) emissions are emitted along with methane from oil and natural gas industry activities, reductions in methane emissions as a result of the WEC also result in co-reductions of VOC and HAP emissions.

The RIA accompanying this proposal analyzes emissions changes and economic impacts of the WEC that arise through two pathways: (1) through the application of cost-effective methane mitigation technologies, and (2) through changes in oil and natural gas production and prices resulting from the WEC and associated mitigation responses. The analysis of methane mitigation is based on bottom-up engineering cost and mitigation potential information for a range of methane mitigation technologies. Application of methane mitigation technologies reduce WEC payments for WEC obligated parties by reducing methane emissions compared to a baseline without additional methane mitigation actions. The analysis assumes that methane mitigation is implemented where the engineering control costs are less than the avoided WEC payments for a particular mitigation technology.

Additionally, oil and natural gas firms may change their production and operational decisions in response to the WEC. This potential impact is modeled using a partial equilibrium model of the crude oil and natural gas markets. The total cost of methane mitigation and WEC payments is added as an increase to production costs, resulting in changes in equilibrium production of oil and natural gas and associated emissions. Projected WEC payments are estimated after methane emissions reductions from both methane mitigation and economic impacts are accounted for.

The number of facilities that will owe WEC obligations, and the amount of those WEC obligations, will ultimately depend on decisions that are within the control of owners and operators, among other factors. However, the EPA estimates that only a relatively small proportion of owner-operators of oil and gas facilities will owe WEC obligations. Using emissions reported to subpart W for RY2022 as an illustrative example, approximately 250 companies would owe WEC obligations related to less than 400 facilities, less than one-fifth of facilities that report to subpart W. Based on RY2022, Table 1–1 of the RIA shows that the WEC would be imposed on less than 15 percent of national methane emissions from petroleum and natural gas systems. Total methane emissions reported to subpart W are significantly less than national methane emissions from the U.S. Greenhouse Gas Inventory for petroleum and natural gas systems. WEC-applicable facilities are the subset of GHGRP facilities that report at least 25,000 mt CO_2e to subpart W industry segments subject to the WEC.

It is also important to note that the WEC would only apply to methane emissions that are above the emissions threshold, not for all emissions from WEC-applicable facilities. The WEC has exemptions related to regulatory compliance, emissions from plugged wells, and unreasonable delay in environmental permitting, although these provisions do not impact the illustrative results in Table 1–1 of the RIA. Finally, emissions subject to WEC accounts for netting of emissions between facilities and entities under common ownership and control. Under the final WEC, facilities with emissions below their emissions threshold may reduce emissions subject to the WEC at other facilities with emissions above the emissions threshold where those facilities are under common ownership or control.

The benefit-cost analysis contained in the RIA accompanying this rulemaking for the WEC considers the potential benefits and costs of the WEC arising from cost-effective mitigation actions under the WEC as well as the potential transfers from affected operators to the government in payments. Costs include engineering costs for methane mitigation actions and costs resulting from production changes in oil and gas energy markets under this final rule. While the EPA expects a range of health and environmental benefits from reductions in methane, VOC, and HAP emissions under the WEC, the monetized benefits of the final rule are limited to the estimated climate benefits from projected methane emissions reductions. These benefits are based on the social cost of methane ($SC–CH_4$). A screening-level analysis of ozone-related benefits from projected VOC reductions can be found in Appendix A of the RIA. However, these estimates are treated as illustrative and are not included in the quantified benefit-cost comparisons in the RIA.

The EPA estimates that this action will result in cumulative emissions reductions of 1.2 million metric tons of methane over the 2024 to 2035 period. These reductions represent about 40 percent of methane emissions that would be subject to the WEC before accounting for the adoption of cost-effective emission reduction technologies. Virtually all the reduced emissions result from mitigation activities undertaken by industry to reduce WEC payments. Less than one

percent of reductions are associated with decreased production activity in the oil and gas sector resulting from the final rule. In addition to methane emissions reductions, the WEC is estimated to result in reductions of 170 thousand metric tons of VOC and six thousand metric tons of HAP.

The WEC has important interactions and is designed to work hand-in-hand with the NSPS and EG for the Oil and Natural Gas Sector by accelerating the adoption of cost-effective methane mitigation technologies, including those that would eventually be required under the 2024 Final NSPS/EG. The annual projected emissions reductions, costs, and WEC obligations are significantly affected by these interactions.

The EPA finalized updates to the Oil and Gas NSPS/EG in March 2024. In addition to requirements already in place, these Oil and Gas NSPS/EG rules include standards for many of the major sources of methane emissions in the oil and natural gas industry. To avoid double counting of benefits and costs, the baseline for this analysis includes reductions resulting from the 2024 Final NSPS/EG based on information from the Final RIA for that rule (available in Docket No. EPA–HQ–OAR–2021–0317). Specifically, that analysis showed gradually increasing reductions in methane emissions resulting from the NSPS and deep reductions in methane emissions beginning to take effect in 2028 as a result of the EG. As facilities implement emission controls required by the 2024 Final NSPS/EG, emissions subject to the WEC decline.

The second interaction between the WEC and NSPS/EG is the regulatory compliance exemption provision of the WEC. Under this provision, when certain conditions are met with respect to the implementation of the Oil and Gas NSPS/EG, applicable facilities in compliance with their applicable requirements are exempted from the WEC. The analysis in the RIA assumes that the regulatory compliance exemption takes effect in 2029, such that in 2029 and later, facilities in the industry segments subject to requirements under the NSPS/EG do not owe WEC payments. This assumption is based on an assumed timeline under which the conditions of the regulatory compliance exemption could be met. The timing of the regulatory compliance exemption availability will vary by State. As timing for any individual State is unknown, this RIA analysis assumes that the regulatory compliance exemption becomes available for all relevant facilities in 2029.

Climate benefits associated with this final rule are the monetized value of methane reductions using the SC–CH_4, which calculates the avoided climate related damages from reducing methane emissions. Methane is the principal component of natural gas. As discussed in section I.C.1. of this preamble, methane is also a potent GHG that, once emitted into the atmosphere, absorbs terrestrial infrared radiation, which in turn contributes to increased global warming and continuing climate change.

This final rulemaking is projected to reduce VOC emissions, which are a precursor to ozone. Ozone is not generally emitted directly into the atmosphere but is created when its two primary precursors, VOC and oxides of nitrogen (NO_X), react in the atmosphere in the presence of sunlight. Emissions reductions under the WEC may decrease ozone formation, human exposure to ozone, and the incidence of ozone-related health effects. VOC emissions are also a precursor to fine particulate matter ($PM_{2.5}$), so VOC reductions may also decrease human exposure to $PM_{2.5}$ and the incidence of $PM_{2.5}$-related health effects.

Available emissions data show that several different HAP are emitted from oil and natural gas operations. Emissions of eight HAP make up a large percentage of the total HAP emissions by mass from the oil and natural gas sector: toluene, hexane, benzene, xylenes (mixed), ethylene glycol, methanol, ethyl benzene, and 2,2,4-trimethylpentane.[75] Reductions of HAP emissions under the WEC may reduce exposure to these and other HAP.

In section 9.3 of the RIA, the EPA identifies existing potential environmental justice issues for the communities in counties that have emissions sources that are expected to owe the WEC charge before accounting for mitigation actions and thus may be positively affected by emissions changes under the final rule. Compared to the national average, these communities include a higher percentage of individuals who identify as racial and ethnic minorities, have lower average incomes, and have slightly elevated health risks associated with various air emissions. Reductions in VOC and HAP emissions as a result of the WEC are expected to benefit communities in these counties. Because the WEC does not directly require emissions reductions, the EPA has not projected specific locations where emissions reductions might occur. In addition, detailed proximity analysis is infeasible because the emissions affected by the WEC occur at hundreds of thousands of locations.

The total cost of the final rule includes the engineering costs for methane mitigation actions implemented by the oil and natural gas industry in order to avoid or reduce WEC obligations. Costs for methane mitigation are calculated on an annualized basis, with total costs spread over the expected lifetime. This includes the initial capital costs required to implement and install the specific mitigation technology. In addition, for mitigation technologies with expected lifetimes greater than one-year, annual recurring operations and maintenance costs, which include labor, energy and materials, are also incorporated. Finally, the total mitigation costs also include the avoided cost of natural gas losses.

The social cost of energy market impacts is the loss in consumer and producer surplus value from changes in natural gas market production and prices. The economic impacts analysis uses a partial equilibrium model and estimates that the impact of the gas market is minimal, with the largest impact occurring in the first few years with a price increase of less than 0.1 percent and a quantity reduction of less than 0.1 percent.

Table 5 presents results of the benefit-cost analysis for the final WEC. It presents the present value (PV) and equivalent annual value (EAV), estimated using discount rates of 2, 3, and 7 percent, of the changes in quantified benefits, costs, and net benefits relative to the baseline.[76] These values reflect an analytical time horizon of 2024 to 2035, are discounted to 2023,

[75] U.S. EPA. The Benefits and Costs of the Clean Air Act from 1990 to 2020. Washington, DC. Retrieved from *https://www.epa.gov/sites/production/files/2015-07/documents/fullreport_rev_a.pdf.*

[76] Monetized climate effects are presented under a 2 percent near-term Ramsey discount rate, consistent with the EPA's updated estimates of the SC–GHG. The 2003 version of OMB's Circular A–4 had generally recommended 3 percent and 7 percent as default discount rates for costs and benefits, though as part of the Interagency Working Group on the Social Cost of Greenhouse Gases, OMB had also long recognized that climate effects should be discounted only at appropriate consumption-based discount rates. OMB finalized an update to Circular A–4 in 2023, in which it recommended the general application of a 2.0 percent discount rate to costs and benefits (subject to regular updates), as well as the consideration of the shadow price of capital when costs or benefits are likely to accrue to capital. Because the SC–GHG estimates reflect net climate change damages in terms of reduced consumption (or monetary consumption equivalents), the use of the discount rate estimated using the average return on capital (7 percent in OMB Circular A–4 (2003)) to discount damages estimated in terms of reduced consumption would inappropriately underestimate the impacts of climate change for the purposes of estimating the SC–GHG. See section 6.1 of the RIA for more discussion.

and are presented in 2019 constant dollars. The table includes consideration of the non-monetized benefits associated with the emissions reductions projected under this proposal.

TABLE 5—PROJECTED EMISSIONS REDUCTIONS UNDER THE FINAL RULE, 2024–2035 TOTAL

Pollutant	Emissions reductions (2024–2035 Total)
Methane (thousand metric tons)[a]	1,200
VOC (thousand metric tons)	170
Hazardous Air Pollutant (thousand short tons)	6
Methane (million metric tons CO_2e)[b]	34

[a] To convert from metric tons to short tons, multiply the short tons by 1.102. Alternatively, to convert from short tons to metric tons, multiply the short tons by 0.907.
[b] Carbon dioxide equivalent (CO_2e). Calculated using a global warming potential of 28.

TABLE 6—BENEFITS, COSTS, AND NET BENEFITS OF THE FINAL RULE, 2024 THROUGH 2035

[Dollar estimates in millions of 2019 dollars][a]

Climate benefits[b]	2 Percent near-term Ramsey discount rate					
	Present value	Equivalent annual value	Present value	Equivalent annual value	Present value	Equivalent annual value
	$2,400	$230	$2,400	$230	$2,400	$230
	2 Percent discount rate		3 Percent discount rate		7 Percent discount rate	
	Present value	Equivalent annual value	Present value	Equivalent annual value	Present value	Equivalent annual value
Total Social Costs	$460	$43	$440	$44	$380	$48
Cost of Methane Mitigation	420	40	400	41	350	44
Cost of Energy Market Impacts	39	4	38	4	33	4
Net Benefits	1,900	190	2,000	190	2,000	180
Non-Monetized Benefits	Climate and ozone health benefits from reducing 1.2 million metric tons of methane from 2024 to 2035 $PM_{2.5}$ and ozone health benefits from reducing 170 thousand metric tons of VOC from 2024 to 2035[c] HAP benefits from reducing 6 thousand metric tons of HAP from 2024 to 2035 Visibility benefits Reduced vegetation effects					

[a] Values rounded to two significant figures. Totals may not appear to add correctly due to rounding.
[b] Climate benefits are based on reductions in methane emissions and are calculated using three different estimates of the social cost of methane ($SC–CH_4$) (under 1.5 percent, 2.0 percent, and 2.5 percent near-term Ramsey discount rates). For the presentational purposes of this table, we show the climate benefits associated with the $SC–CH_4$ at the 2 percent near-term Ramsey discount rate. Please see Table 6–5 of the RIA for the full range of monetized climate benefits estimates.
[c] A screening-level analysis of ozone benefits from VOC reductions can be found in Appendix A of the RIA.

WEC payments are transfers and do not affect total net benefits to society as a whole because payments by oil and natural gas operators are offset by receipts by the government. Therefore, from a net-benefit accounting perspective, transfers are considered separately from costs and benefits (and are therefore not included in Table 6). As explained further in section 2.7 of the RIA, the approach to transfers taken here is in line with OMB guidance and the approach taken for RIAs for other rules impacting payments to the government, such as the Bureau of Land Management (BLM)'s waste prevention rule.

One of the reasons that transfers are not considered costs is because they represent payments to the U.S. Treasury that do not affect total resources available to society. Payments to the U.S. Treasury can then be used to fund other programs, and the pairing of revenue collection (*e.g.,* the WEC payments) with commensurate expenditures (*e.g.,* financial assistance programs) by the Federal government can be designed to be revenue neutral. The Methane Emission Reduction Program created under CAA section 136 includes both collection and expenditure components. In addition to establishing the WEC, another key purpose of CAA section 136 is to encourage the development of innovative technologies in the detection and mitigation of methane emissions. See 168 Cong. Rec. E869 (August 23, 2022) (statement of Rep. Frank Pallone). CAA section 136(a) and (b) provides financial and technical assistance to reduce methane emissions from the oil and gas sector. To implement this program, the EPA is partnering with the U.S. Department of Energy (DOE) to provide up to $1.36 billion in financial and technical assistance to reduce methane emissions from the oil and gas sector. As designed by Congress, these resources and incentives were intended to complement the regulatory programs and to help facilitate the transition to a more efficient petroleum and natural gas industry. These incentives for methane mitigation and monitoring complement the WEC.

The WEC has the effect of better aligning the economic incentives of oil and natural gas companies with the

costs and benefits faced by society from oil and gas activities. In the baseline scenario the environmental damages resulting from methane emissions from the oil and gas sector are a negative externality spread across society as a whole. Under the WEC, this negative externality is internalized, oil and gas companies are required to make WEC payments in proportion to the climate damages of methane emissions subject to the WEC. Alternatively, firms can avoid making WEC payments by mitigating their emissions generating climate benefits associated with the amount of mitigation.

Table 7 provides details of the calculation steps used to estimate projected WEC obligations and climate damages based on projected emissions subject to WEC. In order to compare projected WEC payments to climate damages from emissions subject to the WEC, WEC payments are converted from nominal dollars to 2019 constant dollars using a chain-weighted GDP price index from the 2023 Annual Energy Outlook. Projected WEC payments after accounting for methane mitigation and energy market impacts are estimated to be about $540 million nominal dollars in 2024, and then drop significantly as reductions from the EG OOOOc are implemented in 2028 and the regulatory compliance exemption takes effect in 2029.

TABLE 7—DETAILS OF PROJECTED WEC OBLIGATIONS AND CLIMATE DAMAGES FROM EMISSIONS SUBJECT TO WEC, 2024 THROUGH 2035

[Dollar estimates in millions of 2019 dollars] [a]

Year	Methane emissions subject to WEC in policy scenario (thousand metric tons)	Charge specified by Congress (nominal $ per metric ton)	WEC payments in policy scenario (million nominal $)	WEC payments in policy scenario (million 2019$)	$SC–CH_4$ values at 2 percent discount rate (2019$ per metric ton)	Climate damages from emissions subject to WEC (million 2019$) [a]
2024	600	$900	$540	$450	$1,900	$1,200
2025	460	1,200	560	450	2,000	930
2026	340	1,500	510	400	2,100	700
2027	320	1,500	480	380	2,200	690
2028	35	1,500	52	40	2,200	77
2029	3	1,500	5	4	2,300	7
2030	3	1,500	4	3	2,400	7
2031	3	1,500	4	3	2,500	7
2032	2	1,500	4	3	2,500	6
2033	2	1,500	3	3	2,600	5
2034	2	1,500	3	2	2,700	5
2035	1	1,500	2	1	2,800	4
Total 2024–2035	1,800	.....	2,200	1,700	.....	3,600

[a] Climate damages are based on remaining methane emissions subject to WEC after accounting for emissions reductions and are calculated using three different estimates of the social cost of methane ($SC–CH_4$) (under 1.5 percent, 2.0 percent, and 2.5 percent near-term Ramsey discount rates). For the presentational purposes of this table, we show the climate benefits associated with the $SC–CH_4$ at the 2 percent near-term Ramsey discount rate.

Compared to the analysis presented in the RIA for the January 2024 WEC proposal, the RIA analysis reflects some updates to methodologies used to project impacts reflecting changes in the final regulations relative to the proposal and updated available data. The analysis incorporates broader allowance for netting among owner-operators that share a common parent company, updates to requirements of the regulatory compliance exemption, and updated base year data from GHGRP for 2022.

VI. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is a ''significant regulatory action'' as defined under section 3(f)(1) of Executive Order 12866, as amended by Executive Order 14094. Accordingly, the EPA submitted this action to the Office of Management and Budget (OMB) for Executive Order 12866 review. Documentation of any changes made in response to the Executive Order 12866 review is available in the docket for this rulemaking, Docket ID No. EPA–HQ–OAR–2023–0434. The EPA prepared an analysis of the potential impacts associated with this action. This analysis, *Regulatory Impact Analysis of the Waste Emissions Charge,* is also available in the docket to this rulemaking and is briefly summarized in section V. of this preamble.

B. Paperwork Reduction Act (PRA)

The information collection activities in this rulemaking have been submitted for approval to the OMB under the PRA. The Information Collection Request (ICR) document that the EPA prepared has been assigned EPA ICR number 2787.02 (OMB Control No. 2060–0752). You can find a copy of the ICR in the docket for this rulemaking, Docket ID No. EPA–HQ–OAR–2023–0434, and it is briefly summarized here. The information collection requirements are not enforceable until OMB approves them. Two comments were received regarding the proposed ICR. The commenters stated that actual costs may be higher than estimated by the EPA due to unfamiliarity and glitches with new programs, that burden would be reduced by offering more incentives, and that the proposed ICR was in conflict with the policy standards under the PRA of minimizing paperwork burden and the cost to the Federal government. The commenters did not identify specific aspects of the proposed ICR that were overly burdensome nor did the commenters identify ways to minimize burden to the Agency nor to affected WEC respondents. The EPA acknowledges the commenters' concerns and consistent with the obligation established by CAA section 136 on the EPA to impose and collect a charge, subject to statutorily specified exemptions, the EPA has taken steps to minimize the added paperwork and recordkeeping burden and avoid duplicative reporting, while maintaining effectiveness of the final rule through the utilization of existing systems such as the electronic

Greenhouse Gas Reporting Tool (e-GGRT) system.

The EPA estimates that the final rule would result in an increase in burden. The burden associated with the final rule is due to reporting and recordkeeping requirements in the final rule.

This information collection under the final rule is necessary for the EPA to implement the charge requirements of CAA section 136. The filing required by the final rule contains information identifying the WEC obligated party, the list of identification numbers assigned by the EPA's electronic tool for submission of GHGRP reports for the WEC applicable facilities under the WEC obligated party, and for each WEC applicable facility, information related to the exemptions provided for under CAA section 136(f). Additionally, the filing includes calculations of the waste emissions threshold for each WEC applicable facility and emissions subject to charge at the level of the WEC obligated party (designated as ''net WEC emissions'') and at the individual WEC applicable facility level (designated as ''WEC applicable emissions''). Each of these final reporting requirements are necessary for the EPA to determine the quantity of methane emissions subject to charge. To reduce the burden of data reporting under the final rule, the EPA plans to utilize the identification numbers reported in the final rule to link to data reported under the GHGRP. Additionally, the final rule amended 40 CFR part 98, subpart A to harmonize reporting obligations under part 98 and part 99.

The respondent reporting burden for this collection of information is estimated to be an annual average of 12,876 hours and $1,756,935 over the 3 years covered by this information collection, which includes an annual average of $1,726,440 in labor costs, $0 in operation and maintenance costs, and $30,495 in capital costs. The annual average incremental burden to the EPA for this period is anticipated at 31,200 hours and $5,783,774 ($2024) over the 3 years covered by this information collection, which includes an annual average of $2,117,107 in labor costs and $3,666,667 in non-labor costs.

Respondents/affected entities: Owners and operators of petroleum and natural gas systems that must submit a WEC filing to the EPA to comply with 40 CFR part 99.

Respondent's obligation to respond: The respondent's obligation to respond is mandatory under the authority provided in CAA sections 114 and 136.

Estimated number of respondents: 3,105.

Frequency of response: Annually.

Total estimated burden: 12,876 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $1.8 million (per year), includes $30,495 annualized capital or operation and maintenance costs.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for the EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

I certify that this final action would not have a significant economic impact on a substantial number of small entities under the RFA. The small entities that would be subject to the requirements of this action are small businesses in the petroleum and natural gas industry. Small entities include small businesses, small organizations, and small governmental jurisdictions. The EPA has determined that some small entities are affected because their processes emit methane that must be reported under subpart W and thus may be subject to WEC.

To evaluate whether this final rule would have a significant economic impact on a substantial number of small entities, the EPA conducted a small entity analysis that evaluated the costs of the final rule on small entities identified in the reporting year (RY) 2022 subpart W dataset. The EPA used reported facility-to-parent company and facility-to-owner or operator data to link facilities to WEC obligated parties. The EPA then reviewed the available RY 2022 data for the WEC obligated parties of subpart W facilities to determine whether the reporters were part of a small entity and whether the annualized costs of the proposal would have a significant impact on a substantial number of small entities. The number of small entities potentially affected by the WEC regulation were estimated based on the information collected for 590 owners or operators associated with a facility within one or more of the industry segments identified in CAA section 136(d) reporting at least 25,000 metric tons CO_2e under part 98 subpart W in RY2022. Of these, 371 were identified as small entities. Although the screening analysis suggests that some small entities may have cost-to-revenue ratios that exceed 3 percent (approximately 19 percent), the EPA's evaluation of the impacts to small entities relied on several methodologies involving conservative assumptions. For example, the identification and classification of subpart W parent entities reporting under more than one NAICS code resulted in a designation of ''small'' based on whether the business information available met the SBA size classification threshold for a single NAICS code. In addition to the conservative assumptions, there were further mitigating factors not included in the screening analysis that would likely significantly reduce compliance costs, and, as a result, cost-to-revenue-ratios. For example, the compliance cost estimate used only the defined WEC cost and did not account for early adoption of mitigation measures that could lower an entity's emissions below the threshold and therefore result in no WEC. Details of this analysis are presented in the *Regulatory Impact Analysis of the Waste Emissions Charge,* available in the docket for this rulemaking. The cumulative effect of the mitigating factors and conservative assumptions used in the screening analysis indicates that, overall, the final rule would not have a significant impact on a substantial number of small entities.

D. Unfunded Mandates Reform Act (UMRA)

This action contains a Federal mandate that may result in expenditures of $183 million in 2023$ ($100 million in 1995$ adjusted for inflation using the GDP implicit price deflator) or more as described in UMRA, 2 U.S.C. 1531–1538 for State, local and Tribal governments, in the aggregate, or the private sector in any one year. Accordingly, the EPA has prepared under section 202 of the UMRA a written statement of the benefit-cost analysis, which can be found in Section V. of this preamble and in the *Regulatory Impact Analysis of the Waste Emissions Charge* (RIA), available in the docket for this rulemaking. The final action in part implements mandate(s) specifically and explicitly set forth in CAA section 136.

The applicability, magnitude of charge, methane emissions subject to charge, and exemptions from charge for the WEC program are established by CAA section 136(c) through (g). Given that this framework is required by statute, it is not possible for the EPA to consider regulatory alternatives that are inconsistent with these elements. As such, to evaluate the benefits and costs of the final rule, in the RIA

accompanying this rulemaking two scenarios were evaluated: a baseline scenario (*i.e.,* not including the effects of the WEC program) and a policy scenario inclusive of the costs, benefits, and transfers projected under the final rule. This action is not subject to the requirements of section 203 of UMRA because it contains no regulatory requirements that might significantly or uniquely affect small governments. This final rule does not apply to governmental entities unless the government entity owns a facility in the applicable petroleum and gas industry segments and reports more 25,000 mt CO_2e to subpart W of the GHGRP. It would not impose any implementation responsibilities on State, local, or Tribal governments and it is not expected to increase the cost of existing regulatory programs managed by those governments. Thus, the impact on governments affected by the final rule is expected to be minimal.

E. Executive Order 13132: Federalism

This action does not have Federalism implications. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. This final rule will not apply to governmental entities unless the government entity owns a facility in the applicable petroleum and natural gas industry segments that and reports more 25,000 mt CO_2e to subpart W of the GHGRP. Therefore, the EPA anticipates relatively few State or local government facilities will be affected. However, consistent with the EPA's policy to promote communications between the EPA and State and local governments, the EPA solicited comment on this action from State and local officials.

Specifically, the EPA issued an RFI to seek public input through a non-regulatory docket on broad elements of the Methane Emissions Reduction Program, including waste emissions charge revisions, in the early stages of its design (see Docket ID. No. EPA–HQ–OAR–2022–0875). The EPA received five comments from government entities related to implementation of the WEC. The EPA also solicited comments on the proposal. The EPA received two comments from local government entities and thirteen comments from State or Tribal government entities in response to the proposed rulemaking. All comments received on the proposed rulemaking were considered during the development of the final rule.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action has Tribal implications. While this action does not preempt Tribal law, it will impose direct compliance costs on one or more Federally recognized Tribal governments, and the Federal government will not provide the funds necessary to pay those costs; however, the final rule and the associated compliance costs are required by statute. This final regulation will apply directly to petroleum and natural gas facilities that may be owned by Tribal governments. However, it will generally only have Tribal implications where the Tribal entity owns or operates a facility in an applicable industry segment that emits GHGs above threshold levels or potentially where privately owned facilities subject to the charge are located in Indian country. Based on currently available data, the EPA anticipates that only one Tribe will be directly affected. Of the subpart W facilities currently reporting to the GHGRP in RY2022, this Tribe is the owner or partial owner of three facilities currently reporting to part 98. Based on RY2022 data, all three facilities would be WEC applicable facilities, and the WEC applicable emissions (without consideration of exemptions) for the individual facilities would range from less than 0 mt CH_4 for one facility, up to about 2,700 mt CH_4 for the largest facility (which corresponds to a WEC obligation of around $2.4 million using charge of $900/MT). Note that one of the facilities is within the onshore natural gas processing sector, and thus, this calculation utilizes proxy data of CBI throughput, which may not reflect the actual facility throughput and resulting WEC applicable emissions. Each of the three facilities has a different owner or operator or combination of owners or operators, so the Tribe may not be the WEC obligated party for all three facilities. These estimates do not consider any exemptions that might apply for the three facilities with emissions greater than the facility waste emissions threshold.

In addition to the Tribe that may be directly impacted by the WEC due to owning a facility subject to the charge, the EPA anticipates that Tribes could be impacted in cases where privately-owned facilities subject to the charge are located in Indian country. For example, the EPA reviewed the location of the production wells reported by facilities under the Onshore Petroleum and Natural Gas Production industry segment and found production wells reported under subpart W on lands associated with approximately 20 Tribes. Therefore, although the EPA anticipates that at most only one Tribe may be designated as a WEC obligated party and has the potential to be subject to the WEC, the EPA has sought opportunities to provide information to Tribal governments and representatives during rule development. Further, consistent with the EPA Policy on Consultation and Coordination with Indian Tribes, the EPA engaged in consultation with Tribal officials during the development of this action and specifically solicited comment on this action from Tribal officials.

Consistent with the EPA Policy on Consultation and Coordination with Indian Tribes, the EPA consulted with Tribal officials early in the process of developing this regulation to ensure meaningful and timely Tribal input into its development. On January 26, 2024, the EPA invited all 574 Federally-recognized Tribes to consult on the proposed regulation. Separately, consistent with EPA's Guiding Principles for Consulting with Alaska Native Claims Settlement Act (ANCSA) Corporations, EPA invited ANCSA corporations to consult on the proposed rulemaking. A copy of this letter is available in the docket to this rulemaking (see Docket ID No. EPA–HQ–OAR–2023–0434). Only two Tribes requested government-to-government consultation with the EPA. The EPA consulted with the Southern Ute Indian Tribe via video conference at 12:00 p.m. Eastern Time on March 21, 2024. A summary of the consultation with the Southern Ute Indian Tribe is provided at Docket ID No. EPA–HQ–OAR–2023–0434. The Southern Ute Tribe additionally submitted written comments to the docket. In response to the Ute Indian Tribe's consultation request, the EPA scheduled a video conference with the Ute Indian Tribe's Business Committee at 3:30 p.m. Eastern Time on April 2, 2024; however, the Business Committee informed the EPA during the meeting that the video conference did not meet the Tribe's requirements for a consultation and ended the meeting before providing any input on the proposed rulemaking to the EPA. The Business Committee informed the EPA that the meeting is only considered consultation if the meeting is in person and on Tribal land, but it submitted written comments to the docket.

The EPA encouraged Tribal representatives to submit written comments through the docket on the proposed rulemaking and has responded in detail to Tribal comments

in the response to comments document on the proposed regulation to address Tribal concerns. The EPA has considered the Tribal input from the coordination and consultation calls and public comments in the development of the final rule.

As required by section 7(a), the EPA's Tribal Consultation Official has certified that the requirements of the executive order have been met in a meaningful and timely manner. A copy of the certification is included in the docket for this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This action would not establish an environmental standard intended to mitigate health or safety risks and does not focus on information-gathering actions concerned with children's health. Therefore, this action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk. Since this action does not concern human health, the EPA's Policy on Children's Health also does not apply.

Although this final action does not establish an environmental standard applicable to methane emissions or mandate methane emissions reductions, it is expected that the WEC implemented under this final action would result in elective methane mitigation actions by applicable facilities in the oil and gas industry in order to reduce, or eliminate, the imposition of charges. As such, the EPA believes that the impacts of this final action would result in a reduction in an environmental health or safety risk that has a disproportionate effect on children. Accordingly, the Agency has elected to evaluate the environmental health and welfare effects of climate change on children outside of this action. Greenhouse gases, including methane, contribute to climate change and are emitted in significant quantities by the oil and gas industry. The EPA believes that the implementation of the WEC in this action would improve children's health as a result of methane mitigation actions and operational changes taken by oil and gas applicable facilities to avoid the imposition of WEC. The assessment literature cited in the EPA's 2009 Endangerment Findings concluded that certain populations and life stages, including children, the elderly, and the poor, are most vulnerable to climate-related health effects (74 FR 66524, December 15, 2009). The assessment literature since 2009 strengthens these conclusions by providing more detailed findings regarding these groups' vulnerabilities and the projected impacts they may experience (*e.g.,* the 2016 Climate and Health Assessment).[77] These assessments describe how children's unique physiological and developmental factors contribute to making them particularly vulnerable to climate change. Impacts to children are expected from heat waves, air pollution, and infectious and waterborne illnesses resulting in physical and mental health effects from extreme weather events. In addition, children are among those especially susceptible to most allergic diseases, as well as health effects associated with storms and floods. Additional health concerns may arise in low-income households, especially those with children, if climate change reduces food availability and increases prices, leading to food insecurity within households.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This final action is not a ''significant energy action'' because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy. To make this determination, we compare the projected change in crude oil and natural gas costs and production to guidance articulated in a January 13, 2021 OMB memorandum ''Furthering Compliance with Executive Order 13211, Titled ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.'' [78] With respect to increases in the cost of energy production or distribution, the guidance indicates that a regulatory action produces a significant adverse effect if it is expected to increase costs in excess of one percent. With respect to crude oil production, the guidance indicates that a regulatory action produces a significant adverse effect if it is expected to produce reductions in crude oil supply, in excess of 20 million barrels per year. With respect to natural gas production, the guidance indicates that a regulatory action produces a significant adverse effect if it reduces natural gas production in excess of 40 million thousand cubic feet (mcf) per year.[79] The economic impacts analysis conducted as part of the RIA accompanying this rulemaking estimated a maximum impact on the gas market of a 0.044 percent price increase and a 0.026 percent decrease in production. The highest impact year is estimated to be in 2026, with a production decrease of 10.7 million mcf of natural gas. The analysis projected a maximum impact on the oil market of a 0.03 percent price increase and a 0.026 percent decrease in production. The highest impact year is estimated to be in 2026. These impacts are substantially below the thresholds available in OMB memoranda as measures of a significant adverse effect on the energy supply. Further discussion of this analysis is available in the *Regulatory Impact Analysis of the Waste Emissions Charge,* available in the docket for this rulemaking.

I. National Technology Transfer and Advancement Act

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

The EPA concludes that the emissions reductions likely to result from this rule will improve health and environmental outcomes for communities facing disproportionate and adverse human health effects from the pollution subject to the waste emissions charge, including communities with environmental justice concerns. The EPA finalizes, however, to determine that the Executive Order charge to perform an environmental justice analysis does not apply to this rulemaking because it is a rulemaking that addresses information collection, reporting procedures, and imposition of the waste emissions charge directive of CAA section 136. Although the EPA

[77] USGCRP, 2016: *The Impacts of Climate Change on Human Health in the United States: A Scientific Assessment.* Crimmins, A., J. Balbus, J.L. Gamble, C.B. Beard, J.E. Bell, D. Dodgen, R.J. Eisen, N. Fann, M.D. Hawkins, S.C. Herring, L. Jantarasami, D.M. Mills, S. Saha, M.C. Sarofim, J. Trtanj, and L. Ziska, Eds. U.S. Global Change Research Program, Washington, DC, 312 pp. *https://dx.doi.org/10.7930/J0R49NQX.*

[78] See *https://www.whitehouse.gov/wp-content/uploads/2021/01/M-21-12.pdf.*

[79] The 2021 E.O. 13211 guidance memo states that the natural gas production decrease that indicates the regulatory action is a significant energy action is 40 mcf per year. Because this is a relatively small amount of natural gas and previous guidance from 2001 indicated a threshold of 25 million mcf, we assume the 2021 memo was intended to establish 40 million mcf as the indicator of an adverse energy effect. See *https://www.whitehouse.gov/wp-content/uploads/2017/11/2001-M-01-27-Guidance-for-Implementing-E.O.-13211.pdf.*

anticipates a reduction in methane and associated co-pollutant emissions from this action, these reductions are not the result of emissions standards or mandated reductions.

Although this regulation does not require action that will directly affect human health or environmental conditions, it is expected that the WEC implemented under this final action would result in elective methane mitigation actions by applicable facilities in the oil and gas industry in order to reduce, or eliminate, the imposition of charges. Accordingly, the EPA has identified and addressed environmental justice concerns by electing to conduct a qualitative assessment of the environmental justice outcomes from the action. The EPA believes the human health or environmental conditions that exist prior to this final action would result in or have the potential to result in disproportionate and adverse human health or environmental effects on communities with environmental justice concerns. The EPA identified counties where Onshore Petroleum and Natural Gas Production and/or Onshore Petroleum and Natural Gas Gathering and Boosting facilities with emissions that may be above the waste emissions threshold and therefore subject to the WEC operated in 2022. These are the counties where emissions might change due to the WEC. The EPA found that there are generally higher percentages of low income and members of minority groups in these communities who may experience higher than average health risks. The EPA believes that in aggregate the final action will result in reduction of methane, hazardous air pollutants, and volatile organic compounds, and, generally, this result will improve environmental justice outcomes.

The information supporting this Executive Order review is contained in the *Regulatory Impact Analysis of the Waste Emissions Charge,* available in the docket for this rulemaking.

The EPA has promoted meaningful engagement from communities in developing this action. The EPA has provided several opportunities for public engagement. The EPA opened the proposed rule for public comment from January 26 to March 26, 2024, and hosted a virtual public hearing for the proposed revisions on February 12, 2024. The EPA provided three informational webinars on the technical aspects of the proposed rule on January 25, February 20, and March 5, 2024. The EPA has taken into consideration the comments received from representatives and stakeholders in the development of this final rule.

K. Congressional Review Act

This action is subject to the Congressional Review Act, and the EPA will submit a report on the final rule to each House of the Congress and to the Comptroller General of the United States. This action meets the criteria set forth by 5 U.S.C. 804(2).

L. Judicial Review

Under CAA section 307(b)(1), any petition for review of this final rule must be filed in the U.S. Court of Appeals for the District of Columbia Circuit by January 17, 2025. This final rule establishes requirements applicable to owners and operators of facilities in the petroleum and natural gas systems source category located across the United States that are subject to 40 CFR part 99 and therefore is ''nationally applicable'' within the meaning of CAA section 307(b)(1). Under CAA section 307(d)(7)(B), only an objection to this final rule that was raised with reasonable specificity during the period for public comment can be raised during judicial review. CAA section 307(d)(7)(B) also provides a mechanism for the EPA to convene a proceeding for reconsideration, ''[i]f the person raising an objection can demonstrate to the EPA that it was impracticable to raise such objection within [the period for public comment] or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule.'' Any person seeking to make such a demonstration should submit a Petition for Reconsideration to the Office of the Administrator, Environmental Protection Agency, Room 3000, William Jefferson Clinton Building, 1200 Pennsylvania Ave. NW, Washington, DC 20460, with an electronic copy to the person listed in **FOR FURTHER INFORMATION CONTACT**, and the Associate General Counsel for the Air and Radiation Law Office, Office of General Counsel (Mail Code 2344A), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20004. Note that under CAA section 307(b)(2), the requirements established by this final rule may not be challenged separately in any civil or criminal proceedings brought by the EPA to enforce these requirements.

M. Determination Under CAA Section 307(d)

Pursuant to CAA section 307(d)(1)(V), the Administrator determines that this action is subject to the provisions of CAA section 307(d). Section 307(d)(1)(V) of the CAA provides that the provisions of CAA section 307(d) apply to ''such other actions as the Administrator may determine.''

N. Severability

This final rule is multifaceted and addresses many separate elements of the WEC program established by Congress for independent reasons, as detailed in each respective portion of this preamble. We intend each portion of this final rule to be severable from each other, though we took the approach of including all the parts in one rulemaking rather than promulgating multiple final rules in order to promote coordination of the adoption and implementation of the final rule, even though many elements are not interdependent. Should a reviewing court vacate certain elements of the final rule and not others, the remaining elements can and should function independently.

For example, the provisions for calculating the charge, which are largely dictated by the statute, are severable from the provisions concerning netting and exemptions. Notably, the regulatory compliance exemption is not available until ''methane emissions standards and plans pursuant to subsections (b) and (d) of section 111 have been approved and are in effect in all States with respect to the applicable facility.'' Because of the time it will take for States to promulgate State plans and the EPA to review and approve them or issue a Federal plan, the regulatory compliance exemption would not be available for a few years after this final rule. Thus, should a court conclude that the EPA erred in codifying the regulatory compliance exemption, EPA anticipates that it would be able to timely address any identified errors.

Likewise, the calculation methodologies and data input elements for the WEC calculations reflect the differences in thresholds established by Congress for certain oil and gas operations and the industry segment-specific methane intensity thresholds specified in CAA 136(f) and listed in Table 2 of this preamble. If a reviewing court were to invalidate any of the calculation methodologies for a particular segment, the remainder of the calculations for other segments subject to the WEC would be independent from and do not rely on the calculations that were to be invalidated. Accordingly, each calculation methodology and data input element for the WEC calculations is severable. This is reflected in the structure of the final rule, which describes each of the equations for calculation of the WEC separately.

Moreover, because the calculations as established in this rulemaking are direct translations of the statute into practical terms for ease of implementation, the calculations themselves could be done even without the specific methodologies finalized in this rulemaking.

The EPA is also finalizing certain requirements regarding implementation of the netting requirement established in CAA section 136(f)(4). To the extent a reviewing court were to find any legal issue with any element of the EPA's netting requirements as finalized, that would have no bearing on the implementation of any other elements of the netting requirement, or on any other aspect of the final rule, including the underlying charge obligation.

Each of the exemptions identified in this final rule (emissions from eligible delays in environmental permitting under CAA section 136(f)(5); the regulatory compliance exemption under CAA section 136(f)(6); and the plugged well exemption under CAA section 136(f)(7)) are also severable from each other and from the other provisions of the final rule. Each exemption was established independently under each separate authority under CAA section 136 and each regards a different (and unrelated) set of factual circumstances. Each exemption can function and be implemented in the absence of each other, and are severable. Additionally, certain provisions promulgated within each exemption are also severable. For instance, the EPA is finalizing a determination that plugged wells in the underground storage industry segment are eligible for the plugged well exemption. To the extent that a court were to find any legal issue with the eligibility of the underground storage industry segment for this exemption, it would have no bearing on the eligibility of wells in the production industry segments—nor would it have bearing on the application of any other exemption. As described in section III. of this preamble, the EPA is also finalizing certain general requirements and establishing confidentiality determinations for the reporting of certain data elements. Each of these requirements continues to be fully implementable even in the absence of any one or more of these elements, because each element is reported and evaluated independently pursuant to requirements finalized in this rulemaking.

Finally, as described in section II.A. of this preamble, the EPA is finalizing revisions to the general provisions (subpart A) of part 98. These reporting requirements are independent of the general requirements and other reporting requirements under part 99, and invalidation of the revisions to subpart A of part 98 would have no bearing on the EPA's ability to calculate the WEC. Moreover, the WEC rule can continue to function irrespective of the status of the latest subpart W revisions, because if any aspect of those revisions were invalidated, the previously existing version of the subpart W regulation would then apply.

Thus, the EPA has independently considered and adopted portions of the final rule (including but not limited to the definitions to support WEC implementation; provisions related to common ownership or control; calculation methodologies for each part of the WEC; each of the provisions regarding the exemptions to the WEC; the general requirements of this final rule, and establishing confidentiality determinations for the reporting of certain data elements), and each of these components is severable. If a court were to invalidate any one of these elements of the final rule, we intend the remainder of this action to remain effective. We have designed these different elements of the program to function independently; the supporting basis for each of these elements of the final rule reflects that they are independently justified and appropriate; and our analysis finding each separate portion to be appropriate remains valid even in the event that one or more other parts of the final rule has been set aside. Moreover, this list is not intended to be exhaustive, and should not be viewed as an intention by the EPA to consider other parts of the final rule not explicitly listed here as not severable from other parts of the final rule.

List of Subjects

40 CFR Part 2

Administrative practice and procedure, Confidential business information, Courts, Environmental protection, Freedom of information, Government employees.

40 CFR Part 98

Environmental protection, Greenhouse gases, Reporting and recordkeeping requirements.

40 CFR Part 99

Environmental protection, Greenhouse gases, Natural gas, Petroleum, Reporting and recordkeeping requirements, Penalties.

Michael S. Regan,

Administrator.

For the reasons stated in the preamble, the Environmental Protection Agency amends title 40, chapter I, of the Code of Federal Regulations as follows:

PART 2—PUBLIC INFORMATION

■ 1. The authority citation for part 2 continues to read as follows:

Authority: 5 U.S.C. 552, 552a, 553; 28 U.S.C. 509, 510, 534; 31 U.S.C. 3717.

Subpart B—Confidentiality of Business Information

■ 2. Amend § 2.301 by revising paragraph (d) to read as follows:

§ 2.301 Special rules governing certain information obtained under the Clean Air Act.

* * * * *

(d) *Data submitted under parts 98 or 99 of this chapter.* (1) Sections 2.201 through 2.215 do not apply to data submitted under parts 98 or 99 of this chapter that EPA has determined, pursuant to sections 114(c) and 307(d) of the Clean Air Act, to be either of the following:

(i) Emission data.

(ii) Data not otherwise entitled to confidential treatment pursuant to section 114(c) of the Clean Air Act.

(2) Except as otherwise provided in this paragraph (d)(2) and (4) of this section, §§ 2.201 through 2.215 do not apply to data submitted under parts 98 or 99 of this chapter that EPA has determined, pursuant to sections 114(c) and 307(d) of the Clean Air Act, to be entitled to confidential treatment. EPA shall treat that information as confidential in accordance with the provisions of § 2.211, subject to paragraph (d)(4) of this section and § 2.209.

(3) Upon receiving a request under 5 U.S.C. 552 for data submitted under parts 98 or 99 of this chapter that EPA has determined, pursuant to sections 114(c) and 307(d) of the Clean Air Act, to be entitled to confidential treatment, the EPA office shall furnish the requestor a notice that the information has been determined to be entitled to confidential treatment and that the request is therefore denied. The notice shall include or cite to the appropriate EPA determination.

(4) Modification of prior confidentiality determination. A determination made pursuant to sections 114(c) and 307(d) of the Clean Air Act that information submitted under parts 98 or 99 of this chapter is entitled to confidential treatment shall continue in effect unless, subsequent to the confidentiality determination, EPA takes one of the following actions:

(i) EPA determines, pursuant to sections 114(c) and 307(d) of the Clean

Air Act, that the information is emission data or data not otherwise entitled to confidential treatment under section 114(c) of the Clean Air Act.

(ii) The Office of General Counsel issues a final determination, based on the criteria in § 2.208, stating that the information is no longer entitled to confidential treatment because of change in the applicable law or newly discovered or changed facts. Prior to making such final determination, EPA shall afford the business an opportunity to submit comments on pertinent issues in the manner described by §§ 2.204(e) and 2.205(b). If, after consideration of any timely comments submitted by the business, the Office of General Counsel makes a revised final determination that the information is not entitled to confidential treatment under section 114(c) of the Clean Air Act, EPA will notify the business in accordance with the procedures described in § 2.205(f)(2).

* * * * *

PART 98—MANDATORY GREENHOUSE GAS REPORTING

■ 3. The authority citation for part 98 continues to read as follows:

Authority: 42 U.S.C. 7401–7671q.

Subpart A—General Provision

■ 4. Amend § 98.3 by adding paragraph (c)(14) to read as follows:

§ 98.3 What are the general monitoring, reporting, recordkeeping and verification requirements of this part?

* * * * *

(c) * * *

(14) Additional reporting for facilities subject to reporting under subpart W of this part. Legal name(s) and physical address(es) of each owner and each operator of the facility as of December 31 of the year for which data are being reported.

* * * * *

■ 5. Amend § 98.4 by revising paragraphs (g), (h), and (n)(2) and adding paragraph (o) to read as follows:

§ 98.4 Authorization and responsibilities of the designated representative.

* * * * *

(g) *Changing a designated representative or alternate designated representative.* The designated representative or alternate designated representative identified in a complete certificate of representation under this section for a facility or supplier received by the Administrator may be changed at any time upon receipt by the Administrator of another later signed, complete certificate of representation under this section for the facility or supplier. Except as provided in paragraph (o) of this section, notwithstanding any such change, all representations, actions, inactions, and submissions by the previous designated representative or the previous alternate designated representative of the facility or supplier before the time and date when the Administrator receives such later signed certificate of representation shall be binding on the new designated representative and the owners and operators of the facility or supplier.

(h) *Changes in owners and operators.* Except as provided in paragraphs (n) and (o) of this section, in the event an owner or operator of the facility or supplier is not included in the list of owners and operators in the certificate of representation under this section for the facility or supplier, such owner or operator shall be deemed to be subject to and bound by the certificate of representation, the representations, actions, inactions, and submissions of the designated representative and any alternate designated representative of the facility or supplier, as if the owner or operator were included in such list. Within 90 days after any change in the owners and operators of the facility or supplier (including the addition of a new owner or operator), the designated representative or any alternate designated representative shall submit a certificate of representation that is complete under this section except that such list shall be amended to reflect the change. If the designated representative or alternate designated representative determines at any time that an owner or operator of the facility or supplier is not included in such list and such exclusion is not the result of a change in the owners and operators, the designated representative or any alternate designated representative shall submit, within 90 days of making such determination, a certificate of representation that is complete under this section except that such list shall be amended to include such owner or operator.

* * * * *

(n) * * *

(2) If the entire facility is acquired by an owner or operator that already has a reporting facility in the same industry segment and basin (for onshore petroleum and natural gas production or onshore petroleum and natural gas gathering and boosting) or State (for natural gas distribution), the new owner or operator shall merge the acquired facility into their existing facility for purposes of the annual GHG report. The previous owner or operator shall also follow the provisions of § 98.2(i)(6) to notify EPA that the sold facility will discontinue reporting and shall provide the e-GGRT identification number of the merged, or reconstituted, facility. The owner or operator of the merged facility shall be responsible for submitting the annual report for the merged facility for the entire reporting year beginning with the reporting year in which the acquisition occurred. The owner or operator of the merged facility shall provide the e-GGRT identification number of the acquired facility.

* * * * *

(o) *Alternative provisions for responsibility for submissions and revisions to annual GHG reports for reporting years prior to changes in owners and operators for facilities that report under subpart W of this part.* If there is a change to the owner or operator of a facility that reports under subpart W of this part on January 17, 2025 or later and paragraph (o)(3) of this section does not apply, the entity (or entities) that was (were) the owner or operator as of December 31 of each reporting year remains responsible for submission and any revisions to annual reports for that reporting year and if applicable, annual GHG reports under § 98.3(h) for reporting years as specified in paragraph (o)(6) of this section. If paragraph (o)(1) or (o)(2) applies, the seller(s) shall select a historic reporting representative according to paragraph (o)(1) or (o)(2) of this section, as applicable, and according to paragraph (o)(5) of this section who will be responsible for submission (if not already submitted before the transaction) and revisions to annual GHG reports under § 98.3(h) for reporting years as specified in paragraph (o)(6) of this section. If there is a change to the owner or operator of a facility that reports under subpart W of this part that occurs during a transaction that results in the selling owner(s) and operator(s) ceasing to exist or if there is a change in owner or operator that occurs after December 31, 2024 and prior to January 17, 2025, the owner(s) and operators(s) as of December 31, 2024 and buyer(s) shall select a historic reporting representative according to paragraph (o)(3) or (o)(4) of this section, as applicable, and paragraph (o)(5) of this section who will be responsible for submission (if not already submitted before the transaction) and revisions to annual GHG reports under § 98.3(h) for reporting years as specified in paragraph (o)(6) of this section. If an entire facility is merged or acquired by a new owner(s) or operator(s), the owner(s) or

operator(s) prior to the transaction must notify EPA of the date of the last transaction that results in a change to the owner or operator of the facility and the acquiring owner(s) or operator(s) must provide the e-GGRT identification number of the facility acquired in the transaction. For facilities that meet the criteria in this paragraph (o), the terms *Owner* and *Operator* used in this subpart A and subpart W of this part refer to the owner(s) and operator(s) responsible for submission (if not already submitted before the transaction) and revisions to annual GHG reports under § 98.3(h) for reporting years as specified in paragraph (o)(6) of this section.

(1) If a facility reporting under subpart W had a single owner or operator as of December 31 of the year prior to the transaction(s), then within 90 days of a transaction(s) that results in a change to the owner or operator of the facility from the owner or operator as of December 31 of that reporting year, the owner or operator as of December 31 of that reporting year shall select a historic reporting representative who will be responsible for submission (if not already submitted before the transaction(s)) and revisions to annual GHG reports under § 98.3(h) for reporting years as specified in paragraph (o)(6) of this section. The historic reporting representative shall be an individual selected by an agreement binding on the owner or operator as of December 31 of that reporting year, following the provisions of paragraph (b) of this section.

(2) If a facility reporting under subpart W had more than one owner or operator as of December 31 of the year prior to the transaction(s), then within 90 days of a transaction(s) that results in a change to the owners or operators of the facility from the owners and operators of that reporting year, the owners and operators, as applicable, as of December 31 of that reporting year, shall select a historic reporting representative who will be responsible for submission (if not already submitted before the transaction(s)) and revisions to annual GHG reports under § 98.3(h) for reporting years as specified in paragraph (o)(6) of this section. The historic reporting representative shall be an individual selected by an agreement binding on each of the owners and operators as of December 31 of that reporting year, following the provisions of paragraph (b) of this section. If the transaction results in a change to the owner(s) or operator(s) for the entire facility, the new owner(s) or operator(s) must notify EPA of the date(s) of each transaction that results in a change to the owner or operator of the facility and must provide the e-GGRT identification number of the facility acquired in the transaction.

(3) If a facility is sold by the owner(s) or operator(s) as of December 31 of the year prior to the transaction and the owner(s) or operator(s) selling the facility is(are) acquired or all of the remaining assets of the owner(s) or operators(s) are acquired such that the selling owner(s) or operator(s) cease to exist as a result of a transaction that results in a change to the owner(s) or operator(s) of a facility, the owners or operators involved in that transaction shall select a historic reporting representative who will be responsible for submission (if not already submitted before the transaction) and revisions to annual GHG reports under § 98.3(h) for reporting years as specified in paragraph (o)(6) of this section. The historic reporting representative shall be an individual selected by an agreement binding on each of the owners and operators involved in the transaction, following the provisions of paragraph (b) of this section. If the transaction results in a change to the owner(s) or operator(s) for the entire facility, the new owner(s) or operator(s) must notify EPA of the date(s) of each transaction that results in a change to the owner or operator of the facility and must provide the e-GGRT identification number of the facility acquired in the transaction.

(4) If a facility is sold after December 31, 2024 and prior to January 17, 2025, all of the owners or operators involved in that transaction(s) must select a historic reporting representative who will be responsible for submission (if not already submitted before the transaction(s)) and revisions to annual GHG reports under § 98.3(h) for reporting years as specified in paragraph (o)(6) of this section. The historic reporting representative shall be an individual selected by an agreement binding on each of the owners and operators involved in the transaction(s), following the provisions of paragraph (b) of this section. If the transaction results in a change to the owner(s) or operator(s) for the entire facility, the new owner(s) or operator(s) must notify EPA of the date(s) of each transaction that results in a change to the owner or operator of the facility and must provide the e-GGRT identification number of the facility acquired in the transaction.

(5) The provisions of paragraphs (b), (c), (e), (f), (g), and (m) of this section apply to the historic reporting representative selected in paragraphs (o)(1) through (4) of this section by substituting the term ''historic reporting representative'' for ''designated representative.'' The provisions of paragraph (i) of this section apply to the historic reporting representative by adding the term ''historic reporting representative and any historic alternate designated representative to instances of ''the designated representative and any alternate designated representative.''

(6) Following a transaction as specified in this paragraph (o), the owner(s) or operator(s) relevant as specified in this paragraph (o) (and their selected historic reporting representative as specified in this paragraph (o)) remain responsible for submission (if not already submitted before the transaction) and any revisions to annual reports for the reporting year prior to the transaction and, if applicable, annual GHG reports under § 98.3(h) for additional reporting years prior to the transaction as specified in paragraphs (o)(6)(i) and (ii) of this section. If the responsible owner(s) or operators(s) are acquired such that the owner(s) or operator(s) as of cease to exist as a result of a transaction, the acquiring owners would become responsible for submission (if not already submitted before the transaction) and any revisions to annual reports for the reporting year prior to the transaction and, if applicable, annual GHG reports under § 98.3(h) for additional reporting years prior to the transaction as specified in paragraphs (o)(6)(i) and (ii) of this section.

(i) For the first transaction that occurs as specified in this paragraph (o), all reporting years prior to the reporting year prior to the transaction.

(ii) For each transaction after the first transaction that occurs as specified in this paragraph (o), all reporting years prior to the reporting year in which the transaction occurred and for which the owner(s) or operator(s) was (were) the owner(s) or operator(s) for the facility as of December 31st of the reporting year (and for which the historic reporting representative represents).

■ 6. Add part 99 to read as follows:

PART 99—WASTE EMISSIONS CHARGE

Sec.

Subpart A—General Provisions

99.1 Purpose and scope.
99.2 Definitions.
99.3 Who must file?
99.4 How do I authorize and what are the responsibilities of the designated representative?
99.5 When must I file and remit the applicable WEC obligation?
99.6 How do I file?
99.7 What are the general reporting, recordkeeping, and verification requirements of this part?

99.8 What are the general provisions for assessment of the WEC obligation?
99.9 How are payments required by this part made?
99.10 What fees apply to delinquent payments?
99.11 What are the compliance and enforcement provisions of this part?
99.12 What addresses apply for this part?
99.13 What are the confidentiality determinations and related procedures for this part?

Subpart B—Determining Waste Emissions Charge

99.20 How will the waste emissions threshold for each WEC applicable facility be determined?
99.21 How will the WEC applicable emissions for a WEC applicable facility be determined?
99.22 How will the net WEC emissions for a WEC obligated party be determined?
99.23 How will the transfer of negative net WEC emissions for facilities under the same parent company be determined?
99.24 How will the WEC Obligation for a WEC obligated party be determined?

Subpart C—Unreasonable Delay Exemption

99.30 Who qualifies for the exemption for emissions caused by an unreasonable delay in environmental permitting of gathering or transmission infrastructure?
99.31 What are the reporting requirements for the exemption for emissions caused by an unreasonable delay in environmental permitting of gathering or transmission infrastructure?
99.32 How are the methane emissions caused by an unreasonable delay in environmental permitting of gathering or transmission infrastructure quantified?
99.33 What are the recordkeeping requirements for methane emissions caused by an unreasonable delay in environmental permitting of gathering or transmission infrastructure?

Subpart D—Regulatory Compliance Exemption

99.40 When is the regulatory compliance exemption available, and under what conditions does the exemption cease to be available?
99.41 Which facilities qualify for the exemption for regulatory compliance?
99.42 What are the reporting requirements for the exemption for regulatory compliance?
99.43 How are the emissions qualifying for regulatory compliance exemption in the reporting year quantified?

Subpart E—Exemption for Permanently Shut-in and Plugged Wells

99.50 Who qualifies for the exemption of emissions from permanently shut-in and plugged wells?
99.51 What are the reporting requirements for the exemption for wells that were permanently shut-in and plugged?
99.52 How are the net emissions attributable to all wells at a WEC applicable facility that were permanently shut-in and plugged in the reporting year quantified?

Authority: 42 U.S.C. 7401–7671q; 31 U.S.C. 3717.

Subpart A—General Provisions

§ 99.1 Purpose and scope.

(a) This part establishes requirements for owners and operators of certain petroleum and natural gas systems facilities to make filings and be assessed waste emission charges as required by section 136 of the Clean Air Act (CAA).

(b) Owners and operators of facilities that are subject to this part must follow the requirements of this subpart and all applicable subparts of this part. If a conflict exists between a provision in subpart A and any other applicable subpart, the requirements of the applicable subpart of this chapter shall take precedence.

§ 99.2 Definitions.

All terms used in this part shall have the same meaning given in the Clean Air Act, unless as defined in this section. Terms defined here only apply to this part.

Act means the Clean Air Act, as amended, 42 U.S.C. 7401, *et seq.*

Administrator means the Administrator of the United States Environmental Protection Agency (EPA) or the Administrator's authorized representative.

Affected facility means, for the purposes of the regulatory compliance exemption of this part, affected facilities, as defined in part 60, subpart A of this chapter, that are subject to methane emissions requirements pursuant to part 60 of this chapter.

Applicable facility means a facility within one or more of the following industry segments, as those industry segment terms are defined in § 98.230 of this chapter. In the case where operations from two or more industry segments are co-located at the same part 98 reporting facility, operations for all co-located segments constitute a single *applicable facility* under this part:

(1) Offshore petroleum and natural gas production.

(2) Onshore petroleum and natural gas production.

(3) Onshore natural gas processing.

(4) Onshore natural gas transmission compression.

(5) Underground natural gas storage.

(6) Liquefied natural gas storage.

(7) Liquefied natural gas import and export equipment.

(8) Onshore petroleum and natural gas gathering and boosting.

(9) Onshore natural gas transmission pipeline.

Carbon dioxide equivalent or CO_2e means the number of metric tons of CO_2 emissions with the same global warming potential as one metric ton of another greenhouse gas and is calculated using equation A–1 in § 98.2(b) of this chapter.

Designated facility means, for purposes of the regulatory compliance exemption of this part, designated facilities, as defined in § 60.21a(b) of this chapter, subject to methane emissions requirements pursuant to a State, Tribal, or Federal plan implementing part 60 of this chapter.

Deviation means, for the purposes of the regulatory compliance exemption of this part, the same meaning as defined in part 60, subparts OOOOb and OOOOc of this chapter.

Facility applicable emissions means the annual methane emissions, as calculated in § 99.21, associated with a Waste Emissions Charge (WEC) applicable facility that are either equal to, below, or exceeding the waste emissions threshold for the WEC applicable facility prior to consideration of any applicable exemptions.

Facility ID number means the identification number assigned to a facility by the EPA's Greenhouse Gas Reporting Program (GHGRP).

Gas to oil ratio (GOR) means the ratio of the volume of gas at standard temperature and pressure that is produced from a volume of oil when depressurized to standard temperature and pressure.

Gathering and boosting site means a single gathering compressor station as defined in this section, centralized oil production site as defined in this section, gathering pipeline site as defined in this section, or other fence-line site within the onshore petroleum and natural gas gathering and boosting industry segment.

Gathering and boosting system means a single network of pipelines, compressors and process equipment, including equipment to perform natural gas compression, dehydration, and acid gas removal, that has one or more connection points to gas and oil production or one or more other gathering and boosting systems and a downstream endpoint, typically a gas processing plant, transmission pipeline, Local gas distribution company (LDC) pipeline, or other gathering and boosting system.

Gathering and boosting system owner or operator means any person that holds a contract in which they agree to transport petroleum or natural gas from one or more onshore petroleum and natural gas production wells or one or more other gathering and boosting systems to a downstream endpoint, typically a natural gas processing

facility, another gathering and boosting system, a natural gas transmission pipeline, or a distribution pipeline, or any person responsible for custody of the petroleum or natural gas transported.

Global warming potential or GWP means the ratio of the time-integrated radiative forcing from the instantaneous release of one kilogram of a trace substance relative to that of one kilogram of a reference gas (*i.e.,* CO_2). GWPs for each greenhouse gas are provided in Table A–1 of part 98, subpart A of this chapter.

Greenhouse gas or GHG means the air pollutants carbon dioxide (CO_2), hydrofluorocarbons (HFCs), methane (CH_4), nitrous oxide (N_2O), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6).

Natural gas means a naturally occurring mixture or process derivative of hydrocarbon and non-hydrocarbon gases found in geologic formations beneath the earth's surface, of which its constituents include, but are not limited to, methane, heavier hydrocarbons, and carbon dioxide. Natural gas may be field quality, pipeline quality, or process gas.

Net WEC emissions means the sum of WEC applicable emissions from facilities with the same WEC obligated party as calculated pursuant to § 99.22 using equation B–8 of this part. If the conditions specified in § 99.7(b)(1)(iv) apply for a reporting year, a single WEC obligated party may have multiple net WEC emissions totals for that reporting year.

Net WEC emissions after transfers means the total quantity of methane emissions subject to charge for a WEC obligated party. If the WEC obligated party is not eligible to, or elects not to, transfer or receive negative net WEC emissions pursuant to § 99.23, the net WEC emissions after transfers are determined pursuant to § 99.22. If the WEC obligated party transfers or receives negative net WEC emissions pursuant to § 99.23, the net WEC emissions after transfers reflect such transfers subject to the requirements of § 99.23.

Nonproduction sector means facilities in the onshore natural gas processing, the liquefied natural gas storage, the liquefied natural gas import and export equipment, and the onshore petroleum and natural gas gathering and boosting industry segments as those industry segments are defined in § 98.230 of this chapter.

Onshore natural gas transmission pipeline owner or operator means, for interstate pipelines, the person identified as the transmission pipeline owner or operator on the Certificate of Public Convenience and Necessity issued under 15 U.S.C. 717f, or, for intrastate pipelines, the person identified as the owner or operator on the transmission pipeline's Statement of Operating Conditions under section 311 of the Natural Gas Policy Act, or for pipelines that fall under the ''Hinshaw Exemption'' as referenced in section 1(c) of the Natural Gas Act, 15 U.S.C. 717–717 (w)(1994), the person identified as the owner or operator on blanket certificates issued under 18 CFR 284.224. If an intrastate pipeline is not subject to section 311 of the Natural Gas Policy Act (NGPA), the onshore natural gas transmission pipeline owner or operator is the person identified as the owner or operator on reports to the State regulatory body regulating rates and charges for the sale of natural gas to consumers.

Onshore petroleum and natural gas production owner or operator means the person or entity who holds the permit to operate petroleum and natural gas wells on the drilling permit or an operating permit where no drilling permit is issued, which operates a facility in the onshore petroleum and/or natural gas production industry segment (as that industry segment is defined in § 98.230(a)(2) of this chapter). Where petroleum and natural gas wells operate without a drilling or operating permit, the person or entity that pays the State or Federal business income taxes is considered the owner or operator.

Operator means, except as otherwise defined in this section, any person who operates or supervises a facility.

Owner means, except as otherwise defined in this section, any person who has legal or equitable title to, has a leasehold interest in, or control of an applicable facility, except a person whose legal or equitable title to or leasehold interest in the facility arises solely because the person is a limited partner in a partnership that has legal or equitable title to, has a leasehold interest in, or control of the facility shall not be considered an ''owner'' of the facility.

Parent company means the United States parent company.

Part 98 report means the annual report required under part 98 of this chapter for owners and operators of certain facilities under the Petroleum and Natural Gas Systems source category.

Petroleum means oil removed from the earth and the oil derived from tar sands and shale.

Production sector means facilities in the offshore petroleum and natural gas production and the onshore petroleum and natural gas production industry segments as those industry segments are defined in § 98.230 of this chapter.

Qualified Professional Engineer means an individual who is licensed by a State as a Professional Engineer to practice in one or more disciplines of engineering, is in good standing and who is qualified by education, technical knowledge, and experience to review and interpret the records required under this subpart.

Reporting year means the calendar year during which data are required to be collected for purposes of the annual WEC filing. For example, reporting year 2024 is January 1, 2024, through December 31, 2024, and the annual WEC filing for reporting year 2024 is submitted to the EPA by August 31, 2025.

Standard temperature and pressure means 60 °F and 14.7 psia.

Transmission sector means facilities in the onshore natural gas transmission compression, the underground natural gas storage, and the onshore transmission pipeline industry segments as those industry segments are defined in § 98.230 of this chapter.

United States parent company(s) means the highest-level United States company(s), as reported under § 98.3 of this chapter for a WEC applicable facility, with an ownership interest in the facility as of December 31 of the year for which data are being reported.

Waste emissions threshold means the metric tons of methane emissions calculated by multiplying WEC applicable facility throughput by the industry segment-specific methane intensity thresholds established in CAA section 136(f) and the density of methane (0.0192 metric ton per thousand standard cubic feet).

WEC means waste emissions charge, the charge established in CAA section 136(c) on methane emissions that exceed certain thresholds.

WEC applicable emissions means the annual methane emissions, as calculated in § 99.21, associated with a WEC applicable facility that are either equal to, below, or exceeding the waste emissions threshold for the WEC applicable facility after consideration of any applicable exemptions.

WEC applicable facility means an applicable facility, as defined in this section, for which the owner(s) or operator(s) of the part 98 of this chapter reporting facility was (were) required to report GHG emissions under part 98, subpart W of this chapter of more than 25,000 metric tons CO_2e for the reporting year.

WEC filing means the report and payment of applicable WEC obligation required to be submitted by a WEC

obligated party under the requirements of this chapter. The WEC filing contains information regarding the WEC obligated party and WEC applicable facilities for the previous reporting year. For example, the WEC filing due on August 31, 2025 contains information regarding reporting year 2024, which is January 1, 2024 through December 31, 2024.

WEC obligated party means the WEC applicable facility's owner or operator as defined in this section for the applicable industry segment as of December 31 of the reporting year or that became an owner or operator of the WEC applicable facility in a transaction occurring subsequent to the end of the reporting year (*i.e.,* between January 1 and December 31 of the year following the reporting year) that resulted in the owner(s) or operator(s) of the facility as of December 31 of the reporting year ceasing to exist prior to the WEC filing date pursuant to § 99.5. In cases where a WEC applicable facility has more than one owner or operator, the WEC obligated party must be one of the owners or operators of the facility selected by an agreement binding on each of the owners and operators of the facility, following the provisions of § 99.4(b). Each WEC applicable facility must have only one WEC obligated party for a reporting year.

WEC obligation means the WEC charge amount resulting from the calculations in § 99.24.

Well identification (ID) number means the unique and permanent identification number assigned to a petroleum or natural gas well. If the well has been assigned a US Well Number, the well ID number required in this subpart is the US Well Number. If a US Well Number has not been assigned to the well, the well ID number is the identifier established by the well's permitting authority.

Well-pad site means all equipment on or associated with a single well-pad. Specifically, the *well-pad site* includes all equipment on a single well-pad plus all equipment associated with that single well-pad.

You means a WEC obligated party subject to this part.

§ 99.3 Who must file?

WEC obligated parties, as defined in § 99.2, are required to submit a WEC filing and remit applicable WEC obligations and payments.

§ 99.4 How do I authorize and what are the responsibilities of the designated representative?

Each WEC obligated party must follow the procedures in paragraphs (a) through (l) of this section, as applicable, to identify a WEC obligated party designated representative. In cases where a WEC applicable facility has more than one owner or operator, the WEC obligated party shall be an owner or operator selected by an agreement binding on each of the owners and operators involved with the facility, following the provisions of paragraph (b) of this section. Failure to select a WEC obligated party for each WEC applicable facility with multiple owners or operators following the procedures of paragraph (b) of this section is considered a violation of this part for each owner and operator (as defined in § 99.2 of this part) for the applicable industry segment of the associated WEC applicable facility. If an owner or operator acquires a WEC applicable facility in a transaction occurring subsequent to the end of the reporting year (*i.e.,* between January 1 and December 31 of the year following the reporting year) that resulted in the owner(s) or operator(s) of the facility as of December 31 of the reporting year ceasing to exist prior to the WEC filing date pursuant to § 99.5, the acquiring owner or operator shall be considered the WEC obligated party for that facility.

(a) *General.* Except as provided under paragraph (f) of this section, each WEC obligated party that is subject to this part shall have one designated representative, who shall be responsible for certifying, signing, and submitting WEC filings or other submissions to the Administrator under this part.

(b) *Authorization of a designated representative.* The designated representative of each WEC obligated party shall be an individual selected by an agreement binding on the owner and operator of such entity and shall act in accordance with the certification statement in paragraph (i) of this section. Failure of a WEC obligated party to authorize a designated representative following the procedures of this section is considered a violation of this part.

(c) *Responsibility of the designated representative.* Upon receipt by the Administrator of a complete certificate of representation under this section for the WEC obligated party, the designated representative identified in such certificate of representation shall represent and, by their representations, actions, inactions, or submissions, legally bind the WEC obligated party in all matters pertaining to this part, notwithstanding any agreement between the designated representative and said WEC obligated party. The owner and operator shall be bound by any decision or order issued to the designated representative by the Administrator or a court.

(d) *Timing.* No WEC filing or other submissions under this part for a WEC obligated party will be accepted until the Administrator has received a complete certificate of representation for the reporting year under this section for a designated representative of the WEC obligated party. Such certificate of representation shall be submitted at least 60 days before the deadline for submission of the WEC obligated party's WEC filing under § 99.5 in each reporting year.

(e) *Certification of the WEC filing.* Each WEC filing and any other submission under this part for a WEC obligated party shall be certified, signed, and submitted by the designated representative or any alternate designated representative of the WEC obligated party in accordance with this section and § 3.10 of this chapter.

(1) Each such submission shall include the following certification statement signed by the designated representative or any alternate designated representative: ''I am authorized to make this submission on behalf of the WEC obligated party, for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(2) The Administrator will accept a WEC filing or other submission for a WEC obligated party under this part only if the submission is certified, signed, and submitted in accordance with this section.

(f) *Alternate designated representative.* A certificate of representation under this section for the WEC obligated party may designate one alternate designated representative, who shall be an individual selected by an agreement binding on the owner and operator, and may act on behalf of the WEC obligated party designated representative. The agreement by which the alternate designated representative is selected shall include a procedure for authorizing the alternate designated representative to act in lieu of the designated representative.

(1) Upon receipt by the Administrator of a complete certificate of representation under this section for a WEC obligated party identifying an alternate designated representative, the following apply.

(i) The alternate WEC obligated party designated representative may act on behalf of the WEC obligated party designated representative.

(ii) Any representation, action, inaction, or submission by the alternate designated representative shall be deemed to be a representation, action, inaction, or submission by the WEC obligated party designated representative.

(2) Except in this section, whenever the term ''designated representative'' is used in this part, the term shall be construed to include the designated representative or any alternate designated representative.

(g) *Changing a designated representative or alternate designated representative.* The designated representative or alternate designated representative identified in a complete certificate of representation under this section for a WEC obligated party received by the Administrator may be changed at any time upon receipt by the Administrator of another later signed, complete certificate of representation under this section for the WEC obligated party. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous designated representative or the previous alternate designated representative of the WEC obligated party before the time and date when the Administrator receives such later signed certificate of representation shall be binding on the new designated representative and the owner and operator of the WEC obligated party.

(h) *Changes in the WEC obligated party.* Within 90 days after any change in the WEC obligated party, the designated representative or any alternate designated representative shall submit a certificate of representation that is complete under this section to reflect the change.

(i) *Certificate of representation.* The annual certificate of representation shall be complete if it includes the following elements in a format prescribed by the Administrator in accordance with this section:

(1) Identification of the WEC obligated party and the United States address of the WEC obligated party for which the certificate of representation is submitted.

(2) The name, organization name (company affiliation-employer), address, email address, telephone number, and facsimile transmission number (if any) of the designated representative and any alternate designated representative.

(3) The facility ID number for each WEC applicable facility comprising the WEC obligated party.

(4) The name and United States address of the parent company for purposes of netting under subpart B of this part for the WEC obligated party and the WEC applicable facilities. The indicated parent company must meet the requirements specified in paragraphs (i)(4)(i) and (ii) of this section. As an alternative to reporting a parent company, the WEC obligated party may be listed and paragraphs (i)(4)(i) and (ii) of this section do not apply.

(i) The indicated parent company must have been reported pursuant to § 98.3(c)(11) of this chapter for each WEC applicable facility listed in the certificate of representation for which the WEC obligated party was an owner or operator of the facility as of December 31 of the reporting year and was reported pursuant to § 98.3(c)(14) of this chapter.

(ii) The WEC obligated party must be a subsidiary of, or partially owned by, the indicated parent company.

(5) The following certification statements by the designated representative and any alternate designated representative:

(i) ''I certify that I was selected as the designated representative or alternate designated representative, as applicable, by an agreement binding on the WEC obligated party.''

(ii) ''I certify that I have all the necessary authority to carry out my duties and responsibilities under 40 CFR part 99 on behalf of the WEC obligated party and that such owner and operator shall be fully bound by my representations, actions, inactions, or submissions.''

(iii) ''I certify that the owner and operator of the WEC obligated party, as applicable, shall be bound by any order issued to me by the Administrator or a court therein.''

(iv) If there are multiple owners and/or operators reported pursuant to § 98.3(c)(14) of this chapter for any WEC applicable facility listed in the certificate of representation pursuant to paragraph (i)(5) of this section, for each facility, ''I certify that I have given a written notice of my selection as the 'designated representative' or 'alternate designated representative', as applicable, and of the agreement by which I was selected to each owner and operator of the WEC applicable facility for which there are multiple owners and/or operators.''

(6) The signature of the designated representative and any alternate designated representative and the dates signed.

(j) *Documents of agreement.* Unless otherwise required by the Administrator, documents of agreement referred to in the certificate of representation shall not be submitted to the Administrator. The Administrator shall not be under any obligation to review or evaluate the sufficiency of such documents, if submitted.

(k) *Binding nature of the certificate of representation.* Once a complete certificate of representation under this section for a WEC obligated party has been received, the Administrator will rely on the certificate of representation unless and until a later signed, complete certificate of representation under this section for the facility is received by the Administrator.

(l) *Objections concerning a designated representative.* (1) Except as provided in paragraph (g) of this section, no objection or other communication submitted to the Administrator concerning the authorization, or any representation, action, inaction, or submission, of the designated representative or alternate designated representative shall affect any representation, action, inaction, or submission of the designated representative or alternate designated representative, or the finality of any decision or order by the Administrator under this part.

(2) The Administrator will not adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of any designated representative or alternate designated representative.

§ 99.5 When must I file and remit the applicable WEC obligation?

Each WEC obligated party must submit their WEC filing including the information specified in § 99.7, which contains payment of the applicable WEC obligation no later than August 31 of the year following the reporting year. All filing revisions must be received according to the schedule in § 99.7(e) to be considered for revisions to WEC obligations. If the submission date falls on a weekend or a Federal holiday, the submission date shall be extended to the next business day.

§ 99.6 How do I file?

Each WEC filing, certificate of representation, and remittance of applicable WEC fees for the WEC obligated party must be submitted electronically in accordance with the

requirements of this part and in a format specified by the Administrator.

§ 99.7 What are the general reporting, recordkeeping, and verification requirements of this part?

The WEC obligated party that is subject to the requirements of this part must submit a WEC filing to the Administrator as specified in this section.

(a) *Schedule.* The WEC filing must be submitted in accordance with § 99.5.

(b) *Content of the WEC filing.* For each WEC obligated party, report the information in paragraphs (b)(1)(i) through (vii) of this section. For each WEC applicable facility comprising the WEC obligated party, report the information in paragraphs (b)(2)(i) through (xiii) of this section, as appropriate. The WEC filing must also include payment of applicable WEC obligation, as specified in paragraph (b)(3) of this section.

(1) Reporting requirements at the WEC obligated party level.

(i) The WEC obligated party company name.

(ii) The United States address for the WEC obligated party.

(iii) The list of facility ID number(s) under which the WEC applicable facilities comprising the WEC obligated party as of December 31 of the reporting year reported under part 98, subpart W of this chapter.

(iv) If the WEC obligated party acquired one or more WEC applicable facilities in a transaction occurring subsequent to the end of the reporting year (*i.e.,* between January 1 and December 31 of the year following the reporting year) that resulted in the owner(s) or operator(s) of the facility as of December 31 of the reporting year ceasing to exist prior to the WEC filing date pursuant to § 99.5, report the facility ID number for each WEC applicable facility. You must include these WEC applicable facilities in the reporting requirements under § 99.7(b)(2). For each such WEC applicable facility, also report an indication of whether the parent company identified in paragraph (b)(1)(vi) of this section was reported in the part 98 report for the reporting year pursuant to § 98.3(c)(11) of this chapter. For any such WEC applicable facilities that were not associated with the parent company identified in paragraph (b)(1)(vi) of this section, you may elect to report a parent company for that WEC applicable facility subject to the requirement that such parent company must have been reported in the part 98 report for the reporting year pursuant to § 98.3(c)(11) of this chapter for that facility.

(v) The net WEC emissions, as calculated pursuant to § 99.22, net WEC emissions after transfers, following the provisions of § 99.23, and WEC obligation, as calculated pursuant to § 99.24, for the WEC obligated party. If the condition specified in § 99.7(b)(1)(iv) applies for the reporting year, report separately the net WEC emissions, net WEC emissions after transfers, and WEC obligation associated with each WEC applicable facility that was acquired.

(vi) The parent company for purposes of netting under subpart B of this part for the WEC obligated party and the WEC applicable facilities. The indicated parent company must meet the requirements specified in paragraphs (b)(1)(vi)(A) and (B) of this section. As an alternative to reporting a parent company, the WEC obligated party may be listed and paragraphs (b)(1)(vi)(A) and (B) of this section do not apply.

(A) The indicated parent company must have been reported pursuant to § 98.3(c)(11) of this chapter for each WEC applicable facility listed pursuant to paragraph (b)(1)(iii) of this section.

(B) The WEC obligated party must be a subsidiary of, or partially owned by, the indicated parent company.

(vii) The United States address of the parent company, if electing to report a parent company for purposes of netting under subpart B of this part.

(2) Reporting requirements for each WEC applicable facility comprising the WEC obligated party.

(i) The facility ID number under which the WEC applicable facility emissions are reported under part 98, subpart W of this chapter.

(ii) The industry segment(s) for the WEC applicable facility.

(iii) For WEC applicable facilities in the offshore petroleum and natural gas production or onshore petroleum and natural gas production industry segment, as those industry segment terms are defined in § 98.230 of this chapter, if the conditions specified in § 99.30 regarding emissions from delays in permitting are met, indicate if you are electing to claim for exemption any emissions from delays in permitting. If so, you must provide information as specified in § 99.31.

(iv) If the WEC applicable facility meets the conditions specified in § 99.41(a) and (b) regarding the regulatory compliance exemption, indicate if you are electing to claim for exemption any emissions related to regulatory compliance. If so, you must report the following:

(A) A list of the State(s) and/or Tribal land(s) meeting the conditions specified in § 99.40 for the reporting year in which the WEC applicable facility is located. For WEC applicable facilities in the onshore petroleum and natural gas production or onshore petroleum and natural gas gathering and boosting industry segments, as those industry segment terms are defined in § 98.230 of this chapter, a WEC applicable facility is considered to be located in each State or Tribal lands within which a well-pad site or gathering and boosting site, as applicable, was reported pursuant to §§ 98.236(aa)(1)(iv)(C) or (aa)(10)(v)(E) of this chapter, as applicable, for the reporting year.

(B) An indication of whether the WEC applicable facility contained any affected facilities subject to methane emissions standards under part 60 of this chapter as of December 31st of the reporting year or any designated facilities subject to methane emissions standards under an applicable approved State, Tribal, or Federal plan in part 62 of this chapter as of December 31st of the reporting year. If so, provide the information specified in § 99.42, as applicable.

(v) For WEC applicable facilities in the onshore petroleum and natural gas production, offshore petroleum and natural gas production, or underground natural gas storage industry segments, as those industry segment terms are defined in § 98.230 of this chapter, if the conditions specified in § 99.50 regarding emissions from permanently shut-in and plugged wells are met, indicate if you are electing to claim for exemption any emissions from plugged wells. If so, you must report the information specified in § 99.51.

(vi) The facility waste emissions threshold as calculated pursuant to § 99.20, and, if there is more than one applicable industry segment within the WEC applicable facility, each industry segment waste emissions threshold for each applicable industry segment within the applicable facility, as calculated pursuant to § 99.20.

(vii) The facility applicable emissions, as calculated pursuant to § 99.21 and the WEC applicable emissions, as calculated pursuant to § 99.21.

(viii) The total emissions for the WEC applicable facility as reported under part 98, subpart W of this chapter for the reporting year, mt CO_2e. If the facility reported information related to one or more combustion-related other large release events pursuant to paragraph (b)(2)(xiii) of this section, reduce this amount by the total quantity of emissions reported pursuant to paragraph (b)(2)(xiii)(D) of this section.

If the adjusted total emissions for the WEC applicable facility following this reduction are less than or equal to 25,000 metric tons CO_2e for the reporting year, then the total facility applicable emissions and WEC applicable emissions for the WEC applicable facility are zero, paragraphs (a) through (d) of § 99.20 do not apply to the WEC applicable facility, and the reporting requirements of paragraphs (b)(2)(iii) through (vii) of this section do not apply.

(ix) The annual methane emissions for the WEC applicable facility, as reported under part 98, subpart W of this chapter for the corresponding reporting year, mt CH_4. If the facility reported information related to one or more combustion-related other large release events pursuant to paragraph (b)(2)(xiii) of this section, reduce this amount by the total quantity of emissions reported pursuant to paragraph (b)(2)(xiii)(C) of this section.

(x) The total quantity of natural gas that is sent to sale from the WEC applicable facility in the reporting year, as reported pursuant to part 98, subpart W of this chapter, in Mscf.

(xi) The total quantity of crude oil that is sent to sale from the WEC applicable facility in the reporting year, as reported pursuant to part 98, subpart W of this chapter, in barrels.

(xii) The percentage of ownership interest of the parent company reported pursuant to § 99.7(b)(1)(vi) of the WEC applicable facility as reported pursuant to § 98.3(c)(11) of this chapter for the reporting year. Report 0 for any WEC applicable facilities reported pursuant to § 99.7(b)(1)(iv) for which the parent company was not reported pursuant to § 98.3(c)(11) of this chapter for the reporting year.

(xiii) For reporting year 2025 and later, if one or more combustion-related other large release events were reported pursuant to § 98.236(y) of this chapter and reported emissions pursuant § 98.236(z) of this chapter for the same combustion unit for the timespan of the event for the WEC applicable facility in the part 98 report for that reporting year, then for each combustion-related other large release event report the information specified in paragraphs (b)(2)(xiii)(A) through (D) of this section. For purposes of this part, a combustion-related other large release event is one in which the equipment involved in the release identified pursuant to § 98.236(y)(5)(i) of this chapter is equipment that reports emissions pursuant § 98.236(z) of this chapter.

(A) The unique release event identification number for the other large release event as reported pursuant to § 98.236(y)(2) of this chapter.

(B) The annual CO_2 emissions, in metric tons CO_2, that were reported pursuant to § 98.236(z) of this chapter from the equipment associated with the release that occurred during the timespan of the release as reported pursuant to § 98.236(y)(4) of this chapter. Determine this quantity using the applicable method in paragraphs § 98.236(z)(1) through (3) of this chapter and using measurement data, if available, or a combination of process knowledge, engineering estimates, and best available data when measurement data are not available.

(C) The annual CH_4 emissions, in metric tons CH_4, that were reported pursuant to § 98.236(z) of this chapter from the equipment associated with the release that occurred during the timespan of the release as reported pursuant to § 98.236(y)(4) of this chapter. Determine this quantity using the applicable method in paragraphs § 98.236(z)(1) through (3) of this chapter and using measurement data, if available, or a combination of process knowledge, engineering estimates, and best available data when measurement data are not available.

(D) The CO_2e emissions, in metric tons CO_2e, that were reported pursuant to § 98.236(z) of this chapter from the equipment associated with the release that occurred during the timespan of the release as reported pursuant to § 98.236(y)(4) of this chapter. Calculate this value using equation A–1 of subpart A to part 98 of this chapter, using the values of CO_2 and CH_4 reported pursuant to paragraphs (b)(2)(xiii)(B) and (C), respectively, of this section.

(3) Payment of applicable WEC obligation, submitted in accordance with § 99.9.

(c) *Verification of the WEC filing.* To verify the completeness and accuracy of WEC filing, the EPA will consider the verification status of part 98 reports and may review the certification statements described in § 99.4 and any other credible evidence, in conjunction with a comprehensive review of the WEC filing, including attachments. The EPA intends to conduct audits of select WEC obligated parties and associated WEC applicable facilities. During such audits, the records generated under this part must be made available to the EPA. The on-site audits may be conducted by private auditors contracted by the EPA or by Federal, State or local personnel, as appropriate. Nothing in this section prohibits the EPA from requesting or using additional information, including reports, prepared and submitted in accordance with part 60 of this chapter, or an applicable approved State, Tribal, or Federal plan under part 62 of this chapter that implements the emission guidelines contained in part 60 of this chapter, to verify the completeness and accuracy of the filings.

(d) *Recordkeeping.* A WEC obligated party that is subject to the requirements of this part must keep records as specified in this paragraph (d). You must retain all required records for at least 5 years from the date of submission of the WEC filing for the reporting year in which the record was generated. The records shall be kept in an electronic or hard-copy format (as appropriate) and recorded in a form that is suitable for expeditious inspection and review. Upon request by the Administrator, the records required under this section must be made available to the EPA or a third-party auditor if one is required. Records may be retained off site if the records are readily available for expeditious inspection and review. For records that are electronically generated or maintained, the equipment or software necessary to read the records shall be made available, or, if requested by the EPA, electronic records shall be converted to paper documents. You must retain the following records, in addition to those records prescribed in each applicable subpart of this part:

(1) All information required to be retained by part 98, including subparts A and W of this chapter.

(2) Any other information not included in a part 98 report used to complete the WEC filing.

(3) All information required to be submitted as part of the WEC filing.

(e) *Annual WEC filing revisions.* Except as specified in paragraph (e)(2) of this section, the provisions of this paragraph (e) apply until December 15 of the year following the reporting year, or for a given reporting year after the December 15 deadline if the resubmission is related to the resolution of unverified filings specified at § 99.8. If the deadline falls on a weekend or a Federal holiday, the deadline date shall be extended to the next business day.

(1) The WEC obligated party shall submit a revised WEC filing within 30 days of discovering that a previously submitted WEC filing contains one or more substantive errors. The revised WEC filing must correct all substantive errors. If the resubmission is due to a correction in a part 98 report resubmitted by a WEC applicable facility, the WEC obligated party must report the number of corrections made in the part 98 report(s) and a description of how the changes impact the assessment of the WEC obligation.

(2) The revisions for substantive errors as described in paragraphs (e)(2)(i) through (iii) of this section are not subject to the December 15 deadline and must be submitted according to the schedule therein.

(i) Revised filings for purposes of the regulatory compliance exemption must be submitted as follows:

(A) Revised filings to submit a CAA section 111(b) or (d) compliance report which covers the remaining portion of a WEC filing year, which were not available at the time of the WEC filing, must be submitted within 30 calendar days of the date that the compliance report covering the remainder of the year is due under the applicable requirements of CAA section 111(b) or (d), as applicable.

(B) Revised filings to submit findings by the WEC obligated party that one or more deviations or violations discovered after the WEC filing must be submitted within 30 days of the discovery.

(ii) The Administrator may notify the WEC obligated party in writing that a WEC filing previously submitted by the WEC obligated party contains one or more substantive errors. Such notification will identify each such substantive error. The WEC obligated party shall, within 30 days of receipt of the notification, either resubmit the WEC filing that, for each identified substantive error, corrects the identified substantive error (in accordance with the applicable requirements of this part) or provide information demonstrating that the previously submitted filing does not contain the identified substantive error or that the identified error is not a substantive error. The EPA reserves the right to revise WEC obligations for a given reporting year after the December 15 final resubmission deadline if data errors are discovered by the EPA at a later date.

(iii) Revised filings submitted pursuant to Administrator approval or an Agreement between the WEC obligated party and the Administrator to correct substantive errors.

(3) A substantive error is an error that impacts the Administrator's ability to accurately calculate a WEC obligated party's WEC obligation, which may include, but is not limited to, the list of WEC applicable facilities associated with a WEC obligated party, the emissions or throughput reported in the WEC applicable facility part 98 report(s), emissions associated with exemptions, and supporting information for each exemption to demonstrate its validity.

(4) Notwithstanding paragraphs (e)(1) and (2) of this section, upon request the Administrator may provide an extension of the 30-day period for submission of a revised report or information under paragraphs (e)(1) and (2) of this section if adequate justification is provided by the WEC obligated party. The Administrator may provide an extension provided that the request is received by email to an address prescribed by the Administrator prior to the expiration of the 30-day period and that the request demonstrates that it is not practicable to submit a revised report or information under paragraphs (e)(1) and (2) of this section within 30 days. In no case shall an extension be granted beyond the December 15 final submission deadline.

(5) The WEC obligated party shall retain documentation for a minimum of 5 years from the date of creation to support any revision made to a WEC filing.

(6) If a WEC applicable facility changes ownership such that there is a change to the WEC obligated party, the entity that was the WEC obligated party as reported pursuant to § 99.7(b)(1)(i) in the WEC filing submitted for a reporting year remains responsible for any revisions to WEC filings for that reporting year.

(f) *Designation of unverified filings and reports.* Following the verification process discussed in § 98.3(h) of this chapter for part 98 reports and paragraph (c) of this section for WEC filings, the EPA shall designate:

(1) The annual part 98 report associated with each WEC applicable facility as either verified or unverified. An unverified report is one in which the EPA has provided notification under § 98.3(h)(2) of this chapter and the owner or operator of the WEC applicable facility has failed to revise and resubmit the report and resolve the error or provide justification to the satisfaction of the EPA that the identified error is not a substantive error (in accordance with the applicable requirements of § 98.3(h)(3) of this chapter).

(2) The annual WEC filing from each WEC obligated party submitted pursuant to § 99.7 as either verified or unverified. An unverified filing is one in which the EPA has provided notification under § 99.7(e)(2) and the WEC obligated party designated representative has failed to resubmit the filing and for each identified substantive error correct the identified substantive error (in accordance with the applicable requirements of paragraph (e)(3) of this section) or provide information demonstrating that the submitted filing does not contain the identified substantive error or that the identified error is not a substantive error. The determination of verification status of a part 98 report under paragraph (f)(1) of this section will be taken into consideration in the determination of the verification status of a WEC filing. A WEC filing may also be designated as unverified if it includes receipt of a transfer of negative net WEC emissions, pursuant to § 99.23, associated with an unverified part 98 report (*i.e.,* the WEC obligated party which transferred the negative net WEC emissions includes one or more WEC applicable facilities for which the associated part 98 report is unverified).

§ 99.8 What are the general provisions for assessment of the WEC obligation?

(a) *Assessment of the WEC obligation.* WEC obligation assessments shall be made pursuant to § 99.23 on the basis of information submitted by the date specified in § 99.5 and following the submittal requirements of § 99.6.

(b) *Assessment of the WEC obligation for unverified filings.* If a WEC filing is unverified but the EPA is able to correct the error(s) based on reported data, the EPA may recalculate the WEC obligation using available information and provide an invoice or refund to the WEC obligated party within 60 days of determining a WEC filing to be unverified. If the WEC obligated party resubmits a WEC filing within that timeframe, the EPA will either verify the resubmission, or take the resubmission into account when calculating the WEC obligation.

(c) *Third-party audits for unverified reports.* If the EPA is unable to calculate the WEC obligation with available information, the EPA may require the WEC obligated party to undergo a third-party audit. The EPA may require the WEC obligated party to fund and arrange the third-party audit. The WEC obligated party must make available for review to the third-party auditor all records related to the WEC filing pursuant to § 99.7. The WEC obligated party will have the audit completed and direct the third-party auditor to submit the audit results to the EPA and to the WEC obligated party pursuant to § 99.8(c)(1)(vi). The WEC obligated party will resubmit the WEC filing, if necessary, in accordance with § 99.8(c)(2)(i) and (ii). Nothing in this section regarding third-party audits shall be construed to limit the authority of the Administrator to exercise its authorities under § 114 of the CAA.

(1) *Third-party reviews.* An independent third-party audit of the information provided shall be based on a review of the relevant documents and shall identify each item required by the WEC filing, describe how the

independent third-party evaluated the accuracy of the information provided, state whether the independent third-party agrees with the information provided, and identify any exceptions between the independent third-party's findings and the information provided.

(i) Audits required under this section must be conducted by an independent third-party. The auditor must have professional work experience in the petroleum engineering field or related to oil and gas production, gathering, processing, transmission, or storage and must be a qualified professional engineer.

(ii) To be considered an independent third-party, the auditor must not be an employee of the WEC obligated party or its WEC applicable facilities at which the auditor is conducting the independent review.

(iii) The independent third-party shall submit all records pertaining to the audit required under this section, including information supporting all of the requirements of § 99.8(c)(1) to the WEC obligated party.

(iv) The independent third-party must provide to the WEC obligated party documentation of qualifications of professional work experience in the petroleum engineering field or related to oil and gas production, gathering, processing, transmission, or storage.

(v) The WEC obligated party must make the following information available to the auditor(s) for review which were used to develop the WEC filing including:

(A) All records described under § 99.7(d) of the general recordkeeping provisions for this chapter.

(B) All units, operations, processes, and activities for which GHG emissions were calculated.

(C) The GHG emissions calculations and methods used.

(D) The calculations for the development of site-specific emissions factors.

(E) The quantity of petroleum and natural gas received, produced, and consumed at the facility in the calendar year.

(F) The dates on which any measurements were conducted as well as the results of all emissions measured.

(G) The calibration reports for detection and measurement instruments used.

(H) The inventory of petroleum and natural gas for the current and/or prior calendar year.

(I) The annual part 98 reports.

(vi) The WEC obligated party will direct the independent third-party auditor to submit the audit results to the EPA and the WEC obligated party within 90 days of notification by the EPA of the requirement to conduct a third-party audit.

(2) *Reporting and recordkeeping requirements for WEC obligated parties following third party audits.* (i) The WEC obligated party shall direct the independent third-party auditor to provide the results of the audit to the EPA and the WEC obligated party. After receiving notification from the EPA that the audited information has been verified by the EPA, the WEC obligated party must resubmit the WEC filing, including the WEC obligation amount and all supporting documentation information that is included in reporting requirements under § 99.7, 99.31, 99.42, and 99.51, as applicable, within 30 days of receipt of the EPA notification.

(ii) The WEC obligated party shall provide to the EPA documentation of qualifications of the third-party auditor.

(iii) The WEC obligated party shall retain all records pertaining to the audit required under this section for a period of 5 years from the date of creation and shall deliver such records to the Administrator upon request.

(d) *Resubmittal of filings and reports for the current or prior reporting year.* If resubmittal of a previously submitted part 98 report and/or WEC filing, submitted as specified in § 99.7(e), results in a change to the WEC obligation determined for a WEC obligated party for the reporting year the following process shall apply:

(1) If the WEC obligation based upon the resubmitted report or filing for the reporting year is less than the WEC obligation previously remitted by the WEC obligated party, the Administrator shall authorize a refund to the WEC obligated party equal to the difference in WEC obligation.

(2) If the WEC obligation based upon the resubmitted report or filing for the reporting year is greater than the WEC obligation previously remitted by the WEC obligated party, the Administrator may issue an invoice or bill to the WEC obligated party payable in accordance with § 99.9(b). WEC obligations not paid in full by the specified due date, or within 30 days of the date of the invoice or bill if a due date is not provided, shall be subject to fees as described in § 99.10.

§ 99.9 How are payments required by this part made?

(a) The WEC obligation owed for each reporting year must be paid by the WEC obligated party as part of the annual WEC filing, as required by § 99.7(b), and is considered due at the date specified in § 99.5.

(b) Other than the WEC obligation specified in paragraph (a) of this section, all other charges required by this part, including adjusted WEC obligations, interest fees, and penalties, shall be paid by the WEC obligated party in response to an invoice or bill by the specified due date, or within 30 days of the date of the invoice or bill if a due date is not provided.

(c) All WEC obligations, interest fees, and penalties required by this subpart shall be paid to the Department of the Treasury by the WEC obligated party electronically in U.S. dollars, using an online electronic payment service specified by the Administrator.

§ 99.10 What fees apply to delinquent payments?

(a) *Delinquency.* WEC obligated party accounts are delinquent if the accounts remain unpaid after the due date specified in the invoice or other notice of the WEC amount owed.

(b) *Interest fee.* In accordance with 31 U.S.C. 3717(a), delinquent WEC obligated party accounts shall be charged a minimum annual rate of interest equal to the average investment rate for Treasury tax and loan accounts (Current Value of Funds Rate or CVFR) most recently published and in effect by the Secretary of the Treasury.

(c) *Non-payment penalty.* In accordance with 31 U.S.C. 3717(e), WEC obligated party invoiced debts that are more than 90 days past due shall be charged an additional penalty of 6 percent per year assessed on any part of the invoiced debt that is past due for more than 90 days.

(d) *Penalty for non-submittal.* In accordance with 42 U.S.C. 7413(d)(1), a WEC obligated party that fails to submit an annual WEC filing by the date specified in § 99.5 may be charged an administrative penalty. The penalty assessment shall be a daily assessment per day that the WEC filing is not submitted, assessed up to the value specified in Table 1 of 40 CFR 19.4, as amended. The assessment of penalty shall begin on the date that the WEC filing was considered past due per § 99.5 and continue until such time that the WEC filing is submitted by the WEC obligated party's designated representative. (For example: A WEC filing for reporting year 2025 submitted on September 4, 2026, may be subject to an assessment of four (4) days of administrative penalty for non-submittal.)

§ 99.11 What are the compliance and enforcement provisions of this part?

Any violation of any requirement of this part shall be a violation of the Clean

Air Act, including section 114 (42 U.S.C. 7414) and section 136 (42 U.S.C. 7436). A violation would include but is not limited to failure to submit, or resubmit as required, a WEC filing, failure to collect data needed to calculate the WEC obligation (including any data relevant to determining the applicability of any exemptions and how the netting was conducted), failure to select a WEC obligated party, failure to authorize a designated representative, failure to retain records needed to verify the amount of WEC obligation, providing false or incorrect information in a WEC filing, and failure to remit WEC payment. Each day of each violation constitutes a separate violation. Any penalty assessed shall be in addition to any WEC obligation due under this part and any fees applicable to delinquent payments due under § 99.10.

§ 99.12 What addresses apply for this part?

All requests, notifications, and communications to the Administrator pursuant to this part must be submitted electronically and in a format as specified by the Administrator.

§ 99.13 What are the confidentiality determinations and related procedures for this part?

This section characterizes various categories of information for purposes of making confidentiality determinations, as follows:

(a) This paragraph (a) applies the definition of ''Emission data'' in 40 CFR 2.301(a)(2)(i) for information reported under this part. ''Emission data'' cannot be treated as confidential business information and shall be available to be disclosed to the public. The following categories of information qualify as emission data:

(1) Methane emission information, including the net WEC emissions, waste emissions thresholds, WEC applicable emissions, and the quantity of methane emissions to be exempted due to unreasonable delay and wells that were permanently shut-in and abandoned.

(2) Calculation methodology, including the method used to determine the quantity of methane emissions to be exempted due to an unreasonable permitting delay and the method used to quantify emissions exempted from permanently shut-in and plugged wells.

(3) Facility and unit identifier information, including WEC obligated party company name and address, signed and dated certification statements of the accuracy and completeness of the report, facility identifiers, industry segment, well-pad and/or well identifiers, and emission source-specific methane mitigation activities impacted by an unreasonable permitting delay.

(b) The following types of information are not eligible for confidential treatment:

(1) The WEC obligation, as calculated pursuant to § 99.24.

(2) Compliance information, including information regarding applicable emissions standards or other relevant standards of performance or requirements, information in construction or operating permits, and information submitted to document compliance with an emissions standard or a standard of performance, such as a periodic report, prepared and submitted in accordance with part 60 of this chapter, or an applicable approved State, Tribal, or Federal plan under part 62 of this chapter that implements the emission guidelines contained in part 60 of this chapter, (excluding any information redacted from the report and claimed as confidential).

(3) Published information that is publicly available, including information that is made available through publication of annual reports submitted under part 98 of this chapter, on company or other websites, or otherwise made publicly available.

(c) If you submit information that is not described in paragraphs (a) and (b) of this section, you may claim the information as confidential and the information is subject to the process for confidentiality determinations in 40 CFR part 2 as described in §§ 2.201 through 2.208 of this chapter. You may be required to provide information to substantiate your claims. If claimed, the Administrator may consider this substantiating information to be confidential to the same degree as the information for which you are requesting confidential treatment. The determination will be based on your statements, the supporting information submitted, and any other available information. However, the Administrator may determine that your information is not subject to confidential treatment consistent with 40 CFR part 2 and 5 U.S.C. 552(b)(4).

(d) Submitted applications and reports typically rely on software or templates to identify specific categories of information. If you submit information in a comment field designated for users to add general information, the Administrator will respond to requests for disclosing that information consistent with paragraphs (a) through (c) of this section.

Subpart B—Determining Waste Emissions Charge

§ 99.20 How will the waste emissions threshold for each WEC applicable facility be determined?

The methane waste emissions threshold for each applicable industry segment within a WEC applicable facility for the reporting year will be calculated as described in paragraphs (a) through (d) of this section, as applicable. The methane waste emissions threshold for each WEC applicable facility will be determined as described in paragraph (e) of this section.

(a) For each offshore petroleum and natural gas production industry segment or onshore petroleum and natural gas production industry segment that sends natural gas to sale at a WEC applicable facility, the facility waste emissions threshold will be calculated using equation B–1 of this section.

$$TH_{is,Prod} = 0.002 \times \rho_{CH_4} \times Q_{ng,Prod} \qquad \text{(Eq. B-1)}$$

Where:

$TH_{is,Prod}$ = The methane waste emissions threshold for the industry segment at a WEC applicable facility for the reporting year in the production sector that has natural gas sent to sale, metric tons (mt) CH_4.

0.002 = Industry segment-specific methane intensity threshold, as specified in CAA section 136(f), for methane emissions for applicable facilities with natural gas sales in the production sector, thousand standard cubic feet (Mscf) CH_4 per Mscf of natural gas sent to sale.

ρ_{CH4} = Density of methane = 0.0192 kilograms per standard cubic foot (kg/scf) = 0.0192 metric tons per thousand standard cubic feet (mt/Mscf).

$Q_{ng,Prod}$ = The total quantity of natural gas that is sent to sale from the WEC applicable facility in the reporting year, as reported pursuant to part 98, subpart W of this chapter. For onshore petroleum and natural gas production, you must use the quantity reported pursuant to § 98.236(aa)(1)(i)(B) of this chapter, in Mscf. For offshore petroleum and natural gas production, you must use the quantity reported pursuant to § 98.236(aa)(2)(i) of this chapter, in Mscf.

(b) For each offshore petroleum and natural gas production industry segment or onshore petroleum and natural gas production industry segment that has no natural gas sent to sale at a WEC applicable facility, the facility waste emissions threshold will be calculated using equation B–2 of this section.

$$TH_{is,Prod} = 10 \times Q_{o,Prod} \times 10^{-6} \quad \text{(Eq. B-2)}$$

Where:

$TH_{is,Prod}$ = The annual methane waste emissions threshold for the industry segment at a WEC applicable facility in the production sector that has no natural gas sent to sale, mt CH_4.

10 = Industry segment-specific methane intensity threshold, as specified in CAA section 136(f), for applicable facilities with no natural gas sales in the production sector, mt CH_4 per million barrels oil sent to sale.

$Q_{o,Prod}$ = The total quantity of crude oil that is sent to sale from the WEC applicable facility in the reporting year, as reported pursuant to part 98, subpart W of this chapter. For onshore petroleum and natural gas production, you must use the quantity reported pursuant to § 98.236(aa)(1)(i)(C) of this chapter, in barrels. For offshore petroleum and natural gas production, you must use the quantity reported pursuant to § 98.236(aa)(2)(ii) of this chapter, in barrels.

10^{-6} = Conversion from barrels to million barrels.

(c) For each onshore natural gas processing industry segment, liquefied natural gas storage industry segment, the liquefied natural gas import and export equipment industry segment, or the onshore petroleum and natural gas gathering and boosting industry segment at a WEC applicable facility, the facility waste emissions threshold will be calculated using equation B–3 of this section.

$$TH_{is,NonProd} = 0.0005 \times \rho_{CH_4} \times Q_{ng,NonProd} \quad \text{(Eq. B-3)}$$

Where:

$TH_{is,NonProd}$ = The annual methane waste emissions threshold for the industry segment at a WEC applicable facility in the nonproduction sector, mt CH_4.

0.0005 = Industry segment-specific methane intensity threshold, as specified in CAA section 136(f), for applicable facilities in the nonproduction sector, Mscf CH_4 per Mscf of natural gas sent to sale from or through the facility.

ρ_{CH4} = Density of methane = 0.0192 kg/scf = 0.0192 mt/Mscf.

$Q_{ng,NonProd}$ = The total quantity of natural gas that is sent to sale from or through the industry segment at a WEC applicable facility in the reporting year as reported pursuant to part 98, subpart W of this chapter. For RY 2024 for onshore natural gas processing, you must use the quantity reported pursuant to § 98.236(aa)(3)(ii) of this chapter, in Mscf and for RY 2025 and later, you must use the quantity reported pursuant to § 98.236(aa)(3)(ix) of this chapter, in Mscf. For LNG import and export, you must use the sum of the quantities reported pursuant to § 98.236(aa)(6) and (7) of this chapter, in Mscf. For LNG storage, you must use the quantity reported pursuant to § 98.236(aa)(8)(ii) of this chapter, in Mscf. For onshore petroleum and natural gas gathering and boosting, you must use the quantity reported pursuant to § 98.236(aa)(10)(ii) of this chapter, in Mscf.

(d) For each onshore natural gas transmission compression industry segment, underground natural gas storage industry segment, or onshore natural gas transmission pipeline industry segment at a WEC applicable facility, the facility waste emissions threshold will be calculated using equation B–4 of this section.

$$TH_{is,Tran} = 0.0011 \times \rho_{CH_4} \times Q_{ng,Tran} \quad \text{(Eq. B-4)}$$

Where:

$TH_{is,Tran}$ = The annual methane waste emissions threshold for the industry segment at a WEC applicable facility in the transmission sector, mt CH_4.

0.0011 = Industry segment-specific methane intensity threshold, as specified in CAA section 136(f), for applicable facilities in the transmission sector, Mscf CH_4 per Mscf of natural gas sent to sale from or through the facility.

ρ_{CH4} = Density of methane = 0.0192 kg/scf = 0.0192 mt/Mscf.

$Q_{ng,Tran}$ = The total quantity of natural gas that is sent to sale from or through the industry segment at a WEC applicable facility in the reporting year as reported pursuant to part 98, subpart W of this chapter. For onshore natural gas transmission compression, you must use the quantity reported pursuant to § 98.236(aa)(4)(i) of this chapter, in Mscf. For underground natural gas storage, you must use the quantity reported pursuant to § 98.236(aa)(5)(ii) of this chapter, in Mscf. For onshore natural gas transmission pipeline, you must use the quantity reported pursuant to § 98.236(aa)(11)(iv) of this chapter, in Mscf.

(e) For each WEC applicable facility that operates in a single industry segment, the methane waste emissions threshold shall be equal to the value calculated in equation B–1, equation B–2, equation B–3, or equation B–4 of this section, as applicable. For each WEC applicable facility that operates in two or more industry segments, the facility waste emissions threshold will be calculated using equation B–5 of this section.

$$TH_{WAF} = \sum_{s=1}^{N} TH_{is,s} \quad \text{(Eq. B-5)}$$

Where:

TH_{WAF} = The WEC applicable facility waste emissions threshold, mt CH_4.

$TH_{is,s}$ = The industry segment waste emissions threshold, as calculated in

equation B–3 or equation B–4 of this section, for each industry segment ''s'' at the WEC applicable facility, mt CH_4.

N = Number of industry segments at the WEC applicable facility.

§ 99.21 How will the WEC applicable emissions for a WEC applicable facility be determined?

Except for WEC applicable facilities with a waste emissions threshold of zero as determined in § 99.20(e), the total facility applicable emissions and WEC applicable emissions for each WEC applicable facility for the reporting year will be calculated as described in paragraphs (a) through (d) of this section, as applicable. If the waste emissions threshold for a WEC applicable facility is zero as determined in § 99.20(e), then the total facility applicable emissions and WEC applicable emissions for the WEC applicable facility are zero and paragraphs (a) through (d) of this section do not apply to the WEC applicable facility.

(a) The total facility applicable emissions for each WEC applicable facility will be calculated using equation B–6 of this section.

$$E_{TFA,CH_4} = E_{SubpartW,CH_4} - TH_{WAF} \quad \text{(Eq. B-6)}$$

Where:

$E_{TFA,CH4}$ = The annual methane emissions equal to, below, or exceeding the waste emissions threshold for a WEC applicable facility prior to consideration of any applicable exemptions (*i.e.,* total facility applicable emissions), mt CH_4.

$E_{SubpartW,CH4}$ = The annual methane emissions for a WEC applicable facility, as reported to § 99.7(b)(2)(ix), mt CH_4.

TH_{WAF} = The waste emissions threshold for a WEC applicable facility, as determined in § 99.20(e), mt CH_4.

(b) If the total facility applicable emissions calculated using equation B–6 of this section are less than or equal to 0 mt, then the WEC applicable emissions are equal to the total facility applicable emissions.

(c) If the total facility applicable emissions calculated using equation B–6 of this section are greater than 0 mt and the regulatory compliance exemption as specified in § 99.41 applies for the entire reporting year and to all sites at the WEC applicable facility, the WEC applicable emissions for that facility are equal to 0 mt.

(d) If the total facility applicable emissions calculated using equation B–6 of this section are greater than 0 mt and the regulatory compliance exemption as specified in § 99.41 does not apply for the entire reporting year or does not apply to all sites at the WEC applicable facility, the WEC applicable emissions for each WEC applicable facility will be calculated using equation B–7 of this section. If the result of this calculation is less than 0 mt CH_4, the WEC applicable emissions for the facility are equal to 0 mt CH_4.

$$E_{WA,CH_4} = E_{TFA,CH_4} - E_{Delay,CH_4} - E_{RCE,CH_4} - E_{Plug,CH_4} \quad \text{(Eq. B-7)}$$

Where:

$E_{WA,CH4}$ = The annual methane emissions associated with a WEC applicable facility that are either equal to, below, or exceeding the waste emissions threshold for the WEC applicable facility (*i.e.,* the WEC applicable emissions), mt CH_4.

$E_{TFA,CH4}$ = The annual methane emissions equal to, below, or exceeding the waste emissions threshold for a WEC applicable facility prior to consideration of any applicable exemptions for the reporting year, mt CH_4.

$E_{Delay,CH4}$ = The quantity of methane emissions exempted, as determined in equation C–1 of § 99.32, at the WEC applicable facility due to an unreasonable delay in environmental permitting of gathering or transmission infrastructure meeting the applicability provisions of § 99.30, mt CH_4.

$E_{RCE,CH4}$ = The quantity of methane emissions, as determined pursuant to § 99.43, at the WEC applicable facility attributable to the regulatory compliance exemption subject to the applicability provisions of § 99.41, mt CH_4.

$E_{Plug,CH4}$ = The total quantity of annual methane emissions, as determined in equation E–7 of § 99.52, at the WEC applicable facility attributable to all wells that were permanently shut-in and plugged during the reporting year meeting the applicability provisions of § 99.50, mt CH_4.

§ 99.22 How will the net WEC emissions for a WEC obligated party be determined?

(a) If the condition specified in § 99.7(b)(1)(iv) does not apply for the reporting year, net WEC emissions for a WEC obligated party, equal to the sum of WEC applicable emissions from all facilities with the same WEC obligated party, as specified in § 99.2, will be calculated using equation B–8 of this section.

$$E_{NetWEC,CH_4} = \sum_{j=1}^{N} E_{WA,CH_4,j} \quad \text{(Eq. B-8)}$$

Where:

$E_{NetWEC,CH4}$ = The net WEC emissions for the WEC obligated party for the reporting year, rounded to the nearest 0.01 mt CH_4.

$E_{WA,CH4,j}$ = The annual methane emissions equal to, below, or exceeding the waste emissions thresholds (*i.e.,* the WEC applicable emissions) for a WEC applicable facility, *j,* as calculated in § 99.21(b) or (d) of a WEC obligated party, mt CH_4.

N = Total number of WEC applicable facilities of a WEC obligated party, excluding any WEC applicable facilities for which the regulatory compliance exemption as specified in § 99.41 applied for the entire reporting year.

(b) If the condition specified in § 99.7(b)(1)(iv) applies for the reporting year, net WEC emissions for a WEC obligated party must be calculated according to this paragraph (b). The net WEC emissions for any acquired WEC applicable facilities that were not associated with the parent company reported pursuant to § 99.7(b)(1)(vi) will be calculated using equation B–8 of this section. The net WEC emissions for the WEC applicable facilities that were associated with the WEC obligated party as of December 31 of the reporting year and any acquired WEC applicable facilities that were associated with the parent company reported pursuant to § 99.7(b)(1)(vi) will be calculated using equation B–8 of this section.

(c) If net WEC emissions are calculated pursuant to paragraph (b) of this section, each calculated net WEC emission value will each be treated as a distinct net WEC emission for purposes of netting under § 99.23 and for which the WEC obligation for the WEC obligated party will be determined under § 99.24.

§ 99.23 How will the transfer of negative net WEC emissions for facilities under the same parent company be determined?

(a) Subject to the requirements of this section, a WEC obligated party with a negative quantity of net WEC emissions, as calculated pursuant to § 99.22, may elect to transfer negative quantities of net WEC emissions to another WEC obligated party sharing the same parent company, as indicated in the annual WEC filing for the reporting year submitted pursuant to § 99.7 by each WEC obligated party involved in the transfer.

(b) Following each transfer, the net WEC emissions of the WEC obligated party transferring the negative quantities of net WEC emissions will increase by the quantity of metric tons of CH_4 transferred and the net WEC emissions of the WEC obligated party receiving the transfer will decrease by this amount. In no case can the net WEC emissions of the WEC obligated party transferring the negative quantities of net WEC emissions become a positive value as a result of transfers.

(c) Each transfer of negative quantities of net WEC emissions must be submitted electronically in a format specified by the Administrator and must be approved by the designated representative of each WEC obligated party. Each transfer will designate the WEC obligated party making the transfer, the quantity of metric tons of negative emissions to transfer, and the WEC obligated party that is receiving the transfer. Each transfer must be initiated by the designated representative of the WEC obligated party that is transferring the negative quantities of net WEC emissions. The transfer shall be considered to have occurred at such time that the designated representative of the WEC obligated party that is receiving the transfer approves receipt of the transfer.

(d) Transfers may occur prior to the deadline for submission of the WEC filing under § 99.5, provided that all necessary information to determine net WEC emissions has been completed by both WEC obligated parties involved in the transfer. Transfers for a reporting year must be completed by the date specified in § 99.7(e).

(e) For transfers occurring after the deadline for submission of the WEC filing under § 99.5, the WEC obligated party receiving the transfer must follow the provisions of § 99.7(e) regarding WEC filing revisions and § 99.8(d) regarding resubmittals that result in a change in WEC obligation.

(f) If a WEC obligated party that previously transferred negative quantities of net WEC emissions to another WEC obligated party submits a revised WEC filing pursuant to § 99.7(e) that results in a change to that WEC obligated party's net WEC emissions, the validity of any previously transferred negative quantities of net WEC emissions will be assessed as follows:

(1) If the revised WEC filing results in a greater magnitude of negative quantities of net WEC emissions than in the prior WEC filing, those negative quantities of net WEC emissions are eligible for transfer subject to the requirements of this section.

(2) If the revised WEC filing results in a decrease or elimination of negative quantities of net WEC emissions compared to the prior WEC filing (*i.e.,* the WEC obligated party's net WEC emissions are closer to zero or a positive number), and the WEC obligated party had previously transferred negative quantities of net WEC emissions greater than the revised net WEC emissions, any previously transferred negative quantities of net WEC emissions will be invalidated such that the total quantity of remaining valid negative quantities of net WEC emissions does not exceed the revised net WEC emissions. Previously transferred negative quantities of net WEC emissions will be invalidated in the order that the transfers were approved by the designated representative of the WEC obligated party that received the transfer, beginning with the last transfer approved. Each WEC obligated party that received invalidated negative quantities of net WEC emissions must follow the provisions of § 99.7(e) regarding WEC filing revisions and § 99.8(d) regarding resubmittals that result in a change in WEC obligation.

(g) For each transfer of negative quantities of net WEC emissions between WEC obligated parties, the WEC obligated party that transferred negative quantities of net WEC emissions and the WEC obligated party that received negative quantities of net WEC emissions must maintain all records of the transaction, including any value exchanged, if applicable.

(h) Each transfer of net WEC emissions will be denominated in hundredths of a metric ton of methane (*i.e.,* 0.01 mt CH_4) or larger order of magnitude.

§ 99.24 How will the WEC Obligation for a WEC obligated party be determined?

(a) If the net WEC emissions for a WEC obligated party as determined in § 99.22 and following any transfers pursuant to § 99.23 (*i.e.,* the net WEC emissions after transfers) are less than or equal to zero, the WEC obligated party's WEC obligation is zero and the WEC obligated party is not subject to a waste emissions charge in the reporting year for the WEC applicable facilities included in the calculation of the net WEC emissions as determined in § 99.22.

(b) If the net WEC emissions for a WEC obligated party as determined in § 99.22 and following any transfers pursuant to § 99.23 (*i.e.,* the net WEC emissions after transfers) are greater than zero, the WEC obligation will be calculated according to the applicable provisions in paragraphs (b)(1) through (3) of this section.

(1) For reporting year 2024, multiply the net WEC emissions after transfers by $900 per mt CH_4 to determine the WEC obligation.

(2) For reporting year 2025, multiply the net WEC emissions after transfers by $1,200 per mt CH_4 to determine the WEC obligation.

(3) For reporting year 2026 and each year thereafter, multiply the net WEC emissions after transfers by $1,500 per mt CH_4 to determine the WEC obligation.

Subpart C—Unreasonable Delay Exemption

§ 99.30 Which facilities qualify for the exemption for emissions caused by an unreasonable delay in environmental permitting of gathering or transmission infrastructure?

(a) The WEC applicable facility must be in the offshore petroleum and natural gas production or onshore petroleum and natural gas production industry segment, as those industry segment terms are defined in § 98.230 of this chapter.

(b) The total facility applicable emissions for the WEC applicable facility as calculated in accordance with § 99.21(a) must exceed 0 mt.

(c) The WEC obligated party seeking to exempt a portion of its facility applicable emissions from a WEC applicable facility must not have contributed to the delay. All requests for information regarding the environmental permit application received by the WEC obligated party must not have exceeded the response time requested by, or agreed to by, the

permitting agency or exceeded 30 days if no specific response time is requested. The WEC obligated party seeking eligibility for the exemption must not be a plaintiff in a lawsuit regarding the environmental permit application.

(d) The WEC applicable facility must have reported eligible methane emissions pursuant to § 98.236 of this chapter in the reporting year that occurred as a result of a delay in environmental permitting of gathering or transmission infrastructure necessary for offtake of increased volume as a result of methane emissions mitigation implementation. These eligible methane emissions must have been in compliance with all applicable local, State, and Federal regulations. For purposes of this section, eligible methane emissions for exemption consist of the emissions from the increased volume of gas used as an onsite fuel source, used for another useful purpose that an otherwise purchased fuel or raw material would have served, reinjection into a well, or flared, if that gas would have been routed to a gas gathering flow line or collection system to a sales line if not for the delay in environmental permitting.

(e) Thirty-six (36) months must have passed since submission of the technically complete environmental permit application, as documented by the appropriate permitting authority, to construct gathering or transmission infrastructure without approval or denial of the environmental permit application.

§ 99.31 What are the reporting requirements for the exemption for emissions caused by an unreasonable delay in environmental permitting of gathering or transmission infrastructure?

(a) For a WEC applicable facility meeting all criteria in § 99.30(a) through (e), you may elect to report information regarding an exemption for unreasonable delay in permitting of gathering or transmission infrastructure for a given reporting year. The unreasonable delay exemption information to be reported is described in paragraph (b) of this section. The unreasonable delay exemption information shall be submitted as described in § 99.7.

(b) For each unreasonable delay exemption, the WEC obligated party must report the information specified in paragraphs (b)(1) through (13) of this section.

(1) The company name and name of the facility that submitted the environmental permit application to construct and/or operate gathering or transmission infrastructure.

(2) For reporting year 2025 and later, for a WEC applicable facility in the onshore petroleum and natural gas production industry segment, as that industry segment term is defined in § 98.230 of this chapter, the well-pad ID, as reported pursuant to § 98.236(aa)(1)(iii)(B) of this chapter, of each well-pad impacted by the unreasonable delay in environmental permitting of gathering or transmission infrastructure.

(3) The date the environmental permit application request experiencing an unreasonable delay to build gathering or transmission infrastructure was submitted to the permitting authority and the date the permitting authority determined the application to be technically complete.

(4) A certification that the WEC obligated party seeking to exempt a portion of its facility applicable emissions from a WEC applicable facility has not contributed to the unreasonable delay, has been responsive to the relevant permitting authority regarding the environmental permit application and is not a plaintiff in litigation related to the environmental permit application. For purposes of this paragraph, responsive shall be interpreted to mean that the entity has responded to all requests from the permitting authority within the time frame requested or agreed to by the relevant authority or within thirty (30) days if no timeframe is specified.

(5) A listing of methane emissions mitigation activities that are impacted by the unreasonable permitting delay.

(6) The estimated date to commence operation of the gathering or transmission infrastructure if the application had been approved within thirty-six (36) months.

(7) If the application has been approved and operations commenced during the reporting year, the first date that offtake to the gathering or transmission infrastructure from the implementation of methane emissions mitigation occurred.

(8) The beginning and ending date for which the eligible delay limited the offtake of increased volume associated with methane emissions mitigation activities for the reporting year as determined according to § 99.32(a).

(9) The increased volumes of gas resulting from methane emissions mitigation implementation as determined according to § 99.32(b), in thousand standard cubic feet. For reporting year 2024, report these values for the WEC applicable facility. For reporting year 2025 and later, if the WEC applicable facility is in the onshore petroleum and natural gas production industry segment, report these values for each well-pad site reported in paragraph (b)(2) of this section. Report the increased volumes associated with each of the following:

(i) Onsite fuel source.

(ii) Another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source.

(iii) Reinjection into a well.

(iv) Flaring.

(10) The quantity of methane emissions to be exempted due to the unreasonable delay for the reporting year calculated as specified in § 99.32.

(i) For a WEC applicable facility in the offshore petroleum and natural gas production industry segment, report the following for the WEC applicable facility:

(A) The result of equation C–1 of § 99.32(c)(1), in metric tons CH_4.

(B) The quantity of methane emissions from another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, ($E_{Use,CH4}$), in metric tons CH_4.

(C) The quantity of methane emissions from reinjection of recovered gas ($E_{Reinject,CH4}$), in metric tons CH_4.

(D) The quantity of methane emissions from flaring ($E_{Flare,CH4}$), in metric tons CH_4.

(E) The total quantity of natural gas that was flared at the WEC applicable facility in the reporting year, in thousand scf.

(ii) For a WEC applicable facility in the onshore petroleum and natural gas production industry segment, for reporting year 2024 report the following for the WEC applicable facility:

(A) The result of equation C–2 of § 99.32(c)(2), in metric tons CH_4.

(B) The quantity of methane emissions from use as an onsite fuel source of increased volume of natural gas resulting from methane emissions mitigation implementation ($E_{Fuel,CH4}$), as calculated in equation C–5 to § 99.32(c)(5), in metric tons CH_4.

(C) The quantity of methane emissions from another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, ($E_{Use,CH4}$), as calculated in equation C–6 to § 99.32(c)(6), in metric tons CH_4.

(D) The quantity of methane emissions from reinjection of increased volume of natural gas resulting from methane emissions mitigation implementation ($E_{Reinject,CH4}$), as calculated in equation C–7 to § 99.32(c)(7), in metric tons CH_4.

(E) The quantity of methane emissions from flaring of increased volume of natural gas resulting from methane emissions mitigation implementation ($E_{Flare,CH4}$), as calculated in equation C–8B to § 99.32(c)(8), in metric tons CH_4.

(iii) For a WEC applicable facility in the onshore petroleum and natural gas production industry segment, for reporting year 2025 and later, report the following for each well-pad site reported in paragraph (b)(2) of this section:

(A) The result of equation C–4 of § 99.32(c)(4), in metric tons CH_4.

(B) The quantity of methane emissions from use as an onsite fuel source of increased volume of natural gas resulting from methane emissions mitigation implementation ($E_{Fuel,CH4}$), as calculated in equation C–5 to § 99.32(c)(5), in metric tons CH_4.

(C) The quantity of methane emissions from another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, ($E_{Use,CH4}$), as calculated in equation C–6 to § 99.32(c)(6), in metric tons CH_4.

(D) The quantity of methane emissions from reinjection of increased volume of natural gas resulting from methane emissions mitigation implementation ($E_{Reinject,CH4}$), as calculated in equation C–7 to § 99.32(c)(7), in metric tons CH_4.

(E) The quantity of methane emissions from flaring of increased volume of natural gas resulting from methane emissions mitigation implementation ($E_{Flare,CH4}$), as calculated in equation C–8B to § 99.32(c)(8), in metric tons CH_4.

(iv) For a WEC applicable facility in the onshore petroleum and natural gas production industry segment that reported emissions from use as an onsite fuel source of increased volume of natural gas resulting from methane emissions mitigation implementation ($E_{Fuel,CH4}$), report the information specified in paragraphs (b)(10)(iv)(A) and (B) of this section, as applicable. For reporting year 2024, report each value for the WEC applicable facility. For reporting year 2025 and later, report the value for each well-pad site.

(A) The quantity of methane emissions from combustion of increased volume of natural gas resulting from methane emissions mitigation implementation in stationary or portable fuel combustion equipment as calculated using the methods in § 98.233(z) of this chapter ($E_{CombEq,CH4}$), in metric tons CH_4.

(B) The total volume of natural gas combusted in reciprocating internal combustion engines with crankcase vents during the reporting year (V_{RICE}), in thousand scf.

(v) For a WEC applicable facility in the onshore petroleum and natural gas production industry segment that reported emissions from reinjection into a well ($E_{Reinject,CH4}$), report the information specified in paragraphs (b)(10)(v)(A) and (B) of this section, as applicable. For reporting year 2024, report each value for the WEC applicable facility. For reporting year 2025 and later, report the value for each well-pad site.

(A) A list including each centrifugal compressor unique name or ID as submitted in the part 98 report for the WEC applicable facility that was used in the reinjection into wells of natural gas resulting from methane emissions mitigation implementation (*i.e.,* that was included in $Count_{Cent,Reinject}$ of equation C–7 of this part). For reporting year 2024, use the values reported to § 98.236(o)(1)(i) of this chapter. For reporting year 2025 and later, use the values reported to § 98.236(o)(1)(ii) of this chapter.

(B) A list of each reciprocating compressor unique name or ID as submitted to in the part 98 report for the WEC applicable facility that was used in the reinjection into wells of natural gas resulting from methane emissions mitigation implementation (*i.e.,* that was included in $Count_{Recip,Reinject}$ of equation C–7 of this part). For reporting year 2024, use the values reported to § 98.236(p)(1)(i) of this chapter. For reporting year 2025 and later, use the values reported to § 98.236(p)(1)(ii) of this chapter.

(vi) For a WEC applicable facility in the onshore petroleum and natural gas production industry segment that reported emissions from flaring ($E_{Flare,CH4}$), report the information specified in paragraphs (b)(10)(vi)(A) and (B) of this section for all reporting years. For reporting year 2025 and later, report the information specified in paragraph (b)(10)(vi)(C) of this section. For reporting year 2024, report the information specified in paragraph (b)(10)(vi)(A) for the WEC applicable facility. For reporting year 2025 and later, report the information specified in paragraph (b)(10)(vi)(A) for each well-pad site.

(A) The unique name or ID as reported pursuant to § 98.236(n)(1) of this chapter for each flare stack that flared gas resulting from methane emissions mitigation implementation.

(B) For each flare stack reported to paragraph (b)(10)(vi)(A) of this section, report the volume of natural gas resulting from methane emissions mitigation implementation that was flared at that flare as determined according to § 99.32(b)(4), in thousand scf.

(C) For each flare stack reported to paragraph (b)(10)(vi)(A) of this section, indicate if flow for each stream to the flare was measured or determined in accordance with § 98.233(n)(3)(ii) of this chapter and that stream or combination of streams contained only flow resulting from the environmental permit delay. If so, report the unique ID as reported pursuant to § 98.236(n)(3) of this chapter for each stream that contained only flow resulting from the environmental permit delay.

(vii) For a WEC applicable facility in the onshore petroleum and natural gas production industry segment that reported emissions from another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, ($E_{Use,CH4}$) and/or emissions from reinjection into a well ($E_{Reinject,CH4}$) and quantified the equipment leaks associated with either/both use(s), report the information specified in paragraphs (b)(10)(vii)(A) through (F) of this section, as applicable. For reporting year 2024, report this information for the WEC applicable facility. For reporting year 2025 and later, report this information for each well-pad site. Report separately the information specified in paragraphs (b)(10)(vii)(A) through (F) of this section, as applicable, related to another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, and related to reinjection into a well.

(A) Indicate the method used to calculate equipment leak emissions (*i.e.,* § 99.32(c)(9)(i), (ii), or (iii)).

(B) If the method in § 99.32(c)(9)(i) is used to calculate equipment leak emissions, you must report the following information for each leak: the leak detection survey method used, component type as reported in § 98.236(q) of this chapter, the volumetric flow rate of the natural gas leak in standard cubic feet per hour and the duration of the measured leak as determined in accordance with § 99.32(c)(9)(i), in hours. The measured leak rate, the component type and duration of measured leaks must only include those components associated with another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, or associated with reinjection into a well.

(C) If the method in § 99.32(c)(9)(ii) is used to calculate equipment leak emissions, you must report the following information for each

component identified as leaking: the leak detection survey method used, the component type as specified in § 98.233(q)(2)(iii) of this chapter and the time the surveyed component is assumed to be leaking and operational, in hours. The component type and time the surveyed components are assumed to be leaking and operational must only include those components associated with another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, or associated with reinjection into a well.

(D) If the method in § 99.32(c)(9)(iii) is used to calculate equipment leak emissions, you must report the counts of each component type listed in § 98.233(r)(2) of this chapter that are associated with a useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, or associated with reinjection into a well.

(E) The mole fraction of CH_4 in produced gas for the sub-basin in which the useful purpose or reinjection occurred, as reported pursuant to § 98.236(aa)(1)(ii)(I) of this chapter, unitless. For RY2024, if multiple sub-basins were impacted by the unreasonable delay, report the value of the flow-weighted average mole fraction for the sub-basins in which the useful purpose or reinjection occurred.

(F) The equipment leak emissions qualifying for exemption from another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, or reinjection into a well as calculated in accordance with paragraphs § 99.32(c)(9)(i), (ii), or (iii), metric tons CH_4.

(11) A certification of the facility's compliance with all applicable local, State, and Federal regulations regarding emissions from the activities listed in § 99.30(d) that occurred as a result of a delay in environmental permitting of gathering or transmission infrastructure.

(12) For each environmental permit relevant to the exemption, the name/type of permit, permitting agency, contact information at the permitting agency, and a link to information on the permit (*e.g.,* available through the permitting agency), if available.

(13) Upon request, any other documentation deemed necessary by the Administrator to verify eligibility under this section.

§ 99.32 How are the methane emissions caused by an unreasonable delay in environmental permitting of gathering or transmission infrastructure quantified?

(a) Determine the time period, in days, associated with the emissions that occurred as a result of the eligible delay within the reporting year as specified in paragraphs (a)(1) and (2) of this section.

(1) The start date of the emissions caused by the delay in the reporting year is the latter of January 1 of the reporting year, or the date on which emissions would have been avoided through commencement of the operation of the gathering or transmission infrastructure if the environmental permit application to construct and/or operate the gathering or transmission infrastructure had been approved within 36 months as specified in § 99.31(b)(6).

(2) The end time of the emissions caused by the delay in the reporting year is the earlier of December 31 of the reporting year or the date the emissions caused by the unreasonable delay ended because the infrastructure commenced operation.

(b) Determine by engineering estimates based upon best available information the increased volume of gas, in thousand standard cubic feet, resulting from methane emissions mitigation implementation during the time period determined in paragraph (a) of this section associated with each of the activities listed in paragraphs (b)(1) through (4) of this section. If the WEC applicable facility is in the offshore petroleum and natural gas production industry segment, determine these values for the WEC applicable facility in every reporting year. If the WEC applicable facility is in the onshore petroleum and natural gas production industry segment, for reporting year 2024 determine these values for the WEC applicable facility, and for reporting year 2025 and later determine these values for each well-pad site impacted by the unreasonable delay.

(1) Onsite fuel source.

(2) Another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source.

(3) Reinjection into a well.

(4) Flaring. Determine this value in accordance with this paragraph (4)(i), (ii), or (iii), as applicable. For the onshore petroleum and natural gas production industry segment flaring volumes must be determined for each flare that received an increased volume of gas resulting from the environmental permit delay and then totaled for the WEC applicable facility or well-pad site, as applicable.

(i) If the WEC applicable facility is in the offshore petroleum and natural gas production industry segment determine by engineering estimate based upon best available information.

(ii) If the WEC applicable facility is in the onshore petroleum and natural gas production industry segment for reporting year 2024, determine by engineering estimate based upon best available information the portion of the flow reported pursuant to § 98.236(n)(4) of this chapter attributable to the environmental permit delay for each flare that received an increased volume of gas. If a continuous emissions monitoring system (CEMS) was used to measure emissions from the flare as reported pursuant to § 98.236(n)(12) of this chapter, do not determine a volume of gas for that flare.

(iii) If the WEC applicable facility is in the onshore petroleum and natural gas production industry segment for reporting year 2025 and later, for each flare that received an increased volume of gas attributable to the environmental permit delay, if flow for each stream to the flare is measured or determined in accordance with § 98.233(n)(3)(ii) of this chapter and that stream or combination of streams contain only flow resulting from the environmental permit delay, use the flow for those streams as reported to § 98.236(n)(11) of this chapter. If flow is measured at the inlet to the flare in accordance with § 98.233(n)(3)(i) of this chapter or the stream flow measured or determined in accordance with § 98.233(n)(3)(ii) of this chapter includes flow unrelated to the environmental permit delay, use an engineering estimate based upon best available information of the portion of flow resulting from the environmental permit delay.

(c) For each well-pad site or offshore platform at a WEC applicable facility impacted by an unreasonable delay in environmental permitting of gathering or transmission infrastructure, you must calculate the emissions that occurred at the well-pad site or offshore platform that were caused by the unreasonable delay according to paragraphs (c)(1) through (9) of this section, as applicable.

(1) For a WEC applicable facility in the offshore petroleum and natural gas production industry segment, as that industry segment term is defined in § 98.230 of this chapter, equation C–1 of this section must be used to calculate the WEC applicable facility unreasonable delay emissions.

$$E_{Delay,CH_4} = \left[\left(E_{Use,CH_4} + E_{Reinject,CH_4}\right) \times \frac{T_d}{T}\right] + \left(E_{Flare,CH_4} \times \frac{V_{MM,Flare}}{V_{WAF,Flare}}\right) \qquad \text{(Eq. C-1)}$$

Where:

$E_{Delay,CH4}$ = The quantity of methane emissions attributable to an unreasonable delay in environmental permitting of gathering or transmission infrastructure during the reporting year at a WEC applicable facility meeting the applicability provisions of § 99.30, mt CH_4.

$E_{Use,CH4}$ = The WEC applicable facility quantity of methane emissions from another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, mt CH_4. For reporting year 2024, use best available data to determine the portion of fugitive emissions reported pursuant to § 98.236(s)(2) of this chapter for the reporting year that were associated with another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source. For reporting year 2025 and later, use the applicable portion of the value reported to § 98.236(s)(3)(ii) of this chapter for the reporting year.

$E_{Reinject,CH4}$ = The WEC applicable facility quantity of methane emissions from reinjection of recovered gas, mt CH_4. For reporting year 2024, use best available data to determine the portion fugitive emissions reported pursuant to § 98.236(s)(2) of this chapter for the reporting year that were associated with reinjection of recovered gas. For reporting year 2025 and later, use the applicable portion of the value reported to § 98.236(s)(3)(ii) of this chapter for the reporting year.

T_d = The time period associated with the eligible delay within the reporting year, as determined pursuant to § 99.32(a), in days.

T = The number of days in the reporting year. Use 365, or for leap years, 366.

$E_{Flare,CH4}$ = The WEC applicable facility quantity of methane emissions from flaring, mt CH_4. For reporting year 2024, use the value reported pursuant to § 98.236(s)(2) of this chapter for the reporting year. For reporting year 2025 and later, use the value reported to § 98.236(s)(3)(ii) of this chapter for the reporting year.

$V_{MM,Flare}$ = The volume of natural gas resulting from methane emissions mitigation implementation that was flared as determined pursuant to § 99.32(b)(4)(i), in thousand scf.

$V_{WAF,Flare}$ = The total quantity of natural gas that was flared at the WEC applicable facility in the reporting year, in thousand scf.

(2) For reporting year 2024, for a WEC applicable facility in the onshore petroleum and natural gas production industry segment, as that industry segment term is defined in § 98.230 of this chapter, equation C–2 of this section must be used to calculate the WEC applicable facility unreasonable delay emissions.

$$E_{Delay,CH_4} = E_{Fuel,CH_4} + E_{Use,CH_4} + E_{Reinject,CH_4} + E_{Flare,CH_4} \qquad \text{(Eq. C-2)}$$

Where:

$E_{Delay,CH4}$ = The quantity of methane emissions attributable to an unreasonable delay in environmental permitting of gathering or transmission infrastructure during the reporting year at a WEC applicable facility meeting the applicability provisions of § 99.30, mt CH_4.

$E_{Fuel,CH4}$ = The WEC applicable facility quantity of methane emissions from combustion of the increased volume of natural gas resulting from methane emissions mitigation implementation as calculated in accordance with paragraph (c)(5) of this section.

$E_{Use,CH4}$ = The WEC applicable facility quantity of methane emissions from the increased volume of natural gas resulting from methane emissions mitigation implementation used for another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, as calculated in accordance with paragraph (c)(6) of this section.

$E_{Reinject,CH4}$ = The WEC applicable facility quantity of methane emissions from reinjection of the increased volume of natural gas resulting from methane emissions mitigation implementation as calculated in accordance with paragraph (c)(7) of this section.

$E_{Flare,CH4}$ = The WEC applicable facility quantity of methane emissions from flaring of the increased volume of natural gas resulting from methane emissions mitigation implementation as calculated in accordance with paragraph (c)(8) of this section, mt CH_4.

(3) For reporting year 2025 and later, for a WEC applicable facility in the onshore petroleum and natural gas production industry segment, as that industry segment term is defined in § 98.230 of this chapter, equation C–3 of this section must be used to calculate the WEC applicable facility unreasonable delay emissions.

$$E_{Delay,CH_4} = \sum_{i=1}^{N} E_{WP\text{-}Delay,CH_4} \qquad \text{(Eq. C-3)}$$

Where:

$E_{Delay,CH4}$ = The quantity of methane emissions at the WEC applicable facility attributable to unreasonable delay during the reporting year meeting the applicability provisions of § 99.30, mt CH_4.

$E_{WP\text{-}Delay,CH4}$ = The quantity of methane emissions attributable to a well-pad site ''i'' that met the applicability provisions of § 99.30 during the reporting year calculated using equation C–4 of this section.

N = Total number of well-pad sites that met the applicability provisions of § 99.30 during the reporting year at a WEC applicable facility.

(4) For reporting year 2025, for a WEC applicable facility in the onshore petroleum and natural gas production industry segment, as that industry segment term is defined in § 98.230 of this chapter, equation C–4 of this section must be used to calculate the unreasonable delay emissions for each affected well-pad site.

$$E_{WP\text{-}Delay,CH_4} = E_{Fuel,CH_4} + E_{Use,CH_4} + E_{Reinject,CH_4} + E_{Flare,CH_4} \quad \text{(Eq. C-4)}$$

Where:

$E_{WP\text{-}Delay,CH4}$ = The annual quantity of methane emissions attributable to a well-pad site impacted by an unreasonable delay in environmental permitting of gathering or transmission infrastructure during the reporting year at a WEC applicable facility meeting the applicability provisions of § 99.30, mt CH_4.

$E_{Fuel,CH4}$ = The well-pad site quantity of methane emissions from use as an onsite fuel source of the increased volume of natural gas resulting from methane emissions mitigation implementation as calculated in accordance with paragraph (c)(5) of this section.

$E_{Use,CH4}$ = The well-pad site quantity of methane emissions from the increased volume of natural gas resulting from methane emissions mitigation implementation used for another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, as calculated in accordance with paragraph (c)(6) of this section.

$E_{Reinject,CH4}$ = The well-pad site quantity of methane emissions from reinjection of the increased volume of natural gas resulting from methane emissions mitigation implementation as calculated in accordance with paragraph (c)(7) of this section.

$E_{Flare,CH4}$ = The well-pad site quantity of methane emissions from flaring of the increased volume of natural gas resulting from methane emissions mitigation implementation as calculated in accordance with paragraph (c)(8) of this section, mt CH_4.

(5) If a portion, or all, of the increased volume of natural gas resulting from methane emissions mitigation was used as an onsite fuel source, equation C–5 of this section must be used to calculate the quantity of methane emissions from use as an onsite fuel source of increased volume of natural gas resulting from methane emissions mitigation implementation.

$$E_{Fuel,CH_4} = E_{CombEq,CH_4} + \left(E_{CCV,CH_4} \times \frac{V_{Combusted}}{V_{RICE}}\right) \quad \text{(Eq. C-5)}$$

Where:

$E_{Fuel,CH4}$ = The quantity of methane emissions from use as an onsite fuel source of the increased volume of natural gas resulting from methane emissions mitigation implementation, mt CH_4.

$E_{CombEq,CH4}$ = The quantity of methane emissions from use as an onsite fuel source of the increased volume of natural gas resulting from methane emissions mitigation implementation in stationary or portable fuel combustion equipment, mt CH_4. Use the methods in § 98.233(z) of this chapter to calculate the methane emissions from the use as an onsite fuel source in stationary or portable equipment of natural gas resulting from methane emissions mitigation implementation.

$E_{CCV,CH4}$ = The WEC applicable facility sum quantity of methane emissions from crankcase venting, mt CH_4. For reporting year 2024, use a value of 0. For reporting year 2025 and later, use the sum total of the values reported to § 98.236(ee)(2)(ii) and (ee)(3)(iv) of this chapter for the reporting year.

$V_{Combusted}$ = The volume of natural gas resulting from methane emissions mitigation implementation that was used as an onsite fuel source as determined pursuant to § 99.32(b)(1), in thousand scf.

V_{RICE} = The total volume of natural gas combusted in reciprocating internal combustion engines with crankcase vents during the reporting year, in thousand scf.

(6) If a portion, or all, of the increased volume of natural gas resulting from methane emissions mitigation was used for another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source, equation C–6 of this section must be used to calculate the quantity of methane emissions from the use of the increased volume of natural gas resulting from methane emissions mitigation implementation.

$$E_{Use,CH_4} = E_{Leaks\text{-}Use,CH_4} \quad \text{(Eq. C-6)}$$

Where:

$E_{Use,CH4}$ = The quantity of methane emissions from the increased volume of natural gas resulting from methane emissions mitigation implementation used for another useful purpose that an otherwise purchased fuel or raw material would have served, excluding use as an onsite fuel source as calculated in accordance with paragraph (c)(5) of this section, mt CH_4.

$E_{Leaks\text{-}Use,CH4}$ = The quantity of methane emissions from equipment leaks from components involved in the useful purpose as calculated in accordance with paragraphs (c)(9)(i) through (iii) of this section, as applicable, for the reporting year, mt CH_4. When determining the equipment leak emissions, use only the equipment components that were involved in the useful purpose that an otherwise purchased fuel or raw material would have served during the eligible delay.

(7) If a portion, or all, of the increased volume of natural gas resulting from methane emissions mitigation was reinjected into a well, equation C–7 of this section must be used to calculate the quantity of methane emissions from reinjection of the increased volume of natural gas resulting from methane emissions mitigation implementation.

$$E_{Reinject,CH_4} = \left[\left(E_{Cent,CH_4} \times \frac{Count_{Cent,Reinject}}{C_{Cent,Total}}\right) + \left(E_{Recip,CH_4} \times \frac{Count_{Recip,Reinject}}{C_{Recip,Total}}\right)\right] \times \frac{T_d}{T} + E_{Leaks\text{-}Reinject,CH_4} \quad \text{(Eq. C-7)}$$

Where:

$E_{Reinject,CH4}$ = The total quantity of methane emissions from reinjection into a well of increased volume of natural gas resulting from methane emissions mitigation implementation, mt CH_4.

$E_{Cent,CH4}$ = The total quantity of methane emissions from centrifugal compressors, mt CH_4. For reporting year 2024, use the sum total of the values reported to § 98.236(o)(2)(ii)(D)(2) and (o)(5)(iii) of this chapter for the WEC applicable

facility. For reporting year 2025 and later, use the sum total of the values reported to § 98.236(o)(2)(ii)(D)(2) and (o)(5)(iv) of this chapter for the well-pad site.

$Count_{Cent,Reinject}$ = The count of centrifugal compressors used in the reinjection into wells of natural gas resulting from methane emissions mitigation implementation. For reporting year 2024, use the count associated with the WEC applicable facility for the reporting year. For reporting year 2025 and later, use the count associated with the well-pad site for the reporting year.

$Count_{Cent,Total}$ = The total count of centrifugal compressors reported pursuant to § 98.236(o)(1) of this chapter. For reporting year 2024, use the quantity reported at the WEC applicable facility for the reporting year. For reporting year 2025 and later, use the quantity reported for the well-pad site.

$E_{Recip,CH4}$ = The total quantity of methane emissions from reciprocating compressors, mt CH_4. For reporting year 2024, use the sum total of the values reported to § 98.236(p)(2)(ii)(D)(2) and (p)(5)(iii) of this chapter for the WEC applicable facility. For reporting year 2025 and later, use the sum total of the values reported to § 98.236(p)(2)(ii)(D)(2) and (p)(5)(iv) of this chapter for the well-pad site.

$Count_{Recip,Reinject}$ = The count of reciprocating compressors used in the reinjection into wells of natural gas resulting from methane emissions mitigation implementation. For reporting year 2024, use the count associated with the WEC applicable facility for the reporting year. For reporting year 2025 and later, use the count associated with the well-pad site.

$Count_{Recip,Total}$ = The total count of reciprocating compressors reported pursuant to § 98.236(o)(1) of this chapter. For reporting year 2024, use the quantity reported at the WEC applicable facility for the reporting year. For reporting year 2025 and later, use the quantity reported for the well-pad site.

T_d = The time period associated with the eligible delay within the reporting year, as determined pursuant to § 99.32(a), in days.

T = The number of days in the reporting year. Use 365, or for leap years, 366.

$E_{Leaks\text{-}Reinject,CH4}$ = The quantity of methane emissions from equipment leaks from components involved in reinjection as calculated in accordance with paragraph (c)(9)(i) through (iii) of this section, as applicable, for the reporting year, mt CH_4. When determining the equipment leaks use only the equipment components that were involved in reinjection during the eligible delay.

(8) If a portion, or all, of the increased volume of natural gas resulting from methane emissions mitigation was flared, equation C–8A of this section must be used to calculate the quantity of methane emissions from flaring of increased volume of natural gas resulting from methane emissions mitigation implementation for each associated flare. For reporting year 2024, if a CEMS was used to measure emissions from an associated flare as reported to § 98.236(n)(12) of this part, do not determine methane emissions for that flare. Equation C–8B of this section must be used to calculate the quantity of methane emissions from flaring of increased volume of natural gas resulting from methane emissions mitigation implementation for the WEC applicable facility or well-pad site, as applicable.

$$E_{Flare_i,CH_4} = V_{Flared} \times X_{CH_4} \times [(1 - \eta_D) \times Z_L + Z_U] \times \rho_{CH_4} \times 10^{-3} \qquad \text{(Eq. C-8A)}$$

Where:

$E_{Flare,i,CH4}$ = The quantity of methane emissions from flaring of increased volume of natural gas resulting from methane emissions mitigation implementation for an individual flare, mt CH_4.

V_{Flared} = The volume of natural gas resulting from methane emissions mitigation implementation that was flared at the flare as determined pursuant to § 98.32(b)(4)(ii) or (iii) of this chapter, as applicable, scf.

X_{CH4} = Mole fraction of CH_4 in the gas sent to the flare. For reporting year 2024, use the value reported to § 98.236(n)(7) of this chapter. For reporting year 2025 and later, if you determine composition of each stream routed to the flare as specified in § 98.233(n)(4)(iii) of this chapter and the stream or combination of streams contain only the flow resulting from methane emissions mitigation implementation, use the mole fraction as reported to § 98.236(n)(14) of this chapter (if using multiple streams, use the flow-weighted average mole fraction). Otherwise, for reporting year 2025 and later, use the average mole fraction of CH_4 in produced gas for the sub-basin in which the well-pad site at which methane emissions mitigation implementation occurred as reported to § 98.236(aa)(1)(ii)(I) of this chapter.

O = Flare destruction efficiency for the flare. For reporting year 2024, use the flare combustion efficiency reported to § 98.236(n)(6) of this chapter. For reporting year 2025 and later, use the flare destruction efficiency reported to § 98.236(n)(13) of this chapter.

Z_L = Fraction of the feed gas sent to the burning flare, equal to 1—Z_U of this section.

Z_U = Fraction of the feed gas sent to the flare when it was un-lit. For reporting year 2024, use the value reported to § 98.236(n)(5) of this chapter. For reporting year 2025 and later, use the value reported to § 98.236(n)(12) of this chapter.

ρ_{CH4} = Density of methane at 60 °F and 14.7 psia. Use 0.0192 kg/ft^3.

10^{-3} = Conversion from kilograms to metric tons.

$$E_{Flare,CH_4} = \sum_{i=1}^{M} E_{Flare_i,CH_4} \qquad \text{(Eq. C-8B)}$$

Where:

$E_{Flare,CH4}$ = The quantity of methane emissions from flaring of increased volume of natural gas resulting from methane emissions mitigation implementation, mt CH_4.

$E_{Flare,i,CH4}$ = The quantity of methane emissions from flaring of increased volume of natural gas resulting from methane emissions mitigation implementation for each associated flare, *i*, as determined using equation C–8A of this section, mt CH_4.

M = Total number of flares that received an increased volume of gas resulting from methane emissions mitigation implementation.

(9) You must quantify equipment leak methane emissions from components involved in the useful purpose or reinjection of the increased volume of natural gas resulting from methane emissions mitigation implementation at the WEC applicable facility in accordance with the methods in paragraphs (c)(9)(i) through (iii) of this section. You must use the same calculation method for equipment leaks reported pursuant to § 98.236(q) or (r) of this chapter in the part 98 report associated with the components involved in the useful purpose or reinjection of the increased volume of natural gas resulting from methane emissions mitigation implementation at the WEC applicable facility.

(i) If equipment leak surveys and measurement were used to quantify methane emissions from components involved in the useful purpose or reinjection of the increased volume of natural gas resulting from methane emissions mitigation implementation and reported pursuant to § 98.236(q) of this chapter in the part 98 report for a WEC applicable facility, you must calculate the methane emissions (*i.e.,* $E_{Measured\ Leak,\ CH4}$) for each leak in accordance with equation C–9A of this section. The sum of the quantified methane emissions from components involved in the useful purpose or reinjection of the increased volume of natural gas resulting from methane emissions mitigation implementation calculated in accordance with equation C–9A of this section shall be considered ''$E_{Leaks\text{-}Use,\ CH4}$'' and ''$E_{Leaks\text{-}Reinject,\ CH4}$'' in Equations C–6 and C–7 of this section, as applicable.

$$E_{Measured\ Leak,CH_4} = Q_{p,z} \times T_{p,z} \times M_{CH_4} \times k \times \rho_{CH_4} \times 10^{-3} \qquad \text{(Eq. C-9A)}$$

Where:

$E_{Measured\ Leak,CH4}$ = The quantity of methane emissions attributable to a measured leak emissions from components involved in the useful purpose or reinjection of the increased volume of natural gas resulting from methane emissions mitigation implementation, mt CH_4.

p = Component type as reported in accordance with § 98.236(q) of this chapter, as applicable.

z = An individual component involved in the useful purpose or reinjection of type ''p'' detected as leaking and measured any leak survey during the year.

$Q_{p,z}$ = Volumetric flow rate of the natural gas leak for component ''z'' of component type ''p'' converted to standard conditions according to § 98.233(q)(3)(iii) of this chapter, scf whole gas/hour/component, as applicable.

M_{CH4} = The mole fraction of CH_4 in produced gas for the well. For onshore petroleum and natural gas production wells, use the mole fraction of CH_4 in produced gas for the sub-basin associated with the well, as reported pursuant to § 98.236(aa)(1)(ii)(I) of this chapter, unitless. For RY2024, if multiple sub-basins were impacted by the unreasonable delay, use the flow-weighted average mole fraction.

$T_{p,z}$ = The total time the surveyed component ''z'' of component type ''p'' was assumed to be leaking. If one leak detection survey is conducted in the calendar year, assume the component was leaking from the beginning of the delay period as determined in accordance with § 99.32(a)(1) until the date the delay ended as determined in accordance with § 99.32(a)(2), days. If multiple leak detection surveys are conducted in the calendar year, assume a component found leaking in the first survey was leaking since the beginning of the year until the date of the survey; assume a component found leaking in the last survey of the year was leaking from the preceding survey through the date the delay ended as determined in accordance with § 99.32(a)(2), days; assume a component found leaking in a survey between the first and last surveys of the year was leaking since the preceding survey until the date of the survey, days; and sum times for all leaking periods. For each leaking component, account for time the component was not operational (*i.e.,* not operating under pressure) using an engineering estimate based on best available data.

k = The factor to adjust for undetected leaks by respective leak detection method. For reporting year 2024, k equals 1. For reporting year 2025 and later, k equals 1.25 for the methods in § 98.234(a)(1), (3) and (5) of this chapter; k equals 1.55 for the method in § 98.234(a)(2)(i) of this chapter; and k equals 1.27 for the method in § 98.234(a)(2)(ii) of this chapter. Select the factor for the leak detection method used for the permanently shut-in and plugged well, unitless.

ρ_{CH4} = Density of methane, 0.0192 mt/Mscf.

10^{-3} = Conversion factor from scf to Mscf.

(ii) If equipment leak surveys were used to quantify methane emissions from components involved in the useful purpose or reinjection of the increased volume of natural gas resulting from methane emissions mitigation implementation and reported pursuant to § 98.236(q) of this chapter in the part 98 report for a WEC applicable facility, equation C–9B of this section must be used to calculate $E_{Leaks,CH4}$.

$$E_{Leaks,CH_4} = \sum_{p=1}^{N_p} \left(EF_p \times \sum_{z=1}^{x_p} \left(T_{p,z} \times 24 \right) \right) \times M_{CH_4} \times k \times \rho_{CH_4} \times 10^{-3} \qquad \text{(Eq. C-9B)}$$

Where:

$E_{Leaks,CH4}$ = The annual quantity of methane emissions attributable to components involved in the useful purpose or reinjection of the increased volume of natural gas resulting from methane emissions mitigation implementation as reported pursuant to § 98.236(q) of this chapter for the reporting year, mt CH_4.

p = Component type as specified in § 98.233(q)(2)(iii) of this chapter.

N_p = The number of component types with detected leaks involved in the useful purpose or reinjection.

EF_p = The leaker emission factor for component ''p'' as specified in § 98.233(q)(2)(iii) of this chapter, scf whole gas/hour/component.

24 = Conversion from days to hours.

M_{CH4} = The mole fraction of CH_4 in produced gas for the sub-basin in which the useful purpose or reinjection occurred, as reported pursuant to § 98.236(aa)(1)(ii)(I) of this chapter, unitless. For RY2024, if multiple sub-basins were impacted by the unreasonable delay, use the flow-weighted average mole fraction.

x_p = The total number of specific components involved in the useful purpose or reinjection of type ''p'' detected as leaking during the year. A component found leaking in two or more surveys during the year is counted as one leaking component.

$T_{p,z}$ = The total time the surveyed component ''z'' of component type ''p'' was assumed to be leaking. If one leak detection survey is conducted in the calendar year, assume the component was leaking from the beginning of the delay period as determined in accordance with § 99.32(a)(1) until the date the delay ended as determined in accordance with § 99.32(a)(2), days. If multiple leak detection surveys are conducted in the calendar year, assume a component found leaking in the first survey was leaking since the beginning of the year until the date of the survey; assume a component found leaking in the last survey of the year was leaking from the preceding survey through the date the delay ended as determined in accordance with § 99.32(a)(2), days; assume a component found leaking in a survey between the first and last surveys

of the year was leaking since the preceding survey until the date of the survey, days; and sum times for all leaking periods. For each leaking component, account for time the component was not operational (*i.e.,* not operating under pressure) using an engineering estimate based on best available data.

k = The factor to adjust for undetected leaks by respective leak detection method. For reporting year 2024, k equals 1. For reporting year 2025 and later, k equals 1.25 for the methods in § 98.234(a)(1), (3) and (5) of this chapter; k equals 1.55 for the method in § 98.234(a)(2)(i) of this chapter; and k equals 1.27 for the method in § 98.234(a)(2)(ii) of this chapter. Select the factor for the leak detection method used for the permanently shut-in and plugged well, unitless.

ρ_{CH4} = Density of methane, 0.0192 mt/Mscf.

10^{-3} = Conversion factor from scf to Mscf.

(iii) If equipment leaks by population count were used to quantify methane emission from components involved in the useful purpose or reinjection of the increased volume of natural gas resulting from methane emissions mitigation implementation and reported pursuant to § 98.236(r) of this chapter in the part 98 report for a WEC applicable facility, equation C–9C of this section must be used to calculate $E_{Leaks,CH4}$.

$$E_{Leaks,CH_4} = \sum_{p=1}^{N_p} \left(Count_p \times EF_p\right) \times M_{CH_4} \times T \times 24 \times \rho_{CH_4} \times 10^{-3} \qquad \text{(Eq. C-9C)}$$

Where:

$E_{Leaks,CH4}$ = The annual quantity of methane emissions attributable to components involved in the useful purpose or reinjection of the increased volume of natural gas resulting from methane emissions mitigation implementation as reported pursuant to § 98.236(r) of this chapter for the reporting year, mt CH_4.

$Count_p$ = For each component type, ''p'', listed in § 98.233(r)(2) of this chapter that was involved in the useful purpose or reinjection, count the number of components of that type.

EF_p = The population emission factor for the component type, ''p'', as listed in § 98.233(r)(2) of this chapter.

M_{CH4} = The mole fraction of CH_4 in produced gas for the sub-basin in which the useful purpose or reinjection occurred, as reported pursuant to § 98.236(aa)(1)(ii)(I) of this chapter, unitless. For RY2024, if multiple sub-basins were impacted by the unreasonable delay, use the flow-weighted average mole fraction.

T = The time period of the eligible delay within the reporting year, as determined in accordance with § 99.32(a), days.

24 = Conversion from days to hours.

P_{CH4} = Density of methane, 0.0192 mt/Mscf.

10^{-3} = Conversion factor from scf to Mscf.

§ 99.33 What are the recordkeeping requirements for methane emissions caused by an unreasonable delay in environmental permitting of gathering or transmission infrastructure?

(a) If the WEC obligated party, or its subsidiaries, is the entity seeking the environmental permit, for each communication the entity seeking the environmental permit has had with the permitting authority regarding the permit application:

(1) The date and type of communication.

(2) The date of the facility's response to the communication.

(3) Information on whether the facility's response included modification to the permit application.

(b) Records of values used and any information relied upon in the calculation of the emissions attributable to the unreasonable delay in § 99.32(c).

(c) For any volumes of gas determined under § 99.32(b) that were not directly measured, an explanation of how company records, engineering estimation, and/or best available information were used to determine the gas volume.

(d) A list of all applicable local, State, and Federal regulations the WEC obligated party certified compliance with, as required in § 99.31(b)(11), regarding emissions from the activities listed in § 99.30(d) that occurred as a result of a delay in environmental permitting of gathering or transmission infrastructure.

Subpart D—Regulatory Compliance Exemption

§ 99.40 When is the regulatory compliance exemption available, and under what conditions does the exemption cease to be available?

(a) The requirements of this subpart only apply to a WEC applicable facility when the total facility applicable emissions for that WEC applicable facility as calculated in accordance with § 99.21(a) exceed 0 mt CH_4.

(b) The requirements of § 99.41 shall only be available when the conditions of paragraphs (b)(1) through (3) of this section are met. The Administrator shall make the determinations referenced in conditions (b)(1) and (2) of this section simultaneously for each individual State or Tribal lands in a single administrative action.

(1) A determination has been made by the Administrator that methane emissions standards and plans pursuant to subsections (b) and (d) of section 111 of the CAA have been approved and are in effect in all the State(s) or Tribal lands in which the WEC applicable facility is located; and

(2) A determination has been made by the Administrator that the emissions reductions achieved by compliance with the requirements described in paragraph (b)(1) of this section will result in equivalent or greater emissions reductions as would be achieved by the proposed rule of the Administrator entitled 'Standards of Performance for New, Reconstructed, and Modified Sources and Emissions Guidelines for Existing Sources: Oil and Natural Gas Sector Climate Review' (86 FR 63110; November 15, 2021), if such rule had been finalized and implemented. For purposes of this equivalency determination, the comparison will be made between the emissions reductions that would have been achieved if the proposed rule was finalized and implemented in each State or Tribal lands as proposed, and the emissions reductions that will be achieved when the final standards and plans are actually implemented in each State.

(3) The final compliance date, which is the date at which all affected facilities and all designated facilities become subject to all of the final methane emissions standards established pursuant to CAA section 111(b) or (d), as applicable, has passed in the State(s) or Tribal lands in which the WEC applicable facility is located.

(c) At such time that the conditions specified in paragraphs (b)(1) through (3) of this section are met, the reporting requirements of § 99.42 shall come into effect beginning with the WEC filing due on the date specified in § 99.5 for the calendar year following the calendar year in which all of the conditions were met. Imposition of the waste emission charge shall not be made on the emissions from an applicable facility meeting the requirements for regulatory compliance exemption and electing to claim such exemption for methane emissions that occurred during the

calendar year during which the conditions of paragraphs (b)(1) through (3) of this section are met.

(d) If any of the conditions in paragraph (b)(1) or (2) of this section cease to apply after the Administrator has made the determinations in paragraphs (b)(1) and (2) of this section for the State(s) or Tribal lands in which the WEC applicable facility is located, the reporting requirements of § 99.42 shall cease to be in effect for the WEC applicable facility beginning with the WEC filing due on the date specified in § 99.5 for the calendar year during which either of the conditions were no longer met. The reporting requirements of § 99.42 shall cease to be in effect until the conditions of paragraph (e) of this section are met.

(e) The reporting requirements of § 99.42 will again come into effect at such time that a subsequent determination is made by the Administrator that the conditions in paragraphs (b)(1) and (2) of this section apply for the State(s) or Tribal lands in which the WEC applicable facility is located, and after the final compliance date specified in paragraph (b)(3) of this section. The reporting requirements of § 99.42 will again come into effect in accordance with the timing specified in paragraph (c) of this section until such time the conditions of paragraph (d) of this section apply.

§ 99.41 Which facilities qualify for the exemption for regulatory compliance?

(a) The total facility applicable emissions for the WEC applicable facility as calculated in accordance with § 99.21(a) must exceed 0 mt.

(b) The WEC applicable facility must be located in a State(s) or Tribal lands for which the conditions specified in § 99.40 were met for the reporting year. For WEC applicable facilities in the onshore petroleum and natural gas production or onshore petroleum and natural gas gathering and boosting industry segments, as those industry segment terms are defined in § 98.230 of this chapter, a WEC applicable facility is considered to be located in each State or Tribal lands within which a well-pad site or gathering and boosting site, as applicable, was reported pursuant to §§ 98.236(aa)(1)(iv)(C) or (aa)(10)(v)(E) of this chapter, as applicable, for the reporting year. For WEC applicable facilities that are located in more than one State or Tribal lands, the conditions specified in § 99.40 must be met for each State or Tribal lands.

(c) The WEC applicable facility must contain one or more affected facilities or one or more designated facilities.

(d) For WEC applicable facilities meeting the eligibility criteria of paragraphs (a) through (c) of this section for which the WEC obligated party elects to claim for exemption any emissions related to regulatory compliance, the quantity of methane emissions attributable to regulatory compliance must be determined pursuant to § 99.43. To qualify for exemption of all emissions under the regulatory compliance exemption all affected facilities and all designated facilities that are located at the WEC applicable facility (or the well-pad site or gathering and boosting site, if applicable) must meet the conditions specified in paragraphs (d)(1) and (2) of this section during each calendar quarter (*i.e.,* January 1–March 31) of the reporting year for which the exemption is being claimed.

(1) For all affected facilities and all designated facilities located at the WEC applicable facility (or the well-pad site or gathering and boosting site, if applicable) no deviations or violations of the monitoring requirements, emission limits or standards (or surrogate parameters), operating limits (including operating parameter limits), or work practice standards were identified in compliance reports of the methane emissions requirements of part 60 of this chapter and the methane emissions requirements of an applicable approved State, Tribal, or Federal plan in part 62 of this chapter during the reporting year.

(2) For all affected facilities and all designated facilities located at the WEC applicable facility (or the well-pad site or gathering and boosting site, if applicable) no violations, as determined either through an administrative action taken by the Administrator or delegated agency or through a judicial action, of any requirements of part 60 of this chapter and the methane emissions requirements of an applicable approved State, Tribal, or Federal plan in part 62 of this chapter during the reporting year.

(e) For purposes of this part, the phrase ''affected facility(ies) or designated facility(ies) that are located at the WEC applicable facility'' means the affected facility(ies) or designated facility(ies) that was (were) part of the WEC applicable facility as of December 31 of the reporting year as well as any facility(ies) that was (were) decommissioned during the reporting year without being transferred to another facility.

§ 99.42 What are the reporting requirements for the exemption for regulatory compliance?

(a) *Facilities that qualify to report.* For a WEC applicable facility that meets each of the criteria described in § 99.41(a) through (d) and elects to claim for exemption any emissions related to regulatory compliance, report the information as described in paragraphs (b) through (h) of this section, as applicable. The regulatory compliance exemption information shall be submitted as described in § 99.7.

(b) *Submission of reports.* For each WEC applicable facility report all of the information specified in paragraphs (b)(1) through (6) of this section, as applicable.

(1) For each WEC applicable facility, the final compliance date as determined in accordance with § 99.40(b)(3) and a certification that the facility meets all of the eligibility criteria in § 99.41.

(2) The ICIS–AIR ID (or Facility Registry Service (FRS) ID if the ICIS–AIR ID is not available) and the EPA Registry ID from CEDRI associated with each affected facility and designated facility that are located at the WEC applicable facility. For WEC applicable facilities in the onshore petroleum and natural gas production or onshore petroleum and natural gas gathering and boosting industry segments, as those industry segment terms are defined in § 98.230 of this chapter, indicate the well-pad site ID(s) or gathering and boosting site ID(s), as reported to § 98.236 of this chapter, that is/are part of each affected facility and/or designated facility.

(3) If a report, or reports, prepared and submitted in accordance with part 60 of this chapter, or an applicable approved State, Tribal, or Federal plan under part 62 of this chapter that implements the emission guidelines contained in part 60 of this chapter, cover the complete reporting year *(i.e.,* January 1 through December 31, inclusive), then submit as attachment(s) the applicable report(s). This report, or reports, must include all affected facilities or designated facilities that are located at the WEC applicable facility.

(4) If a report, or reports, prepared and submitted in accordance with part 60 of this chapter, or an applicable approved State, Tribal, or Federal plan under part 62 of this chapter that implements the emission guidelines contained in part 60 of this chapter, does not cover the complete reporting year (*i.e.,* January 1 through December 31, inclusive), then submit as attachment(s) the applicable report(s). This report, or reports, must include all affected facilities or

designated facilities that are located at the WEC applicable facility.

(5) For each report submitted under this section, provide an indication of whether the report indicates that at least one of the affected facilities subject to the requirements of part 60 of this chapter or designated facilities subject to the requirements of an applicable approved State, Tribal, or Federal plan in part 62 of this chapter that is contained within the WEC applicable facility does not meet the conditions of § 99.41(d)(1) or (2).

(6) For each report submitted under this section, indicate if the report includes one or more affected facilities or designated facilities that are not located at the WEC applicable facility. If so, indicate each such affected facility or designated facility. For each affected facility or designated facility, indicate if the affected or designated facility was part of the WEC applicable facility for part of the reporting year and transferred to another facility prior to December 31 of the reporting year or if the affected or designated facility was not part of the WEC applicable at any time during the reporting year.

(c) *Submission of incomplete or partial year reports.* If, pursuant to paragraph (b)(4) of this section, you are unable to provide an annual report covering the entire reporting year at the time of the initial submittal specified in § 99.5 for each affected facility or designated facility at the WEC applicable facility, you must provide a certification of the compliance status for each such affected facility or designated facility for the duration of time not covered by a report submitted pursuant to paragraph (b)(4) of this section. Additionally, you must provide a revised WEC filing within 30 calendar days of the date that an annual report covering the entire reporting year is required to be submitted under the applicable requirements of part 60 of this chapter or an applicable approved State, Tribal, or Federal plan in part 62 of this chapter. This requirement also applies in the case where the initial WEC filing contains an annual report covering only a portion of the reporting year. Within 30 calendar days of the date that an annual report is due under the applicable requirements of part 60 of this chapter or an applicable approved State, Tribal, or Federal plan in part 62 of this chapter for the portion of the reporting year for which a previously submitted report does not cover, you must provide a revised WEC filing including the subsequent annual report. The resubmission of the revised WEC filing shall be considered timely under this paragraph (c) if it is made within 30 calendar days of the date that the annual report is due under the applicable requirements of part 60 of this chapter or an applicable approved State, Tribal, or Federal plan in part 62 of this chapter. In such cases where a newly available report indicates that an affected facility or designated facility does not meet the conditions of § 99.41(d)(1) or (2) that were not previously indicated in the WEC filing for the reporting year (*i.e.,* the WEC applicable facility would no longer qualify for the regulatory compliance exemption for the given calendar quarter(s)), a WEC applicable facility would be required to complete the reporting requirements in § 99.42(d) and (e), as applicable, in the revised WEC filing and the emissions attributable to regulatory compliance exemption must be recalculated pursuant to § 99.43. The WEC obligated party must determine the WEC applicable emissions for the WEC applicable facility pursuant to subpart B of this part and follow the provisions of § 99.7(e) regarding WEC filing revisions and § 99.8(d) regarding resubmittals that result in a change in WEC obligation.

(d) *For reports that indicate a deviation or violation.* For each report submitted pursuant to paragraphs (b) and (c) of this section that indicates that at least one of the affected facilities subject to the requirements of part 60 of this chapter or designated facilities subject to the requirements of an applicable approved State, Tribal, or Federal plan in part 62 of this chapter that is contained within the WEC applicable facility does not meet the conditions for the exemption of all emissions in § 99.41(d)(1) and (2), report the following:

(1) The ICIS–AIR ID (or FRS ID if the ICIS–AIR ID is not available) and the EPA Registry ID from CEDRI associated with each affected facility and designated facility in the report that indicated a deviation or violation. For WEC applicable facilities in the onshore petroleum and natural gas production or onshore petroleum and natural gas gathering and boosting industry segments, as those industry segment terms are defined in § 98.230 of this chapter, indicate the well-pad site ID(s) or gathering and boosting site ID(s), as reported to § 98.236 of this chapter, that is/are part of each affected facility and/or designated facility in the report that indicated a deviation or violation.

(2) For each calendar quarter during the reporting year report whether the conditions in § 99.41(d)(1) or (2) were met. For example, a report in which the only deviation indicated lasted from March 1 to April 30 in the reporting year would be reported as the first (*i.e.,* January to March) and second (*i.e.,* April to June) that the conditions in § 99.41(d)(1) or (2) were not met, and report for the third (*i.e.,* July to September) and fourth (*i.e.,* October to December) calendar quarters that the conditions were met.

(e) *Reporting for other large release events.* For a WEC applicable facility that reported one or more other large release events pursuant to § 98.236(y) of this chapter in the reporting year that occurred within or overlapped with a calendar quarter in which a deviation or violation was reported pursuant to paragraph (d) of this section, for each other large release event that occurred within or overlapped a quarter in which the conditions in § 99.41(d)(1) or (2) were not met report the information specified in paragraphs (e)(1) and (2) of this section.

(1) The unique release event identification number associated with the release event as reported pursuant to § 98.236(y)(2) of this chapter.

(2) The duration of the release event, based upon the start date and duration reported to § 98.236(y)(4) of this chapter, that occurred during calendar quarters in which the conditions in § 99.41(d)(1) or (2) were not met for any affected or designated facilities located at the WEC applicable facility, in days. For example, for a release event that lasted from March 1 to April 14 (*i.e.,* a total event duration of 45 days) at a WEC applicable facility in which there were reported deviations or violations in only the first calendar quarter (January through March, inclusive), the value reported under this paragraph would be 31 days.

(f) *Determination of compliance.* A WEC applicable facility's eligibility for the regulatory compliance exemption pursuant to this subpart does not constitute a determination of compliance for part 60 of this chapter, or an applicable approved State, Tribal, or Federal plan under part 62 of this chapter that implements the emission guidelines contained in part 60 of this chapter, for any affected facility or designated facility present at the applicable facility.

(g) *Administrator or delegated authority determination of non-compliance.* A WEC applicable facility's eligibility for the regulatory compliance exemption during a given reporting year does not preclude reassessment of applicable WEC obligation for that applicable facility upon any determination by the Administrator or a delegated authority of any noncompliance with respect to any applicable methane requirements pursuant to part 60 of this chapter, or

an applicable approved State, Tribal, or Federal plan under part 62 of this chapter that implements the emission guidelines contained in part 60 of this chapter, for the affected facilities or designated facilities present at the applicable facility.

(h) *Reporting of quantification parameters.* Report the following information used to quantify methane emissions to be exempted due to the regulatory compliance exemption as specified in § 99.43.

(1) For a WEC applicable facility in the onshore petroleum and natural gas production or onshore petroleum and natural gas gathering and boosting industry segment, as those industry segment terms are defined in § 98.230 of this chapter, report:

(i) The quantity of methane emissions at the WEC applicable facility qualifying for regulatory compliance exemption, in mt CH_4, as determined using equation D–1A of § 99.43(b)(1) ($E_{RCE,CH4}$)

(ii) The total quantity of methane emissions that qualified for exemption under both the regulatory compliance exemption and another exemption, in mt CH_4, as determined using equation D–2A of § 99.43(c)(1) ($E_{OtherExempt}$)

(iii) For each well-pad site or gathering and boosting site, as applicable, that was reported pursuant to § 98.236(aa)(1)(iv) or (aa)(10)(v) of this chapter, as applicable, for the reporting year, report:

(A) The well-pad site ID(s) or gathering and boosting site ID(s), as reported to § 98.236(aa)(1)(iv)(A) or (aa)(10)(v)(A) of this chapter, as applicable.

(B) An indication of whether any affected facilities or designated facilities at the site did not meet the conditions for the exemption of all emissions in § 99.41(d)(1) and (2) during the reporting year.

(C) If you report to paragraph (h)(1)(iii)(B) of this section that there were periods of time during which any affected facilities or designated facilities at the site did not meet the conditions for the exemption of all emissions in § 99.41(d)(1) and (2), for each calendar quarter in the reporting year report whether the conditions for the exemption of all emissions in § 99.41(d)(1) and (2) were met. For example, if the only deviation for any affected facilities or designated facilities at the site lasted from March 1 to April 30 report for the first (*i.e.,* January to March) and second (*i.e.,* April to June) that the conditions in § 99.41(d)(1) or (2) were not met, and report for the third (*i.e.,* July to September) and fourth (*i.e.,* October to December) calendar quarters that the conditions were met.

(D) If there were multiple reports submitted pursuant to paragraphs (b)(3) and (4) of this section for an individual well-pad site (for the onshore petroleum and natural gas production industry segment) or individual gathering and boosting site (for the onshore petroleum and natural gas gathering and boosting industry segment), the calendar quarters reported pursuant to paragraph (h)(1)(iii)(C) of this section must reflect the periods of time in which the conditions in § 99.41(d)(1) or (2) were met for the well-pad site or gathering and boosting site, as applicable, in its entirety. For example, if two reports were submitted that together represent all of the affected and designated facilities at a well-pad site, and one report indicates deviation during only the first calendar quarter (*i.e.,* January to March) while the other report indicates deviation during only the second calendar quarter (*i.e.,* April to June), the information reported would be that for the first (*i.e.,* January to March) and second (*i.e.,* April to June) calendar quarters the conditions in § 99.41(d)(1) or (2) were not met, and for the third (*i.e.,* July to September) and fourth (*i.e.,* October to December) calendar quarters that the conditions were met.

(2) For a WEC applicable facility in an industry segment other than the onshore petroleum and natural gas production or onshore petroleum and natural gas gathering and boosting industry segment, as those industry segment terms are defined in § 98.230 of this chapter, report:

(i) The quantity of methane emissions at the WEC applicable facility qualifying for regulatory compliance exemption, in mt CH_4, as determined using equation D–1B of § 99.43(b)(2) ($E_{RCE,CH4}$)

(ii) The total quantity of methane emissions that qualified for exemption under both the regulatory compliance exemption and another exemption, in mt CH_4, as determined using equation D–2B of § 99.43(c)(2) ($E_{OtherExempt}$).

(iii) An indication of whether any affected facilities or designated facilities at the facility did not meet the conditions for the exemption of all emissions in § 99.41(d)(1) and (2) during the reporting year.

(iv) If you report to paragraph (h)(2)(iii) of this section that there were periods of time during which any affected facilities or designated facilities at the site did not meet the conditions for the exemption of all emissions in § 99.41(d)(1) and (2), for each calendar quarter in the reporting year report whether the conditions for the exemption of all emissions in § 99.41(d)(1) and (2) were met. For example, if the only deviation for any affected facilities or designated facilities at the facility lasted from March 1 to April 30 report for the first (*i.e.,* January to March) and second (*i.e.,* April to June) that the conditions in § 99.41(d)(1) or (2) were not met, and report for the third (*i.e.,* July to September) and fourth (*i.e.,* October to December) calendar quarters that the conditions were met.

(v) If there were multiple reports submitted pursuant to paragraphs (b)(3) and (4) of this section for the WEC applicable facility, the calendar quarters reported pursuant to paragraph (h)(2)(iv)(C) must reflect the periods of time in which the conditions in § 99.41(d)(1) or (2) were met for the WEC applicable facility in its entirety. For example, if two reports were submitted that together represent all of the affected and designated facilities at a well-pad site, and one report indicates deviation during only the first calendar quarter (*i.e.,* January to March) while the other report indicates deviation during only the second calendar quarter (*i.e.,* April to June), the information reported would be that for the first (*i.e.,* January to March) and second (*i.e.,* April to June) calendar quarters the conditions in § 99.41(d)(1) or (2) were not met, and for the third (*i.e.,* July to September) and fourth (*i.e.,* October to December) calendar quarters that the conditions were met.

§ 99.43 How are the emissions qualifying for regulatory compliance exemption in the reporting year quantified?

(a) If the WEC applicable facility qualified for regulatory compliance exemption pursuant to § 99.41(d) for the entire reporting year, the quantity of methane emissions attributable to the regulatory compliance ($E_{RCE,CH4}$) is equal to the total facility applicable emissions calculated using equation B–6 of this part. For WEC applicable facilities in the onshore petroleum and natural gas production or onshore petroleum and natural gas gathering and boosting industry segments, as those industry segment terms are defined in § 98.230 of this chapter, the WEC applicable facility shall be considered to have qualified for the regulatory compliance exemption pursuant to § 99.41(d) for the entire reporting year if each well-pad site or gathering and boosting site, as applicable, located at the WEC applicable facility qualified for regulatory compliance exemption pursuant to § 99.41(d) for the entire reporting year.

(b) If the WEC applicable facility qualified for regulatory compliance exemption pursuant to § 99.41(d) for only part of the reporting year or for only a portion of sites for WEC

applicable facilities in the onshore petroleum and natural gas production or onshore petroleum and natural gas gathering and boosting industry segments, as those industry segment terms are defined in § 98.230 of this chapter, calculate the qualifying emissions according to the method in paragraph (b)(1) or (2) of this section, as applicable.

(1) If the WEC applicable facility is in the onshore petroleum and natural gas production or onshore petroleum and natural gas gathering and boosting industry segment, as those industry segment terms are defined in § 98.230 of this chapter, calculate the emissions qualifying for regulatory compliance exemption using equation D–1A of this section. If the result of equation D–1A of this section is less than 0 mt CH_4, the emissions qualifying for regulatory compliance exemption are equal to 0 mt CH_4.

$$E_{RCE,CH_4} = E_{TFA,CH_4} - \sum_{i=1}^{M}\left[\left(E_{NCS,i} \times \frac{(4 - T_j)}{4}\right) + \sum_{j=1}^{N}\left(E_{NCS\text{-}OLRE,j} \times \frac{T_{OLRE\text{-}RCE,j}}{T_{OLRE,j}}\right)\right] - E_{OtherExempt} \qquad \text{(Eq. D-1A)}$$

Where:

$E_{RCE,CH4}$ = The quantity of methane emissions, as determined in subpart D of this part, at the WEC applicable facility qualifying for regulatory compliance exemption subject to the applicability provisions of § 99.41, mt CH_4.

$E_{TFA,CH4}$ = The annual methane emissions equal to, below, or exceeding the waste emissions threshold for a WEC applicable facility prior to consideration of any applicable exemptions (*i.e.,* total facility applicable emissions) as determined in equation B–6 of § 99.21, mt CH_4.

M = Total number of sites that did not qualify for regulatory compliance exemption for the entire calendar year.

$E_{NCS,i}$ = The total methane emissions reported pursuant to § 99.7(b)(2)(ix) for the reporting year, excluding methane emissions from other large release events reported pursuant to § 98.236(y)(10) of this chapter, for each well-pad or gathering and boosting site that did not qualify for regulatory compliance exemption for the entire year, *i,* mt CH_4.

T_j = Time that the site, *i,* qualified for regulatory compliance exemption as reported pursuant to § 99.42(h), in calendar quarters.

4 = Number of calendar quarters per year.

N = Total number of other large release events reported pursuant to § 99.42(e) for the reporting year for the well-pad or gathering and boosting site that did not qualify for regulatory compliance exemption for the entire year, *i.*

$E_{NCS–OLRE,j}$ = The methane emissions from each other large release event that occurred during or overlapped with a calendar quarter in which the well-pad or gathering and boosting site that did not qualify for regulatory compliance exemption, *j,* for each well-pad or gathering and boosting site that did not qualify for regulatory compliance exemption for the entire year, *i,* mt CH_4

$T_{OLRE–RCE,j}$ = Duration of the other large release event, *j,* that occurred during periods of time in which the WEC applicable facility did not qualify for regulatory compliance exemption as reported pursuant to § 99.42(e), in days.

$T_{OLRE,j}$ = Duration of the other large release event, *j,* based upon the value pursuant to § 98.236(y)(4) of this chapter, in days. For purposes of this part, the duration of the other large release event includes each calendar day during which the release occurred, inclusive.

$E_{OtherExempt}$ = The total quantity of methane emissions that qualified for exemption under both the regulatory compliance exemption and another exemption, as determined using equation D–2A of this section, for the reporting year, mt CH_4.

(2) If the WEC applicable facility is in an industry segment other than the onshore petroleum and natural gas production or onshore petroleum and natural gas gathering and boosting industry segment, as those industry segment terms are defined in § 98.230 of this chapter, calculate the emissions qualifying for regulatory compliance exemption using equation D–1B of this section. If the result of equation D–1B of this section is less than 0 mt CH_4, the emissions qualifying for regulatory compliance exemption are equal to 0 mt CH_4.

$$E_{RCE,CH_4} = E_{TFA,CH_4} - \left(E_{WAF} \times \frac{(4 - T)}{4}\right) - \sum_{j=1}^{N}\left(E_{WAF\text{-}OLRE,j} \times \frac{T_{OLRE\text{-}RCE,j}}{T_{OLRE,j}}\right) - E_{OtherExempt} \qquad \text{(Eq. D-1B)}$$

Where:

$E_{RCE,CH4}$ = The quantity of methane emissions, as determined in subpart D of this part, at the WEC applicable facility qualifying for regulatory compliance exemption subject to the applicability provisions of § 99.41, mt CH_4.

$E_{TFA,CH4}$ = The annual methane emissions equal to, below, or exceeding the waste emissions threshold for a WEC applicable facility prior to consideration of any applicable exemptions (*i.e.,* total facility applicable emissions) as determined in equation B–6 of § 99.21, mt CH_4.

E_{WAF} = The total methane emissions reported pursuant to § 99.7(b)(2)(ix) for the reporting year, excluding methane emissions from other large release events reported pursuant to § 98.236(y)(10) of this chapter, for the WEC applicable facility, mt CH_4.

T = Time that the WEC applicable facility qualified for regulatory compliance exemption as reported pursuant to § 99.42(h), in calendar quarters.

N = Total number of other large release events reported pursuant to § 99.42(e) for the reporting year for the WEC applicable facility.

$E_{WAF–OLRE,j}$ = The methane emissions from each other large release event that occurred during or overlapped with a calendar quarter in which the WEC applicable facility did not qualify for regulatory compliance exemption, *j,* for the reporting year for the WEC applicable facility, mt CH_4.

$T_{OLRE–RCE,j}$ = Duration of the other large release event, *j,* that occurred during periods of time in which the WEC applicable facility did not qualify for regulatory compliance exemption as reported pursuant to § 99.42(e), in days.

$T_{OLRE,j}$ = Duration of the other large release event, *j,* based upon the value pursuant to § 98.236(y)(4) of this chapter, in days. For purposes of this part, the duration of the other large release event includes each calendar day during which the release occurred, inclusive.

$E_{OtherExempt}$ = The total quantity of methane emissions that qualified for exemption under both the regulatory compliance exemption and another exemption, as determined using equation D–2B of this section, for the reporting year, mt CH_4.

(c) If the WEC applicable facility qualified for regulatory compliance

exemption pursuant to § 99.41(d) for only part of the reporting year and qualified to claim for exemption emissions under § 99.30 and/or § 99.50, the total quantity of methane emissions that qualified for exemption under both the regulatory compliance exemption and another exemption must be calculated according to the applicable method in paragraph (c)(1) or (2).

(1) If the WEC applicable facility is in the onshore petroleum and natural gas production, as that industry segment term is defined in § 98.230 of this chapter, equation D–2A must be used to calculate the quantity of methane emissions that qualified for exemption under both the regulatory compliance exemption and another exemption.

$$E_{OtherExempt} = \sum_{i=1}^{M}\left(E_{Delay,CS,i} + E_{Plug,CS,i}\right) + \sum_{j=1}^{N}\left[\left(E_{Plug,NCS,j} \times \frac{T_j}{4}\right) + \left(E_{Delay,NCS_j} \times \frac{T_{Delay\text{-}RCE,j}}{T_{Delay}}\right)\right] \quad \text{(Eq. D-2A)}$$

Where:

$E_{OtherExempt}$ = The total quantity of methane emissions that qualified for exemption under both the regulatory compliance exemption and another exemption for the reporting year, mt CH_4.

M = Total number of well-pad sites that qualified for regulatory compliance exemption for the entire calendar year.

$E_{Delay,CS,i}$ = The quantity of methane emissions exempted due to an unreasonable delay in environmental permitting of gathering or transmission infrastructure, as determined in equation C–4 of § 99.32(c), at the WEC applicable facility from a well-pad site, *i,* that qualified for regulatory compliance exemption for the entire year, mt CH_4.

$E_{Plug,CS,i}$ = The quantity of methane emissions exempted due to wells that were permanently shut-in and plugged, as determined in equation E–7 of § 99.52(c), at the WEC applicable facility from a well-pad site, *i,* that qualified for regulatory compliance exemption for the entire year, mt CH_4.

N = Total number of well-pad sites that did not qualify for regulatory compliance exemption for the entire calendar year.

$E_{Plug,NCS,j}$ = The quantity of methane emissions exempted due to wells that were permanently shut-in and plugged, as determined in equation E–7 of § 99.52(c), at the WEC applicable facility from a well-pad site, *j,* that did not qualify for regulatory compliance exemption for the entire year, mt CH_4.

T_j = Time that the site, *j,* at the WEC applicable facility qualified for regulatory compliance exemption as reported pursuant to § 99.42(h), in calendar quarters.

$E_{Delay,NCS,j}$ = The quantity of methane emissions exempted due to an unreasonable delay in environmental permitting of gathering or transmission infrastructure, as determined in equation C–4 of § 99.32(c), at the WEC applicable facility from a well-pad site, *j,* that did not qualify for regulatory compliance exemption for the entire year, mt CH_4.

$T_{Delay\text{-}RCE,j}$ = Duration of time during the reporting year that an eligible delay limited the offtake of increased volume associated with methane emissions mitigation activities that occurred during periods of time in which the well-pad site, *j,* at the WEC applicable facility qualified for regulatory compliance exemption, in days. Determine this value using the beginning and ending dates for the eligible delay as reported pursuant to § 99.31(b)(8) and the calendar quarters that the well-pad site, *j,* at the WEC applicable facility qualified for regulatory compliance exemption as reported pursuant to § 99.42(d).

T_{Delay} = Duration of time during the reporting year that an eligible delay limited the offtake of increased volume associated with methane emissions mitigation activities, in days. Determine this value using the beginning and ending dates for the eligible delay as reported pursuant to § 99.31(b)(8), inclusive.

(2) If the WEC applicable facility is in an industry segment other than the onshore petroleum and natural gas production industry segment, as that industry segment term is defined in § 98.230 of this chapter, equation D–2B must be used to calculate the quantity of methane emissions that qualified for exemption under both the regulatory compliance exemption and another exemption.

$$E_{OtherExempt} = \left(E_{Plug,CH_4} \times \frac{T}{4}\right) + \left(E_{Delay,CH_4} \times \frac{T_{Delay\text{-}RCE}}{T_{Delay}}\right) \quad \text{(Eq. D-2B)}$$

Where:

$E_{OtherExempt}$ = The total quantity of methane emissions that qualified for exemption under both the regulatory compliance exemption and another exemption for the reporting year, mt CH_4.

$E_{Plug,CH4}$ = The total quantity of methane emissions, as determined in equation E–7 of § 99.52(c), at the WEC applicable facility attributable to all wells that were permanently shut-in and plugged during the reporting year meeting the applicability provisions of § 99.50, mt CH_4.

T = Time that the WEC applicable facility qualified for regulatory compliance exemption as reported pursuant to § 99.42(d), in calendar quarters

$E_{Delay,CH4}$ = The quantity of methane emissions exempted, as determined in equation C–1 of § 99.32(c), at the WEC applicable facility due to an unreasonable delay in environmental permitting of gathering or transmission infrastructure meeting the applicability provisions of § 99.30, mt CH_4.

$T_{Delay\text{-}RCE}$ = Duration of time during the reporting year that an eligible delay limited the offtake of increased volume associated with methane emissions mitigation activities that occurred during periods of time in which the WEC applicable facility qualified for regulatory compliance exemption, in days. Determine this value using the beginning and ending dates for the eligible delay as reported pursuant to § 99.31(b)(8) and the calendar quarters that the WEC applicable facility qualified for regulatory compliance exemption as reported pursuant to § 99.42(d).

$T_{Delay,j}$ = Duration of time during the reporting year that an eligible delay limited the offtake of increased volume associated with methane emissions mitigation activities, in days. Determine this value using the beginning and ending dates for the eligible delay as reported pursuant to § 99.31(b)(8), inclusive.

(d) If the WEC applicable facility did not qualify for regulatory compliance exemption pursuant to § 99.41(d) for any portion of the reporting year, the quantity of methane emissions attributable to the regulatory compliance exemption ($E_{RCE,CH4}$) is equal to 0.

Subpart E—Exemption for Permanently Shut-in and Plugged Wells

§ 99.50 What facilities qualify for the exemption of emissions from permanently shut-in and plugged wells?

(a) The total facility applicable emissions for the WEC applicable facility containing permanently shut-in and plugged wells must exceed 0 mt as calculated in accordance with § 99.21(a).

(b) This exemption is applicable to WEC applicable facilities in the onshore petroleum and natural gas production, offshore petroleum and natural gas production, or underground natural gas storage industry segments, as those industry segment terms are defined in § 98.230 of this chapter, that permanently shut-in and plug one or more wells during the reporting year.

(c) For the purposes of applying this exemption, a permanently shut-in and plugged well is one that has been permanently sealed, following all applicable local, State, or Federal regulations in the jurisdiction where the well is located, to prevent any potential future leakage of oil, gas, or formation water into shallow sources of potable water, onto the surface, or into the atmosphere. Site reclamation following placement of a metal plate or cap is not required to be completed for the well to be considered permanently shut-in and plugged for the purposes of this part.

§ 99.51 What are the reporting requirements for the exemption for wells that were permanently shut-in and plugged?

(a) For a WEC applicable facility meeting the applicability provisions of § 99.50, you may elect to report information regarding an exemption for wells that were permanently shut-in and plugged. The exemption information to be reported is described in paragraph (b) of this section. The exemption information shall be submitted as described § 99.7.

(b) Report the following information for each well meeting the applicability provisions of § 99.50 that was permanently shut-in and plugged in the reporting year.

(1) Well ID number as reported in part 98, subpart W of this chapter. If no well ID number is reported for the well to part 98, subpart W, report the well ID number as defined in this part.

(2) Date the well was permanently shut-in and plugged, which for the purposes of this exemption, is the date when welding or cementing of a metal plate or cap onto the casing end was completed.

(3) The statutory citation for each applicable State, local, and Federal regulation stipulating requirements that were applicable to the closure of the permanently shut-in and plugged well.

(4) A certification that the requirements in each of the applicable State, local, and Federal regulations identified in paragraph (b)(3) of this section were followed.

(5) If the WEC applicable facility is in the onshore petroleum and natural gas production or underground natural gas storage industry segment and the WEC obligated party calculated methane emissions attributable to the well from wellhead equipment leaks using the methods in § 99.52(b)(5) of this section, you must indicate the method used to calculate equipment leak emissions attributable to the well (*i.e.,* § 99.52(b)(5)(i), (ii), or (iii)). For a WEC applicable facility in the underground natural gas storage industry segment, you must also report the information specified in paragraphs (b)(5)(i) through (iv) of this section, as applicable. For a WEC applicable facility in the onshore petroleum and natural gas production industry segment, you must also report the information specified in paragraphs (b)(5)(i) through (iii) of this section, as applicable. All WEC applicable facilities must report the information specified in paragraph (b)(5)(v).

(i) If the method in § 99.52(b)(5)(i) is used to calculate equipment leak emissions attributable to the well, you must report the following information for each leak: the leak detection survey method used, the component type as reported in § 98.236(q) of this chapter, the volumetric flow rate of the natural gas leak in standard cubic feet per hour and the duration of the measured leak as determined in accordance § 99.52(b)(5)(i), in hours.

(ii) If the method in § 99.52(b)(5)(ii) is used to calculate equipment leak emissions attributable to the well, you must report the following information for each component identified as leaking: the leak detection survey method used, the component type as specified in § 98.233(q)(2)(iii) or (vii) of this chapter, as applicable, and the time the surveyed component is assumed to be leaking and operational as determined in accordance § 99.52(b)(5)(ii), in hours.

(iii) If the method in § 99.52(b)(5)(iii) is used to calculate equipment leak emissions attributable to the well, you must report the counts of each component type listed in § 98.233(r)(3) of this chapter that are associated with the well, as applicable.

(iv) Indicate whether you used the default concentration of CH_4 (0.975) or a facility-specific CH_4 concentration in the total hydrocarbon of the feed natural gas. If you used the facility-specific CH_4 concentration in the total hydrocarbon of the feed natural gas, report the value.

(v) The quantity of methane emissions attributable to the well from wellhead equipment leaks as calculated in accordance with § 99.52(b)(5)(i), (b)(5)(ii), or (b)(5)(iii), as applicable, for the reporting year, in metric tons CH_4.

(6) If the WEC applicable facility is in the onshore petroleum and natural gas production and calculated methane emissions attributable to the well from associated gas flaring and completions and workovers without hydraulic fracturing and with flaring using equation E–6 of this section, you must report the information specified in paragraphs (b)(6)(i) and (ii) of this section.

(i) The volume of gas sent to the flare from the plugged well, in thousand scf.

(ii) The quantity of methane emissions attributable to the well from associated gas flaring and from completions and workovers without hydraulic fracturing and with flaring as calculated in accordance with § 99.52(b)(6), as applicable, in metric tons CH_4.

(7) The emissions attributable to the well calculated using equation E–1, E–2, E–3, or E–4 in § 99.52(b), as applicable, in metric tons CH_4.

(c) The total quantity of methane emissions attributable to all wells that were permanently shut-in and plugged at a WEC applicable facility meeting the applicability provisions of § 99.50 during the reporting year, calculated using equation E–7 in § 99.52(c), in metric tons CH_4.

§ 99.52 How are the net emissions attributable to all wells at a WEC applicable facility that were permanently shut-in and plugged in the reporting year quantified?

(a) For the purposes of this section, the following source types (as specified in part 98, subpart W of this chapter) constitute emissions directly attributable to an onshore petroleum and natural gas production, offshore petroleum and natural gas production, or underground natural gas storage well, as applicable:

(1) Wellhead equipment leaks.

(2) Liquids unloading.

(3) Completions and workovers with hydraulic fracturing.

(4) Completions and workovers without hydraulic fracturing.

(5) Associated natural gas venting and flaring.

(6) Well testing.

(7) Drilling mud degassing.

(b) Calculate the annual emissions attributable to each well that was

permanently shut-in and plugged during the reporting year and included in the submittal pursuant to § 99.51 using equations E–1, E–2, E–3, or E–4 of this section, as applicable.

(1) For onshore petroleum and natural gas production wells that are part of a WEC applicable facility that are permanently shut-in and plugged in reporting years 2025 and later, equation E–1 of this section must be used to quantify the methane emissions directly attributable to each permanently shut-in and plugged well.

$$E_{PW,CH_4} = E_{Leaks,CH_4} + E_{LU,CH_4} + E_{CWwHF,CH_4} + E_{CWwoHF,CH_4} + E_{AGV,CH_4} + E_{F,CH_4} + E_{WT,CH_4} + E_{DMD,CH_4} \quad \text{(Eq. E-1)}$$

Where:

$E_{PW,CH4}$ = The quantity of methane emissions directly attributable to an individual well that was permanently shut-in and plugged during the reporting year at a WEC applicable facility meeting the applicability provisions of § 99.50, mt CH_4.

$E_{Leaks,CH4}$ = The quantity of methane emissions attributable to the well from wellhead equipment leaks as calculated in accordance with paragraphs (b)(5)(i), (b)(5)(ii), or (b)(5)(iii) of this section, as applicable, for the reporting year, mt CH_4.

$E_{LU,CH4}$ = The quantity of methane emissions attributable to the well from liquids unloading as reported pursuant to § 98.236(f)(1)(x) or (f)(2)(viii) of this chapter, as applicable, for the reporting year, mt CH_4.

$E_{CWwHF,CH4}$ = The total quantity of methane emissions attributable to the well from completions and workovers with hydraulic fracturing as reported pursuant to § 98.236(g)(9) of this chapter for the reporting year, mt CH_4.

$E_{CWwoHF,CH4}$ = The total quantity of methane emissions attributable to the well from completions and workovers without hydraulic fracturing and without flaring as reported pursuant to § 98.236(h)(1)(vi) and (h)(3)(iv) of this chapter for the reporting year, mt CH_4.

$E_{AGV,CH4}$ = The quantity of methane emissions attributable to the well from associated gas venting as reported pursuant to § 98.236(m)(7)(viii) of this chapter for the reporting year, mt CH_4.

$E_{F,CH4}$ = The quantity of methane emissions attributable to the well from associated gas flaring and from completions and workovers without hydraulic fracturing and with flaring as calculated in accordance with paragraph (b)(6) of this section, as applicable, mt CH_4.

$E_{WT,CH4}$ = The total quantity of methane emissions attributable to the well from well testing as reported pursuant to § 98.236(l)(1)(vii), (l)(2)(vii), (l)(3)(vi), and (l)(4)(vi) of this chapter, as applicable, for the reporting year, mt CH_4.

$E_{DMD,CH4}$ = The quantity of methane emissions attributable to the well from drilling mud degassing as reported pursuant to § 98.236(dd)(1)(viii), (dd)(2)(iv), or (dd)(3)(iv) of this chapter, as applicable, for the reporting year, mt CH_4.

(2) For onshore petroleum and natural gas production wells that are part of a WEC applicable facility that are permanently shut-in and plugged in reporting year 2024, equation E–2 of this section must be used to quantify the methane emissions attributable to the well:

$$E_{PW,CH_4} = \left(E_{LkQ,CH_4} + E_{LkR,CH_4} + E_{LU,CH_4} + E_{CWw,HF,CH_4} + E_{CWwoHF,CH_4} + E_{AGV,CH_4} + E_{AGF,CH_4} + E_{WT,CH_4}\right) \times \frac{\left(\frac{Q_{ng,PW}}{6}\right) + Q_{oil,PW}}{\left(\frac{Q_{ng,WAF}}{6}\right) + Q_{oil,WAF}} \quad \text{(Eq. E-2)}$$

Where:

$E_{PW,CH4}$ = The quantity of methane emissions attributable to an individual well that was permanently shut-in and plugged during the reporting at a WEC applicable facility meeting the applicability provisions of § 99.50, mt CH_4.

$E_{LkQ,CH4}$ = The WEC applicable facility total quantity of methane emissions from equipment leaks reported pursuant to § 98.236(q)(2)(ix) of this chapter for the reporting year, mt CH_4.

$E_{LkR,CH4}$ = The WEC applicable facility total quantity of methane emissions from equipment leaks reported pursuant to § 98.236(r)(1)(v) of this chapter for the reporting year, mt CH_4.

$E_{LU,CH4}$ = The WEC applicable facility total quantity of methane emissions from liquids unloading as reported pursuant to § 98.236(f)(1)(x) and (f)(2)(viii) of this chapter for the reporting year, mt CH_4.

$E_{CWwHF,CH4}$ = The WEC applicable facility total quantity of methane emissions from completions and workovers with hydraulic fracturing as reported pursuant to § 98.236(g)(9) of this chapter for the reporting year, mt CH_4.

$E_{CWwoHF,CH4}$ = The WEC applicable facility total quantity of methane emissions from completions and workovers without hydraulic fracturing as reported pursuant to § 98.236(h)(1)(vi), (h)(2)(vi), (h)(3)(iv) and (h)(4)(iv) of this chapter for the reporting year, mt CH_4.

$E_{AGV,CH4}$ = The WEC applicable facility quantity of methane emissions from associated gas venting as reported pursuant to § 98.236(m)(7)(iv) of this chapter for the reporting year, mt CH_4.

$E_{AGF,CH4}$ = The WEC applicable facility quantity of methane emissions from associated gas flaring as reported pursuant to § 98.236(m)(8)(iii) of this chapter for the reporting year, mt CH_4.

$E_{WT,CH4}$ = The WEC applicable facility total quantity of methane emissions from well testing as reported pursuant to § 98.236(l)(1)(vii), (l)(2)(vii), (l)(3)(vi), and (l)(4)(vi) of this chapter, as applicable, for the reporting year, mt CH_4.

$Q_{ng,PW}$ = The total annual quantity of natural gas that is produced and sent to sale from the well in the reporting year, as reported pursuant to § 98.236(aa)(1)(iii)(C) of this chapter, in thousand standard cubic feet.

6 = Conversion factor from thousand standard cubic feet of natural gas to barrel of oil equivalent.

$Q_{oil,PW}$ = The total quantity of crude oil and condensate that is produced and sent to sale from the well in the reporting year, as reported pursuant to § 98.236(aa)(1)(iii)(D)of this chapter, in barrels.

$Q_{ng,WAF}$ = The total quantity of natural gas that is produced and sent to sale from the WEC applicable facility in the reporting year, as reported pursuant to § 98.236(aa)(1)(i)(B) of this chapter, in thousand standard cubic feet.

$Q_{oil,WAF}$ = The total quantity of crude oil and condensate that is produced and sent to sale from the WEC applicable facility in the reporting year, as reported pursuant to § 98.236(aa)(1)(i)(C) of this chapter, in barrels.

(3) For offshore petroleum and natural gas production wells that are part of a WEC applicable facility that are permanently shut-in and plugged in any reporting year, equation E–3 of this section must be used to quantify the methane emissions attributable to the well.

$$E_{PW,CH_4} = \left(E_{Leaks,CH_4} + E_{DMD,CH_4}\right) \times \frac{\left(\frac{Q_{ng,PW}}{6}\right) + Q_{oil,PW}}{\left(\frac{Q_{ng,WAF}}{6}\right) + Q_{oil,WAF}} \quad \text{(Eq. E-3)}$$

Where:

$E_{PW,CH4}$ = The quantity of methane emissions attributable to an individual well that was permanently shut-in and plugged during the reporting year at a WEC applicable facility meeting the applicability provisions of § 99.50, mt CH_4.

$E_{Leaks,CH4}$ = The WEC applicable facility total quantity of methane emissions from non-compressor component level fugitives (*i.e.,* equipment leaks), mt CH_4. For reporting year 2024, use the value reported pursuant to § 98.236(s)(2) of this chapter for the reporting year. For reporting year 2025 and later, use the value reported to § 98.236(s)(3)(ii) of this chapter for the reporting year.

$E_{DMD,CH4}$ = The WEC applicable facility total annual quantity of methane emissions from drilling mud degassing, mt CH_4. For reporting year 2024, use the value reported pursuant to § 98.236(s)(2) of this chapter for the reporting year. For reporting year 2025 and later, use the value reported to § 98.236(s)(3)(ii) of this chapter for the reporting year.

$Q_{ng,PW}$ = The total quantity of natural gas that is produced and sent to sale from the well in the reporting year as reported pursuant to § 98.236(aa)(2)(iii) of this chapter, in thousand scf.

6 = Conversion factor from thousand standard cubic feet of natural gas to barrel of oil equivalent.

$Q_{oil,PW}$ = The total quantity of crude oil and condensate that is produced and sent to sale from the well in the reporting year, as reported pursuant to § 98.236(aa)(2)(iv) of this chapter, in barrels.

$Q_{ng,WAF}$ = The total quantity of natural gas that is produced and sent to sale from the WEC applicable facility in the reporting year, as reported pursuant to § 98.236(aa)(2)(i) of this chapter, in thousand scf.

$Q_{oil,WAF}$ = The total quantity of crude oil and condensate that is produced and sent to sale from the WEC applicable facility in the reporting year, as reported pursuant to § 98.236(aa)(2)(ii) of this chapter, in barrels.

(4) For underground natural gas storage wells that are part of a WEC applicable facility that are permanently shut-in and plugged in any reporting year, equation E–4 of this section must be used to quantify the methane emissions attributable to the well.

$$E_{PW,CH_4} = E_{Leaks,CH_4} \quad \text{(Eq. E-4)}$$

Where:

$E_{PW,CH4}$ = The quantity of methane emissions directly attributable to an individual well that was permanently shut-in and plugged during the reporting year at a WEC applicable facility meeting the applicability provisions of § 99.50, mt CH_4.

$E_{Leaks,CH4}$ = The quantity of methane emissions attributable to the well from storage wellhead equipment leaks in accordance with paragraphs (b)(5)(i), (b)(5)(ii) or (b)(5)(iii) of this section, as applicable, for the reporting year, mt CH_4.

(5) You must quantify equipment leak methane emissions from the permanently shut-in and plugged well at the WEC applicable facility in accordance with the methods in (b)(5)(i) through (iii) of this section. You must use the same calculation method for equipment leaks reported pursuant to § 98.236(q) or (r) of this chapter in the part 98 report for the well-pad site or facility, as applicable, which is associated with the permanently shut-in and plugged well.

(i) If equipment leak surveys and measurement were used to quantify methane emissions from the permanently shut-in and plugged well and reported pursuant to § 98.236(q) of this chapter in the part 98 report for a WEC applicable facility, you must calculate the methane emissions (*i.e.,* $E_{Measured\ Leak,\ CH4}$) for each measured wellhead leak in accordance with equation E–5A. The sum of the quantified methane emissions from each measured wellhead leak at the permanently shut-in and plugged well calculated in accordance with equation E–5A shall be considered ''$E_{Leaks,\ CH_4}$'' in Equations E–1 and E–4 of this section, as applicable.

$$E_{Measured\ Leak,CH_4} = Q_{p,z} \times T_{p,z} \times M_{CH_4} \times k \times \rho_{CH_4} \times 10^{-3} \quad \text{(Eq. E-5A)}$$

Where:

$E_{Measured\ Leak,CH4}$ = The quantity of methane emissions attributable to a measured leak from a wellhead leak component at the permanently shut-in and plugged well, mt CH_4.

p = Component type as reported in accordance with § 98.236(q) of this chapter, as applicable.

z = An individual component of type ''p'' detected as leaking and measured at the permanently shut-in and plugged well in any leak survey during the year.

$Q_{p,z}$ = Volumetric flow rate of the natural gas leak for component ''z'' of component type ''p'' converted to standard conditions according to § 98.233(q)(3)(iii) of this chapter, scf whole gas/hour/component, as applicable.

M_{CH4} = The mole fraction of CH_4 in produced gas for the well. For onshore petroleum and natural gas production wells, use the mole fraction of CH_4 in produced gas for the sub-basin associated with the well, as reported pursuant to § 98.236(aa)(1)(ii)(I) of this chapter, unitless. For underground natural gas wellheads, use 0.975 or the concentration of CH_4 in the total hydrocarbon of the feed natural gas, unitless.

$T_{p,z}$ = The total time the surveyed and measured component ''z'' of component type ''p'' was assumed to be leaking and operational, in hours. If one leak detection survey is conducted in the calendar year, assume the component was leaking for the entire calendar year, hours. If multiple leak detection surveys are conducted in the calendar year, assume a component found leaking in the first survey was leaking since the beginning of the year until the date of the survey, hours; assume a component found leaking in the last survey of the year was leaking from the preceding survey through the end of the year, hours; assume a component found leaking in a survey between the first and last surveys of the year was leaking since the preceding survey until the date of the survey, hours; and sum times for all leaking periods. For each leaking component, account for time the

component was not operational (*i.e.,* not operating under pressure) using the same estimates and available data used for calculating the total time the surveyed and measured components were leaking and operational in accordance with § 98.233(q)(3)(ii) of this chapter.

k = The factor to adjust for undetected leaks by respective leak detection method. For reporting year 2024, k equals 1. For reporting year 2025 and later, k equals 1.25 for the methods in § 98.234 (a)(1), (3) and (5) of this chapter; k equals 1.55 for the method in § 98.234(a)(2)(i) of this chapter; and k equals 1.27 for the method in § 98.234(a)(2)(ii) of this chapter. Select the factor for the leak detection method used for the permanently shut-in and plugged well, unitless.

ρ_{CH4} = Density of methane, 0.0192 mt/Mscf.

10^{-3} = Conversion factor from scf to Mscf.

(ii) If equipment leak surveys and leaker emission factors were used to quantify methane emissions from the permanently shut-in and plugged well and reported pursuant to § 98.236(q) of this chapter in the part 98 report for a WEC applicable facility, equation E–5B of this section must be used to calculate $E_{Leaks,CH4}$.

$$E_{Leaks,CH_4} = \sum_{p=1}^{N_p} \left(EF_p \times \sum_{z=1}^{x_p} T_{p,z} \right) \times M_{CH_4} \times k \times \rho_{CH_4} \times 10^{-3} \qquad \text{(Eq. E-5B)}$$

Where:

$E_{Leaks,CH4}$ = The quantity of methane emissions attributable to the well from wellhead equipment leaks as reported pursuant to § 98.236(q) of this chapter for the reporting year, mt CH_4.

p = Component type as specified in § 98.233(q)(2)(iii) and (vii) of this chapter, as applicable.

N_p = The number of component types reported pursuant to § 98.233(q)(2)(ii) of this chapter for which there were detected leaks at the well reported pursuant to § 98.233(q)(2)(iii) or (vii) of this chapter, as applicable.

EF_p = The leaker emission factor for component ''p'' as specified in § 98.233(q)(2)(iii) or (vii) of this chapter, scf whole gas/hour/component, as applicable.

M_{CH4} = For onshore petroleum and natural gas production wells, the mole fraction of CH_4 in produced gas for the sub-basin associated with the well, as reported pursuant to § 98.236(aa)(1)(ii)(I) of this chapter, unitless. For underground natural gas wellheads, the mole fraction of CH_4 equals 0.975 for CH_4 or concentration of CH_4, in the total hydrocarbon of the feed natural gas.

x_p = The total number of specific components of type ''p'' detected as leaking at the permanently shut-in and plugged well in any leak survey during the year. A component found leaking in two or more surveys during the year is counted as one leaking component.

$T_{p,z}$ = The total time the surveyed component ''z'' of component type ''p'' was assumed to be leaking and operational, in hours. If one leak detection survey is conducted in the calendar year, assume the component was leaking for the entire calendar year, hours. If multiple leak detection surveys are conducted in the calendar year, assume a component found leaking in the first survey was leaking since the beginning of the year until the date of the survey, hours; assume a component found leaking in the last survey of the year was leaking from the preceding survey through the end of the year, hours; assume a component found leaking in a survey between the first and last surveys of the year was leaking since the preceding survey until the date of the survey, hours; and sum times for all leaking periods. For each leaking component, account for time the component was not operational (*i.e.,* not operating under pressure) using the same estimates and available data used for calculating the total time the surveyed components were leaking and operational in accordance with § 98.233(q)(2) of this chapter.

k = The factor to adjust for undetected leaks by respective leak detection method. For reporting year 2024, k equals 1. For reporting year 2025 and later, k equals 1.25 for the methods in § 98.234 (a)(1), (3) and (5) of this chapter; k equals 1.55 for the method in § 98.234(a)(2)(i) of this chapter; and k equals 1.27 for the method in § 98.234(a)(2)(ii) of this chapter. Select the factor for the leak detection method used for the permanently shut-in and plugged well, unitless.

ρ_{CH4} = Density of methane, 0.0192 mt/Mscf.

10^{-3} = Conversion factor from scf to Mscf.

(iii) If equipment leaks by population count were used to quantify methane emission from the permanently shut-in and plugged well and reported pursuant to § 98.236(r) of this chapter in the part 98 report for a WEC applicable facility, equation E–5C of this section must be used to calculate $E_{Leaks,CH4}$.

$$E_{Leaks,CH_4} = Count_{wh} \times EF_{wh} \times M_{CH_4} \times T \times \rho_{CH_4} \times 10^{-3} \qquad \text{(Eq. E-5C)}$$

Where:

$E_{Leaks,CH4}$ = The annual quantity of methane emissions attributable to the well from wellhead equipment leaks as reported pursuant to § 98.236(r) of this chapter for the reporting year, mt CH_4.

$Count_{wh}$ = Underground natural gas storage facilities must count each component at the storage wellhead listed in § 98.233(r)(3) of this chapter. Onshore petroleum and natural gas production must use a value of 1 wellhead.

EF_{wh} = The population emission factor for wellheads, as listed in § 98.233(r)(2) and (3) of this chapter, as applicable.

M_{CH4} = For onshore petroleum and natural gas production wells, the mole fraction of CH_4 in produced gas for the sub-basin associated with the well as reported pursuant to § 98.236(aa)(1)(ii)(I) of this chapter, unitless. For underground natural gas wellheads, the mole fraction of CH_4 equals 0.975 for CH_4 or concentration of CH_4, in the total hydrocarbon of the feed natural gas.

T = The total time that has elapsed from the beginning of the reporting year until the date the well was plugged in accordance with § 99.51(b)(2), hours.

P_{CH4} = Density of methane, 0.0192 mt/Mscf.

10^{-3} = Conversion factor from scf to Mscf.

(6) For onshore petroleum and natural gas production wells that are part of a WEC applicable facility that are permanently shut-in and plugged in reporting years 2025 and later, equation E–6 of this section must be used to quantify the methane emissions attributable to the well from associated gas flaring and completions and workovers without hydraulic fracturing and with flaring:

$$E_{F,CH_4} = V_{PW} \times X_{CH_4} \times \left[\left(1 - \eta_D\right) \times Z_L + Z_U\right] \times \rho_{CH_4} \times 10^{-3} \qquad \text{(Eq. E-6)}$$

Where:

$E_{F,CH4}$ = The quantity of methane emissions from associated gas flaring and from completions and workovers without hydraulic fracturing and with flaring attributable to the plugged well for the reporting year, mt CH_4.

V_{PW} = The volume of gas sent to the flare from the plugged well, scf. If flow for each stream to the flare is measured or determined in accordance with § 98.233(n)(3)(ii) of this chapter and that stream contains only the flow from the plugged well, use the flow for that individual stream as reported to § 98.236(n)(11) of this chapter. If flow is measured at the inlet to the flare in accordance with § 98.233(n)(3)(i) of this chapter or the stream flow measured or determined in accordance with § 98.233(n)(3)(ii) of this chapter includes flow from other sources, use an engineering estimate based upon best available information of the portion of flow from the plugged well.

X_{CH4} = Annual average mole fraction of CH_4 in the gas sent to the flare from the plugged well. If you determine composition of each stream routed to the flare as specified in § 98.233(n)(4)(iii) of this chapter and that stream contains only the flow from the plugged well, use the mole fraction for the individual stream as reported to § 98.236(n)(14) of this chapter. Otherwise, use the average mole fraction of CH_4 in produced gas for the sub-basin in which the plugged well is located as reported to § 98.236(aa)(1)(ii)(I) of this chapter.

η_D = Flare destruction efficiency, as reported to § 98.236(n)(13) of this chapter.

Z_L = Fraction of the feed gas sent to the burning flare, equal to $1 - Z_U$.

Z_U = Fraction of the feed gas sent to the flare when it is un-lit, as reported to § 98.236(n)(12) of this chapter.

ρ_{CH4} = Density of methane at 60 °F and 14.7 psia. Use 0.0192 kg/ft^3.

10^{-3} = Conversion from kilograms to metric tons.

(c) Calculate the total emissions attributable to all wells included in the submittal received pursuant to § 99.51 using equation E–7 of this section:

$$E_{Plug,CH_4} = \sum_{j=1}^{N} E_{PW_j,CH_4} \qquad \text{(Eq. E-7)}$$

Where:

$E_{Plug,CH4}$ = The total quantity of methane emissions, as determined in subpart E of this part, at the WEC applicable facility attributable to all wells that were permanently shut-in and plugged during the reporting year meeting the applicability provisions of § 99.50, mt CH_4.

$E_{PW,j,CH4}$ = The annual quantity of methane emissions attributable to a well ''j'' that was permanently shut-in and plugged during the reporting year at a WEC applicable facility meeting the applicability provisions of § 99.50 calculated using equation E–1, E–2, E–3, or E–4 of this section, as applicable.

N = Total number of wells that were permanently shut-in and plugged during the reporting year in accordance with all applicable closure requirements at a WEC applicable facility.

RIN 0584–AE69

Supplemental Nutrition Assistance Program: Standardization of State Heating and Cooling Standard Utility Allowances

AGENCY: Food and Nutrition Service (FNS), Department of Agriculture (USDA).

ACTION: Final rule.

SUMMARY: This rule finalizes changes proposed October 3, 2019, by the Department to revise Supplemental Nutrition Assistance Program (SNAP) regulations for calculating standard utility allowances (SUAs) and expand allowable shelter expenses to include basic internet costs. It requires State agencies to submit for FNS approval their SUA methodologies at least every five years, and methodology submissions must incorporate any revisions necessary to demonstrate that the baseline expenditure data and underlying methodology reflect recent trends and changes. This rule also provides State agencies with the flexibility necessary to ensure that they meet households' needs while also aligning SUAs with data on low-income household utility costs in a more consistent manner. This rule also finalizes updates proposed April 20, 2016, regarding the treatment of Low Income Home Energy Assistance Program or other similar energy assistance program payments, in accordance with amendments made to the Food and Nutrition Act of 2008 by the Agricultural Act of 2014. The intent of this final rule is to ensure consistency and integrity of SUAs across the country, which the Department believes is good governance.

DATES:

Effective date: This final rule is effective January 17, 2025.

Compliance date: The compliance date for SUA changes is October 1, 2025.

ADDRESSES: SNAP Program Development Division, Food and Nutrition Service, USDA, 1320 Braddock Place, Alexandria, Virginia 22314.

Combined Final Rule

This final rule incorporates provisions originally proposed in two separate notices of proposed rulemaking (NPRM): The October 3, 2019, NPRM titled ''Supplemental Nutrition Assistance Program: Standardization of State Heating and Cooling Standard Utility Allowances'' (84 FR 52809), and the April 20, 2016, NPRM titled ''Supplemental Nutrition Assistance Program: Standard Utility Allowances Based on the Receipt of Energy Assistance Payments Under the Agricultural Act of 2014'' (81 FR 23189). While originally published as separate NPRMs, the provisions contained in these rules both relate to determining household shelter expenses, and therefore, the Department is addressing the NPRMs in this single final rule. In this final rule, the Department will refer to the October 3, 2019, NPRM as the SUA NPRM. The Department will refer to the April 20, 2016, NPRM as the LIHEAP NPRM.

The Department intends for the LIHEAP NPRM provisions of this final rule and the SUA NPRM provisions to be separate and severable from one another. If any provision related to the SUA NPRM is stayed or determined to be invalid, it is the Department's intention that the remaining provisions

related to the LIHEAP NPRM shall continue in effect. For example, if a court were to invalidate the final rule's HCSUA standardization provision, the provisions related to the LIHEAP NPRM would remain in effect, as those provisions ''could function sensibly without the stricken provision.'' [1]

This rule redesignates several regulatory citations to reflect amendments to the regulatory text resulting from this final rule. Where applicable, each redesignation is reflected explicitly in the discussion of the corresponding provision.

Background on SUAs and the SUA NPRM

The Food and Nutrition Act of 2008 (the Act) establishes national eligibility standards for SNAP, including net income standards, and provides allowable deductions from gross income to determine the net income of a household. Apart from a standard deduction for all households, deductions are available to households based on their circumstances. Some of these deductions include: earned income; dependent care costs when needed for work, searching for work, training, or education; medical expenses over $35 for elderly or disabled households; and excess shelter costs.

The excess shelter deduction allows households to deduct shelter expenses that exceed 50 percent of their income after all other deductions are taken. For households without an elderly or disabled member, the deduction must not exceed a maximum limit. Households with elderly or disabled members are not subject to a limit. Shelter expenses include the basic cost of housing as well as certain utilities and other allowable expenses listed in 7 CFR 273.9(d)(6)(ii). To help streamline the application and certification process, section 5(e)(6) of the Act permits State agencies to develop SUAs to use in lieu of actual utility expenses in determining a household's shelter costs for the purposes of the excess shelter deduction. The Act requires that State SUAs must be developed ''in accordance with regulations promulgated by the [USDA].'' [2]

Per USDA's regulations, at 7 CFR 273.9(d)(6)(iii), State agencies may create three types of SUAs: a heating and cooling SUA (HCSUA); a limited utility allowance (LUA); and single utility allowances (also referred to as ''individual standards''). The HCSUA is the largest of the SUAs and is available to households that incur heating or cooling expenses separate from their rent or mortgage. The HCSUA is comprehensive and includes costs for heating or cooling and all other allowable utilities. The LUA includes expenses for at least two utilities; single utility allowances may be used for stand-alone utility costs. Neither the LUA nor single utility allowances include costs for heating and/or cooling. Utility expenses captured in SUAs may include: electricity or fuel for purposes other than heating or cooling, water, sewerage, well and septic tank installation and maintenance, telephone, and garbage or trash collection.[3]

A State agency may mandate use of SUAs for all households with qualifying expenses if the State agency has developed one or more SUAs that include the costs of heating and cooling and one or more SUAs that do not include the costs of heating and cooling.[4] Under this option, households entitled to the SUA may not claim actual expenses, even if the expenses are higher than the SUA. Households not entitled to the SUA may claim actual allowable expenses.

SNAP regulations require State agencies to review SUAs annually and adjust to reflect changes in costs.[5] State agencies must submit the figures to FNS for approval at the annual update and whenever a State agency changes methodologies (Office of Management and Budget (OMB) Control Number 0584–0496; Expiration Date 7/31/2026). In developing SUAs, program requirements do not prescribe a particular methodology or data sources for State agencies to use. State agencies have a certain amount of flexibility to tailor the program's administration to meet the needs of their residents. SUAs embody this flexibility, as they vary from State to State and reflect not only the different costs, but the different utility needs in each State. For example, the heating and cooling needs of Maine residents are not the same as those in Mississippi as these States have differing climates, energy usage, and commonly used energy sources. While this flexibility is critical and each State's circumstances are unique, without consistent parameters for SUA methodologies, the Department is concerned that the information State agencies use to determine SUAs is outdated and may not reflect low-income households' current utility costs.

Monthly shelter costs, such as rent, mortgage, and utilities, comprise a significant share of most Americans' household budgets. Similarly, in the SNAP benefit calculation, SUAs comprise a significant share of household shelter costs. The use of SUAs allows for a streamlined approach over an itemized, case-by-case approach to determine household utility costs and is a substantial factor in evaluating whether the household is eligible for the excess shelter deduction. As such, SUAs can affect a household's eligibility for the excess shelter deduction and, ultimately, the household's eligibility for SNAP and their benefit amount. Aligning SUAs with current household conditions, including in households with unusually high utility expenses, is important to ensure that the application of the excess shelter deduction adequately reflects household circumstances and ultimately, the appropriateness of the benefit levels.

The Department explored options for standardizing State SUAs in a 2017 study, ''Methods to Standardize State Standard Utility Allowances'' (Holleyman, et al., 2017) (2017 SUA Study).[6] The 2017 SUA Study evaluated State agency methodologies and reviewed available utility cost data sources. The study found that most of the methodologies State agencies employ fall into one of two categories: (1) those that rely on recent State-specific utility data; and (2) those that adjust a base number using an inflation measure such as the CPI of utility costs. Of the 19 State agencies that update a base number, the study found that less than half (seven States) knew the source of their base number, and many did not know when it was established.

Further, the 2017 SUA Study noted that State HCSUAs differed considerably from the average utility expenditures among low-income households in their State. The authors speculated that State agencies may set their SUAs higher than the average costs to minimize benefit loss for households with very high utility expenses. In evaluating this possibility, the authors compared State HCSUA values to values derived from Federal survey data and found variation in the degree to which State agencies set their HCSUAs compared to HCSUAs set at the 85th percentile of utility costs for low-income households. The study used the

85th percentile for illustrative purposes and not as a recommended threshold, as the Department has not previously set a designated threshold for SUAs and has allowed State agencies flexibility in this area.

The authors found that most State agencies used HCSUAs below the 85th percentile of utility costs for low-income households in their State based on the Federal survey data, meaning that their HCSUAs may be under-representing the costs for households with high utility expenses.

To ensure consistent and transparent application of the HCSUA across the country, the Department proposed a methodology to standardize the way State agencies calculate HCSUAs in the SUA NPRM published October 3, 2019. The Department notes that it also used the term ''benefit equity'' in the NPRM to describe the purpose of standardizing SUA methodologies. Multiple commenters, described in more detail below, raised concerns about the use of this term given that benefit levels depend on household circumstances, including differences in utility costs. This term, in addition to ''consistency'' and ''integrity,'' were used to describe the Department's goal of ensuring each State's SUAs represent utility costs for low-income households in the State by proposing clear data requirements to calculate them. However, after considering this terminology, the Department agrees with commenters that ''benefit equity'' is imprecise compared with the other terms used. Therefore, the Department will use the terms ''consistency'' and ''integrity'' throughout to describe the purpose of the SUA NPRM and the final rule.

The methodology in the proposed rule would establish each State agency's HCSUA at the 80th percentile of low-income households' utility costs in the State. The proposed rule would cap most LUAs and individual standards for other utility costs at a percentage of the State agency's HCSUA. The proposed rule would add the cost of basic internet as an allowable utility expense and establish a national maximum amount for a new telecommunications SUA that would include internet and telephone costs. FNS would calculate the initial figures and update them annually.

Summary of General Comments on the October 3, 2019, (SUA) NPRM

The Department received over 125,000 public comment submissions on the SUA NPRM.[7] Of these, approximately 6,500 were unique and nearly 118,800 were associated with form letter campaigns. The Department reviewed and considered all comments received.

Approximately 35 individual commenters expressed general support for the proposed changes, citing concerns about increasing government spending and the need to prevent fraudulent activity. A non-profit organization argued that SUAs have led to significant distortions in eligibility determinations and benefit levels between States and significantly weaken program integrity. This commenter claimed that State agencies frequently set SUA thresholds above what applicants are paying for utilities, creating a greater risk for abuse and violating the statutory intent of SUA policies. While the Department appreciates these comments, the Department notes that setting SUAs above what some applicants are paying for utilities is not fraudulent, as SUAs are not meant to represent average household utility expenses.

In past guidance,[8] the Department encouraged State agencies to set SUAs high enough to ensure most households use the SUA rather than claim actual utility costs, while also reflecting actual costs. Most State agencies mandate the use of SUAs, as described above. The flexibility State agencies have to set SUAs above the average household's costs protects vulnerable households with higher-than-average utility costs in mandatory SUA States. The Department proposed changes to SUA methodologies out of concern that SUAs are outdated and do not reflect recent trends and data on household utility costs, leading to inconsistencies between State SUA values and the utility costs SNAP households incur.

Additionally, approximately 15 commenters supported the proposed update to the telephone standard to include basic internet services. Multiple commenters, including advocacy groups, a policy advocacy organization, multiple State government agencies, a religious organization, and a trade association, agreed with the Department's argument that internet is an essential service. Additional commenters, including an advocacy group, a legal services organization, a policy advocacy organization, and State government agencies generally supported updating the telephone standard to include internet services.

Approximately 107,980 commenters, the majority of which were from form letter campaigns, generally opposed the proposed changes in the SUA NPRM. Many of these commenters expressed concerns that standardizing HCSUAs at the 80th percentile would decrease benefits and negatively impact the general health and well-being of certain demographics, including women, elderly individuals, individuals with higher-than-average shelter costs, individuals with disabilities, and children. Some commenters also expressed concern over how the changes might affect the stability of the economy.

One food bank, ten non-profit and advocacy organizations, six form letter campaigns, one professional association, one religious organization, one food service industry organization, and two local governments expressed opposition to the proposed rule because it was projected to cut SNAP benefits for a significant number of households. The same religious organization and two other form letter campaigns opposed the changes because they were projected to cause 8,000 people to lose SNAP benefits. An advocacy group wrote that the proposed rule would eliminate 18 percent of the average SNAP family's food budget. The Department notes that most SNAP households (81 percent) would have experienced no change to their benefits or a benefit increase under the proposed rule, as noted in the Regulatory Impact Analysis (RIA). The Department also notes that these projections are no longer accurate, given the changes in the final rule, which are described in more detail below.

Further, a form letter campaign, a State-elected official, three advocacy organizations, one policy advocacy organization, and an individual commented that the proposed rule would force struggling families to choose between heating and cooling their homes and putting food on the table. Two food banks, a form letter campaign, a religious organization, a State government, a trade association, and four advocacy groups cited evidence that suggests SNAP supports housing stability and alleviates the trade-offs families often face between purchasing food or other basic necessities, such as healthcare and utilities. A form letter campaign wrote that the proposed rule discriminates against families with high shelter costs.

Multiple commenters raised concerns about the proposed rule's cut to SNAP benefits and the associated food security and health implications. A food bank, a

[7] Posted public comments may be found at *regulations.gov https://www.regulations.gov/document/FNS-2019-0009-0001/comment*

[8] U.S. Department of Agriculture, Food and Nutrition Service, *Food Stamp Program Standard Utility Allowances Requirements and Methodologies,* FNS Notice 79–47, May 1979. Retrieved from: *https://www.fns.usda.gov/snap/sua-requirements-and-methodologies* in December 2023.

healthcare association, and an individual expressed concerns regarding the negative impacts of food insecurity on a person's health. A legal services organization, four religious organizations, a healthcare association, an educational institution, two advocacy groups, and a policy advocacy organization commented that the proposed rule would exacerbate food insecurity and significantly increase healthcare costs. A form letter campaign stated that Congress authorized SNAP to encourage participant households to consume nutritious foods and found that limiting the purchasing power of low-income households contributed to food insecurity and malnutrition.

Commenters also raised concerns regarding the overall impact of the SUA NPRM in conjunction with the final rule published on December 5, 2019, entitled ''Supplemental Nutrition Assistance Program: Requirements for Able-Bodied Adults Without Dependents'' (84 FR 66782), and the proposed rule published on July 24, 2019, entitled ''Revision of Categorical Eligibility in the Supplemental Nutrition Assistance Program (SNAP)'' (84 FR 35570). Commenters expressed concern that these regulatory changes proposed by the Department would adversely impact households and their benefits, compounding the impact of the SUA NRPM for some households. These comments are no longer relevant as the Department rescinded (86 FR 34605) and withdrew (86 FR 30795) these proposed and final changes to program rules.

Approximately 17,340 commenters discussed the proposed rule as it relates to SNAP's statutory purpose and Congressional intent. Two food banks, two religious organizations, three local/municipal governments, a policy advocacy organization, a trade association, two legal services groups, two form letter campaigns, a health care association, a community organization, and seven advocacy groups claimed that the proposed rule was an attempt to sidestep Congress and reduce SNAP benefits. Many of these commenters, as well as two form letter campaigns, two federally-elected officials, 11 advocacy groups, three legal services groups, a religious organization, three food banks, an academic, a trade association, and a community organization, argued that the proposed rule subverts the 2018 Farm Bill, which made no changes to SUAs.

Twelve commenters, including a policy advocacy organization, two advocacy groups, a lawyer, four legal services groups, two individual commenters, a local/municipal government, and a federally-elected official, claimed the proposed rule was in violation of the Administrative Procedure Act (APA). Two of the legal services commenters alleged the proposed rule was arbitrary and capricious because it did not provide adequate reasoned rationale to inform meaningful comment, as required by the APA. A federally-elected official and an advocacy group claimed the proposed rule violates the APA because it failed to consider all relevant factors. A policy advocacy organization said that the proposed rule does not provide enough information for the public to meaningfully comment on the proposed methodology. The commenter wrote that the proposed rule violates the APA because it does not provide a justification for the 80th percentile HCSUA cap.

The Department appreciates the commenters' concerns about the proposed rule's potential adverse impact on SNAP households and has made changes in the final rule that may address these concerns. These changes include the Department not finalizing the proposed HCSUA methodology standardization provision and the proposed caps on LUAs and individual standards. The Department still believes it is necessary to ensure a clear justification for the any SUA that a State sets, and therefore the Department is providing State agencies with the flexibility to continue setting their own SUAs while standardizing the data and methodology criteria that FNS will use to approve SUAs. As noted above, commenters broadly supported accounting for basic internet costs in SUAs. The final rule makes changes to treat basic internet costs like any other allowable utility cost that can be included in the HCSUA, LUA, and as an individual standard. The Department further explains these changes and the accompanying rationale later in this preamble.

The Department disagrees with commenters' claims that the Department lacks the authority to standardize SUAs. While the Department agrees that Congress did not make changes to SUAs during the passage of the 2018 Farm Bill, the Department notes that Congress did not change sec. 5(e)(6)(C)(i) of the Food and Nutrition Act of 2008 either, which gives the Secretary the authority to promulgate regulations concerning how SUAs are set by State agencies.[9] As such, the Department maintains the authority to regulate SUAs within the statutory framework.

In the sections that follow, the Department presents each provision of the proposed rule: the relevant, substantive comments related to the provision; and any changes made to the final rule in a section-by-section format. Throughout this comment analysis, the Department views a comment as substantive if it provides an opinion or recommendation on a specific policy and includes detailed reasoning.

Standardizing HCSUA Methodology

In the SUA NPRM, the Department proposed to amend SNAP regulations at 7 CFR 273.9(d)(6)(iii) to create a new, standardized methodology for calculating State HCSUAs. The proposed standardization set HCSUAs at the 80th percentile of utility costs for low-income households in each State, calculated annually by FNS.

The NPRM methodology would use best-available utility cost information from nationally representative Federal sources that reflect State-specific household expenses, such as the American Community Survey (ACS), drawing on the recommendations of the 2017 SUA Study. The methodology would also allow the Department to use other data sources if such Federal sources are not available or if better data becomes available. Under the SUA NPRM, FNS would calculate and provide States with standardized HCSUAs using the following sources and set SUAs at the 80th percentile of utility costs for low-income households:

- ACS with adjustments based on the Residential Energy Consumption Surveys (RECS) to derive the energy component of the HCSUA.
- ACS and Consumer Expenditure Surveys (CEX) data to derive the water, sewer, and trash component of the HCSUA.
- Current pricing information on telecommunications services from service providers.

As needed, FNS would adjust the estimates from the sources listed above using utility expenditure growth rates and population growth estimates in order to reflect the current fiscal year.

Since the proposed data sources do not collect information for territories, such as Guam and the Virgin Islands, the Department proposed to continue to allow these territories to use their own methodologies, and conduct their own calculations, subject to FNS approval.

Using the utility cost information from these sources, FNS would set the standardized HCSUAs at the 80th percentile of utility costs for low-income households in each state. In the

[9] 7 U.S.C. 2014(e)(6)(C)(i) (''[A] State agency may use a standard utility allowance in accordance with regulations promulgated by the Secretary. . . .'').

SUA NPRM, the Department explained that it chose the 80th percentile because standardizing at this level would reduce the amount of variation between utility costs and HCSUA amounts across States. Additionally, the Department argued that setting HCSUA values at the 80th percentile would balance the need to create more accurate standards while still capturing households that have higher than average utility costs, as most States mandate SUAs in lieu of actual costs.

Commenters expressed opposition to the proposed standardized HCSUA methodology due to concerns about the following, which are discussed in more detail in the paragraphs below:

- Negatively impacting SNAP participants, especially among certain demographics.
- Setting HCSUAs at the 80th percentile of low-income households' utility costs without clear rationale;
- Limiting State agencies' flexibility to address their unique needs; and
- Using the data sources the Department proposed, in lieu of other State-specific data sources.

Approximately 240 commenters expressed general opposition to the proposal to set HCSUAs at the 80th percentile of low-income households' utility costs in the State. Many of these commenters requested further explanation for the Department's rationale for capping the HCSUA at the 80th percentile. These comments included those from form letter campaigns, multiple members of the U.S. Congress, a legal center, a legal services organization, a health care association, multiple local/municipal commenters, a State agency, and advocacy groups.

Approximately 107,980 commenters expressed general opposition to standardizing the HCSUA methodology process due to the potential adverse effects on certain demographics. Three form letter campaigns, a food bank, five advocacy groups, and an individual, discussed the negative impacts of the proposed changes on people with disabilities. Two of these form letter campaigns, the same individual, an additional food bank, and an additional advocacy group stated that 11 percent of SNAP households include a person with a disability, and those households will be disproportionately impacted by the proposed rule. Many of these same commenters, and an additional food bank and advocacy group, argued that the proposed rule would similarly harm elderly SNAP recipients. Another form letter campaign stated that households with a family member with disabilities are two to three times more likely to experience food insecurity than households without a family member with disabilities. This form letter further claimed that the proposed rule would force people with disabilities and their families to choose between spending their limited resources on food or other necessities such as housing, utilities, and medical expenses.

A policy advocacy organization and an advocacy group argued that the rule would have a disproportionate negative impact on women because women make up the majority of SNAP recipients. Comments from one advocacy group and a policy advocacy organization argued the proposed changes would increase food insecurity for children, and two food banks, four advocacy groups, and a policy advocacy organization cited the proposed rule's RIA, which estimated a 19 percent net reduction in SNAP benefits for households with children, with an average annual loss of $336 in food assistance. The Department notes that the proposed rule's RIA did not estimate a 19 percent net reduction in SNAP benefits for households with children. Rather, it noted that 19 percent of SNAP households with children were expected to see a reduction in their SNAP benefits under the proposed rule.

In addition to the impact on certain demographics, commenters expressed concern that standardizing the HCSUA at the 80th percentile would not adequately cover the lowest-income household's high utility costs and would result in decreases to SNAP benefits. Two form letter campaigns noted that the proposed rule would cut $4.5 billion over five years in SNAP benefits. A community organization, multiple advocacy groups, multiple State government agencies, a food bank, a professional association, and a legal services organization criticized the proposed methodology, writing that 19 percent, or approximately one in five, of SNAP households would see a reduction in benefits under the proposed rule. Three legal services organizations, one attorney, four advocacy groups, four policy advocacy organizations, and one religious organization stated that using the 80th percentile would result in lower HCSUAs than the Department has allowed under long-standing policy. Some commenters raised the potential for the Department to set default HCSUAs at a different percentile and provided suggestions. Advocacy groups and an attorney stated that, while interstate inequities exist, it would be preferable for States with lower-than-average utility allowances to raise them rather than standardizing all States' HCSUAs.

The Department appreciates commenters' concerns about the proposed rule's potential adverse impact on certain demographics. The Department is aware of the potential negative impact on elderly and disabled households since they do not have a cap on their excess shelter deduction in the Act. Therefore, without the cap on shelter expenses that all other households have, households with elderly or disabled members are more likely to see a greater change in their benefit amounts (both increases and decreases) due to any change in HCSUA methodologies than households without elderly or disabled members. The Department is committed to serving all households, including those with elderly or disabled members who are most affected by changes to SUAs, and will support State agencies' implementation of the final rule as they help households understand any changes to their benefits and are available for questions, as necessary.

Numerous commenters also expressed broader concerns about potential SNAP benefit decreases under this rule. The Department understands the importance of benefit stability for households, but also recognizes that SUAs must reflect low-income household utility costs in order to serve their purpose. SUAs may change as utility costs increase or decrease, and those changes are reflected in the SNAP benefit level. The impact that SUAs have on benefits is important, which is why the SUA NPRM sought to bring more consistency to the SUA process and ensure greater integrity in the data used to calculate them. The Department has made changes in the final rule to allow State agencies more flexibility in developing their SUA methodologies to ensure that they meet households' needs in a more consistent manner. These changes also address commenter concerns regarding the SUA NPRM's impact on SNAP benefit levels. The Department will provide targeted technical assistance to State agencies highlighting the flexibilities provided in this final rule and considerations for minimizing potential negative impacts on households, including the Department's waiver authority.

In addition to concerns regarding SNAP benefit impacts, many commenters expressed concerns that standardizing HCSUA methodologies would remove important, existing flexibility for State agencies to address their residents' unique needs. An advocacy group argued that the existing regulations provide State agencies the

flexibility to accurately address the needs of their residents as energy prices vary by location and reflect differing climates. The commenter added that the new process would remove State specificity in relation to the State's unique circumstances and decrease the overall precision of the HCSUAs. Similarly, a policy advocacy organization argued that States are best positioned to develop and administer their own methodologies and determine appropriate SUA amounts based on their region and climate. A non-profit organization criticized the Department's approach in trying to find data sets that fit all States, and instead suggested allowing individual States to use data sets that would best fit their needs.

In addition to State flexibility concerns, multiple commenters, including two advocacy groups, three legal services organizations, a religious organization, two policy advocacy groups, a trade association, two State government agencies, and local government raised concerns about the data sources the Department proposed using as part of its methodology. Specifically, the commenters questioned: (1) the multi-year lags in the availability of RECS data; (2) the effects of possible recall bias on ACS-based cost estimates; (3) the rationale for using RECS data which, at the time of the proposed rule, used regional averages for some States when there was not enough information to develop a State-level estimate; [10] and (4) why the Department did not consider using utility cost data sourced from State public service commissions. Additionally, commenters requested that the Department codify the proposed methodology in the rule and regulations, rather than providing FNS with the flexibility to change it in the future.

Commenters also expressed concern that State agencies with more accurate data than the sources used in the Department's proposed methodology would not have the opportunity to appeal or submit their methodologies. Multiple commenters wrote that individual State agencies will be able to develop much more accurate utility usage figures from utility provider data in comparison to the proposed standardization methodology. A State government agency commented that the Department should allow State agencies to resubmit their HCSUA base methodology with justification and data to support it. A legal services organization and an advocacy group that opposed using RECS suggested that the Department develop a process for State agencies and the public to appeal or present alternative data in calculating HCSUA values. Similarly, an advocacy group and a State agency criticized the omittance in the proposed rule of any opportunity to provide more accurate State data in lieu of the data sources used by the Department. Finally, a non-profit organization suggested that the Department provide technical assistance to State agencies to determine whether their current HCSUA approach best reflects the needs of their individual State, or if the proposed Department methodology would be a better fit.

Lastly, the Department solicited comments specifically related to the standardization exception made for territories for which ACS and RECS do not collect data. The Department received one comment from an advocacy group that supported this treatment of Guam and the Virgin Islands. Another commenter stated that Puerto Rico is similar to Guam and the Virgin Islands and should therefore also be allowed to use its own SUA methodologies. The Department notes that currently, Puerto Rico does not operate SNAP, so SUA policy does not impact this territory; however, the Department agrees that it would treat all territories subject to SUA policy similarly.

After careful consideration of the comments related to the importance of State flexibility and concerns about the limitations of the Department's proposed standardization methodology, the Department is not finalizing the proposed HCSUA standardization as proposed. The Department agrees that State agencies need flexibility to reflect their households' unique utility needs and that, in some cases, State utility data provides more specific, accurate information to inform HCSUA methodologies. Rather than finalizing the proposed HCSUA standardization, the Department will continue to allow State agencies to set their own HCSUA methodology, subject to FNS approval.

Additionally, the Department understands commenters' concerns regarding the rationale for setting HCSUAs at the 80th percentile and the need for State flexibility in setting HCSUAs. As such, the Department will not require State agencies to set HCSUAs at a specific percentile of low-income households' utility costs in the State.

While the Department will no longer set HCSUA values based on a standardized methodology or specific percentile across all States, the Department maintains the purpose of the SUA NPRM is to improve consistency and data integrity in State SUA calculations, albeit through a different method. The Department maintains that there should be clearer guidelines and requirements for State agencies to follow when developing their HCSUAs to ensure these standards accurately reflect low-income households' utility costs. Therefore, in lieu of the proposed HCSUA methodology standardization, the Department is revising 7 CFR 273.9(d)(6)(iii) to allow States to continue to set their own HCSUAs, while standardizing the data and methodology criteria that FNS will use to approve SUAs. This standardization method includes two requirements.

First, State agencies must submit for FNS approval their HCSUA methodology at least every five years. Methodology submissions must incorporate any revisions necessary to demonstrate that the baseline expenditure data and underlying methodology reflect recent trends and changes. The methodology update must include changes to the baseline expenditure data and an explanation of the State agency's methodology for deriving HCSUAs from such data.

The Department notes that this is in addition to the existing requirement in regulations that State agencies must review their SUAs annually and adjust to reflect changes in costs, such as by using sources like CPI. This annual update to reflect changes in costs refers to interim years between the State agency's full methodology update, when new utility data may not be available yet. The Department is also maintaining the existing regulatory requirement that State agencies must submit their methodologies for FNS approval when the State agency develops or changes its methodology.

This five-year period strikes an appropriate balance between capturing changes to general trends in energy markets and utility prices while minimizing the burden on State agencies or utility providers. The Department considered requiring State agencies to revise and submit their methodologies more often than every five years but deemed the existing annual update requirement sufficient to capture changes in interim years; however, State agencies may update their HCSUA methodology more frequently if they wish.

Similarly, the Department considered a longer period between methodology revisions. A longer period raised concerns about how well State agencies could capture shifts in utility costs and account for trends like changing climate

[10] The Department notes that RECS data is available for all States now.

conditions' impact on energy sources. State agencies unable to source data directly from utility providers are likely to rely on survey data, which can lag behind current conditions by several years. As such, allowing State agencies to update their methodologies every seven to eight years could result in baseline methodologies reflecting conditions that are a decade or more out-of-date. This five-year period requirement ensures that State agencies electing to use survey sources will use more recent ones.

Second, State agencies' methodologies must:

- Reflect the entire State or geographic area the SUA covers;
- Use data sourced from utility providers or similarly reliable source;
- Reflect expenses incurred by low-income households,
- Distinguish if the utility is for heating or cooling, if applicable; and
- Reflect residential utility expenses.

The Department chose these criteria to ensure HCSUAs accurately represent the utility costs of low-income households, including households with higher than average utility costs, in the designated area while providing State agencies additional flexibility in creating their standards. These criteria align with the goals of the data and methodology the Department proposed to use in the SUA NPRM. The Department notes that, for the purposes of these criteria, ''utility providers'' includes any company or organization that supplies or sells a utility allowed under 7 CFR 273.9(d)(6)(ii)(C).

The standardized criteria outlined above will ensure State agencies are developing HCSUAs based in appropriate data to support the values; however, it is important that HCSUAs reflect more than just the average household's costs. SUAs need to also represent households with higher-than-average utility costs since most State agencies mandate the use of SUAs. The final rule is forgoing setting a specific percentile for HCSUAs to provide State agencies with additional flexibility and to avoid mandating significantly lower SUAs. While the NPRM proposed requiring that HCSUAs be set at the 80th percentile, this final rule modifies this approach. Under this final rule, State agencies may set HCSUAs at levels higher than the 80th percentile. State agencies have good reasons to take into account the need to capture utility expenses for the vast majority of households, which requires including those that have higher than average utility costs. This final rule allows states this flexibility. Since most State agencies mandate the use of SUAs, it is important that their values reflect more than just the average household's costs and account for households with significant utility expenses. The Department will provide State agencies with technical assistance and support to assess appropriate distributions of utility costs as part of its methodology review.

In developing or revising their HCSUA methodologies, State agencies may select to use Federal sources to meet these requirements. While the Department is no longer finalizing the use of ACS data, in conjunction with RECS and CEX data, to standardize HCSUAs, the Department maintains that this methodology is acceptable and based on the best currently available, annually-updated national Federal surveys for determining utility expenses for low-income households at the State level. For example, RECS is the only source that validates households' reported energy expenditures with data from their utility providers. It also provides end-use information, which allows for estimation of energy expenses by low-income households with heating and cooling expenses. The Department also notes that ACS is updated annually and based on a very large sample, which makes it valuable for producing representative, recent estimates for every State.

The 2017 SUA Study, as well as a subsequent 2023 study [11] conducted by the Department, found that combining this data with ACS data offsets some of the limitations of each data source with the advantages of the other. While not mandating their use, the Department encourages State agencies without more recent and accurate State-specific data to review and consider using Federal survey data, such as ACS and RECS, to develop their HCSUAs. These sources would be considered ''similarly reliable'' to utility provider data. The Department will publish guidance and provide State agencies with technical assistance in developing their HCSUA methodologies as needed. As part of this technical assistance, FNS will provide factors for State agencies to consider when identifying data sources and establishing methodologies. FNS will also provide examples of approved State agency methodologies for reference. FNS will work with State agencies on a state-by-state basis to address their unique circumstances and review flexibilities that may minimize potential negative impacts on households.

While these criteria allow State agencies more flexibility than the proposed standardization, the Department understands that some commenters were wary of any changes to the current process. A State government agency asked for the Department to simply maintain the current system. A legal services organization wrote that the proposed rule provides insufficient reasons for departure from prior policy in removing States' ability to set their own SUAs. Multiple members of the U.S. Congress, a State government agency, and a professional association commented that the Department did not provide any evidence as to why the proposed rule's standardization approach is preferable to current State agency methodologies. Similarly, an advocacy group stated that by nature of the SUA approval process and methodologies not being public, the Department did not provide any insight into the SUA process and what specific issues the Department has with State agencies' methodologies as a rationale for the proposed rule. A legal services organization asked why the Department has not altered or rejected State agency SUAs, when it has the option to review them, if current methodologies used by State agencies are objectionable.

The Department recognizes the impact of HCSUAs in determining eligibility and benefit amounts and has provided additional information to reiterate the purpose and rationale of the SUA NPRM below. Rather than only adjusting certain State HCSUAs, the Department is making changes through regulations because the Department's concerns with HCSUAs are not specific to any one State agency, and the changes would affect consistency and integrity throughout the program nationwide.

In response to comments asking for additional rationale and clarity on issues with the current SUA methodologies, the Department reexamined State agencies' HCSUA base methodologies. In line with the 2017 SUA Study's findings, discussed above, the Department found several State agencies adjusting a base number annually using an inflation measure such as the CPI Fuels and Utilities index but could not locate the underlying source or methodology behind their base number. Other State agencies submitted methodologies based on old data (ranging from 10–47 years old), did not consider low-income households' utility costs, and/or did not consider end-use for the utility. Only a few State agencies' methodologies used more

[11] Holleyman, Chris, Pratima Damani, and Erick Torres. Updating Standardized State Heating and Cooling Utility Allowance Values. Prepared by SP Group, LLC for the U.S. Department of Agriculture, Food and Nutrition Service, March 2023.

recent data sourced from utility providers, but these often did not account for low-income households' utility costs.

Prior to this rulemaking, the Department has provided State agencies limited information on specific parameters or requirements for calculating data-driven SUA methodologies. As a result, the Department has approved changes to SUA methodologies and annual updates to SUA values based on a variety of methodologies and data sources.

Since some State agencies continue to adjust historic base numbers without an underlying, clear methodology, the Department has growing concerns that some State agencies' data is outdated and may not reflect low-income households' utility costs today. Since the mid-1970s, when the Department first introduced SUAs, household utility usage and composition has changed significantly. For example, the U.S. Energy Information Administration found that energy use per household has declined steadily between 1980–2015, due to improvements in building insulation and materials and improved efficiencies of heating and cooling equipment and other appliances.[12] While there have been improvements to building materials across all homes in the past few decades, households that struggle to pay their energy costs are ''more likely to report their homes are drafty or poorly or not insulated [. . .] than households that did not experience energy insecurity.'' [13] These same energy insecure households, some of which may also receive SNAP benefits given their low-incomes, were billed more for energy than other households in 2020.[14]

Further, residential energy sources have shifted from primarily natural gas in 1970 to electricity in 2020.[15] In this same period, air conditioning has become ''one of the fastest growing energy uses in homes.'' [16] The U.S. Energy Information Administration found that while in 1980, 57 percent of homes used air conditioning, 87 percent of homes used air conditioning in 2015.[17] Factors such as changing climate conditions may continue to shift energy use, the mix of energy sources used by households, and the prices of those energy sources over time. The U.S. Global Change Research Program's Fourth National Climate Assessment notes that ''by 2040, nationwide, residential, and commercial electricity expenditures are projected to increase by six percent to 18 percent under a higher [temperature increase] scenario (RCP8.5), four percent to 15 percent under a lower scenario (RCP4.5), and four percent to 12 percent under an even lower scenario (RCP2.6).'' [18]

These factors and changes confirm that State agencies must review and revise their SUA methodologies as needed to accurately reflect low-income households' utility costs and reflect current trends. Beyond outdated source values, when HCSUA methodologies do not incorporate changes in energy sources, the methodology can under (or over) count the share of different utility expenses in a household's budget. The Department recognizes that providing State agencies broad discretion and allowing HCSUA updates based on outdated methodologies may have embedded inconsistency into the process. Further, the Department understands that while some State agencies have an HCSUA methodology that is outdated, unknown, or unclear, other State agencies have State-specific data sourced from utility providers that is more recent or accurate than the proposed data sources used by FNS.

In acknowledgement of these issues, the Department is finalizing revisions to the HCSUA methodology process, albeit with changes and more State agency flexibility, to recalibrate the process. While the Department is not finalizing the proposed HCSUA standardization provision, the standardized criteria outlined above will ensure more consistency between HCSUA methodologies across the nation.

Since the Department is no longer finalizing HCSUA standardization, this final rule treats territories the same as all other States and does not contain any special rules related to territories.

While the proposed rule included standardized HCSUA language at 7 CFR 273.9(d)(6)(iii)(B)(*1*), the final rule amends the proposed language to remove HCSUA standardization and add methodology requirements and redesignates this section at 7 CFR 273.9(d)(6)(iii)(C) for clarity.

Changes to Current SUA Options

The SUA NPRM proposed to eliminate State agency options to vary SUAs by season, household size, or geographic area as part of the Department's efforts to bring greater consistency across States and in recognition of the low number of State agencies taking these options. Currently, six State agencies vary their SUAs by household size, only Alaska and New York vary by geographical area, and no State agencies adjust their SUAs by season.

Approximately 75 commenters, including individuals, a legal services association, a policy advocacy organization, community organization, and State agencies, expressed opposition to eliminating these options. Commenters shared concerns that removing these flexibilities may cause harm to SNAP recipients by treating all States and localities in the same manner when energy needs, heat sources, climates, and housing types are varied. An individual commenter stated that citizens burdened with paying very high heating and cooling bills in certain regions are more likely to suffer because of a SUA calculation that does not account for regional differences in poverty and climate. Further, a legal services commenter stated that the flexibility allowing State agencies to calculate utility costs and rates is essential for States where heating costs, sources, and housing types vary. A federally-elected official expressed concern that the proposed rule would negatively impact the residents of the official's State, who rely on SNAP benefits calculated using factors specific to their community and costs associated with the disparate regions of their State. Commenters also expressed that removing these options would unduly restrict State agency flexibilities.

Two form letter campaigns noted that the proposal would force a ''one-size-fits-all'' policy for both shelter and utility costs across the country. Several commenters, including multiple advocacy groups, a federally-elected official, and an attorney highlighted specific impacts the proposed rule would have on certain geographic areas. An advocacy group and an attorney said that the proposed rule would harm SNAP participants living in northern

and colder states, with specific mentions of Vermont and California. An individual commenter stated that the proposed rule would harm SNAP participants living in southern cities, such as Memphis, Tennessee, where low-income households spend an average of 13.2 percent of their income on energy. The commenter also cited the large energy burdens of other southern cities, including Birmingham, Alabama; Atlanta, Georgia; and New Orleans, Louisiana.

An advocacy group expressed disagreement with the concept in the proposed rule that eliminating State agency options to vary SUAs by season, household size, or geographic areas would bring greater benefit equity across States. Similarly, a policy advocacy organization stated that the Department failed to explain how eliminating an option available to all State agencies (even if only adopted by a few States) improves benefit equity and ignores the potential harm to low-income households in rural areas that need the benefits. Further, an advocacy group stated that incorrectly treating all States' and localities' needs the same causes inequity. After considering the terminology and these comments, the Department maintains the purpose of the SUA NPRM, to improve the integrity and consistency of SUAs, but has decided to use the term ''consistency'' rather than ''benefit equity'' throughout the final rule to be more precise.

As noted above, one of the two State agencies that currently varies its SUAs by geographical areas is Alaska. Program rules grant Alaska and Hawaii additional considerations [19] to account for cost-of-living differences and provide further program flexibilities to Alaska because of its extremely remote geography. The SUA NPRM did not include any exceptions for Alaska and Hawaii. The Department solicited comments on whether additional flexibilities for Alaska and Hawaii should be included in the final rule.

The Department received comments in support of allowing exceptions for Alaska and Hawaii. Alaska State government officials commented explaining how their current SUA calculations use data from utility companies to create region-specific values and that their methodology allows for more accurate SUAs. An advocacy group also expressed surprise that the SUA NPRM did not include special considerations for Alaska and Hawaii. This advocacy group asked if the 2017 SUA Study considered using ACS five-year data to develop SUAs at the sub-State regional level. A policy advocacy organization also stated that it is possible that States like Alaska, Minnesota, Nebraska, South Dakota, Washington, and other States with sizable Tribal populations may want the option to create a separate SUA for households that live on Tribal lands. The commenter suggested Tribes could collect data on the utility costs of their Tribal members living in remote areas, and such an approach might allow State agencies to more adequately reflect the utility costs of Tribal members who participate in SNAP in those areas.

The Department agrees with commenters that some States and localities have unique needs related to energy use, climates, remoteness, and heat sources and may have data to support an HCSUA based on these factors. As described above, the final rule permits State agencies to develop their own SUA methodologies subject to FNS approval, while incorporating data and methodology requirements. To align with that action, the Department will also maintain the option for State agencies to vary SUAs by season, household size, or geographic area, which will address concerns for Alaska and Hawaii in particular. The Department will amend the proposed language at 7 CFR 273.9(d)(6)(iii)(A) to maintain the option for States to vary SUAs based on these factors.

The SUA NPRM proposed changes to additional existing SUA options, one of which was to eliminate the option for State agencies to include the excess heating and cooling costs of public housing residents in the LUA if they wish to offer the lower standard to such households. The SUA NPRM also withdrew the option for State agencies to include the cooling expense in the electricity utility allowance for States where cooling expenses are minimal. Due to the changes proposed for calculating HCSUAs and LUAs, the Department proposed to discontinue these options to ensure all households that incurred heating and cooling costs would be eligible to receive the HCSUA, and not a lower LUA.

A State government supported the clarification that public housing residents who incur heating or cooling costs in States that mandate SUAs would receive the HCSUA. A legal services organization argued that the Department provided insufficient rationale for this change, and an individual commenter alleged that the proposal would harm public housing residents and would enhance institutional discrimination against people with disabilities, low-income seniors, African Americans, Hispanics, Asian-Pacific Islanders, and Native Americans. However, these households would actually receive a higher standard by eliminating this option because HCSUAs encompass full heating and cooling costs, and the Department's position is that all households that incur heating or cooling costs in a State that mandates use of SUAs should be entitled to the HCSUA to ensure consistency across households and States. Therefore, the Department will finalize as proposed, aside from a small technical correction to replace the word ''to'' with ''for'' in the sentence ''[. . .] it must use a standard utility allowance that includes heating and cooling costs to residents of public housing units [. . .].'' While the proposed rule included this provision at 7 CFR 273.9(d)(6)(iii)(E)(*2*), the Department will redesignate this section as 7 CFR 273.9(d)(6)(iii)(G)(*2*).

LUAs and Individual Standards

The Department proposed in the SUA NPRM that State agencies would continue to use their own methodologies to determine LUA and individual standard amounts, if amounts do not exceed maximum limits established by the Department. State agencies would submit their annual LUA and individual standard values to FNS for approval. The proposal would cap LUAs at 70 percent of a State's HCSUA and individual standards at 35 percent of a State's HCSUA. When analyzing the SUA values developed as part of the 2017 SUA Study, the researchers found that most States' individual standards were near 35 percent of their HCSUA. Similarly, most States' LUAs did not exceed 70 percent of their HCSUA. FNS would issue the capped amounts via memo to the State agencies and provide the values publicly on the FNS website.

In FY 2022, only 9.0 percent of households used a LUA or individual standard when determining SNAP eligibility and benefit levels.[20] Although they impact a small portion of SNAP participants, the Department proposed to cap these standards at a percentage of the HCSUA to extend standardization efforts and mitigate future inconsistencies.

Five commenters opposed the proposed cap of LUAs and individual standards. An advocacy group

[19] For example, there are specific gross and net income eligibility limits for Alaska and Hawaii. *See* 7 CFR 273.9(a)(1) and (2).

[20] U.S. Department of Agriculture, Food and Nutrition Service, Office of Policy Support, *Characteristics of Supplemental Nutrition Assistance Program Households: Fiscal Year 2022,* by Mia Monkovic. Project Officer, Aja Weston. Alexandria, VA, 2024.

expressed concern that the cap on LUAs would harm low-income families and disproportionately impact the elderly and persons with disabilities. One advocacy group and a public policy advocacy organization stated that the Department's proposed caps were arbitrary and that the SUA NPRM did not adequately explain the need to cap LUAs. The same public policy advocacy organization and a legal service organization questioned why the Department would standardize the HCSUA methodology but allow State agencies to develop their own LUAs and individual standards. Further, a State government official commented that the 70 percent maximum is too low for their State's LUA and that the cap does not relieve the administrative burden on State agencies.

One commenter, a State agency, proposed an alternative to the proposed cap on LUAs and individual standards. The commenter expressed support for the proposed methodology outlined in the rule since it would result in a higher HCSUA and increase SNAP benefits for 35 percent of recipients in their State. However, the commenter recommended that the Department either change the percentage cap amount, calculate the cap on LUAs based on the total utility costs from the ACS and RECS, or allow State agencies to use their own methodology with Department approval.

Given the revisions to the proposed HCSUA standardization provision, the Department also reevaluated the proposed caps to LUAs and individual standards and whether they align with the purpose of the SUA NPRM to increase SUA consistency and integrity through data-based methodologies. The Department agrees with commenters that State agencies should retain the flexibility to base LUA and individual standard values in data reflective of the utility costs these standards represent rather than uniformly cap them as a percentage of the HCSUA. Retaining this flexibility also maintains consideration of the unique aspects of each State, such as utility composition and trends.

As such, the Department will not finalize the proposed cap for LUAs and individual standards. Instead, State agencies will continue to set their own LUAs and individual standards and submit these figures to the Department annually. Consistent with the revised requirements for HCSUA methodologies, State agencies' must submit for FNS approval their LUA and individual standard methodologies at least every five years. Methodology submissions must incorporate any revisions necessary to demonstrate that the baseline expenditure data and underlying methodology reflect recent trends and changes. Additionally, State agencies' methodologies must:

- Reflect the entire State or geographic area the SUA covers;
- Use data sourced from utility providers or similarly reliable source;
- Reflect expenses incurred by low-income households,
- Distinguish if the utility is for heating or cooling, if applicable; and
- Reflect residential utility expenses.

Like with HCSUA methodologies, the Department chose these criteria to ensure LUAs and individual standards accurately represent the utility costs of low-income households, including households with higher than average utility costs, in the designated area while providing State agencies additional flexibility in creating their standards. The Department will publish guidance and provide State agencies with technical assistance in developing their LUA and individual standard methodologies as needed. As part of this technical assistance, FNS will provide factors for State agencies to consider when identifying data sources and establishing methodologies. FNS will also provide examples of approved methodologies for reference.

The Department amended, combined, and redesignated this provision from the proposed 7 CFR 273.9(d)(6)(iii)(B)(*2*) and (*3*) and finalizes at 7 CFR 273.9(d)(6)(iii)(B) and (C).

Including Basic Internet as an Allowable Shelter Cost and Updating SUAs To Include Basic Internet Costs

In recognition of internet access as a necessity for school, work, and job search, the Department proposed to amend 7 CFR 273.9(d)(6)(ii)(C) to add the cost of basic internet service. The proposed changes would replace the telephone standard (*i.e.,* the individual standard for telephone costs) with a broader telecommunications standard that includes costs for one telephone, basic internet service, or both. The proposed rule would not allow an individual standard for only basic internet service costs, as internet costs could only be part of the new telecommunications standard. The Department proposed to calculate the maximum telecommunications standard amount annually by reviewing nationally available low-cost plans for one telephone line and basic internet access for essential services. Similar to LUAs and individual standards, State agencies would still calculate their own telecommunications figures annually. The Department would review and approve the methodology and final figures, subject to the national cap. The Department estimated that the telecommunications standard cap would be approximately $55 in FY 2020 based on a search of available resources for low-cost carriers.

As proposed, the new telecommunications standard would be available to households with utility costs for one telephone, basic internet service, or both. Households with basic internet and/or telephone costs would either receive the telecommunications standard or use their actual costs, subject to the national cap. For example, households with more than basic internet packages, such as those combined with cable television service, would not be able to count the cost of their entire package. These households would instead either receive the telecommunications standard or have their actual costs of phone and/or basic internet counted, up to the amount of the standard, depending on the option the State agency selects. Additionally, State agencies would be allowed to include the telecommunications costs as part of their LUA so long as the telecommunications share of the LUA would not exceed the amount set for the telecommunications standard.

Approximately 15 commenters supported the proposed update to the telephone standard. Multiple commenters, including advocacy groups, a policy advocacy organization, multiple State government agencies, a religious organization, and a trade association, agreed with the Department's argument that internet is an essential service. Additional commenters, including an advocacy group, a legal services organization, a policy advocacy organization, and State government agencies generally supported updating the telephone standard to include internet services.

Two advocacy groups and a legal services organization also commented that the estimated $55 telecommunications standard cap is too low. One recommended creating a separate internet standard from the telephone standard rather than a combined telecommunications standard, and others argued the cap should be set at the 80th or 95th percentile. A food bank and a legal services organization argued that the explanation for how the Department developed the $55 cap was insufficient. A State agency recommended that State agencies should have the option to either accept the maximum limit established for the telecommunications standard or to use their own methodology, as approved by the Department.

An advocacy group shared alternatives to the Department's proposed telecommunications standard methodology, including comments on which expenses should be allowable as a deduction. The commenter argued that FNS should allow modem rentals, costs of hardware, and subscription costs as allowable expenses and that State agencies should be able to choose whether to offer a standalone internet individual standard, a combined telecommunications standard, or both, depending on their States' needs.

The Department appreciates commenters who supported and confirmed the importance of including basic internet costs as an allowable shelter cost. The Department agrees that this change is critical, as the internet plays a pivotal role in Americans' daily lives, regardless of income level, and is a necessary expense in a household's budget. High-speed internet is a necessary utility for school, work, and job searches. As such, the final rule allows the costs for basic internet service as an allowable shelter cost.

The Department also appreciates the suggestions for alternative ways of allowing basic internet costs. The Department agrees with commenters that allowing State agencies to set a basic internet individual standard, instead of a combined telecommunications standard, is better aligned with how the Department treats other individual standards. For instance, under current rules, State agencies may offer all other utilities (including telephone) as individual standards but may only combine them when using HCSUAs and LUAs. Therefore, the final rule allows State agencies to develop a basic internet individual standard, independent from the telephone standard, rather than as part of a telecommunications standard. Under the final rule, State agencies have the option to develop their own methodology for the basic internet individual standard, similar to other individual standards, rather than abiding by a national maximum amount proposed by the Department in the SUA NPRM. State agencies that choose this option will calculate their basic internet individual standards each fiscal year and submit them to FNS for approval, similar to other LUAs and individual standards.

State agencies may also include basic internet costs in their LUAs and HCSUAs. Rather than FNS incorporating a capped telecommunications standard into a standardized HCSUA as proposed, the final rule allows State agencies to incorporate basic internet costs in their HCSUA methodologies in line with how other utility expenses are reflected in the HCSUA.

Consistent with the revised requirements for other SUA methodologies, including individual standards like telephone, State agencies must submit for FNS approval their basic internet individual standard methodology at least every five years. Methodology submissions must incorporate any revisions necessary to demonstrate that the baseline expenditure data and underlying methodology reflect recent trends and changes. Additionally, State agencies' methodologies must:

- Reflect the entire State or geographic area the SUA covers;
- Use data sourced from utility providers or similarly reliable source;
- Reflect expenses incurred by low-income households,
- Distinguish if the utility is for heating or cooling, if applicable; and
- Reflect residential utility expenses.

Like with HCSUA methodologies, the Department chose these criteria to ensure basic internet individual standards accurately represent the utility costs of low-income households, including households with higher than average utility costs, in the designated area while providing State agencies additional flexibility in creating their standards. the Department will publish guidance and provide State agencies with technical assistance in developing their basic internet methodology as needed. As part of this technical assistance, FNS will provide factors for State agencies to consider when identifying data sources and establishing methodologies. FNS will also provide examples of approvable methodologies for reference.

In determining which costs to include in the basic internet individual standard, the Department agrees with commenters on the need to create consistency across similar utilities, such as telephone. Program rules at 7 CFR 273.9(d)(6)(ii)(C) include the following allowable costs for telephone: all service fees required to provide service for one telephone, including, but not limited to, basic service fees, wire maintenance fees, subscriber line charges, relay center surcharges, 911 fees, and taxes; and fees charged by the utility provider for initial installation of the utility. One-time deposits cannot be included.

Therefore, the Department is finalizing the following costs as part of the basic internet individual standard: all service fees required to provide households with basic internet service, including but not limited to, monthly subscriber fees for a basic internet connection (*i.e.* the base rate paid by the household each month in order to receive service, which may include high-speed internet); taxes and fees charged to the household by the provider that recur on monthly bills; and the cost of one modem rental.

The Department believes the abovementioned allowable costs are consistent with the costs allowed for the telephone individual standard. The Department also notes that if a household does not pay any of its internet costs, including because those costs are paid in full by a program similar to, for example, the Lifeline program or the former Affordable Connectivity Program, then the household would not qualify for the basic internet individual standard.

These changes, including the change to the basic internet individual standard calculation and allowable costs are finalized by amending the proposed 7 CFR 273.9(d)(6)(ii)(C); amending the proposed 7 CFR 273.9(d)(6)(iii)(A)(*3*); amending and redesignating the proposed 7 CFR 273.9(d)(6)(iii)(B)(*3*) as 7 CFR 273.9(d)(6)(iii)(B); and adding methodology requirements at 7 CFR 273.9(d)(6)(iii)(C).

Compliance Dates for Implementing SUA NPRM Changes

The Department expects State agencies to need time to review their current SUA methodologies and make updates to align with the new requirements. Similarly, the Department will need time to review State agencies' methodologies and work with each State agency to ensure they meet the new requirements. As such, the compliance date for SUA changes is October 1, 2025. The Department encourages State agencies to implement changes at the beginning of the Federal fiscal year to minimize disruption to SNAP households since State agencies typically make changes to SUAs and Cost of Living Adjustments at this time. The Department will provide State agencies with technical assistance to revise and receive approval for SUA methodologies in advance of the compliance date, including information on State flexibilities to ensure that SUAs meet households' needs while also aligning with the data available on low-income household utility costs in a more consistent manner.

Background and Summary of Comments on the April 20, 2016, (LIHEAP) NPRM

In addition to the changes to HCSUA methodologies and SUA options, the final rule will also update 7 CFR 273.9(d)(6)(iii)(C). These changes

finalize revisions for how Low-Income Home Energy Assistance Program (LIHEAP) payments are considered to confer eligibility for the HCSUA. This update is consistent with requirements included in the Agricultural Act of 2014 (Pub. L. 113–79).

Section 4006 of the Agricultural Act of 2014 amended requirements for how payments issued under the Low-Income Home Energy Assistance Act (LIHEAA), as amended, confer HCSUAs to households. These changes require that State agencies confer the HCSUA to households receiving a payment, or on behalf of which payments were made, under LIHEAA or other similar energy assistance program, only when the payment is greater than $20 annually and received in either the current month or in the immediately preceding 12 months. The changes were effective with the enactment of the Agricultural Act of 2014, and State agencies were required to begin implementation on March 10, 2014. The Department published an implementation memo,[21] ''Supplemental Nutrition Assistance Program—Section 4006 Agricultural Act of 2014—Implementing Memorandum,'' on March 5, 2014, instructing State agencies to implement the change.

To make the corresponding update to SNAP regulations, the LIHEAP NPRM titled ''Supplemental Nutrition Assistance Program: Standard Utility Allowances Based on the Receipt of Energy Assistance Payments Under the Agricultural Act of 2014,'' was published on April 20, 2016, and proposed updates to 7 CFR 273.9(d)(6)(iii)(C). The Department received a total of nine comments on the LIHEAP NPRM from five advocate groups, two legal services organizations, and two nonprofit organizations. The comments were generally favorable of the proposed provisions, while also providing helpful feedback for consideration in developing the final provisions in this rule. Six commenters in particular were supportive of the rule overall. Several of these commenters noted the real and helpful impact of conferring the HCSUA to eligible LIHEAP receiving households. A more detailed discussion of the comments regarding the NPRM and the changes made in the final rule follows below.

[21] U.S. Department of Agriculture, Food and Nutrition Service, *Supplemental Nutrition Assistance Program—Section 4006 Agricultural Act of 2014—Implementing Memorandum,* 5 March 2014. Retrieved from: *https://www.fns.usda.gov/snap/eligibility/deduction/liheap-implementation-memo* in September 2022.

Agricultural Act of 2014 Changes

For the purposes of the HCSUA, receipt of a LIHEAP payment serves as a proxy for State agencies to determine if a household incurs heating or cooling utility costs. Before the enactment of the Agricultural Act of 2014, section 5(e)(6)(C)(iv) of the Act provided that all households receiving a LIHEAP payment or all households on behalf of which a LIHEAP payment was made automatically qualified for the HCSUA, regardless of the amount of the LIHEAP payment. Some State agencies used this policy to maximize use of the HCSUA by issuing a nominal LIHEAP payment (generally around $1) to all SNAP households. Receipt of the nominal payment allowed the household to receive the HCSUA, even when the household would not have otherwise qualified for the HCSUA because they did not pay for heating or cooling.

The Agricultural Act of 2014 amended section 5(e)(6)(C)(iv)(I) of the Act to adjust how the HCSUA is applied to households receiving LIHEAP payments. The amendment altered this process by requiring State agencies to make the HCSUA available to households that received a payment (or households on behalf of which a payment was made), in the current month or in the immediately preceding 12 months, that was greater than $20 annually under the LIHEAA, or other similar energy assistance program. These requirements were effective March 10, 2014. As a result, the current regulations at 7 CFR 273.9(d)(6)(iii)(C) must be updated to reflect the Agricultural Act of 2014 changes.

As in the LIHEAP NPRM, in this discussion, the phrase ''qualifying LIHEAP or other payment'' refers to those LIHEAP or other similar energy assistance program payments that are in excess of $20 annually and have been received by or made on behalf of the household in the current or immediately preceding 12 months.

Other Similar Energy Assistance Programs

In the LIHEAP NPRM, the Department proposed that the statutory term ''other similar energy assistance program'' be defined as a separate home energy assistance program designed to provide heating or cooling assistance through a payment directly to or on behalf of low-income households. Three commenters supported the proposed standard for what constitutes an ''other similar energy assistance program.'' The proposed definition is adopted as final in this rule.

One of those three commenters suggested adding this definition in the general definitions section at 7 CFR 271.2. Although the Department appreciates the suggestion, 7 CFR 271.2 contains more general definitions relevant to the program overall, instead of issue-specific areas such as this one. For example, Low Income Home Energy Assistance Act of 1981 (LIHEAA) is referenced at the standard utility allowance section of the regulations at 7 CFR 273.9 but not 7 CFR 271.2. As a result, the Department did not add the definition to the general definitions section at 7 CFR 271.2 in this final rule.

The above commenter also asked that the Department provide examples of other similar energy assistance programs and include payments from housing authorities to individually billed tenants, State fuel funds, and State analogues to LIHEAP. The Department believes other similar energy assistance programs could include (but are not limited to) certain State-only funded programs designed to assist households with heating or cooling expenses (separate from a household's rent or mortgage), home energy bills, weatherization (see below for additional discussion on weatherization payments) or energy-related minor home repairs. The Department did not add examples of specific energy assistance programs to the regulatory language because those programs may change in the future and may no longer meet the definition of an ''other similar energy assistance program.'' The Department notes that, in general, State agencies should evaluate a potentially eligible program on a case-by-case basis. To ensure consistency and fairness across the caseload, State agencies must establish clear and reasonable standards for evaluating whether a program constitutes a similar energy assistance program.

Finally, this commenter agreed with the Department's proposal to allow people living in public housing, not just private housing, and billed individually for heating and cooling costs to qualify for the HCSUA. However, the commenter argued that the utility allowances that individuals in public housing receive either as a rent reduction or a cancellation of their cash rental obligation and a partial rebate are energy assistance similar to LIHEAP. This commenter also suggested that the entire amount of the allowance is energy assistance, not just the smaller (or zero) amount that the household receives as a rebate after the housing authority nets out the household's rental obligation.

Although the Department appreciates this comment, the Department notes that section 5(e)(6)(C)(ii)(II) of the Act

prohibits the use of an HCSUA for households that incur a heating or cooling expense but live in public housing that has central utility meters and charges households only for excess utility costs. The prohibition does not apply in States that have mandated the use of SUAs, per section 5(e)(6)(C)(iii)(III) of the Act. Therefore, the Department proposed at 7 CFR 273.9(d)(6)(iii)(C)(*1*)(*ii*) that households in public housing units with central utility meters and who are charged only for excess heating or cooling costs are not entitled to a standard that includes heating or cooling costs, unless the State agency mandates the use of SUAs in accordance with the proposed paragraph 7 CFR 273.9(d)(6)(iii)(E). This provision is adopted as proposed but redesignated at 7 CFR 273.9(d)(6)(iii)(D)(*2*).

The definition of an ''other similar energy assistance program'' is designed to provide parameters but also give State agencies flexibility to determine what constitutes a potentially eligible program within the confines of this definition. The Department maintains that the definition provided in the final rule sufficiently addresses the concerns noted by the commenter.

Current Month

The Agricultural Act of 2014 included a requirement at sec. 5(e)(6)(C)(iv)(I) of the Act that households receive an energy assistance payment in the ''current month'' or the immediately preceding 12 months in order to qualify for the HCSUA. The Department proposed to define ''current month'' to refer strictly to the calendar month, meaning from the first to the final day of a given month.

One commenter encouraged the Department to use a broader interpretation of ''current month'' to mean the first full calendar month of the certification period. Another commenter believed the proposed definition of ''current month'' is too restrictive and suggested the Department allow payments made within SNAP's 30-day processing period to confer eligibility.

The Department appreciates the commenters' concerns; however, the Agricultural Act of 2014 revised the Act to prohibit State agencies from anticipating receipt of a LIHEAP or other qualifying payment to confer a household's eligibility for the HCSUA. The changes allow a household to be eligible for the HCSUA if it receives the qualifying payment in the current month or immediately preceding 12 months. In the LIHEAP NPRM, the Department proposed that the HCSUA may be applied only if the household is scheduled to receive a payment in the current calendar month to allow for some flexibility within the timeline set in the Act. The proposed definition of ''current month'' balances flexibility with the need to adhere to the timeline in the statutory text. For these reasons, the Department adopts this provision as proposed in the final rule.

Moving Households

In the LIHEAP NPRM, the Department indicated that State agencies using HCSUAs would provide the standard to households who receive a qualifying LIHEAP or other payment, regardless of any change in the household's residence or address. One commenter suggested that the Department incorporate this clarification into final regulatory text. The Department agrees this change promotes consistency across States and is making this revision to the regulations at 7 CFR 273.9(d)(6)(iii)(D)(*3*).

One commenter supported the proposal that if a State agency has an indication that a household received a qualifying LIHEAP payment in another State, the State agency should act on this information. The Department reiterates that if, at the time of certification, the State agency has an indication that a household received a qualifying LIHEAP or other payment in another State, the new State agency should pursue clarification. Procedures regarding acting on changes after certification are already contained in 7 CFR 273.12 of the regulations, and the Department did not make any changes to these existing requirements in the final rule.

Overissuance

Section 4006 of the Agricultural Act of 2014 no longer allows a State agency to use an HCSUA in determining eligibility and benefit amount for a household that does not otherwise incur heating or cooling costs based on the State agency's expectation that the household would receive a qualifying LIHEAP or other payment in future months. The Department proposed to only allow the HCSUA to be applied to a household's case based on anticipated receipt if the payment is scheduled to be received within the current calendar month. This allows State agencies the option to consider a qualifying LIHEAP or other payment received by the household for the purposes of conferring HCSUA eligibility, so long as the payment is scheduled in the current month. If the anticipated payment is not received within that month, benefits received by the household would be considered an overissuance and the State agency may be required to pursue a claim against the household.

The Department received adverse comments on this provision. One commenter stated the language regarding claims is confusing and inappropriate. Another commenter suggested removing claims language for overissuance from the regulatory text since State agencies are already responsible for determining overissuances. Another commenter believed that the overpayments language suggests a lapse or delay in a payment itself triggers an overpayment and suggested deleting this language and indicating that State agencies must follow overpayment regulations at 7 CFR 273.18.

The Department agrees that 7 CFR 273.18 already requires State agencies to collect overissuances and the proposed language is unnecessary and potentially confusing. Therefore, the Department revised 7 CFR 273.9(d)(6)(iii)(C)(*1*)(*iii*) in the final rule to remove the reference to claims to avoid such confusion. State agencies will be expected to pursue claims in these circumstances under existing regulations at 7 CFR 273.18. State agencies are already aware of the procedures and requirements regarding the establishment of a claim against a household for any benefits issued in error under 7 CFR 273.18. Additionally, the Department has redesignated the proposed 7 CFR 273.9(d)(6)(iii)(C)(*1*)(*iii*) as 7 CFR 273.9(d)(6)(D)(*3*).

Proration

The Department proposed to revise language at 7 CFR 273.10(d)(6) to reflect the requirement in section 5(e)(6)(C)(iv)(IV) of the Act that assistance under LIHEAA be considered prorated over the heating or cooling season for which the assistance was provided. One commenter believed that the rule should reflect that a payment need not actually be paid during the preceding 12 months, so long as one of those months was in the heating season for which a LIHEAP payment was made and the prorated amount of the grant exceeded $20.

The Act requires the receipt of a qualifying LIHEAP or other program payment in the current month or immediately preceding 12 months that was greater than $20 annually. State agencies are also expected to prorate LIHEAP payments over an entire heating or cooling season. As the commenter suggested, because State agencies must prorate LIHEAP payments over a season, each month covered by the proration could be used to confer eligibility for the HCSUA based on the receipt of a LIHEAP

payment. For example, if a household receives a $150 LIHEAP payment in October 2021, intended for the heating season in that State (from October through February), the State agency would consider the payment prorated to $30 per month from October 2021 through February 2022. If the household applies for SNAP in January 2023, the household would be eligible for the HCSUA based on the receipt of LIHEAP payment in the immediately preceding 12 months.

Furthermore, the Act does not restrict proration to only one heating or cooling season as the amount could qualify the household for the HCSUA for multiple seasons. For example, if an existing SNAP household received a $200 LIHEAP payment in October 2021, the household could use the LIHEAP payment to qualify for the HCSUA from October 2021 through February 2022, as well as from October 2022 through February 2023 since the household received the payment within the immediately preceding 12 months. In summary, the household's receipt of a $200 LIHEAP payment in October 2021 could effectively make the household eligible for the HCSUA from October 2021 through February 2023.

As such, it is reasonable that a household could be eligible for the HCSUA in more than one heating or cooling season, based on the receipt of one LIHEAP payment. In order to clarify this, the final rule revises the regulatory text at 7 CFR 273.10(d)(6) to specify that a prorated qualifying LIHEAP may qualify an individual or household for the HCSUA in more than one heating or cooling season, so long as the payment was received within the last 12 months or the proration period covered at least one month in the preceding 12 months.

The Department would also like to note that while the LIHEAP NPRM preamble correctly stated that the statutory requirement to prorate over the entire heating or cooling season only applied to assistance provided under LIHEAA, this was not clearly reflected in the proposed amendatory language. The final amended 7 CFR 273.10(d)(6) will reflect this specification.

Quantifiable

As the Act requires LIHEAP or other payments to exceed $20 in order to confer HCSUA eligibility, these payments must be quantifiable in order to exceed this established threshold. The Department proposed that State agencies must be able to quantify, in dollars, the amount of the payment for purposes of granting the HCSUA.

Two commenters supported the Department's proposed definition of ''quantifiable.'' One commenter said the rule should be amended to make clear that the provider of the energy assistance may provide the assistance in the form of an in-kind benefit which may not have a precise value and the State agency may rely on estimates to determine if the $20 threshold has been exceeded (for example, if a household receives firewood or coal).

The Department appreciates the concern that some households may receive assistance in the form of in-kind items as opposed to receiving a payment from LIHEAP or similar assistance programs. Organizations may provide households with home heating oil, firewood, or coal, and other goods which vary based on geographic area. The Act does not specify that the payment be cash, and the Department agrees that State agencies may include in-kind assistance as a qualifying LIHEAP or other payment for purposes of conferring the HCSUA. The State agency must be reasonably able to quantify that the amount of this assistance exceeds the $20 threshold. State agencies must develop workable, reasonable procedures to determine how in-kind assistance would be quantified, including how to reasonably estimate the value of those goods, and must apply those procedures consistently and fairly across the caseload. The Department revises the regulations at proposed 7 CFR 273.9(d)(6)(iii)(C)(*1*)(*iii*) and redesignates this section to 7 CFR 273.9(d)(6)(iii)(D)(*3*), as described above, to incorporate this change.

Split Households

The Department proposed that if a household that received a qualifying LIHEAP or other payment subsequently splits into two SNAP households, State agencies must determine which household is eligible for the HCSUA. The Department maintained the State agency is in the best situation to determine which household would receive the HCSUA based on the qualifying LIHEAP or other payment. The State's chosen policy would need to be applied in a consistent and equitable way. The Department proposed to revise 7 CFR 273.9(d)(6)(iii)(C) to incorporate these standards.

Commenters expressed concern that the regulatory language in the LIHEAP NPRM provided too much State discretion and could have error-prone results. For example, one commenter argued that because there are so many ways for a household to divide, State agencies will find it difficult to apply the policy consistently, which could lead to quality control errors. This commenter, in addition to others, suggested that the fairest and most administratively straightforward way to apply this policy is to make the HCSUA available to any member who lived in a household that received a qualifying LIHEAP payment in the prior 12 months.

Due to concerns that the proposed regulatory language could lead to inconsistent application and be unfair for households, the Department is revising the regulations at proposed 7 CFR 273.9(d)(6)(iii)(C)(*1*)(*iii*) (redesignated at 7 CFR 273.9(d)(6)(iii)(D)(*3*) in this final rule). The Department is making this change to require State agencies that elect to use the HCSUA to grant the HCSUA to a household in which a member: (1) previously received a qualifying LIHEAP payment as part of different household, or (2) was previously a member of a different household on which behalf a LIHEAP payment was made. While these individuals no longer reside in the same household, they did receive a qualifying payment in the preceding 12 months, and therefore are eligible for the HCSUA under the Act. This procedure will allow for consistent treatment of all impacted SNAP households.

Actions on Changes

The Department explained in the LIHEAP NPRM preamble that if a SNAP household subsequently receives a qualifying LIHEAP or other payment after certification, or if one is made on the household's behalf during the certification period, the State agency must take action according to the rules of their chosen reporting system under 7 CFR 273.12.

One commenter requested that the Department add this language to the regulatory text. This commenter explained that it is not clear that receipt of LIHEAP should be known to the State agency and acted on during a certification period without further action from the household. While the Department appreciates this feedback, provisions regarding reporting and State agency actions on changes, including unclear information, are addressed in 7 CFR 273.12, and this rulemaking will not affect those provisions. Specifying the applicability of the 7 CFR 273.12 procedures to enumerated issues may cause confusion. The provision is finalized as proposed.

Verification

Under Federal rules, households applying for SNAP do not need to provide verification for utility costs unless questionable, if the household is claiming expenses in excess of the

State's HCSUA, or in accordance with a State-specific verification requirement. Similarly, the Department proposed that receipt of more than $20 in qualifying LIHEAP or other payments would not require verification for SNAP purposes unless questionable.

Two commenters commended the Department for codifying that LIHEAP or similar energy assistance payments do not need to be verified for SNAP unless questionable. One of those commenters also said when a State agency learns of a payment from an energy assistance provider, the information should be verified upon receipt and the State agency should immediately change the benefit level. That commenter also believes State agencies should be encouraged to develop regular automated data feeds from energy assistance providers. Similarly, three commenters requested clarification regarding the treatment of payments received after certification and asked the Department to work with States to develop best practices for prompt re-budgeting.

The Department appreciates these comments. Federal requirements at 7 CFR 273.2(f)(1)(iii) provide that utility costs must be verified only if questionable, if the household is claiming expenses in excess of the State's SUA, or in accordance with a State-specific verification requirement. State agencies establish standards for what is questionable. For purposes of LIHEAP payments, when the information is received directly from an energy assistance provider by the State agency, there is no Federal requirement for the State agency to request additional information from the household unless it is considered questionable. In limited situations, a household's receipt of a LIHEAP payment may be considered questionable, and the State agency could require a household to provide verification, for example, if the household has moved. The existing regulations at 7 CFR 273.12(c) provide State agency requirements for processing changes. Note that although the regulations only require State agencies to verify utility information if it is questionable, State agencies have the option under 7 CFR 273.2(f)(3) to choose to verify utility costs even if not questionable. If a State agency chooses to verify non-questionable utility costs, the State agency must ensure that procedures are consistent across the caseload.

For the reasons stated above, the Department is finalizing this provision as proposed.

Tracking

The Department proposed that State agencies would be responsible for tracking the date of receipt of the qualifying LIHEAP or other similar energy assistance payment to ensure the requirements are met. At 7 CFR 273.9(d)(6)(iii)(C)(*1*)(*iii*), the Department proposed that the State agency must document the date of receipt of a payment made under LIHEAA or other similar energy assistance program to ensure the payment was received in the current month or the immediately preceding 12 months and exceeded $20 annually. Five commenters found the use of the term ''document'' confusing as it could be interpreted as ''verification''. They also requested clarification that the documentation requirement is the responsibility of State agencies, not the household.

The Department proposed to use the term ''document'' in the regulatory text instead of the term ''verify'' intentionally. Regardless of the State agency's choice on verification when the information is not questionable, the State agency must document in the case file the date of receipt of a qualifying payment. This will ensure the payment was received in the current month or the immediately preceding 12 months and exceeded $20 annually. State agencies have the discretion to follow whatever procedure works best for them to ensure that they accurately document this information in the case file beyond the general requirement that the State agency document the receipt of payment. This provision is finalized as proposed in the redesignated 7 CFR 273.9(d)(6)(iii)(D)(*3*)(*iii*).

Data Sharing Agreements

In the LIHEAP NPRM, the Department encouraged State agencies to modify data sharing agreements with their respective LIHEAP agencies, as appropriate, to ensure transmission of timely and accurate information needed for SNAP eligibility and benefit determinations. One commenter recommended that the final rule should include safeguards to ensure that State agencies have data sharing agreements with LIHEAP administrative agencies.

While the Department appreciates this suggestion, the Department declines to finalize this requirement. The Agricultural Act of 2014 does not require State agencies to enter into data sharing agreements with LIHEAP administrative agencies and requiring such agreements in regulation may be unwieldy. Nevertheless, the Department believes these agreements could be highly beneficial for both the State agencies and the LIHEAP agencies. Such agreements could establish standard operating procedures, expectations, and other details that would help ensure both parties are clear on the terms of the relationship. The Department encourages States to enter into data sharing agreements when possible. States should modify their data sharing agreements with their respective LIHEAP agencies as appropriate to ensure transmission of timely and accurate information needed for SNAP eligibility and benefit determination.

Weatherization

Because the Act requires that the LIHEAP or other payment must have been received by or made on behalf of a household, the Department proposed that weatherization payments paid to a landlord cannot confer eligibility for the HCSUA. The Department declined to confer eligibility for the HCSUA for households within a multi-family dwelling when the multi-family dwelling receives weatherization project funding. The Department explained that the Act does not explicitly address how State agencies should evaluate LIHEAP funds that are used to pay for weatherization projects in multi-family dwellings and noted that a June 15, 1999, Information Memorandum [22] issued by the Department of Health and Human Services (HHS), which oversees LIHEAP at the Federal level, found that weatherization of multi-unit buildings ''is not a benefit provided to an individual, household or family eligibility unit.'' [23] The Department requested comments on this issue and potential alternative approaches.

Three commenters responded to the Department's request for feedback on this issue. One commenter believed receipt of weatherization assistance from a LIHEAP or other similar energy assistance program should automatically confer the HCSUA to a household. Two commenters encouraged the Department to allow multi-unit weatherization projects to make all SNAP households within the multi-unit dwelling eligible for HCSUA. To do so, these commenters suggested that State agencies could divide the total value of a weatherization payment (or in-kind service, per the discussion

[22] U.S. Department of Health & Human Services. *LIHEAP IM 1999–10 on Federal Public Benefits Under the Welfare Reform Law—Revised Guidance,* June 15, 1999. Retrieved from *https://www.acf.hhs.gov/ocs/policy-guidance/liheap-im-1999-10-federal-public-benefits-under-welfare-reform-law-revised* in July 2022.

[23] HHS has since confirmed that this guidance was issued exclusively for a different purpose and requested its removal from consideration. See preamble language for additional information.

above on quantifiable benefits) by the number of units in the multi-unit dwelling to determine the payment received on behalf of each household. One of these commenters argued that prohibiting weatherization payments from conferring the HCSUA to households living in multi-family dwellings would unfairly exclude these households since LIHEAP funds often pay for weatherization programs.

The Department concurs with commenters that while the determination may be more difficult for multi-family dwellings, weatherization payments paid to a landlord could be considered a payment made on behalf of the household depending on the circumstances. The Department agrees that all households that receive a LIHEAP or other similar energy assistance program payment that meets the statutory requirements to confer HCSUA eligibility should be treated similarly. Further, HHS has since confirmed that its June 15, 1999, Information Memorandum was issued exclusively to assist in the application of rules under the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 and requested that the Department remove it from consideration in determining whether weatherization payments for multi-unit buildings can be considered a payment made ''on behalf of a household.'' As such, the Department is revising its position on weatherization payments and confirms that a household is eligible for the HCSUA if the household lives in a multi-unit dwelling or an individual unit and receives a qualifying weatherization program payment.

However, the Department maintains that prescribing how weatherization payments are divided among households in a multi-unit dwelling when they are paid directly to a building manager or contractor would be administratively burdensome and restrictive. While two commenters suggested a method for how State agencies could quantify multi-unit dwelling weatherization payments for each household within that dwelling, the Department understands that State SNAP agencies may have different access to weatherization funding information depending on the structure of the State, data sharing agreements, and eligibility systems. Further, the Department establishing a methodology could hinder State agencies from using more workable solutions based on the information they have access to or require other State agencies to establish complicated processes to meet this lone requirement.

Therefore, the Department is providing State agencies flexibility to determine the method for assessing whether a weatherization payment was received by (or on behalf of the household), in the current month or in the immediately preceding 12 months, and that the payment was greater than $20 annually, as required by the Act. State agencies must develop workable, reasonable procedures to determine how multi-unit dwelling weatherization payments would be quantified for households and must apply those procedures consistently and fairly across the caseload. The revised language is found at 7 CFR 273.9(d)(6)(iii)(D)(*3*)(*vii*).

Procedural Matters

Executive Order 12866, 13563, and 14094

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. Executive Order 14094 of April 6, 2023, focuses on modernizing regulatory review and updates the definition of a significant regulation.

This final rule has been determined to be significant under section 3(f)(1) of Executive Order (E.O.) 12866, as amended by E.O 14094, and was reviewed by OMB in conformance with Executive Order 12866.

Regulatory Impact Analysis

The Department estimates the total increase in Federal SNAP benefit spending associated with the SUA provisions of the final rule to be approximately $5.4 billion over the five-year period FY 2025–FY 2029. This represents an increase in Federal transfers (SNAP benefits). Effects on Federal transfers are expected to begin in FY 2025. Effects on Federal costs are expected to begin in FY 2025 and are estimated to be approximately $612,000 over the 5-year period FY 2025–FY 2029. Effects on State administrative costs are expected to begin in FY 2025 and are estimated to be approximately $561,000 over the five-year period. The final rule will not affect household burden.

The Department estimates that approximately 29 percent of SNAP households will see an average 6 percent increase in their monthly SNAP benefit ($15 per month, per household) and 5 percent of SNAP households will see an average 2.6 percent reduction their monthly SNAP benefit ($7 per month, per household). A very small number of households (less than 0.01 percent of all SNAP households) are estimated to lose benefits as a result of the final rule, losing an average of $30 in monthly benefits. The remaining 66 percent of households will see no change to their SNAP benefit. The rule is also expected to result in an increase in ongoing administrative burden for most State SNAP agencies.[24]

Regarding the LIHEAP provisions, the Department notes that States were required by statute to implement the Agricultural Act of 2014's change related to LIHEAP immediately for any household whose initial certification period began on or after March 10, 2014. Therefore, any reduction in transfers related to the LIHEAP provisions of this final rule is assumed to be fully incorporated into the current SNAP baseline.

Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601–612) requires Agencies to analyze the impact of rulemaking on small entities and consider alternatives that would minimize any significant impacts on a substantial number of small entities. Pursuant to that review, it has been certified that this rule would not have a significant impact on a substantial number of small entities.

The final rule primarily impacts SNAP households. Small entities, such as smaller SNAP-authorized retailers, would not be subject to any new requirement. On average, nationwide, SNAP retailers would likely see an increase in the amount of SNAP benefits redeemed at stores under this final rule as the final rule is expected to increase transfers (SNAP benefit spending) by 1.3 percent. As of FY 2022, approximately 76 percent of authorized SNAP retailers (about 195,700 retailers) were small groceries, convenience stores, combination grocery stores, and specialty stores, store types that are likely to fall under the Small Business Administration gross sales threshold to qualify as a small business for Federal Government programs. While these stores make up most authorized

[24] This rule will increase the existing burden currently approved (OMB Control Number 0584–0496; Expiration Date 7/31/2026).

retailers, collectively they redeem about 12 percent of all SNAP benefits.

Amongst States, 43 States are expected to experience a net increase in SNAP benefit as a result of the final rule, ranging from 0.1 percent to 3.4 percent. In these States, small retailers may experience a small increase in sales. The remaining 10 States are expected to see a net decrease, ranging from −0.4 percent to −1.8 percent, in total SNAP benefits because of the final rule. These States are: Maine, Massachusetts, New Hampshire, New Jersey, New York, North Dakota, Ohio, Rhode Island, South Dakota, and Vermont. Of the total 195,700 authorized SNAP retailers that likely qualify as a small business, 17 percent are located in these 10 States. They account for 16 percent of redemptions among likely small, authorized SNAP retailers.

Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs has determined that this rule meets the criteria set forth in 5 U.S.C. 804(2).

Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104–4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and Tribal governments and the private sector. Under section 202 of the UMRA, the Department generally must prepare a written statement, including a cost benefit analysis, for proposed and final rules with ''Federal mandates'' that may result in expenditures by State, local, or Tribal governments, in the aggregate, or the private sector, of $100 million or more in any one year. When such a statement is needed for a rule, section 205 of the UMRA generally requires the Department to identify and consider a reasonable number of regulatory alternatives and adopt the most cost effective or least burdensome alternative that achieves the objectives of the rule.

This final rule does not contain Federal mandates (under the regulatory provisions of Title II of the UMRA) for State, local, and Tribal governments or the private sector of $100 million or more in any one year. Thus, the rule is not subject to the requirements of sections 202 and 205 of the UMRA.

Executive Order 12372

SNAP is listed in the Catalog of Federal Domestic Assistance under No. 10.551. For the reasons set forth in the final rule codified in 7 CFR part 3015, subpart V, and a final rule related notice (48 FR 29115, June 24, 1983), this Program is excluded from the scope of Executive Order 12372, which requires intergovernmental consultation with State and local officials.

Federalism Summary Impact Statement

Executive Order 13132 requires Federal agencies to consider the impact of their regulatory actions on State and local governments. Where such actions have federalism implications, agencies are directed to provide a statement for inclusion in the preamble to the regulations describing the agency's considerations in terms of the three categories called for under section (6)(b)(2)(B) of Executive Order 13132.

The Department has considered the impact of this rule on State and local governments and has determined that this rule does not have federalism implications. Therefore, under section 6(b) of the Executive order, a federalism summary is not required.

Executive Order 12988, Civil Justice Reform

This final rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule is intended to have preemptive effect with respect to any State or local laws, regulations or policies which conflict with its provisions or which would otherwise impede its full and timely implementation. This rule is not intended to have retroactive effect unless so specified in the Effective Dates section of the final rule. Prior to any judicial challenge to the provisions of the final rule, all applicable administrative procedures must be exhausted.

Civil Rights Impact Analysis

The Department has reviewed the final rule in accordance with the Department Regulation 4300–004, ''Civil Rights Impact Analysis'' (CRIA), to identify and address any major civil rights impacts the final rule might have on SNAP participants by gender, race, and ethnicity, as well as impacts on children, the elderly, and persons with disabilities. The final rule allows State agencies to continue to set their own SUA methodologies, subject to FNS approval. State agencies must submit for FNS approval their SUA methodologies at least every five years. Methodology submissions must incorporate any revisions necessary to demonstrate that the baseline expenditure data and underlying methodology reflect recent trends and changes. State agencies' methodologies must also meet certain criteria. The final rule also expands allowable shelter expenses to include basic internet costs. Finally, the final rule finalizes updates to the treatment of LIHEAP payments, in accordance with the Agricultural Act of 2014 (2014 Farm Bill).

The Department ran a simulation using FY 2022 SNAP Quality Control data to estimate how the final rule would impact SNAP participants by gender, race, and ethnicity, as well as impacts on children, the elderly, and persons with disabilities. SNAP participants identified as female are slightly more likely to both gain and lose benefits than SNAP participants identified as male. Households with children are slightly less likely to gain or lose benefits than all households. Households headed by a non-Hispanic White individual or Asian individual are more likely to lose benefits under the final rule. Households headed by an Asian individual are also slightly more likely to gain benefits compared to all households. Households headed by a non-Hispanic Black individual are slightly less likely to gain benefits compared to all households. Among households expected to lose benefits under the final rule, households headed by an Asian or Hispanic individual are expected to experience a larger average benefit loss. Additionally, households with elderly individuals or individuals with disabilities are more likely to lose or gain benefits due to finalized changes to SUAs because these households are not subject to the cap on the allowable excess shelter deduction. Thus, these households with elderly individuals and individuals with disabilities are more likely to be impacted by changes to the HCSUA. The mitigation and outreach strategies outlined in the regulation and this CRIA are intended to minimize the impacts on the protected groups.

Finally, households that previously qualified for the HCSUA based on receipt of a LIHEAP payment of less than $20 without actual costs experienced a benefit change due to the provisions contained in 2014 Farm Bill. Due to the unavailability of data on the specific individuals impacted by the LIHEAP provision within the final rule, the Department is unable to determine whether this change had an adverse or disproportionate impact on SNAP participants who are members of protected classes.

Executive Order 13175

Executive Order 13175 requires Federal agencies to consult and coordinate with Tribes on a government-to-government basis on policies that have Tribal implications, including regulations, legislative

comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

This rule has potential Tribal implications. FNS provided an opportunity for consultation on this issue on October 30, 2020. One question was received and answered on the impact of the proposed changes State-by-State and no additional requests for consultation were received. If further consultation on the provisions of this final rule is requested, the Office of Tribal Relations will work with FNS to ensure quality consultation is provided.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. Chap. 35) requires OMB to approve all collections of information by a Federal agency before they can be implemented. Respondents are not required to respond to any collection of information unless it displays a current valid OMB control number.

In accordance with the Paperwork Reduction Act of 1995, this final rule contains information collections that are subject to review and approval by the Office of Management and Budget. The Department solicited public comments in the respective NPRMs that were incorporated into this final rulemaking regarding changes in the information collection burden that would result from the finalization of changes in the rule. The respective NPRMs were proposed on October 3, 2019, ''Supplemental Nutrition Assistance Program: Standardization of State Heating and Cooling Standard Utility Allowances'' (RIN 0584–AE69); and on April 20, 2016, ''Supplemental Nutrition Assistance Program: Standard Utility Allowances Based on the Receipt of Energy Assistance Payments Under the Agricultural Act of 2014'' (RIN 0584–AE43). The Department will refer to the October 3, 2019, NPRM as the SUA NPRM and the April 20, 2016, NPRM as the LIHEAP NPRM. The LIHEAP NPRM finalized by this rulemaking does not have associated burden under the Paperwork Reduction Act.

These changes are contingent upon OMB approval under the Paperwork Reduction Act of 1995. Once the information collection request is approved by OMB, the agency will publish a separate notice in the **Federal Register** announcing OMB approval.

Due to the timeline of the SUA NPRM, the Department had initially requested a new information collection (designated by OMB as Control Number 0584–0651). However, there are no longer conflicts with the 0584–0496 revision timeline given changes to the final rule publication date. Therefore, instead of creating a new information collection, the Department is revising the existing information collection (0584–0496) to reflect State agencies updating SUA baseline methodology at least every five years; State agencies using contractors to support updates to SUA baseline methodology; and State agencies establishing a basic internet individual standard.

Title: Supplemental Nutrition Assistance Program (SNAP): State Agency Options for Standard Utility Allowances and Self-Employment Income.

OMB Number: 0584–0496.

Form Number: None.

Expiration Date: Previously approved through July 31, 2026.

Type of Request: Revision.

Abstract: Section 5 of the Food and Nutrition Act of 2008 (FNA), as amended, permits States to use standard utility allowances (SUAs) in lieu of actual utility expenses in determining a household's shelter costs for the purposes of the excess shelter deduction. This final rule revises SNAP regulations for calculating standard utility allowances and expands allowable shelter expenses to include basic internet costs.

Commenters on the proposed rule explained that portions of the proposed rule would not decrease or may increase State agency burden. The Department agrees and is including additional burden to account for changes in policy in the final rule, such as State agencies updating SUA methodology to align with criteria in the final rule and State agencies establishing SUAs including basic internet costs. The final rule also adjusts the estimates for updating and reporting on SUAs to reflect changes in the approved information collection during the 2023 revision of this information collection (OMB Control number: 0584–0496; Expiration Date 7/31/2026).

The Department is revising the existing information collection covering State agency reporting and recordkeeping for on SUAs (OMB Control Number: 0584–0496, Expiration Date 7/31/2026) to reflect changes from the final rule. There are no new or revised recordkeeping burden or third-party disclosure requirements.

This rule also finalizes the updates to the treatment of Low-Income Home Energy Assistance Program (LIHEAP) payments in accordance with amendments made to the FNA by the Agricultural Act of 2014. These changes do not have associated burden under the Paperwork Reduction Act and are not reflected in this section.

PRA-Related Comments on Proposed Rule

Following publication of the SUA NPRM, the Department received comments directly on the estimated cost and burden hours and comments related to the underlying proposed program changes. As a result, the Department has made changes to the estimated burden in the final rule. Two State agencies agreed that the proposal for FNS to standardize and calculate the Heating and Cooling Standard Utility Allowance (HCSUA) would reduce the State administrative burden associated with determining values and reporting to FNS. However, most comments asserted that State agencies would experience more administrative burden than reflected in the proposed rule.

Multiple commenters, representing two State agencies, a city government, a congressional office and six advocacy organizations, argued that due to the lower HCSUA because of the proposed rule, some State agencies would switch from using a mandatory HCSUA to a voluntary HCSUA. The commenters explained that these State agencies would have an increase in administrative burden due to calculating households' actual heating and cooling costs. Since the final rule does not require State agencies adopt a lower HCSUA and instead allows State agencies to continue calculating their own HCSUAs, subject to FNS approval, the Department does not expect State agencies will switch from using a mandatory HCSUA to a voluntary HCSUA.

A State agency and a non-profit organization commented that the proposed standardization of the HCSUA and proposed caps on LUAs would do little to relieve administrative burden on State agencies. The commenters argued that State agencies will still be required to calculate LUAs and that much of the data used to calculate LUAs are from the same sources that are used to calculate the HCSUA. The final rule requires State agencies to continue calculating all SUAs, including the HCSUA, LUAs and individual standards. Therefore, the Department increased the burden for State agencies to annually update SUAs.

A State agency and a county government suggested that State agencies and counties will incur administrative costs for policy and system automation changes required to implement the proposed rule. The

Department agreed and added start-up burden for each State agency to account for the hours they will spend establishing SUAs that include the cost of basic internet. The Department also considered the burden households may newly experience when reporting on applications or in interviews whether they incur internet costs and verifying costs if the State agency uses voluntary SUAs and the applicant wishes to claim actual expenses in excess of the State SUA. Similarly, State agencies will have burden associated with requesting such information. The Department maintains this burden is already included in OMB-approved ICR 0584–0064 (exp. 6/30/2027), which accounts for the burden on households and State agencies associated with the SNAP application process. This information collection includes burden for applications, interviews, and verification. Therefore, the Department is not including additional household or State burden related to these activities in this information collection.

Additionally, one advocacy organization expressed opposition to the proposed information collection due to their general opposition to the proposed rule. The commenter explained that they think the administrative burden component is irrelevant compared to the potential negative impact on families losing benefits under the proposed rule. The Department believes that the changes in the final rule, which give States more flexibility to reflect their households' unique utility needs, address the commenter's broad concerns.

Beyond specific comments on the information collection and administrative burden, other comments impact the total burden under the final rule. Commenters to the NPRM expressed concerns about the data sources the Department intends to use to calculate HCSUA values. In response to these and other comments, the Department is not finalizing the proposed HCSUA methodology standardization. Instead, the Department is providing State agencies with the flexibility to continue setting their own SUAs while standardizing the data and methodology criteria that FNS will use to approve SUAs. State agencies submit for FNS approval their SUA methodologies at least every five years. Methodology submissions must incorporate any revisions necessary to demonstrate that the baseline expenditure data and underlying methodology reflect recent trends and changes. The methodology update must include changes to the baseline expenditure data and an explanation of the State agency's methodology for deriving HCSUAs from such data. The Department added to the burden to reflect burden hours incurred by State agencies revising their SUA methodologies every five years. Additionally, given the methodology criteria, the Department assumes that some State agencies will choose to solicit contractor support to identify data sources and revise SUA methodologies. The Department added to the burden to reflect the time to solicit, award, and oversee such contracts, as well as the estimated cost of the contracts.

Changes to Burden Estimates in the Final Rule

In this revision, the Department differentiates between annual burden, burden incurred every five (5) years due to rule provisions, and start-up burden for implementing rule provisions. For the first year of implementation of the final rule, the reporting burden will include the annual burden, burden incurred every five (5) years, and start-up burden. The Department estimates the total first year reporting burden will be 6,680 total annual burden hours and 275 total annual responses from 53 State agencies. For subsequent years, the burden will only include annual burden and one-fifth (⅕) of the burden incurred every five (5) years. The Department estimates the subsequent year reporting burden will be 2,118 total burden hours and approximately 133 total annual responses from 53 State agencies. The Department estimates that the total recordkeeping annual burden will be 13.25 total burden hours and 53 annual responses from 53 State agencies.

In the proposed rule information collection request, the Department estimated that State agencies that accept the FNS-calculated HCSUA value would spend one (1) hour per State to update their existing LUAs and individual standards and respond to this data collection. The final rule requires that State agencies continue making annual updates to all SUAs, including the HCSUA, instead of accepting an FNS-calculated value. Therefore, the Department now estimates that all 53 State agencies will submit two (2) responses, at ten (10) hours each to update their SUAs annually. This includes burden to update SUAs based on the consumer price index (CPI) or similar sources, correspond with FNS, and update systems and policy materials.

Compared to the prior revision, this represents a decrease of 2.5 hours because the burden for updating SUA baseline methodology is now accounted for separately, as discussed below. In alignment with the prior revision, the burden now includes two responses to account for State agencies' review of their preliminary SUA amounts and their final SUA amounts. The estimated total burden for this provision is 1,060 hours (53 State agencies × 2 SUA requests per State agency × 10 hours per request = 1,060 hours).

In addition to annual updates, the Department estimates that given the requirements of the final rule to update SUA baseline methodology, in the first year and every five (5) years thereafter, all 53 State agencies will submit two (2) responses at 40 hours each. This includes burden to gather and analyze data sources, calculate SUAs, and submit revisions to SUA methodology to FNS. This includes two (2) responses to account for State agencies' review of their preliminary methodology and their final methodology. This estimate is based on the Department's recent experience evaluating annual SUA updates and providing technical assistance to State agencies, with additional time for State agencies to ensure data sources and methodology meet the criteria in the final rule. The estimated total burden for this provision is 4,240 hours (53 State agencies × 2 SUA methodology updates per State agency × 40 hours per request = 4,240 hours). Since the Department estimates State agencies will incur this burden every five (5) years, the average annual burden is 848 hours (4,240 hours/5 years = 848 hours annually).

The Department estimates that in the first year and every five (5) years thereafter, five (5) State agencies will solicit contractor support to make required updates to SUA baseline methodology. This estimate assumes that approximately one-fifth to one-quarter of the State agencies FNS identified as likely to make substantial revisions to their HCSUA methodology will solicit contractor support. Based on prior review of State agency SUA submissions, the Department assumes most State agencies will perform updates internally, but some may seek contractor support. The Department estimates that each State agency will spend approximately 160 hours soliciting, awarding, and managing such contracts and spend approximately $100,000 on such contracts. These estimates are based on the Department's experience with previous Federal and State agency contracts for data analysis. The estimated total burden for this provision is 800 hours (5 State agencies × 1 contract per State agency × 160 hours per request = 800 hours). Since the Department estimates State agencies

will incur this burden every five (5) years, the average annual burden is 160 hours (800 hours/5 years = 160 hours annually).

Additionally, there will be start-up responses for establishing SUAs covering basic internet costs. The Department estimates that in the first year all 53 States will submit one (1) response at ten hours each to establish a basic internet individual standard and HCSUA or LUAs covering basic internet costs. The includes the burden to gather and analyze internet data sources and to build the ability to use the basic internet individual standard into their systems and processes. The estimated total burden for this provision is 530 hours (53 State agencies × 1 response per State agency × 10 hours per request = 530 hours).

This rule also finalizes updates proposed on April 30, 2016, to the treatment of Low-Income Home Energy Assistance Program (LIHEAP) payments, in accordance with amendments made to the FNA by the Agricultural Act of 2014. These changes do not have associated burden under the Paperwork Reduction Act.

In addition to the program changes related to the final rule, this information collection also covers the burden of State agency methodologies for determining the cost of doing business in self-employment cases. Current data indicates 23 out of 53 State agencies have already incorporated a self-employment methodology. For this revision, the Department continues to estimate that five (5) State agencies will establish a new methodology for offsetting the cost of producing self-employment income, either for the first time or as an update to their current methodology. This estimate is consistent with the estimate in the most recent approval of this information collection, approved 7/7/2023. The Department has received few updates to State agencies' self-employment methodologies over the last five years, so five (5) States represents the high end of the estimate. The Department estimates that each of these five (5) responses will have a response time of 10 hours, for a total annual burden of 50 hours (5 State agencies × 1 request per State agency × 10 working hours per request = 50 hours). This burden estimate is consistent with the prior revision of this information collection.

Recordkeeping Burden

All 53 State agencies are required to keep and maintain one record of the information gathered and submitted to FNS for SUA and self-employment options, and the Department estimates this process takes 15 minutes (or 0.25 hours) per year. The total annual burden for this provision is estimated at 13.25 hours (53 State agencies × 1 record per State agency × 0.25 hours = 13.25 hours). This burden estimate is consistent with the prior submission for this activity.

There are no new recordkeeping or third-party disclosure requirements resulting from the final rule, and there have been no other changes to this recordkeeping requirement since the Department last consulted with State agencies on the estimate.

The full burden estimates are shown in the chart below:

E-Government Act Compliance

The Department is committed to complying with the E-Government Act, 2002, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

List of Subjects in 7 CFR Part 273

Administrative practice and procedure, Claims, Employment, Food stamps, Fraud, Government employees, Grant programs—social programs, Supplemental Security Income, Wages.

Accordingly, 7 CFR part 273 is amended as follows:

PART 273—CERTIFICATION OF ELIGIBLE HOUSEHOLDS

■ 1. The authority citation for part 273 continues to read as follows:

Authority: 7 U.S.C. 2011–2036.

■ 2. In § 273.9, revise paragraphs (d)(6)(ii)(C) and (d)(6)(iii) to read as follows:

§ 273.9 Income and deductions.

* * * * *

(d) * * *

(6) * * *

(ii) * * *

(C) The cost of fuel for heating; cooling (*i.e.,* the operation of air conditioning systems or room air conditioners); electricity or fuel used for purposes other than heating or cooling; water; sewerage; well installation and maintenance; septic tank system installation and maintenance; garbage and trash collection; all service fees required to provide service for one telephone, including, but not limited to, basic service fees, wire maintenance fees, subscriber line charges, relay center surcharges, 911 fees, and taxes; service fees associated with basic internet connection, including, but not limited to, monthly subscriber fees (*i.e.,* the base rate paid by the household each month in order to receive service, which may include high-speed internet), taxes and fees charged to the household by the provider that recur on monthly bills, and the cost of one modem rental; and fees charged by the utility provider for initial installation of the utility. One-time deposits cannot be included.

* * * * *

(iii) *Standard utility allowances.* (A) A State agency may use standard utility allowances (standards) in place of actual costs in determining a household's excess shelter deduction. The State agency may use different types of standards but cannot allow households the use of two standards that include the same expense. The State agency may vary the standards by factors such as household size, geographical area, or season. Only utility costs identified in paragraph (d)(6)(ii)(C) of this section may be used in developing standards described in paragraphs (d)(6)(iii)(A)(*1*) through (*3*) of this section. The following standards are allowable:

(*1*) An individual standard for each type of utility expense;

(*2*) A standard utility allowance for all utilities that includes heating or cooling costs (HCSUA); and

(*3*) A limited utility allowance (LUA) that includes electricity and fuel for purposes other than heating or cooling, water, sewerage, well and septic tank installation and maintenance, and garbage or trash collection. The LUA may also include telephone and/or internet costs. The LUA must include expenses for at least two utilities.

(B) The State agency must review the standards annually and make adjustments to reflect changes in costs, rounded to the nearest whole dollar. State agencies must provide the amounts of standards to FNS annually and submit methodologies to FNS for approval when the methodologies are developed or changed.

(C) The State agency must submit for FNS approval their methodologies at least every five years. Methodology submissions must incorporate any revisions necessary to demonstrate that the baseline expenditure data and underlying methodology reflect recent trends and changes. State agencies' methodologies must:

(*1*) Reflect the entire State or geographic area the SUA covers;

(*2*) Use data sourced from utility providers or similarly reliable source;

(*3*) Reflect expenses incurred by low-income households;

(*4*) Distinguish if the utility is for heating or cooling, if applicable; and

(*5*) Reflect residential utility expenses.

(D) A standard with a heating or cooling component must be made available to the following households:

(*1*) Households that incur heating or cooling expenses separately from their rent or mortgage;

(*2*) Households in rental housing who are billed by their landlords on the basis of individual usage or who are charged a flat rate separately from their rent. However, households in public housing units which have central utility meters and which charge households only for excess heating or cooling costs are not entitled to a standard that includes heating or cooling costs based only on the charge for excess usage, unless the State agency mandates the use of standard utility allowances in accordance with paragraph (d)(6)(iii)(G) of this section; and

(*3*) Households that receive a payment or on behalf of which a payment was made under the Low Income Home Energy Assistance Act of 1981 (LIHEAA) or other similar energy assistance program, if in the current month or in the immediately preceding 12 months and such payment was greater than $20 annually.

(*i*) Other similar energy assistance programs are separate home energy assistance programs designed to provide heating or cooling assistance through a payment received by or made on behalf of low-income households. State agencies must establish clear and reasonable standards for evaluating whether a program constitutes a similar energy assistance program.

(*ii*) A payment received by a household or made on behalf of a household under LIHEAA or other similar energy assistance program must be quantifiable in order to confer eligibility for the heating and cooling standard utility allowance. A quantifiable payment is one that the State agency quantifies, in dollars. In-kind energy assistance, such as firewood or coal, may be considered an other similar energy assistance program payment if the State agency establishes reasonable procedures for quantifying the payment in a manner that is applied consistently across the caseload.

(*iii*) The State agency shall document the date and receipt of a payment made under LIHEAA or other similar energy assistance program to ensure the payment was received in the current month or the immediately preceding 12 months and exceeds $20 annually.

(*iv*) State agencies shall not consider anticipated receipt of a payment to be an actual payment received under the LIHEAA or other similar energy assistance program when determining a household's eligibility for the HCSUA. However, for purposes of this sub clause, a State agency may consider a payment under the LIHEAA or other similar energy assistance program to be received by the household, or on behalf of the household, if the household is scheduled to receive the payment in the current month.

(*v*) In a case where a payment is scheduled to be received in the current month and the payment is not actually made within that month, the State agency is responsible for determining whether an overissuance has occurred.

(*vi*) A State agency must grant the HCSUA to individuals who received a qualifying LIHEAP or other payment, regardless of changes in residence or address. Individuals who live in a household that received a qualifying LIHEAP or other payment who subsequently move into a separate household are entitled to receive the HCSUA in their new, separate households.

(*vii*) A household is eligible for the HCSUA if the household lives in a multi-unit dwelling or individual unit and receives a qualifying weatherization program payment. State agencies must develop workable, reasonable procedures to determine how multi-unit dwelling weatherization payments would be quantified for households and must apply those procedures consistently and fairly across the caseload.

(E) A household that has both an occupied home and an unoccupied home is only entitled to one standard.

(F) At initial certification, recertification, and when a household moves, the household may choose between a standard or verified actual utility costs for any allowable expense identified in paragraph (d)(6)(ii)(C) of this section, unless the State agency has opted, with FNS approval, to mandate use of a standard. Households certified for 24 months may also choose to switch between a standard and actual costs at the time of the mandatory interim contact required by § 273.10(f)(1) if the State agency has not mandated use of the standard.

(G)(*1*) A State agency may mandate use of standard utility allowances for all households with qualifying expenses if the State uses one or more standards that include the costs of heating and cooling and one or more standards approved by FNS that do not include the costs of heating and cooling, and the standards will not result in increased program costs. The prohibition on increasing program costs does not apply to necessary increases to standards resulting from utility cost increases.

(*2*) If the State agency chooses to mandate use of standard utility allowances, it must use a standard utility allowance that includes heating or cooling costs for residents of public housing units which have central utility meters and which charge the households only for excess heating or cooling costs. The State agency also must not prorate a standard utility allowance that includes heating or cooling costs provided to a household that lives and shares heating or cooling expenses with others.

(*3*) In a State that chooses this option, households entitled to the standard may not claim actual expenses, even if the expenses are higher than the standard. Households not entitled to the standard may claim actual allowable expenses.

(H) If a household lives with and shares heating or cooling expenses with another individual, another household, or both, the State agency shall not prorate the standard for such households if the State agency mandates use of standard utility allowances in accordance with paragraph (d)(6)(iii)(G) of this section. The State agency may not prorate the SUA if all the individuals who share utility expenses but are not in the SNAP household are excluded from the household only because they are ineligible.

■ 3. In § 273.10, revise paragraph (d)(6) to read as follows:

§ 273.10 Determining household eligibility and benefit levels.

* * * * *

(d) * * *

(6) *Energy assistance payments.* The State agency shall prorate energy assistance payments as provided for in § 273.9(d) over the entire heating or cooling season the payment is intended to cover. Any such prorated energy assistance payments may qualify an individual or household for the HCSUA in more than one heating or cooling season.

Tameka Owens,

Acting Administrator and Assistant Administrator, Food and Nutrition Service.

Note: The following appendix will not appear in the Code of Federal Regulations.

Appendix A—Regulatory Impact Analysis

I. Statement of Need

The United States Department of Agriculture (the Department) is finalizing this rule, which revises Supplemental Nutrition Assistance Program (SNAP) regulations to expand allowable shelter expenses to include basic internet costs and establish clearer guidelines and requirements for State agencies to follow when developing standard utility allowances (SUAs) to ensure consistency and integrity in the application of SUAs across the country. While the Department is not finalizing the proposed rule's provision standardizing the methodology for calculating SUAs nor establishing a percentile at which they must be calculated, the Department maintains that clearer requirements will improve consistency and integrity in the program, which the Department believes is good governance. This rule also finalizes updates to the treatment of Low-Income Home Energy Assistance Program (LIHEAP) payments or other similar energy assistance program payments, in accordance with amendments made to the Food and Nutrition Act of 2008 by the Agricultural Act of 2014.

Without consistent parameters for SUA methodologies and the data used to calculate SUAs, the Department is concerned that information State agencies use to determine SUAs is outdated and may not reflect low-income households' current utility costs. In a 2017 study, ''Methods to Standardize State Standard Utility Allowances'' (Holleyman, et al., 2017) (referred to in this analysis as the 2017 SUA Study), the Department found differences in how well State heating and cooling standard utility allowance (HCSUA) values reflected data on utility expenditures among low-income households in each State. These findings persisted in a 2023 update, ''Updating Standardized State Heating and Cooling Utility Allowance Values'' (Holleyman, et al., 2023) (referred to in this analysis as the 2023 SUA Study). Establishing clearer requirements for how States should use data to establish SUAs is important to ensure SUAs are aligned with current household conditions and that the application of the excess shelter deduction reflects household circumstances and, ultimately, the appropriateness of the benefit level.

II. Summary of Impacts

The Department estimates the total increase in Federal SNAP benefit spending associated with the SUA provisions of the final rule to be approximately $5.4 billion over the five-year period FY 2025–FY 2029, averaging $1.1 billion per year. This represents a 1.34 percent increase in Federal transfers (SNAP benefits) upon full implementation. Effects on Federal transfers are expected to begin in FY 2025. Effects on Federal costs are expected to begin in FY 2025 and are estimated to be approximately $612,000 over the 5-year period FY 2025–FY 2029, averaging about $122,000 annually. Effects on State administrative costs are expected to begin in FY 2025 and are estimated to be approximately $561,000 over the five-year period (an increase of less than 0.01 percent from baseline projections), averaging $112,000 annually.

The Department estimates that approximately 29 percent of SNAP households will see an average 6 percent increase in their monthly SNAP benefit (averaging $15 per month, per household) and 5 percent of SNAP households will see an average 2.6 percent reduction their monthly SNAP benefit (averaging $7 per month, per household). Benefit increases are primarily due to the inclusion of internet service as an allowable shelter expense in SUAs. In addition, a small share of households will experience a benefit gain due to increases in some States' HCSUA values due to new data quality standards and periodic methodology reviews, particularly in States that have not updated their HCSUA methodologies or underlying data in recent

years. Benefit losses are due to expected decreases in some States' HCSUA values due to new data quality standards and periodic methodology reviews, particularly in States that have not updated their HCSUA methodologies or underlying data in recent years. The remaining 66 percent of households will see no change to their SNAP benefit. A very small number of households (less than 0.01 percent of all SNAP households) are estimated to lose benefits as a result of the final rule, losing an average of $30 in monthly benefits. The rule is also expected to result in an increase in ongoing administrative burden for most State SNAP agencies.[1] The final rule will not affect household burden.

The final rule's effects are summarized in the following table (Table 1). Increases in SNAP benefit payments are categorized as transfers in the accounting statement (Table 2); increases in administrative burden for States are categorized as costs; and Federal costs to administer the provisions of the final rule are categorized as Federal costs. Regarding the LIHEAP provisions of the final rule, which finalize how LIHEAP payments are considered to confer eligibility for the HCSUA, the Department notes that States were required by statute to implement the Agricultural Act of 2014's change related to LIHEAP immediately for any household whose initial certification period began on or after March 10, 2014. For households that were already certified for SNAP, States had some flexibility in determining when to implement this change but were required to implement no later than August 1, 2015, for most households. Thus, reductions in transfers related to the LIHEAP provisions of this final rule are assumed to be fully incorporated into the current SNAP baseline, as noted in Table 1, and therefore are not included in the accounting statement of transfer effects in Table 2. This analysis focuses on effects over the five-year period FY 2025–FY 2029. Ten-year estimates are available in Appendix Table A.

BILLING CODE 3410–30–P

[1] This rule will increase the existing burden currently approved (OMB Control Number 0584–0496; Expiration Date: July 31, 2026).

BILLING CODE 3410–30–C

As required by OMB Circular A–4, in Table 2 below, the Department has prepared an accounting statement showing the annualized estimates of benefits, costs, and

Table 1: Summary of Federal Budget Impacts, FY 2025-2029

In Millions of Dollars	FY 2025	FY 2026	FY 2027	FY 2028	FY 2029	FY 2025- FY 2029 Total
Transfers - SNAP benefit spending						
Establish guidelines for States' SUA Updates	$0	-$293	-$297	-$301	-$304	-$1,195
Allow basic internet as a shelter expense	$37	$1,604	$1,625	$1,643	$1,661	$6,571
Total Estimated Transfer Impacts[1]	**$37**	**$1,311**	**$1,328**	**$1,343**	**$1,357**	**$5,378**
LIHEAP Provisions[2]	-$427	-$425	-$431	-$436	-$441	**-$2,160**
Discounted Transfer Impact						
3 percent	$36	$1,235	$1,215	$1,193	$1,171	$4,850
7 percent	$34	$1,145	$1,084	$1,024	$968	$4,255
Federal and State Administrative Costs						
State Administrative Costs - Implementation	$0.41	$0.00	$0.00	$0.00	$0.00	$0.41
State Administrative Costs - Ongoing	$0.03	$0.03	$0.03	$0.03	$0.03	$0.15
Federal Costs	$0.49	$0.03	$0.03	$0.03	$0.03	$0.61
Total Estimated Federal and State Costs	**$1.44**	**$0.06**	**$0.06**	**$0.06**	**$0.06**	**$1.17**
Discounted Cost Impact						
3 percent	$0.88	$0.05	$0.05	$0.05	$0.05	$1.08
7 percent	$0.84	$0.05	$0.05	$0.04	$0.04	$1.02

1. Excludes impacts of LIHEAP provision for reasons explained in footnote 2.
2. Because these provisions were implemented shortly after passage of the 2014 Farm Bill, this reduction in transfers is fully captured in the SNAP baseline and not included in the Total Estimated Impacts line.
Note – Figures may not sum due to rounding. Estimates are nominal and include projected inflation in SNAP spending.

transfers associated with the provisions of this rule. Increases in SNAP benefit payments are categorized as transfers; increases in administrative burden for State agencies, households, and the Federal Government are categorized as costs.

Table 2: Accounting Statement

	Primary Estimate	Year Dollar	Discount Rate	Period Covered
Benefits – Qualitative: The final rule will help improve consistency and data integrity in State SUA calculations, while providing State agencies flexibility in creating their standards. Additionally, it will ensure SUAs account for internet costs, in recognition of the vital role internet access plays in households' economic well-being.				
Annualized Monetized ($millions/year)	N/A	2024	--	FY 2025-2029
Costs – This final rule will result in a small one-time burden for State agencies to establish SUAs that incorporate internet expenses. It will result in a periodic (every 5 years) burden for State agencies to update their HCSUA methodologies and data, and for the Federal government to review State agencies' methodology and data submissions. The Federal government will incur 50 percent of the cost related to increases in State agency burden.				
Annualized Monetized ($millions/year)	$0.24	2024	3%	FY 2025-2029
	$0.25	2024	7%	FY 2025-2029
Transfers – This final rule will increase the net amount of benefit payments to SNAP participants.				
Annualized Monetized ($millions/year)[1]	$1,059	2024	3%	FY 2025-2029
	$1,038	2024	7%	FY 2025-2029
Annualized Monetized ($millions/year)[2]	$627	2024	3%	FY 2025-2029
	$606	2024	7%	FY 2025-2029

[1]Estimates exclude impacts of LIHEAP provision (comparing against with-statute baseline).
[2]Estimates include impacts of LIHEAP provision (comparing against without-statute baseline).

In the discussion that follows, there is a section-by-section description of the impacts of each rule provision.

III. Proposed Rule and Comments Received

This final rule incorporates provisions originally proposed in two separate notices of proposed rulemaking (NPRM): The October 3, 2019, NPRM titled ''Supplemental Nutrition Assistance Program: Standardization of State Heating and Cooling Standard Utility Allowances'' (84 FR 52809), and the April 20, 2016, NPRM titled ''Supplemental Nutrition Assistance Program: Standard Utility Allowances Based on the Receipt of Energy Assistance Payments'' (81 FR 23189). While originally published as separate NPRMs, the provisions contained in these rules both relate to calculating household shelter expenses, and therefore the Department is combining the provisions from each rule into a single final rule. For clarity, provisions included in the October 3, 2019, proposed rule are referred to throughout this analysis as SUA NPRM provisions. Provisions included in the April 20, 2016, proposed rule are referred to as LIHEAP NPRM provisions.

The Department received over 125,000 public comment submissions on the SUA NPRM. Of these, approximately 6,500 were unique and nearly 118,800 were associated with form letter campaigns. Comments on the SUA NPRM came from a broad range of stakeholders, including State SNAP agencies, elected officials, local governments, advocacy groups, religious organizations, food banks, legal services organizations, private citizens, and others. The Department received nine comments on the LIHEAP NPRM from advocate groups, legal services organizations, and nonprofit organizations.

A. Comments Related to Impacts of SUA NPRM

While most comments received were related to provisions of the proposed rule that were expected to reduce monthly SNAP benefits for some households, the Department also received comments on the Regulatory Impact Analysis (RIA) published with the proposed rule. Commenters did not suggest alternative, national datasets nor alternative methods of analysis for use in the RIA. Many commenters discussed the effects of the proposed rule in general terms, though some commenters noted specific potential

costs that they did not believe were sufficiently addressed in the RIA, including secondary impacts. Secondary impacts noted in the received comments included:

- Healthcare costs related to increases in food insecurity and poverty;
- Costs to the U.S. and local economies due to SNAP's role in generating economic activity and acting as an economic stabilizer; and
- Impacts on other nutrition assistance programs or providers, including food banks.

The Department notes, that while there are studies that describe the relationships between SNAP, food security, poverty, and health care costs, these studies do not allow the Department to estimate potential costs specific to the impacts of the proposed rule, nor the final rule. Therefore, secondary impacts of reduced SNAP benefits are not assessed in this final rule RIA.

B. Comments Related to Administrative Costs of the Proposed Rule

Some commenters on the SUA NPRM stated that the Department had not adequately addressed potential administrative costs to State and local agencies of complying with the proposed rule. The final rule's RIA includes additional detail and updates to reflect costs State and local agencies will incur because of the final rule. The Department anticipates that the final rule will cause a small, intermittent increase in the administrative burden associated with SUAs for most State agencies because they will be required to periodically review and update their SUA methodology, making any revisions necessary to demonstrate that the baseline data and underlying methodology reflect low-income household utility costs, rather than continuously adjusting the prior year's SUA values with an index of inflation. Additionally, State agencies will experience a one-time increase in burden due to the inclusion of basic internet as an allowable shelter expense. These increases in administrative burden are discussed in greater detail in the Section-by-Section Analysis.

C. Comments Related to Impacts of the SUA NPRM on Vulnerable Populations

Many comments on the SUA NPRM noted specific impacts the proposed rule was anticipated to have on certain subgroups of SNAP participants. These are summarized below:

- Several commenters noted specific impacts on households with elderly or disabled members. In the proposed rule RIA, the Department discussed in-depth the impacts of the proposed rule, including disparate impacts on households with elderly or disabled members. The Department recognizes that households with individuals who are elderly or who have a disability may see a greater change (including increases and decreases) in their benefit amounts because of any changes to SUA values as they are not subject to a cap on their excess shelter deduction amount. The Department is committed to serving households with elderly and disabled members and will support State agencies' implementation of the final rule as they help these households understand any changes to their benefits and are available for questions, as necessary. The Department has made changes to the final rule that give States more flexibility to set SUA levels while also noting the expectation that SUAs will be sufficient to account for the utility expenses of the vast majority of households. The Department is not finalizing the requirement to standardize HCSUAs nor the provision that would have capped limited utility allowances (LUAs) and single utility allowances (also referred to as ''individual standards'').
- A legal services organization, trade association, and advocacy groups stated that rural communities would be more likely to be adversely impacted by the proposed rule because they spend a disproportionately higher share of their income on utilities. Approximately 6 percent of SNAP households live in a rural area.[2] However, the Department does not currently have data available that would allow it to determine if there is a meaningful difference between rural and non-rural SNAP households' utility expenses. Additionally, the Department is not finalizing the proposed rule's provision to standardize HCSUAs as statewide values. Instead, State agencies will retain the flexibility to develop SUAs for different regions within their State.
- Advocacy groups stated that the proposed rule would disproportionately and negatively impact renters as they have higher utility costs than homeowners. As previously discussed, the Department is not finalizing provisions included in the proposed rule that would have standardized SUA values.

Advocacy groups stated the proposed rule would negatively affect households with high housing costs and, by extension, households living in areas with expensive housing markets. The Department notes that the HCSUA and other SUAs are meant to represent utility costs incurred by low-income households, rather than other expenses that may be affected by living in an expensive housing market. Those expenses, like rent and mortgage payments, will continue to be accounted for in the excess shelter deduction calculation. However, the Department acknowledges that some households incur high utility expenses, and those expenses can vary by geographic region of a State. In the final rule, the Department is retaining States' flexibility to establish SUA values for different geographic regions within each State.

D. Comments Related to the SUA NPRM's RIA Methodology and Proposed Data Sources

The Department also received comments on the SUA NPRM that expressed concerns with the data sources used in the proposed rule's RIA and stated concerns that the methodology used in the RIA was not sufficiently clear. A legal services group stated that the use of data from the American Community Survey (ACS) is questionable because it relies on customer recall of their utility expenses and an advocacy group questioned the use of the Residential Energy Consumption Survey (RECS) because the 2015 data release did not provide individual estimates for every State. In addition, some commenters raised concerns that the RECS is only administered every four years, and there is a three- to four-year delay before the data are published. Many commenters, including advocacy groups and State government agencies expressed concerns that the data sources the Department intended to use do not sufficiently capture climate variations within States, cost variation within States (including in Tribal areas) or are less accurate than sources State agencies may currently use for their own methodologies.

The Department appreciates these comments and is making use of Federal survey data, like ACS and RECS, an available option for State agencies to use, rather than mandating their use. The Department maintains that, as of FY 2025, the Federal survey data sources used in the proposed rule's RIA methodology are the best existing national data sources on the utility expenditures of low-income households. Additionally, beginning with the 2020 RECS data collection, the Department notes that RECS data are available for each of the 50 States and the District of Columbia. These data sources may be used by State agencies to calculate their SUAs.

As discussed in the 2017 and 2023 SUA studies, ACS and RECS data each have strengths and limitations as sources of information about low-income households' utility expenditures. When used together, each survey's strengths can mitigate weaknesses in the other survey. For example, RECS data are not subject to customer recall bias that can affect ACS data because RECS collects billing data directly from energy providers to validate the responses provided by surveyed households. RECS data also specify whether a household incurred heating or cooling expenses, permitting estimation of energy expenditures specific to the households that would be eligible for an HCSUA. However, RECS data are not published on an annual basis. ACS data can provide a more recent estimation of low-income households' utility expenditures because it is an annual survey. ACS is also a larger survey than RECS, resulting in larger sample sizes of low-income households in each state and the District of Columbia. RECS and ACS both gather information about respondents' household income, permitting estimates specific to the low-income households who participate in SNAP. Further information about the strengths and weaknesses of each of the Federal surveys used in the proposed rule RIA can be found in the 2017 and 2023 SUA studies.

Although the Department is not finalizing the standardization provision of the proposed rule, which relied on Federal survey data sources to calculate States' HCSUA values, the Department maintains that ACS, RECS, and Consumer Expenditure Survey data from the Bureau of Labor Statistics remain reputable sources of data on low-income households' utility expenditures in each State and the District of Columbia.[3]

[2] Source: FY 2022 SNAP Quality Control data.

[3] Data on utility expenditures in U.S. territories administering SNAP (Guam and U.S. Virgin

Continued

The Department also received comments that expressed concerns about how the proposed telecommunications SUA would be calculated and how it was estimated in the proposed rule RIA. As proposed, the telecommunications standard would have been available to households with utility costs for one telephone, basic internet service, or both. Households with basic internet and/or telephone costs would either receive the telecommunications standard or use their actual costs, subject to the proposed national cap. The final rule no longer creates a telecommunications standard and, instead, includes basic internet service as an allowable shelter cost and allows State agencies to incorporate the cost of basic internet service into the HCSUA. Additionally, the final rule provides States with the option to develop a basic internet individual standard, independent from the telephone individual standard. State agencies may also include basic internet costs in their LUAs. The Department is not finalizing a standardized method of calculating basic internet costs. State agencies will develop their own methodology for including basic internet expenses in the HCSUA. Additionally, States that choose to include internet costs in their LUAs or as an individual standard will develop their own methodology and calculate their basic internet individual standards or LUAs containing the cost of basic internet each fiscal year and submit them to FNS for approval, like other individual standards or LUAs. Consistent with the requirements for other SUA methodologies, including individual standards like the telephone standard, State agencies must submit for FNS approval their basic internet individual standard methodology every five years, and data underlying these methodologies must meet certain criteria.

E. Comments Related to LIHEAP NPRM

Comments on the LIHEAP NPRM were generally favorable of the proposed provisions and did not directly address the LIHEAP NPRM's RIA.

IV. Background

A. Shelter Expenses and Standard Utility Allowances in SNAP

The Food and Nutrition Act of 2008, as amended, establishes uniform national eligibility standards for SNAP and defines the parameters used to calculate SNAP benefits. Household benefits are calculated by subtracting 30 percent of the household's total net income from the maximum allowable benefit allotted for that household's size. Net income is calculated by subtracting allowable deductions from the household's gross monthly income.

One such deduction is an excess shelter expense deduction, which is available to households with shelter costs exceeding 50 percent of their adjusted gross income after other deductions. This deduction has a maximum value for households that do not include elderly or disabled members that is updated annually (sometimes referred to as the ''shelter cap'').[4] Shelter expenses include the basic cost of housing like rent or mortgage payments, as well as utilities and other allowable expenses. Most parameters for eligibility are established at the Federal level, but States are afforded limited discretion to establish SUAs which may be used in place of actual utility expenses when calculating the excess shelter deduction. Using SUAs can help simplify the certification process for applicants and State agencies. State agencies have the option to require that households with eligible utility expenditures use a SUA rather than documenting actual utility costs; 48 State agencies have opted to make the use of SUAs mandatory.[5] [6]

State agencies with mandatory SUAs must establish at least two SUAs, one for households with heating and/or cooling expenses (the HCSUA), and another for households without such expenses. State agencies may establish multiple SUAs to reflect differences in households' circumstances. Types of SUAs include:

- A Heating and Cooling SUA (HCSUA), for households that pay heating and/or cooling expenses separate from their rent or mortgage;
- A Limited Utility Allowance (LUA), for households with expenses for at least two allowable utility costs, but no heating and/or cooling costs;
- A telephone-only allowance, for households that have no utility expenses other than telephone; and
- Other individual standards, for households with one utility expense, such as water, that is separate from rent or mortgage.

Nearly all State agencies have an HCSUA and a telephone individual standard. Most have LUAs and about half have at least one other individual standard. Appendix Table B contains the FY 2024 SUA values for each State. Table 3, below, provides information about the share of SNAP households that claim each type of SUA.

Table 3: Share of SNAP Households Claiming SUAs

Households claiming:	Percent
No SUA/Utilities	26.2%
HCSUA	62.3%
LUA	2.2%
Individual Standard (other than Telephone)	0.3%
Telephone Individual Standard	5.7%
Other	0.8%
Actual Expenses	0.2%
Missing	2.2%

Source: FY 2022 SNAP QC data.

Households that receive LIHEAP payments greater than $20 annually are eligible for the HCSUA and do not need to demonstrate actual utility costs. Section 4006 of the Agricultural Act of 2014 mandates that those State agencies electing to use an HCSUA may only offer the HCSUA to households receiving LIHEAP or other similar energy assistance if the household received a payment greater than $20 in the current month or in the immediately preceding 12 months. Prior to the Agricultural Act of 2014, HCSUAs were available to households that received any payment, or were eligible for a payment if not yet received, under LIHEAP

Islands) are not available from these surveys. However, GU and U.S. VI do not currently use HCSUAs.

[4] In FY 2024, the shelter deduction is capped at $672 in the contiguous 48 States and the District of Columbia, $1,073 in Alaska, $905 in Hawaii, $789 in Guam, and $529 in the U.S. Virgin Islands.

[5] The five States without mandatory SUAs are Guam, Hawaii, Tennessee, Virginia, and the U.S. Virgin Islands.

[6] Throughout this analysis, the term ''State'' is used to refer to the 50 States, as well as District of Columbia, Guam, and the U.S. Virgin Islands (53 State agencies, in total).

or a similar energy assistance program, regardless of the size of the payment.

State agencies must update SUAs annually, but are not directed to use specific data sources, and can revise their methodology at any time so long as they receive FNS approval. In practice, most States update their SUAs each October, at the start of the fiscal year,[7] and the values remain constant throughout the fiscal year. SUAs are not required to be benchmarked to a particular percentile, and State agencies may opt to set them at a higher percentile to ensure the SUA's value is sufficient for a large portion of the SNAP caseload.

Most State agencies use one of two different types of methodologies when calculating their SUAs. The first is a methodology that relies on State-specific recent utility data, often from a sample of areas and/or providers throughout the State. The second is a methodology that adjusts a base number using an inflation measure such as the Consumer Price Index (CPI). Some State agencies use a methodology that combines both approaches. A review of information available to FNS about how State agencies most recently updated their SUA values indicates that at least 10 States have not updated the utility data used to calculate their HCSUA in 10 or more years. These State agencies have adjusted their HCSUA on an annual basis using CPI-based inflation factors. However, inflationary adjustments alone cannot account for broader changes in the household utility expenditures, like the mix of energy sources households use, nor the quantity of energy used. They also are not specific to the circumstances of low-income households and may miss trends in spending among low-income households that diverge from trends among higher-income households.

While the use of SUAs simplifies the application process from the perspective of both the State agency and the applicant, the Department believes program simplification needs to be balanced with ensuring consistency and integrity in how SUAs are calculated. SUAs must align with low-income households' utility costs to ensure that the application of the excess shelter deduction reflects household circumstances and ultimately, the appropriateness of the benefit levels.

[7] All States except for Indiana and Maryland follow the Federal fiscal year calendar for their HCSUA updates. Indiana's update occurs in May and Maryland's update occurs in January.

B. HCSUA Values and Utility Expenditures

The 2017 SUA Study and the 2023 SUA Study found that States' HCSUA values differed considerably from data on what low-income households [8] paid for utilities, using different illustrative benchmarks.[9] The studies also revealed that HCSUA values may not respond to changes in low-income households' utility expenses. In particular, the 2023 SUA Study examined ACS data and found that average monthly energy costs for low-income households in States with HCSUAs were lower in 20 States in 2019 than in 2014.[10] However, 18 of the 20 State agencies had higher HCSUAs in FY 2019 than in FY 2014, with an average increase of $56. The 2023 Study also found that the range of utility expenses incurred by low-income households narrowed since FY 2014 in 48 States, meaning fewer households experienced extremely high monthly utility expenses.[11] These findings from FY 2014–FY 2019 suggest that there have been fundamental shifts in the energy market, like improvements in energy efficiency, changes in the types of energy used (*e.g.,* lower reliance on high-cost fuels), and changes in prices that have affected low-income households' utility expenses within the past 10 years. While CPI-based inflationary adjustments to base values may account for overall changes in expenses for a wide range of consumers, they are not specific to the expenses incurred by low-income households, are not responsive to changes in the mix of energy sources low-income households use, and are not responsive to increases or decreases in the number of low-income households who incur extremely high expenses (*i.e.,* the spread of expenses a SUA seeks to accommodate). This illustrates why the Department believes it is problematic for State agencies to rely on outdated methodologies and/or data sources to calculate their SUA values, which may not reflect current conditions. If the base-year data underlying a State agency's SUA calculation is outdated, the SUA will be reflective of outdated patterns in consumption, efficiency, and prices.

[8] The studies defined ''low-income'' as households with incomes at or below 150 percent of the Federal poverty level.

[9] The 2023 SUA study primarily examined low-income households' average expenditures, as well as expenses at the 80th percentile, 90th percentile and 95th percentile. The 2017 SUA Study looked at average expenses for low-income households, as well as the 85th percentile.

[10] See Appendix Table F–1. Holleyman, Chris, Pratima, Damani, and Torres, Erick. Updating Standardized State Heating and Cooling Utility Allowance Values. Prepared by SP Group LLC. for the U.S. Department of Agriculture, Food and Nutrition Service, March 2023.

[11] This is indicated by what the report authors described as ''a slightly negative difference in the scaling factors used to escalate the average utility expenditures of low-income households to the 80th percentile of low-income households.'' In other words, the 80th percentile of low-income households had moved closer to the median, indicating that fewer households had expenses near the top of the range of all low-income households' expenses.

Internet as a Utility Expense

Under current SNAP regulations, internet service is not an allowable shelter cost that can be deducted from a SNAP household's gross income. However, internet access has become a necessity for school, work, and job search activities. As such, internet has become a necessary expense in SNAP households' monthly budgets and the Department is designating it as an allowable shelter cost in the final rule. To understand the costs incurred by low-income households for basic internet access, FNS's 2023 SUA Study included a methodology for developing a basic internet individual standard using estimates of typical costs for internet access in each State. Broadband was used to represent a level of service that is conducive to economically important household activities, like job searching and virtual education, in contrast to dial-up internet service. The study determined that no national, public database of household broadband expenditures is available at this time. The final rule will permit States to develop their own methodology to estimate internet costs for inclusion in SUAs.

In addition to geographic variation in the availability and price of internet service, the 2023 SUA study also found that understanding the costs low-income families incur for internet service requires evaluating participation in government programs that reduce the cost of internet for many low-income households. The Department notes that if a household does not pay any of its internet costs, including because those costs are paid in full by a program such as the Lifeline program or the former Affordable Connectivity Program (ACP), then the household would not qualify for the basic internet individual standard.

C. Baseline and Time Horizon for Analysis

Our baseline for measuring the costs, benefits, and transfers associated with this final rule is the Department's estimated SNAP participation and benefit spending for FYs 2025–2029, shown in Table 4 below.[12] This regulatory impact analysis (RIA) uses FY 2025–FY 2029 as the time horizon to measure the effects of the final rule. The Department chose this timeframe as it will permit assessment of all start-up costs as well as analysis of the ''steady state'' of the final rule's full implementation, expected to occur in FY 2027. A ten-year cost estimate (FY 2025–FY 2034) is provided as a supplementary resource in Appendix Table A. Additionally, changes in State administrative expenses (SAE) are compared to the Department's baseline projections.

Table 4: Estimated SNAP Participation and Benefit Spending

	2025	2026	2027	2028	2029
Participation (thousands)	41,747	40,217	39,341	38,492	37,688
Benefits ($millions)	$98,148	$97,812	$99,114	$100,195	$101,299
SAE ($millions)	$5,874	$6,041	$6,207	$6,384	$6,560

Source: Internal USDA Estimates (see footnote 12 of this appendix).
Note: Dollar estimates are nominal and include projected inflation in SNAP spending.

As previously noted, the LIHEAP NPRM provisions finalized in this rule have been in effect since FY 2015 and are therefore considered to be fully incorporated in the SNAP baseline presented above. This RIA uses FY 2013 as a reference year to estimate the impacts of the LIHEAP NPRM provisions of the final rule.

D. Methodology

i. Measuring Transfer Changes

The SNAP QC Minimodel is one of the microsimulation models maintained by FNS to estimate the impacts of changes in policy on current SNAP households. The FY 2022 SNAP QC Minimodel uses SNAP QC data from all States from October 2021, through September 2022. SNAP QC data are collected annually as part of the ongoing effort to determine the accuracy of SNAP certification actions.[13] Data are collected for a sample of SNAP households that is statistically representative at both the national and State levels. It includes data from 41,391 households, including information on household income, income sources, expenses, household composition, and utility allowances to simulate the impact of various policy changes to SNAP on current SNAP participants. The FY 2022 SNAP QC data and Minimodel are the most recent data available to FNS for microsimulation. The data are weighted to be representative of the SNAP caseload nationally and in each State. Like all microsimulation models, this model simulates the effects of program changes at the ''micro'' level (in this case, SNAP households). These micro-level effects on SNAP eligibility and benefit amounts are combined to estimate the total effect of program changes at the State and national level. Although most households received emergency allotments related to COVID–19 which supplemented their benefit amounts in FY 2022, this analysis uses households' certified, pre-supplement SNAP benefit amounts. Therefore, estimated benefit effects in this RIA are not affected by emergency allotments.

To estimate the impact on SNAP benefit spending (transfers) of the final rule, the FY 2022 QC Minimodel baseline was adjusted to better reflect current program operations. As all the income, deduction, and benefit data in the model, including HCSUA values, are from FY 2022, a revised baseline was created to reflect changes in the value of States' HCSUAs between FY 2022 and FY 2024, relative to the cap on shelter expense deductions. FNS determined that the FY 2022 HCSUA values in the model were not reflective of FY 2024 HCSUA values in some States because some States have made significant changes to their HCSUA values between FY 2022 and FY 2024 (see next paragraph for an illustrative example). As the changes to HCSUA values in this 2-year period were greater than changes to other parameters in the model, the marginal effect of a State's HCSUA in FY 2022 on a household's SNAP benefit calculation may not reflect its marginal effect in FY 2024, which is the outcome of interest for the purposes of this RIA.

To provide an example of how some State agencies' HCSUAs have changed substantially since FY 2022, State A, whose FY 2022 HCSUA was valued at 98 percent of the FY 2022 cap on the excess shelter deduction, has an FY 2024 HCSUA valued at 126 percent of the FY 2024 cap, a difference of 29 percent. To control for this type of change in States' behavior since FY 2022, the FY 2022 HCSUA values pre-programmed into the QC Minimodel were replaced by adjusted HCSUAs set to reflect the FY 2024 relationship between HCSUAs in each State and the shelter cap. To return to the example of State A, its HCSUA in the QC Minimodel was adjusted to equal 126 percent of the FY 2022 shelter cap.

Simulations of further changes to SUA values, reflecting changes caused by provisions of the final rule, were run against the revised baseline. A brief description of our methodology to measure the transfer effect of each provision of the final rule follows. Against the adjusted baseline described above, separate simulations individually evaluated each SUA-related provision of the final rule:[14]

1. Establishing standards for the quality of data used in SUA calculations and requiring updates at a minimum of 5-year intervals: To simulate the effects of this provision, we assume that 10 States will lower their HCSUAs by 10 percent and 6 States will increase their HCSUAs by 10 percent, on average, because of the final rule's data and methodological update requirements. This assumption was informed by a review of States' FY 2024 HCSUAs and information available to FNS about the methodologies and data used to produce those values. In some cases, FNS has limited information about the methodologies and data used because of the age of some State agencies' methodologies and/or the information shared with FNS lacks a robust description. The 16 States selected for adjustment in this simulation are those identified by FNS as most likely to require a significant revision to their current HCSUA calculation to meet the final rule's data and methodological update requirements. Additionally, these 16 States were determined to have HCSUAs with the greatest deviation from Federal survey data on average State-level utility expenditures among low-income households, defined as households below 150 percent of the Federal poverty level. These data are sources States may use to calculate their SUAs and are of the quality that State agencies will be required to use when developing SUAs. FNS made this determination by examining the Federal data sources examined in FNS's 2017 and 2023 SUA studies (ACS, RECS, and CEX). Some of these 16 States may need to make larger or smaller changes to their HCSUA as a result of the data quality and methodological review provision, but the Department is

[12] Each year as part of the process of developing the President's Budget, the Department produces estimates of expected SNAP participation and benefit spending over a 10-year period. Transfer estimates in this Regulatory Impact Analysis are based on Department estimates for the FY 2025 Mid-session Review of the President's Budget. Estimates related to State administrative expenses (SAE) are compared to the Department's FY 2025 President's Budget baseline estimates.

[13] Detailed information on the QC review process, including sampling requirements and procedures for conducting QC reviews, can be found on the FNS website here: *http://www.fns.usda.gov/snap/quality-control.*

[14] As noted previously, the LIHEAP provisions of the final rule are considered fully incorporated in the SNAP baseline due to their implementation in FY 2015.

estimating a 10 percent average change to the HCSUA in each of the 16 States. We assume 10 States will decrease their HCSUA by 10 percent and 6 States will increase their HCSUA by 10 percent. No States were assumed to change their LUA or individual standard values because of the final rule's data and methodological update provisions.[15] Alternative assumptions are tested in the sensitivity analysis of this RIA.

2. Requiring basic internet expenses as an allowable shelter expense within the HCSUA. To simulate changes to HCSUA values due to incorporating basic internet expenses into the allowance, we assumed States would increase their HCSUAs by an average of $50. This is based on two States which currently have approval from FNS to provide a basic internet individual standard through an administrative waiver. Both States use a $50 standard to represent internet expenses, providing an indication of how other State agencies may behave. While some States may use higher or lower values to approximate low-income households' internet expenses, $50 is used in this analysis to approximate the average value FNS estimates States will use. We assume that all States with an HCSUA choose to incorporate internet into the HCSUA. Alternative assumptions are tested in the sensitivity analysis of this RIA.

3. Providing States with the option of incorporating basic internet expenses in the LUA and as an individual standard: To simulate State-calculated internet allowances in the LUA and a new basic internet individual standard, we simulated a $50 average increase to LUA values for households that currently receive the LUA and estimated that about 5 percent of SNAP households would take-up a new basic internet individual standard.[16] We also assumed households using actual utility expenses would have an increase of $50 in utility expenses if they can newly claim basic internet expenses. We assume all State agencies will take the option to include internet expenses in the LUA and establish a basic internet individual standard, given expressed interest by State SNAP agencies in establishing internet allowances.

In each simulation, household benefits were recalculated for each household that claimed utility expenses and then aggregated to estimate the percentage change in total benefit spending and changes to eligibility. The percentage change applicable to each rule provision was applied to the baseline benefit spending (Table 4 above) to estimate the annual change in SNAP benefit spending (transfers) resulting from each rule provision.

An additional simulation was conducted to estimate the impact of the LIHEAP NPRM. A brief description of the methodology follows:

1. The QC Minimodel includes a variable that indicates whether the household received the HCSUA because they also received LIHEAP. This variable was used to estimate the annual benefit impact on households and total SNAP benefits if all households flagged as receiving a HCSUA due to receipt of LIHEAP no longer received the HCSUA.[17]

2. Because only 17 States providing energy assistance payments that conferred HCSUA eligibility and were affected by the Agricultural Act of 2014 provision, the simulated impacts were adjusted to remove the effects in the 34 unaffected States. The annual benefit impact was further adjusted because 13 of the 17 States that issued affected LIHEAP payments to their SNAP caseload opted to increase those payments above the $20 threshold. Therefore, the impact within these 13 States was removed from the initial estimate, leaving only the effects in the four States that did not increase their LIHEAP payments. These results were then used to estimate the average, per household benefit impact for households affected by the Agricultural Act of 2014's LIHEAP change.

Households that no longer receive LIHEAP payments may continue to receive a SUA (the HCSUA, the LUA, or a different utility standard) if they qualify based on incurred utility expenses. To estimate the proportion of households in the affected States that continued to be eligible for a SUA after discontinuation of LIHEAP payments that conferred HCSUA eligibility, we used SNAP QC data from before and after implementation of the Agricultural Act of 2014 to tabulate how many households in the affected States received the various types of SUAs. Table 5 shows how those percentages changed in the four States that discontinued use of LIHEAP payments to confer HCSUA eligibility.

Table 5: Percentage of Households Using SUAs Pre- and Post- Agricultural Act of 2014

SUA Type	Pre-2014 Farm Bill	Post-2014 Farm Bill	Difference (percentage point)
HCSUA based on LIHEAP receipt	**89.3%**	**35.3%**	**-54.0%**
No utilities and no LIHEAP	3.2%	26.9%	23.7%
Uses actual expenses	0.0%	0.0%	0.0%
HCSUA, no LIHEAP	5.6%	26.5%	20.9%
LUA	0.5%	3.8%	3.2%
Uses telephone only standard	0.6%	5.6%	5.1%
Uses single utility standards	0.6%	1.3%	0.7%
HCSUA, LIHEAP status unknown	0.1%	0.4%	0.3%
Other	0.0%	0.0%	0.0%

3. Based on this re-distribution, we see that 54 percent of households no longer receive the HCSUA based on LIHEAP receipt. These households are redistributed into the other SUA categories, with some households no longer receiving any SUA, some continuing to receive the HCSUA, and others receiving a different SUA (a LUA or individual standard).

4. Overall, of the 54 percent of households that no longer receive the HCSUA based on

[15] FNS does not anticipate that these changes will result in similar decreases or increases to LUA and individual standard values because FNS's review of States' current LUA and individual standard values indicates that these standards do not display the same degree of variability between States and misalignment with current utility data for low-income households that is present among current HCSUA values.

[16] Five percent was selected as an estimate, informed by the share of SNAP households that use a telephone individual standard, to approximate how many households might use a basic internet standard. In the absence of more precise data, the Department estimates that the share of households that may pay an internet bill, but not other utilities which would make them eligible for a LUA or HCSUA, may be similar to the share of household that only pay a telephone bill.

[17] This simulation used 2013 QC data as that was the period prior to implementation of the Agricultural Act of 2014's LIHEAP change.

receipt of LIHEAP, 43.8 percent no longer receive any SUA (calculated as 23.7/54.0), 39.2 percent continue to receive the HCSUA, 6.0 percent receive the LUA or an individual standard, and 10.6 percent receive only the telephone individual standard.[18]

5. Benefit impacts were adjusted as follows:

a. Households no longer eligible for any SUA were allocated 100 percent of the per-household benefit impact of this provision (0.438 × # affected households × per-household benefit impact × 1.00).

b. Households eligible for a LUA were allocated 50 percent [19] of the per-household impact of the provision (0.060 × # affected households × per-household benefit impact × 0.50).

c. Households eligible for a telephone individual standard were allocated 75 percent of the per-household impact of the provision (.106 × # affected households × per-household benefit impact × 0.75).

d. These amounts were totaled to get the annual SNAP benefit impact due to discontinued LIHEAP payments.

ii. Measuring Changes to State and Federal Costs

State administrative costs, burden estimates, and Federal costs (non-transfer) are estimated using information from revisions to a currently approved Information Collection Request (ICR) (OMB Control Number 0584–0496; Expiration Date 7/31/2026). This information collection addresses the State agency reporting burden associated with State options under SNAP for developing SUAs and a methodology for offsetting the cost of producing self-employment income, as required in 7 CFR part 273. The revision accounts for requirement in the final rule. The value of State administrative costs and Federal costs in future years are adjusted annually for inflation using the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI–W) fiscal year-over-fiscal year projections from OMB's Economic Assumptions for the Mid-session Review of the FY 2025 President's Budget.

[18] These percentages vary from the percentages used in the proposed rule RIA because the final rule RIA uses actual changes in SUA receipt documented in the SNAP QC data, rather than estimated changes used before actual data were available. The proposed rule RIA assumed that 55 percent of households would no longer be coded as receiving the HCSUA due to LIHEAP. Of those, we estimated that 36 percent would receive no SUA, 55 percent would continue to receive the HCSUA, 1 percent would receive the LUA or an individual standard, and 7 percent would receive the telephone individual standard.

[19] We chose 50 percent based on the relative size of the LUA, compared to a HCSUA at the time the LIHEAP change went into effect. On average, the HCSUA value was about twice that of the LUA, so the benefit impact would be reduced by roughly 50 percent. Similarly, we chose 75% based on the relative size of a single utility allowance or telephone allowance, compared to a HCSUA. On average, the HCSUA value was about four times that of an individual or telephone standard, so the benefit impact would be reduced by roughly 75%. Information on the relative size of different utility allowances in FY 2024 can be found at: *https://www.fns.usda.gov/snap/eligibility/deduction/standard-utility-allowances.*

V. Section-by-Section Analysis

The costs and savings associated with each provision of the final rule are discussed separately in this section of the RIA. The section-by-section analysis often uses FY 2026 as a reference year to discuss the transfer and cost impacts of the final rule, given that FY 2026 is when all provisions of the final rule are expected to be fully implemented.

A. Requirement To Update SUA Calculation Methodology Every 5 Years and Meet Data Quality Specifications

Discussion: While the Department is not adopting the proposed rule's provisions to standardize the calculation of HCSUAs, nor cap LUAs and individual standards as a percentage of the HCSUA, it maintains that there should be clearer guidelines and requirements for State agencies to follow when developing their SUAs to ensure SUAs accurately reflect low-income households' utility costs. Therefore, the Department is establishing new requirements to guide State agencies' calculation of SUAs. These requirements apply to HCSUAs, LUAs, and individual standards. State agencies must submit for FNS approval their SUA methodologies at least every 5 years and make any revisions necessary to demonstrate that the baseline expenditure data and underlying methodology reflect low-income household utility costs along with recent trends and changes. The methodology update must include updated baseline expenditure data, per certain data criteria, and an explanation of the State agency's methodology for deriving HCSUAs from such data. In interim years, State agencies must continue to review and adjust their SUAs annually to reflect changes in costs, in line with existing regulations. State agencies may use appropriate indices of inflation, like the Consumer Price Index (CPI) values specific to the utilities incorporated into an HCSUA, to perform these interim, annual updates. State agencies must also continue to submit their methodologies for FNS approval any time the State agency develops or changes a methodology.

Additionally, State agencies' methodologies must:

- Reflect the entire State or geographic area the SUA covers;
- Use data sourced from utility providers or similarly reliable source;
- Reflect expenses incurred by low-income households;
- Distinguish if the utility is for heating or cooling, if applicable; and
- Reflect residential utility expenses.

The Department chose these criteria to ensure HCSUAs accurately represent the utility costs of low-income households, including households with higher-than-average utility costs, in the designated area while providing State agencies additional flexibility in creating their standards. These criteria align with the goals of the data and methodology the Department proposed to use in the SUA NPRM. The Department notes that, for the purposes of these criteria, ''utility providers'' includes any company or organization that supplies or sells a utility allowed under 7 CFR 273.9(d)(6)(ii)(C).

Additional SUA provisions in the final rule that are expected to have minimal effects include:

- Eliminating the option for State agencies to use a LUA instead of the HCSUA for public housing residents with excess heating and cooling costs, as proposed in the SUA NPRM.
- Eliminating the option for State agencies to use a LUA instead of the HCSUA for States where cooling expenses are minimal, as proposed in the SUA NPRM.

Effect on SNAP Participants: The Department anticipates that new guidelines directing States to update their SUA methodologies at least once every 5 years and establishing data quality requirements will result in changes to HCSUA values in States which currently use methodologies or data sources that would not meet the requirements of the final rule. The Department estimates that 10 States will reduce their HCSUAs and 6 States will increase their HCSUAs as a result of this provision, each by an average of 10 percent. These changes will reduce the monthly SNAP benefits of approximately 5.2 percent of all SNAP households by an average of 7.5 percent, or about $21 and will increase the monthly SNAP benefits of approximately 2.1 percent of all SNAP households by an average of 3.5 percent, or about $10. A small number of households (less than 0.01 percent) would no longer be eligible for SNAP if this provision was implemented without the internet provision, discussed later in this RIA, resulting in an average monthly benefit loss of $45. These households have a low average monthly benefit because they have monthly incomes close to the maximum allowed for SNAP eligibility. Affected households live in 16 States that FNS has identified as those most likely to require significant revisions to their HCSUA to meet the new data quality and recency guidelines. No effects are anticipated for SNAP households in the other 37 States.

Table 6: Effect on SNAP Households of Establishing Data Quality Standards and Requiring Updates at 5-Year Intervals

	Percentage of Households	Average Dollar Change per Affected Household	Percent Change per Affected Household
Receiving lower benefits	5.2%	-$21	-7.5%
Receiving higher benefits	2.1%	$10	3.5%
No longer eligible	<0.01%	-$45	100%
No change in benefits	92.7%	--	--

Source: Simulation using FY 2022 SNAP Quality Control Data.
Note: Average dollar change per household estimates are nominal.

Effect on Federal Spending: The data quality and methodological revision provision of the final rule is expected to decrease SNAP benefit payments (transfers) by $293 million in FY 2026 and by $1.2 billion over 5 years (FY 2025–FY 2029). Effects on transfers will not be fully phased-in until FY 2026 because FNS expects that States may need until the start of FY 2026 to revise their SUA methodologies and underlying data. This provision results in a 0.3 percent decrease in SNAP benefit payments when fully implemented. The decrease in transfers in 10 States that are estimated to reduce their HCSUAs is larger than the increase in transfers in 6 States that are estimated to increase their HCSUAs, resulting in a net decrease in transfers.

Additionally, Federal administrative burden and the Federal share of States' administrative expenses for this provision of the final rule are expected to increase. The Federal share of States' administrative expenses for initial implementation of this provision is estimated to be about $438,000 in FY 2025. The Federal share of all State agencies' ongoing administrative expenses caused by this provision of the final rule are estimated to be about $152,000 over five years (FY 2025–FY 2029), averaging about $30,000 annually. Federal administrative burden is expected to increase on an ongoing basis due to this provision of the final rule. Every 5 years, the Department expects FNS staff will spend a total of 689 hours reviewing and approving State agencies' methodological updates and providing technical assistance to State agencies as they make those updates. This is expected to cost about $51,000 in FY 2025, the first year in which a methodological update is expected to occur.

Effect on State Agencies: This provision of the final rule is expected to create start-up costs, in addition to recurring increases in State agency burden. FNS estimates 5 State agencies will opt to solicit contractor support to update their SUA methodologies, resulting in about $21,000 in staff costs and $250,000 in contract costs after 50 percent Federal reimbursement over FYs 2024 and 2025 ($271,000 total for 5 state agencies). Non-contract State costs associated with implementation burden and system changes are estimated to be about $145,000 after 50 percent Federal reimbursement across all 53 State agencies.

State agencies are not expected to incur annual increased administrative burden or costs because of this provision. However, every 5 years, State agencies will experience a greater increase in burden, when they will be required to conduct a full review of their SUA methodologies and update the base data used to calculate their SUAs.

B. Allow Basic Internet Costs as an Allowable Shelter Expense

Discussion: The final rule designates basic internet service as an allowable shelter cost and gives State agencies the option to include basic internet costs in their HCSUAs and LUAs and to develop a basic internet individual standard. State agencies will be expected to develop their own methodology for including the cost of basic internet service in the HCSUA, LUA, and as a standalone basic internet individual standard, as they are expected to do for all other allowable utility expenses. The Department assumes that 25 percent of the SNAP caseload lives in States that will establish an individual internet SUA in FY 2025, and all States will implement an individual internet SUA in FY 2026. We assume that all States will implement an HCSUA that incorporates internet expenses in FY 2026.

Effect on SNAP Participants: By allowing basic internet expenses to be incorporated into SUAs, SNAP households using the HCSUA or LUA will be eligible for a larger allowance, which can increase the excess shelter deduction for households that are not at the shelter cap. SNAP households that receive a larger excess shelter deduction may also see their benefits increase, depending on other household circumstances.

Additionally, a portion of SNAP households that do not use a SUA will be eligible for a basic internet individual standard or to claim the value of their actual expenses for basic internet if they incur out-of-pocket expenses for basic internet service. The Department expects the share of households that will claim a basic internet individual standard to be approximately 5 percent of all SNAP households, informed by the share of SNAP households that currently receive a telephone-only utility allowance (see Table 3). These households may also see their excess shelter deduction increase if they are not affected by the shelter cap, potentially increasing their benefits.

Inclusion of basic internet as an allowable utility expense is expected to increase SNAP benefits for an additional 27.1 percent of SNAP households (29.2 percent, total). This provision will not result in benefit losses for any SNAP households. Among households gaining benefits, because of this provision, monthly SNAP benefits will increase by an average of $15. No households are expected to lose eligibility because of this provision. Some of the <0.01 percent of households estimated to lose eligibility due to the previously discussed data quality and methodological review provision (if, hypothetically, that provision were finalized on its own) retain eligibility because of the inclusion of internet expenses in SUAs. Sample sizes for this group are too small for the Department to be more precise in its estimates for this group.

Effect on Federal Spending: Including basic internet as an allowable shelter expense is expected to increase SNAP benefit payments (transfers) by $1.6 billion upon full implementation in FY 2026 and by $6.6 billion over five years (FY 2025–FY 2029). This represents a 1.6 percent increase in SNAP benefit payments when fully implemented. On average, the Department estimates that including basic internet expenses will increase State-calculated HCSUA values by $50, though the amount is expected to vary by State. Additionally, the Federal share of States' administrative expenses to incorporate a basic internet individual standard is estimated to be a one-time expense of about $14,000. The Department does not estimate a measurable change in ongoing Federal burden or costs related to this provision.

Effect on State Agencies: The Department expects it will take each State agency approximately 10 hours to establish a new basic internet individual standard and include basic internet in their HCSUA and LUA calculations. States' share of this expense is estimated to be a total annual cost of about $14,000. The Department does not estimate a measurable change in State agencies' ongoing administrative expenses due to the new inclusion of basic internet as an allowable shelter cost.

C. LIHEAP Provisions

Discussion: The rule also finalizes how Low-Income Home Energy Assistance Program (LIHEAP) payments are considered to confer eligibility for the HCSUA, in accordance with amendments made to the Food and Nutrition Act of 2008 by the Agricultural Act of 2014. While originally published as a separate 2016 NPRM, the LIHEAP provisions are integrally linked to the SUA provisions, and therefore the Department is combining the provisions from each proposed rule into a single rule.

In accordance with the Agricultural Act of 2014, the final rule no longer allows States to confer HCSUAs to households receiving a payment, or on behalf of which payments were made, under the Low Income Home Energy Assistance Act (LIHEAA) or similar programs unless the payment is greater than $20 annually and received in either the current month or in the immediately preceding 12 months. This provision's effects are discussed in the following paragraphs.

Additional LIHEAP provisions which are expected to result in minimal effects include:

- Requiring State agencies to confer HCSUA eligibility to both households if a household receiving a qualifying LIHEAP payment splits into two households.
- Allowing weatherization payments to confer eligibility for the HCSUA in limited circumstances.

As previously discussed, the LIHEAP provisions of this final rule were self-implementing as of 2014 and are therefore fully captured in one of the SNAP participation and benefits baselines relevant to this regulatory analysis.

Effect on SNAP Participants: At the time of implementation, the Department estimates that one-third of SNAP households were affected in States that have a minimum LIHEAP payment below the $20 threshold when this change went into effect beginning in 2014. Most of these households remained eligible for SNAP but may have received a lower monthly benefit. Less than 0.1 percent of all SNAP households are estimated to have lost eligibility. Affected households with an elderly or disabled member generally saw greater reductions in their monthly benefit because they do not face a cap on the amount of their excess shelter expenses deduction. If they were no longer eligible for the HCSUA, their shelter deduction may have become smaller, resulting in a smaller monthly benefit.

Effect on Federal Spending: The Department estimates that these statutory changes reduced Federal transfers (SNAP benefit payments) by approximately $2.2 billion over the 5-year period of FY 2025–FY 2029. Because these provisions were implemented shortly after passage of the Agricultural Act of 2014, this reduction in transfers is already fully captured in one of the SNAP participation and benefits baselines relevant to this analysis and will not result in a reduction, as compared with that baseline, in predicted SNAP spending in future years relevant to this regulatory analysis.

Effect on State Agencies: Among the 17 States that issued LIHEAP payments to confer eligibility for the HCSUA prior to the amendments made by the Agricultural Act of 2014, the four States that opted not to raise those payments to meet the new threshold were required to make minimal, one-time changes to their eligibility systems, manuals, and training procedures for staff. Other minimal burdens imposed on State agencies, such as documenting LIHEAP receipt, were already required as part of the certification process and are considered usual and customary within the course of States' normal administrative activities. States had flexibility in terms of when they made the change for their current caseload, reducing administrative burden.

D. Combined Effects of the Final Rule

Effect on SNAP Participants: The Department estimates that most SNAP households will experience either an increase or no change to their SNAP benefit because of the final rule (see Table 7). Upon full implementation of the rule, about 4.9 percent of SNAP households are expected to receive, on average, 2.6 percent lower monthly benefits (an average monthly decrease of $7). An estimated 29.2 percent of SNAP households are expected to receive, on average, 6.0 percent higher monthly benefits (an average monthly increase of $15). The remaining two-thirds of SNAP households will see no change to their monthly benefits.

The internet provision of the final rule reduces the monthly benefit losses experienced by households in the States that are expected to reduce their HCSUAs because of the data quality and methodological review provision of the final rule. The internet provision reduces the share of households losing benefits under the final rule by 0.4 percentage points. Among households losing benefits due to the data quality and methodology requirements established by the final rule, the marginal effect of including internet expenses in SUAs reduces their average monthly benefit loss from $21 to $7.

Table 7: Combined Effects of Final Rule Provisions on SNAP Households

	Percentage of Households	Average Dollar Change per Household	Percent Change per Household
Receiving lower benefits	4.9%	-$7	-2.6%
Receiving higher benefits	29.2%	$15	6.0%
No longer eligible	<0.01%	-$30	-100%
No change in benefits	66.0%	--	--

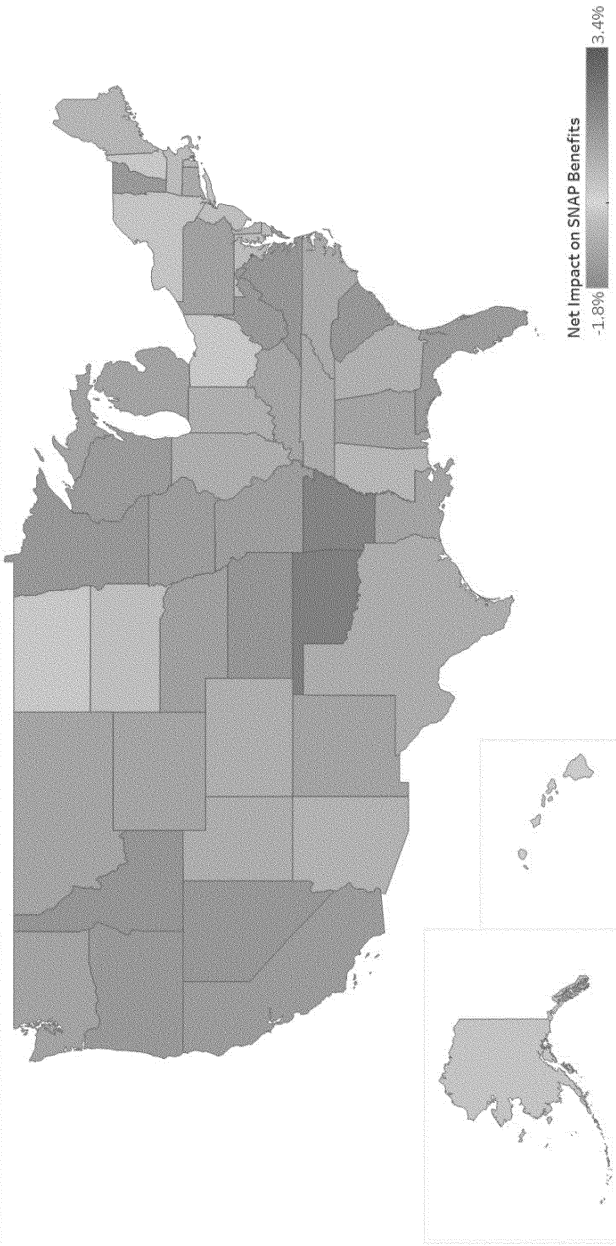
Source: Simulation using FY 2022 SNAP Quality Control Data.
Note: Average dollar change per household estimates are nominal.

Effect on Federal Spending: The Department estimates full implementation of the final rule will increase SNAP benefit spending (transfers) by $1.3 billion in FY 2026 and $5.4 billion over the 5-year period FY 2025–FY 2029. This increase in spending is primarily driven by the rule's provision to allow internet as an allowable shelter expense. The full cost of the internet provision ($6.6 billion over 5 years) is partially offset by savings (−$1.2 billion over 5 years) due to establishing data quality and update frequency requirements for SUAs.

Total Federal non-transfer costs associated with the final rule are estimated to be about $612,000 over 5 years (FY 2025–FY 2029). Non-transfer costs will be higher at implementation in FY 2025 (about $489,000) and every 5 years thereafter, when State agencies are expected to conduct a complete review and resubmission of their SUA calculations. In intervening years, Federal non-transfer costs will be about $31,000.

Effect on State Agencies: The Department expects full implementation of the final rule will increase State agency costs by about $561,000 over 5 years (FY 2025–FY 2029) after 50 percent Federal reimbursement. Most of this cost (about $438,000 in FY 2025) is associated with staff burden and contract costs State agencies are expected to incur every 5 years, when they will be required to conduct a full review and update of their SUA calculations.

VI. Distributive Impacts



A. Differences in State-Level impacts

Effects of the final rule vary by State. The 4.9 percent of households expected to see

reduced SNAP benefits under the final rule are in 10 States, based on FNS's assessment of the likelihood that those 10 State agencies' HCSUA methodologies will require significant revisions to meet the guidelines established by the final rule. Within these 10 States, the share of households estimated to lose a portion of their SNAP benefits ranges from 21.5 percent to 44.9 percent. Among these 10 States, 9 are also expected to have a small share of their SNAP households gaining benefits because of the final rule, ranging from 0.3 percent to 11.6 percent. Simulation results indicated that one State agency is expected to have no households gaining benefits because of the final rule, however this result may be due to small sample sizes in that State, and it is possible that a small number of households in that State could see increased benefits. In the remaining 52 States, the share of households expected to gain benefits under the final rule in each State ranges from a high of 47.6 percent to a low of 0.3 percent. The share of households expected to be unaffected by the final rule ranges from 98.4 percent to 52.5 percent. The LIHEAP provisions of the final rule primarily affect just 4 States that previously issued LIHEAP payments to their SNAP caseloads to confer HCSUA eligibility and did not opt to increase those payments above the $20 threshold.[20]

[20] The four States that chose not to increase their LIHEAP payments to greater than $20.00 at the time of implementation are Delaware, New Hampshire, New Jersey, and Wisconsin.

Figure 1. Estimated Percentage Change in Total SNAP Benefits Based on Implementation of All Provisions in Final Rule, by State

Source: Simulation using FY 2022 SNAP QC data.

The average household monthly benefit gain within each State (among States with households gaining benefits) ranges from a low of $12 to a high of $23 among households that see larger benefits. Among all households expected to gain benefits

under the final rule, the nationwide average gain is about $15. The average household monthly benefit loss per State (among the 10 States with households losing benefits) ranges from −$4 to −$11 among households that see smaller benefits. Among all households expected to lose benefits under the final rule, the nationwide average loss is about −$7 per month. See Appendix Table C for estimates in each State.

Table 9: Distribution of Households Gaining and Losing, All States

	Households Losing Benefits	Households Gaining Benefits
Nationwide	4.9%	29.2%
Maximum, among States with households in column category	44.9%	47.6%
Minimum, among States with households in column category	21.5%	0.3%

Source: Simulation using FY 2022 SNAP Quality Control Data.

B. Differences Among Subgroups Resulting From Changes to SUA Methodology

The final rule's changes to SUAs have the greatest impact on households that contain an elderly or disabled individual. These households are not subject to the cap on the excess shelter deduction, and thus are more likely to be affected by changes to the HCSUA, as larger HCSUAs result in a larger shelter deduction.[21] Households with elderly members and households with disabled members make up a disproportionate share of those who gain benefits as well as of those who lose benefits, as shown in Table 10, below. Households with members who are elderly or disabled are more likely than other households to claim an excess shelter deduction, and those deductions are larger on average than the shelter deductions of other households (Table 11). More households with members who are elderly or disabled are expected to gain benefits under the final rule than to lose benefits. Additionally, the average benefit gain for these households is more than twice the average benefit loss.

SNAP households with children are slightly less likely than all SNAP households to gain benefits because of the final rule (27.3 percent, compared to 29.2 percent for all households) and are slightly less likely to lose benefits of the final rule (3.8 percent, compared to 4.9 percent for all households). SNAP households with children who gain or lose benefits because of the final rule are estimated to experience similar average changes in their monthly benefits as all SNAP households (see Table 10).

[21] All other things being equal, households containing elderly or disabled individuals may qualify for a larger shelter deduction than a similar household without an elderly or disabled member because their shelter deduction is not capped. As a result, the household with an elderly or disabled member has lower net income, resulting in a larger SNAP benefit.

Table 10: Gains and Losses by Demographic Subgroup and Race/Ethnicity Resulting from the Final Rule

	Households Losing Benefits	Households Gaining Benefits	Average Among Impacted Households: Benefit Loss	Benefit Increase
All Households	4.9%	29.2%	-$7	$15
Households with:				
Elderly	8.1%	41.0%	-$8	$15
Disabled	9.2%	47.2%	-$7	$15
Earnings	3.9%	29.4%	-$7	$15
Children	3.8%	27.3%	-$7	$15
Race/Ethnicity of Household Head				
Asian	7.0%	30.9%	-$9	$15
White, not Hispanic	7.0%	29.1%	-$7	$15
Black, not Hispanic	3.6%	26.9%	-$7	$15
Hispanic	5.3%	28.2%	-$9	$15
Unknown race/ethnicity*	1.0%	33.6%	-$7	$14

Source: Simulation using FY 2022 SNAP Quality Control Data.
*Race/ethnicity of household head is unknown for 15 percent of households.
Note: Average dollar change per household estimates are nominal.

Table 11: Excess Shelter Deduction Usage of SNAP Households, FY 2022

	Claiming Excess Shelter Deduction	Average Value*
All Households	70.1%	$466
Households with:		
Elderly individuals	80.6%	$478
No Elderly individuals	65.4%	$460
Households with:		
Non-elderly Individuals with Disabilities	81.6%	$473
No Non-elderly Individuals with Disabilities	67.5%	$465

Source: FY 2022 SNAP Quality Control Data.
*Average value of excess shelter deduction among households claiming the deduction.
Note: Average value estimates are nominal.

Households headed by a non-Hispanic white or Asian individual are more likely to lose benefits (about 7 percent, v. about 5 percent for all households). Households headed by an Asian individual are also slightly more likely to gain benefits due to the final rule (about 31 percent, v. about 29 percent for all households). Households headed by a non-Hispanic black individual are slightly less likely to gain benefits under the final rule (about 27 percent, v. about 29 percent for all households). Households headed by an Asian or Hispanic individual are expected to experience a larger average benefit loss (about −$9, v. about −$7 for all households). Average benefit gains are consistent across the protected class subgroups examined in this analysis (see Table 10).

VII. Uncertainties

Uncertainties related to this regulatory impact analysis include the following:

A. Changes in SNAP Caseload Numbers and Composition

This analysis estimates the economic circumstances of SNAP households based on historical data. Macroeconomic trends in employment, wage growth, and inflation may alter household incomes and expenses in future years in a way that differs significantly from the SNAP caseload in FY 2022. Households that gain or lose benefits under this rule do so because the changes to SUA values result in changes to households' net

incomes, which are used to calculate their SNAP allotments. Smaller SUAs mean households have higher net incomes and thus receive lower benefits; higher SUAs have the opposite effect. If SNAP households' shelter expenses rise faster than their incomes due to inflation in the housing market, they may be more likely to be subject to the cap on shelter expense deductions in the future and may not be impacted by changes to SUA values. Similarly, if SNAP households' gross incomes rise, the excess shelter deduction could have a more limited impact on their SNAP benefit calculation, as only those shelter expenses that exceed 50 percent of net income after other deductions may be deducted. As net income rises, the share of shelter expenses that can be deducted can decrease. In this scenario, changes in SUA values could have a more limited impact on their benefit calculation. It should be noted that households with elderly or disabled members are not subject to the cap on shelter expense deductions and would be less impacted by this uncertainty.

Additionally, State agencies have changed their SUA values, some in significant ways since FY 2022. The model used in this analysis attempted to control for these changes by adjusting each State's FY 2022 HCSUA value to proportionately reflect the relationship between each State's FY 2024 HCSUA and the FY 2024 shelter cap. The Department believes the methodology in this analysis controls for changes to HCSUA values since FY 2022 to the greatest extent feasible.

B. Values of Internet Component of HCSUAs and LUAs and Values of Internet Single Utility Allowances

It is possible that some State agencies may establish significantly higher or lower allowances for internet expenses than the Department anticipates. If States implement values that skew the average across States higher or lower than the $50 average value used in this RIA, the cost of the final rule could increase or decrease. Two alternative scenarios are explored in the following Sensitivity Analysis section. The Department does not currently have information about how each State agency may choose to calculate internet allowances in reaction to this rule.

C. Share of State Agencies That Opt To Include Internet in Their SUAs

While FNS expects all State agencies will choose to account for internet expenses in their HCSUAs, they are not required to do so. If fewer State agencies opt to include basic internet expenses in their SUAs, then the cost of the proposed rule will be lower. However, most of the final rule's cost is due to the mandatory inclusion of internet within States' HCSUAs. Therefore, States' individual decisions about including internet in the LUA or as an individual standard would likely have small effects on the rule's overall cost. An alternative scenario, in which 15 percent of the SNAP caseload lives in a State that chooses not to include internet expenses in its SUAs, is explored in the following Sensitivity Analysis section. The Department does not currently have information about whether some States will opt to only include internet expenses in their HCSUA.

D. Share of States That Issue LIHEAP Payments Greater Than $20 to Their SNAP Caseload

The estimates in this analysis are based on 4 of 17 States that discontinued LIHEAP payments to their SNAP caseloads that conferred HCSUA eligibility and 13 States continuing to provide payments above the $20 threshold. It is possible that more or fewer State agencies will issue LIHEAP payments above the $20 threshold in the future.

VIII. Sensitivity Analysis

Table 12, below, illustrates how the RIA's estimates of the finalized SUA NPRM provisions might change if different assumptions regarding the uncertainties discussed above were used. Sensitivity analysis estimates were produced using the same methodology as was used for the RIA estimates. Alternative assumptions used for the sensitivity analysis include:

A. Assume the average internet allowance value States calculate for their HCSUAs, LUAs, and basic internet individual standard is $40, rather than $50.

B. Assume the average internet allowance value States calculate for their HCSUAs, LUAs, and basic internet individual standard is $60, rather than $50.

C. Assume the average reduction in 10 States' HCSUAs and average increase in 6 States' HCSUAs due to the final rule's data quality and 5-year update requirements is lower, 5 percent rather than 10 percent.

D. Assume the average reduction in 10 States' HCSUAs and average increase in 6 States' HCSUAs due to the final rule's data quality and 5-year update requirements is higher, 15 percent rather than 10 percent.

E. Assume the average reduction in 10 States' HCSUAs and average increase in 6 States' HCSUAs due to the final rule's data quality and 5-year update requirements is higher, 20 percent rather than 10 percent.

F. Assume the average reduction in 10 States' HCSUAs is higher (20 percent) and the average increase in 6 States' HCSUAs remains 10 percent.

G. Assume the average reduction in 10 States' HCSUAs remains 10 percent and the average increase in 6 States' HCSUAs is higher (20 percent).

H. Assume 15 percent of the SNAP caseload lives in a State where the State agency does not opt to incorporate basic internet into their SUAs.

Table 12: Sensitivity Analysis

Estimated Increase in SNAP Benefits (in millions of dollars)	One-Year (FY 2026)	Five-Year (FY 2025-2029)
In RIA as finalized	**$1,311**	**$6,059**
Scenario A: Average internet allowance is $40	$988	$4,024
Scenario B: Average internet allowance is $60	$1,624	$6,614
Scenario C: 10 States reduce their HCSUA by 5%, 6 States increase their HCSUA by 5%	$1,448	$5,897
Scenario D: 10 States reduce their HCSUA by 15%, 6 States increase their HCSUA by 15%	$1,164	$4,741
Scenario E: 10 States reduce their HCSUA by 20%, 6 States increase their HCSUA by 20%	$1,007	$4,104
Scenario F: 10 States reduce their HCSUA by 20%, 6 States increase their HCSUA by 10%	$939	$3,825
Scenario G: 10 States reduce their HCSUA by 10 %, 6 States increase their HCSUA by 20%	$1,379	$5,618
Scenario H: Internet is not added to SUAs for 15% of households	$1,114	$4,538

Source: Simulation using FY 2022 SNAP Quality Control Data.
Note: Estimates are nominal and include projected inflation in SNAP spending.

The simulations that assessed Scenarios A and B (see table 12) indicate that, on average, a $10 change in the average internet allowances implemented by State agencies will result in approximately a corresponding one-third of a percentage point change in the final rule's effect on transfer spending. In the RIA, as finalized, the final rule results in a 1.34 percent increase in total SNAP benefit spending. If the average value of internet standards is $10 higher than anticipated, the final rule would be estimated to result in a 1.66 percent increase in total SNAP benefit spending. Similarly, if the average value of internet standards is $10 lower than anticipated, the final rule would be estimated to result in a 1.01 percent increase in total SNAP benefit spending. A one-third of a percentage point change in the overall impact of the final rule would result in approximately a $322 million increase or decrease in the cost of final rule in FY 2026.

Given that the Department cannot precisely estimate which States will change their HCSUA values because of the final rule, nor the degree to which they will increase or decrease their HCSUAs, several different scenarios were tested (see Table 12, Scenarios C–G). Across these scenarios, the transfer cost of the final rule in FY 2026 ranges from a low of $939 million to a high of $1.6 billion. Over the 5-year period FY 2025–FY 2029, the transfer cost of the final rule in scenarios C through G ranges from a low of $3.8 billion to a high of $6.6 billion.

Finally, if some State agencies decide not to incorporate basic internet expenses into their SUAs (Scenario H in Table 12), the Department estimates there would be a corresponding 0.2 percentage point decrease in the estimated transfer cost of the final rule. This would result in approximately a $197 million decrease in the transfer cost of the final rule in FY 2026 and approximately an $800 million decrease in the transfer cost of the final rule of the 5-year period FY 2025–FY 2029. To produce this estimate, the Department assumes 15 percent of SNAP households may live in a State that will choose not to include basic internet expenses in their SUAs.

X. Alternatives

The Department used the same methodology (as applicable) and FY 2022 SNAP QC Minimodel to assess the final rule and to assess the alternatives presented in this section.

A. Finalizing LIHEAP and Internet Provisions, Only

The Department considered finalizing the LIHEAP provisions of the 2016 NPRM and finalizing internet as an allowable shelter expense for the purposes of calculating the excess shelter expense deduction, without making any additional changes to SUA regulations. This alternative would have made no changes to how States calculate their HCSUAs, LUAs, and individual standards, except for permitting standard allowances to incorporate basic internet expenses. States would retain full flexibility in how they calculate SUAs.

Under this approach, no household would experience reduced monthly SNAP benefits, in comparison to the 4.9 percent of households estimated to lose an average of $7 in monthly benefits under the rule, as finalized. The transfer cost of the final rule would be higher ($6.6 billion over five years FY 2025- FY 2029, compared to $5.4 billion), as there would be no savings due to data quality and methodological requirements.

The Department determined this approach would not address concerns about consistency and data integrity in how States calculate their SUAs, and therefore was an insufficient alternative.

B. Standardizing HCSUAs at the 90th Percentile

The Department considered retaining the proposed rule's provision to standardize HCSUAs, though at the 90th percentile of low-income households' expenses, rather than the 80th percentile as proposed. Under this approach, the Department would have also finalized the LIHEAP provisions of the final rule and added internet as an allowable expense for the purposes of calculating the excess shelter expense deduction. It also would have retained the final rule provisions to make HCSUAs statewide values, calculated by FNS. The Department considered this approach as it would have addressed concerns about fairness and transparency in how SUAs are calculated, while also mitigating benefit losses to households if the 80th percentile was used, as proposed. The Department estimates that this approach would have resulted in a 2.8 percent reduction in SNAP benefit spending (−$11.2 billion over five years if implemented in FY 2026), compared to the 1.3 percent increase ($5.4 billion over five years) estimated for the final rule.

Although this approach would address concerns about consistency and transparency in calculating SUAs, the Department

determined that this approach would constrain States' flexibility in developing SUAs that utilize local utility provider data and respond to within-State variations in expenses, to a greater degree than necessary. It also would have resulted in approximately five times as many households losing benefits (25 percent, v. 5 percent) and about seven times larger average household benefit losses (−$41, v. −$6) than the final rule, resulting in disruption, confusion, and negative consequences for households' food budgets. See Table 13, below, for further details about this alternative's estimated effects on SNAP households.

Table 13: Estimated Effects on SNAP Households of Alternative B

	Percentage of Households	Average Dollar Change per Household	Percent Benefit Change per Household
No longer eligible	0.06%	-$54	-100%
Receiving lower benefits	24.6%	-$41	-15.2%
Receiving higher benefits	13.0%	$14	5.4%
No change in benefits	62.4%	--	--

Source: Simulation using FY 2022 SNAP Quality Control Data.
Note: Average dollar change estimates are nominal.

C. Permitting State Agencies a Longer Timeframe Between Methodological Updates

The Department considered permitting States to conduct methodological updates of their SUAs less frequently than every five years. If States were allowed to update their SUA methodologies and base data every seven years, State agencies would experience a reduced administrative burden due to conducting the updates. Less frequent methodological updates could also affect benefit spending if States continued to use SUAs that were out of alignment with households' current circumstances for a longer period of time. However, the Department cannot predict if less-frequent SUA updates in the future would be more likely to result in SUAs being inappropriately high or low, and therefore is unable to estimate if benefit spending would have increased or decreased under this alternative.

The Department determined that a five-year update requirement was more appropriate than a longer timeframe because it strikes an appropriate balance between ensuring SUAs remain responsive to current trends in consumption, efficiency, and utility prices, while minimizing the burden on State agencies to conduct frequent, extensive updates of their SUA methodologies. The Department believes a longer period between updates could result in SUAs become outdated, particularly if a State bases its SUA calculations on survey data, rather than data sourced directly from utility providers. Survey data from sources like ACS and RECS can lag behind current conditions by multiple years, and their publication does not always take place in time for an annual SUA update. As a result, allowing State agencies to update their methodologies every seven years could result in baseline SUA data that are a decade or more out-of-date.

ELECTRONIC RESEARCH

World Wide Web

Full text of the daily Federal Register, CFR and other publications is located at: **www.govinfo.gov.**

Federal Register information and research tools, including Public Inspection List and electronic text are located at: **www.federalregister.gov.**

E-mail

FEDREGTOC (Daily Federal Register Table of Contents Electronic Mailing List) is an open e-mail service that provides subscribers with a digital form of the Federal Register Table of Contents. The digital form of the Federal Register Table of Contents includes HTML and PDF links to the full text of each document.

To join or leave, go to **https://public.govdelivery.com/accounts/USGPOOFR/subscriber/new**, enter your email address, then follow the instructions to join, leave, or manage your subscription.

PENS (Public Law Electronic Notification Service) is an e-mail service that notifies subscribers of recently enacted laws.

To subscribe, go to **http://listserv.gsa.gov/archives/publaws-l.html and select** *Join or leave the list (or change settings);* then follow the instructions.

FEDREGTOC and **PENS** are mailing lists only. We cannot respond to specific inquiries.

Reference questions. Send questions and comments about the Federal Register system to: **fedreg.info@nara.gov**

The Federal Register staff cannot interpret specific documents or regulations.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List October 8, 2024

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://portalguard.gsa.gov/__layouts/PG/register.aspx*.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
