[31] The surveillance program includes real-time patterns for price and volume movements and post-trade surveillance patterns (*e.g.,* spoofing, marking the close, pinging, phishing).

[32] Section 19(g)(1) of the Act, among other things, requires every SRO registered as a national securities exchange or national securities association to comply with the Act, the rules and regulations thereunder, and the SRO's own rules, and, absent reasonable justification or excuse, enforce compliance by its members and persons associated with its members. See 15 U.S.C. 78q(d)(1) and 17 CFR 240.17d–2. Section 17(d)(1) of the Act allows the Commission to relieve an SRO of certain responsibilities with respect to members of the SRO who are also members of another SRO (''common members''). Specifically, Section 17(d)(1) allows the Commission to relieve an SRO of its responsibilities to: (i) receive regulatory reports from such members; (ii) examine such members for compliance with the Act and the rules and regulations thereunder, and the rules of the SRO; or (iii) carry out other specified regulatory responsibilities with respect to such members.

subject to safeguards related to addressing market abuse and manipulation. As the Commission stated in Bitcoin ETP Order:

Each Exchange has a comprehensive surveillance-sharing agreement with the CME via their common membership in the Intermarket Surveillance Group. This facilitates the sharing of information that is available to the CME through its surveillance of its markets, including its surveillance of the CME bitcoin futures market.[33]

The Exchange states that, given the consistently high correlation between the CME bitcoin futures market and the spot bitcoin market, as confirmed by the Commission through robust correlation analysis, the Commission was able to conclude that such surveillance sharing agreements could reasonably be ''expected to assist in surveilling for fraudulent and manipulative acts and practices in the specific context of the [Bitcoin ETPs].'' [34]

In light of surveillance measures related to both options and futures as well as the underlying Trust,[35] the Exchange believes that existing surveillance procedures are designed to deter and detect possible manipulative behavior which might potentially arise from listing and trading the proposed options on the Trust. Further, the Exchange represents that it will implement any new surveillance procedures it deems necessary to effectively monitor the trading of options on the Trust.

Finally, the Commission has previously approved the listing and trading of options on other commodity ETFs structured as a trust, such as SPDR® Gold Trust,[36] the iShares COMEX Gold Trust [37] the iShares Silver Trust,[38] the ETFS Gold Trust,[39] and the ETFS Silver Trust.[40]

Further, the Exchange's proposal to amend the name ''ETFS Gold Trust'' to ''Aberdeen Standard Physical Gold Trust'' in Exchange Rule 402(i)(4) is consistent with the Act and the protection of investors as this amendment reflects the current name of this product.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. In this regard and as indicated above, the Exchange notes that the rule change is being proposed as a competitive response to filings submitted by ISE.[41]

The Exchange does not believe that the proposed rule change will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act as options on the Trust will be subject to initial listing standards and continued listing standards the same as other options on ETFs listed on the Exchange. Further, options on the Trust will be subject to Exchange Rules that currently govern the listing and trading of options on ETFs, including permissible expirations, strike prices, minimum increments, position and exercise limits (including as proposed in the filing submitted by Exchange's affiliate, MIAX Options), and margin requirements. Options on the Trust will be equally available to all market participants who wish to trade such options. Also, and as stated above, the Exchange already lists options on other commodity ETFs structured as a trust.

The Exchange does not believe that the proposal to list to list and trade options on the Trust will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. To the extent that permitting options on the Trust to trade on the Exchange may make the Exchange a more attractive marketplace to market participants, such market participants are free to elect to become market participants on the Exchange. Additionally, other options exchanges are free to amend their listing rules, as applicable, to permit them to list and trade options on the Trust. The Exchange believes that the proposed rule change may relieve any burden on, or otherwise promote, competition as it is designed to increase competition for order flow on the Exchange in a manner that is beneficial to investors by providing them with a lower-cost option to hedge their investment portfolios. The Exchange notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues that offer similar products. Ultimately, the Exchange believes that offering options on the Trust for trading on the Exchange will promote competition by providing investors with an additional, relatively low-cost means to hedge their portfolios and meet their investment needs in connection with spot bitcoin prices and bitcoin related products and positions.

Finally, the Exchange's proposal to amend the name ''ETFS Gold Trust'' to ''Aberdeen Standard Physical Gold Trust'' in Exchange Rule 402(i)(4) does not impose an undue burden on competition as this amendment reflects the current name of this product.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act [42] and Rule 19b–4(f)(6) thereunder.[43] Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act [44] and subparagraph (f)(6) of Rule 19b–4 thereunder.[45]

[40] *Id.*

[41] *See supra* note 5.

[42] 15 U.S.C. 78s(b)(3)(A)(iii).

[43] 17 CFR 240.19b–4(f)(6).

[44] 15 U.S.C. 78s(b)(3)(A)(iii).

[45] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time

A proposed rule change filed under Rule 19b–4(f)(6) [46] under the Act does not normally become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[47] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission previously approved the listing of options on iShares Bitcoin Trust.[48] The Exchange has provided information regarding the underlying iShares Bitcoin Trust, including, among other things, information regarding trading volume, the number of beneficial holders, and the market capitalization of the iShares Bitcoin Trust. The proposal also establishes position and exercise limits for options on the iShares Bitcoin Trust and provides information regarding the surveillance procedures that will apply to iShares Bitcoin Trust options. The Commission believes that waiver of the operative delay could benefit investors by providing an additional venue for trading iShares Bitcoin Trust options. Therefore, the Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change as operative upon filing.[49]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

as designated by the Commission. The Exchange has satisfied this requirement.

[46] 17 CFR 240.19b–4(f)(6).

[47] 17 CFR 240.19b–4(f)(6)(iii).

[48] *See* Securities Exchange Act Release No. 101128 (September 20, 2024), 89 FR 78942 (September 26, 2024) (SR–ISE–2024–03) (Self-Regulatory Organizations; Nasdaq ISE, LLC; Notice of Filing of Amendment Nos. 4 and 5 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment Nos. 1, 4, and 5, to Permit the Listing and Trading of Options on the iShares Bitcoin Trust).

[49] For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–SAPPHIRE–2024–36 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–SAPPHIRE–2024–36. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–SAPPHIRE–2024–36 and should be submitted on or before December 18, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[50]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–101695; File No. SR–FICC–2024–007]

Self-Regulatory Organizations; Fixed Income Clearing Corporation; Order Approving Proposed Rule Change, as Modified by Partial Amendment No. 1, To Modify the GSD Rules (i) Regarding the Separate Calculation, Collection and Holding of Margin for Proprietary Transactions and That for Indirect Participant Transactions, and (ii) To Address the Conditions of Note H to Rule 15c3–3a

November 21, 2024.

On March 14, 2024, Fixed Income Clearing Corporation (''FICC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change SR–FICC–2024–007 pursuant to Section 19(b) of the Securities Exchange Act of 1934 (''Exchange Act'') [1] and Rule 19b–4 [2] thereunder to modify FICC's Government Securities Division (''GSD'') Rulebook (''GSD Rules'') to calculate, collect, and hold margin for transactions that a direct GSD participant enters into for its own benefit (''proprietary transactions'') separately from margin a direct participant submits to FICC on behalf of indirect participants and to address conditions of Note H to Rule 15c3–3a under the Exchange Act (the ''Proposed Rule Change'').[3] The Proposed Rule Change was published for public comment in the **Federal Register** on March 28, 2024.[4]

FICC also filed a related Advance Notice with the Commission pursuant to Section 806(e)(1) of Title VIII of the Dodd-Frank Wall Street Reform and Consumer Protection Act, entitled the Payment, Clearing, and Settlement Supervision Act of 2010 and Rule 19b–4(n)(1)(i) under the Exchange Act. 12 U.S.C. 5465(e)(1). 15 U.S.C. 78s(b)(1) and 17 CFR 240.19b–4, respectively. The Advance Notice was

Continued

On April 24, 2024, pursuant to Section 19(b)(2) of the Exchange Act,[5] the Commission designated a longer period within which to approve, disapprove, or institute proceedings to determine whether to approve or disapprove the Proposed Rule Change.[6] On June 21, 2024, pursuant to Section 19(b)(2)(B) of the Exchange Act,[7] the Commission instituted proceedings to determine whether to approve or disapprove the Proposed Rule Change.[8] On September 18, 2024, the Commission extended the time period for Commission action on the proceedings to determine whether to disapprove the Proposed Rule Change.[9] On October 25, 2024, FICC filed Partial Amendment No. 1 to the Proposed Rule Change.[10] The Proposed Rule Change, as modified by Partial Amendment No. 1, is referred to herein as the ''Proposed Rule Change.''

The Commission has received comments regarding the substance of the Proposed Rule Change.[11] The Commission also received a letter from FICC responding to the comments.[12]

For the reasons discussed below, the Commission is approving the Proposed Rule Change.

I. Description of the Proposed Rule Change

A. Background and Terminology

FICC, through its GSD, is a central counterparty and provider of clearance and settlement services for the U.S. government securities markets. As a central counterparty in the U.S. government securities markets, FICC novates transactions between two counterparties, effectively becoming the buyer to every seller and the seller to every buyer, and guarantees the settlement of the novated transactions. This means that FICC is exposed to a number of risks arising from such transactions, including counterparty credit risk. FICC seeks to maintain sufficient resources (*i.e.,* margin) to cover its credit exposures to its participants fully with a high degree of confidence and mitigate potential losses from a default of a direct GSD participant, which is generally referred to as a Netting Member under the GSD Rules [13] (and in this Order).

On December 13, 2023, the Commission adopted amendments to the standards applicable to covered clearing agencies that clear transactions in U.S. Treasury securities (''Treasury CCAs''), such as FICC.[14] These amendments require Treasury CCAs to establish, implement, maintain, and enforce written policies and procedures reasonably designed to, among other things, calculate, collect, and hold margin for direct participants' proprietary positions separately and independently from margin calculated, collected, and held for indirect participants that rely on the services provided by the direct participant to access the Treasury CCA's payment, clearing, or settlement facilities.[15] The Commission also amended its broker-dealer customer protection rule (''Rule 15c3–3'') [16] and the customer and proprietary accounts of broker-dealer (''PAB'' reserve formulas thereunder (''Rule 15c3–3a'') [17] to permit margin required and on deposit with Treasury CCAs to be included under certain conditions as a debit in the reserve formulas.[18]

The GSD Rules describe how FICC provides clearance and settlement services to both direct participants and indirect participants, the latter of which rely on the services provided by direct participants to access FICC's clearance and settlement facilities. Currently, the GSD Rules allow indirect participants to access GSD's clearing services through a Netting Member (that is, a direct participant) via two models: the correspondent clearing/prime broker services [19] and the Sponsored Service.[20] The primary difference between the two models is that an indirect participant who becomes a Sponsored Member via the Sponsored Service model must establish an indirect, limited purpose FICC membership, whereas the correspondent clearing/prime broker services do not require an indirect member to establish any relationship with FICC.[21]

The correspondent clearing/prime broker services allow a Netting Member to submit eligible transactions to FICC on behalf of an indirect participant (referred to as the ''Executing Firm''), record these transactions in the same account as the proprietary transactions that the Netting Member (referred to as a ''Submitting Member'') enters into for its own benefit, and net the indirect participants' transactions against the Netting Member's proprietary transactions for purposes of calculating the Netting Member's margin requirements. Unlike the Sponsored Service, FICC has no relationship with the Executing Firm, and all obligations (*i.e.,* margin and settlement) under the GSD Rules remain with the Submitting Member.[22]

---

published in the **Federal Register** on March 28, 2024. Securities Exchange Act Release No. 99845 (Mar. 22, 2024), 89 FR 21586 (Mar. 28, 2024) (File No. SR–FICC–2024–802). Upon publication of notice of filing of the Advance Notice, the Commission extended the review period of the advance notice for an additional 60 days because the Commission determined that the advance notice raised novel and complex issues. On April 24, 2024, the Commission requested additional information from FICC pursuant to Section 806(e)(1)(D) of the Clearing Supervision Act, which tolled the Commission's period of review of the Advance Notice until 120 days from the date the information requested by the Commission was received by the Commission. *See* 12 U.S.C. 5465(e)(1)(D). A memo regarding the Request for Additional Information and the tolled period of review is available at *https://www.sec.gov/comments/sr-ficc-2024-802/srficc2024802-462751-1210414.pdf.* On September 24, 2024, the Commission requested additional information from FICC pursuant to Section 806(e)(1)(D) of the Clearing Supervision Act, which tolled the Commission's period of review of the Advance Notice until 120 days from the date the information requested by the Commission was received by the Commission. On October 21, 2024, the Commission received FICC's response to the Commission's September 24, 2024 request for additional information. *See* 12 U.S.C. 5465(e)(1)(E)(ii) and (G)(ii). A memo regarding receipt of FICC's response to the Request for Additional Information is available at *https://www.sec.gov/comments/sr-ficc-2024-802/srficc2024802-539295-1544222.pdf.*

[22] *Id.* at 21365; *see also* GSD Rule 8, *supra* note 13.

Under a proposed rule change being approved concurrently, FICC is renaming the prime broker/correspondent clearing model to be known as the Agent Clearing Service and providing further specificity around the operation of that service.[23] In that service, the Netting Member which serves as the direct participant to FICC would be referred to as the Agent Clearing Member, and the indirect participant would be referred to as an Executing Firm Customer. An Executing Firm Customer would have no direct relationship to FICC. This separate change would require that a Netting Member using the Agent Clearing Service submit transactions for Executing Firm Customers through an Agent Clearing Member Omnibus Account, to be recorded separately from its other clearing activity, including its proprietary activity. It would also add a definition for transactions eligible to be submitted by an Agent Clearing Member on behalf of its Executing Firm Customers (''Agent Clearing Transactions'').

In addition, in the Sponsored Service, both currently and in a concurrently approved proposed rule change,[24] Netting Members that are approved to be Sponsoring Members are able to sponsor certain indirect participants, referred to as Sponsored Members, into GSD membership and submit transactions on behalf of those Sponsored Members. A Sponsored Member is the legal counterparty to FICC for any submitted transactions.[25] However, the Sponsoring Member unconditionally guarantees to FICC the Sponsored Member's performance under a Sponsoring Member Guaranty, which guarantees to FICC the payment and performance of a Sponsored Member's obligations to FICC.[26] Therefore, reliance upon the Sponsoring Member Guaranty necessarily involves FICC's reliance upon the financial resources of the Sponsoring Member.

Unlike the correspondent clearing/prime broker services, transactions by the Sponsoring Member's Sponsored Members (''Sponsored Member Trades'') are not netted, for margining purposes, against transactions of the Sponsoring Member or another Sponsored Member. Instead, FICC records Sponsored Member Trades in a Sponsored Member Omnibus Account, and calculates margin requirements for each Sponsored Member individually on a gross basis (*i.e.,* without netting their transactions against transactions of the Sponsoring Member or another Sponsored Member).[27]

B. Proposed Changes

In the Proposed Rule Change, FICC seeks to address the Commission's new margin and account separation requirements and the conditions for including margin in the broker-dealer reserve formulas discussed in part I.A above.[28] As described in greater detail below, the Proposed Rule Change would (1) provide for the separate and independent calculation, collection, and holding of margin for proprietary transactions of a Netting Member from margin submitted to FICC by a Netting Member to support the transactions of an indirect participant (*i.e.,* either an Executing Firm Customer or a Sponsored Member); (2) establish segregated accounts for direct and indirect participants, including establishing a minimum $1 million cash margin requirement for each Segregated Indirect Participant; (3) consolidate the methodology for calculating the margin requirements, including definitions of relevant terms and components for calculating margin requirements from various sections of the current GSD Rules into a single margin component schedule (''Margin Component Schedule''), specify how the various components relate to different types of margin, and make certain changes to the margin methodology, including revising the Margin Liquidity Adjustment (''MLA Charge'')[29] definition, providing a method for allocating net unsettled positions to individual indirect participants for calculating margin requirements, and revising and clarifying the calculation of the Excess Capital Premium (''ECP'') component[30] of the Clearing Fund; and (4) modify the terms relating to transactions submitted by Inter-Dealer Broker Netting Members[31] to FICC for clearance and settlement (''Brokered Transactions'').

1. Separate Calculation, Collection, and Holding of Margin

The Proposed Rule Change would provide for the separate and independent calculation, collection, and holding of (i) margin deposited by a Netting Member to support its proprietary transactions, and (ii) margin deposited by a Netting Member to support the transactions of an indirect participant, that is, either an Executing Firm Customer or a Sponsored Member. To facilitate the separate and independent calculation, collection, and holding proprietary and indirect participant margin, FICC would establish proprietary accounts to record the proprietary transactions that the Netting Member enters into for its own benefit and separate indirect participant accounts to record transactions that the Netting Member submits on behalf of an indirect participant, which could be either a Sponsored Member or an Executing Firm Customer.

For proprietary transactions, the accounts would include Dealer Accounts, which would be available for all Netting Members, and Cash Broker Accounts and Repo Broker Accounts, which would only be available for Inter-Dealer Broker Netting Members.[32] Cash

[28] *See supra* note 3.

[29] The MLA Charge is a margin component designed to address the market impact costs of liquidating a defaulted Netting Member's portfolio that may increase when that portfolio includes large net unsettled positions in a particular group of securities with a similar risk profile or in a particular asset type, thereby causing those costs to be higher than the amount collected for the Netting Member's volatility charge, which is designed to capture the market price risk associated with liquidating each Netting Member's portfolio at a 99th percentile level of confidence. *See* GSD Rule 1 (defining Margin Liquidity Adjustment Charge), *supra* note 13; *see also* Securities Exchange Act Release No. 89560 (Aug. 14, 2020), 85 FR 51503 (Aug. 20, 2020) (File No. SR–FICC–2020–09) (approving the MLA charge as a new component of the margin methodology); Securities Exchange Act Release No. 98558 (Sep. 27, 2023), 88 FR 68179 (Oct. 3, 2023) (File No. SR–FICC–2023–012) (approving revisions to ECP charge).

[30] The ECP is a margin component that allows FICC to collect additional margin if a member's exposure to FICC, based on its clearing activity, is out of proportion to its capital levels. It is designed to mitigate the heightened default risk a member could pose to FICC if it operates with lower capital levels relative to its margin requirements. *See* Margin Component Schedule (defining Excess Capital Premium), *supra* note 13; *see also* Securities Exchange Act Release No. 54457 (Sep. 15, 2006), 71 FR 55239 (Sep. 21, 2006) (File Nos. SR–FICC–2006–03 and SR–NSCC–2006–03) (approving the ECP charge as a new component of the margin methodology); Securities Exchange Act Release No. 96786 (Feb. 7, 2023), 88 FR 8013 (Feb. 7, 2023) (File No. SR–NSCC–2022–005) (approving revisions to ECP charge).

[31] An Inter-Dealer Broker is defined as a Person which is in the business of buying and selling securities as agent on behalf of dealers and is registered under Section 15 or Section 15C of the Exchange Act. GSD Rule 1 (defining Inter-Dealer Broker), *supra* note 13. An Inter-Dealer Broker Netting Member must meet that definition and certain applicable membership requirements. *See id.* and Rule 2A (setting forth membership requirements).

[32] Under the proposed changes, ''Cash Broker Account'' would be a proprietary account maintained by FICC for an Inter-Dealer Broker Netting Member to record Brokered Transactions, other than Brokered Repo Transactions, submitted to the Corporation by the Inter-Dealer Broker

Continued

Broker Accounts would be available for recording an Inter-Dealer Broker Netting Member's Brokered Transactions (other than Brokered Repo Transactions), and Repo Broker Accounts would be for purposes of recording an Inter-Dealer Broker Netting Member's Brokered Repo Transactions.

For indirect participant transactions, FICC would establish Indirect Participants Accounts to record transactions that a Netting Member submits to FICC on behalf of Sponsored Members and Executing Firm Customers. These Indirect Participants Accounts would include Sponsoring Member Omnibus Accounts for recording Sponsored Member Trades and Agent Clearing Member Omnibus Accounts for recording Agent Clearing Transactions submitted on behalf of Executing Firm Customers. In addition, the proposal would permit a Sponsoring Member or Agent Clearing Member to designate any of its Indirect Participants Accounts as a segregated customer account (a ''Segregated Indirect Participants Account''). Such designation, as further described in part I.B.2 below, would give Netting Members a mechanism to direct FICC to calculate and segregate margin deposited in connection with the relevant Segregated Indirect Participants Account in accordance with the conditions described in Note H to Rule 15c3–3a.[33]

The proposal would require each Netting Member to deposit two forms of margin: the Required Fund Deposit and the Segregated Customer Margin Requirement. The Required Fund Deposit, which would be deposited to the Clearing Fund, would be the sum of each Netting Member's proprietary accounts (*e.g.,* Dealer Accounts and Broker Accounts) and indirect participant accounts (*e.g.,* Agent Clearing Omnibus Accounts and Sponsoring Member Omnibus Accounts) not designated as Segregated Indirect Participants Accounts. The Segregated Customer Margin Requirement, which would be excluded from the Clearing Fund, would be the sum of the Netting Member's Sponsoring Member Omnibus Accounts designated as Segregated Indirect Participants Accounts and Agent Clearing Member Omnibus Accounts designated as Segregated Indirect Participants Accounts.

FICC's proposal would also provide that a Netting Member's Margin Portfolio, which is utilized to determine a Netting Member's margin requirement, cannot include both proprietary and indirect participant accounts. As a result, the transactions a Netting Member submits to FICC on behalf of an indirect participant either as a Sponsoring Member or an Agent Clearing Member would no longer be netted against a Netting Member's proprietary transactions for calculating a Netting Member's margin requirements.[34] Since proprietary transactions and transactions submitted for indirect participants would not be recorded in the same type of account, these changes would result in margin for a Netting Member's proprietary transactions being calculated separately and independently from margin calculated for the transactions that the Netting Member submits on behalf of indirect participants.

To help ensure that margin for proprietary transactions is calculated, collected, and held separately and independently of margin for indirect participant transactions, FICC would require each Netting Member, at the time it submits a transaction to FICC for clearance and settlement, to designate the account in which the particular transaction should be recorded using a separate Deposit ID, which is an existing operational mechanism used by Netting Members to identify the type of account for which a margin deposit is being made. The use of these separate Deposit IDs would result in margin for each type of account being separately transferred to FICC and recorded on FICC's books as separate margin amounts for each account type. The proposal would also require FICC to report a Netting Member's Required Fund Deposit and Segregated Customer Margin Requirement twice daily and specify the amount of margin attributable to each Required Fund Deposit Portion or Segregated Indirect Participants Account so that the Netting Member can transfer the different margin amounts separately.

In addition, the proposal would eliminate the concept of a Permitted Margin Affiliate, which allows a Netting Member to include accounts of an affiliate that is also a Netting Member in the same Margin Portfolio as its accounts and net their transactions for margin calculation purposes. FICC states that no Netting Member currently has a Permitted Margin Affiliate, so keeping this option in the rules in conjunction with the proposed changes to establish separate and independent calculation, collection, and holding of margin would introduce unnecessary complexity in FICC's rules.[35]

2. Segregation of Customer Margin

FICC is proposing several changes to allow for the segregation of customer margin in a manner that satisfies the conditions for recording a debit in the customer reserve formula under Note H to Exchange Act Rule 15c3–3a.[36] First, to satisfy Section (b)(2)(i) of Note H to Rule 15c3–3a,[37] FICC would calculate the margin requirements applicable to any segregated account on a gross basis (*i.e.,* FICC would treat each indirect participant as if it were a separate Netting Member for margin calculations and would not net the transactions of one indirect participant against the transactions of another indirect participant). Second, to satisfy Section (b)(2)(iii) of Note H to Rule 15c3–3a,[38] FICC would establish Segregated Customer Margin Custody Accounts for eligible customers on its books and records. These accounts would segregate the margin deposited for transactions in that account from any margin for a Netting Member's proprietary positions, both on FICC's own books and records and at FICC's custodians. FICC would only be able to use such segregated margin to secure or satisfy the obligations of the customer for whom such margin is held, and it would not be considered part of the mutualized Clearing Fund. FICC would not be able to apply such margin to the proprietary obligations of the Netting Member that deposited it with FICC, to the obligations of any other Netting Member or indirect participant, or to any lien or claim against FICC.[39] FICC would

Netting Member. ''Repo Broker Account'' would be a proprietary account maintained by the FICC for an Inter-Dealer Broker Netting Member in its capacity as a Repo Broker to record Brokered Repo Transactions submitted to the Corporation by the Inter-Dealer Broker Netting Member.

[33] 17 CFR 240.15c3–3a.

[34] The Proposed Rule Change would also specify the types of accounts in which Netting Members may record transactions to identify the purpose and use of these accounts. FICC's ''Accounts'' are not custodial accounts in which FICC holds assets, but rather a mechanism for FICC to record and group transactions. These records are utilized by FICC in its calculation of a Netting Member's margining, settlement, and other obligations. Proprietary Accounts would include ''Dealer Accounts,'' which would be available for all Netting Members, and ''Cash Broker Accounts'' and ''Repo Broker Accounts,'' which would only be available for Inter-Dealer Broker Netting Members. Non-Proprietary Accounts would include, in the case of a Sponsoring Member, Sponsoring Member Omnibus Accounts for purposes of recording Sponsored Member Trades, and, in the case of an Agent Clearing Member, Agent Clearing Member Omnibus Accounts for purposes of recording Agent Clearing Transactions of its Executing Firm Customers.

[35] *See* Notice of Filing, *supra* note 4, at 21608.

[36] *See id.*, at 21608 (citing 17 CFR 240.15c3–3a).

[37] *Id.* at 21608–09.

[38] *Id.* at 21609.

[39] *See* FICC Letter at 35 (describing this as ''an express prohibition on FICC using Segregated Customer Margin held in respect of one Segregated Indirect Participant for the obligations of any other

provide written notice to any Netting Member that is a broker-dealer that any Segregated Customer Margin Custody Account is being held for the exclusive benefit of the customers and is being kept separate from any other accounts maintained by the broker-dealer or any other Netting Member at FICC, as required by Section (b)(2)(iii)(C) of Note H.[40]

Further, as amended, the proposal would clarify that any interest earned on Segregated Customer Margin consisting of cash must be paid to the Netting Member on behalf of, and as agent for, its Segregated Indirect Participant.[41]

Moreover, to comply with the custody requirements of (b)(2)(iv) of Note H,[42] FICC would require segregated margin accounts to be held at either a bank within the meaning of the Exchange Act that is insured by the Federal Deposit Insurance Corporation and is a qualified custodian under the 1940 Act, or the Federal Reserve Bank of New York.[43] FICC would require these accounts to be segregated from any other account of FICC and used exclusively to hold Segregated Customer Margin, in accordance with Section (b)(2)(iv)(A) of Note H. Moreover, each of these accounts would be subject to (i) a written notice of the bank or Federal Reserve Bank that the account is being held by the bank or Federal Reserve Bank pursuant to Rule 15c3–3 and is being kept separate from and not commingled with any other accounts maintained by FICC or any other person at the bank or Federal Reserve Bank and (ii) a written contract between FICC and the bank or Federal Reserve Bank which would provide that the Segregated Customer Margin in the account is subject to no right, charge, security interest, lien, or claim in favor of the bank or Federal Reserve Bank or any person claiming through the bank or Federal Reserve Bank, in accordance with Sections (b)(2)(iv)(B) and (C) of Note H.[44] FICC would also only allow Segregated Customer Margin consisting of cash to be invested in U.S. Treasury securities with a maturity of one year or less, in accordance with Section (b)(2)(ii) of Note H.[45]

Finally, to satisfy Section (b)(2)(v) of Note H,[46] FICC would provide specific procedures to allow Netting Members to request the return of excess segregated margin. FICC notes that these changes would allow broker-dealer Netting Members to collect margin from customers and deposit it with FICC and to provide all customers, including those that access FICC through non-broker-dealers, the ability to segregate margin they deposit.[47] FICC would have the ability to retain some or all of the excess segregated customer margin if the Netting Member had an outstanding payment or margin obligation to FICC for transactions of any Segregated Indirect Participant. FICC could not retain the excess segregated customer margin for a Segregated Indirect Participant when FICC has determined, in its sole discretion, that such outstanding payment or margin obligation is unrelated to the transactions of that Segregated Indirect Participant.[48] FICC states that these aspects of the Proposed Rule Change would allow for the segregation of certain customer margin in a manner that satisfies the conditions for a broker-dealer to record a debit in the customer reserve formula under Note H to Rule 15c3–3a.[49]

a. $1 Million Minimum Cash Margin Requirement

FICC is also proposing a minimum $1 million cash margin requirement for each Segregated Indirect Participant Account, similar to the $1 million minimum cash margin requirement currently applicable to each Netting Member.[50] FICC conducts daily backtesting to evaluate whether each Netting Member's margin is sufficient to cover FICC's credit exposures to that member based on a simulated liquidation of the member's portfolio on that day. FICC's daily backtesting of the sufficiency of Clearing Fund deposits has shown a heightened risk of backtesting deficiencies (*i.e.,* the projected liquidation losses to FICC due to a Netting Member's default would be greater than the member's margin) for members with lower deposits.[51] Because FICC is required to calculate the margin requirements for Segregated Indirect Participants on a gross basis, as if each Segregated Indirect Participant were a separate Margin Portfolio, and Segregated Customer Margin would not be available to address losses from other direct or indirect participants, FICC believes it is also appropriate to apply the same minimum cash requirement to each Segregated Indirect Participant that it applies to each Margin Portfolio.[52] Moreover, FICC believes that the $1 million cash requirement is the appropriate minimum amount to optimize the balance between financial impact of the requirement to participants and FICC's ability to continue to meet its regulatory obligation to maintain a backtesting performance coverage ratio above its 99 percent coverage target.[53] FICC states that the $1 million minimum is supported by its prior analyses of the appropriate minimum margin requirement for Netting Members.[54] FICC further describes this minimum requirement as critical to ensuring that the account segregation does not expose FICC and its participants to undue loss. FICC explains that the Segregated Customer Margin posted by an individual Segregated Indirect Participant needs to be enough, on its own, to address losses arising from the Segregated Indirect Participant's positions, and that, otherwise, such losses may be mutualized.[55]

However, FICC, in its sole discretion, would have the ability to adjust the amount of the minimum $1 million margin requirement if FICC determines that a different minimum charge would be appropriate and consistent with achieving its backtesting coverage target.[56] FICC would notify Netting Members of any such adjustment to the minimum margin requirement through an Important Notice.[57] In discussing this proposed ability, FICC states that it will review the $1 million floor for Segregated Customer Margin as part of ongoing internal surveillance and risk management monitoring procedures.[58] FICC further states that it would be prudent to have the ability to adjust the $1 million floor proactively to the extent that FICC identifies as part of these reviews that activity levels, margin performance observed through backtesting, and other measures indicate that FICC would be able to continue to

person'' and stating that, as a result, the default of one Segregated Indirect Participant should not generally cause another segregated Indirect participant to lose its margin).

manage the risks presented to it and meet its regulatory risk management obligations (including, for example, its 99% backtesting coverage target) with a lower minimum Segregated Customer Margin Requirement (that is, an amount below $1 million).[59]

3. Margin Component Schedule

To improve the clarity and transparency of its margin components and Clearing Fund calculation methodology,[60] FICC would move the margin calculation methodology, including the relevant defined terms, into a new Margin Component Schedule. Currently, the terms and information concerning the margin calculation methodology, as well as the relevant definitions, appear in several different locations.[61] FICC states that its methodology and the included components would continue to be substantively the same as the methodology under the current Rules.[62]

The new Margin Component Schedule would set out the methodology for calculating margin amounts. That Margin Component Schedule would provide for FICC to perform substantially the same calculation it currently performs when determining a Netting Member's Required Fund Deposit, except that (i) the calculation would be performed on a Segregated Indirect Participant-by-Segregated Indirect Participant basis as though each Segregated Indirect Participant represented a separate Margin Portfolio and (ii) FICC would not impose an ECP on Segregated Indirect Participant Accounts. Specifically, for Required Fund Deposit calculations, the margin amount shall equal the VaR Charge, plus or minus the Blackout Period Exposure Adjustment (as applicable), plus the Portfolio Differential Charge, with the following potential additional charges, as applicable: the Backtesting Charge, the Holiday Charge, the MLA Charge, the ECP, and the Intraday Supplemental Fund Deposit.[63] For Segregated Customer Margin Requirement calculations, the margin amount shall equal the VaR Charge, plus or minus the Blackout Period Exposure Adjustment (as applicable), plus the Portfolio Differential Charge, with the following potential additional charges, as applicable: the Backtesting Charge, the Holiday Charge, the MLA Charge, and the Intraday Supplemental Fund Deposit.

For both types of calculations, the Margin Component Schedule addresses the applicable minimum cash margin requirements ($1 million for each Netting Member and Segregated Indirect Participant)[64] and FICC's authority to require increased deposits as appropriate, including the use of a special charge. FICC would not add Segregated Customer Margin to Section 4 of the Margin Component Schedule, which describes FICC's ability to impose increased Required Fund Deposits under certain circumstances.[65] However, when determining whether to increase the Required Fund Deposit of a Netting Member under the circumstances described in Section 4, FICC would consider the risk presented by a Netting Member from the activity it submits to FICC, including activity of indirect participants.[66]

a. MLA Charge

FICC would amend the definition of the MLA Charge to account for the use of Segregated Indirect Participant Accounts. Specifically, the definition would provide that, if a Segregated Indirect Participant clears through multiple Accounts[67] (including Accounts of different Netting Members), then the MLA Charge for transactions in a Segregated Indirect Participants Account would be the greater of (i) an amount calculated for only the transactions maintained in that Account (*i.e.,* excluding the other Accounts where the Segregated Indirect Participant's transactions are recorded) and (ii) an amount calculated on a consolidated portfolio basis (*i.e.,* taking into account the transactions in each of the Accounts). This would be the same methodology currently used for Sponsored Members clearing through multiple Accounts.[68]

b. Allocation of Net Unsettled Positions

The Proposed Rule Change would also provide a method for allocating net unsettled positions to individual indirect participants for calculating margin requirements. Specifically, as amended, FICC would modify the definition of Current Net Settlement Positions in Rule 1 to provide that, for calculating margin requirements and not for purposes of calculating the Net Settlement Position under GSD Rule 11, positions that are not clearly allocable to an individual Sponsored Member or Segregated Indirect Participant (other than Sponsored GC Trades), because one or more transactions recorded for indirect participants did not settle on the original Scheduled Settlement Date, would be allocated *pro rata* to Sponsored Members or Segregated Indirect Participants that had positions in the same direction and CUSIP as the un-allocable Current Net Unsettled Positions at the end of the preceding business day. FICC states that this situation could arise if a transaction recorded in a Sponsoring Member Omnibus Account or Segregated Indirect Participants Account fails to settle and that such failure to settle would not occur with Sponsored GC Trades.[69] FICC believes this methodology facilitates a reasonable and fair allocation for purposes of calculating gross margin requirements.[70]

c. Calculation of Excess Capital Premium

In addition, the Proposed Rule Change would amend the terms related to the ECP component of the Clearing Fund, which is used to collect additional margin if a Netting Member's exposure to FICC through its clearing activity is out of proportion to its capital. Currently, the ECP applicable to a Netting Member equals the Netting Member's ''Excess Capital Ratio'' (*i.e.,* its VaR Charge divided by its Netting Member Capital) multiplied by its ''Excess Capital Differential'' (*i.e.,* the amount by which a Netting Member's VaR Charge exceeds its Netting Member Capital). However, FICC currently reserves the right to collect less than

[59] *Id.* at 31.

[60] *See* Notice of Filing, *supra* note 4, at 21612.

[61] FICC would move the calculation methodology from Rule 4, Sections 1b, and 2a, Rule 3, Section 14, and Rule 3A, Section 10 to the new Margin Component Schedule. FICC would move the definitions from Rule 1 to Section 5 of the Margin Component Schedule.

[62] *See* Notice of Filing, *supra* note 4, at 21612.

[63] This method does not represent a change from the current method of calculating Required Fund Deposits, but merely moves the description from current Rule 4 to the new Margin Component Schedule.

[64] *See supra* Section I.B.2.a for a description of the proposed $1 million minimum cash margin requirement for each Segregated Indirect Participant Account.

[65] *See* Notice of Filing, *supra* note 4, at 21609.

[66] *Id.*

[67] FICC proposed to amend the definition of Account to be an account maintained by FICC for a Member to record transactions submitted by the member. FICC states that this change would clarify that Accounts are recordkeeping mechanisms for FICC to determine which transactions should be netted against each other, but are not custodial accounts through which FICC holds assets for a Netting Member. *See* Notice of Filing, *supra* note 4, at 21608.

[68] *See* GSD Rule 1 (defining MLA Charge, including for Sponsored Members sponsored by multiple Sponsoring Members), *supra* note 13; Securities Exchange Act Release No. 98558 (Sep. 27, 2024), 89 FR 68179 (Oct. 3, 2023) (File No. SR–FICC–2023–012).

[69] *See* Notice of Filing, *supra* note 4, at 21612–13; Notice of Partial Amendment, *supra* note 10, at 87443.

[70] *See* Notice of Filing, *supra* note 4, at 21613.

this amount or to return some or all of this amount.[71]

The changes would seek to make the calculation of the ECP component clearer and more predictable by (i) capping the amount of the ECP at two times the amount by which a Netting Member's VaR Charge exceeds its Netting Capital,[72] (ii) specifying the Netting Member Capital amounts used to calculate the ECP (that is, the Net Capital amount from each Netting Member's most recent Form X–17–A–5 (Financial and Operational Combined Uniform Single Report (''FOCUS Report'')) or the Equity Capital amount on its most recent Consolidated Report of Condition and Income (''Call Report'')), (iii) providing that FICC may calculate the premium based on updated available information, and (iv) permitting FICC, in its discretion, to waive the amount of the ECP and setting forth a specific procedure for doing so. Regarding the waiver procedure, only a Managing Director in FICC's Group Chief Risk Office would be able to grant a waiver of an ECP in certain situations. These situations would be limited to exigent circumstances or other unexpected events. When deciding whether to grant a waiver, FICC would consider the degree to which a Netting Member's capital position and trading activity compare or correlate to the exigent circumstances and whether FICC can effectively manage the risk exposure from the Netting Member without collecting the ECP.[73] Any waiver would be documented in a written report made available to the Netting Member. FICC states that these changes are substantially similar to changes recently adopted by the National Securities Clearing Corporation (''NSCC'') and they would enhance the ability of Netting Members to identify what their ECP will be and to ensure such amount is accurately calibrated.[74]

In addition, the Proposed Rule Change would revise the definitions of Excess Capital Ratio and Excess Capital Differential to exclude the VaR Charge for Segregated Indirect Participants. FICC is proposing this change because each indirect participant would be responsible for satisfying its own respective VaR Charge, not the Netting Member, and the Excess Margin Charge is designed to address the risk that a Netting Member with low capital relative to value-at-risk is not able to perform its obligations.[75] FICC states that including the VaR Charge that is calculated for an indirect participant and is satisfied by the capital of that indirect participant in the calculation of the Netting Member's ECP could result in assessing an ECP for that Netting Member that is greater than the amount required to mitigate the risk this margin component is designed to address.[76] FICC also states that this change is designed to ensure that the ECP does not result in differential treatment of Netting Members that act as intermediaries for Segregated Indirect Participants.

4. Modification of Terms for Brokered Transactions

The Proposed Rule Change would modify the terms relating to Brokered Transactions. FICC's rules currently cap the amount of loss allocation that may be applied to Inter-Dealer Broker Netting Members and Non-IDB Repo Brokers submitting Brokered Transactions. FICC would revise the definition of Brokered Transactions to include only the side of the transactions submitted to FICC for novation by an Inter-Dealer Broker Netting Member and entered into on the Inter-Dealer Broker Netting Member's own trading platform.[77] As a result, the favorable loss allocation treatment for Brokered Transactions would apply only to the transactions that present limited risk since an Inter-Dealer Broker is standing between two counterparties in those transactions and is therefore completely flat (that is, subject to offsetting exposures).[78] Since FICC believes the favorable loss allocation treatment is appropriate only for Inter-Dealer Broker Netting Members submitting Brokered Transactions, it would delete the term ''Non-IDB Repo Broker'' from its rules.[79] FICC states that these changes would improve FICC's risk management and promote access by ensuring that its differential treatment of different parties and transactions has a sound risk management justification.[80]

In addition, the proposed changes would provide that transactions entered into on inter-dealer brokers and similar platforms may be cleared using the Sponsored Service or the Agent Clearing Service.[81]

II. Discussion and Commission Findings

Section 19(b)(2)(C) of the Exchange Act[82] directs the Commission to approve a proposed rule change of a self-regulatory organization if it finds that such proposed rule change is consistent with the requirements of the Exchange Act and rules and regulations thereunder applicable to such organization. After carefully considering the Proposed Rule Change, the Commission finds that the Proposed Rule Change is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to FICC. In particular, the Commission finds that the Proposed Rule Change is consistent with Sections 17A(b)(3)(F) and (b)(3)(I) of the Exchange Act[83] and Rules 17ad–22(e)(4)(i), (e)(6)(i), (e)(6)(iii), (e)(18)(ii), (e)(18)(iii), (e)(18)(iv)(C), (e)(19), and (e)(23)(ii) thereunder.[84]

A. Consistency With Section 17A(b)(3)(F) of the Exchange Act

Section 17A(b)(3)(F) of the Exchange Act[85] requires the rules of a clearing agency to, among other things, promote the prompt and accurate clearance and settlement of securities transactions and assure the safeguarding of securities and funds which are in the custody or control of the clearing agency or for which it is responsible, and protect investors and promote the public interest.

1. Separate Calculation and Collection of Margin for Proprietary and Customer Accounts

The proposed changes to require the separate and independent calculation and collection of margin for Netting Members' proprietary transactions and indirect participants' transactions, as described in Section I.B.1., should allow FICC to better identify and measure the unique risk profiles of each Netting

[71] *See* GSD Rule 1 (defining Excess Capital Ratio and Excess Capital Differential) and Rule 3, Section 14 (describing the Excess Capital Premium), *supra* note 13.

[72] In addition, FICC would amend the definition of Netting Member Capital to refer to a Netting Member's Net Capital, Net Assets, or Equity Capital to link the calculation to the appropriate regulatory framework for each Netting Member and add the term Equity Capital to clarify that a Netting Member's most recent Call Report, or financial statements or equivalent reporting if a Netting Member is not required to file a Call Report, will be used for the calculation of the Excess Capital Premium.

[82] 15 U.S.C. 78s(b)(2)(C).

[83] 15 U.S.C. 78q–1(b)(3)(F) and 15 U.S.C. 78q–1(b)(3)(I).

[84] 17 CFR 240.17ad–22(e)(4)(i), (e)(6)(i), (e)(6)(iii), (e)(18)(ii), (e)(18)(iii), (e)(18)(iv)(C), (e)(19), and (e)(23)(ii).

[85] 15 U.S.C. 78q–1(b)(3)(F).

Member and indirect participant. This proposed change would ensure that an indirect participant's positions are no longer netted against a Netting Member's positions, that margin is collected with respect to the indirect participant's positions specific to those transactions, and that interest on an indirect participant's cash margin would be paid to the Netting Member for the benefit of, and as agent for, the indirect participant. As discussed in more detail in Section II.C.1 below, this should enhance FICC's ability to calculate and collect the appropriate margin from each direct and indirect participant and, therefore, meet its settlement obligations in the event of a Netting Member or indirect participant default. By doing so, the Proposed Rule Change should better ensure that, in the event of a default, FICC's operation of its critical clearance and settlement services would not be disrupted because of insufficient financial resources and, therefore, it would be able to continue providing prompt and accurate clearance and settlement of securities transactions, consistent with Section 17A(b)(3)(F).[86]

The separate and independent calculation and collection of margin for proprietary and indirect participants' transactions should allow FICC to better identify and measure the unique risk profiles of each Netting Member and indirect participant, enhancing FICC's ability to calculate and collect sufficient margin from each Netting Member and indirect participant to cover potential losses from a Netting Member or indirect participant default, thereby reducing the likelihood that FICC, Netting Members, or indirect participants would incur losses resulting from a default. As a result, the proposed changes should limit FICC's risk to a Netting Member or indirect participant default and thereby enhance its ability to safeguard securities and funds in its control and for which it is responsible.

2. $1 Million Minimum Cash Margin Requirement

For the reasons discussed below in more detail in Section II.C.2., the proposed $1 million minimum cash margin requirement for Segregated Indirect Participants, which could be adjusted by FICC if it determines that a different minimum amount would be appropriate and consistent with achieving its backtesting coverage target, should help ensure that each indirect participant provides sufficient margin to cover its potential obligations to FICC, thereby helping to allow FICC to meet its settlement obligations in the event of a default and to protect FICC, non-defaulting Netting Members, indirect participants, and the market from losses from an indirect participant default. Accordingly, the proposed $1 million minimum cash margin requirement should assure the safeguarding of securities and funds which are in the custody or control of FICC.

In addition, as indicated by FICC's backtesting results, and discussed further in Section II.C.2 below, the $1 million minimum margin requirement should enhance FICC's ability to collect the appropriate margin from each indirect participant and, therefore, meet its settlement obligations in the event of a default. FICC's flexibility to adjust the minimum margin amount if it determines that a different amount would be appropriate and consistent with achieving its backtesting coverage target is also consistent with ensuring that each indirect participant provides sufficient margin to cover its obligations to FICC. Achieving backtesting coverage targets is essential to ensuring that the margin collected would be sufficient for FICC to cover its credit exposures to its Netting Members and indirect participants fully with a high degree of confidence, as required for a covered clearing agency such as FICC.[87] As defined in the Covered Clearing Agency Standards, backtesting is an ex-post comparison of actual outcomes with expected outcomes derived from the use of margin models,[88] and it is a key analytical mechanism for a CCP to consider the effectiveness of its margin model. FICC's ability to adjust the minimum margin amount would apply only where it would be appropriate and consistent with achieving its backtesting coverage target. This ability would, therefore, be limited to circumstances where its backtesting coverage target requirements are not being met or the amount of margin being collected exceeds the amount needed to cover the indirect participant's exposure to FICC.

Based on FICC's representations, the Commission understands that FICC generally intends to use this ability to adjust the minimum margin requirement below $1 million if a lower minimum would suffice to reduce backtesting deficiencies comparably to the $1 million.[89] As part of its ongoing supervision of FICC, the Commission will continue to monitor the performance of the $1 million minimum margin requirement, including as its performance compares to backtesting, and will engage with FICC regarding any changes to that requirement and the supporting analysis for such changes, to help ensure that FICC is appropriately exercising that discretion consistent with the requirements imposed upon it by the rule (*i.e.,* that it determines that any such adjustments would be appropriate and consistent with achieving its backtesting coverage target).[90] For example, not meeting backtesting coverage requirements would be an indication that the minimum margin amount is insufficient to cover FICC's credit exposure to its Netting Members and indirect participants, whereas, on the contrary, higher backtesting performance could indicate that the margin collected exceeds the exposure to FICC.

Therefore, the $1 million minimum margin requirement should help ensure that, in the event of a Segregated Indirect Participant default, FICC's operation of its critical clearance and settlement services would not be disrupted because of insufficient financial resources and it can continue providing prompt and accurate clearance and settlement of securities transactions.

3. Margin Component Schedule

The proposed changes in section I.B.3 regarding the calculation of margin for segregated and non-segregated accounts should help ensure that FICC collects margin sufficient to cover its exposures with respect to both direct and indirect participants. Requiring that the margin requirement for a Segregated Indirect Participant Account be calculated in generally the same manner as a Netting Member's requirement, which the Commission generally has reviewed and approved as part of FICC's rules,[91]

[86] *Id.*

[87] 17 CFR 240.17ad–22(e)(6).

[88] 17 CFR 240.17ad–22(a).

[89] *See* FICC Letter at 3, 30–31.

[90] In addition, the requirements applicable to FICC as a self-regulatory organization under Section 19(b) of the Exchange Act and as a designated financial market utility under Title VIII of the Payment, Clearing, and Supervision Act (12 U.S.C. 5465(e)) would continue to apply. Thus, for example, if FICC were to amend the $1 million minimum margin requirement to an amount that would materially alter the level or nature of risk presented, FICC would be obligated to submit an advance notice of such change with the Commission.

[91] *See, e.g.,* Self-Regulatory Organizations; Fixed Income Clearing Corporation; Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 1, To Implement Changes to the Required Fund Deposit Calculation in the Government Securities Division Rulebook, Exchange Act Release No. 83362 (June 1, 2018), 83 FR 26514 (June 7, 2018) (approving changes to how FICC calculates the Value at Risk component of its margin methodology, addition of the new ''Blackout Period Exposure adjustment'' component to the margin methodology, eliminating certain existing components, and revising additional components).

should help ensure that FICC collects margin sufficient to cover its exposures with respect to both direct and indirect participants, as discussed further in Sections II.C.3 and II.D.3 below. In addition, by doing so, these proposed changes should help ensure that, in the event of such a default, FICC's operation of its critical clearance and settlement services would not be disrupted because of insufficient financial resources and, therefore, it could continue providing prompt and accurate clearance and settlement of securities transactions, consistent with Section 17A(b)(3)(F).[92] For the same reasons, these proposed changes should also help ensure that FICC is able to continue to meet its obligation in the event of a default, without accessing non-defaulting Netting Members' or indirect participants' margin deposits, thereby helping FICC ensure that it can safeguard the funds and securities within its custody or control, consistent with Section 17A(b)(3)(F).[93]

In addition, the proposed changes described in Section I.B.4 to consolidate the terms relating to margin calculation into a single location and refine the description of FICC's margin methodology should help FICC's Netting Members and indirect participants better understand and anticipate their margin requirements. This improved understanding of the potential margin requirements should, in turn, facilitate prompt and accurate clearance and settlement by removing potential ambiguity or confusion about market participants' obligations to FICC. Similarly, the improved transparency provided by the proposed centralized margin component schedule and enhanced descriptions of FICC's margin components, such as the MLA Charge, should provide Netting Members, indirect participants, and the public with more clarity about the calculation and application of FICC's margin components and resolve potential ambiguity about when certain components would or would not apply, which is consistent with promoting the public interest.

4. Allocation of Net Unsettled Positions

The proposed changes described in Section I.B.3.b. to adopt a method for allocating net unsettled positions to individual indirect participants for calculating margin requirements should reduce the potential exposure to FICC arising from indirect participant transactions that fail to settle by ensuring that FICC has a mechanism to collect margin for such transactions. Further, these proposed changes should make clear that such obligations are allocated only to participants that are outside the Sponsored GC service, since such fails to deliver do not occur in that service. By accounting for risks arising from net unsettled positions, the proposed changes should enhance FICC's risk management and its ability to assure the safe return of funds and securities, consistent with Section 17A(b)(3)(F).[94]

5. Calculation of Excess Capital Premium

The proposed changes to the calculation of the ECP described in Section I.B.3.c. above are consistent with promoting robust risk management, because the changes should help ensure that FICC continues to collect margin sufficient to address the heightened default risk presented by a Netting Member operating with lower capital levels relative to its margin requirements. Based on its review of the Proposed Rule Change, including the detailed impact analysis submitted as a confidential exhibit, FICC's margin coverage would not be impacted by this change and FICC would continue to collect sufficient margin to manage its potential exposure to its Netting Members.

In addition, the proposed changes to the calculation of the ECP should result in a simplified and more straightforward method for calculating the ECP, based on understandable metrics with which FICC's Netting Members are familiar. Using a clearly defined source for determining Netting Member Capital in the calculation of the ECP would result in a more consistent calculation across different types of Netting Members. Moreover, capping the Excess Capital Ratio at 2.0 would provide transparency to Netting Members so they can understand how the ECP will be calculated, and it also would align FICC's cap with the recently approved changes to the ECP calculation at NSCC.[95] By improving the consistency and predictability of the ECP, the proposed enhancements would also improve FICC's ability to collect margin amounts that reflect the risks posed by its Netting Members such that, in the event of Netting Member default, FICC's operations would not be disrupted, and non-defaulting Netting Members and indirect participants would not be exposed to losses they cannot anticipate or control. In this way, the proposed rule change is designed to promote the prompt and accurate clearance and settlement of securities transactions and to assure the safeguarding of securities and funds which are in the custody or control of NSCC or for which it is responsible, consistent with Section 17A(b)(3)(F) of the Exchange Act.[96]

The proposed changes set forth in section I.B.3.c should improve transparency and understanding of the FICC's governance and application of the ECP. For example, FICC's proposal would describe the exigent circumstances in which FICC may waive the ECP, describe what information FICC would consider when determining whether to waive the charge, and specify the approval necessary to waive the charge. Moreover, using commonly understood inputs as the determinants of the ECP (*i.e.,* the FOCUS or Call Report) and capping the Excess Capital Ratio at 2.0 should help Netting Members better anticipate and plan for a potential ECP. These proposed changes should help FICC's members better anticipate their required margin because of the use of simplified inputs to the calculation of the ECP and the imposition of a cap on the applicable Excess Capital Ratio. This improved understanding of the potential margin requirements should, in turn, facilitate prompt and accurate clearance and settlement by removing potential ambiguity or confusion about a member's obligations to FICC.

Similarly, the improved transparency provided by this Proposed Rule Change both with respect to a Netting Member's margin obligations and the process by which FICC would consider waiver of an ECP should provide Netting Members and the public with more clarity about the nature and application of the ECP and resolve potential ambiguity about when the ECP would or would not apply, which is consistent with promoting the public interest.

6. Modification of Terms for Brokered Transactions

The proposed changes described in Section I.B.4. to revise the definition of Brokered Transactions to include only the side of the transactions submitted to FICC for novation by an Inter-Dealer Broker Netting Member and entered into on the Inter-Dealer Broker Netting Member's own trading platform should enhance FICC's risk management by providing favorable loss allocation

[96] 15 U.S.C. 78q–1(b)(3)(F).

treatment only to transactions that present limited risk to FICC. As a result, these changes should help ensure that FICC has sufficient prefunded financial resources to continue meeting its obligations in the event of a default, which will facilitate the safeguarding of securities and funds which are in the custody or control of FICC, consistent with Section 17A(b)(3)(F).[97]

For these reasons, the proposed changes are consistent with Section 17A(b)(3)(F) of the Exchange Act.[98]

B. Consistency With Section 17A(b)(3)(I) of the Exchange Act

Section 17A(b)(3)(I) of the Exchange Act requires that the rules of a clearing agency, such as FICC, do not impose any burden on competition not necessary or appropriate in furtherance of the Exchange Act.[99] Section 17A(b)(3)(I) does not require the Commission to make a finding that FICC chose the option that imposes the least possible burden on competition. Rather, the Exchange Act requires that the Commission find that the Proposed Rule Change does not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act, which involves balancing the competitive effects of the proposed rule change against all other relevant considerations under the Exchange Act.[100]

The Commission received comments regarding the impacts the Proposed Rule Change may have on competition. Several commenters state that the $1 million minimum Segregated Customer Margin Requirement for each Segregated Indirect Participant could discourage small firms from using the Segregated Indirect Participant Accounts.[101] Several commenters state that the requirement would increase costs for small firms and limit execution counterparties,[102] and several additional commenters state that FICC's proposed $1 million margin requirement is arbitrarily too high.[103]

In response to concerns about increased costs to relatively small indirect participants, FICC states that the margin segregation regime under the proposal is entirely voluntary.[104] To the extent the $1 million floor is too costly for certain indirect participants, FICC states that they can choose to post margin to a Netting Member in a non-segregated account that could require them to post lower margin or no margin at all.[105] Further, FICC amended the Margin Segregation Proposal to provide that the minimum margin floor will be set at an amount of $1 million but could be adjusted by FICC if it determines that a different minimum amount would be appropriate and consistent with achieving its backtesting coverage target, and it would require that FICC's members would be notified of any such adjustment to the applicable minimum charge by an Important Notice.[106] Specifically, FICC states that it would review the $1 million floor for Segregated Customer Margin as part of ongoing internal surveillance and risk management monitoring procedures.[107] FICC also stated that it would be prudent to have the ability to adjust the $1 million floor proactively to the extent that FICC identifies, as part of these reviews, that activity levels, margin performance observed through backtesting, and other measures indicate that FICC would be able to continue to manage the risks presented to it and meet its regulatory risk management obligations (including, for example, its 99% backtesting coverage target) with a lower minimum Segregated Customer Margin Requirement.[108]

The Commission acknowledges the commenters' concerns that the $1 minimum margin requirement could result in increased costs for small firms that choose to utilize the proposed margin segregation regime, which may weaken those firms' competitive positions relative to others. In addition, the Commission acknowledges that FICC could, potentially, adjust the minimum margin requirement to an amount above $1 million; however, under the proposal, FICC would only be able to do so if it determines that a different amount would be appropriate and consistent with achieving its backtesting coverage target. As part of its ongoing supervision of FICC, the Commission will continue to monitor the performance of the $1 million minimum margin requirement, including as its performance compares to backtesting, and will engage with FICC regarding any changes to that requirement and the supporting analysis for such changes, to help ensure that FICC is appropriately exercising that discretion consistent with the requirements imposed upon it by the rule (*i.e.,* that it determines that any such adjustments would be appropriate and consistent with achieving its backtesting coverage target). In addition, the Commission acknowledges that firms are not required to use a segregated account to participate at FICC and may choose to access FICC through a different type of account. Although some firms who choose to use segregated accounts could experience a burden on competition because of these potentially higher costs, the Commission concludes that any such burden to these firms is necessary and appropriate in furtherance of the Exchange Act [109] for the following reasons.

As discussed in Section I.A above, FICC seeks to maintain sufficient resources (*i.e.,* margin) to cover its credit exposures to its Netting Members and indirect participants fully with a high degree of confidence and uses backtesting to determine when a Netting Member or indirect participant's margin

[102] *See* AIMA Letter at 6 (stating that the requirement will have myriad negative effects on customers and market liquidity generally, and that, for a customer with multiple clearing relationships and multiple segregated accounts, the need to maintain at $1 million cash in each account will increase costs for customers and prevent them from utilizing that capital in more productive ways); Letter from Joanna Mallers, Secretary, Futures Industry of America, Principal Traders Group (Apr. 17, 2024) (''FIA PTG Letter I'') at 7; FIA PTG Letter II at 2–3; SIFMA AMG Letter at 8–9. In addition, one commenter stated that, with the proposed deletion of the requirement to be a qualified institutional buyer (''QIB'') to be a Sponsored Member, these market participants may not be able to afford the $1 million cash requirement because QIBs, by definition, manage more than $100 million in securities on a discretionary basis, so it follows that the $1 million minimum could represent a sizable portion of a non-QIB's assets, potentially disincentivizing the non-QIB from pursuing indirect access to FICC. [109] 15 U.S.C. 78q 1(b)(3)(I). Specifically, as discussed in greater detail in Section II.C and II.H below, the Proposed Rule Change is necessary and appropriate to further the policy goals under Rule 17Ad 22(e)(4)(i) and (e)(19). 17 CFR 240.17Ad 22(e)(4)(i) and (e)(19).

would have been insufficient to cover FICC's credit exposure to that Netting Member or indirect participant. As described in Section II.C.2 below, the impact studies conducted by FICC prior to and after implementation of the $1 million Netting Member minimum margin requirement demonstrate that a $1 million margin floor has a material impact on reducing the number of backtesting deficiencies experienced by FICC's Netting Members, thereby increasing the number of Netting Members for which FICC maintained sufficient coverage at a confidence level of at least 99 percent. Since FICC would only be able to use Segregated Customer Margin posted by an individual Segregated Indirect Participant to satisfy that customer's obligations, the Segregated Customer Margin posted by each individual Segregated Indirect Participant would need to be sufficient on its own to address losses arising from the Segregated Indirect Participant's position. Therefore, adding the proposed $1 million floor for Segregated Customer Margin should enable FICC to better manage its credit exposure to a Segregated Indirect Participant by ensuring FICC holds sufficient collateral to cover that exposure, reducing the likelihood that FICC or non-defaulting parties would incur losses resulting from a Segregated Indirect Participant default. Moreover, if the $1 million floor is cost prohibitive for certain indirect participants, they can continue to access FICC's services by submitting activity through a Sponsoring Member Omnibus Account or Agent Clearing Member Omnibus Account that is not segregated, since the proposed margin segregation regime is entirely voluntary.

Therefore, the Commission concludes that any competitive burden imposed by the Proposed Rule Change is necessary and appropriate in furtherance of the Exchange Act. Accordingly, the Commission finds that the Proposed Rule Change is consistent with the requirements of Section 17A(b)(3)(I) of the Exchange Act.[110]

A. Consistency With Rule 17ad–22(e)(4)(i)

Rule 17ad–22(e)(4)(i) requires that FICC establish, implement, maintain and enforce written policies and procedures reasonably designed to effectively identify, measure, monitor, and manage its credit exposures to participants and those arising from its payment, clearing, and settlement processes, including by maintaining sufficient financial resources to cover its credit exposure to each participant fully with a high degree of confidence.[111]

1. Separate Calculation and Collection of Margin for Proprietary and Customer Accounts

The proposed changes to require the separate and independent calculation and collection of margin for Netting Members' proprietary transactions and indirect participants' transactions, as described in Section I.B.1., are consistent with Rule 17ad–22(e)(4)(i).[112] The separate calculation and collection of margin from Netting Members and indirect participants should allow FICC to better identify and measure the unique risk profile of each participant, enhancing FICC's ability to calculate and collect the appropriate margin from each direct and indirect participant. As a result, the proposed changes should help ensure that FICC has sufficient margin to cover potential losses from a Netting Member or indirect participant default, thereby reducing the probability that FICC, non-defaulting Netting Members, or non-defaulting indirect participants would incur losses resulting from a default.

2. $1 Million Minimum Cash Margin Requirement

The proposed minimum $1 million cash margin requirement for each Segregated Indirect Participant Account, as described in Section I.B.2.a, is consistent with Rule 17ad–22(e)(4)(i). Several commenters state that FICC lacks a sufficient basis or justification for the required $1 million minimum margin amount.[113] Specifically, one commenter stated that using the amount applicable to Netting Members is not an appropriate basis for establishing a minimum for indirect participants, and also stated that the requirement lacks any support or analysis as to the level of margin attributable to a typical fund's positions in cleared Treasury repo, which is data FICC should have readily available.[114] An additional commenter stated the requirement seems arbitrary, and not practical or necessary, especially in the current done-with model, to force every segregated customer to be subject to the same minimum requirement as a Netting Member.[115]

In addition, commenters state that FICC should adopt a lower minimum requirement ($100,000 to $250,000), a dynamic minimum based on average exposure subject to a $250,000 cap, or a minimum set by the relevant Netting Member.[116] Commenters also state that FICC should determine a minimum deposit based on the individual client and the risk that such client presents to FICC and other market participants.[117]

In response, FICC states that the $1 million floor for Segregated Indirect Participants is the same floor FICC already has in place for its Netting Members.[118] FICC states that its impact study, conducted in 2022 when adopting the rule applicable to Netting Members, demonstrated that a $1 million floor would protect FICC and its participants from incurring a loss in the event of a Netting Member failure because the study indicated that a $1 million floor would provide an adequate buffer for additional repo activity due to increases in repo interest rates and would have mitigated 65 out of 396 backtesting deficiencies (16%) during the period from July 1, 2021 to June 30, 2022.[119] FICC further states that it analyzed alternative minimum margin amounts, such as $500,000, and, based on the results of its analysis, the $1 million floor provided the appropriate balance of improving backtesting performance and margin coverage while minimizing the impact on Netting Members.[120]

FICC also states that the backtesting data from the period after the $1 million minimum floor was implemented indicated a ''material reduction of backtesting deficiencies at FICC.'' [121] From December 5, 2022 to June 30, 2024, FICC states that the $1 million floor eliminated 24 backtesting deficiencies, a 12% reduction.[122] Further, during a period of 12-month period of moderate market volatility from July 1, 2023 to June 30, 2024, FICC states that the $1 million floor

The impact study contains an analysis of backtesting results on a member-by-member basis over a twelve-month period ending June 30, 2022, and it includes, for both the then-current rule and the proposed $1 million minimum rule, the number of backtesting deficiencies and the level of coverage obtained. It contains the same analysis for a $500,000 minimum as well, including the same data points on a member-by-member basis.

[119] *See* FICC Letter at 28.

[120] *Id.*

[121] *See* FICC Letter at 29.

[122] *Id.*

eliminated 15 backtesting deficiencies, a 22% reduction.[123]

FICC further states that the $1 million floor is appropriate because the Segregated Customer Margin posted by each individual Segregated Indirect Participant needs to be sufficient on its own to address losses arising from the Segregated Indirect Participant's positions.[124] This is because Segregated Customer Margin is not subject to loss mutualization under the proposal, so FICC can only use Segregated Customer Margin posted by an individual Segregated Indirect Participant to satisfy that customer's obligations. As a result, each Segregated Indirect Participant's portfolio would present a risk to FICC that is equivalent to the risk of a proprietary portfolio of an individual Netting Member.[125] If the Segregated Customer Margin is insufficient, losses would need to be mutualized, with harm to FICC, its non-defaulting Netting Members, and, potentially, the market as a whole.[126]

In addition, FICC stated that the risk cited by the Commission of inconsistent activity giving rise to dramatic changes in risk exposure, discussed by the Commission in the FICC–2022–006 Order,[127] is arguably more pronounced for indirect participants than for Netting Members.[128] First, indirect participants may clear through multiple Netting Members and shift their activity through different Netting Members, which can present risks to FICC since FICC cannot use the Segregated Customer Margin posted by the Segregated Indirect Participant through one Netting Member to address the Segregated Indirect Participant's transactions cleared by another Netting Member.[129] As a result, FICC states that, even if the Segregated Indirect Participant's overall activity remains steady, FICC could see dramatic shifts in its risk simply because the Segregated Indirect Participant shifts the Netting Members it uses as its intermediary at FICC.[130] Second, FICC states that it does not have the same general understanding of indirect participants' business that it has for its Netting Members, since it does not collect the same information on individual customers' business or finances that it does for its Netting Members.[131] As a result, FICC states that it is less likely to know when there may be significant swings in indirect participant risk exposures as it would for its Netting Members and, since indirect participants are likely to have a far more diverse array of business models and interest rate considerations than FICC's Netting Members, they could engage in inconsistent activity that could increase risk exposure to FICC.[132] According to FICC, the possibility of inconsistent activity among indirect participants is potentially greater.[133]

The Commission disagrees with commenters who stated that using the same minimum as Netting Members is not appropriate for Segregated Indirect Participants. As stated in Section I.A. above, FICC and non-defaulting Netting Members and indirect participants may be subject to losses should the Segregated Customer Margin of an indirect participant be insufficient to satisfy losses caused by the liquidation of that indirect participant's portfolio. This potential exposure both to FICC and non-defaulting Netting Members and indirect participants makes it essential that FICC determine margin amounts for Segregated Indirect Participant Accounts that are reasonably designed to ensure that FICC has sufficient margin to cover the losses of a defaulting Segregated Indirect Participant.

The analyses conducted by FICC both in connection with the 2022 change to the required minimum margin amount for Netting Members and after the implementation of that requirement, which the Commission has reviewed and analyzed, support the use of the $1 million margin requirement for Segregated Indirect Participant Accounts. The Commission agrees that these studies demonstrate that a $1 million margin floor has a material impact on reducing the number of backtesting deficiencies experienced by FICC's Netting Members, which would likely help FICC better manage its credit exposure to its Netting Members and indirect participants and credit exposures arising from its payment, clearing, and settlement processes.

Consideration of the appropriate Netting Member minimum is directly relevant to what is appropriate for Segregated Indirect Participant Accounts because FICC would treat such accounts the same as Netting Member accounts in the event of a default of that individual customer.[134] Even though a Segregated Indirect Participant would be the customer of a Sponsoring Member or an Agent Clearing Member, each Segregated Indirect Participant Account would need to provide sufficient margin to independently cover its losses in the event of a default. FICC will determine the appropriate margin for each Segregated Indirect Participant Account as if it were a separate Netting Member. As discussed above, indirect participants may increase risk by clearing through different Netting Members, which would provide FICC with less insight into their overall portfolio. Accordingly, it is appropriate for the minimum amount to be the same for both Netting Members and indirect participants.

In response to commenters who proposed an alternative amount or approach, the Commission also has reviewed and analyzed the analysis of alternative minimum amounts that FICC conducted, which show that there would still be potential for higher amounts of backtesting deficiencies using a $500,000 alternative minimum, making the alternatives proposed by commenters ($100,000, $250,000 or a dynamic minimum with a $250,000 cap) not reasonably designed to allow FICC to collect sufficient margin to cover its exposures. As discussed above, FICC's backtesting data from December 5, 2022 to June 30, 2024 indicates that increasing the minimum margin amount from $100,000 to $1 million eliminated 24 Netting Member backtesting deficiencies, a 12% reduction.[135] Further, during a 12-month period of moderate market volatility from July 1, 2023 to June 30, 2024, the $1 million floor eliminated 15 backtesting deficiencies, a 22% reduction.[136]

Because FICC is not able to predict how many indirect participants may elect to submit activity to FICC through a Segregated Indirect Participants Account or the size or volume of that activity, margin requirements for each Segregated Indirect Participant would be calculated in the same manner as for Netting Members.[137] FICC's impact studies of Netting Members provide a reasonable approximation of the risks FICC may face if the minimum margin amount is set below $1 million.

[134] This also makes the 2022 impact study relevant to this determination because FICC would calculate margin requirements for each Segregated Indirect Participant in the same manner as margin requirements for each Netting Member. The Commission reviewed and analyzed that impact study when approving the current minimum applicable to Netting Members, and the same analysis should apply here as well.

[135] *See* FICC Letter at 29.

[136] *Id.*

[137] *See* Notice of Filing, *supra* note 4, at 21595.

Therefore, the proposed $1 million floor is appropriate to increase the probability that the margin amount collected by FICC is sufficient to cover FICC's credit exposure to Segregated Indirect Participants and protect non-defaulting parties from experiencing losses. However, as described above in Section I.B.2.a., if FICC determines that a different minimum charge would be appropriate and consistent with achieving its backtesting coverage target, FICC would have the ability to adjust the minimum charge of $1 million margin requirement. This added flexibility should allow FICC to continue to collect the appropriate amount of margin to cover its credit exposure to each participant fully with a high degree of confidence, as demonstrated by FICC's meeting its backtesting coverage targets, while minimizing the burden on indirect participants.

Moreover, the Commission disagrees that allowing the Netting Member to determine a minimum would be appropriate. It is unclear what basis a Netting Member would use to determine such a minimum in a way that would ensure that the amount is sufficient to meet FICC's regulatory obligations and minimize backtesting deficiencies because a Netting Member would not be able to replicate FICC's backtesting or calculate FICC's regulatory obligations.

The Commission disagrees that determining a minimum deposit on a case-by-case basis would be feasible for every Segregated Indirect Participant. FICC has stated that it does not know how many Segregated Indirect Participants will participate in FICC. At this time, there are over 2500 Sponsored Members at FICC,[138] and it is likely that additional indirect participants will want to access clearing going forward in light of the Treasury Clearing rules. Determining a minimum for even half the current Sponsored Members on a case-by-case basis would be extremely burdensome for FICC and would require the submission of detailed financial information by each Sponsored Member to inform FICC of its planned business activities, and it is unclear how or on what basis such a minimum would be adjusted over time. Establishment of a minimum requirement is appropriate to ensure that FICC can meet its obligations under Rule 17ad–22(e)(4)(i), and reliance upon the minimum for Netting Members is appropriate because, as discussed above, FICC has to treat each Segregated Indirect Participant as a stand-alone account for risk management purposes to segregate its margin appropriately.

For these reasons, the $1 million minimum margin requirement should help ensure that FICC has sufficient margin to cover potential losses from a Segregated Indirect Participant default, thereby reducing the probability that FICC, non-defaulting Netting Members, and non-defaulting indirect participants would incur losses resulting from a default. Moreover, as described above in Section I.B.2.a., FICC would have the ability to adjust the amount of the minimum $1 million margin requirement if FICC determines that a different minimum charge would be appropriate and consistent with achieving its backtesting coverage target. The Commission agrees with FICC that it should continue to assess the performance of this minimum requirement with respect to FICC's backtesting coverage requirements, as it provided in the Amendment to this filing, to ensure that FICC is not collecting more margin than is necessary to meet its regulatory obligations to cover its exposure to its participants.[139] Although the Commission recognizes that FICC could use this ability to increase the $1 million minimum to some greater amount, it would only be able to do so if determines that a different minimum charge would be appropriate and consistent with achieving its backtesting coverage target.

3. Margin Component Schedule

The proposed changes in section I.B.3 regarding the calculation of margin for segregated and non-segregated accounts should ensure that FICC collects margin sufficient to cover its exposures with respect to both direct and indirect participants. Requiring that the margin requirement for a Segregated Indirect Participant Account be calculated in generally the same manner as a Netting Member's requirement, which the Commission has reviewed and approved as part of FICC's rules, should help ensure that FICC collects margin sufficient to cover its exposures with respect to both direct and indirect participants. By doing so, this portion of the Advance Notice should better ensure that, in the event of a Netting Member's or indirect participant's default, FICC has sufficient margin to cover potential losses from the default, thereby reducing the probability that FICC, non-defaulting Netting Members, and non-defaulting indirect participants would incur losses resulting from a default. Collecting the same margin components for a Segregated Indirect Participant Account as those used for a Netting Member Account is appropriate because FICC has to risk-manage each Segregated Indirect Participant Account individually, and application of the existing margin methodology would help ensure that FICC collects sufficient margin to cover its exposures to participants for all Accounts. FICC has, however, taken into account how the ECP should apply differently when determining a Segregated Customer Margin Requirement, which is appropriate for the reasons discussed in Section II.C.3 below, and the changes related to the ECP Charge would ensure that Segregated Indirect Participants are not required to post additional margin to account for the capital position of its Netting Member.

Accordingly, for the reasons discussed above, the Proposed Rule Change is reasonably designed to enable FICC to effectively identify, measure, monitor, and manage its credit exposure to Netting Members and indirect participants, consistent with Rule 17ad–22(e)(4)(i).[140]

B. Consistency With Rule 17ad–22(e)(6)(i)

Rule 17ad–22(e)(6)(i) requires FICC to establish, implement, maintain and enforce written policies and procedures reasonably designed to cover its credit exposures to its participants by establishing a risk-based margin system that, at a minimum, considers, and produces margin levels commensurate with, the risks and particular attributes of each relevant product, portfolio, and market, and, if the covered clearing agency provides central counterparty services for U.S. Treasury securities, calculates, collects, and holds margin amounts from a direct participant for its proprietary positions in Treasury securities separately and independently from margin calculated and collected from that direct participant in connection with U.S. Treasury securities transactions by an indirect participant that relies on the services provided by the direct participant to access the covered clearing agency's

[138] *See* GSD Member Directories, *available at https://www.dtcc.com/client-center/ficc-gov-directories.*

[139] One commenter states that FICC should not delay recalibration of the minimum margin requirement to a later date. MFA Letter II at 6–7. However, as the Commission discussed above, the minimum margin requirement is appropriate, based on the data available at this time. The Commission will continue to monitor implementation of this requirement going forward once more data regarding the use of segregated accounts is available.

[140] *See id.*

payment, clearing, or settlement facilities.[141]

1. Separation of Proprietary and Customer Margin

The proposed changes to separate proprietary and customer margin are consistent with Rule 17ad–22(e)(6)(i). First, to help ensure that proprietary transactions and transactions submitted to FICC on behalf of indirect participants are margined separately, FICC would require that each margin portfolio contain only transactions from the same account type and that Netting Members use separate Deposit IDs for different transaction types. Second, FICC would calculate each Segregated Indirect Participant's margin requirement separately on a gross basis as though each Segregated Indirect Participant were a separate Netting Member. Finally, FICC would create a separate ''Segregated Customer Margin Custody Account'' for each Netting Member that contains deposits of Segregated Customer Margin for indirect participants, with interest earned on cash margin paid to each Segregated Indirect Participant's Netting Member for the benefit of, and as an agent for, the Segregated Indirect Participant. Collectively, these proposed changes should ensure that a Netting Member's proprietary transactions are not netted with indirect participant transactions for margin calculations and that margin for indirect participant transactions is collected and held separately and independently from margin for a Netting Member's proprietary transactions. Moreover, by calculating each Segregated Indirect Participant's margin requirement separately from Netting Members and other Segregated Indirect Participants, the proposed changes should allow FICC to better isolate the risk profiles of individual indirect participants from Netting Members, which should help FICC better understand and monitor each individual participant's risk exposures.[142]

One commenter expressed concern that the proposal would not fully eliminate fellow customer risk because it would allow for the *pro rata* allocation of Current Net Settlement positions among Segregated Indirect Participant positions held in the same Segregated Indirect Participants Account.[143] In response, FICC explained that, due to the requirement in the Treasury Clearing Rules that margin for customer positions be calculated separately from margin for a Netting Member's proprietary positions, FICC would not be able to allocate the margin obligations from Current Net Settlement Positions to a Netting Member's portfolio.[144] As a result, such margin must be allocated to customer positions and FICC states that, when it is not aware of the allocation of Current Net Settlement Positions among customers, it is most equitable to allocate such positions *pro rata* to customers who were long or short the relevant securities.[145] The Commission agrees that allocating the positions to the Netting Member's account would be inconsistent with Rule 17ad–22(e)(6)(i) because it would impermissibly net proprietary transactions against indirect participant transactions. The Commission further agrees that the positions must be allocated to ensure that FICC is able to appropriately risk-manage those positions (that is, to collect appropriate margin). The Commission further agrees with FICC's approach of limiting such *pro rata* allocations only to customers engaging in non-Sponsored GC Trades because settlement failures do not occur with respect to Sponsored GC Trades. Therefore, in the event that the positions are not allocated, a *pro rata* allocation among customers is appropriate.

Accordingly, the proposed changes in the Proposed Rule Change would be consistent with Rule 17ad–22(e)(6)(i) because they should help ensure that FICC calculates, collects, and holds margin for a Netting Member's proprietary positions separately from the margin for positions the member clears for customers.[146]

5. Margin Component Schedule

The proposed changes to establish a Margin Component Schedule, which would consolidate the terms and information relating to margin calculation throughout the Rules into a single schedule, are consistent with Rule 17ad–22(e)(6)(i). Under the proposed Margin Component Schedule, FICC would perform substantially the same calculation it currently performs when determining a Netting Member's Required Fund Deposit and include the methodology for calculating a Netting Member's Segregated Customer Margin Requirement. By including a methodology to calculate each Segregated Indirect Participant's margin requirement separately from Netting Members and other Segregated Indirect Participants, the proposed changes should help ensure that FICC calculates, collects, and holds margin for a Netting Member's proprietary positions separately from the margin for positions the member clears for customers. Moreover, calculating margin requirements for each Segregated Indirect Participant should allow FICC to better isolate the risk profiles of individual indirect participants from Netting Members, which should help FICC better understand and monitor each individual participant's risk exposures and thereby collect margin commensurate with the risks of each Netting Member and indirect participant portfolio.

A commenter states that FICC should confirm that segregation of margin for indirect participants does not magnify risk for Netting Members. Specifically, the commenter states that it is not clear whether the Required Fund Deposit to be posted by Netting Members incorporates any exposure associated with Segregated Indirect Participant Accounts and expresses concern as to whether FICC's rules allow FICC to collect additional margin to cover any enhanced risk that may arise relating to the Netting Member's obligations to FICC for its clients who are indirect participants generally or who choose segregation specifically.[147] However, FICC's proposed rules establish that the calculation of a Netting Member's Required Fund Deposit excludes the exposure of its Segregated Indirect Participants.[148] FICC's rules do permit FICC to collect increased Required Fund Deposits from Netting Members if ''necessary to protect [FICC] and its Members from Legal Risk,'' which, FICC states, would include the consideration

[141] 17 CFR 240.17ad–22(e)(6)(i).

[142] Commenters requested clarification that FICC's funds-only settlement amounts are settlement payments rather than margin. *See* ISDA Letter at 6; Letter from Katherine Darras, General Counsel, International Swaps and Derivatives Association (July 18, 2024) (''ISDA Letter II'') at 6; SIFMA Letter at 4; Letter from Walt L. Lukken, President and Chief Executive Officer, Futures Industry of America (Apr. 18, 2024) (''FIA Letter'') at 11. The Proposed Rule Change does not make any amendments to the funds-only settlement process at FICC. *See* GSD Rule 13. This aspect of FICC's rules is, therefore, not relevant to this Proposed Rule Change. However, FICC clarified that it views such payments as constituting settlements that discharge outstanding payment obligations, rather than as margin or collateral. FICC Letter at 43. The Commission agrees with this clarification, based upon its knowledge of FICC's margin and payment flows and the applicable GSD Rules.

[145] *Id.*

[146] 17 CFR 240.17ad–22(e)(6)(i).

[147] ISDA Letter I at 7; ISDA Letter II at 6.

[148] *Compare* proposed Margin Component Schedule section 2 (regarding Required Fund Deposits) *with* section 3 (regarding Segregated Customer Margin).

of the Netting Members' indirect participants.[149]

This commenter also states the fact that the ability to prefund margin for a customer is only temporary puts pressure on the Netting Member's own Required Fund Deposits, which ''it seems would still cover the obligations of all its clients'' and also on the Netting Member and the broader FICC membership, in the event of a failure by any Segregated Indirect Participant.[150] However, the Netting Member's Required Fund Deposits would not be calculated based on the obligations of its clients, and, in the event of the default of an indirect participant, FICC would use the Segregated Customer Margin for only that indirect participant. Therefore, the Commission disagrees that the inability to permanently prefund the customer's margin requirement puts additional pressure on the Netting Member's own Required Fund Deposits.

Another commenter states that FICC should explain why it is appropriate to calculate a segregated customer's margin requirement as if it were a Netting Member, even though the margin calculation for FICC Netting Members covers both initial margin and guaranty fund contributions (and customers are not expected to be contributing to the guaranty fund).[151] However, FICC does not maintain a separate guaranty fund into which a Netting Member contributes for its customers. The Segregated Customer Margin Requirement must be sufficient to cover the exposures to FICC arising from that particular customer's activity because, under the segregation system proposed by the Proposed Rule Change which would allow broker-dealers participating in FICC to comply with the conditions of Note H to Rule 15c3–3, FICC would not be able to use the margin collected from a Segregated Indirect Participant for any reason unrelated to the Segregated Indirect Participant. Therefore, calculating each Segregated Customer Margin Requirement in this manner is appropriate to ensure that FICC has appropriate resources to cover each customer's exposures. Therefore, this aspect of the Proposed Rule Change is consistent with Rule 17ad–22(e)(6)(i) under the Exchange Act.

6. Excess Capital Premium

The proposed changes to the calculation of the ECP charge are consistent with Rule 17ad–22(e)(6)(i). FICC's margin deposits are made up of risk-based components (as margin) that are calculated and assessed daily to limit FICC's exposures to Netting Members. FICC's proposed changes to use clearly defined sources in the calculation of the ECP charge would collectively make the calculation clearer and more predictable to Netting Members, while continuing to apply an appropriate risk-based charge designed to mitigate the risks presented to FICC. Similarly, the proposal to cap the Excess Capital Ratio at 2.0 would allow FICC to appropriately address the risks it faces without imposing an overly burdensome ECP and would reduce the circumstances in which FICC may waive the charge, resulting in a more transparent margining methodology. Finally, the proposed rule change would clarify the exigent circumstances under which FICC may determine that it is appropriate to waive the ECP charge. Overall, these proposed changes would improve the effectiveness of the calculation of the ECP and, therefore, allow FICC to more effectively address the increased default risks presented by Netting Members that operate with lower capital levels relative to their margin requirements.

In addition, FICC proposes to exclude VaR Charges for Segregated Indirect Participants Accounts when determining a Netting Member's Excess Capital Differential, in order to take into account the fact that each indirect participant would be responsible for satisfying its own respective VaR Charge. Not including these Segregated Indirect Participants Accounts when determining the Excess Capital Differential, and, therefore, the ECP Charge, is consistent with the purpose of the Excess Premium Charge. This charge is designed to address the risk that a Netting Member with low capital relative to its value-at-risk to FICC is not able to perform its obligations. Because the Netting Member's capital is not used to meet the indirect participant's obligation to FICC, excluding the indirect participant VaR Charges from the determination of the ECP should result in FICC collecting margin commensurate with the risks and particular attributes of each relevant portfolio.

Taken together, the proposed changes enhance the ability of the ECP to produce margin levels commensurate with the risks FICC faces related to its Netting Members' operating capital levels. Therefore, this aspect of the Proposed Rule Change is consistent with Rule 17ad–22(e)(6)(i) under the Exchange Act.

C. Consistency With Rule 17ad–22(e)(6)(iii)

Rule 17ad–22(e)(6)(iii) requires that FICC establish, implement, maintain and enforce written policies and procedures reasonably designed to cover its credit exposures to its participants by establishing a risk-based margin system that, at a minimum, calculates margin sufficient to cover its potential future exposure to members in the interval between the last margin collection and the close out of positions following a member default.[152]

As summarized in Section I.B.3 above, FICC employs daily backtesting to determine the adequacy of each Netting Member's Required Fund Deposit, paying particular attention to members that have backtesting deficiencies below the 99% confidence target. Such backtesting deficiencies highlight exposure that could subject FICC to potential losses if a Netting Member defaults. As discussed in Section II.C.2, FICC's impact study during the period from July 1, 2021 to June 30, 2022 demonstrated that a $1 million floor would have protected FICC and its participants by reducing the possibility of incurring a loss in the event of a Netting Member failure by mitigating 16% of backtesting deficiencies.[153] Moreover, after the $1 million floor was implemented for Netting Members, FICC states that it eliminated 22% of backtesting deficiencies during a 12-month period of moderate market volatility from July 1, 2023 to June 30, 2024.[154]

Therefore, adding the proposed $1 million minimum requirement for Segregated Customer Margin, and the ability to adjust the minimum million margin requirement to achieve FICC's backtesting coverage target, should better ensure that FICC maintains sufficient margin to cover its potential future exposure to its indirect participants in the interval between the last margin collection and the close out of positions following an indirect participant default. This should, thereby, reduce the likelihood FICC or non-defaulting Netting Members or indirect participants would incur losses as a result. Accordingly, FICC's proposed $1 million minimum requirement for Segregated Customer

[152] 17 CFR 240.17ad–22(e)(6)(iii).

[153] *See* FICC Letter at 28.

[154] *Id.*

Margin would be consistent with Rule 17ad–22(e)(6)(iii).[155]

D. Consistency With Rule 17ad–22(e)(18)(ii)

Rule 17ad–22(e)(18)(ii) requires that FICC establish, implement, maintain and enforce written policies and procedures reasonably designed to establish objective, risk-based, and publicly disclosed criteria for participation, which require participants to have sufficient financial resources and robust operational capacity to meet obligations arising from participation in the clearing agency.[156] The proposed changes to consolidate FICC's margin methodology in a single location, identify the particular Required Fund Deposit Portions and Segregated Customer Margin Requirements, and clarify the calculation of the Excess Capital Premium and circumstances in which FICC would waive the application of such premium should enhance FICC's public disclosure of the risk-based margin obligations that Netting Members and their indirect participants would have as a result of their participation in FICC's clearance and settlement services. This improved public disclosure should allow Netting Members and their indirect participants to better understand how their activity would impact margin calculations, which are designed to ensure that participants have sufficient financial resources and robust operational capacity to meet obligations to FICC. Accordingly, the proposed changes would be consistent with Rule 17ad–22(e)(18)(ii).[157]

E. Consistency With Rule 17ad–22(e)(18)(iii)

Rule 17ad–22(e)(18)(iii) requires that FICC establish, implement, maintain and enforce written policies and procedures reasonably designed to establish objective, risk-based, and publicly disclosed criteria for participation, which monitor compliance with its participant requirements on an ongoing basis.[158] The proposed changes would require Netting Members to designate the specific account type when submitting transactions and to identify any Sponsored Member or Executing Firm Customer for whom the transaction is submitted. These changes should enhance FICC's ability to monitor which transactions are being entered into by which entities and assess the specific risks associated with those entities. This enhanced monitoring of participant activity should allow FICC to better monitor participants' compliance with FICC's Rules. Accordingly, the proposed changes would be consistent with Rule 17ad–22(e)(18)(iii) because they should enhance FICC's ability to monitor compliance with its participant requirements on an ongoing basis.[159]

F. Consistency With Rule 17ad–22(e)(18)(iv)(C)

Rule 17ad–22(e)(18)(iv)(C) requires that FICC establish, implement, maintain and enforce written policies and procedures reasonably designed to ensure that it has appropriate means to facilitate access to clearance and settlement services of all eligible secondary market transactions in U.S. Treasury securities, including those of indirect participants.[160]

As discussed above in Section II.B.3, by improving the transparency of FICC's account offerings and margin calculation methodology, the proposed changes should enhance market participants' understanding of how margin is calculated and their options for posting margin, thereby facilitating access to FICC's clearance and settlement services. In addition, the proposed changes should offer greater optionality to Netting Members and indirect participants, which should allow Netting Members and indirect participants to adopt a margining arrangement that aligns with their business objectives and regulatory, operational, and practical constraints. By enhancing transparency of FICC's margin framework and account options and offering greater optionality to participants concerning the type of account they transact in and how their margin is posted, the proposal should facilitate access to FICC's clearance and settlement systems.

Several commenters proposed that FICC should require Netting Members to offer account segregation to customers.[161] One such commenter specified that this should include bank Netting Members, who would not face the same restrictions on the use of customer margin as broker-dealer customers subject to Rule 15c3–3 and therefore may not be as incentivized to provide segregated account services.[162]

FICC did not propose a requirement that its Netting Members offer segregated accounts to their customers. Therefore, the Commission is not addressing any changes related to such a requirement in this Proposed Rule Change. Nothing in the Treasury Clearing Rules or Rule 15c3–3 requires a covered clearing agency, like FICC, to require its Netting Members to provide certain services. Moreover, certain Netting Members may have regulatory or other reasons not to offer segregation, and, if required to offer such services, may choose to cease providing customer clearing services, which could, in turn, increase concentration in the market and reduce liquidity.[163] Any such requirement could constitute a burden on competition that would not be permissible under Section 17A(b)(3)(I) of the Exchange Act.

Additionally, a commenter urged FICC to allow indirect participants to post margin directly to FICC without intermediation from a Netting Member.[164] The Treasury Clearing Rules do not require FICC to provide this function, and FICC did not propose such a method for direct posting of margin.[165] Accordingly, the Commission is not addressing any changes related to such a requirement in this Proposed Rule Change.

One commenter sought clarification whether Netting Members other than broker-dealers can elect segregation for their customers.[166] Based on the Proposed Rule Change, the Commission understands, and FICC confirmed,[167] that any Sponsoring Member or Agent Clearing Member, regardless of whether registered as broker-dealers, would be able to designate an account as a Segregated Indirect Participants Account.

The same commenter also sought clarification whether a customer may segregate margin obtained through a margin financing arrangement.[168] Based

[155] 17 CFR 240.17ad–22(e)(6)(iii).

[156] 17 CFR 240.17ad–22(e)(4)(18)(ii).

[157] *Id.*

[158] 17 CFR 240.17ad–22(e)(18)(iii).

[159] 17 CFR 240.17ad–22(e)(18)(iii).

[160] 17 CFR 240.17ad–22(e)(18)(iv)(C).

[161] Specifically, one commenter stated that for indirect participants, having a ''right'' to direct their Netting Member to segregate their margin is highly desirable because it would allow an indirect participant to have certainty that margin that it posts receives the protection afforded by segregation. SIFMA AMG Letter at 6. Another such commenter stated that, despite what a customer may desire with respect to margin and segregation, there could be incentives for direct participants to finance the margin for their customers' transactions (and thereby earn extra fees for doing so) instead of the customer financing or posting that margin, and for the direct participant to accept the customer's margin without offering the option of segregation (and thereby avoid the additional operational and other costs associated with segregation), which would still be permissible if FICC were not to require its Netting Members to offer account segregation. MFA Letter I at 4.

[162] SIFMA AMG Letter at 6.

[163] FICC Letter at 33.

[164] *See* ICI Letter at 13.

[165] *See supra* note 3 at 2751.

[166] FIA–PTG Letter at 7–9.

[167] FICC Letter at 39.

[168] FIA–PTG Letter at 7–9.

on the Proposed Rule Change, the Commission understands, and FICC confirmed,[169] that such segregation would be permissible under FICC's rules.

This commenter also asked why excess margin would only be returned on request and states that an indirect participant should not have to request a return of its excess margin.[170] The Treasury Clearing Rules do not require FICC to provide this function, and FICC did not propose such a function. Accordingly, the Commission is not addressing any changes related to such a requirement in this Proposed Rule Change. Moreover, when it adopted the amendments to Rule 15c3–3, the Commission declined to adopt a requirement to ''push'' excess margin to direct participants.[171]

Another commenter suggested that FICC allow customer margin to be segregated, even when customers do not post the full amount of the margin needed to cover their positions.[172] FICC states that allowing customer margin to be segregated when customers do not post the full amount of margin would lead to disparities that would put broker-dealer Netting Members at competitive disadvantage to other Netting Members.[173] The Treasury Clearing Rules do not require FICC to provide this function, and FICC did not propose such a function. Any changes to FICC's rules to impose such a requirement would have to be filed with the Commission pursuant to Section 19(b)[174] of the Exchange Act, as well as, potentially, in an advance notice filed pursuant to Section 806(e) of the Clearing Supervision Act.[175] Therefore, the Commission is not addressing any changes related to such a requirement in this Proposed Rule Change.

Finally, one commenter urged FICC to address the cross-border implications of the proposal and provide a framework for compliance by non-U.S. Netting Members and indirect participants.[176] Specifically, this commenter was concerned that the U.S. Treasury clearing mandate will adversely impact foreign customers that are limited in their ability, or prohibited entirely, to post margin in connection with transactions involving U.S. Treasury securities.[177] However, nothing in the Proposed Rule Change would require a particular market participant to post margin in connection with transactions involving U.S. Treasury securities. Indirect participants remain able to access FICC's central clearing services through access models that do not require the direct posting of margin to FICC (*e.g.,* via the non-segregated versions of FICC's Sponsored and Agent Clearing Services), which should allow flexibility for market participants to determine the most effective way to access FICC indirectly regardless of potential regulatory or other constraints on the ability to post margin directly.

Accordingly, the proposed changes would be consistent with Rule 17ad–22(e)(18)(iv)(C).[178]

G. Consistency With Rule 17ad–22(e)(19)

Rule 17ad–22(e)(19) requires that FICC establish, implement, maintain and enforce written policies and procedures reasonably designed to identify, monitor, and manage the material risks to the covered clearing agency arising from arrangements in which firms that are indirect participants in FICC rely on the services provided by direct participants to access FICC's clearance and settlement facilities.[179] The proposed changes described in Section I.B.1 would require that each margin portfolio contains only transactions from the same account type, Netting Members use separate Deposit IDs for different transaction types, each Segregated Indirect Participant's margin requirement be calculated separately on a gross basis as though each Segregated Indirect Participant were a separate Netting Member, and Segregated Customer Margin for each indirect participant be deposited into a separate interest-earning Segregated Customer Margin Custody Account. These changes should enhance FICC's ability to isolate the risk profiles of individual indirect participants from Netting Members, which should help FICC better understand and monitor each individual participant's risk exposures. In addition, the calculation and collection of Segregated Customer Margin on a gross basis, as described in Section I.B.1 and 1.B.2, and the establishment of a $1 million cash floor for Segregated Customer Margin, as described in Section I.B.2.a, should help ensure that FICC will have sufficient margin to manage the risk to FICC during an indirect participant default.

Accordingly, the proposed changes would be consistent with Rule 17ad–22(e)(19) because they should enhance FICC's ability to identify, monitor, and manage the material risks to FICC associated with indirect participants relying on Netting Members to access FICC's clearance and settlement services.[180]

H. Consistency With Rule 17ad–22(e)(23)(ii)

Rule 17ad–22(e)(23)(ii) requires that FICC establish, implement, maintain and enforce written policies and procedures providing sufficient information to enable participants to identify and evaluate the risks, fees, and other material costs they incur by participating in FICC.[181] The proposed changes described in Section I.B.3 to consolidate and clarify FICC's margin calculation methodology in the proposed Margin Component Schedule, adopt a method for allocating net unsettled positions to individual indirect participants for purposes of calculating margin requirements and to clarify the calculation of the ECP should make it easier for both Netting Members and indirect participants to identify and price the potential margining costs

[169] FICC Letter at 40.

[170] *See* FIA PTG Letter I at 7–9.

[171] *See* Treasury Clearing Adopting Release, *supra* note 3, at 2767 (removing, in response to commenters, the requirement that the covered clearing agency have procedures to return customer position margin to the broker-dealer that is no longer needed to meet a current margin requirement resulting from positions in U.S. Treasury securities of the broker-dealer's customers no later than the close of the next business day after the day the customer position margin is no longer needed for this purpose because such a requirement may add significant operational burdens to covered clearing agencies for U.S. Treasury securities and because the debit is limited to margin required and on deposit at the covered clearing agency and therefore does not include the excess margin).

[172] *See* MFA Letter I at 6.

[173] *See* FICC Letter at 32. Specifically, FICC stated that the Treasury Clearing Rules, in particular the amendments to Exchange Act Rule 15c3–3a, provide that a broker-dealer may record a debit in the customer and PAB reserve formulas for margin it collects from customers and on-posts to FICC, but only if the broker-dealer collects from the customer the full amount of margin required for the customer's positions. Accordingly, a broker-dealer is effectively precluded from collecting from customers only a portion of the margin that their positions require and on-posting that amount to FICC. Were FICC to allow segregation of customer margin even if the customer did not fully fund its margin obligations, such segregation would effectively allow non-broker-dealer Netting Members to offer what broker-dealers cannot, *i.e.,* permitting their customers to post a portion of the margin required by FICC and on-post that margin to FICC. This ability would place such Netting Members at a competitive advantage relative to broker-dealer Netting Members.

associated with how each chooses to submit transactions to FICC for clearance and settlement.

Accordingly, the proposed changes would be consistent with Rule 17ad–22(e)(23)(ii) because they should enhance the ability of Netting Members and indirect participants to identify and evaluate the costs to access FICC's clearance and settlement services.[182]

I. Other Comments Received

Commenters submitted several comments that were not related to the Proposed Rule Change. Commenters stated that FICC should publish a roadmap and/or expedite their plans with the Chicago Mercantile Exchange (''CME'') for expanding their cross-margining framework.[183] The Proposed Rule Change does not address the cross-margining agreement between FICC and CME. The current cross-margining agreement between FICC and CME is part of FICC's rulebook, and therefore any changes to the agreement would have to be filed with the Commission pursuant to Section 19(b) [184] of the Exchange Act.[185] Therefore, the Commission cannot approve or disapprove any changes related to the cross-margining agreement at this time. Cross-margining is not required by the recently adopted Treasury Clearing Rules.

However, the Commission historically has supported and approved cross-margining at clearing agencies and recognizes the potential benefits of cross-margining systems, which include freeing capital through reduced margin requirements, reducing clearing costs by integrating clearing functions, reducing clearing agency risk by centralizing asset management, and harmonizing liquidation procedures.[186] The Commission continues to believe that market participants can benefit from cross-margining arrangements and encourages U.S. Treasury CCAs to consider the potential of such benefits. FICC states, in its response letter regarding the Proposed Rule Change, that it is actively pursuing an end-user level cross-margining arrangement with CME. The Commission would consider any proposal arising from such pursuit in due course, if such a proposal were to be filed with the Commission.

Several commenters requested that FICC provide a legal analysis on the enforceability of the proposed changes, including the protection of segregated customer margin in the event of a Netting Member default.[187] In response, FICC states that it has prepared an analysis on the treatment of Segregated Customer Margin in the event of a FICC or Netting Member insolvency and that this analysis confirmed that, as long as customers and their Netting Members make clear that their relationship is a custodial one, Segregated Customer Margin would be reserved for customers and would not form part of FICC's or the Netting Member's general estate upon either institution's insolvency.[188] FICC states that it has made this analysis available to indirect participants upon request on a non-reliance basis.[189] This analysis addresses the commenters' request, and the Commission does not believe that any further action is necessary to respond to the commenters, who can use this analysis to inform their consideration whether to utilize a segregated account.

IV. Conclusion

On the basis of the foregoing, the Commission finds that the Proposed Rule Change is consistent with the requirements of the Exchange Act and in particular with the requirements of Section 17A of the Exchange Act [190] and the rules and regulations promulgated thereunder.

It is therefore ordered, pursuant to Section 19(b)(2) of the Exchange Act [191] that proposed rule change SR–FICC–2024–007, be, and hereby is, APPROVED.[192]

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[193]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–101687; File No. SR–ISE–2024–52]

Self-Regulatory Organizations; Nasdaq ISE, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Its Fees for Connectivity and Co-Location Services

November 21, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 8, 2024, Nasdaq ISE, LLC (''ISE'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Exchange's fees for connectivity and co-location services, as described further below.

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/ise/rules,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to amend the Exchange's fees relating to connectivity and co-location

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

services.[3] Specifically, the Exchange proposes to raise its fees for connectivity and co-location services in General 8 as well as certain fees related to its Testing Facilities in Options 7, Section 8 by 10%, with certain exceptions.

General 8, Section 1 includes the Exchange's fees that relate to connectivity, including fees for cabinets, external telco/inter-cabinet connectivity fees, fees for connectivity to the Exchange, fees for connectivity to third party services, fees for market data connectivity, fees for cabinet power install, and fees for additional charges and services. General 8, Section 2 includes the Exchange's fees for direct connectivity services, including fees for direct circuit connection to the Exchange, fees for direct circuit connection to third party services, and fees for point of presence connectivity. With the exception of the Exchange's GPS Antenna fees and the Cabinet Proximity Option Fee for cabinets with power density >10kW,[4] the Exchange proposes to increase its fees throughout General 8 by 10%.

In addition to increasing fees in General 8, the Exchange also proposes to increase certain fees in Options 7, Section 8, which relate to the Testing Facility. Options 7, Section 8(I) provides that subscribers to the Testing Facility located in Carteret, New Jersey shall pay a fee of $1,000 per hand-off, per month for connection to the Testing Facility. The hand-off fee includes either a 1Gb or 10Gb switch port and a cross connect to the Testing Facility. In addition, Options 7, Section 8(I) provides that subscribers shall also pay a one-time installation fee of $1,000 per hand-off. The Exchange proposes to increase these aforementioned fees by 10% to require that subscribers to the Testing Facility shall pay a fee of $1,100 per hand-off, per month for connection to the Testing Facility and a one-time installation fee of $1,100 per hand-off.

The proposed increases in fees would enable the Exchange to maintain and improve its market technology and services to remain competitive with its peers. Over the years, customer demand for more sophisticated, higher-throughput, lower-latency, and higher-power connectivity solutions has increased. The Exchange continues to invest in maintaining, improving, and enhancing its connectivity and co-location products, services, and facilities—for the benefit and often at the behest of its customers. Such enhancements include refreshing hardware and expanding Nasdaq's existing co-location facility to offer customers additional space and power. Nevertheless, and with the exception of fees that were established as part of a new service in 2017 (and have remained unchanged since their adoption), the Exchange has not increased any of the fees included in the proposal since prior to 2017, and many of the fees date back to between 2010 and 2014. For each of the connectivity products and services that pre-date 2017, inflation (as measured using the ''Data PPI'' metric described below) has been between roughly 15–17%, and in no instance has such inflation been less than 10%. Nevertheless, the Exchange proposes to increase its fees only with respect to the 10% inflation that has occurred since 2017.

As discussed below, the Exchange proposes to adjust its fees by an industry- and product-specific inflationary measure. It is reasonable and consistent with the Act for the Exchange to recoup its investments, at least in part, by adjusting its fees. Continuing to operate at fees frozen at 2010–2017 levels impacts the Exchange's ability to enhance its offerings and the interests of market participants and investors.

The fee increases the Exchange proposes are based on an industry-specific Producer Price Index (''PPI''), which is a tailored measure of inflation.[5] As a general matter, the Producer Price Index is a family of indexes that measures the average change over time in selling prices received by domestic producers of goods and services. PPI measures price change from the perspective of the seller. This contrasts with other metrics, such as the Consumer Price Index (''CPI''), that measure price change from the purchaser's perspective.[6] About 10,000 PPIs for individual products and groups of products are tracked and released each month.[7] PPIs are available for the output of nearly all industries in the goods-producing sectors of the U.S. economy—mining, manufacturing, agriculture, fishing, and forestry—as well as natural gas, electricity, and construction, among others. The PPI program covers approximately 69 percent of the service sector's output, as measured by revenue reported in the 2017 Economic Census.

For purposes of this proposal, the relevant industry-specific PPI is the Data Processing and Related Services PPI (''Data PPI''), which is an industry net-output PPI that measures the average change in selling prices received by companies that provide data processing services.

The Data PPI was introduced in January 2002 by the Bureau of Labor Statistics (''BLS'') as part of an ongoing effort to expand Producer Price Index coverage of the services sector of the U.S. economy and is identified as NAICS—518210 in the North American Industry Classification System.[8] According to the BLS ''[t]he primary output of NAICS 518210 is the provision of electronic data processing services. In the broadest sense, computer services companies help their customers efficiently use technology. The processing services market consists of vendors who use their own computer systems—often utilizing proprietary software—to process customers' transactions and data. Companies that offer processing services collect, organize, and store a customer's transactions and other data for record-keeping purposes. Price movements for the NAICS 518210 index are based on changes in the revenue received by companies that provide data processing services. Each month, companies provide net transaction prices for a specified service. The transaction is an actual contract selected by probability, where the price-determining characteristics are held constant while the service is repriced. The prices used in index calculation are the actual

[3] The Exchange initially filed the proposed pricing change on March 1, 2024 (SR–ISE–2024–09). On April 29, 2024, the Exchange withdrew that filing and submitted SR–ISE–2024–16. The Exchange withdrew that filing on June 27, 2024 and replaced it with SR–ISE–2024–23. The Exchange withdrew SR–ISE–2024–23 and replaced it with SR–ISE–2024–44 on September 10, 2024. On October 11, 2024, the Exchange replaced SR–ISE–2024–44 with SR–ISE–2024–50. The instant filing replaces SR–ISE–2024–50.

[4] The Exchange proposes to exclude the GPS Antenna fees from the proposed fee increase because, unlike the other fees in General 8, the Exchange recently increased its GPS Antenna fees. *See* Securities Exchange Act Release No. 34–99131 (December 11, 2023), 88 FR 86979 (December 15, 2023) (SR–ISE–2023–33). The Exchange also proposes to exclude the Cabinet Proximity Option Fee for cabinets with power density >10kW from the proposed fee increase because the Exchange recently established such fee. *See* Securities Exchange Act Release No. 34–100209 (May 22, 2024), 89 FR 46512 (May 29, 2024) (SR–ISE–2024–19). Similarly, the Exchange proposes to exclude from the proposed fee increase those fees that the Exchange recently established for services in its new NY11–4 expansion facility. *See* Securities Exchange Act Release No. 34–101266 (October 7, 2024), 89 FR 82654 (October 11, 2024) (SR–ISE–2024–47).

[5] *See https://fred.stlouisfed.org/series/PCU51825182#0.*

[6] *See https://www.bls.gov/ppi/overview.htm.*

[7] *See Id.*

[8] *NAICS appears in table 5 of the PPI Detailed Report and is available at https://data.bls.gov/timeseries/PCU518210518210.*

prices billed for the selected service contract.'' [9]

The Exchange believes the Data PPI is an appropriate measure to be considered in the context of the proposed rule change to modify the fee for its connectivity products because the Exchange uses its ''own computer systems'' and ''proprietary software,'' *i.e.,* its own data center and proprietary matching engine software, respectively, to collect, organize, store and report customers' transactions in U.S. equity securities on the Exchange's proprietary trading platform. In other words, the Exchange is in the business of data processing and related services.

For purposes of this proposed rule change, the Exchange examined the Data PPI value for the period from January 2017 to August 2024. The Data PPI had a starting value of 105.6 in January 2017 and an ending value of 116.022 in August 2024, a 10.422% increase. This indicates that companies who are also in the data storage and processing business have generally increased prices for a specified service covered under NAICS 518210 by an average of 10.422% during this period. Based on that percentage change, the Exchange proposes to make a one-time fee increase of only 10%, which reflects an increase covering roughly the entire period since the last price adjustments to these fees were made.

The Exchange further believes the Data PPI is an appropriate measure for purposes of the proposed rule change on the basis that it is a stable metric with limited volatility, unlike other consumer-side inflation metrics. In fact, the Data PPI has not experienced a greater than 2.16% increase for any one calendar year period since Data PPI was introduced into the PPI in January 2002. The average calendar year change from January 2002 to December 2023 was .62%, with a cumulative increase of 15.67% over this 21-year period. The Exchange believes the Data PPI is considerably less volatile than other inflation metrics such as CPI, which has had individual calendar-year increases of more than 6.5%, and a cumulative increase of over 73% over the same period.[10]

The Exchange believes the Data PPI, and significant investments into, and enhanced performance of, the Exchange support the reasonableness of the proposed fee increases.[11]

These proposed fee increases will be immediately effective upon filing. However, going forward and until December 1, 2024, the Exchange will waive all fees set forth herein to the extent that such fees exceed the levels that would have been charged for the same products and services purchased during that time period, had such fees been calculated at the rates set forth in SR–ISE–2024–44 (*i.e.,* pricing reflective of a 5.5% increase from prior fee levels). This waiver is reasonable, equitable, and not unfairly discriminatory because it will afford all customers in excess of the 30-day prior notice period for fee changes set forth in the Exchange's service terms.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[12] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[13] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

This belief is based on two factors. First, the current fees do not properly reflect the quality of the services and products, as fees for the services and products in question have been static in nominal terms, and therefore falling in real terms due to inflation. Second, the Exchange believes that investments made in enhancing the capacity and speed of Exchange systems increase the performance of the services and products.

The Proposed Rule Change Is Reasonable

As noted above, the Exchange has not increased any of the fees included in the proposal since 2017 or earlier. However, in the years following the last fee increases, the Exchange has made significant investments in upgrades to its connectivity products, services, and facilities, enhancing the quality of its services. In other words, Exchange customers have greatly benefitted, while the Exchange's ability to recoup its investments has been hampered. Between 2017 and 2024, the inflation rate is 3.64% per year, on average, producing a cumulative inflation rate of 28.43%.[14] Using the more targeted inflation number of Data PPI, the cumulative inflation rate was 10.422%. The exchange believes the Data PPI is a reasonable metric to base this fee increase on because it is targeted to producer-side increases in the data processing industry.

Notwithstanding inflation, as noted above, the Exchange has not increased its fees at all for over seven years for the subject services. The proposed fee changes represent a modest increase from the current fees. The Exchange believes the proposed fee increase is reasonable in light of the Exchange's continued expenditure in maintaining a robust technology ecosystem. Furthermore, the Exchange continues to invest in maintaining and enhancing its connectivity products—for the benefit and often at the behest of its customers and global investors. Such enhancements include refreshing all aspects of the technology ecosystem including software, hardware, and network while introducing new and innovative products and expanded and modernized facilities.[15] The goal of the enhancements discussed above, among other things, is to provide faster, higher-capacity, and more modern connectivity products and services. Accordingly, the Exchange continues to expend resources to innovate and modernize technology so that it may benefit its members in offering its connectivity products and services.

The Proposed Fees Are Equitably Allocated and Not Unfairly Discriminatory

The Exchange believes that the proposed fee increases are equitably allocated and not unfairly discriminatory because they would apply to all market participants that choose to purchase connectivity products and services from the Exchange. Any participant that chooses to purchase the Exchange's connectivity products and services would be subject to the same Fee Schedule, regardless of what type of business they operate or

[9] *See https://www.bls.gov/ppi/factsheets/producer-price-index-for-the-data-processing-and-related-servicesindustry-naics-518210.htm.*

[11] *See supra* discussion of connectivity product and facility improvements. Additionally, other exchanges have filed for increases in certain fees, based in part on comparisons to inflation. See, *e.g.,* Securities Exchange Act Release Nos. 34–100004 (April 22, 2024), 89 FR 32465 (April 26, 2024) (SR–CboeBYX–2024–012); and 34–100398 (June 21, 2024), 89 FR 53676 (June 27, 2024) (SR–BOX–2024–16)l; Securities Exchange Act Release No. 34–100994 (September 10, 2024), 89 FR 75612 (September 16, 2024) (SR–NYSEARCA–2024–79).

[12] 15 U.S.C. 78f(b).

[13] 15 U.S.C. 78f(b)(4) and (5).

[14] *See https://www.officialdata.org/us/inflation/2017?amount=1.*

[15] *See, e.g.,* Securities Exchange Act Release No.34–101076 (September 18, 2024), 89 FR 77951(September 24, 2024) (SR–ISE–2024–45 (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Expand [the Exchange's] Co-Location Services).

the use they plan to make use of the products and services. Additionally, the fee increase would be applied uniformly to market participants without regard to Exchange membership status or the extent of any other business with the Exchange or affiliated entities. The Exchange also believes that the proposal represents an equitable allocation of reasonable dues, fees and other charges because Exchange fees have fallen in real terms during the relevant period. Finally, the Exchange believes that the proposed fee changes are not unfairly discriminatory because the fees would be assessed uniformly across all market participants, in the same manner they are today, that voluntarily purchase the Exchange's connectivity products and services, which would remain available for purchase by all market participants.

These proposed fee increases will be immediately effective upon filing. However, going forward and until December 1, 2024, the Exchange will waive all fees set forth herein to the extent that such fees exceed the levels that would have been charged for the same products and services purchased during that time period, had such fees been calculated at the rates set forth in SR–ISE–2024–44 (*i.e.,* pricing reflective of a 5.5% increase from prior fee levels). This waiver is reasonable, equitable, and not unfairly discriminatory because it will afford all customers in excess of the 30-day prior notice period for fee changes set forth in the Exchange's service terms.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed fees will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intramarket Competition

The Exchange believes that the proposed fees do not put any market participants at a relative disadvantage compared to other market participants. As noted above, the fee schedule would continue to apply to all purchasers of the Exchange's connectivity products and services in the same manner as it does today albeit at inflation-adjusted rates for certain fees, and customers may choose whether to purchase these products and services at all. The Exchange also believes that the level of the proposed fees neither favor nor penalize one or more categories of market participants in a manner that would impose an undue burden on competition. Likewise, the proposed fee waiver described above will apply to all purchasers of the Exchange's connectivity products and services in the same manner and therefore will not burden competition among them.

Intermarket Competition

The Exchange believes that the proposed fees do not impose a burden on competition or on other SROs that is not necessary or appropriate. In determining the proposed fees, the Exchange utilized an objective and stable metric with limited volatility. Utilizing Data PPI over a specified period of time is a reasonable means of recouping the Exchange's investment in maintaining and enhancing its connectivity products, services, and facilities. The Exchange believes utilizing Data PPI, a tailored measure of inflation, to increase certain fees for connectivity products and services to recoup the Exchange's investment in maintaining and enhancing such products, services, and its facilities would not impose a burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[16] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–ISE–2024–52 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–ISE–2024–52. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–ISE–2024–52 and should be submitted on or before December 18, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[17]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–101694; File No. SR–FICC–2024–005]

Self-Regulatory Organizations; Fixed Income Clearing Corporation; Order Approving a Proposed Rule Change, as Modified by Partial Amendment No. 1, To Modify the GSD Rules To Facilitate Access to Clearance and Settlement of All Eligible Secondary Market Transactions in U.S. Treasury Securities

November 21, 2024.

On March 11, 2024, Fixed Income Clearing Corporation (''FICC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change SR–FICC–2024–005 pursuant to Section 19(b) of the Securities Exchange Act of 1934 (''Exchange Act'') [1] and Rule 19b–4 [2] thereunder to modify FICC's Government Securities Division (''GSD'') Rulebook (''GSD Rules'') with respect to facilitating access to GSD's clearance and settlement services for all eligible secondary market transactions in U.S. Treasury securities.[3] On March 19, 2024, FICC filed Partial Amendment No. 1 to make clarifications and corrections [4] to the proposed rule change. The proposed rule change, as modified by Partial Amendment No. 1, is referred to herein as the ''Proposed Rule Change.'' The Proposed Rule Change was published for public comment in the **Federal Register** on March 27, 2024.[5]

On May 1, 2024, pursuant to Section 19(b)(2) of the Exchange Act,[6] the Commission designated a longer period within which to approve, disapprove, or institute proceedings to determine whether to approve or disapprove the Proposed Rule Change.[7] On June 27, 2024, the Commission instituted proceedings to determine whether to approve or disapprove the Proposed Rule Change.[8] On September 24, 2024, pursuant to Section 19(b)(2) of the Exchange Act,[9] the Commission extended the period for the conclusion of proceedings to determine whether to approve or disapprove the Proposed Rule Change.[10]

The Commission received several comment letters on the Proposed Rule Change.[11] In addition, the Commission received a letter from FICC responding to the public comments.[12] For the reasons discussed below, the Commission is approving the Proposed Rule Change.

I. Description of the Proposed Rule Change

A. Background and Current Access Models

FICC, through GSD, serves as a central counterparty (''CCP'') and provides real-time trade matching, clearing, risk management and netting for cash purchases and sales of U.S. Treasury securities as well as repurchase and reverse repurchase transactions (''repos'') involving U.S. Treasury securities. Currently, FICC is the sole provider of clearance and settlement services for U.S. Treasury securities.

On December 13, 2023, the Commission adopted amendments to the standards applicable to covered clearing agencies, such as FICC,[13] requiring each such clearing agency for U.S. Treasury securities to have written policies and procedures reasonably designed to, among other things, ensure that it has appropriate means to facilitate access to clearance and settlement services of all eligible secondary market transactions in U.S. Treasury securities, including those of the clearing agency's indirect participants.[14]

1. Direct Participation at FICC

GSD's CCP services are currently available directly to entities that are approved under the GSD Rules [15] to be Netting Members.[16] Currently, there are different categories of Netting Member based upon the type of legal entity (*i.e.,* Bank Netting Member, Dealer Netting Member, Inter-Dealer Broker Netting Member, *etc.*) and whether an entity is incorporated in the United States or not (*i.e.,* a Foreign Netting Member). Netting Member applicants must meet both financial and operational minimum eligibility requirements [17] and, once admitted, Netting Members must adhere to ongoing minimum membership standards.[18] Furthermore, both the minimum eligibility requirements and ongoing standards vary depending on the relevant Netting Membership category. However, in general, all Netting Member categories may access the services available through GSD's Comparison System [19] and Netting System.[20]

2. Indirect Participation at FICC

Market participants may also access GSD's clearing services indirectly through a Netting Member. There are currently two indirect participation models to facilitate indirect participant access to GSD—the Sponsored Service [21] and the correspondent clearing/prime broker services.[22] Each of these indirect participation models gives market participants different options to consider in accessing GSD's

[22] *See* GSD Rule 8, *supra* note 15.

clearance and settlement services. The primary difference between the two models is that an indirect participant who becomes a Sponsored Member must establish an indirect, limited purpose GSD membership, whereas the correspondent clearing/prime broker services do not require an indirect member to establish any relationship with GSD.

The Sponsored Service permits Netting Members, approved under the GSD Rules as ''Sponsoring Members,'' to sponsor certain institutional firms, referred to as ''Sponsored Members,'' into GSD membership. The Sponsoring Member is permitted to submit to FICC for comparison, novation, and netting certain types of eligible transactions either between itself and its Sponsored Members (*i.e.,* ''done-with''), or between the Sponsored Members and other third-party Netting Members (*i.e.,* ''done-away''). For operational and administrative purposes, a Sponsored Member appoints its Sponsoring Member to act as processing agent with respect to the Sponsored Member's satisfaction of its securities and funds-only settlement obligations.[23]

A Sponsored Member is a GSD Member and the legal counterparty to FICC for any submitted transactions.[24] However, the Sponsoring Member unconditionally guarantees to FICC the Sponsored Member's performance under a Sponsoring Member Guaranty, which guarantees to FICC the payment and performance of a Sponsored Member's obligations to FICC.[25] Therefore, FICC relies on the financial resources of the Sponsoring Member in relying upon the Sponsoring Member Guaranty. If a Sponsoring Member fails to perform under the Sponsoring Member Guaranty, FICC may cease to act for the Sponsoring Member both as a Sponsoring Member as well as a Netting Member.[26]

Netting Members may also submit to FICC eligible activity on behalf of their customers through the correspondent clearing/prime broker services.[27] Under the current GSD Rules, the Netting Member is referred to as the ''Submitting Member'' and the customer is referred to as the ''Executing Firm.'' [28] Unlike the Sponsored Service, FICC has no relationship with the Executing Firm,[29] and all obligations (*i.e.,* margin and settlement) under the GSD Rules remain with the Submitting Member.[30] Additionally, Submitting Members have the option of either netting Executing Firm activity with other activity they submit to FICC (*i.e.,* Submitting Member proprietary activity) or segregating Executing Firm activity in separate accounts.[31] In all cases, however, the Submitting Member must identify the relevant Executing Firm(s) on the FICC transaction submission file.[32] The current GSD Rule does not address the qualifications of a Submitting Member (or how a Netting Member becomes a Submitting Member); does not specify the information that each Submitting Member must provide to FICC regarding the Executing Firms on whose behalf it submits transactions; does not require acknowledgments from Executing Firms; and does not set forth any rules regarding the processing of transactions through the correspondent clearing/prime broker service or how such transactions are treated in the event of a default.

B. Proposed Changes [33]

1. Re-Naming the Correspondent Clearing/Prime Broker Services as the Agent Clearing Service and Providing Additional Specificity on the Agent Clearing Service

FICC proposes to re-name, consolidate, and adopt additional provisions governing GSD's existing correspondent clearing/prime broker services. Moving forward, the correspondent clearing/prime broker services would be referred to as the ''Agent Clearing Service,'' Submitting Members would be referred to as ''Agent Clearing Members,'' and Executing Firms would be referred to as ''Executing Firm Customers.'' The Agent Clearing Service would continue to allow Netting Members to submit, on behalf of their customers, transactions to FICC for novation. These proposed changes would primarily amend GSD Rule 8,[34] which currently describes the correspondent clearing/prime broker services, to describe the Agent Clearing Service with greater specificity.

FICC designed the proposed changes to the Agent Clearing Service to highlight the similarities between the Agent Clearing Service and other agent clearing models, such as those through which market participants in the cleared derivatives markets can execute commodity derivatives with third parties and then give them up to a futures commission merchant (''FCM'') for clearing.[35] FICC states that these proposed changes would enhance the ability of indirect participants to identify the Agent Clearing Service as a workable ''done-away'' model that allows indirect participants to access clearing through multiple direct participants.[36]

While the proposed changes would re-name certain terms in the GSD Rules and otherwise expand upon the description of how the correspondent clearing/prime broker access models operate, most of the proposed changes would not alter how Netting Members and their customers use this model to access GSD's services.[37] Like the correspondent clearing/prime broker models, the Agent Clearing Service would continue to facilitate agent-style trading by allowing an Agent Clearing Member to act as processing agent and credit intermediary for its Executing Firm Customers.

Specifically, the Proposed Rule Change would address various specific topics. First, the Proposed Rule Change would address Agent Clearing Member qualifications and the application process to become an Agent Clearing Member. A Netting Member, other than an Inter-Dealer Broker Netting Member, shall be eligible to become an Agent Clearing Member. An applicant to be an Agent Clearing Member would have to submit an application and provide additional information that FICC may request, and this application would include information about the applicant's customers, past and/or projected volumes of applicant customer activity, and the applicant's

[23] *See* GSD Rule 3A, *supra* note 15. An entity that chooses to become a Sponsoring Member retains its status as a Netting Member and can continue to submit any non-Sponsored Member activity to FICC as such.

[24] *See* GSD Rule 3A, section 7 (describing novation of Sponsored Member Trades) and 2 (identifying membership types), *supra* note 15.

[25] *See* GSD Rule 3A (describing the operation of the Sponsoring Member Guaranty) and 1 (defining the Sponsoring Member Guaranty), *supra* note 15.

[26] *See* Notice of Filing, *supra* note 5, at 89 FR 21365; *see also* GSD Rule 3A, Section 14; and GSD Rule 21, Sections 1(a), 1(b), 4(a) *supra* note 15.

[27] *See* GSD Rule 8, *supra* note 15.

[28] *See id.* There are no operational differences between the current correspondent clearing service and the prime broker service. The primary difference between the two services is that FICC provides a report to prime brokers that identifies margin calculation for their customers' transactions and does not provide such report to Members using the correspondent clearing service.

[29] *See* GSD Rule 1 (defining the term Executing Firm), *supra* note 15.

[30] *See* GSD Rule 8, Section 4, and GSD Rule 15, Section 1, *supra* note 15.

[31] *See id.*

[32] *See* GSD Rule 8, Section 2, *supra* note 15.

[33] For a detailed description of each proposed change, please refer generally to the Notice of Filing, *supra* note 5.

[34] *See* GSD Rule 8, *supra* note 15.

[35] *See* Notice of Filing, *supra* note 5, at 89 FR 21365–66.

[36] *See id.* FICC also states that these proposed changes would improve the transparency of the GSD Rules regarding the availability and operations of this service to both Netting Members and, indirectly, their customers. *See id.*

[37] *See* Notice of Filing, *supra* note 5, at 89 FR 21366.

controls for monitoring and mitigating risks, including any risks posed by its customers.

Second, the Proposed Rule Change would require certain information regarding an Agent Clearing Member's Executing Firm Customer Relationships to be provided to FICC. The required information would include a Legal Entity Identifier (''LEI'') for each Executing Firm Customer,[38] and each Agent Clearing Member would be required to indemnify FICC for any losses, liabilities, expenses and legal actions that could arise related to the LEI requirement. Thus, an Agent Clearing Member would establish a relationship with one or more Executing Firm Customers and provide FICC with notice confirming the Executing Firm relationship with each such customer. FICC states that this information sharing would better enable FICC to identify and manage the risks posed by such indirect participants and would support FICC's compliance with the requirements of Rule 17ad–22(e)(18)(iii) under the Exchange Act to monitor compliance with its participation requirements on an ongoing basis.[39]

In addition, the Proposed Rule Change would require that an agreement between the Agent Clearing Member and the Executing Firm Customer bind the customer to the applicable provisions of the GSD Rules. However, beyond this specific requirement the Proposed Rule Change would also acknowledge such an agreement may otherwise be on any terms and conditions mutually agreed to by the parties and confirm that the GSD Rules do not prohibit any reimbursement or other payments sharing arrangements that may be established between those parties, away from FICC.

Third, the Proposed Rule Change would define what transactions are eligible to be submitted through the Agent Clearing Service, which would remain the same as the transactions eligible for the correspondent/prime broker services and would continue to exclude Netting Eligible Auction Purchases, Brokered Transactions, GCF Repo Transactions, and CCIT Transactions.[40]

Fourth, the Proposed Rule Change would identify the rights and obligations of Agent Clearing Members. For example, it would define the role of the Agent Clearing Members as processing agents of Executing Firm Customers and establish that Agent Clearing Members are liable to FICC for all obligations arising in connection with their Agent Clearing Transactions in the same manner as if the Agent Clearing Member had executed those trades. It would also state that FICC has no liability or obligation to any Executing Firm Customer. It would also provide that FICC may request information or reports regarding Agent Clearing Transactions, which would allow FICC to continue to identify, monitor and manage the risks its Agent Clearing Members may present to it and the broader GSD membership.[41]

Fifth, the Proposed Rule Change would include specific Executing Firm Customer acknowledgements with respect to their participation in the Agent Clearing Service.[42] Because Executing Firm Customers would continue to have no relationship to FICC, the Proposed Rule Change would provide that Agent Clearing Members are responsible for affirming that their Executing Firm Customers understand, acknowledge and agree to the provisions in the relevant section of the GSD Rules.

Finally, the Proposed Rule Change would set forth rules regarding the processing of Agent Clearing Transactions. FICC would require Agent Clearing Members to process and record their customers' activity in separate ''Agent Clearing Member Omnibus Accounts,'' as opposed to the optional segregated submission approach provided for in the current GSD Rules, to facilitate FICC's ability to monitor and, ultimately, risk manage that activity appropriately.[43] It would also require that all Agent Clearing Transactions include an executing firm symbol that identifies the Executing Firm Customer. It would describe that Agent Clearing Transactions would continue to be processed in the same way that FICC processes other transactions through the GSD netting, clearing and settlement systems and would describe how Agent Clearing Transactions are processed when the optional field identifying the contra-party is either omitted or does not match on the transaction file. It would also address how a loss would be allocated within the Agent Clearing Service, that is, that the Agent Clearing Member, as principal, would be responsible for satisfying the loss allocation obligations that are calculated for its Executing Firm Customers.[44]

2. Changes to the Sponsored Service

Eliminate Separate Categories of Sponsoring Members

Under the current GSD Rules, there are two categories of Sponsoring Members—Category 1 Sponsoring Members are Bank Netting Members that meet the eligibility criteria described in Section 2(a) of Rule 3A, and Category 2 Sponsoring Members are all other eligible Netting Members.[45] While Bank Netting Members are currently subject to certain capitalization requirements as

[38] In addition to the LEI, this information would include: the name and executing firm symbol of the Executing Firm Customer; written authorization from the Executing Firm Customer to act on its behalf; confirmation that the Executing Firm Customer and the Agent Clearing Member have entered into an agreement that binds the Executing Firm Customer to the applicable provisions of the GSD Rules, as would be required by Section 3, described below; and confirmation that the Executing Firm Customer understands, acknowledges and agrees to each of the Executing Firm Customer Acknowledgments set forth in, and as would be required by the GSD Rules.

[39] *See* Notice of Filing, *supra* note 5, at 89 FR 21365; 17 CFR 240.17ad–22(e)(18)(iii).

[40] FICC states that GCF Repo Transactions and CCIT Transactions are currently excluded due to system limitations, and Brokered Transactions are necessarily excluded because Inter-Dealer Broker Netting Members are not permitted to act as Agent Clearing Members, as discussed above. The exclusion of Netting Eligible Auction Purchases is driven by the specific processing rules applicable to auctions that are external to FICC and established by the U.S. Department of the Treasury. *See* Notice of Filing, *supra* note 5, at 89 FR 21368.

[41] *See* Notice of Filing, *supra* note 5, at 89 FR 21368.

[42] These acknowledgments would include that the Agent Clearing Service is governed by the GSD Rules, including Novation of Agent Clearing Transactions; that FICC is not obligated to deal directly with the Executing Firm Customer and may deal exclusively with the Agent Clearing Member; that FICC shall have no obligations to the Executing Firm Customer with respect to any Agent Clearing Transactions submitted by an Agent Clearing Member on behalf of the Executing Firm Customer, including with respect to any payment or delivery obligations; and that the Executing Firm Customer shall have no right to receive from FICC, or any right to assert a claim against FICC with respect to, nor shall FICC be liable to the Executing Firm Customer for, any payment or delivery obligation in connection with any Agent Clearing Transactions submitted by an Agent Clearing Member on behalf of the Executing Firm Customer, and FICC shall make any such payments or redeliveries solely to the Agent Clearing Member.

[43] *See* Notice of Filing, *supra* note 5, 89 FR at 21368.

[44] The Proposed Rule Change would also provide that the Clearing Fund obligations applicable to an Agent Clearing Members' Agent Clearing Transactions would be calculated separately from the obligations calculated with respect to other activity of the Agent Clearing Member. However, FICC would have the right to apply any Clearing Fund deposits of an Agent Clearing Member to any obligations of that Member (including in their capacity as a Netting Member). As a substantive matter, the above two changes do not vary from how FICC calculates and applies loss allocation or Clearing Fund requirements under the correspondent clearing and prime broker services today. *See* Notice of Filing, *supra* note 5, 89 FR at 21369.

[45] *See* Securities Exchange Act Release No. 85470 (Mar. 29, 2019) 84 FR 13328 (Apr. 4, 2019) (SR–FICC–2018–013) (creating two categories of Netting Members to be eligible to be Sponsoring Members, expanding the eligibility of the service to other types of Netting Members in addition to Bank Netting Members). *See also* GSD Rule 3A, Section 2, *supra* note 15.

Sponsoring Member applicants,[46] Category 2 Sponsoring Member applicants are subject to financial requirements that are greater than the financial requirements applicable in their capacity as Netting Members.[47] Thus, the current tiered category structure creates differing applicant criteria based on the type of entity seeking Sponsoring Member status.

Additionally, the ongoing Sponsoring Member requirements in the GSD Rules also apply a differentiated approach for Category 1 and Category 2 Sponsoring Members. For example, a Category 1 Sponsoring Member may be subject to an increase in its Required Fund Deposit if it fails to meet the applicable capitalization requirements.[48] Alternatively, a Category 2 Sponsoring Member may be subject to a limit on the activity it can submit through the Sponsoring Service if the Sponsoring Member's VaR Charges exceed its Netting Member Capital.[49]

FICC proposes to eliminate the two categories of Sponsoring Members and make all Sponsoring Members subject to the same eligibility and ongoing requirements that are currently applicable to Category 2 Sponsoring Members. FICC states that these proposed changes would encourage additional Netting Members to become Sponsoring Members thus facilitating broader access to clearance and settlement services for eligible secondary market transactions in U.S. Treasury securities, including those of indirect participants who may seek to use the Sponsored Service as Sponsored Members.[50] The proposed changes would affect Bank Netting Members that are—or will apply to be—Sponsoring Members by removing the above-mentioned capitalization requirements and instead applying the activity limits and financial condition factors used under the current GSD Rules for Category 2 Sponsoring Members. The proposed changes would create parity among all Sponsoring Members (and applicants), which FICC states would encourage additional market participants to become Sponsoring Members, which in turn should give indirect participants a wider range of Sponsoring Members to consider should they choose to access GSD's central clearing services via the Sponsored Service.[51] FICC states that the activity limits and financial condition monitoring will allow FICC to continue to manage the risks that could be presented by any activity cleared through the Sponsored Service.[52] FICC does not believe the proposed changes would increase the risks presented to it by Bank Netting Members' participation in the Sponsored Service as Sponsoring Members because other existing risk management tools (*e.g.,* FICC's ability to impose greater and additional financial requirements,[53] the Excess Capital Premium,[54] and activity limits [55]) would be available for FICC to continue to manage those risks.[56]

Remove the ''Qualified Institutional Buyer'' Requirements for Sponsored Members

FICC proposes to remove the requirement that Sponsored Members either be ''qualified institutional buyers,'' as such term is defined by Rule 144A under the Securities Act of 1933,[57] or satisfy the financial requirements of such definition (''QIB Requirement''). This proposed change would make the Sponsored Service available to additional market participants, thereby providing such firms with access to GSD's clearing services. FICC states that expanding eligibility to become a Sponsored Member supports the goals of the Treasury Clearing Rules to facilitate increased central clearing of transactions involving U.S. Treasury securities.[58]

FICC states that this change would not increase the relevant risks because FICC risk manages the Sponsored Service primarily at the Sponsoring Member level, not the Sponsored Member level.[59] For example, a Sponsoring Member is responsible for posting to FICC the Required Fund Deposit for its sponsored activity and, while Sponsored Members are principally liable to FICC for their settlement obligations, the Sponsoring Member is also required to provide a guaranty to FICC for such obligations.[60] In the event a Sponsored Member does not satisfy its settlement obligations, FICC is able to invoke the Sponsoring Member Guaranty.[61] Additionally, Sponsoring Members may be required to provide FICC with reports or other information that FICC may require, including, for example, responses to annual or ad hoc due diligence requests.[62] FICC utilizes such due diligence requests to identify, monitor and manage the risks Sponsoring Members and their Sponsored Members may present to it. As discussed above, where FICC identifies risks (whether via the due diligence process or otherwise), FICC can impose supplemental financial requirements on a Sponsoring Member, an Excess Capital Premium charge (where applicable), and activity limits.[63] Therefore, FICC states that that its existing risk management practices with respect to the Sponsored Service, which do not rely on the QIB Requirement, are sufficiently effective.[64]

3. Clarify Eligibility Criteria for Non-U.S. and Other Applicants

Changes Regarding Non-U.S. Applicants

Currently, a Foreign Person applying to be a Netting Member must meet the eligibility criteria for the distinct

[46] Under Section 2(a) of GSD Rule 3A, Bank Netting Members applying to be a Sponsoring Member must (i) have equity capital of at least $5 billion, (ii) be ''Well-Capitalized,'' as such term is defined in the GSD Rules, and (iii) have a bank holding company that is registered under the Bank Holding Company Act of 1954, as amended and that such bank holding company also be ''Well Capitalized.'' ''Well Capitalized'' is defined in GSD Rule 1 to have the meaning given that term in the capital adequacy rules and regulations of the Federal Deposit Insurance Corporation. *Supra* note 15.

[47] These increased financial requirements do not solely relate to an applicant's capitalization, but instead are based on the applicant's anticipated use of the Sponsoring Service in relation to their financial condition. *See* Section 2(b)(ii) of GSD Rule 3A, *supra* note 15.

[48] *See* Section 2(h) of GSD Rule 3A, *supra* note 15.

[49] The ''VaR Charge'' is a component of the Required Fund Deposit and defined in GSD Rule 1; ''Netting Member Capital'' is defined in GSD Rule 1 to mean ''Net Capital, net assets or equity capital as applicable, to a Netting Member based on its type of regulation.'' *Supra* note 15.

[50] *See* Notice of Filing, *supra* note 5, at 89 FR 21370.

[51] *See id.*

[52] *See id.*

[53] *See* GSD Rule 3A, Section 2(b)(ii) (describing the factors that FICC may consider when determining whether to impose additional financial requirements on a Sponsoring Member), *supra* note 5. For the purposes of illustration only, such financial requirements could include, without limitation, additional reporting requirements, including reporting of parent company financials, or a higher minimum deposit to the Clearing Fund.

[54] *See* GSD Rule 3, Section 14 (the Excess Capital Premium is an additional Clearing Fund deposit that may be required if a Netting Member's capital levels drop below a threshold relative to its other margin requirements), *supra* note 5.

[55] The activity limit, which currently only applies to Category 2 Sponsoring Members, restricts a Sponsoring Member from submitting additional activity into its Sponsoring Member Omnibus Account(s) if its capital levels exceed the sum of its VaR Charge component of the Clearing Fund. *See* GSD Rule 3A, Section 2(h), *supra* note 5.

[56] *See* Notice of Filing, *supra* note 5, at 89 FR 21370.

[57] 17 CFR 230.144A.

[58] *See* Notice of Filing, *supra* note 5, at 89 FR 21371; Adopting Release *supra* note 14, at 2716–17 (referring to the revisions to Rule 17ad–22(e)(18) as being designed to ''bring the benefits of central clearing to more transactions involving U.S. Treasury securities, thereby reducing the overall systemic risk in the market'').

[59] *See* Notice of Filing, *supra* note 5, at 89 FR 21371.

[60] *See* GSD Rule 3A, *supra* note 15.

[61] *See id.*

[62] *See id.*

[64] *See* Notice of Filing, *supra* note 5, 89 FR 21371.

Netting Member category of ''Foreign Netting Members.'' [65] In contrast with the eligibility criteria for other Netting Member categories, the eligibility criteria for Foreign Netting Members in Section 3(a)(v) of GSD Rule 2A do not specify or reference eligible types of legal entities.[66] Instead, Section 4(b)(ii)(E) of GSD Rule 2A provides FICC the authority to set minimum financial requirements for Foreign Netting Member applicants.[67] Additionally, Section 3(b) of GSD Rule 2A currently states that an entity can only be one category of Netting Member at a time.[68] Thus, a Foreign Person that is the foreign equivalent of, for example a Registered Investment Company, which is a legal entity recognized in the GSD Rules for U.S. entities, would apply to be a Foreign Netting Member, and would be subject to the eligibility criteria, other membership qualifications, and ongoing minimum membership standards applicable to Foreign Netting Members.[69] However, the GSD Rules also contain specific eligibility criteria, other membership qualifications, and ongoing minimum membership standards applicable to, in this example, Registered Investment Company Netting Members.[70] Therefore, in this example, the current GSD Rules are unclear as to whether the applicant entity would only be subject to the Foreign Netting Member standards or would also be subject to the Registered Investment Company Netting Member standards.[71]

To avoid this ambiguity, FICC proposes to eliminate the category of ''Foreign Netting Member'' and expand the qualifications for each category of Netting Member to include the foreign equivalent of the same legal entity types.[72] Foreign Persons that are eligible to apply to be a Netting Member would be subject to both the minimum membership standards of the applicable Netting Member category as well as the eligibility criteria currently applicable to Foreign Netting Members, currently set forth in Section 3(a)(v) of GSD Rule 2A.[73] In making the determination of whether a Foreign Person is an equivalent legal entity to the domestic legal entities that qualify for a category of Netting Member, FICC would consider, for example, the applicant's business model and its regulatory framework and designated examining authority. Therefore, the Proposed Rule Change would provide that a Foreign Person shall be eligible to become a Netting Member if either (1) it qualifies for one of the existing categories of Netting Member, or (2) FICC determines that the applicant may apply in the same way as an applicant that does not qualify under an existing category of Netting Member, as discussed with respect to ''Changes Regarding Other Applicants'' below.

Foreign Persons that are eligible to apply to be a Netting Member would be subject to both the minimum membership standards of the applicable Netting Member category and the eligibility criteria currently applicable to Foreign Netting Members, currently set forth in Section 3(a)(v) of Rule 2A. Where an applicable Netting Member category is subject to membership qualifications that are inconsistent with the qualifications applicable to a Foreign Person, then the standards applicable to a Foreign Person would apply. Although this could lead to an approach where a Foreign Person applicant remains subject to home jurisdiction requirements that are different than the requirements applicable to other Netting Members, FICC states that that this is acceptable because, as discussed further below, the GSD Rules would still provide that FICC will continue to apply the membership standards that were designed specifically to address the risks that may not be present when an applicant is not domiciled in the U.S. and whose primary regulator is not U.S.-based.[74]

Changes Regarding Other Applicants

Additionally, FICC proposes to clarify the eligibility criteria for applicants that do not fit into one of the existing Netting Member categories. In light of the adoption of the Treasury Clearing Rules, additional market participants will need to access FICC's clearance and settlement services, either as direct Netting Members or as indirect participants. However, under the current GSD Rules, FICC does not have the authority to consider a Netting Member applicant that does not meet the eligibility criteria of one of the Netting Member categories enumerated in the GSD Rules. Therefore, FICC proposes amendments to the GSD Rules that would provide a framework for FICC to consider an applicant, including a Foreign Person, to be a Netting Member if that applicant does not meet the eligibility criteria of one of the existing Netting Member categories.

Specifically, the Proposed Rule Change would first require that an applicant submit an application questionnaire and other initial application materials that demonstrate to FICC that the applicant's business and capabilities are such that it could reasonably expect material benefit from direct access to FICC's services. FICC proposes to establish minimum membership standards, including financial and other qualifications for membership, as it may determine are reasonable and appropriate based on information provided by or concerning such an applicant. FICC's determination of the minimum membership standards to apply to that applicant would be based on the risk profile of the applicant, as determined by FICC, and information related to (i) the applicant's business model, (ii) its regulatory framework and designated examining authority, (iii) its organizational structure and risk management framework, and (iv) its anticipated use of the Corporation's services.

FICC states that it cannot reliably predict which types of legal entities will apply for direct membership or predict the risk profiles of those entities.[75] The proposed changes would provide FICC with the necessary flexibility to consider any potential applicants, including legal entities that do not fit into its current Netting Member

[75] *See* Notice of Filing, *supra* note 5, at 89 FR 21373.

categories.[76] FICC states that these proposed changes would facilitate access to GSD's clearing services to a broader range of market participants.[77]

4. Other Proposed Changes

FICC proposes changes to the GSD Rules generally designed to describe the criteria and related requirements regarding direct and indirect access to GSD's clearance and settlement services. FICC states that these proposed changes should enhance the ability of market participants, and in particular indirect participants, to understand and evaluate the comparative tradeoffs of using GSD's central clearing services depending on the relevant access model.[78]

Specifically, FICC proposes to include a ''road map'' in the GSD Rules describing the various GSD access models that allow for both direct and indirect access to GSD's clearance and settlement services. In addition, to simplify the description of eligibility requirements in GSD Rule 2A, FICC proposes to move the definitions of the Netting Member Categories from GSD Rule 2A to the defined terms in GSD Rule 1. FICC further proposes to remove definitions which are only used once in the GSD Rules and replace those uses with the defined terms, meaning that it would remove stand-alone definitions that are used only once and instead fold the one-time definition into broader context within the GSD Rules.[79] FICC proposes to clarify eligibility criteria for FCM Netting Members to require membership in the National Futures Association. Additionally, FICC proposes to make several grammatical and other non-substantive changes to the GSD Rules to streamline, clarify, and simplify the GSD access models, related definitions, and other relevant provisions.[80]

II. Discussion and Commission Findings

Section 19(b)(2)(C) of the Exchange Act[81] directs the Commission to approve a proposed rule change of a self-regulatory organization if it finds that such proposed rule change is consistent with the requirements of the Exchange Act and rules and regulations thereunder applicable to such organization. After carefully considering the Proposed Rule Change,[82] the Commission finds that the Proposed Rule Change is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to FICC. In particular, the Commission finds that the Proposed Rule Change is consistent with Sections 17A(b)(3)(F)[83] and (b)(3)(I)[84] of the Exchange Act and Rules 17ad–22(e)(18)(iii), (e)(18)(iv)(C), (e)(19), and (e)(23)(ii) thereunder.[85]

A. Consistency With Section 17A(b)(3)(F) of the Exchange Act

Section 17A(b)(3)(F) of the Exchange Act[86] requires that the rules of a clearing agency, such as FICC, be designed to, among other things, promote the prompt and accurate clearance and settlement of securities transactions, and protect investors and the public interest.

As described above in Section I.B., FICC proposes changes to the GSD Rules that are designed to encourage and facilitate a greater number of market participants to utilize GSD's clearance and settlement services for transactions in U.S. Treasury securities, including for done-with and done-away transactions. Specifically, as described in Section I.B.1, FICC's consolidation of the correspondent clearing/prime broker services into the Agent Clearing Service and the substantially increased level of detail about how this service operates should allow for a better understanding of the availability of this model at FICC.[87] By updating and expanding the Agent Clearing Service to more closely resemble the nomenclature and functioning of an FCM-style model, the Proposed Rule Change should better present the Agent Clearing Service as a viable method for market participants to consider for clearing transactions in U.S. Treasury securities. The new terminology should help to show that the Agent Clearing Service operates similarly to agent clearing models in cleared derivatives markets, where market participants execute transactions with third parties and then give them up to their futures commission merchant for clearing.

Further, the increased specificity regarding the functioning of the Agent Clearing Service should help market participants better evaluate its fitness for their individual needs. The current GSD Rules do not describe a Submitting Member as an agent for an Executing Firm or as submitting given up transactions to FICC for clearing, and the current GSD Rules present only limited information about how the service functions. By contrast, the expanded rules regarding the Agent Clearing Service makes clear how the Agent Clearing Service would function. It addresses various topics, including the qualifications of Agent Clearing Members and the application process, what an Executing Firm Customer is and what information an Agent Clearing Member must provide to FICC regarding its Executing Firm Customers (including confirmation that there is an agreement binding the Executing Firm Customer to the applicable GSD Rules and that the Executing Firm Customer agrees to the specified Executing Firm Customer Acknowledgments, what transactions may be submitted through the service, the rights and obligations of the Agent Clearing Member, and how transactions are addressed in the event of a default or non-default loss event. These changes substantially expand the description of how this service functions beyond the limited and high-level information currently in the GSD Rules. The Commission understands that, based on a survey conducted by FICC, a significant number (28 percent) of Netting Member survey respondents have already indicated that they expect to facilitate clearing transactions in U.S. Treasury securities using their existing prime brokerage, agency clearing, or

[76] *See id.*

[77] *See id.*

[78] *See id.*

[79] For example, the GSD Rules currently contain a definition for Inter-Dealer Broker which is used only, in turn, to define an Inter-Dealer Broker Netting Member. The revisions would collapse the definition of an Inter-Dealer Broker into the description of an Inter-Dealer Broker Netting Member.

[84] 15 U.S.C. 78q–1(b)(3)(I).

[85] As part of the Commission's process of analyzing the Proposed Rule Change for consistency with the Exchange Act and rules and regulations thereunder, the Commission carefully considered the public comment letters. Many of the comment letters were submitted in response to both the Proposed Rule Change and a related set of proposed rule changes (*see* Securities Exchange Act Release No. 99845 (Mar. 22, 2024), 89 FR 21603 (Mar. 28, 2024) (File No. SR–FICC–2024–802) and Securities Exchange Act Release No. 99844 (March 22, 2024), 89 FR 21586 (Mar. 28, 2024) (File No. SR–FICC–2024–007)). On October 25, 2024, FICC filed Partial Amendment No. 1 to the related set of proposed rule changes (*see* Securities Exchange Act Release No. 101455 (Oct. 28, 2024), 89 FR 87449 (Nov. 1, 2024) (File No. SR–FICC–2024–802) and Securities Exchange Act Release No. 101454 (Oct. 28, 2024), 89 FR 87441 (Nov. 1, 2024) (File No. SR–FICC–2024–007) (together, the ''Account Segregation Proposals'')). The comment letters generally did not specify which individual comments relate to the Proposed Rule Change as opposed to the Account Segregation Proposals. In the instant Order, the Commission addresses the comments related to the Proposed Rule Change. In a separate Order, the Commission addresses the comments related to the Account Segregation Proposals.

FCM business units currently used for clearing listed and over-the-counter derivatives.[88]

The changes regarding the Agent Clearing Service should help facilitate market participants' ability to access central clearing by providing more detail about how the service functions and, potentially, allowing market participants to leverage existing policies and practices used for other agent clearing models to clear other types of products. In addition, the changes would provide FICC with increased ability to risk manage and monitor the Agent Clearing Transactions because it would require additional information on Executing Firm Customers and the use of an Agent Clearing Omnibus Account. These changes should therefore help promote prompt and accurate clearance and settlement and protect investors and the public interest.

Additionally, FICC's proposals to streamline and clarify certain aspects of its membership standards would remove entry barriers and make it easier for market participants to utilize the Sponsored Service. First, as described above in Section I.B.2., the Proposed Rule Change would enable additional market participants to become Sponsoring Members by removing capital requirements and eliminating other distinctions between the two existing categories of Sponsoring Members. Second, the Proposed Rule Change would enable additional market participants to become Sponsored Members by removing the QIB Requirement. These changes should allow FICC to streamline the Sponsored Service and improve its accessibility to potential Sponsoring and Sponsored Members, while still allowing FICC to appropriately risk manage transactions cleared through the Sponsored Service. Therefore, this aspect of the Proposed Rule Change should facilitate greater participation in the Sponsored Service and, therefore, in central clearing more generally, subject to appropriate risk management at FICC, which is consistent with both promoting prompt and accurate clearance and settlement and the protection of investors and the public interest.

The Proposed Rule Change, as described in Section I.B.3, would also facilitate broader market participation in GSD by streamlining and clarifying the Netting Member eligibility criteria applicable to Foreign Persons and applicants that do not otherwise fit into one of the existing categories of Netting Member and would establish an application process for such entities that allows FICC to consider any applicant and the potential risk that it could bring to FICC. FICC's membership requirements are part of its overall risk management because membership requirements help to guard against defaults of any FICC member, as well as to protect FICC and the financial system as a whole from the risk that one member's default could cause others to default, potentially including FICC itself.

Additionally, FICC's proposals to add new provisions to the GSD Rules that more clearly describe the various direct and indirect GSD access models, and otherwise clarify the GSD Rule provisions regarding the GSD access models, would provide greater transparency on those subjects to market participants, and thereby enable market participants to more accurately and efficiently evaluate which model best fits their business needs.

Finally, as described above in Section I.B.4., FICC proposes to make several grammatical and other non-substantive changes to the GSD Rules to streamline, clarify, and simplify the GSD access models, related definitions, and other relevant provisions.

The Proposed Rule Change would encourage and facilitate greater participation in central clearing, while still providing sound risk management which would promote the prompt and accurate clearance and settlement of securities transactions, and would protect investors and the public interest. As the Commission explained when adopting the Treasury Clearing Rules, U.S. Treasury securities play a critical and unique role in the U.S. and global economy, serving as a significant investment instrument and hedging vehicle for investors, a risk-free benchmark for other financial instruments, and an important mechanism for the Federal Reserve's implementation of monetary policy.[89] Consequently, confidence in the U.S. Treasury market, and in its ability to function efficiently is critical to the stability of the global financial system. In central clearing, through novating transactions (*i.e.,* becoming the counterparty to both sides of a transaction), a CCP addresses concerns about counterparty risk by substituting its own creditworthiness and liquidity for the creditworthiness and liquidity of the counterparties.[90] A CCP thereby enables market participants to effectively reduce costs, increase operational efficiency, and manage risks.[91] Moreover, a CCP provides a centralized system of default management that can mitigate the potential for a single market participant's failure to destabilize other market participants or the financial system more broadly.[92] The Commission adopted the Treasury Clearing Rules, in part, to help reduce contagion risk to the CCP and bring the benefits of central clearing to more transactions involving U.S. Treasury securities, thereby lowering overall systemic risk in the market.[93]

CCP rules that are clear and comprehensible, increase operational efficiency, and more effectively manage risks, like the Proposed Rule Change, should encourage a broader scope of market participants to utilize the CCP's services, thereby promoting the prompt and accurate clearance and settlement of securities transactions, and protecting investors and the public interest, consistent with Section 17A(b)(3)(F) of the Exchange Act. The Proposed Rule Change is consistent with those objectives because it encourages and supports greater participation in GSD's central clearing services for different types of market participants and transactions. Accordingly, the Proposed Rule Change would promote the prompt and accurate clearance and settlement of securities transactions, and protect investors and the public interest, because by encouraging greater participation in central clearing, the proposals would extend the benefits of operational efficiency and risk management to a greater segment of the U.S. Treasury securities market.

For these reasons, the Proposed Rule Change is consistent with the

requirements of Section 17A(b)(3)(F) of the Exchange Act.[94]

B. Consistency With Section 17A(b)(3)(I) of the Exchange Act

Section 17A(b)(3)(I) of the Exchange Act requires that the rules of a clearing agency, such as FICC, do not impose any burden on competition not necessary or appropriate in furtherance of the Exchange Act.[95] Section 17A(b)(3)(I) does not require the Commission to make a finding that FICC chose the option that imposes the least possible burden on competition. Rather, the Exchange Act requires that the Commission find that the Proposed Rule Change does not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act, which involves balancing the competitive effects of the Proposed Rule Change against all other relevant considerations under the Exchange Act.[96]

Several commenters suggest that the Proposed Rule Change's failure to include a requirement that FICC's direct participants offer done-away clearing services would not sufficiently provide for a workable done-away model.[97] For example, one commenter states that it does not expect Netting Members to offer done-away trading via the Agent Clearing Model (which would effectively result in clearing members surrendering potentially lucrative commissions from trade execution to other brokers).[98] This commenter further states that the Proposed Rule Change does not address this or otherwise provide any other mechanism to properly align Netting Members' incentives with the goal of facilitating done-away trading.[99] Another commenter states that the Proposed Rule Change ''ignores the current reality'' in which the commenter is not aware of any clearing member currently offering done-away clearing to its customers for either cash or repo transactions and the Proposed Rule Change fails to explain why done-with and done-away transactions continue to be treated differently given that a clearing member should be agnostic about with whom a trade is executed, as the counterparty of a cleared trade is FICC (*i.e.,* not the executing counterparty).[100] This commenter states that FICC has not explained the justification for treating done-with and done-away transactions differently and why it has elected to continue to permit its clearing members to require *all* customers to bundle execution and clearing in these models.[101] Another commenter states that there remain serious questions whether Netting Members view offering done-away services as practicable from a regulatory net capital perspective and whether a sufficient number of Netting Members will provide clearing services on a standalone basis, as opposed to bundling execution and clearing.[102]

As a solution to the foregoing concerns, the commenters state that FICC should require Netting Member intermediaries (*i.e.,* Sponsoring Members and Agent Clearing Members) to offer done-away clearing to their customers.[103]

In contrast to these commenters, one commenter states that a mandate from FICC is not a necessary condition for a viable done-away access model.[104] Instead, the commenter states that a Netting Member's decision to provide done-away services—or any services—to market participants is, and should remain, a commercial and risk decision of each member, and that such commercial arrangements should not be mandated by rule or otherwise.[105] The commenter further states that mandating the provision of done-away services could compromise the goals of the Treasury Clearing Rules by making the access models less attractive from a business perspective to Netting Members and cause Netting Members to limit the offerings they do make to customers if doing so would mandate other commercial arrangements or transactions that they may not wish to engage in.[106]

In response, FICC states that requiring Netting Member intermediaries to offer done-away clearing services to customers could expose FICC and its participants to additional risks and other challenges that could limit the commercial and risk management choices an intermediary could consider in offering clearing services, which in turn could reduce the number of market participants willing to provide such services.[107] FICC further states that such a contraction in the availability of direct participants providing clearing services would result in concentration of risk, increased costs, and reduced liquidity in the Treasury market.[108] Additionally, FICC states that unlike done-with clearing, done-away clearing presents unique liquidity risks to both FICC and Netting Member intermediaries.[109] For FICC, if a customer's Netting Member intermediary defaults, FICC would be obligated to perform the one-sided obligations of the done-away transactions of the customer and would need liquidity to do so.[110] For Netting Member intermediaries, done-away transactions would increase the maximum liquidity a Netting Member may be required to provide to FICC under the Capped Contingency

Commenters also state that by not including a requirement on Netting Member intermediaries to offer done-away clearing to their customers, the Proposed Rule Change does not adequately facilitate access for such customers to FICC's clearance and settlement services, consistent with Rule 17ad–22(e)(18)(iv)(C). *See* 17 CFR 240.17ad–22(e)(18)(iv)(C). The Commission addresses those comments below in Section II.D.

[104] *See* Letter from Robert Toomey, Head of Capital Markets, Managing Director/Associate General Counsel, SIFMA, at 3–4 (July 31, 2024) (''SIFMA Letter II'').

[108] *See id.*

[109] *See* FICC Letter at 11–14.

[110] *See* FICC Letter at 11–12. FICC also states that, by contrast, in a done-with transaction, the customer enters into the transaction with its clearing member, and that, if the clearing member then defaults, the clearing agency has the option to close out both the obligations to the clearing member and those to the customer (*i.e.,* ''both sides of the trade''), with the sole resulting payment obligation being the mark-to-market value of the positions. *See id.* at 12. One commenter states that it is ''inaccurate'' that done-away transactions have greater liquidity risks, but the commenter does not disagree with FICC's description of these liquidity concerns, and instead states that this distinction highlights a deficiency of FICC's current default management framework. *See* Letter from Stephen Berger, Managing Director, Global Head of Government & Regulatory Policy, Citadel and Citadel Securities, (Oct. 21, 2024) (''Citadel Letter'') at 5; *see also* MFA Letter II at 3–4. The concerns regarding the default management framework are discussed in Section II.D.6 *infra.*

Liquidity Facility (''CCLF''), increasing the cost of clearing done-away transactions.[111]

FICC also states that since done-away transactions are negotiated between a customer and its counterparty, the Netting Member intermediary must rely on external parties and/or processes to confirm that a transaction is consistent with the Netting Member's risk limits and regulatory requirements.[112] Therefore, FICC states that imposing a done-away mandate on Netting Members that lack the infrastructure to perform such confirmations could discourage market participants from providing clearing services to customers.[113] FICC also states that done-away clearing might subject Netting Member intermediaries to certain regulatory challenges (*e.g.,* regarding trade reporting and confirmations) and/or increased capital requirements (since it may be difficult to conclude that they have a well-founded basis on which they can exercise close-out netting rights upon a customer default).[114] FICC states that in light of the foregoing risks and challenges, a done-away mandate could have the unintended consequence of discouraging Netting Member intermediaries from providing clearing services to customers, which would concentrate risk, increase costs, and reduce liquidity in the Treasury market.[115] Instead of a done-away mandate, FICC states that Netting Member intermediaries should be allowed to decide whether and how to provide clearing services to customers after evaluating the relevant risks.[116]

As proposed, the GSD access models, including the ability to bundle execution and clearing, do not constitute a burden on competition that is not necessary or appropriate in furtherance of the Exchange Act, because the models continue to offer optionality for different types of market participants to access central clearing in different ways. After proposing the Treasury Clearing Rules,[117] the Commission received similar comments regarding the impact that the absence of a done-away mandate would have on competition for GSD's indirect participants.[118] At that time, the Commission disagreed with those comments and declined to impose a done-away mandate and did not agree that FICC's current access models constituted a burden on competition that is not necessary or appropriate in furtherance of the Exchange Act.[119] Notably, the client clearing models that FICC has proposed allow for Netting Members to offer done-away services. Although the models have not been widely used for done-away services to date, market participants have indicated that they will provide such services going forward.[120] In addition, as the Commission stated in the Treasury Clearing Adopting Release, in order to encourage Netting Member intermediaries to provide services that enable customers to access central clearing, it is best not to remove the ability of such intermediaries to determine which risks to take with respect to guaranteeing transactions to a CCP.[121] As FICC and one commenter highlighted, providing done-away clearing services brings certain risks to the Netting Member, which the Netting Member must evaluate and manage. Finally, approving the Proposed Rule Change does not preclude further action by FICC to incentivize or facilitate done-away clearing services going forward.

In addition, commenters state that the Proposed Rule Change should prohibit bundling of clearing and execution services. One commenter states that this prohibition need not include a done-away mandate, as it would simply prohibit Netting Members from requiring forced bundling, and the commenter also disagrees with FICC's legal arguments regarding whether FICC may impose such a prohibition.[122] An additional commenter states that there are economic incentives for direct participants to bundle their execution and clearing services by favoring done-with transactions.[123] This commenter cites certain prohibitions adopted by the Commodity Futures Trading Commission (''CFTC'') and states that FICC should adopt the same protections for the U.S. Treasury market, as necessary to ensure a robust done-away clearing market.[124]

In response to such comments, FICC states that such a prohibition would effectively mean that a Netting Member could not charge lower fees for done-with clearing because that would amount to tying executing to clearing, and, as a result, could be viewed as the clearing agency dictating pricing terms.[125] FICC further states that such setting of prices is not clearly consistent with Section 17A(b)(3)(E) of the Exchange Act, which provides that the rules of a clearing agency may not impose any schedule of prices, or fix rates or other fees, for services rendered by its participants.[126]

The Commission considered similar comments regarding a prohibition of bundling and clearing when it adopted the Treasury Clearing Rules.[127] Specifically, several commenters stated that the Commission should require

[111] *See* FICC Letter at 12, 14. The CCLF is a member-funded, rules-based, committed liquidity resource, designed to enable FICC to meet its cash settlement obligations in the event of a default of the member (including affiliates) to which FICC has the largest exposure in extreme but plausible market conditions. FICC allocates $15 billion of the total size of the CCLF among all members. FICC allocates the remainder of the total size of the CCLF among members depending on the amount and frequency with which they generate liquidity needs above $15 billion. *See* GSD Rule 22A, Section 2a, *supra* note 15.

[124] *See id.*

[125] *See* FICC Letter at 15.

[126] *See* FICC Letter at 15–16. One commenter states that FICC also relied upon Section 17A(b)(6) regarding a prohibition on bundling and execution. *See* Citadel Letter at 8. However, FICC's reference to that statutory provision relates to a comment that would require done-away clearing services to any customer that posts margin and not to the bundling of execution and clearing services.

[127] *See* Treasury Clearing Adopting Release, *supra* note 14, 89 FR at 2756–77 (including n. 415 identifying such comments). More generally, the statutory authority for the CFTC provisions cited by one commenter differs significantly from the statutory authority applicable to the Commission for the U.S. Treasury market.

U.S. Treasury securities central clearing agencies to obligate their members to accept done-away transactions and prohibit their members from requiring clients to bundle execution and clearing.[128] In response, the Commission stated that it disagrees that the failure to require the submission of done-away transactions necessarily constitutes ''unfair discrimination,'' as discussed in Section 17A(b)(3)(F).[129] In order to encourage market participants to provide services to enable indirect access to central clearing, the Commission stated that it believes it is best not to remove the ability of FICC's direct participants to determine what risks to take with respect to guaranteeing customer transactions. In addition, the Commission also did not agree that, at that time, the current access models offered by FICC constitute a burden on competition that is not necessary or appropriate, as discussed in Section 17A(b)(3)(I).[130] The Commission's analysis remains applicable to the commenters seeking such a prohibition from FICC.

For these reasons, after considering the public comments and FICC's response, the access models in the Proposed Rule Change, which would not prevent a Netting Member from bundling execution and clearing and do not require a Netting Member to provide done-away clearing services would not impose a burden on competition not necessary or appropriate in furtherance of the Exchange Act.[131]

C. Consistency With Rule 17ad–22(e)(18)(iii)

Rule 17ad–22(e)(18)(iii) under the Exchange Act requires that a covered clearing agency, such as FICC, establish objective, risk-based, and publicly disclosed criteria for participation, which monitor compliance with such participation requirements on an ongoing basis.[132]

As described above in Section I.B.1., FICC proposes changes that would enable it to monitor activity submitted through the Agent Clearing Service. Specifically, FICC would require a Netting Member to submit an application to become an Agent Clearing Member and provide additional information regarding each Executing Firm Customer beyond that which is required for Executing Firms under the current GSD Rules, such as a Legal Entity Identifier (''LEI''). FICC would also require an Agent Clearing Member to submit activity on behalf of its Executing Firm Customer(s) through one or more separate Agent Clearing Member Omnibus Accounts, as opposed to the optional segregated submission approach provided for in the current GSD Rules. Finally, for both initial and ongoing membership purposes, FICC would require an Agent Clearing Member to provide FICC with information related to its use of the Agent Clearing Service. Adding these provisions to the GSD Rules should help FICC monitor the trading activity generated withing the Agent Clearing Service because they should allow FICC to better understand which transactions are attributable to which Executing Firm Customers submitting through an Agent Clearing Member, which should, in turn, provide better overall understanding of market participants' activity at FICC even across multiple Agent Clearing Members.

One commenter states that FICC should change its proposal regarding the requirement on Agent Clearing Members to indemnify FICC for any harm arising out of the Agent Clearing Member's failure to have the current LEIs of its Executing Firm Customers on file with FICC.[133] Specifically, the commenter states that FICC's proposal is overly broad insofar as it would ostensibly require an Agent Clearing Member to halt a customer's trading activity for minor lapses in LEI renewals and require the Agent Clearing Member to verify current LEIs on any number of LEI service provider websites.[134] The commenter states that FICC should not need to maintain such strict rules governing LEIs when other identifying information accompanies each trade.[135] Therefore, the commenter states that FICC should more narrowly tailor the indemnification provision to cover only relevant harms arising out of an Agent Clearing Member's gross negligence, willful misconduct, or fraudulent conduct.[136]

In response, FICC states that, although the Agent Clearing Member has a contractual relationship with its customers, FICC does not.[137] Therefore, the Agent Clearing Member is able to include contract provisions that obligate its customers to maintain current LEI information and notify the Agent Clearing Member of any LEI renewals or changes.[138] FICC further states that although it does not generally expect the LEI indemnification provision to give rise to significant liability, neither FICC nor its other members should bear the costs of any such liability.[139]

The Commission agrees with FICC on this point. The LEI portion of the Proposed Rule Change is consistent with FICC's existing rule regarding a Sponsoring Member's obligation to provide an LEI for its Sponsored Members.[140] Therefore, Sponsoring Members are already subject to such a requirement. An Agent Clearing Member, like a Sponsoring Member, should be able to contract with its Executing Firm Customers to ensure that it receives updated LEI information to provide to FICC. Neither FICC nor its other members should bear any liability arising out of an Agent Clearing Member's failure to have the current LEIs of its Executing Firm Customers on file with FICC.

Accordingly, the Proposed Rule Change would assist FICC in monitoring its participants' ongoing compliance with the Agent Clearing Service participation requirements, consistent with Rule 17ad–22(e)(18)(iii).[141]

D. Consistency With Rule 17ad–22(e)(18)(iv)(C)

Rule 17ad–22(e)(18)(iv)(C) under the Exchange Act requires that a covered clearing agency, such as FICC, when providing CCP services for transactions in U.S Treasury securities, establish objective, risk-based, and publicly disclosed criteria for participation, which ensure that it has appropriate means to facilitate access to clearance and settlement services of all eligible secondary market transactions in U.S. Treasury securities, including those of indirect participants.[142]

FICC states that the Proposed Rule Change is primarily designed to ensure that the access models in the GSD Rules comply with Rule 17ad–22(e)(18)(iv)(C) by constituting criteria for participation

[142] 17 CFR 240.17ad–22(e)(18)(iv)(C).

that facilitate access to GSD's clearance and settlement services, including for indirect participants.[143] Specifically, FICC developed the Proposed Rule Change following FICC's review of GSD's existing direct and indirect access models.[144] That review examined whether those models provide market participants with access to GSD's clearance and settlement services in as flexible a means as possible, consistent with FICC's responsibility to provide sound risk management and comply with its regulatory risk management obligations under Rule 17ad–22(e) and other parts of the Exchange Act.[145]

1. Changes to the Agent Clearing Service

As described above in Section I.B.1., FICC proposes to re-name GSD's existing correspondent clearing/prime broker services as the Agent Clearing Service. FICC also proposes to consolidate and adopt additional provisions governing the re-named Agent Clearing Service. The proposed changes to re-name, consolidate, and provide additional specificity regarding the operation of the Agent Clearing Service should improve transparency of the GSD Rules regarding the Agent Clearing Service and allow market participants to better evaluate and consider how the Agent Clearing Service operates, including how it compares to existing cleared derivatives systems and infrastructure. The refinement of the proposed Agent Clearing Service should help ensure that market participants are able to evaluate and, if they choose, use this service to access FICC, including for done-away transactions, as discussed above in Section I.A. Therefore, these proposed changes are consistent with Rule 17ad–22(e)(18)(iv)(C).

Several commenters request that FICC clarify that an Agent Clearing Member would be permitted to treat its customer transactions as off-balance sheet for accounting purposes, otherwise the Agent Clearing Service may be so capital intensive as to disincentivize use of the access model.[146] In response, FICC states that it is actively working with industry groups to determine the balance sheet impact of done-away transactions.[147]

It is ultimately the responsibility of each Netting Member to determine the accounting treatment of its own transactions. FICC need not opine on the balance sheet treatment for transactions within the Agent Clearing Service in order for the Commission to evaluate the Proposed Rule Change's consistency with Rule 17ad–22(e)(18)(iv)(C).[148]

Another commenter is concerned that the rights of Executing Firm Customers are too limited vis-à-vis FICC within the Agent Clearing Service.[149] For example, the commenter states that under the Proposed Rule Change, FICC would have no obligations to Executing Firm Customers; rather, FICC's obligations would be solely to the Agent Clearing Member.[150]

In the Notice of Filing, FICC states that within the current correspondent clearing/prime broker services, an indirect participant does not establish any relationship with FICC.[151] FICC's proposed changes regarding the Agent Clearing Service would not change that aspect of the access model. In contrast, within the Sponsored Service, a Sponsored Member must establish an indirect, limited purpose membership with FICC. FICC states that one of the factors that an indirect participant may wish to consider in choosing between GSD access models is whether the participant prefers to be in a direct contractual relationship with FICC.[152]

In the Treasury Clearing Rules Adopting Release, the Commission also recognized that certain access models offered by FICC may not result in a contractual relationship or direct obligation between FICC and an indirect participant.[153] This generally would be the case in any agent clearing relationship in which an indirect participant relies upon a direct participant to submit transactions for clearing on its behalf.[154] The commenter's concern that within the Agent Clearing Service, indirect participants would not have a contractual relationship with FICC, does not render the Proposed Rule Change inconsistent with Rule 17ad–22(e)(18)(iv)(C).

2. Comments Regarding Done-Away Clearing

As discussed in more detail in Section II.B above, several commenters suggest that by not including a requirement on Netting Member intermediaries to provide done-away clearing services to customers, the Proposed Rule Change would fail to implement criteria for participation that facilitate access to GSD's clearance and settlement services for indirect participants.[155] Specifically, commenters state that if a customer is limited to done-with transactions, it would need to establish separate clearing relationships with each done-with counterparty with whom it wishes to transact, which would increase cost, complexity, operational risk, and limit the number of counterparties with whom to transact.[156] In addition, several commenters state that alternatively, these market participants may limit their cash and/or repo U.S. Treasury transactions, thereby negatively impacting market liquidity.[157] Commenters also state that FICC should prohibit the bundling of clearing and execution services to comply with Rule 17ad–22(e)(18)(iv)(C). As discussed further in Section II.B *infra,* these commenters state that such a prohibition is necessary to ensure that market participants will provide done-away clearing services.[158]

Generally, these commenters state that FICC should impose a mandate on Netting Member intermediaries to provide done-away clearing services to customers and should prohibit the

bundling of clearing and execution services to address these concerns.[159]

As discussed in more detail in Section II.B above, in response, FICC states that the Proposed Rule Change would meaningfully facilitate done-away clearing, without imposing a done-away mandate or prohibiting the bundling of clearing and execution services.[160] FICC also states that a done-away mandate could expose both FICC and its participants to unique risks.[161] First, as discussed in Section II.B above, done-away transactions present liquidity risks that done-with transactions do not.[162] Because done-away transactions are entered into between a customer and a counterparty other than the customer's Netting Member intermediary, if the intermediary defaults, FICC would need to perform the one-sided obligations of the customer.[163] Second, because done-away transactions are negotiated between the customer and its counterparty, the Netting Member intermediary must depend on outside processes or parties to confirm that the transactions do not give rise to risk or regulatory issues (*e.g.,* trade reporting and confirmation requirements, anti-money laundering and sanctions regulations, *etc.*).[164] FICC states that its direct participants should independently determine whether they can assume the risks associated with providing done-away clearing services.[165] Otherwise, according to FICC, the increased risks and costs associated with a done-away mandate could stifle the ongoing and positive market developments toward done-away clearing by discouraging Netting Member intermediaries from providing clearing services altogether.[166]

FICC further states that a done-away mandate could be inconsistent with Section 17A(b)(3)(E) and/or Section 17A(b)(6) of the Exchange Act.[167] FICC states that for a done-away mandate to be effective, it would likely need to prohibit the bundling of execution and clearing (and thereby prevent a Netting Member intermediary from forcing its customers into done-with transactions through more favorable terms).[168] FICC states that, as a result, a done-away mandate could be viewed as FICC dictating pricing terms, which could violate Section 17A(b)(3)(E).[169] Additionally, Section 17A(b)(6) provides that a clearing agency may not ''prohibit or limit access by any person to services offered by any participant therein.'' [170] FICC states that a requirement on Netting Member intermediaries to provide done-away clearing to customers that post margin could violate Section 17A(b)(6) because the service offered to customers who do not post margin could potentially be limited to done-with clearing.[171]

In addition, as stated above in Section II.B., one commenter also states that FICC should not impose a done-away clearing mandate.[172] Rather, the commenter states that any decision to offer done-away services should be a commercial/business decision left to clearing members, driven by evaluations of risk.[173] The commenter states that FICC can implement an access model, without a done-away clearing mandate, that would be reasonably designed to ensure that FICC has appropriate means to facilitate access to its clearance and settlement services consistent with Rule 17ad–22(e)(18)(iv)(C).[174]

The Proposed Rule Change does not include a requirement that FICC's participants offer done-away clearing or prohibit the bundling of clearing and execution services. The Commission shall approve a proposed rule change of a self-regulatory organization if it finds that it is consistent with the Exchange Act,[175] and the Proposed Rule Change is consistent with the Exchange Act and the rules thereunder, even in the absence of a done-away mandate or a prohibition on the bundling of clearing and execution services.

The Commission disagrees with the commenters arguing that FICC must impose a done-away clearing mandate on Netting Member intermediaries or prohibit the bundling of clearing and execution services to comply with Rule 17ad–22(e)(18)(iv)(C). As discussed in the Adopting Release, Rule 17ad–22(e)(18)(iv)(C) does not prescribe a particular access model, but it instead helps ensure that FICC, and any other covered clearing agency serving the U.S. Treasury market, review their indirect access models and ensure that they facilitate access to clearance and settlement services in a manner suited to the needs and regulatory requirements of market participants, including indirect participants.[176] Further, in the Adopting Release, the Commission stated that a requirement to accept done-away transactions would require a covered clearing agency to, in turn, require their direct participants to transact with their customers in specific ways and limit their ability to offer certain types of pricing services.[177]

More generally, and as stated above in Section II.A., both the Sponsored Service and the Agent Clearing Service (including the prime broker/correspondent clearing service in place currently) allow (and are currently used) for done-away clearing.[178] As stated in the Adopting Release, in order to encourage Netting Member intermediaries to provide services that enable customers to access central clearing, it is best not to remove the ability of such intermediaries to determine which risks to take with respect to guaranteeing transactions to a CCP such as FICC.[179] This is also true with respect to providing done-away clearing services. The Commission agrees with the rationale articulated by both FICC and one commenter arguing that a done-away clearing mandate could be counterproductive and ultimately discourage Netting Member intermediaries from providing clearing services to customers.[180] Additionally, it is appropriate to allow the U.S. Treasury market to adjust to the implementation of the Treasury Clearing Rules (*e.g.,* the Account Segregation Proposals) before determining that additional access models are needed.[181] For the foregoing reasons, FICC need not impose a done-away clearing mandate on Netting Member intermediaries in order to comply with Rule 17ad–22(e)(18)(iv)(C).[182]

Several commenters state that FICC should explain how its proposal to re-brand the Agent Clearing Service would actually facilitate done-away

clearing.[183] Two commenters state the re-branding and making conforming, technical amendments to the Agent Clearing Service are non-substantive and ''superficial'' and would not increase the availability of done-away trading.[184] One commenter states that there is not a significant amount of repo activity conducted through the current correspondent clearing/prime broker clearing services.[185] The commenter further questions why that would change after the services are re-branded as the Agent Clearing Service.[186] In response, FICC states that its survey results demonstrate that prior to publication of the Notice of Filing, 77 percent of market participants were not very familiar with the correspondent clearing/prime brokerage services, and that lack of familiarity is likely the reason for the relatively low level of use of those GSD access models.[187] FICC states that after publication of the Notice of Filing, its survey results indicate that 43 percent of Netting Members would likely clear indirect participant transactions through the Agent Clearing Service.[188] FICC attributes the shift among participants towards considering using the Agent Clearing Service is a result of the Proposed Rule Change's clarifications and consolidations regarding the Agent Clearing Service.[189]

The Proposed Rule Change sufficiently explains how the Agent Clearing Service would work and how it could facilitate done-away clearing. Further explanation is unnecessary for purposes of considering the Proposed Rule Change, and each market participant has to determine which access model to use for its own business purposes. However, the Commission observes that FICC has engaged in market outreach to assist market participants in evaluating and understanding the operations and business case for each access model.[190]

Several commenters raise the concern that even if a Netting Member intermediary offers done-away clearing services, customers would be required to disclose the identity of their execution counterparties to the intermediary.[191] One commenter states that requiring the disclosure of execution counterparties to the Netting Member intermediary divulges confidential information regarding the customer's trading activities and could lead to limitations placed on those execution counterparties, directly undermining a key benefit of central clearing.[192] Another commenter states that in a cleared market, the identity of a customer's original execution counterparty should be irrelevant to a clearing member because the clearing member is not exposed to the creditworthiness of the execution counterparty, meaning that a clearing member should not be in a position to limit a customer's execution counterparties.[193] This commenter also states that this concern is why the Commodity Futures Trading Commission specifically prohibited ''the type of trilateral execution agreement described by FICC.'' [194] Therefore, commenters state, FICC should enable customers to avoid disclosing the identity of their execution counterparties to their Netting Member intermediaries and prohibit the restriction of execution counterparties.[195]

FICC states that it is currently not practically feasible to prohibit a direct participant from knowing the execution counterparty's identity because there is no mechanism in the U.S. Treasury market available for someone other than a direct participant to submit transactions and counterparty information to FICC.[196] Regarding the concerns that disclosure of the identity of a customer's execution counterparty could result in the Netting Member intermediary placing limitations on the execution counterparty, FICC states that Netting Member intermediaries may, in certain cases, have legitimate reasons to know or limit a customer's execution counterparties.[197] For example, FICC states that a Netting Member may need to confirm that a customer's proposed execution counterparty has an execution or similar agreement in place with the Netting Member and that the execution counterparty has performed any obligations set forth in that agreement.[198] FICC also states that Netting Members may also need to know the identity of a customer's execution counterparty to assess certain risks, such as potential CCLF requirements.[199] FICC states that whether and how a Netting Member intermediary may restrict execution counterparties are matters that should be commercially negotiated between the intermediary and its customers, rather than dictated by FICC in the GSD Rules.[200]

The Commission acknowledges that a customer may not wish to disclose the identity of its execution counterparty to its Netting Member intermediary. Although the commenters state that FICC should enable anonymous execution, such anonymous execution is not yet possible considering the current market infrastructure. Therefore, FICC need not require Netting Member intermediaries to provide for anonymous execution in order for the Proposed Rule Change to be consistent with Rule 17ad–22(e)(18)(iv)(C).[201]

In addition, regarding the concern that a Netting Member intermediary could restrict the execution counterparty, FICC's response that a Netting Member intermediary might have legitimate reasons to know the identity and restrict execution counterparties supports the suggestion that such matters should be negotiated bilaterally between customers and their Netting Members intermediaries.[202] However, regarding potential liquidity risk arising from done-away transactions, the Commission understands that the existence of exposure arising from a done-away transaction, and not necessarily the execution counterparty to that exposure, could have an effect on the Netting Member's liquidity obligations to FICC in the event of a member default. The Commission would not view the

[195] *See* FIA–PTG Letter I at 7–8; MFA Letter I at 4–5.

[196] *See* FICC Letter at 16. FICC states that in other markets (*e.g.,* the U.S. markets for equity securities and cleared derivatives), there are execution facilities or affirmation platforms that provide post-trade settlement market infrastructure with counterparty information. However, in the U.S. Treasury market, such facilities or platforms are not predominant or do not currently offer similar services. *See id.*

[197] *See* FICC Letter at 17.

[198] *See id.*

[199] *See id.*

[200] *See id.*

[201] *See* 17 CFR 240.17ad–22(e)(18)(iv)(C).

[202] In addition, the Commission understands that, to the extent that a market participant is transacting on an inter-dealer broker or similar platform, the execution counterparty to the transaction would be the inter-dealer broker or platform, not the other market participant that was brought together on the platform and also had a transaction with the inter-dealer broker or platform.

identity of the execution counterparty as relevant to the potential liquidity risk arising from that transaction. Moreover, the Commission disagrees that FICC's statements regarding confirming that a proposed execution counterparty has an execution or similar agreement in place with the Netting Member equates to the types of trilateral agreements prohibited by the CFTC.[203]

One commenter asked why the Agent Clearing Service cannot be used for ''brokered transactions'' or GCF repo transactions.[204] The commenter also states that for Treasury cash transactions executed by inter-dealer brokers, there would appear to be no way to comply with the Treasury Clearing Rules via customer clearing, as the execution counterparty does not offer customer clearing services and therefore another clearing member must accept these trades via a done-away offering.[205] In response, FICC states that, with respect to general collateral repo transactions, FICC would not be able to clear such transactions through the proposed Agent Clearing Service, but it states that it is considering developing such capabilities based on feedback from market participants.[206] With respect to brokered transactions, FICC states that it would not be appropriate for transactions cleared through the proposed Agent Clearing Service to be treated as ''Brokered Transactions'' under the GSD Rules because Brokered Transactions are designed to capture certain transactions that present lower risk than other cleared transactions.[207] Moreover, the Account Segregation Proposals [208] would modify the GSD Rules regarding Brokered Transactions, further clarifying the unique treatment of Brokered Transactions due to the limited risk they present to FICC.[209] The current GSD Rules cap the amount of loss allocation that may be applied to Inter-Dealer Broker Netting Members and Non-IDB Repo Brokers submitting Brokered Transactions.[210] The Account Segregation Proposals would revise the definition of Brokered Transactions to only include the side of the transactions submitted to FICC for novation by an Inter-Dealer Broker Netting Member and entered into on the Inter-Dealer Broker Netting Member's own trading platform.[211] As a result, the favorable loss allocation treatment for Brokered Transactions would only apply to the transactions that present limited risk since an Inter-Dealer Broker is standing in between two counterparties in those transactions and is therefore completely flat.[212] Since the favorable loss allocation treatment is only appropriate for Inter-Dealer Broker Netting Members submitting Brokered Transactions, the Account Segregation Proposals would delete the term ''Non IDB Repo Broker'' from the GSD Rules.[213] Additionally, the concurrently approved Account Segregation Proposals would provide that transactions entered into on an Inter-Dealer Broker Netting Member's trading platform or similar platform may be cleared using the Sponsored Service or the Agent Clearing Service, which addresses the commenter's concern.[214]

In response to the comments regarding transactions executed on an inter-dealer broker or similar platform, the Commission agrees that, as FICC represented,[215] such transactions could be submitted through the Agent Clearing Service.

3. Changes to the Sponsored Service

As described above in Section I.B.2., FICC also proposes to update certain membership standards in the GSD Rules regarding the Sponsored Service. First, FICC proposes to eliminate the two categories of Sponsoring Members, and instead, make all Sponsoring Members subject to the same eligibility and ongoing requirements that are currently applicable to Category 2 Sponsoring Members. These proposed changes would remove the capitalization requirements on Bank Netting Members from the current GSD Rules, and instead apply the activity limits and financial condition factors used under the current GSD Rules for Category 2 Sponsoring Members. These proposed changes would create parity among all Sponsoring Members (and applicants), thereby encouraging additional market participants to become Sponsoring Members, which in turn should give indirect participants a wider range of Sponsoring Members to consider should they choose to access GSD's central clearing services via the Sponsored Service.[216] Second, FICC proposes to remove the QIB Requirement for Sponsored Members, which would make the Sponsored Service available to additional market participants (*i.e.,* those unable to meet the QIB Requirement).[217]

Therefore, the proposed changes to the GSD Rules to (1) consolidate the Sponsoring Member categories, and (2) eliminate the QIB Requirement for Sponsored Members, constitute criteria for participation that facilitate access to GSD's clearance and settlement services, including for indirect participants, are consistent with Rule 17ad–22(e)(18)(iv)(C), because the proposed changes would expand the availability of the Sponsored Service to a broader range of market participants.[218]

4. Changes to Eligibility Criteria for Non-U.S. and Other Applicants

As described above in Section I.B.2., FICC proposes to clarify the eligibility criteria for non-U.S. Netting Member applicants. Whereas the current GSD Rules are unclear as to whether a non-U.S. applicant entity would only be subject to the Foreign Netting Member standards or would also be subject to the legal entity standards, FICC proposes to streamline the relevant membership categories by eliminating the category of ''Foreign Netting Member'' and expanding the qualifications for each category of Netting Member to include the foreign equivalent of the same legal entity types. Additionally, FICC proposes to clarify the eligibility criteria for applicants (including non-U.S. entities) that do not fit into one of the existing Netting Member categories.

Following the adoption of the Treasury Clearing Rules, additional market participants will need to access FICC's clearance and settlement services, either as direct Netting Members or as indirect participants.

[203] Such agreements incorporated optional annexes that make the clearing member to one or both of the executing parties a party to the agreement. These trilateral agreements contain provisions that would permit a customer's FCM, in consultation with the swap dealer (''SD'') that is the customer's counterparty, to establish specific credit limits for the customer's swap transactions with the SD, and that the FCM will only accept for clearing those transactions that fall within these specific limits. The limits set for trades with the SD or MSP might be less than the overall limits set for the customer for all trades cleared through the FCM. CFTC, Customer Clearing Documentation, Timing of Acceptance for Clearing, and Clearing Member Risk Management, 77 FR 21278, 21279 (Apr. 9, 2012).

[217] One commenter expressed support for FICC's proposal to eliminate the QIB Requirement. *See* ICI Letter at 5. No other commenter addressed this particular change or any other changes to the Sponsored Service.

[218] *See* 17 CFR 240.17ad–22(e)(18)(iv)(C).

Whereas the current GSD Rules do not provide FICC with the authority to consider a Netting Member applicant that does not meet the eligibility criteria of one of the Netting Member categories enumerated in the GSD Rules, the proposed changes, as described in Section I.B.2, would provide a framework for FICC to consider such other applicants. FICC designed the proposed changes regarding non-U.S. and other applicants to facilitate access to GSD's clearing services to a broader range of market participants.[219]

The proposed changes to the GSD Rules to clarify the eligibility criteria for non-U.S. Netting Member applicants and applicants that do not fit into one of the existing Netting Member categories, are consistent with Rule 17ad–22(e)(18)(iv)(C), because the proposed changes would expand the availability of GSD's clearing services to a broader range of market participants.[220]

5. Changes To Clarify the GSD Access Models

As described above in Section I.B.3., FICC proposes to include a ''road map'' in the GSD Rules describing the various GSD access models that allow for both direct and indirect access to GSD's clearance and settlement services. FICC also proposes to simplify the GSD Rule definitions regarding the different types of membership and other related definitions.[221] FICC states that these proposed changes would enhance the ability of market participants to better understand and evaluate the comparative tradeoffs between GSD's different access models.[222]

Several commenters request that FICC provide further clarity regarding the GSD access models.[223] Specifically, commenters request that FICC explain the expected use cases for each of the GSD access models to enable market participants to better evaluate the relative benefits of each access model by understanding the substantive differences between them.[224] One commenter states that FICC should eliminate any access model that it cannot justify with a use case.[225] One commenter states that although the availability of multiple access models may provide flexibility to market participants, it could also introduce unnecessary complexity and confusion.[226]

FICC states that it developed four indirect access models (*i.e.,* the Sponsored Service and Agent Clearing Service, each with either segregated or non-segregated margin) after engagement with market participants to ensure a diverse array of models through which market participants can access central clearing.[227] In response to the comments requesting further clarity and challenging the need for each of the proposed access models, FICC describes some of the possible use cases and advantages of each of the four access models.[228] Specifically, FICC states that market participants might prefer the Agent Clearing Service due to its conceptual and operational similarity to an FCM-style cleared derivatives model, enabling market participants to leverage their existing legal analyses, structures, policies, and procedures to clear transactions in U.S. Treasury securities.[229] Additionally, due to the greater intermediation of the Agent Clearing Service, a Netting Member intermediary would be able to utilize a ''financial asset'' election to perfect its security interest in cleared transactions without having to file a Uniform Commercial Code financing statement, potentially reducing cost, risk, and publicity.[230] Moreover, in comparison to the Sponsored Service, the Agent Clearing Service would involve a simpler onboarding process, would not require privity of contract between indirect participants and FICC, and would not impose the same jurisdictional requirements on indirect participants.[231] On the other hand, FICC highlights potential advantages to the Sponsored Service, including being in a direct contractual relationship with FICC.[232] FICC also states that Netting Members have existing clearing agreements with many customers for the Sponsored Service without segregation and could continue to utilize their existing agreements.[233] Additionally, since the Sponsored Service has existed for nearly two decades, FICC states that market participants have achieved a certain level of confidence regarding the Sponsored Service's treatment for legal, regulatory, accounting, and other purposes.[234]

Publication of ''use cases'' or justifications are not required for a proposed rule change to be consistent with Rule 17ad–22(e)(18)(iv)(C), which requires only that a covered clearing agency have written policies and procedures reasonably designed to ensure appropriate access to its clearing and settlement services, including for indirect participants. Further, the decision of which access model to use is for each individual market participant to determine, as each market participant has different regulatory obligations, business strategies, ownership models, etc. Nevertheless, FICC's description of the reasons for each of its four access models is sound and clearly identifies potential advantages and disadvantages of each model for market participants to consider.[235]

In addition, several commenters questioned the decision to offer both segregated and non-segregated accounts in both the Sponsored Service and Agent Clearing Service. Specifically, one commenter requests that FICC explain the benefits of the access models insofar as they allow for omnibus (*i.e.,* non-segregated) margin submission.[236] Another commenter questioned whether both the Sponsored Service and Agent Clearing Service should offer segregated models.[237]

In response, FICC explains potential advantages regarding margin segregation options (*i.e.,* to explain why the GSD access models allow for both segregated and non-segregated, or omnibus, margin submission).[238] Specifically, within the Agent Clearing Service, if margin is not segregated, Clearing Fund requirements for customer transactions would be calculated on a net basis across all Executing Firm Customers whose transactions are recorded within the same account, resulting in aggregate margin obligations that are substantially lower than under the Sponsored

[235] The Commission also understands that FICC has engaged in outreach and education efforts to further explain the different features of each model. *See generally* FICC's U.S. Treasury Clearing information website, *available at https://www.dtcc.com/ustclearing* (*e.g.,* the ''Access Central Clearing'' tab, which provides resources for direct and indirect participants to understand and evaluate each GSD access model, including explanations of recommended access models for specific types of market participants).

[236] *See* SIFMA–AMG Letter at 11–12.

[237] *See* FIA–PTG Letter at 4.

[238] *See* FICC Letter at 50–51.

Service.[239] If margin is segregated, Agent Clearing Members would not bear the costs of financing margin obligations for customer positions—a cost saving that could be passed on to customers without exposing customers to FICC, fellow customer, or Netting Member risk.[240] Regarding the Sponsored Service, FICC states that many customers have clearing agreements in place that already provide for non-segregated margin.[241] By continuing to allow non-segregated margin within the Sponsored Service, FICC would enable such customers to maintain their existing clearing agreements and associated processes.[242]

FICC's explanation of the potential reasons why a customer may want to be able to pursue the various options of segregation within both models is sound. Each market participant will have to evaluate the advantages and drawbacks of each option and determine what works best for its own business. The existence of both segregated and omnibus options for both the Agent Clearing and Sponsored Services is consistent with Rule 17ad–22(e)(18)(iv)(C), which requires only that a covered clearing agency have written policies and procedures reasonably designed to ensure appropriate access to its clearing and settlement services, including for indirect participants.

For these reasons, FICC's proposals to include a ''road map'' describing the various GSD access models and to simplify the definitions regarding GSD membership would, among other things, provide clarity in the GSD Rules regarding the models that direct and indirect participants may use to access GSD's clearance and settlement services. The proposed changes would enable market participants to better understand and evaluate the various GSD access models for clearing transactions in U.S. Treasury securities. Therefore, the proposed changes would constitute criteria for participation that facilitate access to GSD's clearance and settlement services, including for indirect participants, consistent with Rule 17ad–22(e)(18)(iv)(C).[243]

Additionally, one commenter states that FICC should require Netting Member intermediaries to allow their customers to choose whether to access clearing through the Sponsored Service or the Agent Clearing Service.[244] The same commenter further states that that margin segregation should be automatic for any Sponsored Member that posts its own margin.[245]

In response, FICC states that the best way to facilitate access to clearing is to enable direct and indirect participants to select the access method and associated terms that are most consistent with their commercial, regulatory, risk, operational, and legal considerations. Moreover, FICC states that mandating that Netting Members offer a particular service or clearing model could be inconsistent with Section 17A(b)(3)(E) of the Exchange Act, which prohibits a clearing agency from imposing any schedule of prices, or fix rates or other fees for its participants' services.[246] In response to the comment regarding automatic margin segregation within the Sponsored Service, FICC states that margin segregation should not be automatic for Sponsored Members that post their own margin, because there are scenarios in which market participants may prefer the flexibility of choosing non-segregated margin even when a Sponsored Member posts its own margin.[247]

The Proposed Rule Change does not include a requirement that FICC's Netting Members offer their customers a choice of what access model to use. The Commission shall approve a proposed rule change of a self-regulatory organization if it finds that it is consistent with the Act,[248] and the lack of a requirement that each Netting Member give its customers the choice of which access model to use is not inconsistent with the Act.

One commenter raises concerns as to whether FICC has the operational capability to onboard and account for the large number of new accounts that would need to be established to support the increased volume of clearing activity that would arise from FICC's implementation of its requirements pursuant to the Treasury Clearing Rules.[249] Specifically, the commenter states that that FICC would need to establish and maintain a large number of new accounts because each Agent Clearing Member would need to set up an individual account at FICC for each indirect participant for which the Agent Clearing Member would segregate margin.[250]

In response, FICC states it proposed each access model after confirming that FICC has the ability, from a legal, operational, risk, regulatory, and commercial perspective, to provide such a model.[251] Regarding individual accounts, FICC states that neither the Sponsored Service nor the Agent Clearing Service would necessitate individual accounts for each customer.[252]

The Commission agrees that neither the Proposed Rule Change nor FICC's implementation of its other requirements pursuant to the Treasury Clearing Rules would require FICC to establish and maintain accounts for each indirect participant.[253] Moreover, in its supervisory capacity regarding FICC, the Commission routinely and regularly receives data, reports, and other information regarding FICC's clearance and settlement activities, including FICC's operational capabilities. Based on the Commission's supervisory knowledge, FICC has the requisite operational capacity to offer the access models that it has proposed.[254]

One commenter raised concerns regarding the inability of FCMs to utilize the GSD access models.[255] Specifically, the commenter states that certain regulatory requirements to which FCMs are subject would conflict with FCMs participating in both the Sponsored Service and Agent Clearing Service.[256] The commenter urges FICC

[255] *See* Letter from Walt L. Lukken, President and Chief Executive Officer, Futures Industry of America (April 18, 2024) (''FIA Letter'') at 2–12. On July 1, 2024, FICC filed a separate proposed rule change that would, among other things, require each Netting Member to submit for central clearing all eligible secondary market transactions in U.S. Treasury securities to which it is a counterparty. *See* Securities Exchange Act Release No. 100417 (June 25, 2024), 89 FR 54602 (July 1, 2024) (SR–FICC–2024–009) (''Trade Submission Proposal''). The Commission notes that the FIA Letter includes a request for relief from the clearing requirement in the Trade Submission Proposal. *See* FIA Letter at 2–3. The commenter appropriately submitted a separate comment letter in response to the Trade Submission Proposal requesting similar relief, and the Commission will address the comment when adjudicating the Trade Submission Proposal. However, the commenter's request is outside the scope of the instant Proposed Rule Change.

[256] *See* FIA Letter at 4, 7–8 (citing CFTC Regulations regarding acceptable FCM counterparties, delivery-versus-payment and payment-versus-delivery requirements, posting collateral as margin for repos entered into with customer funds, FCM bankruptcy management, FCM repos with affiliates, and FCMs holding customer assets in customer segregated accounts).

to allow Netting Members to maintain sub-accounts for futures customer funds, cleared swaps customer funds, and foreign futures customer funds that comply with CFTC requirements.[257] Additionally, the commenter states that FCMs are currently seeking relief from the CFTC to recognize FICC as an acceptable counterparty and otherwise align the GSD access models with CFTC requirements.[258] In the interim, the commenter requests that FICC apply to FCMs certain GSD Rules that would exempt a Netting Member's Covered Affiliate from submitting trades to FICC if the obligation to submit the trade would cause a violation of any applicable law, rule, or regulation.[259] The commenter further requests that FICC work with FCMs and the CFTC to develop alternative CFTC-compliant access models.[260]

FICC states that it is open to considering additional access models if necessary to address market participants' regulatory or other needs.[261] In response to the commenter's request regarding sub-accounts, FICC states that the GSD Rules would allow Netting Members to instruct FICC to establish separate accounts for certain kinds of transactions and to have such accounts constitute separate margin portfolios.[262] Thus, a Netting Member that enters into transactions using futures, cleared swaps, or foreign futures customer funds could have those transactions recorded in an account that does not net with the Netting Member's other accounts for purposes of calculating margin or funds-only settlement amounts.[263]

The commenter specifically seeks relief from the CFTC from certain CFTC regulations, which are not within the Commission's jurisdiction.[264] The commenter also requests that FICC continue to apply certain GSD Rule provisions that would exempt FCMs from the requirement to submit trades to FICC if such trade submission would cause the FCM to be in violation of any applicable rule, or regulation.[265] The Commission notes that the GSD Rule provisions cited by the commenter are currently the subject of the Trade Submission Proposal, a separate pending proposed rule change filed by FICC.[266] Because the commenter's request to be excluded from the trade submission requirement deals with GSD Rule provisions that are subject to change as part of a separate proposed rule change, the Commission is not addressing the comment in the instant Order. For the same reason, the Commission is not addressing the commenter's request to require FICC to apply those GSD Rule provisions that are subject to change as part of a separate proposed rule change.[267]

Finally, the commenter requests that FICC work with FCMs and the CFTC to develop access models that are more suitable for FCMs than the Agent Clearing Service.[268] As mentioned above, FICC states that it is open to considering additional access models if necessary to address market participants' regulatory or other needs.[269] Additionally, FICC states that it continues to actively engage with the FCM community to resolve outstanding issues regarding the GSD access models.[270]

One commenter requests that FICC confirm that a bank's branches and Netting Member's affiliates can establish a separate margin portfolio within the Netting Member's account that would be separately netted and margined, such that they would not have to establish indirect access to FICC.[271] Because the commenter's request relates directly to GSD Rule provisions that are subject to change as part of the Trade Submission Proposal, a separate pending proposed rule change filed by FICC,[272] the Commission is not addressing the comment in the instant Order.

6. Comments Regarding Default Within the Client Clearing Models

Commenters raised several issues related to how FICC should address certain aspects of default within the Agent Clearing and Sponsored Services.

One commenter states that FICC should allow indirect participants to close out their positions with a defaulting Sponsoring Member or Agent Clearing Member.[273] For example, the commenter states that under the current GSD Rules, the process for closing out indirect participants' trade positions under the Sponsored Service is driven entirely by FICC, with indirect participants having no ''say'' in whether their positions are closed out, meaning that the customer may need to continue to rely on an insolvent (or near insolvent) Netting Member to make or receive payments on its behalf.[274] This commenter also states that FICC should clearly address Executing Firm Customers close-out rights in the event of the default of their Agent Clearing Member.[275] Alternatively, the commenter states that in the event of such a default, customers should be able to elect to receive payment directly from FICC, with FICC using any customer funds held at FICC to satisfy such amounts owed.[276] Similarly, an additional commenter states that the GSD Rules should address the situation of a FICC default simultaneous with a Sponsoring Member default, suggesting that Sponsored Members should have the ability to promptly close out and manage its positions.[277]

In response, FICC states that it was not aware of any such U.S. CCP that provides either for customers to have the ability to direct the CCP to terminate trades or to make payments directly to the customer, but that, instead, CCPs interface directly with clearing members, as agents for their customers consistent with the framework of an intermediated clearing arrangement.[278] FICC further states that, from a risk perspective, it important to FICC to interface with Netting Members as agents for their customers because Netting Members are subject to comprehensive operational requirements and testing that are designed to ensure that they have the capability to perform and to receive performance from FICC and that such performance will not expose FICC to operational risks (*e.g.,* systems failures and viruses).[279] FICC states that because customers are not subject to such requirements, FICC cannot establish interoperability without exposing itself, its participants, and the broader market to significant operational risk.[280] FICC also states that imposition of operational standards to customers would be quite burdensome, if not infeasible, for many customers, and that such burdens would likely outweigh any benefits of establishing interoperability with customers, because in a Netting Member default scenario, FICC would generally

close out trades or settle through the trustee or receiver of the defaulting member and applicable insolvency law would likely prohibit FICC from engaging directly with customers.[281]

The Proposed Rule Change does not include these types of close-out provisions for indirect participants that the commenter seeks. The Commission shall approve a proposed rule change of a self-regulatory organization if it finds that it is consistent with the Act,[282] and the lack of such close-out provisions is not inconsistent with the Act.

One commenter requests that FICC clarify the differences in the GSD Rules between the Sponsored Service and Agent Clearing Service governing a default of the Sponsoring Member or Agent Clearing Member.[283] The commenter states that the Proposed Rule Change suggests that customer positions will always be closed-out under the Agent Clearing Service, whereas FICC may elect to continue to settle customer positions under the Sponsored Service in the event of a Netting Member default.[284] FICC agrees with the commenter's suggestion that FICC should have the opportunity to settle the outstanding cleared transactions that a defaulting Agent Clearing Member has cleared through the Agent Clearing Service.[285] FICC states that, as a general matter, settlement may in many instances be the most effective and customer-protective way to address a member default scenario, so long as the receiver or trustee of the defaulting member consents.[286]

The Proposed Rule Change does not include the ability for FICC to settle the transactions of a defaulting Agent Clearing Member's customers that the commenter seeks. The Commission shall approve a proposed rule change of a self-regulatory organization if it finds that it is consistent with the Act,[287] and the lack of such close-out provisions is not inconsistent with the Act.

Some commenters question why the proposed Agent Clearing Service does not include a close-out mechanism regarding a defaulted customer's open positions, which could pose unique risks to an Agent Clearing Member by forcing it to keep a defaulted customer's positions open until the default is resolved.[288] One commenter further states that FICC may have declined to provide a mechanism for liquidating customer trades because, in contrast to the Sponsored Service, Executing Firm Customers are not members of FICC and therefore a ''close out amount'' cannot be calculated as between the customer and FICC.[289] However, this commenter also states that FICC could amend its rulebook to explicitly allow Netting Members to liquidate positions with defaulting customers, with such close-out procedure then addressed in account documentation between the Agent Clearing Member and its Executing Firm Customer.[290] Several commenters also state that FICC should allow an Agent Clearing Member to liquidate the transactions of a defaulted customer by transferring the positions to its proprietary account or by transferring offsetting positions to its omnibus account.[291] In addition, one commenter states that FICC should include similar trade liquidation procedures for done-away transactions cleared through the Sponsored Service.[292]

In response, FICC states that the Agent Clearing Service was designed to closely resemble the clearing model used in the futures and cleared swap market, and that such clearing models do not, to FICC's knowledge, prescribe a close-out mechanism for a clearing member to use to close out its customers' trades.[293] FICC further states that, instead, the clearing models generally leave it to the bilateral agreement between clearing members and their customers to address how such close-out should be effected. FICC also states that it is open to considering steps FICC can take to facilitate the ability of Netting Members to address a customer default situation and to promote legal certainty for both done-away and done-with transactions under the Agent Clearing and Sponsored Services.

The Proposed Rule Change does not include these types of close-out provisions that the commenter seeks. However, the Commission shall approve a proposed rule change of a self-regulatory organization if it finds that it is consistent with the Act,[294] and the lack of such close-out provisions is not inconsistent with the Act.

Several commenters state that the GSD Rules should provide for a porting mechanism to enable a customer to transfer positions to another Netting Member intermediary for risk management or business-related reasons.[295] Some commenters highlight that porting mechanisms exist in the cleared futures market as an important risk management tool.[296] In addition, one commenter states that in the event of a clearing member default, *all* non-defaulting customers will want the option to avoid immediately having their positions closed-out by FICC (regardless of whether their original execution counterparty was the clearing member or a third party), through either continuing to settle open positions or porting them to another clearing member.[297]

In response, FICC states that it intends to propose amendments to the GSD Rules that would add porting provisions similar to those adopted by other U.S.

[296] *See* ISDA Letter I at 5 (stating that many cleared futures clients are accustomed to their porting rights and use them as an important risk management tool); ISDA Letter II at 3–4 (stating that the commenting association's members have already come to rely on this type of guardrail in the futures clearing model as an essential risk management tool); MFA Letter I at 6 (stating that porting is an important risk management tool that provides additional certainty to indirect participants, particularly during periods of market stress); SIFMA–AMG Letter at 8 (stating that the ability to port positions is an important feature of the cleared swaps and futures market.).

[297] *See* Citadel Letter at 5.

CCPs, to make clear that porting is possible for FICC-cleared trades.[298] FICC also states its belief that it will be more efficient to wait until the Commission decides whether to approve or disapprove the Proposed Rule Change before proposing a specific porting framework, and states that it will seek to facilitate porting before December 31, 2025.[299] FICC also states that any porting framework would need to take into consideration the fact that many FICC-cleared customer transactions are overnight, and that porting may not be practical for such transactions because they will generally settle before the porting can be completed.[300] FICC further states that the ability to settle (which is currently included in the GSD Rules governing the Sponsored Service) is therefore substantially more important than the ability to port.[301]

The Proposed Rule Change does not contain any provisions related to porting customer transactions at FICC. However, the Commission shall approve a proposed rule change of a self-regulatory organization if it finds that it is consistent with the Act,[302] and the lack of porting provisions is not inconsistent with the Act.

Accordingly, for the reasons above, the Proposed Rule Change is consistent with Rule 17ad–22(e)(18)(iv)(C).[303]

E. Consistency With Rule 17ad–22(e)(23)(ii)

Rule 17ad–22(e)(23)(ii) under the Exchange Act requires a covered clearing agency, such as FICC, to establish, implement, maintain, and enforce written policies and procedures reasonably designed to provide sufficient information to enable participants to identify and evaluate the risks, fees, and other material costs they incur by participating in the covered clearing agency.[304]

Several commenters state that FICC should regularly publish statistics regarding the GSD access models, such as the volumes and proportion of transactions cleared through each access model and transactions executed on done-with and done-away bases.[305] The commenters suggest that FICC's publication of such data would enable market participants to better evaluate which access model best fits their business needs.[306] FICC responds that it intends to collect and publish information regarding the GSD access models, including the (1) number of Netting Members enabled to use each model, (2) number of Sponsoring Members enabled to offer done-away clearing, and (3) volumes of trading through each access model, including the number of transactions and total notional.[307] The Commission agrees that FICC's regular publication of the foregoing data should provide information that would better enable market participants to evaluate the GSD access models.

One commenter states that in addition to regularly publishing the data referenced in the immediately preceding paragraph, FICC should also regularly publish the number of clearing members who are in fact clearing more than *de minimis* volumes pursuant to each such model, and clearly separate out done-with and done-away activity.[308] The Proposed Rule Change does not contain any provisions related to FICC's publication of the specific data requested by the commenter. The Commission shall approve a proposed rule change of a self-regulatory organization if it finds that it is consistent with the Act,[309] and the lack of provisions regarding FICC's regular publication of the data requested by the commenter is not inconsistent with the Act.

For the reasons discussed above, the Proposed Rule Change would enable FICC to establish, implement, maintain, and enforce written policies and procedures reasonably designed to provide sufficient information to enable members to identify and evaluate the risks, fees, and other material costs they incur as FICC's members, consistent with Rule 17ad–22(e)(23)(ii).[310]

III. Conclusion

On the basis of the foregoing, the Commission finds that the Proposed Rule Change is consistent with the requirements of the Exchange Act and in particular with the requirements of Section 17A of the Exchange Act[311] and the rules and regulations promulgated thereunder.

It is therefore ordered, pursuant to Section 19(b)(2) of the Exchange Act[312] that proposed rule change SR–FICC–2024–005, be, and hereby is, Approved.[313]

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[314]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–101698; File No. SR–MIAX–2024–40]

Self-Regulatory Organizations; MIAX Exchange LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 402, Criteria for Underlying Securities, Exchange Rule 307, Position Limits, and Exchange Rule 309, Exercise Limits To Allow the Exchange To List and Trade Options on the iShares Bitcoin Trust (the "Trust")

November 21, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 18, 2024, Miami International Securities Exchange, LLC (''MIAX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Exchange Rule 402, Criteria for Underlying Securities, Exchange Rule 307, Position Limits, and Exchange Rule 309, Exercise Limits.

The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-options/miax-options/rule-filings,* at MIAX's principal office, and at the Commission's Public Reference Room.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Exchange Rule 402, Criteria for Underlying Securities, Exchange Rule 307, Position Limits, and Exchange Rule 309, Exercise Limits,[3] to allow the Exchange to list and trade options on the iShares Bitcoin Trust (the ''Trust''), designating the Trust as appropriate for options trading on the Exchange.[4] This is a competitive filing based on a similar proposal submitted by Nasdaq ISE, LLC (''ISE'') and approved by the Securities and Exchange Commission (''Commission'').[5]

Current Exchange Rule 402(i)(4) provides that securities deemed appropriate for options trading include shares or other securities (''Exchange Traded Fund Shares'') that are traded on a national securities exchange and are defined as ''NMS stock'' under Rule 600 of Regulation NMS, and that meet specified criteria enumerated in the rule. Sub Section 4 of Exchange Rule 402(i) provides that such shares or other securities:

> (4) are issued by the SPDR® Gold Trust or the iShares COMEX Gold Trust or the iShares Silver Trust or the ETFS Silver Trust or the ETFS Gold Trust or the ETFS Palladium Trust or the ETFS Platinum Trust or the Sprott Physical Gold Trust; or

In addition, the underlying securities and Exchange Rule 402i, including the commodity based trusts in Exchange Rule 402(i)(4), must meet the requirements of Exchange Rule 402(i), Sections (5)(i)(A) or (B).

Proposal

The Exchange proposes to amend Exchange Rule 402(i)(4) to expand the list of securities that are appropriate for options trading on the Exchange.

Description of the Trust[6]

The shares are issued by the Trust, a Delaware statutory trust. The Trust operates pursuant to a trust agreement (the ''Trust Agreement'') between the Sponsor, BlackRock Fund Advisors (the ''Trustee'') as the trustee of the Trust and Wilmington Trust, National Association, as Delaware trustee . The Trust issues shares representing fractional undivided beneficial interests in its net assets. The assets of the Trust consist only of bitcoin, held by a custodian on behalf of the Trust except under limited circumstances when transferred through the Trust's prime broker temporarily (described below), and cash. Coinbase Custody Trust Company, LLC (the ''Bitcoin Custodian'') is the custodian for the Trust's bitcoin holdings, and maintains a custody account for the Trust (''Custody Account''); Coinbase, Inc. (the ''Prime Execution Agent''), an affiliate of the Bitcoin Custodian, is the prime broker for the Trust and maintains a trading account for the Trust (''Trading Account''); and Bank of New York Mellon is the custodian for the Trust's cash holdings (the ''Cash Custodian'' and together with the Bitcoin Custodian, the ''Custodians'') and the administrator of the Trust (the ''Trust Administrator''). Under the Trust Agreement, the Trustee may delegate all or a portion of its duties to any agent, and has delegated the bulk of the day to day responsibilities to the Trust Administrator and certain other administrative and record-keeping functions to its affiliates and other agents. The Trust is not an investment company registered under the Investment Company Act of 1940, as amended.

The investment objective of the Trust is to reflect generally the performance of the price of bitcoin. The Trust seeks to reflect such performance before payment of the Trust's expenses and liabilities. The shares are intended to constitute a simple means of making an investment similar to an investment in bitcoin through the public securities market rather than by acquiring, holding and trading bitcoin directly on a peer-to-peer or other basis or via a digital asset exchange. The shares have been designed to remove the obstacles represented by the complexities and operational burdens involved in a direct investment in bitcoin, while at the same time having an intrinsic value that reflects, at any given time, the investment exposure to the bitcoin owned by the Trust at such time, less the Trust's expenses and liabilities. Although the shares are not the exact equivalent of a direct investment in bitcoin, they provide investors with an alternative method of achieving investment exposure to bitcoin through the public securities market, which may be more familiar to them.

Custody of the Trust's Bitcoin

An investment in the shares is backed by bitcoin held by the Bitcoin Custodian on behalf of the Trust. All of the Trust's bitcoin will be held in the Custody Account, other than the Trust's bitcoin which is temporarily maintained in the Trading Account under limited circumstances, *i.e.,* in connection with creation and redemption Basket[7] activity or sales of bitcoin deducted from the Trust's holdings in payment of Trust expenses or the Sponsor's fee (or, in extraordinary circumstances, upon liquidation of the Trust). The Custody Account includes all of the Trust's bitcoin held at the Bitcoin Custodian,

[3] The Exchange notes that its affiliate exchanges, MIAX Pearl and MIAX Sapphire, submitted substantively identical proposals. The Exchange notes that all the rules of Chapter III of the MIAX Options Exchange, including Rules 307 and 309, are incorporated by reference to MIAX Pearl and MIAX Sapphire. The Exchange also notes that all of the rules of Chapter III of the MIAX Options Exchange, including Rules 307 and 309, and the rules of Chapter IV of the MIAX Options Exchange, including Rule 402, are incorporated by reference to MIAX Emerald.

[4] On January 10, 2024, the Commission approved proposals by NYSE Arca, Inc., The Nasdaq Stock Market LLC, and Cboe BZX Exchange, Inc. to list and trade the shares of 11 bitcoin-based commodity-based trust shares and trust units, including the iShares Bitcoin Trust. *See* Securities Exchange Act Release No. 99306 (Jan. 10, 2024), 89 FR 3008 (Jan. 17, 2024) (order approving File Nos. SR–NYSEARCA–2021–90; SR–NYSEARCA–2023–44; SR–NYSEARCA–2023–58; SR–NASDAQ–2023–016; SR–NASDAQ–2023–019; SR–CboeBZX–2023–028; SR–CboeBZX–2023–038; SR–CboeBZX–2023–040; SR–CboeBZX–2023–042; SR–CboeBZX–2023–044; SR–CboeBZX–2023–072) (''Bitcoin ETP Order'').

[5] *See* Securities Exchange Act Release No. 101128 (September 20, 2024), 89 FR 78942 (September 26, 2024) (SR–ISE–2024–03) (Self-Regulatory Organizations; Nasdaq ISE, LLC; Notice of Filing of Amendment Nos. 4 and 5 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment Nos. 1, 4, and 5, to Permit the Listing and Trading of Options on the iShares Bitcoin Trust).

[6] *See* Securities Exchange Act Release No. 99306 (Jan. 10, 2024), 89 FR 3008 (Jan. 17, 2024) (order approving File Nos. SR–NYSEARCA–2021–90; SR–NYSEARCA–2023–44; SR–NYSEARCA–2023–58; SR–NASDAQ–2023–016; SR–NASDAQ–2023–019; SR–CboeBZX–2023–028; SR–CboeBZX–2023–038; SR–CboeBZX–2023–040; SR–CboeBZX–2023–042; SR–CboeBZX–2023–044; SR–CboeBZX–2023–072) (Order Granting Accelerated Approval of Proposed Rule Changes, as Modified by Amendments Thereto, To List and Trade Bitcoin-Based Commodity-Based Trust Shares and Trust Units) for a complete description of the Trust.

[7] The Trust issues and redeems Shares only in blocks of 40,000 or integral multiples thereof. A block of 40,000 Shares is called a ''Basket.'' These transactions take place in exchange for Bitcoin.

but does not include the Trust's bitcoin temporarily maintained at the Prime Execution Agent in the Trading Account from time to time. The Bitcoin Custodian will keep all of the private keys associated with the Trust's bitcoin held in the Custody Account in ''cold storage''.[8] The hardware, software, systems, and procedures of the Bitcoin Custodian may not be available or cost-effective for many investors to access directly.

The Exchange believes that offering options on the Trust will benefit investors by providing them with an additional, relatively lower cost investing tool to gain exposure to spot Bitcoin as well as a hedging vehicle to meet their investment needs in connection with Bitcoin products and positions. Similar to other commodity-based trusts on which options may be listed on the Exchange (*e.g.* SPDR® Gold Trust, the iShares COMEX Gold Trust, the iShares Silver Trust, or the ETFS Gold Trust),[9] the Trust essentially offers the same objectives and benefits to investors as do other commodity-based trusts on which options may be listed on the Exchange.

Options on the Trust will trade in the same manner as options on other ETFs on the Exchange. Exchange Rules that currently apply to the listing and trading of all options on ETFs on the Exchange, including, for example, Rules that govern listing criteria, expirations, exercise prices, minimum increments, position and exercise limits (including as proposed herein), margin requirements, customer accounts and trading halt procedures, will apply to the listing and trading of options on the Trust on the Exchange. Today, these rules apply to options on the various commodities-based trusts deemed appropriate for options trading on the Exchange pursuant to Exchange Rule 402(i)(4).

The Exchange's initial listing standards for ETFs on which options may be listed and traded on the Exchange will apply to the Trust. Pursuant to Exchange Rule 402(a), a security (which includes ETFs) on which options may be listed and traded on the Exchange must be registered (with the Commission) and be an NMS stock (as defined in Rule 600 of Regulation NMS under the Act,) and be characterized by a substantial number of outstanding shares that are widely held and actively traded. Exchange Rule 402(i) requires that, in relevant part, ETFs must either (1) meet the criteria and standards set forth in Exchange Rule 402(a) or Exchange Rule 402(b), or (2) be available for creation or redemption each business day from or through the issuer in cash or in kind at a price related to net asset value, and the issuer must be obligated to issue ETFs in a specified aggregate number even if some or all of the investment assets required to be deposited have not been received by the issuer, subject to the condition that the person obligated to deposit the investments has undertaken to deliver the investment assets as soon as possible and such undertaking is secured by the delivery and maintenance of collateral consisting of cash or cash equivalents satisfactory to the issuer, as provided in the respective prospectus.

Options on the Trust will also be subject to the Exchange's continued listing standards set forth in Exchange Rule 403(g), for ETFs deemed appropriate for options trading pursuant to Exchange Rule 402(i). Specifically, Exchange Rule 403(g) provides that ETFs that were initially approved for options trading pursuant to Exchange Rule 402(i) shall be deemed not to meet the requirements for continued approval, and the Exchange shall not open for trading any additional series of option contracts of the class covering that such ETFs, if the ETFs are delisted from trading pursuant to Exchange Rule 403(b)(4), are halted or suspended from trading in their primary market. Additionally, options on ETFs may be subject to the suspension of opening transactions in any of the following circumstances: (1) in the case of options covering ETFs approved for trading under Exchange Rule 402(i)(5)(i)(A), in accordance with the terms of paragraphs (b)(1), (2), and (3) of Exchange Rule 403; (2) in the case of options covering ETFs approved for trading under Exchange Rule 402(i)(5)(i)(B), following the initial twelve-month period beginning upon the commencement of trading in the ETFs on a national securities exchange and are defined as an NMS stock, there are fewer than 50 record and/or beneficial holders of such ETFs for 30 or more consecutive trading days; (3) the value of the index or portfolio of securities, non-U.S. currency, or portfolio of commodities including commodity futures contracts, options on commodity futures contracts, swaps, forward contracts and/or options on physical commodities and/or financial instruments and money market instruments on which the ETFs are based is no longer calculated or available; or (4) such other event shall occur or condition exist that in the opinion of the Exchange makes further dealing in such options on the Exchange inadvisable.

Options on the Trust would be physically settled contracts with American-style exercise.[10] Consistent with current Exchange Rule 404, which governs the opening of options series on a specific underlying security (including ETFs), the Exchange will open at least one expiration month for options on the Trust[11] and may also list series of options on the Trust for trading on a weekly,[12] monthly,[13] or quarterly[14] basis. The Exchange may also list long-term equity option series (''LEAPS'') that expire from 12 to 39 months from the time they are listed.[15]

Pursuant to Exchange Rule 404, Interpretation and Policy .06, which governs strike prices of series of options on ETFs, the interval between strike prices of series of options on ETFs approved for options trading pursuant to Exchange Rule 402(i) shall be fixed at a price per share which is reasonably close to the price per share at which the

[8] The term ''cold storage'' refers to a safeguarding method by which the private keys corresponding to the Trust's bitcoins are generated and stored in an offline manner, subject to layers of procedures designed to enhance security. Private keys are generated by the Bitcoin Custodian in offline computers that are not connected to the internet so that they are more resistant to being hacked.

[9] *See* Exchange Rule 402(i)(4).

[10] *See* Exchange Rule 401, which provides that the rights and obligations of holders and writers are set forth in the Rules of the Options Clearing Corporation (''OCC''); *see also* OCC Rules, Chapters VIII (which governs exercise and assignment) and Chapter IX (which governs the discharge of delivery and payment obligations arising out of the exercise of physically settled stock option contracts).

[11] *See* Exchange Rule 404(b). The monthly expirations are subject to certain listing criteria for underlying securities described within Exchange Rule 404 and its Interpretations and Policies. Monthly listings expire the third Friday of the month. The term ''expiration date'' (unless separately defined elsewhere in the OCC By-Laws), when used in respect of an option contract (subject to certain exceptions), means the third Friday of the expiration month of such option contract, or if such Friday is a day on which the exchange on which such option is listed is not open for business, the preceding day on which such exchange is open for business. *See* OCC By-Laws Article I, Section 1. Pursuant to Exchange Rule 404(c), additional series of options of the same class may be opened for trading on the Exchange when the Exchange deems it necessary to maintain an orderly market, to meet customer demand or when the market price of the underlying stock moves more than five strike prices from the initial exercise price or prices. Pursuant to Exchange Rule 404(e), new series of options on an individual stock may be added until the beginning of the month in which the options contract will expire. Due to unusual market conditions, the Exchange, in its discretion, may add a new series of options on an individual stock until the close of trading on the business day prior to expiration.

[12] *See* Exchange Rule 404, Interpretations and Policies .02.

[13] *See* Exchange Rule 404, Interpretations and Policies .13.

[14] *See* Exchange Rule 404, Interpretations and Policies .03.

[15] *See* Exchange Rule 404(d).

underlying security is traded in the primary market at or about the same time such series of options is first open for trading on the Exchange, or at such intervals as may have been established on another options exchange prior to the initiation of trading on the Exchange. With respect to the Short Term Options Series or Weekly Program, during the month prior to expiration of an option class that is selected for the Short Term Option Series Program, the strike price intervals for the related non-Short Term Option (''Related non-Short Term Option'') shall be the same as the strike price intervals for the Short Term Option.[16] Specifically, the Exchange may open for trading Short Term Option Series at strike price intervals of (i) $0.50 or greater where the strike price is less than $100, and $1 or greater where the strike price is between $100 and $150 for all option classes that participate in the Short Term Options Series Program; (ii) $0.50 for option classes that trade in one dollar increments and are in the Short Term Option Series Program; or (iii) $2.50 or greater where the strike price is above $150.[17] Additionally, the Exchange may list series of options pursuant to the $1 Strike Price Interval Program,[18] the $0.50 Strike Program,[19] and the $2.50 Strike Price Program.[20] Pursuant to Exchange Rule 510, where the price of a series of options for the Trust is less than $3.00, the minimum increment will be $0.05, and where the price is $3.00 or higher, the minimum increment will be $0.10[21] consistent with the minimum increments for options on other ETFs listed on the Exchange. Any and all new series of Trust options that the Exchange lists will be consistent and comply with the expirations, strike prices, and minimum increments set forth in Rules 404 and 510, as applicable.

Position and exercise limits for options on ETFs, including options on the Trust, are determined pursuant to Exchange Rules 307 and 309, respectively. Position and exercise limits for ETF options vary according to the number of outstanding shares and the trading volumes of the underlying ETF over the past six months, where the largest in capitalization and the most frequently traded ETFs have an option position and exercise limit of 250,000 contracts (with adjustments for splits, re-capitalizations, etc.) on the same side of the market; and smaller capitalization ETFs have position and exercise limits of 200,000, 75,000, 50,000 or 25,000 contracts (with adjustments for splits, re-capitalizations, etc.) on the same side of the market. The Exchange proposes to cap the position and exercise limits for the Trust at 25,000 contracts. Capping the position and exercise limits at 25,000 contracts, the lowest limits available in options, would address concerns related to manipulation and protection of investors as this number is extremely conservative for the Trust and is more than appropriate given its liquidity.

For purposes of addressing position and exercise limits, the Exchange applies position and exercise limits for options for each underlying security and does not aggregate position and exercise limits. In considering the appropriate position and exercise limits for the Trust, the Exchange reviewed the data presented by ISE in its filing, specifically in Exhibit 3 of the filing,[22] where ISE measured the Trust's market capitalization and ADV against other industry data as explained further below. The Commission should consider the position and exercise limits for options on the Trust exclusive of other options on bitcoin.

In its filing, ISE considered the Trust's market capitalization and ADV, and prospective position limit in relation to other securities. In measuring the Trust against other securities, ISE aggregated market capitalization and volume data for securities that have defined position limits utilizing data from The Options Clearing Corporations (''OCC'').[23] This pool of data took into consideration 3,984 options on single stock securities, excluding broad based ETFs.[24] Next, ISE aggregated the data based on market capitalization and ADV and grouped option symbols by position limit utilizing statistical thresholds for ADV and market capitalization that were one standard deviation above the mean for each position limit category (*i.e.* 25,000, 50,000 to 65,000, 75,000, 100,000 to less than 250,000, 250,000 to 400,000, 450,000 to 1,000,000, and greater than or equal to 1,000,000)(sic).[25] Exchange Rule 307(d) sets out position limits for various contracts. For example, on the Exchange like on ISE, a 25,000 contract limit applies to those options having an underlying security that does not meet the requirements for a higher options contract limit. ISE performed an exercise to demonstrate the Trust's position limit relative to other options symbols in terms of market capitalization and ADV. For reference the market capitalization for the Trust was 19,789,068 billion[26] with an ADV, for the preceding three months prior to August 7, 2024, of greater than 26 million shares.[27] Today, by comparison, other options symbols with similar market capitalization and ADV have a position limit in excess of 400,000.[28] Therefore, the proposed 25,000 same side position limit for options on the Trust is extremely conservative relative to these options symbols which are a full standard deviation above the mean in comparison.

Second, ISE reviewed the Trust's data relative to the market capitalization of the entire bitcoin market in terms of exercise risk and availability of deliverables. Utilizing data as of August 3, 2024, there were 19,737,193 bitcoins in circulation.[29] ISE took a price of $57,000 that equates to a market capitalization of greater than 1.125 trillion US dollars, and applied that to a position limit of 400,000 for options on the Trust.[30] If a position limit of 400,000 options were considered (the position limit that would be typically assigned based upon data) the exercisable risk would represent only 6.6% of the outstanding shares of the Trust. The 25,000 position limit being sought only represents 0.4% of the outstanding shares of the Trust. Since the Trust has a creation and redemption process managed through the issuer, additionally it can be compared the position limit sought to the total market capitalization of the entire bitcoin market. In this case, the exercisable risk for options on the Trust would be less

[30] Id.

than 0.01% of the market capitalization of all outstanding bitcoin. Assuming a scenario where all options on the Trust's shares were exercised given the proposed 25,000 per same side position limit, this would have a virtually unnoticed impact on the entire bitcoin market. This analysis demonstrates that the proposed 25,000 per same side position limit is also extremely conservative and more than appropriate for options on the Trust.

Third, ISE reviewed the proposed position limit by comparing it to position limits for derivative products regulated by the Commodity Futures Trading Commission (''CFTC''). While the CFTC, through the relevant Designated Contract Markets, only regulates options positions based upon delta equivalents (creating a less stringent standard), ISE examined equivalent bitcoin futures position limits. In particular, ISE looked at the CME bitcoin futures contract [31] that has a position limit of 2,000 futures.[32] On August 7, 2024, CME bitcoin futures settled at $55,000.[33] Taking the position limit of 2,000 futures at a $5 multiplier [34] equates to $550 million of notional value for bitcoin futures. By way of comparison, on August 7, 2024, the Trust settled at $31.19 per share, which would equate to 17,633,857 shares of the Trust [35] if the CME notional position limit were utilized. Since substantial portions of any distributed options portfolio are likely to be out of the money on expiration, an options position limit equivalent to the CME position limit for bitcoin futures (considering that all options deltas are ≤1.00) should be a bit higher than the CME implied 176,338 limit.

Of note, unlike options contracts, CME position limits are calculated on a net futures equivalent basis by contract and include contracts that aggregate into one or more base contract according to an aggregation ratio(s).[36] Therefore, if a portfolio includes positions in options on futures, CME would aggregate those positions into the underlying futures contracts in accordance with a table published by CME on a delta equivalent value for the relevant spot month, subsequent spot month, single month and all month position limits.[37] If a position exceeds position limits because of an option assignment, CME permits market participants to liquidate the excess position within one business day without being considered in violation of its rules. Additionally, if at the close of trading, a position that includes options exceeds position limits for futures contracts, when evaluated using the delta factors as of that day's close of trading, but does not exceed the limits when evaluated using the previous day's delta factors, then the position shall not constitute a position limit violation. Considering CME's position limits on futures for bitcoin, the Exchange believes that the proposed 25,000 per same side position limit is conservative and more than appropriate for options on the Trust.

In analyzing the proposed position limit for options on the Trust, ISE also considered the supply of bitcoin. Specifically, ISE examined the number of market participants with position limits that would need to exercise in unison to put the underlying asset under stress. In the case of options on the Trust, the proposed 25,000 same side position limit effectively restricts a market participant from holding positions that could be exercised in excess of 2,500,000 shares of the Trust. Utilizing data from August 12, 2024, the Trust had 611,040,000 shares outstanding, therefore 244 market participants would have to simultaneously exercise position limits in order to create a scenario that may put the underlying asset (the Trust) under stress.[38] The Exchange notes that historically, from observation only, it appears that no more than five market participants holding position limits in any security have exercised in unison in any option. As unlikely an occurrence as all market participants exercising their position limits in unison would be, if it were to occur, it should be noted that even such an occurrence would not likely put the Trust under stress as economic incentives, would induce the creation of more shares through the ETF creation and redemption process.

By way of example, given that the current global supply of bitcoin, the underlying asset of the Trust, is 19,789,068 [39] and that each bitcoin can currently be redeemed for 1,755 shares of the Trust, another 34,729,814,340 shares of the Trust could be created. To exhaust this supply of the Trust, 13,891 market participants would have to simultaneously exercise their position limit. Comparing the Trust to the SPDR Gold Shares (''GLD'') ETF or the iShares Silver Trust (''SLV'') ETF, which have position limits of 250,000 or ten times the proposed position limit for the Trust as well as lower shares outstanding in both products,[40] it is unjustified to mandate a different level of stringency with respect to a position limit for options on the Trust.

The supply of bitcoin does have a limit, which will take years to fully mint.[41] The Exchange notes that bitcoin is a viable economic alternative to traditional assets. The price of goods denominated by bitcoin has actually declined. This dynamic not only makes a fixed supply desirable, but a necessary condition of the value added by this asset in the broader economy. Further, the Exchange notes that corporations have a limited number of outstanding shares. Corporations may authorize additional shares, repurchase shares or split their shares. Similarly, ETFs, like the Trust, may also create, redeem, or split shares to suit the demand of the marketplace.

Importantly, because the supply of bitcoin is much larger than the available supply of most securities and the proposed 25,000 contract position limit is so conservative, the Exchange believes that evaluating the available supply of bitcoin in establishing a position limit for options on the Trust would demonstrate that the proposed limit is safe for investors and the market.[42] The Trust constitutes less than 2% of the entire bitcoin supply. When comparing the market capitalization of bitcoin against the largest securities, bitcoin would rank 7th among those

[42] A supply consideration would likely be valuable for an option symbol that had far less liquidity than the Trust.

securities.[43] Further, the Exchange believes that its proposal to list options on the Trust with a position limit of 25,000 on the same side is a conservative position limit that does not lend itself to manipulation in the market given the ample market capitalization and liquidity in the Trust. If we look to the liquidity statistics of similar instruments and their concomitant position limits, we are able to extrapolate a reasonable standard for arriving at a position limit for a new product. In this case we can look to GLD, SLV, and the ProShares Bitcoin Strategy ETF (''BITO''). These products have volume statistics and ''float'' statistics, which gauge liquidity, which are in line, yet slightly lower than the Trust. All three of these reference products have position limits of 250,000 contracts. These reference products are remarkably similar in nature to the Trust; they are exchange-traded products (''ETPs'') holding one asset in a trust.

The Exchange further notes that Exchange Rule 1502, which governs margin requirements applicable to trading on the Exchange, including options on ETFs, will also apply to the trading of the Trust options. Notwithstanding the position limits in Exchange Rule 307(d) and exercise limits in Exchange Rule 309, the Exchange proposes the position and exercise limits for the options on the Trust to be 25,000 contracts on the same side pursuant to proposed Supplementary Material .01 to Exchange Rule 307 and proposed Supplementary Material .01 to Exchange Rule 309.

The Exchange represents that the same surveillance procedures applicable to all other options on other ETFs currently listed and traded on the Exchange will apply to options on the Trust. Also the Exchange represents that it has the necessary systems capacity to support the new option series. The Exchange believes that its existing surveillance and reporting safeguards are designed to deter and detect possible manipulative behavior which might potentially arise from listing and trading options on ETFs, including the proposed Trust options.

Today, the Exchange has an adequate surveillance program in place for options. The Exchange intends to apply those same program procedures to options on the Trust that it applies to the Exchange's other options products.[44] The Exchange's staff will have access to the surveillance programs conducted by its affiliate exchanges, MIAX Pearl and MIAX Sapphire with respect to trading in the shares of the underlying Trust when conducting surveillances for market abuse or manipulation in the options on the Trust. Additionally, the Exchange is a member of the Intermarket Surveillance Group (''ISG'') under the Intermarket Surveillance Group Agreement. ISG members work together to coordinate surveillance and investigative information sharing in the stock, options, and futures markets. In addition to obtaining surveillance data from MIAX Pearl and MIAX Sapphire, the Exchange will be able to obtain information regarding trading in the shares of the underlying Trust from Nasdaq, LLC and other markets through ISG. In addition, the Exchange has a Regulatory Services Agreement with the Financial Industry Regulatory Authority (''FINRA''). Pursuant to a multi-party 17d–2 joint plan, all options exchanges allocate regulatory responsibilities to FINRA to conduct certain options-related market surveillance that are common to rules of all options exchanges.[45]

The underlying shares of spot bitcoin ETPs, including the Trust, are also subject to safeguards related to addressing market abuse and manipulation. As the Commission stated in Bitcoin ETP Order:

> Each Exchange has a comprehensive surveillance-sharing agreement with the CME via their common membership in the Intermarket Surveillance Group. This facilitates the sharing of information that is available to the CME through its surveillance of its markets, including its surveillance of the CME bitcoin futures market.[46]
>
> The Exchange states that, given the consistently high correlation between the CME bitcoin futures market and the spot bitcoin market, as confirmed by the Commission through robust correlation analysis, the Commission was able to conclude that such surveillance sharing agreements could reasonably be ''expected to assist in surveilling for fraudulent and manipulative acts and practices in the specific context of the [Bitcoin ETPs].''[47]

In light of surveillance measures related to both options and futures as well as the underlying Trust,[48] the Exchange believes that existing surveillance procedures are designed to deter and detect possible manipulative behavior which might potentially arise from listing and trading the proposed options on the Trust. Further, the Exchange represents that it will implement any new surveillance procedures it deems necessary to effectively monitor the trading of options on the Trust.

The Exchange has also analyzed its capacity and represents that it believes the Exchange and Options Price Reporting Authority or ''OPRA'' have the necessary systems capacity to handle the additional traffic associated with the listing of new series that may result from the introduction of options on the Trust up to the number of expirations currently permissible under the Rules. Because the proposal is limited to one class, the Exchange believes any additional traffic that may be generated from the introduction of the Trust options will be manageable. Finally, the Exchange proposes a technical amendment to Exchange Rule 402(i)(4) to amend the name ''ETFS Gold Trust'' to ''Aberdeen Standard Physical Gold Trust.'' In 2018 ETFS Gold Trust was renamed.[49] At this time, the Exchange proposes to amend the name of the ETF to reflect its current name.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Act and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[50] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[51] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and

[43] *See https://companiesmarketcap.com/usa/largest-companies-in-the-usa-by-market-cap/.*

[44] The surveillance program includes real-time patterns for price and volume movements and post-trade surveillance patterns (*e.g.,* spoofing, marking the close, pinging, phishing).

[45] Section 19(g)(1) of the Act, among other things, requires every SRO registered as a national securities exchange or national securities association to comply with the Act, the rules and regulations thereunder, and the SRO's own rules, and, absent reasonable justification or excuse, enforce compliance by its members and persons associated with its members. See 15 U.S.C. 78q(d)(1) and 17 CFR 240.17d–2. Section 17(d)(1) of the Act allows the Commission to relieve an SRO of certain responsibilities with respect to members of the SRO who are also members of another SRO (''common members''). Specifically, Section 17(d)(1) allows the Commission to relieve an SRO of its responsibilities to: (i) receive regulatory reports from such members; (ii) examine such members for compliance with the Act and the rules and regulations thereunder, and the rules of the SRO; or (iii) carry out other specified regulatory responsibilities with respect to such members.

[49] Effective October 1, 2018 ETFS Gold Trust was renamed Aberdeen Standard Gold ETF Trust. *https://www.sec.gov/Archives/edgar/data/1450923/000138713118005292/ex10-2.htm.*

[50] 15 U.S.C. 78f(b).

[51] 15 U.S.C. 78f(b)(5).

practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section (6)(b)(5) [52] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In particular, the Exchange believes that the proposal to list and trade options on the Trust will remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, protect investors because offering options on the Trust will provide investors with a greater opportunity to realize the benefits of utilizing options on an ETF based on spot bitcoin, including cost efficiencies and increased hedging strategies. The Exchange believes that offering options on a competitively priced ETF based on spot bitcoin will benefit investors by providing them with an additional, relatively lower-cost risk management tool, allowing them to manage, more easily, their positions and associated risks in their portfolios in connection with exposure to spot bitcoin. Today, the Exchange lists options on other commodity ETFs structured as a trust, which essentially offer the same objectives and benefits to investors, and for which the Exchange has not identified any issues with the continued listing and trading of options on those ETFs.

The Exchange also believes the proposal to permit options on the Trust will remove impediments to and perfect the mechanism of a free and open market and a national market system, because options on the Trust will comply with current Exchange Rules. Options on the Trust must satisfy the initial listing standards and continued listing standards currently in the Exchange Rules, applicable to options on all ETFs, including options on other commodity ETFs already deemed appropriate for options trading on the Exchange pursuant to Exchange Rule 402(i)(4). Additionally, as demonstrated above, the Trust is characterized by a substantial number of shares that are widely held and actively traded. Further, Exchange Rules that currently govern the listing and trading of options on ETFs, including permissible expirations, strike prices, minimum increments, position and exercise limits (as proposed herein), and margin requirements, will govern the listing and trading of options on the Trust. The proposed position and exercise limits for options on the Trust is 25,000 contracts. These position and exercise limits are the lowest position and exercise limits available in the options industry, are extremely conservative and more than appropriate given the Trust's market capitalization, average daily volume, and high number of outstanding shares. The proposed position limit, and exercise limit, is consistent with the Act as it addresses concerns related to manipulation and protection of investors because, as demonstrated above, the position limit (and exercise limit) is extremely conservative and more than appropriate given the Trust is actively traded. In support of the proposed position and exercise limits for options on the Trust is 25,000 contracts, the Exchange is citing the in depth analysis ISE did in its filing. As noted above, in the IBIT Approval Order, ISE considered the: (i) Trust's market capitalization and ADV, and prospective position limit in relation to other securities; (ii) market capitalization of the entire bitcoin market in terms of exercise risk and availability of deliverables; (iii) proposed position limit by comparing it to position limits for derivative products regulated by the CFTC; and (iv) supply of bitcoin. Based on the Exchange's review of IBIT Approval Order, the Exchange believes that the setting position and exercise limits for options on the Trust is 25,000 contracts is more than appropriate for the Trust. The proposed position and exercise limits reasonably and appropriately balance the liquidity provisioning in the market against the prevention of manipulation. The Exchange believes these proposed limits are effectively designed to prevent an individual customer or entity from establishing options positions that could be used to manipulate the market of the underlying as well as the Bitcoin market.[53]

The Exchange represents that it has the necessary systems capacity to support options on the Trust. The Exchange believes that its existing surveillance and reporting safeguards are designed to deter and detect possible manipulative behavior which might arise from listing and trading options on ETFs, including the Trust options. Today, the Exchange has an adequate surveillance program in place for options. The Exchange intends to apply those same program procedures to options on the Trust that it applies to the Exchange's other options products.[54] The Exchange's staff will have access to the surveillance programs conducted by its affiliate exchanges, MIAX Pearl and MIAX Sapphire with respect to the underlying Trust when conducting surveillances for market abuse or manipulation in the options on the Trust. The Exchange will review activity in the underlying Trust when conducting surveillances for market abuse or manipulation in the options on the Trust. Additionally, the Exchange is a member of the ISG under the Intermarket Surveillance Group Agreement. ISG members work together to coordinate surveillance and investigative information sharing in the stock, options, and futures markets. In addition to obtaining surveillance data from MIAX Pearl and MIAX Sapphire, the Exchange will be able to obtain information from Nasdaq, LLC and other markets through ISG. In addition, the Exchange has a Regulatory Services Agreement with FINRA. Pursuant to a multi-party 17d–2 joint plan, all options exchanges allocate regulatory responsibilities to FINRA to conduct certain options-related market surveillance that are common to rules of all options exchanges.[55]

The underlying shares of spot bitcoin ETPs, including the Trust, are also subject to safeguards related to addressing market abuse and manipulation. As the Commission stated in Bitcoin ETP Order:

Each Exchange has a comprehensive surveillance-sharing agreement with the CME via their common membership in the Intermarket Surveillance Group.

[52] *Id.*

[53] *See* Securities Exchange Act Release No. 39489 (December 24, 1997), 63 FR 276 (January 5, 1998) (SR–CBOE–1997–11).

[54] The surveillance program includes real-time patterns for price and volume movements and post-trade surveillance patterns (*e.g.,* spoofing, marking the close, pinging, phishing).

[55] Section 19(g)(1) of the Act, among other things, requires every SRO registered as a national securities exchange or national securities association to comply with the Act, the rules and regulations thereunder, and the SRO's own rules, and, absent reasonable justification or excuse, enforce compliance by its members and persons associated with its members. See 15 U.S.C. 78q(d)(1) and 17 CFR 240.17d–2. Section 17(d)(1) of the Act allows the Commission to relieve an SRO of certain responsibilities with respect to members of the SRO who are also members of another SRO (''common members''). Specifically, Section 17(d)(1) allows the Commission to relieve an SRO of its responsibilities to: (i) receive regulatory reports from such members; (ii) examine such members for compliance with the Act and the rules and regulations thereunder, and the rules of the SRO; or (iii) carry out other specified regulatory responsibilities with respect to such members.

This facilitates the sharing of information that is available to the CME through its surveillance of its markets, including its surveillance of the CME bitcoin futures market.[56]

The Exchange states that, given the consistently high correlation between the CME bitcoin futures market and the spot bitcoin market, as confirmed by the Commission through robust correlation analysis, the Commission was able to conclude that such surveillance sharing agreements could reasonably be ''expected to assist in surveilling for fraudulent and manipulative acts and practices in the specific context of the [Bitcoin ETPs].'' [57]

In light of surveillance measures related to both options and futures as well as the underlying Trust,[58] the Exchange believes that existing surveillance procedures are designed to deter and detect possible manipulative behavior which might potentially arise from listing and trading the proposed options on the Trust. Further, the Exchange represents that it will implement any new surveillance procedures it deems necessary to effectively monitor the trading of options on the Trust.

Finally, the Commission has previously approved the listing and trading of options on other commodity ETFs structured as a trust, such as SPDR® Gold Trust,[59] the iShares COMEX Gold Trust [60] the iShares Silver Trust,[61] the ETFS Gold Trust,[62] and the ETFS Silver Trust.[63]

Further, the Exchange's proposal to amend the name ''ETFS Gold Trust'' to ''Aberdeen Standard Physical Gold Trust'' in Exchange Rule 402(i)(4) is consistent with the Act and the protection of investors as this amendment reflects the current name of this product.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. In this regard and as indicated above, the Exchange notes that the rule change is being proposed as a competitive response to filings submitted by ISE.[64]

The Exchange does not believe that the proposed rule change will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act as options on the Trust will be subject to initial listing standards and continued listing standards the same as other options on ETFs listed on the Exchange. Further, options on the Trust will be subject to Exchange Rules that currently govern the listing and trading of options on ETFs, including permissible expirations, strike prices, minimum increments, position and exercise limits (including as proposed to modify herein), and margin requirements. Options on the Trust will be equally available to all market participants who wish to trade such options. Also, and as stated above, the Exchange already lists options on other commodity ETFs structured as a trust.

The Exchange does not believe that the proposal to list to list and trade options on the Trust will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. To the extent that permitting options on the Trust to trade on the Exchange may make the Exchange a more attractive marketplace to market participants, such market participants are free to elect to become market participants on the Exchange. Additionally, other options exchanges are free to amend their listing rules, as applicable, to permit them to list and trade options on the Trust. The Exchange believes that the proposed rule change may relieve any burden on, or otherwise promote, competition as it is designed to increase competition for order flow on the Exchange in a manner that is beneficial to investors by providing them with a lower-cost option to hedge their investment portfolios. The Exchange notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues that offer similar products. Ultimately, the Exchange believes that offering options on the Trust for trading on the Exchange will promote competition by providing investors with an additional, relatively low-cost means to hedge their portfolios and meet their investment needs in connection with spot bitcoin prices and bitcoin related products and positions.

Finally, the Exchange's proposal to amend the name ''ETFS Gold Trust'' to ''Aberdeen Standard Physical Gold Trust'' in Exchange Rule 402(i)(4) does not impose an undue burden on competition as this amendment reflects the current name of this product.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act [65] and Rule 19b–4(f)(6) thereunder.[66] Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act [67] and subparagraph (f)(6) of Rule 19b–4 thereunder.[68]

[67] 15 U.S.C. 78s(b)(3)(A)(iii).

[68] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time

Continued

A proposed rule change filed under Rule 19b–4(f)(6)[69] under the Act does not normally become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[70] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission previously approved the listing of options on iShares Bitcoin Trust.[71] The Exchange has provided information regarding the underlying iShares Bitcoin Trust, including, among other things, information regarding trading volume, the number of beneficial holders, and the market capitalization of the iShares Bitcoin Trust. The proposal also establishes position and exercise limits for options on the iShares Bitcoin Trust and provides information regarding the surveillance procedures that will apply to iShares Bitcoin Trust options. The Commission believes that waiver of the operative delay could benefit investors by providing an additional venue for trading iShares Bitcoin Trust options. Therefore, the Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change as operative upon filing.[72]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

as designated by the Commission. The Exchange has satisfied this requirement.

[69] 17 CFR 240.19b–4(f)(6).

[70] 17 CFR 240.19b–4(f)(6)(iii).

[71] *See* Securities Exchange Act Release No. 101128 (September 20, 2024), 89 FR 78942 (September 26, 2024) (SR–ISE–2024–03) (Self-Regulatory Organizations; Nasdaq ISE, LLC; Notice of Filing of Amendment Nos. 4 and 5 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment Nos. 1, 4, and 5, to Permit the Listing and Trading of Options on the iShares Bitcoin Trust).

[72] For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–MIAX–2024–40 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–MIAX–2024–40. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–MIAX–2024–40 and should be submitted on or before December 18, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[73]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–101688; File No. SR–GEMX–2024–40]

Self-Regulatory Organizations; Nasdaq GEMX, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Its Fees for Connectivity and Co-Location Services

November 21, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 8, 2024, Nasdaq GEMX, LLC (''GEMX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Exchange's fees for connectivity and co-location services, as described further below.

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/gemx/rules,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of

[73] 17 CFR 200.30–3(a)(12), (59).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to amend the Exchange's fees relating to connectivity and co-location services.[3] Specifically, the Exchange proposes to raise its fees for connectivity and co-location services in General 8 as well as certain fees related to its Testing Facilities in Options 7, Section 6 by 10%, with certain exceptions.

General 8, Section 1 includes the Exchange's fees that relate to connectivity, including fees for cabinets, external telco/inter-cabinet connectivity fees, fees for connectivity to the Exchange, fees for connectivity to third party services, fees for market data connectivity, fees for cabinet power install, and fees for additional charges and services. General 8, Section 2 includes the Exchange's fees for direct connectivity services, including fees for direct circuit connection to the Exchange, fees for direct circuit connection to third party services, and fees for point of presence connectivity. With the exception of the Exchange's GPS Antenna fees and the Cabinet Proximity Option Fee for cabinets with power density >10kW,[4] the Exchange proposes to increase its fees throughout General 8 by 10%.

In addition to increasing fees in General 8, the Exchange also proposes to increase certain fees in Options 7, Section 6, which relate to the Testing Facility. Options 7, Section 6(H) provides that subscribers to the Testing Facility located in Carteret, New Jersey shall pay a fee of $1,000 per hand-off, per month for connection to the Testing Facility. The hand-off fee includes either a 1Gb or 10Gb switch port and a cross connect to the Testing Facility. In addition, Options 7, Section 6(H) provides that subscribers shall also pay a one-time installation fee of $1,000 per hand-off. The Exchange proposes to increase these aforementioned fees by 10% to require that subscribers to the Testing Facility shall pay a fee of $1,100 per hand-off, per month for connection to the Testing Facility and a one-time installation fee of $1,100 per hand-off.

The proposed increases in fees would enable the Exchange to maintain and improve its market technology and services to remain competitive with its peers. Over the years, customer demand for more sophisticated, higher-throughput, lower-latency, and higher-power connectivity solutions has increased. The Exchange continues to invest in maintaining, improving, and enhancing its connectivity and co-location products, services, and facilities—for the benefit and often at the behest of its customers. Such enhancements include refreshing hardware and expanding Nasdaq's existing co-location facility to offer customers additional space and power. Nevertheless, and with the exception of fees that were established as part of a new service in 2017 (and have remained unchanged since their adoption), the Exchange has not increased any of the fees included in the proposal since prior to 2017, and many of the fees date back to between 2010 and 2014. For each of the connectivity products and services that pre-date 2017, inflation (as measured using the ''Data PPI'' metric described below) has been between roughly 15–17%, and in no instance has such inflation been less than 10%. Nevertheless, the Exchange proposes to increase its fees only with respect to the 10% inflation that has occurred since 2017.

As discussed below, the Exchange proposes to adjust its fees by an industry- and product-specific inflationary measure. It is reasonable and consistent with the Act for the Exchange to recoup its investments, at least in part, by adjusting its fees. Continuing to operate at fees frozen at 2010–2017 levels impacts the Exchange's ability to enhance its offerings and the interests of market participants and investors.

The fee increases the Exchange proposes are based on an industry-specific Producer Price Index (''PPI''), which is a tailored measure of inflation.[5] As a general matter, the Producer Price Index is a family of indexes that measures the average change over time in selling prices received by domestic producers of goods and services. PPI measures price change from the perspective of the seller. This contrasts with other metrics, such as the Consumer Price Index (''CPI''), that measure price change from the purchaser's perspective.[6] About 10,000 PPIs for individual products and groups of products are tracked and released each month.[7] PPIs are available for the output of nearly all industries in the goods-producing sectors of the U.S. economy—mining, manufacturing, agriculture, fishing, and forestry—as well as natural gas, electricity, and construction, among others. The PPI program covers approximately 69 percent of the service sector's output, as measured by revenue reported in the 2017 Economic Census.

For purposes of this proposal, the relevant industry-specific PPI is the Data Processing and Related Services PPI (''Data PPI''), which is an industry net-output PPI that measures the average change in selling prices received by companies that provide data processing services.

The Data PPI was introduced in January 2002 by the Bureau of Labor Statistics (''BLS'') as part of an ongoing effort to expand Producer Price Index coverage of the services sector of the U.S. economy and is identified as NAICS–518210 in the North American Industry Classification System.[8] According to the BLS ''[t]he primary output of NAICS 518210 is the provision of electronic data processing services. In the broadest sense, computer services companies help their customers efficiently use technology. The processing services market consists of vendors who use their own computer systems—often utilizing proprietary softwar—to process customers' transactions and data. Companies that offer processing services collect, organize, and store a customer's transactions and other data for record-keeping purposes. Price movements for the NAICS 518210 index are based on changes in the revenue received by companies that provide data processing

[3] The Exchange initially filed the proposed pricing change on March 1, 2024 (SR–GEMX–2024–05). On April 29, 2024, the Exchange withdrew that filing and submitted SR–GEMX–2024–09. On June 27, 2024, the Exchange withdrew SR–GEMX–2024–09 and submitted SR–GEMX–2024–15. The Exchange withdrew SR–GEMX–2024–15 and replaced it with SR–GEMX–2024–33 on September 10, 2024. On October 11, 2024, the Exchange replaced SR–GEMX–2024–33 with SR–GEMX–2024–38. The instant filing replaces SR–GEMX–2024–38.

[4] The Exchange proposes to exclude the GPS Antenna fees from the proposed fee increase because, unlike the other fees in General 8, the Exchange recently increased its GPS Antenna fees. *See* Securities Exchange Act Release No. 34–99129 (December 11, 2023), 88 FR 87017 (December 15, 2023) (SR–GEMX–2023–17). The Exchange also proposes to exclude the Cabinet Proximity Option Fee for cabinets with power density >10kW from the proposed fee increase because the Exchange recently established such fee. *See* Securities Exchange Act Release No. 34–100210 (May 22, 2024), 89 FR 46476 (May 29, 2024) (SR–GEMX–2024–11). Similarly, the Exchange proposes to exclude from the proposed fee increase those fees that the Exchange recently established for services in its new NY11–4 expansion facility. *See* Securities Exchange Act Release No. 34–101262 (October 7, 2024), 89 FR 82649 (October 11, 2024) (SR–GEMX–2024–36).

[5] *See https://fred.stlouisfed.org/series/PCU51825182#0.*

[6] *See https://www.bls.gov/ppi/overview.htm.*

[7] *See Id.*

[8] *NAICS appears in table 5 of the PPI Detailed Report and is available at https://data.bls.gov/timeseries/PCU518210518210.*

services. Each month, companies provide net transaction prices for a specified service. The transaction is an actual contract selected by probability, where the price-determining characteristics are held constant while the service is repriced. The prices used in index calculation are the actual prices billed for the selected service contract.'' [9]

The Exchange believes the Data PPI is an appropriate measure to be considered in the context of the proposed rule change to modify the fee for its connectivity products because the Exchange uses its ''own computer systems'' and ''proprietary software,'' *i.e.,* its own data center and proprietary matching engine software, respectively, to collect, organize, store and report customers' transactions in U.S. equity securities on the Exchange's proprietary trading platform. In other words, the Exchange is in the business of data processing and related services.

For purposes of this proposed rule change, the Exchange examined the Data PPI value for the period from January 2017 to August 2024. The Data PPI had a starting value of 105.6 in January 2017 and an ending value of 116.022 in August 2024, a 10.422% increase. This indicates that companies who are also in the data storage and processing business have generally increased prices for a specified service covered under NAICS 518210 by an average of 10.422% during this period. Based on that percentage change, the Exchange proposes to make a one-time fee increase of only 10%, which reflects an increase covering roughly the entire period since the last price adjustments to these fees were made.

The Exchange further believes the Data PPI is an appropriate measure for purposes of the proposed rule change on the basis that it is a stable metric with limited volatility, unlike other consumer-side inflation metrics. In fact, the Data PPI has not experienced a greater than 2.16% increase for any one calendar year period since Data PPI was introduced into the PPI in January 2002. The average calendar year change from January 2002 to December 2023 was .62%, with a cumulative increase of 15.67% over this 21-year period. The Exchange believes the Data PPI is considerably less volatile than other inflation metrics such as CPI, which has had individual calendar-year increases of more than 6.5%, and a cumulative increase of over 73% over the same period.[10]

The Exchange believes the Data PPI, and significant investments into, and enhanced performance of, the Exchange support the reasonableness of the proposed fee increases.[11]

These proposed fee increases will be immediately effective upon filing. However, going forward and until December 1, 2024, the Exchange will waive all fees set forth herein to the extent that such fees exceed the levels that would have been charged for the same products and services purchased during that time period, had such fees been calculated at the rates set forth in SR–GEMX–2024–33 (*i.e.,* pricing reflective of a 5.5% increase from prior fee levels). This waiver is reasonable, equitable, and not unfairly discriminatory because it will afford all customers in excess of the 30-day prior notice period for fee changes set forth in the Exchange's service terms.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[12] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[13] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

This belief is based on two factors. First, the current fees do not properly reflect the quality of the services and products, as fees for the services and products in question have been static in nominal terms, and therefore falling in real terms due to inflation. Second, the Exchange believes that investments made in enhancing the capacity and speed of Exchange systems increase the performance of the services and products.

The Proposed Rule Change Is Reasonable

As noted above, the Exchange has not increased any of the fees included in the proposal since 2017 or earlier. However, in the years following the last fee increases, the Exchange has made significant investments in upgrades to its connectivity products, services, and facilities, enhancing the quality of its services. In other words, Exchange customers have greatly benefitted, while the Exchange's ability to recoup its investments has been hampered. Between 2017 and 2024, the inflation rate is 3.64% per year, on average, producing a cumulative inflation rate of 28.43%.[14] Using the more targeted inflation number of Data PPI, the cumulative inflation rate was 10.422%. The exchange believes the Data PPI is a reasonable metric to base this fee increase on because it is targeted to producer-side increases in the data processing industry.

Notwithstanding inflation, as noted above, the Exchange has not increased its fees at all for over seven years for the subject services. The proposed fee changes represent a modest increase from the current fees. The Exchange believes the proposed fee increase is reasonable in light of the Exchange's continued expenditure in maintaining a robust technology ecosystem. Furthermore, the Exchange continues to invest in maintaining and enhancing its connectivity products—for the benefit and often at the behest of its customers and global investors. Such enhancements include refreshing all aspects of the technology ecosystem including software, hardware, and network while introducing new and innovative products and expanded and modernized facilities.[15] The goal of the enhancements discussed above, among other things, is to provide faster, higher-capacity, and more modern connectivity products and services. Accordingly, the Exchange continues to expend resources to innovate and modernize technology so that it may benefit its members in offering its connectivity products and services.

The Proposed Fees Are Equitably Allocated and Not Unfairly Discriminatory

The Exchange believes that the proposed fee increases are equitably

[9] *See https://www.bls.gov/ppi/factsheets/producer-price-index-for-the-data-processing-and-related-servicesindustry-naics-518210.htm.*

[10] *See https://www.usinflationcalculator.com/inflation/consumer-price-index-and-annual-percent-changesfrom-1913-to-2008/.*

[11] *See supra* discussion of connectivity product and facility improvements. Additionally, other exchanges have filed for increases in certain fees, based in part on comparisons to inflation. See, *e.g.,* Securities Exchange Act Release Nos. 34–100004 (April 22, 2024), 89 FR 32465 (April 26, 2024) (SR–CboeBYX–2024–012); and 34–100398 (June 21, 2024), 89 FR 53676 (June 27, 2024) (SR–BOX–2024–16)l; Securities Exchange Act Release No. 34–100994 (September 10, 2024), 89 FR 75612 (September 16, 2024) (SR–NYSEARCA–2024–79).

[12] 15 U.S.C. 78f(b).

[13] 15 U.S.C. 78f(b)(4) and (5).

[14] *See https://www.officialdata.org/us/inflation/2017?amount=1.*

[15] *See, e.g.,* Securities Exchange Act Release No.34–101074 (September 18, 2024), 89 FR 77920 (September 24, 2024) (SR–GEMX–2024–34 (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Expand [the Exchange's] Co-Location Services).

allocated and not unfairly discriminatory because they would apply to all market participants that choose to purchase connectivity products and services from the Exchange. Any participant that chooses to purchase the Exchange's connectivity products and services would be subject to the same Fee Schedule, regardless of what type of business they operate or the use they plan to make use of the products and services. Additionally, the fee increase would be applied uniformly to market participants without regard to Exchange membership status or the extent of any other business with the Exchange or affiliated entities. The Exchange also believes that the proposal represents an equitable allocation of reasonable dues, fees and other charges because Exchange fees have fallen in real terms during the relevant period. Finally, the Exchange believes that the proposed fee changes are not unfairly discriminatory because the fees would be assessed uniformly across all market participants, in the same manner they are today, that voluntarily purchase the Exchange's connectivity products and services, which would remain available for purchase by all market participants.

These proposed fee increases will be immediately effective upon filing. However, going forward and until December 1, 2024, the Exchange will waive all fees set forth herein to the extent that such fees exceed the levels that would have been charged for the same products and services purchased during that time period, had such fees been calculated at the rates set forth in SR–GEMX–2024–33 (*i.e.,* pricing reflective of a 5.5% increase from prior fee levels). This waiver is reasonable, equitable, and not unfairly discriminatory because it will afford all customers in excess of the 30-day prior notice period for fee changes set forth in the Exchange's service terms.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed fees will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intramarket Competition

The Exchange believes that the proposed fees do not put any market participants at a relative disadvantage compared to other market participants. As noted above, the fee schedule would continue to apply to all purchasers of the Exchange's connectivity products and services in the same manner as it does today albeit at inflation-adjusted rates for certain fees, and customers may choose whether to purchase these products and services at all. The Exchange also believes that the level of the proposed fees neither favor nor penalize one or more categories of market participants in a manner that would impose an undue burden on competition. Likewise, the proposed fee waiver described above will apply to all purchasers of the Exchange's connectivity products and services in the same manner and therefore will not burden competition among them.

Intermarket Competition

The Exchange believes that the proposed fees do not impose a burden on competition or on other SROs that is not necessary or appropriate. In determining the proposed fees, the Exchange utilized an objective and stable metric with limited volatility. Utilizing Data PPI over a specified period of time is a reasonable means of recouping the Exchange's investment in maintaining and enhancing its connectivity products, services, and facilities. The Exchange believes utilizing Data PPI, a tailored measure of inflation, to increase certain fees for connectivity products and services to recoup the Exchange's investment in maintaining and enhancing such products, services, and its facilities would not impose a burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[16] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include file number SR–GEMX–2024–40 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–GEMX–2024–40. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–GEMX–2024–40 and should be submitted on or before December 18, 2024.

[16] 15 U.S.C. 78s(b)(3)(A)(ii).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[17]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SOCIAL SECURITY ADMINISTRATION

[Docket No: SSA–2024–0050]

Agency Information Collection Activities: Proposed Request and Comment Request

The Social Security Administration (SSA) publishes a list of information collection packages requiring clearance by the Office of Management and Budget (OMB) in compliance with Public Law 104–13, the Paperwork Reduction Act of 1995, effective October 1, 1995. This notice includes a revision of an OMB-approved information collection.

SSA is soliciting comments on the accuracy of the agency's burden estimate; the need for the information; its practical utility; ways to enhance its quality, utility, and clarity; and ways to minimize burden on respondents, including the use of automated collection techniques or other forms of information technology. Mail, email, or fax your comments and recommendations on the information collection(s) to the OMB Desk Officer and SSA Reports Clearance Officer at the following addresses or fax numbers.

(OMB), Office of Management and Budget, Attn: Desk Officer for SSA

(SSA), Social Security Administration, OLCA, Attn: Reports Clearance Director, Mail Stop 3253 Altmeyer, 6401 Security Blvd., Baltimore, MD 21235, Fax: 833–410–1631, Email address: *OR.Reports.Clearance@ssa.gov*

Or you may submit your comments online through *https://www.reginfo.gov/public/do/PRAmain* by clicking on Currently under Review—Open for Public Comments and choosing to click on one of SSA's published items. Please reference Docket ID Number [SSA–2024–0050] in your submitted response.

The information collection below is pending at SSA. SSA will submit it to OMB within 60 days from the date of this notice. To be sure we consider your comments, we must receive them no later than January 27, 2025. Individuals can obtain copies of the collection instruments by writing to the above email address.

Rules of Conduct and Standards of Responsibility for Appointed Representatives—20 CFR 404.1740(b)(5), 404.1740(b)(6), 404.1740(b)(9), 416.1540(b)(5), 416.1540(b)(6), and 416.1540(b)(9)—0960–0804. Section 205(a) of the Social Security Act (the Act) authorizes SSA's Commissioner to make rules and regulations and to establish procedures, not inconsistent with the provisions of this title, which are necessary or appropriate to carry out such provisions. Section 1631(d)(1) of the Act incorporates section 205(a) and applies it to Title XVI of the Act. Additionally, sections 206(a) and 1631(d)(2) of the Act provide that the Commissioner has the authority to establish rules and regulations governing the recognition of individuals who represent claimants before the Commissioner. Individuals appointed to represent claimants before SSA must report to SSA in writing whenever one of the following situations in our revised regulations occurs:

- *20 CFR 404.1740(b)(5) and 416.1540(b)(5)*—This regulatory section requires representatives to disclose to SSA in writing, at the time a medical or vocational opinion is submitted to SSA, or as soon as the representative is aware of the submission to us, if the representative's employee or any individual contracting with the representative drafted, prepared, or issued a medical or vocational opinion about a claimant's disability, or if the representative referred or suggested that the claimant seek an examination from, treatment by, or the assistance of the individual providing opinion evidence;
- *20 CFR 404.1740(b)(6) and 416.1540(b)(6)*—This regulatory section requires representatives to disclose to SSA immediately if the representative discovers that his or her services are or were used by the claimant to commit fraud against SSA;

A representative's obligation to report these events is ongoing, and SSA requires representatives to report any time one or more of these events occurs. We consider this information essential to ensure the integrity of our administrative process and to safeguard the rights of all claimants. SSA requires representatives to notify SSA in writing, but there is no prescribed format for these reports. The respondents are individuals appointed to represent claimants before SSA.

Type of Request: Revision of an OMB-approved information collection.

Regulation citations	Number of respondents	Frequency of response	Average burden per response (minutes)	Estimated annual burden (hours)	Average theoretical hourly cost amount (dollars) *	Total annual opportunity cost (dollars) **
404.1740(b)(5)&(6)/416.1540(b)(5)&(6)	43,600	1	5	3,633	$58.40	$212,149

* We based this figure on average hourly wages for paralegals/legal assistants and lawyers *https://www.bls.gov/oes/current/oes231011.htm* as posted by the U.S. Bureau of Labor Statistics (*https://www.bls.gov/oes/current/oes_nat.htm*).

** These figures do not represent actual costs that SSA is imposing on representatives to complete the required disclosures; rather, these are theoretical opportunity costs for the additional time representatives or their employees and associates will spend to complete the required disclosures. There is no actual charge to representatives to complete the required disclosures.

[17] 17 CFR 200.30–3(a)(12).

Dated: November 22, 2024.

Naomi Sipple,

Reports Clearance Officer, Social Security Administration.

BILLING CODE 4191–02–P

DEPARTMENT OF STATE

[Public Notice: 12596]

Notice of Public Meeting in Preparation for International Maritime Organization Eleventh Session of the Sub-Committee on Ship Design and Construction (SDC) Meeting

The Department of State will conduct a public meeting at 11 a.m. on Wednesday, January 8, 2025, both in-person at Coast Guard Headquarters in Washington, DC, and via teleconference. The primary purpose of the meeting is to prepare for the 11th session of the International Maritime Organization's (IMO) Sub-committee on Ship Design and Construction (SDC) to be held at IMO Headquarters in London, United Kingdom from Monday, January 13 to Friday, January 17, 2025.

Members of the public may participate up to the capacity of the teleconference phone line, which can handle 500 participants or up to the seating capacity of the room if attending in person. The meeting location will be the United States Coast Guard Headquarters, and the teleconference line will be provided to those who RSVP. To RSVP, participants should contact the meeting coordinator, LCDR Bryan Andrews, by email at *bryan.j.andrews@uscg.mil.* LCDR Andrews will provide access information for in-person and virtual attendance.

The agenda items to be considered at SDC 11 include:

—Adoption of the agenda
—Decisions of other IMO bodies
—Development of Guidelines for emergency towing arrangements for ships other than tankers (2.20)
—Further development of the IP Code and associated guidance (2.4)
—Revision of the Interim explanatory notes for the assessment of passenger ship systems' capabilities after a fire or flooding casualty (MSC.1/Circ.1369) and related circulars (7.42)
—Amendments to the 2011 ESP Code (7.21)
—Amendments to the Guidelines for construction, installation, maintenance and inspection/survey of means of embarkation and disembarkation (MSC.1/Circ.1331) concerning the rigging of safety netting on accommodation ladders and gangways (7.35)
—Revision of SOLAS chapters II–1 (part C) and V, and related instruments regarding steering and propulsion requirements, to address both traditional and non-traditional propulsion and steering systems. (2.9)
—Amendment to regulation 25 of the 1988 Load Line Protocol regarding the requirement for setting of guard rails on the deck structure (7.25) Unified interpretation of provisions of IMO safety, security, environment, facilitation, liability and compensation-related conventions (7.1)
—Guidelines for use of Fibre-Reinforced Plastics (FRP) within ship structures (2.6)
—Review of the 2009 Code on Alerts and Indicators (7.47)
—Biennial status report and provisional agenda for SDC 12
—Election of Chair and Vice-Chair for 2026
—Experience-building phase for the reduction of underwater radiated noise from shipping (1.16)
—Any other business
—Report to the Maritime Safety Committee

Please note: The IMO may, on short notice, adjust the SDC 11 agenda to accommodate the constraints associated with the meeting format. Any changes to the agenda will be reported to those who RSVP.

Those who plan to participate should contact the meeting coordinator, LCDR Bryan Andrews, by email at *bryan.j.andrews@uscg.mil,* or in writing at 2703 Martin Luther King Jr. Ave. SE, Stop 7509, Washington, DC 20593–7509, by December 20, 2024. Please note that, due to security considerations, two valid, government issued photo identifications must be presented to gain entrance to the Douglas A. Munro Coast Guard Headquarters Building at St. Elizabeth's. This building is accessible by taxi, public transportation, and privately owned conveyance (upon request). Additionally, members of the public needing reasonable accommodation should advise the meeting coordinator not later than December 20, 2024. Requests made after that date will be considered but might not be possible to fulfill.

Additional information regarding this and other IMO public meetings may be found at: *https://www.dco.uscg.mil/IMO.*

(Authority: 22 U.S.C. 2656 and 5 U.S.C. 552)

Leslie W. Hunt,

Coast Guard Liaison Officer, Office of Ocean and Polar Affairs, Department of State.

BILLING CODE 4710–09–P

DEPARTMENT OF STATE

[Public Notice 12595]

30-Day Notice of Proposed Information Collection: Foreign Service Officer Test Registration Form

ACTION: Notice of request for public comment and submission to OMB of proposed collection of information.

SUMMARY: The Department of State has submitted the information collection described below to the Office of Management and Budget (OMB) for approval. In accordance with the Paperwork Reduction Act of 1995 we are requesting comments on this collection from all interested individuals and organizations. The purpose of this Notice is to allow 30 days for public comment.

DATES: Submit comments up to December 18, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Gailyn McClung, 771–205–1565. Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents to Board of Examiners for the Foreign Service, Department of State SA–1, H–518. 2401 E Street NW, Washington, DC 20522.

SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Registration for the Foreign Service Officer Test.
- *OMB Control Number:* 1405–0008.
- *Type of Request:* Extension of a Currently Approved Collection.
- *Originating Office:* Bureau of Human Resources, Board of Examiners.
- *Form Number:* DS–1998E.
- *Respondents:* Registrants for the Foreign Service Officer Test.
- *Estimated Number of Respondents:* 7,000.
- *Estimated Number of Responses:* 7,000.

• *Average Time Per Response:* 2 hours.

• *Total Estimated Burden Time:* 14,000 hours.

• *Frequency:* Annually.

• *Obligation to Respond:* Required to Obtain or Retain a Benefit.

We are soliciting public comments to permit the Department to:

• Evaluate whether the proposed information collection is necessary for the proper functions of the Department.

• Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.

• Enhance the quality, utility, and clarity of the information to be collected.

• Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

Individuals registering for the Foreign Service Officer Test will complete a Registration Form, asking for their name, contact information, ethnicity, education and work history, and military experience. The information will be used to prepare and issue admission to the Foreign Service Officer Test, to provide data useful for improving future tests, and to conduct research studies based on the test results.

Methodology

The registration process, which includes concurrent application submission and seat selection, opens approximately four (4) weeks prior to each testing window. To register, individuals go to *pearsonvue.com/fsot/* during the four-week period prior to a specific testing window to create an account, submit completed eligibility verification and application forms, and select a location and seat for the specific test date.

David J. Burger,

Director, GTM/TAC/BEX, Department of State.

BILLING CODE 4710–15–P

DEPARTMENT OF STATE

[Public Notice: 12590]

Request for Information for the 2025 Trafficking in Persons Report

SUMMARY: The Department of State (''the Department'') requests written information to assist in reporting on the degree to which the United States and foreign governments meet the minimum standards for the elimination of trafficking in persons (''minimum standards'') that are prescribed by the Trafficking Victims Protection Act of 2000.

DATES: Submissions must be made in writing to the Office to Monitor and Combat Trafficking in Persons at the Department of State by 5 p.m. EST on February 3, 2025.

SUPPLEMENTARY INFORMATION: This written information will assist in the preparation of the Trafficking in Persons Report (''TIP Report'') which the Department submits annually to the U.S. Congress on governments' concrete actions to meet the minimum standards for the elimination of trafficking in persons (''minimum standards'') that are prescribed by the Trafficking Victims Protection Act of 2000 (Div. A, Pub. L. 106–386), as amended (''TVPA''). Foreign governments that do not meet the minimum standards and are not making significant efforts to do so may be subject to restrictions on nonhumanitarian, nontrade-related foreign assistance from the United States, as defined by the TVPA. Please refer to the Information Sought Relevant to the Minimum Standards of this Notice for the questionnaire and to the Addresses, Scope of Interest, and Information Sought sections for additional instructions on submission requirements. Written submissions and supporting documentation may be submitted by the following method:

• *Email: tipreport@state.gov* for submissions related to foreign governments and *tipreportUS@state.gov* for submissions related to the United States.

Scope of Interest: The Department requests information relevant to assessing the United States' and foreign governments' concrete actions to meet the minimum standards for the elimination of trafficking in persons during the reporting period (April 1, 2024–March 31, 2025). The minimum standards are listed in the *Background* section. Submissions must include information relevant to efforts to meet the minimum standards and should include, but need not be limited to, answering the questions in the *Information Sought* section. Submissions need not include answers to all the questions; only those questions for which the submitter has direct professional experience should be answered, and that experience should be noted. For any critique or deficiency described, please provide a recommendation to remedy it. Note the country or countries that are the focus of the submission. Submissions may include written narratives answering the questions presented in this Notice, research, studies, statistics, fieldwork, training materials, evaluations, assessments, and other relevant evidence of local, state/provincial, and federal/central government efforts. To the extent possible, precise dates and numbers of officials or individuals affected should be included. Questions below seek to gather information and updates from the details provided and assessment on government efforts made in the 2024 TIP Report. Furthermore, we request information on the government's treatment of vulnerable populations and underserved communities, including how the government may have systemically denied opportunities to a community to participate in aspects of economic, social, and civic life that has led to heighted risk to human trafficking or how the government's anti-trafficking response may have treated certain groups differently. Written narratives providing factual information should provide citations of sources, and copies of and links to the source material should be provided. Please send electronic copies of the entire submission, including source material. If primary sources are used, such as research studies, interviews, direct observations, or other sources of quantitative or qualitative data, provide details on the research or data-gathering methodology and any supporting documentation. The Department only includes in the TIP Report information related to trafficking in persons as defined by the TVPA; it does not include, and is therefore not seeking, information on commercial sex, migrant smuggling, visa fraud, or child abuse, unless such crimes also involve the elements of sex trafficking or forced labor.

Confidentiality: Please provide the name, phone number, and email address of a single point of contact for any submission. It is Department practice not to identify in the TIP Report information concerning sources to safeguard those sources. Note, however, that any information submitted to the Department may be releasable pursuant to the provisions of the Freedom of

Information Act or other applicable law. Submissions related to the United States will be shared with U.S. government agencies, as will submissions relevant to efforts by other U.S. government agencies.

Response: This is a request for information only; there will be no response to submissions. Remuneration for responses will not be provided. In order to expend appropriated funds, there must be specific authority to do so. The Department of State has no authority to expend funds for this purpose.

Background

Definitions: The TVPA defines ''severe forms of trafficking in persons'' as:

- The recruitment, harboring, transportation, provision, obtaining, patronizing, or soliciting of a person for the purpose of a commercial sex act that is induced by force, fraud, or coercion, or in which the person induced to perform such act has not attained 18 years of age.
  - Persons under age 18 in commercial sex are trafficking in persons victims regardless of whether force, fraud, or coercion were involved.
- The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion, for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery.
  - Forced labor may take the form of domestic servitude, forced begging, forced criminal activity (*e.g.,* drug smuggling), and prison labor that is not a consequence of a conviction in a court of law.
- Children recruited or used as soldiers or for labor or services can be a severe form of human trafficking when the activity involves force, fraud, or coercion. Children may be victims regardless of gender.

The TIP Report: The TIP Report is the most comprehensive worldwide report assessing governments' efforts to combat trafficking in persons. It represents an annually updated global assessment of the nature and scope of trafficking in persons and the broad range of government actions to confront and eliminate it. The U.S. government uses the TIP Report to inform diplomacy, encourage partnership in creating and implementing laws and policies to combat trafficking, and target resources on prevention, protection, and prosecution programs. Worldwide, international organizations (IOs), foreign governments, and nongovernmental organizations (NGOs) use the TIP Report as a tool to examine where resources are most needed. Prosecuting traffickers, protecting victims, and preventing trafficking are the ultimate goals of the TIP Report and of the U.S government's anti-trafficking policy.

The Department prepares the TIP Report with information from across the U.S. government, foreign government officials, nongovernmental and international organizations, survivors of trafficking in persons, published reports, and research related to every region. The TIP Report focuses on concrete actions made by governments to fight trafficking in persons, including prosecutions, convictions, and sentences for traffickers, as well as victim identification and protection measures and prevention efforts. Note that rankings only consider government actions to combat human trafficking, not NGOs' or IOs' activities. Each TIP Report narrative also includes prioritized recommendations for each country. These recommendations are used to assist the Department in measuring governments' progress from one year to the next and determining whether governments meet the minimum standards for the elimination of trafficking in persons or are making significant efforts to do so.

The TVPA creates a four-tier ranking system. Tier placement is based principally on the extent of concrete government action to combat trafficking. The Department first evaluates whether the government fully meets the TVPA's minimum standards for the elimination of trafficking, as set forth in Sec. 108 of the Trafficking Victims Protection Act, as amended (22 U.S.C. 7106). Governments that do so are placed on Tier 1. For other governments, the Department considers the extent of such efforts. Governments that are making significant efforts to meet the minimum standards are placed on Tier 2. Governments that do not fully meet the minimum standards and are not making significant efforts to do so are placed on Tier 3. Finally, the Department considers Watch List criteria and, when applicable, places countries on the Tier 2 Watch List. For more information, the 2024 TIP Report can be found at *www.state.gov/reports/2024-trafficking-in-persons-report.*

Since the inception of the TIP Report in 2001, the number of countries included and ranked has more than doubled; the 2024 TIP Report included 188 countries and territories. Around the world, the TIP Report and the promising practices reflected therein have inspired legislation, national action plans, policy implementation, program funding, protection mechanisms to complement prosecution efforts, and a stronger global understanding of this crime.

Since 2003, the primary reporting on the United States' anti-trafficking activities has been through the annual Attorney General's Report to Congress and Assessment of U.S. Government Activities to Combat Human Trafficking mandated by section 105 of the TVPA (22 U.S.C. 7103(d)(7)). Since 2010, the TIP Report, through a collaborative interagency process, has included an assessment of U.S. government anti-trafficking efforts in light of the minimum standards to eliminate trafficking in persons set forth by the TVPA.

Information Sought Relevant to the Minimum Standards

Submissions should include, but need not be limited to, answers to relevant questions below for which the submitter has direct professional experience within the reporting period (April 1, 2024–March 31, 2025). Citations to source material should also be provided. Note the country or countries that are the focus of the submission. Please see the *Scope of Interest* section above for detailed information regarding submission requirements.

Overview

1. What were the government's major accomplishments in addressing human trafficking since April 1, 2024? In what significant ways have the government's efforts to combat trafficking in persons changed in the past year? How have new laws, regulations, policies, or implementation strategies (*e.g.,* substantive criminal laws and procedures, mechanisms for civil remedies, and victim-witness programs, generally and in relation to court proceedings) affected its anti-trafficking response?

2. Over the past year, what were the greatest deficiencies in the government's anti-trafficking efforts? What were the limitations on the government's ability to address human trafficking problems in practice?

3. Provide additional information and/or recommendations to improve the government's anti-trafficking efforts overall.

4. Highlight effective strategies and practices that other governments could consider adopting.

Prosecution

5. Provide observations regarding the implementation of existing laws, policies, and procedures. Are there gaps in anti-trafficking legislation that could be amended to improve the

government's response? Are there any government policies that have undermined or otherwise negatively affected anti-trafficking efforts within that country?

6. Do government officials understand the nature of all forms of trafficking? If not, provide examples of misconceptions or misunderstandings. Did the government effectively provide or support anti-trafficking trainings for officials including on enforcement of policies, and laws; and/or on victim identification measures or procedures? If not, how could it be improved?

7. Provide observations on overall anti-trafficking law enforcement efforts and the efforts of police and prosecutors to investigate, prosecute, and convict traffickers. Is the government equally vigorous in pursuing forced labor and sex trafficking, domestic and transnational trafficking, and crimes that involve its own nationals or foreign citizens? Were anti-trafficking laws equitably enforced, or were certain communities disproportionately affected?

8. Does law enforcement pursue trafficking cases seeking to hold criminally accountable private employers or corporations for forced labor in supply chains?

9. Do judges appear appropriately knowledgeable and sensitized to trafficking cases? Do they implement and encourage trauma-informed practices in their courts?

10. Describe any allegations of official complicity in trafficking crimes, including of state-sponsored forced labor. What measures did the government take to end such practices? What proactive measures did the government take to prevent official complicity in trafficking in persons crimes? How did the government respond to reports of complicity during the reporting period, including investigations, prosecutions, convictions, and sentencing of complicit officials? Were these efforts sufficient?

11. Is there evidence nationals of the country deployed abroad as part of a diplomatic, peacekeeping, or other similar mission have engaged in or facilitated trafficking, including in domestic servitude? Has the government vigorously investigated, prosecuted, convicted, and sentenced nationals engaged in these activities?

12. If the government has entered into a bilateral, multilateral, or regional anti-trafficking information-sharing and cooperation arrangements, is the agreement effective and has it resulted in concrete and measurable outcomes?

Protection

13. Did the government make a coordinated, proactive effort to identify victims of all forms of trafficking? If there were any new (or changes to preexisting) formal/standard procedures for screening for trafficking, including of individuals in immigration detention or removal proceedings, and for victim referral to protection services, were those procedures sufficient and how did the government implement them?

14. If the government had written procedures to guide officials in referring potential trafficking victims to services (*e.g.,* national referral mechanism, or a formal framework to complement victim identification procedures a government uses to ensure trafficking victims' referral and access to protection services), were front-line officials across government sectors and other responsible stakeholders aware of the procedures and how to use them? Did officials implement the referral procedures and was implementation equitable across all affected populations? Did officials effectively coordinate among one another and with relevant NGOs to conduct screenings and refer victims to care? Did the referral procedures require victims to interact with law enforcement before being referred to social service providers?

15. Did government policy require a person to be formally identified as a trafficking victim to receive certain services or benefits? If yes, which services or benefits were limited to persons formally identified as trafficking victims? If applicable, which officials or entities did the government authorize to formally identify individuals as trafficking victims?

16. If commercial sex is legalized or decriminalized in the country, how did health officials, labor inspectors, or police identify trafficking victims among persons involved in commercial sex? If commercial sex is illegal, did the government proactively identify trafficking victims during law enforcement operations or other encounters with commercial sex establishments?

17. Were there any new (or changes to preexisting) services available for victims and survivors (legal, medical, food, shelter, interpretation, mental health care, employment, training, etc.)? If NGOs provide the services, does the government adequately support their work either financially or otherwise? Did all victims and survivors of both labor and sex trafficking—regardless of citizenship, gender identity, racial/ethnic identity, sexual orientation, religious affiliation, and physical ability—receive the same quality and level of access to services?

18. What was the overall quality of victim care? How could victim services be improved? Are services victim-centered and trauma-informed? Were services linked to whether a victim assisted law enforcement or participated in a trial, or whether a trafficker was convicted? Were there populations that lacked access to care, including shelter and other services?

19. Where were child victims placed (*e.g.,* in shelters, foster care, or juvenile justice detention centers), and what kind of specialized care did they receive?

20. If the government operates or funds any trafficking-specific hotlines (including those run by NGOs), did calls to those hotlines lead to victim identification, victim referral to care, and/or criminal investigations?

21. What is the level of cooperation, communication, and trust between service providers and law enforcement?

22. Were there means by which victims could obtain restitution from defendants in criminal cases or file civil suits against traffickers for damages, and did this happen in practice? Did prosecutors request and/or courts order restitution in all cases where it was required, and if not, why?

23. Please provide observations on trafficking victims and survivors' ability to access justice, as they define it, and the treatment of survivors throughout the criminal legal process. How did the government support victims who assisted in the investigation and prosecution of trafficking cases, and did it do so in a trauma-informed way? How did the government protect victims during the trial process and ensure victims were not re-traumatized during participation in the process? What, if any, alternatives were available to victims instead of speaking to law enforcement during investigations (for example, speaking to a victim-witness advocate, social worker, psychologist, etc.)? Did law enforcement allow a representative or advocate to accompany victims during interviews? In what ways could the government increase support for victims in prosecutions against traffickers?

24. Did the government provide, through a formal policy or otherwise, temporary or permanent residency status, or other relief from deportation, for foreign national victims of human trafficking who may face retribution or hardship in the countries to which they would be deported? Were foreign national victims given the opportunity to seek legal employment while in this

temporary or permanent residency? Were such benefits linked to whether a victim assisted law enforcement, whether a victim participated in a trial, or whether there was a successful prosecution? Does the government repatriate victims who wish to return home or assist with third-country resettlement? Are victims awaiting repatriation or third-country resettlement offered services? Are victims indeed repatriated, or are they deported?

25. Does the government effectively assist its nationals exploited abroad? Does the government work to ensure victims receive adequate assistance and support for their repatriation while in destination countries? Does the government provide adequate assistance to repatriated victims after their return to their countries of origin, and if so, what forms of assistance?

26. Were potential trafficking victims incarcerated, fined, or otherwise penalized solely for unlawful acts committed as a direct result of being trafficked (*e.g.,* subject to commercial sex, drug-related, or other criminal charges, or subject to deportation/immigration enforcement or administrative penalties)? If so, do these victims disproportionately represent a certain gender, race, ethnicity, or other group or particular type of trafficking?

Prevention

27. What efforts has the government made to prevent human trafficking? Did the government take new or ongoing steps to ensure policies did not further marginalize communities already overrepresented among trafficking victims, increasing their risk to human trafficking? If so, did it take efforts to implement those policies?

28. If the government had a national action plan to address trafficking, how was it implemented in practice? Were NGOs and other relevant civil society stakeholders consulted in the development and implementation of the plan? Who will monitor its implementation and/or measure its impact?

29. Please describe any government-funded anti-trafficking information or education campaigns or training, whether aimed at the public or at specific sectors or stakeholders/actors. What strategies did the campaigns employ to ensure messaging and images did not legitimize and/or perpetuate harmful or racialized narratives and/or stereotypes about victims, survivors, and perpetrators? Were campaign materials readily available, cost-free, and accessible in various languages, including braille? Does the government provide financial support to NGOs working to promote public awareness?

30. Did the government seek and include the input of survivors in crafting or implementing anti-trafficking laws, regulations, policies, or programs? If so, did the government take steps to ensure input was received and incorporated from a diverse group of survivors?

31. How did the government regulate, oversee, and screen for trafficking indicators in the labor recruitment process, including for both licensed and unlicensed recruitment and placement agencies, individual recruiters, and sub-brokers? Did the government prohibit (in any context) charging workers recruitment fees and prohibit the recruitment of workers through knowingly fraudulent job offers (including misrepresenting wages, working conditions, location, or nature of the job), contract switching, and confiscating or otherwise denying workers access to their identity documents? If there are laws or regulations on recruitment, did the government effectively enforce them? Did the government allow migrant workers to change employers in a timely manner without obtaining special permissions?

32. Did the government coordinate with other governments (*e.g.,* via bilateral agreements with migrant labor sending or receiving countries) on safe and responsible labor recruitment including prevention measures to target known trafficking indicators? To what extent were these implemented? Are workers (both nationals of the country and foreign nationals) in all industries (*e.g.,* domestic work, agriculture, etc.) equally and sufficiently protected under existing labor laws?

33. Did government policies, regulations, or agreements relating to migration, labor, trade, and investment facilitate vulnerabilities to, or incidence of, forced labor or sex trafficking? If so, what actions did the government take to ensure that its policies, regulations, and agreements relating to migration, labor, trade, border security measures, and investment did not facilitate trafficking?

34. Did the government take tangible action to prevent forced labor in domestic or global supply chains? Did the government make any efforts to prohibit and prevent trafficking in the supply chains of its own public procurement?

35. Did the government provide assistance to other governments in combating trafficking in persons through trainings or other assistance programs?

36. What measures has the government taken to reduce its nationals' or foreigners' participation in domestic and extraterritorial child sexual exploitation? Note: This was previously covered as ''child sex tourism.''

Territories and Semi-Autonomous Regions

37. Provide any information about trafficking trends and government anti-trafficking efforts in dependent territories and semi-autonomous regions to prosecute traffickers, identify and provide services to victims, and prevent trafficking.

Trafficking Profile

38. Describe human trafficking trends, drivers, methods, source/destination dynamics, industries and sectors, impacted demographics, recruitment methods, etc.

39. What groups, including vulnerable populations and underserved communities, are at particular risk of sex trafficking or forced labor? Vulnerable populations and underserved communities are populations sharing a particular characteristic, as well as geographic communities, that have been systematically denied a full opportunity to participate in aspects of economic, social, and civic life. This term may include, but is not limited to, women and girls, persons with disabilities, indigenous peoples, people of African descent, racial and ethnic minorities, refugees and internally displaced people, religious minorities, LGBTQI+ persons, rural residents, migrants, as well as those who are otherwise adversely affected by persistent poverty or inequality. Please also consider: adults arrested for engaging in commercial sex acts, undocumented migrants, asylum seekers, stateless persons, persons with severe mental illness, unhoused persons, children in welfare systems or aging out of such systems, previously incarcerated people, members of marginalized racial and ethnic communities, people in early or forced marriages, people living with HIV/AIDS, or individuals or communities living in conflict, crisis, or post-disaster settings.

40. Are any Chinese, Cuban, or North Korean persons present in the country as part of government-to-government agreements and/or in foreign government-affiliated projects? If present, are these individuals subjected to or at high risk of forced labor?

41. Provide any information about trafficking trends, general numerical data on victims identified, or risk factors

stemming from climate-related change or disasters, as well as any efforts to mitigate these vulnerabilities; emerging migration crises and associated vulnerabilities to human trafficking; the ongoing trafficking risk as a result of conflict; and the use of technology to recruit and exploit victims, including cyber or online scam operations involving indicators of trafficking.

Child Soldiering

42. Using the definition of ''child soldier'' as defined by the Child Soldiers Prevention Act of 2008 (CSPA), describe instances, cases, and reports, including anecdotal reports, of:

a. Use of any person under the age of 18 in direct hostilities as a member of governmental armed forces, police, or other security forces;

b. Conscription or forced recruitment of persons under the age of 18 into governmental armed forces, police, or other security forces;

c. Voluntary recruitment of any person under 15 years of age into governmental armed forces, police, or other security forces;

d. Recruitment (forced or voluntary) or use in hostilities of persons under the age of 18 by armed groups distinct from the armed forces of a state.

e. Abuse of male and female children recruited by governmental armed forces, police, or other security forces, and government-supported armed groups (*e.g.,* sexual abuse or use for forced labor). Describe the manner and age of conscription, noting differences in treatment or conscription patterns based on gender.

43. Did the government provide support to an armed group that recruits and/or uses child soldiers? What was the extent of the support (*e.g.,* in-kind, financial, training, etc.)? Where did the provision of support occur (within the country or outside of the country)? In cases where the government was included on the CSPA list in 2024 based on its support to non-state armed groups that recruit and/or use child soldiers, describe whether the government took steps to pressure the group to cease its recruitment or use of child soldiers, publicly disavow the group's recruitment or use of child soldiers, or cease its support to that group.

44. Describe any government efforts to prevent or end child soldier recruitment or use, including efforts to disarm, demobilize, and reintegrate former child soldiers. (*i.e.,* enacting any laws or regulations, implementing a United Nations Action Plan or Roadmap, specialized training for officials, procedures for age verification, etc.)

Cynthia D. Dyer,

Ambassador-at-Large, Office to Monitor and Combat Trafficking in Persons, Department of State.

BILLING CODE 4710–17–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Availability, Notice of Public Comment Period, Notice of Public Meetings, and Request for Comment on the Revised Draft Tiered Environmental Assessment for SpaceX Starship/Super Heavy Vehicle Increased Cadence at the Boca Chica Launch Site in Cameron County, Texas

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Notice of availability, notice of public comment period, notice of public meetings, and request for comment.

SUMMARY: In accordance with the National Environmental Policy Act of 1969, as amended (NEPA), Council on Environmental Quality NEPA-implementing regulations, and FAA Order 1050.1F, *Environmental Impacts: Policies and Procedures,* the FAA is announcing the availability of the Revised Draft Tiered Environmental Assessment for SpaceX's proposal to increase the number of launches and landings of its Starship/Super Heavy vehicle at the Boca Chica Launch Site in Cameron County, Texas (Revised Draft EA), and its intent to hold public meetings. The Revised Draft EA analyzes SpaceX's proposal to increase launch and landing cadence up to 25 annual Starship/Super Heavy orbital launches, including: up to 25 annual landings of Starship (Second stage), and up to 25 annual landings of Super Heavy (First stage). The Revised Draft EA also addresses vehicle upgrades.

DATES: No registration is required for the four in-person public meetings that will be held at the following dates and times (Central):

- Tuesday, January 7, 2025; 1 p.m.–3 p.m. & 5:30 p.m.–7:30 p.m. CT.
- Thursday, January 9, 2025; 1 p.m.–3 p.m. & 5:30 p.m.–7:30 p.m. CT.

Registration is required for the virtual public meeting that will be held on Monday, January 13, 2025; 5:30 p.m.–7:30 p.m. CT.

The public comment period for the Revised Draft EA will close on January 17, 2025.

ADDRESSES: The locations for the meetings are as follows:

- January 7, 2025; Texas Southmost College, Jacob Brown Auditorium, 600 International Boulevard, Brownsville, TX 78520.
- January 9, 2025; Port Isabel Event & Cultural Center, Queen Isabella Room, 309 E Railroad Avenue, Port Isabel, TX 78578.
- January 13, 2025; Registration Link: *https://us02web.zoom.us/webinar/register/WN_6f5su5mtTne_vBr8MqJOLA,* Dial-in phone number: 888–788–0099 (Toll Free), Webinar ID: 879 9253 6128, Passcode: 900729.

The Revised Draft EA is available for review at *https://www.faa.gov/space/stakeholder_engagement/spacex_starship.* The FAA invites interested parties to submit comments on the Revised Draft EA. Public comments can be submitted electronically to *www.regulations.gov* under Docket No. FAA–2024–2006, by postal mail to Ms. Amy Hanson, FAA Environmental Specialist, SpaceX EA, c/o ICF 1902 Reston Metro Plaza Reston, VA 20190, or delivered in written or verbal form during a public meeting. Instructions on how to submit comments can be found on the FAA web page at the address listed above.

FOR FURTHER INFORMATION CONTACT: Amy Hanson at 847–243–7609 or *SpaceXBocaChica@icf.com.*

SUPPLEMENTARY INFORMATION: The FAA will provide a pre-recorded presentation during the first half hour of the public meetings. The public will also have an opportunity to submit comments during the meetings. English-Spanish translation services will be provided. Both English and Spanish versions of the presentation will be made available to the public on December 16, 2024, on this website listed above. More information on the public meetings can be found at: *https://www.faa.gov/space/stakeholder_engagement/spacex_starship.* If any accommodation for the public meetings is needed (such as additional translation services), please submit a request by December 16, 2024, to the project email address: *SpaceXBocaChica@icf.com.* For any media inquiries, please contact the FAA Press Office at *pressoffice@faa.gov.*

Before including your address, phone number, email address, or other personal identifying information in your comment, be advised that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask the FAA in your comment to withhold from public review your personal identifying information, the

FAA cannot guarantee that it will be able to do so. All comments received during the comment period will be given equal weight and be taken into consideration in the preparation of the Final EA.

Issued in Washington, DC, on November 20, 2024.

Stacey Molinich Zee,

Manager, Operations Support Branch.

[FR Doc. 2024–27533 Filed 11–26–24; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Notice of Final Federal Agency Actions on Proposed Transportation Project in Florida

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of Limitation on Claims for Judicial Review of Actions by Florida Department of Transportation (FDOT), pursuant to 23 U.S.C. 327, and other Federal Agencies.

SUMMARY: The FHWA, on behalf of the FDOT, is issuing this notice to announce actions taken by FDOT and other Federal Agencies that are final agency actions. These actions relate to the proposed State Road (S.R.) 535/Vineland Road Project Development and Environment (PD&E) Study (Financial Management Number 437174–2). The proposed S.R. 535/Vineland Road project will reduce congestion and improve safety from US 192 to World Center Drive (S.R. 536), a distance of approximately 2.35 miles. Improvements consist of widening the existing roadway from four to six lanes, improvements to intersections, and the construction of stormwater management facilities. These actions grant licenses, permits, or approvals for the project.

DATES: By this notice, the FHWA, on behalf of FDOT, is advising the public of final agency actions subject to 23 U.S.C. 139(l)(1). A claim seeking judicial review of the Federal Agency actions on the listed highway project will be barred unless the claim is filed on or before April 28, 2025. If the Federal law that authorizes judicial review of a claim provides a time period of less than 150 days for filing such claim, then that shorter time period still applies.

ADDRESSES: The Type 2 Categorical Exclusion and additional project documents can be viewed and downloaded from the project website at: *https://www.cflroads.com/project/437174-2,* or by contacting FDOT Office of Environmental Management, 605 Suwannee Street, MS 37, Tallahassee, Florida 32399, during normal business hours are 8:00 a.m. to 5:00 p.m. (Eastern Standard Time), Monday through Friday, except State holidays.

FOR FURTHER INFORMATION CONTACT: Jennifer Marshall, P.E., Director, FDOT Office of Environmental Management, FDOT; telephone (850) 414–4316; email: *Jennifer.Marshall@dot.state.fl.us.*

SUPPLEMENTARY INFORMATION: Effective December 14, 2016, and as subsequently renewed on May 26, 2022, the FHWA assigned, and the FDOT assumed, environmental responsibilities for this project pursuant to 23 U.S.C. 327. Notice is hereby given that FDOT and other Federal Agencies have taken final agency actions subject to 23 U.S.C. 139 (l)(1) by issuing licenses, permits, or approvals for the proposed highway improvement project. The actions by FDOT and other Federal Agencies on the project, and the laws under which such actions were taken are described in the Type II Categorical Exclusion approved on November 15, 2024, and in other project records for the listed project. The Type II Categorical Exclusion and other documents for the listed project are available by contacting FDOT at the address provided above. The project subject to this notice is:

Project Location: The project is located in Osceola and Orange Counties, Florida. The project limits are S.R. 535/Vineland Road from US 192 to north of World Center Drive (S.R. 536), a distance of approximately 2.35 miles.

Project Actions: This notice applies to the Type II Categorical Exclusion and all other Federal Agency licenses, permits, or approvals for the listed project as of the issuance date of this notice and all laws under which such actions were taken, including but not limited to:

1. *General:* National Environmental Policy Act (NEPA) [42 U.S.C. 4321*et seq.*]; Federal-Aid Highway Act (FAHA) [23 U.S.C. 109 and 23 U.S.C. 128]; 23 CFR part 771.

2. *Air:* Clean Air Act (CAA) [42 U.S.C. 7401–7671(q)], with the exception of project level conformity determinations [42 U.S.C. 7506].

3. *Noise:* Noise Control Act of 1972 [42 U.S.C. 4901–4918]; 23 CFR772.

4. *Land:* Section 4(f) of the Department of Transportation Act of 1966 [23 U.S.C. 138 and 49 U.S.C. 303]; 23 CFR part 774; Land and Water Conservation Fund (LWCF) [54 U.S.C. 200302–200310].

5. *Wildlife:* Endangered Species Act (ESA) [16 U.S.C. 1531–1544 and 1536]; Marine Mammal Protection Act [16 U.S.C. 1361–1423h], Anadromous Fish Conservation Act [16 U.S.C. 757(a)–757(f)]; Fish and Wildlife Coordination Act [16 U.S.C. 661–667(d)]; Migratory Bird Treaty Act (MBTA) [16 U.S.C. 703–712]; Magnuson-Stevenson Fishery Conservation and Management Act of 1976, as amended [16 U.S.C. 1801–1891d], with Essential Fish Habitat requirements [16 U.S.C. 1855(b)(2)].

6. *Historic and Cultural Resources:* Section 106 of the National Historic Preservation Act of 1966, as amended [54 U.S.C. 3006101 *et seq.*]; Archaeological Resources Protection Act of 1979 (ARPA) [16 U.S.C. 470(aa)–470(II)]; Preservation of Historical and Archaeological Data [54 U.S.C.312501–312508]; Native American Grave Protection and Repatriation Act (NAGPRA) [25 U.S.C. 3001–3013; 18 U.S.C. 1170].

7. *Social and Economic:* Civil Rights Act of 1964 [42 U.S.C. 2000 d–2000d–1]; American Indian Religious Freedom Act [42 U.S.C. 1996]; Farmland Protection Policy Act (FPPA) [7 U.S.C. 4201–4209].

8. *Wetlands and Water Resources:* Clean Water Act (Section 319, Section 401, Section 404) [33 U.S.C. 1251–1387]; Coastal Barriers Resources Act (CBRA) [16 U.S.C. 3501–3510]; Coastal Zone Management Act (CZMA) [16 U.S.C. 1451–1466];; Safe Drinking Water Act (SDWA) [42 U.S.C. 300f–300j—26]; Rivers and Harbors Act of 1899 [33 U.S.C. 401–406]; Wild and Scenic Rivers Act [16 U.S.C. 1271–1287]; Emergency Wetlands Resources Act [16 U.S.C. 3921, 3931]; Wetlands Mitigation, [23 U.S.C. 119(g) and 133(b)(3)]; Flood Disaster Protection Act [42 U.S.C. 4001–4130].

9. *Hazardous Materials:* Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) [42 U.S.C. 9601–9675]; Superfund Amendments and Reauthorization Act of 1986 (SARA); Resource Conservation and Recovery Act (RCRA) [42 U.S.C. 6901–6992(k)].

10. *Executive Orders:* E.O. 11990 Protection of Wetlands; E.O. 11988 Floodplain Management; E.O. 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low Income Populations; E.O. 11593 Protection and Enhancement of Cultural Resources; E.O. 13007 Indian Sacred Sites; E.O. 13287 Preserve America; E.O. 11514 Protection and Enhancement of Environmental Quality; E.O. 13112 Invasive Species.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on

Federal programs and activities apply to this program.)

Authority: 23 U.S.C. 139(l)(1).

Issued on: November 21, 2024.

Karen M. Brunelle

Director, Office of Project Development, Federal Highway Administration, Tallahassee, Florida.

[FR Doc. 2024–27817 Filed 11–26–24; 8:45 am]

BILLING CODE 4910–RY–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement: Cameron, Hidalgo, And Willacy Counties, Texas

AGENCY: Texas Department of Transportation (TxDOT), Federal Highway Administration (FHWA), Department of Transportation.

ACTION: Federal notice of intent to prepare an Environmental Impact Statement (EIS).

SUMMARY: FHWA, on behalf of TxDOT, is issuing this notice to advise the public that an EIS will be prepared for a proposed transportation project to study the effects of constructing a highway improvement project from Interstate Highway (I–) 69C/United States Highway (US) 281 to I–69E/US 77 in Hidalgo, Cameron, and Willacy Counties, Texas (CSJ: 0921–02–353). The proposed project will be referred to herein as I–69 Connector, or the I–69 Connector Project. The proposed project is approximately 25 miles in length.

FOR FURTHER INFORMATION CONTACT: Francisco Chapa, P.E., TxDOT Pharr District Project Manager, 600 West I–2, Pharr, Texas, 78577, (956) 702–6344, *Francisco.chapa@txdot.gov.*

SUPPLEMENTARY INFORMATION: The environmental review, consultation, and other actions required by applicable Federal environmental laws for this project are being, or have been, carried-out by TxDOT pursuant to 23 U.S.C. 327 and a Memorandum of Understanding dated December 9, 2019, and executed by FHWA and TxDOT.

The purpose and need of the proposed I–69 Connector is to alleviate/reduce traffic congestion and improve regional mobility, to improve and increase transportation network connectivity, to address future population growth and travel demands, and to provide an east-west hurricane evacuation route.

The proposed project would evaluate a new potential connection from I–69C/US 281 to I–69E/US 77 in Hidalgo, Cameron, and Willacy Counties, Texas (CSJ: 0921–02–353). The proposed project could potentially include constructing a highway on new location for approximately 25 miles with grade separations at intersections with major crossroads.

The EIS will evaluate a range of build alternatives and a no-build alterative. Possible build alternatives include the four alternatives that were evaluated in the I–69 Connector Route Feasibility Study. Each alternative would be evaluated on the same right-of-way width and level of detail during the Alternative Analysis process.

Alternative A

Alternative A starts on the western end at the intersection of I–69C/US 281 and State Highway (SH) 107. It follows SH 107 for approximately 3.2 miles to the east, where SH 107 curves north, before continuing on new location eastward for approximately 12.3 miles. After intersection with International Boundary and Water Commission (IBWC)'s North Floodway, the alignment follows SH 107 southeast for 2.2 miles before turning north at the intersection of Farm-to-Market (FM) 1425 for approximately 1.1 miles and continuing east for approximately 6.5 miles until the eastern end of the project at I–69E/US 77. Alternative A is on partial new location and approximately 25.5 miles long.

Alternative B

Alternative B starts on new alignment at the western end at I–69C/US 281 and approximately 0.15 mile south of E. Richardson Road. This alignment continues east for approximately 3.4 miles, and curves slightly south at the intersection of SH 107 before continuing on new location for approximately 12.3 miles. After the alignment's intersection with the IBWC's North Floodway, the alignment moves slightly south until the intersection with FM 1425 for approximately 2.1 miles, then continues east for approximately 7 miles until the eastern end of the project at I–69E/US 77. Alternative B is on new location and approximately 24.8 miles long.

Alternative C

Alternative C starts on new alignment at the western end at I–69C/US 281 and approximately 0.70 mile north of E. Richardson Road. The alignment continues east for approximately 9.7 miles until curving south after the intersection with FM 88. The alignment continues east for approximately 15.3 miles until the eastern end of the project at I–69E/US 77. Alternative C is on new location and approximately 25 miles long.

Alternative D

Alternative D starts on new alignment at the western end at I–69C/US 281 and approximately 0.7 mile north of E. Richardson Road. The alignment continues east for approximately 9.3 miles until curving north 0.3 mile west of the intersection with FM 88. The alignment continues northeast for approximately 4.3 miles then continues east for approximately 9.6 miles until the intersection with I–69E/US 77. Alternative D is on new location and approximately 23 miles long.

Section 106 and Section 4(f) Historic Properties. The proposed build alternatives will be evaluated for potential adverse impacts to historic properties (*i.e.* properties that are eligible for or listed in the National Register of Historic Places) within the study area.

Environmental Justice (EJ). The proposed build alternatives will be evaluated for potential adverse impacts to EJ communities due to anticipated relocations as well as other impacts such as access, noise, and visual aesthetics. Additional analysis and public involvement will be conducted during the National Environmental Policy Act process to assess if the project would result in any disproportionately high and adverse effects on low-income and minority communities.

Wildlife and threatened and endangered species. The proposed build alternatives will be evaluated for potential adverse impacts to wildlife and threatened and endangered species within the study area.

Floodplains. The proposed build alternatives will be evaluated for potential adverse impacts to floodplains within the study area.

The EIS will evaluate the potential impacts and benefits to the resources/communities identified above as well as the following other subject areas: Limited English Proficiency communities, land use, right-of-way, social and community resources, traffic noise, air quality, water resources, hazardous materials sites, cultural resources, biological resources, protected lands 4(f) and 6(f), and visual resources.

It is anticipated that the following would be required: Texas Antiquities Code permit and concurrence, Section 106 historic/archeological resources concurrence, Section 4(f) evaluation approval, Section 7 consultation with U.S. Fish and Wildlife, IBWC Permit, and U.S. Army Corp of Engineers Section 404 Nationwide Permit(s).

A Tentative Schedule is outlined below.

The Agency Scoping Meeting was held July 29, 2024.

Public Scoping Meeting: January 21 and 23, 2025.

The FEIS/ROD is anticipated Summer 2027.

In addition to the public scoping meeting, a public hearing will be held after the Draft EIS is prepared. Public notice will provide the time and place of the hearing. After the public hearing and end of Draft EIS comment period, issuance of the Final EIS/Record of Decision is anticipated. If a build alternative is selected, all permits and authorization decisions would occur before construction.

The following entities have been invited to be cooperating agencies for this EIS: U.S. Environmental Protection Agency, U.S. Fish and Wildlife Service, U.S. Department of Agriculture, Natural Resource Conservation Service, National Park Service, U.S. Army Corp of Engineers, Federal Emergency Management Agency, Federal Transit Administration, Federal Railroad Administration, International Boundary and Water Commission, U.S. Customs and Border Protection, U.S. Department of Housing and Urban Development, Santa Ana National Wildlife Refuge, Lower Rio Grande Valley National Wildlife Refuge, Kiowa Tribe, Mescalero Apache Tribe, Tonkawa Tribe of Oklahoma, Apache Tribe of Oklahoma, and Comanche Nation of Oklahoma.

The following entities have been invited to be participating agencies for this EIS: Texas Commission on Environmental Quality, McAllen Historic Preservation Council, Texas Division of Emergency Management, The Texas General Land Office, Texas Historical Commission/State Historic Preservation Officer, Texas Parks and Wildlife Department, Cameron County Regional Mobility Authority, Hidalgo County Regional Mobility Authority, Hidalgo County Planning and Development, Cameron County Planning and Development, Hidalgo County, Cameron County, Willacy County, Texas Department of Public Safety, City of Harlingen, City of Lyford, City of McAllen, City of Donna, City of Edinburg, City of Elsa, City of La Feria, City of La Villa, City of Alamo, City of San Juan, City of Weslaco, City of Mercedes, City of Palm Valley, City of Pharr, City of Raymondville, Town of Combes, Rio Grande Valley Metropolitan Planning Organization, Cameron County Historical Commission, Hidalgo County Historical Commission, Willacy County Historical Commission, Hidalgo County Drainage District No. 1, Cameron County Irrigation District No. 2, McAllen Economic Development Corporation (EDC), Harlingen EDC, Edinburg EDC, Alamo EDC, Donna EDC, Lyford EDC, Mercedes EDC, Pharr EDC, San Juan EDC, Weslaco EDC, Elsa EDC, and Combes EDC.

TxDOT will issue a single Final Environmental Impact Statement and Record of Decision document pursuant to 23 U.S.C. 139(n)(2), unless TxDOT determines statutory criteria or practicability considerations preclude issuance of a combined document.

In accordance with 23 U.S.C. 139, cooperating agencies, participating agencies, and the public will be given an opportunity for continued input on project development. A in-person public scoping meeting is planned for Tuesday, January 21, 2025, from 5 p.m. to 7 p.m. CST at J. Economedes High School 1414 N Alamo Rd, Edinburg, Texas 78541, and January 23, 2025, from 5 p.m. to 7 p.m. CST at Elma E. Barrera Elementary School, Hwy 107, Santa Rosa, Texas 78593. The public scoping meeting will provide an opportunity for the public to review and comment on the draft coordination plan and schedule, the project purpose and need, the range of alternatives, and methodologies and level of detail for analyzing alternatives. It will also allow the public an opportunity to provide input on any expected environmental impacts, anticipated permits or other authorizations, and any significant issues that should be analyzed in depth in the EIS. In addition to the public scoping meeting, a public hearing will be held after the draft EIS is prepared. Public notice will be given of the time and place of the meeting and hearing.

The public meeting will be conducted in English. If you need an interpreter or document translator because English is not your primary language or you have difficulty communicating effectively in English, one will be provided to you. If you have a disability and need assistance, special arrangements can be made to accommodate most needs. If you need interpretation or translation services or you are a person with a disability who requires an accommodation to attend and participate in the public scoping meeting, please contact Norma Robledo, TxDOT Pharr District, at (956) 702–6161 no later than 4 p.m. CT, Thursday, January 16, 2025. Please be aware that advance notice is required as some services and accommodations may require time for the Texas Department of Transportation to arrange.

The public is requested to provide public comments on alternatives or impacts and on relevant information, studies, or analyses with respect to this proposed project. Comments may be provided in writing by mail to Francisco Chapa, TxDOT Project Manager at 600 West I–2, Pharr, Texas, 78577 or by email to *Francisco.Chapa@txdot.gov* or to *PHR_I69_Connector@txdot.gov.* Comments must be received by Friday, February 7, 2025.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction.)

Michael T. Leary,

Director, Planning and Program Development, Federal Highway Administration.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number [FRA–2010–0029]

The National Railroad Passenger Corporation's Request To Amend Its Positive Train Control Safety Plan and Positive Train Control System

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of availability and request for comments.

SUMMARY: This document provides the public with notice that, on November 14, 2024, the National Railroad Passenger Corporation (Amtrak) submitted a request for amendment (RFA) to its FRA-approved Positive Train Control Safety Plan (PTCSP) to provide supplemental information to its initial RFA, submitted November 7, 2024, to support updates to Amtrak's Onboard Computer (OBC) Serial platform and Fusion software release. As this RFA may involve a request for FRA's approval of proposed material modifications to an FRA-certified positive train control (PTC) system, FRA is publishing this notice and inviting public comment on Amtrak's RFA to its PTCSP.

DATES: FRA will consider comments received by December 17, 2024. FRA may consider comments received after that date to the extent practicable and without delaying implementation of valuable or necessary modifications to a PTC system.

ADDRESSES:

Comments: Comments may be submitted by going to *https://www.regulations.gov* and following the online instructions for submitting comments.

Instructions: All submissions must include the agency name and the

applicable docket number. The relevant PTC docket number for this host railroad is Docket No. FRA–2010–0029. For convenience, all active PTC dockets are hyperlinked on FRA's website at *https://railroads.dot.gov/research-development/program-areas/train-control/ptc/railroads-ptc-dockets.* All comments received will be posted without change to *https://www.regulations.gov;* this includes any personal information.

FOR FURTHER INFORMATION CONTACT: Gabe Neal, Staff Director, Signal, Train Control, and Crossings Division, telephone: 816–516–7168, email: *Gabe.Neal@dot.gov.*

SUPPLEMENTARY INFORMATION: In general, Title 49 United States Code (U.S.C.) Section 20157(h) requires FRA to certify that a host railroad's PTC system complies with Title 49 Code of Federal Regulations (CFR) part 236, subpart I, before the technology may be operated in revenue service. Before making certain changes to an FRA-certified PTC system or the associated FRA-approved PTCSP, a host railroad must submit, and obtain FRA's approval of, an RFA to its PTCSP under 49 CFR 236.1021.

Under 49 CFR 236.1021(e), FRA's regulations provide that FRA will publish a notice in the **Federal Register** and invite public comment in accordance with 49 CFR part 211, if an RFA includes a request for approval of a material modification of a signal or train control system. Accordingly, this notice informs the public that, on November 14, 2024, Amtrak submitted an RFA to its PTCSP for its Advanced Civil Speed Enforcement System II (ACSES II), which seeks FRA's approval for updates to its OBC Serial platform and Fusion software release. That RFA is available in Docket No. FRA–2010–0029.

Interested parties are invited to comment on Amtrak's RFA to its PTCSP by submitting written comments or data. During FRA's review of Amtrak's RFA, FRA will consider any comments or data submitted within the timeline specified in this notice and to the extent practicable, without delaying implementation of valuable or necessary modifications to a PTC system. *See* 49 CFR 236.1021; *see also* 49 CFR 236.1011(e). Under 49 CFR 236.1021, FRA maintains the authority to approve, approve with conditions, or deny a railroad's RFA to its PTCSP at FRA's sole discretion.

Privacy Act Notice

In accordance with 49 CFR 211.3, FRA solicits comments from the public to better inform its decisions. DOT posts these comments, without edit, including any personal information the commenter provides, to *https://www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *https://www.transportation.gov/privacy.* See *https://www.regulations.gov/privacy-notice* for the privacy notice of *regulations.gov.* To facilitate comment tracking, we encourage commenters to provide their name, or the name of their organization; however, submission of names is completely optional. If you wish to provide comments containing proprietary or confidential information, please contact FRA for alternate submission instructions.

DEPARTMENT OF TRANSPORTATION

Federal Transit Administration

[Docket No. FTA–2024–0015]

Notice of Availability of Proposed Circular Updates and Request for Comments

AGENCY: Federal Transit Administration (FTA), Department of Transportation (DOT).

ACTION: Notice; request for comments.

SUMMARY: The Federal Transit Administration (FTA) has placed in the docket and on its website proposed guidance in the form of an updated circular pertaining to procurements financed in whole or part with Federal assistance awarded by FTA through grants or cooperative agreements (*i.e.,* ''third party'' procurements). This updated circular would cancel and replace Circular FTA C 4220.1F, most recently revised March 18, 2013. The proposed updates reflect statutory and regulatory changes that have occurred since the last update, as well as providing additional non-binding guidance. By this notice, FTA invites public comment on its proposed circular, ''Third Party Contracting Guidance.''

DATES: Comments must be submitted by December 27, 2024. Late-filed comments will be considered to the extent practicable.

ADDRESSES: Please submit your comments by only one of the following methods, identifying your submission by docket number FTA–2024–0015. All electronic submissions must be made to the U.S. Government electronic site at *https://www.regulations.gov/.*

(1) *Federal eRulemaking Portal:* Go to *https://www.regulations.gov/* and follow the online instructions for submitting comments.

(2) *Mail:* Docket Management Facility: U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Ground Floor, Room W12–140, Washington, DC 20590–0001.

(3) *Hand Delivery or Courier:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, between 9 a.m. and 5 p.m. Eastern time, Monday through Friday, except Federal holidays.

(4) *Fax:* 202–366–7951.

Instructions: You must include the agency name (Federal Transit Administration) and docket number (FTA–2024–0015) at the beginning of your comments. Submit two copies of your comments if you submit them by mail. For confirmation that FTA received your comments, include a self-addressed stamped postcard. Note that all comments received will be posted without change to *https://www.regulations.gov/* including any personal information provided and will be available to internet users. For information on DOT's compliance with the Privacy Act, please visit *https://www.transportation.gov/privacy.*

Docket: For access to the docket to read background documents and comments received, go to *https://www.regulations.gov/* at any time or to the U.S. Department of Transportation, 1200 New Jersey Avenue SE, Docket Operations, M–30, West Building Ground Floor, Room W12–140, Washington, DC 20590 between 9 a.m. and 5 p.m. Eastern Time, Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: For third party contracting questions, contact Tara Murphy, Division Chief, Office of Administration, Federal Transit Administration, 1200 New Jersey Ave. SE, Room E41–311, Washington, DC 20590, phone: (202) 366–5647 or email *tara.murphy@dot.gov.* For legal questions, Christopher Hall, Office of Chief Counsel, same address, Room E56–312, phone (202) 941–9595 or email *christopher.hall@dot.gov.*

SUPPLEMENTARY INFORMATION:

Overview

FTA proposes an update to its Third Party Contracting Guidance Circular, which would replace and cancel the current iteration dated March 18, 2013 (C 4220.1F). The proposed circular would update FTA's guidance for

recipient procurements financed with FTA assistance (third party contracts) to reflect current statutory and regulatory text, including the Infrastructure Investment and Jobs Act (IIJA), Public Law 117–582, signed into law on November 15, 2021; the Fixing America's Surface Transportation (FAST) Act, Public Law 114–94, signed into law on December 4, 2015; and new or updated administrative requirements from 2 CFR parts 200 and 1201.

This notice does not include the proposed circular; electronic versions of the proposed circular may be found on the docket at *https://www.regulations.gov,* docket number FTA–2024–0015, or on FTA's website at *https://www.transit.dot.gov.*

Chapter-By-Chapter Summaries

Throughout the proposed circular, revisions are proposed that would clarify or reorganize sections for improved readability, without substantively altering guidance from the current Circular 4220.1F. The proposed circular also updates citations to authority and adds citations to improve transparency about the sources of requirements. Proposed changes that would not have a substantive effect are not necessarily called out in this notice.

Chapter I

In Chapter I, FTA proposes to revise several key definitions, including ''Approval, Authorization, Concurrence, Waiver,'' ''Best Value,'' ''Change Order,'' ''Common Grant Rules,'' ''Constructive Change,'' ''Contract,'' ''Design-Build Project,'' ''Governmental Recipient,'' ''Joint Procurement,'' ''Non-Governmental Recipient,'' ''Recipient,'' ''State or Local Government Purchasing Schedule or Purchasing Contract,'' ''Third Party Contract,'' and ''Value Engineering.'' In most cases, revisions were to simplify definitions, or align definitions with existing statute or regulations. Additionally, this chapter would introduce new definitions, such as ''Alternate Contracting Method (ACM),'' ''Progressive Design-Build (PDB),'' and ''Public-Private Partnership (P3).''

FTA also proposes to update language in this chapter describing the Federal Transit Administration (FTA) and the roles of FTA's headquarters, regional, and metropolitan offices in supporting public transportation agencies.

Chapter II

FTA proposes to revise Chapter II to clarify the circular's effect and applicability, including by distinguishing between binding requirements (*e.g.,* described using ''must'' or ''shall'') and non-binding recommendations (*e.g.,* described using ''may'' or ''should''). Throughout the proposed circular, revisions would take care to distinguish between the mandatory and the advisory. The proposed revisions would specify how the circular applies to different entities, including States, Tribes, non-State recipients, and third party contractors, and would simplify the Project Types and Third Party Contracts sections under the Applicability of the Circular. Updates would consolidate or remove outdated and inapplicable sections from this Chapter, such as those on ''Other Agreement'' Assistance, Art, the Over the Road Bus Accessibility Program, and certain Operations and Preventive Maintenance contracts. These sections are redundant or otherwise no longer relevant due to program changes.

Additionally, proposed changes would expand the descriptions of available project delivery options for recipients by adding Construction Manager/General Contractor (CM/GC), Full Delivery or Program Management, and Progressive Design-Build (PDB) to the list of project delivery systems. Proposed revisions to Chapter II would also add guidance on Alternative Contracting Methods (ACMs) regarding PDB and P3. Finally, the proposed updates would revise the Federal Laws and Regulations section and the State and Local Laws and Regulations section to update the description of the relationships among Federal and State laws, regulations, and the FTA grant agreements and Master Agreement.

Chapter III

FTA proposes amendments to Chapter III that would update guidance on recipients' responsibilities, with particular emphasis on Written Standards of Conduct to address Gifts and Violations, along with new guidance on Organizational Conflicts, to reflect current Federal regulations. Similarly, the proposed changes would update guidance on Self-Certification and Third Party Contracting Capacity to clarify FTA's use of certifications and describe existing practice and procedures at FTA. Proposed revisions to Adequate Third Party Contract Provisions, Industry Contracts, Record Keeping, Procurement History, Procurement Method, Contract Type, and Contractor Selection would improve clarity, update citations, and bring them into alignment with current Federal regulations.

Proposed revisions to Chapter III would also incorporate new guidance on Constructive Changes, update guidance on Access to Records, and remove Special Notification Requirements to align with current Federal regulations. Additionally, proposed changes would update guidance regarding Use of Technology/Electronic Commerce and Electronic Bidding and Reverse Auctions.

To address the industry's growing need for control and access to data, as contracts increasingly involve data collection, new guidance would be added on Data Rights. This guidance would cover aspects such as data collection, ownership, and usage, with specific provisions on negotiating data rights to secure adequate licenses for federally funded data. It would also ensure the clear definition of data rights, negotiation of data access rights to meet Federal objectives, and inclusion of appropriate clauses.

Proposed updates would update guidance on Audits to align with updated Federal regulations.

To replace the current circular's description of protests and appeals to FTA (see below, under Chapter VII), Chapter III would include a new section describing FTA's role in the recipient's procurement disputes and FTA's interest in settlements impacting Federal funds.

Chapter IV

In Chapter IV, FTA proposes to clarify the Determining the Recipient's Needs section, including guidance on Necessity, Unnecessary Reserves and Spare Ratios, Acquisition for Assignment Purposes (''piggybacking''), Changes in the Recipient's Needs, and Joint Procurements, as well as State or Local Government Purchasing Schedules or Purchasing Contracts, in accordance with current FTA guidance and purchasing authorities and to reduce duplication of other sections of the circular. Guidance on Joint Procurements would be clarified, while Small Procurements and Lease-versus-Purchase guidance would be updated to align with existing Federal regulation. New guidance to reflect innovative procurement flexibilities introduced by the FAST Act would be introduced on Leases of Rolling Stock and Related Equipment, Leases of Removable Power Sources, reporting requirements, and lease specifications.

Additional updates would clarify Federal requirements affecting recipient acquisitions. Guidance on Responsibility Requirements and DOT Debarment and Suspension would be updated, with references to the GSA Excluded Parties List replaced by the System for Award Management (SAM). Updates to Conflicts of Interest, and Lobbying Certification and Disclosure

would improve clarity and reflect current Federal regulations and FTA policy.

The Federal Civil Rights Laws and Regulations section would be renamed Civil Rights and moved and consolidated with other civil rights-related sections for better flow. Updates within Administrative Requirements would include minor clarifications for accuracy. Under Cost Principles, unnecessary guidance on Governmental Entities, Educational Institutions, Non-Profit Entities, and For-Profit Entities would be removed because these entities all apply the same cost principles under FTA's policy.

The Payments Provision section would be updated with the latest FTA guidance on Advance Payments and Progress Payments.

Wage and Hour Requirements under Socio-Economic Requirements would be renamed the Contract Work and Hours and Safety Standards Act, to be consistent with regulation, and the information therein would be updated to reflect the most current description in Federal regulation. Fair Labor Standards guidance would be similarly updated.

Under Civil Rights, guidance would be reorganized for flow, and new guidance would address changes in the law regarding nondiscrimination on the basis of sexual orientation and gender since the last circular update.

The Targeted Contracting section would be updated. The description of U.S. DOT's Disadvantaged Business Enterprise (DBE) rule would be updated to reflect changes to that rule that took effect in 2024. The section on Small and Disadvantaged Business Enterprises and HUBZones would be expanded in accordance with existing Federal regulation.

Under Environmental Protection, guidance on the Clean Air Act, the Federal Water Pollution Control Act, and Recycled Products would be updated to reflect current Federal regulations. Energy Conservation would be updated to refer to current regulation. Preference for U.S. Property—Buy America would be updated to add reference to the Build America, Buy America Act that became law in 2021, the addition of construction materials to the list of products that must be manufactured in the United States on an FTA funded project, and reference to 2 CFR part 184, which implements the new requirement for construction materials. Guidance on Shipments by Ocean Vessel would be clarified.

Under Technical Restrictions, updates would remove unnecessary Metric Measurements guidance, because 2 CFR part 200 does not require this.

Under Rolling Stock—Special Requirements, guidance on Transit Vehicle Manufacturer Compliance with DBE Requirements would expand to include guidance on project-specific DBE participation goals. Updates on Minimum Useful Life and Spare Ratios would make clarifications and align with FTA's latest guidance. Outdated guidance on Air Pollution and Fuel Economy would be removed. Minor corrections and simplifications would be made to Preaward and Post Delivery Review, Bus Testing, In-State Dealers, and Rolling Stock Contract Options.

The Art section would be substantially removed because art no longer is an eligible expense under FTA's statute.

Guidance on Architectural and Engineering (A&E) Services would include updates on Qualifications-Based Selection, renamed from Qualifications-Based Requirements, to reorganize and clarify without substantive changes. Related updates for Construction, Service Purposes, Equivalent State Law, and Indirect Cost Rates would enhance clarity.

Under Construction—Special Requirements, guidance on Bonding, Bid Guarantees, Performance Bonds, Payment Bonds, Reduced Bonding, and Excessive Bonding would be updated to refer to current regulations and updated URLs without substantive change. Seismic Safety, Value Engineering, Equal Employment Opportunity, Davis-Bacon Wages, Anti-Kickback, Contract Work Hours and Safety Standards, and Labor Neutrality would receive non-substantive updates for clarity and regulatory alignment, and a new section on veterans' employment would be added in accordance with FTA's existing statute. The section on Preference for U.S. Property—Buy America would be consolidated earlier in the chapter. Accessibility guidance would also be relocated for clarity.

The Research, Development, Demonstration, Deployment, and Special Studies—Special Requirements section would include updates to Patent Rights, Rights in Data, Export Control, Protection of Human Subjects, and Protection of Animals to cite to current Federal regulations and FTA's Master Agreement where appropriate.

Finally, updates in Audit Services would align with current Federal regulations and dollar thresholds, with revisions to the Single Audit Act, Organizational Conflicts of Interest, Eligibility Costs, and verification processes. The section on Obtaining Indirect Cost Rates would be simplified and references to current Federal regulation would be added.

Chapter V

Chapter V would update the Force Account and Shared Use sections for clarity to refer to FTA's latest guidance on the subjects. Under Joint Procurement, guidance would be clarified. Updates to the guidance on State or Local Government Purchasing Schedules or Purchasing Contracts would be clarified, and new guidance would be provided on Interstate Purchasing of Rolling Stock and Related Equipment to account for changes to rolling stock purchasing authorities. New guidance would be added on Interstate Purchasing Schedules and guidance on Intergovernmental Agreements would be updated to reflect new authorities introduced by the FAST Act for rolling stock procurements.

New guidance on Cooperative Procurement of Rolling Stock and Related Equipment would be added to reflect new FAST Act authorities.

Guidance on Competition and Price Reasonableness would be revised to align with current Federal regulations.

The Existing Contracts (Assignments) section would be reorganized and streamlined for clarity. Information on Alternatives to Assigned Contract Rights, Joint Procurements, and Intergovernmental Procurements would be removed and consolidated with the sections elsewhere in the circular dealing with those topics. Guidance related to Impermissible Actions, Improper Contract Expansion and Improper Cardinal Changes would be updated to improve clarity. Sections on Tests, Rolling Stock, and Federal Procurement Standards would be removed from this section and consolidated with sections elsewhere in this circular dealing with those topics.

Chapter VI

For Chapter VI, the Competition Required section would incorporate changes to more closely reflect existing Federal regulations. The subsection on Unsolicited Proposals would be reorganized for flow without substantive change. Prequalification guidance would be updated to match current regulation, adding Objective Factors and refining sections on Currentness (formerly Lists), Sources, and Qualification Periods.

Solicitation Requirements and Restrictions would also be updated to align with Federal regulations, including clarifications in the subsections What to Include and Brand Name or Equal. Prohibitions would be revised, with updates on Excessive Qualifications, Unnecessary Experience, Improper Prequalification, Retainer

Contracts, Excessive Bonding, Brand Name Only, and Geographic Restrictions (formerly In-State or Local Geographic Restrictions). Regarding geographic restrictions, changes since the last circular update include authority in IIJA to apply local hiring targets to construction projects, and the removal of a former prohibition against geographic restrictions from 2 CFR part 200. A reference to Self-Dealing and Bid Rigging would be added to the list of prohibited restrictions on competition.

The section on Organizational Conflicts of Interest would be revised to include new guidance on the Recipient's Conflicts in accordance with current regulation. Updates to Contractor's Conflicts would include expanded guidance on Biased Ground Rules in accordance with existing regulation.

The Prohibited or Restricted Contract Types section would be simplified, with clarifications on Cost Plus a Percentage of Cost—Prohibited, Percentage of Construction Cost—Prohibited, and Time and Materials—Restricted. Subsections on When to Use and Firm Ceiling Price would be removed as unnecessary.

Methods of Procurement would be revised to reflect updated Federal regulations, including a new section on Self-Certified Micro-Purchase Thresholds, which were introduced by a new provision in 2 CFR part 200 that took effect in 2024. Under the new provision, a recipient may set for itself a micro-purchase threshold that is higher than the Federal micro-purchase threshold. Procedures, including Distribution (formerly Competition) and Documentation, would be clarified, and the Small Purchases subsection would be renamed Simplified Acquisitions for accuracy, regulatory alignment, and to avoid confusion with FTA's unrelated ''small purchases'' Buy America waiver. The Simplified Acquisitions section would be updated to align with the current regulations, including updates to Competition and Documentation.

Sealed Bids (Formal Advertising) would undergo updates to align with current Federal regulations and simplify guidance, with specific clarifications in When Appropriate, Fixed Price Contract, Discussions Unnecessary, and Procurement Procedures.

Competitive Proposals (Request for Proposals) would be updated for regulatory consistency, with clarification in When Appropriate and Discussion Expected. Procurement Procedures would see updates in Notice (formerly Publicity), Written Procedures (formerly Evaluation Method), Price and Other Factors, and the absorption of Best Value into Price and Other Factors.

The section on Two-Step Procurement Procedures would receive additional guidance and clarifications.

Guidance on Architectural and Engineering (A&E) Services and Other Services would be updated for clarity, and a new statement would be added to make clear that Multiple Award Indefinite-Delivery A&E Contracts are permissible.

Information on Design-Bid-Build (DBB) would be incorporated into a new section on Mixed A&E-Construction Contracts, covering both DBB and Progressive Design-Build (PDB). The Procurement Method section would be updated, with Construction Predominant, Design Services Predominant, and Selection Processes sections absorbed into Procurement Method for streamlined guidance.

The Other Than Full and Open Competition section would be revised to more closely follow Federal regulations. Guidance on Micro-Purchases, Sole Source, Unsolicited Proposals, and Restricted Data Rights would be updated for clarity. The Exigency or Emergency section would be clarified, with Unusual and Compelling Urgency absorbed under Exigency or Emergency. The significantly outdated paragraph about Associated Capital Maintenance Item Exception would be removed.

Updates would clarify guidance on Cardinal Changes, including revised guidance on when cardinal changes impair competition and how to recognize cardinal changes that impair competition.

Eligible Costs would be updated to align with the current Federal regulation and FTA policy in its Master Agreement. The section on Adjustments to Project Costs would be removed as unnecessary.

Cost Analysis and Price Analysis would receive minor revisions for clarity and organization, and the sentence on Federal cost principles would be removed as redundant with the following subsection, Guidance on Cost and Price Analysis.

Guidance on Evaluations and Contract Award would be updated with minor changes for clarity, and a new information on disqualifying offerors with recent Tax Liability or Felony Convictions.

Chapter VII

Chapter VII in Circular 4220.1F deals with protests, changes, disputes, and appeals of the recipient's procurement decisions to FTA. The proposed circular would eliminate Chapter VII and replace it with a new paragraph in proposed Chapter III on Recipient Responsibilities and FTA's Role in Procurement Disputes. That paragraph would restate the current regulation, which commits procurement decisions to the discretion of the recipient and states that FTA will not substitute its judgment for that of the recipient unless the matter is primarily a Federal concern. It also would state FTA's interest in settlements of procurement disputes that would commit Federal funds or the proceeds of procurement disputes arising from federally funded procurements.

Appendices

FTA proposes to revise the appendices of the circular to improve accuracy, accessibility, and ensure alignment with current best practices. Specifically, Appendix A, References, would be revised to reflect sources incorporated in this version. Appendix B, FTA Regional and Metropolitan Office Contact Information, and Appendix C, Third Party Contracting Checklist, would be removed to streamline the document and focus on core guidance. Additionally, Appendix D, Provisions, Certifications, Reports, Forms, and Other—Matrices, would be removed to enable more timely updates to this information on the FTA website.

Closing

After a review and consideration of the comments provided on the updates proposed, FTA will publish the updated Third Party Contracting Guidance Circular (C 4220.1G) on its website and will announce the availability of the updated circular and the response to comments in the **Federal Register**.

Veronica Vanterpool,

Deputy Administrator.

BILLING CODE 4910–57–P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

Agency Information Collection Activities: Information Collection Renewal; Comment Request; Computer-Security Incident Notification

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury.

ACTION: Notice and request for comment.

SUMMARY: The OCC, as part of its continuing effort to reduce paperwork and respondent burden, invites

comment on a continuing information collection, as required by the Paperwork Reduction Act of 1995 (PRA). In accordance with the requirements of the PRA, the OCC may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The OCC is soliciting comment concerning the renewal of its information collection titled, ''Computer-Security Incident Notification.''

DATES: Comments must be received by January 27, 2025.

ADDRESSES: Commenters are encouraged to submit comments by email, if possible. You may submit comments by any of the following methods:

- *Email: prainfo@occ.treas.gov.*
- *Mail:* Chief Counsel's Office, Attention: Comment Processing, Office of the Comptroller of the Currency, Attention: 1557–0350, 400 7th Street SW, Suite 3E–218, Washington, DC 20219.
- *Hand Delivery/Courier:* 400 7th Street SW, Suite 3E–218, Washington, DC 20219.
- *Fax:* (571) 293–4835.

Instructions: You must include ''OCC'' as the agency name and ''1557–0350'' in your comment. In general, the OCC will publish comments on *www.reginfo.gov* without change, including any business or personal information provided, such as name and address information, email addresses, or phone numbers. Comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

Following the close of this notice's 60-day comment period, the OCC will publish a second notice with a 30-day comment period. You may review comments and other related materials that pertain to this information collection beginning on the date of publication of the second notice for this collection by the method set forth in the next bullet.

- *Viewing Comments Electronically:* Go to *www.reginfo.gov.* Hover over the ''Information Collection Review'' tab and click on ''Information Collection Review'' from the drop-down menu. From the ''Currently under Review'' drop-down menu, select ''Department of Treasury'' and then click ''submit.'' This information collection can be located by searching OMB control number ''1557–0350'' or ''Computer-Security Incident Notification.'' Upon finding the appropriate information collection, click on the related ''ICR Reference Number.'' On the next screen, select ''View Supporting Statement and Other Documents'' and then click on the link to any comment listed at the bottom of the screen.
- For assistance in navigating *www.reginfo.gov,* please contact the Regulatory Information Service Center at (202) 482–7340.

FOR FURTHER INFORMATION CONTACT: Shaquita Merritt, Clearance Officer, (202) 649–5490, Chief Counsel's Office, Office of the Comptroller of the Currency, 400 7th Street SW, Washington, DC 20219. If you are deaf, hard of hearing, or have a speech disability, please dial 7–1–1 to access telecommunications relay services.

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501 *et seq.*), Federal agencies must obtain approval from the OMB for each collection of information that they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) to include agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of title 44 generally requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, the OCC is publishing notice of the renewal of this collection.

Title: Computer-Security Incident Notification.

OMB Control No.: 1557–0350.

Type of Review: Regular.

Affected Public: Businesses or other for-profit.

Description: Pursuant to 12 CFR part 53, the OCC has established certain computer-security incident notification requirements applicable to banking organizations [1] and bank service providers.[2] Specifically, 12 CFR 53.3 requires a banking organization to notify the OCC about a ''notification incident'' as soon as possible but no later than 36 hours after the banking organization determines that a notification incident has occurred. The regulation defines a ''notification incident'' as ''a computer-security incident that has materially disrupted or degraded, or is reasonably likely to materially disrupt or degrade, a banking organization's—(i) [a]bility to carry out banking operations, activities, or processes, or deliver banking products and services to a material portion of its customer base, in the ordinary course of business; (ii) [b]usiness line(s), including associated operations, services, functions, and support, that upon failure would result in a material loss of revenue, profit, or franchise value; or (iii) [o]perations, including associated services, functions and support, as applicable, the failure or discontinuance of which would pose a threat to the financial stability of the United States.'' [3]

Additionally, a bank service provider must notify at least one bank-designated point of contact at each affected banking organization customer as soon as possible when the bank service provider determines that it has experienced a computer-security incident that has materially disrupted or degraded, or is reasonably likely to materially disrupt or degrade, covered services provided to such banking organization for four or more hours.

Estimated Burden:

Estimated Frequency of Response: On occasion; event generated.

Estimated Number of Respondents:

Reporting: 100 Respondents.

Disclosure: 832 Respondents.

Estimated Total Annual Burden: 2,795 hours.

Comments submitted in response to this notice will be summarized and included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the OCC, including whether the information has practical utility;

(b) The accuracy of the OCC's estimate of the burden of the collection of information;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of the collection on respondents, including

[1] A banking organization as ''a national bank, Federal savings association, or Federal branch or agency of a foreign bank; provided, however, that no designated financial market utility shall be considered a banking organization.'' 12 CFR 53.2(b)(1).

[2] A bank service provider is ''a bank service company or other person that performs covered services; provided, however, that no designated financial market utility shall be considered a bank service provider.'' 12 CFR 53.2(b)(2).

[3] 12 CFR 53.2(b)(7). A ''computer-security incident'' is ''an occurrence that results in actual harm to the confidentiality, integrity, or availability of an information system or the information that the system processes, stores, or transmits.'' 12 CFR 53.2(b)(4).

through the use of automated collection techniques or other forms of information technology; and

(e) Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Patrick T. Tierney,

Assistant Director, Office of the Comptroller of the Currency.

[FR Doc. 2024–27876 Filed 11–26–24; 8:45 am]

BILLING CODE 4810–33–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Notice of OFAC Sanctions Action

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names of one or more persons that have been placed on OFAC's Specially Designated Nationals and Blocked Persons List (SDN List) based on OFAC's determination that one or more applicable legal criteria were satisfied. All property and interests in property subject to U.S. jurisdiction of these persons are blocked, and U.S. persons are generally prohibited from engaging in transactions with them.

DATES: This action was issued on October 30, 2024. See **SUPPLEMENTARY INFORMATION** for relevant dates.

FOR FURTHER INFORMATION CONTACT: OFAC: Associate Director for Global Targeting, 202–622–2420; or *https://ofac.treasury.gov/contact-ofac.*

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions programs are available on OFAC's website: *https://ofac.treasury.gov.*

Notice of OFAC Action(s)

On October 30, 2024, OFAC determined that the property and interests in property subject to U.S. jurisdiction of the following persons are blocked under the relevant sanctions authorities listed below.

BILLING CODE 4810–AL–P

Individuals

1. AYDIN, Gurhan, Konya, Turkey; DOB 20 Jan 1964; POB Konya, Turkey; nationality Turkey; Gender Male; Secondary sanctions risk: See Section 11 of Executive Order 14024.; National ID No. 30481753270 (Turkey) (individual) [RUSSIA-EO14024] (Linked To: AYTT CNC TAKIM TEZGAHLARI MAKINE SANAYI VE TICARET LIMITED SIRKETI).

   Designated pursuant to section 1(a)(iii)(C) of Executive Order 14024 of April 15, 2021, ''Blocking Property With Respect To Specified Harmful Foreign Activities of the Government of the Russian Federation,'' 86 FR 20249, 3 CFR, 2021 Comp., p. 542 (Apr. 15, 2021) (E.O. 14024) as amended by Executive Order 14114 of December 22, 2023, "Taking Additional Steps With Respect to the Russian Federation's Harmful Activities," 88 FR 89271, 3 CFR, 2023 Comp., p. 721 (Dec. 22, 2023) (E.O. 14114), for being or having been a leader, official, senior executive officer, or member of the board of directors of AYTT CNC TAKIM TEZGAHLARI MAKINE SANAYI VE TICARET LIMITED SIRKETI, a person whose property and interests in property are blocked pursuant to E.O. 14024.

2. AYDIN, Recep Cetin, Konya, Turkey; DOB 14 Nov 1996; POB Selcuklu, Turkey; nationality Turkey; Gender Male; Secondary sanctions risk: See Section 11 of Executive Order 14024.; Passport U14618486 (Turkey) expires 05 Jun 2027; National ID No. 30442754582 (Turkey) (individual) [RUSSIA-EO14024].

   Designated pursuant to section 1(a)(i) of E.O. 14024 for operating or having operated in the manufacturing sector of the Russian Federation economy.

3. KOKOREV, Sergei, Montenegro; DOB 04 Oct 1986; nationality Russia; Gender Male; Secondary sanctions risk: See Section 11 of Executive Order 14024.; Passport 761579971 (Russia) (individual) [RUSSIA-EO14024].

   Designated pursuant to section 1(a)(i) of E.O. 14024 for operating or having operated in the manufacturing sector of the Russian Federation economy.

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Notice of OFAC Sanctions Action

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names of one or more persons that have been placed on OFAC's Specially Designated Nationals and Blocked Persons List (SDN List) based on OFAC's determination that one or more applicable legal criteria were satisfied. All property and interests in property subject to U.S. jurisdiction of these persons are blocked, and U.S. persons are generally prohibited from engaging in transactions with them.

DATES: This action was issued on November 21, 2024. See **SUPPLEMENTARY INFORMATION** section for relevant dates.

FOR FURTHER INFORMATION CONTACT: OFAC: Associate Director for Global Targeting, 202–622–2420; or *https://ofac.treasury.gov/contact-ofac.*

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions programs are available on OFAC's website: *https://ofac.treasury.gov.*

Notice of OFAC Actions

On November 21, 2024, OFAC determined that the property and interests in property subject to U.S. jurisdiction of the following persons are blocked under the relevant sanctions authorities listed below.

BILLING CODE 4810–AL–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Foreign Account Tax Compliance Act Collections

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on continuing information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning the foreign account tax compliance act collection requirements.

DATES: Written comments should be received on or before January 27, 2025 to be assured of consideration.

ADDRESSES: Direct all written comments to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224 or by email to *pra.comments@irs.gov.* Include OMB Control number 1545–2246 or Forms: 8957, 8966, 8966–C, 8809–I, and 8508–I.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form should be directed to Molly Stasko, at (202) 317–6206 or Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet at *Molly.J.Stasko@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Foreign Account Tax Compliance Act (FATCA).

OMB Number: 1545–2246.

Form Numbers: 8957, 8966, 8966–C, 8809–I, and 8508–I.

Regulation Project Numbers: IRS Notice 2023–11, IRS Notice 2024–78, and TD 9610.

Abstract: Internal Revenue Code (IRC) section 1471–1474 is part of the Foreign Account Tax Compliance Act (FATCA) legislative framework to obtain reporting from foreign financial institutions on the accounts held in their institutions by US persons. The IRS developed forms and regulations under these authorities of IRC. TD 9610 includes the regulations related to the reporting on the forms and the associated recordkeeping requirements.

Form 8957, Foreign Account Tax Compliance Act (FATCA) Registration, information is to be used by a foreign financial institution to apply for status as a foreign financial institution (FFI) as defined in IRC 1471(b)(2). Form 8966, FATCA Report, is used by a responsible officer of a foreign institution to report information with respect to U.S. accounts or persons based on their IRC chapter 4 status. Form 8966–C is used to authenticate the paper-filed Forms 8966 and to ensure the ability to identify discrepancies between the number of forms received versus those claimed to have been sent by the filer. Taxpayers use Form 8508–I to request a waiver from filing Form 8966 electronically. Form 8809–I is used to request an initial or additional extension of time to file 8966 for the current year. IRS Notice 2023–11 and IRS Notice 2024–78 allow FFIs to obtain temporary relief from reporting missing required U.S. taxpayer identification numbers for certain preexisting accounts, when they comply with the procedures described within each notice. Publication 5124 provides directions on how Model 1 Intergovernmental Agreements report information directly to the IRS.

Current Actions: IRS is adding the Publication 5124, IRS Notice 2023–11 and 2024–78 to the OMB approval for 1545–2246. There are not changes to the requirements. This is an administrative change to count the burden within 1545–2246.

Type of Review: Revision of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 5,561,180.

Estimated Time per Response: 7 minutes up to 8 hours, 7 minutes for the various collection requirements.

Estimated Total Annual Burden Hours: 2,912,282.

The following paragraph applies to all the collections of information covered by this notice.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained if their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax

return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: November 21, 2024.

Molly J. Stasko,

Senior Tax Analyst.

DEPARTMENT OF VETERANS AFFAIRS

Veterans and Community Oversight and Engagement Board, Notice of Meeting

The Department of Veterans Affairs (VA) gives notice under the Federal Advisory Committee Act (FACA), 5 U.S.C. ch. 10, that the Veterans and Community Oversight and Engagement Board will meet virtually on December 13, 2024. The meeting sessions will begin, and end as follows:

Date:	Time:
Friday, December 13, 2024	9:00 a.m. to 3:00 p.m. Pacific Standard Time (PST).

The meetings are open to the public and will be recorded.

The Board was established by the West Los Angeles Leasing Act of 2016 on September 29, 2016. The purpose of the Board is to provide advice and make recommendations to the Secretary of Veterans Affairs on: identifying the goals of the community and Veteran partnership; improving services and outcomes for Veterans, members of the Armed Forces, and the families of such Veterans and members; and on the implementation of the Draft Master Plan approved by the Secretary on January 28, 2016, and on the creation and implementation of any successor master plans.

On December 13, the agenda will include opening remarks from the Committee Chair and the Executive Sponsor. There will be a general update from VA Greater Los Angeles Healthcare System (VAGLAHS). The West Los Angeles Veterans Collective will provide a status briefing all activities since June 2024. The Urban Land Institute will present the results of their Implementation Technical Assistance Panel (ITAP) study. An update on the status and projected efforts related to Master Plan 2025, and an overview of the VA Survey on Veteran Preferences results will be presented by (VAGLAHS) staff. The Board's subcommittees on Outreach and Community Engagement with Services and Outcomes, and Master Plan with Services and Outcomes will report on activities since the last meeting. Subcommittee reports will be followed by an out brief to the full Board on any draft recommendations considered for forwarding to the Secretary.

Time will be allocated for receiving public comments on December 13, starting at 9:40 a.m. PST. Individuals wishing to make public comments are requested to submit a 1–2-page summary of their comments for inclusion in the official meeting record or would like to share information with the Committee should contact Mr. Chihung Szeto, Alternate Designated Federal Officer, at (562) 708–9959, at *Chihung.Szeto@va.gov* or *VEOFACA@va.gov.* Only those members of the public (first 6 public comment registrants) who have confirmed registrations to provide public comment will be allowed to provide public comment. In the interest of time, each speaker will be held to 5-minute time limit. The Committee will accept written comments from interested parties on issues outlined in the meeting agenda, from December 11, 2024 to December 15, 2024.

Members of the public can attend the meeting via WEBEX by joining from the meeting link below. The link will be active from 8:45 a.m.–3:30 p.m. PST, December 13, 2024.

Veteran and Community Oversight and Engagement Board (VCOEB)

Hosted by Walsh, Margaret K. (ERPI).

https://veteransaffairs.webex.com/veteransaffairs/j.php?MTID=mef5d2ad406348e108778e341fcbbf891.

Friday, December 13, 2024, 9:00 a.m. | 6 hours | Pacific Time (US & Canada).

Meeting number: 2831 720 3971.

Password: sJMpM2pJ*32.

Any member of the public seeking additional information should contact Mr. Eugene W. Skinner Jr. at (202) 631–7645 or at *Eugene.Skinner@va.gov.*

Dated: November 22, 2024.

Jelessa M. Burney,

Federal Advisory Committee Management Officer.

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0783]

Agency Information Collection Activity: Nonprofit Research and Education Corporations (NPCs)—Annual Report, Remediation Plans & Assessment Questionnaires

AGENCY: Veterans Health Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: Veterans Health Administration (VHA), Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of a currently approved collection, and allow 60 days for public comment in response to the notice. DATES: Comments must be received on or before January 27, 2025.

ADDRESSES: Comments must be submitted through *www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT:

Program-Specific information: Rebecca Mimnall, 202–695–9434, *vhacopra@va.gov.*

VA PRA information: VA PRA Clearance Office, 202–461–8900, *vacopaperworkreduact@va.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA of 1995, Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VHA invites comments on: (1) whether the proposed collection of information is necessary for the proper performance of VHA's functions, including whether the information will have practical utility; (2) the accuracy of VHA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Title: Nonprofit Research and Education Corporations (NPCs)—Annual Report, Remediation Plans & Assessment Questionnaires (VA Forms 10–10073, 10–10073A, 10–10073B, and 10–10073C).

OMB Control Number: 2900–0783. *https://www.reginfo.gov/public/do/PRASearch* (Once at this link, you can enter the OMB Control Number to find the historical versions of this Information Collection).

Type of Review: Revision of a currently approved collection.

Abstract: Federal law at 38 U.S.C. 7366, Accountability and Oversight, states ''(b) each such corporation (NPC) shall submit to the Secretary (Department of Veterans Affairs (DVA)) an annual report providing a detailed statement of its operations, activities, and accomplishments during that year.'' The individual NPC annual reports are combined into one NPC Annual Report to Congress. VA oversight of NPCs includes reviews, audits, self-assessments, and remediation plans. This information collection is used for oversight of NPCs and includes the following:

a. NPC Annual Report Template, VA Form 10–10073
b. NPC Audit Actions Items Remediation Plans, VA Form 10–10073A
c. NPPO Internal Control Questionnaire, VA Form 10–10073B
d. NPPO Operations Oversight Questionnaire, VA Form 10–10073C

NPC Annual Report Template, VA Form 10–10073

Since 1988, when the enabling legislation for the NPCs was passed, annual reports have been obtained from each NPC and combined into an NPC Annual Report to Congress. Congress uses the combined NPC Annual Report to Congress to monitor the progress of the overall NPC program it created. The NPC Annual Report to Congress is also used by top-level VA executives to evaluate the program and to recommend changes where needed. VHA's Nonprofit Oversight Board and the Nonprofit Program Office (NPPO) use both the combined NPC Annual Report to Congress and the individual NPC Annual Report Templates to monitor and oversee the NPCs. Trend analyses and other financial information are analyzed for each NPC and judgments made about each NPC's progress, financial viability, stewardship of assets, and accomplishments.

NPC Audit Actions Items Remediation Plans, VA Form 10–10073A

The NPC Audit Action Items Remediation Plans information collection is used to review the NPCs' remedies for audit deficiencies and recommendations. The major objective of the information collection is to help ensure proper corrective action. If any of the remediation plans submitted are inadequate, then the NPPO will make recommendations for sound, workable remedies.

NPPO Internal Control Questionnaire, VA Form 10–10073B

The NPPO Internal Control Questionnaire, or portions of it, will be used in conducting reviews, audits, and investigations of the NPCs. The major objective of the questionnaire is to uncover weaknesses and lapses in internal controls. The NPPO will then make recommendations for improved internal controls wherever there are weaknesses or lapses. The questionnaire also may be used as a voluntary self-assessment by the NPCs.

NPPO Operations Oversight Questionnaire, VA Form 10–10073C

The NPPO Operations Oversight Questionnaire, or portions of it, will be used in conducting operational reviews of the NPCs. The major objective of the questionnaire is to uncover operating problems and areas that need improvement. The NPPO will then make recommendations for operations improvements wherever problems or opportunities for improvement are found. The questionnaire also may be used as a voluntary self-assessment by the NPCs.

VHA does not anticipate any changes to the annual number of responses or burden hours. However, there are some minor updates to the forms for clarification and to comply with current guidance on standard PRA language.

Total Annual Burden: 858 hours.

Total Annual Responses: 300.

Affected Public: Individuals or Households.

Estimated Annual Burden:

a. NPC Annual Report Template—301 hours.
b. NPC Audit Actions Items Remediation Plans—84 hours.
c. NPPO Internal Control Questionnaire—344 hours.
d. NPPO Operations Oversight Questionnaire—129 hours.

Estimated Average Burden Per Respondent:

a. NPC Annual Report Template—210 minutes.
b. NPC Audit Actions Items Remediation Plans—120 minutes.
c. NPPO Internal Control Questionnaire—240 minutes.
d. NPPO Operations Oversight Questionnaire—90 minutes.

Frequency of Response: Once annually.

Estimated Number of Respondents:

a. NPC Annual Report Template—86.
b. NPC Audit Actions Items Remediation Plans—42.
c. NPPO Internal Control Questionnaire—86.
d. NPPO Operations Oversight Questionnaire—86.

Authority: 44 U.S.C. 3501 *et seq.*

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration/Data Governance Analytics, Department of Veterans Affairs.

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0587]

Agency Information Collection Activity Under OMB Review: Equipment Operation and Maintenance Manuals

AGENCY: Procurement Policy and Warrant Management Service (PPS), Office of Procurement Policy, Systems and Oversight, Office of Acquisition and Logistics, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of

1995, this notice announces that the Procurement Policy and Warrant Management Service, Office of Procurement Policy, Systems and Oversight, Office of Acquisition and Logistics, Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden, and it includes the actual data collection instrument.

DATES: Comments and recommendations for the proposed information collection should be sent by December 27, 2024.

ADDRESSES: To submit comments and recommendations for the proposed information collection, please type the following link into your browser: *www.reginfo.gov/public/do/PRAMain,* select ''Currently under Review—Open for Public Comments'', then search the list for the information collection by Title or ''OMB Control No. 2900–0587.''

FOR FURTHER INFORMATION CONTACT: VA PRA information: VA PRA Clearance Office, 202–461–8900, *vacopaperworkreduact@va.gov.*

SUPPLEMENTARY INFORMATION:

Title: VAAR Clause 852.211–70, Equipment Operation and Maintenance Manuals.

OMB Control Number: 2900–0587 *https://www.reginfo.gov/public/do/PRASearch.*

Type of Review: Revision of a currently approved collection.

Abstract: The contracting officer shall insert the clause at 852.211–70, Equipment Operation and Maintenance Manuals, in solicitations and contracts for technical medical equipment, and other technical and mechanical equipment and devices where the requiring activity determines manuals are a necessary requirement for operation and maintenance of the equipment. Contractors are required to furnish both operation manuals and maintenance/repair manuals with the equipment provided to the Government. This clause sets forth those requirements and the minimum standards those manuals must meet to be acceptable. Generally, this is the same operation manual furnished with each piece of equipment sold to the general public and the same repair manual used by company technicians in repairing the company's equipment. The cost of the manuals is included in the contract price or listed as separately priced line items on the purchase order. The operation manual will be used by the individual actually operating the equipment to ensure proper operation and cleaning. The repair manual will be used by VA equipment repair staff to repair the equipment.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 89FR76193, September 17, 2024.

Affected Public: Individuals or Households.

Estimated Annual Burden: 745 hours.

Estimated Average Burden per Respondent: 2 minutes.

Frequency of Response: On occasion.

Estimated Number of Respondents: 22,337.

Authority: 44 U.S.C. 3501 *et seq.*

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

Notice of Plans for Department of Veterans Affairs to Assess Exposures and Conditions of Interest for Veterans Who Served At Karshi-Khanabad Air Base and To Solicit Public Comment

AGENCY: Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: The Department of Veterans Affairs (VA) announces that it plans to conduct an assessment of scientific literature and historical claims data to determine whether there is an association between military environmental exposure to toxic substances related to military service at Camp Stronghold Freedom in Karshi-Khanabad (K2) in Uzbekistan from 2001 to 2005 and medical conditions. VA entered into an agreement with the Center for Disease Control and Prevention's Agency for Toxic Substances and Disease Registry and published a Report to Congress in 2022 that identified the known health consequences associated with the identified toxic substances, chemicals, and airborne hazards at K2. As part of a continuing effort to assess the health risks that may be associated with military service at K2, VA is soliciting public comment on environmental exposures at K2 and medical conditions developed by Veterans who served there. This notice provides an opportunity for Veterans, caregivers, survivors, and the public to share relevant information with VA to inform decisions regarding presumptive benefits that could impact the roughly 16,000 Veterans who served at K2.

DATES: Comments must be received on or before December 27, 2024.

ADDRESSES: Comments must be submitted through *www.regulations.gov.* Except as provided below, comments received before the close of the comment period will be available as soon as possible after they have been received at *www.regulations.gov* for public viewing, inspection, or copying, including any personally identifiable or confidential business information that is included in a comment. VA will not post public comments that make threats to individuals or institutions or suggest that the commenter will take actions to harm an individual. VA encourages individuals not to submit duplicative comments. We will post comments from multiple unique commenters even if the content is identical or nearly identical to other comments. Any public comment received after the comment period's closing date is considered late and will not be considered in any potential future rulemaking.

FOR FURTHER INFORMATION CONTACT: Peter D. Rumm, M.D., MPH, Director of Policy, Health Outcomes Military Exposures, Veterans Health Administration, Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420, at 202–461–7297. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: Camp Stronghold Freedom was established at a former Soviet Air Base in K2 located in Southwest Uzbekistan in October 2001 and occupied by U.S. forces through the middle of 2005. During this period, several environmental site surveys were conducted by the Department of Defense (DOD) to assess contaminants that could impact the operational readiness of U.S. military operations and the safety of U.S. forces that deployed to K2. These surveys identified several contaminants, such as dust and particulate matter, underground jet fuel plumes, surface dirt with traces of asbestos, depleted uranium, benzene, chromium, and others. The Public Health website of the Defense Health Agency of the DOD lists contaminants of concern it identified at K2 [1].

Since 2021, VA has been assessing the potential health effects, including respiratory conditions and cancers, among K2 Veterans. Section 2010 of the Johnny Isakson and David P. Roe, M.D.

Veterans Health Care and Benefits Improvement Act of 2020, Public Law 116–315 (the Isakson and Roe Act) [2], directed VA to engage the Center for Disease Control and Prevention's Agency for Toxic Substances and Disease Registry to describe the known health effects associated with the toxic substances, chemicals, airborne hazards, and other substances DOD identified at K2. This effort has been completed, and a report was submitted to Congress in January 2022, which documented the DOD identified contaminants of concern, medium of exposure, along with the potential cancer and noncancer health effects. The findings from this report can be found on VA's K2 website [3]. The Department of Defense has also studied the mortality among K2 Service members and found that a more in-depth study of health issues is necessary [4]. Section 2010 of the Isakson and Roe Act also directed VA to assess the health effects associated with deployment to K2, with a final report due to Congress no later than 2030 [2]. VA created a public health surveillance program to address this requirement. Analyses are underway and data are updated annually on all K2 Veterans to allow VA to address new information on adverse health outcomes and health concerns of veterans as they become known.

The purpose of this Notice is to provide the K2 community (K2 Veterans, their caregivers, and their survivors) and the broader public the opportunity to share relevant information for VA to determine if VA should recognize the unique environmental exposures (individually and in combination) and medical conditions as presumptive based on a Veteran's service at K2. VA encourages the K2 community and broader public to submit thoughts, recommendations, and requests regarding the exposures and health conditions they feel are related to K2 service and warrant specific consideration by VA as a presumptive condition. VA also invites the public to submit information, evidence, and suggestions that may help VA assess potential exposures at K2 and health effects that may be associated with such exposures.

In accordance with 38 U.S.C. 1172, as created by section 202 of the Sergeant First Class Heath Robinson Honoring our Promise to Address Comprehensive Toxics Act of 2022 (PACT Act), VA is publishing this notice about its planned scientific assessment of the possibility of a relationship between all medical conditions and military environmental exposures related to service at Camp Stronghold Freedom in K2 from 2001 to 2005. Pursuant to section 202, the VA Secretary must determine whether to establish or remove presumptions for service connections based on military environmental exposure and the evaluation of adverse health outcomes. VA's procedure includes issuing a public notice regarding reviews, soliciting public comment, and recommendations for corrections to the Secretary from the working group subject matter experts to better reflect Veterans and dependents. Here, in recognition of the unique exposure environment at K2, Secretary McDonough directed a PACT Act presumptive process to formally solicit stakeholder input and demonstrate the rigor VA continues to apply to important questions concerning the contaminants present at K2 and the conditions that K2 Veterans developed following service there.

In accordance with 38 U.S.C. 1119 and 1120, as created by the PACT Act, Uzbekistan is included as an eligible country covered under the PACT Act for certain presumptions of exposure and service connection. Thus, K2 Veterans are eligible for hundreds of individual presumptive conditions encompassed by the 23 disease categories designated under this landmark legislation [5]. Additionally, K2 Veterans are eligible to receive health care from the Veterans Health Administration, regardless of whether they have filed a claim for disability [6]. VA encourages all K2 Veterans to register for health care and encourages all K2 Veterans and their survivors to submit a claim for any adverse health outcome, even if not covered under the PACT Act, that they feel is related to their military service at K2 or elsewhere.

Signing Authority

Denis McDonough, Secretary of Veterans Affairs, signed and approved this document on November 15, 2024, and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs.

Jeffrey M. Martin,

Assistant Director, Office of Regulation Policy & Management, Office of General Counsel, Department of Veterans Affairs.

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Final rule with comment period.

SUMMARY: This final rule with comment period revises the Medicare Hospital Outpatient Prospective Payment System (OPPS) and the Medicare Ambulatory Surgical Center (ASC) payment system for calendar year 2025 based on our continuing experience with these systems. We describe the changes to the amounts and factors used to determine the payment rates for Medicare services paid under the OPPS and those paid under the ASC payment system. Also, this final rule updates the requirements for the Hospital Outpatient Quality Reporting Program, Rural Emergency Hospital Quality Reporting Program, Ambulatory Surgical Center Quality Reporting Program, and Hospital Inpatient Quality Reporting Program. We also summarize information received in response to a Request for Information on potential modifications to the Safety of Care measure group in the Overall Hospital Quality Star Rating methodology. In this final rule, we are also finalizing our proposal to narrow the description of ''custody'' in the Medicare payment exclusion rule and to revise the special enrollment period criteria for formerly incarcerated individuals. We are also finalizing our Medicaid and Children's Health Insurance Program (CHIP) continuous eligibility provisions. We are also finalizing the proposal to reduce the review timeframe for standard prior authorization requests for certain covered outpatient department services paid under the OPPS from 10-business days to 7-calendar days. Further, this rule finalizes updates to the Conditions of Participation (CoPs) for hospitals and critical access hospitals (CAHs) in an effort to advance the health and safety of pregnant, birthing, and postpartum women. This rule also finalizes our proposed policy to separately pay Indian Health Service (IHS) and Tribal hospitals for high-cost drugs furnished in hospital outpatient departments through an add-on payment in addition to the all-inclusive rate (AIR) under the authorities used to calculate the AIR starting January 1, 2025. Finally, we are finalizing exceptions to the Medicaid clinic services four walls requirement for IHS and Tribal clinics, and, at state option, for behavioral health clinics and clinics located in rural areas.

DATES:

Effective date: The provisions of this rule are effective January 1, 2025.

Implementation date: Except as set forth in this section, the regulations at §§ 482.43(c), 482.55(c), and 485.618(e) must be implemented by July 1, 2025; the regulations at §§ 482.59(a) and (b) and 485.649(a) and (b) must be implemented by January 1, 2026; and the regulations at §§ 482.21(b)(4) and (e), 482.59(c), 485.641(d)(4) and (e)(2), and 485.649(c) must be implemented by January 1, 2027.

Comment period: To be assured consideration, comments must be received at one of the addresses provided below, by December 31, 2024.

ADDRESSES: In commenting, please refer to file code CMS–1809–FC.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *https://www.regulations.gov*. Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1809–FC, P.O. Box 8010, Baltimore, MD 21244–8010.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1809–FC, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: *https://www.regulations.gov*. Follow the search instructions on that website to view public comments. CMS will not post on *Regulations.gov* public comments that make threats to individuals or institutions or suggest that the individual will take actions to harm the individual. CMS continues to encourage individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments.

Plain Language Summary: In accordance with 5 U.S.C. 553(b)(4), a plain language summary of this rule may be found at *https://www.regulations.gov/*.

Severability of Provisions: We are clarifying and emphasizing our intent that if any provision of this final rule is held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, or stayed pending further action, it shall be severable from other parts of this final rule, and from rules and regulations currently in effect, and not affect the remainder thereof or the application of the provision to other persons not similarly situated or to other, dissimilar circumstances. If any provision is held to be invalid or unenforceable, the remaining provisions which could function independently should take effect and be given the maximum effect permitted by law. Through this rule, we adopt provisions that are intended to and will operate independently of each other, even if each serves the same general purpose or policy goal. Where a provision is necessarily dependent on another, the context generally makes that clear.

Addenda Available Only Through the Internet on the CMS Website

In the past, a majority of the Addenda referred to in our OPPS/ASC proposed and final rules were published in the **Federal Register** as part of the annual rulemakings. However, beginning with the calendar year (CY) 2012 OPPS/ASC proposed rule, all of the Addenda no longer appear in the **Federal Register** as part of the annual OPPS/ASC proposed and final rules to decrease administrative burden and reduce costs associated with publishing lengthy tables. Instead, these Addenda are published and available only on the CMS website. The Addenda relating to the OPPS are available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*. The Addenda relating to the ASC payment

system are available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/asc-regulations-and-notices*.

I. Summary and Background

A. Executive Summary of This Document

1. Purpose

We are updating the payment policies and payment rates for services furnished to Medicare beneficiaries in hospital outpatient departments (HOPDs) and ambulatory surgical centers (ASCs), beginning January 1, 2025. Section 1833(t) of the Social Security Act (the Act) requires us to annually review and update the payment rates for services payable under the Hospital Outpatient Prospective Payment System (OPPS). Specifically, section 1833(t)(9)(A) of the Act requires the Secretary of the Department of Health and Human Services (the Secretary) to review certain components of the OPPS not less often than annually, and to revise the groups, the relative payment weights, and the wage and other adjustments to take into account changes in medical practice, changes in technology, and the addition of new services, new cost data, and other relevant information and factors. In addition, under section 1833(i)(D)(v) of the Act, we annually review and update the ASC payment rates. This final rule with comment period also includes additional policy changes made in accordance with our experience with the OPPS and the ASC payment system and recent changes in our statutory authority. We describe these and various other statutory authorities in the relevant sections of this final rule with comment period. Also, this final rule with comment period updates the requirements for the Hospital Outpatient Quality Reporting (OQR) Program, the Rural Emergency Hospital Quality Reporting (REHQR) Program, the Ambulatory Surgical Center Quality Reporting (ASCQR) Program, and the Hospital Inpatient Quality Reporting (IQR) Program. We summarize information received in response to a Request for Information on potential modifications of the Safety of Care measure group in the Overall Hospital Quality Star Rating methodology. Given that the maternal health crisis in the United States is among the highest in high-income countries and also disproportionately impacts racial and ethnic minorities, we are finalizing updates to the CoPs for hospitals and CAHs in an effort to advance the health and safety of pregnant, birthing, and post-partum women. We are also finalizing an implementation approach in phases that allows additional time for hospitals and CAHs to comply with the requirements of the rule. In addition, we are narrowing the description of ''custody'' for the purposes of Medicare's no legal obligation to pay payment exclusion at § 411.4(b), providing an illustrative list of individuals who are not considered to be in custody, adding a definition of ''penal authority,'' reorganizing the regulation, and making certain technical edits. This rule also revises the eligibility requirements in the special enrollment period (SEP) for formerly incarcerated individuals at §§ 406.27(d) (Premium Part A) and 407.23(d) (Part B) to tie the eligibility for this SEP to the determination made by the Social Security Administration (SSA) that they are no longer incarcerated for releases beginning on January 1, 2025, and limit the current eligibility criteria for the SEP, with reference to ''custody'' associated with § 411.4(b) to releases between January 1, 2023, and December 31, 2024. Additionally, we are finalizing our proposed revisions to Medicaid and CHIP regulations to codify the requirement within the CAA, 2023 to require States to provide 12 months of continuous eligibility to children under the age of 19 in Medicaid and CHIP, with limited exceptions.

Finally, we are finalizing our proposed exceptions to the Medicaid clinic services benefit four walls requirement, to authorize Medicaid payment for clinic services provided outside the four walls of the clinic for IHS/Tribal clinics, and at State option, behavioral health clinics and clinics located in rural areas. Our current regulation at 42 CFR 440.90(b) includes an exception to the four walls requirement under the Medicaid clinic services benefit only for clinic services furnished to individuals who are unhoused. We believe finalizing these additional exceptions will help maintain and improve access for the populations served by IHS/Tribal clinics, behavioral health clinics, and clinics located in rural areas.

2. Summary of the Major Provisions

• *OPPS Update:* For CY 2025, we are increasing the payment rates under the OPPS by an Outpatient Department (OPD) fee schedule increase factor of 2.9 percent. This increase factor is based on the final inpatient hospital market basket percentage increase of 3.4 percent for inpatient services paid under the hospital inpatient prospective payment system (IPPS) reduced by a final productivity adjustment of 0.5 percentage point. Based on this update, we estimate that total payments to OPPS providers (including beneficiary cost sharing and estimated changes in enrollment, utilization, and case mix) for calendar year (CY) 2025 will be approximately $87.7 billion, an increase of approximately $4.7 billion compared to estimated CY 2024 OPPS payments. We are continuing to implement the statutory 2.0 percentage point reduction in payments for hospitals that fail to meet the hospital outpatient quality reporting requirements by applying a reporting factor of 0.9806 to the OPPS payments and copayments for all applicable services.

• *ASC Payment Update:* For CYs 2019 through 2023, we adopted a policy to update the ASC payment system using the hospital market basket update. In light of the impact of the COVID–19 public health emergency (PHE) on healthcare utilization, we extended our policy to update the ASC payment system using the hospital market basket update an additional 2 years—through CYs 2024 and 2025. Using the hospital market basket methodology, for CY 2025, we increased payment rates under the ASC payment system by 2.9 percent for ASCs that meet the quality reporting requirements under the ASCQR Program. This increase is based on a final hospital market basket percentage increase of 3.4 percent reduced by a productivity adjustment of 0.5 percentage point. Based on this final update, we estimate that total payments to ASCs (including beneficiary cost sharing and estimated changes in enrollment, utilization, and case-mix) for CY 2025 will be approximately $7.4 billion, an increase of approximately $308 million compared to estimated CY 2024 Medicare payments.

• *Device Pass-Through Payment Applications:* For CY 2025, we received 14 complete applications for device pass-through payments. We sought public comment on these applications and make final determinations on these applications in this final rule with comment period.

• *Changes to the List of ASC Covered Surgical Procedures and Ancillary Services Lists:* For CY 2025, we are adding 21 medical and dental procedures to the ASC covered procedures list (CPL) and ancillary services lists, based upon existing criteria at § 416.166.

• *Changes to the Inpatient Only (IPO) List:* For CY 2025, we are finalizing adding three liver allograft services for which codes were newly created by the AMA CPT Editorial Panel for CY 2025 to the IPO list. Additionally, we are finalizing removing a pelvic fixation code (CPT code 22848) from the IPO list for CY 2025.

• *Remote Services:* For CY 2025, we are clarifying our policies for remotely furnished outpatient therapy services, Diabetes Self-Management Training and Medical Nutrition Therapy services and mental health services furnished remotely to beneficiaries in their homes by hospital staff to maintain alignment across payment systems.

• *Payment for High-Cost Drugs Provided by Indian Health Service and Tribal Hospitals:* For CY 2025, we are finalizing our policy to separately pay IHS and tribal hospitals for high-cost drugs furnished in hospital outpatient departments through an add-on payment in addition to the AIR under the authorities used to calculate the AIR.

• *Clinical Trials Coding and Payment:* We are finalizing a clarification to our Category B clinical trials coding and payment policy for devices and procedures to specify that our policy applies only to IDE studies with a control arm and where a payment adjustment is necessary to preserve the scientific validity of such a study. We are not finalizing our proposal to extend our coding and payment policy to drugs and devices that are being studied in clinical trials under a Coverage with Evidence Development (CED) National Coverage Determination (NCD),[1] for which the trial includes a treatment and control arm for CY 2025. We are taking additional time to consider the broad implications of a payment methodology for clinical trials for CED drugs and devices.

• *Payment for HIV Pre-Exposure Prophylaxis (PrEP) in Hospital Outpatient Departments:* For CY 2025, we are finalizing paying for HIV PrEP drugs covered as an additional preventive service and related services under the OPPS. We are finalizing a site neutral policy where products are generally paid similar rates under the OPPS and Physician Fee Schedule.

[1] *https://www.cms.gov/medicare/coverage/evidence.*

• *Diagnostic Radiopharmaceuticals Separate Payment:* We are finalizing a policy to pay separately for diagnostic radiopharmaceuticals with per day costs above a threshold of $630, which is approximately two times the volume weighted average cost amount currently associated with diagnostic radiopharmaceuticals in the Nuclear Medicine APCs. We also are finalizing updating the $630 threshold in CY 2026 and subsequent years by the Producer Price Index (PPI) for Pharmaceutical Preparations. Finally, we are finalizing payment for separately payable diagnostic radiopharmaceuticals based on their Mean Unit Cost (MUC) derived from OPPS claims for CY 2025.

• *Exclusion of Cell and Gene Therapies from Comprehensive Ambulatory Payment Classification (C–APC) Packaging:* We are finalizing a policy to exclude qualifying cell and gene therapies from C–APC packaging.

• *Add-on Payment for Radiopharmaceutical Technetium-99m (Tc-99m) Derived from Domestically Produced Mo-99:* For CY 2025, an add-on payment applies to radiopharmaceuticals that use Tc-99m produced without use of highly enriched uranium (HEU). For CY 2026, we are finalizing replacing the add-on payment for radiopharmaceuticals produced without the use of Tc-99m derived from non-HEU sources with an add-on payment for radiopharmaceuticals that use Tc-99m derived from domestically produced Mo-99.

• *Changes to the Review Timeframes for the Hospital Outpatient Department (OPD) Prior Authorization Process:* We are changing the current review timeframe for prior authorization requests for OPD services from 10-business days to 7-calendar days for standard reviews.

• *Health Equity Measures for the Hospital Outpatient Quality Reporting (OQR), Rural Emergency Hospital Quality Reporting (REHQR), and Ambulatory Surgical Center Quality Reporting (ASCQR) Programs:* We are finalizing: (1) adoption of the Hospital Commitment to Health Equity (HCHE) measure in the Hospital OQR and the REHQR Programs, and adoption of the Facility Commitment to Health Equity (FCHE) measure in the ASCQR Program, beginning with the CY 2025 reporting period/CY 2027 payment or program determinations; (2) adoption of the Screening for Social Drivers of Health (SDOH) measure in all three programs beginning with voluntary reporting for the CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028

payment or program determinations; and (3) adoption of the Screen Positive Rate for SDOH measure in all three programs beginning with voluntary reporting for the CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment or program determinations.

• *Modification of the Immediate Measure Removal Policy for the Hospital OQR and ASCQR Programs:* We are finalizing modification of the immediate measure removal policy to an immediate measure suspension policy to increase transparency regarding the process for removing adopted measures in the Hospital OQR and ASCQR Programs beginning with CY 2025.

• *Hospital Outpatient Quality Reporting (OQR) Program:* In addition to the cross-program measures and policies, we are finalizing: (1) adoption of the Patient Understanding of Key Information Related to Recovery After a Facility-Based Outpatient Procedure or Surgery, Patient Reported Outcome-Based Performance Measure (Information Transfer PRO–PM) beginning with voluntary reporting for the CY 2026 reporting period followed by mandatory reporting beginning with the CY 2027 reporting period/CY 2029 payment determination; (2) removal of the MRI Lumbar Spine for Low Back Pain measure beginning with the CY 2025 reporting period/CY 2027 payment determination; (3) removal of the Cardiac Imaging for Preoperative Risk Assessment for Non-Cardiac, Low-Risk Surgery measure beginning with the CY 2025 reporting period/CY 2027 payment determination; (4) the requirement that electronic health record (EHR) technology be certified to all electronic clinical quality measures (eCQMs) available to report beginning with the CY 2025 reporting period/CY 2027 payment determination; and (5) public reporting of the Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients measure—Psychiatric/Mental Health Patients stratification on Care Compare beginning with CY 2025.

• *Rural Emergency Hospital Quality Reporting (REHQR) Program:* In addition to the cross-program measures, we are finalizing: (1) extension of the reporting period for the Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery measure from 1 year to 2 years beginning with the CY 2027 program determination; and (2) when, after status conversion, REHs are required to report data under the REHQR Program.

• *Ambulatory Surgical Center Quality Reporting (ASCQR) Program:* In addition to finalizing the cross-program measures and policies, we summarize comments received on the potential development of frameworks for specialty focused reporting and minimum case number for required reporting under the ASCQR Program.

• *Hospital Inpatient Quality Reporting (IQR) Program:* We are finalizing the voluntary reporting of the core clinical data elements (CCDEs) and linking variables for both the Hybrid Hospital-Wide Readmission (HWR) and Hybrid Hospital-Wide Standardized Mortality (HWM) measures, for the performance period of July 1, 2023, through June 30, 2024, impacting the FY 2026 payment determination for the Hospital IQR Program. Additionally, we are extending voluntary reporting of CCDEs and linking variables for an additional year for the performance period of July 1, 2024, through June 30, 2025, impacting the FY 2027 payment determination for the Hospital IQR Program.

• *Overall Hospital Quality Star Rating:* We summarize comments received on potential modifications to the Safety of Care measure group in the Overall Hospital Quality Star Rating methodology.

• *Medicare FFS No Legal Obligation to Pay Payment Exclusion and Incarceration:* We are narrowing the description of ''custody'' for purposes of Medicare's no legal obligation to pay payment exclusion at § 411.4(b), stating explicitly in regulatory text that individuals who are released to the community pending trial (including those in pretrial community supervision and those released pursuant to cash bail), on parole, probation, or home detention, or required to reside in halfway houses are not considered to be in ''custody'' for purposes of the payment exclusion, adding a definition of ''penal authority,'' reorganizing the regulation, and making certain technical edits.

• *Revision to Medicare Special Enrollment Period for Formerly Incarcerated Individuals:* We are finalizing the eligibility requirements in the special enrollment period (SEP) for formerly incarcerated individuals at §§ 406.27(d) and 407.23(d) to remove the reference to ''custody'' associated with § 411.4(b) and instead tie the eligibility for this SEP to the determination made by SSA that they are no longer incarcerated. We are also expanding the SEP eligibility criteria to include individuals released from confinement to residency in halfway houses.

• *Continuous Eligibility in Medicaid and CHIP:* We are finalizing our proposed revisions to Medicaid and CHIP regulations to codify the requirement within the CAA, 2023 for States to provide 12 months of continuous eligibility to children under the age of 19 in Medicaid and CHIP, with limited exceptions. Specifically, we are finalizing the removal of the option to provide continuous eligibility to a subgroup of Medicaid and CHIP enrollees and for a time period of less than 12 months. For CHIP, we are finalizing the removal of the option to disenroll children from CHIP during a continuous eligibility period for failure to pay premiums.

• *Medicaid Clinic Services Four Walls Exceptions:* We are finalizing three exceptions to the Medicaid clinic services benefit four walls requirement at 42 CFR 440.90. Our current regulation at 42 CFR 440.90(b) allows for Medicaid payment for clinic services furnished outside of the four walls of the clinic only to individuals who are unhoused. Our final rule adds a mandatory exception to the four walls requirement for IHS/Tribal clinics at 42 CFR 440.90(c) and optional exceptions for behavioral health clinics and clinics located in rural areas at 42 CFR 440.90(d) and (e), respectively.

• *Health and Safety Standards for Obstetrical Services in Hospitals and Critical Access Hospitals:* We are finalizing new Conditions of Participation (CoPs) for hospitals and CAHs for obstetrical services, including new requirements for maternal quality assessment and performance improvement (QAPI), as well as baseline standards for the organization, staffing, and delivery of care within obstetrical units, and staff training on evidence-based best practices every 2 years. We are finalizing revisions to the emergency services CoP related to emergency readiness for hospitals and CAHs that provide emergency services. In addition, we are finalizing revisions to the Discharge Planning CoP for all hospitals related to transfer protocols. Further, we are finalizing a phased-in implementation to provide hospitals and CAHs with additional time to come into compliance with the requirements. Lastly, we sought comments in the proposed rule on whether these requirements should also apply to rural emergency hospitals (REHs), which we discuss below.

3. Summary of Costs and Benefits

In section XXVIII of this final rule with comment period, we set forth a detailed analysis of the regulatory and federalism impacts that the proposed

changes would have on affected entities and beneficiaries. Key estimated impacts are described below.

a. Impacts of All OPPS Changes

Table 201 in section XXVIII.C of this final rule with comment period displays the distributional impact of all the OPPS changes on various groups of hospitals and CMHCs for CY 2025 compared to all estimated OPPS payments in CY 2024. We estimate that the final policies in this final rule with comment period would result in a 3.0 percent overall increase in OPPS payments to providers. We estimate that total OPPS payments for CY 2025, including beneficiary cost-sharing, to the approximately 3,500 facilities paid under the OPPS (including general acute care hospitals, children's hospitals, cancer hospitals, and CMHCs) would increase by approximately $1.98 billion compared to CY 2024 payments, excluding our estimated changes in enrollment, utilization, and case-mix.

We estimated the isolated impact of our OPPS policies on CMHCs because CMHCs have historically only been paid for partial hospitalization services under the OPPS. Beginning CY 2024, they are also paid for intensive outpatient program (IOP) services under the OPPS. Continuing the provider-specific structure we adopted beginning in CY 2011, and basing payment fully on the type of provider furnishing the service, we estimate a 11.9 percent increase in CY 2025 payments to CMHCs relative to their CY 2024 payments.

b. Impacts of the Updated Wage Indexes

We estimate that our update of the wage indexes based on the fiscal year (FY) 2025 IPPS final rule wage indexes will result in a 0.1 percent increase for urban hospitals under the OPPS and a 0.9 percent increase for rural hospitals. These wage indexes include continued implementation of the Office of Management and Budget (OMB) labor market area delineations based on 2020 Decennial Census data, with updates, as discussed in section II.C of this final rule with comment period.

c. Impacts of the Rural Adjustment and the Cancer Hospital Payment Adjustment

For CY 2025, we are continuing to provide additional payments to cancer hospitals so that a cancer hospital's payment-to-cost ratio (PCR) after the additional payments is equal to the weighted average PCR for the other OPPS hospitals using the most recently submitted or settled cost report data. Section 16002(b) of the 21st Century Cures Act requires that this weighted average PCR be reduced by 1.0 percentage point. In light of the COVID–19 PHE impact on claims and cost data used to calculate the target PCR, we had maintained the CY 2021 target PCR of 0.89 through CYs 2022 and 2023. However, in CY 2024, we finalized a policy to reduce the target PCR by 1.0 percentage point each calendar year until the target PCR equals the PCR of non-cancer hospitals using the most recently submitted or settled cost report data. For CY 2024, we finalized a target PCR of 0.88. For CY 2025, we are finalizing a target PCR of 0.87 to determine the CY 2025 cancer hospital payment adjustment to be paid at cost report settlement. That is, the payment adjustments would be the additional payments needed to result in a PCR equal to 0.87 for each cancer hospital.

d. Impacts of the OPD Fee Schedule Increase Factor

For the CY 2025 OPPS/ASC, we are establishing an OPD fee schedule increase factor of 2.9 percent and applying that increase factor to the conversion factor for CY 2025. As a result of the OPD fee schedule increase factor and other budget neutrality adjustments, we estimate that urban hospitals will experience an increase in payments of approximately 3.2 percent and that rural hospitals will experience an increase in payments of 3.2 percent. Classifying hospitals by teaching status, we estimate non-teaching hospitals will experience an increase in payments of 3.3 percent, minor teaching hospitals will experience an increase in payments of 3.5 percent, and major teaching hospitals will experience an increase in payments of 2.7 percent. We also classified hospitals by the type of ownership. We estimate that hospitals with voluntary ownership will experience an increase of 3.1 percent in payments, while hospitals with government ownership will experience an increase of 2.6 percent in payments. We estimate that hospitals with proprietary ownership will experience an increase of 4.9 percent in payments.

e. Impacts of the ASC Payment Update

For impact purposes, the surgical procedures on the ASC covered surgical procedure list are aggregated into surgical specialty groups using CPT and HCPCS code range definitions. The percentage change in estimated total payments by specialty groups under the CY 2025 payment rates, compared to estimated CY 2024 payment rates, generally ranges between an increase of 3 percent and an increase of 4 percent, depending on the service, with some exceptions. We estimate the impact of applying the inpatient hospital market basket update to ASC payment rates will increase payments by $193 million under the ASC payment system in CY 2025.

f. Impacts of Medicaid Clinic Services Four Walls Exceptions

We estimate that the finalized exceptions to the four walls requirement under the Medicaid clinic services benefit for IHS/Tribal clinics, behavioral health clinics, and clinics located in rural areas will increase total expenditures by $1.18 billion from FY 2025 through 2029. Our estimate includes a Federal impact of $1.15 billion and impact to States of $30 million. These estimates are discussed in more detail in section XXVIII of this final rule.

g. Impacts of Health and Safety Standards for Obstetrical Services in Hospitals and Critical Access Hospitals

We are finalizing maternal health focused revisions to the CoPs for hospitals and CAHs, which are estimated to increase burden on hospitals and CAHs by $423 million annually with total costs estimated at $4.23 billion over 10 years. We expect an average annual cost of $67,103 per hospital and CAH. As discussed in detail in section XXVIII of this final rule with comment period, we expect the benefits of these policies to include reduced maternal morbidity and mortality, leading to financial benefits for patients, their families, and payors. We also expect that the policies are likely to reduce inequality in maternal health outcomes among pregnant and postpartum women from different groups and lead to overall improvements in patient care.

h. Impacts of the Medicaid and CHIP Continuous Eligibility Requirements

We are finalizing our proposed revisions to Medicaid and CHIP regulations to codify the requirement within the CAA, 2023 for States to provide 12 months of continuous eligibility to children under the age of 19 in Medicaid and CHIP, with limited exceptions. For CHIP, we are finalizing the removal of the option to disenroll children from CHIP during a continuous eligibility period for failure to pay premiums. Requiring 12months of continuous eligibility in Medicaid and CHIP is estimated to increase annual average enrollment in Medicaid and CHIP by approximately 124,000 by 2028 (75,000 in Medicaid and 49,000 in CHIP). The total estimated impact of this requirement over 5 years is $2,466 million, including Federal impact of

$1,592 million and State impact of $874 million.

B. Legislative and Regulatory Authority for the Hospital OPPS

When Title XVIII of the Act was enacted, Medicare payment for hospital outpatient services was based on hospital-specific costs. In an effort to ensure that Medicare and its beneficiaries pay appropriately for services and to encourage more efficient delivery of care, the Congress mandated replacement of the reasonable cost-based payment methodology with a prospective payment system (PPS). The Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33) added section 1833(t) to the Act, authorizing implementation of a PPS for hospital outpatient services. The OPPS was first implemented for services furnished on or after August 1, 2000. Implementing regulations for the OPPS are located at 42 CFR parts 410 and 419.

The Medicare, Medicaid, and SCHIP Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113) made major changes in the hospital OPPS. The following Acts made additional changes to the OPPS: the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554); the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173); the Deficit Reduction Act of 2005 (DRA) (Pub. L. 109–171), enacted on February 8, 2006; the Medicare Improvements and Extension Act under Division B of Title I of the Tax Relief and Health Care Act of 2006 (MIEA–TRHCA) (Pub. L. 109–432), enacted on December 20, 2006; the Medicare, Medicaid, and SCHIP Extension Act of 2007 (MMSEA) (Pub. L. 110–173), enacted on December 29, 2007; the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) (Pub. L. 110–275), enacted on July 15, 2008; the Patient Protection and Affordable Care Act (Pub. L. 111–148), enacted on March 23, 2010, as amended by the Health Care and Education Reconciliation Act of 2010 (HCERA, Pub. L. 111–152), enacted on March 30, 2010 (these two public laws are collectively known as the Affordable Care Act); the Medicare and Medicaid Extenders Act of 2010 (MMEA, Pub. L. 111–309); the Temporary Payroll Tax Cut Continuation Act of 2011 (TPTCCA, Pub. L. 112–78), enacted on December 23, 2011; the Middle Class Tax Relief and Job Creation Act of 2012 (MCTRJCA, Pub. L. 112–96), enacted on February 22, 2012; the American Taxpayer Relief Act of 2012 (Pub. L. 112–240), enacted January 2, 2013; the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) enacted on December 26, 2013; the Protecting Access to Medicare Act of 2014 (PAMA, Pub. L. 113–93), enacted on March 27, 2014; the Medicare Access and CHIP Reauthorization Act (MACRA) of 2015 (Pub. L. 114–10), enacted April 16, 2015; the Bipartisan Budget Act of 2015 (Pub. L. 114–74), enacted November 2, 2015; the Consolidated Appropriations Act, 2016 (Pub. L. 114–113), enacted on December 18, 2015, the 21st Century Cures Act (Pub. L. 114–255), enacted on December 13, 2016; the Consolidated Appropriations Act, 2018 (Pub. L. 115–141), enacted on March 23, 2018; the Substance Use Disorder—Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (Pub. L. 115–271), enacted on October 24, 2018; the Further Consolidated Appropriations Act, 2020 (Pub. L. 116–94), enacted on December 20, 2019; the Coronavirus Aid, Relief, and Economic Security Act (Pub. L. 116–136), enacted on March 27, 2020; the Consolidated Appropriations Act, 2021 (Pub. L. 116–260), enacted on December 27, 2020; the Inflation Reduction Act, 2022 (Pub. L. 117–169), enacted on August 16, 2022; and the Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–238), enacted December 29, 2022.

Under the OPPS, we generally pay for hospital Part B services on a rate-per-service basis that varies according to the APC group to which the service is assigned. We use the Healthcare Common Procedure Coding System (HCPCS) (which includes certain Current Procedural Terminology (CPT) codes) to identify and group the services within each APC. The OPPS includes payment for most hospital outpatient services, except those identified in section I.C of this final rule with comment period. Section 1833(t)(1)(B) of the Act provides for payment under the OPPS for hospital outpatient services designated by the Secretary (which includes partial hospitalization services furnished by CMHCs), and certain inpatient hospital services that are paid under Medicare Part B.

The OPPS rate is an unadjusted national payment amount that includes the Medicare payment and the beneficiary copayment. This rate is divided into a labor-related amount and a nonlabor-related amount. The labor-related amount is adjusted for area wage differences using the hospital inpatient wage index value for the locality in which the hospital or CMHC is located.

All services and items within an APC group are comparable clinically and with respect to resource use, as required by section 1833(t)(2)(B) of the Act. In accordance with section 1833(t)(2)(B) of the Act, subject to certain exceptions, items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest median cost (or mean cost, if elected by the Secretary) for an item or service in the APC group is more than 2 times greater than the lowest median cost (or mean cost, if elected by the Secretary) for an item or service within the same APC group (referred to as the ''2 times rule''). In implementing this provision, we generally use the cost of the item or service assigned to an APC group.

For new technology items and services, special payments under the OPPS may be made in one of two ways. Section 1833(t)(6) of the Act provides for temporary additional payments, which we refer to as ''transitional pass-through payments,'' for at least 2 but not more than 3 years for certain drugs, biological agents, brachytherapy devices used for the treatment of cancer, and categories of other medical devices. For new technology services that are not eligible for transitional pass-through payments, and for which we lack sufficient clinical information and cost data to appropriately assign them to a clinical APC group, we have established special APC groups based on costs, which we refer to as New Technology APCs. These New Technology APCs are designated by cost bands which allow us to provide appropriate and consistent payment for designated new procedures that are not yet reflected in our claims data. Similar to pass-through payments, an assignment to a New Technology APC is temporary; that is, we retain a service within a New Technology APC until we acquire sufficient data to assign it to a clinically appropriate APC group.

C. Excluded OPPS Services and Hospitals

Section 1833(t)(1)(B)(i) of the Act authorizes the Secretary to designate the hospital outpatient services that are paid under the OPPS. While most hospital outpatient services are payable under the OPPS, section 1833(t)(1)(B)(iv) of the Act excludes payment for ambulance, physical and occupational therapy, and speech-language pathology services, for which payment is made under a fee schedule. It also excludes screening mammography, diagnostic mammography, and effective January 1, 2011, an annual wellness visit providing personalized prevention plan services. The Secretary exercises the authority granted under the statute to also exclude from the OPPS certain services that are

paid under fee schedules or other payment systems. Such excluded services include, for example, the professional services of physicians and nonphysician practitioners paid under the Medicare Physician Fee Schedule (MPFS); certain laboratory services paid under the Clinical Laboratory Fee Schedule (CLFS); services for beneficiaries with end-stage renal disease (ESRD) that are paid under the ESRD prospective payment system; and services and procedures that require an inpatient stay that are paid under the hospital IPPS. In addition, section 1833(t)(1)(B)(v) of the Act does not include applicable items and services (as defined in subparagraph (A) of paragraph (21)) that are furnished on or after January 1, 2017, by an off-campus outpatient department of a provider (as defined in subparagraph (B) of paragraph (21)). We set forth the services that are excluded from payment under the OPPS in regulations at 42 CFR 419.22.

Under § 419.20(b) of the regulations, we specify the types of hospitals that are excluded from payment under the OPPS. These excluded hospitals are:

- Critical access hospitals (CAHs);
- Hospitals located in Maryland and paid under Maryland's All-Payer or Total Cost of Care Model;
- Hospitals located outside of the 50 States, the District of Columbia, and Puerto Rico;
- Indian Health Service (IHS) hospitals; and
- Rural emergency hospitals (REH).

D. Prior Rulemaking

On April 7, 2000, we published in the **Federal Register** a final rule with comment period (65 FR 18434) to implement a prospective payment system for hospital outpatient services. The hospital OPPS was first implemented for services furnished on or after August 1, 2000. Section 1833(t)(9)(A) of the Act requires the Secretary to review certain components of the OPPS, not less often than annually, and to revise the groups, the relative payment weights, and the wage and other adjustments to take into account changes in medical practices, changes in technology, the addition of new services, new cost data, and other relevant information and factors.

Since initially implementing the OPPS, we have published final rules in the **Federal Register** annually to implement statutory requirements and changes arising from our continuing experience with this system. These rules can be viewed on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*.

E. Advisory Panel on Hospital Outpatient Payment (the HOP Panel or the Panel)

1. Authority of the Panel

Section 1833(t)(9)(A) of the Act, as amended by section 201(h) of Public Law 106–113, and redesignated by section 202(a)(2) of Public Law 106–113, requires that we consult with an expert outside advisory panel composed of an appropriate selection of representatives of providers to annually review (and advise the Secretary concerning) the clinical integrity of the payment groups and their weights under the OPPS. In CY 2000, based on section 1833(t)(9)(A) of the Act, the Secretary established the Advisory Panel on Ambulatory Payment Classification Groups (APC Panel) to fulfill this requirement. In CY 2011, based on section 222 of the Public Health Service Act (the PHS Act), which gives discretionary authority to the Secretary to convene advisory councils and committees, the Secretary expanded the panel's scope to include the supervision of hospital outpatient therapeutic services in addition to the APC groups and weights. To reflect this new role of the panel, the Secretary changed the panel's name to the Advisory Panel on Hospital Outpatient Payment (the HOP Panel). The HOP Panel is not restricted to using data compiled by CMS, and in conducting its review, it may use data collected or developed by organizations outside the Department.

2. Establishment of the Panel

On November 21, 2000, the Secretary signed the initial charter establishing the Panel, and, at that time, named the APC Panel. This expert panel is composed of appropriate representatives of providers (currently employed full-time, not as consultants, in their respective areas of expertise) who review clinical data and advise CMS about the clinical integrity of the APC groups and their payment weights. Since CY 2012, the Panel also is charged with advising the Secretary on the appropriate level of supervision for individual hospital outpatient therapeutic services. The Panel is technical in nature, and it is governed by the provisions of the Federal Advisory Committee Act (FACA). The current charter specifies, among other requirements, that the Panel—

- May advise on the clinical integrity of Ambulatory Payment Classification (APC) groups and their associated weights;
- May advise on the appropriate supervision level for hospital outpatient services;
- May advise on OPPS APC rates for ASC covered surgical procedures;
- Continues to be technical in nature;
- Is governed by the provisions of the FACA;
- Has a Designated Federal Official (DFO); and
- Is chaired by a Federal Official designated by the Secretary.

The Panel's charter was amended on November 15, 2011, renaming the Panel and expanding the Panel's authority to include supervision of hospital outpatient therapeutic services and to add critical access hospital (CAH) representation to its membership. The Panel's charter was also amended on November 6, 2014 (80 FR 23009), and the number of members was revised from up to 19 to up to 15 members. The Panel's current charter was approved on November 21, 2022, for a 2-year period.

The current Panel membership and other information pertaining to the Panel, including its charter, **Federal Register** notices, membership, meeting dates, agenda topics, and meeting reports, can be viewed on the CMS website at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/FACA/AdvisoryPanelonAmbulatoryPaymentClassificationGroups.html*.

3. Panel Meetings and Organizational Structure

The Panel has held many meetings, with the last meeting taking place on August 26, 2024. The recommendations of the Panel for the most recent meeting are available on the CMS website at: *https://www.cms.gov/medicare/regulations-guidance/advisory-committees/hospital-outpatient-payment*. Prior to each meeting, we publish a notice in the **Federal Register** to announce the meeting, new members, and any other changes of which the public should be aware. Beginning in CY 2017, we have transitioned to one meeting per year (81 FR 31941). In CY 2022, we published a **Federal Register** notice requesting nominations to fill vacancies on the Panel (87 FR 68499). CMS is currently accepting nominations at: *https://mearis.cms.gov*.

In addition, the Panel has established an administrative structure that, in part, currently includes the use of three subcommittee workgroups to provide preparatory meeting and subject support to the larger panel. The three current subcommittees include the following:

- APC Groups and Status Indicator Assignments Subcommittee, which advises and provides recommendations to the Panel on the appropriate status

indicators to be assigned to HCPCS codes, including but not limited to whether a HCPCS code or a category of codes should be packaged or separately paid, as well as the appropriate APC assignment of HCPCS codes regarding services for which separate payment is made;

- Data Subcommittee, which is responsible for studying the data issues confronting the Panel and for recommending options for resolving them; and

- Visits and Observation Subcommittee, which reviews and makes recommendations to the Panel on all technical issues pertaining to observation services and hospital outpatient visits paid under the OPPS.

Each of these workgroup subcommittees was established by a majority vote from the full Panel during a scheduled Panel meeting, and the Panel recommended at the August 21, 2023, meeting that the subcommittees continue. We accepted this recommendation.

For discussions of earlier Panel meetings and recommendations, we refer readers to previously published OPPS/ASC proposed and final rules, the CMS website mentioned earlier in this section, and the FACA database at *https://facadatabase.gov*.

F. Public Comments Received on the CY 2025 Proposed Rule

We received approximately 3,500 timely pieces of correspondence on the CY 2025 OPPS/ASC proposed rule that appeared in the **Federal Register** on July 22, 2024 (89 FR 59186). We received comments from elected officials, providers and suppliers, practitioners, and advocacy groups. We provide summaries of the public comments, and our responses are set forth in the various sections of this final rule with comment period under the appropriate headings. We note that we received some public comments that were outside the scope of the CY 2025 OPPS/ASC proposed rule. Out-of-scope-public comments are not addressed in this CY 2025 OPPS/ASC final rule with comment period.

G. Public Comments Received on the CY 2024 OPPS/ASC Final Rule With Comment Period

We received approximately 180 timely pieces of correspondence on the CY 2024 OPPS/ASC final rule with comment period that appeared in the **Federal Register** on November 22, 2023 (88 FR 81540).

II. Updates Affecting OPPS Payments

A. Recalibration of APC Relative Payment Weights

1. Database Construction

a. Database Source and Methodology

Section 1833(t)(9)(A) of the Act requires that the Secretary review not less often than annually and revise the relative payment weights for Ambulatory Payment Classifications (APCs). In the April 7, 2000, OPPS final rule with comment period (65 FR 18482), we explained in detail how we calculated the relative payment weights that were implemented on August 1, 2000, for each APC group.

For the CY 2025 OPPS, we proposed to recalibrate the APC relative payment weights for services furnished on or after January 1, 2025, and before January 1, 2026 (CY 2025), using the same basic methodology that we described in the CY 2024 OPPS/ASC final rule with comment period (88 FR 81549 through 81552), using CY 2023 claims data. That is, we proposed to recalibrate the relative payment weights for each APC based on claims and cost report data for hospital outpatient department (HOPD) services to construct a database for calculating APC group weights.

For the purpose of recalibrating the proposed APC relative payment weights for CY 2025, we began with approximately 145 million final action claims (claims for which all disputes and adjustments have been resolved and payment has been made) for HOPD services furnished on or after January 1, 2023, and before January 1, 2024, before applying our exclusionary criteria and other methodological adjustments. After the application of those data processing changes, we used approximately 73 million final action claims to develop the proposed CY 2025 OPPS payment weights. For exact numbers of claims used and additional details on the claims accounting process, we refer readers to the claims accounting narrative under supporting documentation for the CY 2025 OPPS/ASC proposed rule on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient*.

Addendum N to the CY 2025 OPPS/ASC proposed rule (which is available via the internet on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*) includes the proposed list of bypass codes for CY 2025. The proposed list of bypass codes contains codes that are reported on claims for services in CY 2023 and, therefore, includes codes that were in effect in CY 2023 and used for billing. We proposed to retain these deleted bypass codes on the proposed CY 2025 bypass list because these codes existed in CY 2023 and were covered OPD services in that period, and CY 2023 claims data were used to calculate proposed CY 2025 payment rates. Keeping these deleted bypass codes on the bypass list potentially allows us to create more ''pseudo'' single procedure claims for ratesetting purposes. ''Overlap bypass codes'' that are members of the proposed multiple imaging composite APCs are identified by asterisks (*) in the third column of Addendum N to the CY 2025 OPPS/ASC proposed rule. HCPCS codes that we proposed to add for CY 2025 are identified by asterisks (*) in the fourth column of Addendum N.

We did not receive any public comments on our general proposal to recalibrate the relative payment weights for each APC based on claims and cost report data for HOPD services or on our proposed bypass code process. We are finalizing as proposed the ''pseudo'' single claims process and the final CY 2025 list of bypass codes, as displayed in Addendum N to this final rule with comment period (which is available via the internet on the CMS website). For this final rule with comment period, for the purpose of recalibrating the final APC relative payment weights for CY 2025, we used approximately 78 million final action claims (claims for which all disputes and adjustments have been resolved and payment has been made) for HOPD services furnished on or after January 1, 2023, and before January 1, 2024. For the exact numbers of claims used and additional details on the claims accounting process, we refer readers to the claims accounting narrative under supporting documentation for this final rule with comment period on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient*.

b. Calculation and Use of Cost-to-Charge Ratios (CCRs)

For CY 2025, we proposed to continue to use the hospital-specific overall ancillary and departmental cost-to-charge ratios (CCRs) to convert charges to estimated costs through application of a revenue code-to-cost center crosswalk. To calculate the APC costs on which the proposed CY 2025 APC payment rates are based, we calculated hospital-specific departmental CCRs for each hospital for which we had CY 2023 claims data by comparing these claims data to the most recently available hospital cost reports, which, in most

cases, are from CY 2022. For the proposed CY 2025 OPPS payment rates, we used the set of claims processed during CY 2023. We applied the hospital-specific CCR to the hospital's charges at the most detailed level possible, based on a revenue code-to-cost center crosswalk that contains a hierarchy of CCRs used to estimate costs from charges for each revenue code. To ensure the completeness of the revenue code-to-cost center crosswalk, we reviewed changes to the list of revenue codes for CY 2023 (the year of claims data we used to calculate the proposed CY 2025 OPPS payment rates) and updates to the National Uniform Billing Committee (NUBC) 2023 Data specifications Manual. That crosswalk is available for review and continuous comment on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient*.

In accordance with our longstanding policy, similar to our finalized policy for CY 2024 OPPS ratesetting, we proposed to calculate CCRs for the standard cost centers—cost centers with a predefined label—and nonstandard cost centers—cost centers defined by a hospital—accepted by the electronic cost report database. In general, the most detailed level at which we calculate CCRs is the hospital-specific departmental level.

While we generally view the use of additional cost data as improving our OPPS ratesetting process, we have historically not included cost report lines for certain nonstandard cost centers in the OPPS ratesetting database construction when hospitals have reported these nonstandard cost centers on cost report lines that do not correspond to the cost center number. We believe it is important to further investigate the accuracy of these cost report data before including such data in the ratesetting process. Further, we believe it is appropriate to gather additional information from the public as well before including them in OPPS ratesetting. For CY 2025, we proposed not to include the nonstandard cost centers reported in this way in the OPPS ratesetting database construction.

We did not receive any public comments on the general CCR process and therefore, we are finalizing our proposal for CY 2025 to use the hospital-specific overall ancillary and departmental CRs to convert charges to estimated costs through application of a revenue code-to-cost center crosswalk and the proposed methodology.

2. Final Data Development and Calculation of Costs Used for Ratesetting

In this section of this final rule with comment period, we discuss the use of claims to calculate the OPPS payment rates for CY 2025. The Hospital OPPS page on the CMS website on which this final rule with comment period is posted (*https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient*) provides an accounting of claims used in the development of the proposed payment rates. That accounting provides additional detail regarding the number of claims derived at each stage of the process. In addition, later in this section we discuss the file of claims that comprises the data set that is available upon payment of an administrative fee under a CMS data use agreement. The CMS website, *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient*, includes information about obtaining the ''OPPS Limited Data Set,'' which now includes the additional variables previously available only in the OPPS Identifiable Data Set, including International Classification of Diseases, Tenth Revision, Clinical Modification (ICD–10–CM) diagnosis codes and revenue code payment amounts. This file is derived from the CY 2023 claims that are used to calculate the proposed payment rates for the CY 2025 OPPS/ASC proposed rule.

Previously, the OPPS established the scaled relative weights on which payments are based using APC median costs, a process described in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74188). However, as discussed in more detail in section II.A.2.f of the CY 2013 OPPS/ASC final rule with comment period (77 FR 68259 through 68271), we finalized the use of geometric mean costs to calculate the relative weights on which the CY 2013 OPPS payment rates were based. While this policy changed the cost metric on which the relative payments are based, the data process in general remained the same under the methodologies that we used to obtain appropriate claims data and accurate cost information in determining estimated service cost.

We used the methodology described in sections II.A.2.a through II.A.2.c of this final rule with comment period to calculate the costs we used to establish the proposed relative payment weights used in calculating the OPPS payment rates for CY 2025 shown in Addenda A and B to this final rule with comment period (which are available via the internet on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*). We refer readers to section II.A.4 of this final rule with comment period for a discussion of the conversion of APC costs to scaled payment weights.

We note that under the OPPS, CY 2019 was the first year in which the claims data used for setting payment rates (CY 2017 data) contained lines with the modifier ''PN,'' which indicates nonexcepted items and services furnished and billed by off-campus provider-based departments (PBDs) of hospitals. Because nonexcepted items and services are not paid under the OPPS, in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58832), we finalized a policy to remove those claim lines reported with modifier ''PN'' from the claims data used in ratesetting for the CY 2019 OPPS and subsequent years. For the CY 2025 OPPS, we proposed to continue to remove claim lines with modifier ''PN'' from the ratesetting process.

We did not receive any public comments on our proposal and are finalizing our proposal to continue to remove claim lines reported with modifier ''PN'' from the ratesetting process.

For details of the claims accounting process used in this CY 2025 OPPS/ASC final rule with comment period, we refer readers to the claims accounting narrative under supporting documentation for this final rule with comment period on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient*.

a. Calculation of Single Procedure APC Criteria-Based Costs

(1) Blood and Blood Products

(a) Methodology

Since the implementation of the OPPS in August 2000, we have made separate payments for blood and blood products through APCs rather than packaging payment for them into payments for the procedures with which they are administered. Hospital payments for the costs of blood and blood products, as well as for the costs of collecting, processing, and storing blood and blood products, are made through the OPPS payments for specific blood product APCs.

In the CY 2025 OPPS/ASC proposed rule, we proposed to continue to establish payment rates for blood and blood products using our blood-specific CCR methodology (88 FR 49562), which utilizes actual or simulated CCRs from

the most recently available hospital cost reports to convert hospital charges for blood and blood products to costs. This methodology has been our standard ratesetting methodology for blood and blood products since CY 2005. It was developed in response to data analysis indicating that there was a significant difference in CCRs for those hospitals with and without blood-specific cost centers and past public comments indicating that the former OPPS policy of defaulting to the overall hospital CCR for hospitals not reporting a blood-specific cost center often resulted in an underestimation of the true hospital costs for blood and blood products. To address the differences in CCRs and to better reflect hospitals' costs, our methodology simulates blood CCRs for each hospital that does not report a blood cost center by calculating the ratio of the blood-specific CCRs to hospitals' overall CCRs for those hospitals that do report costs and charges for blood cost centers and applies this mean ratio to the overall CCRs of hospitals not reporting costs and charges for blood cost centers on their cost reports. We propose to calculate the costs upon which the proposed payment rates for blood and blood products are based using the actual blood-specific CCR for hospitals that reported costs and charges for a blood cost center and a hospital-specific, simulated, blood-specific CCR for hospitals that did not report costs and charges for a blood cost center.

We stated in the CY 2025 OPPS/ASC proposed rule that we continue to believe that the hospital-specific, simulated, blood-specific CCR methodology takes into account the unique charging and cost accounting structure of each hospital, as it better responds to the absence of a blood-specific CCR for a hospital than alternative methodologies, such as defaulting to the overall hospital CCR or applying an average blood-specific CCR across hospitals. This methodology also yields more accurate estimated costs for these products and results in payment rates for blood and blood products that appropriately reflect the relative estimated costs of these products for hospitals without blood cost centers and for these blood products in general.

We refer readers to Addendum B to this final rule with comment period (which is available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*) for the final CY 2025 payment rates for blood and blood products (which are generally identified with status indicator ''R'').

For a more detailed discussion of payments for blood and blood products through APCs, we refer readers to:

- the CY 2005 OPPS proposed rule (69 FR 50524 and 50525) for a more comprehensive discussion of the blood-specific CCR methodology;
- the CY 2008 OPPS/ASC final rule with comment period (72 FR 66807 through 66810) for a detailed history of the OPPS payment for blood and blood products; and
- the CY 2015 OPPS/ASC final rule with comment period (79 FR 66795 and 66796) for additional discussion of our policy not to make separate payments for blood and blood products when they appear on the same claims as services assigned to a C–APC.

Comment: We received one comment regarding the cost calculations for blood and blood products. The commenter stated that current payment rates do not always cover the cost to process, store, and transport the unit of blood. The commenter recommended that CMS utilize the average wholesale price (AWP) as the payment rate for blood products, in addition to basing payment rates on the hospital CCRs, as they believed using AWP would help eliminate outliers and produce more accurate payment calculations. The commenter explained that cost reporting methodologies may vary among hospitals. For example, some cost centers may combine blood products with blood bank testing which could skew the CCRs for that cost center, which would then impact the payment rates.

Response: We thank the commenter for their input and will keep it in mind for future rulemaking. However, we note that reflecting the range and variation of billing patterns across hospitals, as reflected in their claims, is part of establishing prospective payment rates. Additionally, we do not believe at this time that using AWP to set the payment rate for blood products would necessarily result in more accurate payment calculations, because AWP does not factor in volume discounts or rebates and, therefore, may not reflect the true cost of the product.

Comment: One commenter supported our proposal to continue to pay separately for blood and blood products.

Response: We thank the commenter for their support.

After consideration of the public comments we received, we are finalizing our proposals for blood and blood products using our blood-specific CCR methodology without modification. Please refer to Addendum B to this final rule with comment period, which is available on the CMS website, for the final CY 2025 payment rates for blood and blood products.

(b) New HCPCS Code for Red Blood Cell Product (HCPCS Code P9027)

Effective October 1, 2024, the HCPCS workgroup created HCPCS code P9027 (Red blood cells, leukocytes reduced, oxygen/carbon dioxide reduced, each unit). HCPCS code P9027 may be used to bill for a blood product that utilizes a two-stage process to remove oxygen and maintain a deoxygenated state throughout its storage period, thereby preventing oxidative damage to red blood cells. We note that because HCPCS code P9027 was created after the CY 2025 OPPS/ASC proposed rule was issued, we did not include a proposal regarding the APC assignment for HCPCS code P9027 in the CY 2025 OPPS/ASC proposed rule. Due to its effective date, we assigned HCPCS code P9027 to APC 9541 with an SI = R (Blood and Blood Products) in Change Request 13784. The payment rate for HCPCS code P9027, effective October 1, 2024, is $252.48.

While we usually calculate payment rates for blood and blood products using our blood-specific CCR methodology, when there is no claims data on the charges and costs for blood products upon which to apply our blood-specific CCR methodology, we establish a payment rate for the new blood product based on a crosswalk to an existing blood product HCPCS code that we believe provides the best proxy for the costs of the new blood product. Because we did not have any claims data on HCPCS code P9027 ahead of its October 1, 2024, effective date, we used a crosswalk code to assign a payment rate for HCPCS code P9027. Specifically, we found that HCPCS code P9040 (Red blood cells, leukocytes reduced, irradiated, each unit) with a CY 2024 payment rate of $252.48 was sufficiently similar to P9027 to serve as a crosswalk for purposes of a payment rate assignment.

Comment: We received a comment from the manufacturer of the blood product described by P9027. HCPCS code P9027 may be used to bill for the blood product involving the Hemanext ONE System. The commenter provided estimated cost information regarding the blood product, including an expected average per-unit anticipated hospital cost of $510. The manufacturer provided the estimated costs based on total blood establishment manufacturing costs, including the costs to manufacture a single unit of the starting materials, the sales price for the Hemanext ONE System, and the blood establishment labor, overhead,

administrative, and shipping costs. The commenter noted that they believe their red blood cell product is potentially transformative and would provide improved health outcomes. The commenter stated that they believe the product whose CY 2024 Medicare payment rate reasonably approximates the projected average hospital acquisition cost for HCPCS P9027 is HCPCS code P9057 (Red blood cells, frozen/deglycerolized/washed/leukocytes reduced, irradiated, each unit), with a CY 2024 payment rate of $493.21 per unit. As such, the commenter recommends that CMS crosswalk the payment rate for HCPCS P9057 to HCPCS P9027. The commenter believes that a crosswalk to any other red blood cell product will result in a payment rate that does not cover the acquisition cost for HCPCS P9027 and creates patient access barriers.

Response: We thank the commenter for their comment. Based on the additional cost information provided by the manufacturer, we believe that HCPCS code P9040 is not the best proxy for the costs of the blood product described by HCPCS code P9027. However, we disagree with the commenter that HCPCS code P9057 is the most appropriate crosswalk for new HCPCS code P9027 because the payment rate for HCPCS code P9057 reflects additional processes that are not reflected in the code descriptor for HCPCS code P9027. Given this difference in process, and the associated differences in estimated costs, we believe HCPCS code P9035 is a more appropriate proxy for the costs associated with HCPCS code P9027. Therefore, we are establishing an interim payment rate for HCPCS code P9027 based on a crosswalk to existing blood product HCPCS code P9035. Table 1 lists the new HCPCS code P9027 and its payment crosswalk.

TABLE 1: NEW HCPCS CODE P9027 PAYMENT RATE AND CROSSWALK FOR CY 2025

New HCPCS P-Code	New HCPCS P-code long descriptor	Crosswalked HCPCS P-code	Crosswalked HCPCS P-code long descriptor	Final CY 2025 OPPS payment amount
P9027	Red blood cells, leukocytes reduced, oxygen/carbon dioxide reduced, each unit	P9035	Platelets, pheresis, leukocytes reduced, each unit	$493.01

The interim payment rate for HCPCS code P9027 is open for public comment in this CY 2025 final rule with comment period. Specifically, HCPCS code P9027 is flagged with comment indicator ''NI'' in Addendum B to this final rule with comment period to indicate that we have assigned the codes an interim OPPS payment status for CY 2025 and are seeking public comments on the APC and status indicator assignments. Once we have claims data for this new HCPCS P-code, we will calculate a payment rate using the claims data that should be available for these new codes beginning in CY 2027, which is our practice for other blood products for which claims data have been available for 2 years.

(2) Brachytherapy Sources

Section 1833(t)(2)(H) of the Act mandates the creation of additional groups of covered OPD services that classify devices of brachytherapy—cancer treatment through solid source radioactive implants—consisting of a seed or seeds (or radioactive source) (''brachytherapy sources'') separately from other services or groups of services. The statute provides certain criteria for the additional groups. For the history of OPPS payment for brachytherapy sources, we refer readers to prior OPPS final rules, such as the CY 2012 OPPS/ASC final rule with comment period (77 FR 68240 and 68241). As we have stated in prior OPPS updates, we believe that adopting the general OPPS prospective payment methodology for brachytherapy sources is appropriate for a number of reasons (77 FR 68240). The general OPPS methodology uses costs based on claims data to set the relative payment weights for hospital outpatient services. This payment methodology results in more consistent, predictable, and equitable payment amounts per source across hospitals by averaging the extremely high and low values, in contrast to payment based on hospitals' charges adjusted to costs. We believe that the OPPS methodology, as opposed to payment based on hospitals' charges adjusted to cost, also would provide hospitals with incentives for efficiency in the provision of brachytherapy services to Medicare beneficiaries. Moreover, this approach is consistent with our payment methodology for the vast majority of items and services paid under the OPPS. We refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70323 through 70325) for further discussion of the history of OPPS payment for brachytherapy sources.

For CY 2025, except where otherwise indicated, we proposed to continue our policy and use the costs derived from CY 2023 claims data to set the proposed CY 2025 payment rates for brachytherapy sources because CY 2023 is the year of data we proposed to use to set the proposed payment rates for most other items and services that would be paid under the CY 2025 OPPS. With the exception of the proposed payment rate for brachytherapy source C2645 (Brachytherapy planar source, palladium-103, per square millimeter) and the proposed payment rates for low-volume brachytherapy APCs discussed in section III.D of the CY 2025 OPPS/ASC proposed rule, we proposed to base the payment rates for brachytherapy sources on the geometric mean unit costs for each source, consistent with the methodology that we proposed for other items and services paid under the OPPS, as discussed in section II.A.2 of the CY 2025 OPPS/ASC proposed rule. We also proposed for CY 2025 and subsequent years to continue the other payment policies for brachytherapy sources that we finalized and first implemented in the CY 2010 OPPS/ASC final rule with comment period (74 FR

60537). For CY 2025 and subsequent years, we proposed to pay for the stranded and nonstranded not otherwise specified (NOS) codes, HCPCS codes C2698 (Brachytherapy source, stranded, not otherwise specified, per source) and C2699 (Brachytherapy source, non-stranded, not otherwise specified, per source), at a rate equal to the lowest stranded or nonstranded prospective payment rate for such sources, respectively, on a per-source basis (as opposed to, for example, per mCi), which is based on the policy we established in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66785). For CY 2025 and subsequent years, we also proposed to continue the policy we first implemented in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60537) regarding payment for new brachytherapy sources for which we have no claims data, based on the same reasons we discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66786; which was delayed until January 1, 2010, by section 142 of Pub. L. 110–275). Specifically, this policy is intended to enable us to assign new HCPCS codes for new brachytherapy sources to their own APCs, with prospective payment rates set based on our consideration of external data and other relevant information regarding the expected costs of the sources to hospitals. The proposed CY 2025 payment rates for brachytherapy sources are included on Addendum B to the CY 2025 OPPS/ASC proposed rule (which is available via the internet on the CMS website) and identified with status indicator ''U.''

For CY 2018, we assigned status indicator ''U'' (Brachytherapy Sources, Paid under OPPS; separate APC payment) to HCPCS code C2645 (Brachytherapy planar source, palladium-103, per square millimeter) in the absence of claims data and established a payment rate using external data (invoice price) at $4.69 per mm^2 for the brachytherapy source's APC–APC 2648 (Brachytx planar, p-103). For CY 2019, in the absence of sufficient claims data, we continued to establish a payment rate for C2645 at $4.69 per mm^2 for APC 2648 (Brachytx planar, p103). Our CY 2018 claims data available for the CY 2020 OPPS/ASC final rule with comment period (84 FR 61142) included two claims with a geometric mean cost for HCPCS code C2645 of $1.02 per mm^2. In response to comments from interested parties, we agreed that, given the limited claims data available and a new outpatient indication for C2645, a payment rate for HCPCS code C2645 based on the geometric mean cost of $1.02 per mm^2 may not adequately reflect the cost of HCPCS code C2645. In the CY 2020 OPPS/ASC final rule with comment period, we finalized our policy to use our equitable adjustment authority under section 1833(t)(2)(E) of the Act, which states that the Secretary shall establish, in a budget neutral manner, other adjustments as determined to be necessary to ensure equitable payments, to maintain the CY 2019 payment rate of $4.69 per mm^2 for HCPCS code C2645 for CY 2020. Similarly, in the absence of sufficient claims data to establish an APC payment rate, in the CY 2021, CY 2022, CY 2023, and CY 2024 OPPS/ASC final rules with comment period (85 FR 85879 through 85880, 86 FR 63469, 87 FR 71760–71761, and 88 FR 81553), we finalized our policy to use our equitable adjustment authority under section 1833(t)(2)(E) of the Act to maintain the CY 2019 payment rate of $4.69 per mm^2 for HCPCS code C2645 for CYs 2021 through 2024.

There were no CY 2023 claims available that reported HCPCS code C2645 for the CY 2025 OPPS/ASC proposed rule. Therefore, in the absence of claims data, we proposed to continue to use our equitable adjustment authority under section 1833(t)(2)(E) of the Act to maintain the CY 2024 payment rate of $4.69 per mm^2 for HCPCS code C2645, which we proposed to be assigned to APC 2648 (Brachytx planar, p-103), for CY 2025.

Additionally, for CY 2022 and subsequent calendar years, we adopted a Universal Low Volume APC policy for clinical and brachytherapy APCs. As discussed in further detail in section X.C of the CY 2022 OPPS/ASC final rule with comment period (86 FR 63743 through 63747), we adopted this policy to mitigate wide variation in payment rates that occur from year to year for APCs with low utilization. Such volatility in payment rates from year to year can result in even lower utilization and potential barriers to access. Brachytherapy APCs that have fewer than 100 single claims used for ratesetting purposes are designated as Low Volume APCs unless an alternative payment rate is applied, such as the use of our equitable adjustment authority under section 1833(t)(2)(E) of the Act in the case of APC 2648 (Brachytx planar, p-103), for which HCPCS code C2645 (Brachytherapy planar source, palladium-103, per square millimeter) is the only code assigned as discussed previously in this section.

For CY 2025, we proposed to designate six brachytherapy APCs as Low Volume APCs as these APCs meet our criteria to be designated as Low Volume APCs. For more information on the brachytherapy APCs we proposed to designate as Low Volume APCs, see section III.D of the CY 2025 OPPS/ASC proposed rule.

Comment: We received support from commenters for our proposal to use our equitable adjustment authority under section 1833(t)(2)(E) of the Act to maintain the CY 2024 payment rate of $4.69 per mm^2 for HCPCS code C2645, which we proposed to assign to APC 2648 (Brachytx planar, p-103) for CY 2025.

Response: We thank the commenters for their support.

After consideration of the public comment we received, we are finalizing, without modification, that we will use our equitable adjustment authority under section 1833(t)(2)(E) of the Act to maintain the CY 2024 payment rate of $4.69 per mm^2 for HCPCS code C2645, which we are assigning to APC 2648 (Brachytx planar, p-103), for CY 2025.

The final CY 2025 payment rates for brachytherapy sources are included in Addendum B to this final rule with comment period (which is available via the internet on the CMS website) and are identified with status indicator ''U.'' We continue to invite interested parties to submit recommendations for new codes to describe new brachytherapy sources. Such recommendations should be directed via email to *outpatientpps@cms.hhs.gov* or by mail to the Division of Outpatient Care, Mail Stop C4–01–26, Centers for Medicare and Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244. We will continue to add new brachytherapy source codes and descriptors to our systems for payment on a quarterly basis.

b. Comprehensive APCs (C–APCs) for CY 2025

(1) Background

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 74861 through 74910), we finalized a comprehensive payment policy that packages payment for adjunctive and secondary items, services, and procedures into the most costly primary procedure under the OPPS at the claim level. The policy was finalized in CY 2014, but the effective date was delayed until January 1, 2015, to allow additional time for further analysis, opportunity for public comment, and systems preparation. The comprehensive APC (C–APC) policy was implemented effective January 1, 2015, with modifications and clarifications in response to public

comments received regarding specific provisions of the C–APC policy (79 FR 66798 through 66810).

A C–APC is defined as a classification for the provision of a primary service and all adjunctive services provided to support the delivery of the primary service. We established C–APCs as a category broadly for OPPS payment and implemented 25 C–APCs beginning in CY 2015 (79 FR 66809 and 66810). We have gradually added new C–APCs since the policy was implemented beginning in CY 2015, with the number of C–APCs now totaling 72 (80 FR 70332; 81 FR 79584 and 79585; 83 FR 58844 through 58846; 84 FR 61158 through 61166; 85 FR 85885; 86 FR 63474; 87 FR 71769; and 88 FR 81562).

Under our C–APC policy, we designate a service described by a HCPCS code assigned to a C–APC as the primary service when the service is identified by OPPS status indicator ''J1.'' When such a primary service is reported on a hospital outpatient claim, taking into consideration the few exceptions that are discussed below, we make payment for all other items and services reported on the hospital outpatient claim as being integral, ancillary, supportive, dependent, and adjunctive to the primary service (hereinafter collectively referred to as ''adjunctive services'') and representing components of a complete comprehensive service (78 FR 74865 and 79 FR 66799). Payments for adjunctive services are packaged into the payments for the primary services. This results in a single prospective payment for each of the primary, comprehensive services based on the costs of all reported services at the claim level. One example of a primary service would be a partial mastectomy and an example of a secondary service packaged into that primary service would be a radiation therapy procedure.

Services excluded from the C–APC policy under the OPPS include services that are not covered OPD services, services that cannot by statute be paid for under the OPPS, and services that are required by statute to be separately paid. This includes certain mammography and ambulance services that are not covered OPD services in accordance with section 1833(t)(1)(B)(iv) of the Act; brachytherapy seeds, which also are required by statute to receive separate payment under section 1833(t)(2)(H) of the Act; pass-through payment drugs and devices, which also require separate payment under section 1833(t)(6) of the Act; self-administered drugs (SADs) that are not otherwise packaged as supplies because they are not covered under Medicare Part B under section 1861(s)(2)(B) of the Act; and certain preventive services (78 FR 74865 and 79 FR 66800 and 66801). A list of services excluded from the C–APC policy is included in Addendum J to this final rule (which is available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*). If a service does not appear on this list of excluded services, payment for it will be packaged into the payment for the primary C–APC service when it appears on an outpatient claim with a primary C–APC service.

The C–APC policy payment methodology set forth in the CY 2014 OPPS/ASC final rule with comment period and modified and implemented beginning in CY 2015 is summarized as follows (78 FR 74887 and 79 FR 66800):

Basic Methodology. As stated in the CY 2015 OPPS/ASC final rule with comment period, we define the C–APC payment policy as including all covered OPD services on a hospital outpatient claim reporting a primary service that is assigned to status indicator ''J1,'' [2] excluding services that are not covered OPD services or that cannot by statute be paid for under the OPPS. Services and procedures described by HCPCS codes assigned to status indicator ''J1'' are assigned to C–APCs based on our usual APC assignment methodology by evaluating the geometric mean costs of the primary service claims to establish resource similarity and the clinical characteristics of each procedure to establish clinical similarity within each APC.

In the CY 2016 OPPS/ASC final rule with comment period, we expanded the C–APC payment methodology to qualifying extended assessment and management encounters through the ''Comprehensive Observation Services'' C–APC (C–APC 8011). Services within this APC are assigned status indicator ''J2.'' [3] Specifically, we make a payment through C–APC 8011 for a claim that:

- Does not contain a procedure described by a HCPCS code to which we have assigned status indicator ''T;''
- Contains 8 or more units of services described by HCPCS code G0378 (Hospital observation services, per hour);
- Contains services provided on the same date of service or one day before the date of service for HCPCS code G0378 that are described by one of the following codes: HCPCS code G0379 (Direct admission of patient for hospital observation care) on the same date of service as HCPCS code G0378; CPT code 99281 (Emergency department visit for the evaluation and management of a patient (Level 1)); CPT code 99282 (Emergency department visit for the evaluation and management of a patient (Level 2)); CPT code 99283 (Emergency department visit for the evaluation and management of a patient (Level 3)); CPT code 99284 (Emergency department visit for the evaluation and management of a patient (Level 4)); CPT code 99285 (Emergency department visit for the evaluation and management of a patient (Level 5)) or HCPCS code G0380 (Type B emergency department visit (Level 1)); HCPCS code G0381 (Type B emergency department visit (Level 2)); HCPCS code G0382 (Type B emergency department visit (Level 3)); HCPCS code G0383 (Type B emergency department visit (Level 4)); HCPCS code G0384 (Type B emergency department visit (Level 5)); CPT code 99291 (Critical care, evaluation and management of the critically ill or critically injured patient; first 30–74 minutes); or HCPCS code G0463 (Hospital outpatient clinic visit for assessment and management of a patient); and
- Does not contain services described by a HCPCS code to which we have assigned status indicator ''J1.''

The assignment of status indicator ''J2'' to a specific set of services performed in combination with each other allows for all other OPPS payable services and items reported on the claim (excluding services that are not covered OPD services or that cannot by statute be paid for under the OPPS) to be deemed adjunctive services representing components of a comprehensive service and resulting in a single prospective payment for the comprehensive service based on the costs of all reported services on the claim (80 FR 70333 through 70336).

Services included under the C–APC payment packaging policy, that is, services that are typically adjunctive to the primary service and provided during the delivery of the comprehensive service, include diagnostic procedures, laboratory tests, and other diagnostic tests and treatments that assist in the delivery of the primary procedure; visits and evaluations performed in association with the procedure; uncoded services and supplies used during the service; durable medical equipment as well as prosthetic and

[2] Status indicator ''J1'' denotes Hospital Part B Services Paid Through a Comprehensive APC. Further information can be found in CY 2025 Addendum D1.

[3] Status indicator ''J2'' denotes Hospital Part B Services That May Be Paid Through a Comprehensive APC. Further information can be found in CY 2025 Addendum D1.

orthotic items and supplies when provided as part of the outpatient service; and any other components reported by HCPCS codes that represent services that are provided during the complete comprehensive service (78 FR 74865 and 79 FR 66800).

In addition, payment for hospital outpatient department services that are similar to therapy services, such as speech language pathology, and delivered either by therapists or nontherapists is included as part of the payment for the packaged complete comprehensive service. These services that are provided during the perioperative period are adjunctive services and are deemed not to be therapy services as described in section 1834(k) of the Act, regardless of whether the services are delivered by therapists or other nontherapist health care workers. We have previously noted that therapy services are those provided by therapists under a plan of care in accordance with section 1835(a)(2)(C) and section 1835(a)(2)(D) of the Act and are paid for under section 1834(k) of the Act, subject to annual therapy caps as applicable (78 FR 74867 and 79 FR 66800). However, certain other services similar to therapy services are considered and paid for as hospital outpatient department services. Payment for these nontherapy outpatient department services that are reported with therapy codes and provided with a comprehensive service is included in the payment for the packaged complete comprehensive service. We note that these services, even though they are reported with therapy codes, are hospital outpatient department services and not therapy services. We refer readers to the July 2016 OPPS Change Request 9658 (Transmittal 3523) for further instructions on reporting these services in the context of a C–APC service.

Items included in the packaged payment provided in conjunction with the primary service also include all drugs, biologicals, and radiopharmaceuticals, regardless of cost, except those drugs with pass-through payment status and SADs, unless they function as packaged supplies (78 FR 74868, 74869, and 74909 and 79 FR 66800). We refer readers to Section 50.2M, Chapter 15, of the Medicare Benefit Policy Manual for a description of our policy on SADs treated as hospital outpatient supplies, including lists of SADs that function as supplies and those that do not function as supplies.[4]

We define each hospital outpatient claim reporting a single unit of a single primary service assigned to status indicator ''J1'' as a single ''J1'' unit procedure claim (78 FR 74871 and 79 FR 66801). Line-item charges for services included on the C–APC claim are converted to line-item costs, which are then summed to develop the estimated APC costs. These claims are then assigned one unit of the service with status indicator ''J1'' and later used to develop the geometric mean costs for the C–APC relative payment weights. (We note that we use the term ''comprehensive'' to describe the geometric mean cost of a claim reporting ''J1'' service(s) or the geometric mean cost of a C–APC, inclusive of all the items and services included in the C–APC service payment bundle.) Charges for services that would otherwise be separately payable are added to the charges for the primary service. This process differs from our traditional cost accounting methodology only in that all such services on the claim are packaged (except certain services as described above). We apply our standard data trims, which exclude claims with extremely high primary units or extreme costs.

The comprehensive geometric mean costs are used to establish resource similarity and, along with clinical similarity, dictate the assignment of the primary services to the C–APCs. We establish a ranking of each primary service (single unit only) to be assigned to status indicator ''J1'' according to its comprehensive geometric mean costs. For the minority of claims reporting more than one primary service assigned to status indicator ''J1'' or units thereof, we identify one ''J1'' service as the primary service for the claim based on our cost-based ranking of primary services. We then assign these multiple ''J1'' procedure claims to the C–APC to which the service designated as the primary service is assigned. If the reported ''J1'' services on a claim map to different C–APCs, we designate the ''J1'' service assigned to the C–APC with the highest comprehensive geometric mean cost as the primary service for that claim. If the reported multiple ''J1'' services on a claim map to the same C–APC, we designate the most costly service (at the HCPCS code level) as the primary service for that claim. This process results in initial assignments of claims for the primary services assigned to status indicator ''J1'' to the most appropriate C–APCs based on both single and multiple procedure claims reporting these services and clinical and resource homogeneity.

Complexity Adjustments. We use complexity adjustments to provide increased payment for certain comprehensive services. We apply a complexity adjustment by promoting qualifying paired ''J1'' service code combinations or paired code combinations of ''J1'' services and certain add-on codes (as described further below) from the originating C–APC (the C–APC to which the designated primary service is first assigned) to the next higher paying C–APC in the same clinical family of C–APCs. We apply this type of complexity adjustment when the paired code combination represents a complex, costly form or version of the primary service according to the following criteria:

- Frequency of 25 or more claims reporting the code combination (frequency threshold); and
- Violation of the 2 times rule, as stated in section 1833(t)(2) of the Act and section III.B.2 of this final rule with comment period, in the originating C–APC (cost threshold).

These criteria identify paired code combinations that occur commonly and exhibit materially greater resource requirements than the primary service. The CY 2017 OPPS/ASC final rule with comment period (81 FR 79582) included a revision to the complexity adjustment eligibility criteria. Specifically, we finalized a policy to discontinue the requirement that a code combination (that qualifies for a complexity adjustment by satisfying the frequency and cost criteria thresholds described above) also not create a 2 times rule violation in the higher level or receiving APC.

After designating a single primary service for a claim, we evaluate that service in combination with each of the other procedure codes reported on the claim assigned to status indicator ''J1'' (or certain add-on codes) to determine if there are paired code combinations that meet the complexity adjustment criteria. For a new HCPCS code, we determine initial C–APC assignment and qualification for a complexity adjustment using the best available information, crosswalking the new HCPCS code to a predecessor code(s) when appropriate.

Once we have determined that a particular code combination of ''J1'' services (or combinations of ''J1'' services reported in conjunction with certain add-on codes) represents a

[4] *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/bp102c15.pdf.*

complex version of the primary service because it is sufficiently costly, frequent, and a subset of the primary comprehensive service overall according to the criteria described above, we promote the claim including the complex version of the primary service as described by the code combination to the next higher cost C–APC within the clinical family, unless the primary service is already assigned to the highest cost APC within the C–APC clinical family or assigned to the only C–APC in a clinical family. We do not create new APCs with a comprehensive geometric mean cost that is higher than the highest geometric mean cost (or only) C–APC in a clinical family just to accommodate potential complexity adjustments. Therefore, the highest payment for any claim including a code combination for services assigned to a C–APC would be the highest paying C–APC in the clinical family (79 FR 66802).

We package payment for all add-on codes into the payment for the C–APC. However, certain primary service add-on combinations may qualify for a complexity adjustment. As noted in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70331), all add-on codes that can be appropriately reported in combination with a base code that describes a primary ''J1'' service are evaluated for a complexity adjustment.

To determine which combinations of primary service codes reported in conjunction with an add-on code may qualify for a complexity adjustment for CY 2025, we apply the frequency and cost criteria thresholds discussed above, testing claims reporting one unit of a single primary service assigned to status indicator ''J1'' and any number of units of a single add-on code for the primary ''J1'' service. If the frequency and cost criteria thresholds for a complexity adjustment are met and reassignment to the next higher cost APC in the clinical family is appropriate (based on meeting the criteria outlined above), we make a complexity adjustment for the code combination; that is, we reassign the primary service code reported in conjunction with the add-on code to the next higher cost C–APC within the same clinical family of C–APCs. As previously stated, we package payment for add-on codes into the C–APC payment rate. If any add-on code reported in conjunction with the ''J1'' primary service code does not qualify for a complexity adjustment, payment for the add-on service continues to be packaged into the payment for the primary service and is not reassigned to the next higher cost C–APC. We list the complexity adjustments for ''J1'' and add-on code combinations for CY 2025, along with all the other final complexity adjustments, in Addendum J to this final rule with comment period (which is available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*).

Addendum J to this final rule with comment period includes the cost statistics for each code combination that would qualify for a complexity adjustment (including primary code and add-on code combinations). Addendum J to this final rule with comment period also contains summary cost statistics for each of the paired code combinations that describe a complex code combination that would qualify for a complexity adjustment and be reassigned to the next higher cost C–APC within the clinical family. The combined statistics for all proposed reassigned complex code combinations are represented by an alphanumeric code with the first four digits of the designated primary service followed by a letter. For example, the proposed geometric mean cost listed in Addendum J for the code combination described by complexity adjustment assignment 3320R, which is assigned to C–APC 5224 (Level 4 Pacemaker and Similar Procedures), includes all paired code combinations that will be reassigned to C–APC 5224 when CPT code 33208 is the primary code. Providing the information contained in Addendum J to this final rule with comment period allows interested parties the opportunity to better assess the impact associated with the assignment of claims with each of the paired code combinations eligible for a complexity adjustment.

Comment: We received support from commenters for a variety of existing and proposed complexity adjustments.

Response: We thank the commenters for their support.

Comment: Multiple commenters requested that CMS apply a complexity adjustment to additional code combinations. The specific C–APC complexity adjustment code combinations requested by the commenters for CY 2025 are listed in Table 2.

BILLING CODE 4120–01–P

TABLE 2: C-APC COMPLEXITY ADJUSTMENTS REQUESTED BY COMMENTERS FOR CY 2025

Primary "J1" HCPCS/CPT Code	Secondary "J1" HCPCS/CPT code	Primary C-APC Assignment	Requested complexity adjusted C-APC assignment
28292 (Correction, hallux valgus with bunionectomy, with sesamoidectomy when performed; with resection of proximal phalanx base, when performed, any method)	**28270** (Capsulotomy; metatarsophalangeal joint, with or without tenorrhaphy, each joint (separate procedure))	5113	5115
28296 (Correction, hallux valgus with bunionectomy, with sesamoidectomy when performed; with distal metatarsal osteotomy, any method)	**28270** (Capsulotomy; metatarsophalangeal joint, with or without tenorrhaphy, each joint (separate procedure))	5113	5115
28750 (Arthrodesis, great toe; metatarsophalangeal joint)	**20902** (Bone graft, any donor area; major or large)	5114	5115
	27691 (Transfer or transplant of single tendon (with muscle redirection or rerouting); deep (eg, anterior tibial or posterior tibial through interosseous space, flexor digitorum longus, flexor hallucis longus, or peroneal tendon to midfoot or hindfoot)	5114	5115
	28309 (Osteotomy, with or without lengthening, shortening or angular correction, metatarsal; multiple (eg, swanson type cavus foot procedure)	5114	5115
28740 (Arthrodesis, midtarsal or tarsometatarsal, single joint)	**27687** (Gastrocnemius recession (eg, strayer procedure))	5114	5115
	27691 (Transfer or transplant of single tendon (with muscle redirection or rerouting); deep (eg, anterior tibial or posterior tibial through interosseous space, flexor digitorum longus, flexor hallucis longus, or peroneal tendon to midfoot or hindfoot))	5114	5115
	28270 (Capsulotomy; metatarsophalangeal joint, with or without tenorrhaphy, each joint (separate procedure))	5114	5115
	28740 (Arthrodesis, midtarsal or tarsometatarsal, single joint)	5114	5115

92943 Percutaneous transluminal revascularization of chronic total occlusion, coronary artery, coronary artery branch, or coronary artery bypass graft, any combination of intracoronary stent, atherectomy and angioplasty; single vessel)		5193	5194

BILLING CODE 4120–01–C

Response: We reviewed each of the requested code combinations suggested by commenters, listed in Table 2, against our complexity adjustment

criteria. The code combination for primary HCPCS code 28296 with secondary HCPCS code 28270 meets our cost and frequency criteria, qualifying for a complexity adjustment for CY 2025. All the remaining code combinations listed failed to meet our cost or frequency criteria and do not qualify for complexity adjustments for CY 2025. Addendum J to this final rule with comment period includes the cost statistics for each code combination that was evaluated for a complexity adjustment.

Comment: Commenters requested that CMS modify, waive, or eliminate the established C–APC complexity adjustment eligibility criteria of 25 or more claims reporting the code combination (frequency) and a violation of the 2 times rule in the originating C–APC (cost) to allow additional code combinations to qualify for complexity adjustments. These commenters were concerned that C–APC packaging and a lack of complexity adjustment would limit access to procedures. Specifically, some commenters expressed concern that CMS's methodology for determining complexity adjustments is unnecessarily restrictive, particularly the 25-claim threshold, and suggested that CMS eliminate the 25-claim threshold and implement a complexity adjustment whenever a code pair exceeds the cost threshold.

Some commenters were concerned that when multiple ''J1'' primary services are reported on a claim, along with an add-on service, the add-on service is not evaluated for a complexity adjustment. Commenters cited examples where significant claims volume from add-on services may not be incorporated into the complexity adjustment evaluation. Commenters also reiterated requests to broaden the complexity adjustment policy and allow clusters of procedures, consisting of a ''J1'' code pair and multiple other associated add-on codes used in combination with that ''J1'' code pair, to qualify for complexity adjustments. Commenters stated that there are certain complex procedures that include numerous add-on codes and this approach would allow more accurate reflection of the cost of medical practice when multiple procedures are performed together. They noted that lack of additional payment for these code combinations can present a financial challenge for the providers who perform these more resource intensive services.

Response: We appreciate these comments. At this time, we do not believe changes to the C–APC complexity adjustment criteria are necessary or that we should make exceptions to the criteria to allow claims with the code combinations suggested by the commenters to receive complexity adjustments. As we stated in the CY 2017 OPPS/ASC final rule (81 FR 79582), we believe that the complexity adjustment criteria, which require a frequency of 25 or more claims reporting a code combination and a violation of the 2 times rule in the originating C–APC, are appropriate to determine if a combination of procedures represents a complex, costly subset of the primary service that should qualify for the adjustment and be paid at the next higher paying C–APC in the clinical family. As we also previously stated in the CY 2020 OPPS/ASC final rule with comment period (84 FR 61161), a minimum of 25 claims is already a very low threshold for a national payment system. Lowering the minimum of 25 claims further could lead to unnecessary complexity adjustments for service combinations that are rarely performed.

Comment: A few commenters suggested that to help maintain better stability and predictability of payments associated with complex procedures, CMS should revise the complexity adjustment policy by allowing qualifying codes to maintain the complexity adjusted payment for three calendar years before they are required to go through the eligibility review. For codes that do not qualify in a given year, they could be evaluated in the next calendar year. Commenters asserted that the updated cadence would allow more time for providers and coders to be educated on new code pairs that qualify for complexity adjustments and it would help promote payment stability and predictability for these complex procedures.

Response: For the OPPS ratesetting process, our goal is to use the best available data for ratesetting to accurately estimate the costs associated with furnishing outpatient services and to set appropriate payment rates. We evaluate code combinations each year against our complexity adjustment criteria using the latest available data. Potentially maintaining complexity adjustments that are not supported by the latest data could undermine our goals for the ratesetting process.

Comment: A few commenters requested that CMS provide additional information on the rationale for not counting claims that reflect code combinations of services that would otherwise meet the frequency criteria needed to receive a complexity adjustment. Commenters conducted their own data modeling using data reflecting all code combinations that met the frequency criteria needed to receive a complexity adjustment. Commenters asked for greater transparency on the methodology CMS used to evaluate the complexity adjustment frequency criteria for code combinations.

Response: We refer commenters to the claims accounting narrative under supporting documentation for this CY 2025 OPPS/ASC final rule on the CMS website at: *https://www.cms.gov/files/document/2025-nprm-opps-claims-accounting.pdf*. The claims accounting narrative provides a detailed overview of how CMS processes the CY 2023 claims data to produce the proposed prospective CY 2025 OPPS payment rates. We are updating the section on Comprehensive APCs in order to provide additional clarity on the claims accounting process used for determining complexity adjustments.

After consideration of the public comments we received, we are finalizing the C–APC complexity adjustment policy for CY 2025 as proposed. We are also finalizing the proposed complexity adjustments, with the addition of one new code combination (*i.e.,* primary HCPCS code 28296 with secondary HCPCS code 28270) suggested by commenters that meets our complexity adjustment criteria.

(2) Exclusion of Procedures Assigned to New Technology APCs From the C–APC Policy

Services that are assigned to New Technology APCs are typically new procedures that do not have sufficient claims history to establish an accurate payment for them. Beginning in CY 2002, we retain services within New Technology APC groups until we gather sufficient claims data to enable us to assign the service to an appropriate clinical APC. This policy allows us to move a service from a New Technology APC in less than 2 years if sufficient data are available. It also allows us to retain a service in a New Technology APC for more than 2 years if sufficient data upon which to base a decision for reassignment have not been collected (82 FR 59277).

The C–APC payment policy packages payment for adjunctive and secondary items, services, and procedures into the most costly primary procedure under the OPPS at the claim level. Prior to CY 2019, when a procedure assigned to a New Technology APC was included on the claim with a primary procedure, identified by OPPS status indicator ''J1,'' payment for the new technology service was typically packaged into the payment for the primary procedure.

Because the new technology service was not separately paid in this scenario, the overall number of single claims available to determine an appropriate clinical APC for the new service was reduced. This was contrary to the objective of the New Technology APC payment policy, which is to gather sufficient claims data to enable us to assign the service to an appropriate clinical APC.

To address this issue and ensure that there are sufficient claims data for services assigned to New Technology APCs, in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58847), we finalized excluding payment for any procedure that is assigned to a New Technology APC (APCs 1491 through 1599 and APCs 1901 through 1908) from being packaged when included on a claim with a ''J1'' service assigned to a C–APC. In the CY 2020 OPPS/ASC final rule with comment period, we finalized that beginning in CY 2020, payment for services assigned to a New Technology APC would be excluded from being packaged into the payment for comprehensive observation services assigned status indicator ''J2'' when they are included on a claim with a ''J2'' service (84 FR 61167).

(3) Exclusion of Drugs and Biologicals Described by HCPCS Code C9399 (Unclassified Drugs or Biologicals) From the C–APC Policy

Section 1833(t)(15) of the Act, as added by section 621(a)(1) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (Pub. L. 108–173), provides for payment under the OPPS for new drugs and biologicals until HCPCS codes are assigned. Under this provision, we are required to make payment for a covered outpatient drug or biological that is furnished as part of covered outpatient department services but for which a HCPCS code has not yet been assigned in an amount equal to 95 percent of average wholesale price (AWP) for the drug or biological.

In the CY 2005 OPPS/ASC final rule with comment period (69 FR 65805), we implemented section 1833(t)(15) of the Act by instructing hospitals to bill for a drug or biological that is newly approved by the Food and Drug Administration (FDA) and that does not yet have a HCPCS code by reporting the National Drug Code (NDC) for the product along with the newly created HCPCS code C9399 (Unclassified drugs or biologicals). We explained that when HCPCS code C9399 appears on a claim, the Outpatient Code Editor (OCE) suspends the claim for manual pricing by the Medicare Administrative Contractor (MAC). The MAC prices the claim at 95 percent of the drug or biological's AWP, using Red Book or an equivalent recognized compendium, and processes the claim for payment. We emphasized that this approach enables hospitals to bill and receive payment for a new drug or biological concurrent with its approval by the FDA. The hospital does not have to wait for the next quarterly release or for approval of a product specific HCPCS code to receive payment for a newly approved drug or biological or to resubmit claims for adjustment. We instructed that hospitals would discontinue billing HCPCS code C9399 and the NDC upon implementation of a product specific HCPCS code, status indicator, and appropriate payment amount with the next quarterly update. We also note that HCPCS code C9399 is paid in a similar manner in the ASC setting, as 42 CFR 416.171(b) outlines that certain drugs and biologicals for which separate payment is allowed under the OPPS are considered covered ancillary services for which the OPPS payment rate, which is 95 percent of AWP for HCPCS code C9399, applies. Since the implementation of the C–APC policy in 2015, payment for drugs and biologicals described by HCPCS code C9399 had been included in the C–APC payment when these products appear on a claim with a primary C–APC service. Packaging payment for these drugs and biologicals that appear on a hospital outpatient claim with a primary C–APC service is consistent with our C–APC packaging policy under which we make payment for all items and services, including all non-pass-through drugs, reported on the hospital outpatient claim as being integral, ancillary, supportive, dependent, and adjunctive to the primary service and representing components of a complete comprehensive service, with certain limited exceptions (78 FR 74869). It was our position that the total payment for the C–APC with which payment for a drug or biological described by HCPCS code C9399 is packaged includes payment for the drug or biological at 95 percent of its AWP.

However, we determined that in certain instances, drugs and biologicals described by HCPCS code C9399 are not being paid at 95 percent of their AWPs when payment for them is packaged with payment for a primary C–APC service. In order to ensure payment for new drugs, biologicals, and radiopharmaceuticals described by HCPCS code C9399 at 95 percent of their AWP, for CY 2023 and subsequent years, we finalized our proposal to exclude any drug, biological, or radiopharmaceutical described by HCPCS code C9399 from packaging when the drug, biological, or radiopharmaceutical is included on a claim with a ''J1'' service, which is the status indicator assigned to a C–APC, and a claim with a ''J2'' service, which is the status indicator assigned to comprehensive observation services. See Addendum J for the CY 2025 C–APC payment policy exclusions.

In the CY 2023 OPPS/ASC final rule with comment period, we finalized the proposal in section XI ''CY 2023 OPPS Payment Status and Comment Indicators'' to add a new definition to status indicator ''A'' to include unclassified drugs and biologicals that are reportable with HCPCS code C9399 (87 FR 72051). The definition, found in Addendum D1, would ensure the MAC prices claims for drugs, biologicals, or radiopharmaceuticals billed with HCPCS code C9399 at 95 percent of the drug or biological's AWP and pays separately for the drug, biological, or radiopharmaceutical under the OPPS when it appears on the same claim as a primary C–APC service.

(4) Exclusion of Cell and Gene Therapies From the C–APC Policy

As previously discussed in this section, and in the CY 2014 OPPS/ASC final rule with comment period (78 FR 74865), the C–APC policy packages payment for items and services that are typically integral, ancillary, supportive, dependent, or adjunctive to the primary service and provided during the delivery of the comprehensive service, including diagnostic procedures, laboratory tests and other diagnostic tests and treatments that assist in the delivery of the primary procedure. In the CY 2014 OPPS/ASC final rule (78 FR 74861), we finalized defining a comprehensive APC as a classification for the provision of a primary service and all adjunctive services provided to support the delivery of the primary service. Because a comprehensive APC treats all individually reported codes as representing components of the comprehensive service, we make a single prospective payment based on the cost of all individually reported codes that represent the provision of a primary service and all adjunctive services provided to support that delivery of the primary service.

As discussed in the CY 2025 OPPS/ASC proposed rule (89 FR 59201 through 59204), we generally treat all items and services reported on a C–APC claim as integral, ancillary, supportive, dependent, and adjunctive to the primary service and representing

components of a comprehensive service. Historically, items packaged for payment provided in conjunction with the primary C–APC service also include all drugs, biologicals, and radiopharmaceuticals, regardless of cost, except those drugs with pass-through payment status and those drugs that are usually self-administered (SADs), unless they function as supplies (78 FR 74868 through 74869 and 74909).

Our intent has been to make a single prospective payment based on the cost of all individually reported codes that appear on a claim with the primary C–APC service, which we believe represent the provision of a primary service and all adjunctive services provided to support that delivery of the primary service. We discussed in the CY 2025 OPPS/ASC proposed rule (89 FR 59201 through 59204), there are rare instances where the cell and gene therapies listed in Table 3, which are usually separately payable under the OPPS, appear on the same claim as a primary C–APC service and therefore, have their payment packaged with payment for the primary C–APC service. The therapies in Table 3 are usually separately paid and priced using the ASP methodology when not on a C–APC claim. Given the unique nature of these therapies, we do not believe they function as integral, ancillary, supportive, dependent, or adjunctive to any of the current C–APCs primary services. The cell therapies described in Table 3 are primarily for the treatment of specific cancers and are administered through an intravenous infusion. The gene therapies listed in Table 3 are generally for the treatment of certain rare ocular or spinal conditions caused by specific genetic mutations and are also either intravenously infused or administered through a subretinal injection. When these products are administered, they are the primary treatment being administered to a patient and thus, are not integral, ancillary, supportive, dependent, or adjunctive to any primary C–APC services. Additionally, the current primary C–APC services describe common surgical procedures, such as breast/lymphatic surgery and musculoskeletal procedures. The cell and gene therapies listed in Table 3 are intended to treat a specific condition and would not be used to support the outcome of any primary C–APC procedure. For example, HCPCS code J3399 (Injection, onasemnogene abeparvovec-xioi, per treatment, up to 5x10^15 vector genomes) may be used to describe the gene therapy Zolgensma. This product is FDA-approved as an adeno-associated virus (AAV) vector-based gene therapy indicated for the treatment of pediatric patients less than 2 years of age with spinal muscular atrophy (SMA) with bi-allelic mutations in the survival motor neuron 1 (SMN1) gene. The specified mechanism of onasemnogene abeparvovec is a recombinant AAV9-based gene therapy designed to deliver a copy of the gene encoding the human SMN protein.[5] The function of a product such as Zolgensma, is not intended to be integral, ancillary, supportive, dependent, and adjunctive to any C–APC as the gene therapy itself is an independent treatment.

Yescarta (HCPCS code Q2041) is an example of a cell therapy that functions as an independent treatment. Based on its FDA-approved indication,[6] this product's intended clinical use would not be integral, ancillary, supportive, dependent, or adjunctive to any current C–APC primary service. Yescarta is indicated as a CD19-directed genetically modified autologous T cell immunotherapy for the treatment of Adult patients with large B-cell lymphoma that is refractory to first-line chemoimmunotherapy or that relapses within 12 months of first-line chemoimmunotherapy and adult patients with relapsed or refractory large B-cell lymphoma after two or more lines of systemic therapy, including diffuse large B-cell lymphoma (DLBCL) not otherwise specified, primary mediastinal large B-cell lymphoma, high grade B-cell lymphoma, and DLBCL arising from follicular lymphoma. Yescarta is the primary treatment being performed when administered for these FDA-approved indications and should not be packaged as supportive of any C–APC primary service even if the two services appear on the same claim.

We explained in the CY 2014 OPPS/ASC final rule with comment period (78 FR 74868) that intravenous drugs, for example, are OPPS services that are considered adjunctive to the primary procedure because the correct administration of the drug either promotes a beneficial outcome, such as the use of intravenous pain medications, or prevents possible complications, such as the use of intravenous blood pressure medications to temporarily replace oral blood pressure medications and reduce the risk of a sudden rise in blood pressure when a normal daily medication is stopped. In the case of the cell and gene therapies described in Table 3, however, we do not believe the therapies ''promote a beneficial outcome'' or ''prevent possible complications'' of any of the procedures currently designated as primary C–APC services. While the cell and gene therapies in Table 3 may ''promote a beneficial outcome'' for the patient in general, we do not believe the provision of cell and gene therapies are ''promoting a beneficial outcome'' for any of the primary C–APC services themselves, as the cell and gene therapies are serving as independent therapies. These are distinguishable from the previous examples of intravenous pain medications that are directly related to the primary C–APC service and promote a beneficial outcome for that procedure. Further, in the CY 2014 OPPS/ASC final rule with comment period (78 FR 74865), we stated that we proposed to package into C–APCs all of these integral, ancillary, supportive, dependent, and adjunctive services, hereinafter collectively referred to as ''adjunctive services,'' provided during the delivery of the comprehensive service. This includes the diagnostic procedures, laboratory tests and other diagnostic tests, and treatments that assist in the delivery of the primary procedure. In the CY 2025 OPPS/ASC proposed rule (89 FR 59201 through 59204), we stated we did not believe that the cell and gene therapies listed in Table 3 are assisting in the delivery of any primary procedure currently assigned to a C–APC.

Therefore, for CY 2025 only, we proposed not to package payment for the cell and gene therapies listed in Table 3 into the payment for the primary C–APC service when they appear on the same claim as primary C–APCs services. We proposed this policy for one year only in order to gather more information from interested parties as to whether the proposed policy appropriately captures all of the unique therapies, such as the cell and gene therapies listed in Table 3, that function as primary treatments and do not support C–APC primary services. As discussed later in this section, we welcomed comments from readers on the proposal and the potential need for a different, modified, expanded, or supplemental policy for future rulemaking. We stated we will assess whether to continue this policy, or a modified version of this policy, beyond one year in future rulemaking, taking into consideration the comments received.

We did not propose to include therapies that are on drug pass-through status for all of CY 2025 in Table 3

[5] Zolgensma. FDA Package Insert. October 2023. *https://www.fda.gov/media/126109/download?attachment.*

[6] FDA Package Insert. Yescarta. April 2024. *https://www.fda.gov/media/108377/download?attachment.*

because pass-through drugs are already excluded from C–APC packaging. We proposed that products for which pass-through status is expiring in CY 2025 would be excluded from C–APC packaging after their pass-through status expires. For example, the product described by HCPCS code Q2056 has pass-through status expiring June 30, 2025. Until its pass-through status expires, the product will be excluded from C–APC packaging due to the pass-through C–APC exclusion policy, but after its pass-through status expires, we propose that the therapy would continue to be excluded from C–APC packaging under our proposed exclusion for cell and gene therapies. For more information on drug pass-through status, including expiring and continuing pass-through status, please see section V.A of this final rule with comment period.

BILLING CODE 4120–01–P

TABLE 3: CELL AND GENE THERAPIES PROPOSED FOR EXCLUSION FROM C-APC PACKAGING FOR CY 2025

Trade Name	HCPCS Code	Long Descriptor
Yescarta	Q2041	Axicabtagene ciloleucel, up to 200 million autologous anti-cd19 car positive viable t cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Kymriah	Q2042	Tisagenlecleucel, up to 600 million car-positive viable t cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Provenge	Q2043	Sipuleucel-t, minimum of 50 million autologous cd54+ cells activated with pap-gm-csf, including leukapheresis and all other preparatory procedures, per infusion
Tecartus	Q2053	Brexucabtagene autoleucel, up to 200 million autologous anti-cd19 car positive viable t cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Breyanzi	Q2054	Lisocabtagene maraleucel, up to 110 million autologous anti-cd19 car-positive viable t cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Abecma	Q2055	Idecabtagene vicleucel, up to 510 million autologous b-cell maturation antigen (bcma) directed car-positive t cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Carvytki	Q2056	Ciltacabtagene autoleucel, up to 100 million autologous b-cell maturation antigen (bcma) directed car-positive t cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Luxturna	J3398	Injection, voretigene neparvovec-rzyl, 1 billion vector genomes
Zolgensma	J3399	Injection, onasemnogene abeparvovec-xioi, per treatment, up to 5x10^15 vector genomes

BILLING CODE 4120–01–C

We proposed to exclude the therapies listed in Table 3 from C–APC packaging. We invited comment on the proposal, and we invited comment on whether there are any additional cell and gene therapies that may be appropriate to exclude from C–APC packaging for CY 2025. We asked commenters to explain why any additional cell and gene therapies that they believe should be excluded from C–APC packaging were not integral, ancillary, supportive, dependent, or adjunctive to any C–APC primary service. We invited comment on whether the proposal should be extended beyond 1 year or if a different, expanded, or supplemental policy approach may be warranted in future rulemaking. For example, we were interested in comments on whether there are other classes of drugs, biologicals, or other products that are not clearly integral, ancillary, adjunctive, or supportive of a primary C–APC service but could appear on the same claim as the C–APC for that primary service and for which payment would be packaged into the C–APC payment under our current policy. We stated that we would expect clinical evidence supporting commenters' assertion that other identified classes of drugs, biologicals, medical devices, or other products are not clearly supportive of a primary C–APC service but may nonetheless appear on the same claim as a primary C–APC procedure. Similarly, we invited comment on whether interested parties believe it is appropriate for these other classes of drugs, biologicals, or medical devices to be excluded from packaging with all C–APCs or only specific C–APCs, such as the Comprehensive Observation Services C–APC (SI = ''J2'').

Finally, we invited comment on the following:

- Because the cell and gene therapies listed in Table 3 are not integral, ancillary, supportive, dependent, or adjunctive to any current C–APC procedure, how could CMS structure a new C–APC, or similar packaged payment policy, for the service to administer cell or gene therapies, such by creating as a Chimeric Antigen Receptor (CAR) T-cell therapy administration C–APC, with which the CAR–T or gene therapy would be integral, ancillary, supportive, dependent, or adjunctive to the primary C–APC service? What integral, ancillary, supportive, dependent, or adjunctive items and services are routinely provided as part of the administration of cell and gene therapies or in conjunction with cell and gene therapies generally?

We recognized that currently, for CY 2024, the following HCPCS codes are associated with CAR–T therapy: HCPCS code 0537T (Chimeric antigen receptor t-cell (car-t) therapy; harvesting of blood-derived t lymphocytes for development of genetically modified autologous car-t cells, per day), 0538T (Chimeric antigen receptor t-cell (car-t) therapy; preparation of blood-derived t lymphocytes for transportation (eg, cryopreservation, storage)), 0539T (Chimeric antigen receptor t-cell (car-t) therapy; receipt and preparation of car-t cells for administration), and 0540T (Chimeric antigen receptor t-cell (car-t) therapy; car-t cell administration, autologous) as discussed in previous OPPS rulemaking, including the CY 2022 OPPS/ASC final rule with comment period (86 FR 63550 through 63552).

Separately, we also invited comment on whether policy revisions to the C–APC policy may be appropriate in future rulemaking, such as a modified outlier payment policy specific to C–APCs to address related situations in the future. We listed all proposed C–APC exclusion categories for CY 2025 in Addendum J to the CY 2025 OPPS/ASC proposed rule (which is available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*).

Comment: Commenters were generally very supportive of the proposal and thought this agency action was a positive step forward to ensure access to these new classes of drugs. They agreed with CMS's assessment that the cell and gene therapies listed in the CY 2025 OPPS/ASC proposed rule did not function as integral, ancillary, supportive, dependent, or adjunctive to any of the current C–APCs primary services. Commenters noted that they agreed that these treatments acted as independent therapies and were the reason for a Medicare beneficiary's visit to a hospital outpatient department. Additionally, commenters believed that this policy was necessary and important given the large number of cell and gene therapy products currently being researched that may ultimately be approved and available to Medicare beneficiaries in the coming years.

Response: We thank commenters for their support of our proposal and rationale.

Comment: Many commenters recommended CMS make this policy permanent as soon as possible. They noted that they agreed with CMS's assessment that it would be inappropriate to package cell and gene therapies into C–APCs for CY 2025 only, but that the same reasons that C–APC packaging would be inappropriate for CY 2025 would also apply to subsequent years. Other commenters recommended that CMS make this policy effective for an extended period of time, such as three years, in order to better understand how the policy is working.

Response: We thank commenters for their feedback. Based on the comments received, we are persuaded that the reasoning for excluding these cell and gene therapy products from C–APC packaging in CY 2025 would also apply to subsequent years. As such, we will be finalizing our proposal as later discussed in this section for CY 2025 and subsequent years.

Comment: One commenter recommended that its cell therapy be added to the list of qualifying exceptions to C–APC packaging as their product received FDA approval on August 1, 2024, during the public comment period. A few commenters recommended CMS apply this packaging exception to other categories of drugs that they believed fell into a similar clinical category as cell and gene therapies. For example, one commenter suggested that its drug product is one of a growing number of innovative drugs that are administered using surgical procedures that are mapped to a C–APC, resulting in packaging of that product. The commenter stated that the product was the primary treatment being delivered to the patient, and not the C–APC procedure. Another commenter stated they have a product in the pipeline that, according to guidance from a specialty society, requires a procedure corresponding to CPT code 51720 (bladder instillation of anticarcinogenic agent), which is assigned to C–APC 5372, in order to insert the investigational product into the bladder. This commenter believed their product is the primary treatment being administered to a patient and is not supportive to any primary C–APC services. Therefore, they requested this product not be packaged into a C–APC and believed C–APC packaging would be inappropriate. This commenter also requested that in order to prevent C–APC packaging, one option would be for CMS to reassign the code used to describe the administration of its product to a drug administration APC rather than a C–APC. Specifically, they recommended CMS reassign CPT code 51720, which corresponds to the procedure used to administer the investigational product, to a non C–APC, such as a drug administration APC.

Some commenters recommended that CMS extend the proposed policy to cell and gene therapies assigned to status indicator ''G'', which correlates to pass-through status. Similarly, commenters recommend CMS exclude a variety of products from C–APC packaging, such as Casgevy, Lyfgenia, Amtagvi, Omisurge, Zynteglo, Obe-cel, Hemgenix, Beqvez, Roctavian, Spinraza and Elevidys. A few commenters suggested CMS should review and identify any other products that may be administered as independent therapies in the hospital outpatient setting and stated that such products should be separately paid.

Response: We greatly thank commenters for their detailed comments. For new cell and gene therapy products that are not integral, ancillary, supportive, dependent, or adjunctive to any C–APC primary service that were approved during CY 2024 and that continue to be approved, CMS will add their product specific HCPCS codes, when created, to the C–APC exclusion list. For example, HCPCS code J3392 (Injection, exagamglogene autotemcel, per treatment) effective October 1, 2024, which may be used to describe the product Casgevy, was added to the list of qualifying products. We also thank commenters for their suggestions to add additional drugs and classes of drugs to this C–APC exclusion policy as well as those drugs that are administered during a C–APC procedure. Additionally, we thank the commenter for its suggestion to move some codes that describe the administration of a product from a C–APC to a drug administration APC. We will take this feedback into consideration for future rulemaking. As we stated in the proposed rule, we welcomed comments from readers on the proposal and the potential need for a different, modified, expanded, or supplemental policy for future rulemaking. We believe that cell and gene therapies are a unique class of products, but we believe we need additional evidence and engagement from interested parties concerning whether other identified classes of drugs, biologicals, medical devices, or other products are not supportive of a primary C–APC service but may nonetheless appear on the same claim as a primary C–APC procedure. We strongly believe in the principles of our prospective payment system and the C–APC policy; therefore, we want to ensure than any potential future changes to our C–APC packaging policy maintain these principles.

Commenters suggested that we exclude several additional products from C–APC packaging, such as Lyfgenia, Zynteglo, Hemgenix, Beqvez, Roctavian, and Elevidys. We note that these products are currently on OPPS pass-through status for the duration of CY 2025, and therefore will be excluded from C–APC packaging under that policy. Similarly, in response to commenters suggestion that we apply this policy to cell and gene therapy products assigned to status indicator ''G'', we note that we specifically did not propose to include therapies that are on drug pass-through status, represented by status indicator ''G'' for all of CY 2025 because pass-through drugs are already excluded from C–APC packaging. Please see section V.A of this final rule with comment period for additional information on OPPS drug pass-through status.

Comment: Several commenters recommended that CMS unpackage all status indicator ''K'' drugs from C–APC packaging, which aligned with the 2024 Advisory Panel on Hospital Outpatient Payment recommendation to no longer package drugs with a status indicator of ''K'' into any C–APC and, instead, they recommended CMS provide separate payment for all drugs and biologicals above the drug packaging threshold. Commenters said these status indicator ''K'' drugs should be paid based on 1847A of the Social Security Act and reimbursed at Average Sales Price plus 6 percent rather than packaged. Similarly, a commenter suggested that since drugs on pass-through status are paid separately when billed with a C–APC, that CMS should continue that separately payable status after passthrough status expiration and the transition of that code's status indicator from ''G'' to ''K.''

Commenters suggested that the proportion of status indicator ''K'' drug charges relative to all other charges appearing on C–APCs claims was less than 2.5 percent across all C–APCs. Meaning, in commenters' views, that C–APCs do not inherently involve the provision of status indicator ''K'' drugs. Another commenter recommended that CMS exclude high-cost primary therapy drugs across drug classes and not only to cell and gene therapies, apply the C–APC exclusion to primary therapy drugs that clinically align to C–APCs, and they included specific examples they researched that serve as the primary therapy drugs similar to cell and gene therapies.

Response: We appreciate the information submitted by commenters, but respectfully disagree with their conclusions. The C–APC policy aims to package payment for items and services that are typically integral, ancillary, supportive, dependent, or adjunctive to the primary service and provided during the delivery of the comprehensive service, including diagnostic procedures, laboratory tests and other diagnostic tests and treatments that assist in the delivery of the primary procedure. We believe it is appropriate for most drugs and biologicals to be packaged into C–APCs as we believe they function to ''promote a beneficial outcome'' or ''prevent possible complications'' of C–APC services. We explained in the CY 2014 OPPS/ASC final rule with comment period (78 FR 74868) that intravenous drugs, for example, are OPPS services that are considered adjunctive to the primary procedure because the correct administration of the drug either promotes a beneficial outcome, such as the use of intravenous pain medications, or prevents possible complications, such as the use of intravenous blood pressure medications to temporarily replace oral blood pressure medications and reduce the risk of a sudden rise in blood pressure when a normal daily medication is stopped. We are therefore not excluding all status indicator ''K'' drugs above the drug packaging threshold from C–APC packaging. Our packaging policies are a fundamental component of the OPPS and they support our strategic goal of using larger payment bundles in the OPPS to maximize hospitals' incentives to provide care in the most efficient manner. Additionally, we do not believe at this time that cost alone is a reason to exclude a product from packaging.

Comment: Many commenters responded to several of our requests for comment associated with the proposal. Commenters recommended no significant overall changes to the general methodology CMS proposed to exclude products from all C–APC packaging and pay separately based on the individual product's average sales price plus 6 percent. Specifically, commenters strongly conveyed that they did not see an appropriate reason for CMS to structure a new C–APC, or similar packaged payment policy, for the service to administer cell or gene therapies, such as by creating a CAR T-cell therapy administration C–APC. Commenters believed that there is no accurate way to create a bundled payment for a whole group of cell and gene therapies as the costs and resources required are unique and novel between each of the therapies, which also makes it difficult to determine appropriate items and services associated with each therapy for inclusion in C–APC packaging. Commenters broadly believed no

different or supplemental policy was warranted given the numerous challenges providers face related to cell and gene therapies currently. They saw any additional change to move towards a packaged payment policy as an additional challenge for the hospitals providing the therapies.

Similarly, commenters cautioned CMS against creating C–APCs for cell and gene therapies as this may cause inadequate Medicare reimbursement to hospitals, which, in their view, has the potential to jeopardize beneficiary access to CAR T-cell therapy and other high-cost therapies as commenters communicated that institutions weigh reimbursement challenges with their ability to provide this costly care. Commenters were concerned that creating a new packaged payment policy could lead to a financial loss and decrease the number of facilities offering high-cost cell and gene therapies in the hospital outpatient department.

Commenters emphasized that these therapies involve highly specialized procedures, intensive monitoring, and multidisciplinary care teams, all of which contribute to their substantial costs. Commenters were concerned by the fact that the administration of cell and gene therapies are multi-step processes that can take weeks if not months and entail multiple services that would not appear on the same claim. Additional commenters reiterated that all of the various and distinct clinical services for CAR T-cell therapy are furnished over multiple encounters on different dates—making CAR T-cell therapy inappropriate for C–APCs, which are typically specific to a single encounter in their view. Commenters believed a CAR T-cell therapy C–APC, or similar packaged payment policy, would be unprecedented and a huge policy departure for CMS and recommended CMS not pursue the idea any further.

Many commenters believed that separate payment based on average sales price plus 6 percent is the most appropriate payment methodology for cell and gene therapies due to its transparency, uniformity and predictability. A few commenters pointed out that current hospital cost data is lower than ASP for CAR T-cell therapy products, potentially leaving products underpaid if paid based on C–APC principles. Commenters similarly took the position that there is no appropriate method in which CMS could modify its outlier payment policy with respect to C–APCs to better pay for these types of products.

Response: We appreciate the insights provided by commenters and will take them into consideration for future rulemaking. At this time, we are not considering the creation of a new C–APC, similar packaged payment policy, or modified outlier policy, for services to administer cell or gene therapies.

After consideration of the public comments we received, we are finalizing our policy proposal with a modification with respect to how long this policy will apply. For CY 2025 and subsequent years, we are finalizing a policy not to package payment for cell and gene therapies into C–APCs, when those cell and gene therapies are not functioning as integral, ancillary, supportive, dependent, or adjunctive to the primary C–APC service. For new cell and gene therapy products that are not integral, ancillary, supportive, dependent, or adjunctive to any C–APC primary service, we will continue to add their product specific HCPCS codes, when created, to the C–APC exclusion list. The current list of qualifying products can be found in Table 4. We are not adding any additional drug classes to this policy exclusion at this time, and we are not currently considering any additional modifications to our policy, but will continue to consider additional refinements for future rulemaking.

We list all final C–APC exclusion categories for CY 2025 in Addendum J to this final rule (which is available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*).

BILLING CODE 4120–01–P

TABLE 4: CELL AND GENE THERAPIES FINALIZED FOR EXCLUSION FROM C-APC PACKAGING FOR CY 2025

Trade Name	HCPCS Code	Long Descriptor
Yescarta	Q2041	Axicabtagene ciloleucel, up to 200 million autologous anti-cd19 car positive viable t cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Kymriah	Q2042	Tisagenlecleucel, up to 600 million car-positive viable t cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Provenge	Q2043	Sipuleucel-t, minimum of 50 million autologous cd54+ cells activated with pap-gm-csf, including leukapheresis and all other preparatory procedures, per infusion
Tecartus	Q2053	Brexucabtagene autoleucel, up to 200 million autologous anti-cd19 car positive viable t cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Breyanzi	Q2054	Lisocabtagene maraleucel, up to 110 million autologous anti-cd19 car-positive viable t cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Abecma	Q2055	Idecabtagene vicleucel, up to 510 million autologous b-cell maturation antigen (bcma) directed car-positive t cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Carvytki	Q2056	Ciltacabtagene autoleucel, up to 100 million autologous b-cell maturation antigen (bcma) directed car-positive t cells, including leukapheresis and dose preparation procedures, per therapeutic dose
Luxturna	J3398	Injection, voretigene neparvovec-rzyl, 1 billion vector genomes
Zolgensma	J3399	Injection, onasemnogene abeparvovec-xioi, per treatment, up to 5x10^15 vector genomes
CASGEVY	J3392	Injection, exagamglogene autotemcel, per treatment

BILLING CODE 4120–01–C

(5) Exclusion of Non-Opioid Products for Pain Relief Under Section 4135 of the Consolidated Appropriations Act, 2023 From the C–APC Policy

The Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–328), was signed into law on December 29, 2022. Section 4135(a) and (b) of the CAA, 2023, titled ''Access to Non-Opioid Treatments for Pain Relief,'' amended section 1833(t)(16) and section 1833(i) of the Social Security Act, respectively, to provide for temporary additional payments for non-opioid treatments for pain relief (as that term is defined in section 1833(t)(16)(G)(i) of the Act). In particular, section 1833(t)(16)(G) provides that with respect to a non-opioid treatment for pain relief furnished on or after January 1, 2025,

and before January 1, 2028, the Secretary shall not package payment for the non-opioid treatment for pain relief into payment for a covered OPD service (or group of services) and shall make an additional payment for the non-opioid treatment for pain relief as specified in clause (ii) of that section. Clauses (ii) and (iii) of section 1833(t)(16)(G) of the Act provide for the amount of additional payment and set a limitation on that amount. As stated earlier in this section, our current policy is to exclude from the packaged C–APC payment those items and services that are required by statute to be separately paid.

Accordingly, we proposed to exclude the non-opioid treatments for pain relief identified as satisfying the required criteria for payment under section 4135 of the CAA, 2023 from the C–APC policy to ensure payment is not packaged into any C–APC and that separate payment is made in accordance with the statute.

Comment: Commenters were generally supportive of our proposal not to package payment and to pay separately for qualifying drugs, biologicals, and medical devices that met the criteria for payment under section 4135 of the CAA, 2023. A commenter mentioned its support of CMS packaging policies, and noted reservations about paying separately, and not packaging, non-opioid treatments for pain relief; however, they ultimately conceded that CMS must implement section 4135 of the CAA, 2023, which requires separately payable status, and supported CMS's implementation methodology.

Response: We thank commenters for their support.

After consideration of the public comments we received, we are finalizing our policy as proposed, and will exclude the non-opioid treatments for pain relief identified as satisfying the required criteria for payment under section 4135 of the CAA, 2023 from the C–APC policy to ensure payment is not packaged into any C–APC and that separate payment is made in accordance with the statute. Please see section XIII.F of this final rule with comment period for a list of the products that we are finalizing would qualify for payment under the new payment policy for non-opioid drugs, biologicals, and devices for pain relief.

(6) C–APCs for CY 2025

For CY 2025 and subsequent years, we proposed to continue to apply the C–APC payment policy methodology. We refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79583) for a discussion of the C–APC payment policy methodology and revisions.

Each year, in accordance with section 1833(t)(9)(A) of the Act, we review and revise the services within each APC group and the APC assignments under the OPPS. As a result of our annual review of the services and the APC assignments under the OPPS, we did not propose to convert any standard APCs to C–APCs in CY 2025; thus, we proposed that the number of C–APCs for CY 2025 would be the same as the number for CY 2024, which is 72 C–APCs.

Comment: A few commenters requested that CMS reconsider our packaging policies for C–APC 8011 (Comprehensive Observation Services). They requested that CMS remove the rule that the presence of a SI ''T'' procedure on a claim excludes payment of C–APC 8011 and instead package the payment of the SI ''T'' procedure into C–APC 8011, as is already done with SI ''Q'' procedures. Commenters stated that this requirement violates the basic tenet of the packaging concept in that when observation services are ordered and furnished, the observation services become the primary service provided to such patients and the SI ''T'' procedure is provided ancillary to that primary service. Commenters cited scenarios in which hospitals provide significant, resource-intensive services to a patient but are paid significantly less than if a SI ''T'' procedure was not done.

Response: We thank the commenters for bringing this to our attention. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70334–70336), in response to commenters' concerns regarding packaging payment for potentially high-cost surgical procedures into the payment for an observation C–APC, we finalized a policy that claims reporting procedures assigned status indicator ''T'' do not qualify for payment through C–APC 8011, regardless of whether the procedure assigned status indicator ''T'' was furnished before or after observation services (described by HCPCS code G0378) were provided. In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79562), we stated that services that would otherwise qualify for C–APC 8011 are not considered to be observation services when they are associated with a surgical procedure (assigned to status indicator ''T''). Instead, they are considered to be perioperative recovery, which is always packaged in with the surgical procedure. We will continue to review the impacts of this issue and may revisit it in future rulemaking.

Comment: Two commenters expressed concerns with the C–APC methodology for surgical insertion codes for brachytherapy treatment, stating that these concerns impact beneficiary access to brachytherapy in the HOPD setting. These commenters stated that the C–APC methodology lacks the appropriate charge capture mechanisms to accurately reflect the services associated with the C–APC, that there are significant variations in the clinical practice and billing patterns in the hospital claims data used for ratesetting, and that the C–APC rates do not accurately or fully reflect the services and costs associated with the primary procedure. Commenters urged the agency to explore alternatives, including that CMS discontinue the C–APC policy for all brachytherapy insertion codes. Alternatively, one commenter suggested that CMS could continue to pay for ''J1'' brachytherapy insertion codes under the C–APC payment methodology but exclude and make separate payment for designated preparation and planning services in addition to the C–APC payment. Another commenter called for education on whether services, like brachytherapy, that are assigned to a J1 indicators and delivered over multiple patient encounters may be reported per encounter.

Response: We appreciate the comments on the C–APC methodology. However, we believe that the current C–APC methodology is appropriately applied to surgical insertion for brachytherapy treatment procedures and is accurately capturing costs, particularly as the brachytherapy sources used for these procedures are excluded from C–APC packaging and are separately payable. We will evaluate if provider education may be appropriate in this circumstance. We will continue to examine these concerns and will determine if any modifications on this policy are warranted in future rulemaking.

After consideration of the public comments we received, we are finalizing the C–APCs as proposed. Table 5 lists the final C–APCs for CY 2025. All C–APCs are displayed in Addendum J to this CY 2025 OPPS/ASC final rule with comment period (which is available via the internet on the CMS website). Addendum J to this final rule with comment period also contains all of the data related to the C–APC payment policy methodology, including the list of complexity adjustments and other information for CY 2025.

BILLING CODE 4120–01–C

C–APC Clinical Family Descriptor Key:

AENDO = Airway Endoscopy
AICDP = Automatic Implantable Cardiac Defibrillators, Pacemakers, and Related Devices.
BREAS = Breast Surgery
COCHL = Cochlear Implant
EBIDX = Excision/Biopsy/Incision and Drainage
ENTXX = ENT Procedures
EPHYS = Cardiac Electrophysiology/
EVASC = Endovascular Procedures
EXEYE = Extraocular Ophthalmic Surgery
GIXXX = Gastrointestinal Procedures
GYNXX = Gynecologic Procedures
INEYE = Intraocular Surgery
LAPXX = Laparoscopic Procedures
NERVE = Nerve Procedures
NSTIM = Neurostimulators
ORTHO = Orthopedic Surgery
PUMPS = Implantable Drug Delivery Systems
RADTX = Radiation Oncology
SCTXX = Stem Cell Transplant

UROXX = Urologic Procedures
VASCX = Vascular Procedures
WPMXX = Wireless PA Pressure Monitor

c. Calculation of Composite APC Criteria-Based Costs

As discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66613), we believe it is important that the OPPS enhance incentives for hospitals to provide necessary, high-quality care as efficiently as possible. For CY 2008, we developed composite APCs to provide a single payment for groups of services that are typically performed together during a single clinical encounter and that result in the provision of a complete service. Combining payment for multiple, independent services into a single OPPS payment in this way enables hospitals to manage their resources with maximum flexibility by monitoring and adjusting the volume and efficiency of services themselves. An additional advantage to the composite APC model is that we can use data from correctly coded multiple procedure claims to calculate payment rates for the specified combinations of services, rather than relying upon single procedure claims which may be low in volume and/or incorrectly coded. Under the OPPS, we currently have composite policies for mental health services and multiple imaging services. We refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66611 through 66614 and 66650 through 66652) for a full discussion of the development of the composite APC methodology, and the CY 2012 OPPS/ASC final rule with comment period (76 FR 74163) and the CY 2018 OPPS/ASC final rule with comment period (82 FR 59241, 59242, and 59246 through 52950) for more recent background.

(1) Mental Health Services Composite APC

For CY 2025, we proposed to continue our longstanding policy of limiting the aggregate payment for specified less resource-intensive mental health services furnished on the same date to the payment for a day of partial hospitalization services provided by a hospital, which we consider to be the most resource-intensive of all outpatient mental health services (88 FR 49572). We refer readers to the April 7, 2000, OPPS final rule with comment period (65 FR 18452 through 18455) for the initial discussion of this longstanding policy and the CY 2012 OPPS/ASC final rule with comment period (76 FR 74168) for more recent background.

In the CY 2018 OPPS/ASC proposed rule and final rule with comment period (82 FR 33580 and 33581 and 82 FR 59246 and 59247), we proposed and finalized the policy for CY 2018 and subsequent years that, when the aggregate payment for specified mental health services provided by one hospital to a single beneficiary on a single date of service, based on the payment rates associated with the APCs for the individual services, exceeds the maximum per diem payment rate for partial hospitalization services provided by a hospital, those specified mental health services will be paid through composite APC 8010 (Mental Health Services Composite). In addition, we set the payment rate for composite APC 8010 for CY 2018 at the same payment rate for APC 5863, which was the maximum partial hospitalization per diem payment rate for a hospital, and finalized a policy that the hospital would continue to be paid the payment rate for composite APC 8010. This policy applied in CYs 2018 through 2023.

In the CY 2024 OPPS/ASC proposed rule, we stated that APC 5863 was no longer the maximum partial hospitalization per diem payment rate for a hospital due to the creation of APC 5864, which is four or more hospital-based PHP services per day (88 FR 49572). We solicited comment on whether APC 5864 would be appropriate to use as the daily mental health cap, as we have historically set the daily mental health cap for composite APC 8010 at the maximum partial hospitalization per diem payment rate for a hospital (88 FR 49572). Based on public comments received and our longstanding policy, in CY 2024 OPPS/ASC final rule, we finalized APC 5864, four hospital-based PHP services per day, as the daily mental health cap (88 FR 81566).

We continue to believe that the costs associated with administering a partial hospitalization program represent the most resource intensive of all outpatient mental health services. For CY 2025 and subsequent years, we proposed to continue this policy that when the aggregate payment for specified mental health services provided by one hospital to a single beneficiary on a single date of service, based on the payment rates associated with the APCs for the individual services, exceeds the per diem payment rate for 4 partial hospitalization services provided in a day by a hospital (the payment amount for APC 5864), those specified mental health services would be paid through composite APC 8010. In addition, we proposed to continue to set the payment rate for composite APC 8010 at the same payment rate that we propose for APC 5864, which is a partial hospitalization per diem payment rate for 4 partial hospitalization services furnished in a day by a hospital.

Under the proposed policy, the Integrated OCE (I/OCE) would continue to determine whether to pay for these specified mental health services individually, or to make a single payment at the same payment rate established for APC 5864 for all the specified mental health services furnished by the hospital on that single date of service by paying for the services through composite APC 5863.

Comment: One commenter recommended that CMS change the status indicator for two neuropsychological testing codes (HCPCS codes 96133 and 96137) from SI = N to SI = Q3 to allow separate payment for additional hours of testing or increase the payment rate for the primary testing procedure codes. Noting the multiple day structure of neuropsychological testing, they requested a daily payment for each date of service. The commenters noted that the payment rate for Composite APC 8010, which is capped at the maximum per diem partial hospitalization rate, is lower than the individual HCPCS code APC payment rates and does not provide sufficient payment for these procedures.

Response: After reviewing this issue, we believe the Composite APC methodology is being appropriately applied in this case. Composite APCs provide a single payment for groups of services that are typically performed together during a single clinical encounter and that result in the provision of a complete service.

The words ''list separately in addition to code for primary procedure'' are included in the long descriptors for HCPCS codes 96133 and 96137 to indicate that that the codes are considered ''add-ons'' to another primary code that cannot be reported independently. Specifically, add-on codes must always be reported with another primary code on the same day. The AMA states in the CPT 2024 Professional Edition (page xviii) that ''add-on codes are always performed in addition to the primary service or procedure and must never be reported as a stand-alone code.'' In most cases, add-on codes are typically ancillary and supportive to a primary diagnostic or therapeutic modality and are an integral part of the primary service they support. As specified under 42 CFR 419.2(b)(18), certain services described by add-on codes are generally packaged under the OPPS, and payments for the codes are bundled with the primary codes.

Consequently, HCPCS codes 96133 and 96137 are not paid separately under the OPPS, but instead, their payment is packaged into the primary code.

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59246 through 59247), we stated that the costs associated with administering a partial hospitalization program at a hospital represent the most resource intensive of all outpatient mental health services. We continue to believe that the Composite APC methodology, which limits the aggregate payment for specified mental health services provided by one hospital to a single beneficiary on a single date of service, based on the payment rates associated with the APCs for the individual services, to the per diem payment rate for four partial hospitalization services provided in a day by a hospital (the payment amount for APC 5864), is appropriate.

We will continue to examine these concerns and will determine if any modifications to this policy are warranted in future rulemaking.

After consideration of the public comments we received, we are finalizing our proposal, without modification, that when the aggregate payment for specified mental health services provided by one hospital to a single beneficiary on a single date of service, based on the payment rates associated with the APCs for the individual services, exceeds the maximum per diem payment rate for four partial hospitalization services provided in a day by a hospital (the payment amount for APC 5864), those specified mental health services would be paid through composite APC 8010 for CY 2025. In addition, we are finalizing setting the payment rate for composite APC 8010 for CY 2025 at the same payment rate that we set for APC 5864, which is the maximum partial hospitalization per diem payment rate for a hospital.

(2) Multiple Imaging Composite APCs (APCs 8004, 8005, 8006, 8007, and 8008)

Effective January 1, 2009, we provide a single payment each time a hospital submits a claim for more than one imaging procedure within an imaging family on the same date of service, to reflect and promote the efficiencies hospitals can achieve when performing multiple imaging procedures during a single session (73 FR 41448 through 41450). We utilize three imaging families based on imaging modality for purposes of this methodology: (1) ultrasound; (2) computed tomography (CT) and computed tomographic angiography (CTA); and (3) magnetic resonance imaging (MRI) and magnetic resonance angiography (MRA). The HCPCS codes subject to the multiple imaging composite policy and their respective families are listed in Table 6.

While there are three imaging families, there are five multiple imaging composite APCs due to the statutory requirement under section 1833(t)(2)(G) of the Act that we differentiate payment for OPPS imaging services provided with and without contrast. While the ultrasound procedures included under the policy do not involve contrast, both CT/CTA and MRI/MRA scans can be provided either with or without contrast. The five multiple imaging composite APCs established in CY 2009 are:

- APC 8004 (Ultrasound Composite);
- APC 8005 (CT and CTA without Contrast Composite);
- APC 8006 (CT and CTA with Contrast Composite);
- APC 8007 (MRI and MRA without Contrast Composite); and
- APC 8008 (MRI and MRA with Contrast Composite).

We define the single imaging session for the ''with contrast'' composite APCs as having at least one or more imaging procedures from the same family performed with contrast on the same date of service. For example, if the hospital performs an MRI without contrast during the same session as at least one other MRI with contrast, the hospital will receive payment based on the payment rate for APC 8008, the ''with contrast'' composite APC.

We make a single payment for those imaging procedures that qualify for payment based on the composite APC payment rate, which includes any packaged services furnished on the same date of service. The standard (noncomposite) APC assignments continue to apply for single imaging procedures and multiple imaging procedures performed across families. For a full discussion of the development of the multiple imaging composite APC methodology, we refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68559 through 68569).

For CY 2025, we proposed to continue to pay for all multiple imaging procedures within an imaging family performed on the same date of service using the multiple imaging composite APC payment methodology. We continue to believe that this policy would reflect and promote the efficiencies hospitals can achieve when performing multiple imaging procedures during a single session.

For CY 2025, except where otherwise indicated, we proposed to use the costs derived from CY 2023 claims data to set the proposed CY 2025 payment rates. Therefore, for CY 2025, the proposed payment rates for the five multiple imaging composite APCs (APCs 8004, 8005, 8006, 8007, and 8008) were based on proposed geometric mean costs calculated from CY 2023 claims available for the CY 2025 OPPS/ASC proposed rule that qualify for composite payment under the current policy (that is, those claims reporting more than one procedure within the same family on a single date of service). To calculate the proposed geometric mean costs, we used the same methodology that we used to calculate the geometric mean costs for these composite APCs since CY 2014, as described in the CY 2014 OPPS/ASC final rule with comment period (78 FR 74918). The imaging HCPCS codes referred to as ''overlap bypass codes'' that we removed from the bypass list for purposes of calculating the proposed multiple imaging composite APC geometric mean costs, in accordance with our established methodology as stated in the CY 2014 OPPS/ASC final rule with comment period (78 FR 74918), are identified by asterisks in Addendum N to this final rule with comment period (which is available via the internet on the CMS website) and are discussed in more detail in section II.A.1.a of the this final rule with comment period.

For this final rule with comment period, we were able to identify approximately 0.95 million ''single session'' claims out of an estimated 2.1 million potential claims for payment through composite APCs from our ratesetting claims data, which represents approximately 45.0 percent of all eligible claims, to calculate the final CY 2025 geometric mean costs for the multiple imaging composite APCs. Table 6 lists the final HCPCS codes that would be subject to the multiple imaging composite APC policy and their respective families and approximate composite APC final geometric mean costs for CY 2025.

We did not receive any public comments on this policy. We are finalizing without modification our proposal to continue the use of multiple imaging composite APCs to pay for the provision of more than one imaging procedure from the same imaging family on the same date. Table 6 lists the HCPCS codes that will be subject to the multiple imaging composite APC policy and their respective imaging families and approximate composite APC final geometric mean costs for CY 2025.

BILLING CODE 4120–01–C

3. Changes to Packaged Items and Services

a. Background and Rationale for Packaging in the OPPS

Like other prospective payment systems, the OPPS relies on the concept of averaging to establish a payment rate for services. The payment may be more or less than the estimated cost of providing a specific service or a bundle of specific services for a particular beneficiary. The OPPS packages payments for multiple interrelated items

and services into a single payment to create incentives for hospitals to furnish services most efficiently and to manage their resources with maximum flexibility. Our packaging policies support our strategic goal of using larger payment bundles in the OPPS to maximize hospitals' incentives to provide care in the most efficient manner. For example, where there are a variety of devices, drugs, items, and supplies that could be used to furnish a service, some of which are more costly than others, packaging encourages hospitals to use the most cost-efficient item that meets the patient's needs, rather than to routinely use a more expensive item, which may occur if separate payment is provided for the item.

Packaging also encourages hospitals to effectively negotiate with manufacturers and suppliers to reduce the purchase price of items and services or to explore alternative group purchasing arrangements, thereby encouraging the most economical health care delivery. Similarly, packaging encourages hospitals to establish protocols that ensure that necessary services are furnished, while scrutinizing the services ordered by practitioners to maximize the efficient use of hospital resources. Packaging payments into larger payment bundles promotes the predictability and accuracy of payment for services over time. Finally, packaging may reduce the importance of refining service-specific payments because packaged payments include costs associated with higher cost cases requiring many ancillary items and services and lower cost cases requiring fewer ancillary items and services. Packaging encourages efficiency and is an essential component of a prospective payment system, therefore packaging payments for items and services that are typically integral, ancillary, supportive, dependent, or adjunctive to a primary service has been a fundamental part of the OPPS since its implementation in August 2000. As we continue to develop larger payment groups that more broadly reflect services provided in an encounter or episode of care, we have expanded the OPPS packaging policies. Most, but not necessarily all, categories of items and services currently packaged in the OPPS are listed in 42 CFR 419.2(b). Our overarching goal is to make payments for all services under the OPPS more consistent with those of a prospective payment system and less like those of a per-service fee schedule, which pays separately for each coded item. As a part of this effort, we have continued to examine the payment for items and services provided under the OPPS to determine which OPPS services can be packaged to further achieve the objective of advancing the OPPS toward a more prospective payment system.

b. Final CY 2025 Policy on Packaged Items and Services

For CY 2025, we examined the items and services currently provided under the OPPS, reviewing categories of integral, ancillary, supportive, dependent, or adjunctive items and services for which we believe payment would be appropriately packaged into payment for the primary service that they support. Specifically, we examined the HCPCS code definitions (including CPT code descriptors) and hospital outpatient department billing patterns to determine whether there were categories of codes for which packaging would be appropriate according to existing OPPS packaging policies or a logical expansion of those existing OPPS packaging policies.

For CY 2025, we did not propose any changes to the overall packaging policy discussed. We proposed to continue to conditionally package the costs of selected newly identified ancillary services into payment for a primary service where we believe that the packaged item or service is integral, ancillary, supportive, dependent, or adjunctive to the provision of care that was reported by the primary service HCPCS code.

While we did not propose any changes to the overall packaging policy, we proposed potential modifications to our packaging policy as described in the following sections.

We did not receive any public comments on our overall packaging policy proposal and therefore, we are finalizing our proposal to continue to conditionally package the costs of selected newly identified ancillary services into payment for a primary service where we believe that the packaged item or service is integral, ancillary, supportive, dependent, or adjunctive to the provision of care that was reported by the primary service HCPCS code, as proposed for CY 2025.

We did receive specific recommendations regarding C–APC packaging of Cell and Gene Therapies and associated products, which are addressed in section II.b.4 of this final rule with comment period, and the packaging of non-opioid treatments for pain relief, which are addressed in section XIII.E of this final rule with comment period. Additionally, commenters made recommendations on our packaging policies in the context of our diagnostic radiopharmaceutical proposal, which is discussed in the next section.

c. Payment for Diagnostic Radiopharmaceuticals

(1) Background on OPPS Packaging Policy for Diagnostic Radiopharmaceuticals

Under the OPPS, we package several categories of nonpass-through drugs, biologicals, and radiopharmaceuticals, regardless of the cost of the products. Because the products are packaged according to the policies in § 419.2(b), we refer to them as ''policy-packaged'' drugs, biologicals, and radiopharmaceuticals. In particular, under § 419.2(b)(15), payment for drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure is packaged with the payment for the related procedure or service. Packaging costs into a single aggregate payment for a service, encounter, or episode of care is a fundamental principle that distinguishes a prospective payment system from a fee schedule. In general, packaging the costs of supportive items and services into the payment for the primary procedure or service with which they are associated encourages hospital efficiencies and enables hospitals to manage their resources with maximum flexibility.

In the CY 2008 OPPS/ASC final rule with comment period we finalized the packaging status of diagnostic radiopharmaceuticals as part of our overall enhanced packaging approach for the CY 2008 OPPS and subsequent years (72 FR 66635 through 66641). Importantly, we believed diagnostic radiopharmaceuticals are always intended to be used with a diagnostic nuclear medicine procedure and function as supplies when used in a diagnostic test or procedure, making it appropriate to package the payment for the diagnostic radiopharmaceutical into the payment for the related nuclear medicine procedure. Diagnostic radiopharmaceuticals are one specific type of product that is policy packaged under the category described by § 419.2(b)(15). Since we implemented this policy in CY 2008, interested parties have raised concerns regarding policy packaging of diagnostic radiopharmaceuticals. In previous rulemaking (87 FR 71962 and 71963), commenters recommended that CMS always pay separately under the OPPS for diagnostic radiopharmaceuticals, not just when the products have pass-through payment status. Many of these commenters mentioned that pass-

through payment status helps the diffusion of new diagnostic radiopharmaceuticals into the market. However, commenters believe the packaged payment rate is often inadequate after pass-through status expires, especially in cases where the diagnostic radiopharmaceutical is high-cost and has low utilization.

We have heard from interested parties regarding alternative payment methodologies, such as subjecting diagnostic radiopharmaceuticals to the drug packaging threshold and creating separate APC payments for diagnostic radiopharmaceuticals with a per-day cost greater than $500. Interested parties have also recommended that we analyze our nuclear medicine APC structure and consider establishing additional nuclear medicine APCs to reflect the costs of diagnostic radiopharmaceuticals more accurately. Historically, commenters opposed incorporating the cost of diagnostic radiopharmaceuticals into the associated nuclear medicine APC as the nuclear medicine APCs are sometimes paid at a lower rate than the payment rate for the diagnostic radiopharmaceutical itself when it has pass-through payment status (87 FR 71962 and 71963).

Importantly, commenters historically have also been concerned that packaging payment for precision diagnostic radiopharmaceuticals in the outpatient hospital setting creates barriers to beneficiary access for safety net hospitals serving a high proportion of Medicare beneficiaries and hospitals serving underserved communities (87 FR 71962 and 71963). Commenters specified that certain populations, such as those with Alzheimer's disease, depend on the use of certain high-cost diagnostic radiopharmaceuticals. Commenters discussed difficulties enrolling hospitals in clinical studies due to OPPS packaging policies and suggested that we pay separately under the OPPS specifically for radiopharmaceuticals that are used for Alzheimer's disease. Additionally, commenters have recommended that CMS continue to apply radiolabeled product edits to the nuclear medicine procedures to ensure that all packaged costs are included on nuclear medicine claims to establish appropriate payment rates in the future. Beginning January 1, 2008, CMS implemented OPPS edits that require hospitals to include a HCPCS code for a radiolabeled product when a separately payable nuclear medicine procedure is present on a claim. This policy to require hospitals to include a HCPCS code for a radiolabeled product for a separately payable nuclear medicine procedure ended in CY 2014 (78 FR 75033 through 75034).

Many of these comments and our responses have been discussed in rulemaking since the policy to package diagnostic radiopharmaceuticals was adopted, and they prompted us to solicit comment on payment for diagnostic radiopharmaceuticals in the CY 2024 OPPS/ASC proposed rule (88 FR 49577). In that proposed rule, we stated we continue to believe that diagnostic radiopharmaceuticals are an integral component of many nuclear medicine and imaging procedures and charges associated with them should be reported on hospital claims to the extent they are used. Accordingly, we reiterated our belief that the payment for the diagnostic radiopharmaceutical should be reflected within the payment for the primary procedure with which it is used. We noted that ratesetting uses the geometric mean of reported procedure costs, which in the example of nuclear medicine procedures includes the costs of the reported diagnostic radiopharmaceutical, based on data submitted to CMS from all hospitals paid under the OPPS to set the payment rate for the service. The costs that are calculated by Medicare reflect the average costs of items and services that are packaged into a primary procedure and will not necessarily equal the sum of the cost of the primary procedure and the Average Sales Price (ASP) of the specific items and services used in the procedure in each case. Furthermore, we explained that the costs are based on the reported costs submitted to Medicare by the hospitals and not the list price established by the manufacturer. Claims data that include the diagnostic radiopharmaceutical packaged with the associated procedure should reflect the combined cost of the procedure and the radiopharmaceutical used in the procedure.

As we have reiterated over the years, we believe packaging policies are inherent principles of the OPPS and are essential to a prospective payment system. At the same time, we have explained that we are committed to ensuring beneficiary access to diagnostic radiopharmaceuticals while also ensuring the availability of new and innovative diagnostic tools for Medicare beneficiaries. Therefore, we sought public comments on potential modifications to our packaging policy for diagnostic radiopharmaceuticals to ensure equitable payment and continued beneficiary access.

As described in the CY 2024 OPPS/ASC proposed rule (88 FR 49578), we solicited comment on how the OPPS packaging policy for diagnostic radiopharmaceuticals has impacted beneficiary access, including whether there are specific patient populations or clinical disease states for whom this issue is especially critical.

In addition, we solicited comment on the following potential approaches that would enhance beneficiary access, while also maintaining the principles of the outpatient prospective payment system. These approaches included: (1) paying separately for diagnostic radiopharmaceuticals with per-day costs above the OPPS drug packaging threshold of $140; (2) establishing a specific per-day cost threshold that may be greater or less than the OPPS drug packaging threshold; (3) restructuring APCs, including by adding nuclear medicine APCs for services that utilize high-cost diagnostic radiopharmaceuticals; (4) creating specific payment policies for diagnostic radiopharmaceuticals used in clinical trials; and (5) adopting codes that incorporate the disease state being diagnosed or a diagnostic indication of a particular class of diagnostic radiopharmaceuticals.

Finally, we were interested in hearing from stakeholders how the suggested policy modifications might impact our overarching goal of utilizing packaging policies to better align OPPS policies with those of a prospective payment system rather than a fee schedule. We stated we would also like to know if making any of the suggested policy changes could have negative consequences for beneficiaries, such as unintentionally influencing clinical practice decisions, increasing beneficiary cost-sharing obligations, or inadvertently encouraging the use of higher-cost diagnostic radiopharmaceuticals over lower cost, but equally effective, diagnostic options.

We received a significant number of comments in response to the comment solicitation on potential issues caused by our current payment policy for diagnostic radiopharmaceuticals under the OPPS and on new approaches to payment for these products. Commenters expressed concerns regarding the CMS policy to package diagnostic radiopharmaceuticals and the financial implications this policy has for facilities. Commenters believe that, for newer, more innovative radiopharmaceuticals, the current OPPS packaging policy has led to a lack of patient access to the technologies after the radiopharmaceutical's pass-through status expires, especially if there is no clinical alternative to the radiopharmaceutical. Most commenters requested that CMS provide separate payment for diagnostic

radiopharmaceuticals. Some commenters believed paying separately for all diagnostic radiopharmaceuticals regardless of their per-day cost was the best methodology to avoid encouraging price inflation for diagnostic radiopharmaceuticals to reach a certain threshold. Other commenters thought that applying the existing OPPS per-day cost threshold ($135 for CY 2024) to the payment of diagnostic radiopharmaceuticals would be an adequate solution. Others supported a $500 threshold, and many cited the Facilitating Innovative Nuclear Diagnostics Act (FIND Act) of 2023 as their rationale for that number and recognized that the $500 threshold number may be a more targeted approach relative to the OPPS drug packaging threshold as the higher cost diagnostic radiopharmaceuticals are the most disadvantaged by the OPPS packaging policy in their view. For the full discussion on the comment solicitation summarized here, refer to the CY 2024 OPPS/ASC final rule with comment period (88 FR 81573 through 81577).

(2) Packaging Threshold for Diagnostic Radiopharmaceuticals

As stated in the CY 2024 OPPS final rule with comment period (88 FR 81577), we agree with commenters that payment for diagnostic radiopharmaceuticals is a complex and important issue. We explained that we intended to further consider these points and take them into consideration for future notice and comment rulemaking. As described in the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222), after significant consideration and ongoing engagement from interested parties, we proposed a change to our current policy that packages diagnostic radiopharmaceuticals regardless of their cost.

We continue to believe diagnostic radiopharmaceuticals are always intended to be used with a diagnostic nuclear medicine procedure and function as supplies when used in a diagnostic test or procedure, generally making it appropriate to package payment for them with payment for the related nuclear medicine procedure. In the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222), we stated that while we continue to believe that this should be the policy for most diagnostic radiopharmaceuticals, we believe there are certain situations in which the packaged payment amount attributed to the diagnostic radiopharmaceutical used in an imaging procedure assigned to a nuclear medicine APC may not adequately account for the cost of a diagnostic radiopharmaceutical that has a significantly higher cost, but lower utilization relative to the other diagnostic radiopharmaceuticals that may be used with the procedure. In situations where a hospital may have to pay significantly more to purchase a diagnostic radiopharmaceutical than Medicare pays, a hospital may decide not to provide that specific diagnostic radiopharmaceutical imaging agent to Medicare beneficiaries. This could potentially deny access to diagnostic tools for which there is no clinical alternative. To ensure Medicare payment policy is not providing a financial disincentive to using high cost, low utilization diagnostic radiopharmaceuticals, especially when those agents may be the most clinically appropriate, and to ensure appropriate beneficiary access, we believe a subset of diagnostic radiopharmaceuticals with higher per day costs should be paid separately and not packaged into the diagnostic procedure with which the diagnostic radiopharmaceutical is used.

To address these concerns, we proposed to pay separately for any diagnostic radiopharmaceutical with a per day cost greater than $630. Any diagnostic radiopharmaceutical with a per day cost below that threshold would continue to be policy packaged under the current policy at § 419.2(b)(15). We discuss our proposed methodology for determining the proposed per day cost threshold of $630 in further detail in this section.

To determine an appropriate threshold for our proposal, we estimated the approximate payment that would typically be attributable to diagnostic radiopharmaceutical payment within each nuclear medicine APC (APCs 5591, 5592, 5593, and 5594). We did this by assessing the offsets associated with these APCs that were directly attributable to ''policy packaged'' drugs. The offset amounts used are correlated with the approximate portion of APC payment associated with these ''policy packaged'' drugs. For nuclear medicine APCs, the primary ''policy packaged'' drugs are diagnostic radiopharmaceuticals. To calculate this threshold, we calculated a volume weighted average of the offset dollar amount of each nuclear medicine APC. This involved taking the offset percentage for ''policy packaged'' drugs, multiplying it by the APC geometric mean to get an offset dollar amount, and then multiplying that offset amount by the number of single claims to get the total offset amount for each nuclear medicine APC level. We then calculated the sum of the total offset amount for all 4 of the nuclear medicine APCs. We divided this number by the total number of single claims for all 4 nuclear medicine APCs, resulting in $314.28, which represents the volume weighted average policy packaged offset amount for the nuclear medicine APC series. We then took that number and multiplied it by 2, and rounded it to the nearest $5 increment, which resulted in $630. See Table 7 for the values used to calculate this threshold amount. We noted that the data values in Table 7 were collected without unpackaging the set of diagnostic radiopharmaceuticals listed in Table 8. We noted that if we finalized our proposal and those diagnostic radiopharmaceuticals were unpackaged, it would change the APC geometric mean unit costs (MUCs) as well as the offset percentages. This is why the APC geometric mean cost values listed below are not the same as in the addenda to this rule.

TABLE 7: CY 2025 COSTS STATISTICS FOR NUCLEAR MEDICINE APCS USED TO CALCULATE $630 THRESHOLD

APC	APC Title	Number of Single Claims	APC Geometric mean Cost	Portion of APC Payment Associated with "Policy Packaged" Drugs / Offset Percent for Packaged Drugs that are Always Packaged
5591	Level 1 Nuclear Medicine and Related Services	155,289	$416.50	0.152
5592	Level 2 Nuclear Medicine and Related Services	60,334	$556.84	0.2146
5593	Level 3 Nuclear Medicine and Related Services	496,758	$1,399.48	0.2387
5594	Level 4 Nuclear Medicine and Related Services	402,439	$1,738.01	0.2393

The offset percentages used were updated based on the available data for the CY 2025 proposed rule and these offset percentages are usually the offsets that are published in the final rule. However, we included the data in Table 7 to illustrate how we arrived at the proposed $630 threshold. Additionally, the file and corresponding offset percentages used for the $630 threshold are similar to and consistent with the ones that can be found in the CY 2024 NFRM APC Offset File. These files are available via the internet on the CMS OPPS website.[7]

We proposed to multiply by two the volume weighted average amount of the offset to establish the threshold triggering separate payment because this amount would ensure that separate payment would apply only to diagnostic radiopharmaceuticals whose costs significantly exceed the approximate amount of payment already attributed to the product in the nuclear medicine APC payment. This is consistent with the principles of a prospective payment system where some payments are lower than hospitals' costs while other payments are greater than a hospitals' costs. However, diagnostic radiopharmaceuticals with costs more than double the volume weighted average amount of the offset could present a hospital with a significant financial loss. This is why the OPPS has several payment provisions that rely on a multiplier of costs as a threshold for modifying payment.

Our proposed approach to multiply the average offset amount by two is consistent with the two-times rule the OPPS uses to determine Ambulatory Payment Classification (APC) levels, where a significant service that has a cost greater than two times the lowest cost significant service in an APC is generally moved to a higher level APC in the series. The two-times rule requires that the highest calculated cost of an individual procedure categorized to any given APC cannot exceed two times the calculated cost of the lowest cost procedure categorized to that same APC. We note that the two-times rule does not apply to diagnostic radiopharmaceuticals themselves, but only to the procedures in which they are used, which is why we are proposing a diagnostic radiopharmaceutical packaging threshold utilizing a similar two-times methodology.

As described in the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222), our proposed approach to multiply the average offset amount by two is also generally consistent with the OPPS outlier policy applicable to certain high-cost procedures, where costs greater than 1.75 times the APC payment trigger an additional outlier payment. The OPPS provides outlier payments to hospitals to help mitigate the financial risk associated with high-cost and complex procedures, where a very costly service could present a hospital with significant financial loss. Outlier payments are provided on a service basis when the cost of a service exceeds the APC payment amount multiplier threshold (1.75) as well as the APC payment amount plus a fixed-dollar amount threshold. The proposed diagnostic radiopharmaceutical packaging threshold would serve a similar purpose as the outlier policy, in that it would provide payments to hospitals to help mitigate the financial risk associated with high-cost diagnostic radiopharmaceuticals, where a very costly diagnostic radiopharmaceutical could present a hospital with significant financial loss.

We proposed a multiplier of two and explained that we believe two is the most appropriate number for the multiplier for the volume weighted average amount of the offset, but we sought comment on the alternatives of using 1.75 times the volume weighted average amount of the offset as the threshold amount for triggering separate payment, or another appropriate multiplier amount. We stated that, for example, an interested party could present data that a financial disincentive to use diagnostic radiopharmaceuticals exists when costs are 1.75 times, or three times or five times, the volume weighted average offset amount. Since the hospital outpatient outlier payment policy is a longstanding policy familiar to most hospitals, we sought comment on utilizing elements of that policy for purposes of our proposed diagnostic radiopharmaceutical packaging policy in order to help hospitals mitigate the financial risk that may be associated with furnishing high-cost and complex diagnostic radiopharmaceuticals. As previously mentioned, we sought comment on the use of 1.75 times as the multiplier threshold rather than 2. Although the outlier policy uses both a 1.75 multiplier threshold and a fixed-dollar threshold, we sought comment regarding the use of 1.75 as the multiplier to set a fixed dollar threshold for the volume weighted average amount of the offset as the goals of the

[7] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/annual-policy-files.*

outlier policy and the proposed diagnostic radiopharmaceutical policy are similar.

We also solicited comment on the alternative of using the standard drug packaging threshold, which was proposed to be $140 for CY 2025 and is being finalized as $140 for CY 2025 in section V.B of this final rule with comment period, as the threshold for separate payment for diagnostic radiopharmaceuticals. We believe that diagnostic radiopharmaceuticals are functioning as supplies to the nuclear medicine procedure in which they are used. Because diagnostic radiopharmaceuticals function as supplies in the diagnostic procedures in which they are used, they are serving as an item that is integral, ancillary, supportive, dependent, or adjunctive to the primary diagnostic service. This is in contrast to therapeutic drugs, biologicals, and therapeutic radiopharmaceuticals that are typically packaged under the standard drug packaging threshold. These products could be the only therapeutic modality provided to a patient during an encounter and may not serve as an item that is integral, ancillary, supportive, dependent, or adjunctive to the primary service. Due to this clinical difference, we did not believe that using the standard drug packaging threshold was appropriate for diagnostic radiopharmaceuticals, and therefore we proposed a threshold specific to diagnostic radiopharmaceuticals. As stated in the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222), we were interested to hear from commenters whether they agreed or disagreed with this assessment.

Comment: A significant portion of commenters provided broad support for CMS's overall proposal regarding payment for diagnostic radiopharmaceuticals, stating that this policy will ensure access for Medicare beneficiaries, empower clinicians to make the best treatment decisions, and encourage innovation from industry. Commenters frequently stated that this policy will ensure access for underrepresented populations, which often have higher rates of disease but lower rates of detection.

Response: We thank commenters for their support.

Comment: Many commenters were supportive of CMS's proposal regarding separate payment for diagnostic radiopharmaceuticals, including the packaging threshold of $630. Commenters appreciated that CMS was targeting those products with costs that significantly exceeded the amount of the current packaged payment. These commenters supported the overall methodology and rationale for the calculation of the threshold, which was based on the approximate payment that would typically be attributable to diagnostic radiopharmaceuticals within each nuclear medicine APC by assessing the offsets associated with these APCs that were directly attributable to ''policy packaged'' drugs. Commenters generally agreed with using two times this amount to establish the threshold as they agreed it correlated with the statutory OPPS two times rule.

Response: We thank commenters for their support of our proposal to create a $630 threshold and the associated methodology used to calculate that threshold.

Comment: While many commenters were supportive of CMS's proposed $630 using the two times threshold multiplier, several said they also would not be opposed to a 1.75 multiplier, which would result in a $550 threshold. Other commenters advocated solely for a 1.75 multiplier citing consistency with the OPPS outlier policy, which they believed is a more appropriate comparator policy than the OPPS two times rule.

Response: The OPPS provides outlier payments to hospitals to help mitigate the financial risk associated with high-cost and complex procedures, where a very costly service could present a hospital with significant financial loss. Outlier payments are provided on a service basis when the cost of a service exceeds the APC payment amount multiplier threshold (1.75) as well as the APC payment amount plus a fixed-dollar amount threshold. An outlier payment is triggered when the cost of a service exceeds two different thresholds, a fixed dollar threshold and a multiplier threshold. A 1.75 multiplier is appropriate for the outlier payment policy as it is combined with a secondary fixed-dollar threshold, which is appropriate for the broader OPPS outlier policy which can apply to a large number of services with vastly different costs and payment amounts. For the OPPS outlier policy, two separate thresholds must be surpassed in order for separate payment to be made. We believe the lower 1.75 multiplier is appropriate for the outlier policy as there is also a secondary threshold that must be met to trigger outlier payments. The single threshold for separate payment for diagnostic radiopharmaceuticals would apply to a much narrower range of products; therefore, we do not believe the same two-threshold system used for OPPS outlier payments is practical. This makes a single threshold more appropriate, and because we are using a single threshold, we believe the higher two times multiplier is more appropriate, as there is not a secondary threshold that must also be surpassed. We believe our proposed approach to multiply the average offset amount by two to set the threshold is the most appropriate approach to determining this threshold, as this results in only those products whose costs significantly exceed, by two-times, the approximate amount of payment already attributed to the product in the nuclear medicine APC payment. This multiplier is consistent with the two-times rule the OPPS uses to determine Ambulatory Payment Classification (APC) levels, which also uses a single two times multiplier, rather than a two-threshold system like the OPPS outlier policy. The OPPS two times rule instructs that a significant service that has a cost greater than two times the lowest cost significant service in an APC is generally moved to a higher-level APC in the series. The two-times rule requires that the highest calculated cost of an individual procedure categorized to any given APC cannot exceed two times the calculated cost of the lowest cost procedure assigned to that same APC. A two times multiplier ensures that separate payment would apply only to diagnostic radiopharmaceuticals whose costs significantly exceed the approximate amount of payment already attributed to the product in the nuclear medicine APC payment.

Comment: A few commenters suggested other thresholds, such as the OPPS drug packaging threshold, in order to treat diagnostic radiopharmaceuticals in a similar manner as other drugs, biologicals, and therapeutic radiopharmaceuticals paid under the OPPS. Commenters also believed that using a lower threshold actually decreased the likelihood that a provider would be financially incentivized to use a product above the threshold, as more products would be paid separately using a lower threshold. They believed a lower threshold decreased the likelihood of a non-clinical financial incentive to use a higher cost radiopharmaceutical. Other commenters believed using a $500 threshold would be appropriate as it coincided with the figure used for separate payment for diagnostic radiopharmaceuticals in draft legislation, titled the Facilitating Innovative Nuclear Diagnostics (FIND) Act. Commenters also suggested using an alternative threshold multiplier, such as 1.51, 1.50, or 1.25. These commenters thought these lower thresholds would

allow for more products to be paid separately and argued a cost for a diagnostic radiopharmaceutical even 25 percent higher than the average diagnostic radiopharmaceutical cost could be considered significant and warrant separate payment. Two commenters suggested reassessing the threshold based on the changing costs of products over time or assessing which products are driving the APC payments and then setting the threshold higher than the cost of those high-volume products.

Response: We thank commenters for their comments; however, we believe the commenters' suggested thresholds are inconsistent with our OPPS two-times rule as described, which we believe is a longstanding and reasonable proxy for determining when costs exceed payment to a degree that warrants payment modification. The two-times rule utilizes a two times multiplier to determine APC levels, where a significant service that has a cost greater than two times the lowest cost significant service in an APC is generally moved to a higher-level APC in the series. The lower thresholds suggested by commenters would not follow this principle, and therefore, would not exclusively identify diagnostic radiopharmaceuticals whose costs significantly exceed the approximate amount of payment already attributed to the product in the nuclear medicine APC payment. We believe diagnostic radiopharmaceuticals are unique and therefore warrant their own specific threshold that is distinct from the broader drug packaging threshold used for therapeutic drugs, biologicals, and radiopharmaceuticals. This is because diagnostic radiopharmaceuticals are functioning as supplies to the nuclear medicine procedure in which they are used and are serving as an item that is integral, ancillary, supportive, dependent, or adjunctive to the primary diagnostic service. This is in contrast to therapeutic drugs, biologicals, and therapeutic radiopharmaceuticals that are typically packaged under the standard drug packaging threshold. These products could be the only therapeutic modality provided to a patient during an encounter and may not serve as an item that is integral, ancillary, supportive, dependent, or adjunctive to the primary service. Due to these differences, we believe a threshold specific to diagnostic radiopharmaceuticals is appropriate.

Comment: Some commenters advocated that CMS use a threshold of at least $630. Several commenters believed that focusing separate payment on those radiopharmaceuticals whose costs significantly exceed the payment already attributable to the product will help concentrate the effects of unbundling on only those products that are most likely to create access issues for beneficiaries while reducing the broader effects on the nuclear medicine APCs. One commenter stated that unpackaging radiopharmaceuticals with per day costs greater than $630 would decrease the nuclear medicine APC procedure payment rates, but that decrease would be exacerbated if CMS used a lower threshold.

Response: We thank commenters for their support. We agree a $630 threshold would appropriately identify only those diagnostic radiopharmaceuticals whose costs significantly exceed the approximate amount of payment already attributed to the product in the nuclear medicine APC payment.

Comment: Several commenters requested that CMS clarify that the proposal does not alter the qualifications for pass-through payment status or the pass-through payment methodology for those diagnostic radiopharmaceuticals that apply for pass-through status under the OPPS.

Response: That is correct. This policy is distinct from the policies described in section V.A of this final rule with comment period, which describe the qualifications and payment methodology for those products that qualify for OPPS pass-through status.

Comment: A few commenters recommended CMS monitor the effects of this policy if finalized. For example, one commenter supported the proposal, but suggested CMS carefully monitor the affected nuclear medicine APCs and address any larger than expected alterations to their reimbursement or other unintended consequences. An additional commenter encouraged CMS to continue to evaluate this methodology as new products enter the market. This commenter recommended CMS ensure no unintended consequences of this policy occur, such as manufacturers purposefully pricing their products just above the payment threshold.

Response: We thank the commenter for their support. We will monitor the effects of this policy and will consider proposing modifications in future rulemaking if appropriate.

Comment: One commenter sought clarification from CMS that, if finalized, its proposal to provide separate payment for diagnostic radiopharmaceutical products would be implemented in a budget neutral manner.

Response: Yes. This policy will be implemented in a budget neutral manner.

After consideration of the public comments we received, we are finalizing this aspect of our proposal without modification and will pay separately for any diagnostic radiopharmaceutical with a per day cost greater than $630 for CY 2025. Any diagnostic radiopharmaceutical with a per day cost at or below that threshold will continue to be policy packaged under the current policy at § 419.2(b)(15).

(3) Calculating the Per Day Cost of Diagnostic Radiopharmaceuticals

We proposed to calculate the per day costs for diagnostic radiopharmaceuticals using a methodology similar to the one we use for determining the per day costs of drugs and biologicals for comparison to the OPPS drug packaging threshold, proposed to be $140 for CY 2025.

We proposed to calculate the per day cost based on the methodology described in section V.B.1.b of the CY 2025 OPPS/ASC proposed rule, which relies on the methodology in the CY 2006 OPPS/ASC proposed rule (70 FR 42723 and 42724) and finalized in the CY 2006 OPPS final rule with comment period (70 FR 68636 through 68638). Though the clinical use of the drugs, biologicals, and therapeutic radiopharmaceuticals differs from diagnostic radiopharmaceuticals, we believe the method of determining how much of that item is used per day should be similar. Therefore, we proposed to use a similar methodology for determining the per day costs of diagnostic radiopharmaceuticals, as we do drugs, biologicals, and therapeutic radiopharmaceuticals. This methodology consists of nine steps:

Step 1. After application of the CCRs, we aggregated all line-items for a single date of service on a single claim for each product. This resulted in creation of a single line-item with the total number of units and the total cost of a diagnostic radiopharmaceutical given to a patient in a single day.

Step 2. We then created a separate record for each diagnostic radiopharmaceutical by date of service, regardless of the number of lines on which the diagnostic radiopharmaceutical was billed on each claim. For example, ''diagnostic radiopharmaceutical X'' is billed on a claim with two different dates of service, and for each date of service, the diagnostic radiopharmaceutical is billed on two line-items with a cost of $10 and 5 units for each line-item. In this case,

the computer program would create two records for this diagnostic radiopharmaceutical, and each record would have a total cost of $20 and 10 units of the product.

Step 3. We trimmed records with unit counts per day greater or less than 3 standard deviations from the geometric mean.

Step 4. For each remaining record for a diagnostic radiopharmaceutical, we calculated the cost per unit of the diagnostic radiopharmaceutical. If the HCPCS descriptor for ''diagnostic radiopharmaceutical X'' is ''per 1 millicurie'' and one record was created for a total of 10 millicurie (as indicated by the total number of units for the diagnostic radiopharmaceutical on the claim for each unique date of service), the computer program divided the total cost for the record by 10 to give a per unit cost. We then weighted this unit cost by the total number of units in the record. We did this by generating a number of line-items equivalent to the number of units in that particular claim. Thus, a claim with 100 units of ''diagnostic radiopharmaceutical X'' and a total cost of $200 would be given 100 line-items, each with a cost of $2, while a claim of 50 units with a cost of $50 would be given 50 line items, each with a cost of $1.

Step 5. We trimmed the unit records with cost per unit greater or less than 3 standard deviations from the geometric mean.

Step 6. We aggregated the remaining unit records to determine the mean cost per unit of the diagnostic radiopharmaceutical.

Step 7. Using only the records that remained after records with unit counts per day greater or less than 3 standard deviations from the geometric mean were trimmed (step 3), we determined the total number of units billed for each item and the total number of unique per-day records for each item. We divided the count of the total number of units by the total number of unique per day records for each item to calculate an average number of units per day.

Step 8. We used the payment rate (the mean unit cost (MUC) derived from the CY 2023 hospital claims data) for each diagnostic radiopharmaceutical and multiplied the payment rate by the average number of units per day for each diagnostic radiopharmaceutical to arrive at its per day cost.

Step 9. We packaged the items with per day costs less than or equal to $630 and designated items with per day costs greater than $630 as separately payable.

As just described, to determine the proposed CY 2025 packaging status for all nonpass-through diagnostic radiopharmaceuticals, we proposed to use the per day cost, calculated on a HCPCS code-specific basis, of each diagnostic radiopharmaceutical that had a HCPCS code in CY 2023 and was paid (via packaged or separate payment) under the OPPS. We used data from CY 2023 claims processed through December 31, 2023, for this calculation.

We proposed to continue to package payment for diagnostic radiopharmaceuticals with per day costs less than or equal to $630 under our existing packaging policy for diagnostic radiopharmaceuticals that function as surgical supplies under § 419.2(b)(15). Similar to our policy for the drug packaging threshold, we proposed to use updated claims data to make final determinations of the packaging status of HCPCS codes for diagnostic radiopharmaceuticals for each OPPS/ASC final rule with comment period. We proposed to make an annual packaging determination for each diagnostic radiopharmaceutical HCPCS code only when we develop the OPPS/ASC final rule with comment period for the update year. We proposed that only diagnostic radiopharmaceutical HCPCS codes that are identified as separately payable in this final rule with comment period would be subject to quarterly updates.

Consequently, the packaging status of some HCPCS codes for diagnostic radiopharmaceuticals in the OPPS/ASC proposed rule may differ from the same HCPCS codes' packaging status determined based on the data used for the final rule with comment period. Under these circumstances, we proposed to follow the established policies for the OPPS drug packaging threshold, which were initially adopted for the CY 2005 OPPS (69 FR 65780), to more equitably pay for those diagnostic radiopharmaceuticals whose costs fluctuate relative to the proposed CY 2025 OPPS diagnostic radiopharmaceutical packaging threshold in a way that affects the product's payment status (packaged or separately payable). Our policy for the OPPS drug packaging threshold has not changed for many years and is the same as described in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70434). We believe these same policies should apply to diagnostic radiopharmaceuticals in order to ensure payment consistency for those diagnostic radiopharmaceuticals whose costs fluctuate relative to the proposed CY 2025 OPPS diagnostic radiopharmaceutical packaging threshold. For CY 2025, similar to our historical practice for the drug packaging threshold, we proposed to apply the following policies to those HCPCS codes for diagnostic radiopharmaceuticals whose relationship to the diagnostic radiopharmaceutical packaging threshold changes based on the final updated data: HCPCS codes for diagnostic radiopharmaceuticals that are proposed for separate payment in CY 2025, and that then have per day costs equal to or less than the CY 2025 final rule diagnostic radiopharmaceutical packaging threshold, based on the updated hospital claims data used for the CY 2025 final rule, would remain packaged in CY 2025. HCPCS codes for diagnostic radiopharmaceuticals for which we proposed packaged payment in CY 2025 but that then have per-day costs greater than the CY 2025 final rule drug packaging threshold, based on updated hospital claims data used for the CY 2025 final rule, would receive separate payment in CY 2025.

Comment: Most commenters were supportive of the methodology used to calculate the per day costs, and many commenters were able to analyze the cost data published with the proposed rule and calculate the same list of products with per day costs exceeding $630.

Response: We thank commenters for their support of our proposal, and for their agreement with our calculations of the per day costs.

Comment: A few commenters recommended CMS consider alternative methods of calculating per day costs and make refinements in the future as we gain more experience with this policy.

Response: We thank commenters for their input. Our methods for calculating per day cost are consistent with our longstanding policies for calculating per day costs for purposes of the OPPS drug packaging threshold and we believe they should be finalized for CY 2025 and subsequent years. We could address this methodology in future rulemaking if the need arises; however, this methodology has worked effectively for calculating per day costs of drugs, biologicals and radiopharmaceuticals for purposes of the OPPS drug packaging threshold, and we believe this well-known process will work equally well for diagnostic radiopharmaceuticals to create a trimmed data set from which from per day costs can be calculated.

Comment: Many commenters recommended that CMS not apply the proposed packaging rules in 2025 and pay separately for any product that was proposed for separate payment or that exceeds the cost threshold in the final rule data. Commenters stated that CMS

should only consider applying its proposed methodology after the separate payment threshold has been in effect for a reasonable period of time. Specifically, commenters recommended that HCPCS codes for diagnostic radiopharmaceuticals that are proposed for separate payment in CY 2025, and that then have per day costs equal to or less than the threshold for the final rule, be separately paid. Similarly, commenters believed HCPCS codes for diagnostic radiopharmaceuticals for which CMS proposed packaged payment in CY 2025 but that then have per-day costs greater than the CY 2025 final rule drug packaging threshold, based on updated hospital claims data used for the CY 2025 final rule, receive separate payment in CY 2025.

Commenters stated that the claims data and the cost report data are updated between the proposed and final rule. Specifically, commenters noted that the determination of whether a diagnostic radiopharmaceutical will qualify for separate payment uses both units and mean cost calculated from Medicare claims data to determine the per day cost. As the mean cost estimate relies on cost-to-charge ratios, in the commenter's view, the diagnostic radiopharmaceutical packaging determination is susceptible to fluctuations in the mean cost estimate and those fluctuations are not necessarily driven by variation in the actual price of the product. The commenter stated that this is in contrast to ASP based payment rates, as ASP is an external estimate of product cost.

Response: We thank commenters for their comments and understand their concerns about potential cost data fluctuations changing packaging determinations between the proposed and final rule. However, based on updated data for the final rule, the diagnostic radiopharmaceuticals that have per day costs that exceed $630 are the same 26 diagnostic radiopharmaceuticals that exceeded the $630 threshold using proposed rule data, meaning, for purposes of determining whether a product's per day cost exceeded $630, the updated data for the final rule did not change the list of qualifying products.

After consideration of the public comments we received, we are finalizing our proposal regarding the calculation of per day costs of diagnostic radiopharmaceuticals without modification. Specifically, we are finalizing a policy to calculate the per day costs for diagnostic radiopharmaceuticals for purposes of determining whether a diagnostic radiopharmaceutical qualifies for separate payment using a methodology similar to the one we use for determining the per day costs of drugs and biologicals for comparison to the OPPS drug packaging threshold. We calculated the per day cost based on the methodology described in section V.B.1.b of this final rule with comment period, which relies on the methodology in the CY 2006 OPPS/ASC proposed rule (70 FR 42723 and 42724) and finalized in the CY 2006 OPPS final rule with comment period (70 FR 68636 through 68638).

(4) Updating the Diagnostic Radiopharmaceutical Packaging Threshold in CY 2026

Starting in CY 2026 and subsequent years, we proposed to update the proposed threshold amount of $630 by the PPI for Pharmaceuticals for Human Use (Prescription) (Bureau of Labor Statistics series code WPUSI07003) from IHS Global, Inc (IGI). IGI is a nationally recognized economic and financial forecasting firm with which CMS contracts to forecast the various price indexes including the Producer Price Index (PPI) Pharmaceuticals for Human Use (Prescription). This is the same as the update factor used for the OPPS drug packaging threshold, where we originally used the four-quarter moving average PPI levels for Pharmaceutical Preparations (Prescription) to trend the $50 threshold forward from the third quarter of CY 2005 (when the Pub. L. 108–173 mandated threshold became effective) to the third quarter of the applicable calendar year. We believe it is appropriate to use the same PPI for Pharmaceuticals for Human Use (Prescription) for the diagnostic radiopharmaceutical packaging threshold, as diagnostic radiopharmaceuticals are also prescription pharmaceuticals for human use. We proposed that starting for CY 2026, we would use the most recently available four quarter moving average PPI levels to trend the final CY 2025 threshold forward from the third quarter of CY 2024 to the third quarter of CY 2025 and round the resulting dollar amount to the nearest $5 increment. We explained that the proposal to update the diagnostic radiopharmaceutical packaging threshold would maintain consistency with our longstanding methodology for updating the OPPS drug packaging threshold, which is discussed in more detail in section V.B.1.a. of this final rule with comment period and also in the CY 2007 OPPS/ASC final rule with comment period (71 FR 68085 and 68086).

Comment: The majority of commenters supported our proposal to update the final threshold by the PPI for Pharmaceuticals for Human Use (Prescription) in CY 2026 and future years. They stated this was appropriate to reflect the increasing cost of diagnostic radiopharmaceuticals annually.

Response: We thank commenters for their support.

Comment: A small number of commenters were not in favor of our proposal to update the threshold by the PPI for Pharmaceuticals for Human Use (Prescription). One commenter believed CMS should take a broader approach and comprehensively review the appropriateness of the threshold amount yearly based on data for that year.

Response: We thank commenters for their insights; however, we continue to believe it is appropriate to subject the diagnostic radiopharmaceutical packaging threshold to the same update factor that is used for the OPPS drug packaging threshold as supported by the majority of commenters. Updating the finalized threshold by the PPI for Pharmaceuticals for Human Use (Prescription) is consistent with our longstanding policy to update the OPPS drug packaging threshold annually. This PPI update factor provides aggregate changes in the selling prices of pharmaceuticals, which makes it an appropriate factor with which to update the diagnostic radiopharmaceutical packaging threshold to ensure that as diagnostic radiopharmaceuticals' costs change over time, the threshold continues to identify products with costs that significantly exceed the otherwise applicable APC payment amounts as determined in this rule and that therefore should be eligible for separate payment.

After consideration of the public comments we received, we are finalizing our proposal to update the finalized packaging threshold without modification. Specifically, starting in CY 2026 and for subsequent years, we will update the threshold amount of $630 by the PPI for Pharmaceuticals for Human Use (Prescription) (Bureau of Labor Statistics series code WPUSI07003) from IHS Global, Inc (IGI).

(5) Amount of Separate Payment for Diagnostic Radiopharmaceuticals Exceeding the Threshold

As discussed in the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222), once we determine that the per day cost of a nonpass-through diagnostic radiopharmaceutical exceeds the cost threshold of $630 per day for CY 2025, we then proposed to assign that radiopharmaceutical to an APC,

making it a specified covered outpatient drug (SCOD) per section 1833(t)(14)(B) of the Act. Accordingly, we proposed to pay for those nonpass-through, separately payable diagnostic radiopharmaceuticals based on our authority under section 1833(t)(14)(A)(iii)(II) of the Act. While under this authority we would ordinarily use the ASP methodology under section 1847A of the Act, we find that the ASP data we have is not usable for payment purposes. As previously mentioned, radiopharmaceuticals are not required to report ASP under section 1847A of the Act, and as such, there are very few manufacturers reporting ASP for their products currently. As discussed in the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222), of those few manufacturers reporting ASP, the ASP values that we do have generally do not align with the ASP we would expect based on the cost and Mean Unit Cost (MUC) data submitted to CMS by hospitals. For example, a frequently used diagnostic radiopharmaceutical had a reported ASP that is over 23,000 percent higher than the MUC derived from claims data. As manufacturers of diagnostic radiopharmaceuticals may be unaware of the correct reporting requirements, we explained that we believe it would be inappropriate to propose to pay for separately payable diagnostic radiopharmaceuticals based on their ASPs as currently reported, without giving manufacturers the opportunity to submit, certify, or restate the ASPs of their products. We believed MUC would be an appropriate proxy for the average price for a diagnostic radiopharmaceutical for a given year, as it is calculated based on the average costs for a particular year and is directly reflective of the actual cost data that hospitals submit to CMS.

In the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222), we stated that under our policy for therapeutic radiopharmaceuticals (74 FR 60520), there are several requirements for reporting ASP. For example, ASP data submitted would need to be provided for a patient-specific dose, or patient-ready form, of the radiopharmaceutical in order to properly calculate the ASP amount for a given HCPCS code if that HCPCS code dose descriptor was per study dose or similar. ASP data submitted should align with the code's dose descriptor and billing unit. We stated we would expect that the ASP data reported by a manufacturer would be representative of the item(s) sold by the manufacturer. We used the term ''patient-ready'' in that rule to ensure that ASP data submitted for OPPS payment purposes for separately payable radiopharmaceuticals reflect the costs of all the component materials of the finished radiopharmaceutical product. We expected that the ASP data would represent the sales price of all of the component materials of the finished radiopharmaceutical product sold by the manufacturer in terms that reflect the applicable HCPCS code descriptor such as ''per study dose'', ''per millicurie'' and ''up to XX millicuries.'' For the few manufacturers that reported ASP data for their diagnostic radiopharmaceuticals, we believed it may be possible that they are not aware of the reporting requirements or are unaware of how to properly report ASP for their product, as CMS has not used ASP as the basis of payment for nonpass-through diagnostic radiopharmaceuticals before. Therefore, we explained that we believe a reasonable alternative for CY 2025 for separate payment of diagnostic radiopharmaceuticals that exceed the per day cost threshold is to use of their mean unit cost from claims data. This is consistent with our current practice for therapeutic radiopharmaceuticals when ASP data is not available. For diagnostic radiopharmaceuticals, we believe that ASP data is effectively not available for purposes of determining a payment amount and, therefore, payment based on MUC is a reasonable alternative.

We previously acknowledged (74 FR 35335), and continue to acknowledge, the complexities associated with reporting ASP for radiopharmaceuticals. We encourage manufacturers to submit ASP information for diagnostic radiopharmaceuticals, if possible. While we proposed to use MUC to pay for separately payable diagnostic radiopharmaceuticals in CY 2025, manufacturers can begin, or continue, to report ASP data for potential future use in paying for diagnostic radiopharmaceuticals. For CY 2025, ASP reporting is voluntary for diagnostic radiopharmaceuticals paid under the OPPS. We encouraged interested parties to submit comments regarding potential issues that may arise that prevent appropriate ASP reporting for diagnostic radiopharmaceuticals. If manufacturers choose to report ASP data, the data must meet reporting requirements to be used for payment under the OPPS.

As discussed in the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222), manufacturers that choose to report ASP data for their diagnostic radiopharmaceuticals would need to provide comprehensive data for CMS to calculate an ASP amount for a given HCPCS code. In instances where there is more than one manufacturer of a particular diagnostic radiopharmaceutical, we proposed that all manufacturers would need to submit ASP information for payment to be made based on ASP. This is because it would be inappropriate for Medicare payment for a HCPCS code to be based on the payment information submitted by one manufacturer, if that payment is used for a product made by different manufacturers. This is because the ASP information reported by one manufacturer might not reflect the ASP of the same product made by other manufacturers.

We note that ASP submissions for radiopharmaceutical payment under the OPPS would need to meet all of the existing regulatory and subregulatory requirements of the ASP reporting process under sections 1847A and 1927(b)(3) of the Act.

Specifically, we reiterated our ASP reporting requirements outlined in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60520) for products for which we are encouraging the reporting of ASP, but for which reporting is not statutorily required. The ASP data submitted would need to be provided for a patient-specific dose, or patient-ready form, of the diagnostic radiopharmaceutical in order to properly calculate the ASP amount that aligns with the dose descriptor for a given HCPCS code. When reporting an ASP for a separately payable radiopharmaceutical, we expect that the ASP data reported by a manufacturer would be representative of the item(s) sold by the manufacturer. In the CY 2010 OPPS/ASC final rule with comment period (74 FR 60520), we used the term ''patient-ready'' to ensure that ASP data submitted for OPPS payment purposes for separately payable radiopharmaceuticals reflect the costs of all the component materials of the finished radiopharmaceutical product. We expect that the ASP data would represent the sales price of all of the component materials of the finished radiopharmaceutical product sold by the manufacturer in terms that reflect the applicable HCPCS code descriptor, such as ''per study dose'' or ''millicurie.'' We defined a ''patient-ready'' dose for OPPS purposes as including all component materials of the radiopharmaceutical, at a minimum, and any other processing the manufacturer requires to produce the radiopharmaceutical that it sells that are reflected in the sales price, including radiolabeling, as long as any fees paid for such processing done on behalf of

the manufacturer meet the definition of ''bona fide service fees'' under § 414.802 (74 FR 60525).

As discussed in the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222), we understand that manufacturers of separately payable radiopharmaceuticals produce radiopharmaceuticals that require a variety of processing steps in order to prepare the product for administration to a beneficiary. To be used for separate OPPS radiopharmaceutical payment, the ASP data reported by a manufacturer must represent sales of all of the component materials associated with the radiopharmaceutical. For our full policy on which factors to incorporate into ASP pricing, please see the CY 2010 OPPS/ASC final rule with comment period (74 FR 60520 through 60521).

In order to be used for payment under the OPPS, all radiopharmaceutical ASP submissions should meet the existing regulatory and subregulatory requirements of the ASP submission process under sections 1847A and 1927(b)(3) of the Act. In particular, we explained that we believe the ''bona fide service fee'' test in the ASP regulations is instructive here, and we refer readers to the CY 2010 OPPS/ASC final rule with comment period for our discussion on radiopharmaceutical ASP reporting (74 FR 60521).

To summarize our CY 2010 policy for ASP reporting on radiopharmaceuticals for OPPS payment purposes (74 FR 60521), a patient-specific dose or patient-ready form in the context of OPPS ASP submission for radiopharmaceutical payment means that the ASP reflecting manufacturer sales must represent sales of all of the component materials for the radiopharmaceutical, including a minimum of a cold kit and a radioisotope, and be reported in terms that reflect the applicable HCPCS code descriptor, such as ''treatment dose'' or ''millicurie.'' The ASP would not necessarily take into account the preparation of the final form of the radiopharmaceutical for patient administration, including radiolabeling, which may be conducted by the manufacturer, freestanding radiopharmacy, hospital pharmacy, or other entity. With respect to the latter, fees paid by the manufacturer for these services would be excluded from the ASP calculation (that is, would not be considered price concessions that reduce the ASP) only if they are ''bona fide service fees'' as defined in the regulations governing ASP. Thus, if the manufacturer pays a ''bona fide service fee'' for the services of the freestanding radiopharmacy, hospital pharmacy, or other entity, and reflects that fee in its price for the radiopharmaceutical, the amount of the ''bona fide service fee'' would be taken into account in the reported ASP data. However, manufacturers are not required to pay for the preparation of a radiopharmaceutical (including radiolabeling) in a freestanding radiopharmacy, hospital pharmacy, or other entity after sale of all of the component materials, and in that case, the cost of those services would not be reflected in the ASP data submitted to CMS. Manufacturers should submit ASP data for a separately payable radiopharmaceutical that incorporates prices for sales of all of the component materials by the manufacturer. We sought comment on these ASP reporting requirements outlined in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60521) and previous CMS guidance on the guidelines for the Submission of OPPS ASP Data for Nonpass-Through Separately Payable Therapeutic Radiopharmaceuticals and Radiopharmaceuticals with Pass-Through Status.[8] We continue to believe that these ASP reporting practices should be applicable to radiopharmaceuticals, including both therapeutic and diagnostic radiopharmaceuticals, but sought comment from interested parties in this space to ensure that these reporting guidelines are clear and reflective of clinical practice today.

We mentioned in the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222) that we still see the potential value in the use of ASP data for payment purposes for diagnostic radiopharmaceuticals when reported correctly and by all manufacturers who manufacture a product that is described by a given HCPCS code. We stated that we believe that the use of ASP information for OPPS payment could provide an opportunity to improve payment accuracy for separately payable diagnostic radiopharmaceuticals by applying an established methodology that has already been successfully implemented under the OPPS for other separately payable drugs and biologicals, as well as therapeutic radiopharmaceuticals. Because the per day cost calculations determine whether a diagnostic radiopharmaceutical qualifies for separate payment, using the most accurate pricing information is paramount. The use of ASP information could provide an opportunity to further improve the accuracy of the per day cost calculations and the separate payment amounts for diagnostic radiopharmaceuticals. As previously mentioned, we do not believe that the limited amount of ASP information submitted currently is adequate for the purpose of determining separate payment for those few products that currently do report ASP, which is why we proposed to pay diagnostic radiopharmaceuticals with per day costs above the $630 threshold at each diagnostic radiopharmaceutical's mean unit cost. However, we were still interested in the potential to use ASP for the purpose of determining a diagnostic radiopharmaceutical's per day cost and payment amount in the future. Therefore, we wanted to engage with interested parties to learn about the unique aspects and challenges that may be associated with reporting ASP for diagnostic radiopharmaceuticals, and radiopharmaceuticals in general. We specifically sought comment as to whether interested parties believe CMS should require payment for diagnostic radiopharmaceuticals to be based on ASP in the future, such as in CY 2026 rulemaking, if interested parties are confident in their reporting ability.

We discussed in the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222) that we do believe that there could be situations in which it is appropriate to use ASP currently. For example, in section V.A.4 of the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222), we proposed to utilize ASP in payment for diagnostic radiopharmaceuticals on OPPS transitional pass-through status. In this situation, we believed the use of ASP is appropriate as the manufacturer of that diagnostic radiopharmaceutical is actively involved in the radiopharmaceutical's pass-through application, and CMS can ensure that pricing is reported appropriately for purposes of the drug pass-through cost significance tests and for purposes of payment if the pass-through status is approved. Typically, there is only one manufacturer for a diagnostic radiopharmaceutical applying for pass-through status, so CMS does not have to ensure all manufacturers are reporting ASP for that particular HCPCS code prior to establishing a separate payment amount based on ASP. Additionally, as discussed in section V.B.5 of the CY 2025 OPPS/ASC proposed rule (Proposed Payment for Nonpass-Through Drugs, Biologicals, and Radiopharmaceuticals with HCPCS Codes but Without OPPS Hospital

[8] *https://www.cms.gov/medicare/medicare-fee-for-service-payment/hospitaloutpatientpps/downloads/opps_asp_radiopharm_guidance10302009.pdf.*

Claims Data), we proposed to base the initial payment for new diagnostic radiopharmaceuticals with HCPCS codes, but which do not have pass-through status and are without claims data, on ASP, and on WAC if ASP data for these diagnostic radiopharmaceuticals are not available. If the WAC also is unavailable, we proposed to make payment for new diagnostic radiopharmaceuticals at 95 percent of the products' most recent AWP. We believe the volume of products in this category will typically be very low; however, in these rare situations, we believe it would be appropriate to use ASP until a MUC is available. Similar to drugs applying for pass-through status, there is typically only one manufacturer for a diagnostic radiopharmaceutical that is new and described by a HCPCS code, but without claims data, so CMS does not have to ensure all manufacturers are reporting ASP for that particular HCPCS code prior to establishing a separate payment amount based on ASP. Additionally, although reporting of ASP is not a condition of CMS approving a HCPCS application, CMS has the opportunity to actively engage with the manufacturer, or sponsor of a HCPCS application, during the HCPCS application process. This allows for ongoing dialogue and education regarding the unique ASP reporting requirements that may be associated with a particular product, including how to ensure the reported ASP aligns with the dose descriptor for the newly assigned HCPCS code.

We sought comments on additional unique situations in which it still may be appropriate for CMS to use ASP information to assess per day costs and payment amounts for diagnostic radiopharmaceuticals for CY 2025. For example, we stated that one such unique situation could be continuing the use of ASP for a particular HCPCS code once its pass-through status has ended, if the HCPCS code was actively being paid based on ASP while on pass-through status. Under our proposal, payment for a diagnostic radiopharmaceutical would be based on MUC once its pass-through status ends. We sought comment on this potential unique situation, as well as others of which readers may be aware. We stated that we may finalize utilizing ASP in additional situations that commenters bring to our attention in the final rule as policies for CY 2025 depending on comments received.

As discussed, we proposed to base the payment rate for diagnostic radiopharmaceuticals on mean unit cost data derived from hospital claims. We did not propose to use ASP data for determining payment rates of nonpass-through diagnostic radiopharmaceuticals with claims data but are seeking comment on its use for determining the per day cost and setting the payment rate for diagnostic radiopharmaceuticals in the future. Additionally, we did not propose to use WAC or AWP as a basis for payment for diagnostic radiopharmaceuticals. Similar to our reasoning for payment of therapeutic radiopharmaceuticals in the CY 2012 OPPS/ASC final rule with comment period (77 FR 68390), we believe that paying for diagnostic radiopharmaceuticals using mean unit cost would appropriately pay for the average price of nonpass-through separately payable diagnostic radiopharmaceuticals for the applicable year. We believe MUC is an appropriate proxy for the average price for a diagnostic radiopharmaceutical for a given year, as it is calculated based on the average costs for a particular year and is directly reflective of the actual cost data that hospitals submit to CMS.

As we stated in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60523), we believe that WAC or AWP is not an appropriate proxy to provide OPPS payment for average therapeutic radiopharmaceutical acquisition cost and associated handling costs when manufacturers are not required to submit ASP data because payment based on WAC or AWP for separately payable drugs and biologicals is usually temporary for a calendar quarter until a manufacturer is able to submit the required ASP data in accordance with the quarterly ASP submission timeframes for reporting under section 1847A of the Act. However, WAC and AWP reported to compendia may not be reflective of a patient ready dose. We are additionally concerned about the use of WAC and AWP since ASP reporting for OPPS payment of separately payable diagnostic radiopharmaceuticals would not be required for CY 2025. The absence of appropriate ASP reporting could result in payment for a separately payable diagnostic radiopharmaceutical based on WAC or AWP indefinitely, a result which we believe would be inappropriate, as these pricing metrics do not capture all of the pricing discounts that may be reflected in the ASP. In the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222), we stated that given all of the concerns we had with other pricing methodologies for diagnostic radiopharmaceuticals, we proposed to rely on CY 2023 mean unit cost data derived from hospital claims data for payment rates for diagnostic radiopharmaceuticals for CY 2025.

Our proposed payment methodology for diagnostic radiopharmaceuticals that have costs above a $630 threshold would be similar, but not the same, as the methodology adopted for therapeutic radiopharmaceuticals as described in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60518). Although therapeutic radiopharmaceuticals are generally targeted at treating a certain disease or condition, and diagnostic radiopharmaceuticals are generally targeted at diagnosing a certain disease or condition, we believe they are clinically very similar products, manufactured in a similar manner, and should generally be paid using a similar payment methodology when paid separately. As such, we stated that we believe the same payment method as is used for therapeutic radiopharmaceuticals should apply to diagnostic radiopharmaceuticals above the cost threshold. However, as previously discussed, given our concerns with current ASP reporting patterns, we proposed to use MUC as the basis of payment for nonpass-through diagnostic radiopharmaceuticals for CY 2025. Therefore, we explained that we believe it is appropriate for the methodology to determine the proposed payment amounts to differ between diagnostic and therapeutic radiopharmaceuticals, at least for CY 2025. We stated that we will consider aligning the payment methodologies between therapeutic and diagnostic radiopharmaceuticals, either based on ASP or MUC, in future rulemaking.

We explained that we believe that mean unit cost data is an appropriate and adequate proxy for the average price for diagnostic radiopharmaceuticals and associated handling costs for these products. Mean unit cost data is reflective of the actual cost data that hospitals submit to CMS. The MUC payment methodology is consistent with our payment policy for therapeutic radiopharmaceuticals as stated in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60523) and is currently the basis of payment for many therapeutic radiopharmaceuticals when ASP is unavailable.

As previously discussed, we find that the ASP data we have is not usable for the purpose of paying for diagnostic radiopharmaceuticals and, therefore, we proposed to pay for qualifying nonpass-through diagnostic radiopharmaceuticals with claims data based on MUC. However, we also sought comment on how we could

potentially use our equitable adjustment authority at section 1833(t)(2)(E) of the Act to make an adjustment to the ASP data that has been reported in order to make it usable for the purpose of paying equitably for these products. For example, we sought comment as to whether CMS could use its equitable adjustment authority to adjust payment for diagnostic radiopharmaceuticals based on an adjusted ASP value when the ASP amounts reported to CMS deviate by a given threshold, such as two times the MUC calculated for the diagnostic radiopharmaceutical using claims data. Alternatively, the adjusted payment rate could be an average of the reported ASP and MUC, or other methodologies suggested by commenters. We broadly sought comment on this potential use of equitable adjustment authority to make the limited ASP data reported for diagnostic radiopharmaceuticals usable for purposes of setting payment rates for qualifying products.

We note, if readers do not believe it is appropriate for CMS to base the payment amount for diagnostic radiopharmaceuticals on MUC for CY 2025, we proposed in the alternative to maintain our current policy of unconditionally policy packaging all diagnostic radiopharmaceuticals regardless of their cost until an appropriate payment methodology can be established to determine a separate payment amount for diagnostic radiopharmaceuticals.

We stated that HCPCS codes that describe diagnostic radiopharmaceuticals with per day costs that meet or exceed the proposed diagnostic radiopharmaceutical packaging threshold would be assigned to a status indicator of ''K'', indicating separate payment. An APC and a payment rate would be assigned as shown in Addendum B to the proposed rule. HCPCS codes that describe diagnostic radiopharmaceuticals with per day costs that are at or below the proposed diagnostic radiopharmaceutical packaging threshold would continue to be assigned to a status indicator of ''N'', indicating packaged payment. We welcomed comment on these determinations. The proposed list of diagnostic radiopharmaceuticals that we calculated as having per day costs that exceed $630 and their proposed status indicators can be found in Table 8.

TABLE 8: Proposed Qualifying Diagnostic Radiopharmaceuticals with Per Day Costs Exceeding $630

HCPCS Code	Short Descriptor	Proposed CY 2025 Status Indicator Assignment
A9515	Choline c-11	K
A9521	Tc99m exametazime	K
A9542	In111 ibritumomab, dx	K
A9547	In111 oxyquinoline	K

A9800	Gallium locametz 1 millicuri	K***
C9067	Gallium ga-68 dotatoc	K
Q9982	Flutemetamol f18 diagnostic	K
Q9983	Florbetaben f18 diagnostic	K

*HCPCS code A9596 will be assigned to status indicator "G" until its pass through expiration on 06/30/2025. For the remainder of CY 2025, we would propose to assign it to status indicator "K."

**HCPCS code A9602 will be assigned to status indicator "G" until its pass through expiration on 09/30/2025. For the remainder of CY 2025, we would propose to assign it to status indicator "K."

***HCPCS code A9800 will be assigned to status indicator "G" until its pass through expiration on 09/30/2025. For the remainder of CY 2025, we would propose to assign it to status indicator "K."

Proposed definitions of status indicators were included in Addendum D1 to the CY 2025 OPPS/ASC proposed rule (89 FR 59213 through 59222). Addenda to that proposed rule can be found on the CMS OPPS web page.

We proposed corresponding regulation text edits at § 419.2(b)(15) to only package diagnostic radiopharmaceuticals when their per day cost is at or below the per day diagnostic radiopharmaceutical packaging threshold for the applicable year. Specifically, we proposed to add the text ''at or below the per-day diagnostic radiopharmaceutical packaging threshold for the applicable year'' to qualify the packaging of diagnostic radiopharmaceuticals. We also proposed corresponding regulation text edits at § 419.41 (Calculation of national beneficiary copayment amounts and national Medicare program payment amounts) to codify our proposed payment policy for diagnostic radiopharmaceuticals and our existing policy for therapeutic radiopharmaceuticals.

Comment: Commenters were largely supportive of CMS's proposal to pay diagnostic radiopharmaceuticals based on their mean unit cost for CY 2025. Commenters applauded CMS for recognizing that the uniqueness of diagnostic radiopharmaceuticals could lead to some difficulty or uncertainty around reporting other pricing data, such as Average Sales Price (ASP), for these products. Additionally, commenters generally seemed to understand CMS's concerns with using ASP as a basis for payment broadly for CY 2025 given the limited information available.

Response: We thank commenters for their support of our proposal.

Comment: Although the majority of commenters were generally supportive of using mean unit cost as the basis for diagnostic radiopharmaceutical payment for CY 2025, many of these commenters saw the use of MUC as a transitional step, and recommended CMS consider Average Sales Price as the

methodology to determine the payment amount as soon as possible. Other commenters suggested specific unique situations in which they believed it would be appropriate for CMS to use ASP, such as when a product's OPPS pass-through status expires if the product was being paid based on ASP while on OPPS pass-through status. Similarly, some commenters expressed some drawbacks to using MUC as a payment amount rather than ASP, such as that mean unit cost depends on hospital cost to charge ratios and uses cost data from prior years, rather than from the current payment year. Similarly, a commenter communicated that the MUC methodology underestimates the actual costs to hospitals for higher priced technologies due to charge compression which, in their view, may result in an inaccurate payment rate for a product compared to the actual acquisition cost for a product by a given hospital.

Commenters stated that using ASP information was consistent with payment for drugs under the OPPS, and they also stated that ASP information was an established methodology that could provide an opportunity to improve payment accuracy.

Commenters believed there was value in using ASP as the basis of payment, and although they acknowledged CMS may not have access to ASP data for patient ready doses for all diagnostic radiopharmaceuticals, commenters recommended we transition to an ASP-based payment.

Some commenters stated their belief that separate payment will incentivize reporting of ASP data. CMS was urged to work with manufacturers to obtain ASP data and only consider basing payment on ASP when such data are determined to be reliable. Commenters also recommended that CMS provide at least one year notice of its intent to base payment on ASP to facilitate the most complete reporting and consistent payment methodologies across products.

Response: We thank commenters for their feedback and considerations on our proposal. Our concerns from the proposed rule remain for the final rule, in that there are very few manufacturers reporting ASP for their products currently, and of those few manufacturers reporting ASP, the ASP values that we do have generally do not align with the ASP we would expect based on the cost data submitted to CMS by hospitals. While a small number of manufacturers may be reporting ASP correctly, such as those recently on OPPS pass-through status, we believe a consistent payment methodology is most appropriate for nonpass-through diagnostic radiopharmaceuticals with per day costs above the threshold. We do agree that there could be some value in the use of ASP for determining a payment amount in the future; however, if we were to use the ASP methodology, we believe there must be more consistent, validated, and universal reporting in order for ASP to be a viable payment methodology. To maintain a consistent payment methodology for CY 2025, we believe it is appropriate to treat all nonpass-through diagnostic radiopharmaceuticals with claims data the same and pay using MUC without exception, such as for products with recent pass-through expiration.

Comment: Commenters expressed a broad interest in using ASP data and learning how to report that data appropriately to CMS, including regarding topics such as ''bona fide service fees.'' Commenters indicated a desire to learn more about how they could report ASP for their specific products. Many manufacturers expressed their intent to initiate discussions with CMS in order to potentially begin to report ASP data.

Response: We thank commenters for expressing their interest in use of ASP data and appropriate ASP reporting. As we have previously stated, and as commenters have noted, we recognize the complexities associated with reporting ASP for radiopharmaceuticals. We encourage ongoing engagement with CMS in order for manufacturers to provide information regarding their products' unique reporting complexities.

Comment: Some commenters recommended CMS continue to consider the appropriateness of other sources of cost data for future years, such as wholesale acquisition cost (WAC).

Response: We continue to believe that neither WAC nor AWP is an appropriate proxy to provide OPPS payment for average radiopharmaceutical acquisition costs and associated handling costs when manufacturers are not required to submit ASP data. This is because payment based on WAC or AWP for separately payable drugs and biologicals is usually temporary for a calendar quarter until a manufacturer is able to submit the required ASP data in accordance with the quarterly ASP submission timeframes for reporting under section 1847A of the Act. WAC and AWP reported to compendia may not be reflective of a patient ready dose. The absence of an ASP reporting requirement and inappropriate or no reporting of ASP could result in payment for a separately payable diagnostic radiopharmaceutical based on WAC or AWP indefinitely, a result which we believe would be inappropriate, as these pricing metrics do not capture all of the pricing discounts that may be reflected in the ASP.

Comment: Some commenters were concerned about potential fluctuations in MUC data and the effect on payment for separately payable diagnostic radiopharmaceuticals. Several commenters recommend CMS apply its low volume APC policy to diagnostic radiopharmaceutical APCs, stating that CMS's policy for setting payment rates for low volume APCs, defined as those with fewer than 100 claims, by using up to four years of claims data and basing the rate on the highest value among the arithmetic mean, geometric mean, or median improves payment rate stability for low volume APCs.

Response: We thank commenters for their recommendations. We did not propose to subject low volume diagnostic radiopharmaceutical APCs to the broader OPPS low volume policy, and we note that the low volume APC policy does not apply to APCs to which single drugs, biologicals, or radiopharmaceuticals are assigned, even if there is a low volume of claims for these items. We understand the commenter's concerns; however, we do not believe it would be appropriate to finalize this policy modification without further engagement from interested parties. While we agree this suggested policy modification could result in greater payment stability, we want to ensure that there are no unintended consequences of such a policy, such as an unintended decrease in the overall MUC payment rate as a result of using 4 years of cost data. We encourage additional engagement on this issue.

Comment: A commenter noted that we proposed that only diagnostic radiopharmaceutical HCPCS codes that are identified as separately payable in the final rule with a comment period would be subject to quarterly updates. The commenter was unsure why quarterly updates would be necessary for MUC-based payment, which they expect would be established annually as part of the rulemaking process and thus not be subject to quarterly updates.

Response: We thank the commenter for this comment and confirm that their understanding is correct. MUC will be calculated on an annual basis for the payment of nonpass-through diagnostic radiopharmaceuticals with per day costs exceeding $630. Because we are not adopting an ASP-based payment approach at this time, there is no need to update the payment amounts

quarterly as the MUC will be set in this final rule for the entire calendar year.

Comment: A few commenters believed that the product Magtrace, which may be described by HCPCS code A9697 (Injection, carboxydextran-coated superparamagnetic iron oxide, per study dose), was inappropriately assigned to a packaged payment status for the proposed rule and should be subject to this policy and designated for separate payment in the final rule. One commenter stated that the product is a magnetic tracer indicated to assist in localizing lymph nodes draining a tumor site, as part of a sentinel lymph node biopsy procedure in patients with breast cancer undergoing mastectomy or lumpectomy. The commenter stated that when HCPCS code A9697 was first incorporated in the October 2023 OPPS Update Transmittal, it was in a table titled ''Table 15.—Newly Established HCPCS Codes for Drugs, Biologicals, and Radiopharmaceuticals as of October 1, 2023'' and that Medicare Administrative Contractors (MACs) have indicated that HCPCS codes in the A9500–A9700 range, which the Magtrace code falls within, are for radiopharmaceuticals.

Response: We note that this product is not radioactive [9] [10] and is regulated by the FDA as a medical device under the product name ''Magtrace and Sentimag Magnetic Localization System'' with a premarket approval.[11] Accordingly, we do not believe that this product qualifies as a diagnostic radiopharmaceutical, and do not believe that it should be paid separately under this policy. We believe this product functions as a supply when used in a diagnostic test or procedure and should continue to be packaged under 42 CFR 419.2(b)(15). Please see section V.A. of this final rule with comment period for the payment status of HCPCS code A9697 for CY 2025.

Comment: Broadly, commenters suggested that CMS subject additional classes of drugs, such as contrast agents to this policy. For example, a commenter discussed one such product, Cysview, which may be described by HCPCS code A9589 (Instillation, hexaminolevulinate hydrochloride, 100 mg), and believed CMS's reasoning in the proposed rule for unpackaging and paying separately for diagnostic radiopharmaceuticals applies equally to their product. The commenter believed lack of separate payment was a barrier to beneficiary access and recommended CMS pay for products like theirs when the products' costs exceeded a certain threshold.

Response: We thank the commenters for their feedback. We continue to believe that our packaging policies are a fundamental principle that distinguishes a prospective payment system from a fee schedule. In general, packaging the costs of supportive items and services into the payment for the primary procedure or service with which they are associated encourages hospital efficiencies and enables hospitals to manage their resources with maximum flexibility. We will take the information commenters provided into consideration as appropriate for possible future rulemaking.

After consideration of the public comments we received, we are finalizing our proposal without modification. In summary, for CY 2025 we are paying separately for any diagnostic radiopharmaceutical with a per day cost greater than $630 using the methodology described. Any diagnostic radiopharmaceutical with a per day cost at or below that threshold would continue to be policy packaged under our longstanding policy at § 419.2(b)(15). We are finalizing our proposal regarding updating the selected packaging threshold without modification. Specifically, starting in CY 2026 and for subsequent years, we will update the threshold amount of $630 by the PPI for Pharmaceuticals for Human Use (Prescription) (Bureau of Labor Statistics series code WPUSI07003) from IHS Global, Inc (IGI). We are finalizing our proposal to pay for those nonpass-through, separately payable diagnostic radiopharmaceuticals based on our authority under section 1833(t)(14)(A)(iii)(II) of the Act, and as we find that the ASP data we have is not usable for the purpose of paying for diagnostic radiopharmaceuticals, we are paying for qualifying nonpass-through diagnostic radiopharmaceuticals with claims data based on mean unit cost data derived from hospital claims. We believe that paying for diagnostic radiopharmaceuticals using mean unit cost would appropriately pay for the average price of nonpass-through separately payable diagnostic radiopharmaceuticals for the applicable year. We believe MUC is an appropriate proxy for the average price for a diagnostic radiopharmaceutical for a given year, as it is calculated based on the average costs for a particular year and is directly reflective of the actual cost data that hospitals submit to CMS.

The finalized list of diagnostic radiopharmaceuticals that have calculated per day costs that exceed $630 and their status indicators can be found in Table 9.

[9] Per the manufacturer's website: ''Is Magtrace Radioactive? No. Magtrace is the world's first non-radioactive tracer to offer dual identification. This not only facilitates the eradication of radioactive products from the OR, but provides psychological benefits for the patient.'' *https://www.endomag.com/resources/faqs/magtrace/?product=magtrace.*

[10] Per the manufacturer's website: ''Magtrace® is a uniquely designed non-radioactive liquid tracer used to map the potential spread of cancer to the axilla in sentinel lymph node biopsy procedures. The liquid is made up of tiny particles of iron oxide, coated in sugar and suspended in saline.'' *https://www.endomag.com/resources/faqs/magtrace/.*

*HCPCS code A9596 will be assigned to status indicator "G" until its pass through expiration on 06/30/2025. For the remainder of CY 2025, it will be assigned to status indicator "K."

**HCPCS code A9602 will be assigned to status indicator "G" until its pass through expiration on 09/30/2025. For the remainder of CY 2025, it will be assigned to status indicator "K."

***HCPCS code A9800 will be assigned to status indicator "G" until its pass through expiration on 09/30/2025. For the remainder of CY 2025, it will be assigned to status indicator "K."

Definitions of status indicators can be found in Addendum D1 to this final rule with comment period. Addenda to this final rule with comment period can be found on the CMS OPPS web page.

Additionally, we are finalizing with slight modification corresponding regulation text edits at § 419.2(b)(15) to only package diagnostic radiopharmaceuticals when their per day cost is at or below the per day diagnostic radiopharmaceutical packaging threshold for the applicable year. We are adding the language ''with per-day costs at or'' to the regulation text as a technical change to conform with our final policy as the prior text did not make it clear that the per day cost of a diagnostic radiopharmaceutical must be at or below the per-day diagnostic radiopharmaceutical packaging threshold in order for the product to be packaged. Overall, this regulation text is changed by adding the text ''with per-day costs at or below the per-day diagnostic radiopharmaceutical packaging threshold for the applicable year'' rather than only ''below the per-day diagnostic radiopharmaceutical packaging threshold for the applicable year'' to qualify the packaging of diagnostic radiopharmaceuticals. Aside from those changes described in V.B.5 of this CY 2025 OPPS/ASC final rule with comment period to conform with our payment policy for nonpass-through diagnostic radiopharmaceuticals in situations in which claims data are not available, we are finalizing without modification corresponding regulation text edits at § 419.41 (Calculation of national beneficiary copayment amounts and national Medicare program payment amounts) to codify our proposed payment policy for diagnostic radiopharmaceuticals and our existing policy for therapeutic radiopharmaceuticals.

4. Implementation of Section 4135 of the Consolidated Appropriations Act (CAA)

The Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–328), was signed into law on December 29, 2022. Section 4135(a) and (b) of the CAA, 2023, titled Access to Non-Opioid Treatments for Pain Relief, amended sections 1833(t)(16) and 1833(i) of the Act, respectively, to provide for temporary additional payments for non-opioid treatments for pain relief (as that term is defined in section 1833(t)(16)(G)(i) of the Act). In particular, section 1833(t)(16)(G) of the Act provides that with respect to a non-opioid treatment for pain relief furnished on or after January 1, 2025, and before January 1, 2028, the Secretary shall not package payment for the non-opioid treatment for pain relief into payment for a covered OPD service (or group of services) and shall make an additional payment for the non-opioid treatment for pain relief as specified in clause (ii) of that section. Clauses (ii) and (iii) of section 1833(t)(16)(G) of the Act provide for the amount of additional payment and set a limitation on that amount, respectively.

As the additional payments are required to begin on January 1, 2025, we proposed and are finalizing a policy to implement the CAA, 2023 section 4135 amendments in this final rule with comment period. Our finalized policy to implement section 4135 of CAA, 2023 can be found in section XIII.E of this final rule with comment period.

5. Calculation of OPPS Scaled Payment Weights

We established a policy in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68283) of using geometric mean-based APC costs to calculate relative payment weights under the OPPS. In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81577 through 81578), we applied this policy and calculated the relative payment weights for each APC for CY 2024 that were shown in Addenda A and B of the CY 2024 OPPS/ASC final rule with comment period (which were made available via the internet on the CMS website) using the APC costs discussed in sections II.A.1 and II.A.2 of the CY 2024 OPPS/ASC final rule with comment period (88 FR 81549 through 81572). For CY 2025, as we did for CY 2024, we proposed to continue to apply the policy established in CY 2013 and calculate relative payment weights for each APC for CY 2025 using geometric mean-based APC costs.

For CY 2012 and CY 2013, outpatient clinic visits were assigned to one of five levels of clinic visit APCs, with APC 0606 representing a mid-level clinic visit. In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75036 through 75043), we finalized a policy that created alphanumeric HCPCS code G0463 (Hospital outpatient clinic visit for assessment and management of a patient), representing all clinic visits under the OPPS. HCPCS code G0463 was assigned to APC 0634 (Hospital Clinic Visits). We also finalized a policy to use CY 2012 claims data to develop the CY 2014 OPPS payment rates for HCPCS code G0463 based on the total geometric mean cost of the levels one through five CPT Evaluation or Assessment and Management (E/M) codes for clinic visits previously recognized under the OPPS (CPT codes 99201 through 99205 and 99211 through 99215). In addition, we finalized a policy to no longer recognize a distinction between new and established patient clinic visits.

For CY 2016, we deleted APC 0634 and reassigned the outpatient clinic visit HCPCS code G0463 to APC 5012 (Level 2 Examinations and Related Services) (80 FR 70372). For CY 2025, as we did for CY 2024, we proposed to continue to standardize all of the relative payment weights to APC 5012. We believe that standardizing relative payment weights to the geometric mean of the APC to which HCPCS code G0463 is assigned maintains consistency in calculating unscaled weights that represent the cost of some of the most frequently provided OPPS services. For CY 2025, as we did for CY 2024, we proposed to assign APC 5012 a relative payment weight of 1.00 and to divide the geometric mean cost of each APC by the geometric mean cost for APC 5012 to derive the unscaled relative payment weight for each APC. The choice of the APC on which to standardize the relative payment weights does not affect payments made under the OPPS because we scale the weights for budget neutrality.

Section 1833(t)(9)(B) of the Act requires that APC reclassification and recalibration changes, wage index changes, and other adjustments be made in a budget neutral manner. Budget neutrality ensures that the estimated aggregate weight under the OPPS for CY 2025 is neither greater than nor less than the estimated aggregate weight that would have been calculated without the changes. To comply with this requirement concerning the APC changes, we proposed to compare the estimated aggregate weight using the CY 2024 scaled relative payment weights to the estimated aggregate weight using the proposed CY 2025 unscaled relative payment weights.

For CY 2024, we multiplied the CY 2024 scaled APC relative payment weight applicable to a service paid under the OPPS by the volume of that service from CY 2023 claims to calculate the total relative payment weight for each service. We then added together the total relative payment weight for each of these services in order to calculate an estimated aggregate weight for the year. For CY 2025, we proposed to apply the same process using the estimated CY 2025 unscaled relative payment weights rather than scaled relative payment weights. We proposed to calculate the weight scalar by dividing the CY 2024 estimated aggregate weight by the unscaled CY 2025 estimated aggregate weight.

For a detailed discussion of the weight scalar calculation, we refer readers to the OPPS claims accounting document available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*. Click on the link labeled ''Hospital Outpatient Prospective Payment—Notice of Proposed Rulemaking with Comment Period (NPRM)'' for 2025, which can be found under the heading ''Hospital Outpatient Regulations and Notices'' and open the claims accounting document link, which is labeled ''2025 NPRM OPPS Claims Accounting (PDF).''

We proposed to compare the estimated unscaled relative payment weights in CY 2025 to the estimated total relative payment weights in CY 2024 using CY 2023 claims data, holding all other components of the payment system constant to isolate changes in total weight. Based on this comparison, we proposed to adjust the calculated CY 2025 unscaled relative payment weights for purposes of budget neutrality. We proposed to adjust the estimated CY 2025 unscaled relative payment weights by multiplying them by a proposed weight scalar of 1.4452 to ensure that the proposed CY 2025 relative payment weights are scaled to be budget neutral. The proposed CY 2025 relative payment weights listed in Addenda A and B to the proposed rule (which are available via the internet on the CMS website) are scaled and incorporate the recalibration adjustments discussed in sections II.A.1 and II.A.2 of this final rule with comment period.

Section 1833(t)(14) of the Act provides the payment rates for certain specified covered outpatient drugs (SCODs). Section 1833(t)(14)(H) of the

Act provides that additional expenditures resulting from this paragraph shall not be taken into account in establishing the conversion factor, weighting, and other adjustment factors for 2004 and 2005 under paragraph (9) but shall be taken into account for subsequent years. Therefore, the cost of those SCODs (as discussed in section V.B.2 of this final rule with comment period) is included in the budget neutrality calculations for the CY 2025 OPPS.

We did not receive any public comments on the proposed weight scalar calculation, and we are finalizing our proposal to use the calculation process described in the CY 2025 OPPS/ASC proposed rule, without modification, for CY 2025. For CY 2025, as we did for CY 2024, we will continue to apply the policy established in CY 2013 and calculate relative payment weights for each APC for CY 2025 using geometric mean-based APC costs. For CY 2025, as we did for CY 2024, we will assign APC 5012 a relative payment weight of 1.00; and we will divide the geometric mean cost of each APC by the geometric mean cost for APC 5012 to derive the unscaled relative payment weight for each APC. To comply with this requirement concerning the APC changes, we will compare the estimated aggregate weight using the CY 2024 scaled relative payment weights to the estimated aggregate weight using the CY 2025 unscaled relative payment weights.

Using updated final rule claims data, we are updating the estimated CY 2025 unscaled relative payment weights by multiplying them by a weight scalar of 1.4452 to ensure that the final CY 2025 relative payment weights are scaled to be budget neutral. The final CY 2025 relative payments weights listed in Addenda A and B of this final rule with comment period (available via the internet on the CMS website) were scaled and incorporate the recalibration adjustments discussed in sections II.A.1 and II.A.2 of this final rule with comment period.

B. Conversion Factor Update

1. OPD Fee Schedule Increase Factor

Section 1833(t)(3)(C)(ii) of the Act requires the Secretary to update the conversion factor used to determine the payment rates under the OPPS on an annual basis by applying the OPD fee schedule increase factor. For purposes of section 1833(t)(3)(C)(iv) of the Act, subject to sections 1833(t)(17) and 1833(t)(3)(F) of the Act, the OPD fee schedule increase factor is equal to the hospital inpatient market basket percentage increase applicable to hospital discharges under section 1886(b)(3)(B)(iii) of the Act. In the FY 2025 IPPS/Long Term Care Hospital (LTCH) PPS proposed rule (89 FR 36204), consistent with current law, based on IHS Global, Inc.'s fourth quarter 2023 forecast, the proposed FY 2025 IPPS market basket percentage increase was 3.0 percent. In the CY 2025 OPPS/ASC proposed rule, we noted that under our regular process for the CY 2025 OPPS/ASC final rule with comment period, we would use the market basket update for the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986). We explained that if that forecast is different than the IPPS market basket percentage increase used for the proposed rule, the CY 2025 OPPS/ASC final rule with comment period OPD fee schedule increase factor would reflect that updated forecast of the market basket percentage increase.

For CY 2025, we proposed to use the estimate of the hospital inpatient market basket percentage increase of 3.0 percent as one component to calculate the OPD fee schedule increase factor.

Comment: Two commenters expressed their support for the proposed hospital inpatient market basket increase of 3.0 percent.

Response: We appreciate the support of the commenters.

Comment: Several commenters expressed concerns that the proposed CY 2025 market basket update does not adequately reflect the rising inflation and costs that hospitals have faced over the last few years. Commenters stated that economy-wide inflation grew by 12.4 percent from 2021 through 2023 (as measured by the Consumer Price Index (CPI)), more than two times faster than Medicare reimbursement for hospital outpatient services, which increased by 5.9 percent during the same time. A commenter noted that the US Health Care Inflation Rate (USHCIR) for June 2024 was 3.3 percent and long-term USHCIR was 5.1 percent. Another commenter noted that inflation for hospital services in July 2024 was 6.1 percent. The commenters observed these rates are substantially higher that the proposed market basket increase.

Many commenters stated that rapid and sustained growth in labor costs have put persistent cost pressure on hospitals. They also noted increases in drug prices, citing a recent study and a report by the Health and Human Services (HHS) Assistant Secretary for Planning and Evaluation which found that in 2022 and 2023, prices for nearly 2,000 drugs increased faster than the rate of general inflation, with an average price increase of 15.2 percent. Several commenters also stated that hospitals have seen significant growth in administrative costs due to what they described as inappropriate practices by large commercial health insurers, including Medicare Advantage and Medicaid managed care plans, such as automatic claim denials and onerous prior authorization requirements. Commenters also discussed the continued costs of addressing past and preventing future cyberattacks and a commenter stated they have seen significant increases in capital costs, particularly since the pandemic. Some commenters stated that hospitals will continue to face increased costs due to the Change Healthcare cyberattack, such as interest costs on loan payments for loans acquired during the cyberattack, expected denials that will require additional administrative costs, and manual processing of claims. Commenters also urged CMS to consider the changing health care environment, which they state is putting enormous financial strain on hospitals and health systems and is expected to continue through 2025.

Several commenters proposed CMS apply a payment increase of at least 4.1 percent which is aligned with MedPAC's March 2024 Report to Congress, which recommended a 1.5 percentage points increase over the FY 2025 payment update. These commenters noted that this was the second year that MedPAC made a recommendation of increasing the market basket update. Several commenters suggested various higher market basket increases, which they believe better reflects hospitals' input prices and the contract labor staffing challenge. A commenter encouraged CMS to consider, at a minimum, matching the 3.7 percent increase that the commenter stated Medicare Advantage will receive.

Several commenters recommended CMS look to alternative data sources that they asserted better reflect true labor and input cost increases in a timely manner. The commenters stated that the proposed payment update does not recognize these challenges, nor does it factor in the realities of inflation impacting operating costs. Commenters also stated CMS must use data that better reflects the input price inflation that hospitals have experienced and are projected to experience in CY 2025. Multiple commenters recommended CMS use more recent data to update adjustments to 2025 OPPS rates.

Many commenters noted their financial pressures due to the PHE, aging, more complex patients, negative Medicare margins of −12.7 percent as

estimated by MedPAC, and reliance on public payers. Several commenters urged CMS to consider and assess the financial position of hospitals, particularly those with low margins. Multiple commenters asked for CMS to increase rates to cover the cost of care for Medicaid patients. Many commenters noted financial hardships, particularly in 2022, with high inflation and workforce shortages. They noted that MedPAC found that all-payment operating and overall Medicare margins both fell to record lows, estimating Medicare hospital margins of negative 12.7 percent for FY 2022. MedPAC's FY 2024 recommendation was to increase the market basket update by one percentage point and, for FY 2025, that Congress increase the acute hospital market basket by 1.5 percentage points over current law.

Response: We acknowledge commenters' concerns, however, as we stated in the CY 2025 OPPS/ASC proposed rule, section 1833(t)(3)(C)(iv) of the Act requires the OPD fee schedule increase factor for a year to equal the IPPS market basket percentage increase factor applicable under section 1886(b)(3)(B)(iii) to hospital discharges in the fiscal year ending in such year. Accordingly, we are unable to adopt a final OPD fee schedule increase factor different than the IPPS market basket percentage increase factor finalized in the FY 2025 IPPS/LTCH PPS final rule. We refer commenters to that final rule for responses regarding the issues commenters raised (89 FR 69340).

Comment: Many commenters expressed concerns with the Employment Cost Index (ECI) used to measure changes in labor compensation in the market basket, which they state may no longer accurately capture the changing composition and cost structure of the hospital labor market given the large increases in short-term contract labor use and its growing costs. The commenters stated labor costs have increased by more than 18 percent from CY 2020 to CY 2023. They attributed this increase to expensive contract labor costs (as a result of higher utilization rates and higher costs per hour) and faster growth in salaries for employed workers (reflecting sign-on and retention bonuses). They further stated that while salaries for contract nurses have decreased some from a peak in certain geographical areas, they still remained nearly 60 percent higher at the end of FY 2023 compared to the start of FY 2020. They further stated that CMS recognizes that the ECI does not capture shifts in composition of labor, and the commenters stated that by design, the ECI is not capturing the shifts that have occurred as hospitals have had to turn to contract labor to meet patient demand. Several commenters recommended that CMS use its exceptions and adjustments authority to adopt new or supplemental data sources, to ensure labor costs are adequately reflected in the payment update in the final rule. They further requested CMS utilize supplemental data sources to evaluate the accuracy of the ECI proxy and to modify methodologies, including adopting new or supplemental data, to calculate the payment update if its analysis determines that the ECI is not adequately capturing labor costs.

Response: We refer commenters to the FY 2025 IPPS/LTCH PPS final rule, where we responded to similar comments regarding the use of the ECI and related issues raised by commenters (89 FR 69340 through 69341). We further note that, as we stated in the CY 2025 OPPS/ASC proposed rule, section 1833(t)(3)(C)(iv) of the Act requires the OPD fee schedule increase factor for a year to equal the IPPS market basket percentage increase factor applicable under section 1886(b)(3)(B)(iii) to hospital discharges in the fiscal year ending in such year. Accordingly, we are unable to adopt a final OPD fee schedule increase factor different than the IPPS market basket percentage increase factor finalized in the FY 2025 IPPS/LTCH PPS final rule, which would occur if we used a different methodology to measure changes in labor compensation in the OPPS market basket.

Comment: Several commenters recommended that CMS reevaluate the data sources it uses for rebasing its market basket and calculating the annual market basket update, including labor costs. They strongly encouraged CMS to adopt new or supplemental data sources in future rulemaking that more accurately reflect the costs to hospitals, such as through use of more real time data from the hospital community. They stated that they believe that the current market basket does not account for the higher costs of contract labor, which has become more common in hospitals in an era of clinical labor shortages. A commenter requested that CMS rebase the market baskets more frequently and at least every 3 years to ensure the market basket reflects the appropriate mix of services provided to Medicare beneficiaries.

Response: We refer commenters to the FY 2025 IPPS/LTCH PPS final rule, where we responded to similar comments (89 FR 69341). As we stated in the CY 2025 OPPS/ASC proposed rule, section 1833(t)(3)(C)(iv) of the Act requires the OPD fee schedule increase factor for a year to equal the IPPS market basket percentage increase factor applicable under section 1886(b)(3)(B)(iii) to hospital discharges in the fiscal year ending in such year. Accordingly, we are unable to adopt a final OPD fee schedule increase factor different than the IPPS market basket percentage increase factor finalized in the FY 2025 IPPS/LTCH PPS final rule.

Comment: Commenters stated that since the COVID–19 PHE, IHS Global, Inc (IGI) has shown a consistent 3-year trend of under-forecasting the market basket growth and expressed concern this may indicate a more systematic issue with IGI's forecasting. They stated that these missed forecasts are permanently established in the standard payment rate for IPPS and will continue to compound, which they estimate to be $4 billion. Several commenters, including many associations, urged CMS to use its special exceptions and adjustments authority under section 1886(d)(5)(i) of the Act to implement a retrospective one-time adjustment for CY 2025 to account for the underestimation of the market basket updates over the last several years. Commenters recommended that CMS implement various one-time adjustments to account for underpayments in one or more years between CY 2021 and CY 2023 as well as for forecasted underpayments for CY 2024. The commenters stated the underestimation is, in large part, because the market basket is a time-lagged estimate that cannot fully account for unexpected changes that occur, such as historic inflation and increased labor and supply costs. They stated this is exactly what occurred at the end of the CY 2021 into CY 2022, which resulted in a large forecast error in the CY 2022 market basket update.

Several commenters noted that CMS currently implements a capital IPPS market basket forecast error adjustment as well as SNF PPS market basket forecast error adjustment policy, which resulted in FY 2024 and FY 2025 SNF forecast error adjustments of 3.6 percentage points and 1.7 percentage points, respectively. They stated while CMS has not developed an analogous policy for the OPPS operating update, they believe such a forecast error adjustment to the CY 2025 OPPS operating update could be adopted under CMS' existing authority. They noted the forecast errors for CY 2021 through CY 2023 for OPPS exceeded the 0.5 percentage point threshold that is used for the SNF forecast error adjustment policy. A commenter recommended CMS establish a forecast

error threshold of 1.5 percentage points, and retroactively adjust payments for that year.

Response: We refer commenters to the FY 2025 IPPS/LTCH PPS final rule, where we responded to similar comments (89 FR 69342). As we stated in the CY 2025 OPPS/ASC proposed rule, section 1833(t)(3)(C)(iv) of the Act requires the OPD fee schedule increase factor for a year to equal the IPPS market basket percentage increase factor applicable under section 1886(b)(3)(B)(iii) to hospital discharges in the fiscal year ending in such year. Accordingly, we are unable to adopt a final OPD fee schedule increase factor different than the IPPS market basket percentage increase factor finalized in the FY 2025 IPPS/LTCH PPS final rule.

Comment: Multiple commenters supported the proposed 3.0 percent market basket increase believing the market basket increase would help rural hospitals. However, the commenters believe inflation for outpatient hospital services is substantially higher than the market basket increase, and they would prefer a higher market basket increase to help rural providers. The commenters stated that the operating margin for independent rural hospitals is -2.2 percent and that the operating margins for system-affiliated rural hospitals is 1.7 percent. Other commenters believe the low market basket increases lead to challenges for rural providers. Those commenters noted that the operating margins for rural hospitals are not sustainable, and they noted that eleven hospitals in rural and underserved areas have closed in the past two years even with the establishment of a new Medicare provider type that allows such hospitals to become rural emergency hospitals. The commenters believe a higher market basket increase would help rural hospitals stay open and provide access to quality care especially maternal care in the areas that they serve.

Response: We appreciate the support of the commenters of the proposed market basket increase, and we appreciate the commenters' raising their concerns regarding rural hospitals. As we stated in the CY 2025 OPPS/ASC proposed rule, section 1833(t)(3)(C)(iv) of the Act requires the OPD fee schedule increase factor for a year to equal the IPPS market basket percentage increase factor applicable under section 1886(b)(3)(B)(iii) to hospital discharges in the fiscal year ending in such year. Accordingly, we are unable to adopt a final OPD fee schedule increase factor different than the IPPS market basket percentage increase factor finalized in the FY 2025 IPPS/LTCH PPS final rule.

Comment: Multiple commenters claim that section 1833(t)(3)(C)(iv) of the Act, which defines the outpatient hospital department market basket increase factor, has provisions that give CMS flexibility to use a different market basket increase factor for outpatient hospital services than the market basket increase factor used for inpatient hospital services. The commenters requested that CMS take advantage of section 1833(t)(3)(C)(iv) to establish a market basket increase for CY 2025 for the OPPS that would be larger than the market basket increase that was finalized for FY 2025 for the IPPS.

Response: Section 1833(t)(3)(C)(iv) of the Act permits the Secretary to substitute for the market basket percentage increase an annual percentage increase that is computed and applied with respect to covered OPD services furnished in a year in the same manner as the market basket percentage increase is determined and applied to inpatient hospital services for discharges occurring in a fiscal year. We would only anticipate utilizing a specific outpatient hospital market basket factor if the rate of change in the cost of covered OPD services was substantially different than the rate of change in the cost of inpatient hospital services for the previous fiscal year. We did not find evidence that the rate of change for covered OPD services was substantially different that the rate of changes for inpatient hospital services. Therefore, we are adopting an OPD fee schedule increase factor for CY 2025 equal to the IPPS market basket percentage increase factor applicable under section 1886(b)(3)(B)(iii) to hospital discharges in the fiscal year ending in such year, as required by section 1833(t)(3)(C)(iv) of the Act. We decline to adopt a final OPD fee schedule increase factor different than the IPPS market basket percentage increase factor finalized in the FY 2025 IPPS/LTCH PPS final rule.

2. Productivity Adjustment

Section 1833(t)(3)(F)(i) of the Act requires that, for 2012 and subsequent years, the OPD fee schedule increase factor under subparagraph (C)(iv) be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act. Section 1886(b)(3)(B)(xi)(II) of the Act defines the productivity adjustment as equal to the 10-year moving average of changes in annual economy-wide, private nonfarm business multifactor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period) (the ''productivity adjustment''). In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51689 through 51692), we finalized our methodology for calculating and applying the productivity adjustment. The U.S. Department of Labor's Bureau of Labor Statistics (BLS) publishes the official measures of private nonfarm business productivity for the U.S. economy. We note that previously the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act was published by BLS as private nonfarm business multifactor productivity. Beginning with the November 18, 2021, release of productivity data, BLS replaced the term multifactor productivity (MFP) with total factor productivity (TFP). BLS noted that this is a change in terminology only and will not affect the data or methodology. As a result of the BLS name change, the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act is now published by BLS as private nonfarm business total factor productivity. However, as mentioned, the data and methods are unchanged. Please see *www.bls.gov* for the BLS historical published TFP data. A complete description of IHS Global, Inc.'s (IGI) TFP projection methodology is available on the CMS website at *https://www.cms.gov/data-research/statistics-trends-and-reports/medicare-program-rates-statistics/market-basket-research-and-information*. In addition, we note that beginning with the FY 2022 IPPS/LTCH PPS final rule, we refer to this adjustment as the productivity adjustment rather than the MFP adjustment to more closely track the statutory language in section 1886(b)(3)(B)(xi)(II) of the Act. We note that the adjustment continues to rely on the same underlying data and methodology. In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36204), the proposed productivity adjustment for FY 2025 was 0.4 percentage point.

Therefore, we proposed that the productivity adjustment for the CY 2025 OPPS/ASC would be 0.4 percentage point. We also proposed that if more recent data subsequently became available after the publication of the CY 2025 OPPS/ASC proposed rule (for example, a more recent estimate of the market basket percentage increase and/or the productivity adjustment), we would use such updated data, if appropriate, to determine the CY 2025 hospital inpatient market basket update and the productivity adjustment, which are components in calculating the OPD fee schedule increase factor under

sections 1833(t)(3)(C)(iv) and 1833(t)(3)(F) of the Act.

We note that section 1833(t)(3)(F) of the Act provides that application of this subparagraph may result in the OPD fee schedule increase factor under section 1833(t)(3)(C)(iv) of the Act being less than 0.0 percent for a year and may result in OPPS payment rates being less than rates for the preceding year. As described in further detail below, we proposed for CY 2025 an OPD fee schedule increase factor of 2.6 percent for the CY 2025 OPPS/ASC (which is the proposed estimate of the hospital inpatient market basket percentage increase of 3.0 percent, less the proposed 0.4 percentage point productivity adjustment).

Comment: Several commenters expressed concerns about the application of the productivity adjustment, particularly given the extreme pressures in which hospital and health systems operate. They stated the use of the private nonfarm business TFP is meant to capture gains from new technologies, economies of scale, business acumen, managerial skills and changes in productions. Thus, they stated this measure effectively assumes the hospital sector can mirror productivity gains from the private nonfarm business sector. They stated, however, in an economy marked by great uncertainty due to the PHE and labor and other productivity shocks, this assumption is significantly flawed. Other commenters requested that productivity adjustment be eliminated for CY 2025 without any additional reasons. A commenter also requested that CMS use its ''special exceptions and adjustments'' authority to reduce the productivity adjustment for CY 2025. Another commenter asked that the productivity adjustment not apply to small rural and sole community hospitals for CY 2025.

Response: Section 1833(t)(3)(F)(i) requires that after determining the OPD fee schedule increase factor under subparagraph (C)(iv), the Secretary shall reduce such increase factor by the productivity adjustment described in section 1886(b)(3)(B)(xi) of the Act. As required by statute, the FY 2025 productivity adjustment is derived based on the 10-year moving average growth in economy-wide productivity for the period ending FY 2025.

We thank the commenters for their comments. After consideration of the comments received and consistent with our proposal, we are finalizing an OPD fee schedule increase factor of 2.9 percent for CY 2025, which consists of the IPPS market basket increase factor of 3.4 percent less a 0.5 percentage point productivity adjustment.

3. Other Conversion Factor Adjustments

To set the OPPS conversion factor for 2025, we proposed to increase the CY 2024 conversion factor of $87.382 by 2.6 percent. In accordance with section 1833(t)(9)(B) of the Act, we proposed further to adjust the conversion factor for CY 2025 to ensure that any revisions made to the wage index and rural adjustment are made on a budget neutral basis. We proposed to calculate an overall budget neutrality factor of 1.0026 for wage index changes by comparing proposed total estimated payments from our simulation model using the proposed FY 2025 IPPS wage indexes to those payments using the FY 2024 IPPS wage indexes, as adopted on a calendar year basis for the OPPS. We further proposed to calculate an additional budget neutrality factor of 0.9982 to account for our proposed policy to cap wage index reductions for hospitals at 5 percent on an annual basis.

For CY 2025, we proposed to maintain the current rural adjustment policy, as discussed in section II.E of this final rule with comment period. Therefore, the proposed budget neutrality factor for the rural adjustment was 1.0000.

We proposed to calculate a CY 2025 budget neutrality adjustment factor for the cancer hospital payment adjustment by transitioning from the target PCR of 0.89 we finalized for CYs 2020 through 2023 (which included the 1.0 percentage point reduction as required by section 16002(b) of the 21st Century Cures Act) and incrementally reducing the target PCR by an additional 1.0 percentage point for each calendar year, beginning with CY 2024, until the target PCR equals the PCR of non-cancer hospitals calculated using the most recent data minus 1.0 percentage point as required by section 16002(b) of the 21st Century Cures Act. Therefore, we proposed to apply a budget neutrality adjustment factor of 1.0006 to the conversion factor for the cancer hospital payment adjustment. In accordance with section 1833(t)(18)(C) of the Act, as added by section 16002(b) of the 21st Century Cures Act (Pub. L. 114–255), we reduce the target PCR by 0.01, which brings the proposed target PCR to 0.87. This is 0.02 less than the target PCR of 0.89 from CY 2021 through CY 2023, which was held at the pre-PHE target.

For the CY 2025 OPPS/ASC proposed rule, we estimated that proposed pass-through spending for drugs, biologicals, and devices for CY 2025 would equal approximately $625 million, which represented 0.71 percent of total projected CY 2025 OPPS spending. Therefore, we stated that the proposed conversion factor would be adjusted by the difference between the 0.27 percent estimate of pass-through spending for CY 2024 and the 0.71 percent estimate of proposed pass-through spending for CY 2025, resulting in a proposed decrease to the conversion factor for CY 2025 of 0.44 percent.

We proposed that estimated payments for outliers would remain at 1.0 percent of total OPPS payments for CY 2025. We estimated for the proposed rule that outlier payments would be approximately 0.85 percent of total OPPS payments in CY 2024; the 1.00 percent for proposed outlier payments in CY 2025 would constitute a 0.15 percent increase in payment in CY 2025 relative to CY 2024.

For CY 2025, we proposed to use a conversion factor of $87.382 in the calculation of the national unadjusted payment rates for those items and services for which payment rates are calculated using geometric mean costs; that is, the proposed OPD fee schedule increase factor of 2.6 percent for CY 2025, the required proposed wage index budget neutrality adjustment of approximately 1.0026, the proposed 5 percent annual cap for individual hospital wage index reductions adjustment of approximately 0.9982, the proposed cancer hospital payment adjustment of 1.0006, and the proposed adjustment of a decrease of 0.44 percentage point of projected OPPS spending for the difference in pass-through spending, which resulted in a proposed conversion factor for CY 2025 of $89.379.

For CY 2025, we also proposed that hospitals that fail to meet the reporting requirements of the Hospital OQR Program would continue to be subject to a further reduction of 2.0 percentage points to the OPD fee schedule increase factor. For hospitals that fail to meet the requirements of the Hospital OQR Program, we proposed to make all other adjustments discussed above, but use a reduced OPD fee schedule update factor of 0.6 percent (that is, the proposed OPD fee schedule increase factor of 2.6 percent further reduced by 2.0 percentage points). This would result in a proposed reduced conversion factor for CY 2025 of $87.636 for hospitals that fail to meet the Hospital OQR Program requirements (a difference of −1.743 in the conversion factor relative to hospitals that met the requirements). For further discussion of the Hospital OQR Program, we refer readers to section XV of this final rule with comment period. For 2025, we proposed

to use a reduced conversion factor of $87.636 in the calculation of payments for hospitals that fail to meet the Hospital OQR Program requirements (a difference of −1.743 in the conversion factor relative to hospitals that met the requirements).

We received no comments on our proposed adjustments to the conversion factor for CY 2025. For this CY 2025 OPPS/ASC final rule with comment period, based on more recent data available, the OPD fee schedule increase factor for the CY 2025 OPPS is 2.9 percent (which reflects the 3.4 percent final estimate of the hospital inpatient market basket percentage increase reduced by a 0.5 percentage point productivity adjustment). For CY 2025, we are using a conversion factor of $89.169 in the calculation of the national unadjusted payment rates for those items and services for which payment rates are calculated using geometric mean costs; that is, the OPD fee schedule increase factor of 2.9 percent for CY 2025, the required wage index budget neutrality adjustment of 0.9927, the 5 percent annual cap for individual hospital wage index reductions of 0.9995, the cancer hospital payment adjustment of 1.0005, and the adjustment of 0.10 (or 0.37 less 0.27) percentage point of projected OPPS spending for the difference in pass-through spending that results in a conversion factor for CY 2024 of $89.169. We are also finalizing a reduced conversion factor of $87.439 in the calculation of payments for hospitals that fail to meet the Hospital OQR Program requirements (a difference of −1.730 in the conversion factor relative to hospitals that met the requirements).

The calculations we performed to determine the CY 2025 final conversion factor are shown in Table 10.

BILLING CODE 4120–01–P

TABLE 10: CALCULATION OF CY 2025 FINAL OPPS CONVERSION FACTOR

Start: CY 2024 Final OPPS Conversion Factor = **$87.382**
Step 1a: Adjust the conversion factor to temporarily account for additional drug and device pass-through spending and outlier spending in CY 2024. This action causes an increase in the conversion factor. So, the amount of both drug and device pass-through spending (0.0027) and the percentage of outlier spending (0.01) as a share of total OPPS outpatient hospital spending is subtracted from 1.0000, which represents total OPPS outpatient hospital spending for CY 2024. ➢ 1.0000– (0.0027+0.01) = 0.9873
Step 1b: Divide $87.382 by 0.9873 ➢ $87.382/0.9873 = **$88.506**
Step 2: Adjust the conversion factor by the required wage index budget neutrality adjustment of approximately 0.9927. This adjustment increases the amount of OPPS outpatient hospital spending and is multiplied with $88.506. ➢ $88.506* 0.9927 = **$87.860**
Step 3: Adjust the conversion factor by the 5 percent annual cap for individual hospital wage index reductions adjustment of approximately 0.9995. This adjustment reduces the amount of OPPS outpatient hospital spending and is multiplied with $87.860. ➢ $87.860* 0.9995 = **$87.816**
Step 4: Adjust the conversion factor by the cancer hospital payment adjustment of 1.0005. Because the PCR for cancer hospitals is declining between CY 2024 and CY 2025, it increases the amount of OPPS outpatient hospital spending for providers that are not cancer hospitals and is multiplied with $87.816. ➢ $87.816*1.0005 = **$87.860**
Step 5: Adjust the conversion factor by rural SCH adjustment policy of 1.0000. Since we are maintaining our current policy, there is no impact on the conversion by this policy.

➢ $87.860*1.0000 = **$87.860**
Step 6a: Adjust the conversion factor by the OPD fee schedule increase factor of 0.029 for CY 2025. The OPD fee schedule increase factor increases outpatient hospital spending in CY 2025 over CY 2024 and is added to 1.0000 which represents total outpatient hospital OPPS spending in CY 2024. ➢ 1.0000+0.029 = 1.0290
Step 6b: Multiply $87.860 by 1.0290. ➢ $87.860*1.0290 = **$90.408**
Step 7a: Adjust the conversion factor to remove additional drug and device pass-through spending and outlier spending for CY 2025. This action causes a decrease in the conversion factor. So, the amount of both drug and device pass-through spending (0.0037) and the percentage of outlier spending (0.01) as a share of total OPPS outpatient hospital spending is subtracted from 1.0000, which represents total OPPS outpatient hospital spending for CY 2025. ➢ 1.0000– (0.0037+0.01) = 0.9863
Step 7b: Multiply $90.408 by 0.9863 to get the CY 2025 final OPPS conversion factor. $90.408*0.9863 = **$89.169**
Finish: **CY 2025 OPPS Conversion Factor = $89.169**

BILLING CODE 4120–01–C

C. Wage Index Changes

Section 1833(t)(2)(D) of the Act requires the Secretary to determine a wage adjustment factor to adjust the portion of payment and coinsurance attributable to labor-related costs for relative differences in labor and labor-related costs across geographic regions in a budget neutral manner (codified at 42 CFR 419.43(a)). This portion of the OPPS payment rate is called the OPPS labor-related share. Budget neutrality is discussed in section II.A.5 of this final rule with comment period.

The OPPS labor-related share is 60 percent of the national OPPS payment. This labor-related share is based on a regression analysis that determined that, for all hospitals, approximately 60 percent of the costs of services paid under the OPPS were attributable to wage costs. We confirmed that this labor-related share for outpatient services is appropriate during- our regression analysis for the payment adjustment for rural hospitals in the CY 2006 OPPS final rule with comment period (70 FR 68553). We proposed to continue this policy for the CY 2025 OPPS/ASC. We refer readers to section II.C of this final rule with comment period for a description and an example of how the wage index for a particular hospital is used to determine payment for the hospital.

We did not receive any public comments on our proposed labor-related share, and we are finalizing our proposal without modification.

As discussed in the claims accounting narrative included with the supporting documentation for this final rule with comment period (which is available via the internet on the CMS website (*https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*)), for estimating APC costs, we would standardize 60 percent of estimated claims costs for geographic area wage variation using the same FY 2025 pre-reclassified wage index that we use under the IPPS to standardize costs. This standardization process removes the effects of differences in area wage levels from the determination of a national unadjusted OPPS payment rate and copayment amount.

Under 42 CFR 419.41(c)(1) and 419.43(c) (published in the OPPS April 7, 2000, final rule with comment period (65 FR 18495 and 18545)), the OPPS adopted the final fiscal year IPPS post-reclassified wage index as the calendar year wage index for adjusting the OPPS standard payment amounts for labor market differences. Therefore, in general, the wage index that applies to a particular acute care, short-stay hospital under the IPPS has also applied to that hospital under the OPPS. As initially explained in the September 8, 1998, OPPS/ASC proposed rule (63 FR 47576), we believe that using the IPPS wage index as the source of an adjustment factor for the OPPS is reasonable and logical, given the inseparable, subordinate status of the HOPD within the hospital overall. In accordance with section 1886(d)(3)(E) of

the Act, the IPPS wage index is updated annually.

The Affordable Care Act contained several provisions affecting the wage index. These provisions were discussed in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74191). Section 10324 of the Affordable Care Act added section 1886(d)(3)(E)(iii)(II) to the Act, which defines a frontier State and amended section 1833(t) of the Act to add paragraph (19), which requires a frontier State wage index floor of 1.00 in certain cases, and states that the frontier State floor shall not be applied in a budget neutral manner. We codified these requirements at § 419.43(c)(2) and (3) of our regulations. For CY 2025 we proposed to implement this provision in the same manner as we have since CY 2011. Under this policy, the frontier State hospitals would receive a wage index of 1.00 if the otherwise applicable wage index (including reclassification, the rural floor, and rural floor budget neutrality) is less than 1.00. Because the HOPD receives a wage index based on the geographic location of the specific inpatient hospital with which it is associated, the frontier State wage index adjustment applicable for the inpatient hospital also would apply for any associated HOPD. We refer readers to the FY 2011 through FY 2024 IPPS/LTCH PPS final rules for discussions regarding this provision, including our methodology for identifying which areas meet the definition of ''frontier States'' as provided for in section 1886(d)(3)(E)(iii)(II) of the Act: for FY 2011, 75 FR 50160 through 50161; for FY 2012, 76 FR 51793, 51795, and 51825; for FY 2013, 77 FR 53369 and 53370; for FY 2014, 78 FR 50590 and 50591; for FY 2015, 79 FR 49971; for FY 2016, 80 FR 49498; for FY 2017, 81 FR 56922; for FY 2018, 82 FR 38142; for FY 2019, 83 FR 41380; for FY 2020, 84 FR 42312; for FY 2021, 85 FR 58765; for FY 2022, 86 FR 45178; FY 2023, 87 FR 49006; and for FY 2024, 88 FR 58977.

In addition to the changes required by the Affordable Care Act, we note that the proposed FY 2025 IPPS wage indexes continue to reflect a number of adjustments implemented in past years, including, but not limited to, reclassification of hospitals to different geographic areas, the rural floor provisions, the imputed floor wage index adjustment in all-urban states, an adjustment for occupational mix, an adjustment to the wage index based on commuting patterns of employees (the out-migration adjustment), and the permanent 5-percent cap on any decrease to a hospital's wage index from its wage index in a prior FY. Beginning with FY 2024, we include hospitals with § 412.103 reclassification along with geographically rural hospitals in all rural wage index calculations, and exclude ''dual reclass'' hospitals (hospitals with simultaneous § 412.103 and Medicare Geographic Classification Review Board (MGCRB) reclassifications) implicated by the hold harmless provision at section 1886(d)(8)(C)(ii) of the Act (88 FR 58971 through 58973). We also proposed to continue the low wage index hospital policy, under which we increase the wage index for hospitals with a wage index value below the 25th percentile wage index value for a fiscal year by half the difference between the otherwise applicable final wage index value for a year for that hospital and the 25th percentile wage index value for that year across all hospitals. We refer readers to the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36181 through 36186) for a detailed discussion of all proposed changes to the FY 2025 IPPS wage indexes.

We note that in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49018 through 49021), we finalized a permanent approach to smooth year-to-year decreases in hospitals' wage indexes. Specifically, for FY 2023 and subsequent years, we apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline. That is, a hospital's wage index for FY 2025 would not be less than 95 percent of its final wage index for FY 2024. Except for newly opened hospitals, we apply the cap for a fiscal year using the final wage index applicable to the hospital on the last day of the prior fiscal year. A newly opened hospital would be paid the wage index for the area in which it is geographically located for its first full or partial fiscal year (subject to any reclassification), and it would not receive a cap for that first year, because it would not have been assigned a wage index in the prior year (in accordance with 42 CFR 419.41(c)(1) and 419.43(c), as noted previously).

We delineate hospital labor market areas based on Core-Based Statistical Areas (CBSAs) established by the Office of Management and Budget (OMB). As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36139 through 36174), OMB issued revisions to the current labor market area delineations on July 21, 2023, that included a number of significant changes such as new CBSAs, urban counties that become rural, rural counties that become urban, and existing CBSAs that are split apart (OMB Bulletin 23–01). This bulletin can be found at: *https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf*. The proposed changes to the IPPS wage index based on the newest CBSA delineations are available in the FY 2025 IPPS/LTCH PPS proposed rule. We proposed that corresponding changes would be adopted in the OPPS, which uses the IPPS wage index, based on the new OMB delineations in the CY 2025 OPPS/ASC proposed rule, consistent with any proposals in the FY 2025 IPPS/LTCH PPS proposed rule. We believe that using the revised delineations based on OMB Bulletin No. 23–01 will increase the integrity of the OPPS wage index system by creating a more accurate representation of current geographic variations in wage levels. We refer readers to proposed changes based on the new OMB delineations in the FY 2025 IPPS/LTCH PPS proposed rule at 89 FR 36139 through 36174, which includes a discussion of the effects of implementation of the proposal to adopt the revised OMB labor market area delineations on reclassified hospitals.

CBSAs are made up of one or more constituent counties. Each CBSA and constituent county has its own unique identifying codes. The FY 2018 IPPS/LTCH PPS final rule (82 FR 38130) discussed the two different lists of codes to identify counties: Social Security Administration (SSA) codes and Federal Information Processing Standard (FIPS) codes. Historically, CMS listed and used SSA and FIPS county codes to identify and crosswalk counties to CBSA codes for purposes of the IPPS and OPPS wage indexes. However, the SSA county codes are no longer being maintained and updated, although the FIPS codes continue to be maintained by the U.S. Census Bureau. The Census Bureau's most current statistical area information is derived from ongoing census data from 2020. The Census Bureau maintains a complete list of changes to counties or county equivalent entities on the website at: *https://www.census.gov/geo/reference/county-changes.html* (which, as of May 6, 2019, migrated to: *https://www.census.gov/programs-surveys/geography.html*). In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38130), for purposes of cross walking counties to CBSAs for the IPPS wage index, we finalized our proposal to discontinue the use of the SSA county codes and begin using only the FIPS county codes. Similarly, for the purposes of cross walking counties to CBSAs for the OPPS wage index, in the CY 2018 OPPS/ASC final rule with comment period (82 FR 59260), we finalized our proposal to discontinue

the use of SSA county codes and begin using only the FIPS county codes. For CY 2025, under the OPPS, we are continuing to use only the FIPS county codes for purposes of cross walking counties to CBSAs.

We proposed to use the FY 2025 IPPS post-reclassified wage index for urban and rural areas as the wage index for the OPPS to determine the wage adjustments for both the OPPS payment rate and the copayment rate for CY 2025. We note that the proposed FY 2025 IPPS wage indexes reflect several proposed changes as a result of the revised OMB delineations, including proposed policies to accommodate changes in rural or urban status for existing counties, as well as addition or removal of certain individual CBSAs compared to the previous delineations. Therefore, policies and adjustments that were finalized for the FY 2025 IPPS post-reclassified wage index would be reflected in the final CY 2025 OPPS wage index beginning on January 1, 2025, if appropriate. We refer readers to the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36181 through 36186) and the proposed FY 2025 hospital wage index files posted on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/fy-2025-ipps-proposed-rule-home-page*. Regarding budget neutrality for the CY 2025 OPPS wage index, we refer readers to section II.C of this final rule with comment period.

As a general matter, we continue to believe that using the IPPS post-reclassified wage index as the source of an adjustment factor for the OPPS is reasonable and logical, given the inseparable, subordinate status of the HOPD within the hospital overall. We acknowledge, however, that an interim final action with comment period (IFC) entitled Changes to the Fiscal Year 2025 Hospital Inpatient Prospective Payment System (IPPS) Rates Due to Court Decision appeared in the October 3, 2024 **Federal Register** (89 FR 80405), which makes certain changes to the FY 2025 IPPS post-reclassified wage index for some hospitals that were not and could not have been anticipated or accounted for in the OPPS proposed rule. For reasons discussed in detail later in this section, we believe it is more appropriate and consistent with CMS' authority to use the post-reclassified wage index established in the FY 2025 IPPS final rule (89 FR 68986) as corrected in the FY 2025 IPPS final rule correction (89 FR 80098) for purposes of the CY 2025 OPPS wage index than it would be to incorporate the exceptional changes implemented by the IFC.

Hospitals that are paid under the OPPS, but not under the IPPS, do not have an assigned hospital wage index under the IPPS. Therefore, for non-IPPS hospitals paid under the OPPS, it is our longstanding policy to assign the wage index that would be applicable if the hospital was paid under the IPPS, based on its geographic location and any applicable wage index policies and adjustments. We proposed to continue this policy for CY 2025. We refer readers to the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36181 through 36186) for a detailed discussion of the proposed changes to the FY 2025 IPPS wage indexes.

It has been our longstanding policy to allow non-IPPS hospitals paid under the OPPS to qualify for the out-migration adjustment if they are located in a section 505 out-migration county (section 505 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA)) (Pub. L. 108–173). Applying this adjustment is consistent with our general approach to adopt IPPS wage index policies for hospitals paid under the OPPS. We note that, because non-IPPS hospitals cannot reclassify, they are eligible for the out-migration wage index adjustment if they are located in a section 505 out-migration county. This is the same out-migration adjustment policy that would apply if the hospital were paid under the IPPS. For CY 2025, we proposed to continue our policy of allowing non-IPPS hospitals paid under the OPPS to qualify for the outmigration adjustment if they are located in a section 505 out-migration county (section 505 of the MMA) (88 FR 49585 and 49586). Furthermore, we proposed that the wage index that would apply for CY 2025 to non-IPPS hospitals paid under the OPPS would continue to include the rural floor adjustment and any policies and adjustments applied to the IPPS wage index to address wage index disparities. In addition, we proposed that the wage index that would apply to non-IPPS hospitals paid under the OPPS would include the 5-percent cap on wage index decreases.

Comment: One commenter supported CMS's decision to utilize the updated OMB delineations and agreed with the CBSA assignments made in Connecticut based on the regional planning areas.

Response: We appreciate the commenter's support.

Comment: A commenter did not agree with CMS's adoption of OMB's CBSA delineation revisions. The commenter stated that OMB cautions that CBSAs are not intended for any non-statistical uses and should only be used for other purposes with full consideration of the effects of using the delineations for such purposes. Further, the commenter stated that the Metropolitan Areas Protection and Standardization Act (MAPS Act) bars the automatic propagation of OMB revisions in CBSA delineations to geographic area determinations in nonstatistical Federal programs, and stated that any change to the standards of CBSA delineations shall propagate for any non-statistical use by any domestic assistance program only if the relevant agency determines that such a propagation supports the purposes of the program, is in the public interest, and adopts the change through notice-and-comment rulemaking. The commenter contends that if CMS chooses to adopt new OMB delineations, CMS must fully explain why reliance on the updated CBSAs as set forth by OMB is appropriate for purposes of the FY 2025 hospital wage index adjustments. The commenter stated that CMS has not provided an appropriate rationale for relying on the updated CBSAs and proposed to adopt the revised CBSAs by default. The commenter contends that CMS must make a fact-specific determination of those CBSAs' suitability for Medicare reimbursement purposes, including whether it would be appropriate to use additional data to modify OMB's delineations to ensure that such changes are appropriate for purposes of defining regional labor markets for hospital workers.

Response: CMS acknowledges that the CBSA definitions and delineations were not specifically created for the purpose of determining a hospital wage index. However, based on the reasons stated in prior rulemaking, we continue to believe that these definitions and delineations, which are regularly reviewed and updated by OMB, are the best proxy for CMS to use to adjust hospital payment rates based on geographic variations in labor costs in accordance with the statute. We note that the OPPS wage index has historically adopted the IPPS wage index on a calendar year basis, and thus the same structure for organizing geographic areas applied to the IPPS through CBSAs has applied in the OPPS.

Section 1886(d)(3)(E) of the Act requires that, as part of the methodology for determining prospective payments to hospitals through the IPPS, the Secretary must adjust the standardized amounts ''for area differences in hospital wage levels by a factor (established by the Secretary) reflecting the relative hospital wage level in the

geographic area of the hospital compared to the national average hospital wage level.'' Section 1833(t)(2)(D) of the Act provides that for the OPPS, ''the Secretary shall determine a wage adjustment factor to adjust the portion of payment and coinsurance attributable to labor-related costs for relative differences in labor and labor-related costs across geographic regions in a budget neutral manner.'' We refer readers to the FY 1985 IPPS final rule (50 FR 24375 through 24377) and the FY 1995 IPPS final rule (60 FR 29218 through 29220) for a history of the outreach, consultation, and discussion of the challenges faced in defining appropriate labor market areas for purposes of the wage index methodology. As with any classification system in which boundaries must be established, it is impossible to designate boundaries that will be completely satisfactory to all concerned. There was no consensus among the interested parties on a choice for new labor market areas, and CMS concluded the adoption and continuation of an MSA-based framework was the most prudent course of action. We also refer readers to the FY 2005 rule (69 FR 49027 through 49028) for further discussion regarding the process and outreach CMS undertook before initially adopting OMB CBSAs as the basis for the wage index methodology. We found that the CBSA framework offered a useful proxy for labor market area delineations and that none of the alternative labor market areas that were studied provided a distinct improvement over the use of MSAs.

As stated previously, CMS continued to evaluate other potential methods to calculate variations in geographic labor markets in a manner that maintains or improves consistency and equity in hospital payments in response to recommendations from MedPAC. However, as stated in the 2012 Report to Congress: Plan to Reform the Medicare Wage Index (on the web at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-IndexReform*), CMS has concluded that implementing any of the recommended revisions to wage index methodologies would require Congressional action. The commenter did not suggest any alternative method for defining geographic labor market areas and, given our decades long history of using OMB CBSA (and the prior Primary MSA) definitions and delineations for wage index purposes, we continue to believe adopting OMB revisions in a timely manner is essential to the wage index by creating a more accurate representation of geographic variations in wage levels. CMS is aware of the MAPS Act requirements for the adoption of CBSA definitions for nonstatistical use and believes that we have provided an adequate rationale to support our proposed adoption through notice and comment rulemaking. As we stated in the proposed rule (89 FR 36140), we believe that using the revised delineations based on OMB Bulletin No. 23–01 will increase the integrity of the wage index by creating a more accurate representation of current geographic variations in wage levels. While the adoption of the revised delineations will have both positive and negative impacts on specific hospitals and labor markets, we believe that periodically updating the labor market delineations using objective criteria and based on the most recently available commuting data will serve the public's interest in ensuring accurate Medicare payments to hospitals under the OPPS by more accurately reflecting current geographic variations in labor costs in the hospital payment methodology. While some CBSAs would be modified in significant ways, the criteria for MSA, Micropolitan Statistical Area, and Metropolitan Division definitions finalized by OMB are generally consistent with past updates, and we do not find that the adoption of these delineations will create extreme variations in payments to hospitals, especially when considering the impact of the policy to cap annual wage index reductions at 5 percent. On this basis, and for the reasons we stated in prior rulemaking, we have determined that their use supports the purpose of adjusting hospital payment rates based on geographic variations in labor costs in accordance with the statute. We have reviewed our findings and impacts relating to the new OMB delineations and find no compelling reason to delay implementation. Therefore, we are finalizing the proposed policies implementing the revised OMB delineations, including the policy for the treatment of Micropolitan Statistical areas, Metropolitan divisions, and the change to county-equivalent definitions for the State of Connecticut.

Comment: A commenter requested that in addition to the permanent cap policy, CMS implement a 3-year wage index transition period consistent with prior updates to the CBSA categorizations made due to OMB updates.

Response: We note that when we previously adopted revised OMB delineations, the majority of negatively impacted hospitals received a wage index adjustment for only one fiscal year via a 50/50 blend of wage index values using the then-current and newly adopted delineations (79 FR 66827). Hospitals that were reassigned from an urban to rural area as a result of our adoption of the revised OMB delineations received a 3-year transition period from their previous urban area wage index, as long as they did not obtain a new MGCRB reclassification during that time period. As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49018 through 49021), the 5 percent cap on annual wage index reductions was intended to make unnecessary any future transitions in connection with wage index policy implementations, including the adoption of revised labor market area definitions. Based on our analysis of wage index differences between FY 2024 and FY 2025, we estimate that only 136 hospitals (less that 4 percent) will receive a wage index cap that did not receive the cap in FY 2024. This indicates any impact on overall wage index values that could be caused by the adoption of the revised delineations would be relatively small. Furthermore, given the iterative and interactive effects of different reclassification and wage index hold-harmless policies, it is difficult to isolate the effects on wage index values (both positive and negative) that are due solely to the adoption of the revised delineations. That is, hospitals may make different reclassification decisions based on the transition policy, rather than the actual impacts of the revised delineations. We believe that any attempt to tailor a transition policy specifically to the impacts of adopting revised labor market delineations is not likely to yield results that more accurately reflect current differences in area wages than the 5 percent cap policy. We believe the 5 percent cap policy ensures that hospitals will not experience large payment reductions as a result of annual changes in their wage index value, allows adequate time for hospitals to evaluate reclassification options, and provides consistency and predictability in wage index values. Largely due to the modification of the rural wage index calculation finalized in FY 2024 IPPS/LTCH PPS final rule (88 FR 58971 through 58977), a much larger number of urban and rural hospitals within the same state (nearly 60 percent) receive identical wage index values (prior to the application of other policies, such as the outmigration adjustment, 5 percent cap on annual wage index decreases, and low-wage index hospital policy). This

fact suggests that there is even less need for separate transition policies for urban and rural hospitals in response to changes in geographic delineations than there was previously. Furthermore, we did not receive a comment from any hospital (urban or rural) citing specific negative impacts due solely or primarily to the proposed adoption of the revised OMB delineations. For these reasons, we do not believe it is necessary to implement any additional or alternative transition policy to the 5 percent cap on wage index decrease policy.

Comment: A commenter supported our policy to treat urban hospitals reclassified as rural hospitals under § 412.103 as rural hospitals for purposes of the rural wage indexes and the rural floor.

Response: We appreciate the commenter's support of our policy.

Comment: Multiple commenters supported our proposed low-wage index policy, which, for hospitals with a wage index value below the 25th percentile, increases the hospital's wage index by half the difference between the otherwise applicable wage index value for that hospital and the 25th percentile wage index value for all hospitals. Some commenters stated that the policy helps to address unjustified disparities in Medicare reimbursement. One commenter supported the continuation of this policy and noted the court decision in *Bridgeport Hospital* v. *Becerra,* 108 F.4th 882 (D.C. Cir. 2024) that determined that CMS lacked the statutory authority to adopt this policy in the IPPS.

One commenter opposed the proposed low wage index hospital policy. They believe that it has the effect of harming hospitals in high wage areas while having unclear impacts on the hospitals in low wage areas that receive higher payments. The commenter further noted the recent court decision in *Bridgeport Hospital* v. *Becerra.* As a result, they urged CMS to discontinue the low wage index policy in the OPPS, but advocated that if CMS maintained the policy, it do so in a non-budget neutral manner.

Response: We appreciate these comments.

Since the establishment of the OPPS, we have adopted the IPPS wage index on a calendar year basis in the OPPS. As we have noted across the years and earlier in this section, using the IPPS wage index as the source of an adjustment factor for the OPPS is reasonable and logical, given the inseparable, subordinate status of the HOPD within the hospital overall. In cases where CMS has had statutory authority to implement certain policies under the IPPS in a non-budget neutral manner, to apply the same wage index values in the OPPS we have budget neutralized those adjustments in accordance with section 1833(t)(2)(D) of the Act, such as with the outmigration adjustment (69 FR 65842 through 65844).

On July 23, 2024, the Court of Appeals for the D.C. Circuit held that the Secretary lacked authority under section 1886(d)(3)(E) of the Act or under the ''adjustments'' language of section 1886(d)(5)(I)(i) of the Act to adopt the low wage index hospital policy for FY 2020 for the IPPS, and that the policy and related budget neutrality adjustment in the IPPS must be vacated. *Bridgeport Hosp.* v. *Becerra,* 108 F.4th 882, 887–91 & n.6 (D.C. Cir. 2024). In consideration of the court decision, CMS subsequently issued the interim final action with comment period (IFC) entitled Changes to the Fiscal Year 2025 Hospital Inpatient Prospective Payment System (IPPS) Rates Due to Court Decision (CMS–1808–IFC) to remove the low wage index hospital policy for FY 2025 IPPS purposes. At the same time, the IFC included a payment exception under section 1886(d)(5)(I)(i) of the Act that corresponded mathematically to a 5 percent cap on wage index reductions from FY 2024 for certain low wage index hospitals most significantly impacted by the removal of the low wage index policy.

We note that we proposed to include the low wage index hospital policy as part of the CY 2025 OPPS wage index and believe that the statutory authority provided under section 1833(t)(2)(D) of the Act allows us to finalize a similar policy for the CY 2025 OPPS, as we have done each year beginning in CY 2020. Specifically, section 1886(d)(3)(E) of the Act requires that CMS base the IPPS wage index on a comparison of ''the relative hospital wage level in the geographic area of the hospital compared to the national average hospital wage level,'' and on ''a survey conducted by the Secretary (and updated as appropriate) of the wages and wage–related costs of subsection (d) hospitals in the United States,'' whereas section 1833(t)(2)(D) contains no such prescriptions for the manner of determining the OPPS wage index. (We continue to effectuate relevant prescriptions, such as the requirement in sections 1833(t)(2)(D) and 1833(t)(9) of the Act that OPPS wage index policies are generally budget neutral.) In addition, CMS has authority to apply the low wage index hospital policy to the OPPS wage index under section 1833(t)(2)(E) of the Act, which allows the Secretary to ''establish, in budget neutral manner, . . . other adjustments as determined to be necessary to ensure equitable payments, such as adjustments for certain classes of hospitals. We believe implementing the low wage index hospital policy is a valid exercise of the Secretary's authority to adopt ''adjustments'' to OPPS payments under the OPPS statute, where the provision regarding calculation of the OPPS wage adjustment factor does not contain the same language that the D.C. Circuit found to be prescriptive for the calculation of the IPPS wage index found at section 1886(d)(3)(E) of the Act. Additionally, section 1833(t)(2)(E) of the Act—unlike the adjustment authority at section 1886(d)(5)(I)—authorizes us to make adjustments to ''ensure equitable payments.'' In light of the unique circumstances presented by the timing of D.C. Circuit's decision, application of the low wage-index-hospital policy under the OPPS for CY 2025 avoids unexpected and arguably unfair payment consequences for hospitals that were not plaintiffs in the *Bridgeport* case and so falls within our equitable adjustment authority.

While this would create a divergence between the OPPS wage index values in CY 2025 and the ultimate, effective FY 2025 IPPS wage index values for some hospitals, we continue to believe that the concerns related to the wage index that led to the application of this policy to the OPPS wage index in previous years continue to apply, and that the OPPS authority for wage adjustment factors continues to give CMS the authority to implement a budget neutral low wage index hospital policy. Additionally, we believe that the same reasons underlying adoption of the IFC policies for the FY 2025 IPPS wage index weigh against incorporating those policies for purposes of the CY 2025 OPPS wage index. Specifically, we noted in the IFC that the intention of the policies implemented therein is to ''promote certainty regarding. . .payments'' and ''provide for payment stability and promote predictability,'' in light of the court's decision in the *Bridgeport Hospital* case (89 FR 80408). Given the differences noted in the previous paragraph between the IPPS and OPPS in CMS's statutory authorities related to the wage index, those interests are better served by finalizing the OPPS wage index methodology as proposed, including the low wage index hospital policy.

Finally, we acknowledge that in the IFC, we implemented under section 1886(d)(5)(I)(i) of the Act a transitional payment exception for hospitals that benefitted from the FY 2024 low wage

index hospital policy in the IPPS without budget neutralizing that exception. But that payment exception serves a different purpose from that of the low wage index hospital policy. And, in any event, unlike the statute authorizing the transitional payment exception, CMS's authority to implement a low wage index hospital policy in the OPPS requires it to budget neutralize that policy. That is, while section 1886(d)(5)(I)(i) contains no budget neutrality requirement, both section 1833(t)(2)(D) and (t)(2)(E) do. Thus, in the context of the OPPS, we will continue to budget neutralize the low wage index hospital policy. For these reasons, and those discussed above, we are finalizing in the CY 2025 OPPS the low wage index hospital policy as we had proposed in the CY 2025 OPPS/ASC proposed rule (89 FR 59227).

We recognize that creating different effective wage index values for a hospital under the OPPS than the wage index value for the hospital under the IPPS for CY 2025 differs in some respects from how we have implemented the OPPS wage index previously, where we have used the IPPS wage index value in effect throughout the FY as the OPPS wage index value for all hospitals. However, we believe this is the appropriate approach for the CY 2025 OPPS given the unusual circumstances wherein an appellate court ruled that CMS lacked authority under the IPPS statute for a policy under the FY 2020 IPPS wage index that the OPPS proposed rule had already proposed to include in the OPPS wage index. We further believe the approach in this final rule is consistent with § 419.43(c), which states: ''CMS uses the hospital inpatient prospective payment system wage index established in accordance with Part 412 of this chapter to make the adjustment specified under paragraph (a) of this section.'' The OPPS wage index values will match the IPPS wage index values in the FY 2025 IPPS final rule, as corrected in the FY 2025 IPPS final rule correction (89 FR 80098), which were ''established in accordance with Part 412''; we are merely declining to incorporate certain modifications to those values made in the IFC, which reflect extraordinary steps taken due to the timing of the court's decision in *Bridgeport Hospital.*

CMS will explore options for realigning the IPPS and OPPS wage index values through future rulemaking.

Comment: Multiple commenters supported our policy to apply a 5 percent cap on any decrease to a hospital's wage index from its wage index in the prior FY. Commenters also requested that the proposed 5-percent cap policy be applied in a non-budget neutral manner, which the commenter stated would allow the cap to be applied while avoiding decreases to the wage index in areas with high wage indexes.

Response: We appreciate the commenters' support of our policy to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY. For the OPPS, section 1833(t)(2)(D) of the Act requires the Secretary to determine a wage adjustment factor to adjust the portion of payment and coinsurance attributable to labor-related costs for relative differences in labor and labor-related costs across geographic regions in a budget neutral manner, which is inconsistent with the commenters' request to exclude the wage index cap policy from budget neutrality.

After consideration of the public comments we received, we are finalizing our proposal without modification to use the FY 2025 IPPS post-reclassified wage index for urban and rural areas as finalized in the FY 2025 IPPS final rule and corrected in the FY 2025 IPPS final rule correction as the wage index for the OPPS, which includes the OPPS low wage index hospital policy, to determine the wage adjustments for both the OPPS payment rate and the copayment rate for CY 2025. In addition to the low wage index hospital policy, which will only apply in the OPPS in CY 2025, certain FY 2025 post-reclassified wage index policies will be reflected in the final CY 2025 OPPS wage index beginning on January 1, 2025, including, but not limited to, reclassification of hospitals to different geographic areas, the rural floor provisions, the imputed floor wage index adjustment in all-urban states, an adjustment for occupational mix, an adjustment to the wage index based on commuting patterns of employees (the out-migration adjustment), and a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY. We refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69252 through 69310) and the FY 2025 hospital wage index files posted on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/fy-2025-ipps-final-rule-home-page*. Regarding budget neutrality for the CY 2025 OPPS wage index, we refer readers to section II.B. of this final rule with comment period.

For CMHCs, for CY 2025, we proposed to continue to calculate the wage index by using the post-reclassification IPPS wage index based on the CBSA where the CMHC is located. Furthermore, we proposed that the wage index that would apply to a CMHC for CY 2025 would continue to include the rural floor adjustment and any policies and adjustments applied to the IPPS wage index to address wage index disparities. In addition, the wage index that would apply to CMHCs would include the 5-percent cap on wage index decreases. Also, we proposed that the wage index that would apply to CMHCs would not include the outmigration adjustment because that adjustment only applies to hospitals.

We did not receive any public comments on our proposals, and we are finalizing our proposals regarding CMHC wage index calculations without modification.

Table 4A associated with the FY 2025 IPPS/LTCH PPS final rule (available via the internet on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/fy-2025-ipps-final-rule-home-page*) identifies counties that would be eligible for the out-migration adjustment. Table 2 associated with the FY 2025 IPPS/LTCH PPS final rule as corrected by the FY 2025 IPPS final rule correction identifies IPPS hospitals that would receive the out-migration adjustment for FY 2025. We are including the outmigration adjustment information from Table 2 associated with the FY 2025 IPPS/LTCH PPS final rule as Addendum L to this final rule with comment period, with the addition of non-IPPS hospitals that would receive the section 505 outmigration adjustment under this final rule. Addendum L is available via the internet on the CMS website. We refer readers to the CMS website for the OPPS at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*. At this link, readers will find a link to the FY 2025 IPPS final rule wage index tables and the CY 2025 OPPS final rule Addendum L.

D. Statewide Average Default Cost-to-Charge Ratios (CCRs)

In addition to using CCRs to estimate costs from charges on claims for ratesetting, we use overall hospital-specific CCRs calculated from the hospital's most recent cost report (OMB control number: 0938–0050 for Form CMS–2552–10) to determine outlier payments, payments for pass-through devices, and monthly interim transitional corridor payments under the OPPS during the PPS year. For certain hospitals, under the regulations at 42 CFR 419.43(d)(5)(iii), we use the

statewide average default CCRs to determine the payments mentioned earlier if it is not possible to determine an accurate CCR for a hospital in certain circumstances. This includes hospitals that are new, hospitals that have not accepted assignment of an existing hospital's provider agreement, and hospitals that have not yet submitted a cost report. We also use the statewide average default CCRs to determine payments for hospitals whose CCR falls outside the predetermined ceiling threshold for a valid CCR or for hospitals in which the most recent cost report reflects an all-inclusive rate status (Medicare Claims Processing Manual (Pub. L. 100–04), Chapter 4, Section 10.11).

We discussed our policy for using default CCRs, including setting the ceiling threshold for a valid CCR, in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68594 through 68599) in the context of our adoption of an outlier reconciliation policy for cost reports beginning on or after January 1, 2009. For details on our process for calculating the statewide average CCRs, we refer readers to the Claims Accounting Narrative for this final rule with comment period, which is posted on our website. We proposed to calculate the default ratios for CY 2025 using the most recent cost report data.

We did not receive any public comments on our proposal, and we are finalizing our proposal without modification to calculate the default ratios for CY 2025 using the most recent cost report data, which are from a June 2024 HCRIS cost report extract.

We no longer publish a table in the **Federal Register** containing the statewide average CCRs in the annual OPPS/ASC proposed rule and final rule with comment period. These CCRs and the upper limit CCR value at which we would apply statewide CCRs will be available for download with each OPPS/ASC CY proposed rule and final rule on the CMS website. We refer readers to our website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices;* click on the link on the left of the page titled ''Annual Policy Files'' and then select the relevant year to download the statewide CCRs and upper limit in the ''Downloads'' section of the web page.

E. Adjustment for Rural Sole Community Hospitals (SCHs) and Essential Access Community Hospitals (EACHs) Under Section 1833(t)(13)(B) of the Act for CY 2025

In the CY 2006 OPPS final rule with comment period (70 FR 68556), we finalized a payment increase for rural sole community hospitals (SCHs) of 7.1 percent for all services and procedures paid under the OPPS, excluding separately payable drugs and biologicals, brachytherapy sources, items paid at charges reduced to costs, and devices paid under the pass-through payment policy, in accordance with section 1833(t)(13)(B) of the Act, as added by section 411 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173). Section 1833(t)(13) of the Act provides the Secretary the authority to make an adjustment to OPPS payments for rural hospitals, effective January 1, 2006, if justified by a study of the difference in costs by APC between hospitals in rural areas and hospitals in urban areas. Our analysis showed a difference in costs for rural SCHs. Therefore, for the CY 2006 OPPS, we finalized a payment adjustment for rural SCHs of 7.1 percent for all services and procedures paid under the OPPS, excluding separately payable drugs and biologicals, brachytherapy sources, items paid at charges reduced to costs, and devices paid under the pass-through payment policy, in accordance with section 1833(t)(13)(B) of the Act.

In the CY 2007 OPPS/ASC final rule with comment period (71 FR 68010 and 68227), for purposes of receiving this rural adjustment, we revised our regulations at § 419.43(g) to clarify that essential access community hospitals (EACHs) are also eligible to receive the rural SCH adjustment, assuming these entities otherwise meet the rural adjustment criteria. Currently, two hospitals are classified as EACHs, and as of CY 1998, under section 4201(c) of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), a hospital can no longer become newly classified as an EACH.

This adjustment for rural SCHs is budget neutral and applied before calculating outlier payments and copayments. We stated in the CY 2006 OPPS final rule with comment period (70 FR 68560) that we would not reestablish the adjustment amount on an annual basis, but we may review the adjustment in the future and, if appropriate, would revise the adjustment. We provided the same 7.1 percent adjustment to rural SCHs, including EACHs, again in CYs 2008 through 2024.

For CY 2025, we proposed to continue the current policy of a 7.1 percent payment adjustment for rural SCHs, including EACHs, for all services and procedures paid under the OPPS, excluding separately payable drugs and biologicals, brachytherapy sources, items paid at charges reduced to costs, and devices paid under the pass-through payment policy, applied in a budget neutral manner.

Comment: Many commenters supported our policy to continue the 7.1 percent payment adjustment for rural SCHs and EACHs.

Response: We thank the commenters for their support of our policy.

Comment: Multiple commenters stated that the 7.1 percent payment adjustment should be extended to urban SCHs and Medicare dependent hospitals (MDHs). The commenters suggested CMS perform another study to look at the costs that MDHs incur and that CMS has the authority to extend the adjustment to MDHs and urban SCHs without legislation.

Response: We reiterate that our study of the cost difference by APC's between hospitals in rural areas and urban areas only showed a significant difference in costs for rural SCHs. CMS results did not identify significant cost differences between hospitals in urban areas and MDHs. In addition, our authority under section 1833(t)(13) of the Act only extends to rural hospitals. Therefore, we are not expanding the types of hospitals eligible for the 7.1 percent payment adjustment at this time.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to continue our current policy of utilizing a budget neutral 7.1 percent payment adjustment for rural SCHs, including EACHs, for all services and procedures paid under the OPPS, excluding separately payable drugs and biologicals, devices paid under the pass-through payment policy, and items paid at charges reduced to costs.

F. Payment Adjustment for Certain Cancer Hospitals for CY 2025

1. Background

Since the inception of the OPPS, which was authorized by the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), Medicare has paid the 11 hospitals that meet the criteria for cancer hospitals identified in section 1886(d)(1)(B)(v) of the Act under the OPPS for covered outpatient department services. These cancer hospitals are exempted from payment under the IPPS. With the Medicare, Medicaid and SCHIP Balanced Budget Refinement Act of 1999 (Pub. L. 106–113), the Congress added section 1833(t)(7), ''Transitional Adjustment to Limit Decline in Payment,'' to the Act, which requires the Secretary to determine OPPS payments to cancer and children's hospitals based on their pre-BBA

payment amount (these hospitals are often referred to under this policy as ''held harmless'' and their payments are often referred to as ''hold harmless'' payments).

As required under section 1833(t)(7)(D)(ii) of the Act, a cancer hospital receives the full amount of the difference between payments for covered outpatient department services under the OPPS and a ''pre-BBA amount.'' That is, cancer hospitals are permanently held harmless to their ''pre-BBA amount,'' and they receive transitional outpatient payments (TOPs) or hold harmless payments to ensure that they do not receive a payment that is lower in amount under the OPPS than the payment amount they would have received before implementation of the OPPS, as set forth in section 1833(t)(7)(F) of the Act. The ''pre-BBA amount'' is the product of the hospital's reasonable costs for covered outpatient department services occurring in the current year and the base payment-to-cost ratio (PCR) for the hospital defined in section 1833(t)(7)(F)(ii) of the Act. The ''pre-BBA amount'' and the determination of the base PCR are defined at § 419.70(f). TOPs are calculated on Worksheet E, Part B, of the Hospital Cost Report or the Hospital Health Care Complex Cost Report (Form CMS–2552–96 or Form CMS–2552–10 (OMB NO: 0938–0050), respectively), as applicable each year. Section 1833(t)(7)(I) of the Act exempts TOPs from budget neutrality calculations.

Section 3138 of the Affordable Care Act (Pub. L. 111–148) amended section 1833(t) of the Act by adding a new paragraph (18), which instructs the Secretary to conduct a study to determine if, under the OPPS, outpatient costs incurred by cancer hospitals described in section 1886(d)(1)(B)(v) of the Act with respect to APC groups exceed outpatient costs incurred by other hospitals furnishing services under section 1833(t) of the Act, as determined appropriate by the Secretary. Section 1833(t)(18)(A) of the Act requires the Secretary to take into consideration the cost of drugs and biologicals incurred by cancer hospitals and other hospitals. Section 1833(t)(18)(B) of the Act provides that, if the Secretary determines that cancer hospitals' costs are higher than those of other hospitals, the Secretary shall provide an appropriate adjustment under section 1833(t)(2)(E) of the Act to reflect these higher costs. In 2011, after conducting the study required by section 1833(t)(18)(A) of the Act, we determined that outpatient costs incurred by the 11 specified cancer hospitals were greater than the costs incurred by other OPPS hospitals. For a complete discussion regarding the cancer hospital cost study, we refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74200 and 74201).

Based on these findings, we finalized a policy to provide a payment adjustment to the 11 specified cancer hospitals that reflects their higher outpatient costs, as discussed in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74202 through 74206). Specifically, we adopted a policy to provide additional payments to the cancer hospitals so that each cancer hospital's final PCR for services provided in a given calendar year is equal to the weighted average PCR (which we refer to as the ''target PCR'') for other hospitals paid under the OPPS. The target PCR is set in advance of the calendar year and is calculated using the most recently submitted or settled cost report data that are available at the time of final rulemaking for the calendar year. The amount of the payment adjustment is made on an aggregate basis at cost report settlement. We note that the changes made by section 1833(t)(18) of the Act do not affect the existing statutory provisions that provide for TOPs for cancer hospitals. The TOPs are assessed, as usual, after all payments, including the cancer hospital payment adjustment, have been made for a cost reporting period. Table 11 displays the target PCR for purposes of the cancer hospital adjustment for CY 2012 through CY 2024.

TABLE 11: CANCER HOSPITAL ADJUSTMENT TARGET PAYMENT-TO-COST RATIOS (PCRS), CY 2012 THROUGH CY 2024

Calendar Year	Target PCR
2012	0.91
2013	0.91
2014	0.90
2015	0.90
2016	0.92
2017	0.91
2018	0.88
2019	0.88
2020	0.89
2021	0.89
2022	0.89
2023	0.89
2024	0.88

2. Policy for CY 2025

Section 16002(b) of the 21st Century Cures Act (Pub. L. 114–255) amended section 1833(t)(18) of the Act by adding subparagraph (C), which requires that in applying § 419.43(i) (that is, the payment adjustment for certain cancer hospitals) for services furnished on or after January 1, 2018, the target PCR adjustment be reduced by 1.0 percentage point less than what would

otherwise apply. Section 16002(b) also provides that, in addition to the percentage reduction, the Secretary may consider making an additional percentage point reduction to the target PCR that takes into account payment rates for applicable items and services described under section 1833(t)(21)(C) of the Act for hospitals that are not cancer hospitals described under section 1886(d)(1)(B)(v) of the Act. Further, in making any budget neutrality adjustment under section 1833(t) of the Act, the Secretary shall not take into account the reduced expenditures that result from application of section 1833(t)(18)(C) of the Act.

We proposed to provide additional payments to the 11 specified cancer hospitals so that each cancer hospital's proposed PCR is equal to the weighted average PCR (or ''target PCR'') for the other OPPS hospitals, generally using the most recent submitted or settled cost report data that are available, reduced by 1.0 percentage point, to comply with section 16002(b) of the 21st Century Cures Act, and adjusted by the proposed post-Public Health Emergency (PHE) transition as described later in this section. We are not proposing an additional reduction beyond the 1.0 percentage point reduction required by section 16002(b) of the 21st Century Cures Act for CY 2025.

To calculate the proposed CY 2025 target PCR, we proposed to use the same extract of cost report data from HCRIS used to estimate costs for the CY 2025 OPPS which, in most cases, would be the most recently available hospital cost reports. Using these cost report data, we included data from Worksheet E, Part B, for each hospital, using data from each hospital's most recent cost report, whether as submitted or settled.

We then limited the dataset to the hospitals with CY 2023 claims data that we used to model the impact of the proposed CY 2025 APC relative payment weights (3,448 hospitals) because it is appropriate to use the same set of hospitals that are being used to calibrate the modeled CY 2025 OPPS. The cost report data for the hospitals in this dataset were from cost report periods with fiscal year ends ranging from 2019 to 2023; however, the cost reporting periods were predominantly from fiscal years ending in 2022 and 2023. We then removed the cost report data of the 49 hospitals located in Puerto Rico from our dataset because we did not believe their cost structure reflected the costs of most hospitals paid under the OPPS, and, therefore, their inclusion may bias the calculation of hospital-weighted statistics. We also removed the cost report data of 16 hospitals because these hospitals had cost report data that were not complete (missing aggregate OPPS payments, missing aggregate cost data, or missing both), so that all cost reports in the study would have both the payment and cost data necessary to calculate a PCR for each hospital, leading to a proposed analytic file of 3,421 hospitals with cost report data.

Using this smaller dataset of cost report data, we estimated that, on average, the OPPS payments to other hospitals furnishing services under the OPPS were approximately 87 percent of reasonable cost (weighted average PCR of 0.87). Therefore, after applying the 1.0 percentage point reduction, as required by section 16002(b) of the 21st Century Cures Act, using our standard process the payment amount associated with the cancer hospital payment adjustment to be determined at cost report settlement would be the additional payment needed to result in a target PCR equal to 0.86 for each cancer hospital.

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81586 through 81589), we explained that we believe we should begin to take into consideration the PCR of non-cancer hospitals based on the most recently available data for calculating the target PCR. We noted that we do not know if the changes in the data that have yielded lower PCRs for non-cancer hospitals are likely to continue in future years or if, when data from after the PHE is available, we will see the target PCR increase toward its historical norm. Therefore, in the CY 2024 OPPS/ASC final rule with comment period, we finalized our proposal to transition from the target PCR of 0.89 we finalized for CYs 2020 through 2024 (which included the 1.0 percentage point reduction as required by section 16002(b) of the 21st Century Cures Act) and incrementally reduce the target PCR by an additional 1.0 percentage point for each calendar year, beginning with CY 2024, until the target PCR equals the PCR of non-cancer hospitals calculated using the most recent data minus 1.0 percentage point as required by section 16002(b) of the 21st Century Cures Act. Therefore, utilizing this methodology for the CY 2025 OPPS/ASC proposed rule, since the target PCR that would otherwise apply under our standard process would be a target PCR of 0.86, we proposed to reduce the CY 2024 target PCR of 0.88 by 1 percentage point and proposed a cancer hospital target PCR of 0.87 for CY 2025.

Comment: Commenters supported the proposed target PCR of 0.87 for CY 2025. One commenter requested that CMS ensure that repayments to 340B hospitals are appropriately reflected in the final 2025 PCR calculation.

Response: We thank the commenters for their support. With respect to the commenter's request that the final 2025 PCR calculation include repayments to 340B hospitals, we refer to our response to that same comment in the CY 2024 OPPS/ASC final rule with comment period (88 FR 81588).

After consideration of the public comments we received, we are finalizing without modification our proposal to reduce the CY 2024 target PCR by 1 percentage point and apply a target PCR of 0.87 to the 11 specified cancer hospitals for CY 2025.

Table 12 shows the estimated percentage increase in OPPS payments to each cancer hospital for CY 2025, due to the cancer hospital payment adjustment policy. The actual, final amount of the CY 2025 cancer hospital payment adjustment for each cancer hospital will be determined at cost report settlement and will depend on each hospital's CY 2025 payments and costs from the settled CY 2025 cost report. We note that the requirements contained in section 1833(t)(18) of the Act do not affect the existing statutory provisions that provide for TOPs for cancer hospitals. The TOPs will be assessed, as usual, after all payments, including the cancer hospital payment adjustment, have been made for a cost reporting period.

TABLE 12: ESTIMATED CY 2025 HOSPITAL-SPECIFIC PAYMENT ADJUSTMENT FOR CANCER HOSPITALS TO BE PROVIDED AT COST REPORT SETTLEMENT

Provider Number	Hospital Name	Estimated Percentage Increase in OPPS Payments for CY 2025 due to Payment Adjustment
050146	City of Hope Comprehensive Cancer Center	51.5%
050660	USC Norris Cancer Hospital	44.3%
100079	Sylvester Comprehensive Cancer Center	32.4%
100271	H. Lee Moffitt Cancer Center & Research Institute	23.9%
220162	Dana-Farber Cancer Institute	46.6%
330154	Memorial Sloan-Kettering Cancer Center	51.6%
330354	Roswell Park Cancer Institute	21.3%
360242	James Cancer Hospital & Solove Research Institute	16.0%
390196	Fox Chase Cancer Center	30.0%
450076	M.D. Anderson Cancer Center	45.1%
500138	Seattle Cancer Care Alliance	47.7%

G. Hospital Outpatient Outlier Payments

1. Background

The OPPS provides outlier payments to hospitals to help mitigate the financial risk associated with high-cost and complex procedures, where a very costly service could present a hospital with significant financial loss. As explained in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66832 through 66834), we set our projected target for aggregate outlier payments at 1.0 percent of the estimated aggregate total payments under the OPPS for the prospective year. Outlier payments are provided on a service-by-service basis when the cost of a service exceeds the APC payment amount multiplier threshold (the APC payment amount multiplied by a certain amount) as well as the APC payment amount plus a fixed-dollar amount threshold (the APC payment plus a certain dollar amount). In CY 2024, the outlier threshold was met when the hospital's cost of furnishing a service exceeded 1.75 times the APC payment amount (the multiplier threshold) and exceeded the APC payment amount plus $7,750 (the fixed-dollar amount threshold) (88 FR 81589 through 81591). If the hospital's cost of furnishing a service exceeds both the multiplier threshold and the fixed-dollar threshold, the outlier payment is calculated as 50 percent of the amount by which the hospital's cost of furnishing the service exceeds 1.75 times the APC payment amount. Beginning with CY 2009 payments, outlier payments are subject to a reconciliation process similar to the IPPS outlier reconciliation process for cost reports, as discussed in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68594 through 68599).

It has been our policy to report the actual amount of outlier payments as a percent of total spending in the claims being used to model the OPPS. Our estimate of total outlier payments as a percent of total CY 2023 OPPS payments, using CY 2023 claims available for this CY 2025 OPPS/ASC final rule with comment period, is approximately 0.65 percent. Therefore, for CY 2023, we estimate that we did not meet the outlier target by 0.35 percent of total aggregated OPPS payments.

For this CY 2025 OPPS/ASC final rule with comment period, using CY 2023 claims data and CY 2024 payment rates, we estimate that the aggregate outlier payments for CY 2024 would be approximately 0.83 percent of the total CY 2024 OPPS payments. We provide estimated CY 2025 outlier payments for hospitals and CMHCs with claims included in the claims data that we used to model impacts in the Hospital–Specific Impacts—Provider-Specific Data file on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient*.

2. Outlier Calculation for CY 2025

For CY 2025, we proposed to continue our policy of estimating outlier payments to be 1.0 percent of the estimated aggregate total payments under the OPPS. We proposed that a portion of that 1.0 percent, an amount equal to less than 0.01 percent of outlier payments (or 0.0001 percent of total OPPS payments), would be allocated to CMHCs for partial hospitalization program (PHP) and intensive outpatient program (IOP) outlier payments. This is the amount of estimated outlier payments that would result from the proposed CMHC outlier threshold as a proportion of total estimated OPPS

outlier payments. We proposed to continue our outlier policy that if a CMHC's cost for PHP and IOP services exceeds 3.40 times the APC payment rate, the outlier payment would be calculated as 50 percent of the amount by which the cost exceeds 3.40 times the proposed APC payment rate.

For further discussion of CMHC outlier payments, we refer readers to section VIII.C of this final rule with comment period.

To ensure that the estimated CY 2025 aggregate outlier payments would equal 1.0 percent of estimated aggregate total payments under the OPPS, we proposed that the hospital outlier threshold be set so that outlier payments would be triggered when a hospital's cost of furnishing a service exceeds 1.75 times the APC payment amount and exceeds the APC payment amount plus the fixed-dollar threshold.

We calculated the proposed fixed-dollar threshold using the standard methodology most recently used for CY 2024 (88 FR 81589 through 81591). For purposes of estimating outlier payments for CY 2025, we use the hospital-specific overall ancillary CCRs available in the April 2024 update to the Outpatient Provider-Specific File (OPSF). The OPSF contains provider-specific data, such as the most current CCRs, which are maintained by the MACs and used by the OPPS Pricer to pay claims. The claims that we generally use to model each OPPS update lag by 2 years.

In order to estimate the CY 2025 hospital outlier payments, we inflated the charges on the CY 2023 claims using the same proposed charge inflation factor of 1.084555 that we used to estimate the IPPS fixed-loss cost threshold for the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36572). We used an inflation factor of 1.04142 to estimate CY 2024 charges from the CY 2023 charges reported on CY 2023 claims before applying CY 2024 CCRs to estimate the percent of outliers paid in CY 2024. The proposed methodology for determining these charge inflation factors is discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36572). As we stated in the CY 2005 OPPS final rule with comment period (69 FR 65844 through 65846), we believe that the use of the same charge inflation factors is appropriate for the OPPS because, with the exception of the inpatient routine service cost centers, hospitals use the same ancillary and cost centers to capture costs and charges for inpatient and outpatient services.

As noted in the CY 2007 OPPS/ASC final rule with comment period (71 FR 68011), we are concerned that we could systematically overestimate the OPPS hospital outlier threshold if we did not apply a CCR inflation adjustment factor. Therefore, we proposed to apply the same CCR adjustment factor that we proposed to apply for the FY 2025 IPPS outlier calculation to the CCRs used to simulate the proposed CY 2025 OPPS outlier payments to determine the fixed-dollar threshold. Specifically, for CY 2025, we proposed to apply an adjustment factor of 1.03331 to the CCRs that were in the April 2024 OPSF to trend them forward from CY 2024 to CY 2025. The methodology for calculating the proposed CCR adjustment factor is discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36572 through 36573).

To model hospital outlier payments for the CY 2025 proposed rule, we applied the overall CCRs from the April 2024 OPSF after adjustment (using the proposed CCR inflation adjustment factor of 1.03331 to approximate CY 2025 CCRs) to charges on CY 2023 claims that were adjusted (using the proposed charge inflation factor of 1.084555 to approximate CY 2025 charges). We simulated aggregated CY 2023 hospital outlier payments using these costs for several different fixed-dollar thresholds, holding the 1.75 multiplier threshold constant and assuming that outlier payments would continue to be made at 50 percent of the amount by which the cost of furnishing the service would exceed 1.75 times the APC payment amount, until the total outlier payments equaled 1.0 percent of aggregated estimated total CY 2025 OPPS payments. We estimated that a proposed fixed-dollar threshold of $8,000, combined with the proposed multiplier threshold of 1.75 times the APC payment rate, would allocate 1.0 percent of aggregated total OPPS payments to outlier payments. For CMHCs, we proposed that, if a CMHC's cost for partial hospitalization or intensive outpatient services exceeds 3.40 times the APC payment rate, the outlier payment would be calculated as 50 percent of the amount by which the cost exceeds 3.40 times the APC payment rate.

Section 1833(t)(17)(A) of the Act, which applies to hospitals, as defined under section 1886(d)(1)(B) of the Act, requires that hospitals that fail to report data required for the quality measures selected by the Secretary, in the form and manner required by the Secretary under section 1833(t)(17)(B) of the Act, incur a 2.0 percentage point reduction to their OPD fee schedule increase factor; that is, the annual payment update factor. The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that would apply to certain outpatient items and services furnished by hospitals that are required to report outpatient quality data and that fail to meet the Hospital Outpatient Quality Reporting (OQR) Program requirements. For hospitals that fail to meet the Hospital OQR Program requirements, we proposed to continue the policy that we implemented in CY 2010 that the hospitals' costs would be compared to the reduced payments for purposes of outlier eligibility and payment calculation. For more information on the Hospital OQR Program, we refer readers to section XV of this final rule with comment period.

Comment: One commenter noted that they believe the CCR adjustment factors used for the IPPS and OPPS proposed rules overstate the effect of cost increases that took place from 2022 to 2023. The commenter argues that the CCR adjustment factor used in each final rule has been below 1.0; however, we proposed a CCR adjustment factor of 1.03331. The commenter recommended that we substitute a different CCR adjustment factor or cap the CCR adjustment factor at 1.0.

Response: As discussed in greater detail in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69955 through 69962), consistent with our usual practice, we are using more recent CCR data for this final rule with comment period which yields a CCR adjustment factor of 1.015123. We do not believe it is necessary to deviate from our usual practice of using the CCR adjustment factor for our calculation, which was finalized under the IPPS for FY 2025. Therefore, we are also not accepting this recommendation under the OPPS.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to continue our policy of estimating outlier payments to be 1.0 percent of the estimated aggregate total payments under the OPPS and to use our established methodology to set the OPPS outlier fixed-dollar loss threshold for CY 2025.

3. Final Outlier Calculation

Consistent with historical practice, we used updated data for this final rule with comment period for outlier calculations. For CY 2025, we are applying the overall ancillary CCRs from the July 2024 OPSF file after adjustment (using the CCR adjustment factor of 1.015123 to approximate CY 2025 CCRs) to charges on CY 2023 claims that were adjusted using a charge inflation factor of 1.08406 to

approximate CY 2025 charges. These are the same CCR adjustment and charge inflation factors that were used to set the IPPS fixed-dollar thresholds for the FY 2025 IPPS/LTCH PPS final rule (89 FR 69955 through 69962). We simulated aggregated CY 2025 hospital outlier payments using these costs for several different fixed-dollar thresholds, holding the 1.75 multiple-threshold constant and assuming that outlier payments will continue to be made at 50 percent of the amount by which the cost of furnishing the service would exceed 1.75 times the APC payment amount, until the total outlier payment equaled 1.0 percent of aggregated estimated total CY 2025 OPPS payments. We estimate that a fixed-dollar threshold of $7,175 combined with the multiple threshold of 1.75 times the APC payment rate, will allocate the 1.0 percent of aggregated total OPPS payments to outlier payments.

For CMHCs, if a CMHC's cost for partial hospitalization or intensive outpatient services exceeds 3.40 times the APC payment rate, the outlier payment will be calculated as 50 percent of the amount by which the cost exceeds the 3.40 times the ACP payment rate.

H. Calculation of an Adjusted Medicare Payment From the National Unadjusted Medicare Payment

The national unadjusted payment rate is the payment rate for most APCs before accounting for the wage index adjustment or any applicable adjustments. The basic methodology for determining prospective payment rates for HOPD services under the OPPS is set forth in existing regulations at 42 CFR part 419, subparts C and D. For this CY 2025 OPPS/ASC final rule with comment period, the payment rate for most services and procedures for which payment is made under the OPPS is the product of the conversion factor calculated in accordance with section II.B of this final rule with comment period and the relative payment weight described in section II.A of this final rule with comment period. The national unadjusted payment rate for most APCs contained in Addendum A to this final rule with comment period (which is available via the CMS website *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates*) and for most HCPCS codes to which separate payment under the OPPS has been assigned in Addendum B to this final rule with comment period (which is available on the CMS website link above) is calculated by multiplying the final CY 2025 scaled weight for the APC by the CY 2025 conversion factor.

We note that section 1833(t)(17) of the Act, which applies to hospitals, as defined under section 1886(d)(1)(B) of the Act, requires that hospitals that fail to submit data required to be submitted on quality measures selected by the Secretary, in the form and manner and at a time specified by the Secretary, incur a reduction of 2.0 percentage points to their OPD fee schedule increase factor, that is, the annual payment update factor. The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that apply to certain outpatient items and services provided by hospitals that are required to report outpatient quality data and that fail to meet the Hospital OQR Program requirements. For further discussion of the payment reduction for hospitals that fail to meet the requirements of the Hospital OQR Program, we refer readers to section XIV of this final rule with comment period.

Below we demonstrate the steps used to determine the APC payments that will be made in a CY under the OPPS to a hospital that fulfills the Hospital OQR Program requirements and to a hospital that fails to meet the Hospital OQR Program requirements for a service that has any of the following status indicator assignments: ''J1,'' ''J2,'' ''P,'' ''Q1,'' ''Q2,'' ''Q3,'' ''Q4,'' ''R,'' ''S,'' ''T,'' ''U,'' or ''V'' (as defined in Addendum D1 to this final rule with comment period, which is available via the internet on the CMS website), in a circumstance in which the multiple procedure discount does not apply, the procedure is not bilateral, and conditionally packaged services (status indicator of ''Q1'' and ''Q2'') qualify for separate payment. We note that, although blood and blood products with status indicator ''R'' and brachytherapy sources with status indicator ''U'' are not subject to wage adjustment, they are subject to reduced payments when a hospital fails to meet the Hospital OQR Program requirements.

Individual providers interested in calculating the payment amount that they would receive for a specific service from the national unadjusted payment rates presented in Addenda A and B to this final rule with comment period (which are available via the internet on the CMS website) should follow the formulas presented in the following steps. For purposes of the payment calculations below, we refer to the national unadjusted payment rate for hospitals that meet the requirements of the Hospital OQR Program as the ''full'' national unadjusted payment rate. We refer to the national unadjusted payment rate for hospitals that fail to meet the requirements of the Hospital OQR Program as the ''reduced'' national unadjusted payment rate. The reduced national unadjusted payment rate is calculated by multiplying the reporting ratio of 0.9806 times the ''full'' national unadjusted payment rate. The national unadjusted payment rate used in the calculations below is either the full national unadjusted payment rate or the reduced national unadjusted payment rate, depending on whether the hospital met its Hospital OQR Program requirements to receive the full CY 2025 OPPS fee schedule increase factor.

Step 1. Calculate 60 percent (the labor-related portion) of the national unadjusted payment rate. Since the initial implementation of the OPPS, we have used 60 percent to represent our estimate of that portion of costs attributable, on average, to labor. We refer readers to the April 7, 2000 OPPS/ASC final rule with comment period (65 FR 18496 through 18497) for a detailed discussion of how we derived this percentage. During our regression analysis for the payment adjustment for rural hospitals in the CY 2006 OPPS final rule with comment period (70 FR 68553), we confirmed that this labor-related share for hospital outpatient services is appropriate.

The formula below is a mathematical representation of Step 1 and identifies the labor-related portion of a specific payment rate for a specific service.

X is the labor-related portion of the national unadjusted payment rate.

$X = .60 *$ (national unadjusted payment rate).

Step 2. Determine the wage index area in which the hospital is located and identify the wage index level that applies to the specific hospital. The wage index values assigned to each area would reflect the geographic statistical areas (which are based upon OMB standards) to which hospitals are assigned for FY 2025 in the FY 2025 IPPS, as corrected in the FY 2025 IPPS final rule correction (89 FR 80098), reclassifications through the Medicare Geographic Classification Review Board (MGCRB), section 1886(d)(8)(B) ''Lugar'' hospitals, and reclassifications under section 1886(d)(8)(E) of the Act, as implemented in § 412.103 of the regulations. We are continuing to apply for the CY 2025 OPPS wage index any adjustments for the FY 2025 IPPS final rule post-reclassified wage index, including, but not limited to, the rural floor adjustment and a wage index floor of 1.00 in frontier states, in accordance with section 10324 of the Affordable

Care Act of 2010. We are also including the low wage index hospital policy as part of the CY 2025 OPPS wage index. The adoption of this policy for CY 2025 for the OPPS wage index will create different effective wage index values for hospitals that benefit from the policy under the OPPS than the wage index value for those hospitals under the IPPS for FY 2025 as modified by the interim final action with comment period ''Changes to the Fiscal Year 2025 Hospital Inpatient Prospective Payment System (IPPS) Rates Due to Court Decision'' (89 FR 80405). For further discussion of the wage index we are applying for the CY 2025 OPPS, including the low wage index hospital policy, we refer readers to section II.C of this final rule with comment period.

Step 3. Adjust the wage index of hospitals located in certain qualifying counties that have a relatively high percentage of hospital employees who reside in the county, but who work in a different county with a higher wage index, in accordance with section 505 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (Pub. L. 108–173). Addendum L to this final rule with comment period (which is available via the internet on the CMS website) contains the qualifying counties and the associated wage index increase developed for the final FY 2025 IPPS wage index, which are listed in Table 3 associated with the FY 2025 IPPS final rule and available via the internet on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.* (Click on the link on the left side of the screen titled ''FY 2025 IPPS Final Rule Home Page'' and select ''FY 2025 Final Rule Tables.'') This step is to be followed only if the hospital is not reclassified or redesignated under section 1886(d)(8) or section 1886(d)(10) of the Act.

Step 4. Multiply the applicable wage index determined under Steps 2 and 3 by the amount determined under Step 1 that represents the labor-related portion of the national unadjusted payment rate.

The formula below is a mathematical representation of Step 4 and adjusts the labor-related portion of the national unadjusted payment rate for the specific service by the wage index.

X_a is the labor-related portion of the national unadjusted payment rate (wage adjusted).

X_a = labor-portion of the national unadjusted payment rate * applicable wage index.

Step 5. Calculate 40 percent (the nonlabor-related portion) of the national unadjusted payment rate and add that amount to the resulting product of Step 4. The result is the wage index adjusted payment rate for the relevant wage index area.

The formula below is a mathematical representation of Step 5 and calculates the remaining portion of the national payment rate, the amount not attributable to labor, and the adjusted payment for the specific service.

Y is the nonlabor-related portion of the national unadjusted payment rate.

Y = 0.40 * (national unadjusted payment rate).

Step 6. If a provider is an SCH, as set forth in the regulations at § 412.92, or an EACH, which is considered to be an SCH under section 1886(d)(5)(D)(iii)(III) of the Act, and located in a rural area, as defined in § 412.64(b), or is treated as being located in a rural area under § 412.103, multiply the wage index adjusted payment rate by 1.071 to calculate the total payment.

The formula below is a mathematical representation of Step 6 and applies the rural adjustment for rural SCHs.

Adjusted Medicare Payment (SCH or EACH) = Adjusted Medicare Payment * 1.071.

Step 7. The adjusted payment rate is the sum of the wage adjusted labor-related portion of the national unadjusted payment rate and the nonlabor-related portion of the national unadjusted payment rate.

$X_a$is the labor-related portion of the national unadjusted payment rate (wage adjusted).

Y is the nonlabor-related portion of the national unadjusted payment rate.

Adjusted Medicare Payment = $X_a + Y$

We are providing examples below of the calculation of both the full and reduced national unadjusted payment rates that would apply to certain outpatient items and services performed by hospitals that meet and that fail to meet the Hospital OQR Program requirements, using the steps outlined previously. For purposes of this example, we are using a provider that is located in Brooklyn, New York that is assigned to CBSA 35614. This provider bills one service that is assigned to APC 5071 (Level 1 Excision/Biopsy/Incision and Drainage). The final CY 2025 full national unadjusted payment rate for APC 5071 is $703.59. The final reduced national adjusted payment rate for APC 5071 for a hospital that fails to meet the Hospital OQR Program requirements is $689.94. This reduced rate is calculated by multiplying the reporting ratio of 0.9806 by the full unadjusted payment rate for APC 5071.

Step 1. The labor-related portion of the final full national unadjusted payment is approximately $422.15 (0.60 * $703.59). The labor-related portion of the final reduced national adjusted payment is approximately $413.96 (0.60 * $689.94).

Step 2 & 3. The FY 2025 wage index for a provider located in CBSA 35614 in New York, which includes the adoption of the final IPPS 2025 wage index policies, is 1.3056.

Step 4. The wage adjusted labor-related portion of the final full national unadjusted payment is approximately $551.16 ($422.15 * 1.3056). The wage adjusted labor-related portion of the final reduced national adjusted payment is approximately $540.47 ($413.96 * 1.3056).

Step 5. The nonlabor-related portion of the final full national unadjusted payment is approximately $281.44 (0.40 * $703.59). The nonlabor-related portion of the final reduced national adjusted payment is approximately $275.98 (0.40 * $689.94).

Step 6. For this example of a provider located in Brooklyn, New York, the rural adjustment for rural SCHs does not apply.

Step 7. The sum of the labor-related and nonlabor-related portions of the final full national unadjusted payment is approximately $832.60 ($551.16 + $281.44). The sum of the portions of the final reduced national adjusted payment is approximately $816.45 ($540.47 + $275.98) as shown in Table 13.

TABLE 13: FINAL FULL NATIONAL UNADJUSTED PAYMENT RATE AND PROPOSED REDUCED NATIONAL ADJUSTED PAYMENT RATE

Final Full national unadjusted payment rate	Final Reduced national adjusted payment rate
$832.60	$816.45

We did not receive any public comments on these steps under the methodology that we included in the proposed rule to determine the APC payments for CY 2025. Therefore, we are using the steps in the methodology specified above to demonstrate the calculation of the final CY 2025 OPPS payments using the same parameters.

I. Beneficiary Copayments

1. Background

Section 1833(t)(3)(B) of the Act requires the Secretary to set rules for determining the unadjusted copayment amounts to be paid by beneficiaries for covered OPD services. Section 1833(t)(8)(C)(ii) of the Act specifies that the Secretary must reduce the national unadjusted copayment amount for a covered OPD service (or group of such services) furnished in a year in a manner so that the effective copayment rate (determined on a national unadjusted basis) for that service in the year does not exceed a specified percentage. As specified in section 1833(t)(8)(C)(ii)(V) of the Act, the effective copayment rate for a covered OPD service paid under the OPPS in CY 2006, and in CYs thereafter, shall not exceed 40 percent of the APC payment rate.

Section 1833(t)(3)(B)(ii) of the Act provides that, for a covered OPD service (or group of such services) furnished in a year, the national unadjusted copayment amount cannot be less than 20 percent of the OPD fee schedule amount. However, section 1833(t)(8)(C)(i) of the Act limits the amount of beneficiary copayment that may be collected for a procedure (including items such as drugs and biologicals) performed in a year to the amount of the inpatient hospital deductible for that year.

Section 4104 of the Affordable Care Act eliminated the Medicare Part B coinsurance for preventive services furnished on and after January 1, 2011, that meet certain requirements, including flexible sigmoidoscopies and screening colonoscopies, and waived the Part B deductible for screening colonoscopies that become diagnostic during the procedure. For a discussion of the changes made by the Affordable Care Act with regard to copayments for preventive services furnished on and after January 1, 2011, we refer readers to section XII.B of the CY 2011 OPPS/ASC final rule with comment period (75 FR 72013).

Section 122 of the Consolidated Appropriations Act (CAA) of 2021 (Pub. L. 116–260), Waiving Medicare Coinsurance for Certain Colorectal Cancer Screening Tests, amended section 1833(a) of the Act to offer a special coinsurance rule for screening flexible sigmoidoscopies and screening colonoscopies, regardless of the code that is billed for the establishment of a diagnosis as a result of the test, or for the removal of tissue or other matter or other procedure, that is furnished in connection with, as a result of, and in the same clinical encounter as the colorectal cancer screening test. We refer readers to section X.B, ''Changes to Beneficiary Coinsurance for Certain Colorectal Cancer Screening Tests,'' of the CY 2022 OPPS/ASC final rule with comment period for the full discussion of this policy (86 FR 63740 through 63743). Under the regulation at 42 CFR 410.152(l)(5)(i)(B), the Medicare Part B payment percentage for colorectal cancer screening tests described in the regulation at § 410.37(j) that are furnished in CY 2023 through CY 2026 is 85 percent, with beneficiary coinsurance equal to 15 percent.

On August 16, 2022, the Inflation Reduction Act of 2022 (IRA) (Pub. L. 117–169) was signed into law. Section 11101(a) of the IRA amended section 1847A of the Act by adding a new subsection (i), which requires the payment of rebates into the Supplementary Medical Insurance Trust Fund for Part B rebatable drugs if the payment limit amount exceeds the inflation-adjusted payment amount, which is calculated as set forth in section 1847A(i)(3)(C) of the Act. The provisions of section 11101 of the IRA thus far have primarily been implemented through program instruction, as permitted under section 1847A(c)(5)(C) of the Act. As such, we issued guidance for the computation of inflation-adjusted beneficiary coinsurance under section 1847A(i)(5) of the Act and amounts paid under section 1833(a)(1)(EE) of the Act on February 9, 2023.[12] [13] For additional information regarding implementation of section 11101 of the IRA, please see the inflation rebates resources page at *https://www.cms.gov/inflation-reduction-act-and-medicare/inflation-rebates-medicare*.

Section 11101(b) of the IRA amended sections 1833(i) and 1833(t)(8) of the Act by adding a new paragraph (9) and subparagraph (F), respectively. Section 1833(i)(9) requires under the ASC payment system that, in the case of a Part B rebatable drug, in lieu of calculation of coinsurance that would otherwise apply under the ASC payment system, the provisions of section 1847A(i)(5) of the Act shall, as determined appropriate by the Secretary, apply for calculation of beneficiary coinsurance in the same manner as the provisions of section 1847A(i)(5) of the Act apply under that section. Similarly, section 1833(t)(8)(F) of the Act requires under the OPPS that in the case of a Part B rebatable drug (except for a drug that has no copayment applied under subparagraph (E) of such section or for which payment is packaged into the payment for a covered OPD service or group of services), in lieu of the calculation of the copayment amount that would otherwise apply under the OPPS, the provisions of section 1847A(i)(5) of the Act shall, as determined appropriate by the Secretary, apply in the same manner as the provisions of section 1847A(i)(5) of the Act apply under that section. Section 1847A(i)(5) of the Act requires that for Part B rebatable drugs, as defined in section 1847A(i)(2)(A) of the Act, furnished on or after April 1, 2023, in quarters in which the payment

[12] *https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-initial-guidance.pdf*.

[13] In addition, beginning with the April 2023 ASP Drug Pricing file, the file includes the coinsurance percentage for each drug and specifies ''inflation-adjusted coinsurance'' in the ''Notes'' column if the coinsurance for a drug is less than 20 percent of the Medicare Part B payment amount. Drug pricing files are available at *https://www.cms.gov/medicare/medicare-fee-for-service-part-b-drugs/mcrpartbdrugavgsalesprice*.

amount described in section 1847A(i)(3)(A)(ii)(I) of the Act (or, in the case of selected drugs described under section 1192(c) of the Act, the payment amount described in section 1847A(b)(1)(B) of the Act), exceeds the inflation-adjusted payment amount determined in accordance with section 1847A(i)(3)(C) of the Act, the coinsurance will be 20 percent of the inflation-adjusted payment amount for such quarter (hereafter, the inflation-adjusted coinsurance amount). This inflation-adjusted coinsurance amount is applied as a percent, as determined by the Secretary, to the payment amount that would otherwise apply for such calendar quarter in accordance with section 1847A(b)(1)(B) or (C) of the Act, as applicable, including in the case of a selected drug.

Paragraph (9) of section 1833(i) of the Act and subparagraph (F) of section 1833(t)(8) of the Act, as added by section 11101(b) of the IRA, also provide that in lieu of the amounts of payment otherwise applicable under the ASC payment system and the OPPS, the provisions of paragraph (1)(EE) of subsection (a) of section 1833 of the Act shall apply, as determined appropriate by the Secretary. Section 11101(b) of the IRA amended section 1833(a)(1) of the Act by adding a new subparagraph (EE), which requires that if the payment amount under section 1847A(i)(3)(A)(ii)(I) of the Act or, in the case of a selected drug, the payment amount described in section 1847A(b)(1)(B) of the Act, for that drug exceeds the inflation-adjusted payment amount for a Part B rebatable drug, the Part B payment amount would, subject to the Part B deductible and sequestration, equal the difference between such payment amount and the inflation-adjusted coinsurance amount. Consistent with the policy adopted in section 40 of the revised Medicare Part B Drug Inflation Rebate Guidance, the calculation to determine the applicable beneficiary coinsurance amount would not be adjusted for sequestration. CMS codified the Medicare payment for Part B rebatable drugs in the CY 2024 PFS final rule by adding new paragraph (m) to § 410.152.

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81594), we codified the OPPS program payment and cost sharing amounts for Part B rebatable drugs as required by section 1833(t)(8)(F) by adding a new paragraph (e) to § 419.41, which cross-references the regulations adopted in the CY 2024 PFS final rule (§§ 410.152(m) and 489.30(b)(6)). We also amended the regulation text to reflect our longstanding policies for calculating the Medicare program payment and cost sharing amounts for separately payable drugs and biologicals by adding a new paragraph (d) to § 419.41. Similarly, we codified the ASC cost sharing amounts for Part B rebatable drugs as required by section 1833(i)(9) of the Act by revising § 416.172(d) to include a cross-reference to 42 CFR 489.30(b)(6), which codified the cost sharing amounts for Part B rebatable drugs with prices increasing at a rate faster than inflation.

In the CY 2025 PFS proposed rule (89 FR 61956), CMS proposed to adopt new provisions at §§ 427.200 and 427.201 to codify the policies regarding the computation of the inflation-adjusted beneficiary coinsurance, defined in § 427.200, for Part B rebatable drugs as required by section 1847A(i)(5) of the Act. The proposed new provision at § 427.201 includes references to the existing provisions at §§ 410.152(m), 419.41(e), and 489.30(b)(6). CMS further proposed at § 427.201(c) that any category of products that is excluded from the identification of Part B rebatable drugs at § 427.101(b) is not subject to the inflation-adjusted beneficiary coinsurance. Examples of these excluded products include separately payable radiopharmaceuticals, skin substitute products, and qualifying biosimilar biological products.

Additionally, CMS proposed at § 427.201(b) that CMS would use the published payment amount in quarterly pricing files [14] [15] [16] to determine if a Part B rebatable drug should have an adjusted beneficiary coinsurance equal to 20 percent of the inflation-adjusted payment amount as described in section 1847A(i)(3)(C) for a calendar quarter. The proposed approach deviates from the rebate calculation approach proposed in § 427.302, which relies on the specified amount defined at § 427.20 even when the specified amount and the published payment amount in quarterly pricing files differ. The approach proposed at § 427.201(b) will be used only to determine whether there should be a coinsurance adjustment and will not impact the applicability or calculation of inflation rebates. CMS believes this approach is consistent with the statutory language and appropriately reflects the differences in the statutory text of section 1847A(i)(5) of the Act, which sets forth the payment amount that is used to determine whether coinsurance should be adjusted, and section 1847A(i)(3)(A) of the Act, which sets forth the ''specified amount'' used to determine rebate amounts.

We did not receive any public comments related to inflation-adjusted beneficiary coinsurance or program payment amounts.

2. OPPS Copayment Policy

For CY 2025, we proposed to determine copayment amounts for new and revised APCs using the same methodology that we implemented beginning in CY 2004. We refer readers to the November 7, 2003 OPPS final rule with comment period for a discussion of that methodology (68 FR 63458). In addition, we proposed to use the same standard rounding principles that we have historically used in instances where the application of our standard copayment methodology would result in a copayment amount that is less than 20 percent and cannot be rounded, under standard rounding principles, to 20 percent. We refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66687) in which we discuss our rationale for applying these rounding principles. The final national unadjusted copayment amounts for services payable under the OPPS that will be effective January 1, 2025, are included in Addenda A and B to this final rule with comment period (which are available via the internet on the CMS website).

As discussed in section XIV.E of this final rule with comment period, for CY 2025, the Medicare beneficiary's minimum unadjusted copayment and national unadjusted copayment for a service to which a reduced national unadjusted payment rate applies will equal the product of the reporting ratio and the national unadjusted copayment, or the product of the reporting ratio and the minimum unadjusted copayment, respectively, for the service.

We note that OPPS copayments may increase or decrease each year based on changes in the calculated APC payment rates, due to updated cost report and claims data, and any changes to the OPPS cost modeling process. However, as described in the CY 2004 OPPS final rule with comment period, the development of the copayment methodology generally moves beneficiary copayments closer to 20 percent of OPPS APC payments (68 FR 63458 through 63459).

In the CY 2004 OPPS final rule with comment period (68 FR 63459), we adopted a new methodology to calculate unadjusted copayment amounts in situations including reorganizing APCs,

[14] See: *https://www.cms.gov/medicare/payment/part-b-drugs/asp-pricing-files.*

[15] See: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates.*

[16] See: *https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/asc-payment-rates-addenda.*

and we finalized the following rules to determine copayment amounts in CY 2004 and subsequent years.

- When an APC group consists solely of HCPCS codes that were not paid under the OPPS the prior year because they were packaged or excluded or are new codes, the unadjusted copayment amount would be 20 percent of the APC payment rate.
- If a new APC that did not exist during the prior year is created and consists of HCPCS codes previously assigned to other APCs, the copayment amount is calculated as the product of the APC payment rate and the lowest coinsurance percentage of the codes comprising the new APC.
- If no codes are added to or removed from an APC and, after recalibration of its relative payment weight, the new payment rate is equal to or *greater than* the prior year's rate, the copayment amount remains constant (unless the resulting coinsurance percentage is less than 20 percent).
- If no codes are added to or removed from an APC and, after recalibration of its relative payment weight, the new payment rate is *less than* the prior year's rate, the copayment amount is calculated as the product of the new payment rate and the prior year's coinsurance percentage.
- If HCPCS codes are added to or deleted from an APC and, after recalibrating its relative payment weight, holding its unadjusted copayment amount constant results in a decrease in the coinsurance percentage for the reconfigured APC, the copayment amount would not change (unless retaining the copayment amount would result in a coinsurance rate less than 20 percent).
- If HCPCS codes are added to an APC and, after recalibrating its relative payment weight, holding its unadjusted copayment amount constant results in an increase in the coinsurance percentage for the reconfigured APC, the copayment amount would be calculated as the product of the payment rate of the reconfigured APC and the lowest coinsurance percentage of the codes being added to the reconfigured APC.

We noted in the CY 2004 OPPS final rule with comment period that we would seek to lower the copayment percentage for a service in an APC from the prior year if the copayment percentage was greater than 20 percent. We noted that this principle was consistent with section 1833(t)(8)(C)(ii) of the Act, which accelerates the reduction in the national unadjusted coinsurance rate so that beneficiary liability will eventually equal 20 percent of the OPPS payment rate for all OPPS services to which a copayment applies, and with section 1833(t)(3)(B) of the Act, which achieves a 20-percent copayment percentage when fully phased in and gives the Secretary the authority to set rules for determining copayment amounts for new services. We further noted that the use of this methodology would, in general, reduce the beneficiary coinsurance rate and copayment amount for APCs for which the payment rate changes as the result of the reconfiguration of APCs and/or recalibration of relative payment weights (68 FR 63459).

We did not receive any public comments on our proposal and we are finalizing our proposal to determine copayment amounts for new and revised APCs using the same methodology that we implemented beginning in CY 2004. The finalized national unadjusted copayment amounts for services payable under the OPPS that will be effective January 1, 2025, are included in Addenda A and B to the CY 2025 OPPS/ASC final rule (which are available on the CMS website).

3. Calculation of an Adjusted Copayment Amount for an APC Group

Individuals interested in calculating the national copayment liability for a Medicare beneficiary for a given service provided by a hospital that met or failed to meet its Hospital OQR Program requirements should follow the formulas presented in the following steps.

Step 1. Calculate the beneficiary payment percentage for the APC by dividing the APC's national unadjusted copayment by its proposed payment rate. For example, using APC 5071, $140.72 is approximately 20 percent of the full national unadjusted payment rate of $703.59. For APCs with only a minimum unadjusted copayment in Addenda A and B to this final rule with comment period (which are available via the internet on the CMS website), the beneficiary payment percentage is 20 percent.

The formula below is a mathematical representation of Step 1 and calculates the national copayment as a percentage of national payment for a given service.

B is the beneficiary payment percentage.

B = National unadjusted copayment for APC/national unadjusted payment rate for APC.

Step 2. Calculate the appropriate wage-adjusted payment rate for the APC for the provider in question, as indicated in Steps 2 through 4 under section II.H of this final rule with comment period. Calculate the rural adjustment for eligible providers, as indicated in Step 6 under section II.H of this final rule with comment period.

Step 3. Multiply the percentage calculated in Step 1 by the payment rate calculated in Step 2. The result is the wage-adjusted copayment amount for the APC.

The formula below is a mathematical representation of Step 3 and applies the beneficiary payment percentage to the adjusted payment rate for a service calculated under section II.H of this final rule with comment period, with and without the rural adjustment, to calculate the adjusted beneficiary copayment for a given service.

Wage-adjusted copayment amount for the APC = Adjusted Medicare Payment * *B.*

Wage-adjusted copayment amount for the APC (SCH or EACH) = (Adjusted Medicare Payment * 1.071) * *B.*

Step 4. For a hospital that failed to meet its Hospital OQR Program requirements, multiply the copayment calculated in Step 3 by the reporting ratio of 0.9806.

The unadjusted copayments for services payable under the OPPS that will be effective January 1, 2025, are shown in Addenda A and B to this final rule with comment period (which are available via the CMS website). We note that the final national unadjusted payment rates and copayment rates shown in Addenda A and B to this final rule with comment period reflect the CY 2025 OPD fee schedule increase factor discussed in section II.B of this final rule with comment period.

In addition, as noted earlier, section 1833(t)(8)(C)(i) of the Act limits the amount of beneficiary copayment that may be collected for a procedure performed in a year to the amount of the inpatient hospital deductible for that year.

Comment: One commenter suggested beneficiaries should not be responsible for drug pricing increases and that CMS should limit or eliminate cost-sharing for beneficiaries. The commenter also stated that cost-sharing has unintended consequences and negative effects on access to health care and health outcomes, including increased use of emergency rooms. The commenter also acknowledged that CMS is limited by statute and that our copayment methodologies ensure that copayments are minimal.

Response: We thank the commenter for the input. We note that the beneficiary copayment is established by section 1833(t)(3)(B) of the Act and § 419.41(d). Section 1847A(i)(5) of the Act provides for an adjustment to the

beneficiary coinsurance for Part B rebatable drugs with prices that have increased faster than the rate of inflation beginning April 1, 2023. In the CY 2024 OPPS/ASC OPPS final rule and the CY 2024 Physician Fee Schedule final rule, CMS codified this inflation-adjusted coinsurance amount at §§ 419.41(e), 410.152(m), and 489.30(b)(6), respectively. For these drugs and biologicals, the beneficiary coinsurance is 20 percent of the inflation-adjusted payment amount, which is less than what the beneficiary would pay in coinsurance otherwise. Therefore, beneficiaries are insulated from coinsurance amounts calculated based on drug prices that outpace inflation. More information about the beneficiary coinsurance adjustment and the Medicare Part B Inflation Rebate Program is available at *https://www.cms.gov/inflation-reduction-act-and-medicare/inflation-rebates-medicare*.

III. OPPS Ambulatory Payment Classification (APC) Group Policies

A. OPPS Treatment of New and Revised HCPCS Codes

Payments for OPPS procedures, services, and items are generally based on medical billing codes, specifically, Healthcare Common Procedure Coding System (HCPCS) codes, that are reported on hospital outpatient department (HOPD) claims. HCPCS codes are used to report surgical procedures, medical services, items, and supplies under the hospital OPPS. The HCPCS is divided into two principal subsystems, referred to as Level I and Level II of the HCPCS. Level I is comprised of CPT (Current Procedural Terminology) codes, a numeric and alphanumeric coding system that is established and maintained by the American Medical Association (AMA), and consists of Category I, II, III, MAAA, and PLA CPT codes. Level II, which is established and maintained by CMS, is a standardized coding system that is used primarily to identify products, supplies, and services not included in the CPT codes. Together, Level I and II HCPCS codes are used to report procedures, services, items, and supplies under the OPPS payment system. Specifically, we recognize the following codes on OPPS claims:

- Category I CPT codes, which describe surgical procedures, diagnostic and therapeutic services, and vaccine codes;
- Category III CPT codes, which describe new and emerging technologies, services, and procedures;
- MAAA CPT codes, which describe laboratory multianalyte assays with algorithmic analyses (MAA);
- PLA CPT codes, which describe proprietary laboratory analyses (PLA) services; and
- Level II HCPCS codes (also known as alpha-numeric codes), which are used primarily to identify drugs, devices, supplies, temporary procedures, and services not described by CPT codes.

The codes are updated and changed throughout the year. CPT and Level II HCPCS code changes that affect the OPPS are published through the annual rulemaking cycle and through the OPPS quarterly update Change Requests (CRs). Generally, these code changes are effective January 1, April 1, July 1, or October 1. CPT code changes are released by the AMA (via their website) while Level II HCPCS code changes are released to the public via the CMS HCPCS website. CMS recognizes the release of new CPT and Level II HCPCS codes outside of the formal rulemaking process via OPPS quarterly update CRs. Based on our review, we assign the new codes to interim status indicators (SIs) and APCs. These interim assignments are finalized in the OPPS/ASC final rules. This quarterly process offers hospitals access to codes that more accurately describe the items or services furnished and provides payment for these items or services in a timelier manner than if we waited for the annual rulemaking process. We solicit public comments on the new CPT and Level II HCPCS codes, status indicators, and APC assignments through our annual rulemaking process.

We note that, under the OPPS, the APC assignment determines the payment rate for an item, procedure, or service. The items, procedures, or services not exclusively paid separately under the hospital OPPS are assigned to appropriate status indicators. Certain payment status indicators provide separate payment while other payment status indicators do not. In section XI (CY 2025 Payment Status and Comment Indicators) of this final rule with comment period, we discuss the various status indicators and comment indicators used under the OPPS. We also provide a complete list of the status indicators and their definitions in Addendum D1 to this final rule with comment period.

1. April 2024 HCPCS Codes Proposed Rule Comment Solicitation

For the April 2024 update, 73 new HCPCS codes were established and made effective on April 1, 2024. Through the April 2024 OPPS quarterly update CR (Transmittal 12552, Change Request 13568, dated March 21, 2024), we recognized several new HCPCS codes for payment under the OPPS. We solicited public comments on the proposed APC and status indicator assignments for the codes listed in Table 10 (New HCPCS Codes Effective April 1, 2024) of the CY 2025 OPPS/ASC proposed rule (89 FR 59239 through 59241, which are also displayed in Table 14.

We received some public comments on the proposed OPPS APC and SI assignments for the new Level II HCPCS codes that were effective on April 1, 2024. The comments and our responses are addressed in the applicable sections of this final rule with comment period, which include, but are not limited to: sections III.C. (New Technology APCs); III.E. (OPPS APC-Specific Policies); and IV. (OPPS Payment for Devices). For those April 2024 codes for which we received no comments, we are finalizing the proposed APC and status indicator assignments as proposed. We note that several of the HCPCS C-codes have been replaced with HCPCS J-codes, effective January 1, 2025. Their replacement codes are listed in Table 14. In addition, in prior years we included the final OPPS status indicators and APC assignments in the coding preamble tables, however, because the same information can be found in Addendum B, we are no longer including them in Table 14. Therefore, readers are advised to refer to the OPPS Addendum B for the final OPPS status indicators, APC assignments, and payment rates for all codes reportable under the hospital OPPS. These new codes that were effective April 1, 2024, were assigned to comment indicator ''NP'' in Addendum B to the CY 2025 OPPS/APC proposed rule to indicate that the codes are assigned to an interim APC assignment and comments would be accepted on their interim APC assignments. The complete list of status indicators and definitions used under the OPPS can be found in Addendum D1 to this final rule with comment period, while the complete list comment indicators and definitions can be found in Addendum D2 to this final rule with comment period. We note that OPPS Addendum B (OPPS payment file by HCPCS code), Addendum D1 (OPPS Status Indicators), and Addendum D2 (OPPS Comment Indicators) are available via the internet on the CMS website.

BILLING CODE 4120–01–P

TABLE 14: NEW HCPCS CODES EFFECTIVE APRIL 1, 2024

April 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
A2026	A2026	Restrata minimatrix, 5 mg
A4271	A4271	Integrated lancing and blood sample testing cartridges for home blood glucose monitor, per month
A4438	A4438	Adhesive clip applied to the skin to secure external electrical nerve stimulator controller, each
A4564	A4564	Pessary, disposable, any type
A4593	A4593	Neuromodulation stimulator system, adjunct to rehabilitation therapy regime, controller
A4594	A4594	Neuromodulation stimulator system, adjunct to rehabilitation therapy regime, mouthpiece each
A9293	A9293	Fertility cycle (contraception & conception) tracking software application, FDA cleared, per month, includes accessories (e.g., thermometer)
C9166	C9166	Injection, secukinumab, intravenous, 1 mg
C9167	C9167	Injection, adamts13, recombinant-krhn, 10 iu
C9168	C9168	Injection, mirikizumab-mrkz, 1 mg
C9796	C9796	Repair of enterocutaneous fistula small intestine or colon (excluding anorectal fistula) with plug (e.g., porcine small intestine submucosa [SIS])
C9797	C9797	Vascular embolization or occlusion procedure with use of a pressure-generating catheter (e.g., one-way valve, intermittently occluding), inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for tumors, organ ischemia, or infarction
E0152	E0152	Walker, battery powered, wheeled, folding, adjustable or fixed height
E0468	E0468	Home ventilator, dual-function respiratory device, also performs additional function of cough stimulation, includes all accessories, components and supplies for all functions
E0736	E0736	Transcutaneous tibial nerve stimulator
E0738	E0738	Upper extremity rehabilitation system providing active assistance to facilitate muscle re-education, include microprocessor, all components and accessories
E0739	E0739	Rehab system with interactive interface providing active assistance in rehabilitation therapy, includes all components and accessories, motors, microprocessors, sensors
E2104	E2104	Home blood glucose monitor for use with integrated lancing/blood sample testing cartridge
E2298	E2298	Complex rehabilitative power wheelchair accessory, power seat elevation system, any type
G0138	G0138	Intravenous infusion of cipaglucosidase alfa-atga, including provider/supplier acquisition and clinical supervision of oral administration of miglustat in preparation of receipt of cipaglucosidase alfa-atga
H0051	H0051	Traditional healing service
C9161	J0177	Injection, aflibercept hd, 1 mg
J0209	J0209	Injection, sodium thiosulfate (hope), 100 mg
J0577	J0577	Injection, buprenorphine extended-release (brixadi), less than or equal to 7 days of therapy
J0578	J0578	Injection, buprenorphine extended-release (brixadi), greater than 7 days of therapy and up to 28 days of therapy

April 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
C9160	J0589	Injection, daxibotulinumtoxina-lanm, 1 unit
J0650	J0650	Injection, levothyroxine sodium, not otherwise specified, 10 mcg
J0651	J0651	Injection, levothyroxine sodium (fresenius kabi), not therapeutically equivalent to J0650, 10 mcg
J0652	J0652	Injection, levothyroxine sodium (hikma), not therapeutically equivalent to J0650, 10mcg
J1010	J1010	Injection, methylprednisolone acetate, 1 mg
J1202	J1202	Miglustat, oral, 65 mg
J1203	J1203	Injection, cipaglucosidase alfa-atga, 5 mg
C9165	J1323	Injection, elranatamab-bcmm, 1 mg
J1434	J1434	Injection, fosaprepitant (focinvez), 1 mg
J2277	J2277	Injection, motixafortide, 0.25 mg
C9162	J2782	Injection, avacincaptad pegol, 0.1 mg
J2801	J2801	Injection, risperidone (rykindo), 0.5 mg
J2919	J2919	Injection, methylprednisolone sodium succinate, 5 mg
C9163	J3055	Injection, talquetamab-tgvs, 0.25 mg
J3424	J3424	Injection, hydroxocobalamin, intravenous, 25 mg
C9159	J7165	Injection, prothrombin complex concentrate, human-lans, per i.u. of factor ix activity
C9164	J7354	Cantharidin for topical administration, 0.7%, single unit dose applicator (3.2 mg)
J9073	J9073	Injection, cyclophosphamide (ingenus), 5 mg
J9074	J9074	Injection, cyclophosphamide (sandoz), 5 mg
J9075	J9075	Injection, cyclophosphamide, not otherwise specified, 5 mg
J9248	J9248	Injection, melphalan (hepzato), 1 mg
J9249	J9249	Injection, melphalan (apotex), 1 mg
J9376	J9376	Injection, pozelimab-bbfg, 1 mg
K1037	K1037	Docking station for use with oral device/appliance used to reduce upper airway collapsibility
L1320	L1320	Thoracic, pectus carinatum orthosis, sternal compression, rigid circumferential frame with anterior and posterior rigid pads, custom fabricated
L5783	L5783	Addition to lower extremity, user adjustable, mechanical, residual limb volume management system
L5841	L5841	Addition, endoskeletal knee-shin system, polycentric, pneumatic swing, and stance phase control
Q4305	Q4305	American amnion ac tri-layer, per square centimeter
Q4306	Q4306	American amnion ac, per square centimeter
Q4307	Q4307	American amnion, per square centimeter
Q4308	Q4308	Sanopellis, per square centimeter
Q4309	Q4309	Via matrix, per square centimeter
Q4310	Q4310	Procenta, per 100 mg
Q5133	Q5133	Injection, tocilizumab-bavi (tofidence), biosimilar, 1 mg
Q5134	Q5134	Injection, natalizumab-sztn (tyruko), biosimilar, 1 mg
S4988	S4988	Penile contracture device, manual, greater than 3 lbs traction force
S9002	S9002	Intra-vaginal motion sensor system, provides biofeedback for pelvic floor muscle rehabilitation device
0439U	0439U	Cardiology (coronary heart disease [CHD]), DNA, analysis of 5 single-nucleotide polymorphisms (SNPs) (rs11716050 [LOC105376934], rs6560711 [WDR37], rs3735222 [SCIN/LOC107986769], rs6820447

April 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
		[intergenic], and rs9638144 [ESYT2]) and 3 DNA methylation markers (cg00300879 [transcription start site {TSS200} of CNKSR1], cg09552548 [intergenic], and cg14789911 [body of SPATC1L]), qPCR and digital PCR, whole blood, algorithm reported as a 4-tiered risk score for a 3-year risk of symptomatic CHD
0440U	0440U	Cardiology (coronary heart disease [CHD]), DNA, analysis of 10 single-nucleotide polymorphisms (SNPs) (rs710987 [LINC010019], rs1333048 [CDKN2B-AS1], rs12129789 [KCND3], rs942317 [KTN1-AS1], rs1441433 [PPP3CA], rs2869675 [PREX1], rs4639796 [ZBTB41], rs4376434 [LINC00972], rs12714414 [TMEM18], and rs7585056 [TMEM18]) and 6 DNA methylation markers (cg03725309 [SARS1], cg12586707 [CXCL1, cg04988978 [MPO], cg17901584 [DHCR24-DT], cg21161138 [AHRR], and cg12655112 [EHD4]), qPCR and digital PCR, whole blood, algorithm reported as detected or not detected for CHD
0441U	0441U	Infectious disease (bacterial, fungal, or viral infection), semiquantitative biomechanical assessment (via deformability cytometry), whole blood, with algorithmic analysis and result reported as an index
0442U	0442U	Infectious disease (respiratory infection), Myxovirus resistance protein A (MxA) and C-reactive protein (CRP), fingerstick whole blood specimen, each biomarker reported as present or absent
0443U	0443U	Neurofilament light chain (NfL), ultra-sensitive immunoassay, serum or cerebrospinal fluid
0444U	0444U	Oncology (solid organ neoplasia), targeted genomic sequence analysis panel of 361 genes, interrogation for gene fusions, translocations, or other rearrangements, using DNA from formalin-fixed paraffin-embedded (FFPE) tumor tissue, report of clinically significant variant(s)
0445U	0445U	β-amyloid (Abeta42) and phospho tau (181P) (pTau181), electrochemiluminescent immunoassay (ECLIA), cerebral spinal fluid, ratio reported as positive or negative for amyloid pathology
0446U	0446U	Autoimmune diseases (systemic lupus erythematosus [SLE]), analysis of 10 cytokine soluble mediator biomarkers by immunoassay, plasma, individual components reported with an algorithmic risk score for current disease activity
0447U	0447U	Autoimmune diseases (systemic lupus erythematosus [SLE]), analysis of 11 cytokine soluble mediator biomarkers by immunoassay, plasma, individual components reported with an algorithmic prognostic risk score for developing a clinical flare
0448U	0448U	Oncology (lung and colon cancer), DNA, qualitative, nextgeneration sequencing detection of single-nucleotide variants and deletions in EGFR and KRAS genes, formalin-fixed paraffinembedded (FFPE) solid tumor samples, reported as presence or absence of targeted mutation(s), with recommended therapeutic options
0449U	0449U	Carrier screening for severe inherited conditions (e.g., cystic fibrosis, spinal muscular atrophy, beta hemoglobinopathies [including sickle cell disease], alpha thalassemia), regardless of race or self-identified ancestry, genomic sequence analysis panel, must include analysis of 5 genes (CFTR, SMN1, HBB, HBA1, HBA2)

BILLING CODE 4120–01–C

2. July 2024 HCPCS Codes Proposed Rule Comment Solicitation

For the July 2024 update, 130 new codes were established and made effective July 1, 2024. Through the July 2024 OPPS quarterly update CR (Transmittal 12665, Change Request 13632, dated May 31, 2024), we recognized several new codes for payment and assigned them to appropriate interim OPPS status indicators and APCs. We solicited public comments on the proposed APC and status indicator assignments for the codes listed in Table 11 (New HCPCS Codes Effective July 1, 2024) of the CY 2025 OPPS/ASC proposed rule (89 FR 59242 through 59249), which are also listed in Table 15.

We received some public comments on the proposed OPPS APC and SI assignments for the new Level II HCPCS codes implemented on July 1, 2024. The comments and our responses are addressed in pertinent sections of this final rule with comment period, which include, but are not limited to: sections III.C (New Technology APCs); III.E (OPPS APC-Specific Policies); and IV (OPPS Payment for Devices). For those July 1, 2024, codes for which we received no comments, we are finalizing the proposed APC and status indicator assignments. Additionally, we note that in prior years we included the final OPPS status indicators and APC assignments in the coding preamble tables, however, because the same information can be found in Addendum B, we are no longer including them in Table 15. Therefore, readers are advised to refer to the OPPS Addendum B for the final OPPS status indicators, APC assignments, and payment rates for all codes reportable under the hospital OPPS. These new codes that were effective July 1, 2024, were assigned to comment indicator ''NP'' in Addendum B to the CY 2025 OPPS/ASC proposed rule to indicate that the codes are assigned to an interim APC assignment and comments would be accepted on their interim APC assignments. The complete list of status indicators and definitions used under the OPPS can be found in Addendum D1 to this final rule with comment period, while the complete list of comment indicators and definitions can be found in Addendum D2 to this final rule with comment period. We note that OPPS Addendum B (OPPS payment file by HCPCS code), Addendum D1 (OPPS Status Indicators), and Addendum D2 (OPPS Comment Indicators) are available via the internet on the CMS website.

BILLING CODE 4120–01–P

TABLE 15: NEW HCPCS CODES EFFECTIVE JULY 1, 2024

July 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
90637	90637	Influenza virus vaccine, quadrivalent (qIRV), mRNA; 30 mcg/0.5 mL dosage, for intramuscular use
90638	90638	Influenza virus vaccine, quadrivalent (qIRV), mRNA; 60 mcg/0.5 mL dosage, for intramuscular use
C9901	C9901	Endoscopic defect closure within the entire gastrointestinal tract, including upper endoscopy (including diagnostic, if performed) or colonoscopy (including diagnostic, if performed), with all system and tissue anchoring components
C1605	C1605	Pacemaker, leadless, dual chamber (right atrial and right ventricular implantable components), rate-responsive, including all necessary components for implantation
C1606	C1606	Adapter, single-use (i.e. disposable), for attaching ultrasound system to upper gastrointestinal endoscope
G0519	G0519	Management of new patient-caregiver dyad with dementia, low complexity, for use in CMMI Model
G0520	G0520	Management of new patient-caregiver dyad with dementia, moderate complexity, for use in CMMI Model
G0521	G0521	Management of new patient-caregiver dyad with dementia, high complexity, for use in CMMI Model
G0522	G0522	Management of a new patient with dementia, low complexity, for use in CMMI Model
G0523	G0523	Management of a new patient with dementia, moderate to high complexity, for use in CMMI Model
G0524	G0524	Management of established patient-caregiver dyad with dementia, low complexity, for use in CMMI Model
G0525	G0525	Management of established patient-caregiver dyad with dementia, moderate complexity, for use in CMMI Model
G0526	G0526	Management of established patient-caregiver dyad with dementia, high complexity, for use in CMMI Model
G0527	G0527	Management of established patient with dementia, low complexity, for use in CMMI Model
G0528	G0528	Management of established patient with dementia, moderate to high complexity, for use in CMMI Model
G0529	G0529	In-home respite care, 4-hour unit, for use in CMMI Model
G0530	G0530	Adult day center, 8-hour unit, for use in CMMI Model
G0531	G0531	Facility-based respite, 24-hour unit, for use in CMMI Model
G9037	G9037	Interprofessional telephone/Internet/electronic health record clinical question/request for specialty recommendations by a treating/requesting physician or other qualified health care

July 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
		professional for the care of the patient (i.e. not for professional education or scheduling) and may include subsequent follow up on the specialist's recommendations; 30 minutes
G9038	G9038	Co-management services with the following elements: New diagnosis OR acute exacerbation and stabilization of existing condition; Condition which may benefit from joint care planning; Condition for which specialist is taking a co-management role; Condition expected to last at least 3 months; Comprehensive care plan established, implemented, revised or monitored in partnership with co-managing clinicians; Ongoing communication and care coordination between co-managing clinicians furnishing care
J0211	J0211	Injection, sodium nitrite 3 mg and sodium thiosulfate 125 mg (nithiodote)
J0687	J0687	Injection, cefazolin sodium (wg critical care), not therapeutically equivalent to j0690, 500 mg
J0872	J0872	Injection, daptomycin (xellia), unrefrigerated, not therapeutically equivalent to j0878 or j0873, 1 mg
J0911	J0911	Instillation, taurolidine 1.35 mg and heparin sodium 100 units (central venous catheter lock for adult patients receiving chronic hemodialysis)
J1597	J1597	Injection, glycopyrrolate (glyrx-pf), 0.1 mg
J1598	J1598	Injection, glycopyrrolate (fresenius kabi), not therapeutically equivalent to J1596, 0.1 mg
J2183	J2183	Injection, meropenem (wg critical care), not therapeutically equivalent to j2185, 100 mg
J2246	J2246	Injection, micafungin in sodium (baxter), not therapeutically equivalent to j2248, 1 mg
J2267	J2267	Injection, mirikizumab-mrkz, 1 mg
J2373	J2373	Injection, phenylephrine hydrochloride (immphentiv), 20 micrograms
J2468	J2468	Injection, palonosetron hydrochloride (avyxa), not therapeutically equivalent to J2469, 25 micrograms
J2470	J2470	Injection, pantoprazole sodium, 40 mg
J2471	J2471	Injection, pantoprazole (hikma), not therapeutically equivalent to J2470, 40 mg
J3247	J3247	Injection, secukinumab, intravenous, 1 mg
J3263	J3263	Injection, toripalimab-tpzi, 1 mg
J3393	J3393	Injection, betibeglogene autotemcel, per treatment

July 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
J3394	J3394	Injection, lovotibeglogene autotemcel, per treatment
J7171	J7171	Injection, adamts13, recombinant-krhn, 10 iu
J7355	J7355	Injection, travoprost, intracameral implant, 1 microgram
J8611	J8611	Methotrexate (jylamvo), oral, 2.5 mg
J8612	J8612	Methotrexate (xatmep), oral, 2.5 mg
J9361	J9361	Injection, efbemalenograstim alfa-vuxw, 0.5 mg
Q4311	Q4311	Acesso, per square centimeter
Q4312	Q4312	Acesso ac, per square centimeter
Q4313	Q4313	Dermabind fm, per square centimeter
Q4314	Q4314	Reeva ft, per square centimeter
Q4315	Q4315	Regenelink amniotic membrane allograft, per square centimeter
Q4316	Q4316	Amchoplast, per square centimeter
Q4317	Q4317	Vitograft, per square centimeter
Q4318	Q4318	E-graft, per square centimeter
Q4319	Q4319	Sanograft, per square centimeter
Q4320	Q4320	Pellograft, per square centimeter
Q4321	Q4321	Renograft, per square centimeter
Q4322	Q4322	Caregraft, per square centimeter
Q4323	Q4323	Alloply, per square centimeter
Q4324	Q4324	Amniotx, per square centimeter
Q4325	Q4325	Acapatch, per square centimeter
Q4326	Q4326	Woundplus, per square centimeter
Q4327	Q4327	Duoamnion, per square centimeter
Q4328	Q4328	Most, per square centimeter
Q4329	Q4329	Singlay, per square centimeter
Q4330	Q4330	Total, per square centimeter
Q4331	Q4331	Axolotl graft, per square centimeter
Q4332	Q4332	Axolotl dualgraft, per square centimeter

July 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
Q4333	Q4333	Ardeograft, per square centimeter
Q5136	Q5136	Injection, infliximab-dyyb (zymfentra), biosimilar, 10 mg
Q5137	Q5137	Injection, ustekinumab-auub (wezlana), biosimilar, subcutaneous, 1 mg
Q5138	Q5138	Injection, ustekinumab-auub (wezlana), biosimilar, intravenous, 1 mg
0867T	0867T	Transperineal laser ablation of benign prostatic hyperplasia, including imaging guidance; prostate volume greater than or equal to 50 mL
0868T	0868T	High-resolution gastric electrophysiology mapping with simultaneous patient symptom profiling, with interpretation and report
0869T	0869T	Injection(s), bone-substitute material for bone and/or soft tissue hardware fixation augmentation, including intraoperative imaging guidance, when performed
0870T	0870T	Implantation of subcutaneous peritoneal ascites pump system, percutaneous, including pump-pocket creation, insertion of tunneled indwelling bladder and peritoneal catheters with pump connections, including all imaging and initial programming, when performed
0871T	0871T	Replacement of a subcutaneous peritoneal ascites pump, including reconnection between pump and indwelling bladder and peritoneal catheters, including initial programming and imaging, when performed
0872T	0872T	Replacement of indwelling bladder and peritoneal catheters, including tunneling of catheter(s) and connection with previously implanted peritoneal ascites pump, including imaging and programming, when performed
0873T	0873T	Revision of a subcutaneously implanted peritoneal ascites pump system, any component (ascites pump, associated peritoneal catheter, associated bladder catheter), including imaging and programming, when performed
0874T	0874T	Removal of a peritoneal ascites pump system, including implanted peritoneal ascites pump and indwelling bladder and peritoneal catheters
0875T	0875T	Programming of subcutaneously implanted peritoneal ascites pump system by physician or other qualified health care professional
0876T	0876T	Duplex scan of hemodialysis fistula, computer-aided, limited (volume flow, diameter, and depth, including only body of fistula)

July 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
0877T	0877T	Augmentative analysis of chest computed tomography (CT) imaging data to provide categorical diagnostic subtype classification of interstitial lung disease; obtained without concurrent CT examination of any structure contained in previously acquired diagnostic imaging
0878T	0878T	Augmentative analysis of chest computed tomography (CT) imaging data to provide categorical diagnostic subtype classification of interstitial lung disease; obtained with concurrent CT examination of the same structure
0879T	0879T	Augmentative analysis of chest computed tomography (CT) imaging data to provide categorical diagnostic subtype classification of interstitial lung disease; radiological data preparation and transmission
0880T	0880T	Augmentative analysis of chest computed tomography (CT) imaging data to provide categorical diagnostic subtype classification of interstitial lung disease; physician or other qualified health care professional interpretation and report
0881T	0881T	Cryotherapy of the oral cavity using temperature regulated fluid cooling system, including placement of an oral device, monitoring of patient tolerance to treatment, and removal of the oral device
0882T	0882T	Intraoperative therapeutic electrical stimulation of peripheral nerve to promote nerve regeneration, including lead placement and removal, upper extremity, minimum of 10 minutes; initial nerve (List separately in addition to code for primary procedure)
0883T	0883T	Intraoperative therapeutic electrical stimulation of peripheral nerve to promote nerve regeneration, including lead placement and removal, upper extremity, minimum of 10 minutes; each additional nerve (List separately in addition to code for primary procedure)
0884T	0884T	Esophagoscopy, flexible, transoral, with initial transendoscopic mechanical dilation (e.g., nondrug-coated balloon) followed by therapeutic drug delivery by drug-coated balloon catheter for esophageal stricture, including fluoroscopic guidance, when performed
0885T	0885T	Colonoscopy, flexible, with initial transendoscopic mechanical dilation (e.g., nondrug-coated balloon) followed by therapeutic drug delivery by drug-coated balloon catheter for colonic stricture, including fluoroscopic guidance, when performed
0886T	0886T	Sigmoidoscopy, flexible, with initial transendoscopic mechanical dilation (e.g., nondrug-coated balloon) followed

July 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
		by therapeutic drug delivery by drug-coated balloon catheter for colonic stricture, including fluoroscopic guidance, when performed
0887T	0887T	End-tidal control of inhaled anesthetic agents and oxygen to assist anesthesia care delivery (List separately in addition to code for primary procedure)
0888T	0888T	Histotripsy (i.e., non-thermal ablation via acoustic energy delivery) of malignant renal tissue, including imaging guidance
0889T	0889T	Personalized target development for accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation derived from a structural and resting-state functional MRI, including data preparation and transmission, generation of the target, motor threshold–starting location, neuronavigation files and target report, review and interpretation
0890T	0890T	Accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation, including target assessment, initial motor threshold determination, neuronavigation, delivery and management, initial treatment day
0891T	0891T	Accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation, including neuronavigation, delivery and management, subsequent treatment day
0892T	0892T	Accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation, including neuronavigation, delivery and management, subsequent motor threshold redetermination with delivery and management, per treatment day
0893T	0893T	Noninvasive assessment of blood oxygenation, gas exchange efficiency, and cardiorespiratory status, with physician or other qualified health care professional interpretation and report
0894T	0894T	Cannulation of the liver allograft in preparation for connection to the normothermic perfusion device and decannulation of the liver allograft following normothermic perfusion
0895T	0895T	Connection of liver allograft to normothermic machine perfusion device, hemostasis control; initial 4 hours of monitoring time, including hourly physiological and laboratory assessments (e.g., perfusate temperature, perfusate pH, hemodynamic parameters, bile production, bile pH, bile

July 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
		glucose, biliary bicarbonate, lactate levels, macroscopic assessment)
0896T	0896T	Connection of liver allograft to normothermic machine perfusion device, hemostasis control; each additional hour, including physiological and laboratory assessments (e.g., perfusate temperature, perfusate pH, hemodynamic parameters, bile production, bile pH, bile glucose, biliary bicarbonate, lactate levels, macroscopic assessment) (List separately in addition to code for primary procedure)
0897T	0897T	Noninvasive augmentative arrhythmia analysis derived from quantitative computational cardiac arrhythmia simulations, based on selected intervals of interest from 12-lead electrocardiogram and uploaded clinical parameters, including uploading clinical parameters with interpretation and report
0898T	0898T	Noninvasive prostate cancer estimation map, derived from augmentative analysis of image-guided fusion biopsy and pathology, including visualization of margin volume and location, with margin determination and physician interpretation and report
0899T	0899T	Noninvasive determination of absolute quantitation of myocardial blood flow (AQMBF), derived from augmentative algorithmic analysis of the dataset acquired via contrast cardiac magnetic resonance (CMR), pharmacologic stress, with interpretation and report by a physician or other qualified health care professional (List separately in addition to code for primary procedure)
0900T	0900T	Noninvasive estimate of absolute quantitation of myocardial blood flow (AQMBF), derived from assistive algorithmic analysis of the dataset acquired via contrast cardiac magnetic resonance (CMR), pharmacologic stress, with interpretation and report by a physician or other qualified health care professional (List separately in addition to code for primary procedure)
0450U	0450U	Oncology (multiple myeloma), liquid chromatography with tandem mass spectrometry (LCMS/MS), monoclonal paraprotein sequencing analysis, serum, results reported as baseline presence or absence of detectable clonotypic peptides
0451U	0451U	Oncology (multiple myeloma), LCMS/MS, peptide ion quantification, serum, results compared with baseline to determine monoclonal paraprotein abundance
0452U	0452U	Oncology (bladder), methylated PENK DNA detection by linear target enrichment-quantitative methylation-specific real-

July 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
		time PCR (LTE-qMSP), urine, reported as likelihood of bladder cancer
0453U	0453U	Oncology (colorectal cancer), cellfree DNA (cfDNA), methylationbased quantitative PCR assay (SEPTIN9, IKZF1, BCAT1, Septin9-2, VAV3, BCAN), plasma, reported as presence or absence of circulating tumor DNA (ctDNA)
0454U	0454U	Rare diseases (constitutional/heritable disorders), identification of copy number variations, inversions, insertions, translocations, and other structural variants by optical genome mapping
0455U	0455U	Infectious agents (sexually transmitted infection), Chlamydia trachomatis, Neisseria gonorrhoeae, and Trichomonas vaginalis, multiplex amplified probe technique, vaginal, endocervical, gynecological specimens, oropharyngeal swabs, rectal swabs, female or male urine, each pathogen reported as detected or not detected
0456U	0456U	Autoimmune (rheumatoid arthritis), next-generation sequencing (NGS), gene expression testing of 19 genes, whole blood, with analysis of anticyclic citrullinated peptides (CCP) levels, combined with sex, patient global assessment, and body mass index (BMI), algorithm reported as a score that predicts nonresponse to tumor necrosis factor inhibitor (TNFi) therapy
0457U	0457U	Perfluoroalkyl substances (PFAS) (e.g., perfluorooctanoic acid, perfluorooctane sulfonic acid), 9 PFAS compounds by LC-MS/MS, plasma or serum, quantitative
0458U	0458U	Oncology (breast cancer), S100A8 and S100A9, by enzymelinked immunosorbent assay (ELISA), tear fluid with age, algorithm reported as a risk score
0459U	0459U	β-amyloid (Abeta42) and total tau (tTau), electrochemiluminescent immunoassay (ECLIA), cerebral spinal fluid, ratio reported as positive or negative for amyloid pathology
0460U	0460U	Oncology, whole blood or buccal, DNA single-nucleotide polymorphism (SNP) genotyping by real-time PCR of 24 genes, with variant analysis and reported phenotypes
0461U	0461U	Oncology, pharmacogenomic analysis of single-nucleotide polymorphism (SNP) genotyping by real-time PCR of 24 genes, whole blood or buccal swab, with variant analysis, including impacted gene-drug interactions and reported phenotypes

July 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
0462U	0462U	Melatonin levels test, sleep study, 7 or 9 sample melatonin profile (cortisol optional), enzyme-linked immunosorbent assay (ELISA), saliva, screening/preliminary
0463U	0463U	Oncology (cervix), mRNA gene expression profiling of 14 biomarkers (E6 and E7 of the highest-risk human papillomavirus [HPV] types 16, 18, 31, 33, 45, 52, 58), by real-time nucleic acid sequence-based amplification (NASBA), exo- or endocervical epithelial cells, algorithm reported as positive or negative for increased risk of cervical dysplasia or cancer for each biomarker
0464U	0464U	Oncology (colorectal) screening, quantitative real-time target and signal amplification, methylated DNA markers, including LASS4, LRRC4 and PPP2R5C, a reference marker ZDHHC1, and a protein marker (fecal hemoglobin), utilizing stool, algorithm reported as a positive or negative result
0465U	0465U	Oncology (urothelial carcinoma), DNA, quantitative methylationspecific PCR of 2 genes (ONECUT2, VIM), algorithmic analysis reported as positive or negative
0466U	0466U	Cardiology (coronary artery disease [CAD]), DNA, genomewide association studies (564856 single-nucleotide polymorphisms [SNPs], targeted variant genotyping), patient lifestyle and clinical data, buccal swab, algorithm reported as polygenic risk to acquired heart disease
0467U	0467U	Oncology (bladder), DNA, nextgeneration sequencing (NGS) of 60 genes and whole genome aneuploidy, urine, algorithms reported as minimal residual disease (MRD) status positive or negative and quantitative disease burden
0468U	0468U	Hepatology (nonalcoholic steatohepatitis [NASH]), miR-34a5p, alpha 2-macroglobulin, YKL40, HbA1c, serum and whole blood, algorithm reported as a single score for NASH activity and fibrosis
0469U	0469U	Rare diseases (constitutional/heritable disorders), whole genome sequence analysis for chromosomal abnormalities, copy number variants, duplications/deletions, inversions, unbalanced translocations, regions of homozygosity (ROH),inheritance pattern that indicate uniparental disomy (UPD), and aneuploidy, fetal sample (amniotic fluid, chorionic villus sample, or products of conception),identification and categorization of genetic variants, diagnostic report of fetal results based on phenotype with maternal sample and paternal sample, if performed, as comparators and/or maternal cell contamination

July 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
0470U	0470U	Oncology (oropharyngeal), detection of minimal residual disease by next-generation sequencing (NGS) based quantitative evaluation of 8 DNA targets, cell-free HPV 16 and 18 DNA from plasma
0471U	0471U	Oncology (colorectal cancer), qualitative real-time PCR of 35 variants of KRAS and NRAS genes (exons 2, 3, 4), formalinfixed paraffin-embedded (FFPE), predictive, identification of detected mutations
0472U	0472U	Carbonic anhydrase VI (CA VI), parotid specific/secretory protein (PSP) and salivary protein (SP1) IgG, IgM, and IgA antibodies, enzyme-linked immunosorbent assay (ELISA), semiqualitative, blood, reported as predictive evidence of early Sjögren syndrome
0473U	0473U	Oncology (solid tumor), nextgeneration sequencing (NGS) of DNA from formalin-fixed paraffinembedded (FFPE) tissue with comparative sequence analysis from a matched normal specimen (blood or saliva), 648 genes, interrogation for sequence variants, insertion and deletion alterations, copy number variants, rearrangements, microsatellite instability, and tumor-mutation burden
0474U	0474U	Hereditary pan-cancer (e.g., hereditary sarcomas, hereditary endocrine tumors, hereditary neuroendocrine tumors, hereditary cutaneous melanoma), genomic sequence analysis panel of 88 genes with 20 duplications/deletions using nextgeneration sequencing (NGS), Sanger sequencing, blood or saliva, reported as positive or negative for germline variants, each gene
0475U	0475U	Hereditary prostate cancer-related disorders, genomic sequence analysis panel using next-generation sequencing (NGS), Sanger sequencing, multiplex ligation-dependent probe amplification (MLPA), and array comparative genomic hybridization (CGH), evaluation of 23 genes and duplications/deletions when indicated, pathologic mutations reported with a genetic risk score for prostate cancer

3. October 2024 HCPCS Codes Final Rule Comment Solicitation

For the October 2024 update, 107 codes were established and made effective October 1, 2024. Through the October 2024 OPPS quarterly update CR (Transmittal 12816, Change Request 13784, dated August 29, 2024), we recognized several new codes for separate payment and assigned them to appropriate interim OPPS status indicators and APCs. For CY 2025, consistent with our established policy, we proposed in the CY 2025 OPPS/ASC proposed rule (89 FR 59250) that the HCPCS codes that would be effective October 1, 2024, would be flagged with comment indicator ''NI'' in Addendum B to the CY 2025 OPPS/ASC final rule with comment period to indicate that we have assigned the codes to interim OPPS status indicators for CY 2025. Table 16 lists the codes that were effective October 1, 2024. We note that one of the temporary C-codes has been replaced with a permanent J-code effective January 1, 2025. We are inviting public comments in this final rule with comment period on the interim payment indicators, which will be finalized in the CY 2026 OPPS/ASC final rule with comment period. We note the proposed APC assignments and status indicators for these same codes will be subject to comment in the CY 2026 OPPS/ASC proposed rule with comment period, and will be finalized in the CY 2026 OPPS/ASC final rule with comment period.

TABLE 16: NEW HCPCS CODES EFFECTIVE OCTOBER 1, 2024

October 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
90624	90624	Meningococcal pentavalent vaccine, Men B-4C recombinant proteins and outer membrane vesicle and conjugated Men A, C, W, Y-diphtheria toxoid carrier, for intramuscular use
90683	90683	Respiratory syncytial virus vaccine, mRNA lipid nanoparticles, for intramuscular use
90684	90684	Pneumococcal conjugate vaccine, 21 valent (PCV21), for intramuscular use
90695	90695	Influenza virus vaccine, H5N8, derived from cell cultures, adjuvanted, for intramuscular use
0020M	0020M	Oncology (central nervous system), analysis of 30000 DNA methylation loci by methylation array, utilizing DNA extracted from tumor tissue, diagnostic algorithm reported as probability of matching a reference tumor subclass
0476U	0476U	Drug metabolism, psychiatry (e.g., major depressive disorder, general anxiety disorder, attention deficit hyperactivity disorder [ADHD], schizophrenia), whole blood, buccal swab, pharmacogenomic genotyping of 14 genes and CYP2D6 copy number variant analysis, and reported phenotypes
0477U	0477U	Drug metabolism, psychiatry (e.g., major depressive disorder, general anxiety disorder, attention deficit hyperactivity disorder [ADHD], schizophrenia), whole blood, buccal swab, pharmacogenomic genotyping of 14 genes and CYP2D6 copy number variant analysis, including impacted gene-drug interactions and reported phenotypes
0478U	0478U	Oncology (non-small cell lung cancer), DNA and RNA, digital PCR analysis of 9 genes (EGFR, KRAS, BRAF, ALK, ROS1, RET,

October 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
		NTRK 1/2/3, ERBB2, and MET) in formalin-fixed paraffin-embedded (FFPE) tissue, interrogation for single nucleotide variants, insertions/deletions, gene rearrangements, and reported as actionable detected variants for therapy selection
0479U	0479U	Tau, phosphorylated, pTau217
0480U	0480U	Infectious disease (bacteria, viruses, fungi, and parasites), cerebrospinal fluid (CSF), metagenomic next-generation sequencing (DNA and RNA), bioinformatic analysis, with positive pathogen identification
0481U	0481U	IDH1 (isocitrate dehydrogenase 1[NADP+]), IDH2 (isocitrate dehydrogenase 2 [NADP+]), and TERT (telomerase reverse transcriptase) promoter (e.g., central nervous system [CNS] tumors), next-generation sequencing (single-nucleotide variants [SNV], deletions, and insertions)
0482U	0482U	Obstetrics (preeclampsia), biochemical assay of soluble fms-like tyrosine kinase 1 (sFlT-1) and placental growth factor (PIGF), serum, ratio reported for sFlT-1/PIGF, with risk of progression for preeclampsia with severe features within 2 weeks
0483U	0483U	Infectious disease (Neisseria gonorrhoeae), sensitivity, ciprofloxacin resistance (gyrA S91F point mutation), oral, rectal, or vaginal swab, algorithm reported as probability of fluoroquinolone resistance
0484U	0484U	Infectious disease (Mycoplasma genitalium), macrolide sensitivity (23S rRNA point mutation), oral, rectal, or vaginal swab, algorithm reported as probability of macrolide resistance
0485U	0485U	Oncology (solid tumor), cell-free DNA and RNA by next-generation sequencing, interpretative report for germline mutations, clonal hematopoiesis of indeterminate potential, and tumor-derived single-nucleotide variants, small insertions/deletions, copy number alterations, fusions, microsatellite instability, and tumor mutational burden
0486U	0486U	Oncology (pan-solid tumor), next-generation sequencing analysis of tumor methylation markers present in cell-free circulating tumor DNA, algorithm reported as quantitative measurement of methylation as a correlate of tumor fraction
0487U	0487U	Oncology (solid tumor), cell-free circulating DNA, targeted genomic sequence analysis panel of 84 genes, interrogation for sequence variants, aneuploidy-corrected gene copy number amplifications and losses, gene rearrangements, and microsatellite instability
0488U	0488U	Obstetrics (fetal antigen noninvasive prenatal test), cell-free DNA sequence analysis for the detection of the fetal presence or absence of 1 or more of the Rh, C, c, D, E, Duffy (Fya), or Kell (K) antigen in alloimmunized pregnancies, reported as selected antigen(s) detected or not detected

October 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
0489U	0489U	Obstetrics (single-gene noninvasive prenatal test), cell-free DNA sequence analysis of 1 or more targets (e.g., CFTR, SMN1, HBB, HBA1, HBA2) to identify paternally inherited pathogenic variants, and relative mutation-dosage analysis based on molecular counts to determine the fetal inheritance of the maternal mutation, algorithm reported as a fetal risk score for the condition (e.g., cystic fibrosis, spinal muscular atrophy, beta hemoglobinopathies [including sickle cell disease], alpha thalassemia)
0490U	0490U	Oncology (cutaneous or uveal melanoma), circulating tumor cell selection, morphological characterization and enumeration based on differential CD146, high molecular–weight melanoma-associated antigen, CD34 and CD45 protein biomarkers, peripheral blood
0491U	0491U	Oncology (solid tumor), circulating tumor cell selection, morphological characterization and enumeration based on differential epithelial cell adhesion molecule (EpCAM), cytokeratins 8, 18, and 19, CD45 protein biomarkers, and quantification of estrogen receptor (ER) protein biomarker–expressing cells, peripheral blood
0492U	0492U	Oncology (solid tumor), circulating tumor cell selection, morphological characterization and enumeration based on differential epithelial cell adhesion molecule (EpCAM), cytokeratins 8, 18, and 19, CD45 protein biomarkers, and quantification of PD-L1 protein biomarker–expressing cells, peripheral blood
0493U	0493U	Transplantation medicine, quantification of donor-derived cell-free DNA using next-generation sequencing, plasma, reported as percentage of donor-derived cell-free DNA (cfDNA)
0494U	0494U	Red blood cell antigen (fetal RhD gene analysis), next-generation sequencing of circulating cell-free DNA (cfDNA) of blood in pregnant individuals known to be RhD negative, reported as positive or negative
0495U	0495U	Oncology (prostate), analysis of circulating plasma proteins (tPSA, fPSA, KLK2, PSP94, and GDF15), germline polygenic risk score (60 variants), clinical information (age, family history of prostate cancer, prior negative prostate biopsy), algorithm reported as risk of likelihood of detecting clinically significant prostate cancer
0496U	0496U	Oncology (colorectal), cell-free DNA, 8 genes for mutations, 7 genes for methylation by real-time RT-PCR, and 4 proteins by enzyme-linked immunosorbent assay, blood, reported positive or negative for colorectal cancer or advanced adenoma risk
0497U	0497U	Oncology (prostate), mRNA gene-expression profiling by real-time RT-PCR of 6 genes (FOXM1, MCM3, MTUS1, TTC21B, ALAS1, and PPP2CA), utilizing formalin-fixed paraffin-embedded (FFPE) tissue, algorithm reported as a risk score for prostate cancer
0498U	0498U	Oncology (colorectal), next-generation sequencing for mutation detection in 43 genes and methylation pattern in 45 genes, blood,

October 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
		and formalin-fixed paraffin-embedded (FFPE) tissue, report of variants and methylation pattern with interpretation
0499U	0499U	Oncology (colorectal and lung), DNA from formalin-fixed paraffin-embedded (FFPE) tissue, next-generation sequencing of 8 genes (NRAS, EGFR, CTNNB1, PIK3CA, APC, BRAF, KRAS, and TP53), mutation detection
0500U	0500U	Autoinflammatory disease (VEXAS syndrome), DNA, UBA1 gene mutations, targeted variant analysis (M41T, M41V, M41L, c.118-2A>C, c.118-1G>C, c.118-9_118-2del, S56F, S621C)
0501U	0501U	Oncology (colorectal), blood, quantitative measurement of cell-free DNA (cfDNA)
0502U	0502U	Human papillomavirus (HPV), E6/E7 markers for high-risk types (16, 18, 31, 33, 35, 39, 45, 51, 52, 56, 58, 59, 66, and 68), cervical cells, branched-chain capture hybridization, reported as negative or positive for high risk for HPV
0503U	0503U	Neurology (Alzheimer disease), beta amyloid (Aβ40, Aβ42, Aβ42/40 ratio) and tau-protein (p-tau217, np-tau217, p-tau217/np-tau217 ratio), blood, immunoprecipitation with quantitation by liquid chromatography with tandem mass spectrometry (LC-MS/MS), algorithm score reported as the likelihood of positive or negative for amyloid plaques
0504U	0504U	Infectious disease (urinary tract infection), identification of 17 pathologic organisms, urine, real-time PCR, reported as positive or negative for each organism
0505U	0505U	*Infectious disease* (vaginal infection), identification of 32 pathogenic organisms, swab, real-time PCR, reported as positive or negative for each organism
0506U	0506U	Gastroenterology (Barrett's esophagus), esophageal cells, DNA methylation analysis by next-generation sequencing of at least 89 differentially methylated genomic regions, algorithm reported as likelihood for Barrett's esophagus
0507U	0507U	Oncology (ovarian), DNA, whole-genome sequencing with 5-hydroxymethylcytosine (5hmC) enrichment, using whole blood or plasma, algorithm reported as cancer detected or not detected
0508U	0508U	Transplantation medicine, quantification of donor-derived cell-free DNA using 40 single-nucleotide polymorphism (SNPs), plasma, and urine, initial evaluation reported as percentage of donor-derived cell-free DNA with risk for active rejection
0509U	0509U	Transplantation medicine, quantification of donor-derived cell-free DNA using up to 12 single-nucleotide polymorphism (SNPs) previously identified, plasma, reported as percentage of donor-derived cell-free DNA with risk for active rejection
0510U	0510U	Oncology (pancreatic cancer), augmentative algorithmic analysis of 16 genes from previously sequenced RNA whole-transcriptome data, reported as probability of predicted molecular subtype

October 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
0511U	0511U	Oncology (solid tumor), tumor cell culture in 3D microenvironment, 36 or more drug panel, reported as tumor-response prediction for each drug
0512U	0512U	Oncology (prostate), augmentative algorithmic analysis of digitized whole-slide imaging of histologic features for microsatellite instability (MSI) status, formalin-fixed paraffin-embedded (FFPE) tissue, reported as increased or decreased probability of MSI-High (MSI-H)
0513U	0513U	Oncology (prostate), augmentative algorithmic analysis of digitized whole-slide imaging of histologic features for microsatellite instability (MSI) and homologous recombination deficiency (HRD) status, formalin-fixed paraffin-embedded (FFPE) tissue, reported as increased or decreased probability of each biomarker
0514U	0514U	Gastroenterology (irritable bowel disease [IBD]), immunoassay for the quantitative determination of adalimumab (ADL) levels in venous serum in patients undergoing adalimumab therapy, results reported as a numerical value as micrograms per milliliter (µg/mL)
0515U	0515U	Gastroenterology (irritable bowel disease [IBD]), immunoassay for the quantitative determination of infliximab (IXL) levels in venous serum in patients undergoing infliximab therapy, results reported as a numerical value as micrograms per milliliter (µg/mL)
0516U	0516U	Drug metabolism, whole blood, pharmacogenomic genotyping of 40 genes and CYP2D6 copy number variant analysis, reported as metabolizer status
0517U	0517U	Therapeutic drug monitoring, 80 or more psychoactive drugs or substances, LC-MS/MS, plasma, qualitative and quantitative therapeutic minimally and maximally effective dose of prescribed and non-prescribed medications
0518U	0518U	Therapeutic drug monitoring, 90 or more pain and mental health drugs or substances, LC-MS/MS, plasma, qualitative and quantitative therapeutic minimally effective range of prescribed and non-prescribed medications
0519U	0519U	Therapeutic drug monitoring, medications specific to pain, depression, and anxiety, LC-MS/MS, plasma, 110 or more drugs or substances, qualitative and quantitative therapeutic minimally effective range of prescribed, non-prescribed, and illicit medications in circulation
0520U	0520U	Therapeutic drug monitoring, 200 or more drugs or substances, LC-MS/MS, plasma, qualitative and quantitative therapeutic minimally effective range of prescribed and non-prescribed medications
A2027	A2027	Matriderm, per square centimeter
A2028	A2028	Micromatrix flex, per mg
A2029	A2029	Mirotract wound matrix sheet, per cubic centimeter

October 2024 HCPCS Code	CY 2025 HCPCS Code	CY 2025 Long Descriptor
A4543	A4543	Supplies for transcutaneous electrical nerve stimulator, for nerves in the auricular region, per month
A4544	A4544	Electrode for external lower extremity nerve stimulator for restless legs syndrome
A4545	A4545	Supplies and accessories for external tibial nerve stimulator (e.g., socks, gel pads, electrodes, etc.), needed for one month
A7021	A7021	Supplies and accessories for lung expansion airway clearance, continuous high frequency oscillation, and nebulization device (e.g., handset, nebulizer kit, biofilter)
C9150	A9610	Xenon xe-129 hyperpolarized gas, diagnostic, per study dose
C8000	C8000	Support device, extravascular, for arteriovenous fistula (implantable)
C9169	C9169	Injection, nogapendekin alfa inbakicept-pmln, for intravesical use, 1 microgram
C9170	C9170	Injection, tarlatamab-dlle, 1 mg
C9171	C9171	Injection, pegulicianine, 1 mg
C9172	C9172	Injection, fidanacogene elaparvovec-dzkt, per therapeutic dose
E0469	E0469	Lung expansion airway clearance, continuous high frequency oscillation, and nebulization device
E0683	E0683	Non-pneumatic, non-sequential, peristaltic wave compression pump
E0715	E0715	Intravaginal device intended to strengthen pelvic floor muscles during kegel exercises
E0716	E0716	Supplies and accessories for intravaginal device intended to strengthen pelvic floor muscles during kegel exercises
E0721	E0721	Transcutaneous electrical nerve stimulatory, stimulates nerves in the auricular region
E0737	E0737	Transcutaneous tibial nerve stimulator, controlled by phone application
E0743	E0743	External lower extremity nerve stimulator for restless legs syndrome, each
E0767	E0767	Intrabuccal, systemic delivery of amplitude-modulated, radiofrequency electromagnetic field device, for cancer treatment, includes all accessories
E2513	E2513	Accessory for speech generating device, electromyographic sensor
E3200	E3200	Gait modulation system, rhythmic auditory stimulation, including restricted therapy software, all components and accessories, prescription only
J0138	J0138	Injection, acetaminophen 10 mg and ibuprofen 3 mg

BILLING CODE 4120–01–C

4. January 2025 HCPCS Codes

a. New Level II HCPCS Codes Final Rule Comment Solicitation

Consistent with past practice, we are soliciting comments on the new Level II HCPCS codes that will be effective January 1, 2025, in this CY 2025 OPPS/ASC final rule with comment period, thereby allowing us to finalize the status indicators and APC assignments for the codes in the CY 2026 OPPS/ASC final rule with comment period. Unlike the CPT codes that are effective January 1 and are included in the OPPS/ASC proposed rules, and except for the proposed new C-codes and G-codes listed in Addendum O of the CY 2025 OPPS/ASC proposed rule, most Level II HCPCS codes are not released until sometime around November to be effective January 1. Because these codes are not available until November, we are unable to include them in the OPPS/ASC proposed rules. Consequently, for CY 2025, we propose to include the new Level II HCPCS codes that will be effective January 1, 2025 (that would be incorporated in the January 2025 OPPS quarterly update CR), in Addendum B to the CY 2025 OPPS/ASC final rule with comment period. Specifically, for CY 2025, we propose to continue our established policy of assigning comment indicator ''NI'' in Addendum B to the OPPS/ASC final rule with comment period to the new HCPCS codes that will be effective January 1, 2025, to indicate that we are assigning them an interim status indicator, which is subject to public comment. We are inviting public comments in this final rule with comment period on the status indicators and APC assignments, which would then be finalized in the CY 2026 OPPS/ASC final rule with comment period. Similar to the codes effective October 1, 2024, the proposed APC assignments and status indicators for these new Level II HCPCS codes that will be effective January 1, 2025, will also be subject to comment in the CY 2026 OPPS/ASC proposed rule with comment period, and will be finalized in the CY 2026 OPPS/ASC final rule with comment period.

b. New CPT Codes Proposed Rule Comment Solicitation

In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66841 through 66844), we finalized a revised process of assigning APCs and status indicators for new and revised Category I and III CPT codes that would be effective January 1. Specifically, for the new/revised CPT codes that we receive in a timely manner from the AMA's CPT Editorial Panel, we finalized our proposal to include the codes that would be effective January 1 in the OPPS/ASC proposed rules, along with proposed APC and status indicator assignments for them, and to finalize the APC and status indicator assignments in the OPPS/ASC final rules beginning with the CY 2016 OPPS update. For those new/revised CPT codes that were received too late for inclusion in the OPPS/ASC proposed rule, we finalized our proposal to establish and use

HCPCS G-codes that mirror the predecessor CPT codes and retain the current APC and status indicator assignments for a year until we can propose APC and status indicator assignments in the following year's rulemaking cycle. We note that even if we find that we need to create HCPCS G-codes in place of certain CPT codes for the PFS proposed rule, we do not anticipate that these HCPCS G-codes will always be necessary for OPPS purposes. We will make every effort to include proposed APC and status indicator assignments for all new and revised CPT codes that the AMA makes publicly available in time for us to include them in the proposed rule, and to avoid resorting to use of HCPCS G-codes and the resulting delay in utilization of the most current CPT codes. Also, we finalized our proposal to make interim APC and status indicator assignments for CPT codes that are not available in time for the proposed rule and that describe wholly new services (such as new technologies or new surgical procedures), to solicit public comments in the final rule, and to finalize the specific APC and status indicator assignments for those codes in the following year's final rule.

For the CY 2025 OPPS update, we received the CPT codes that will be effective January 1, 2025, from the AMA in time to be included in the CY 2025 OPPS/ASC proposed rule. The new, revised, and deleted CPT codes were included in Addendum B to the proposed rule (which is available via the internet on the CMS website). We note that the new and revised CPT codes were assigned to comment indicator ''NP'' in Addendum B of the proposed rule to indicate that the code is new for the next calendar year or the code is an existing code with substantial revision to its code descriptor in the next calendar year as compared to the current calendar year with a proposed APC assignment, and that comments would be accepted on the proposed APC assignment and status indicator.

Further, we noted that the CPT code descriptors that appeared in Addendum B were short descriptors and did not accurately describe the complete procedure, service, or item described by the CPT code. Therefore, we included the 5-digit placeholder codes and the long descriptors for the new and revised CY 2025 CPT codes in Addendum O to the proposed rule (which is available via the internet on the CMS website) so that the public could adequately comment on the proposed APCs and SI assignments. The 5-digit placeholder codes were included in Addendum O to the proposed rule, specifically under the column labeled ''CY 2025 OPPS/ASC Proposed Rule 5- Digit AMA Placeholder Code''. We noted that the final CPT code numbers would be included in this CY 2025 OPPS/ASC final rule with comment period. We also noted that not every code listed in Addendum O is subject to public comment. For the new and revised Category I and III CPT codes, we requested public comments on only those codes that are assigned comment indicator ''NP.''

In summary, in the CY 2025 OPPS/ASC proposed rule, we solicited public comments on the proposed CY 2025 SI and APC assignments for the new and revised Category I and III CPT codes that would be effective January 1, 2025. The CPT codes were listed in Addendum B to the proposed rule with short descriptors only. We listed them again, with long descriptors, in Addendum O to the proposed rule. We also proposed to finalize the SI and APC assignments for these codes (with their final CPT code numbers) in the CY 2025 OPPS/ASC final rule with comment period. The proposed SI and APC assignments for these codes were included in Addendum B to the proposed rule (which is available via the internet on the CMS website). We received comments on several of the new CPT codes that were assigned to comment indicator ''NP'' in Addendum B to the CY 2025 OPPS/ASC proposed rule. We have responded to those public comments in sections III.C, III.E, and IV of this CY 2025 OPPS/ASC final rule with comment period.

The final SIs, APC assignments, and payment rates for the new CPT codes that are effective January 1, 2025, can be found in Addendum B to this final rule with comment period. In addition, the SI definitions can be found in Addendum D1 (OPPS Payment Status Indicators for CY 2024) to this final rule with comment period. Addenda B and D1 are available via the internet on the CMS website.

Finally, Table 17, which is a reprint of Table 12 from the CY 2025 OPPS/ASC proposed rule (89 FR 59251), shows the comment timeframe for new and revised HCPCS codes. The table provides information on our current process for updating codes through our OPPS quarterly update CRs, seeking public comments, and finalizing the treatment of these codes under the OPPS.

TABLE 17: COMMENT AND FINALIZATION TIMEFRAMES FOR NEW AND REVISED OPPS-RELATED HCPCS CODES

OPPS Quarterly Update CR	Type of Code	Effective Date	Comments Sought	When Finalized
April 2024	HCPCS (CPT and Level II codes)	April 1, 2024	CY 2025 OPPS/ASC proposed rule	CY 2025 OPPS/ASC final rule with comment period
July 2024	HCPCS (CPT and Level II codes)	July 1, 2024	CY 2025 OPPS/ASC proposed rule	CY 2025 OPPS/ASC final rule with comment period
October 2024	HCPCS (CPT and Level II codes)	October 1, 2024	CY 2025 OPPS/ASC final rule with comment period	CY 2026 OPPS/ASC final rule with comment period

	Level II HCPCS Codes	January 1, 2025	CY 2025 OPPS/ASC final rule with comment period	CY 2026 OPPS/ASC final rule with comment period

B. OPPS Changes—Variations Within APCs

1. Background

Section 1833(t)(2)(A) of the Act requires the Secretary to develop a classification system for covered hospital outpatient department services. In addition, section 1833(t)(2)(B) of the Act provides that the Secretary may establish groups of covered OPD services within this classification system, so that services classified within each group are comparable clinically and with respect to the use of resources. In accordance with these provisions, we developed a grouping classification system, referred to as Ambulatory Payment Classifications (APCs), as set forth in the regulation at 42 CFR 419.31. We use Level I (also known as CPT codes) and Level II HCPCS codes (also known as alphanumeric codes) to identify and group the services within each APC. The APCs are organized such that each group is homogeneous both clinically and in terms of resource use. Using this classification system, we have established distinct groups of similar services. We also have developed separate APC groups for certain medical devices, drugs, biologicals, therapeutic radiopharmaceuticals, and brachytherapy devices that are not packaged into the payment for the procedure.

We have packaged into the payment for each procedure or service within an APC group, the costs associated with those items and services that are typically ancillary and supportive to a primary diagnostic or therapeutic modality and, in those cases, are an integral part of the primary service they support. Therefore, we do not make separate payment for these packaged items or services. In general, packaged items and services include, but are not limited to, the items and services listed in the regulation at 42 CFR 419.2(b). A further discussion of packaged services is included in section II.A.3 of this final rule with comment period.

Under the OPPS, we generally pay for covered hospital outpatient services on a rate-per-service basis, where the service may be reported with one or more HCPCS codes. Payment varies according to the APC group to which the independent service or combination of services is assigned. For CY 2025, we proposed that each APC relative payment weight represents the hospital cost of the services included in that APC, relative to the hospital cost of the services included in APC 5012 (Clinic Visits and Related Services). The APC relative payment weights are scaled to APC 5012 because it is the hospital clinic visit APC and clinic visits are among the most frequently furnished services in the hospital outpatient setting.

2. Application of the 2 Times Rule

Section 1833(t)(9)(A) of the Act requires the Secretary to review, not less

often than annually, and revise the APC groups, the relative payment weights, and the wage and other adjustments described in paragraph (2) to consider changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors. Section 1833(t)(9)(A) of the Act also requires the Secretary to consult with an expert outside advisory panel composed of an appropriate selection of representatives of providers to review (and advise the Secretary concerning) the clinical integrity of the APC groups and the relative payment weights. We note that the Advisory Panel on Hospital Outpatient Payment (also known as the HOP Panel or the Panel) recommendations for specific services for the CY 2025 OPPS update will be discussed in the relevant specific sections throughout this CY 2025 OPPS/ASC final rule with comment period.

In addition, section 1833(t)(2) of the Act provides that, subject to certain exceptions, the items and services within an APC group cannot be considered comparable regarding the use of resources if the highest cost for an item or service in the group is more than 2 times greater than the lowest cost for an item or service within the same group (referred to as the ''2 times rule''). The statute authorizes the Secretary to make exceptions to the 2 times rule in unusual cases, such as for low-volume items and services (but the Secretary may not make such an exception in the case of a drug or biological that has been designated as an orphan drug under section 526 of the Federal Food, Drug, and Cosmetic Act). In determining the APCs with a 2 times rule violation, we consider only those HCPCS codes that are significant based on the number of claims. We note that, for purposes of identifying significant procedure codes for examination under the 2 times rule, we consider procedure codes that have more than 1,000 single major claims or procedure codes that both have more than 99 single major claims and contribute at least 2 percent of the single major claims used to establish the APC cost to be significant (75 FR 71832). This longstanding definition of when a procedure code is significant for purposes of the 2 times rule was selected because we believe that a subset of 1,000 or fewer claims is negligible within the set of approximately 100 million single procedure or single session claims we use for establishing costs. Similarly, a procedure code for which there are fewer than 99 single claims and that comprises less than 2 percent of the single major claims within an APC will have a negligible impact on the APC cost (75 FR 71832). In the CY 2025 OPPS/ASC proposed rule, for CY 2025, we proposed to make exceptions to this limit on the variation of costs within each APC group in unusual cases, such as for certain low-volume items and services.

For the CY 2025 OPPS update, we identified the APCs with violations of the 2 times rule, and we proposed changes to the procedure codes assigned to these APCs (with the exception of those APCs for which we proposed a 2 times rule exception) in Addendum B to CY 2025 OPPS/ASC proposed rule. We note that Addendum B does not appear in the printed version of the **Federal Register** as part of this final rule with comment period. Rather, it is published and made available via the internet on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*.

To eliminate a violation of the 2 times rule and improve clinical and resource homogeneity in the APCs for which we did not propose a 2 times rule exception, we proposed to reassign these procedure codes to new APCs that contain services that are similar with regard to both their clinical and resource characteristics. In many cases, the proposed procedure code reassignments and associated APC reconfigurations for CY 2025 included in the CY 2025 OPPS/ASC proposed rule are related to changes in costs of services that were observed in the CY 2023 claims data available for CY 2025 ratesetting. Addendum B to the CY 2025 OPPS/ASC proposed rule identifies with a comment indicator ''CH'' those procedure codes for which we proposed a change to the APC assignment or status indicator, or both, that were initially assigned in the July 1, 2024, OPPS Addendum B Update, which is available via the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates*.

3. APC Exceptions to the 2 Times Rule

While considering the APC changes that we proposed for CY 2025, we reviewed all of the APCs for which we identified 2 times rule violations to determine whether any of the APCs would qualify for an exception. We used the following criteria to evaluate whether to propose exceptions to the 2 times rule for affected APCs:

- Resource homogeneity;
- Clinical homogeneity;
- Hospital outpatient setting utilization;
- Frequency of service (volume); and
- Opportunity for upcoding and code fragments.

For a detailed discussion of these criteria, we refer readers to the April 7, 2000 final rule (65 FR 18457 and 18458).

Based on the CY 2023 claims data available for the CY 2025 OPPS/ASC proposed rule, we found 23 APCs with violations of the 2 times rule. We applied the criteria as described above to identify the APCs for which we proposed to make exceptions under the 2 times rule for CY 2025 and found that all of the 23 APCs we identified met the criteria for an exception to the 2 times rule based on the CY 2023 claims data available for the CY 2025 OPPS/APC proposed rule. We note that, on an annual basis, based on our analysis of the latest claims data, we identify violations to the 2 times rule and propose changes when appropriate. Those APCs that violate the 2 times rule are identified and appear in Table 18. In addition, we did not include in that determination those APCs where a 2 times rule violation was not a relevant concept, such as APC 5401 (Dialysis), which only has two HCPCS codes assigned to it that have similar geometric mean costs and do not create a 2 times rule violation. Therefore, we have only identified those APCs, including those with criteria-based costs, such as device-dependent CPT/HCPCS codes, with violations of the 2 times rule, where a 2 times rule violation is a relevant concept.

Table 13 of the CY 2025 OPPS/ASC proposed rule (89 FR 59253) listed the 23 APCs for which we proposed to make an exception under the 2 times rule for CY 2025 based on the criteria cited above and claims data submitted between January 1, 2023, and December 31, 2023, and CCRs, if available. The proposed geometric mean costs for covered hospital outpatient services for these and all other APCs that were used in the development of the proposed rule can be found on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*.

Based on the updated final rule CY 2023 claims data used for this CY 2025 final rule with comment period, we found a total of 28 APCs with violations of the 2 times rule. Of these 28 total APCs, 23 were identified in the proposed rule and five are newly identified in this final rule with comment period. The following two APCs appeared in Table 13 of the CY 2025 OPPS/ASC proposed rule (89 FR

59253) as violating the 2 times rule, however, after conducting our data analysis for this final rule with comment period, we found that the APCs no longer violate the 2 times rule:

- APC 5303 (Level 3 Upper GI Procedures)
- APC 5822 (Health and Behavior Services)
- In addition, the following five APCs are newly identified with 2 times rule violations using updated data for this final rule with comment period: APC 5024 (Level 4 Type A ED Visits)
- APC 5501 (Level 1 Extraocular, Repair, and Plastic Eye Procedures)
- APC 5613 (Level 3 Therapeutic Radiation Treatment Preparation)
- APC 5674 (Level 4 Pathology)
- APC 5722 (Level 2 Diagnostic Tests and Related Services)

Although we did not receive any comments on Table 13 of the CY OPPS/ASC proposed rule, we did receive comments on APC assignments for specific HCPCS codes. The comments, and our responses, can be found in section III.E. of this final rule with comment period.

BILLING CODE 4120–01–P

TABLE 18: FINAL CY 2025 APC EXCEPTIONS TO THE 2 TIMES RULE

APC	APC Group Title
5012	Clinic Visits and Related Services
5024	Level 4 Type A ED Visits
5053	Level 3 Skin Procedures
5071	Level 1 Excision/Biopsy/Incision and Drainage
5501	Level 1 Extraocular, Repair, and Plastic Eye Procedures
5521	Level 1 Imaging without Contrast
5522	Level 2 Imaging without Contrast
5523	Level 3 Imaging without Contrast
5524	Level 4 Imaging without Contrast
5572	Level 2 Imaging with Contrast
5593	Level 3 Nuclear Medicine and Related Services
5611	Level 1 Therapeutic Radiation Treatment Preparation
5613	Level 3 Therapeutic Radiation Treatment Preparation
5627	Level 7 Radiation Therapy
5674	Level 4 Pathology

5823	Level 3 Health and Behavior Services

BILLING CODE 4120–01–C

We did not receive any public comments on our proposal. Based on our analysis of the CY 2023 costs from hospital claims and cost report data available for this CY 2025 final rule with comment period, we are finalizing our proposals with some modifications. Specifically, we are finalizing our proposal to except the 23 proposed APCs that continue to have 2 times violations in the final rule data from the 2 times rule for CY 2023 claims data and also excepting five additional APCs (APCs 5024, 5501, 5613, 5674, 5722) that did not violate the 2 times rule in the proposed rule data, but do violate the 2 times rule in the final rule data, for a total of 28 APCs for which we identified 2 times rule violations but that qualify for exceptions.

In summary, Table 18 lists the 28 APCs that we are excepting from the 2 times rule for CY 2025 based on the criteria described earlier and a review of updated claims data for dates of service between January 1, 2023, and December 31, 2023, that were processed on or before June 30, 2024, and updated CCRs, if available. We note that, for cases in which a recommendation by the HOP Panel appears to result in or allow a violation of the 2 times rule, we generally accept the HOP Panel's recommendation because those recommendations are based on explicit consideration of resource use, clinical homogeneity, site of service, and the quality of the claims data used to determine the APC payment rates. The geometric mean costs for hospital outpatient services for these and all other APCs that were used in the development of this final rule with comment period can be found on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*.

C. New Technology APCs

1. Background

In the CY 2002 OPPS final rule (66 FR 59903), we finalized changes to the time period in which a service can be eligible for payment under a New Technology APC. Beginning in CY 2002, we retain services within New Technology APC groups until we gather sufficient claims data to enable us to assign the service to an appropriate clinical APC. This policy allows us to move a service from a New Technology APC in less than 2 years if sufficient data are available. It also allows us to retain a service in a New Technology APC for more than 2 years if sufficient data upon which to base a decision for reassignment have not been collected.

We also adopted in the CY 2002 OPPS final rule the following criteria for assigning a complete or comprehensive service to a New Technology APC: (1) the service must be truly new, meaning it cannot be appropriately reported by an existing HCPCS code assigned to a clinical APC and does not appropriately fit within an existing clinical APC; (2) the service is not eligible for transitional pass-through payment (however, a truly new, comprehensive service could qualify for assignment to a new technology APC even if it involves a device or drug that could, on its own, qualify for pass-through payment); and (3) the service falls within the scope of Medicare benefits under section 1832(a) of the Act and is reasonable and necessary in accordance with section 1862(a)(1)(A) of the Act (66 FR 59898 through 59903). For additional information about our New Technology APC policy, we refer readers to *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/pass-through-payment-status-new-technology-ambulatory-payment-classification-apc* on the CMS website and then follow the instructions to access the MEARIS™ system for OPPS New Technology APC applications.[17]

In the CY 2004 OPPS final rule with comment period (68 FR 63416), we restructured the New Technology APCs to make the cost intervals more consistent across payment levels and refined the cost bands for these APCs to retain two parallel sets of New Technology APCs: one set with a status indicator of ''S'' (Significant Procedures, Not Discounted when Multiple. Paid under OPPS; separate APC payment) and the other set with a status indicator of ''T'' (Significant Procedure, Multiple Reduction Applies. Paid under OPPS; separate APC payment). These current New Technology APC configurations allow us to price new technology services more appropriately and consistently.

For CY 2024, there were 52 New Technology APC levels, ranging from the lowest cost band assigned to APC 1491 (New Technology—Level 1A ($0–$10)) to the highest cost band assigned to APC 1908 (New Technology—Level 52 ($145,001–$160,000)). We note that the cost bands for the New Technology APCs, specifically, APCs 1491 through 1599 and 1901 through 1908, vary with increments ranging from $10 to $14,999. These cost bands identify the APCs to which new technology procedures and services with estimated service costs that fall within those cost bands are assigned under the OPPS. Payment for each APC is made at the mid-point of the APC's assigned cost band. For example, payment for New Technology APC 1507 (New Technology—Level 7 ($501–$600)) is made at $550.50.

Under the OPPS, one of our goals is to make payments that are appropriate for the services that are necessary for the treatment of Medicare beneficiaries. The OPPS, like other Medicare payment systems, is budget neutral and increases are limited to the annual hospital market basket increase reduced by the productivity adjustment. We believe that our payment rates reflect the costs that are associated with providing care to Medicare beneficiaries and are adequate to ensure access to services (80 FR 70374). For many emerging technologies, there is a transitional period during which utilization may be low, often because providers are first learning about the technologies and their clinical utility. Quite often, parties request that Medicare make higher payments under the New Technology APCs for new procedures in that transitional phase. These requests, and their accompanying estimates for expected total patient utilization, often reflect very low rates of patient use of expensive equipment, resulting in high per-use costs for which requesters believe Medicare should make full payment. Medicare does not, and we believe should not, assume responsibility for more than its share of the costs of procedures based on projected utilization for Medicare beneficiaries and does not set its payment rates based on initial projections of low utilization for services that require expensive capital equipment. For the OPPS, we rely on hospitals to make informed business decisions regarding the acquisition of high-cost capital equipment, taking into consideration their knowledge about their entire patient base (Medicare beneficiaries included) and an understanding of Medicare's and other payers' payment policies. We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68314) for further discussion regarding this payment policy.

Some services assigned to New Technology APCs have low annual volume, which we consider to be fewer than 100 claims in the year of claims data used for ratesetting (86 FR 63528). Where utilization of services assigned to a New Technology APC is low, it can lead to wide variation in payment rates from year to year, resulting in even lower utilization and potential barriers to access to new technologies, which

[17] Currently approved under OMB control number 0938–0860; expires 07/31/2024.

ultimately limits our ability to assign the service to the appropriate clinical APC. To mitigate these issues, we finalized a policy in the CY 2019 OPPS/ASC final rule with comment period to utilize our equitable adjustment authority at section 1833(t)(2)(E) of the Act to adjust how we determine the costs for low-volume services assigned to New Technology APCs (83 FR 58892 through 58893). Specifically, in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58893), we established that, in each of our annual rulemakings, we would calculate and present the result of each statistical methodology (arithmetic mean, geometric mean, and median) based on up to 4 years of claims data and solicit public comment on which methodology should be used to establish the payment rate for the low-volume new technology service. In the CY 2022 OPPS/ASC final rule (86 FR 63529), we replaced the New Technology APC low volume policy with the universal low volume APC policy. Unlike the New Technology APC low volume policy, the universal low volume APC policy applies to clinical APCs and brachytherapy APCs, in addition to procedures assigned to New Technology APCs, and uses the highest of the geometric mean, arithmetic mean, or median based on up to 4 years of claims data to set the payment rate for the APC. We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63529) for further discussion regarding this policy.

Finally, we note that, in a budget-neutral system, payments may not fully cover hospitals' costs in a particular circumstance, including those for the purchase and maintenance of capital equipment. We rely on hospitals to make their decisions regarding the acquisition of high-cost equipment with the understanding that the Medicare program must be careful to establish its initial payment rates, including those made through New Technology APCs, for new services that lack hospital claims data based on realistic utilization projections for all such services delivered in cost-efficient hospital outpatient settings. As the OPPS acquires claims data regarding hospital costs associated with new procedures, we regularly examine the claims data and any available new information regarding the clinical aspects of new procedures to confirm that our OPPS payments remain appropriate for procedures as they transition into mainstream medical practice (77 FR 68314). For CY 2025, we included the proposed payment rates for New Technology APCs 1491 to 1599 and 1901 through 1908 in Addendum A to the proposed rule (which is available on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*).

Comment: We received a comment requesting that CMS revise the New Technology APC criteria to accommodate for forms of algorithm-based healthcare services (ABHS). The commenter explained that certain ABHS, that provide new clinical outputs that can impact the diagnosis or treatment of a patient's disease, and represent additional costs to hospitals not currently accounted for in the provision of an underlying service, would most likely not meet the New Technology APC criteria because the service provided by the technology is occurring at the same time as the performance of an underlying service. The commenter also requested that the New Technology APC process allow for the creation of new procedural C-codes when needed.

Response: We thank the commenter for their comment. As part of the existing New Technology APC process, CMS creates C-codes when we find that there is no existing code that can appropriately describe a service. CMS will assign a service to a New Technology APC when certain criteria are met, including the criterion that the service is truly new, meaning that it cannot be appropriately reported by an existing HCPCS code assigned to a clinical APC and does not appropriately fit within an existing clinical APC. In the past, we have found that several SaaS procedures, including those that are algorithm-based, meet the existing New Technology APC criteria. For CY 2025, we proposed to assign several SaaS procedures that meet our criteria to New Technology APCs, many of which have been assigned to New Technology APCs for several years. However, we recognize that software-based technologies are rapidly evolving and, therefore, we are considering for future rulemaking whether specific adjustments to payment policies, including our New Technology APC policies, are needed to more accurately and appropriately pay for these products and services across settings of care.

For CY 2025, we did not propose to make any changes to the existing New Technology APC criteria. After consideration of the public comments we received, we are not finalizing any changes to the New Technology APC criterion at this time.

2. Policy To Exempt Services With Very Low Claims Volume From APC Reassignment Based on the Universal Low Volume Policy

We continue to be concerned about payment stability for services assigned to New Technology APCs, specifically services with very low claims volume of fewer than 10 claims in the 4-year lookback period used under the universal low volume APC policy. Historically, we have used our equitable adjustment authority at section 1833(t)(2)(E) of the Act to exempt a number of services with very low claims volume from the universal low volume APC policy in instances where application of the universal low volume policy would lead to significant fluctuations in payment. Given the frequency with which we have needed to utilize our equitable adjustment authority to address significant fluctuations in payment for very low volume services, we noted in the proposed rule that we believed that refinements to our universal low volume policy for services assigned to New Technology APCs may be necessary. We also recognized that determining initial cost estimates for these services may be particularly challenging, given the lack of cost information for new and innovative technologies.

To allow time for us to consider these issues, we proposed for CY 2025 to exempt services assigned to New Technology APCs with fewer than 10 claims over the 4-year lookback period used for the universal low volume policy. Instead of assigning these services to a different New Technology APC based on the very few claims available, we proposed that we would maintain the New Technology APC assignment for each service from the prior year, which in this case would be the New Technology APC assignment for CY 2024. We explained that we believed it was appropriate to apply this policy to New Technology APCs because services assigned to New Technology APCs represent new technologies for which it may be more challenging to determine an appropriate cost than for other, more established services. We believed 10 claims was an appropriate ceiling for exempting services from reassignment based on the universal low volume policy because we believed that at 10 claims a rough standard distribution begins to appear. We also believed that services with so few claims over the 4-year lookback period would be especially vulnerable to large changes in payment rates year-to-year as a result of one or two new

claims being available or one or two claims from what was previously the fourth year of the lookback period no longer being included in that period.

Consistent with our overall policy regarding use of updated claims data in the final rule, we proposed to perform a similar analysis for the final rule using updated claims data, including determining whether specific HCPCS codes continue to meet the criteria for our universal low volume APC policy or our proposal to exempt services with fewer than 10 claims in the 4-year lookback period from the universal low volume APC policy and maintain their CY 2024 New Technology APC assignment. We noted we would update the APC placement as needed in the final rule.

Comment: Commenters agreed with our concerns that the application of the universal low volume APC policy may result in payment instability for certain services assigned to New Technology APCs, but offered different perspectives on how to address the issue. One commenter, representing artificial intelligence companies, supported our proposal to exempt certain services from the universal low volume APC policy and recommended that we utilize 25 claims, rather than 10 claims when determining whether to maintain a service's New Technology APC assignment from the previous year. Another commenter, representing manufacturers of medical imaging equipment, did not believe that the proposal sufficiently addressed the policy concern of payment stability for services assigned to New Technology APCs. This commenter also believed that the proposal would create a disincentive for hospitals to furnish the service and, therefore, discourage claims utilization where it would be more prudent to have no claims than to risk being assigned to a lower paying New Technology APC in future years by exceeding the 10-claim threshold.

Response: We agree with the commenters' concerns that applying the universal low volume APC policy can result in payment fluctuations from year-to-year. We also recognize that major payment fluctuations that do not reflect the actual cost of the service can have the effect of discouraging usage and keeping claims volume low, which prevents CMS from gathering sufficient claims data upon which to transition the service from a New Technology APC to an appropriate clinical APC. We disagree with one commenter's assertion that our proposal to maintain the New Technology APC placement of a service with extremely low claims volume would disincentivize usage of the service. By maintaining the APC placement for services with fewer than 10 claims in the four-year lookback period, we are removing the potential for a major payment change based on a handful of claims over multiple years, that may not reflect the actual cost of the service. We believe that this policy is an incremental step towards more stable and predictable payments while providers learn about these new technology services, which should have the effect of encouraging utilization in the long-term. We also disagree with the commenter's suggestion to increase the claims threshold from 10 to 25 claims. We proposed to exempt less than 10 claims from the universal low volume APC policy because at 10 claims a rough standard distribution begins to appear, and services with an extremely low number of claims are most vulnerable to significant payment fluctuations.

Our proposal is meant to serve as a first step to addressing the issue of payment stability for services assigned to New Technology APCs. As we stated in the proposed rule, we continue to believe that refinements to the universal low volume APC policy with respect to its application to services in New Technology APCs may be necessary. We are finalizing our policy as proposed for CY 2025 and will consider additional changes in future years.

Comment: One commenter expressed support for the universal low volume APC policy.

Response: We thank the commenter for their input.

After consideration of the public comments we received, we are finalizing our proposal to exempt services assigned to New Technology APCs with fewer than 10 claims in the four-year lookback period from the universal low volume APC policy and maintain their CY 2024 New Technology APC assignment as proposed.

3. Procedures Assigned to New Technology APCs for CY 2025

As we described in the CY 2002 OPPS final rule (66 FR 59902), we generally retain a procedure in the New Technology APC to which it is initially assigned until we have obtained sufficient claims data to justify reassignment of the procedure to a clinically appropriate APC. In addition, in cases where we find that our initial New Technology APC assignment was based on inaccurate or inadequate information (although it was the best information available at the time), where we obtain new information that was not available at the time of our initial New Technology APC assignment, or where the New Technology APCs are restructured, we may, based on more recent resource utilization information (including claims data) or the availability of refined New Technology APC cost bands, reassign the procedure or service to a different New Technology APC that more appropriately reflects its cost (66 FR 59903).

Consistent with our current policy, for CY 2025, we proposed to retain services within New Technology APC groups until we obtain sufficient claims data to justify reassignment of the service to an appropriate clinical APC. The flexibility associated with this policy allows us to reassign a service from a New Technology APC in less than 2 years if we have obtained sufficient claims data. It also allows us to retain a service in a New Technology APC for more than 2 years if we have not obtained sufficient claims data upon which to base a reassignment decision (66 FR 59902).

a. Administration of Subretinal Therapies Requiring Vitrectomy (APC 1563)

Effective January 1, 2021, CMS established HCPCS code C9770 (Vitrectomy, mechanical, pars plana approach, with subretinal injection of pharmacologic/biologic agent) and assigned it to a New Technology APC based on the geometric mean cost of CPT code 67036 (Vitrectomy, mechanical, pars plana approach) due to similar resource utilization. For CY 2021, HCPCS code C9770 was assigned to APC 1561 (New Technology—Level 24 ($3001–$3500)). This code may be used to describe the administration of HCPCS code J3398 (Injection, voretigene neparvovec-rzyl, 1 billion vector genomes). This procedure was previously discussed in depth in the CY 2021 OPPS/ASC final rule with comment period (85 FR 85939 through 85940). For CY 2022, we maintained the APC assignment of APC 1561 (New Technology—Level 24 ($3001–$3500)) for HCPCS code C9770 (86 FR 63531 through 63532).

HCPCS code J3398 (Injection, voretigene neparvovec-rzyl, 1 billion vector genomes) is for a gene therapy product indicated for a rare mutation-associated retinal dystrophy. Voretigene neparvovec-rzyl (Luxturna®) was approved by FDA in December of 2017 and is an adeno-associated virus vector-based gene therapy indicated for the treatment of patients with confirmed biallelic RPE65 mutation-associated retinal dystrophy.[18] This therapy is administered through a subretinal injection, which interested parties describe as an extremely delicate and sensitive surgical procedure. The FDA-approved package insert describes one of the steps for administering Luxturna as, ''after completing a vitrectomy, identify the intended site of administration. The subretinal injection can be introduced via pars plana.''

Interested parties, including the manufacturer of Luxturna®, recommended CPT code 67036 (Vitrectomy, mechanical, pars plana approach) for the administration of the gene therapy.[19] However, the manufacturer previously contended the administration was not accurately described by any existing codes as CPT code 67036 (Vitrectomy, mechanical, pars plana approach) does not account for the administration itself.

CMS recognized the need to accurately describe the unique procedure that is required to administer the therapy described by HCPCS code J3398. Therefore, in the CY 2021 OPPS/ASC proposed rule (85 FR 48832), we proposed to establish a new HCPCS code, C97X1 (Vitrectomy, mechanical, pars plana approach, with subretinal injection of pharmacologic/biologic agent) to describe this process. We stated that we believed this new HCPCS code accurately described the unique service associated with intraocular administration of HCPCS code J3398. We recognized that CPT code 67036 represents a clinically similar procedure and process that approximates similar resource utilization to C97X1. However, we also recognized that it is not prudent for the code that describes the administration of this unique gene therapy, C97X1, to be assigned to the same C–APC to which CPT code 67036 is assigned, as this would package the primary therapy, HCPCS code J3398, into the code that represents the process to administer the gene therapy.

Therefore, for CY 2021, we proposed to assign the services described by C97X1 to a New Technology APC with a cost band that contains the geometric mean cost for CPT code 67036. The placeholder code C97X1 was replaced by HCPCS code C9770. For CY 2021, we finalized our proposal to create HCPCS code C9770 (Vitrectomy, mechanical, pars plana approach, with subretinal injection of pharmacologic/biologic agent), and we assigned this code to APC 1561 (New Technology—Level 24 ($3001–$3500)) using the geometric mean cost of CPT code 67036. For CY 2022, we continued to assign HCPCS code C9770 to APC 1561 (New Technology—Level 24 ($3001–$3500)) using the geometric mean cost of CPT code 67036.

CY 2023 was the first year that claims data were available for HCPCS code C9770; therefore, we proposed and finalized a policy to base the payment rate of HCPCS code C9770 on claims data for that code rather than on the geometric mean cost of CPT code 67036. Given the low number of claims for this procedure, we designated HCPCS code C9770 as a low volume procedure under our universal low volume APC policy and used the greater of the geometric mean, arithmetic mean, or median cost calculated based on the available claims data to calculate an appropriate payment rate for purposes of assigning HCPCS code C9770 to a New Technology APC.

Based on the claims data available for the CY 2023 OPPS/ASC final rule with comment period, we found the median was the statistical methodology that estimated the highest cost for the service. The payment rate calculated using this methodology fell within the cost band for New Technology APC 1562 (New Technology—Level 25 ($3501–$4000)). Therefore, we finalized our proposal to assign HCPCS code C9770 to APC 1562 for CY 2023.

For CY 2024, we proposed and finalized that we would delete HCPCS code C9770 effective December 31, 2023, and recognize CPT code 0810T (Subretinal injection of a pharmacologic agent, including vitrectomy and 1 or more retinotomies) starting January 1, 2024 (88 FR 81617 through 81619). We determined the payment rate for CPT code 0810T using the claims data for HCPCS code C9770 and designated CPT code 0810T as a low volume procedure under our universal low volume APC policy and used the greater of the geometric mean, arithmetic mean, or median cost calculated based on the available claims data for HCPCS code C9770 to calculate an appropriate payment rate for purposes of assigning CPT code 0810T to a New Technology APC. For CY 2024, we finalized assignment of CPT code 0810T to APC 1563 (New Technology—Level 26 ($4001–$4500)) (88 FR 81617 through 81619).

Since CMS recognized CPT code 0810T starting January 1, 2024, we do not have claims data for CPT code 0810T available for CY 2025 rulemaking. However, as HCPCS code C9770 was still in use until December 31, 2023, we proposed to determine the payment rate for CPT code 0810T using the claims data for HCPCS code C9770. This is similar to the policy we finalized for CY 2024. For CY 2025, we proposed to designate CPT code 0810T as a low volume procedure under our universal low volume APC policy, given that there were only 34 claims available for HCPCS code C9770 and none for CPT code 0810T. This is below the threshold of 100 claims for a service within a year required to designate a service as a low volume service and apply our universal low volume APC policy. Therefore, we proposed to use the greater of the geometric mean, arithmetic mean, or median cost calculated based on the available claims data for HCPCS code C9770 to calculate an appropriate payment rate for purposes of assigning CPT code 0810T to a New Technology APC.

Using all available claims from the 4-year lookback period, which was 34 claims, we determined the geometric mean cost to be $3,934, the arithmetic mean cost to be $4,173, and the median cost to be $4,103. Because the arithmetic mean is the statistical methodology that estimated the highest cost for the service, we proposed to use this cost to determine the New Technology APC placement. The arithmetic mean of $4,173 falls within the cost band for New Technology APC 1563 (New Technology—Level 26 ($4001–$4500)). Therefore, we proposed to assign CPT code 0810T to APC 1563 for CY 2025. Additionally, we proposed to perform a similar analysis using updated claims data in this final rule with comment period, including determining if CPT code 0810T continues to meet the criteria for our universal low volume APC policy, and update the APC assignment as needed.

Please refer to Table 19 below for the final CY 2024 and proposed CY 2025 OPPS New Technology APC and status indicator assignments for CPT code 0810T. The proposed CY 2025 payment rates can be found in Addendum B to the CY 2025 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 19: FINAL CY 2024 AND PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0810T

HCPCS Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0810T	Subretinal injection of a pharmacologic agent, including vitrectomy and 1 or more retinotomies	T	1563	T	1563

We did not receive any public comments on our proposal to continue to assign HCPCS code 0810T to APC 1563 for CY 2025.

Additional claims for CY 2023 have been processed since the proposed rule. Our analysis of the updated claims data found that the greater of the geometric mean, arithmetic mean, or median cost calculated for HCPCS code C9770 is approximately $4,240. This continues to fall into the cost band of New Technology APC 1563. Therefore, we are finalizing our proposal without modification to continue to assign HCPCS code 0810T to APC 1563. Please refer to Table 20 for the final OPPS New Technology APC and status indicator assignment for HCPCS codes 0810T for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 20: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0810T

HCPCS Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0810T	Subretinal injection of a pharmacologic agent, including vitrectomy and 1 or more retinotomies	T	1563

b. BgRT (APCs 1521 and 1525)

Biology Guided Radiation Therapy (BgRT) uses positron-emitting radiopharmaceuticals to control delivery of radiation therapy to treat primary and metastatic lung or bone tumors. During radiation treatment delivery, the same system applies these firing filters to the real-time positron emission tomography (PET) data collected by the radiation treatment delivery machine. Effective January 1, 2024, CMS created HCPCS codes C9794 (Therapeutic radiology simulation-aided field setting; complex, including acquisition of PET and CT imaging data required for radiopharmaceutical-directed radiation therapy treatment planning (*i.e.,* modeling) and C9795 (Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance and real-time positron emissions-based delivery adjustments to 1 or more lesions, entire course not to exceed 5 fractions) to describe the modeling and treatment delivery portions of the BgRT service. We assigned HCPCS code C9794 to APC 1521 (New Technology—Level 21 ($1901–$2000)) and HCPCS code C9795 to APC 1525 (New Technology—Level 25 ($3501–$4000)) for CY 2024.

For CY 2025, the OPPS payment rates were proposed based on available CY 2023 claims data. As HCPCS codes C9794 and C9795 were effective January 1, 2024, we do not have any claims data for the service. Therefore, for CY 2025, we proposed to continue to assign HCPCS code C9794 to APC 1521 (New Technology—Level 21 ($1901–$2000)) with a payment rate of $1,950.50 and HCPCS code C9795 to APC 1525 (New Technology—Level 25 ($3501–$4000)) with a payment rate of $3,750.50. Please refer to Table 21 below for the proposed

OPPS New Technology APC and status indicator assignment for HCPCS codes C9794 and C9795 for CY 2025. The proposed CY 2025 payment rates can be found in Addendum B to the CY 2025 OPPS/ASC proposed rule via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 21: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR BIOLOGY GUIDED RADIATION THERAPY

HCPCS	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
C9794	Therapeutic radiology simulation-aided field setting; complex, including acquisition of PET and CT imaging data required for radiopharmaceutical-directed radiation therapy treatment planning (i.e., modeling)	S	1521
C9795	Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance and real-time positron emissions-based delivery adjustments to 1 or more lesions, entire course not to exceed 5 fractions	S	1525

Comment: We received several comments supporting our proposal to maintain the APC assignments for HCPCS code C9794 and C9795 until claims data are received.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal without modification. Specifically, for CY 2025 we are finalizing our proposal to assign C9794 and C9795 to APCs 1521 (New Technology—Level 21 ($1901–$2000)) and 1525 (New Technology—Level 25 ($3501–$4000)), respectively.

We note that, effective January 1, 2025, two new G-codes are replacing HCPCS codes C9794 and C9795. Specifically, effective January 1, 2025, HCPCS codes C9794 and C9795 are being deleted and replaced by G0562 and G0563, respectively, to allow for payment in settings other than hospital outpatient departments for CY 2025. The descriptors for the new G-codes are the same as existing HCPCS codes C9794 and C9795.

Please refer to Table 22 for the final OPPS New Technology APC and status indicator assignments for HCPCS codes G0562 and G0563 for CY 2025. The CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 22: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR BIOLOGY GUIDED RADIATION THERAPY

HCPCS	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
G0562	Therapeutic radiology simulation-aided field setting; complex, including acquisition of PET and CT imaging data required for radiopharmaceutical-directed radiation therapy treatment planning (i.e., modeling)	S	1521
G0563	Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance and real-time positron emissions-based delivery adjustments to 1 or more lesions, entire course not to exceed 5 fractions	S	1525

c. Blinded Procedure for NYHA Class III/IV Heart Failure (APC 1590)

A randomized, double-blinded, controlled IDE study is currently in progress for the V-Wave interatrial shunt. The V-Wave interatrial shunt is for patients with severe symptomatic heart failure and is designed to regulate left atrial pressure in the heart. All participants who passed initial screening for the study receive a right heart catheterization procedure described by CPT code 93451 (Right heart catheterization including measurement(s) of oxygen saturation and cardiac output, when performed). Participants assigned to the experimental group also receive the V-Wave interatrial shunt procedure while participants assigned to the control group only receive right heart catheterization. The developer of V-Wave was concerned that the current coding of these services by Medicare would reveal to the study participants whether they had received the interatrial shunt because an additional procedure code, CPT code 93799 (Unlisted cardiovascular service or procedure), would be included on the claims for participants receiving the interatrial shunt. Therefore, for CY 2020, we created a temporary HCPCS code to describe the V-Wave interatrial shunt procedure for both the experimental group and the control group in the study. Specifically, we established HCPCS code C9758 (Blinded procedure for NYHA class III/IV heart failure; transcatheter implantation of interatrial shunt or placebo control, including right heart catheterization, trans-esophageal echocardiography (TEE)/intracardiac echocardiography (ICE), and all imaging with or without guidance (for example, ultrasound, fluoroscopy), performed in an approved investigational device exemption (IDE) study) to describe the service, and we assigned the service to New Technology APC 1589 (New Technology—Level 38 ($10,001–$15,000)) with a payment rate of $12,500.50.

In the CY 2021 OPPS/ASC final rule with comment period (85 FR 85946), we stated that we believe similar resources and device costs are involved with the V-Wave interatrial shunt procedure and the Corvia Medical interatrial shunt procedure (HCPCS code C9760), except that payment for HCPCS codes C9758 and C9760 differs based on how often the interatrial shunt is implanted when each code is billed. An interatrial shunt is implanted one-half of the time HCPCS code C9758 is billed, whereas an interatrial shunt is implanted every time HCPCS code C9760 is billed. Accordingly, for CY 2021, we reassigned HCPCS code C9758 to New Technology APC 1590 (New Technology—Level 39 ($15,001–$20,000)), which reflects the cost of furnishing the interatrial shunt one-half of the time the procedure is performed.

For CY 2022, we used the same claims data from CY 2019 that we did for the CY 2021 OPPS/ASC final rule with comment period. Because there were no claims reporting HCPCS code C9758, we continued to assign HCPCS code C9758 to New Technology APC 1590 with a payment rate of $17,500.50 for CY 2022. For CY 2023 we used claims data from CY 2019 through CY 2022. Because there were no claims reporting HCPCS code C9758 in CY 2023 or CY 2024, we continued to assign HCPCS code C9758 to New Technology APC 1590 with a payment rate of $17,500.50 for CY 2023 and 2024.

For CY 2025, the OPPS payment rates were proposed based on available CY 2023 claims data. There were only three claims for HCPCS code C9758 within this time period. As this is below the threshold of 100 claims for a service within a year, we would designate C9758 as a low volume service and apply our universal low volume APC policy. Under this policy, we would use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign HCPCS code C9758 to the appropriate New Technology APC. Given our proposal, which we are finalizing, to maintain current New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low volume APC policy, we proposed to continue assigning HCPCS code C9758 to New Technology APC 1590 with a proposed payment rate of $17,500.50.

Please refer to Table 23 for the proposed OPPS New Technology APC and status indicator assignments for HCPCS code C9758 for CY 2025.

TABLE 23: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR BLINDED INTRATRIAL SHUNT PROCEDURE

HCPCS	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
C9758	Blinded procedure for NYHA class III/IV heart failure; transcatheter implantation of interatrial shunt or placebo control, including right heart catheterization, trans-esophageal echocardiography (TEE)/intracardiac echocardiography (ICE), and all imaging with or without guidance (for example, ultrasound, fluoroscopy), performed in an approved investigational device exemption (IDE) study	T	1590

Comment: We received one comment supporting our proposal to continue to assign HCPCS code C9758 to New Technology APC 1590.

Response: We thank the commenter for their support. Our updated claims data for the 4-year lookback period for the universal low volume APC policy continues to show only 3 claims for HCPCS code C9758. Therefore, we are finalizing our proposal without modification to continue assigning HCPCS code C9758 to New Technology APC 1590. Please refer to Table 24 for the final OPPS New Technology APC and status indicator assignment for HCPCS code C9758 for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 24: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR BLINDED INTRATRIAL SHUNT PROCEDURE

HCPCS	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
C9758	Blinded procedure for NYHA class III/IV heart failure; transcatheter implantation of interatrial shunt or placebo control, including right heart catheterization, trans-esophageal echocardiography (TEE)/intracardiac echocardiography (ICE), and all imaging with or without guidance (for example, ultrasound, fluoroscopy), performed in an approved investigational device exemption (IDE) study	T	1590

d. Bronchoscopy With Transbronchial Ablation of Lesion(s) by Microwave Energy (APC 1562)

Effective January 1, 2019, CMS established HCPCS code C9751 (Bronchoscopy, rigid or flexible, transbronchial ablation of lesion(s) by microwave energy, including fluoroscopic guidance, when performed, with computed tomography acquisition(s) and 3-D rendering, computer-assisted, image-guided navigation, and endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (*e.g.,* aspiration[s]/biopsy[ies]) and all mediastinal and/or hilar lymph node stations or structures and therapeutic intervention(s)). This microwave ablation procedure utilizes a flexible catheter to access the lung tumor via a working channel and may be used as an alternative procedure to a percutaneous microwave approach. Based on our review of the New Technology APC application for this service and the service's clinical similarity to existing services paid under the OPPS, we estimated the likely cost of the procedure would be between $8,001 and $8,500. We assigned the procedure to New Technology APC 1571 (New Technology—Level 34 ($8001–$8500)) for CY 2019.

In claims data available from CY 2019 for the CY 2021 OPPS/ASC final rule with comment period, there were four claims reported for bronchoscopy with transbronchial ablation of lesions by microwave energy. Given the low volume of claims for the service, we proposed for CY 2021 to apply the universal low volume APC policy we adopted in CY 2019, under which we utilize our equitable adjustment

authority under section 1833(t)(2)(E) of the Act to calculate the geometric mean, arithmetic mean, and median costs to determine an appropriate payment rate for purposes of assigning bronchoscopy with transbronchial ablation of lesions by microwave energy to a New Technology APC. We found the geometric mean cost for the service to be approximately $2,693, the arithmetic mean cost to be approximately $3,086, and the median cost to be approximately $3,708. The median was the statistical methodology that estimated the highest cost for the service. The payment rate calculated using this methodology fell within the cost band for New Technology APC 1562 (New Technology—Level 25 ($3501–$4000)). Therefore, we assigned HCPCS code C9751 to APC 1562 for CY 2021.

In CY 2022, we again used the claims data from CY 2019 for HCPCS code C9751. Because the claims data was unchanged from when it was used in CY 2021, the values for the geometric mean cost ($2,693), the arithmetic mean cost ($3,086), and the median cost ($3,708) for the service described by HCPCS code C9751 remained the same. The highest cost metric using these methodologies was again the median and within the cost band for New Technology APC 1562 (New Technology—Level 25 ($3,501–$4,000)). Therefore, we continued to assign HCPCS code C9751 to APC 1562 (New Technology—Level 25 ($3501–$4000)), with a payment rate of $3,750.50 for CY 2022.

There were no new claims for HCPCS code C9751 for the CY 2024 OPPS/ASC final rule with comment period. Therefore, we continued to use claims from CY 2019 to determine the payment rate for the service; and continued to assign HCPCS code C9751 to APC 1562 (New Technology—Level 25 ($3501–$4000)), with a payment rate of $3,750.50.

There continue to be no separately payable claims for HCPCS code C9751 since 2019. Consistent with our proposal to maintain current New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low volume APC policy, we proposed, for CY 2025, to continue to assign HCPCS code C9751 to APC 1562 (New Technology—Level 25 ($3501–$4000)), with a payment rate of $3,750.50.

Please refer to Table 25 for the proposed OPPS New Technology APC and status indicator assignments for HCPCS code C9751 for CY 2025.

TABLE 25: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODE C9751

HCPCS Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
C9751	Bronchoscopy, rigid or flexible, transbronchial ablation of lesion(s) by microwave energy, including fluoroscopic guidance, when performed, with computed tomography acquisition(s) and 3-D rendering, computer-assisted, image-guided navigation, and endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (e.g., aspiration[s]/biopsy[ies]	T	1562

We did not receive any public comments on our proposal to continue to assign HCPCS code C9751 to APC 1562 (New Technology—Level 25 ($3501–$4000)). Additionally, our updated claims data continues to show that there are no new claims for C9751 for CY 2025. Therefore, we are finalizing our proposal without modification to continue to assign HCPCS code C9751 to APC 1562. Please refer to Table 26 for the final OPPS New Technology APC and status indicator assignment for HCPCS codes C9751 for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 26: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODE C9751

HCPCS Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
C9751	Bronchoscopy, rigid or flexible, transbronchial ablation of lesion(s) by microwave energy, including fluoroscopic guidance, when performed, with computed tomography acquisition(s) and 3-D rendering, computer-assisted, image-guided navigation, and endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (e.g., aspiration[s]/biopsy[ies]	T	1562

e. Cardiac Positron Emission Tomography (PET)/Computed Tomography (CT) Studies (APCs 1520 and 1522)

For CY 2025, the OPPS payment rates for the service described by CPT codes 78431, 78432, and 78433 were proposed to be based on available CY 2023 claims data. CPT code 78431 had over 26,000 single frequency claims in CY 2023. The geometric mean cost for CPT code 78431 was approximately $2,350. The geometric mean falls within APC 1522 (New Technology—Level 22 ($2001–$2500)) with a payment rate of $2,250.50, which is the current APC assignment for this service. Therefore, we proposed, for CY 2025, to continue to assign CPT code 78431 to APC 1522 (New Technology—Level 22 ($2001–$2500)) with a payment rate of $2,250.50.

There were only 19 single frequency claims in CY 2023 for CPT code 78432. As this is below the threshold of 100 claims for a service within a year, we proposed to apply our universal low volume New Technology APC policy and used the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT code 78432 to the appropriate New Technology APC. Using available claims data from CY 2021, CY 2022, and CY 2023, our analysis found the geometric mean cost of the service was approximately $1,760, the arithmetic mean cost of the service was approximately $1,920, and the median cost of the service was approximately $1,540. The arithmetic mean was the statistical methodology that estimated the highest cost for the service. The arithmetic mean cost of $1,923, is an amount that is above the cost band for APC 1520 (New Technology—Level 20 ($1801–$1900)), where the procedure is currently assigned for CY 2024. Therefore, we proposed, for CY 2025, to assign CPT code 78432 to APC 1521 (New Technology—Level 21 ($1901–$2000)) with a payment rate of $1950.50.

There were over 1,400 single frequency claims for CPT code 78433 in CY 2023. The geometric mean cost for CPT code 78433 was approximately $2,010, which is an amount that is above the current New Technology APC cost band for APC 1521 (New Technology—Level 21 ($1901-$2000)) to which it is assigned for CY 2024. Therefore, for CY 2025, we proposed to reassign CPT code 78433 to APC 1522 (New Technology—Level 22 ($2001–$2500)) with a payment rate of $2,250.50.

Please refer to Table 27 below for the proposed OPPS New Technology APC and status indicator assignments for CPT codes 78431, 78432, and 78433 for CY 2025. The proposed CY 2025 payment rates can be found in Addendum B to the CY 2025 OPPS/ASC proposed rule via the internet on the CMS website.

BILLING CODE 4120–01–P

TABLE 27: FINAL CY 2024 AND PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 78431, 78432, AND 78433

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
78431	Myocardial imaging, positron emission tomography (PET), perfusion study (including ventricular wall motion[s] and/or ejection fraction[s], when performed); multiple studies at rest and stress (exercise or pharmacologic), with concurrently acquired computed tomography transmission scan	S	1522	S	1522
78432	Myocardial imaging, positron emission tomography (PET), combined perfusion with metabolic evaluation study (including ventricular wall motion[s] and/or ejection fraction[s], when performed), dual radiotracer (e.g., myocardial viability);	S	1520	S	1521
78433	Myocardial imaging, positron emission tomography (PET), combined perfusion with metabolic evaluation study (including ventricular wall motion[s] and/or ejection fraction[s], when performed), dual radiotracer (e.g., myocardial viability); with concurrently acquired computed tomography transmission scan	S	1521	S	1522

BILLING CODE 4120–01–C

Comment: We received comments supporting our proposals to assign CPT codes 78431 and 78433 to APC 1522 (New Technology—Level 22 ($2001–$2500)) and to assign CPT code 78432 to APC 1521 (New Technology—Level 21 ($1901–$2000)). One commenter noted that the geometric mean costs and hospital reporting for PET/CT services is stabilizing and that the claims data will support stable payment rates in future years.

Response: We thank the commenters for their support. We agree that the claims data for these services have been stabilizing in recent years, and any payment adjustments have been, generally, minor. As we have begun to gather adequate claims data, we will consider whether to assign CPT codes 78431 and 78433 to clinical APCs in future rulemaking.

Comment: One commenter supported our proposals to assign CPT codes 78431 and 78433 to APC 1522 but did not support our proposal to assign CPT code 78432 to APC 1521. The commenter explained that CPT code 78431 should be assigned to APC 1522 or higher because, from a clinical workflow perspective, CPT code 78432 requires more resources than CPT code 78431. The commenter explained that they believe the low claims volume is responsible for the lower payment rate for CPT codes 78432.

Response: We thank the commenter for their input. We note that New Technology APCs are cost bands rather than clinical groupings. Unlike when we assign a service to a clinical APC and consider resource and clinical similarities to other services in a clinical APC, we assign services to New Technology APCs based on cost. While we appreciate the commenter's information regarding the clinical differences between CPT codes 78431 and 78432, we adjust New Technology APC assignments based on the claims

data available rather than clinical characteristics of a service.

We note that additional claims for CPT codes 78431 through 78433 have been processed since the proposed rule. Based on updated claims data, CPT code 78431 has an updated geometric mean cost of approximately $2,300. Because the geometric mean cost of CPT code 78431 is still within the range for APC 1522, the proposed APC assignment for CPT code 78431 for CY 2025, we are finalizing the proposed APC assignment of CPT code 78431 without modification.

There were close to 15 additional single frequency claims for CY 2023 processed for CPT code 78432 since the proposed rule, bringing the total number of single frequency claims to approximately 33 for CPT code 78432 for CY 2023. Based on the updated claims data for CPT code 78432, the geometric mean cost is approximately $1,750; the arithmetic mean cost is approximately $1,890; and the median cost is approximately $1,590. Of these, the highest statistical methodology is the arithmetic mean cost of $1,890. Since the updated arithmetic mean cost for CPT code 78432 is outside of the cost band for APC 1521 (New Technology—Level 21 ($1901–$2000), we are not finalizing our proposal to assign CPT code 78432 to APC 1521 for CY 2025. Based on the updated statistical methodologies, we are assigning CPT code 78432 to APC 1520 for CY 2025 (New Technology—Level 20 ($1801–$1900)) with a payment rate of $1,850.50.

For CPT code 78433, the geometric mean cost based on the updated claims data has changed to approximately $1964, down from approximately $2010 at the time of the proposed rule. Therefore, we are not finalizing the assignment of CPT code 78433 to APC 1522 as proposed because the geometric mean cost falls outside of the cost band for proposed APC 1522 (New Technology—Level 22 ($2001–$2500)). We are assigning CPT code 78433 to APC 1521 (New Technology—Level 21 ($1901–$2000)) for CY 2025, which is the same New Technology APC to which it is currently assigned for CY 2024.

Please refer to Table 28 for the final OPPS New Technology APC and status indicator assignments for CPT codes 7843, 78432, and 78433 for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

BILLING CODE 4120–01–C

f. CardiAMP (APC 1590)

The CardiAMP cell therapy IDE studies are two randomized, double-blinded, controlled IDE studies: the CardiAMP Cell Therapy Chronic Myocardial Ischemia Trial [20] and the CardiAMP Cell Therapy Heart Failure Trial.[21] The two trials are designed to investigate the safety and efficacy of autologous bone marrow mononuclear cell treatment for the following: (1) patients with medically refractory and symptomatic ischemic cardiomyopathy; and (2) patients with refractory angina pectoris and chronic myocardial ischemia. On April 1, 2022, we established HCPCS code C9782 to describe the CardiAMP cell therapy IDE studies and assigned HCPCS code C9782 to APC 1574 (New Technology—Level 37 ($9,501–$10,000)) with the status indicator ''T.'' We subsequently revised the descriptor for HCPCS code C9782 to: (Blinded procedure for New York Heart Association (NYHA) Class II or III heart failure, or Canadian Cardiovascular Society (CCS) Class III or IV chronic refractory angina; transcatheter intramyocardial transplantation of autologous bone marrow cells (*e.g.,* mononuclear) or placebo control, autologous bone marrow harvesting and preparation for transplantation, left heart catheterization including ventriculography, all laboratory services, and all imaging with or without guidance (*e.g.,* transthoracic

Accessed May 10, 2022. *https://clinicaltrials.gov/ct2/show/NCT03455725?term=NCT03455725&rank=1.*

[21] *ClinicalTrials.gov.* ''Randomized Controlled Pivotal Trial of Autologous Bone Marrow Mononuclear Cells Using the CardiAMP Cell Therapy System in Patients With Post Myocardial Infarction Heart Failure.'' Accessed May 10, 2022. *https://clinicaltrials.gov/ct2/show/NCT02438306.*

echocardiography, ultrasound, fluoroscopy), all device(s), performed in an approved Investigational Device Exemption (IDE) study) to clarify the inclusion of the Helix trans endocardial injection catheter device in the descriptor. Additionally, we determined that APC 1590 (New Technology—Level 39 ($15,001–$20,000)) most accurately accounted for the resources associated with furnishing the procedure described by HCPCS code C9782.

For CY 2025, the proposed OPPS payment rates were based on available CY 2023 claims data. We identified three single frequency paid claims for C9782 for ratesetting for CY 2025. As this is below the threshold of 100 claims for a service within a year, we would designate C9782 as a low volume service and apply our universal low volume APC policy. Under this policy, we would use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT codes C9782 to the appropriate New Technology APC. Our analysis of the data found the geometric mean cost of the service is approximately $18,045, the arithmetic mean cost of the service is approximately $18,332, and the median cost of the service is approximately $20,394. The median was the statistical methodology that estimated the highest cost for the service. However, because there are only three claims for HCPCS code C9782 from the CY 2023 claims data, we had concerns that the universal low volume APC policy calculations would not accurately capture the cost of the service. Given our proposal to maintain current New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low-volume APC policy, we proposed to continue to assign HCPCS code C9782 to New Technology APC 1590 with a payment rate of $17,050.50.

Please refer to Table 29 below for the proposed OPPS New Technology APC and status indicator assignments for HCPCS code C9782 for CY 2025. The proposed CY 2025 payment rates can be found in Addendum B to the CY 2025 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 29: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE CARDIAMP CELL THERAPY IDE STUDIES

HCPCS Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
C9782	Blinded procedure for New York Heart Association (NYHA) Class II or III heart failure, or Canadian Cardiovascular Society (CCS) Class III or IV chronic refractory angina; transcatheter intramyocardial transplantation of autologous bone marrow cells (e.g., mononuclear) or placebo control, autologous bone marrow harvesting and preparation for transplantation, left heart catheterization including ventriculography, all laboratory services, and all imaging with or without guidance (e.g., transthoracic echocardiography, ultrasound, fluoroscopy), all device(s), performed in an approved Investigational Device Exemption (IDE) study	T	1590

We did not receive any public comments on our proposal and are finalizing it without modification. HCPCS code C9782 will be assigned to New Technology APC 1590 with a status indication of ''T'' for CY 2025. Please refer to Table 30 for the final OPPS New Technology APC and status indicator assignment for CPT code C9782. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website.

HCPCS Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 202 OPPS APC
C9782	Blinded procedure for New York Heart Association (NYHA) Class II or III heart failure, or Canadian Cardiovascular Society (CCS) Class III or IV chronic refractory angina; transcatheter intramyocardial transplantation of autologous bone marrow cells (e.g., mononuclear) or placebo control, autologous bone marrow harvesting and preparation for transplantation, left heart catheterization including ventriculography, all laboratory services, and all imaging with or without guidance (e.g., transthoracic echocardiography, ultrasound, fluoroscopy), all device(s), performed in an approved Investigational Device Exemption (IDE) study	T	1590

g. Atherosclerosis Imaging-Quantitative Computer Tomography (AI–QCT) (APC 1511)

Atherosclerosis Imaging-Quantitative Computer Tomography (AI–QCT) is a Software as a Service (SaaS) that assesses the extent of coronary artery disease severity. This procedure is performed to quantify the extent of coronary plaque and stenosis in patients who have undergone coronary computed tomography analysis (CCTA). The AMA CPT Editorial Panel established the following four codes associated with this service, effective January 1, 2021:

0623T: Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; data preparation and transmission, computerized analysis of data, with review of computerized analysis output to reconcile discordant data, interpretation, and report.

0624T: Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; data preparation and transmission.

0625T: Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; computerized analysis of data from coronary computed tomographic angiography.

0626T: Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; review of computerized analysis output to reconcile discordant data, interpretation and report.

Of these four CPT codes, only CPT code 0625T was determined to be separately payable in the OPPS and was assigned to status indicator = ''S'' (Procedure or Service, Not Discounted When Multiple) starting October 1, 2022. We assigned CPT code 0625T to a separately payable status indicator based on the technology and its potential utilization in the HOPD setting, our evaluation of the service, as well as input from our medical advisors. The procedure was assigned to APC 1511 (New Technology—Level 11 ($900–$1000)) with a payment rate of $950.50.

For CY 2024, the OPPS payment rates were proposed to be based on available CY 2022 claims data. There were 37 claims for CPT code 0625T during this time period. As this was below the threshold of 100 claims for a service within a year, we explained that we could propose to designate CPT code 0625T as a low volume service under our universal low volume New Technology APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign code 0625T to the appropriate New Technology APC. We found the geometric mean cost for the service to be approximately $3.70, the arithmetic mean cost to be approximately $4.10, and the median cost to be approximately $3.50. Under our universal low volume New Technology APC policy, we would use the greatest of the statistical methodologies, the arithmetic mean, to assign CPT code 0625T to New Technology 1491 (New Technology Level 1A—(0–$10)) with a payment rate of $5.00. However, we acknowledged that, because CPT code 0625T was only made separately payable as part of the OPPS in October 2022, and, therefore, the claims available only reflect two months of data, we were concerned that we did not have sufficient claims data to justify reassignment to another New Technology APC (66 FR 69902). Therefore, consistent with our current policy to retain services within New Technology APC groups until we obtain sufficient claims data to justify reassignment (66 FR 59902), for CY 2024 we adopted as final our proposal

to maintain CPT code 0625T's current assignment to APC 1511 (New Technology—Level 11 ($901–$1000) with a payment rate of $950.50.

For setting CY 2025 payment rates, there were only three separately payable claims in the CY 2023 data reported for CPT code 0625T indicating a geometric mean cost of approximately $180, which is substantially lower than the code's current payment rate of $950.50. Additionally, in CY 2022 and CY 2023, there were a total of 40 separately payable claims reported for CPT code 0625T, but it is unlikely that a service with a current payment rate of $950.50 would have a geometric mean of $4.20, an arithmetic mean of $6.60, and a median of $3.52. These findings lead to uncertainty about the appropriate payment rate for the service described by CPT code 0625T. A review of the evidence submitted by the developer of the procedure when this procedure was originally assigned to a New Technology APC, and before any claims data were available, indicated the procedure had a cost between $901 and $1,000. Claims for CPT code 0625T from CY 2021 and CY 2022 indicate that the cost of the procedure is less than $10, which would not appear to cover the basic cost of this procedure, including computing time, generating a report, and having medical personnel interpret the report. For CY 2023, the geometric mean cost of approximately $180 based on three claims may better reflect the cost of the procedure described by CPT code 0625T, but there were not enough claims to be confident about the result. Therefore, we proposed to use our authority under section 1833(t)(2)(E) for CY 2025 to continue to assign CPT code 0625T to APC 1511 (New Technology—Level 11 ($901–$1000) with a payment rate of $950.50 based on the data currently available to us, which we believe best reflects the cost of the service as described by the New Technology APC application.

Refer to Table 31 for the proposed OPPS New Technology APC and status indicator assignments for CPT code 0625T for CY 2025.

TABLE 31: PROPOSED CY 2025 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR ATHEROSCLEROSIS IMAGING-QUANTITATIVE COMPUTER TOMOGRAPHY (AI-QCT) CPT CODE 0625T

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0625T	Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; computerized analysis of data from coronary computed tomographic angiography	S	1511

Comment: We received several comments supporting the assignment of CPT code 0625T to APC 1511 (New Technology—Level 11 ($901–$1000) for CY 2025.

Response: We thank the commenters for their support. We note that since the CY 2025 OPPS/ASC proposed rule was issued, two additional claims for CPT code 0625T have been processed, with the updated geometric mean cost increasing to approximately $498. Although we have two additional claims, we are not certain that we have enough claims data to be confident in the calculated geometric mean cost for CPT code 0625T. Therefore, we are finalizing our proposal, without modification, to continue to assign CPT code 0625T to APC 1511 (New Technology—Level 11 ($901–$1000). Please refer to Table 32 for the final OPPS New Technology APC and status indicator assignment for CPT code 0625T. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

0625T	Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; computerized analysis of data from coronary computed tomographic angiography	S	1511

h. Corvia Medical Interatrial Shunt Procedure (APC 1592)

On July 1, 2020, we established HCPCS code C9760 (Non-randomized, non-blinded procedure for nyha class ii, iii, iv heart failure; transcatheter implantation of interatrial shunt, including right and left heart catheterization, transeptal puncture, trans-esophageal echocardiography (tee)/intracardiac echocardiography (ice), and all imaging with or without guidance (for example, ultrasound, fluoroscopy) performed in an approved investigational device exemption (ide) study, performed in an approved investigational device exemption (ide) study) to facilitate payment for the implantation of the Corvia Medical interatrial shunt.

As we stated in the CY 2021 OPPS final rule with comment period (85 FR 85947), we believe that similar resources and device costs are involved with the Corvia Medical interatrial shunt procedure and the V-Wave interatrial shunt procedure. Unlike the V-Wave interatrial shunt, which is implanted half the time the associated interatrial shunt procedure described by HCPCS code C9758 is billed, the Corvia Medical interatrial shunt is implanted every time the associated interatrial shunt procedure (HCPCS code C9760) is billed. Therefore, for CY 2021, we assigned HCPCS code C9760 to New Technology APC 1592 (New Technology—Level 41 ($25,001–$30,000)) with a payment rate of $27,500.50. We also modified the code descriptor for HCPCS code C9760 to remove the phrase ''or placebo control,'' from the descriptor. In CY 2022, we generally used the same claims data as was used in the CY 2021 OPPS final rule to set the payment rates for that year. Accordingly, because there were no claims for this service in CY 2019, we continued to assign HCPCS code C9760 to New Technology APC 1592 in CY 2022. There continued to be no claims data for this service in CY 2021, so we continued to assign HCPCS code C9760 to New Technology APC 1592 in CY 2023, the year for which we used CY 2021 data for ratesetting. While there was one claim in CY 2022, we continued to assign HCPCS code C9760 to New Technology APC 1592 for CY 2024 due to the extremely limited claims data available.

For CY 2025, the OPPS payment rates were proposed to be based on available CY 2023 claims data. There were no claims for HCPCS code C9760 in CY 2023. Therefore, we proposed to continue assigning HCPCS code C9760 to New Technology APC 1592.

Please refer to Table 33 for the proposed OPPS New Technology APC and status indicator assignments for HCPCS code C9760. The proposed CY 2025 payment rates can be found in Addendum B to the CY 2025 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 33: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR NON-BLINDED INTRATRIAL SHUNT PROCEDURE

HCPCS	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
C9760	(Non-randomized, non-blinded procedure for nyha class ii, iii, iv heart failure; transcatheter implantation of interatrial shunt, including right and left heart catheterization, transeptal puncture, trans-esophageal echocardiography (tee)/intracardiac echocardiography (ice), and all imaging with or without guidance (for example, ultrasound, fluoroscopy) performed in an approved investigational device exemption (ide) study	T	1592

We did not receive any public comments on our proposal, and we still do not have any claims for the service. Therefore, for CY 2025, we are finalizing our proposal without modification. Specifically for CY 2025, we are assigning HCPCS code C9760 to APC 1592 (New Technology—Level 41 ($25,001–$30,000)) with a payment rate of $27,500.50.

Please refer to Table 34 below for the final OPPS New Technology APC and status indicator assignments for HCPCS code C9760 for CY 2025. The CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 34: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR NON-BLINDED INTRATRIAL SHUNT PROCEDURE

i. DARI Motion Procedure (APC 1505)

Effective January 1, 2022, CPT code 0693T (Comprehensive full body computer-based markerless 3D kinematic and kinetic motion analysis and report) is associated with the DARI Motion Procedure, a service that provides human motion analysis to aid clinicians in pre- and post-operative surgical intervention and in making other treatment decisions, including selecting the best course of physical therapy and rehabilitation. The technology consists of eight cameras that surround a patient, which send live video to a computer workstation that analyzes the video to create a 3D reconstruction of the patient without the need for special clothing, markers, or devices attached to the patient's clothing or skin. For CY 2022, we assigned CPT code 0693T to New Technology APC 1505 (New Technology—Level 5 ($301–$400)). For CY 2023, the OPPS payment rates were based on claims submitted between January 1, 2021, and December 31, 2021, processed through June 30, 2022. Due to its effective date of January 1, 2022, there were no claims available for CPT

code 0693T for rate setting in CY 2023. Therefore, in CY 2023, we continued to assign CPT code 0693T to New Technology APC 1505. For CY 2024, there were no claims available, so we again continued to assign CPT code 0693T to New Technology APC 1505.

For CY 2025, the OPPS payment rates were proposed based on available CY 2023 claims data. Although CPT code 0693T was effective January 1, 2022, we have no claims data at this time. Because we have no claims data, for CY 2025, we proposed to continue to assign CPT code 0693T to APC 1505 with a proposed payment rate of $350.50.

Refer to Table 35 for the proposed OPPS New Technology APC and status indicator assignments for CPT code 0693T for CY 2025. The proposed CY 2025 payment rates can be found in Addendum B to the CY 2025 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 35: PROPOSED CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE DARI MOTION PROCEDURE

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0693T	Comprehensive full body computer-based markerless 3D kinematic and kinetic motion analysis and report	S	1505

We did not receive any public comments on our proposal, and we still do not have any claims for the service. Therefore, for CY 2025, we are finalizing our proposal without modification. Specifically, for CY 2025, we are assigning CPT code 0693T to APC 1505 with a status indicator of ''S''. The final New Technology APC and status indicator assignments for CPT code 0693T for CY 2025 are found in Table 36. The CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

j. Instillation of Anti-Neoplastic Pharmacologic/Biologic Agent Into Renal Pelvis (APC 1558)

Effective October 1, 2023, CMS established HCPCS code C9789 (Instillation of anti-neoplastic pharmacologic/biologic agent into renal pelvis, any method, including all imaging guidance, including volumetric measurement if performed) and assigned it to New Technology APC 1559 (New Technology—Level 22 ($2001–$2500)), with a payment rate of $2,250.50 based on our review of the clinical and resource characteristics of this service.

This code may be used to describe the unique procedure associated with the administration of the drug described by HCPCS code J9281 (Mitomycin pyelocalyceal instillation, 1 mg) or similar products. HCPCS code J9281 may be used to describe the product, Jelmyto (mitomycin for pyelocalyceal solution). The FDA approved Jelmyto in 2020, and the FDA approved indication and usage for Jelmyto is as an alkylating drug indicated for the treatment of adult patients with low-grade Upper Tract Urothelial Cancer (LG–UTUS).[22]

Because we created HCPCS code C9789 effective October 1, 2023, we have limited claims data from CY 2023 available for CY 2025 rulemaking. Specifically, we only had 6 claims available. Given our proposal to

[22] Jelmyto Package Insert. 01/14/2021. *https://www.accessdata.fda.gov/drugsatfda_docs/label/2021/211728s002lbl.pdf.*

maintain current New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low-volume APC policy, we proposed to continue to assign HCPCS code C9789 to New Technology APC 1559 (New Technology—Level 22 ($2001–$2500)).

Please refer to Table 37 for the proposed OPPS New Technology APC and status indicator assignments for CPT code C9789 for CY 2025.

TABLE 37: FINAL CY 2024 AND PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODE C9789

HCPCS Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
C9789	Instillation of anti-neoplastic pharmacologic/biologic agent into renal pelvis, any method, including all imaging guidance, including volumetric measurement if performed	T	1559	T	1559

Comment: We received one comment in support of our proposal.

Response: We thank the commenter for their support.

Our updated claims data during the 4-year lookback period applicable for the universal low-volume APC policy continues to show only 6 claims for HCPCS code C9789. Therefore, we are finalizing our proposal without modification to continue assigning HCPCS code C9758 to New Technology APC 1559 (New Technology—Level 22 ($2001–$2500)). Please refer to Table 38 below for the final OPPS New Technology APC and status indicator assignment for HCPCS code C9789 for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 38: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODE C9789

C9789	Instillation of anti-neoplastic pharmacologic/biologic agent into renal pelvis, any method, including all imaging guidance, including volumetric measurement if performed	T	1559

k. LimFlow TADV Procedure CPT Code 0620T (APC 1579)

The LimFlow TADV procedure, which is described by CPT code 0620T (Endovascular venous arterialization, tibial or peroneal vein, with transcatheter placement of intravascular stent graft(s) and closure by any method, including percutaneous or open vascular access, ultrasound guidance for vascular access when performed, all catheterization(s) and intraprocedural roadmapping and imaging guidance necessary to complete the intervention, all associated radiological supervision and interpretation, when performed), is an endovascular procedure that is used

to treat patients with chronic limb-threatening ischemia. According to the developer, these patients are no longer eligible for conventional endovascular or open bypass surgery to treat their artery blockage, and without this procedure, they are likely to face limb amputation.

CPT code 0620T was established in January 2021 and was assigned to APC 5194 (Level 4 Endovascular Procedures) with a payment rate of approximately $17,400, which is the highest-paying APC for endovascular procedures. While we proposed to continue to assign CPT code 0620T to APC 5194 for CY 2024, we finalized a reassignment from a clinical APC to a New Technology APC with a higher payment rate based on comments received expressing concern that the low payment rate of the procedure would discourage providers from performing the procedure and deny access to the procedure. To determine the appropriate New Technology APC assignment for CY 2024, we looked at the available cost information. There were only 15 claims for the procedure for CY 2021 and CY 2022, so the LimFlow TADV procedure was subject to our new technology procedure low volume APC policy. An analysis of the median, arithmetic mean, and geometric mean of CPT code 0620T for CY 2024 rulemaking found that the median was approximately $25,800, the arithmetic mean was approximately $28,600, and the geometric mean was approximately $26,700. Because the arithmetic mean had the highest value of the three cost statistics, for CY 2024, we assigned CPT code 0620T to New Technology APC 1578 (New Technology—Level 41 ($25,001–$30,000)) with a payment rate of $27,500.50.

For CY 2025, the OPPS payment rates were proposed to be based on available CY 2023 claims data. We identified only six single frequency claims for CPT code 0620T in the CY 2023 claims data. As this is below the threshold of 100 claims for a service within a year, we proposed to again apply our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign the service to the appropriate New Technology APC. Based on our review of the available claims, we determined that the arithmetic mean was approximately $35,000; the median was approximately $36,000; and the geometric mean cost was approximately $33,000. Of these, the median was the statistical methodology that estimated the highest cost for the service. The payment rate calculated using this methodology fell within the cost band for New Technology APC 1579 (New Technology—Level 42 ($30,001–$40,000)) with a payment rate of $35,000.50. Therefore, for CY 2025, we proposed to designate this service as a low volume service under our universal low volume APC policy and to assign HCPCS code 0620T to New Technology APC 1579.

TABLE 39: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR LIMFLOW

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0620T	Endovascular venous arterialization, tibial or peroneal vein, with transcatheter placement of intravascular stent graft(s) and closure by any method, including percutaneous or open vascular access, ultrasound guidance for vascular access when performed, all catheterization(s) and intraprocedural roadmapping and imaging guidance necessary to complete the intervention, all associated radiological supervision and interpretation, when performed	S	1579

Comment: We received a comment from the manufacturer supporting our proposal to designate CPT code 0620T as a low volume service under the universal low volume APC policy and assign the service to New Technology APC 1579 for CY 2025, as they believe the proposed assignment more accurately reflects the resources used in the procedure.

Response: We thank the commenter for their support.

We note that there are an additional five claims for CPT code 0620T for CY 2023 that have been processed since the proposed rule. Based on the 11 single frequency claims available for CY 2023, in addition to the other 26 claims in the 4-year lookback period, we determined that the arithmetic mean is $35,700; the median is $36,400; and the geometric mean cost is $33,900. Since the total number of claims for CPT code 0620T for CY 2023 is still below the 100-claim threshold, we are finalizing our proposal to designate 0620T as a low volume service under the universal low volume APC policy. The payment rate calculated using the highest of these methodologies, the median, continues to fall within the cost band for New Technology APC 1579 (New Technology—Level 42 ($30,001–$40,000)) with a payment rate of $35,000.50. Therefore, we are also finalizing our proposal without modification to assign CPT code 0620T to New Technology APC 1579 for CY 2025.

Please refer to Table 40 for the final OPPS New Technology APC and status indicator assignments for CPT code

0662T for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 40: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR LIMFLOW

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0620T	Endovascular venous arterialization, tibial or peroneal vein, with transcatheter placement of intravascular stent graft(s) and closure by any method, including percutaneous or open vascular access, ultrasound guidance for vascular access when performed, all catheterization(s) and intraprocedural roadmapping and imaging guidance necessary to complete the intervention, all associated radiological supervision and interpretation, when performed	S	1579

l. Liver Histotripsy Service (APC 1576)

CPT code 0686T (Histotripsy (*i.e.,* non-thermal ablation via acoustic energy delivery) of malignant hepatocellular tissue, including image guidance) was first effective July 1, 2021, and describes the histotripsy service associated with the use of the HistoSonics system. Histotripsy is a non-invasive, non-thermal, mechanical process that uses a focused beam of sonic energy to destroy cancerous liver tumors and is currently in a non-randomized, prospective clinical trial to evaluate the efficacy and safety of the device for the treatment of primary or metastatic tumors located in the liver.[23] When HCPCS code 0686T was first effective, the histotripsy procedure was designated as a Category A IDE clinical study (NCT04573881). Since devices in Category A IDE studies are excluded from Medicare payment, payment for CPT code 0686T only reflected the cost of the service that is performed (absent the cost of the device) each time it is reported on a claim. On March 2, 2023, the histotripsy IDE clinical study was re-designated as a Category B (Non-experimental/Investigational) IDE study. Due to this new designation, payment for CPT code 0686T in CY 2024 reflects payment for both the service that is performed and the device used each time it is reported on a claim. For CY 2024, we assigned CPT code 0686T to New Technology APC 1576 (New Technology—Level 39 ($15,001–$20,000)) with a payment rate of $17,500.50.

For CY 2025, proposed OPPS payment rates were based on available CY 2023 claims data. We have identified one claim for CPT code 0686T within the CY 2023 claims data. As the available claims data is below the threshold of 100 claims for a service within a year, we would propose to designate CPT code 0686T as a low volume service under our universal low volume APC policy, and use the highest of the geometric mean cost, arithmetic mean cost, or median cost to assign CPT code 0686T to the appropriate New Technology APC. However, because there is only a single claim in the CY 2023 data, we have concerns that the universal low volume APC policy calculations do not accurately capture the cost of the service.

Given our proposal to maintain current New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low volume APC policy, and based on the fact that there have only been 3 claims for CPT code 0686T in the prior 4-year period, we proposed to continue to assign CPT code 0686T to APC 1576 (New Technology—Level 39 ($15,001–$20,000)) with a payment rate of $17,500.50 as shown in Table 25.

Please refer to Table 41 for the proposed OPPS New Technology APC and status indicator assignments for CPT code 0686T for CY 2025. The proposed CY 2025 payment rates can be found in Addendum B to the CY 2025 OPPS/ASC proposed rule.

[23] *ClinicalTrials.gov.* ''The HistoSonics System for Treatment of Primary and Metastatic Liver Tumors Using Histotripsy (#HOPE4LIVER) (#HOPE4LIVER).'' Accessed May 10, 2022. *https://clinicaltrials.gov/ct2/show/study/NCT04573881.*

TABLE 41: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE LIVER HISTOTRIPSY SERVICE

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0686T	Histotripsy (i.e., non-thermal ablation via acoustic energy delivery) of malignant hepatocellular tissue, including image guidance	S	1576

We did not receive any public comments on our proposal and are finalizing it without modification. HCPCS code 0686T will be assigned to New Technology APC 1576 with a status indication of ''S'' for CY 2025. Please refer to Table 42 below for the final OPPS New Technology APC and status indicator assignment for CPT code 0686T. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 42: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE LIVER HISTOTRIPSY SERVICE

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC

m. LiverMultiScan Service (APC 1511)

Effective July 1, 2021, CPT codes 0648T (Quantitative magnetic resonance for analysis of tissue composition (*e.g.,* fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic mri examination of the same anatomy (*e.g.,* organ, gland, tissue, target structure) during the same session; single organ) and 0649T (Quantitative magnetic resonance for analysis of tissue composition (*e.g.,* fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained with diagnostic mri examination of the same anatomy (*e.g.,* organ, gland, tissue, target structure); single organ (list separately in addition to code for primary procedure)) are associated with the LiverMultiScan service. LiverMultiScan is a Software as a medical Service (SaaS) that is intended to aid the diagnosis and management of chronic liver disease, the most prevalent of which is Non-Alcoholic Fatty Liver Disease (NAFLD). It provides standardized, quantitative imaging biomarkers for the characterization and assessment of inflammation, hepatocyte ballooning, and fibrosis, as well as steatosis, and iron accumulation. LiverMultiScan receives MR images acquired from patients' providers and analyzes the images using their proprietary Artificial Intelligence (AI) algorithms. It then sends the providers a quantitative metric report of the patient's liver fibrosis and inflammation. In accordance with our SaaS add-on codes policy (87 FR 72032 to 72033), SaaS CPT add-on codes are assigned to the same APCs and status indicators as their standalone codes. Thus, CPT code 0649T, the add-on code for LiverMultiScan, is assigned to the identical APC and status indicator as CPT code 0648T, the standalone code for the same service. For CY 2024, we assigned CPT codes 0648T and 0649T to New Technology APC 1511 (New Technology—Level 11 ($901–$1,000) with a payment rate of $950.50.

For CY 2025, the OPPS payment rates were proposed to be based on available CY 2023 claims data. We identified 71 claims for CPT code 0648T and 72 claims for CPT code 0649T for CY 2023. As this is below the threshold of 100 claims for each code within a year, we

proposed to utilize our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT codes 0648T and 0649T to the appropriate New Technology APC. There are available claims data from CY 2021 and CY 2022 for CPT codes 0648T and 0649T. Our analysis of the combined data, 114 claims for CPT code 0648T and 115 claims for CPT code 0649T, yielded a geometric mean cost of approximately $180, an arithmetic mean cost of approximately $234, and a median cost of approximately $197. We explained that we believed it was appropriate to utilize our universal low volume APC policy to assign the LiverMultiScan service to a New Technology APC because we stated that we believed that the combined claims data from CY 2021 to CY 2023 provided sufficient claims to capture the cost of the service. The arithmetic mean was the statistical methodology that estimated the highest cost for CPT codes 0648T and 0649T. Therefore, we proposed to reassign CPT codes 0648T and 0649T to New Technology APC 1504 (New Technology—Level 4 ($201–$300)) with a payment rate of $250.50 as shown in Table 43.

TABLE 43: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE LIVER MULTISCAN SERVICE

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0648T	Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic mri examination of the same anatomy (e.g., organ, gland, tissue, target structure) during the same session; single organ	S	1504
0649T	Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained with diagnostic MRI examination of the same anatomy (e.g., organ, gland, tissue, target structure) (List separately in addition to code for primary procedure)	S	1504

Comment: We received several comments, including a comment from the manufacturer, requesting that we maintain the APC assignment for the CPT codes 0648T and 0649T at APC 1511. Many commenters stated that the cost of each of the services is at least $950, and that the proposed payment rate of $250 would be inadequate to ensure patient access. Commenters noted that the claims data used to determine the CY 2025 OPPS proposed APC assignment for this service represent an insufficient number of claims to estimate the cost for this service. One commenter expressed concern about the wide data variability present in the claims data for CPT codes 0648T and 0649T. One commenter requested that we develop a payment policy for SaaS like CPT codes 0648T and 0649T that results in appropriate and consistent payment for innovative new services. We also received one comment signed by ten radiologists stating that the current payment rate for the procedures was too high.

Response: We recognize that software-based technologies, like those described by CPT codes 0648T and 0649T, are rapidly evolving and, therefore, we are considering for future rulemaking whether specific adjustments to payment policies, including our New Technology APC policies, are needed to more accurately and appropriately pay for these products and services across settings of care. For CY 2025, we recognize that the few claims available for CPT codes 0648T and 0649T may not truly represent the cost of this service. While we received a comment expressing concern over the potential overpayment of the service, we do not believe we have sufficient claims to justify a reassignment at this time. Therefore, we agree with the commenters that, for both CPT codes 0648T and 0649T, we should maintain the payment rates for CY 2025 until we have additional claims data.

Comment: One commenter supported the proposed reassignment of CPT codes 0648T and 0649T to New Technology APC 1504. The commenter stated that the payment rate of $950 created a paradigm where the third-party automated quantitative analytic service was valued greater than the MRI procedure that included technologist staffing, professional interpretation and liability. The commenter believed that the payment of the service should be

based on the true cost of these automated digital quantitative services at New Technology APC 1504.

Response: We thank the commenter for its support of our proposal. We reiterate that the few claims for CPT codes 0648T and 0649T may not truly represent the cost of this service or justify a reassignment at this time.

After consideration of the public comments we received, we are finalizing our proposal with modifications. We are using our equitable adjustment authority under section 1833(t)(2)(E) to continue to assign CPT codes 0648T and 0649T to New Technology APC 1511 (New Technology—Level 11 ($901–$1,000) with a payment rate of $950.50 for CY 2025. Please refer to Table 44 below for the final OPPS New Technology APC and status indicator assignments for CPT codes 0648T and 0649T for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 44: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE LIVER MULTISCAN SERVICE

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0648T	Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic mri examination of the same anatomy (e.g., organ, gland, tissue, target structure) during the same session; single organ	S	1511
0649T	Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained with diagnostic MRI examination of the same anatomy (e.g., organ, gland, tissue, target structure) (List separately in addition to code for primary procedure)	S	1511

n. Optellum Lung Cancer Prediction (LCP) (APC 1508)

CPT codes 0721T (Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained without concurrent CT examination of any structure contained in previously acquired diagnostic imaging) and 0722T (Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained with concurrent CT examination of any structure contained in the concurrently acquired diagnostic imaging dataset (list separately in addition to code for primary procedure)) became effective July 1, 2022, and are associated with the Optellum LCP technology. The Optellum LCP applies an algorithm to a patient's CT scan to produce a raw risk score for a patient's pulmonary nodule. The physician uses the risk score to quantify the risk of lung cancer and to determine what the next management step should be for the patient (for example, CT surveillance versus invasive procedure). In accordance with our SaaS add-on codes policy (87 FR 72032 and 72033), SaaS CPT add-on codes are assigned to the same APCs and status indicators as their standalone codes. Thus, CPT code 0722T, the add-on code for the Optellum LCP service, is assigned to the identical APC and status indicator as CPT code 0721T, the standalone code for the same service. For CY 2024, we assigned CPT codes 0721T and 0722T to APC New Technology 1508 (New Technology—Level 8 ($601–$700)).

For CY 2025, the OPPS payment rates were proposed based on available CY 2023 claims data. We identified three claims for CPT codes 0721T and 0722T for ratesetting for CY 2025. As this is below the threshold of 100 claims for a service within a year, we would usually propose to apply our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT codes 0721T and 0722T to the appropriate New Technology APC. There are available claims data only from CY 2023 for CPT codes 0721T and 0722T. Our analysis of the data for CPT code 0721T found the geometric mean cost of the service is approximately $84, the arithmetic mean cost of the service is approximately $98, and the median

cost of the service is approximately $130. We did not identify any reported claims for CPT code 0722T. However, because there were only three claims for the Optellum LCP service and these claims show a much lower cost than would be expected based on the current APC assignment of this service, we have concerns that the universal low volume APC policy calculations do not accurately capture the cost of the service. Given our proposal to maintain current New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low-volume APC policy, we proposed to continue to assign CPT codes 0721T and 0722T to New Technology APC 1508 (New Technology—Level 8 ($601–$700)) with a proposed payment rate of $650.50.

Please refer to Table 45 below for the proposed OPPS New Technology APC and status indicator assignments for HCPCS codes 0721T and 0722T for CY 2025. The proposed CY 2025 payment rates can be found in Addendum B to the CY 2025 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 45: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE OPTELLUM LCP PROCEDURE

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0721T	Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained without concurrent CT examination of any structure contained in previously acquired diagnostic imaging	S	1508
0722T	Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained with concurrent CT examination of any structure contained in the concurrently acquired diagnostic imaging dataset (list separately in addition to code for primary procedure)	S	1508

We did not receive any public comments on our proposal, and we are finalizing our proposal without modification. We are assigning HCPCS codes 0721T and 0722T to New Technology APC 1508 with a status indication of ''S'' for CY 2025. Please refer to Table 46 below for the final OPPS New Technology APC and status indicator assignment for CPT codes 0721T and 0722T. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 46: FINAL CY 2025 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE OPTELLUM LCP PROCEDURE

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0721T	Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained without concurrent CT examination of any structure contained in previously acquired diagnostic imaging	S	1508
0722T	Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained with concurrent CT examination of any structure contained in the concurrently acquired diagnostic imaging dataset (list separately in addition to code for primary procedure)	S	1508

o. Quantitative Magnetic Resonance (QMR) for Analysis of Tissue Composition (APC 1511)

Effective January 1, 2022, CPT codes 0697T (Quantitative magnetic resonance for analysis of tissue composition (*e.g.,* fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic mri examination of the same anatomy (*e.g.,* organ, gland, tissue, target structure) during the same session; multiple organs) and 0698T (Quantitative magnetic resonance for analysis of tissue composition (*e.g.,* fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained with diagnostic mri examination of the same anatomy (*e.g.,* organ, gland, tissue, target structure); multiple organs (list separately in addition to code for primary procedure)) are associated with the CoverScan Software as a medical Service (SaaS). This service is a medical image management and processing software package that analyzes MR data and provides quantified metrics of multiple organs such as the heart, lungs, liver, spleen, pancreas, and kidney. In accordance with our SaaS add-on codes policy (87 FR 72032 to 72033), SaaS CPT add-on codes are assigned to the same APCs and status indicators as their standalone codes. Thus, CPT code 0698T, the add-on code for CoverScan is be assigned to the same APC and status indicator as CPT code 0697T, the standalone code for the same service. For CY 2024, we assigned CPT codes 0697T and 0698T to New Technology APC 1511 (New Technology—Level 11 ($900–$1,000)).

For CY 2025, the proposed OPPS payment rates were based on available CY 2023 claims data. We identified 48 claims for CPT code 0698T and no claims for CPT code 0697T in CY 2023. As this is below the threshold of 100 claims for a service within a year, we proposed to apply our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT codes 0697T and 0698T to the appropriate New Technology APC. There are also available claims data from CY 2022 for CPT code 0698T. Our analysis of the combined data, approximately 80 claims, yielded a geometric mean cost of approximately $444, an arithmetic mean cost of approximately $622, and a median cost of approximately $786. The median cost is the statistical methodology that estimates the highest cost for CPT codes 0697T and 0698T. Therefore, we proposed, for CY 2025, to reassign CPT codes 0697T and 0698T to APC 1509 (New Technology—Level 9 ($701–$800)) with a payment rate of $750.50.

Refer to Table 47 below for the proposed OPPS New Technology APC and status indicator assignments for CPT codes 0697T and 0698T for CY 2025. The proposed CY 2025 payment rates can be found in Addendum B to the CY 2025 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 47: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE QMRCP PROCEDURE

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0697T	Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic mri examination of the same anatomy (e.g., organ, gland, tissue, target structure) during the same session; multiple organs	S	1509
0698T	Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained with diagnostic mri examination of the same anatomy (e.g., organ, gland, tissue, target structure); multiple organs (list separately in addition to code for primary procedure)	S	1509

Comment: Commenters requested that we maintain the APC assignment for the CPT codes 0697T and 0698T at APC 1511 for CY 2025. Many commenters stated that the cost of each of the services is at least $950, and that the proposed payment rate of $750 does not cover the cost of this service. One commenter noted that the claims data used to determine the CY 2025 OPPS proposed rate for this service represent an insufficient number of claims to estimate the cost for this service. Additionally, the commenter stated that wide variability in claims data distorts the applicability of the universal low volume APC policy and skews the arithmetic mean value. Commenters were concerned that the proposed payment rate would hinder patient access to these services.

Response: We recognize that software-based technologies, like those described by CPT codes 0697T and 0698T, are rapidly evolving and, therefore, we are considering for future rulemaking whether specific adjustments to payment policies, including our New Technology APC policies, are needed to more accurately and appropriately pay for these products and services across settings of care. For CY 2025, we recognize that the few claims available for CPT codes 0697T and 0698T may not truly represent the cost of this service. We agree with the commenters that, for both CPT codes 0697T and 0698T, we should maintain the payment rates for CY 2025 until we have additional claims data.

After consideration of the public comments we received, we are finalizing our proposal with modifications. We will use our equitable adjustment authority under section 1833(t)(2)(E) to continue to assign CPT codes 0697T and 0698T to New Technology APC 1511 (New Technology—Level 11 ($901–$1,000) with a payment rate of $950.50 for CY 2025. Please refer to Table 48 below for the final OPPS New Technology APC and status indicator assignments for CPT codes 0697T and 0698T for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 47: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE QMRCP PROCEDURE

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0697T	Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic mri examination of the same anatomy (e.g., organ, gland, tissue, target structure) during the same session; multiple organs	S	1509
0698T	Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained with diagnostic mri examination of the same anatomy (e.g., organ, gland, tissue, target structure); multiple organs (list separately in addition to code for primary procedure)	S	1509

p. Quantitative Magnetic Resonance Cholangiopancreatography (QMRCP) (APC 1511)

Effective July 1, 2022, CPT codes 0723T (Quantitative magnetic resonance cholangiopancreatography (QMRCP) including data preparation and transmission, interpretation and report, obtained without diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (*e.g.,* organ, gland, tissue, target structure) during the same session) and 0724T (Quantitative magnetic resonance cholangiopancreatography (QMRCP), including data preparation and transmission, interpretation and report, obtained with diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (*e.g.,* organ, gland, tissue, target structure) (list separately in addition to code for primary procedure)) are associated with the QMRCP Software as a medical Service (SaaS). The service performs quantitative assessment of the biliary tree and gallbladder. It uses a proprietary algorithm that produces a three-dimensional reconstruction of the biliary tree and pancreatic duct and also provides precise quantitative information of biliary tree volume and duct metrics. In accordance with our SaaS add-on codes policy (87 FR 72032 and 72033), SaaS CPT add-on codes are assigned to the same APCs and status indicators as their standalone codes. Consistent with our SaaS add-on codes policy, CPT code 0724T, the add-on code for QMRCP is assigned to the identical APC and status indicator as CPT code 0723T, the standalone code for the same service. For CY 2024, we assigned CPT codes 0723T and 0724T to New Technology APC 1511 (New Technology—Level 11 ($900–$1,000)).

For CY 2025, the proposed OPPS payment rates were based on available CY 2023 claims data. We identified 3 claims for CPT code 0724T and no claims for CPT code 0723T in CY 2023. As this is below the threshold of 100 claims for a service within a year, we would usually propose to apply our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT codes 0723T and 0724T to the appropriate New Technology APC. There is only one single claim from CY 2022 for CPT code 0724T and no claims for CPT code 0723T. For CY 2023, we received 3 claims for CPT code for CPT 0724T and no claims for CPT code 0723T. Our analysis of the combined CY 2022 and CY 2023 data for CPT code 0723T and 0724T found the geometric mean cost of the service is approximately $26, the arithmetic mean cost of the service is approximately $26, and the median cost of the service is approximately $27. Given our proposal to maintain current New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low volume APC policy, we proposed to continue to assign the CPT codes 0723T and 0724T to New Technology APC 1511 (New Technology—Level 11 ($901–$1,000)) with a payment rate of $950.50.

Refer to Table 49 for the proposed OPPS New Technology APC and status indicator assignments for CPT codes 0723T and 0724T for CY 2025.

TABLE 49: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE QMRCP PROCEDURE

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0723T	Quantitative magnetic resonance cholangiopancreatography (QMRCP) including data preparation and transmission, interpretation and report, obtained without diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (e.g., organ, gland, tissue, target structure) during the same session	S	1511
0724T	Quantitative magnetic resonance cholangiopancreatography (QMRCP), including data preparation and transmission, interpretation and report, obtained with diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (e.g., organ, gland, tissue, target structure) (list separately in addition to code for primary procedure)	S	1511

We did not receive any public comments on our proposal to continue to assign the CPT codes 0723T and 0724T to New Technology APC 1511 (New Technology—Level 11 ($901–$1,000)). Our updated claims data did not show any additional claims for CY 2023 for CPT codes 0723T and 0724T. Therefore, we are finalizing our proposal without modification to continue to assign CPT codes 0723T and 0724T to APC 1511. Please refer to Table 50 for the final OPPS New Technology APC and status indicator assignment for CPT codes 0723T and 0724T for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 50: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE QMRCP PROCEDURE

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0723T	Quantitative magnetic resonance cholangiopancreatography (QMRCP) including data preparation and transmission, interpretation and report, obtained without diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (e.g., organ, gland, tissue, target structure) during the same session	S	1511
0724T	Quantitative magnetic resonance cholangiopancreatography (QMRCP), including data preparation and transmission, interpretation and report, obtained with diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (e.g., organ, gland, tissue, target structure) (list separately in addition to code for primary procedure)	S	1511

q. Scalp Cooling (APC 1519)

CPT code 0662T (Scalp cooling, mechanical; initial measurement and calibration of cap) became effective on July 1, 2021, to describe initial measurement and calibration of a scalp cooling device for use during chemotherapy administration to prevent hair loss. According to Medicare's National Coverage Determination (NCD) policy, specifically, NCD 110.6 (Scalp Hypothermia During Chemotherapy to Prevent Hair Loss), the scalp cooling cap itself is classified as an incident to supply to a physician service, and would not be paid under the OPPS; however, interested parties have indicated that there are substantial resource costs of around $1,900 to $2,400 associated with calibrating and fitting the cap. CPT guidance states that CPT code 0662T should be billed once per chemotherapy session, which we interpret to mean once per course of chemotherapy. Therefore, if a course of chemotherapy involves, for example, 6 or 18 sessions, HOPDs should report CPT 0662T only once for that 6 or 18 therapy sessions.

For CY 2022, we assigned CPT code 0662T to APC New Technology 1520 (New Technology—Level 20 ($1,801–$1,900)) with a payment rate of $1,850.50. For CY 2023, we did not have any claims data, so we continued to assign CPT code 0662T to APC 1520. For CY 2024 we finalized reassignment of CPT code 0662T to APC 1514 (New Technology—Level 14 ($1,201–$1,300)) with a payment rate of $1,250.50 based on 11 single frequency claims.

For CY 2025, the OPPS payment rates were proposed to be based on available CY 2023 claims data. The Scalp Cooling service became effective in the OPPS in CY 2022, and we identified 38 single frequency paid claims for CPT code 0662T for CY 2023. As this is below the threshold of 100 claims for a service within a year, we proposed to designate CPT code 0662T as a low volume service under our universal low volume APC policy and to use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign the service to the appropriate New Technology APC. Based on our review of the available claims, we determined that the geometric mean cost for CPT code 0662T was approximately $841; the median was approximately $1,351; and the arithmetic mean was approximately $1,361. Therefore, for CY 2025, we proposed to designate this service as a low volume service under our universal low volume APC policy and to reassign CPT code 0662T to APC 1515 (New Technology—Level 15 ($1301–$1400)) with a payment rate of $1,350.50 for CY 2025 based on the arithmetic mean of approximately $1,361.Please refer to Table 51 below for the proposed OPPS New Technology APC and status indicator assignment for CPT code 0662T. The proposed CY 2025 payment rates can be found in Addendum B CY 2025 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 51: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR SCALP COOLING

HCPCS	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0662T	Scalp cooling, mechanical; initial measurement and calibration of cap	S	1515

We did not receive any public comments on our proposal. We note that additional claims for CPT code 0662T have been processed since the proposed rule. Specifically, there are 50 single frequency claims for CPT code 0662T for CY 2023. Since this is below the threshold of 100 claims, we are finalizing our proposal to designate CPT code 0662T as a low volume service under our universal low volume APC policy and use the greater of the geometric mean, arithmetic mean, or median cost based on the available claims data for CPT code 0662T to calculate an appropriate payment rate for purposes of assigning CPT code 0662T to a New Technology APC. Based on the updated claims data available for this final rule, we found the geometric mean cost to be approximately $1,110, the median to be $1,750, and the arithmetic mean to be $1,420. The median was the statistical methodology that estimated the highest cost for the service. The payment rate calculated using this methodology falls within the cost band for New Technology APC 1519 (New Technology—Level 19 ($1701–$1800)). Therefore, we are assigning CPT code 0662T to APC 1519 for CY 2025.

Please refer to Table 52 for the final OPPS New Technology APC and status indicator assignments for CPT code 0662T for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

0662T	Scalp cooling, mechanical; initial measurement and calibration of cap	S	1515	S	1519

r. Supervised Visits for Esketamine Self-Administration (APCs 1513 and 1518)

On March 5, 2019, FDA approved Spravato™ (esketamine) nasal spray, used in conjunction with an oral antidepressant, for treatment of depression in adults who have tried other antidepressant medicines but have not benefited from them (treatment-resistant depression (TRD)). This is the first FDA approval of esketamine for any use.

Esketamine is a noncompetitive N-methyl D-aspartate (NMDA) receptor antagonist. It is a nasal spray supplied as an aqueous solution of esketamine hydrochloride in a vial with a nasal spray device. Each device delivers two sprays containing a total of 28 mg of esketamine. Patients would require either two (2) devices (for a 56 mg dose) or three (3) devices (for an 84 mg dose) per treatment.

Because of the risk of serious adverse outcomes resulting from sedation and dissociation caused by esketamine nasal spray administration, and the potential for misuse of the product, it is only available through a restricted distribution system under a Risk Evaluation and Mitigation Strategy (REMS). A REMS is a drug safety program that the FDA can require for certain medications with serious safety concerns to help ensure the benefits of the medication outweigh its risks. The Spravato™ REMS program requires the esketamine nasal spray to be dispensed and administered to enrolled patients in health care settings that are certified in the REMS. See *www.fda.gov* for more information regarding the Spravato™ REMS program compliance requirements.

A treatment session of esketamine consists of instructed nasal self-administration by the patient followed by a period of at least 2 hours post-administration observation of the patient under direct supervision of a health care professional in the certified health care setting. Refer to the CY 2020 PFS final rule and interim final rule for

more information about supervised visits for esketamine nasal spray self-administration (84 FR 63102 through 63105).

To facilitate prompt beneficiary access to the new, potentially life-saving treatment for TRD using esketamine, we created two new HCPCS G codes, G2082 and G2083, effective January 1, 2020. HCPCS code G2082 is for an outpatient visit for the evaluation and management of an established patient who requires the supervision of a physician or other qualified health care professional and provision of up to 56 mg of esketamine through nasal self-administration and includes 2 hours of post-administration observation. For CY 2020, HCPCS code G2082 was assigned to New Technology APC 1508 (New Technology—Level 8 ($601–$700)) with a payment rate of $650.50. HCPCS code G2083 describes a similar service to HCPCS code G2082 but involves the administration of more than 56 mg of esketamine. For CY 2020, HCPCS code G2083 was assigned to New Technology APC 1511 (New Technology—Level 11 ($901–$1000)) with a payment rate of $950.50. Updates to the APC assignments for G2082 and G2083 have been made in past rules. See the CY 2021 OPPS/ASC final rule with comment period (85 FR 85948), CY 2022 OPPS/ASC final rule with comment period (86 FR 63538), CY 2023 OPPS/ASC final rule with comment period (87 FR 71816–71817), and CY 2024 OPPS/ASC final rule with comment period (88 FR 81628—81630) for these updates.

For CY 2025, the OPPS payment rates were proposed based on available CY 2023 claims data as the available single frequency claims exceed the 100 claims threshold generally used for our universal low volume policy. Therefore, for CY 2025, we proposed to assign HCPCS codes G2082 and G2083 to New Technology APCs based on the codes' geometric mean costs. Specifically, we proposed to assign HCPCS code G2082 to New Technology APC 1512 (New Technology—Level 12 ($1001–$1100)) with a payment rate of $1,050.50 based on its geometric mean cost of $1,087, which was calculated using the available 424 single frequency claims from CY 2023 claims data. We also proposed to assign HCPCS code G2083 to New Technology APC 1518 (New Technology—Level 18 ($1601–$1700)) with a payment rate of $1,650.50 based on its geometric mean cost of $1,643, which was calculated using the available 2,482 single frequency claims from CY 2023 claims data.

Refer to Table 53 for the New Technology APC and status indicator assignments for HCPCS codes G2082 and G2083. The proposed CY 2025 payment rates for these HCPCS codes can be found in Addendum B to the CY 2025 OPPS/ASC proposed rule.

TABLE 53: FINAL CY 2024 AND PROPOSED CY 2025 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODES G2082 AND G2083

HCPCS Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
G2082	Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of up to 56 mg of esketamine nasal self-administration, includes 2 hours post-administration observation	S	1513	S	1512
G2083	Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of greater than 56 mg esketamine nasal self-administration, includes 2 hours post-administration observation	S	1520	S	1518

We did not receive any public comments on our proposal. We note however that the geometric mean costs for both HCPCS code G2082 and HCPCS code G2083 have changed since the proposed rule. Based on the updated claims data available for this final rule, the geometric mean cost for HCPCS code G2082 is $1,104.71 and the geometric mean cost for G2083 is $1,448.83. Based on updated claims data available for this final rule with comment period, we are finalizing a New Technology APC assignment for HCPCS code G2082 to APC 1513 (New Technology—Level 13 ($1101–$1200)) with a payment of $1150.50 and we are finalizing a New Technology APC assignment for HCPCS code G2083 to APC 1516 (New Technology—Level 16 ($1401–$1500)) with a payment of $1450.50.

Please refer to Table 54 for the CY 2025 proposed and final APC and SI assignments for HCPCS codes G2082 and G2083. The CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

Finally, we note that because we have gathered additional claims data and seen increases in claims volume, we are considering placing HCPCS codes G2082 and G2083 into clinical APCs through future rulemaking.

TABLE 54: PROPOSED AND FINAL CY 2025 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODES G2082 AND G2083

HCPCS Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC

s. Surfacer® Inside-Out® Access Catheter System (APC 1534)

HCPCS code C9780 (Insertion of central venous catheter through central venous occlusion via inferior and superior approaches (*e.g.,* inside-out technique), including imaging guidance) describes the procedure associated with the use of the Surfacer® Inside-Out® Access Catheter System that is designed to address central venous occlusion. HCPCS code C9780 was established on October 1, 2021, and since its establishment the code has been assigned to New Technology APC 1534 (New Technology—Level 34 ($8001–$8500)).

For CY 2025, there were only 3 single frequency claims in CY 2023 for HCPCS code C9780. There were no available claims from CY 2021 or CY 2022. Given our proposal to maintain current New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low volume APC policy, we proposed to continue to assign HCPCS code C9780 to APC 1534 (New Technology—Level 34 ($8001–$8500)) with a payment rate of $8,250.50. Refer to Table 55 for the proposed New Technology APC and status indicator assignments for HCPCS code C9780.

TABLE 55: PROPOSED CY 2025 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENT FOR SURFACER® INSIDE-OUT® ACCESS CATHETER SYSTEM PROCEDURE

HCPCS Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
C9780	Insertion of central venous catheter through central venous occlusion via inferior and superior approaches (e.g., inside-out technique), including imaging guidance	S	1534

We did not receive any public comments on our proposal to continue to assign CPT code C9870 to APC 1534 (New Technology—Level 34 ($8001–$8500)). We note that there was one additional claim in our updated claims data, however, the total number of claims for CY 2023 is still under 10. Therefore, given our new policy to maintain current New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low volume APC policy, we are finalizing as proposed to continue to assign CPT code C9870 to APC 1534. Please refer to Table 56 below for the final OPPS New Technology APC and status indicator assignment for HCPCS code C9780. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

HCPCS Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
C9780	Insertion of central venous catheter through central venous occlusion via inferior and superior approaches (e.g., inside-out technique), including imaging guidance	S	1534

t. TASS (APC 1537)

The Transcatheter Atrial Shunt System (TASS) is a nitinol self-expanding cardiovascular implant consisting of four arms including two left atrial (LA) arms and two coronary sinus (CS) arms placed between the left atrium and coronary sinus to create a 7mm flow diameter channel for blood to flow from the high pressure region of the left atrium to the lower pressure region of the right atrium via the coronary sinus. TASS is currently in a Category B IDE clinical trial. Effective October 1, 2023 CMS created HCPCS code C9792 (Blinded or nonblinded procedure for symptomatic New York Heart Association (NYHA) Class II, III, IV a heart failure; transcatheter implantation of left atrial to coronary sinus shunt using jugular vein access, including all imaging necessary to intra procedurally map the coronary sinus for optimal shunt placement (*e.g.,* TEE or ICE ultrasound, fluoroscopy), performed under general anesthesia in an approved investigational device exemption (IDE) study) to describe the TASS service and assigned it to APC 1537 (New Technology—Level 37 ($9501–$10000)) with a payment rate of $9,750.50.

For CY 2025, the proposed OPPS payment rates were based on available CY 2023 claims data. Due to the effective date of the code of October 1, 2023, there were no claims available for HCPCS code C9792 for rate setting in CY 2024. Therefore, in CY 2025, we proposed to continue to assign HCPCS code C9792 to APC 1537.

Please refer to Table 57 below for the current and proposed OPPS New Technology APC and status indicator assignments for HCPCS code C9792. The proposed CY 2025 payment rates can be found in Addendum B to the proposed rule via the internet on the CMS website.

TABLE 57: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR TRANSCATHETER ATRIAL SHUNT SYSTEM

HCPCS	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
C9792	Blinded or nonblinded procedure for symptomatic New York Heart Association (NYHA) Class II, III, IVa heart failure; transcatheter implantation of left atrial to coronary sinus shunt using jugular vein access, including all imaging necessary to intra procedurally map the coronary sinus for optimal shunt placement (e.g., TEE or ICE ultrasound, fluoroscopy), performed under general anesthesia in an approved investigational device exemption (IDE) study	S	1537

Comment: We received a comment supporting our proposal to continue to assign HCPCS code C9792 to APC 1537.

Response: We appreciate the commenter's support for our proposal.

After consideration of the public comments we received, we are finalizing our proposal without modification to assign CPT code C9792 to APC 1537 (New Technology—Level 37 ($9501–$10000)) with a payment rate of $9,750.50 for CY 2025. Please refer to Table 58 for the final OPPS New Technology APC and status indicator assignment for HCPCS code C9792. The final CY 2024 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 58: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR TRANSCATHETER ATRIAL SHUNT SYSTEM

HCPCS	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
C9792	Blinded or nonblinded procedure for symptomatic New York Heart Association (NYHA) Class II, III, IVa heart failure; transcatheter implantation of left atrial to coronary sinus shunt using jugular vein access, including all imaging necessary to intra procedurally map the coronary sinus for optimal shunt placement (e.g., TEE or ICE ultrasound, fluoroscopy), performed under general anesthesia in an approved investigational device exemption (IDE) study	S	1537

u. Magnetic Resonance Imaging With Inhaled Hyperpolarized Xenon-129 Contrast Agent (APC 1551)

HCPCS code C9791 (Magnetic resonance imaging with inhaled hyperpolarized xenon-129 contrast agent, chest, including preparation and administration of agent) was established on October 1, 2023. For CY 2023, we assigned HCPCS code C9791 to New Technology APC 1551 (New Technology—Level 14 ($1201–$1300)). For CY 2024, the OPPS payment rates were based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. Due to the effective date of the service of October 1, 2023, there were no claims available for HCPCS code C9791 for rate setting in CY 2024. Therefore, in CY 2024, we continued to assign HCPCS code C9791 to New Technology APC 1551.

For CY 2025, the proposed OPPS payment rates were based on available CY 2023 claims data. Although HCPCS code C9791 was effective October 1, 2023, we did not have any claims data for the service for the proposed rule. Therefore, for CY 2025, we proposed to continue to assign HCPCS code C9791 to New Technology APC 1551 (New Technology—Level 14) with a proposed payment rate of $1,250.50.

Please refer to Table 59 for the proposed OPPS New Technology APC and status indicator assignment for HCPCS code C9791 for CY 2025.

TABLE 59: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR MAGNETIC RESONANCE IMAGING WITH INHALED HYPERPOLARIZED XENON-129 CONTRAST AGENT PROCEDURE

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
C9791	Magnetic resonance imaging with inhaled hyperpolarized xenon-129 contrast agent, chest, including preparation and administration of agent	T	1551

We did not receive any public comments on our proposal, and we still do not have any claims for the service. Therefore, for CY 2025, we are finalizing our proposal without modification to assign HCPCS code C9791 to New Technology APC 1551 (New Technology—Level 14 ($1201–$1300)) and SI ''T''. The final New Technology APC and status indicator assignments for HCPCS code C9791 for CY 2025 are found in Table 60. The CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 60: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR MAGNETIC RESONANCE IMAGING WITH INHALED HYPERPOLARIZED XENON-129 CONTRAST AGENT PROCEDURE

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
C9791	Magnetic resonance imaging with inhaled hyperpolarized xenon-129 contrast agent, chest, including preparation and administration of agent	T	1551

v. SAINT Neuromodulation System

The SAINT Neuromodulation System is a non-invasive repetitive transcranial magnetic stimulation (rTMS) system that identifies an individualized target and delivers navigationally directed repetitive magnetic pulses to that individualized target located within the left dorsolateral prefrontal cortex to treat major depressive disorder (MDD). The patient first receives structural MRI and functional MRI scans that are analyzed by the provider to identify and localize the personalized stimulation target in the patient's dorsolateral prefrontal cortex. Once the areas targeted for treatment are identified, the patient receives non-invasive magnetic stimulation in the targeted area. The patient has 10 treatment sessions per day with each treatment session lasting 10 minutes followed by 50 minutes of rest before another treatment session occurs. The treatment is administered over five days for a total of 50 sessions of non-invasive magnetic stimulation therapy. There are four CPT codes listed in Table 61 that describe the MRI scans that are used to target the treatment and describe the administration of the non-invasive magnetic stimulation therapy.

TABLE 61: SAINT NEUROMODULATION SYSTEM CPT CODES AND DESCRIPTORS

CPT Code	Long Descriptor
0889T	Personalized target development for accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation derived from a structural and resting-state functional MRI, including data preparation and transmission, generation of the target, motor threshold–starting location, neuronavigation files and target report, review and interpretation
0890T	Accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation, including target assessment, initial motor threshold determination, neuronavigation, delivery and management, initial treatment day
0891T	Accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation, including neuronavigation, delivery and management, subsequent treatment day
0892T	Accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation, including neuronavigation, delivery and management, subsequent motor threshold redetermination with delivery and management, per treatment day

For CY 2025, the OPPS payment rates were proposed based on available CY 2023 claims data. However, CPT codes 0889T, 0890T, 0891T, and 0892T did not become effective until July 1, 2024, which means there was no claims data for the procedures described these CPT codes. We assigned our proposed rates for these services based on our evaluation of the resources needed to perform these services. Table 62 lists CPT codes 0889T, 0890T, 0891T, and 0892T and our proposed status indicator and APC assignment for CY 2025.

TABLE 62: PROPOSED CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR SERVICES ASSOCIATED WITH THE SAINT NEUROMODULATION SYSTEM

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0889T	Personalized target development for accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation derived from a structural and resting-state functional MRI, including data preparation and transmission, generation of the target, motor threshold–starting location, neuronavigation files and target report, review and interpretation	S	1511
0890T	Accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation, including target assessment, initial motor threshold determination, neuronavigation, delivery and management, initial treatment day	S	1522
0891T	Accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation, including neuronavigation, delivery and management, subsequent treatment day	S	1522
0892T	Accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation, including neuronavigation, delivery and management, subsequent motor threshold redetermination with delivery and management, per treatment day	S	1522

Comment: Several commenters, including clinicians and other interested parties, believe that the payment rate of $2,250.50 for the proposed APC assignment to New Technology APC 1522 (New Technology—Level 22 ($2001–$2500)) for CPT codes 0890T, 0891T, and 0892T that describes the administration of the non-invasive magnetic stimulation therapy is too low. The commenters are concerned that the proposed payment rate will discourage providers from using the SAINT neuromodulation system to treat MDD. The commenters supported assigning CPT codes 0890T, 0891T, and 0892T to New Technology APC 1528 (New Technology—Level 28 ($5001–$5500)) with a payment rate of $5,250.50 to better reflect the resource cost of each of these three services. Multiple commenters also felt that the IPPS new technology add-on payment amount for the SAINT neuromodulation system acknowledged the cost of the SAINT system.

Response: We do not have any claims data to directly determine the cost of the procedures described by CPT codes 0890T, 0891T, and 0892T. Therefore, we make our assessment of the resource costs to perform the procedure based on our judgment of the clinical and resource information presented to us about the SAINT neuromodulation system and the treatment approach in the manufacturer's OPPS New Technology APC application and through comments on the proposed rule. We agree with the commenters that the cost per case used for purposes of determining the IPPS maximum new technology add-on payment amount (88 FR 58938) was a more appropriate estimate of the cost of the SAINT neuromodulation system than our original cost estimate for the procedure in the CY 2025 OPPS proposed rule. For purposes of determining the new technology add-on payment amount, the cost estimate for the entire SAINT course of treatment, which included fifty sessions over five days of the non-invasive magnetic stimulation therapy and related operating costs, was $19,500.

Our review has determined that the cost estimate of the procedure described by CPT code 0899T should remain the same and CPT code 0899T should

continue to be assigned to New Technology APC 1511 (New Technology—Level 11 ($901–$1000)) with a payment rate of $950.50. However, we now have determined that the per day cost of the services described by CPT codes 0890T, 0891T, and 0892T is around $3,710 instead of our proposed estimate of around $2,250. We are changing the APC assignment for CPT codes 0890T, 0891T, and 0892T to New Technology APC 1525 (New Technology—Level 25 ($3501–$4000)) with a payment rate of $3,750.50.

Comment: Several commenters described their experiences with MDD and receiving treatment for their MDD using the SAINT neuromodulation system. All of these commenters claimed that the SAINT therapy was beneficial to them and helped to reduce the symptoms of MDD, which substantially improved their mental health. Many of these commenters were able to receive SAINT because they participated in clinical trials for the therapy or were able to afford the treatment even if it was not covered by health insurance. The commenters want us to ensure that SAINT will be affordable to patients who receive treatment, and that SAINT will be widely available throughout the United States, so those who have MDD are able to access this therapy.

Response: We thank commenters for their input, and we are committed to establishing appropriate payment for the services described by CPT codes 0890T, 0891T, and 0892T.

After consideration of the public comments we received, we are finalizing our proposal with modification for CY 2025 to assign CPT code 0899T to New Technology APC 1511 (New Technology—Level 11 ($901–$1000)) and SI of ''S'' and to assign CPT codes 0890T, 0891T and 0892T to New Technology APC 1525 (New Technology—Level 25 ($3501–$4000)) and SI of ''S''. The final New Technology APC and status indicator assignments for CPT codes 0889T, 0890T, 0891T, and 0892T for CY 2025 are found in Table 63. The CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 63: FINAL CY 2025 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR SERVICES ASSOCIATED WITH THE SAINT NEUROMODULATION SYSTEM

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0889T	Personalized target development for accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation derived from a structural and resting-state functional MRI, including data preparation and transmission, generation of the target, motor threshold–starting location, neuronavigation files and target report, review and interpretation	S	1511
0890T	Accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation, including target assessment, initial motor threshold determination, neuronavigation, delivery and management, initial treatment day	S	1525
0891T	Accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation, including neuronavigation, delivery and management, subsequent treatment day	S	1525
0892T	Accelerated, repetitive high-dose functional connectivity MRI–guided theta-burst stimulation, including neuronavigation, delivery and management, subsequent motor threshold redetermination with delivery and management, per treatment day	S	1525

D. Universal Low Volume APC Policy for Clinical and Brachytherapy APCs

In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63743 through 63747), we adopted a policy to designate clinical and brachytherapy APCs as low volume APCs if they have fewer than 100 single claims that can be used for ratesetting purposes in the claims year used for ratesetting for the prospective year. For the CY 2025 OPPS/ASC proposed rule, CY 2023 claims are generally the claims used for ratesetting; and clinical and brachytherapy APCs with fewer than 100 single claims from CY 2023 that can be used for ratesetting would be low volume APCs subject to our universal low volume APC policy. As we stated in the CY 2022 OPPS/ASC final rule with comment period, we adopted this policy to reduce the volatility in the payment rate for those APCs with fewer than 100 single claims. Where a clinical or brachytherapy APC has fewer than 100 single claims that can be used for ratesetting, under our low volume APC payment adjustment policy, we determine the APC cost as the greatest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data. We excluded APC 5853 (Partial Hospitalization for CMHCs) and APC 5863 (Partial Hospitalization for Hospital-based PHPs) from our universal low volume APC policy given the different nature of policies that affect the partial hospitalization program. We also excluded APC 2698 (Brachytx, stranded, nos) and APC 2699 (Brachytx, non-stranded, nos) as our current methodology for determining payment rates for non-specified brachytherapy sources is appropriate.

Based on claims data available for the CY 2025 OPPS/ASC proposed rule, we proposed to designate six brachytherapy APCs and five clinical APCs as low volume APCs under the OPPS. The six brachytherapy APCs and five clinical APCs meet our criteria of having fewer than 100 single claims in the claims' year used for ratesetting (CY 2023 for the CY 2025 OPPS/ASC proposed rule). Nine of the 11 APCs were designated as low volume APCs in CY 2024. Based on data for the CY 2025 OPPS/ASC proposed rule, APC 2645 (Brachytx,

non-stranded, gold-198) and APC 5881 (Ancillary Outpatient Services When Patient Dies) met our criteria to be designated a Low Volume APCs; and we proposed to designate those APCs as such for CY 2025.

We did not receive any public comments on our proposal. Based on CY 2023 claims data available for this final rule with comment period, we are finalizing our proposal to designate six brachytherapy APCs and five clinical APCs as low volume APCs under the OPPS. Table 64 includes the CY 2023 claims available for ratesetting for each of the APCs we are designating as Low Volume APCs for CY 2025. The final cost statistics for our CY 2025 Low Volume APCs, such as the median, arithmetic mean, and geometric mean cost are available for download with this final rule with comment period on the CMS website. We refer readers to our website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*; click on the relevant regulation to download the low volume APC cost statistics under the comprehensive (OPPS) ratesetting methodology in the downloads section of the web page.

TABLE 64: FINAL LOW VOLUME APCS USING COMPREHENSIVE (OPPS) RATESETTING METHODOLOGY FOR CY 2025

APC	APC Description	CY 2023 Claims Available for Ratesetting
2632	Iodine I-125 sodium iodide	1
2635	Brachytx, non-str, HA, p-103	20
2636	Brachy linear, non-str, p-103	1
2642	Brachytx, stranded, c-131	95
2645	Brachytx, non-str, gold-198	96
2647	Brachytx, NS, Non-HDRIr-192	2
5244	Level 4 Blood Product Exchanges and Related Services	60
5494	Level 4 Intraocular Procedures	88
5495	Level 5 Intraocular Procedures	62
5496	Level 6 Intraocular Procedures	29
5881	Ancillary Outpatient Services When Patient Dies	75

E. APC-Specific Policies

1. Cardiac CT Services, CPT Codes 75572, 75573, and 75574 (APC 5572)

For the 2006 coding update, the AMA's CPT Editorial Panel established six Category III CPT codes to describe cardiac computed tomography angiography with contrast materials (cardiac CT services) effective January 1, 2006. The codes were active and separately payable under the OPPS between January 1, 2006, and December 31, 2009. The CPT Editorial Panel deleted the Category III CPT codes and replaced them with Category I CPT codes 75572 through 75574 effective January 1, 2010. With the deletion of the Category III CPT codes on December 31, 2009, we crosswalked the APC assignments from the Category III CPT codes (predecessor codes) to the new Category I CPT codes effective January 1, 2010. Since 2010, the Category I CPT codes describing cardiac CT services are CPT codes 75572, 75573, and 75574. The codes and their long descriptors are listed below.

- 75572: Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology (including 3D image postprocessing, assessment of cardiac function, and evaluation of venous structures, if performed).
- 75573: Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology in the setting of congenital heart disease (including 3D image postprocessing, assessment of left ventricular (LV) cardiac function, right ventricular (RV) structure and function and evaluation of vascular structures, if performed).
- 75574: Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed).

Like the predecessor codes, CPT codes 75572, 75573, and 75574 have been paid separately under the OPPS since 2010. From CY 2015 through CY 2024, the OPPS payment rate, based on the geometric mean cost for the cardiac CT codes, has ranged between $175 and $265 for these codes, as listed in Table 65 below.

TABLE 65: CY 2015 - CY 2024 OPPS PAYMENT RATES FOR CPT CODES 75572 – 75574

CPT Codes	CY 2015	CY 2016	CY 2017	CY 2018	CY 2019	CY 2020	CY 2021	CY 2022	CY 2023	CY 2024
75572 - 75574	$216.05	$236.86	$265.02	$252.74	$201.74	$182.22	$178.55	$182.43	$180.34	$175.06

We note that the OPPS payment rate applies only to the hospital outpatient facility and does not include the physician service payment. Physician services are paid under Medicare's Physician Fee Schedule (PFS).

We update the OPPS payment rates on an annual basis consistent with the requirements set forth in section 1833(t)(9)(A) of the Act, which requires the HHS Secretary to review, not less often than annually, and revise the APC groups, the relative payment weights, and the wage and other adjustments to take into account changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors. Because of the annual updates, OPPS payment rates for services may fluctuate from year to year. We note that we generally use the latest claims data available to set the annual payment rates. Payment rates for this CY 2025 OPPS/ASC final rule with comment period are based on claims with dates of service between January 1, 2023, and December 31, 2023, processed through June 30, 2024.

Over the years we have received comments noting that the payment for these codes has declined since 2017. Comments on previous OPPS proposed rules have indicated that the payment amount is insufficient to cover the cost of providing the service and have stated that the payment amount does not consider the hospital resources required to perform these services, including the use of the equipment, medication administration, staff time, and scanner time. We have maintained over the years that an analysis of our claims data for these three codes have shown geometric mean costs consistent with the geometric mean cost for APC 5571 (Level 1 Imaging with Contrast), the APC to which the cardiac CT codes have been assigned since 2015.

We have also received comments in the past urging CMS to allow hospitals the flexibility to submit charges for cardiac CT services with a revenue code other than CT scan (035X) and Radiology Diagnostic (032X) revenue codes, implying that MACs had applied edits to the cardiac CT codes that prevented hospitals from reporting a cardiology (048X) revenue code when appropriate. It is longstanding CMS policy that hospital outpatient facilities are responsible for reporting the appropriate cost centers and revenue codes on claims. As stated in section 20.5 in Chapter 4 (Part B Hospital) of the Medicare Claims Processing Manual, CMS ''does not instruct hospitals on the assignment of HCPCS codes to revenue codes for services provided under OPPS since hospitals' assignments of cost vary. Where explicit instructions are not provided, HOPDs should report their charges under the revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report.'' We have consistently stated that hospital outpatient facilities must determine the most appropriate cost center and revenue code for the cardiac CT codes (87 FR 71849, 88 FR 81664).

After we issued the CY 2024 OPPS/ASC final rule, interested parties notified us of a specific claims edit that may have limited the revenue codes reported with the cardiac CT codes in prior years' claims data. CMS removed the revenue code edit in early December 2023 to allow for the cardiac CT codes to be billed with any appropriate revenue code. We informed the public of our findings and the changes that we made in the January 2024 OPPS Update (Transmittal 12421, Change Request 13488), dated December 21, 2023. We believe the edit may have prevented some providers from reporting the cardiology revenue code (048X), which maps to the cardiology cost center (03140), when billing for cardiac CT services. In the past, commenters have indicated that the cardiology cost center has a higher cost-to-charge ratio (CCR) than the imaging cost centers, and they believe the inability to report the cardiology revenue code has resulted in a lower payment rate for cardiac CT services. Since the OPPS ratesetting process utilizes the applicable cost center's CCR to reduce the charges on the claim to estimated cost, utilizing cost centers with lower CCRs results in a lower OPPS payment compared to utilizing cost centers with higher CCRs. With the edit no longer in place, hospitals may bill for cardiac CT services with whichever revenue code they believe appropriate for CY 2024, including cardiology revenue code 048X, and the CY 2026 OPPS payment rates (which most likely will be based on CY 2024 claims) will reflect those updated revenue code billing patterns. We note that for CY 2025, based on our standard ratesetting methodology using claims submitted during CY 2023, our analysis reveals that the angiocardiography and CT scan revenue codes were reported with CPT codes 75572 through 75574, which were mapped to angiography and CT scan cost centers, as shown in Table 66.

TABLE 66: STANDARD OPPS RATESETTING METHODOLOGY –REVENUE CODES AND COST CENTERS REPORTED WITH THE CARDIAC COMPUTED TOMOGRAPHY (CT) CPT CODES 75572, 75573, AND 75574

Revenue Code	Revenue Code Description (applicable to CY 2023 claims)	Used in CY 2025 OPPS Ratesetting (Based on CY 2023 claims)	Primary Cost Center	Primary Cost Center Description
0321	Radiology - Diagnostic	Y	03030	Angiocardiography
0350	Computed tomographic (CT scan) - general	Y	05700	CT Scan
0351	Computed tomographic (CT scan) – head scan	Y	05700	CT Scan
0352	Computed tomographic (CT scan) – body scan	Y	05700	CT Scan
0359	Computed tomographic (CT scan) – other CT scans	Y	05700	CT Scan

Because we wanted to determine whether the revenue edit could have affected the geometric mean costs for CPT codes 75572 through 75574, we conducted studies prior to the CY 2025 proposed rule and during the comment period to calculate HCPCS geometric mean costs for these codes based on a simulation that assumed that differing numbers of HOPDs (specifically 25 percent, 50 percent, and 75 percent of the total number of HOPDs billing for these services) would have assigned these services to the cardiology revenue code (048X) and cardiology cost center (03140). Based upon the results of the studies, we found that if 50 percent or more of HOPDs had billed these services with the cardiology revenue code (048X) and cardiology cost center (03140), the geometric mean cost for these codes would have increased and would have resulted in a revised APC assignment from APC 5571 (Level 1 Imaging with Contrast) to APC 5572 (Level 2 Imaging with Contrast). As noted in Table 67, under our standard ratesetting methodology, the geometric mean cost for the cardiac CT codes would be approximately $182, which maps to APC 5571, while an assumption that 50 percent of HOPDs billed with the cardiology revenue code (048X) and cardiology cost center (03140) on CY 2023 claims would result in a geometric mean cost of about $386, which maps to APC 5572.

We also reviewed the limited CY 2024 claims data for cardiac CT services available to determine the percentage of HOPDs that are utilizing the cardiology revenue code (048X) and cardiology cost center (03140) with the understanding that many HOPDs may still be updating their current billing practices. We did not find any appreciable change in current billing practices.

TABLE 67: STANDARD OPPS RATESETTING METHODOLOGY VS. SIMULATED 50 PERCENT OF HOPDS UTILIZING THE CARDIOLOGY REVENUE CODE AND CARDIOLOGY COST CENTER

Code	Number of Claims Used for Ratesetting	Standard OPPS Methodology GMC	Standard OPPS Methodology Ambulatory APC	50 percent HOPD GMC	50 percent HOPD Methodology APC
75572	26,879	$148.88	APC 5571	$240.70	APC 5572
75573	647	$182.26	GMC	$278.20	GMC
75574	69,377	$185.98	$181.72	$299.80	$386.46

Because the RTP edit associated with the cardiac CT codes may have affected the CY 2023 data we have available to establish the CY 2025 OPPS payment rates for these services, in the CY 2025 OPPS/ASC proposed rule, we requested information on the following topics regarding hospitals' billing practices for cardiac CT services:

(1) Where are cardiac CT services performed in a hospital? Are cardiac CT services performed in a dedicated cardiology department, radiology department, or some other hospital outpatient department?

(2) What factors determine the revenue code assignment for cardiac CT services (*i.e.,* the department in which the service is performed, the type of service that is performed, or some other factor)?

(3) What revenue codes are HOPDs reporting for these services in CY 2024? Are HOPDs using the cardiology revenue code on claims for cardiac CT services now that they are no longer restricted from using this revenue code?

We stated in the CY 2025 OPPS/ASC proposed rule that we would use the comments received and the information from the CY 2024 claims data to help us identify whether the current OPPS payment is appropriate for the cardiac CT codes, or whether we should revise the payment methodology for the CY 2025 OPPS. We received a significant number of comments in response to our Request for Information. While a major portion of the comments were part of a large write-in campaign, commenters provided information specific to their experiences in their facilities. We appreciate all the feedback and address the comments below.

Comment: We received a significant number of comments in response to our Request for Information about cardiac CT services and the billing practices for these services. Commenters ranged from specialty societies to healthcare providers who practice in a variety of settings of different sizes and in various locations throughout the United States.

In terms of where cardiac CT services are performed, commenters shared that cardiac CT services may be performed in a radiology department, an interventional radiology department, a cardiology department, or a clinic setting. Resources to furnish the services, such as staff, are utilized from both the cardiology and radiology departments. Many commenters described the test being performed in radiology departments utilizing cardiology nursing staff to prepare the patient, administer medications (such as IV beta blockers and nitroglycerin), and monitor the patient during and after the procedure.

In terms of the factors that determine the revenue code assignment for cardiac CT services, most commenters stated that the resources used for these services are very similar to other cardiac procedures such as cardiac stress tests or even cardiac catheterizations, which are assigned to the cardiology revenue code. Commenters described cardiac CT services as resource intensive, stating that the cross-department coordination between cardiology and radiology, the skill level of staff (technicians, nurses, and physicians), the expense of up-to-date CT equipment, and the amount of testing time involved is comparable to other more expensive and invasive cardiac tests.

In response to our request for the revenue codes hospital outpatient departments are reporting with cardiac CT services now that there is not an edit in place prohibiting them from using the cardiology revenue code, commenters stated that they want to use the cardiology revenue code when billing cardiac CT services, but they are unable to due to third-party edits (billing and payer) in place from clearinghouses, billing companies, or billing software companies. Some stated that they have continued to use the radiology revenue codes to prevent receiving claims denials. Another commenter stated their coding staff expressed compliance concerns with assigning cardiac CT services to a cardiology revenue code versus the CT revenue code. Commenters requested that CMS provide education about revenue code use for providers, healthcare facilities, clearinghouses, and health plans and indicated that explicit education would facilitate use of the cardiac revenue code with cardiac CT services.

Many commenters shared how many cardiac CT services are completed per year at their facilities. They expressed concern about the declining payment for such a complex, resource-intensive test that is used to accurately diagnose and manage coronary artery disease and the impact that insufficient payment could have on beneficiary access. Commenters noted that cardiac CT has been identified by the American College of Cardiology as a first line approach to manage patients with chest pain and asserted that cardiac CT is more clinically useful than more expensive, invasive tests such as cardiac catheterizations.

Response: We thank the commenters for their feedback regarding the clinical value cardiac CT services provide for clinicians diagnosing and managing patients with chest pain and coronary artery disease. We also thank commenters for describing the process of cardiac CT tests and all the resources used in providing those services and sharing information about selection of revenue code assignment when billing for CT services.

We acknowledge commenters' concerns that, even with the revenue code edit removed for CY 2024, there are a number of procedural and logistical hurdles to providers billing with the cardiology revenue codes in CY 2024 and that it would not be realistic to expect a majority of providers to be billing with the cardiology revenue codes at this point due to those issues. We acknowledge that process changes often happen slowly and that it may take time for facilities to update their billing practices, even if the majority of providers would prefer to bill these codes with the cardiology revenue code.

We appreciate commenters sharing their concerns about third-party edits that are still affecting the billing process and understand their request for additional guidance from CMS. We remind readers that we informed the public of our findings and the changes that we made in the January 2024 OPPS Update (Transmittal 12421, Change Request 13488), dated December 21, 2023. Specifically, we stated the following: ''We recently identified an outdated return-to-provider (RTP) Healthcare Common Procedure Coding System-to-revenue code edit that resulted in certain claims submissions being limited to specific revenue codes for CPT codes 75572, 75573, and 75574. These claims were returned to the providers for resubmission. The outdated edit has been removed; and providers, when appropriate, may begin billing these codes with any appropriate revenue code.'' We have also stated in section 20.5 in Chapter 4 (Part B Hospital) of the Medicare Claims Processing Manual, CMS ''does not instruct hospitals on the assignment of HCPCS codes to revenue codes for services provided under OPPS since hospitals' assignments of cost vary. Where explicit instructions are not provided, HOPDs should report their charges under the revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report.'' We have consistently stated that hospital outpatient facilities must determine the most appropriate cost center and revenue code for the cardiac CT codes (87 FR 71849, 88 FR 81664). While we believe that this information should suffice for education to third parties who may have edits in place that affect the selection of a cardiology

revenue code when billing for cardiac CT services and for other interested parties who have compliance concerns, we will be providing public education and instruction through the CMS Medicare Learning Network (MLN).

We are persuaded after a review of the comments submitted that a majority of providers who bill these codes would prefer to bill them with the cardiology revenue code but have not been able to do so due to the prior revenue code edit and remaining procedural hurdles that flow from the prior revenue code edit. As stated above, if there had not been a systems edit in place preventing providers from choosing the cardiology revenue code (048X) and cardiology cost center (03140) and 50 percent or more of HOPDs had billed these services with the cardiology revenue code and cardiology cost center, the geometric mean cost for these codes would have increased and would have resulted in a revised APC assignment from APC 5571 (Level 1 Imaging with Contrast) to APC 5572 (Level 2 Imaging with Contrast). Therefore, for CY 2025, we are using our equitable adjustment authority under section 1833(t)(2)(E) of the Act to utilize an alternative methodology to calculate the payment for the cardiac CT services in CY 2025 and subsequent years. Specifically, we are finalizing a temporary reassignment of the cardiac CT codes (CPT code 75572 through 75574) to APC 5572 (Level 2 Imaging with Contrast). See Table 68 for the CY 2025 Proposed and Final OPPS SI and APC assignments for CPT codes 75572 through 75574. We anticipate that it may take 3 to 4 years to see an impact from changes in billing practices from providers based on the comments we received on the proposed rule. If we do not see a significant change in the geometric mean costs after several years, we would revert payment for these services to the standard OPPS payment methodology and assign the cardiac CT codes to appropriate APCs based on their geometric mean costs. We note that this APC reassignment will not involve reprocessing of claims with dates prior to January 1, 2025.

TABLE 68: CY 2025 PROPOSED AND FINAL OPPS SI AND APCS FOR CPT CODES 75572, 75573, and 75574

CPT Code	Long Descriptor	Proposed CY 2025 APC	Proposed CY 2025 SI	Final CY 2025 APC	Final CY 2025 SI
75572	Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology (including 3D image postprocessing, assessment of cardiac function, and evaluation of venous structures, if performed).	5571	S	5572	S
75573	Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology in the setting of congenital heart disease (including 3D image postprocessing, assessment of left ventricular (LV) cardiac function, right ventricular (RV) structure and function and evaluation of vascular structures, if performed).	5571	S	5572	S
75574	Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed).	5571	S	5572	S

The final CY 2025 payment with rates for the cardiac CT CPT codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

2. Neurostimulator and Related Procedures (APCs 5461 Through 5465)

In the CY 2021 OPPS/ASC final rule with comment period, we finalized a five-level APC structure for the Neurostimulator and Related Procedures series (85 FR 85968 through 85970). For a detailed discussion of the history of neurostimulators policy, we refer readers to the CY 2015, CY 2020, CY 2021, CY 2023, and CY 2024 OPPS/ASC final rules with comment period (79 FR 66807 through 66808; 84 FR 61162 through 6116, 85 FR 85968 through 85970; 87 FR 71869; 88 FR 81645 through 81658).

In the CY 2024 OPPS/ASC final rule with comment period, we did not make any changes to the 5 level APC structure for the Neurostimulator and Related Procedures series. However, we made temporary changes to services previously assigned to the neurostimulator APCS: reassigning HCPCS code 33276 (Insertion of phrenic nerve stimulator system (pulse generator and stimulating lead[s]), including vessel catheterization, all imaging guidance, and pulse generator initial analysis with diagnostic mode activation, when performed), with predecessor code 0424T, and 33287 (Removal and replacement of phrenic nerve stimulator, including vessel

catheterization, all imaging guidance, and interrogation and programming, when performed; pulse generator), from New Technology APC 1581 to New Technology APC 1580 (88 FR 81645 through 81647) and assigning HCPCS code 0266T (Implantation or replacement of carotid sinus baroreflex activation device; total system (includes generator placement, unilateral or bilateral lead placement, intra-operative interrogation, programming, and repositioning, when performed)) to New Tech APC 1580 (88 FR 81658).

For the CY 2025 OPPS/ASC proposed rule, we proposed to maintain the 5 level APC structure for the Neurostimulator series. We proposed to assign HCPCS codes 0266T and 33276 to the APC 5465 (Level 5 Neurostimulator and Related Procedures), given the cost and coding changes associated with those codes. We noted that while we have claims data available for HCPCS codes in the neurostimulator APC series that are no longer active, there would also be cost and coding changes associated with new CPT codes as their claims data become available.

While we continued to believe that a five-level structure for the Neurostimulator and Related Procedures APC series remained appropriate, we also solicited comments from interested parties in CY 2025 OPPS/ASC proposed rule on the need for a Level 6 APC, given the clinical and estimated cost characteristics of the services currently assigned to APC 5465 (Level 5 Neurostimulator and Related Procedures).

In summary, for the CY 2025 OPPS, we proposed to maintain the current 5-level structure for the Neurostimulator and Related Procedure APC series, assign HCPCS codes 0266T and 33276 to APC 5465, and solicited comment creating an additional Level 6 Neurostimulator APC.

See Table 69 for the services that we proposed to reassign to the Level 5 APC and Table 70 below for the proposed CY 2025 Neurostimulator and Related Procedures APCs.

TABLE 69: PROPOSED CY 2025 APC AND STATUS INDICATOR ASSIGNMENTS

HCPCS Code	HCPCS Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
0266T	Implantation or replacement of carotid sinus baroreflex activation device; total system (includes generator placement, unilateral or bilateral lead placement, intra-operative interrogation, programming, and repositioning, when performed)	J1	5465
33276	Insertion of phrenic nerve stimulator system (pulse generator and stimulating lead[s]), including vessel catheterization, all imaging guidance, and pulse generator initial analysis with diagnostic mode activation, when performed	J1	5465

TABLE 70: PROPOSED CY 2025 NEUROSTIMULATOR AND RELATED PROCEDURES APCS

APC	Group Title	SI	Proposed CY 2025 APC Geometric Mean Cost
5461	Level 1 Neurostimulator and Related Procedures	J1	$3,653.12
5462	Level 2 Neurostimulator and Related Procedures	J1	$6,779.89
5463	Level 3 Neurostimulator and Related Procedures	J1	$13,472.02
5464	Level 4 Neurostimulator and Related Procedures	J1	$21,777.61
5465	Level 5 Neurostimulator and Related Procedures	J1	$31,222.52

At the August 26, 2024, HOP Panel Meeting, several presenters provided information to the Panel regarding HCPCS codes 33276 (Insertion of phrenic nerve stimulator system (pulse generator and stimulating lead[s]), including vessel catheterization, all imaging guidance, and pulse generator initial analysis with diagnostic mode activation, when performed), 64568 (Open implantation of cranial nerve (*e.g.,* vagus nerve) neurostimulator electrode array and pulse generator), and 0266T (Implantation or replacement of carotid sinus baroreflex activation device; total system (includes generator placement, unilateral or bilateral lead placement, intra-operative interrogation, programming, and repositioning, when performed)). The presenters advised the Panel to request that CMS either create a new Level 6 Neurostimulator and Related Procedures APC and consider including the three codes mentioned above in the Level 6 Neurostimulator APC, or alternatively assign the three codes mentioned above to New Technology APC 1580 (New Technology—Level 43 ($40,001–$50,000)). The HOP Panel agreed with the presenter and made that recommendation.

Comment: Many commenters requested the creation of a Level 6 Neurostimulator and Related Procedures APC, noting that creating an additional APC would align payment more closely with costs incurred while maintaining access to services assigned to that APC. Many of these commenters requested that if a Level 6 APC could not be created, that HCPCS code 0266T be maintained in New Technology APC 1580 for an additional year. Other commenters asked that CMS reconsider the proposed assignment of HCPCS code 33276 to APC 5465 and place the code in an APC consistent with the resources required for the procedure. One of those commenters specifically requested an APC assignment to New Technology APC 1580 until a more permanent solution to address disparity between payment and resource costs could be determined. Some commenters requested that HCPCS code 64568 be moved from APC 5465 (Level 5 Neurostimulator and Related Procedures) to New Technology APC 1580. Two commenters supported maintaining the current 5 level APC structure for the Neurostimulator series. One of those commenters recommended that HCPCS codes 33276 and 0266T continue to be assigned to New Technology APC 1580 to maintain beneficiary access while additional claims data are collected, while the other recommended more broadly that New Technology APCs be used for similar scenarios where codes had high cost but low volume. One commenter believed that HCPCS code 64568 should remain assigned to APC 5465 (Level 5 Neurostimulator and Related Procedures) since it is a long-established procedure and would not be expected to have changes in cost or volume the way ''new'' technologies would.

Response: We appreciate the thoughtful responses commenters have provided with regard to the proposed policy and our requests for comments. While we understand the concerns and issues commenters have raised, we believe that the 5 level APC structure for the series continues to remain appropriate in grouping together procedures with similar cost and clinical characteristics. Therefore, we are finalizing the 5 level APC structure for the Neurostimulator and Related Procedures APCs.

However, we also recognize the concerns commenters have raised regarding HCPCS codes 0266T and 33276 and in particular, the request that we return those codes to their current New Technology APC placements should we establish a final policy of not creating an additional APC level. Thus, we are assigning these codes to New Tech APC 1580, the same APC these codes were assigned to in CY 2024, in this CY 2025 OPPS/ASC final rule with comment period.

For HCPCS code 64568, we believe its current assignment to the Level 5 APC remains appropriate. The code has been assigned to the Neurostimulator and Related Procedures APC series for many years and the claims volume we have for the procedure allow for an estimate of the associated resource costs. Therefore, we do not believe a New Tech APC assignment is appropriate at this time, as New Technology APC placements are typically used when insufficient cost and claims data are available to make appropriate clinical APC assignments. We will continue to monitor the data as additional claims become available for these codes.

After consideration of the public comments we received, we are finalizing our proposal with modification. We are finalizing the

proposed 5 level APC structure for the Neurostimulator and Related Procedures APC series. However, we are continuing to assign HCPCS codes 33276 and 0266T to New Technology APC 1580 (New Technology—Level 43 ($40,001–$50,000)) in CY 2025 rather than finalizing our proposal to assign them to APC 5465. See Table 71 for the status indicators and APC assignments for HCPCS codes 0266T and 33276. We note that we have previously discussed the placement of these codes in New Technology APCs until such time that sufficient claims data were available to assign those codes to clinical APCs (87 FR 81769, 88 FR 81645 through 81647, 88 FR 81658). We will continue to monitor the data as more claims for these codes become available. Finally, we are maintaining the APC assignment of HCPCS code 64568 to APC 5465 (Level 5 Neurostimulator and Related Procedures). Please see Table 74 for the final CY 2025 OPPS APC and SI assignments for HCPCS codes 0266T and 33276.

TABLE 71: FINAL CY 2025 APC AND STATUS INDICATOR ASSIGNMENTS

HCPCS Code	HCPCS Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0266T	Implantation or replacement of carotid sinus baroreflex activation device; total system (includes generator placement, unilateral or bilateral lead placement, intra-operative interrogation, programming, and repositioning, when performed)	S	1580
33276	Insertion of phrenic nerve stimulator system (pulse generator and stimulating lead[s]), including vessel catheterization, all imaging guidance, and pulse generator initial analysis with diagnostic mode activation, when performed	S	1580

3. Focal Laser Ablation, CPT Code 0655T (APC 5375)

Focal laser ablation is an MRI directed and image guided, minimally invasive procedure that targets prostate cancer tissue. The focal laser ablation procedure, represented by CPT code 0655T (Transperineal focal laser ablation of malignant prostate tissue, including transrectal imaging guidance, with mr-fused images or other enhanced ultrasound imaging), became effective July 1, 2021, and describes the destruction of localized prostate cancer tissue with the high energy source of focal laser radiation. The procedure utilizes real-time intraoperative prostate ultrasound fused with MRI guidance to allow the surgeon to plan the ablation and guide the laser targeting as well as providing real-time feedback to minimize changes to the tissues outside of the targeted ablation zone. This procedure offers another therapy option for select patients with localized intermediate risk prostate cancer.

For the CY 2025 OPPS/ASC proposed rule, we reviewed the CY 2023 claims submitted between January 1, 2023, through December 31, 2023, that were processed on or before December 31, 2023, for CPT code 0655T and found seven single frequency claims available for ratesetting, with a resulting geometric mean cost of $12,777. Additionally, for the CY 2025 OPPS/ASC proposed rule, we examined the procedures assigned to the Urology Procedures APCs. Based on our examination of the procedures assigned to Urology and Related Procedures APCs and the available CY 2023 claims data, we stated that we believe it is appropriate to move CPT code 0655T to APC 5375 (Level 5 Urology and Related Services) from APC 5374 (Level 4 Urology and Related Services) because 0655T shares more resource cost and clinical homogeneity with procedures in APC 5375. Specifically, we explained that we believe CPT code 0655T shares resources and is clinical homogeneous with CPT code 0714T (Transperineal laser ablation of benign prostatic hyperplasia, including imaging guidance), and CPT code 52648 (Laser vaporization of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)). We noted that the seven available CY 2023 single frequency claims for CPT code 0655T would not significantly impact the geometric mean cost calculations for APC 5374 and APC 5375. Therefore, for CY 2025, we proposed to reassign CPT code 0655T from APC 5374 (Level 4 Urology and Related Services) to APC 5375 (Level 5 Urology and Related Services).

Comment: One commenter supported our proposal to reassign CPT code 0655T from APC 5374 (Level 4 Urology and Related Services) to APC 5375 (Level 5 Urology and Related Services), citing the clinical and resource homogeneity with CPT codes 52648 and 0714T. Furthermore, the commenter suggested we monitor the impact of the

reassignment on the geometric mean cost for APCs 5374 and 5375 to ensure payment stability.

Response: We thank the commenter for the support. Based on evaluation of their clinical and resource similarities, and taking into account updated claims data for this final rule with comment period, we continue to believe it is appropriate to reassign CPT code 0655T to APC 5375.

After consideration of the public comment we received, we are finalizing our policy without modification for CPT code 0655T. Please refer to Table 72 below for the final OPPS APC and status indicator assignments for HCPCS code 0655T for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 72: FINAL CY 2025 OPPS APC ASSIGNMENT AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0655T

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0655T	Transperineal focal laser ablation of malignant prostate tissue, including transrectal imaging guidance, with mr-fused images or other enhanced ultrasound imaging	J1	5375

4. Bone Mass Measurement: Biomechanical Computed Tomography (BCT) Analysis With and Without Vertebral Fracture Assessment, CPT Codes 0554T–0558T, 0743T (APCs 5521, 5523, and 5731)

CPT code 0743T (Bone strength and fracture risk using finite element analysis of functional data and bone mineral density (BMD), with concurrent vertebral fracture assessment, utilizing data from a computed tomography scan, retrieval and transmission of the scan data, measurement of bone strength and BMD and classification of any vertebral fractures, with overall fracture-risk assessment, interpretation and report) became effective January 1, 2023. This code describes the service associated with biomechanical computed tomography (BCT) analysis with concurrent vertebral fracture assessment (VFA).

In the CY 2023 OPPS/ASC final rule (87 FR71844 through 71846), we stated that, based on our review and understanding of the service, BCT analysis does not meet Medicare's definition of bone mass measurement, as specified in § 410.31(a), which specifies the coverage of, and payment for, bone mass measurements for Medicare beneficiaries. Therefore, we assigned the BCT codes (CPT codes 0554T–0558T) and CPT code 0743T to status indicator ''E1'' to indicate that these codes are not covered by Medicare, and not paid by Medicare when submitted on outpatient claims (any outpatient bill type). The complete long descriptors for the codes can be found below:

0554T: Bone strength and fracture risk using finite element analysis of functional data and bone-mineral density utilizing data from a computed tomography scan; retrieval and transmission of the scan data, assessment of bone strength and fracture risk and bone-mineral density, interpretation and report.

0555T: Bone strength and fracture risk using finite element analysis of functional data and bone-mineral density utilizing data from a computed tomography scan; retrieval and transmission of the scan data.

0556T: Bone strength and fracture risk using finite element analysis of functional data and bone-mineral density utilizing data from a computed tomography scan; assessment of bone strength and fracture risk and bone mineral density.

0557T: Bone strength and fracture risk using finite element analysis of functional data and bone-mineral density utilizing data from a computed tomography scan; interpretation and report.

0558T: Computed tomography scan taken for the purpose of biomechanical computed tomography analysis.

In the CY 2024 OPPS/ASC proposed rule, we proposed to continue to assign the codes to status indicator ''E1'' to indicate non-coverage and non-payment for the services. (See Addendum B for CY 2024/ASC proposed rule via the internet on the CMS website.) However, as discussed in the CY 2024 OPPS/ASC final rule with comment period (88 FR 81660 through 81661), based on comments received and further review of the issue, we did not finalize our proposal. We instead assigned CPT code 0555T to APC 5731 (Level 1 Minor Procedures) and SI of ''S,'' (Procedure or Service, Not Discounted When Multiple; Paid under OPPS; separate APC payment), CPT code 0556T to APC 5523 (Level 3 Imaging without Contrast) and SI of ''S,'' and CPT code 0558T to APC 5521 (Level 1 Imaging without Contrast) with SI of ''S,'' which were the same APC assignments for the codes between CY 2019 and CY 2022. In addition, we assigned CPT codes 0554T, 0557T, and 0743T to SI of ''M'' (Items and Services Not Billable to the MAC. Not paid under OPPS) to indicate that these codes are not payable under the OPPS because they describe physician-only services. The final payment rates for these codes were listed in the OPPS Addendum B that was released with the CY 2024 OPPS/ASC final rule via the internet on the CMS website.

For the CY 2025 OPPS/ASC proposed rule, we proposed to assign CPT codes 0554T and 0557T to status indicator of ''M'' as the codes include or describe a professional component of the service

that is provided by a physician as evidenced by ''interpretation and report'' in the descriptor. It is important to note that CPT code 0554T is a comprehensive code (or ''parent code'') that includes both technical and professional components. Because there are additional CPT codes (''child codes'') that facilities can use to describe the technical components of BCT analysis, we explained that we believed it was appropriate for the comprehensive code that includes the professional component to be assigned a SI of ''M''. In addition, we proposed to assign CPT code 0555T to APC 5731 (Level 1 Minor Procedures) and a SI of ''S,'' CPT code 0556T to APC 5523 (Level 3 Imaging without Contrast) and a SI of ''S,'' and CPT code 0558T to APC 5521 (Level 1 Imaging without Contrast) with a SI of ''S.''

For the CY 2025 OPPS/ASC proposed rule, we explained that we believe the service described by CPT code 0743T is a comprehensive code and involves both a technical component and a professional component that are performed by hospital outpatient facilities. Unlike CPT 0554T, there are no additional codes to describe the technical component(s) of this service (BCT analysis and VFA) and there is a parenthetical note instructing facilities to not report the BCT analysis codes (0554T–0557T) with CPT code 0743T. Consequently, we proposed to assign CPT code 0743T to APC 5523 (Level 3 Imaging without Contrast) and we proposed to change the status indicator for 0743T from ''M'' to ''S'' (Procedure or Service, Not Discounted When Multiple; Paid under OPPS; separate APC payment) for CY 2025. See Table 73 below.

Comment: We received several comments describing support for the use of BCT services to assess bone strength, bone mineral density, and fracture risk indicating that these services were cost-effective and provided valuable clinical information. Commenters noted the significant impact that osteoporosis has on Medicare beneficiaries, especially women. They shared that BCT is effective in clinical practice when determining use and approval of anti-osteoporotic medications that are dependent on bone density assessments. They also noted that DXA (dual-energy X-ray absorptiometry) scans (most common test used to measure bone mineral density) may be difficult to do when patients have scoliosis or extensive degenerative diseases and thus prefer to use BCT.

Response: We appreciate the feedback supporting BCT services.

Comment: We received one comment requesting that we assign payable status indicators for CPT codes 0554T and 0557T.

Response: We thank the commenter for their request. As stated above, we proposed to continue to assign CPT codes 0554T and 0557T a status indicator of ''M'' as the codes include or describe a professional component of the service that is provided by a physician as evidenced by ''interpretation and report'' in the descriptor. CPT code 0554T is a comprehensive code (or ''parent code'') that includes both technical and professional components. Because there are additional CPT codes (''child codes'') that facilities can use to describe the technical components of BCT analysis, it is appropriate for the comprehensive code that includes the professional component to be assigned a SI of ''M''. CPT code 0557T describes only the professional component of the BCT analysis code and therefore, is appropriately assigned a SI of ''M''.

Comment: We received several comments expressing support for the proposed APC and status indicator assignments.

Response: We thank the commenters for their support.

Comment: Several commenters believe that Medicare has limited access to some BCT services in the hospital outpatient setting by assigning non-payable status indicators. Consequently, they are requesting that the pertinent codes be allowed through national coverage.

Response: We appreciate these comments. In Transmittal 2362 dated September 19, 2019, we note the BCT codes, specifically CPT codes 0554T, 0555T, 0556T, 0557T, and 0558T were listed as covered effective July 1, 2019 under NCD 150.3 Bone Mineral Density Studies. These services were added in error and were retracted due to ''added in error'' in Transmittal 11952 dated April 12, 2023. We apologize for the confusion this has caused and the mistaken belief that ''coverage was revoked'' when in fact these services had not been approved for national coverage.

While CMS further considers the issue of national coverage, we will finalize our proposed status indicator and (if applicable) APC assignments for CPT codes 0554T–0558T and CPT code 0743T as listed in Table G42 below.

The regulation at 42 CFR 410.31(f) (Bone mass measurement: Conditions for coverage and frequency standards) recognizes that CMS may use the Medicare National Coverage Determination (NCD) process to examine additional BMM systems for coverage. The public may request an NCD for a particular item or service by following the procedures established at 78 FR 48164 (August7, 2013). The commenter may request a new NCD (or seek reconsideration of an existing NCD). As a reminder to our readers, National Coverage Determinations do not include coding and payment decisions.

In summary, after consideration of the public comments, we are finalizing our proposed status indicator and (if applicable) APC assignments for CPT codes 0554T–0558T and CPT code 0743T without modification. The final payment rates for the separately payable codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 73: FINAL CY 2024 AND CY 2025 OPPS APC & STATUS INDICATOR ASSIGNMENTS FOR BCT CODES 0554T – 0558T, 0743T

CPT Codes	Long Descriptors	FINAL CY 2024 OPPS/ASC SI	FINAL CY 2024 OPPS/ASC APC	FINAL CY 2025 OPPS/ASC SI	FINAL CY 2025 OPPS/ASC APC

	tomography scan, retrieval and transmission of the scan data, measurement of bone strength and BMD and classification of any vertebral fractures, with overall fracture-risk assessment, interpretation and report				

5. 3D Contour Simulation, CPT Code 0944T (APC 5523)

CAS-One® IR is Software as a Service (SaaS) that assists a physician or other qualified health care professional during percutaneous liver ablation treatments by providing 3D images that allow the physician to visualize the liver lesions, as well as define suitable margins and pathways to perform the ablation procedure. The AMA CPT Editorial Panel established CPT code 0944T effective January 1, 2025:

The long descriptor for CPT code 0944T is as follows: 3D contour simulation of target liver lesion(s) and margin(s) for image-guided percutaneous microwave ablation.

In the CY 2025 OPPS/ASC proposed rule with comment period, we proposed to assign 0944T to status indicator ''E1'' to indicate that the code is not payable by Medicare when submitted on outpatient claims because the service had not received FDA clearance at the time of the assignment.

Comment: We received one comment from the manufacturer. The commenter states that the 3D simulation is always performed with CPT code 47382 (Ablation, 1 or more liver tumor(s), percutaneous, radiofrequency) which is assigned to APC 5361 (Level 1 Laparoscopy and Related Services) and has a payment rate of approximately $5,800. The manufacturer asserts the costs for the 3D simulation service are approximately $3,000 which include a CT of the abdomen with contrast, utilization of the CAS-One® system, sterile accessories (patient markers, instrument markers, drapes, and marker templates), and annual services for the system (including maintenance, warranty, software subscription, and clinical support). They have requested that we reassign CPT code 0944T to APC 5362 (Level 2 Laparoscopy and Related Service) with a payment rate of approximately $10,400 and a status indicator of J1, representing a comprehensive service that includes both the ablation procedure (CPT code 47382) and the 3D simulation service (CPT code 0944T).

Response: We thank the commenter for their input. We disagree that we should consider adding the costs of both the ablation procedure (CPT code 47382) and the 3D simulation service (CPT code 0944T) to determine the appropriate payment for the 3D simulation service. The ablation procedure (CPT code 47382) is a primary service as identified by the OPPS status indicator ''J1'' (Hospital Part B Services Paid Through a Comprehensive APC; Paid under OPPS). The ablation procedure can be done with or without 3D simulation services, but 3D simulation services are never provided without the primary ablation services. Under our C–APC policy, we designate a service described by a HCPCS code assigned to a C–APC as the primary service when the service is identified by OPPS status indicator ''J1''. Because the 3D simulation service is always performed with the ablation service, we believe the 3D simulation could be considered an adjunctive service. (See 78 FR 74865 and 79 FR 66799.) Payments for adjunctive services are generally packaged into the payments for the primary services.

After review of the procedure description for 3D simulation and input from our CMS medical officers, we do not believe it would be appropriate to always package the costs of the 3D simulation procedure into the ablation procedure. Based on the technology and its potential use in the HOPD setting, we used CPT code 75557 (Cardiac magnetic resonance imaging for morphology and function without contrast material) as a comparator code to determine an APC and status indicator assignment for CPT 0944T. While we realize that there are significant differences between these two codes, we believe that both codes use a type of imaging service to provide valuable information for the clinician to assist in further diagnosing and treating patients. CPT code 75557 is assigned to APC 5523 (Level 3 Imaging without Contrast) and a status indicator of ''Q1'' (STV-Packaged Codes; Paid under OPPS). We also note that the CAS-One® IR has received 510(k) Premarket Notification from the FDA and should no longer be assigned status indicator ''E1''.

In summary, we are revising the status indicator for CPT code 0944T from status indicator ''E1'' to status indicator ''Q1'' (STV-Packaged Codes; Paid under OPPS), indicating a conditionally packaged procedure. CPT code 0944T will be packaged when it is provided with a significant procedure but will be separately paid when the service appears on the claim without a significant procedure (see Table 74). We are assigning CPT code 0944T to APC 5523 (Level 3 Imaging without Contrast) with a final payment rate of around $240.00. Please refer to Table G43 for the code descriptor, APC assignment, and status indicator assignment for CPT code 0944T for CY 2025. The final payment rate for 0944T can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 74: CY 2025 PROPOSED AND FINAL OPPS SI AND APC FOR CPT CODE 0944T

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0944T	3D contour simulation of target liver lesion(s) and margin(s) for image-guided percutaneous microwave ablation	E1		Q1	5523

6. Administration of Lacrimal Ophthalmic Insert Into Lacrimal Canaliculus, CPT Code 68841(APC 5503)

Dextenza, which is described by HCPCS code J1096 (Dexamethasone, lacrimal ophthalmic insert, 0.1 mg), is a drug indicated for ''the treatment of ocular inflammation and pain following ophthalmic surgery'' and for ''the treatment of ocular itching associated with allergic conjunctivitis.'' [24] The drug manufacturer previously asserted that this drug is administered and described by CPT code 0356T (Insertion of drug-eluting implant (including punctal dilation and implant removal when performed) into lacrimal canaliculus, each). Interested parties also previously stated that Dextenza is inserted in a natural opening in the eyelid (called the punctum) and that the drug is designed to deliver a tapered dose of dexamethasone to the ocular surface for up to 30 days. CPT code 0356T was deleted December 31, 2021, and replaced with CPT code 68841 (Insertion of drug-eluting implant, including punctal dilation when performed, into lacrimal canaliculus, each), effective January 1, 2022.

Interested parties currently assert that the drug, Dextenza, is administered and described by CPT code 68841. We refer readers to the CY 2023 OPPS/ASC final rule with comment period for a detailed history of CMS payment assignments for CPT code 0356T and CPT code 68841 (87 FR 71840). See section XIII.F. of this final rule with comment period for the CY 2025 payment status of the drug, Dextenza, which may be described by HCPCS code J1096.

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81651 through 81653), we stated that based on the claims data available at the time, we continued to believe that the assignment of CPT code 68841 to APC 5503 (Level 3 Extraocular, Repair, and Plastic Eye Procedures) was appropriate based on the geometric mean costs. We also reiterated our reasoning that CPT code 68841 was appropriately assigned to an OPPS status indicator of ''Q1'' and ASC payment indicator of ''N1.'' We continued to believe that CPT code 68841 is mostly performed during ophthalmic surgeries, such as cataract surgeries. A status indicator ''Q1,'' indicating a conditionally packaged procedure, describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a surgical procedure, HCPCS codes that are conditionally packaged under the OPPS are generally packaged (payment indictor ''N1'') under the ASC payment system. Although stakeholders stated this is an independent surgical procedure and should not be packaged into the primary ophthalmic procedure in which the drug and drug administration are associated, we did not agree based on observed clinical patterns of how the drug is used. Based on CY 2024 claims data, out of over 7,000 total frequency claims, CPT code 68841 was used independently only about 2 percent of the time, meaning that the other 98 percent of the time CPT code 68841 had its payment packaged into the primary procedure with which it is associated.

These data reinforced our belief that Dextenza and CPT code 68841 are not furnished independently of a surgical procedure and should be packaged into the primary ophthalmic procedure with which the drug and drug administration are associated. While we recognized that there are some claims that may only include CPT code 68841 without a primary ophthalmic surgery on the claim, we did not believe that this is a frequent occurrence based on our claims data and clinical use patterns; as previously mentioned, our claims data showed that only 2 percent of claims are performed independently of another primary procedure.

For CY 2025, we proposed to continue to assign CPT code 68841 to APC 5503 (Level 3 Extraocular, Repair, and Plastic Eye Procedures). We also proposed to continue to assign CPT code 68841 to OPPS status indicator ''Q1'' and an ASC payment indicator of ''N1.'' The issue of payment for CPT code 68841 was brought to the Advisory Panel on Hospital Outpatient Payment (also known as HOP Panel) in 2024 for CY 2025 rulemaking. At the August 2024 meeting, based on the information presented, the Panel made no recommendation to CMS regarding changing the proposed status indicator assignment, Q1, for HCPCS code 68841 for CY 2025.

Comment: We received input from several interested parties contending that increased and separate payment for CPT code 68841, the code that can be used to describe the administration of the drug Dextenza, is required to ensure continued beneficiary access to Dextenza (HCPCS code J1096) in both the HOPD and ASC settings. Commenters emphasized that the lack of payment disproportionately and negatively affects the ASC setting. Several commenters pointed to the clinical importance of providing Dextenza to patients, noting that it reduces ocular pain and inflammation and reduces the burden of topical eyedrop application. Additionally, commenters stated that they usually perform the procedure to administer Dextenza in conjunction with ophthalmic surgeries.

Commenters generally did not disagree with the proposed APC assignment, but rather recommended CMS pay separately for the procedure.

[24] FDA Package Insert. *https://www.accessdata.fda.gov/drugsatfda_docs/label/2021/208742s007lbl.pdf.*

Many of these commenters recommended CMS assign CPT code 68841 to a status indicator of ''J1,'' indicating a comprehensive APC procedure. Commenters believed that ''J1'' would be the most accurate status indicator assignment and would generate consistency within APC 5503 (Level 3 Extraocular, Repair, and Plastic Eye Procedures), as all other codes in APC 5503 are assigned to status indicator ''J1.'' Commenters stated that CPT code 68841 required an additional 5 minutes of operating time and the assistance of an ophthalmic technician, and without payment for those costs, it was difficult to provide the drug to Medicare beneficiaries.

Commenters did not agree with CMS that the fact that CPT code 68841 was performed as a standalone procedure only two percent of the time was an adequate justification for assigning a ''Q1'' status indicator. They believed, and provided examples, that there are many other procedures that are performed independently at that frequency or a lower percentage of the time, that are assigned to a payable status indicator for hospital outpatient purposes and thus also are paid separately in the ASC setting. For example, commenters mentioned CPT code 64415 (Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance when performed) as an example of a procedure with a lower percentage of single frequency claims and that is assigned to a payable status indicator; a status indicator of ''T'' in this example. Commenters also believed that CPT code 68841 was similar to other procedures for introducing a product to the eye, such as CPT code 66020 (Injection, anterior chamber of eye (separate procedure); air or liquid) and should be paid in a similar manner. Commenters believed the procedure described by CPT code 68841 is a distinct surgical procedure that requires additional operating room time and resources. These commenters believed that the cataract surgery is conducted and concluded, and then the procedure described by CPT code 68841 begins.

Response: We thank commenters for their feedback. We have long maintained that Dextenza is a drug that functions as a surgical supply and should be packaged under our packaging policy at 42 CFR 419.2(b), which lists the types of items and services for which payment is packaged under the OPPS. Specifically, § 419.2(b)(16) includes drugs and biologicals that function as supplies when used in a surgical procedure as packaged costs. Historically, we have stated that we consider all items related to the surgical outcome and provided during the hospital stay in which the surgery is performed, including postsurgical pain management drugs, to be part of the surgery for purposes of our drug and biological surgical supply packaging policy (79 FR 66875). As such, the drug administration procedure, CPT code 68841, is also supporting the main ocular procedure being performed. CPT code 68841 should, therefore, be packaged as an intraoperative service under § 419.2(b)(14).

Based on the rationale provided in the CY 2024 OPPS/ASC final rule with comment period, (88 FR 81651 through 81653), the procedure described by CPT code 68841 had its payment packaged into another procedure 98 percent of the time, meaning that it is not an independent surgical procedure as commenters assert. Rather, CPT code 68841 is used to support the primary procedure being performed and is a supportive intraoperative service that is a part of that primary procedure. We reiterate that both Dextenza and its administration impact the surgical outcome of the primary procedure and are provided during the hospital stay in which the surgery is performed, which we consider to be part of the surgery for purposes of our drug and biological surgical supply packaging policy. Although interested parties state this is an independent surgical procedure and should not be packaged into the primary ophthalmic procedure in which the drug and drug administration are associated, based on expected and observed clinical patterns as to how the drug is used, we do not agree.

When revaluating the claims data available for CY 2025, CPT code 68841 has 94 single frequency claims in the OPPS out of over 4200 total frequency claims, meaning that 98 percent of the time CPT code 68841 was furnished with another primary procedure into which CPT code 68841's payment was packaged. This confirms our belief that CPT code 68841 is a component of another primary procedure, supportive of that procedure, and should have its payment packaged into that procedure.

Additionally, as commenters were most concerned about a financial disincentive, we note that utilization has been increasing year over year based on utilization patterns of Dextenza in the ASC setting. For example, from claims year CY 2022 to claims year CY 2023, the number of units of Dextenza billed increased from approximately 260,000 to approximately 320,000 units, which reflects a nearly 20 percent year over year increase in utilization. Therefore, we do not believe that our packaging policies are hindering appropriate utilization as suggested by commenters. We note that HCPCS code J1096, which may be used to describe the drug, Dextenza, is a qualifying product for separate payment in both the OPPS and ASC under our policy to implement section 4135 of the CAA, 2023. Please see section XIII.F. of this final rule with comment period, for additional information.

For the reasons discussed, we continue to believe that it is appropriate to assign CPT code 68841 to a status indicator ''Q1,'' indicating a conditionally packaged procedure, which describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a surgical procedure, HCPCS codes that are conditionally packaged under the OPPS are generally packaged (payment indictor ''N1'') under the ASC payment system. We do not believe the HCPCS codes suggested by commenters that are not conditionally packaged are analogous to CPT code 68841. Therefore, our analysis was based on claims data specific to CPT code 68841 in order to confirm the appropriateness of the assignment to an OPP SI = ''Q1'' and ASC PI = ''N1.''

After consideration of the public comments, we are finalizing our proposal, without modification, to assign CPT code 68841 to APC 5503 with OPPS status indicator ''Q1'' (STV Packaged Codes) for CY 2025, which typically means there will be a packaged APC payment if this code is billed on the same claims as a HCPCS code assigned to status indictor ''S,'' ''T,'' or ''V'' (Clinic or Emergency Department Visit). In addition, based on the OPPS assignments, we are finalizing an ASC payment indicator of ''N1'' (Packaged service/item; no separate payment made) for CPT code 68841 for CY 2025.

For the final CY 2025 OPPS payment rates, we refer readers to OPPS Addendum B to this final rule with comment period. In addition, we refer readers to OPPS Addendum D1 to this final rule with comment period for the status indicator definitions for all codes reported under the OPPS. For the final CY 2025 ASC payment rates and payment indicators, we refer readers to Addendum AA and Addendum BB for the ASC payment rates, and Addendum DD1 for the ASC payment indicator and their definitions. The OPPS Addenda B and D1 and ASC Addenda AA, BB, and

DD1 are available via the internet on the CMS website.

Please refer to Table 75 for the code descriptor, APC assignment, status indicator assignment, and payment indicator assignment for CPT code 68841 for CY 2025.

TABLE 75: FINAL CY 2025 OPPS AND ASC PAYMENT ASSIGNMENTS FOR CPT CODE 68841

CPT Code	Long Descriptor	Final CY 2025 OPPS APC	Final CY 2025 OPPS SI	Final CY 2025 ASC PI
68841	Insertion of drug-eluting implant, including punctal dilation when performed, into lacrimal canaliculus, each	5503	Q1	N1

7. Application of Rigid Total Contact Leg Cast, CPT Code 29445 (APC 5102)

CPT code 29445 describes the procedure of applying a rigid leg cast. This code specifically refers to the process of immobilizing a leg fracture or injury by encasing the affected area in a hard cast, which helps to stabilize the bone and promote healing.

In the CY 2025 OPPS/ASC proposed rule, we proposed to continue to assign CPT code 29445 to APC 5102 (Level 2 Strapping and Cast Application) with status indicator ''T'' (Procedure or service, multiple procedure reduction applies; with a separate APC payment under OPPS) and proposed payment rate of $266.86.

Payment for CPT code 29445 was brought to the Advisory Panel on Hospital Outpatient Payment (also known as HOP Panel) at the August 2024 meeting. Based on the information presented, the HOP Panel recommended that ''CMS consider HCPCS code 29445, (Application of rigid total contact leg cast), a separately payable code when performed concurrently on the same date of service as any of the following: HCPCS codes 11402, 11403,11404, 11405, 11406, 11407, 97597, 97598, 15271, 15272, 15273, 15274, 15275, 15276, 15277, 15278.''

We received two public comments endorsing the recommendation of the HOP Panel.

Comment: One commenter requested that CMS ensure that hospital outpatient departments are able to receive separate payment for the CPT code 29445 when a debridement or graft is performed on the same date of service, which they are currently are unable to do because of a National Correct Coding Initiative (NCCI) edit that has been put in place.

Another commenter stated that if a wound debridement is performed (codes 11042–11047, 97597–97598), any primary or secondary dressing materials used to cover the wound would be included in the debridement and would not be separately reported. However, a TCC is not considered a wound dressing and is not included in the debridement procedure. Therefore, the commenter believed the cast application should be reported in addition to the code for the appropriate level of debridement, if performed, and should be mapped to APC 5102.

Response: We thank the commenters for providing this information related to CPT code 29445. We will take commenters' suggestions into consideration for the future rulemaking.

8. Aquabeam Waterjet Ablation Procedure, CPT Code 0421T (APC 5376)

CPT code 0421T (Transurethral waterjet ablation of prostate, including control of post-operative bleeding, including ultrasound guidance, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included when performed) describes the Aquabeam waterjet ablation procedure. According to the manufacturer, Aquabeam is for treating lower urinary tract symptoms (LUTS) due to benign prostatic hyperplasia (BPH) by using a high-velocity water stream to ablate and remove tissue from enlarged prostates.

For the CY 2025 proposed rule, we estimated the geometric mean cost for CPT code 0421T to be $10,438 based on 4,743 single claims and proposed to assign the service to APC 5376 (Level 6 Urology and Related Services), which has a geometric mean cost of $9,356.

Comment: One commenter supported our proposal to assign CPT code 0421T to APC 5376 due to the clinical and resource similarities to other procedures assigned to APC 5376.

Response: We appreciate the commenter's feedback on CPT code 0421T and we agree with the commenter's recommendation to finalize the APC assignment.

After consideration of the public comment we received, we are finalizing our proposal without modification to assign CPT code 0421T to APC 5376. Please refer to Table 76 below for the final OPPS APC and status indicator assignment for HCPCS code 0421T for CY 2025. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 76: FINAL CY 2025 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0421T

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0421T	Transurethral waterjet ablation of prostate, including control of post-operative bleeding, including ultrasound guidance, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included when performed	J1	5376

.

9. Aqueous Shunt to Extraocular Plate Reservoir Procedure, CPT Code 66180 (APC 5493)

For CY 2024, we assigned CPT code 66180 (Aqueous shunt to extraocular equatorial plate reservoir, external approach; with graft) to APC 5492 (Level 2 Intraocular Procedures). For CY 2025, as shown in OPPS Addendum B that was released with the CY 2025 OPPS/ASC proposed rule with comment period, we proposed to maintain the APC assignment to APC 5492 with a payment rate of $3,873.90 for CPT code 66180.

Comment: We received two comments requesting that we reassign CPT code 66180 to APC 5493 (Level 3 Intraocular Procedures) due to the code's similarity to CPT code 66179 (Aqueous shunt to extraocular equatorial plate reservoir, external approach; without graft), which we proposed to assign to APC 5493 for CY 2025. The commenters explained that the procedures are the same except that CPT code 66180 requires additional clinical work, time, and resources, associated with suturing a patch graft to the eye. The commenters also explained that the available claims data from the CY 2025 OPPS/ASC proposed rule support assigning CPT code 66180 to APC 5493. For example, per the commenters, the geometric mean cost for CPT code 66180 ($5,026.75) is closer to the geometric mean cost of APC 5493 ($5,298.63) than the geometric mean cost of APC 5492 ($4,159.32).

Response: We agree with the commenters that APC 5493 is a more appropriate placement for CPT code 66180 due to the additional clinical work and resources utilized to furnish the service due to its similarity to CPT code 66179. We also agree with the commenters that the geometric mean cost of CPT code 66180 confirms that the resources necessary to furnish the service more closely match the geometric mean cost of APC 5493 than APC 5492.

After consideration of the public comments received, we are finalizing an APC assignment for CPT code 66180 to APC 5493 for CY 2025. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

10. Arteriovenous Fistula (AVF) Creation Procedures, CPT Codes 36836 and 36837 (APC 5194)

CPT codes 36836 (Percutaneous arteriovenous fistula creation, upper extremity, single access of both the peripheral artery and peripheral vein, including fistula maturation procedures (*e.g.,* transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation) and 36837 (Percutaneous arteriovenous fistula creation, upper extremity, separate access sites of the peripheral artery and peripheral vein, including fistula maturation procedures (*e.g.,* transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation) describe a percutaneous arteriovenous fistula creation of an upper extremity. CPT code 36836 replaced HCPCS codes C9754 and G2170, while CPT code 36837 replaced HCPCS codes C9755 and G2171.

In the CY 2020 OPPS/ASC final rule with comment period (84 FR 61246 through 61247), in response to public comment, input from our medical advisors, and the available claims data, we reassigned C9754 and C9755 from APC 5193 to APC 5194. In the CY 2021 OPPS/ASC final rule with comment period (85 FR 85954 through 95955), we used our equitable adjustment authority to maintain the assignment of HCPCS codes G2170 and G2171 to APC 5194 (Level 4 Endovascular Procedures), given that both procedures are for ESRD patients that need dialysis, the predecessor codes had very similar median costs, and there were low claims data available. We continued the assignment of CPT codes 36836 and 36837 to APC 5194, with commenter support, for CY 2022.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 71863 through 71864), we assigned the newly established [25] CPT codes 36836 and 36837 to APC 5194 based on our assessment of the CY 2023 geometric mean cost of predecessor codes HCPCS codes G2170 ($12,055.90) and G2171 ($13,486.08) and their APC assignment. For CY 2024, we continued assignment to APC 5194 for HCPCS codes G2170 and G2171, with commenter support.

For CY 2025, we proposed to continue assignment of both CPT codes 36836 and 36837 to APC 5194 (Level 4 Endovascular) with a proposed payment rate of around $17,956. For the CY 2025 proposed rule, CPT code 36836 had227 single claims for ratesetting, a geometric mean cost (GMC) of around $11,234, and CPT code 36837 had 121 single claims for ratesetting and a GMC of around $16,770.

Comment: A few commenters supported our assignment of CPT code 36837 to APC 5194.

Response: We thank the commenters for their support.

Comment: Several commenters requested that we avoid a proposed payment reduction for CPT code 36837 by maintaining its CY 2024 APC assignment.

Response: We note that for CY 2025 we proposed to maintain the assignment

[25] The AMA's CPT Editorial Panel established CPT codes 36836 and 36837 during the January 2023 update and CMS deleted HCPCS codes G2170 and G2171, effective January 1, 2023.

of CPT code 36837 to APC 5194 and did not propose to reassign CPT code 36837 to a lower-paying APC.

Comment: Several commenters indicated that CPT codes 36836 and 36837 do not have similar resource costs and that CPT code 36836 would be more appropriately assigned to APC 5193, which had a proposed payment rate of $11,478.26, as opposed to continuing to assign the code to APC 5194, which had a proposed payment rate of $18,167.36. A commenter further suggested that the volume of current claims data is sufficient to support reassigning CPT code 36836 to APC 5193. The commenter believed that the proposed rule geometric mean cost data illustrated distinct differences in required resources to perform the procedures described CPT code 36836 (GMC: $10,123.79) and CPT code 36837 (GMC: $16,849.60) and that CPT code 36836 is significantly overpaid in APC 5194 and would be overpaid in APC 5193, but to a lesser degree.

Response: We thank the commenters for their comments. We reiterate that we review, on an annual basis, the APC assignments for all services and items paid under the OPPS based on our analysis of the latest claims data and review of the clinical characteristics of the procedure. After further clinical review, we continue to believe that CPT code 36836 is more similar clinically to services in APC 5194, which includes more complex endovascular procedures, than those in APC 5193, which primarily contains less complex revascularization and embolization procedures. Further, while CPT code 36836 does have more available claims than what was available for the initial assignment of CPT code 36836 to APC 5194, we believe additional claims and clinical data would be useful before proposing to move this code to a different APC.

However, we note that we review the APC assignments for all items and services paid under the OPPS on an annual basis. We will reevaluate the APC assignment for CPT code 36836 in the next rulemaking cycle.

In summary, after consideration of the public comments we received, we are finalizing our proposal, without modification, to continue to assign CPT code 36836 and CPT code 36837 to APC 5194 for CY 2025. We refer readers to Addendum B of this final rule with comment period for the payment rate for all codes paid under the OPPS.

11. Arthroscopic Subacromial Balloon Implant, HCPCS Code C9781 (APC 5115)

HCPCS code C9781 describes the implantation of a subacromial spacer, such as a balloon, in the shoulder to treat a torn rotator cuff. The procedure may also include debridement, acromioplasty, subacromial decompression, and biceps tenodesis.

In the CY 2025 OPPS/ASC proposed rule, we proposed to continue to assign HCPCS code C9781 (Arthroscopy, shoulder, surgical; with implantation of subacromial spacer (*e.g.,* balloon), includes debridement (*e.g.,* limited or extensive), subacromial decompression, acromioplasty, and biceps tenodesis when performed) to APC 5115 (Level 5 Musculoskeletal Procedures) with a proposed payment rate of $12,755.58.

We received two comments in support of our proposal.

Comment: Both commenters endorsed our proposal to assign HCPCS code C9781, which describes InSpace™ Subacromial Tissue Spacer System, to APC 5115 for CY 2025. They encouraged CMS to maintain this assignment in the final rule.

Response: Based on our analysis of the latest CY 2023 claims data available for CY 2025 OPPS ratesetting, the geometric mean cost associated with HCPCS code C9781 is $12,757.71based on 493 single claims, which is consistent with the geometric mean cost of $13,022.88for APC 5115.

In summary, after consideration of the public comments we received, we are finalizing our proposal to assign HCPCS code C9781 to APC 5115 without modification. The final CY 2025 OPPS payment rate for this code can be found in Addendum B to this final rule with comment period.

12. Artificial Iris Insertion Procedures, CPT Code 66683 (APC 5496)

For the CY 2025 OPPS proposed rule, we proposed to assign placeholder CPT code 6X004 (Implantation of iris prosthesis, including suture fixation and repair or removal of iris, when performed) to APC 5496 (Level 6 Intraocular Procedures) with a payment rate of around $16,416. CPT code 66683 is the final code for 6X004 and will replace CPT code 0616T (Insertion of iris prosthesis, including suture fixation and repair or removal of iris, when performed; without removal of crystalline lens or intraocular lens, without insertion of intraocular lens); CPT code 0617T (Insertion of iris prosthesis, including suture fixation and repair or removal of iris, when performed; with removal of crystalline lens and insertion of intraocular lens); and CPT code 0618T (Insertion of iris prosthesis, including suture fixation and repair or removal of iris, when performed; with secondary intraocular lens placement or intraocular lens exchange).

Comment: One commenter supported our proposal to assign placeholder CPT code 6X004 (CPT code 66683) to APC 5496.

Response: We appreciate the support of the commenter for our proposal.

After consideration of the public comments we received, we are implementing our proposal without modification to assign CPT code 66683 to APC 5496 (Level 6 Intraocular Procedures). Table 77 shows the finalized status indicator and APC assignment for CPT code 66683. We refer readers to Addendum B of this final rule for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 77: FINAL CY 2025 OPPS APC STATUS INDICATOR ASSIGNMENT FOR CPT CODE 66683

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
66683	Implantation of iris prosthesis, including suture fixation and repair or removal of iris, when performed	J1	5496

13. Bronchoscopy With Needle Biopsy, CPT Code 31629 (APC 5154)

CPT code 31629 describes the use of diagnostic rigid or flexible bronchoscope to obtain one or more biopsies from the trachea, main stem, and/or lobar bronchus using a transbronchial needle aspiration technique. In the CY 2025 OPPS/ASC proposed rule, we proposed to continue to assign CPT code 31629 to APC 5154 (Level 4 Airway Endoscopy) with a proposed payment rate of $3,681.38.

Comment: We received one public comment that requested CMS reassign CPT code 31629 from APC 5154 (Level 4 Airway Endoscopy) to APC 5155 (Level 5 Airway Endoscopy) in the CY 2025 ASC/OPPS final rule. The commenter stated that CPT code 31629 is the highest cost significant procedure in APC 5154 with a geometric mean cost of $5,123.33. The geometric mean cost of CPT code 31629 exceeds the geometric mean cost of the lowest cost significant procedure in APC 5155, CPT code 31267 with a geometric mean cost of $5,031.74.

According to the commenter, given the intraoperative service time and physician skill level required for the procedure, this procedure is aligned with procedures already assigned to APC 5155 including balloon dilation and stenting procedures. The commenter stated that the reassignment of CPT code 31629 from APC 5154 to APC 5155 would better support resource homogeneity within the Airway Endoscopy Procedures APC series.

Response: Although the geometric mean cost of the CPT code 31629 is $1,300 higher than the geometric mean cost of APC 5154, it is $1,974 lower than the geometric mean cost of APC 5155. CPT code 31629 also does not violate the 2 times rule in its current assignment in APC 5154. In addition, we believe that CPT code 31629 fits appropriately in APC 5154 based on clinical similarity and resource homogeneity with the procedures in that APC.

Therefore, after consideration of the public comment we received, we are finalizing our proposal without modification, to assign CPT code 31629 to APC 5154 for CY 2025. We refer readers to Addendum B of this final rule with comment period for the CY 2025 final payment rate for this code. Addendum B is available via the internet on the CMS website.

14. CADScor System, CPT Code 0716T (APC 5733)

The CADScor System is intended as a diagnostic aid in symptomatic patients suspected of stable coronary artery disease (CAD) and is designed to help reduce invasive and costly diagnostic procedures. The CADScor System is a diagnostic aid that uses sensitive acoustics and advanced computational processing to analyze coronary blood flow to rule out obstructive CAD. CPT code 0716T describes the service that utilizes the CADScor System: Cardiac acoustic waveform recording with automated analysis and generation of coronary artery disease risk score. For CY 2025, we proposed to assign CPT 0716T to APC 5733—Level 3 Minor Procedures, with a payment rate of $59.07 and a status indicator of ''Q1'' (conditionally packaged).

Comment: Commenters disagreed with our proposal to assign CPT code 0716T to APC 5733 with a status indicator of ''Q1.'' Commenters suggested that CPT code 0716T should be assigned to APC 5722 based on clinical and resource homogeneity with other services assigned to APC 5722. Commenters also expressed that status indicator ''S'' (separately payable) would be most appropriate for CPT code 0716T. They contended that status indicator ''Q1'' essentially unconditionally packages the code because CPT code 0716T is never furnished without an emergency department visit.

Response: Although CPT code 0716T was effective July 1, 2022, we have no claims data for the code. The OPPS payment rates are proposed based on available CY 2023 claims data. Because we have no claims data, we believe that we should continue to assign CPT code 0716T to APC 5733 for CY 2024. We review, on an annual basis, the APC assignments for all services and items paid under the OPPS. As a result, we will reevaluate the APC assignment for CPT code 0716T for the next rulemaking cycle.

In addition, as listed in OPPS Addendum D1 of the CY 2025 OPPS/ASC proposed rule, codes assigned to status indicator ''Q1'' may be packaged, assigned to a composite APC, or paid separately under the OPPS. Specifically, a ''Q1'' status indicator may indicate a:

- Packaged APC payment if billed on the same claim as a HCPCS code assigned status indicator ''S'', ''T'', or ''V''; or
- Composite APC payment if billed with specific combinations of services based on OPPS composite-specific payment criteria. Payment is packaged into a single payment for specific combinations of services; or
- In other circumstances, payment is made through a separate APC payment

After reviewing the public comments, we believe that it is appropriate for the procedure described by CPT code 0716T to be paid separately. We agree with commenters that it is unlikely that CPT code 0716T would be furnished without an emergency department (ED) visit and should not be always be packaged with an ED visit. Therefore, we are revising the status indicator for the code from ''Q1'' (conditionally packaged) to ''S'' (Procedure or Service, Not Discounted When Multiple) to indicate that the service is paid separately.

In summary, after consideration of the public comments, we are finalizing the APC and status indicator assignment for

CPT code 0716T with modification. Specifically, we are finalizing the assignment of CPT code 0716T to APC 5733 and we are revising the status indicator assignment for CPT code 0716T to ''S'' (separately payable). Please refer to Table 78 for the code descriptor, APC assignment, status indicator assignment, and payment indicator assignment for CPT code 0716T for CY 2025.

TABLE 78: CY 2025 FINAL OPPS APC AND STATUS INDICATOR FOR CPT CODE 0716T

CPT Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0716T	Cardiac acoustic waveform recording with automated analysis and generation of coronary artery disease risk score	Q1	5733	S	5733

15. Cardiac Magnetic Resonance Imaging Procedures, CPT Codes 75561 and 75563 (APCs 5572 and 5573)

CPT code 75561 (Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences) and CPT code 75563 (Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences; with stress imaging) both describe cardiac MRI procedures.

For CY 2024, we assigned CPT code 75561 to APC 5572 (Level 2 Imaging with Contrast), and CPT code 75563 to APC 5573 (Level 3 Imaging with Contrast). For the CY 2025 OPPS/ASC proposed rule, we proposed to maintain the current APC assignments for both cardiac MRI codes.

Comment: We received one comment requesting that we reassign CPT code 75561 to APC 5573 (Level 3 Imaging with Contrast). The commenter indicated that the other services in APC 5572 (Level 2 Imaging with Contrast) are not clinically similar or similar in resource use to the service described by CPT code 75561.

Response: We thank the commenter for their input. The OPPS payment rates are proposed based on available CY 2023 claims data. Our claims data show a geometric mean cost of about $450 for CPT code 75561 based on 27,543 single claims. We believe that the geometric mean cost of about $450 for CPT code 75561 is more consistent with the geometric mean cost of approximately $361 for APC 5572, than the geometric mean cost of approximately $800 for APC 5573. We continue to believe that the clinical and resource characteristics of CPT code 75561 are sufficiently like other procedures assigned to APC 5572 and should continue to be assigned to APC 5572.

Comment: The same commenter requested that CPT code 75563 (Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences; with stress imaging) be reassigned to APC 5593 (Level 3 Nuclear Medicine and Related Services) because of lack of clinical homogeneity and resource utilization with other services currently assigned to APC 5573. The commenter notes that CPT code 75563 was previously assigned to the Nuclear Medicine APC family until the imaging services were restructured during a comprehensive review of the APC series that took place in CY 2016. The purpose of the restructuring of the OPPS APC groupings for imaging services was to improve the clinical and resource homogeneity of the services classified within the imaging APCs (80 FR 70392 and 81 FR 7928).

The commenter cites the following reasons to support the reassignment of 75563 to APC 5593:

(1) the clinical labor and resources (acquisition time, staffing, medications, and perfusion agents) are very similar to CPT code 78452 which describes myocardial perfusion imaging;

(2) both tests are indicated for patients with cardiac angina or coronary artery disease; and

(3) both tests provide the same clinical information.

We disagreed with a similar argument in the past (81 FR 79630) where commenters asserted that cardiac MRI with stress imaging is very similar to myocardial perfusion imaging because both tests are performed under a stress protocol and therefore should be assigned to APC 5593. APC 5593 contains procedures that describe nuclear medicine tests, and CPT code 75563 is a specific type of MRI and not a nuclear medicine test. Additionally, the geometric mean cost of CPT code 75563 is approximately $887 and the geometric mean cost of the APC to which it is assigned, APC 5573, is approximately $800. These geometric mean costs are very similar. However, the geometric mean cost of APC 5593 is approximately $1,321, which is significantly higher than the geometric mean cost of CPT code 75563. Therefore, assigning CPT code 75563 to APC 5593 would assign the procedure to an APC with clinically dissimilar nuclear medicine tests that have a geometric mean cost of $1,321 (as compared to the $887 geometric mean cost of CPT code 75563).

In summary, after consideration of the public comment, we are finalizing our proposal without modification to assign CPT code 75561 to APC 5572 and CPT code 75563 to APC 5573 for CY 2025. The final CY 2025 payment rates for the codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

16. CardioMEMS, HCPCS Code GMEM1, CPT Code 93264 (APCs 5724 and 5741)

The CardioMEMS Heart Failure System allows practitioners treating heart failure patients to wirelessly monitor and measure pulmonary artery pressure and heart rate in patients with heart failure and transmit the information to the physician to inform the treatment plan for the patient. The system includes two critical components: first, a miniaturized, wireless monitor, which is implanted into a patient's pulmonary artery, and second, a smart pillow (the CardioMEMS Patient Electronics System), which captures and transmits readings via safe radio frequency from the patient's implanted CardioMEMS Heart Failure System. The CardioMEMS Heart Failure System enables patients to transmit critical heart failure status information to clinicians regularly, potentially eliminating the need for frequent clinic or hospital visits. The CardioMEMS Heart Failure System is described by CPT code 33289 (Transcatheter implantation of wireless pulmonary artery pressure sensor for long-term hemodynamic monitoring, including deployment and calibration of the sensor, right heart catheterization, selective pulmonary catheterization, radiological supervision and interpretation, and pulmonary artery angiography, when performed).

Interested parties have met with CMS and highlighted the critical importance of the device for heart failure patients who require close monitoring of weight and blood pressure to prevent fluid buildup around the heart and have requested that CMS establish coding to describe when practitioners and hospitals incur costs during clinical scenarios when crucial components of the system require replacement. Given that these components are crucial for system functionality and there is no existing coding framework to address their replacement, we believe that establishing appropriate coding and payment mechanisms can facilitate the provision of these services more effectively in the office and hospital settings. In the CY 2025 Physician Fee Schedule (PFS) proposed rule, we proposed a new code, HCPCS code GMEM1 (Provision of replacement patient electronics system (for example, system pillow) for home pulmonary artery pressure monitoring including provision of materials for use in the home and reporting of test results to physician or qualified health care professional). The CY 2025 PFS proposed rule (89 FR 61956) sought comment from interested parties regarding direct costs from invoices for the replacement component referenced above, utilization estimates, and potential indicators.

CPT Code 93264 (Remote monitoring of a wireless pulmonary artery pressure sensor for up to 30 days, including at least weekly downloads of pulmonary artery pressure recordings, interpretation(s), trend analysis, and report(s) by a physician or other qualified health care professional) can be used by hospitals to bill for the ongoing analysis and monitoring performed with CardioMEMS.

While we did not discuss the GMEM1 code in the CY 2025 OPPS proposed rule preamble it was included in Addendum B with an assignment to APC 5741 (Level 1 Electronic Analysis of Devices) with a payment rate of $36.90 and assigned a status indicator of Q1. CPT code 93264 was included in Addendum B with a status indicator of ''M'' to indicate that this code is not payable under the OPPS.

The issue of payment for GMEM1 was brought to the Advisory Panel on Hospital Outpatient Payment (also known as HOP Panel) in 2024 for CY 2025 rulemaking. At the August 2024 meeting, based on the information presented, the Panel did not make any recommendations on GMEM1.

We note that HCPCS code G0555 is replacing the placeholder code GMEM1.

Comment: In their comment letters on the CY 2025 OPPS proposed rule, commenters indicated that the G0555 (placeholder codeGMEM1) code descriptor proposed in the CY 2025 PFS proposed rule introduces confusion by also referencing reporting test results to the physician, which is a separate function furnished by a different party than the replacement Patient Electronics System (PES). Commenters requested that CMS revise the proposed code descriptor for G0555 (placeholder code GMEM1) to clarify that it is for the replacement PES only and remove the following language from the descriptor: ''and reporting of test results to physician or qualified health care professional''). Commenters requested that if the code is finalized under OPPS (and PFS) with the revised descriptor, that CMS assign it to APC 1528, New Technology—Level 28 ($5001-$5500), which they believe is reflective of the cost of the replacement PES.

Response: We agree that assignment to APC 5741 is likely not reflective of the cost of the replacement PES. However, assignment to New Technology APCs usually occurs when there is no existing clinical APC that is appropriate in terms of clinical similarity or resources. Based on the nature of the procedure, we believe that the service associated with GMEM1 is more appropriately in APC 5724 (Level 4 Diagnostic Tests and Related Services). We believe that the service described by HCPCS code G0555 (placeholder code GMEM1) shares similar resource costs and clinical characteristics with services included in APC 5724. Assignment to APC 5741 may not have sufficiently covered the cost of the replacement of the PES. Therefore, for CY 2025, we are revising the assignment for HCPCS code G0555 (placeholder code GMEM1) to APC 5724, with a status indicator of ''S''.

Comment: Commenters recommend that CMS revise the OPPS status indicator for CPT 93264, which CMS proposed to designate as ''M'' (not payable under the OPPS). They argued that this classification is contrary to CMS's treatment of similar monitoring procedures (*e.g.,* CPT codes 93297 and 93298), which have status indicator ''Q1'' and are assigned to APC 5741 (Level 1 Electronic Analysis of Devices).

Response: As listed in OPPS Addendum D1 of the CY 2025 OPPS/ASC proposed rule, codes assigned to status indicator ''Q1'' may be packaged, assigned to a composite APC, or paid separately under the OPPS. Specifically, a ''Q1'' status indicator may indicate a:

- Packaged APC payment if billed on the same claim as a HCPCS code assigned status indicator ''S'', ''T'', or ''V''; or
- Composite APC payment if billed with specific combinations of services based on OPPS composite-specific payment criteria. Payment is packaged into a single payment for specific combinations of services; or
- In other circumstances, payment is made through a separate APC payment

After reviewing the public comments, we agree with commenters that it is appropriate for the procedure described by CPT code 93264 to be assigned to status indicator Q1(conditionally packaged). Therefore, we are revising the status indicator for the code from ''M'' (not payable under the OPPS'') to ''Q1'' (conditionally packaged). The conditional packaging of this code supports our overarching goal to make payments for all services paid under the OPPS and ASC payment system more consistent with those of a prospective payment system and less like those of a per-service fee schedule. We believe that packaging encourages efficiency and is an essential component of a prospective payment system, and that packaging payments for items and services that are typically integral, ancillary, supportive, dependent, or adjunctive to a primary service is a

fundamental part of the OPPS. We therefore believe packaging of CPT code 93264 is appropriate.

Because CPT code 93264 was assigned status indicator ''M'' (not payable under the OPPS) we have no claims data to use for making an APC assignment for CPT code 93264 in CY 2025. We agree with commenters that the code is similar in clinical and resource use to CPT codes 93297 and 93298. Therefore, we will be assigning CPT code 93264 to APC 5741 (Level 1 Electronic Analysis of Devices) for CY 2025.

In summary, after consideration of the public comment, we are finalizing the APC assignment for HCPCS code G0555 (placeholder code GMEM1) with modification. Specifically, we are revising the APC assignment for HCPCS code G0555 (placeholder code GMEM1) to APC 5724 and assigning the code to status indicator ''S'' for CY 2025. We are revising the status indicator for CPT 93264 and assigning a status indicator of ''Q1'' for CY 2025. Lastly, we are assigning CPT 93264 to APC 5741 for CY 2025. The final CY 2025 OPPS payment rate for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

We refer readers to Table 79 for the code descriptor, APC assignment, status indicator assignment, and payment indicator assignment for CPT codes G0555 (placeholder code GMEM1) and 93264 for CY 2025.

TABLE 79: CY 2025 PROPOSED OPPS APC AND STATUS INDICATOR FOR HCPCS CODE G0555 AND CPT CODE 93264

HCPCS Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
G0555 (placeholder code GMEM1)	Provision of replacement patient electronics system (for example, system pillow) for home pulmonary artery pressure monitoring including provision of materials for use in the home	S	5741	S	5724
93264	Remote monitoring of a wireless pulmonary artery pressure sensor for up to 30 days, including at least weekly downloads of pulmonary artery pressure recordings, interpretation(s), trend analysis, and report(s) by a physician or other qualified health care professional	M		Q1	5741

17. Caregiver Training Services, HCPCS Codes GCTD1, GCTD2, and GCTD3 (APC 5731)

The CY 2025 Physician Fee Schedule (PFS) proposed rule (89 FR 61956) proposed to establish new coding and payment for caregiver training for direct care services and supports. The topics of training could include, but would not be limited to, techniques to prevent decubitus ulcer formation, wound dressing changes, and infection control. Unlike other caregiver training codes that are currently paid under the PFS, the caregiver training codes for direct care services and supports focus on specific clinical skills aimed at the caregiver effectuating hands-on treatment, reducing complications, and monitoring the patient when the patient is not capable to do so themselves. Three new HCPCS codes were proposed: GCTD1 (*Caregiver training in direct care strategies and techniques to support care for patients with an ongoing condition or illness and to reduce complications (including, but not limited to, techniques to prevent decubitus ulcer formation, wound dressing changes, and infection control) (without the patient present), face-to-face; initial 30 minutes*), GCTD2 (*Caregiver training in direct care strategies and techniques to support care for patients with an ongoing condition or illness and to reduce complications (including, but not limited to, techniques to prevent decubitus ulcer formation, wound dressing changes, and infection control) (without the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service) (Use GCTD2 in conjunction with GCTD1)*), and GCTD3 (*Group caregiver training in direct care strategies and techniques to support care for patients with an ongoing condition or illness and to reduce complications (including, but not limited to, techniques to prevent*

decubitus ulcer formation, wound dressing changes, and infection control) (without the patient present), face-to-face with multiple sets of caregivers)). We did not propose APC or status indicator assignments for these G codes in the CY 2025 OPPS proposed rule (89 FR 59186).

We note that the HCPCS codes G0541, G0542, and G0543 are replacing their respective placeholder codes GCTD1, GCDT2, and GCTD3.

Comment: We received several comments related to the CY 2025 Physician Fee Schedule (PFS) proposal suggesting that we begin providing payment for Caregiver Training Services (CTS) G0541, G0542, and G0543placeholder codes GCTD1, GCTD2, and GCTD3) under the OPPS. Commenters asked for clarification on whether these codes would be given the OPPS status indicator ''A,'' which would limit their use for outpatient hospital payment purposes to therapists only, or whether CMS will assign separately payable status indicators to those codes. Commenters stated that assigning separately payable status would recognize the different types of hospital staff that can render appropriate CTS. Commenters requested that CMS make the newly proposed CTS codes G0541, G0542, and G0543 (placeholder codes GCTD1, GCTD2, and GCTD3) payable under the OPPS.

Response: HCPCS codes G0541, G0542, and G0543 (placeholder codes GCTD1, GCTD2, and GCTD3) will be effective on January 1, 2025. Based on our evaluation of these new codes, we are proposing an interim assignment of HCPCS codes G0541, G0542, and G0543 (placeholder codes GCTD1, GCTD2, and GCTD3) to status indicator ''A'' to indicate that these codes are payable under a fee schedule or payment system other than the OPPS. These services are covered Medicare services and will be assigned payable indicators under the Physician Fee Schedule (PFS). While these services are not payable under the OPPS, they are payable under the PFS; therefore, we are proposing to assign them status indicator of ''A.'' Sections 1834(k) and 1833(a)(8) of the Act require that payment be made for outpatient therapy services (physical therapy, speech language pathology, and occupational therapy) furnished by providers of therapy services, including a hospital (to its outpatients and inpatients not under a Part A stay), be made under the PFS.

In summary, we are proposing an interim assignment of HCPCS codes G0541, G0542, and G0543 (placeholder codes GCTD1, GCTD2, and GCTD3) to status indictor ''A'' to indicate that the code is payable under a fee schedule or payment system other than the OPPS. Because we were not able to propose APC and status indicator assignments in the CY 2025 OPPS proposed rule, we will be assigning HCPCS codes G0541, G0542, and G0543 (placeholder codes GCTD1, GCTD2, and GCTD3) comment indicator ''NI'' in Addendum B of this final rule. This comment indicator is for new HCPCS codes that will be effective January 1, 2025, to indicate that we are assigning them an interim status indicator and APC assignment, which is subject to public comment. We invite public comment on the interim proposed status indicators for HCPCS codes G0541, G0542, and G0543 (placeholder codes GCTD1, GCTD2, and GCTD3), which will then be finalized in the CY 2026 OPPS/ASC final rule with comment period.

Please refer to Table 80 below for the proposed interim status indicator assignments for HCPCS codes G0541, G0542, and G0543 (placeholder codes GCTD1, GCTD2, and GCTD3) for CY 2025.

TABLE 80: INTERIM CY 2025 SI FOR THE CAREGIVER TRAINING SERVICES HCPCS CODES EFFECTIVE JANUARY 1, 2025

HCPCS Code	Long Descriptor	Interim CY 2025 OPPS SI	Comment Indicator
G0541 (placeholder code GCTD1)	Caregiver training in direct care strategies and techniques to support care for patients with an ongoing condition or illness and to reduce complications (including, but not limited to, techniques to prevent decubitus ulcer formation, wound dressing changes, and infection control) (without the patient present), face-to-face; initial 30 minutes)	A	N1
G0542 (placeholder code GCTD2)	Caregiver training in direct care strategies and techniques to support care for patients with an ongoing condition or illness and to reduce complications (including, but not limited to, techniques to prevent decubitus ulcer formation, wound dressing changes, and infection control) (without the patient present), face-to face; each additional 15 minutes (List separately in addition to code for primary service) (Use GCTD2 in conjunction with GCTD1)	A	N1
G0543 (placeholder code GCTD3)	Group caregiver training in direct care strategies and techniques to support care for patients with an ongoing condition or illness and to reduce complications (including, but not limited to, techniques to prevent decubitus ulcer formation, wound dressing changes, and infection control) (without the patient present), face-to face with multiple sets of caregivers))	A	N1

18. Chimeric Antigen Receptor Therapy (CAR–T), CPT Codes 0537T, 0538T, 0539T, and 0540T (APC 5694)

Chimeric Antigen Receptor T-Cell (CAR T-cell) therapy is a cell-based gene therapy in which T-cells are collected and genetically engineered to express a chimeric antigen receptor that will bind to a certain protein on a patient's cancerous cells. The CAR T-cells are then administered to the patient to attack certain cancerous cells, and the individual is observed for potential serious side effects that would require medical intervention. We refer readers to previous discussions in the OPPS/ASC final rules with comment period for background regarding the specific CAR T-cell products, in both the CY 2020 OPPS/ASC final rule with comment period (84 FR 61231 through 61234) and the CY 2019 OPPS/ASC final rule with comment period (83 FR 58904 through 58908). In addition, for discussion about CY 2022 OPPS payment policies for separately paid drugs with pass-through status expiring or continuing in CY 2022, please see sections V.A.4 and V.A.5 of this final rule with comment period. The AMA created four Category III CPT codes that are related to CAR T-cell therapy, effective January 1, 2019. As discussed in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58904 through 58908), the CY 2020 OPPS/ASC final rule with comment period (84 FR 61231 through 61234), and the CY 2021 OPPS/ASC final rule with comment period (85 FR 85949 through 85951) we finalized our proposal to assign procedures described by CPT codes 0537T, 0538T, and 0539T to status indicator ''B'' (Codes that are not recognized by OPPS when submitted on an outpatient hospital Part B bill type (12x and 13x)) to indicate that the services are not paid under the OPPS. The procedures described by CPT codes 0537T, 0538T, and 0539T describe the various steps required to collect and prepare the genetically modified T-cells, and Medicare does not generally pay separately for each step used to

manufacture a drug or biological. We also finalized that the procedures described by CPT code 0540T would be assigned status indicator ''S'' (Procedure or Service, Not Discounted when Multiple) and APC 5694 (Level 4 Drug Administration) for CY 2019 through CY 2024 and made no proposal to change the assignment for CY 2025. Additionally, the National Uniform Billing Committee (NUBC) established CAR T-cell-related revenue codes and a value code to be reportable on Hospital Outpatient Department (HOPD) claims effective for claims received on or after April 1, 2019.

Category III CPT codes 0537T, 0538T, 0539T, and 0540T are being replaced by Category I CPT codes 38225, 38226, 38227, and 38228, which were previously represented by placeholder codes 3X018, 3X019, 3X020, and 3X021. As such, we made no specific proposal related to the CAR T-cell preparation codes but proposed to apply the existing APC and status indicator assignments for the predecessor Category III CPT codes to the replacement Category I CPT codes.

As listed in Addendum B of the CY 2025 OPPS/ASC proposed rule, we proposed to continue to assign procedures described by these CPT codes, 3X018, 3X019, and 3X020, to status indicator ''B'' (Codes that are not recognized by OPPS when submitted on an outpatient hospital Part B bill type (12x and 13x)) to indicate that the services are not paid under the OPPS. We proposed to continue to assign CPT code 3X021 to status indicator ''S'' (Procedure or Service, Not Discounted when Multiple) and APC 5694 (Level IV Drug Administration).

Comment: Some commenters provided input on the proposed policies in the physician office setting regarding the dose preparation procedures associated with CAR T-cell therapy and other billing topics in the office setting, such as the expansion of digits on MAC claims processing screens for physician office claims.

Response: Comments related to the CY 2025 PFS payment policies are out of scope.

Comment: Several commenters opposed our proposal to continue to assign status indicator ''B'' to CPT codes 38225, 38226, and 38227, for CY 2025. Many commenters provided alternate status indicator assignment recommendations, such as ''S'', as well as APC assignment recommendations. Commenters stated that by allowing these codes to be billable and paid, CMS could use claims data collected to assign the codes to more accurate APCs. Some commenters explained that CMS's overall practice and billing process should be reevaluated, with some recommending revisions to, or the retirement of, MLN Matters Number SE19009 [26] which they believed caused confusion, raised numerous program integrity concerns, including confusion regarding what can be included in ASP reporting, increased inconsistencies with Medicare requirements for under arrangement services and with charges reported and hospital billing, and commenters believed the elimination of this guidance, including separate payment of 38225, 38226, and 38227, would reduce hospital burden. One commenter raised the concern that some manufacturers will pay hospitals for the dose preparation services, while other manufacturers will not. In their view, this raises potential program integrity concerns and could influence medical decision making.

Commenters stated that the cell collection required as part of the CAR T-cell therapy process is done by leukapheresis, a costly and labor-intensive procedure in commenters' view. Commenters also communicated that the hospital in which the preparation procedure occurs is not always the same facility in which the final infusion of the therapy occurs. In their view, this could disincentivize hospitals from providing the preparation procedures if they are not the hospital ultimately providing the final product. A few commenters emphasized that manufacturers do not provide these services, hospitals do. Commenters believed ''under-arrangements'' made between hospitals were infeasible long term given the likely growth in the volume of these therapies and the costs incurred. Commenters also discussed that the preparation procedures could occur months apart from the final administration of the product.

Many of these commenters also stated that 10–15 percent of the time a finalized CAR T-cell therapy product is never administered to a beneficiary, which could occur for a multitude of reasons, such as a manufacturing failure, or disease progression potentially resulting in death or ineligibility for treatment while the CAR T-cell therapy product is being manufactured.

Commenters also recommended CMS revise the product specific Q-codes to remove ''leukapheresis and dose preparation procedures'' and they believe it is inappropriate for these services to be described by the HCPCS Level II codes when they can be described by Level I HCPCS codes. Additional commenters recommended CMS transition the product specific Q-codes to permanent J-codes.

Several commenters discussed other therapies, such as stem cell transplant, and therapies such as those described by HCPCS codes J3394 (Injection, lovotibeglogene autotemcel, per treatment) and J3393 (Injection, betibeglogene autotemcel, per treatment), which in commenter's view is similar to CAR T-cell therapy and requires similar dose preparation procedures.

Commenters supported the 2024 Advisory Panel on Hospital Outpatient Payment recommendation to assign CPT code 38225/3X018, *Chimeric antigen receptor T-cell therapy; harvesting of blood-derived T lymphocytes for development of genetically modified autologous CAR–T cells, per day,* an SI of S and place the code in APC 5242, *Level 2 Blood Product Exchange and Related Services.* The Panel further recommended that CMS assign CPT code 38226/3X019, *Chimeric antigen receptor T-cell therapy; preparation of blood-derived T lymphocytes for transportation (e.g., cryopreservation, storage);* and CPT code 38227/3X020, *Chimeric antigen receptor T-cell therapy; receipt and preparation of CAR–T cells for administration;* an SI of S and place these codes in APC 5241, *Level 1 Blood Product Exchange and Related Services.*

Response: We thank the commenters for their feedback. CMS continues to believe that the procedures described by CPT codes 0537T, 0538T, and 0539T and replacement CPT codes 38225, 38226, and 38227, describe the various steps required to collect and prepare the genetically modified T-cells, and Medicare does not generally pay separately for each step used to manufacture a drug or biological product. Therefore, CMS does not believe that separate or packaged payment under the OPPS is necessary for the procedures described by CPT codes 38225, 38226, and 38227, for CY 2025. However, we thank commenters for providing their unique perspectives and experiences in situations where the manufacturing process does not result in a final product being administered to a beneficiary.

We note that the current HCPCS coding for the currently approved CAR T-cell therapies include leukapheresis and dose preparation procedures, as these services are included in the manufacturing of these biologicals. Therefore, payment for these services is

[26] *https://www.cms.gov/regulations-and-guidance/guidance/transmittals/2019-transmittals-items/se19009.*

incorporated into the drug codes. CMS is not revising the descriptors for the Q-codes to remove leukapheresis and dose preparation procedures nor are we transitioning the Q-codes to J-codes at this time.

We note that, although there is no payment associated with CPT codes 38225, 38226, and 38227, for reasons stated previously, these codes can still be reported to CMS for tracking purposes. We thank commenters for their feedback and for raising concerns related to our guidance contained in MLN Matters Article SE19009. We are not revising this document at this time as we believe these instructions are consistent with our longstanding policies, but we understand the feedback provided. Accordingly, we are not accepting the recommendations at this time to revise the status indicators for procedures described by CPT codes 38225, 38226, and 38227. We will continue to evaluate and monitor payment for CAR T-cell therapies. In summary, after consideration of the public comments we received, we are finalizing our proposal to assign status indicator ''B'' to CPT codes 38225, 38226, and 38227 for CY 2025 without modification.

Additionally, we are continuing our policy from CY 2019 to assign status indicator ''S'' to CPT code 38228 for CY 2025. Table 81 shows the final SI and APC assignments for HCPCS codes 38225, 38226, 38227, and 38228 for CY 2025. For more information on CY 2025 OPPS final status indicators, APC assignments, and payment rates for HCPCS codes, including the CAR T-cell drug codes, we refer readers to Addendum B to this final rule with comment period. In addition, the status indicator definitions can be found in Addendum D1 (OPPS Payment Status Indicators for CY 2025) to this final rule with comment period. Both Addendum B and D1 are available via the internet on the CMS website.

TABLE 81. FINAL CY 2025 STATUS INDICATORS AND APCS FOR CATEGORY I AND III CPT CODES FOR THE PREPARATION OF CAR T-CELL THERAPY

CPT Code	Long Descriptor	Finalized CY 2025 Status Indicator	Finalized CY 2025 APC
0537T	Chimeric antigen receptor t-cell (car-t) therapy; harvesting of blood-derived t lymphocytes for development of genetically modified autologous car-t cells, per day	D	N/A
0538T	Chimeric antigen receptor t-cell (car-t) therapy; preparation of blood-derived t lymphocytes for transportation (e.g., cryopreservation, storage)	D	N/A
0539T	Chimeric antigen receptor t-cell (car-t) therapy; receipt and preparation of car-t cells for administration	D	N/A
0540T	Chimeric antigen receptor t-cell (car-t) therapy; car-t cell administration, autologous	D	5694
3X018/38225	Chimeric antigen receptor t-cell (car-t) therapy; harvesting of blood-derived t lymphocytes for development of genetically modified autologous car-t cells, per day	B	N/A
3X019/38226	Chimeric antigen receptor t-cell (car-t) therapy; preparation of blood-derived t lymphocytes for transportation (e.g., cryopreservation, storage)	B	N/A
3X020/38227	Chimeric antigen receptor t-cell (car-t) therapy; receipt and preparation of car-t cells for administration	B	N/A
3X021/38228	Chimeric antigen receptor t-cell (car-t) therapy; car-t cell administration, autologous	S	5694

19. Complex Bunion Correction Procedure CPT Code 28297 (APC 5115)

CPT code 28297 describes a surgical procedure to correct a bunion, or hallux valgus, in the foot. The procedure involves:

- Removing the bunion
- Realigning the big toe
- Correcting the bony prominence at the base of the toe

- Fusing the joint between the first metatarsal bone and the medial cuneiform bone
- Removing the sesamoid bones, which are pea-shaped bones under the big toe joint

In the CY 2025 OPPS/ASC proposed rule, we proposed to move CPT code 28297 (Correction, hallux valgus with bunionectomy, with sesamoidectomy when performed; with first metatarsal and medial cuneiform joint arthrodesis, any method) from APC 5114 (Level 4 Musculoskeletal Procedures) to APC 5115 (Level 5 Musculoskeletal Procedures) with the proposed payment rate of $12,755.58.

We received several comments supporting the proposed reassignment of CPT code 28297 from APC 5114 (Level 4 Musculoskeletal Procedures) to APC 5115 (Level 5 Musculoskeletal Procedures).

Comment: One commenter stated that CPT code 28297 clearly meets the criteria for reassignment. The total frequency of CPT code 28297 exceeded the significance threshold of 1,000 procedures. The geometric mean cost of CPT code 28297 exceeded two times the geometric mean cost of the lowest significant procedure in APC 5114 (Level 4 Musculoskeletal Procedures). Furthermore, the geometric mean cost of CPT code 28297 was nearly equal to the geometric mean cost of APC 5115 (Level 5 Musculoskeletal Procedures). Several other commenters also supported assigning CPT code 28297 to APC 5114 ((Level 5 Musculoskeletal Procedures).

Response: We agree with the commenters, and we thank them for their support. In summary, after consideration of the public comments that we received, we are finalizing our proposal without modification and are assigning CPT code 28297 to APC 5115 (Level 5 Musculoskeletal Procedures) for CY 2025. The final CY 2025 payment rate for this code can be found in Addendum B of this final rule with comment period.

20. Computational Electrocardiogram (ECG) Analysis System (vMap), CPT Code 0897T (APC 5724)

CPT code 0897T (Noninvasive augmentative arrhythmia analysis derived from quantitative computational cardiac arrhythmia simulations, based on selected intervals of interest from 12-lead electrocardiogram and uploaded clinical parameters, including uploading clinical parameters with interpretation and report) utilizes ECG data to identify potential arrhythmia focal points for patients. The vMap provides augmented information which enables physicians to characterize arrhythmia and assists in triage and treatment of abnormal rhythm. CPT code 0897T became effective July 1, 2024 and since its establishment, the code has been assigned to APC 5724 (Level 4 Diagnostic Tests and Related Services) for CY 2024. Because this is a new code for CY 2024, there are no claims available. For CY 2025, we proposed to maintain the assignment to APC 5724, with a payment rate of $1,012.27.

Comment: One commenter supported our proposal to assign CPT code 0897T to APC 5724, due to the resource similarity of this technology to other procedures assigned to APC 5724.

Response: We appreciate the commenter's feedback on CPT code 0897T and we agree with the commenter's recommendation to finalize the APC assignment.

After consideration of the public comment we received, we are finalizing our proposal without modification for CPT code 0897T. Please refer to Table 82 below for the final OPPS APC and status indicator assignment for HCPCS code 0897T for CY 2025. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 82: FINAL CY 2025 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0897T

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0897T	Noninvasive augmentative arrhythmia analysis derived from quantitative computational cardiac arrhythmia simulations, based on selected intervals of interest from 12-lead electrocardiogram and uploaded clinical parameters, including uploading clinical parameters with interpretation and report	S	5724

21. Computed Tomographic Colonography, CPT Code 74263 (APC 5523)

For CY 2024, we assigned CPT code 74263 (Computed tomographic (CT) colonography, screening, including image postprocessing) to status indicator ''E1'' indicating that the service was not covered and not payable by Medicare under the OPPS. For the CY 2025 OPPS/ASC proposed rule, we proposed to assign CPT code 74263 to APC 5522 (Level 2 Imaging without Contrast) and a status indicator of ''S'' (Procedure or Service, Not Discounted When Multiple. Paid under OPPS; separate APC payment) to indicate that the code is separately payable under OPPS based on the proposed coverage changes for the colorectal cancer screening. (We refer our readers to section X.E. of this final rule with comment period for a full discussion of the coverage changes for colorectal cancer screening services.)

For the CY 2025 OPPS/ASC proposed rule, we believed the time and resources associated with performing a screening virtual colonoscopy is similar to those necessary to furnish a diagnostic virtual colonoscopy, which is described by CPT code 74261 (Computed tomographic (ct) colonography, diagnostic, including image postprocessing; without contrast material). Consequently, we proposed to

assign CPT code 74263 to APC 5522 (Level 2 Imaging without Contrast) based on its clinical and resource homogeneity to CPT code 74261, which is assigned to the same clinical APC.

Comment: We received one comment requesting to reassign CPT code 74263 to APC 5571 (Level 1 Imaging with Contrast). The commenter is concerned that the proposed payment for the screening CT colonography is insufficient to cover the costs of providing the service. The commenter believed that other services within that APC family such as CT abdomen with contrast have greater clinical homogeneity with CPT code 74263.

Response: We thank the commenter for their input. We disagree with the commenter that CPT code 74263 should be placed in APC 5571 (Level 1 Imaging with Contrast) as it is a procedure that is completed without contrast. However, we do believe that this newly covered screening test for colorectal cancer should be assigned to an APC where payment is more comparable to the purported resource costs. Given that any claims data in CY 2023 would be from before the service was payable in the OPPS, it would be difficult to rely on the claims data to determine the APC assignment for this code. Based on our review of the service (CT colonography) compared to other services assigned to the Imaging without Contrast APC series, we believe CPT code 74176 (Computed tomography, abdomen and pelvis; without contrast material) is an appropriate crosswalk code for CPT code 74263.

In summary, after consideration of the public comment, we are finalizing our proposal with modification to assign CPT code 74263 to APC 5523 (Level 3 Imaging without Contrast) and a status indicator of ''S'' for CY 2025. The final CY 2025 payment with rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

22. Concurrent Optical and Magnetic Stimulation (COMS) Therapy, CPT Codes 0906T and 0907T (APC 5051)

On June 20, 2023, CMS approved for Medicare coverage the Category B Investigational Device Exemption (IDE) study associated with concurrent optical and magnetic stimulation (Study Title: [27] Concurrent Optical and Magnetic Stimulation (COMS) for Treatment of Refractory Diabetic Foot Ulcer; a Prospective Randomized, Sham-controlled, Double-blinded, Pivotal Clinical Trial; NCT number NCT05758545; IDE number G220277 [28]). For the July 2024 update, the AMA CPT Editorial Panel established 0906T (placeholder code XX18T) (Concurrent optical and magnetic stimulation therapy, wound assessment and dressing care; first application, total wound(s) surface area less than or equal to 50 sq cm) and 0907T (placeholder code XX37T) (Concurrent optical and magnetic stimulation (COMS) therapy, wound assessment and dressing care; each additional application, total wound(s) surface area less than or equal to 50 sq cm (List separately in addition to code for primary procedure)) for COMS, effective January 1, 2025.

For the CY 2025 OPPS/ASC proposed rule, CMS proposed to assign the SIs and APCs listed in Table 83 below for the new codes based on the clinical characteristics of the procedures.

TABLE 83: PROPOSED CY 2025 OPPS APC AND STATUS INDICATORS FOR CPT CODES 0906T AND 0907T

CPT Code	Long Descriptor	Proposed 2025 OPPS SI	Proposed 2025 OPPS APC	Proposed CY 2025 OPPS APC Title	Proposed CY 2025 Payment Rate
0906T	Concurrent optical and magnetic stimulation therapy, wound assessment and dressing care; first application, total wound(s) surface area less than or equal to 50 sq cm	S	5051	Level 1 Skin Procedures	$201.14
0907T	Concurrent optical and magnetic stimulation (COMS) therapy, wound assessment and dressing care; each additional application, total wound(s) surface area less than or equal to 50 sq cm (List separately in addition to code for primary procedure)	N	N/A	N/A	N/A

We note that at the August 28, 2024, HOP Panel Meeting, a presentation was made requesting the reassignment to APC 5053 for CPT code 0906T (placeholder code XX18T). Based on the information presented at the meeting, the Panel made no recommendation on the APC assignment for the code.

[27] *ClinicalTrials.gov*. ''Trial to Evaluate the Safety and Effectiveness of Treatment With COMS One Device in Subjects With Diabetic Foot Ulcers (Mavericks).'' Accessed September 24, 2024. *https://clinicaltrials.gov/study/NCT05758545*

[28] Approved IDE Studies- ''G220277–NCT05758545.'' Accessed September 24, 2024. *https://www.cms.gov/medicare/coverage/ide/approved-ide-studies/683545095/g220277-nct05758545*

Comment: We received a comment from the manufacturer of COMS on our proposed assignments for the codes listed in Table 83. The commenter stated that the COMS procedures include extensive wound examination, wound bed preparation, and dressing management. With the inclusion of standard wound care administered before and after each active COMS device treatment, the commenter estimates that the total time required for a COMS procedure is 35–50 minutes, during which considerable medical supplies and facility resources are utilized. The manufacturer suggested that the total resource code for CPT code 0906T is $627, with $392 in hospital facility resource costs and $235 specifically for the COMS device-associated costs. The commenter maintains that the assignment to APC 5051, which has a proposed CY 2025 payment rate of $201.14, does not cover the costs of the procedure.

The commenter claims that CPT code 0906T is sufficiently similar in terms of resources and time to CPT codes 11043 (Debridement, muscle and/or fascia (includes epidermis, dermis, and subcutaneous tissue, if performed); first 20 sq cm or less) and 12044 (Repair, intermediate, wounds of neck, hands, feet and/or external genitalia; 7.6 cm to 12.5 cm), both assigned to APC 5053 ((Level 3 Skin Procedures, proposed CY 2025 payment rate of $619.63), to warrant the reassignment of CPT code 0906T to APC 5053. The commenter further stated that assigning these procedures to APC 5053 would align with other wound care procedures with similar resource costs and procedural time.

Response: We thank the commenter for their input. We have no claims data for CPT code 0906T available for this final rule. However, based on this code's similarity to CPT code 0521T (Extracorporeal shock wave for integumentary wound healing, including topical application and dressing care; initial wound) and CPT code 97610 (Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day) which are both assigned to APC 5051, we continue to believe CPT code 0906T has clinical and resource similarities to procedures assigned to APC 5051. Therefore, for CY 2025, we are finalizing our proposal without modification and assigning CPT code 0906T to APC 5051. Table 84 lists the final CY 2025 OPPS payment rate for 0906T and 0907T.

In summary, after consideration of the public comment that we received, we are finalizing the APC and SI assignments for CPT codes 0906T to APC 5051. As we do every year, we will reevaluate the APC assignments for these codes in the next rulemaking cycle. We remind hospitals that we review, on an annual basis, the APC assignments for all items and services paid under the OPPS. The final payment rates for the codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Both Addendum B and D1 are available via the internet on the CMS website.

TABLE 84: FINAL CY 2025 OPPS APC AND SI ASSIGNMENT FOR CPT CODES 0906T AND 0907T

CPT Code	Short Descriptor	Proposed CY 2025 SI	Proposed CY 2025 APC	Final CY 2025 SI	Final CY 2025 APC
XX18T/ 0906T	Concurrent optical and magnetic stimulation therapy, wound assessment and dressing care; first application, total wound(s) surface area less than or equal to 50 sq cm	S	5051	S	5051
XX37T/ 0907T	Concurrent optical and magnetic stimulation (COMS) therapy, wound assessment and dressing care; each additional application, total wound(s) surface area less than or equal to 50 sq cm (List separately in addition to code for primary procedure)	N	N/A	N	N/A

23. Cystourethroscopy With Temporarily Implanted Nitinol Device Procedure, HCPCS Code C9769 (APC 5376)

Cystourethroscopy temporarily implanted nitinol device (iTIND) is a minimally invasive surgery to treat bothersome lower urinary tract symptoms (LUTS) caused by benign prostate enlargement. The iTIND serves to re-model the bladder neck and the prostatic urethra. The HCPCS Code C9769 (Cystourethroscopy, with insertion of temporary prostatic implant/stent with fixation/anchor and incisional struts) became effective October 1, 2020.

For CY 2025, the proposed OPPS payment rates are based on available CY 2023 claims data. For CY 2025, based on our analysis of claims data, we found a total of 96 single frequency claims and a geometric mean cost of approximately $4,902 for HCPCS code C9769. For CY 2025, we proposed to continue to assign HCPCS code C9769 to APC 5376 (Level 6 Urology and Related Services) with a proposed payment rate of approximately $9,209.

Comment: One commenter pointed out that the AMA CPT created a new code, CPT code 5XX05 effective January 1, 2025, to describe the cystourethroscopy with iTIND service represented by HCPCS code C9769. CPT code 5XX05 (Cystourethroscopy with insertion of temporary device for ischemic remodeling (*i.e.,* pressure necrosis) of bladder neck and prostate) becomes effective January 1, 2025. The commenter stated that CMS may either sunset HCPCS code C9769 and reassign the underlying claims to CPT code 5XX05 or maintain HCPCS code C9769 active and assign CPT code 5XX05 to a non-payable status in the OPPS.

Response: We thank the commenter for pointing out that CPT code 5XX05 (53865) will become effective January 1, 2025. We note that we will replace HCPCS code C9769 with CPT code 5XX05 (53865) effective January 1, 2025, as well as assign the underlying claims associated with HCPCS code C9769 to CPT code 5XX05 (53865). Therefore, for CY 2025, we are reassigning CPT code 5XX05 (53865) to Level 6 Urology and Related Services (APC 5376). We note that we will continue to evaluate and monitor the cost for CPT code 5XX05 (53865) for future rulemaking.

After consideration of the public comment we received, we are finalizing our policy to assign CPT code 5XX05 (53865) to APC 5376 (Level 6 Urology and Related Services) and we will be sunsetting HCPCS code C9769. Please refer to Table 85 for the final OPPS APC and status indicator assignment for CPT code 5XX05 (53865) for CY 2025. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 85: FINAL CY 2025 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 5XX05 (53865)

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
5XX05 (53865)	Cystourethroscopy with insertion of temporary device for ischemic remodeling (i.e., pressure necrosis) of bladder neck and prostate	J1	5376

24. Dental Alveoloplasty and Exostosis Removal Procedures, CDT Codes D7320, D7321, and D7471 (APCs 5163, 5164)

Effective January 1, 2024, we made 229 additional dental codes payable under the OPPS when payment and coverage requirements are met, as provided in the relevant PFS payment rules regarding Medicare Part B payment for dental services (88 FR 81540–82185). For CY 2025, we did not propose to make additional dental codes payable under the OPPS. As a result, we proposed to continue to assign many dental services to non-payable status indicators, including CDT codes D7320 (Alveoloplasty not in conjunction with extractions—four or more teeth or tooth spaces, per quadrant), D7321(Alveoloplasty not in conjunction with extractions—one to three teeth or tooth spaces, per quadrant), and D7471 (Removal of lateral exostosis (maxilla or mandible), which we proposed to assign to status indicator ''B,'' indicating the service is not paid under OPPS, for CY 2025.

Comment: We received a comment from an association representing oral and maxillofacial surgeons requesting that we make CDT codes D7320, D7321, and D7471 payable under the OPPS. The commenter stated that these codes may contribute to the elimination of an oral or dental infection. The commenter explained that alveoloplasty and the removal of lateral exostosis are often necessary procedures for medically compromised patients undergoing tooth removal prior to radiation treatment. Failure to perform these procedures, per the commenter, can put patients at risk for osteoradionecrosis following radiation therapy. In addition, the commenter explained that not performing an alveoloplasty or removing the exostosis when clinically indicated may impede the patient's ability to receive a removable prosthesis due to the risk of tissue trauma. The procedures may also be required to address common sequelae following dental extractions. Per the commenters, excluding the services described by CDT codes D7320, D7321, and D7471 from OPPS payment places patients at considerable risk and diminishes the effectiveness of initial treatments aimed at eliminating oral or dental infections. Finally, the commenters stated that there are existing CPT codes that describe these procedures. Specifically, per the commenters, CPT code 41874 (Alveoloplasty, each quadrant (specify)) may describe alveoloplasty procedures and CPT code 41823 (Excision of osseous tuberosities, dentoalveolar structures) may describe the removal of exostosis.

Response: We appreciate the commenter's input. We note that the commenter submitted a similar public comment to the CY 2024 OPPS/ASC final rule to assign several codes, including CDT codes D7320, D7321, and

D7471, to APCs for CY 2024. In the CY 2024 OPPS/ASC final rule, we agreed to assign to clinical APCs the codes for which we agreed with the commenter may be considered medically necessary diagnostic and treatment services immediately necessary to eliminate or eradicate an oral or dental infection prior to, or contemporaneously with certain Medicare-covered medical services specified in the CY 2023 PFS final rule (42 CFR 411.15). We also specified we needed more information on how certain codes the commenter recommended for APC assignment, including CDT codes D7320, D7321, and D7471, were consistent with existing dental payment polices.

The comment to the CY 2025 OPPS/ASC proposed rule provided additional information regarding how dental surgical procedures including surgical interventions to facilitate tooth eruption, alveoloplasty or ridge preparation and removal of lateral exostosis of the jaw may contribute to the elimination of an oral or dental infection. Based on the additional information provided, we agree with the commenter that t CDT codes D7320, D7321 and D7471 should be assigned to clinical APCs for CY 2025 as we believe there may be instances where these services may be considered medically necessary diagnostic and treatment services immediately necessary to eliminate or eradicate an oral or dental infection prior to, or contemporaneously with, certain Medicare-covered medical services specified in the CY 2023 and CY 2024 PFS final rules. For CY 2025, we are assigning CDT codes D7320 and D7321 to APC 5163 (Level 3 ENT Procedures), based on clinical and resource similarities to other alveoloplasty codes currently assigned to the same clinical APC, specifically CDT codes D7310 (Alveoloplasty in conjunction with extractions—four or more teeth or tooth spaces, per quadrant) and D7311 (Alveoloplasty in conjunction with extractions—one to three teeth or tooth spaces, per quadrant). We are also assigning CDT code D7471 to APC 5164 (Level 4 ENT Procedures) based on clinical and resource similarities to other exostosis services assigned to the same clinical APC, specifically CPT codes 21031 (Remove exostosis mandible) and 21032 (Remove exostosis maxilla).

We note that Medicare Part B does not pay for removable prostheses, such as dentures. While we understand that services like alveoloplasty and the removal of the exostosis can improve the fit and stability of dentures and other dental prosthetics as the commenter explained, we are not finalizing APC assignments for CPT codes D7320, D7321 and D7471 so that these services may be furnished in preparation for a patient's denture or dental implant, and billing Medicare for that purpose would not meet our payment and coverage requirements. As we have consistently stated in past rules (87 FR 71879) and quarterly change requests to assign new codes to APCs (see, *e.g.,* Pub 100–04 Medicare Claims Processing, Transmittal 11937), the fact that a drug, device, procedure or service is assigned a HCPCS code and a payment rate under the OPPS does not imply coverage by the Medicare program, but indicates only how the product, procedure, or service may be paid if covered by the program. Medicare Administrative Contractors (MACs) determine whether a drug, device, procedure, or other service meets all program requirements and conditions for coverage and payment. Accordingly, we emphasize that HOPDs would only receive payment for a dental service assigned to an APC when the appropriate MAC determines that the service meets the relevant conditions for coverage and payment.

After consideration of the public comment received, for CY 2025, we are finalizing clinical APC assignments for CDT codes D7320, D7321, and D7471. Please refer to Table 86for the final APC assignments and status indicators for CDT codes D7320, D7321, and D7471. We refer readers to Addendum D1 to this final rule with comment period for a complete list of status indicators and their definitions. Addendum D1 is available via the internet on the CMS website.

TABLE 86: FINAL CY 2025 OPPS APC AND STATUS INDICATORS FOR CDT CODES D7320, D7321, D7471

CDT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
D7320	Alveoloplasty not in conjunction with extractions - four or more teeth or tooth spaces, per quadrant	J1	APC 5163 (Level 3 ENT Procedures)
D7321	Alveoloplasty not in conjunction with extractions - one to three teeth or tooth spaces, per quadrant	J1	APC 5163 (Level 3 ENT Procedures)
D7471	Removal of lateral exostosis (maxilla or mandible)	J1	APC 5164 (Level 4 ENT Procedures)

25. Digital Mental Health Treatment Devices, HCPCS Codes GMBT1, GMBT2, and GMBT3 (APC 5012)

In CY 2025 Medicare Physician Fee Schedule proposed rule (89 FR 61956) we stated that we recognize that digital therapeutics may offer innovative means to access certain behavioral health care services. We noted that given nationwide behavioral health workforce shortages combined with increasing demand for behavioral health care services, some Medicare beneficiaries may have limited access to these services. To that end, we proposed to create three new HCPCS codes for Digital Mental Health Treatment Devices (DHMT): GMBT1 (*Supply of digital mental health treatment device and initial education and onboarding, per course of treatment that augments a behavioral therapy plan*) for furnishing a DMHT device; GMBT2 (*First 20*

minutes of monthly treatment management services directly related to the patient's therapeutic use of the digital mental health treatment (DMHT) device that augments a behavioral therapy plan, physician/other qualified health care professional time reviewing data generated from the DMHT device from patient observations and patient specific inputs in a calendar month and requiring at least one interactive communication with the patient/caregiver during the calendar month) and GMBT3 (*Each additional 20 minutes of monthly treatment management services directly related to the patient's therapeutic use of the digital mental health treatment (DMHT) device that augments a behavioral therapy plan, physician/other qualified health care professional time reviewing data generated from the DMHT device from patient observations and patient specific inputs in a calendar month and requiring at least one interactive communication with the patient/caregiver during the calendar month*). We did not address the new proposed DMHT device G-codes or propose APC or Status Indicator assignments in the CY 2025 OPPS proposed rule (89 FR 59186).

The HCPCS codes G0552, G0553, and G0554 are replacing the respective placeholder codes GMBT1, GMBT2, and GMBT3.

Comment: We received several comments on the DHMT codes with different suggestions on how these codes be treated in the OPPS. One commenter recommended that CMS assign code G0552 (placeholder code GMBT1) to APC 1511—New Technology Level 11—with a CY 2025 proposed payment rate of $950.50. This commenter went on to say that CMS could then update the applicable APC assignment for DMHT devices over time after it obtains hospital claims data. Commenters who suggested CMS assign HCPCS code G0552 (placeholder code GMBT1) to a New Technology APC explained that this approach is similar to ones the agency has taken in the past—most notably for reimbursing for the technical/facility components of remote therapeutic monitoring (RTM) and remote physiological monitoring (RPM) codes. One commenter supported contractor pricing for HCPCS code G0552 (placeholder code GMBT1). Commenters urged CMS to establish a payment for the DMHT device supply in the hospital outpatient setting in the CY 2025 OPPS final rule.

Response: HCPCS codes G0552, G0553, and G0554 (placeholder codes GMBT1, GMBT2, and GMBT3) will be effective on January 1, 2025. Based on our evaluation of these new codes and in response to commenters' requests, we are proposing an interim assignment of HCPCS code G0552 (placeholder code GMBT1) to status indicator ''V'' (Clinic or Emergency Department Visit; Paid under OPPS; separate APC payment) and APC 5012 (Clinic Visits and Related Services). We are proposing an interim assignment of HCPCS code G0553 (placeholder code GMBT2) to status indicator ''V'' (Clinic or Emergency Department Visit; Paid under OPPS; separate APC payment) and APC 5012 (Clinic Visits and Related Services). Finally, we are proposing an interim assignment of HCPCS code G0554 (placeholder code GMBT3) to status indictor ''N'' to indicate that the code is packaged since it is an add-on service to the primary code, and payment for add-on codes is always packaged with their associated primary service codes under regulation at 419.2(b)(18).

Because we were not able to propose APC and status indicator assignments in the CY 2025 OPPS proposed rule, we will be assigning HCPCS codes G0552, G0553, and G0554 (placeholder codes GMBT1, GMBT2, and GMBT3) comment indicator ''NI'' in Addendum B of this final rule. This comment indicator is for new HCPCS codes that will be effective January 1, 2025, to indicate that we are assigning them an interim status indicator and APC assignment, which is subject to public comment. We invite public comment on the interim proposed status indicators and APC assignments for HCPCS codes G0552, G0553, and G0554 (placeholder codes GMBT1, GMBT2, and GMBT3), which will then be finalized in the CY 2026 OPPS/ASC final rule with comment period.

Please refer to Table 87 for the proposed interim APC and status indicator assignments for HCPCs codes G0552, G0553, and G0554 (placeholder codes GMBT1, GMBT2, and GMBT3) for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period.

TABLE 87: INTERIM CY 2025 APC, SI, AND COMMENT INDICATOR FOR THE DIGITAL MENTAL HEALTH TREATMENT DEVICES HCPCS CODES EFFECTIVE JANUARY 1, 2025

CPT Code	Long Descriptor	Interim CY 2025 OPPS SI	Interim CY 2025 OPPS APC	Comment Indicator
G0552 (placeholder code GMBT1)	Supply of digital mental health treatment device and initial education and onboarding, per course of treatment that augments a behavioral therapy plan	V	5012	N1
G0553 (placeholder code GMBT2)	First 20 minutes of monthly treatment management services directly related to the patient's therapeutic use of the digital mental health treatment (DMHT) device that augments a behavioral therapy plan, physician/other qualified health care professional time reviewing data generated from the DMHT device from patient observations and patient specific inputs in a calendar month and requiring at least one interactive communication with the patient/caregiver during the calendar month	V	5012	N1
G0554 (placeholder code GMBT3)	Each additional 20 minutes of monthly treatment management services directly related to the patient's therapeutic use of the digital mental health treatment (DMHT) device that augments	N		N1

26. Drug-Coated Balloon for Esophageal and Bowel Strictures, CPT Codes 0884T, 0885T, and 0886T (APC 5331)

ProTractX3™ TTS is a drug-coated balloon that is used to treat strictures in the esophagus, small intestine, and large intestine. For the CY 2025 OPPS proposed rule, we proposed to assign CPT code 0884T (Esophagoscopy, flexible, transoral, with initial transendoscopic mechanical dilation (*e.g.,* nondrug-coated balloon) followed by therapeutic drug delivery by drug-coated balloon catheter for esophageal stricture, including fluoroscopic guidance, when performed) with no claims data for CY 2025 to APC 5303 (Level 3 Upper GI Procedures) with a payment rate of around $3,805804. In addition, we proposed to assign both CPT code 0885T (Colonoscopy, flexible, with initial transendoscopic mechanical dilation (*e.g.,* nondrug-coated balloon) followed by therapeutic drug delivery by drug-coated balloon catheter for colonic stricture, including fluoroscopic guidance, when performed) and CPT code 0886T (Sigmoidoscopy, flexible, with initial transendoscopic mechanical dilation (*e.g.,* nondrug-coated balloon) followed by therapeutic drug delivery by drug-coated balloon catheter for colonic stricture, including fluoroscopic guidance, when performed) with no claims data for CY 2025 to APC 5313 (Level 3 Lower GI Procedures) with a payment rate of around $2,742.

Comment: One commenter, the manufacturer of the ProTractX3™ TTS, requested that the procedures described CPT codes 0884T–0886T be reassigned to APC 5331 (Complex GI Procedures) with a payment rate of around $5,953. The commenter stated that the cost of the ProTractX3™ TTS is $3,100. The commenter based their cost estimate for the ProTractX3™ TTS on similar drug-coated balloons used for other medical procedures. The commenter believes the cost of ProTractX3™ TTS should be added to the geometric mean cost of the existing procedures that correspond to the procedures described by CPT codes 0884T–0886T, but do not describe the use of a drug-coated balloon with the procedures. These procedures are CPT code 43220 (Esophagoscopy, flexible, transoral; with transendoscopic balloon dilation (less than 30 mm diameter) with a geometric mean cost of around $2,175 that corresponds to procedure described by CPT code 0884T; CPT code 45386 (Colonoscopy, flexible; with transendoscopic balloon dilation) with a geometric mean cost of around $1,662 that corresponds to the procedure described by CPT code 0885T; and CPT code 45340 (Sigmoidoscopy, flexible; with transendoscopic balloon dilation) with a geometric mean cost of around $1,518 that corresponds to the procedure described by CPT code 0886T. The commenter also noted that additional operating room time needed to use the drug-coated balloon adds another $806 to the cost of each of these procedures.

According to the commenter, when the cost of ProTractX3™ TTS drug-coated balloon and the cost of the additional operating room time to use the drug-coated balloon is added to the geometric cost of CPT code 43220, the estimated cost of CPT code 0884T is $6,081. The commenter performed similar calculations for CPT code 0885T reporting an estimated procedure cost of $5,568, and for CPT code 0886T, the commenter reported an estimated procedure cost is $5,424. The commenter made the case that these procedure costs are much closer to the payment rate of APC 5331 of $5,953, than the payment rate of $3,805 for APC 5303 where we proposed to assign CPT code 0884T. Likewise, the commenter showed that the procedure costs for CPT codes 0885T and 0886T are much closer to the payment rate of APC 5331 of $5,953, than the payment rate of APC 5313 of $2,742 where we had proposed to assign those CPT codes.

Response: We appreciate the detailed analysis by the commenter which demonstrated the additional costs of the ProTractX3™ TTS drug-coated balloon, as well as the use of the drug-coated

balloon when compared to the corresponding procedures where no drug-coated balloon is used. Based on the additional cost data provided by the commenter, we agree with the commenter that CPT codes 0884T–0886T should be assigned to APC 5331.

After consideration of the public comments we received, we are implementing our proposal with modification to assign CPT codes 0884T, 0885T, and 0886T to APC 5331 (Complex GI Procedures). Table 88 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 88: FINAL CY 2025 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 0884T – 0886T

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0884T	Esophagoscopy, flexible, transoral, with initial transendoscopic mechanical dilation (e.g., nondrug-coated balloon) followed by therapeutic drug delivery by drug-coated balloon catheter for esophageal stricture, including fluoroscopic guidance, when performed	J1	5331
0885T	Colonoscopy, flexible, with initial transendoscopic mechanical dilation (e.g., nondrug-coated balloon) followed by therapeutic drug delivery by drug-coated balloon catheter for colonic stricture, including fluoroscopic guidance, when performed	J1	5331
0886T	Sigmoidoscopy, flexible, with initial transendoscopic mechanical dilation (e.g., nondrug-coated balloon) followed by therapeutic drug delivery by drug-coated balloon catheter for colonic stricture, including fluoroscopic guidance, when performed	J1	5331

27. EchoGo Echocardiography Image Processing Service, HCPCS Code C9786 (APC 5743)

Effective July 1, 2023, based on a New Technology application received by CMS for an echocardiography image processing service, CMS established HCPCS code C9786 (Echocardiography image post processing for computer aided detection of heart failure with preserved ejection fraction, including interpretation and report) and assigned it to APC 5742 (Level 2 Electronic Analysis of Devices). In CY 2024, CMS reassigned HCPCS code C9786 to APC 5743 (Level 3 Electronic Analysis of Devices).

For CY 2025, CMS is deleting HCPCS code C9786 because the CPT Editorial Panel established new Category III CPT code, specifically, 0932T (Noninvasive detection of heart failure derived from augmentative analysis of an echocardiogram that demonstrated preserved ejection fraction, with interpretation and report by a physician or other qualified health care professional) to describe the same service, which will be effective January 1, 2025. Because the final CY 2025 CPT code number was not available when we published the CY 2025 OPPS/ASC proposed rule, the code was listed as placeholder code XX68T in the OPPS Addendum B of the CY 2025 OPPS/ASC proposed rule.

In the CY 2025 OPPS/ASC proposed rule, we proposed to assign CPT code XX68T (Noninvasive detection of heart failure derived from augmentative analysis of an echocardiogram that demonstrated preserved ejection

fraction, with interpretation and report by a physician or other qualified health care professional) to APC 5743 (Level 3 Electronic Analysis of Devices), the same APC to which HCPCS code C9786 is assigned.

We note that because both HCPCS code C9786 and CPT code 0932T describe the same service, effective January 1, 2025, CMS will delete HCPCS code C9786 and only CPT code 0932T will be used to bill for the service. We received one public comment in support of our proposal.

Comment: The commenter noted that the assignment of XX68T to APC 5743 appropriately reflects the resources required to perform this advanced artificial intelligence (AI) analysis, as well as the clinical value it provides. and stated that this APC assignment would help ensure adequate reimbursement for hospitals, supporting broader access to this important diagnostic tool for Medicare beneficiaries. The commenter appreciated CMS's consideration of this new technology and its potential impact on patient care.

Response: We thank the commenter for the support.

In summary, after consideration of the public comment we received, we are finalizing our proposal, without modification, to assign CPT code 0932T to APC 5743 for CY 2025. We note that the final CY 2025 payment rate for the code can be found in Addendum B of this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

28. Endoscopic Submucosal Dissection (ESD) Procedure, HCPCS Code C9779 (APC 5303)

CMS established HCPCS code C9779 (Endoscopic submucosal dissection (ESD), including endoscopy or colonoscopy, mucosal closure, when performed) effective October 1, 2021, to describe the endoscopic submucosal dissection (ESD) performed during an endoscopy or colonoscopy. HCPCS code C9779 was established based on a New Technology application that was submitted to CMS for New Technology consideration under the OPPS. Based on our assessment, we assigned the code to APC 5313 (Level 3 Lower GI Procedures) because we believed the ESD procedure had similar clinical characteristics and resource costs as the surgical procedures assigned to APC 5313. We announced the assignment to APC 5313 in the October 2021 OPPS quarterly update CR (Transmittal 10997, Change Request 12436, dated September 16, 2021). In CY 2022, we continued to assign the code to APC 5313.

For CY 2023, we assigned HCPCS code C9779 to APC 5303 (Level 3 Upper GI Procedures) after receiving public comments that stated that the ESD procedure's resource requirements and geometric mean cost were more similar to the resource requirements and geometric mean costs of procedures found in APC 5303. Further, commenters noted that the ESD procedure is technically more demanding, requires advanced skills to perform, and is clinically similar to CPT code 43497 (Lower esophageal myotomy, transoral (*i.e.,* peroral endoscopic myotomy [POEM])), which was assigned to APC 5303. For CY 2025, we proposed to maintain HCPCS code C9779 (with a geometric mean cost (GMC) of around $5,093) in APC 5303 (Level 3 Upper GI Procedures).

Comment: We received one comment requesting that we reassign HCPCS code C9779 from APC 5303 (Level 3 Upper GI Procedures) to APC 5361 (Level 1 Laparoscopy and Related Procedures). The commenter states that resource requirements for HCPCS code C9779 are well-aligned with other procedures in APC 5361, noting that the geometric mean cost of HCPCS code C9779 is higher than 4 procedures with significant volume assigned to APC 5361. The commenter believes that based on resource cost and clinical homogeneity, HCPCS code C9779 should be reassigned to APC 5361.

Response: We thank the commenter for their input. We disagree with the commenter that HCPCS code C9779 should be assigned to APC 5361. Specifically, we do not believe that endoscopic submucosal dissection is a laparoscopic procedure and should not be assigned to a laparoscopic APC family. Additionally, we believe HCPCS code C9779 is appropriately assigned, based on both clinical similarity and resource costs, to APC 5303 (Level 3 Upper GI Procedures).

In summary, after consideration of the public comment, we are finalizing our proposal without modification to assign HCPCS code C9779 to APC 5303 (Level 3 Upper GI Procedures). We note that we review, on an annual basis, the APC assignments for all services and items paid under the OPPS based on our analysis of the latest claims data. The final CY 2025 OPPS payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Both Addendum B and D1 are available via the internet on the CMS website.

29. Esophageal Balloon Distention Study, CPT Code 91040 (APC 5723)

Esophageal balloon distension studies are used to diagnose conditions of the esophagus and may be used to determine the source of certain types of pain, such as chest pain. The esophageal balloon study is often performed in conjunction with esophagogastroduodenoscopy procedures. For CY 2025, we proposed to assigned CPT code 91040 (Esophageal balloon distension study, diagnostic, with provocation when performed) to APC 5723 (Level 3 Diagnostic Tests and Related Services) with a proposed payment rate of around $530.

Comment: We received one public comment requesting that CPT code 91040 be reassigned from APC 5723 (Level 3 Diagnostic Tests and Related Services) to APC 5724 (Level 4 Diagnostic Tests and Related Services), stating that the costs of this procedure significantly exceed the APC 5723 assignment. The commenter suggested that a higher payment would more closely align with the costs of the resources utilized to perform this test.

Response: We thank the commenter for their input. We note that the geometric mean cost (GMC) for CPT code 91040 is around $1,500, and the GMC for APC 5723 is around $537. While this is a significant difference, our claims data show that approximately 70 percent of the costs for this procedure are made up of higher cost items (equipment, drugs, and supplies) that are packaged with the procedure costs.

In addition, claims data for CY 2025, show that out of all the claims billed with CPT code 91040 (3,429 total frequency), only 2.7 percent (approximately 95) of those claims were billed with only CPT code 91040. We believe that in addition to the higher costs of the items that are packaged, the costs from the other procedures that are performed with CPT code 91040 have driven up the GMC of CPT code 91040.

Based on review of the service and other services in the same APC family, input from CMS medical advisors, and the claims data, we believe that the clinical and resource characteristics of CPT code 91040 are sufficiently like other procedures assigned to APC 5723 and should continue to be assigned to APC 5723. For CY 2025, based on our evaluation, we are finalizing our proposal, without modification, to assign CPT code 91040 to APC 5723.

The final CY 2025 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

30. Esophagogastroduodenoscopy With Optical Endomicroscopy, CPT Code 43252 (APC 5302)

An esophagogastroduodenoscopy is a procedure to view the esophagus, stomach, and duodenum by means of a flexible endoscope passed through the mouth. The provider uses an endomicroscopy system to evaluate the structures during this procedure. This procedure is reported with CPT code 43252 (Esophagogastroduodenoscopy, flexible, transoral; with optical endomicroscopy).

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81685), we reassigned CPT code 43252 from APC 5303 (Level 3 Upper GI Procedures) to APC 5302 (Level 2 Upper GI Procedures). In the 2025 OPPS/ASC proposed rule, we proposed to continue to assign this code to APC 5302 with a proposed payment rate of $1,884.11. We received two public comments that disagreed with our proposal.

Comment: Both commenters noted that the significant payment reduction for this service could impede access to this service for beneficiaries. One commenter noted that just a few hospital outpatient facilities are offering this procedure and that over 70 percent of cases are performed in ASCs.

One commenter stated that CPT code 43252 is similar in clinical intensity, resource utilization and costs to CPT code 0654T (Esophagogastroduodenoscopy, flexible, transnasal; with insertion of intraluminal tube or catheter) which is assigned to APC 5303. This commenter also claimed that some hospitals are underreporting their costs for CPT code 43252. Both commenters requested that CMS reassign CPT code 43252 to APC 5303.

Response: We note that the CY 2025 OPPS payment rates are proposed based on available CY 2023 claims data. Based on our latest review of the claims data, we found the geometric mean cost of approximately $1,839.38for CPT code 43252 based on 246 single claims, is consistent with the geometric mean cost of about $1,920.00for APC 5302. We note that the geometric mean cost of APC 5303 is approximately $3,850.67which is about $2,011 more than the geometric mean cost of CPT code 43252.

In summary, we are finalizing without modification our proposal to assign CPT code 43252 to APC 5302 for CY 2025. The CY 2025 final payment rate for this code can be found in Addendum B of this final rule with comment period.

31. Extracorporeal Shock Wave Lithotripsy (SWL), CPT Code 50590 (APC 5374)

Extracorporeal shock wave lithotripsy is a procedure used to break up stone in the urinary tract using directed shock wave therapy. Shock waves are generated by a lithotripter which is a machine and capital equipment for the provider. The procedure is described by CPT code 50590 (Lithotripsy, extracorporeal shock wave).

For CY 2025, the OPPS payment rates are proposed based on available CY 2023 claims data. For the CY 2025 OPPS/ASC proposed rule, we found a total of 26,669 single frequency claims and a geometric mean cost of approximately $3,536 for CPT code 50590. For CY 2025, we proposed to continue to assign CPT code 50590 to APC 5374 (Level 4 Urology and Related Services) with a proposed payment rate of approximately $3,438.

Comment: One commenter disagreed with our APC assignment of CPT code 50590 to APC 5374 (Level 4 Urology and Related Services) and suggested that CPT code 50590 should be assigned to APC 5375 (Level 5 Urology and Related Services) like CPT code 52353 (Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with lithotripsy (ureteral catheterization is included)) and CPT code 52356 (Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with lithotripsy including insertion of indwelling ureteral stent (*e.g.,* gibbons or double-j type)). The commenter stated that higher payment for CPT codes 52353 and 52356 has driven service volume toward those codes and away from CPT code 50590.

Response: We thank the commenter for the input. We note that, with over 25,000 single claims in CY 2025, the geometric mean cost of CPT code 50590 very closely aligns with the geometric mean cost of the APC to which it is assigned, APC 5374. Furthermore, CPT code's geometric mean cost is well below that of CPT code 52356, which is the primary driver of the geometric mean cost of APC 5375.

After consideration of the public comment we received, we are finalizing our proposal without modification for CPT code 50590. Please refer to Table 89 for the final OPPS APC and status indicator assignment for CPT code 50590 for CY 2025. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 89: FINAL CY 2025 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 50590

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
50590	Lithotripsy, extracorporeal shock wave	J1	5374

32. Female Intraurethral Valve-Pump, Insertion and Replacement, CPT Codes 0596T and 0597T (APC 5372)

For CY 2025, we proposed to assign CPT codes 0596T (Temporary female intraurethral valve-pump (*i.e.,* voiding prosthesis); initial insertion, including urethral measurement) and 0597T (Temporary female intraurethral valve-pump (*i.e.,* voiding prosthesis); replacement) to status indicator ''J1'', APC 5372 (Level 2 Urology and Related Services) with a proposed payment rate of $675.64.

Comment: Commenters shared support for the proposal to assign CPT code 0597T to APC 5372 and agreed that the proposed assignment to APC 5372 aligns with costs incurred by hospitals to perform this service.

Response: We thank commenters for their support.

Comment: Commenters, the manufacturer and a trade association, expressed concerns that the proposed assignment of CPT code 0597T to APC 5372 does not sufficiently consider the targeted device cost of $1,885 and is not appropriate from a resource perspective, which the commenters feel may limit access to the procedures. The commenters requested reassignment of CPT code 0596T to APC 5373 (Level 3 Urology and Related Services) with a proposed payment rate of $2,074.53 as they believe that APC 5373 would be appropriate from a clinical and resource perspective and would more appropriately reflect the device costs to hospitals to furnish the service.

Response: We thank the commenter for their comment. For this final rule with comment period, we have no claims data for CPT code 0596T for OPPS ratesetting purposes. We continue to believe that CPT code 0596T shares similar clinical characteristics and resource costs to the services assigned to APC 5372.

In summary, after consideration of the public comments we received, we are finalizing our proposal, without modification, to continue to assign CPT codes 0596T and 0597T to APC 5372 for CY 2025. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reported under the OPPS. In addition, we refer readers to Addendum A of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Both Addendum A and Addendum B are available via the internet on the CMS website.

33. Fractional Flow Reserve (FFR) With 3D Coronary Mapping, CPT Code 0523T

The fractional flow reserve (FFR) with 3D coronary mapping procedure is described by CPT code 0523T (Intraprocedural coronary fractional flow reserve (ffr) with 3d functional mapping of color-coded ffr values for the coronary tree, derived from coronary angiogram data, for real-time review and interpretation of possible atherosclerotic stenosis(es) intervention (list separately in addition to code for primary procedure)). CPT code 0523T became effective January 1, 2019. For CY 2024, CPT code 0523T was assigned the status indicator ''N'' (packaged).

Comment: One commenter requested that the packaging exemption for SaaS add-on codes policy should be applied to CPT code 0523T. The commenter further requested that CPT code 0523T be assigned to status indicator ''J1'' (Comprehensive APC) and assigned to APC 5191 (Level 1 Endovascular Procedures) for CY 2025.

Response: We note that CPT code 0523T is an add-on code. Add-on codes represent services that are always performed in addition to the primary service or procedure and must never be reported as a stand-alone code. As specified under 42 CFR 419.2(b)(18), add-on codes are generally packaged under the OPPS, and payment for the codes are bundled with the primary codes. Consequently, CPT code 0523T is not paid separately under the OPPS, but instead, has its payment packaged into the payment for the primary code.

Under the packaging exemption for SaaS add-on codes (87 FR 72027 to 72035), we adopted a policy that services represented by SaaS add-on codes are not among the ''certain services described by add-on codes'' for which we package payment with the related procedures or services under the regulation at 42 CFR 419.2(b)(18). Specifically, the SaaS CPT add-on codes will be assigned to identical APCs and have the same status indicator assignments as their standalone SaaS codes. As such, the policy exempts SaaS add-on codes for which a standalone SaaS code is separately payable under the OPPS for the identical SaaS service furnished without concurrent imaging and described by the standalone CPT code. In summary, the packaging exemption for SaaS add-on codes policy only exempts SaaS add-on codes when the identical SaaS procedure is also represented by a standalone SaaS code and payable under the OPPS because the procedure requires the same resources regardless of whether it is furnished with or without the imaging service.

After consideration of the public comments we received, we are finalizing our proposal without modification for CPT codes 0523T. Please refer to Table 90 below for the final OPPS APC and status indicator assignment for CPT codes 0523T for CY 2025. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 90: FINAL CY 2025 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0523T

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0523T	Intraprocedural coronary fractional flow reserve (ffr) with 3d functional mapping of color-coded ffr values for the coronary tree, derived from coronary angiogram data, for real-time review and interpretation of possible atherosclerotic stenosis(es) intervention (list separately in addition to code for primary procedure)	N	NA

34. Fractional Flow Reserve Derived From Computed Tomography (FFRCT), CPT Code 75580 (APC 5724)

Fractional Flow Reserve Derived from Computed Tomography (FFRCT), also known by the trade name HeartFlow®, is a noninvasive diagnostic service that allows physicians to measure coronary artery disease in a patient through the use of coronary CT scans. The HeartFlow® service is indicated for clinically stable symptomatic patients with coronary artery disease, and, in many cases, may avoid the need for an invasive coronary angiogram procedure. HeartFlow® uses a proprietary data analysis process performed at a central facility to develop a three-dimensional image of a patient's coronary arteries, which allows physicians to identify the fractional flow reserve to assess whether patients should undergo further invasive testing (that is, a coronary angiogram).

HeartFlow® is currently described by CPT code 75580 (Noninvasive estimate of coronary fractional flow reserve (FFR) derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional). On January 1, 2024, CPT code 75580 replaced CPT code 0503T ((Noninvasive estimated coronary fractional flow reserve (ffr) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; analysis of fluid dynamics and simulated maximal coronary hyperemia, and generation of estimated ffr model).

HeartFlow® was assigned to APC 5724 (Level 4 Diagnostic Tests and Related Services) for CY 2024, and we proposed for CY 2025 to continue to assign HeartFlow® (CPT code 75580) to APC 5724.

Comment: We received one comment stating that several of the Medicare Administrative Contractors (MACs) have an edit in place that prohibits the use of the cardiology revenue code (0480) when billing CPT code 75580 as evidenced by claims denials with ''Invalid Revenue Code'' errors. The commenter asked that we provide guidance that explicitly allows CPT code 75580 to be billed with any appropriate revenue code just as we did for cardiac CT services. (See January 2024 Update (Transmittal 12421, Change Request 13488, dated December 21, 2023.)

Response: Based on the information the commenter provided, we were able to identify the outdated edit and remove it. Facilities may bill CPT 75580 with any appropriate revenue code. As a reminder, it is longstanding CMS policy that hospital outpatient facilities are responsible for reporting the appropriate cost centers and revenue codes on claims. As stated in section 20.5 in Chapter 4 (Part B Hospital) of the Medicare Claims Processing Manual, CMS ''does not instruct hospitals on the assignment of HCPCS codes to revenue codes for services provided under OPPS since hospitals' assignment of cost vary. Where explicit instructions are not provided, HOPDs should report their charges under the revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report.'' In addition to referring readers to the Medicare Claims Processing Manual, we will be providing public education and instruction through the CMS Medicare Learning Network (MLN).

Comment: Multiple commenters supported our proposal to continue to assign CPT code 75580 to APC 5724 for CY 2025.

Response: We thank the commenters for their input and for their support of our policy.

After consideration of the public comments we received, we are finalizing our proposal without modification. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

35. Gastric Electrophysiology Mapping With Simultaneously Validated Patient System Profiling (GEMS) Service, CPT Code 0868T (APC 5723)

Effective July 1, 2023, based on a New Technology application received by CMS for the GEMS service, CMS established HCPCS code C9787 (Gastric electrophysiology mapping with simultaneous patient symptom profiling) and assigned it to APC 5723 (Level 3 Diagnostic Tests and Related Services). Effective July 1, 2024, HCPCS code C9787 was deleted and replaced by CPT code 0868T (High-resolution gastric electrophysiology mapping with simultaneous patient symptom profiling, with interpretation and report). CMS assigned CPT code 0868T to APC 5723, the same APC to which its predecessor code, HCPCS code C9787, was assigned. For CY 2025, CMS proposed to continue to assign CPT code 0868T to APC 5723 with a proposed payment rate of $527.44 for CY 2025.

Comment: We received several comments, including a comment from the manufacturer, requesting that we reassign CPT code 0868T from APC 5723 to APC 1520 (New Technology—Level 20 ($1801–$1900)) with a payment rate of $1850.50, based on the purported cost of the technology and the

fact that it is a new service with a low volume of claims. The commenters explained that the proposed payment rate for CPT code 0868T would not cover the costs of the device, supplies, and clinical staff expenses. One commenter explained that the available claims data supports the conclusion that the proposed APC placement is inadequate. Specifically, the commenter pointed to one single frequency claim that shows a geometric mean cost of approximately $1,800 to demonstrate that CPT code 0868T should be assigned to APC 1520. The commenters suggested that if CMS did not agree to finalize an assignment to APC 1520, they would then suggest that CPT code 0868T be assigned to APC 5724 (Level 4 Diagnostic Tests and Related Services) with a proposed payment rate of approximately $1,000 or APC 5302 (Level 2 Upper GI Procedures) with a proposed payment rate of approximately $1,800 for CY 2025. Finally, one commenter drew differences between the clinical characteristics of CPT code 0868T and the other services assigned to APC 5723, including CPT code 0799T. For example, the commenter stated that CPT code 0799T involves a low-resolution electrode patch generating data comparable to traditional legacy electrogastrography, whereas C9787/0868T uses a high-resolution 64-lead array and sophisticated software to provide detailed multimodal diagnostic data.

Response: We appreciate the commenters' input. We disagree with the APC assignments recommended by commenters based on the purported costs of the service. Since we issued the proposed rule, additional claims data have been processed which, we believe, confirm that the proposed APC assignment is appropriate for HCPCS code C9787/CPT code 0868T for CY 2025. Our analysis of the available claims data demonstrates that the geometric mean cost for HCPCS code C9787 is approximately $310 based on 5 single frequency claims, which is below the geometric mean cost of $530 for APC 5723, but within the range of geometric mean costs of services assigned to APC 5723 which vary from approximately $150 to $2000. We note that given the effective date of payment, we have only one year of claims data for HCPCS code C9787/CPT code 0868T with an extremely low level of single frequency claims.

We will continue to monitor the claims data and adjust the APC placement for CPT code 0868T, based on the claims data in future rulemaking. Additionally, based on our review of the technology used as part of the service, input from CMS medical advisors, and review of all other information available to us, we continue to believe that CPT code 0868T is similar to services assigned to APC 5723. Based on the resource and clinical similarities to other services assigned to APC 5723, including CPT code 0779T (Gi myoelectrical actv study), as well as the available claims data, we believe that our proposal to assign CPT code 0868T is appropriate for CY 2025.

After consideration of the public comments, we are finalizing our proposal without modification to continue to assign CPT code 0868T to APC 5723. The final CY 2025 payment rate for the code can be found in Addendum B to this final rule with comment period. We also refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

36. Hernia Repair Procedures, CPT Codes 49593, 49595, and 49615 (APCs 5342 and 5361)

Effective January 1, 2023, the AMA created new abdominal hernia repair CPT codes 49593 (Repair of anterior abdominal hernia(s) (*i.e.,* epigastric, incisional, ventral, umbilical, spigelian), any approach (*i.e.,* open, laparoscopic, robotic), initial, including implantation of mesh or other prosthesis when performed, total length of defect(s); 3 cm to 10 cm, reducible), 49595 (Repair of anterior abdominal hernia(s) (*i.e.,* epigastric, incisional, ventral, umbilical, spigelian), any approach (*i.e.,* open, laparoscopic, robotic), initial, including implantation of mesh or other prosthesis when performed, total length of defect(s); greater than 10 cm, reducible), and 49615 (Repair of anterior abdominal hernia(s) (*i.e.,* epigastric, incisional, ventral, umbilical, spigelian), any approach (*i.e.,* open, laparoscopic, robotic), recurrent, including implantation of mesh or other prosthesis when performed, total length of defect(s); 3 cm to 10 cm, reducible). For CY 2023, we assigned these codes to APC 5341 (Level 1 Abdominal/Peritoneal/Biliary and Related Procedures). For CY 2025, we proposed to reassign these codes to APC 5342 (Level 2 Abdominal/Peritoneal/Biliary and Related Procedures) to resolve a 2-times violation for APC 5341.

Comment: We received two comments supporting the reassignment of CPT codes 49593, 49595, and 49615 to APC 5342 for CY 2025.

Response: We thank the commenters for their support.

Comment: The two commenters recommended that we also reassign CPT codes 49650 (Laparoscopy, surgical; repair initial inguinal hernia) and 49651 (Laparoscopy, surgical; repair recurrent inguinal hernia) from APC 5361 (Level 1 Laparoscopy and Related Services) to APC 5342. The commenters noted that with the addition of the three ventral hernia procedures, APC 5342 would now contain both open and laparoscopic surgical procedures.

Response: We thank the commenter for their suggestions. After further clinical review, we continue to believe that CPT codes 49650 and 49651 are still appropriately assigned to APC 5361 based on clinical and resource homogeneity to the procedures in the APC 5361.

After consideration of the public comment we received, we are finalizing our proposal without modification to reassign CPT codes 49593, 49595 and 49615 to APC 5342 (Level 2 Abdominal/Peritoneal/Biliary and Related Procedures). We are also finalizing our proposal without modification to continue to assign CPT codes 49650 and 49651 to APC 5361 (Level 1 Laparoscopy and Related Services). Table 91 shows the finalized status indicator and APC assignment for the procedure code. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 91: FINAL CY 2025 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 49593, 49595, 49615, 49650 AND 49651

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
49593	Repair of anterior abdominal hernia(s) (i.e., epigastric, incisional, ventral, umbilical, spigelian), any approach (i.e., open, laparoscopic, robotic), initial, including implantation of mesh or other prosthesis when performed, total length of defect(s); 3 cm to 10 cm, reducible	J1	5342
49595	Repair of anterior abdominal hernia(s) (i.e., epigastric, incisional, ventral, umbilical, spigelian), any approach (i.e., open, laparoscopic, robotic), initial, including implantation of mesh or other prosthesis when performed, total length of defect(s); greater than 10 cm, reducible	J1	5342
49615	Repair of anterior abdominal hernia(s) (i.e., epigastric, incisional, ventral, umbilical, spigelian), any approach (i.e., open, laparoscopic, robotic), recurrent, including implantation of mesh or other prosthesis when performed, total length of defect(s); 3 cm to 10 cm, reducible	J1	5342
49650	Laparoscopy, surgical; repair initial inguinal hernia	J1	5361
49651	Laparoscopy, surgical; repair recurrent inguinal hernia	J1	5361

37. Imaging of Retina for Detection or Monitoring of Disease, CPT Code 92229 (APC 5733)

CPT code 92229 (Imaging of retina for detection or monitoring of disease; point-of-care autonomous analysis and report, unilateral or bilateral) is performed to screen patients with diabetes for signs of diabetic retinopathy and other eye diseases. The code was established on January 1, 2021 and assigned to APC 5733 (Level 3 Minor Procedures). The code was assigned to Level 3 Minor Procedures because the service had clinical and resource similarity to long-established CPT code 92227 (Imaging of retina for detection or monitoring of disease; with remote clinical staff review and report, unilateral or bilateral) which also is assigned to APC 5733 (Level 3 Minor Procedures).

In the CY 2023 claims data, there were 370 (single frequency) claims for CPT code 92229 and the geometric mean for the service was $28.53. For CY 2025, we proposed to maintain CPT code 92229 in APC 5733 (Level 3 Minor Procedures) and wait for more claims data to be available before adjusting the payment rates for this service.

Comment: We received several comments supporting our decision to maintain CPT 92229 in APC 5733 (Level 3 Minor Procedures). Commenters noted that this service provides potentially sight saving technology to beneficiaries with diabetes in rural and underserved communities.

Response: We thank the commenters for their input.

Comment: We received one comment requesting that CPT code 92229 be removed from the Deficit Reduction Act (DRA) cap.

Response: We thank the commenter for their input, but we note that this comment is out of scope for purposes of this CY 2025 OPPS/ASC final rule with comment period.

After consideration of the public comments we received, we are finalizing our proposal without modification to assign CPT code 92229 to APC 5733. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

38. Implantable Cardiac Alert System, CPT Codes 0525T and 0527T (APCs 5224 and 5222)

The implantable cardiac alert system is a cardiac monitoring and alerting device to detect acute coronary syndrome (ACS) events and alerts the patient to seek urgent medical attention. The CPT codes 0525T (Insertion or replacement of intracardiac ischemia monitoring system, including testing of the lead and monitor, initial system programming, and imaging supervision and interpretation; complete system (electrode and implantable monitor)) and 0527T (Insertion or replacement of intracardiac ischemia monitoring system, including testing of the lead and monitor, initial system programming, and imaging supervision and interpretation; implantable monitor only) became effective January 1, 2019.

For CY 2025, the OPPS payment rates are proposed based on available CY 2023 claims data. For the CY 2025 OPPS/ASC proposed rule, based on our

analysis of claims data, we found a total of 15 single frequency claims and an estimated geometric mean cost of $3,244 for CPT code 0525T and a total of three single frequency claims and an estimated geometric mean cost of $3,433 for CPT code 0527T. For CY 2025, we proposed to continue to assign CPT code 0525T to Level 3 Pacemaker and Similar Procedures (APC 5223) and CPT code 0527T to Level 2 Pacemaker and Similar Procedures (APC 5222).

Comment: One Commenter disagreed with our APC's assignments of CPT codes 0525T and 0527T, suggesting that we did not account for the cost of the device represented by HCPCS code C1833 in the proposed rule. The commenter also stated that we erroneously assigned the status indicator of ''H'' to HCPCS code C1833 in the CY 2025 OPPS/ASC proposed rule. The commenter noted the Transitional Pass-Through period for C1833 expires December 31, 2024, and that HCPCS code C1833 should have been assigned the status indicator of ''N'' for CY 2025.

Additionally, the commenter argued that the proposed payment rates for CPT codes 0525T and 0527T are insufficient to cover the procedures' cost because we did not account for the device cost in the proposed CY 2025 payment rates. They claimed that the procedures represented by 0525T and 0527T are similar procedures and should both be assigned to APC 5231 (Level 1 ICD and Similar Procedures).

Response: We appreciate the commenter pointing out that HCPCS code C1833's Transitional Pass-through Status expires December 31, 2024. Therefore, we are revising the HCPCS code C1833's status indicator to ''N'' (packaged) for CY 2025.

We agree with the commenter the CY 2025 proposed APC assignments for 0525T and 0527T erroneously omitted the device cost (HCPCS code C1833) associated with these procedures. With the updated final rule data including the HCPCS code C1833 device cost, the revised geometric mean cost for CPT code 0525T is approximately $15,167 and the geometric mean cost for 0527T is approximately $7,242. Therefore, we believe an appropriate APC assignment for CPT code 0525T would be APC 5224 (Level 4 Pacemaker and Similar Procedures); and an appropriate assignment for CPT code 0527T would be APC 5222 (Level 2 Pacemaker and Similar Procedures).

We disagree with the commenter that CPT code 0525T is similar clinically and in resource costs to CPT code 0527T. We note that CPT code 0525T is for insertion of the complete system while CPT code 0527T is for insertion of the implantable monitor only.

After consideration of the public comments we received, we are finalizing a revision to our proposed APC assignment for CPT code 0525T and assigning this code to APC 5224 (Level 4 Pacemaker and Similar Procedures). We are finalizing the assignment of CPT code 0527T to APC 5222 (Level 2 Pacemaker and Similar Procedures) as proposed. Please refer to Table 92 for the final OPPS APC and status indicator assignment for CPT codes 0525T, 0527T and C1833 for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 92: FINAL CY 2025 OPPS APC ASSIGNMENT AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 0525T, 0527T, AND HCPCS CODE C1833

HCPCS Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0525T	Insertion or replacement of intracardiac ischemia monitoring system, including testing of the lead and monitor, initial system programming, and imaging supervision and interpretation; complete system (electrode and implantable monitor)	J1	5224
0527T	Insertion or replacement of intracardiac ischemia monitoring system, including testing of the lead and monitor, initial system programming, and imaging supervision and interpretation; implantable monitor only	J1	5222
C1833	Monitor, cardiac, including intracardiac lead and all system components (implantable)	N	

39. Implantable Glucose Monitoring System, CPT Codes 0446T and 0448T (APC 5054)

In 2017, the AMA CPT Editorial Panel established CPT codes 0446T and 0448T. CPT code 0446T (Creation of subcutaneous pocket with insertion of implantable interstitial glucose sensor, including system activation and patient training) and CPT code 0448T (Removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new implantable sensor, including system activation) describe an implantable glucose sensor for diabetic patients. The current codes are used to describe both 90-day and 180-day sensors. The FDA recently approved a 365-day sensor that is not currently on the market.

For CY 2025, we proposed to maintain both CPT codes in APC 5054 (Level 4 Skin Procedures) with a status indicator of ''T'' (Procedure or Service, Multiple Procedure Reduction Applies; Paid under OPPS; separate APC payment.).

Comment: We received one comment from the manufacturer requesting that we reassign CPT codes 0446T and 0448T from APC 5054 (Level 4 Skin Procedures) to APC 1531 (New Technology—Level 31 ($6501–$7000)) with a payment of $6,750.50 to reflect the increased expense of the implantable sensor that has quadrupled the life of the 90-day sensor. The manufacturer reiterated the value of the longer sensor duration, including fewer insertion and removal procedures and increased adherence to therapy.

Response: We appreciate the request of the commenter and understand the implicated value that a longer life sensor brings to Medicare beneficiaries. Because the current CPT codes do not designate the increased battery life of the sensor, we believe it is more appropriate to create 2 new HCPCS G codes effective January 1, 2025 to describe the implantable interstitial glucose sensor with a 365-day battery life than to make APC reassignments and potentially overpay for the current codes that could be used to describe the 90-day, 180-day, or 365-day sensor. Specifically, we created the following G codes to describe the 365-day sensor:

- G0564 (Creation of subcutaneous pocket with insertion of 365 day implantable interstitial glucose sensor, including system activation and patient training); and
- G0565 (Removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new 365 day implantable sensor, including system activation).

The manufacturer asserts the supply costs of the 365-day system will be equivalent to two 180-day systems or four 90-day systems. While we agree that there would be inherently increased costs to the new technology of a 365-day system, we do not agree that those costs would be 4 times more than the 90-day system.

After reviewing the device and procedure and obtaining input from our medical officers, we are assigning HCPCS codes G0564 and G0565 to APC 1561 (New Technology—Level 24 ($3001–$3500)) with a payment rate of $3,250.50.

We currently have very little claims information available for CPT codes 0446T and 0448T as there has only been 1 single frequency claim for CPT 0448T (with a geometric mean cost of around $1,320) and no single frequency claims for 0446T. The geometric mean cost for APC 5054 (Level 4 Skin Procedures) is around $1,850 so we believe APC 5054 is an appropriate assignment. We will continue to monitor these codes as we gather adequate claim information and other relevant clinical information that would be useful in determining appropriate APC assignments.

In summary, after consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT code 0446T and 0448T to APC 5054 (Level 4 Skin Procedures) for CY 2025 and finalizing APC assignments for G0564 and G0565. The final CY 2025 payment rate for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

40. Integrated Sacral Neurostimulators, CPT Code 0786T

Effective January 1, 2024, the CPT Editorial Panel separated integrated from non-integrated (*i.e.,* traditional) sacral neurostimulator procedure by establishing new CPT code, 0786T to report procedures using integrated sacral neurostimulator devices, while CPT code 64590 was updated to reflect the use of traditional technology:

- *0786T:* Insertion or replacement of percutaneous electrode array, sacral, with integrated neurostimulator, including imaging guidance, when performed.
- *64590:* Insertion or replacement of peripheral, sacral, or gastric neurostimulator pulse generator or receiver, requiring pocket creation and connection between electrode array and pulse generator or receiver

In the CY 2025 OPPS/ASC proposed rule Addendum B, we proposed to continue to assign CPT code 0786T to APC 5463 (Level 3 Neurostimulator and Related Procedures) with a proposed payment rate of $13,029.81. We received several comments related to the proposal.

Comment: One commenter disagreed with our proposal. The commenter stated that the proposed assignment for this technology would reduce reimbursement and limit access for Medicare and Medicaid patients seeking care in the outpatient surgery setting. The commenter thought that this decision may have been based on the concept that the Neuspera system is an integrated system, requiring no intra-operative connection. Although physical connections are not required, they stated a considerable amount of time and effort is expended on creating wireless connections and re-positioning the device once partially deployed.

One commenter asserted that the integrated sacral neuromodulation system (SNM) represents a disruptive technology that should improve patient satisfaction, with similar efficacy, lower risk, and as a ''one and done'' procedure that will reduce the need for 2–3 devices per patient to only one Neuspera devices per patient. The commenter stated the lead placement takes the majority of the procedure time, while the implantable pulse generator (IPG) placement requires very little time and expertise. Given their claim that the integrated system is nearly identical to the current non-integrated systems, they requested it should be paid on par with the current non-integrated system.

Other commenters maintained that the integrated SNM system anticipated to reach the market in 2025 has time and resources substantially equivalent to those for traditional SNM systems. Given this, they noted keeping CPT code 0786T in a lower APC with a lower device-intensive designation than traditional SNM systems will create an economic barrier and restrict hospitals and ASCs from offering this new less invasive form of SNM to patients.

Several commenters urged CMS to reassign CPT code 0786T to APC 5464 (Level 4 Neurostimulator and Related Procedures) to reflect the most accurate procedure and cost information related to this novel sacral neuromodulation system. They stated that there is a high degree of parity and similarity in time, work, staffing, costs, and resources required for the Neuspera procedure, compared to traditional sacral neuromodulation systems, which are currently assigned to APC 5464. The commenters also pointed out that if CMS is not willing to reassign CPT code 0786T to APC 5464, status indicator ''E1'' may provide CMS the ability to postpone APC assignment until there is FDA cleared technology to make a decision. Currently no FDA approved ''integrated'' sacral neuromodulation system exists.

Response: We proposed to continue to assign CPT code 0786T to APC 5463 for CY 2025, based on input from our clinicians and based on our evaluation of the code. We inadvertently listed Neuspera integrated sacral nerve stimulation system as receiving FDA-approval. However, it is still pending FDA approval and therefore, we agree with most of the commenters who recommended to reassign CPT code 0786T to status indicator ''E1'' until FDA approval has been received.

In summary, after consideration of the public comments that we received, we are finalizing our proposal with modification and are reassigning CPT code 0786T from APC 5463 to status indicator ''E1'' (Not covered by any Medicare outpatient benefit category; Statutorily excluded by Medicare; Not reasonable and necessary; Not paid by Medicare when submitted on outpatient claims (any outpatient bill type)) for CY 2025 because this service is not yet FDA approved.

We refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

41. Laparoscopic Appendectomy, CPT Code 44970 (APC 5361)

CPT code 44970 (Laparoscopy, surgical, appendectomy) describes the procedure for laparoscopic appendectomy. Using CY 2023 claims data, CPT code 44970 had a geometric mean cost of $6,499.86 in the CY 2025 OPPS/ASC proposed rule. For CY 2025, we believed this was still appropriately assigned to APC 5361 (Level 1 Laparoscopy and Related Services), which had a proposed payment rate of $5,798.13. Therefore, we proposed to continue assigning CPT code 44970 to APC 5361.

Comment: We received one comment requesting that we reassign CPT code 44970 to APC 5342 (Level 2 Abdominal/Peritoneal/Biliary and Related Procedures). The commenter argued that CPT code 44970 had clinical homogeneity and resource utilization similar to CPT code 44950 (Appendectomy), which is currently assigned to APC 5342.

Response: We thank the commenter for their input. CPT code 44970 has an updated GMC of $6,404.30 in the final rule data. While this is closer to the payment rate for APC 5342, after clinical review of this procedure, we did not find APC 5342 to be the clinically appropriate APC family for CPT code 44970. We continue to believe that this procedure belongs in the Laparoscopy and Related Procedures family.

After consideration of the public comment we received, we are finalizing our proposal without modification to continue to assign CPT code 44970 to APC 5361 (Level 1 Laparoscopy and Related Services). Table 93 shows the

finalized status indicator and APC assignment for the procedure code. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 93: FINAL CY 2025 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 44970

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
44970	Laparoscopy, surgical, appendectomy	J1	5361

42. Litholapaxy Procedure, CPT Code 52318 (APC 5374)

Litholapaxy is a procedure that involves crushing bladder stones and extracting the fragmented stones. CPT code 52318 (Litholapaxy: crushing or fragmentation of calculus by any means in bladder and removal of fragments; complicated or large (over 2.5 cm)) became effective January 1, 1985.

For CY 2025, OPPS payment rates are proposed based on available CY 2023 claims data. For CY 2025, based on our analysis of claims data, we found a total of 4,215 single frequency claims and a geometric mean cost of approximately $4,298 for CPT code 52318. For CY 2025, we proposed to continue to assign CPT code 52318 to Level 4 Urology and Related Services (APC 5374) with a proposed payment rate of approximately $3,438.

Comment: One commenter requested the APC assignment of CPT code 52318 to Level 5 Urology and Related Services (APC 5375). The commenter stated that the complexity and resources required for CPT code 52318 is comparable to CPT code 52601 (Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)), which is assigned to APC 5375. Moreover, the commenter alleged that CPT code 52318 is two times greater than the lowest geometric mean of CPT code 54670 (Suture or repair of testicular injury) in APC 5375, which is a two times rule violation.

Response: We appreciate the commenter's recommendation regarding the APC assignment of CPT code 52318, but we disagree that the complexity and resources required for CPT code 52318 are comparable to CPT code 52601. Based on the claims data, we believe that CPT code 52318 fits more appropriately in APC 5374, rather than in APC 5375, based on resource cost and clinical similarity to the procedures in APC 5374.

Furthermore, CPT codes 52318 and 54670 are currently assigned to APC 5374 (Level 4 Urology and Related Services). We note that APC 5374 does not currently have a 2 times rule violation in the final rule data. In addition, both CPT codes 52318 and 54670 do not meet the requirements for cost significance for 2 times rule violation purposes, under the requirements described in section III.B.2. of this final rule with comment period. We have reviewed the codes' geometric mean cost based on the available CY 2023 claims data within APC 5374 and believe that their current APC assignment continues to be appropriate.

After consideration of the public comment we received, we are finalizing our proposal without modification for CPT code 52318 to be reassigned to APC 5374 (Level 4 Urology and Related Services). Please refer to Table 94 for the final OPPS APC and status indicator assignment for CPT code 52318 for CY 2025. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 94: FINAL CY 2025 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 52318

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
52318	Litholapaxy: crushing or fragmentation of calculus by any means in bladder and removal of fragments; complicated or large (over 2.5 cm)	J1	5374

43. LIXELLE® Apheresis

LIXELLE® β2-microglobulin Apheresis Column is indicated for use in the treatment of dialysis-related amyloidosis (DRA), a disease that affects people with end-stage renal disease (ESRD). DRA is a metabolic disorder from the failure of the kidney to filter and remove β2-microglobulin, typically from chronic hemodialysis (typically 5 years or longer). The LIXELLE® device is used in an apheresis procedure that selectively removes β2-microglobulin from circulating blood and is used pursuant to a physician prescription in conjunction with hemodialysis. It is intended to be used at each hemodialysis session (that is, frequency

of treatment is expected to be 3 times per week). In March 2015, FDA approved LIXELLE® as a Class III Humanitarian Use Device (HUD) with an approved Humanitarian Device Exemption (HDE). For CY 2025, there are currently no specific HCPCS or CPT codes that represent the LIXELLE® apheresis service.

Comment: We received one comment, from the manufacturer, requesting CMS provide reimbursement for LIXELLE® apheresis procedure under the ESRD payment system or the OPPS to benefit patients with DRA. Specifically, the commenter requested that CMS provide separate payment under the OPPS for the procedure, and offered the following options:

(1) establish a new HCPCS C code or G code for the LIXELLE® apheresis procedure and assign the code to APC 5242 (Level 2 Blood Product Exchange and Related Services); or

(2) pay separately for the apheresis procedure used with the LIXELLE® device through CPT code 36516 (Therapeutic apheresis with extracorporeal immunoadsorption, selective adsorption or selective filtration and plasma reinfusion), assigned to APC 5243 (Level 3 Blood Product Exchange and Related Services) for CY 2025, and require the use of a modifier or add-on code when the LIXELLE® apheresis procedure is billed to reduce the procedure payment APC 5242 (Level 2 Blood Product Exchange and Related Services) payment rate; or

(3) allow separate payment for the dialysis performed as part of LIXELLE® apheresis procedure through HCPCS code G0257 (Unscheduled or emergency dialysis treatment for an ESRD patient in a hospital outpatient department that is not certified as an ESRD facility), which is assigned to APC 5401 (Dialysis) for CY 2025 and require the use of a modifier or add-on code to provide additional payment beyond that provided for APC 5401; or

(4) assign CPT 90947 (Dialysis procedure other than hemodialysis (*e.g.,* peritoneal dialysis, hemofiltration, or other continuous renal replacement therapies) requiring repeated evaluations by a physician or other qualified health care professional, with or without substantial revision of dialysis prescription) to APC 5242 (Level 2 Blood Product Exchange and Related Services).

The commenter also noted the FDA has approved a clarification to the Instructions for Use (IFU) since last year's comment and rulemaking. The IFU for LIXELLE® expands the list of personnel who can supervise the patient while connected to the extracorporeal system to include not only a physician, but a qualified health care professional such as a physician assistant, nurse practitioner, or registered nurse who is qualified to supervise hemodialysis procedures.

Response: We appreciate the thoughtful recommendations and will consider them for future rulemaking. We note this complex, ongoing issue is still under consideration and continues to merit a thorough evaluation to ensure an appropriate Medicare benefit category and payment pathway for the service is determined.

44. Low Ejection Fraction AI–ECG Service, CPT Codes 0764T and 0765T (APC 5734)

The low ejection fraction AI–ECG Service is intended to aid in screening for Left Ventricular Ejection Fraction (LVEF) less than or equal to 40 percent in adults at risk for heart failure. The low ejection fraction AI–ECG Service is an algorithmic SaaS service that aims to detect hidden diseases using algorithms to enhance and improve interventional procedures through real-time AI insights. CPT codes 0764T (Assistive algorithmic electrocardiogram risk-based assessment for cardiac dysfunction (*e.g.,* low ejection fraction, pulmonary hypertension, hypertrophic cardiomyopathy); related to concurrently performed electrocardiogram (List separately in addition to code for primary procedure)) and 0765T (Assistive algorithmic electrocardiogram risk-based assessment for cardiac dysfunction (*e.g.,* low ejection fraction, pulmonary hypertension, hypertrophic cardiomyopathy); related to previously performed electrocardiogram) became effective January 1, 2023 and were assigned to status indicator ''E1'' (Not paid by Medicare when submitted on outpatient claims). For CY 2025, we proposed that CPT codes 0764T and 0765T continue to be assigned to status indicator E1.

Comment: One Commenter provided documentation that AI–ECG has been FDA approved on September 28, 2023. The commenter requested separate payment for the low ejection fraction AI–ECG service for CY 2025. In addition, the commenter referenced our CY 2023 packaging exemption for SaaS add-on codes policy and requested separate payment for the add-on CPT code 0764T.

Response: We appreciate the commenter providing the FDA documentation for the AI–ECG approval. We agree that CPT code 0765T should be payable for CY 2025. Consistent with our SaaS Add-on Codes policy, CPT code 0764T, the add-on code for the low ejection fraction AI–ECG service would be assigned to the identical APC and status indicator to CPT code 0765T, the standalone code for the same service.

After consideration of the public comments we received, we are finalizing revised status indicator and APC assignments for CPT codes 0764T and 0765T. Please refer to Table 95 for the final OPPS APC and status indicator assignment for HCPCS codes 0764T and 0765T for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 95: FINAL CY 2025 OPPS APC ASSIGNMENT AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 0764T and 0765T

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0764T	Assistive algorithmic electrocardiogram risk-based assessment for cardiac dysfunction (e.g., low-ejection fraction, pulmonary hypertension, hypertrophic cardiomyopathy); related to concurrently performed electrocardiogram (list separately in addition to code for primary procedure)	S	5734
0765T	Assistive algorithmic electrocardiogram risk-based assessment for cardiac dysfunction (e.g., low-ejection fraction, pulmonary hypertension, hypertrophic cardiomyopathy); related to previously performed electrocardiogram	S	5734

45. Lower Esophageal Myotomy (POEM), CPT 43497 (APC 5331)

CPT code 43497 (Lower esophageal myotomy, transoral (*i.e.,* peroral endoscopic myotomy [POEM]) describes a minimally invasive endoscopic procedure that treats swallowing disorders caused by muscle problems in the esophagus.

For CY 2025, we proposed to assign CPT code 43497 to APC 5331 (Complex GI Procedures) with a proposed payment rate of around $5,838.

Comment: We received one comment requesting that we reassign CPT code 43497 to APC 5361 (Level 1 Laparoscopy and Related Services) with a proposed payment of around $5,798. The commenter stated that the procedure utilizes techniques that are surgical in nature and that APC 5361 would be a more appropriate APC assignment, based on clinical homogeneity and resource utilization with other services in APC 5361.

Response: The OPPS is a prospective payment system that provides payment for groups of services that share clinical and resource use characteristics. Based on our understanding of the service and input from our medical advisors, we do not agree that CPT code 43497 has clinical and resource homogeneity to other services in APC 5361 such that it should be assigned to APC 5361.

In summary, after consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT code 43497 to APC 5331 for CY 2025. The final CY 2025 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

46. Magnetic Resonance Exam Safety Procedures, CPT Codes 76014 Through 76019 (APCs 5521, 5523, 5731, 5733, and 5742)

For CY 2025, the AMA CPT Editorial Panel created six codes to report magnetic resonance (MR) examination safety procedures, effective January 1, 2025. The new codes did not have a predecessor code or a one-to-one match to an existing code. When determining the proposed status indicators and APC assignments for CY 2025, we reviewed the clinical and resource characteristics of the procedures, considered input from our medical advisors, and reviewed existing APC classifications to identify similar and closely related procedures. The codes, their long descriptors, and their proposed CY 2025 OPPS status indicators and APC assignments are listed in Table 96.

We note that CPT codes 76014, 76015, 76016, 76017, 76018, and 76019 were listed as placeholder codes 7XX00, 7XX01, 7XX02, 7XX03, 7XX04, and 7XX05 respectively, in OPPS Addendum B and Addendum O that were released with the CY 2025 OPPS/ASC proposed rule. Because we had not received the final CPT code numbers from AMA for the new codes that would be effective January 1, 2025, in time for the publication of the proposed rule, we listed the new CPT codes with their respective placeholder codes in OPPS Addendum B and Addendum O.

BILLING CODE 4120–01–P

TABLE 96 PROPOSED CY 2025 OPPS SI AND APC FOR THE MR DIAGNOSTIC PROCEDURES CPT CODES 76014-76019

CPT Code	Placeholder Code	Long Descriptor	Proposed CY 2025 OPPS SI	Proposed CY 2025 OPPS APC
76014	7XX00	MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (e.g., surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report; initial 15 minutes	S	5731
76015	7XX01	MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (e.g., surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report; each additional 30 minutes (List separately in addition to code for primary procedure)	N	N/A
76016	7XX02	MR safety determination by a physician or other qualified health care professional responsible for the safety of the MR procedure, including review of implant MR conditions for indicated MR examination, analysis of risk vs clinical benefit of performing MR examination, and determination of MR equipment, accessory equipment, and expertise required to perform examination, with written report	S	5521
76017	7XX03	MR safety medical physics examination customization, planning and performance monitoring by medical physicist or MR safety expert, with review and analysis by physician or other qualified health care professional to prioritize and select views and imaging sequences, to tailor MR acquisition specific to restrictive requirements or artifacts associated with MR conditional implants or to mitigate risk of non-conditional implants or foreign bodies, with written report	S	5734
76018	7XX04	MR safety implant electronics preparation under supervision of physician or other qualified health care professional, including MR-specific programming of pulse generator and/or transmitter to verify device integrity, protection of device internal circuitry from MR electromagnetic fields, and protection of patient from risks of unintended stimulation or heating while in the MR room, with written report	S	5731
76019	7XX05	MR safety implant positioning and/or immobilization under supervision of physician or other qualified health care professional, including application of physical protections to secure implanted medical device from MR-induced translational or vibrational forces, magnetically induced functional changes, and/or prevention of radiofrequency burns from inadvertent tissue contact while in the MR room, with written report	S	5733

BILLING CODE 4120–01–C

Comment: Some commenters disagreed with the proposed assignments for the five separately payable codes and provided

recommendations for APC reassignments. They stated that the proposed APC assignments for the new codes would be insufficient to cover the cost of furnishing the procedures and would impact beneficiary access. Commenters detailed that the proposed APC assignments for CPT codes 76017, 76018, and 76019 did not reflect the facility costs associated with these procedures, including additional staff time, MR room time and clinical resources for planning, preparation, and patient positioning.

The commenters requested that CMS reassign CPT codes 76014 (placeholder code 7XX00) and 76016 (placeholder code 7XX05) to APC 5611(Level 1 Therapeutic Radiation Treatment Preparation) with a proposed payment rate of $89.12. Commenters requested that CMS reassign CPT codes 76017 (placeholder code 7XX03) and 76019 (placeholder code 7XX05) to APC 5612 (Level 2 Therapeutic Radiation Treatment Preparation; proposed payment rate of around $370). Commenters shared that CPT codes 76017 (placeholder code 7XX03) and 76019 (placeholder code 7XX05) require additional staff time and clinical resources for planning, preparation, and positioning which warrants reassignment to APC 5612.

One commenter requested that CMS reassign CPT code 76018 (placeholder code 7XX04) to APC 5612 (Level 2 Therapeutic Radiation Treatment Preparation; proposed payment rate of around $370), Another commenter requested a reassignment of CPT code 76018 to APC 5742 (Level 2 Electronic Analysis of Devices; proposed payment rate of around $92). The commenter stated that CPT code 76018 involves interrogation and programming of an implanted device to protect the device and patient against interactions with the MRI scanner and would therefore fit well within APC 5612.

Response: We thank the commenters for their feedback and recommendations. In determining the appropriate APC placement for new codes, we rely on input from a variety of sources, including, but not limited to, review of the resource costs and clinical similarity of the service to existing procedures; input from CMS medical advisors; and information from interested specialty societies. We evaluated the recommendations, modeled the suggestions, analyzed the cost results of the suggested APC reassignments, and received additional input from our medical advisors. Because we believe that the services assigned to the Therapeutic Radiation Treatment Preparation APC family have higher degrees of technicality, require higher levels of trained professional staff, and therefore have additional facility costs beyond those described by the CPT codes 76014 through 76019, we disagree with the commenter requests to assign these CPT codes to APCs 5611 and 5612. And while we recognize that there is not currently a one-to-one match to crosswalk to the new codes, we based the proposed APC assignments for CPT codes 76014, 76016, and 76019 on crosswalks to CPT codes that have similar service and resource elements, as well as required staff, to the new codes.

Specifically, we continue to believe that:

- CPT code 76014 is similar to the service described by CPT code 0521T (Interrogation device evaluation (in person) with analysis, review and report, includes connection, recording, and disconnection per patient encounter, wireless cardiac stimulator for left ventricular pacing), which is assigned to APC 5731.
- CPT code 76016 is similar to the service described by CPT code 77091 (Trabecular bone score (tbs), structural condition of the bone microarchitecture; technical calculation only), which is assigned to APC 5521.
- CPT code 76019 is similar to CPT code 29520 (Strapping; hip), which is assigned to APC 5733.

After consideration of the public comments, our review of CPT code 76017 identified procedures in APC 5523 (Level 3 Imaging without Contrast) that we believe better align with the clinical characteristics and resources required for CPT code 76017, including CPT code 73718 (Magnetic resonance (*e.g.,* proton) imaging, lower extremity other than joint; without contrast material(s)). After further input from CMS medical advisors, we believe that it may be appropriate to assign CPT code 76017 to APC 5523.

Additionally, we believe that we have identified additional procedures in APC 5742 that share similar resource and clinical characteristics with CPT code 76018. Specifically, we believe that CPT code 76018 shares resource and clinical similarities to the service described by CPT code 29125 (Application of short arm splint (forearm to hand); static). Based on our assessment, we believe it appropriate to assign CPT code 76018 to APC 5742, based on shared resource and clinical characteristics.

In summary, we believe that the below assignment of the new codes in Table 97 are the most appropriate, in terms of clinical and resource homogeneity. We note that we review our claims data on an annual basis to establish the OPPS payment rates and we will reevaluate the status indicator and APC assignments annually.

After consideration of the public comments we received, we are finalizing our proposal with modification for CPT codes 76014 through 76019. Table 97 shows the finalized status indicators and APC assignments for all of the procedure codes. The final CY 2025 payment rates for these codes can be found in Addendum B to this final rule with comment period. We also refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

BILLING CODE 4120–01–P

TABLE 97: FINAL CY 2025 OPPS SI AND APC FOR THE MR DIAGNOSTIC PROCEDURES CPT CODES 76014-76019

CPT Code	Placeholder Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
76014	7XX00	MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (e.g., surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report; initial 15 minutes	S	5731
76015	7XX01	MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (e.g., surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report; each additional 30 minutes (List separately in addition to code for primary procedure)	N	N/A
76016	7XX02	MR safety determination by a physician or other qualified health care professional responsible for the safety of the MR procedure, including review of implant MR conditions for indicated MR examination, analysis of risk vs clinical benefit of performing MR examination, and determination of MR equipment, accessory equipment, and expertise required to perform examination, with written report	S	5521
76017	7XX03	MR safety medical physics examination customization, planning and performance monitoring by medical physicist or MR safety expert, with review and analysis by physician or other qualified health care professional to prioritize and select views and imaging sequences, to tailor MR acquisition specific to restrictive requirements or artifacts associated with MR conditional implants or to mitigate risk of non-conditional implants or foreign bodies, with written report	S	5523
76018	7XX04	MR safety implant electronics preparation under supervision of physician or other qualified health care professional, including MR-specific programming of pulse generator and/or transmitter to verify device integrity, protection of device internal circuitry from MR electromagnetic fields, and protection of patient from risks of unintended stimulation or heating while in the MR room, with written report	S	5742
76019	7XX05	MR safety implant positioning and/or immobilization under supervision of physician or other qualified health care professional, including application of physical protections to secure implanted medical device from MR-induced translational or vibrational forces, magnetically induced functional changes, and/or prevention of radiofrequency burns from inadvertent tissue contact while in the MR room, with written report	S	5733

BILLING CODE 4120–01–C

47. MindMotion GO Neurorehabilitative Remote Therapy Service, CPT Code 0733T (APC 1505)

Effective July 1, 2022, the AMA established CPT code 0733T (Remote real-time, motion capture-based neurorehabilitative therapy ordered by a physician or other qualified health care professional; supply and technical support, per 30 days) to describe the procedure associated with the use of MindMotion GO, which provides remote real-time, motion capture-based neurorehabilitative therapy. In the CY 2025 OPPS/ASC proposed rule, CMS proposed to continue to assign CPT code 0733T to APC 5741 (Level 1 Electronic Analysis of Devices) with a proposed payment rate of $36.90, due to its similarity to CPT code 98976 (Remote therapeutic monitoring (*e.g.,* therapy adherence, therapy response); device(s) supply with scheduled (*e.g.,* daily) recording(s) and/or programmed alert(s) transmission to monitor respiratory system, each 30 days).

Comment: We received one comment from the manufacturer of MindMotion GO requesting that CMS reassign CPT code 0733T to APC 1510 (New Technology—Level 10 ($801–$900)). The commenter stated that the resource costs of this service are $849 and that the MindMotion GO technology will not be commercially available until early 2025, so there is currently no claims data available to assign this service to a clinical APC. The commenter also believed that CPT code 0733T was not clinically homogeneous with APC 5741 as the procedures in the APC are for monitoring services, while CPT code 0733T also describes a device used primarily for treatment of neurological conditions.

Response: We thank the commenter for their input. We agree with the commenter that the current assignment of APC 5741 would result in too low of a payment for CPT code 0733T. After further review, we believe this procedure is similar to the procedure described by CPT code 0693T (Comprehensive full body computer-based markerless 3d kinematic and kinetic motion analysis and report), which describes technology for DARI Motion. CPT code 0693T is currently assigned to APC 1505 (New Technology—Level 5 ($301—$400)). Therefore, we are reassigning CPT code 0733T to APC 1505 until we are able to obtain claims data for this procedure.

After consideration of the public comment we received, we are finalizing our proposal with modification to reassign CPT code 0733T to APC 1505 (New Technology—Level 5 ($301–$400)). Table 98 shows the finalized status indicator and APC assignment for the procedure code. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 98: FINAL CY 2025 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0733T

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0733T	Remote real-time, motion capture-based neurorehabilitative therapy ordered by a physician or other qualified health care professional; supply and technical support, per 30 days	S	1505

48. Musculoskeletal Procedures (APCs 5111 Through 5116)

Prior to the CY 2016 OPPS, payment for musculoskeletal procedures was primarily divided according to anatomy and the type of musculoskeletal procedure. As part of the CY 2016 reorganization to better structure the OPPS payments to utilize prospective payment packages, we consolidated these individual APCs so that they became a general Musculoskeletal APC series (80 FR 70397 and 70398).

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59300), we continued to apply a six-level structure for the Musculoskeletal APCs because doing so provided an appropriate distinction for resource costs at each level and provided clinical homogeneity. However, we indicated that we would continue to review the structure of these APCs to determine whether additional granularity would be necessary. In the CY 2019 OPPS proposed rule (83 FR 37096), we recognized that commenters had previously expressed concerns regarding the granularity of the current APC levels and, therefore, requested comment on the establishment of additional levels. Specifically, we solicited comments on the creation of a new APC level between the current Level 5 and Level 6 within the Musculoskeletal APC series. While some commenters suggested APC reconfigurations and requested changes to APC assignments, many commenters requested that we maintain the current six-level structure and continue to monitor the claims data as they become available. Therefore, in the CY 2019 OPPS/ASC final rule with comment period, we maintained the six-level APC structure for the Musculoskeletal Procedures APCs (83 FR 58920 and 58921).

For CY 2025, based on the claims data available for the CY 2024 OPPS/ASC proposed rule, we continued to believe that the six-level APC structure for the Musculoskeletal Procedures APC series is appropriate, and we proposed to maintain it for the CY 2025 OPPS update.

Comment: Several commenters supported the assignment of HCPCS code 0737T (Xenograft implantation into the articular surface) to APC 5115 (Level 5 Musculoskeletal Procedures) and recommended that we finalize the assignment in the CY 2025 OPPS.

Response: We appreciate the commenters' support of our proposal. We agree and are finalizing the proposed assignment of HCPCS code 0737T (Xenograft implantation into the articular surface) to APC 5115 (Level 5 Musculoskeletal Procedures). We refer

readers to section III.E.67 of this final rule with comment period for a detailed discussion of this issue.

Comment: A commenter supported the continued assignment of HCPCS code C9781 (Arthroscopy, shoulder, surgical; with implantation of subacromial spacer (*e.g.,* balloon), includes debridement (*e.g.,* limited or extensive), subacromial decompression, acromioplasty, and biceps tenodesis when performed) to APC 5115 (Level 5 Musculoskeletal Procedures).

Response: We appreciate the commenter's support of our proposal. We agree and are finalizing the proposed assignment of HCPCS code C9781 (Arthroscopy, shoulder, surgical; with implantation of subacromial spacer (*e.g.,* balloon), includes debridement (*e.g.,* limited or extensive), subacromial decompression, acromioplasty, and biceps tenodesis when performed) to APC 5115 (Level 5 Musculoskeletal Procedures). We refer readers to section III.E.11. of this final rule with comment period for a detailed discussion of this issue.

Comment: A few commenters recommended that CMS consider the creation of additional musculoskeletal APC levels. Commenters noted that additional APCs should be considered with the goal of reducing payment gaps and volatility, while aligning cost and clinical homogeneity in the APCs. One commenter recommended that an additional APC level be considered between the current levels 4 and 5 with costs ranging from $7,000 to $12,000. Another commenter requested that we create an additional Musculoskeletal APC level from codes currently in APC 5116 (Level 6 Musculoskeletal Procedures) with geometric mean costs above $22,000, while moving codes with geomean costs above $14,000 in the current level 5 APC to the level 6 APC.

Response: We appreciate the commenters' recommendations. We also appreciate the goal of developing APC levels that properly group procedures by clinical and resource similarity. At this time, we believe the six-level structure for the Musculoskeletal APCs that we proposed continues to provide an appropriate distinction between the resource costs at each level and clinical homogeneity and are therefore finalizing that six-level structure for the Musculoskeletal Procedures APC series in the CY 2025 OPPS. However, we will take these comments into consideration for future rulemaking and continue to monitor the claims data as they are available.

After consideration of the public comments, we are finalizing our proposal to maintain the six-level Musculoskeletal Procedures APC structure. We are also finalizing the assignment of HCPCS code 0737T (Xenograft implantation into the articular surface) to APC 5115 and HCPCS code C9781 (Arthroscopy, shoulder, surgical; with implantation of subacromial spacer (*e.g.,* balloon), includes debridement (*e.g.,* limited or extensive), subacromial decompression, acromioplasty, and biceps tenodesis when performed) to APC 5115 for the CY 2025 OPPS.

49. Noncontact Near-Infrared (NIR) Spectroscopy, CPT 0640T (APC 5732)

Effective CY 2024, there are three codes that describe the service related to NIR spectroscopy: CPT codes 0640T (Noncontact near-infrared spectroscopy (*e.g.,* for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), other than for screening for peripheral arterial disease, image acquisition, interpretation, and report; first anatomic site, 0859T (Noncontact near-infrared spectroscopy (*e.g.,* for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), other than for screening for peripheral arterial disease, image acquisition, interpretation, and report; each additional anatomic site (list separately in addition to code for primary procedure)), and 0860T (Noncontact near-infrared spectroscopy (*e.g.,* for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), for screening for peripheral arterial disease, including provocative maneuvers, image acquisition, interpretation, and report, one or both lower extremities). Only CPT code 0640T is separately paid under the OPPS. For CY 2025, CMS proposed to assign CPT code 0640T to APC 5732 (Level 2 Minor Procedures) and status indicator ''S'' with a $39 payment rate.

Comment: We received one comment regarding the proposed APC assignment for CPT code 0640T. The commenter requested that we reassign 0640T to APC 5722 (Level 2 Imaging without contrast) with a proposed payment rate of approximately $310 for CY 2025 based on a crosswalk to CPT code 0598T (Noncontact real-time fluorescence wound imaging, for bacterial presence, location, and load, per session; first anatomic site (*e.g.,* lower extremity)). The commenter explained that CPT code 0598T is an appropriate crosswalk code because it yields diagnostic images without contrast, is newer, and utilizes a Category III CPT code.

Response: We thank the commenter for their input. First, we note that prior to the AMA's CPT Editorial Panel descriptor revision for CPT code 0640T, the technical service associated with NIR spectroscopy was described by CPT code 0641T, which was assigned to APC 5732 for CY 2023, prior to being deleted for CY 2024. Under the OPPS, the predecessor code for CPT code 0640T is CPT code 0641T. We note for CY 2025, OPPS payment rates are proposed based on available CY 2023 claims data. Based on our analysis of the claims data for this final rule with comment period, we found a geometric mean cost of about $16 for predecessor CPT code 0641T, based on 32 single frequency claims (out of 445 total claims). In contrast, we found a geometric mean cost of approximately $170 for CPT code 0598T based on 1109 single frequency claims (out of 2531 total claims). Based on the data, the resource cost associated with noncontact real-time fluorescence imaging (CPT code 0598T), is significantly higher compared to noncontact near-infrared (NIR) spectroscopy (CPT code 0640T/0641T). We disagree that the resource cost for NIR spectroscopy is similar to noncontact real-time fluorescence imaging. Therefore, we do not agree that both technologies should be placed in the same APC. We believe that the code describing NIR spectroscopy, specifically, CPT code 0640T, is appropriately placed in APC 5732.

In consideration of the public comment we received, we are finalizing our proposal without modification for CPT code 0640T. Specifically, for CY 2025, we are finalizing our proposal to assign CPT code 0640T to APC 5732. The final CY 2025 OPPS payment rate for all the codes payable under the OPPS can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

50. Percutaneous Coronary Revascularization Services by Intracoronary Antiproliferative Drug Delivery, CPT Codes 0913T and 0914T (APC 5192)

For the July 2024 update, the AMA's CPT Editorial Panel established two Category III codes to describe percutaneous coronary revascularization services by intracoronary antiproliferative drug delivery, performed for occlusive disease of the coronary vessels (major coronary arteries, coronary artery branches) using

drug-delivery balloon (*e.g.,* drug-coated, drug-eluting) for intracoronary antiproliferative drug delivery:

- CPT code 0913T (placeholder code XX23T) (Percutaneous transcatheter therapeutic drug delivery by intracoronary drug-delivery balloon (*e.g.,* drug-coated, drug-eluting), including mechanical dilation by nondrug-delivery balloon angioplasty, endoluminal imaging using intravascular ultrasound (IVUS) or optical coherence tomography (OCT) when performed, imaging supervision, interpretation, and report, single major coronary artery or branch)); and,
- CPT code 0914T (placeholder code XX40T) (Percutaneous transcatheter therapeutic drug delivery by intracoronary drug-delivery balloon (*e.g.,* drug-coated, drug-eluting) performed on a separate target lesion from the target lesion treated with balloon angioplasty, coronary stent placement or coronary atherectomy, including mechanical dilation by nondrug-delivery balloon angioplasty, endoluminal imaging using intravascular ultrasound (IVUS) or optical coherence tomography (OCT) when performed, imaging supervision, interpretation, and report, single major coronary artery or branch (List separately in addition to code for percutaneous coronary stent or atherectomy intervention)).

In the CY 2025 OPPS/ASC proposed rule, we proposed to assign CPT code 0913T (placeholder code XX23T) to APC 5192 (Level 2 Endovascular Procedures; geometric mean cost of $5,771.29) based on clinical and resource similarity to other Percutaneous Coronary Intervention (PCI) procedures, including CPT code 92920 (Percutaneous transluminal coronary angioplasty; single major coronary artery or branch). Additionally, as an add-on code, we proposed to assign CPT code 0914T to status indicator ''N.''

We note that a transitional device pass-through application was submitted for the AGENT™ Paclitaxel-Coated Balloon Catheter for CY 2025 to request separate payment for the device under the OPPS, in addition to the surgical CPT codes. We direct readers to section IV.A (Pass-Through Payment for Devices) of this final rule with comment period for a more detailed discussion of the transitional device pass-through applications and the status of the CY 2025 device pass-through application for the AGENT™ Paclitaxel-Coated Balloon Catheter.

We also note that a presenter provided information to the Panel on the description of the service and the cost of the Agent™ device and procedure at the August 28, 2024, HOP Panel Meeting. At the conclusion of the presentation, the presenter asked the Panel to request that CMS reassign CPT code 0913T from APC 5192 to APC 5193 (Level 3 Endovascular Procedures). Based on the information presented at the HOP Panel meeting, the HOP Panel recommended reassigning CPT 0913T to APC 5193.

Comment: We received several comments from interested parties, including the manufacturer, a trade association, and several practitioners. One commenter reiterated information shared during the 2024 HOP Panel. Commenters stated that coronary drug-delivery by drug-coated balloon (DCB) is a clinically similar procedure to a drug-eluting stent (DES) implant, which is reported with HCPCS code C9600 (Percutaneous transcatheter placement of drug eluting intracoronary stent(s), with coronary angioplasty when performed; single major coronary artery or branch) and is assigned to APC 5193 (Level 3 Endovascular Procedures). The manufacturer also provided a cost analysis of one facility's Medicare outpatient claims for coronary DCB. Their provided cost analysis included eleven claims and indicated that the geometric mean cost of those eleven claims was $18,935.69.

Response: We thank the commenters for their comments. After consideration of the public comments, we continue to believe that CPT code 0913T is appropriately assigned to APC 5192. We note that the long descriptor for CPT code 0913T describes a service similar to other codes in APC 5192. After review of the service and input from our CMS medical officers, we believe that CPT code 92920 (Percutaneous transluminal coronary angioplasty; single major coronary artery or branch) which is assigned to APC 5192 is a good crosswalk code for CPT code 0913T because it is clinically similar.

In summary, we are finalizing our proposal to assign CPT code 0913T to status indicator ''J1,'' and APC 5192. The final CY 2025 payment rate for CPT code 0913T can be found in Addendum B to this final rule with comment period. We also refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendums B and D1 are available via the internet on the CMS website.

51. Potential Two-Times Rule Violations (APCs 5302, 5415, 5092, and 5114)

We received comments on the APC assignments we proposed in the CY 2025 OPPS/ASC proposed rule, which commenters believe result in 2-times rule violations.

Endoscopic Esophageal Procedures

CPT code 43254 (Esophagogastroduodenoscopy, flexible, transoral; with endoscopic mucosal resection) with a geometric mean cost of around $2,632; CPT code 43270 (Esophagogastroduodenoscopy, flexible, transoral; with ablation of tumor(s), polyp(s), or other lesion(s) (includes pre- and post-dilation and guide wire passage, when performed)) with a geometric mean cost of around $2,985; and CPT code 43275 (Endoscopic retrograde cholangiopancreatography (ERCP); with removal of foreign body(s) or stent(s) from biliary/pancreatic duct(s)) with a geometric mean cost of around $2,886 describe endoscopic procedures that are performed on the esophagus. For the CY 2025 OPPS/ASC proposed rule, we proposed to assign all 3 procedures to APC 5302 (Level 2 Upper GI Procedures), which had a proposed a payment rate of around $1,884.

Comment: One commenter requested that we reassign CPT codes 43254, 43270, and 43275 to APC 5303 (Level 3 Upper GI Procedures) with a proposed payment rate of around $3,648, due to the geometric mean costs of these codes being more than 2 times that of CPT code 0653T (Esophagogastroduodenoscopy, flexible, transnasal; with biopsy, single or multiple). CPT code 0653T has a geometric mean cost of around $1,212.

Response: We appreciate the commenter's request. We did not identify a 2-times rule violation for APC 5302. Since the release of the CY 2025 OPPS proposed rule, we have updated our 2-times analysis of claims from CY 2023 that are used to set rates for CY 2025. Our updated claims data found CPT code 0653T has fewer than 100 claims and does not meet the significance threshold for the two times rule evaluation, and therefore is not considered the lowest cost significant procedure for APC 5302.

Vaginal Hysterectomy Procedures

CPT code 58260 (Vaginal hysterectomy, for uterus 250 g or less) with a geometric mean cost of around $6,083 and CPT code 58262 (Vaginal hysterectomy, for uterus 250 g or less; with removal of tube(s), and/or ovary(s)) with a geometric mean cost of around $6,753 describe vaginal hysterectomy procedures. For the CY 2025 OPPS/ASC proposed rule, we proposed to assign both procedures to APC 5415 (Level 5 Gynecologic Procedures) with a

proposed payment rate of around $4,902.

Comment: A commenter requested that we reassign CPT codes 58260 and 58262 to APC 5416 (Level 6 Gynecologic Procedures) with a proposed payment rate of around $7,312, citing the geometric mean cost of CPT code 57550 (Excision of cervical stump, vaginal approach) which is around $1,879.

Response: We appreciate the commenter's request. We did not identify a 2-times rule violations for APC 5415. Our updated claims data found CPT code 57550 has fewer than 100 claims and does not meet the significance threshold for the 2-times rule evaluation, and therefore is not considered the lowest cost significant procedure for APC 5415.

Mastectomy Procedures

CPT code 19303 (Mastectomy, simple, complete) with a geometric mean cost of around $7,236 and CPT code 19307 (Mastectomy, modified radical, including axillary lymph nodes, with or without pectoralis minor muscle, but excluding pectoralis major muscle) with a geometric mean cost of around $7,412 describe mastectomy procedures. For the CY 2025 OPPS/ASC proposed rule, we proposed to assign both procedures to APC 5092 (Level 2 Breast/Lymphatic Surgery and Related Procedures) with a proposed payment rate of around $6,473.

Comment: Another commenter requested that we reassign CPT code 19303 and 19307 to APC 5093 (Level 3 Breast/Lymphatic Surgery and Related Procedures) with a proposed payment rate of around $9,417, citing the geometric mean cost of CPT code 38555 (Excision of cystic hygroma, axillary or cervical; with deep neurovascular dissection) which is around $3,475.

Response: We appreciate the commenter's request. We did not identify a 2-times rule violations for APC 5092. Our updated claims data found CPT code 38555 has fewer than 100 claims and does not meet the significance threshold for the two times rule evaluation and therefore is not considered the lowest cost significant procedure for APC 5092.

Arthrodesis Procedure

CPT code 28740 (Arthrodesis, midtarsal or tarsometatarsal, single joint), which has a geometric mean cost of around $11,058, describes an arthrodesis procedure performed in the foot. For the CY 2025 OPPS/ASC proposed rule, we proposed to assign this procedure to APC 5114 (Level 4 Musculoskeletal Procedures) with a proposed payment rate of around $7,090.

Comment: A commenter requested that CPT code 28740 be reassigned to APC 5115 (Level 5 Musculoskeletal Procedures) with a proposed payment rate of around $12,755, citing the geometric mean cost of CPT code 27385 which is around $5,616.

Response: We appreciate the commenter's request. Our updated claims data did not identify a 2-times rule violation for APC 5115. We also found that the geometric mean cost for CPT code 28740 is $11,074. This is less than two times the updated cost of the suggested code CPT code 27385, which is $5,616.

In summary, after consideration of these public comments, we are finalizing our proposal without modification to assign CPT codes 43254, 43270, and 43275 to APC 5302 (Level 2 Upper GI Procedures); CPT codes 58260 and 58262 to APC 5415 (Level 5 Gynecologic Procedures); CPT codes 19303 and 19307 to APC 5092 (Level 2 Breast/Lymphatic Surgery and Related Procedures); and CPT code 28740 to APC 5114 (Level 4 Musculoskeletal Procedures). We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

52. Prostate Laser Enucleation Procedure, CPT Code 52649 (APC 5375)

Prostate laser enucleation procedure utilizes laser to remove the prostate tissue to treat benign prostatic hyperplasia. The procedure is described by CPT code 52649 (Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)).

For CY 2025, the OPPS payment rates are proposed based on available CY 2023 claims data. For the CY 2025 proposed rule, based on our analysis of claims data, we found a total of 7,494 single frequency claims and a geometric mean cost of approximately $6,812 for CPT code 52649. For CY 2025, we proposed to continue to assign CPT code 52649 to Level 5 Urology and Related Services (APC 5375) with a proposed payment rate of approximately $5,057.

Comment: One commenter disagreed with the proposed APC assignment to APC 5375 (Level 5 Urology and Related Services) and requested the reassignment of CPT code 52649 to APC 5376 (Level 6 Urology and Related Services). The commenter argued that CPT code 52649 shared more clinical and resource similarities with CPT code 50562 (Renal endoscopy through established nephrostomy or pyelostomy, with or without irrigation, instillation, or ureteropyelography, exclusive of radiologic service; with resection of tumor) and CPT code 55873 (Cryosurgical ablation of the prostate (includes ultrasonic guidance and monitoring)), which are currently assigned to APC 5376. Moreover, the commenter argued that there is more work involved in CPT code 52649 than CPT code 52601 (Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)) which is currently assigned to APC 5375 (Level 5 Urology and Related Services).

Response: The CY 2025 OPPS payment rates were proposed based on available CY 2023 claims data. We analyzed the claims data for this final rule, and based on our review, we found a geometric mean cost of approximately $6,812 for CPT code 52649 based on 7,494 single claims (out of 7,564 total claims), is consistent with the geometric mean cost of about $5,145 for APC 5375, rather than the geometric mean cost of approximately $9,356 for APC 5376. Based on the claims data, we believe that CPT code 52649 fits more appropriately in APC 5375, rather than in APC 5376, based on resource cost and clinical similarity to CPT code 52601 in APC 5375. We note that we review, on an annual basis, the APC assignments for all services and items paid under the OPPS based on our analysis of the latest claims data.

We also disagree that CPT code 52649 is sufficiently clinically similar to CPT code 50562 because the latter code involves a surgical treatment of the kidney rather than the prostate. Furthermore, we disagreed that CPT code 52649 shares resource similarity with CPT code 55873, as cryosurgical ablation requires many more resources than the prostate laser enucleation procedure.

In summary, after consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT code 52649 to APC 5375 for CY 2025. Please refer to Table 99 below for the final OPPS APC and status indicator assignment for HCPCS code 52649 for CY 2025. The final CY 2025 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer

readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Both Addendum B and D1 are available via the internet on the CMS website.

TABLE 99: FINAL CY 2025 OPPS APC ASSIGNMENT AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 52649

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
52649	Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)	J1	5375

53. Remote Uroflowmetry Service, CPT Code 0812T (APC 5721)

Remote uroflowmetry is a service that allows patients to measure urine output while remotely monitored by health professionals. This service aids in the diagnosis and management of lower urinary tract issues, such as benign prostatic hyperplasia. It is described by CPT code 0812T (Remote multi-day complex uroflowmetry (*e.g.,* calibrated electronic equipment); device supply with automated report generation, up to 10 days) which became effective January 1, 2024. For CY 2025, we proposed to assign CPT code 0812T to APC 5741 (Level 1 Electronic Analysis of Devices).

Comment: One commenter disagreed with our proposed APC assignment of APC 5741 (Level 1 Electronic Analysis of Devices), citing higher equipment and labor cost associated with the CPT code 0812T than services assigned to APC 5741. The commenter requested CPT code 0812T be reassigned to APC 5722 (Level 2 Diagnostic Tests and Related Services), citing resource similarity to CPT code 51741(Complex uroflowmetry (*e.g.,* calibrated electronic equipment)).

Response: We appreciate the commenter's recommendation regarding the APC assignment for CPT code 0812T. However, we disagree with the commenter that CPT code 51741 shares similar resource requirements with CPT code 0812T, although both CPT codes describe the uroflowmetry service. CPT code 51741 is a more complex procedure than CPT code 0812T, which is why we proposed to assign CPT code 51741 to APC 5722 (Level 2 Diagnostic Tests and Related Services)). However, we also believe CPT code 0812T shares more resource similarity with CPT code 51703 (Insertion of temporary indwelling bladder catheter; complicated (*e.g.,* altered anatomy, fractured catheter/balloon)) than CPT code 51741. Therefore, for CY 2025, we are reassigning CPT code 0812T to APC 5721 (Level 1 Diagnostic Tests and Related Services).

After consideration of the public comment we received, we are finalizing our proposal with modification and reassigning CPT code 0812T to APC 5721 (Level 1 Diagnostic Tests and Related Services). Please refer to Table 100 below for the final OPPS APC and status indicator assignment for CPT code 0821T for CY 2025. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 100: FINAL CY 2025 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0812T

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0812T	Remote multi-day complex uroflowmetry (e.g., calibrated electronic equipment); device supply with automated report generation, up to 10 days	Q1	5721

54. Skin Cell Suspension Autograft (SCSA) Procedures, CPT Codes 15011 Through 15018 (APCs 5051, 5054, and 1567)

The RECELL System is a device used for skin cell suspension autograft (SCSA) procedures. Skin cell suspension autograft procedures treat acute thermal burn injuries by adhering skin cell solutions to the wound site without use of fixation. There are three steps to perform a SCSA procedure: (1) skin harvesting, (2) SCSA preparation (utilizing the RECELL System), and (3) SCSA application to the wound bed.

The RECELL System is on transitional pass-through (TPT) effective January 1, 2022, to December 31, 2024. While on TPT, each time the RECELL device is used, providers must bill device code HCPCS C1832 (Autograft suspension, including cell processing and application, and all system components) and either CPT code 15110 (Epidermal autograft, trunk, arms, legs; first 100 sq cm or less, or 1% of body area of infants and children) or CPT code 15115 (Epidermal autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 100 sq cm or less, or 1% of body area of infants and children),as provided in the January 2022 OPPS Change Request 12552 (Transmittal R11150CP).

While HCPCS code C1832 describes the RECELL System that prepares the SCSA, CPT codes 15110 and 15115 describe the autograft procedure, which includes both the skin harvesting and SCSA application components of the service. For CY 2024, CPT codes 15510 and 15115 were assigned to APC 5054 (Level 4 Skin Procedures), with a payment rate of approximately $1,800. HCPCS code C1832 can also be billed with CPT codes 15100 (Split-thickness autograft, trunk, arms, legs; first 100 sq cm or less, or 1% of body area of infants and children (except 15050)) or 15120 (Split-thickness autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 100 sq cm or less, or 1% of body area of infants and children (except 15050)), so long as it is billed with one of the two preceding codes (CPT codes 15110 or 15115).

In September 2023, AMA's CPT Editorial Panel created eight new Category 1 CPT codes to describe SCSA procedures, effective January 1, 2025. The eight new codes are provided in Table 101.

TABLE 101: CATEGORY I CPT CODES TO DESCRIBE SCSA PROCEDURES EFFECTIVE JANUARY 1, 2025

CPT Code	Long Descriptor
15011 (placeholder code 15XX1)	Harvest of skin for skin cell suspension autograft; first 25 sq cm or less
15012 (15XX2)	Harvest of skin for skin cell suspension autograft; each additional 25 sq cm or part thereof (List separately in addition to code for primary procedure)
15013 (15XX3)	Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; first 25 sq cm or less of harvested skin
15014 (15XX4)	Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; each additional 25 sq cm of harvested skin or part thereof (List separately in addition to code for primary procedure)
15015 (15XX5)	Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; first 480 sq cm or less
15016 (15XX6)	Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; each additional 480 sq cm or part thereof (List separately in addition to code for primary procedure)
15017 (15XX7)	Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 480 sq cm or less
15018 (15XX8)	Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 480 sq cm or part thereof (List separately in addition to code for primary procedure)

In creating these eight new CPT codes, the harvesting, preparation, and application components of the service are each split into separate codes. The harvesting of the skin is described by CPT codes 15011 and 15012, the preparation of the SCSA is described by CPT codes 15013 and 15014, and the application of the SCSA is described by CPT codes 15015 through 15018. While the RECELL System is on TPT, it is sufficient to bill the device code HCPCS C1832 and only one procedure code (either CPT code 15110 or CPT 15115) to describe all three components of the service. However, with the creation of the eight new CPT codes, at least three CPT codes will need to be billed each time the RECELL System is used for a SCSA procedure: CPT code 15011 with or without CPT code 15012 for the skin harvesting, CPT code 15013 with or without CPT code 15014 for the SCSA preparation, and CPT code 15015 with or without CPT code 15016 or CPT code 15017 with or without CPT code 15018 for the SCSA application.

For CY 2025, we proposed to assign the eight new CPT codes to various clinical APCs and status indicators provided in Table 102.

BILLING CODE 4120–01–P

TABLE 102: PROPOSED CY 2025 APC AND STATUS INDICATOR ASSIGNMENTS FOR NEW SCSA PROCEDURES

CPT Code	Long Descriptors	Proposed CY 2025 Status Indicator	Proposed CY 2025 APC Assignment
15011 (15XX1)	Harvest of skin for skin cell suspension autograft; first 25 sq cm or less	T	5054
15012 (15XX2)	Harvest of skin for skin cell suspension autograft; each additional 25 sq cm or part thereof (List separately in addition to code for primary procedure)	N	N/A
15013 (15XX3)	Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; first 25 sq cm or less of harvested skin	T	5051
15014 (15XX4)	Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; each additional 25 sq cm of harvested skin or part thereof (List separately in addition to code for primary procedure)	N	N/A
15015 (15XX5)	Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; first 480 sq cm or less	T	5054
15016 (15XX6)	Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; each additional 480 sq cm or part thereof (List separately in addition to code for primary procedure)	N	N/A
15017 (15XX7)	Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 480 sq cm or less	T	5054

BILLING CODE 4120–01–C

Comment: We received two comments requesting that we finalize our proposal to assign 15011, 15015, and 15017 to

APC 5054 (Level 4 Skin Procedures) for CY 2025.

Response: We thank the commenters for their support.

Comment: We received two comments, including one comment from the manufacturer of the RECELL System, requesting that we reassign CPT code 15013 from APC 5051 (Level 1 Skin Procedures) to APC 1575 (New Technology—Level 38 ($10,001–$15,000) with a payment rate of $12,500.50 for CY 2025. The commenters expressed concern that the proposed APC assignment for CPT code 15013 to APC 5051 does not accurately reflect the hospital-reported costs associated with the RECELL System. The commenters requested that we consider the hospital costs reported with device code C1832 during the TPT period when finalizing the APC assignment for CPT 15013. The comments estimated a combined total cost of $10,188.96 for CPT code 15013 by adding the purported mean cost for device code C1832 ($7,220) with supply and operating room time costs of approximately $2,900. Based on these estimates, the commenters believe assigning CPT code 15013 to APC 1575 with a payment rate of $12,500.50 would sufficiently pay for the preparation step of the SCSA procedure.

Response: We thank the commenters for their input. Under the OPPS, once pass-through status ends for a device, the cost of the device is packaged into its associated procedure. For the RECELL System, once TPT expires on December 31, 2024, the associated procedure will be CPT code 15013. We agree with the commenters that we need to use the claims data available while the RECELL System is on TPT to determine the appropriate APC placement for CPT code 15013.

However, given the restructuring of how SCSA procedures utilizing the RECELL System will be billed effective January 1, 2025, we also believe we need to consider the costs of the skin harvesting and application steps of the procedure, which are currently billed by only one procedure code (either CPT Code 15110 or CPT code 15115), paid at approximately $1,800, to determine the appropriate payment for the RECELL System and SCSA application step. In other words, we believe that the sum of the payment rates for the new codes describing the three steps of the SCSA procedure should approximate the cost of the RECELL System on TPT and CPT codes 15110 or 15115. Based on our review of the claims data for device code C1832 during the TPT period, as well as the payment rates for CPT codes 15110 and 15115, we believe assigning CPT code 15013 to APC 1567 (New Technology—Level 30 ($6001–$6500)) with a $6,250.50 payment rate would be appropriate for CY 2025, considering that it will be billed with additional procedure codes that describe the other steps of the SCSA procedure. Rather than assigning CPT code 15013 to APC 5051, as proposed, which has a payment rate of approximately $200 for CY 2025, we believe assigning CPT code 15013 to APC 1567 with a payment rate of $6,250.50 will more appropriately pay for the preparation part of the service, which uses the device. When the full service is performed, meaning that the harvesting, preparation, and application steps are performed, the total cost of the service for CY 2025 will be approximately $10,000, an amount that we believe is appropriate based on the data we have collected while the device has had transitional pass-through status.

In consideration of the public comments received, we are finalizing our proposal with modification. For CY 2025, we are finalizing the APC assignments for CPT codes 15011, 15015, and 15017 to APC 5054 (Level 4 Skin Procedures) as proposed. However, we are not finalizing our proposal to assign CPT code 15013 to APC 5051 (Level 1 Skin Procedures) as proposed. For CY 2025, we are assigning CPT code 15013 to APC 1567 ((New Technology—Level 30 ($6001–$6500)).

The final 2025 payment rates for the codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

55. Surgical Pathology Examination, CPT Code 88309 (APC 5674)

CPT code 88309 describes a level VI examination of a surgical pathology specimen performed by the physician, typically a pathologist. The examination includes accessioning the specimen into the lab, which involves formally receiving the specimen, examining gross and microscopic features of the specimen, and reporting findings.

In the CY 2025 OPPS/ASC proposed rule, we proposed to reassign CPT code 88309 from APC 5674 (Level 4 Pathology) to APC 5673 (Level 3 Pathology) with a proposed payment rate of $356.00.

Comment: Three commenters asked CMS to maintain the assignment of CPT code 88309 in APC 5674.

One commenter recommended that CMS maintain the current assignment of CPT 88309 (Level VI—Surgical pathology, gross and microscopic examination) in APC 5674, (Level 4 Pathology), rather than assigning the code to APC 5673, (Level 3 Pathology), to promote resource and clinical cohesion.

Two commenters stated that the proposed reassignment is based on claims data that do not reflect the actual costs of performing the test. They stated that the CY 2025 geometric mean cost for this code is over 25% lower than the geometric mean cost for the prior calendar years and that the complexity of specimens and technical work associated with these services requires the maintenance of the code in APC 5674. Therefore, to ensure resource cohesion within the clinical APCs, the commenters asked CMS to maintain the assignment of CPT code 88309 to APC 5674 for CY 2025 and to not finalize an APC reassignment that would result in a greater than 56% reduction in the payment rate for this important service for Medicare beneficiaries.

Response: We thank the commenters for their input. We acknowledge a significant drop in the geometric mean cost for CPT code 88309, which is almost 25% lower than the geometric mean cost in previous years.

For this final rule with comment period, we once again reviewed the available CY 2023 claims data and observed a wide variation in claims used for ratesetting purposes for CY 2025. We note that the claims included in ratesetting for this code reflect a wide range of estimated costs and providers furnishing this service along with their associated clinical patterns. We believe these claims are an accurate reflection of those changing costs. However, we are sympathetic to commenters' concerns regarding the 25% reduction in the proposed payment rate for CPT code 88309 from CY 2024 to CY 2025. Therefore, we will use our equitable adjustment authority under section 1833(t)(2)(E) of the Act to continue to assign CPT code 88309 to APC 5674 for CY 2025.

In summary, after consideration of the public comments that we received, we are finalizing our proposal with modification to assign CPT code 88309 to APC 5674. However, we will continue to monitor the claims data as they are updated and available.

We refer readers to Addendum B to this final rule with comment period for the final CY 2025 OPPS payment rate for this code. Addendum B is available via the internet on the CMS website.

56. Therapeutic Ultrafiltration, CPT 0692T (APC 5242)

In the CY 2025 OPPS/ASC proposed rule, we proposed to continue to assign CPT code 0692T (Therapeutic ultrafiltration), which became effective January 1, 2022, to APC 5241 (Level 1 Blood Product Exchange and Related Services) with a proposed payment rate of $431.37.

Therapeutic ultrafiltration reported with CPT code 0692T, is an apheresis procedure for fluid-overloaded heart failure patients through which plasma water and sodium are removed from the blood using the Aquadex SmartFlow System.

We received several comments requesting CMS reassign CPT code 0692T from APC 5241 (Level 1 Blood Product Exchange and Related Services) to APC 5242 (Level 2 Blood Product Exchange and Related Services).

Comment: Several commenters claimed that the payment rate for APC 5241 is inadequate for CPT code 0692T and that APC 5242 better aligns with the resource costs and clinical aspects of the service. According to the commenters, the resources required, and risks associated with ultrafiltration are the same as plasmapheresis, which is assigned to APC 5242. Ultrafiltration (*e.g.,* apheresis) is the extracorporeal removal of isotonic plasma water (water and salt/electrolytes) and is very similar to plasmapheresis according to the commenters, which involves the extracorporeal removal, return, or exchange of blood plasma or components and is assigned to APC 5242. Commenters suggested that reassigning the ultrafiltration therapy code 0692T to APC 5242 would align OPPS payment with the cost of providing the service.

Response: We thank commenters for their input. We have limited claims data (9 total claims) for CPT code 0692T available for CY 2025 ratesetting. However, based on the code's clinical similarity and expected resource cost similarity to CPT code 36514 (Therapeutic apheresis; for plasma pheresis), which we have assigned to APC 5242 (Level 2 Blood Product Exchange and Related Services) for CY 2025, we believe that we should reassign CPT code 0692T to APC 5242.

In summary, after consideration of the public comments that we received, we are finalizing our proposal with modification, and assigning CPT code 0692T to APC 5242 for CY 2025. The CY 2025 final payment rate for this code can be found in Addendum B of this final rule with comment period.

57. Thyroid Ablation, CPT Codes 60660 and 60661 (APC 5072)

The AMA established CPT codes 60660 (Ablation of 1 or more thyroid nodule(s), one lobe or the isthmus, percutaneous, including imaging guidance, radiofrequency) and 60661 (Ablation of 1 or more thyroid nodule(s), additional lobe, percutaneous, with imaging guidance, radiofrequency (List separately in addition to code for primary service), effective January 1, 2025. These codes were previously described by the placeholder codes 6XX01 and 6XX02. In the CY 2025 OPPS/ASC proposed rule, CMS crosswalked CPT code 60660 to CPT code 0673T (Ablation, benign thyroid nodule(s), percutaneous, laser, including imaging guidance) and proposed to assign it to APC 5072 (Level 2 Excision/Biopsy/Incision and Drainage) for CY 2025. CMS also proposed to assign CPT code 60661 to status indicator ''N'' (packaged), as it is an add-on code.

Comment: We received two comments requesting reassignment for CPT codes 60660 and 60661. One comment requested we reassign CPT code 60660 to APC 5073 (Level 3 Excision/Biopsy/Incision and Drainage), due to its clinical similarity and resource homogeneity with the other procedures in APC 5073. A second comment requested we reassign both 60660 and 60661 to APC 5164 (Level 4 ENT Procedures), due to their similarity to CPT code 30140 (Submucous resection inferior turbinate, partial or complete, any method).

Response: We thank the commenters for their suggestions. After further clinical review, we continue to believe that CPT code 0673T is the appropriate crosswalk for CPT code 60660 and that CPT code 30140 would not be the correct clinically comparable code. CPT code 0673T has a geometric mean cost of around $1,578 and is assigned to APC 5072, which has a payment rate of around $1,620. We believe that 0673T is appropriately placed in APC 5072, and therefore, CPT code 60660 is appropriately assigned to APC 5072 and should not be reassigned to APC 5073 at this time. Additionally, because CPT code 60661 is an add-on code, we believe that the current status indicator assignment of ''N'' is correct.

After consideration of the public comments we received, we are finalizing our proposal without modification to assign CPT code 60660 to APC 5072 (Level 2 Excision/Biopsy/Incision and Drainage) and 60661 to status indicator ''N'' for CY 2025. Table 103 shows the finalized status indicator and APC assignment for the procedure code. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 103: FINAL CY 2025 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 60660 AND 60661

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
60660	Ablation of 1 or more thyroid nodule(s), one lobe or the isthmus, percutaneous, including imaging guidance, radiofrequency	J1	5072
60661	Ablation of 1 or more thyroid nodule(s), additional lobe, percutaneous, with imaging guidance, radiofrequency (List separately in addition to code for primary service	N	N/A

58. Thyroid Removal, CPT Code 60240 (APC 5361)

In the CY 2025 OPPS/ASC proposed rule, CPT code 60240 (Thyroidectomy, total or complete), which describes thyroid removal, was proposed to be assigned to APC 5361 (Level 1 Laparoscopy and Related Services) with a proposed geometric mean cost of $7,150.89 and proposed APC payment rate of $5,798.13.

Comment: We received one comment requesting that we reassign CPT code 60240 to APC 5362 (Level 2 Laparoscopy and Related Services), which had a proposed payment rate of $10,378.45. The commenter argued that keeping CPT code 60240 in APC 5361 would be a 2 times rule violation because CPT code 60240 has a geometric mean cost that is greater than 2 times the geometric mean value of CPT code 60281(Excision of thyroglossal duct cyst or sinus; recurrent), which had a proposed geometric mean cost of around $3,462 and is also in APC 5361.

Response: We thank the commenter for their input. Our review found that APC 5361 was not in violation of the 2 times rule. Because CPT code 60821 has only 2 claims for CY 2025, it does not meet the significance threshold for the 2 times rule evaluation. Additionally, the updated geometric mean cost for CPT code 60240 of $7,022.82 is closer to the payment rate of APC 5361 ($5,834.36) compared to APC 5362 ($10,411.39).

After consideration of the public comment we received, we are finalizing our proposal without modification to assign CPT code 60240 to 5361 (Level 1 Laparoscopy and Related Services) for CY 2025. Table 104 shows the finalized status indicator and APC assignment for the procedure code. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 104: FINAL CY 2025 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 60240

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
60240	Thyroidectomy, total or complete	J1	5361

59. Trabecular Bypass Procedures, CPT Codes 66989, 66991, 0660T, 0661T, and 0671T (APCs 5492 and 5493)

Trabecular bypass procedures are used for the treatment of glaucoma and may be performed along with cataract surgery or as a stand-alone procedure. Another glaucoma treatment involves the implantation of a device that releases a drug into the eye. For the CY 2025 OPPS final rule, we proposed to assign CPT code 66989 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (*e.g.,* irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (*e.g.,* iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with insertion of intraocular (*e.g.,* trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more) with a geometric mean cost around $5,440; CPT code 66991 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (*e.g.,* irrigation and aspiration or phacoemulsification); with insertion of intraocular (*e.g.,* trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more) with a geometric mean cost around $4,990; and CPT code 0671T (Insertion of anterior segment aqueous drainage device into the trabecular meshwork, without external

reservoir, and without concomitant cataract removal, one or more) with a geometric mean cost around $5,527 to APC 5493 (Level 3 Intraocular Procedures) with a payment rate around $5,160.

Also, for the CY 2025 OPPS final rule, we proposed to assign CPT code 0660T (Implantation of anterior segment intraocular nonbiodegradable drug-eluting system, internal approach) with no claims data for CY 2025, and CPT code 0661T (Removal and reimplantation of anterior segment intraocular nonbiodegradable drug-eluting implant) with no claims data for CY 2025 to APC 5492 (Level 2 Intraocular Procedures) with a payment rate of around $4,023.

Comment: Multiple commenters supported our proposal to assign CPT codes 66989, 66991, and 0671T to APC 5493 (Level 3 Intraocular Procedures) with a payment rate around $5,160. The commenters also supported our proposal to assign CPT codes 0660T and 0661T to APC 5492 (Level 2 Intraocular Procedures) with a payment rate of around $4,023.

Response: We appreciate the commenters' support for our proposals.

After consideration of the public comments we received, we are finalizing our proposal without modification for CPT codes 66989, 66991, 0660T, 0661T, 0671T to assign these procedures to APC 5493 (Level 3 Intraocular Procedures). We also are implementing our proposal without modification for CPT codes 0660T and 0661T to assign these procedures to APC 5492 (Level 2 Intraocular Procedures). Table 105 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 105: FINAL CY 2025 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 66989, 66991, 0660T, 0661T, 0671T

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
66989	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (e.g., iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with insertion of intraocular (e.g., trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more	J1	5493
66991	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification); with insertion of intraocular (e.g., trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more	J1	5493
0671T	Insertion of anterior segment aqueous drainage device into the trabecular meshwork, without external reservoir, and without concomitant cataract removal, one or more	J1	5493
0660T	Implantation of anterior segment intraocular nonbiodegradable drug-eluting system, internal approach	J1	5492
0661T	Removal and reimplantation of anterior segment intraocular nonbiodegradable drug-eluting implant	J1	5492

60. Transcutaneous Magnetic Peripheral Nerve Stimulation CPT Codes 0766T and 0767T (APC 5722)

Transcutaneous Magnetic Peripheral Nerve Stimulation is intended to stimulate peripheral nerves for relief of chronic intractable pain, post-traumatic pain, post-surgical pain and/or for relief of chronic painful diabetic peripheral neuropathy in the lower extremities for patients 18 and older. CPT code 0766T (Transcutaneous magnetic stimulation by focused low-frequency electromagnetic pulse, peripheral nerve, with identification and marking of the treatment location, including noninvasive electroneurographic localization (nerve conduction localization), when performed; first nerve) became effective January 1, 2023. For CY 2024, CPT code 0766T has been assigned to APC 5721 (Level 1 Diagnostic Tests and Related Services) with the status indicator ''Q1'' (STV-Packaged Codes). There are no claims available for CPT codes 0766T in CY 2023. For CY 2025, we proposed to continue assigning CPT codes 0766T to APC 5721.

CPT code 0767T (Transcutaneous magnetic stimulation by focused low-frequency electromagnetic pulse, peripheral nerve, with identification and marking of the treatment location, including noninvasive electroneurographic localization (nerve conduction localization), when performed; each additional nerve (list separately in addition to code for primary procedure)) became effective January 1, 2023. CPT code 0767T is an add-on code and we proposed to assign status indicator ''N'' (packaged) for this code.

Comment: Commenters disagreed with the proposed assignment of APC 5721 (Level 1 Diagnostic Tests and Related Services) and the status indicator ''Q1'' for CPT code 0766T, claiming that CPT code 0766T is not clinically similar nor uses comparable resources to other services in APC 5721. The commenters stated that the HOP Panel recommended that 0766T be reassigned to APC 5431 (Level 1 Nerve Procedures) with a status indicator ''S'' (Significant Procedures, Not Discounted when Multiple. Paid under OPPS; separate APC payment). Additionally, commenters disagreed with the status indicator of ''N'' for CPT code 0767T and requested the 0767T be reassigned status indicator ''S'' and assigned to APC 5431 (Level 1 Nerve Procedures).

Response: We thank commenters for their input. We disagree that CPT code 0766T is comparable clinically and in resource costs to the services assigned to APC 5431. However, after further evaluation, we believe CPT code 0766T is more comparable clinically and from a resource cost perspective to CPT code 90867 (Therapeutic repetitive transcranial magnetic stimulation (tms) treatment; initial, including cortical mapping, motor threshold determination, delivery and management), which is assigned to APC 5722 (Level 2 Diagnostic Tests and Related Services), because these services share similar magnetic stimulation and nerve localization processes. Additionally, we believe that patients may receive this service as a primary standalone service. Therefore, for CY 2025, we are finalizing the reassignment of CPT code 0766T to APC 5722 (Level 2 Diagnostic Tests and Related Services) and its status indicator to ''S'' (Significant Procedures, Not Discounted when Multiple. Paid under OPPS; separate APC payment).

We note that CPT code 0767T is an add-on code. Add-on codes are always performed in addition to the primary service or procedure and must never be reported as a stand-alone code. As specified under regulation 42 CFR 419.2(b)(18), add-on codes are generally packaged under the OPPS, and payment for the codes are bundled with the primary codes. Consequently, CPT code 0767T is not paid separately under the OPPS, but instead, its payment is packaged into payment for the primary code.

After consideration of the public comments we received, we are finalizing reassigned status indicator and APC assignments for CPT codes 0766T and finalizing as proposed the status indicator assignment for 0767T. Please refer to Table 106 below for the final OPPS APC and status indicator assignment for CPT codes 0766T and 0767T for CY 2025. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 106: FINAL CY 2025 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 0766T and 0767T

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0766T	Transcutaneous magnetic stimulation by focused low-frequency electromagnetic pulse, peripheral nerve, with identification and marking of the treatment location, including noninvasive electroneurographic localization (nerve conduction localization), when performed; first nerve	S	5722
0767T	Transcutaneous magnetic stimulation by focused low-frequency electromagnetic pulse, peripheral nerve, with identification and marking of the treatment location, including noninvasive electroneurographic localization (nerve conduction localization), when performed; *each additional nerve* (List separately in addition to code for primary procedure)	N	NA

61. Transurethral Ultrasound Ablation (TULSA) Procedure, HCPCS Code C9734 and CPT Code 55882 (APC 5377)

The TULSA procedure is a minimally invasive procedure that, under MRI guidance, delivers precise doses of therapeutic ultrasound to treat prostate cancer. HCPCS code C9734 (Focused ultrasound ablation/therapeutic intervention, other than uterine leiomyomata, with magnetic resonance (mr) guidance) became effective April 1, 2013.

For CY 2025, the OPPS payment rates are proposed based on available CY 2023 claims data. For CY 2025, based on our analysis of claims data, we found a total of 89 single frequency claims and an estimated geometric mean cost of $10,056 for HCPCS code C9734. For CY 2025, we proposed to continue to assign HCPCS code C9734 to APC 5115 (Level 5 Musculoskeletal Procedures) with a proposed payment rate of approximately $12,756.

Comment: Commenters pointed out that the AMA CPT created a new code, CPT code 5X008, to describe the TULSA procedure represented by HCPCS code C9734. CPT code 5X008 (Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation; with insertion of transurethral ultrasound transducer for delivery of thermal ultrasound, including suprapubic tube placement and placement of an endorectal cooling device, when performed) becomes effective January 1, 2025.

Commenters also recommended that the TULSA procedure be reassigned to the Urology and Related Services APC series, which is more clinically consistent with other urology related procedures. Furthermore, commenters stated TULSA is more similar clinically and in terms of resources to the procedures in APC 5377 (Level 7 Urology and Related Services) than procedures in APC 5376 (Level 6 Urology and Related Services). Commenters referenced the use of a MRI technology, specialized staffing, and the longer procedural time that increases the resources needed to perform the TULSA procedure relative to other prostate ablation procedures in Level 6 Urology and Related Services (APC 5376). Commenters stated that HCPCS code C9734's geometric mean cost aligns more appropriately with APC 5377 (Level 7 Urology and Related Services) with a proposed APC geometric mean cost of $13,217.

Response: We thank the commenters for pointing out that CPT code 5X008 (55882) will become effective January 1, 2025. We note that we will replace HCPCS code C9734 with CPT code 5X008 (55882) effective January 1, 2025, as well as assign the underlying claims associated with C9734 to CPT code 5X008 (55882).

We agree with the commenters that the TULSA procedure, described by HCPCS code C9734 (CPT code 55882) should be reassigned to the Urology and Related Services APC series to be consistent with other urological related procedures. We also believe that the TULSA procedure is clinically similar to CPT code 55880 (Ablation of malignant prostate tissue, transrectal, with high intensity-focused ultrasound (hifu), including ultrasound guidance) or CPT code 55873 (Cryosurgical ablation of the prostate (includes ultrasonic guidance and monitoring)) which are assigned to APC 5376. However, we acknowledge that the TULSA procedure requires greater resources from MRI equipment and MRI technologists, and requires a longer procedure time than CPT codes 55880 and 55873. Therefore, for CY 2025, we are reassigning CPT code 5X008 (55882) to APC 5377 (Level 7 Urology and Related Services). We note that we will continue to evaluate and monitor the cost of CPT code 5X008 (55882) for future rulemaking.

After consideration of the public comments we received, we are finalizing our policy to assign CPT code 5X008 (55882) to APC 5377 (Level 7 Urology and Related Services). Please refer to Table 107 below for the final OPPS APC and status indicator assignment for CPT code 5X008 (55882) for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 107: FINAL CY 2025 OPPS APC ASSIGNMENT AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 5X008 (55882)

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
5X008 (55882)	Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation; with insertion of transurethral ultrasound transducer for delivery of thermal ultrasound, including suprapubic tube placement and placement of an endorectal cooling device, when performed	J1	5377

62. Unfold AI Service, CPT Code 0898T (APC 5724)

Unfold AI is an algorithm-based test that analyzes multiple clinical data inputs and multi-modal images to create a newly computed 3D visualization of the precise location and dimensions of clinically significant prostate cancer. The generated output assists physicians in identifying the cancer margins for treatment. The Unfold AI service is represented by CPT code 0898T (Noninvasive prostate cancer estimation map, derived from augmentative analysis of image-guided fusion biopsy and pathology, including visualization of margin volume and location, with margin determination and physician interpretation and report) which became effective July 1, 2024. As this is a new code in 2024, we have no claims data for CPT code 0898T. For CY 2025, we proposed to assign CPT Code 0898T to APC 5724 (Level 4 Diagnostic Tests and Related Services).

Comment: Commenters supported our proposal to assign CPT code 0898T to Level 4 Diagnostic Tests and Related Services (APC 5724).

Response: We thank the commenters for their support on our proposal to assign CPT code 0898T to Level 4 Diagnostic Tests and Related Services (APC 5724).

After consideration of the public comments we received, we are finalizing our proposal without modification for CPT code 0898T. Please refer to Table 108 below for the final OPPS APC and status indicator assignment for HCPCS code 0898T for CY 2025. The final CY 2025 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 108: FINAL CY 2025 OPPS APC ASSIGNMENT AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0898T

CPT Code	Long Descriptor	Final CY 2025 OPPS SI	Final CY 2025 OPPS APC
0898T	Noninvasive prostate cancer estimation map, derived from augmentative analysis of image-guided fusion biopsy and pathology, including visualization of margin volume and location, with margin determination and physician interpretation and report	S	5724

63. Ureteroscopy, HCPCS Code C9761 (APC 5376)

The ureteroscopy procedure addresses kidney stones and may apply catheterization to vacuum aspirate the fragmented kidney stones. HCPCS code C9761 (Cystourethroscopy, with ureteroscopy and/or, with lithotripsy, and ureteral catheterization for steerable vacuum aspiration of the kidney, collecting system, ureter, bladder, and urethra if applicable (must use a steerable ureteral catheter) became effective October 1, 2020.

For CY 2025, the OPPS payment rates are proposed based on available CY

2023 claims data. For the CY 2025 OPPS/ASC proposed rule, we found a total of 95 single frequency claims and a geometric mean cost of approximately $9,718 for HCPCS code C9761. For CY 2025, we proposed to continue to assign HCPCS code C9761 to APC 5376 (Level 6 Urology and Related Services) with a proposed payment rate of approximately $9,208.

Comment: One commenter requested CMS provide coding guidance if HCPCS code C9761 should be reported when the ureteroscopy procedure utilizes the flexible ureteroscopy (fURS) with the flexible and navigable suction (FANS) sheath.

Response: This comment is out of scope of this OPPS/ASC final rule with comment period. We note that if hospitals have questions about appropriate coding that they cannot resolve on their own, the appropriate first step would be to review the HCPCS codes or consult a Medicare Administrative Contractor (MAC).

64. V–LAP System Left Atrial Pressure Monitoring Procedure, CPT Code 0933T (APC 5191)

On January 1, 2025, CPT code 0933T (Transcatheter implantation of wireless left atrial pressure sensor for long-term left atrial pressure monitoring, including sensor calibration and deployment, right heart catheterization, transseptal puncture, imaging guidance, and radiological supervision and interpretation) will become effective to report the implantation and remote monitoring of the V–LAP System. The system is used to measure and monitor left atrial pressure in patients with advanced congestive heart failure (CHF).

The V–LAP system was designated as a Category A IDE clinical study (NCT06147336) on January 30, 2024. Since devices in Category A IDE studies are not covered by Medicare during the study, the payment for CPT code 0933T while in the Category A IDE study will reflect only the cost of the service that is performed each time it is reported on a claim. For CY 2025, we proposed to assign CPT code 0933T to APC 5191 (Level 1 Endovascular Procedures) and status indicator of ''J1'' (Hospital Part B Services Paid Through a Comprehensive APC) with a proposed payment of around $3,210.

Comment: We received one comment from the manufacturer requesting that we reassign CPT code 0933T from APC 5191 (Level 1 Endovascular Procedures) to APC 1532 (New Technology—Level 32 ($7001–$7500)), as it more accurately reflects the costs of this procedure.

Response: We appreciate the commenter's input. The commenter asserts that the current APC assignment of 5191 (Level 1 Endovascular Procedures) does not adequately reflect the complex nature and resource demands of the V–LAP procedure even though the procedure is described as a standard minimally invasive catheterization. We are unclear what procedural steps makes this procedure more complex than the other procedures assigned to APC 5191. Based on our understanding of the service and input from our medical advisors, we do not agree and believe that CPT code 93451 (Right heart catheterization including measurement(s) of oxygen saturation and cardiac output, when performed) is an appropriate crosswalk code while the V–LAP™ procedure is in a Category A IDE trial. Once the service receives appropriate FDA approval outside of the Category A IDE study (*e.g.,* PMA approval or 510(k)), we will work to assign CPT code 0933T to an APC that is more reflective of the cost of the service, beyond routine care items and services.

We remind the readers that for Category A IDE studies, Medicare only provides payment for routine care items and services furnished in the FDA-approved Category A study. We refer readers to the Medicare Benefit Policy Manual, See 20.1—Medicare Requirements for Coverage of Items and Services in FDA-approved Category A and B IDE Studies.

After consideration of the public comment we received, we are finalizing our proposal without modification to assign CPT code 0933T to APC 5191. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

65. Vagal Nerve Neurostimulator System, CPT Codes 0908T Through 0912T

The CPT Editorial Panel created 5 new Category III CPT codes, effective January 1, 2025, which describe the implantation, replacement, removal, interrogation, and programming of the integrated vagus nerve stimulation device used for the treatment of patients who have rheumatoid arthritis (RA) and are not responsive to pharmacological therapy. The patient is placed under general anesthesia (for about 60–90 minutes) while the neurosurgeon dissects the tissue on the left side of the neck to access the cervical vagus nerve within the carotid sheath. The rechargeable integrated neurostimulator is then placed directly on the cervical vagus nerve. The implant is charged weekly with an external charger. A rheumatologist is responsible for prescribing and making changes to the stimulation therapy via an app. See Table 109 for the CPT codes, their long descriptors, and the proposed payment assignments.

TABLE 109: PROPOSED CY OPPS SI AND APC ASSIGNMENTS FOR THE VAGAL NERVE NEUROSTIMULATOR SYSTEM

CPT Code (Placeholder Code and Final Code)	Long Descriptor	CY 2025 Proposed SI	CY 2025 Proposed APC
XX32T / 0908T	Open implantation of integrated neurostimulation system, vagus nerve, including analysis and programming, when performed	J1	5462
XX33T / 0909T	Replacement of integrated neurostimulation system, vagus nerve, including analysis and programming, when performed	J1	5462
XX34T / 0910T	Removal of integrated neurostimulation system, vagus nerve	J1	5461
XX35T / 0911T	Electronic analysis of implanted integrated neurostimulation system, vagus nerve; without programming by physician or other qualified healthcare professional	Q1	5733
XX36T / 0912T	Electronic analysis of implanted integrated neurostimulation system, vagus nerve; with simple programming by physician or other qualified health care professional	S	5742

For CY 2025, we proposed to assign 0908T and 0909T to APC 5462 (Level 2 Neurostimulator and Related Procedures) and status indicator ''J1'' (Hospital Part B Services Paid Through a Comprehensive APC; Paid under OPPS.) based on their similarity to CPT code 0587T (Percutaneous implantation or replacement of integrated single device neurostimulation system for bladder dysfunction including electrode array and receiver or pulse generator, including analysis, programming, and imaging guidance when performed, posterior tibial nerve) and because CPT 0587T also describes an integrated system.

We proposed to assign 0910T to APC 5461 (Level 1 Neurostimulator and Related Procedures) and status indicator ''J1'' based on its similarity to CPT code 0588T (Revision or removal of percutaneously placed integrated single device neurostimulation system for bladder dysfunction including electrode array and receiver or pulse generator, including analysis, programming, and imaging guidance when performed, posterior tibial nerve) as both codes describe the removal of an integrated neurostimulation system.

We also proposed to assign CPT codes 0911T to APC 5733 (Level 3 Minor Procedures) and status indicator ''Q1'' (STV-Packaged Codes; Paid Under OPPS) using CPT code 95981(Electronic analysis of implanted neurostimulator pulse generator system (*e.g.,* rate, pulse amplitude and duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient measurements) gastric neurostimulator pulse generator/transmitter; subsequent, without reprogramming) as a crosswalk code and 0912T to APC 5742 (Level 2 Electronic Analysis of Devices) and status indicator of ''S'' (Procedure or Service, Not Discounted When Multiple; Paid under OPPS; separate APC payment.) using CPT code 0589T (Electronic analysis with simple programming of implanted integrated neurostimulation system for bladder dysfunction (*e.g.,* electrode array and receiver), including contact group(s), amplitude, pulse width, frequency (Hz), on/off cycling, burst, dose lockout, patient-selectable parameters, responsive neurostimulation, detection algorithms, closed-loop parameters, and passive parameters, when performed by physician or other qualified health care professional, posterior tibial nerve, 1–3 parameters) as a crosswalk code.

Comment: We received several comments from stakeholders requesting that CPT codes XX32T (0908T) and XX33T (0909T) be reassigned from APC 5462 (Level 2 Neurostimulator and Related Procedures) to APC 5465 (Level 5 Neurostimulator and Related Procedures) because the proposed APC assignments do not reflect the costs of the device and procedure or consider the clinical intensity and risk of the procedure. Commenters provided CPT code 64568 (Open implantation of cranial nerve (*e.g.,* vagus nerve) neurostimulator electrode array and pulse generator) as an appropriate comparator code, noting that the integrated devices do not require the creation of an additional subcutaneous pocket. While there are some differences in the two surgical procedures described by CPT codes XX32T (0908T) and XX33T (0909T) compared to CPT code 64568, the commenter asserted that

inserting the integrated system is a complex procedure to perform and is similar in cost, resources, and required skill.

Another commenter requested that we reassign XX34T (0910T) from APC 5461 (Level 1 Neurostimulator and Related Procedures) to APC 5463 (Level 3 Neurostimulator and Related Procedures) stating that CPT code 61888 (Revision or removal of cranial neurostimulator pulse generator or receiver) is an appropriate comparator code.

Commenters noted that the vagal nerve neurostimulation system is a novel treatment for rheumatoid arthritis patients who have exhausted other pharmacological options to manage their disease. They stated that biological therapies are expensive and may cost over $50,000/per year, while this neurostimulation system is expected to have a shelf life of 10 years. They asserted that APC reassignments of XX32T (0908T), XX33T (0909T), and XX34T (0910T) would support CMS' commitment to promoting new innovative treatment options and expanding access for beneficiaries with chronic conditions.

In addition to the comments requesting APC reassignments, the manufacturer stated they were expecting FDA approval, specifically Premarket Approval (PMA), in the 2nd quarter of 2025 with an expected statement ''for the treatment of adult patients with moderately to severely active RA who have had an inadequate response, loss of response or intolerance to one (1) or more biological or targeted synthetic DMARDs (disease-modifying antirheumatic drugs)''. They acknowledged that, in the past, CMS has assigned non-FDA approved technologies a status indicator of ''E1'' and addressed the APC assignments once FDA approval is received. The manufacturer asserted the lack of payment assignments (APCs and status indicators) would significantly hinder commercialization of their neurostimulation system.

Response: We thank the commenters for all their valuable input. Because this vagal nerve neurostimulation system has not yet received FDA approval, we believe that we should reassign CPT codes 0908T, 0909T, 0910T, 0911T, and 0912T to status indicator ''E1'' to indicate that the code is not payable by Medicare when submitted on outpatient claims (any outpatient bill type). When we are notified by stakeholders that the FDA has approved this neurostimulation system, we will reassess the status indicator and APC assignments for these codes based on the comments we have received, in a future quarterly update and/or rulemaking cycle.

In summary, after consideration of the public comments received, we are finalizing our proposal, with modification, to assign status indicator ''E1'' to CPT codes 0909T through 0912T. The final status indicator assignment for the codes is listed in Table 110. We refer readers to Addendum D1 of this final rule with comment period for the complete list of the OPPS payment status indicators and their definitions for CY 2025. Addendum D1 is available via the internet on the CMS website.

TABLE 110: FINAL CY 2025 OPPS STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 0908T – 0912T

CPT Code	Long Descriptor	CY 2025 Final SI
0908T	Open implantation of integrated neurostimulation system, vagus nerve, including analysis and programming, when performed	E1
0909T	Replacement of integrated neurostimulation system, vagus nerve, including analysis and programming, when performed	E1
0910T	Removal of integrated neurostimulation system, vagus nerve	E1
0911T	Electronic analysis of implanted integrated neurostimulation system, vagus nerve; without programming by physician or other qualified healthcare professional	E1
0912T	Electronic analysis of implanted integrated neurostimulation system, vagus nerve; with simple programming by physician or other qualified health care professional	E1

66. VisONE® Synchronized Diaphragmatic Stimulation™ (SDS®) System CPT Codes 0674T Through 0685T

The VisONE® Synchronized Diaphragmatic Stimulation™ (SDS®) System is a technology being studied to treat select patients with chronic heart failure by delivering electrical stimulation to the diaphragm to modulate intrathoracic pressure pulses on the cardiovascular system. The SDS® System is comprised of an implantable pulse generator (IPG), sensing and therapy lead electrodes, a laparoscopic implant tool to place the leads, and an external programmer and telemetry wand.

There are 12 Category III CPT codes that may describe the various procedures related to the procedures involving the SDS® System: CPT codes 0674T–0685T. For CY 2025, as the SDS® System did not have FDA approval at the time of the proposed rule, we proposed to assign CPT codes 0674T–0685T to status indicator ''E1'' to indicate that the services are not paid by Medicare when submitted on outpatient claims (any outpatient bill type). Please refer to Table 111 for the full list of CPT codes and the proposed status indicators for CY 2025.

BILLING CODE 4120–01–P

TABLE 111: PROPOSED CY 2025 STATUS INDICATORS FOR CPT CODES FOR PROCEDURES INVOLVING SDS® SYSTEM

CPT Code	Long Descriptor	Proposed CY 2025 Status Indicator
0674T	Laparoscopic insertion of new or replacement of permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including an implantable pulse generator and diaphragmatic lead(s)	E1
0675T	Laparoscopic insertion of new or replacement of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including connection to an existing pulse generator; first lead	E1
0676T	Laparoscopic insertion of new or replacement of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including connection to an existing pulse generator; each additional lead (list separately in addition to code for primary procedure)	E1
0677T	Laparoscopic repositioning of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including connection to an existing pulse generator; first repositioned lead	E1
0678T	Laparoscopic repositioning of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including connection to an existing pulse generator; each additional repositioned lead (list separately in addition to code for primary procedure)	E1
0679T	Laparoscopic removal of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1
0680T	Insertion or replacement of pulse generator only, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, with connection to existing lead(s)	E1
0681T	Relocation of pulse generator only, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, with connection to existing dual leads	E1
0682T	Removal of pulse generator only, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1
0683T	Programming device evaluation (in-person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1
0684T	Peri-procedural device evaluation (in-person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review, and report by a physician or other qualified health care professional, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1
0685T	Interrogation device evaluation (in-person) with analysis, review and report by a physician or other qualified health care professional, including connection, recording and disconnection per patient encounter, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1

BILLING CODE 4120–01–C

Comment: One commenter, specifically, the manufacturer of the SDS® System, requested clinical APC assignments for 9 of the 12 CPT codes

describing the various procedures involving the SDS® System. The commenter requested assignments to packaged status indicator ''N'' for the remaining three add-on CPT codes for which they did not request a clinical APC assignment.

Specifically, the commenter requested that, for CY 2025, CMS assign:

- CPT code 0674T to APC 5465 (Level 5 Neurostimulator and Related Procedures) with SI ''J1'' based on a crosswalk to CPT code 63685.
- CPT code 0675T to APC 5463 (Level 3 Neurostimulator and Related Procedures) with SI ''J1'' based on a crosswalk to CPT code 43647.
- CPT codes 0677T and 0679T to APC 5362 (Level 2 Laparoscopy and Related Services) with SI ''J1'' based on a crosswalk to CPT code 43648.
- CPT code 0680T to APC 5464 (Level 4 Neurostimulator and Related Procedures) with SI ''J1'' based on a crosswalk to CPT code 64590.
- CPT code 0681T and 0682T to APC 5461 (Level 1 Neurostimulator and Related Procedures) with SI ''J1'' based on a crosswalk to CPT code 64595.
- CPT code 0683T and 0685T to APC 5741 (Level 1 Electronic Analysis of Devices) with SI ''Q1'' based on crosswalks to CPT codes 93281 and 93288, respectively.
- SI ''N'' to CPT codes 0676T, 0678T, and 0684T.

The commenter also provided additional information regarding the FDA approval status of the SDS® System. Per the commenter, on July 26, 2024, the SDS® System received FDA approval for the Investigational Device Exemption (IDE) regarding the RECOVER–HF trial, which was anticipated to begin in late 2024. The request for Medicare coverage of the RECOVER–HF trial was pending when the comment was submitted. The commenter requested that CMS make the 12 codes payable effective January 1, 2025, in anticipation of Medicare's approval of their Category B IDE trial application.

Response: We thank the commenter for their input and agree with the suggested CPT crosswalk codes provided by the commenter.

We note that the RECOVER–HF trial was approved for Medicare coverage on September 23, 2024. Because the Category B IDE trial meets the CMS standards for coverage, and appears on the CMS approved IDE list on the CMS website, we are not finalizing our proposal to assign the 12 codes that describe the various procedures associated with the SDS® System to status indicator ''E1.'' In light of the recent Category B IDE study approval for the RECOVER–HF clinical trial, and based on our review of the comment received, more specifically the crosswalk codes recommended by the commenter, we are finalizing the following clinical APC and status indicator assignments:

BILLING CODE 4120–01–P

TABLE G81: PROPOSED AND FINAL CY 2025 STATUS INDICATORS AND CLINICAL APC ASSIGNMENTS FOR CPT CODES FOR PROCEDURES INVOLVING SDS® SYSTEM

CPT Code	Long Descriptor	Proposed CY 2025 Status Indicator	Final CY 2025 APC	Final CY 2025 Status Indicator
0674T	Laparoscopic insertion of new or replacement of permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including an implantable pulse generator and diaphragmatic lead(s)	E1	5465	J1
0675T	Laparoscopic insertion of new or replacement of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including connection to an existing pulse generator; first lead	E1	5463	J1
0676T	Laparoscopic insertion of new or replacement of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including connection to an existing pulse generator; each additional lead (list separately in addition to code for primary procedure)	E1	N/A	N
0677T	Laparoscopic repositioning of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including connection to an existing pulse generator; first repositioned lead	E1	5362	J1
0678T	Laparoscopic repositioning of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including connection to an existing pulse generator; each additional repositioned lead (list separately in addition to code for primary procedure)	E1	N/A	N
0679T	Laparoscopic removal of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1	5362	J1
0680T	Insertion or replacement of pulse generator only, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, with connection to existing lead(s)	E1	5464	J1
0681T	Relocation of pulse generator only, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, with connection to existing dual leads	E1	5461	J1
0682T	Removal of pulse generator only, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1	5461	J1
0683T	Programming device evaluation (in-person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional, permanent implantable synchronized	E1	5741	Q1

CPT Code	Long Descriptor	Proposed CY 2025 Status Indicator	Final CY 2025 APC	Final CY 2025 Status Indicator
	diaphragmatic stimulation system for augmentation of cardiac function			
0684T	Peri-procedural device evaluation (in-person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review, and report by a physician or other qualified health care professional, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1	N/A	N
0685T	Interrogation device evaluation (in-person) with analysis, review and report by a physician or other qualified health care professional, including connection, recording and disconnection per patient encounter, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1	5741	Q1

BILLING CODE 4120–01–C

The final CY 2025 payment rate for the codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the complete list of the OPPS payment status indicators and their definitions for CY 2025. Addendum D1 is available via the internet on the CMS website.

67. Xenograft Implantation Into the Articular Surface, CPT Code 0737T (APC 5115)

For the July 1, 2022, update, the AMA CPT Editorial Panel established CPT code 0737T (Xenograft implantation into the articular surface) to describe xenograft implantation for use in cartilage and osteochondral defects in joints. Since July 1, 2022, CPT code 0737T has been assigned to status indicator ''E1'' (Not paid by Medicare when submitted on outpatient claims (any outpatient bill type)) to indicate that the code was not payable under the OPPS. In the OPPS Quarterly Change Request (Transmittal 12816, CR 13784) dated August 29, 2024, we noted that the device associated with this code (Agili-C™) had become available, and therefore we reassigned CPT code 0737T to status indicator ''J1'' (Hospital Part B Services Paid Through a Comprehensive APC; Paid under OPPS) and APC 5115 (Level 5 Musculoskeletal Procedures) effective July 1, 2024. For CY 2025, we proposed to continue to assign CPT code 0737T to APC 5115 with a proposed payment assignment of around $12,755.

Comment: We received a couple of comments expressing support for assigning CPT code 0737T to APC 5115 and status indicator ''J1''. Commenters noted that the reimbursement was consistent with the costs associated with the procedure and would ensure equitable patient access, even allowing some beneficiaries to possibly avoid more costly knee replacement procedures. They requested that we maintain the APC and status indicator assignments for several years to gather claims data as they anticipate the patient volume will be limited due to the patient selection criteria.

Response: We thank the commenters for their input. Under the OPPS, we review our claims data on an annual basis to determine payment rates and will continue to monitor the claims data and the appropriateness of the APC assignment for CPT code 0737T to APC 5115.

In summary, we are finalizing our proposal, without modification, to assign CPT code 0737T to APC 5115 for CY 2025. The final CY 2025 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

68. OPPS Payment for Software as a Service

New clinical software, which includes clinical decision support software, clinical risk modeling, and computer aided detection (CAD), is becoming increasingly available to providers. These technologies often perform data analysis of diagnostic images from patients. While many of these technologies are new, we note that clinical software, particularly CAD, has been used to aid or augment clinical decision making for decades. These technologies rely on complex algorithms or statistical predictive modeling to aid in the diagnosis or treatment of a patient's condition. We refer to these algorithm-driven services that assist practitioners in making clinical assessments, and that providers pay for either on a subscription or per-use basis, as Software as a Service (SaaS).

We note the proliferation of SaaS procedures approved by the FDA and their subsequent assignment of CPT codes by the AMA has led the agency to seek a workable SaaS payment strategy. We are seeking a strategy that would provide equitable payment for these new technologies while also preserving the integrity of the OPPS payment bundles, an essential component of a prospective payment system. We are seeking a payment strategy that aligns with our agency's mission to improve quality, health, reduce cost, and strengthen the health care system. We note that the manufacturer-supplied cost data of

these SaaS services is often high and the true return in investment for these services is still unknown. Moreover, many SaaS services often do not share clinical and resource similarity to existing medical services. Thus, it generally has been challenging to compare a new SaaS service to existing medical services for the purpose of determining a fair payment rate for these new services.

Although some have recently received separate payment for these SaaS procedures under the OPPS, we recognize that certain clinical decision support software, including machine learning or ''AI,'' has been available for many years. In the past ten years, clinical decision support software has been commonly used alongside electronic medical records by medical practitioners. Nonetheless, the number of FDA approved or cleared ''machine learning'' or ''AI'' clinical software programs has rapidly increased in the past few years. We note that the FDA has approved many SaaS procedures for similar functions: there are at least six software products that purport to detect findings in Computed Tomography (CT) studies of the chest.[29] Additionally, we note some clinical software developers are now using alternative licensing that charges per use rather than using the traditional annual subscription or bulk use subscription. As a result of these variables and potentially others, there is significant price variation within the SaaS procedure space.

We recognize that, as described in the CY 2023 OPPS/ASC final rule with comment period (87 FR 72027), SaaS procedures are a heterogenous group of services, which presents challenges when it comes to adopting payment policy for SaaS procedures as a whole. In the CY 2023 OPPS/ASC final rule, we solicited public comment on a payment approach that would broadly apply to SaaS procedures and have received some valuable feedback. Some of the feedback includes incorporating AI taxonomy across agencies and interested parties, or not to establish a single policy that would apply to all SaaS-type technology but instead separately evaluate each new technology to determine the appropriate HCPCS coding, including whether or not a potential CPT code can be used to support payment for the separate and distinct service under the OPPS.

For CY 2025, we are continuing to work to formulate a workable SaaS payment policy that would enhance our ability to provide equitable payment for SaaS procedures while responsibly managing cost and protecting the Medicare trust fund. Specifically, we are working to address the following:

- Identifying a payment strategy that is applicable across the settings of care (physician offices, for example);
- Identifying the fair costs associated for SaaS services;
- Distinguishing services that should be paid separately versus services that should be packaged under a prospective payment system; and
- Identifying a payment strategy for SaaS services that are part of other medical devices versus those that are distinct services.

We did not make any proposals on OPPS payment for SaaS for CY 2025 but received a number of comments on the topic.

Comment: Commenters suggested CMS formulate a SaaS payment policy that would incentivize adoption of new AI and ensure access and provide stability for its adoption of SaaS technologies. Commenters stated that CMS payment decisions have not uniformly and consistently ensured appropriate levels of payment. Some commenters recommended that we adopt the term ''Algorithm-based healthcare services'' (ABHS), which include SaaS procedures. ABHS includes these services regardless of whether they are delivered by a third party, or a health care professional using the AI software through the cloud, the web, a workstation, or embedded in imaging acquisition hardware. Commenters also recommended that ABHS codes be initially assigned to New Technology APCs for at least 5 years based on manufacture-supply cost data, until sufficient claims data are available. Some commenters also recommend that we codify the 2023 packaging exemption for SaaS add-on codes policy.

Response: We appreciate the commenters' valuable input on a SaaS payment policy approach, and we will consider their input for any future SaaS payment policy. We note that the suggestion for any new SaaS services to remain in the initial New Technology APC assignment for at least 5 years is in contrast to our current Transitional Pass-Through policy of three years for device or drugs. Moreover, we would need to examine the feasibility of payment determination based on manufacture-supplied cost data, which has historically not been comparable when the claims data become available.

Comment: One commenter requested CMS clarify that SaaS codes created by the AMA CPT are to be vendor neutral, and that these codes do not represent any single vendor's services. The commenter stated the focus on a single commercial platform for a code is not accurate, confuses the applicability, and limits adoption of other tools for which the code was intended. The commenter recommended removing the current language that these codes are ''associated with'' a specific service, which may result in an increase in claims, therefore allowing for a more accurate understanding of actual costs associated with these services.

Response: We thank the commenter for the valuable input. We recognize that the proliferation of SaaS procedures has created a need for the agency to continue to update our payment approach. We are continuing to work to improve SaaS payment policy in future rulemakings to enhance our ability to provide equitable payment for SaaS procedures while responsibly managing cost and protecting the Medicare trust fund.

69. APC and Status Indicator Review Process

Each year, CMS receives a high volume of requests from stakeholders and other interested parties to make certain OPPS payment policy changes, including many requesting changes to the APC and status indicator assignments of new or revised codes. Current APC groupings, APC assignments, and status indicators are reflected in the various addenda to the proposed and final OPPS payment rules. In addition, comments within the scope of the proposed rule, are summarized and responded to in the annual OPPS final rule with comment period.

Comment: We received one comment requesting that CMS outline a process that describes the criteria used to determine which stakeholder requests regarding APC assignments are included in the OPPS proposed rule. The commenter suggested that all APC assignment requests, including APC structure requests, be included in the OPPS proposed rule and that we should follow a process similar to the IPPS, which includes an annual deadline, and requests discussed in the following year's proposed rule.

Response: We appreciate the feedback and will consider this comment for future rulemaking. As a reminder, codes are updated and changed throughout the year. CPT and Level II HCPCS code changes that affect the OPPS are published through the annual rulemaking cycle and through the OPPS quarterly update Change Requests (CRs). Generally, these code changes are effective January 1, April 1, July 1, or

[29] *https://www.fda.gov/medical-devices/software-medical-device-samd/artificial-intelligence-and-machine-learning-aiml-enabled-medical-devices*

October 1. CPT code changes are released by the AMA (via their website) while Level II HCPCS code changes are released to the public via the CMS HCPCS website. CMS recognizes the release of new CPT and Level II HCPCS codes outside of the formal rulemaking process via OPPS quarterly update CRs. Based on our review, we assign the new codes to interim status indicators (SIs) and APCs. These interim assignments are finalized in the OPPS/ASC final rules. This quarterly process offers hospitals access to codes that more accurately describe the items or services furnished and provides payment for these items or services in a timelier manner than if we waited for the annual rulemaking process. We solicit public comments on the new CPT and Level II HCPCS codes, status indicators, and APC assignments through our annual rulemaking process.

Comment: We received one comment requesting information about our process for assigning status indicator ''E1'' to CPT or HCPCS codes that are not FDA approved. The commenter asserts that the delay in timing (from FDA approval to APC and SI assignment) affects beneficiary access to new technologies and services and impacts how other payers will pay for the services.

Response: We appreciate the feedback. We believe for items and services that are not FDA approved, it is appropriate to assign the codes to status indicator ''E1'' to indicate that they are not payable by Medicare when submitted on outpatient claims (any outpatient bill type) because the services are either not covered by any Medicare outpatient benefit category, statutorily excluded by Medicare, or not reasonable and necessary. We rely on stakeholders to notify us upon FDA approval of their device and/or service and we work to ensure a timely transition and assign the applicable codes to APCs that reflect clinical and resource similarity to the new codes. We accept information regarding the device and/or service that the stakeholder can provide to us to assist us in our review. We remind readers that OPPS payment policies are updated quarterly through a sub-regulatory process.

IV. OPPS Payment for Devices

A. Pass-Through Payment for Devices

1. Beginning Eligibility Date for Device Pass-Through Status and Quarterly Expiration of Device Pass-Through Payments

a. Background

The intent of transitional device pass-through payment, as implemented at § 419.66, is to facilitate access for beneficiaries to the advantages of new and truly innovative devices by allowing for adequate payment for these new devices while the necessary cost data is collected to incorporate the costs for these devices into the procedure APC rate (66 FR 55861). Under section 1833(t)(6)(B)(iii) of the Act, the period for which a device category eligible for transitional pass-through payments under the OPPS can be in effect is at least 2 years but not more than 3 years. Prior to CY 2017, our regulation at § 419.66(g) provided that this pass-through payment eligibility period began on the date CMS established a particular transitional pass-through category of devices, and we based the pass-through status expiration date for a device category on the date on which pass-through payment was effective for the category. In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79654), in accordance with section 1833(t)(6)(B)(iii)(II) of the Act, we amended § 419.66(g) to provide that the pass-through eligibility period for a device category begins on the first date on which pass-through payment is made under the OPPS for any medical device described by such category.

In addition, prior to CY 2017, our policy was to propose and finalize the dates for expiration of pass-through status for device categories as part of the OPPS annual update. This means that device pass-through status would expire at the end of a calendar year when at least 2 years of pass-through payments had been made, regardless of the quarter in which the device was approved. In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79655), we changed our policy to allow for quarterly expiration of pass-through payment status for devices, beginning with pass-through devices approved in CY 2017 and subsequent calendar years, to afford a pass-through payment period that is as close to a full 3 years as possible for all pass-through payment devices. We also have an established policy to package the costs of the devices that are no longer eligible for pass-through payments into the costs of the procedures with which the devices are reported in the claims data used to set the payment rates (67 FR 66763).

We refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79648 through 79661) for a full discussion of the current device pass-through payment policy.[30]

In the CY 2023 OPPS/ASC final rule with comment period, we finalized our policy to publicly post online OPPS device pass-through applications received on or after March 1, 2023, beginning with the issuance of the CY 2025 proposed rule and for each OPPS rulemaking thereafter. We refer readers to the CY 2023 OPPS/ASC final rule with comment period (87 FR 71934 through 71938) for a full discussion of the policy to publicly post OPPS device pass-through applications.

b. Expiration of Transitional Pass-Through Payments for Certain Devices

As stated earlier, section 1833(t)(6)(B)(iii) of the Act requires that, under the OPPS, a category of devices be eligible for transitional pass-through payments for at least 2 years, but not more than 3 years. Currently, there are 13 device categories eligible for pass-through payment. These devices are listed in Table 112 of this final rule where we detail the expiration dates of pass-through payment status for each of the 13 devices currently receiving device pass-through payment.

[30] To apply for OPPS transitional device pass-through status, applicants complete an application that is subject to the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*). This information collection (CMS–10052) is currently approved under OMB control number 0938–0857 and has an expiration date of November 30, 2025.

TABLE 112: DEVICES WITH PASS-THROUGH STATUS EXPIRING IN 2024, IN 2025, IN 2026, OR IN 2027

HCPCS Code	Long Descriptor	Effective Date	Pass-Through Expiration Date
C1832	Autograft suspension, including cell processing and application, and all system components	01/01/2022	12/31/2024
C1833	Monitor, cardiac, including intracardiac lead and all system components (implantable)	01/01/2022	12/31/2024
C1826	Generator, neurostimulator (implantable), includes closed feedback loop leads and all implantable components, with rechargeable battery and charging system	01/1/2023	12/31/2025
C1827	Generator, neurostimulator (implantable), non-rechargeable, with implantable stimulation lead and external paired stimulation controller	01/01/2023	12/31/2025
C1747	Endoscope, single-use (*i.e.* disposable), urinary tract, imaging/illumination device (insertable)	01/01/2023	12/31/2025
C1600	Catheter, transluminal intravascular lesion preparation device, bladed, sheathed (insertable)	01/01/2024	12/31/2026
C1601	Endoscope, single-use (*i.e.* disposable), pulmonary, imaging/illumination device (insertable)	01/01/2024	12/31/2026
C1602	Orthopedic/device/drug matrix/absorbable bone void filler, antimicrobial-eluting (implantable)	01/01/2024	12/31/2026
C1603	Retrieval device, insertable, laser (used to retrieve intravascular inferior vena cava filter)	01/01/2024	12/31/2026
C1604	Graft, transmural transvenous arterial bypass (implantable), with all delivery system components	01/01/2024	12/31/2026
C1605	Pacemaker, leadless, dual chamber (right atrial and right ventricular implantable components), rate-responsive, including all necessary components for implantation	07/01/2024	06/30/2027
C1606	Adapter, single-use (*i.e.* disposable), for attaching ultrasound system to upper gastrointestinal endoscope	07/01/2024	06/30/2027
C8000	Support device, extravascular, for arteriovenous fistula (implantable)	10/01/2024	9/30/2027

As discussed in section IV.A.2. New Device Pass-Through Applications for CY 2024 of the CY 2024 OPPS/ASC final rule with comment period, we approved HCPCS code C1601 (Endoscope, single-use (*i.e.* disposable), pulmonary, imaging/illumination device (insertable)), as a new device category for pass-through status under the OPPS, with an effective date of January 1, 2024. For the full discussion of the criteria used to evaluate device pass-through applications, refer to the CY 2024 OPPS/ASC final rule with comment period, which was published in the **Federal Register** on November 22, 2023 (88 FR 81729 through 81743). We note that HCPCS code C1601 was established for a bronchoscope that can only be used for a single procedure and cannot be reprocessed. As such, HCPCS code C1601 only describes devices that cannot be reprocessed.

In addition, as discussed in section IV.A.2 (New Device Pass-Through Applications for CY 2023) of the CY 2023 OPPS/ASC final rule with comment period, we approved HCPCS code C1747 (Endoscope, single-use (*i.e.* disposable), urinary tract, imaging/illumination device (insertable)), as a new device category for pass-through status under the OPPS, with an effective date of January 1, 2023. For the full discussion on the criteria used to evaluate device pass-through applications, refer to the CY 2023 OPPS/ASC final rule with comment period, which was published in the **Federal Register** on November 23, 2022 (87 FR 71929 through 71934). We note that HCPCS code C1747 was established for a ureteroscope that can only be used for a single procedure and cannot be reprocessed. As such, HCPCS code C1747 only describes devices that cannot be reprocessed.

2. New Device Pass-Through Applications for CY 2025

a. Background

Section 1833(t)(6) of the Act provides for pass-through payments for devices, and section 1833(t)(6)(B) of the Act requires CMS to use categories in determining the eligibility of devices for pass-through payments. As part of implementing the statute through regulations, we have continued to believe that it is important for hospitals to receive pass-through payments for devices that offer substantial clinical improvement in the treatment of Medicare beneficiaries to facilitate access by beneficiaries to the advantages of the new technology. Conversely, we have noted that the need for additional payments for devices that offer little or no clinical improvement over previously existing devices is less apparent. In such cases, these devices can still be used by hospitals, and hospitals will be paid for them through appropriate APC payment. Moreover, a goal is to target pass-through payments for those devices where cost considerations are most likely to interfere with patient access (66 FR 55852; 67 FR 66782; and 70 FR 68629).

As specified in regulations at § 419.66(b)(1) through (3), to be eligible for transitional pass-through payment under the OPPS, a device must meet the following criteria:

- If required by FDA, the device must have received FDA approval or clearance and FDA marketing authorization (except for a device that has received an FDA investigational device exemption (IDE) and has been classified as a Category B device by FDA), or meet another appropriate FDA exemption; and the pass-through payment application must be submitted within 3 years from the date of the initial FDA marketing authorization, if required, unless there is a documented, verifiable delay in U.S. market availability after FDA marketing authorization is granted, in which case CMS will consider the pass-through payment application if it is submitted within 3 years from the date of market availability;
- The device is determined to be reasonable and necessary for the diagnosis or treatment of an illness or injury or to improve the functioning of a malformed body part, as required by section 1862(a)(1)(A) of the Act; and
- The device is an integral part of the service furnished, is used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted (either permanently or temporarily), or applied in or on a wound or other skin lesion.

In addition, according to § 419.66(b)(4), a device is not eligible to be considered for device pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker).

Separately, we use the following criteria, as set forth under § 419.66(c), to determine whether a new category of pass-through payment devices should be established. The device to be included in the new category must—

- Not be appropriately described by an existing category or by any category previously in effect established for transitional pass-through payments, and was not being paid for as an outpatient service as of December 31, 1996;
- Have an average cost that is not ''insignificant'' relative to the payment amount for the procedure or service with which the device is associated as determined under § 419.66(d) by demonstrating: (1) the estimated average reasonable cost of devices in the category exceeds 25 percent of the applicable APC payment amount for the service related to the category of devices; (2) the estimated average reasonable cost of the devices in the category exceeds the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent; and (3) the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device exceeds 10 percent of the APC payment amount for the related service (with the exception of brachytherapy and temperature-monitored cryoablation, which are exempt from the cost requirements as specified at § 419.66(c)(3) and (e)); and
- Demonstrate a substantial clinical improvement, that is, substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment, or, for devices for which pass-through payment status will begin on or after January 1, 2020, as an alternative pathway to demonstrating substantial clinical improvement, a device is part of the FDA's Breakthrough Devices Program and has received marketing authorization for the indication covered by the Breakthrough Device designation.

Beginning in CY 2016, we changed our device pass-through evaluation and determination process. Device pass-through applications are still submitted to CMS through the quarterly subregulatory process, but the applications are subject to notice and comment rulemaking in the next applicable OPPS annual rulemaking cycle. Under this process, all applications that are preliminarily approved upon quarterly review will automatically be included in the next applicable OPPS annual rulemaking cycle, while submitters of applications that are not approved upon quarterly review will have the option of being

included in the next applicable OPPS annual rulemaking cycle or withdrawing their application from consideration. Under this notice-and-comment process, applicants may submit new evidence, such as clinical trial results published in a peer-reviewed journal or other materials, for consideration during the public comment process for the proposed rule. This process allows those applications that we are able to determine meet all of the criteria for device pass-through payment under the quarterly review process to receive timely pass-through payment status, while still allowing for a transparent, public review process for all applications (80 FR 70417 through 70418).

In the CY 2020 annual rulemaking process, we finalized an alternative pathway for devices that are granted a Breakthrough Device designation (84 FR 61295) and receive FDA marketing authorization for the indication covered by the Breakthrough Device designation. Under this alternative pathway, devices that are granted an FDA Breakthrough Device designation are not evaluated in terms of the current substantial clinical improvement criterion at § 419.66(c)(2) for the purposes of determining device pass-through payment status, but do need to meet the other requirements for pass-through payment status in our regulation at § 419.66. Devices that are part of the Breakthrough Devices Program, have received FDA marketing authorization for the indication covered by the Breakthrough Devices designation, and meet the other criteria in the regulation can be approved through the quarterly process and announced through that process (81 FR 79655). Proposals regarding these devices and whether pass-through payment status should continue to apply are included in the next applicable OPPS rulemaking cycle. This process promotes timely pass-through payment status for innovative devices, while also recognizing that such devices may not have a sufficient evidence base to demonstrate substantial clinical improvement at the time of FDA marketing authorization.

More details on the requirements for device pass-through payment applications are included on the CMS website in the application form itself at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/passthrough_payment.html*, in the ''Downloads'' section. In addition, CMS is amenable to meeting with applicants or potential applicants to facilitate information sharing to support the evaluation of an OPPS device pass-through payment application or discuss general application criteria, including the substantial clinical improvement criterion.

b. Applications Received for Device Pass-Through Status for CY 2025

We received 14 complete applications by the March 1, 2024, quarterly deadline, which was the last quarterly deadline for applications to be received in time to be included in this final rule. Of the complete applications, we received two applications in the second quarter of 2023, two application in the third quarter of 2023, three applications in the fourth quarter of 2023, and seven applications in the first quarter of 2024. Three of the applications were approved for device pass-through payment during the quarterly review process: The DETOUR™ System, which was preliminarily approved upon quarterly review under the alternative pathway effective January 1, 2024, and the AVEIR™ DR Dual Chamber Leadless Pacemaker System and the EndoSound Vision System™ (EVS™) which both were preliminarily approved upon quarterly review under the alternative pathway effective July 1, 2024. As previously stated, all applications that are preliminarily approved upon quarterly review will automatically be included in the next applicable OPPS annual rulemaking cycle. Therefore, the DETOUR™ System, the AVEIR™ DR Dual Chamber Leadless Pacemaker System, and the EndoSound Vision System™ (EVS™) are discussed in the following section IV.2.b.1.

We note that the quarterly application process and requirements have not changed because of the addition of rulemaking review. Detailed instructions on submission of a quarterly device pass-through payment application are included on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Downloads/catapp.pdf*.

Discussions of the applications we received by the March 1, 2024, deadline are included below. We did not include the description and discussion of new device category for transitional pass-through payment status applications which were included in the proposed rule that were withdrawn for consideration for the upcoming calendar year. We also do not summarize or respond to public comments received regarding these withdrawn or ineligible applications.

(1) Alternative Pathway Device Pass-Through Applications

We received 10 device pass-through applications by the March 2024 quarterly application deadline for devices that have received Breakthrough Device designation from FDA and FDA marketing authorization for the indication for which they have a Breakthrough Device designation, and therefore were eligible to apply under the alternative pathway.

(a) AGENT™ Paclitaxel-Coated Balloon Catheter

Boston Scientific Corporation submitted an application for a new device category for transitional pass-through payment status for the AGENT™ Paclitaxel-Coated Balloon Catheter for CY 2025. Per the applicant, the AGENT™ Paclitaxel-Coated Balloon Catheter is a device/drug combination product consisting of a semi-compliant intracoronary balloon catheter with a paclitaxel/acetyl tributyl citrate drug coating on the balloon component. The applicant asserted that the AGENT™ Paclitaxel-Coated Balloon Catheter delivers paclitaxel, an antiproliferative drug, directly to the arterial tissue which inhibits the proliferation of neointimal smooth muscle cells without introducing an additional stent layer, thereby reducing the rate of restenosis. According to the applicant, the AGENT™ Paclitaxel-Coated Balloon Catheter is intended for use in adult patients, after appropriate vessel preparation, undergoing percutaneous coronary intervention (PCI) in coronary arteries 2.0 mm to 4.0 mm in diameter and lesions up to 26 mm in length for the purpose of improving myocardial perfusion when treating in-stent restenosis (ISR) and the management of atherosclerotic coronary artery disease.

Please refer to the online application posting for the AGENT™ Paclitaxel-Coated Balloon Catheter, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP2402295H2TU*, for additional detail describing this device and the disease treated by the device.

Comment: Many commenters expressed their support for the approval of transitional pass-through payment for the AGENT™ Paclitaxel-Coated Balloon Catheter. The commenters, including the applicant, emphasized their positive views on the device's transformational nature as a treatment for ISR, the device's ability to demonstrate clinical improvement relative to other available treatments, and the device's safety profile. In addition, many commenters expressed their concerns that without

adequate reimbursement many medical facilities may not adopt widespread use of the AGENT™ Paclitaxel-Coated Balloon Catheter.

Response: We appreciate the commenters' input and support for the AGENT™ Paclitaxel-Coated Balloon Catheter application for transitional pass-through payment. We have taken these comments into consideration in our final determination for pass-through status for the AGENT™ Paclitaxel-Coated Balloon Catheter.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), the AGENT™ Paclitaxel-Coated Balloon Catheter received FDA Breakthrough Device designation effective January 22, 2021, as a combination product indicated for percutaneous transluminal coronary angioplasty (PTCA) in coronary arteries 2.0 mm to 4.0 mm in diameter to treat ISR, up to 26 mm in length, for the purpose of improving myocardial perfusion. FDA approved the premarket approval application (PMA) for the AGENT™ Paclitaxel-Coated Balloon Catheter on February 29, 2024, as indicated for use after appropriate vessel preparation in adult patients undergoing PCI in coronary arteries 2.0 mm to 4.0 mm in diameter and lesions up to 26 mm in length for the purpose of improving myocardial perfusion when treating ISR. We noted that while the indication for the FDA Breakthrough Device designation and the indication for the FDA premarket approval vary slightly, we stated that we believe that FDA premarket approval indication is the indication covered by the Breakthrough Device designation. We received the application for a new device category for transitional pass-through payment status for the AGENT™ Paclitaxel-Coated Balloon Catheter on February 29, 2024, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comment on whether the AGENT™ Paclitaxel-Coated Balloon Catheter meets the newness criterion at § 419.66(b)(1).

Comment: With respect to the newness criterion at § 419.66(b)(1), the applicant reiterated that the AGENT™ Paclitaxel-Coated Balloon Catheter received FDA premarket approval on February 29, 2024, for use after appropriate vessel preparation in adult patients undergoing PCI in coronary arteries 2.0 mm to 4.0 mm in diameter and lesions up to 26 mm in length for the purpose of improving myocardial perfusion when treating ISR. In addition, a few other commenters expressed their belief that the AGENT™ Paclitaxel-Coated Balloon Catheter meets the newness criterion at § 419.66(b)(1).

Response: We appreciate the applicant's and commenters' input. The AGENT™ Paclitaxel-Coated Balloon Catheter received FDA Breakthrough Device designation effective January 22, 2021. We received the application for a new device category for transitional pass-through payment status for the AGENT™ Paclitaxel-Coated Balloon Catheter on February 29, 2024, which is within 3 years of February 29, 2024, the date of FDA premarket approval application. Based on our review of the application, we have determined that the AGENT™ Paclitaxel-Coated Balloon Catheter meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criterion at § 419.66(b)(3), the device must be an integral part of the service furnished, used for one patient only, come in contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. The applicant did not explicitly indicate whether the AGENT™ Paclitaxel-Coated Balloon Catheter is integral to the service provided. The applicant stated that the AGENT™ Paclitaxel-Coated Balloon Catheter is used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted as required by § 419.66(b)(3).

We invited public comment on whether the AGENT™ Paclitaxel-Coated Balloon Catheter meets the eligibility criterion at § 419.66(b)(3).

Comment: The applicant and another commenter asserted that the AGENT™ Paclitaxel-Coated Balloon Catheter meets all the requirements of § 419.66(b)(3). The applicant submitted a comment clarifying that the AGENT™ Paclitaxel-Coated Balloon Catheter is integral to the service provided and meets the eligibility criterion at § 419.66(b)(3) because the service cannot be furnished without the AGENT™ Paclitaxel-Coated Balloon Catheter. Specifically, the applicant commented that that the AGENT™ Paclitaxel-Coated Balloon Catheter is a device/drug combination product consisting of a semi-compliant intracoronary balloon catheter with a drug coating consisting of paclitaxel/acetyl tributyl citrate on the balloon component. In addition, the applicant provided that the AGENT™ Paclitaxel-Coated Balloon Catheter is inserted transiently in a coronary artery suffering from ISR and transfers a long-dwelling, therapeutic dose of paclitaxel to the vessel wall of the artery to prevent ISR reoccurrence. The applicant reiterated that the AGENT™ Paclitaxel-Coated Balloon Catheter is used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted.

Response: We appreciate the applicant's and commenter's clarification, and we agree that the AGENT™ Paclitaxel-Coated Balloon Catheter is integral to the service furnished. We agree with the applicant and commenter that the AGENT™ Paclitaxel-Coated Balloon Catheter is used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted, or applied in or on a wound or other skin lesion. After consideration of the public comments received and our review of the application, we have determined that the AGENT™ Paclitaxel-Coated Balloon Catheter meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criterion at § 419.66(b)(4), a device is not eligible to be considered for device pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). The applicant did not indicate whether the AGENT™ Paclitaxel-Coated Balloon Catheter is equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered, or if the AGENT™ Paclitaxel-Coated Balloon Catheter is a supply or material furnished incident to a service.

We invited public comment on whether the AGENT™ Paclitaxel-Coated Balloon Catheter meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant and commenter submitted a comment clarifying that the AGENT™ Paclitaxel-Coated Balloon Catheter meets the eligibility criterion at § 419.66(b)(4) because it is not equipment, an instrument, apparatus, implement or any type of item for which depreciation and financing expenses are recovered, and because it is the primary therapeutic intervention and is not a supply or material furnished incident to a service.

Response: We appreciate the applicant's and commenter's clarification. We agree with the

applicant and commenter that the AGENT™ Paclitaxel-Coated Balloon Catheter is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets, or a material or supply furnished incident to a service. After consideration of the public comments received and our review of the application, we have determined that the AGENT™ Paclitaxel-Coated Balloon Catheter meets the eligibility criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. According to the applicant, no previous or existing device categories for pass-through payment appropriately describe the AGENT™ Paclitaxel-Coated Balloon Catheter. Per the applicant, while device category C2623 (Catheter, transluminal angioplasty, drug-coated, non-laser) describes related or similar products to the AGENT™ Paclitaxel-Coated Balloon Catheter, the AGENT™ Paclitaxel-Coated Balloon Catheter is not appropriately described by C2623 because the devices in this category differ from the AGENT™ Paclitaxel-Coated Balloon Catheter in both size and indicated use, and therefore, the device is not appropriately described by C2623. The applicant further claimed that the devices described by C2623 are approved for use in the femoral or popliteal arteries in vessels with a diameter of at least 4.0 mm, whereas the AGENT™ Paclitaxel-Coated Balloon Catheter is indicated for use in coronary arteries that are between 2.0 mm to 4.0 mm in diameter. In addition, the applicant also noted that the length of the lesions (up to 180 mm) treated with devices in this device category greatly exceeds the maximum lesion size of 26 mm for the AGENT™ Paclitaxel-Coated Balloon Catheter. Moreover, the applicant asserted that the devices described by C2623 are used to treat peripheral arterial disease and are contraindicated for use in coronary arteries. Per the applicant, the AGENT™ Paclitaxel-Coated Balloon Catheter is used in conjunction with transluminal PCIs which are described by different procedure codes than the percutaneous transluminal angioplasty services used for the devices in C2623. Lastly, the applicant stated that an analysis of claims found that the devices described by C2623 are typically reported with femoral or popliteal revascularization procedures (HCPCS codes from 37224 to 37227).

We noted that, based on the description the applicant provided, the AGENT™ Paclitaxel-Coated Balloon Catheter is a device/drug combination product consisting of a semi-compliant intracoronary balloon catheter with a paclitaxel/acetyl tributyl citrate drug coating on the balloon component and thus could be appropriately described by C2623. Specifically, we stated that we believe that C2623 may appropriately describe the AGENT™ Paclitaxel-Coated Balloon Catheter because it is a non-laser, drug-coated catheter used for transluminal angioplasty procedures. In this context, we noted that we believe the AGENT™ Paclitaxel-Coated Balloon Catheter may be similar to the devices described by C2623, and therefore, the AGENT™ Paclitaxel-Coated Balloon Catheter may also be appropriately described by C2623.

In addition, while we acknowledged that when C2623 was established as a device category code effective April 1, 2015, the procedure codes with which C2623 could be reported (HCPCS code 37224 and HCPCS code 37226) were limited to use in the femoral or popliteal arteries. However, based on the subsequent changes that were made to the procedure codes with which C2623 could be reported, we did not agree that C2623 is limited to use with femoral or popliteal revascularization procedures. First, we noted that effective August 25, 2017, while C2623 was in device pass-through payment status, CMS added two procedure codes with which C2623 could be reported that were for procedures other than femoral popliteal revascularization procedures. Specifically, based on the FDA approval of a new indication for an existing device (a drug-coated balloon catheter for use with dialysis circuit procedures for the treatment of patients with dysfunctional arteriovenous fistulae),[31] CMS added two procedure codes, HCPCS codes 36902 and 36903 (transluminal balloon angioplasty procedures in peripheral dialysis segments),[32] with which C2623 could be reported effective August 25, 2017. The devices used with these two added HCPCS codes, 36902 and 36903, which are also described by C2623, are drug-coated balloon catheters used for dialysis circuit procedures in the upper extremities. We stated that we believe the inclusion of these additional reportable procedure codes illustrates that devices that may be described by C2623 were neither intended to be restricted to the treatment of vascular lesions of a specified dimension nor anatomically limited to femoral or popliteal revascularization procedures and is inconsistent with the applicant's assertion that the AGENT™ Paclitaxel-Coated Balloon Catheter is not appropriately described by C2623 because the category is only applicable for devices used in femoral or popliteal arteries with a diameter of at least 4.0 mm, and not smaller coronary arteries.

Further, beginning January 1, 2018, upon the expiration of device pass-through payment status for C2623, CMS packaged the payment for the costs of each of the devices described by C2623 into the payment for the costs related to the procedure with which each device is reported in the hospital claims data (FR 82 59321 through 59323). We further noted that upon becoming packaged for payment, C2623 effectively became reportable with other transluminal angioplasty procedure codes, including procedure codes for percutaneous coronary transluminal angioplasty services. Finally, we noted that while, per the applicant, the devices described by C2623 are typically reported with femoral or popliteal revascularization procedures, other procedure codes, including procedure codes for other percutaneous transluminal angioplasty services and

[31] Centers for Medicare & Medicaid Services (2017). Pub 100–04 Medicare Claims Processing (Transmittal 3941) in CMS Manual System. Accessed at *https://www.cms.gov/regulations-and-guidance/guidance/transmittals/2017downloads/r3941cp.pdf.*

[32] HCPCS code 36902 (Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report; with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty) and HCPCS code 36903 (Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report; with transcatheter placement of intravascular stent(s) peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis segment).

other related coronary procedure codes can and have been performed with devices described by C2623. As such, we stated that we believe the procedures with which the AGENT™ Paclitaxel-Coated Balloon Catheter is utilized could be reported with C2623.

In this context, based on the description the applicant provided, we stated that we believe the AGENT™ Paclitaxel-Coated Balloon Catheter may be similar to the devices described by C2623, and therefore, the AGENT™ Paclitaxel-Coated Balloon Catheter may also be appropriately described by C2623.

We invited public comment on whether the AGENT™ Paclitaxel-Coated Balloon Catheter meets the device category criterion at § 419.66(c)(1).

Comment: In response to our concerns that the AGENT™ Paclitaxel-Coated Balloon Catheter may be appropriately described by C2623, the applicant and many commenters asserted that the AGENT™ Paclitaxel-Coated Balloon Catheter is not described by C2623 because the device is not used to perform transluminal angioplasties. Specifically, these commenters explained that the AGENT™ Paclitaxel-Coated Balloon Catheter is used to effectively deliver its drug to a lesion after the vessel wall has been prepared, typically through an angioplasty. They also asserted that C2623 is used to describe drug-coated balloons indicated for use in the peripheral vasculature which are capable of both angioplasty and drug-delivery; however, according to the commenters, the AGENT™ Paclitaxel-Coated Balloon Catheter is used solely for drug-delivery and cannot be used for performing an angioplasty. In addition, the applicant commented that peripheral drug-coated balloon catheters, like those described by C2623, are primarily used for treating typically diffused atherosclerotic/restenotic lesions in the comparatively elastic femoral or popliteal arteries, whereas coronary drug-coated balloons are used for treatment of substantially smaller, stented (and therefore, relatively inelastic) coronary segments, with largely focal lesions. Similarly, many commenters underlined the differences between the AGENT™ Paclitaxel-Coated Balloon Catheter and peripheral drug-coated balloon catheters, including design, size, deployment location and time length, clinical indication, and procedural complexity.

The applicant and a few commenters noted that CMS has historically included specific anatomy in several device categories, including those differentiating coronary and non-coronary devices. The applicant offered the following as examples of device categories that are specific to a particular type of intervention: C1759 (Catheter, intracardiac echocardiography), C1761 (Catheter, transluminal intravascular lithotripsy, coronary), and C1888 (Catheter, ablation, non-cardiac, endovascular). A few commenters highlighted device categories that are more granular in description than C2623, such as C1714 (Catheter, transluminal atherectomy, directional), C1724 (Catheter, transluminal atherectomy, rotational), C1732 (Catheter, electrophysiology, diagnostic/ablation, 3D or vector mapping), and C1733 (Catheter, electrophysiology, diagnostic/ablation, other than 3D or vector mapping, other than cool-tip), and suggested that CMS similarly acknowledge the differences between the AGENT™ Paclitaxel-Coated Balloon Catheter and those devices in device category C2623.

Response: We appreciate the applicant's and commenters' input. We note that while the FDA Breakthrough Device designation for the AGENT™ Paclitaxel-Coated Balloon Catheter stated a proposed indication for PTCA in coronary arteries 2.0 mm to 4.0 mm in diameter to treat ISR, up to 26 mm in length, for the purpose of improving myocardial perfusion, the FDA PMA for the AGENT™ Paclitaxel-Coated Balloon Catheter on February 29, 2024, stated the combination drug/device is indicated for use after appropriate vessel preparation in adult patients undergoing PCI in coronary arteries 2.0 mm to 4.0 mm in diameter and lesions up to 26 mm in length for the purpose of improving myocardial perfusion when treating ISR, removing the PTCA indication. This appears to be consistent with the applicant's and commenters' assertions that the AGENT™ Paclitaxel-Coated Balloon Catheter is not utilized in the treatment of PTCA. After consideration of the public comments received, we agree that the AGENT™ Paclitaxel-Coated Balloon Catheter is not indicated for use in transluminal angioplasty; rather, it is intended for improving myocardial perfusion when treating in-stent restenosis after appropriate vessel preparation. Further, we agree that C2623 describes drug-coated balloons which are capable of angioplasty, while the AGENT™ Paclitaxel-Coated Balloon Catheter appears to be used solely for drug-delivery and cannot be used for performing an angioplasty, including PCTAs. As such, we do not believe that the AGENT™ Paclitaxel-Coated Balloon Catheter is described by C2623.

We acknowledge that CMS has included specific anatomic language in the descriptors of previous device category codes when such language was necessary based on the unique circumstances surrounding the establishment of a particular device category code. We note that CMS does not establish pass-through device categories for the purposes of describing specific devices, but rather, device categories which are intended to encompass all devices that can be appropriately described by a category. As such, all device categories, regardless of the language utilized in the descriptors, are established in such a way that no medical device is described by more than one category in accordance with section 1833(t)(6)(B)(ii)(II) of the Act.

After consideration of the public comments received and our review of the application, we agree there is no existing category or category previously in effect that appropriately describes the AGENT™ Paclitaxel-Coated Balloon Catheter. Based on this information, we have determined that the AGENT™ Paclitaxel-Coated Balloon Catheter meets the eligibility criterion at § 419.66(c)(1).

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (i) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. The AGENT™ Paclitaxel-Coated Balloon Catheter has a Breakthrough Device designation and marketing authorization from FDA for the indication covered by the Breakthrough Device designation (as explained in the discussion of the newness criterion), and therefore, is not evaluated for substantial clinical improvement.

We invited public comment on whether the AGENT™ Paclitaxel-Coated Balloon Catheter meets the device category criterion at § 419.66(c)(2)(ii).

Comment: The applicant and one commenter confirmed that the

AGENT™ Paclitaxel-Coated Balloon Catheter has received both Breakthrough Device designation and marketing authorization from FDA, meeting the device category criterion at § 419.66(c)(2).

Response: We appreciate the applicant's and commenter's input. The AGENT™ Paclitaxel-Coated Balloon Catheter has a Breakthrough Device designation effective January 22, 2021, and marketing authorization from FDA effective February 29, 2024, for the indication covered by the Breakthrough Device designation. Therefore, the AGENT™ Paclitaxel-Coated Balloon Catheter meets the criterion at 419.66(c)(2)(ii) and is not evaluated for substantial clinical improvement at § 419.66(c)(2)(i). Based on our review of the application, we have determined that the AGENT™ Paclitaxel-Coated Balloon Catheter meets the device category criterion at § 419.66(c)(2).

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated that the AGENT™ Paclitaxel-Coated Balloon Catheter would be reported with the HCPCS codes as shown in Table 113.

TABLE 113: HCPCS CODES REPORTED WITH THE AGENT™ PACLITAXEL-COATED BALLOON CATHETER

HCPCS Code	Long Descriptor	SI	APC
92920	Percutaneous transluminal coronary angioplasty; single major coronary artery or branch	J1	5192
92924	Percutaneous transluminal coronary atherectomy, with coronary angioplasty when performed; single major coronary artery or branch	J1	5193
92928	Percutaneous transcatheter placement of intracoronary stent(s), with coronary angioplasty when performed; single major coronary artery or branch	J1	5193
92933	Percutaneous transluminal coronary atherectomy, with intracoronary stent, with coronary angioplasty when performed; single major coronary artery or branch	J1	5194
C9600	Percutaneous transcatheter placement of drug-eluting intracoronary stent(s), with coronary angioplasty when performed; single major coronary artery or branch	J1	5193
C9602	Percutaneous transluminal coronary atherectomy, with drug-eluting intracoronary stent, with coronary angioplasty when performed; single major coronary artery or branch	J1	5194

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). We noted that the applicant utilized the CY 2024 payment rates for the three tests of the cost criterion. For our calculations, we used APC 5192, which had a CY 2024 payment rate of $5,445.84 at the time the application was received. HCPCS code 92920 in APC 5192 had a device offset amount of $1,662.61 at the time the application was received. According to the applicant, the cost of the AGENT™ Paclitaxel-Coated Balloon Catheter is $5,500.00.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The average reasonable cost of $5,500.00 for the AGENT™ Paclitaxel-Coated Balloon Catheter is 101.00 percent of the applicable APC payment amount for the service related to the category of devices of $5,445.84 (($5,500.00/$5,445.84) × 100 = 101.00 percent). Therefore, we stated that we believe the AGENT™ Paclitaxel-Coated Balloon Catheter meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of $5,500.00 for the AGENT™ Paclitaxel-Coated Balloon Catheter is 330.81 percent of the cost of the device-related portion of the APC payment amount for the related service of $1,662.61 (($5,500.00/$1,662.61) × 100 = 330.81 percent). Therefore, we stated that we believe the AGENT™ Paclitaxel-Coated Balloon Catheter meets the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of $5,500.00 for the AGENT™ Paclitaxel-Coated Balloon Catheter and the portion of the APC payment amount for the device of $1,662.61 is 70.46 percent of the APC payment amount for the related service of $5,445.84 (((($5,500.00 −

$1,662.61)/$ 5,445.84) × 100 = 70.46 percent). Therefore, we stated that we believe the AGENT™ Paclitaxel-Coated Balloon Catheter meets the third cost significance requirement.

We invited public comment on whether the AGENT™ Paclitaxel-Coated Balloon Catheter meets the device pass-through payment criteria discussed in this section, including the cost criterion for device pass-through payment status.

Comment: With respect to cost significance criteria, the applicant and a commenter reiterated that the AGENT™ Paclitaxel-Coated Balloon Catheter meets all three of the cost significance criteria.

Response: We appreciate the applicant's and commenter's input. After consideration of the public comments received and our findings from the first, second, and third cost significance tests, we agree that the AGENT™ Paclitaxel-Coated Balloon Catheter meets the cost significance criteria specified at § 419.66(d).

After consideration of the public comments received and our review of the device pass-through application, we have determined that the AGENT™ Paclitaxel-Coated Balloon Catheter meets the requirements for device pass-through status described at § 419.66. We are finalizing approval for device pass-through payment status for the AGENT™ Paclitaxel-Coated Balloon Catheter effective January 1, 2025 under the alternative pathway for devices that have an FDA Breakthrough Device designation and have received FDA marketing authorization for the indication covered by the Breakthrough Device designation.

(b) Aveir™ DR Dual Chamber Leadless Pacemaker System

Abbott Laboratories submitted an application for a new device category for transitional pass-through payment status for the Aveir™ DR Dual Chamber Leadless Pacemaker System (Aveir™ DR System) for CY 2025. Per the applicant, the Aveir™ DR System is comprised of two leadless pacemakers, one atrial and one ventricular with each containing a generator and electrodes, that provide dual-chamber pacing therapy after being placed within the heart's myocardium through a minimally invasive catheter-based procedure. According to the applicant, the Aveir™ DR System is without the need for traditional wire electrodes and can provide beat-to-beat communication and synchrony between the two pacemakers for the treatment of arrhythmia/bradycardia. Per the applicant, patients with indication for dual-chamber pacing would benefit from a dual-chamber leadless pacemaker system that provides atrial and ventricular bradycardia therapy, while eliminating the complications associated with conventional pacing systems.

Please refer to the online application posting for the Aveir™ DR System, available at *https://mearis.cmsgov/public/publications/device-ptp/DEP230831B8DX0*, for additional detail describing the device and the disease treated by the device.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), the Aveir™ DR System received FDA Breakthrough Device designation effective March 27, 2020, as a pacemaker implantation indicated in one or more of the following permanent conditions: syncope, presyncope, fatigue, disorientation due to arrhythmia/bradycardia, or any combination of these symptoms. FDA approved the premarket approval application (PMA) for the Aveir™ DR System on June 29, 2023, for the indication covered by the Breakthrough Device designation. We received the application for a new device category for transitional pass-through payment status for the Aveir™ DR System on March 23, 2023, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comment on whether the Aveir™ DR System meets the newness criterion at § 419.66(b)(1).

We did not receive public comments regarding whether the Aveir™ DR System meets the newness criterion at § 419.66(b)(1). The Aveir™ DR System received FDA Breakthrough Device designation effective March 27, 2020. We received the application for a new device category for transitional pass-through payment status for the Aveir™ DR System on March 23, 2023, which is within 3 years of June 29, 2023, the date of FDA PMA. Based on our review of the application, we have determined that the Aveir™ DR System meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criteria at § 419.66(b)(3), the device must be an integral part of the service furnished, used for one patient only, come in contact with human tissue and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. As noted in the proposed rule, the applicant did not indicate whether the Aveir™ DR System is integral to the service furnished. The applicant also did not explicitly state that the Aveir™ DR System is single-use; however, the applicant did state that one Aveir™ DR System is required per patient per procedure. While the applicant did not explicitly state whether the Aveir™ DR System comes in contact with human tissue or is surgically inserted or implanted, the applicant noted that the two Aveir™ Delivery Catheters are inserted into the peripheral vasculature and the cardiovascular system to deliver and implant the Aveir™ AR Atrial Leadless Pacemaker and the Aveir™ VR Ventricular Leadless Pacemaker into the right atrium and right ventricle of the heart, respectively.

We invited public comment on whether the Aveir™ DR System meets the eligibility criterion at § 419.66(b)(3).

Comment: The applicant submitted a comment confirming that the Aveir™ DR System is an integral part of the service provided, is used for one patient only, comes in contact with human tissue, and is surgically inserted or implanted using two delivery catheters that are inserted into the peripheral vasculature and cardiovascular system to deliver and implant the Aveir™ AR Atrial Leadless Pacemaker and the Aveir™ VR Ventricular Leadless Pacemaker into the right atrium and right ventricle of the heart, respectively. The applicant also stated that therefore, it believes the Aveir™ DR System meets the eligibility criterion at § 419.66(b)(3).

Response: We appreciate the applicant's input. We agree with the applicant that the Aveir™ DR System is an integral part of the service furnished, is used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted, or applied in or on a wound or other skin lesion. After consideration of the public comment received and our review of the application, we have determined that the Aveir™ DR System meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criterion at § 419.66(b)(4), a device is not eligible to be considered for device pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). The applicant did not indicate whether the Aveir™ DR System is equipment, an instrument, apparatus, implement, or item of this type for which depreciating and financing expenses are recovered,

or if the Aveir™ DR System is a supply or material furnished incident to a service.

We invited public comment on whether the Aveir™ DR System meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant confirmed that the Aveir™ DR System is not an instrument, apparatus, implement, or similar item for which depreciation and financing expenses are recovered. The applicant also stated that the Aveir™ DR System is not a supply or material furnished incident to a service, and therefore, meets the eligibility criterion at § 419.66(b)(4).

Response: We appreciate the applicant's input. With respect to the eligibility criterion at § 419.66(b)(4), we agree with the applicant that the Aveir™ DR System is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets, or a material or supply furnished incident to a service. After consideration of the public comment received and our review of the application, we have determined that the Aveir™ DR System meets the eligibility criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. The applicant asserted that the Aveir™ DR System is the only dual-chamber leadless pacemaker authorized by FDA and indicated for implantation in patients with one or more of the following permanent conditions: syncope, presyncope, fatigue, disorientation due to arrhythmia/bradycardia, or any combination of those conditions. Per the applicant, the Aveir™ DR System is a modular dual-chamber leadless pacemaker system with bidirectional implant-to-implant communication that can accommodate all pacing indications. According to the applicant, no previous or existing device categories for pass-through payment appropriately describe the Aveir™ DR System. The applicant stated that device categories C1785 (Pacemaker, dual-chamber, rate-responsive (implantable)) and C1889 (Insertable/implantable device, not otherwise classified) do not appropriately describe the Aveir™ DR System because the Aveir™ DR System received Breakthrough Device designation from FDA and has specific functionality and capabilities that are new to the market. The applicant also asserted that the Aveir™ DR system is modular, such that a single device can be implanted in a heart chamber initially, and the second pacemaker added to the other heart chamber in the future should the clinical need arise; and therefore, it is not appropriately described by either C1785 or C1889.

We did not identify an existing pass-through payment category that describes the Aveir™ DR System. We invited public comment on whether the Aveir™ DR System meets the device category criterion at § 419.66(c)(1).

Comment: The applicant agreed with CMS's assessment that there are no existing pass-through payment categories that describe the Aveir™ DR System.

Response: We appreciate the applicant's input. After consideration of the public comment received and our review of the application, we continue to believe that there is no existing category or category previously in effect that appropriately describes the Aveir™ DR System. Therefore, we have determined that the Aveir™ DR System meets the device category eligibility criterion at § 419.66(c)(1).

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (i) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. The Aveir™ DR System has a Breakthrough Device designation and marketing authorization from FDA for the indication covered by the Breakthrough Device designation (as explained in more detail in the discussion of the newness criterion), and therefore, is not evaluated for substantial clinical improvement.

We invited public comment on whether the Aveir™ DR System meets the device category criterion at § 419.66(c)(2)(ii).

We did not receive public comment regarding whether the Aveir™ DR System meets the device category criterion at § 419.66(c)(2)(ii). However, the Aveir™ DR System has a Breakthrough Device designation effective March 27, 2020, and a marketing authorization from FDA effective June 29, 2023, for the indication covered by the Breakthrough Device designation. Therefore, the Aveir™ DR System meets the criterion at § 419.66(c)(2)(ii) and is not evaluated for substantial clinical improvement at § 419.66(c)(2)(i). Based on our review of the application, we have determined that the Aveir™ DR System meets the device category criterion at § 419.66(c)(2).

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated that the Aveir™ DR System would be reported with HCPCS codes as shown in Table 114.

TABLE 114: HCPCS CODES REPORTED WITH THE AVEIR™ DR SYSTEM

HCPCS Code	Long Descriptor	SI	APC
0801T**	Transcatheter removal and replacement of permanent dual-chamber leadless pacemaker, including imaging guidance (*e.g.*, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (*e.g.*, interrogation or programming), when performed; dual-chamber system (*i.e.*, right atrial and right ventricular pacemaker components)	J1	5224
0795T**	Transcatheter insertion of permanent dual-chamber leadless pacemaker, including imaging guidance (*e.g.*, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (*e.g.,* interrogation or programming), when performed; complete system (*i.e.*, right atrial and right ventricular pacemaker components)	J1	5224

**Denotes a HCPCS code that was not included in Addendum P to the CY 2023 OPPS/ASC final rule with comment period, with no CY 2023 HCPCS/CPT code level device offset amount available. We noted the applicant used the CY 2023 payment rates for the three tests of the cost criterion. Since neither of the HCPCS/CPT codes provided by the applicant had a CY 2023 HCPCS/CPT code level device offset amount available at the time the application was received, we used the CY 2023 APC level device offset amount to assess whether the device meets the cost significance criterion.

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). We noted that the applicant used the CY 2023 payment rates for the three tests of the cost criterion. For our calculations, we used APC 5224, which had a CY 2023 payment rate of $18,672.01 at the time the application was received. We used the CY 2023 APC level device offset amount of $11,739.09 for APC 5224, as HCPCS codes 0795T and 0801T provided by the applicant were not included in Addendum P to the CY 2023 OPPS/ASC final rule with comment period and no CY 2023 HCPCS/CPT code level device offset amount was available at the time the application was received.[33] According to the applicant, the cost of the Aveir™ DR System is $24,000.00.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The average reasonable cost of $24,000.00 for the Aveir™ DR System is 128.54 percent of the applicable APC payment amount for the service related to the category of devices of $18,672.01 (($24,000.00/$18,672.01) × 100 = 128.54 percent). Therefore, we stated that we believe the Aveir™ DR System meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of $24,000.00 for the Aveir™ DR System is 204.45 percent of the cost of the device-related portion of the APC payment amount for the related service of $11,739.09 (($24,000.00/$11,739.09) × 100 = 204.45 percent). Therefore, we stated that we believe the Aveir™ DR System meets the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of $24,000.00 for the Aveir™ DR System and the portion of the APC payment amount for the device of $11,739.09 is 65.66 percent of the APC payment amount for the related service of $18,672.01 ((($24,000.00 − $11,739.09)/$18,672.01) × 100 = 65.66 percent). Therefore, we stated that we believe the Aveir™ DR System meets the third cost significance requirement.

We invited public comment on whether the Aveir™ DR System meets the device pass-through payment criteria discussed in this section, including the cost criterion for device pass-through payment status.

Comment: With respect to cost significance criteria, the applicant reiterated that the Aveir™ DR System meets all three of the cost significance criteria.

Response: We appreciate the applicant's input. After consideration of the public comment we received and our findings from the first, second, and third cost significance tests, we agree that the Aveir™ DR System meets the cost significance criteria specified at § 419.66(d).

[33] We noted that the applicant originally utilized APC 5231 (Level 1 ICD and Similar Procedures) for the three tests of the cost criteria in the application. However, the applicant provided supplemental information indicating that, HCPCS codes 0795T and 0801T were assigned to APC 5224 (Level 4 Pacemaker and Similar Procedures) in the corrected Addendum B to the CY 2024 OPPS/ASC final rule with comment period and they believed that APC 5224 is currently the appropriate APC for the purposes of performing the cost significance calculations. We agreed with the applicant and selected APC 5224 for our calculation, which we believe is a more appropriate APC to use based on the assignment of HCPCS codes 0795T and 0801T to APC 5224 and the clinical similarity to other pacemaker insertion codes in APC 5224.

Comment: The applicant submitted a comment requesting that CMS revise the proposed device offset for HCPCS code 0795T (Transcatheter insertion of permanent dual-chamber leadless pacemaker, including imaging guidance (*e.g.,* fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (*e.g.,* interrogation or programming), when performed; complete system (*i.e.,* right atrial and right ventricular pacemaker components)) used to report dual-chamber leadless pacemaker procedures.

Response: We appreciate the applicant's input regarding the device offset amount associated with HCPCS code 0795T. We note that we have addressed this comment in Section IV.B of this final rule with comment period.

As discussed, the Aveir™ DR System pass-through application was preliminarily approved for transitional pass-through payment under the alternative pathway effective July 1, 2024. After consideration of the public comment we received and our review of the device pass-through application, we have determined that the Aveir™ DR System meets the requirements for device pass-through status described at § 419.66 and we are finalizing approval for device pass-through payment status for the Aveir™ DR System under the alternative pathway for devices that have an FDA Breakthrough Device designation and have received FDA marketing authorization for the indication covered by the Breakthrough Device designation.

(c) The DETOUR™ System

Endologix, LLC submitted an application for a new device category for transitional pass-through payment status for the DETOUR™ System for CY 2025. According to the applicant, the DETOUR™ System is an implantable component, used to create a femoropopliteal bypass routed through the femoral vein. The DETOUR™ System is comprised of two main components: (1) the TORUS™ Stent Graft System, which is comprised of the TORUS™ Stent Graft and the TORUS™ Stent Graft Delivery System, and (2) the ENDOCROSS™ Device. Per the applicant, the DETOUR™ System is used to treat patients with advanced peripheral vascular disease, specifically those with long complex femoropopliteal artery stenoses and occlusions resulting in lifestyle limiting claudication or severe lower limb threatening ischemia. According to the applicant, the DETOUR™ System can restore arterial blood flow to the lower limb around the blocked femoral artery and allows for venous blood flow around the conduit for normal venous return, to reduce signs and symptoms of lower limb ischemia and prevent amputation.

Please refer to the online application posting for the DETOUR™ System, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP23090164QL2*, for additional detail describing the device and the disease treated by the device.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), the DETOUR™ System received FDA Breakthrough Device designation effective September 2, 2020, under the name the PQ Bypass System, as a device intended for percutaneous revascularization of symptomatic femoropopliteal lesions 200mm to 460mm with a chronic total occlusion 100mm to 425mm, and/or moderate-to-severe calcification, and/or in-stent-restenosis in patients with severe peripheral arterial disease. FDA approved the premarket approval application (PMA) for the DETOUR™ System on June 7, 2023, indicated for use for percutaneous revascularization in patients with symptomatic femoropopliteal lesions from 200 mm to 460 mm in length with chronic total occlusions (100 mm to 425 mm) or diffuse stenosis >70 percent who may be considered suboptimal candidates for surgical or alternative endovascular treatments. The DETOUR™ System, or any of its components, is not for use in the coronary and cerebral vasculature. We noted that while the indication for the FDA Breakthrough Device designation and the indication for the FDA premarket approval vary slightly, we stated we believe that FDA premarket approval indication is the indication covered by the Breakthrough Device designation. We received the application for a new device category for transitional pass-through payment status for the DETOUR™ System on September 1, 2023, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comment on whether the DETOUR™ System meets the newness criterion at § 419.66(b)(1).

We did not receive public comments regarding whether the DETOUR™ System meets the newness criterion at § 419.66(b)(1). The DETOUR™ System received FDA Breakthrough Device designation effective September 2, 2020. We received the application for a new device category for transitional pass-through payment status for the DETOURÔ System on September 1, 2023, which is within 3 years of June 7, 2023, the date of FDA PMA. Based on our review of the application, we have determined that the DETOUR™ System meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criteria at § 419.66(b)(3), the device must be an integral part of the service furnished, used for one patient only, come in contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. Per the applicant, the DETOUR™ System is integral to the service provided and is used for one patient only. While the applicant did not indicate whether the DETOUR™ System comes in contact with human tissue, the applicant did specify that both components of the DETOUR™ System, the TORUS™ Stent Graft System and the ENDOCROSS™ Device, are inserted or implanted during the percutaneous transmural femoropopliteal bypass procedure, as required by § 419.66(b)(3).

We invited public comments on whether the DETOUR™ System meets the eligibility criterion at § 419.66(b)(3).

We did not receive public comments regarding whether the DETOUR™ System meets the eligibility requirements of § 419.66(b)(3). As noted in the proposed rule, the applicant did not indicate that the DETOUR™ System comes in contact with human tissue. However, because both components of the DETOUR™ System, the TORUS™ Stent Graft System and the ENDOCROSS™ Device, are inserted or implanted during the percutaneous transmural femoralpopliteal bypass procedure, we believe that the DETOUR™ System comes into contact with human tissue. After consideration of the information in the application, we have determined that the DETOUR™ System meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criterion at § 419.66(b)(4), a device is not eligible to be considered for device pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). The applicant asserted that the DETOUR™ System meets the device eligibility

requirements because it is not an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered, and it is not a supply or material furnished incident to a service.

We invited public comment on whether the DETOUR™ System meets the exclusion criterion at § 419.66(b)(4).

We did not receive public comments regarding whether the DETOUR™ System meets the eligibility requirements of § 419.66(b)(4). Based on our review of the application, we agree with the applicant that the DETOUR™ System is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets, or a material or supply furnished incident to a service. Therefore, we have determined that the DETOUR™ System meets the eligibility criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. The applicant described that the DETOUR™ System is a minimally invasive, single-use device with an implantable component, used to create a femoropopliteal bypass routed through the femoral vein. The applicant provided a list of existing and previous device categories for pass-through payment for other stents and explained why they do not believe any of the categories describe the DETOUR™ System. In summary, the applicant asserted that the referenced device categories do not adequately describe the DETOUR™ System because, in contrast to the DETOUR™ System, the referenced device categories do not have: (1) a crossing device with long needle for transmural access, (2) a crossing device with high pressure needle delivery for heavily calcified and atherosclerotic arteries, (3) a high radial strength transmural stent graft capable of self-support and sustaining blood flow through conduit bridging artery to vein and back to artery, (4) a percutaneous stent graft delivery catheter, (5) a covered stent graft to allow for arterial blood flow within the conduit as venous blood flows around it in the vein, or (6) a permanent implant to maintain arterial and venous blood flow. The reasons the applicant asserted for why the DETOUR™ System is not adequately described by each of the device categories are shown in Table 115.

TABLE 115: POTENTIAL EXISTING/PREVIOUS DEVICE CATEGORIES

HCPCS Code	Device Category Description	Applicant Assertion: The DETOUR™ System Is Not Appropriately Described by Existing/Previous Device Category
C1874	Stent, coated/covered, with delivery system	(1) No crossing device with long needle for transmural access; (2) No crossing device with high pressure needle delivery for heavily calcific and atherosclerotic arteries; (3) No high radial strength transmural stent graft capable of self-support and sustaining blood flow through conduit bridging artery to vein and back to artery
C1875	Stent, coated/covered, without delivery system	Reasons (1); (2); (3); and (4) No percutaneous stent graft delivery catheter
C1876	Stent, non-coated/non-covered, with delivery system	Reasons (1); (2); (3); and (5) No covered stent graft to allow for arterial blood flow within the conduit as venous blood flows around it in the vein
C1877	Stent, non-coated/non-covered, without delivery system	Reasons (1); (2); (3); (4); and (5)
C2625	Stent, non-coronary, temporary, with delivery system	Reasons (1); (2); (3); (5); and (6) No permanent implant to maintain arterial and venous blood flow
C2617	Stent, non-coronary, temporary, without delivery system	Reasons (1); (2); (3); (4); (5); and (6)
C1768	Graft, vascular	Reasons (1); (2); (3); and (5)
C1894	Introducer/sheath, other than guiding, other than intracardiac electrophysiological, non-laser	Reasons (1); (2); (3); and (5)
C2629	Introducer/sheath, other than guiding, other than intracardiac electrophysiological, laser	Reasons (1); (2); (3); and (5)

We did not identify an existing pass-through payment category that describes the DETOUR™ System.

We invited public comment on whether the DETOUR™ System meets the device category criterion at § 419.66(c)(1).

We did not receive any comments regarding whether the DETOUR™ System meets the eligibility requirements at § 419.66(c)(1). Based on our review of the application, we continue to believe there is no existing category or category previously in effect that appropriately describes the DETOUR™ System. Therefore, we have determined that the DETOUR™ System meets the device category eligibility criterion at § 419.66(c)(1).

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (i) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. The DETOUR™ System has a Breakthrough Device designation and marketing authorization from FDA for the indication covered by the Breakthrough Device designation (as explained in more detail in the discussion of the newness criterion), and therefore, is not evaluated for substantial clinical improvement.

We invited public comment on whether the DETOUR™ System meets the device category criterion at § 419.66(c)(2).

We did not receive public comment regarding whether the DETOUR™ System meets the device category criterion at § 419.66(c)(2). However, the DETOUR™ System has a Breakthrough Device designation effective September 2, 2020, and marketing authorization from FDA effective June 7, 2023, for the indication covered by the Breakthrough Device. Therefore, the DETOUR™ System meets the criterion at § 419.66(c)(2)(ii) and is not evaluated for substantial clinical improvement at § 419.66(c)(2)(i). Based on our review of the application, we have determined that the DETOUR™ System meets the device category criterion at § 419.66(c)(2).

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated that the DETOUR™ System would be reported with the HCPCS code as shown in Table 116.

TABLE 116: HCPCS CODE REPORTED WITH THE DETOUR™ SYSTEM

HCPCS Code	Long Descriptor	SI	APC
0505T	Endovenous femoral-popliteal arterial revascularization, with transcatheter placement of intravascular stent graft(s) and closure by any method, including percutaneous or open vascular access, ultrasound guidance for vascular access when performed, all catheterization(s) and intraprocedural roadmapping and imaging guidance necessary to complete the intervention, all associated radiological supervision and interpretation, when performed, with crossing of the occlusive lesion in an extraluminal fashion.	J1	5193

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). We noted that the applicant used the CY 2023 payment rates for the three tests of the cost criterion. For our calculations, like the applicant, we used APC 5193, which had a CY 2023 payment rate of $10,615.31 at the time the application was received. HCPCS code 0505T in APC 5193 had a CY 2023 device offset amount of $5,229.10 at the time the application was received. According to the applicant, the cost of the DETOUR™ System is $25,000.00.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The average reasonable cost of $25,000.00 for the DETOUR™ System is 235.51 percent of the applicable APC payment amount for the service related to the category of devices of $10,615.31 (($25,000.00/$10,615.31) × 100 = 235.51 percent). Therefore, we stated that we believe the DETOUR™ System meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of $25,000.00 for the DETOUR™ System is 478.09 percent of the cost of the device-related portion of the APC payment amount for the related service of $5,229.10 (($25,000.00/$5,229.10) × 100 = 478.09 percent). Therefore, we stated that we believe the DETOUR™ System meets the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related

service. The difference between the estimated average reasonable cost of $25,000.00 for the DETOUR™ System and the portion of the APC payment amount for the device of $5,229.10 is 186.25 percent of the APC payment amount for the related service of $10,615.31 ((($25,000.00 − $5,229.10)/$10,615.31) × 100 = 186.25 percent). Therefore, we stated that we believe the DETOUR™ System meets the third cost significance requirement.

We invited public comment on whether the DETOUR™ System meets the device pass-through payment criteria discussed in this section, including the cost criterion for device pass-through payment status.

We did not receive any comments regarding whether the DETOURÔ System meets the cost significance criteria as described at § 419.66(d). Based on our findings from the first, second, and third cost significance tests, we have determined that the DETOURÔ System meets the cost significance criteria specified at § 419,66(d).

Comment: The applicant commented that the device offset amount assigned to HCPCS code 0505T should remain at $0.00 to align with the precedent set for similarly situated devices and ensure that hospitals continue to receive full and fair reimbursement for C1604.

Response: We appreciate the applicant's input regarding the device offset amount associated with HCPCS code 0505T. We note that we have addressed this comment in section IV.B of this final rule with comment period.

As discussed, the DETOUR™ System pass-through application was preliminarily approved for transitional pass-through payment under the alternative pathway effective January 1, 2024. After our review of the device pass-through application, we have determined that the DETOURÔ System meets the requirements for device pass-through status described at § 419.66 and we are finalizing approval for device pass-through payment status for the DETOURÔ System under the alternative pathway for devices that have an FDA Breakthrough Device designation and have received FDA marketing authorization for the indication covered by the Breakthrough Device designation.

(d) EndoSound Vision System™ (EVS™)

EndoSound, Inc. submitted an application for a new device category for transitional pass-through payment status for the EVS™ for CY 2025. The applicant is only seeking a new device category for transitional pass-through payment status for the Ultrasound Disposable Kit—Diagnostic/Therapeutic (UDK–T) component (hereinafter referred to as ''UDK–T'') of the EVS™. According to the applicant, the EVS™ is an ultrasound system designed to externally attach to an upper gastrointestinal (GI) endoscope (gastroscope/upper (EGD) endoscope). Per the applicant, the EVS™ is a device that, once attached to an EGD endoscope, temporarily converts the EGD endoscope to a fully capable endoscopic ultrasound (EUS) endoscope. The applicant asserted that the EVS™ can be coupled with an upper GI endoscope device to enable real-time ultrasound imaging, ultrasound guided needle aspiration, and other EUS guided procedures within the upper GI tract and surrounding organs. According to the applicant, the EVS™ consists of: (1) the EVS Scanner, a beamformer/scanner that performs ultrasound signal processing; (2) the Ultrasound Transducer Module (UTM), a reusable transducer assembly that converts the electrical signals from the scanner into ultrasound energy; (3) the Transducer Extension Cable (TEC), a cable/connector to interface the UTM to the EVS Scanner; and (4) the UDK–T, a disposable mounting kit with an operator control mechanism used to externally affix the EVS™ to a standard EGD endoscope and to provide needle and transducer angulation while maintaining the native gastroscope controls.

Please refer to the online application posting for the EVS™, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP240228GJT0X*, for additional detail describing this device and the disease treated by the device.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), the EVS™, which includes the UDK–T, received FDA Breakthrough Device designation effective July 29, 2021, as a device intended to provide optical visualization of, ultrasonic visualization of, and therapeutic access to, the upper GI tract including but not restricted to the organs, tissues, and subsystems: esophagus, stomach, duodenum, and underlying areas. FDA granted the applicant 510(k) clearance for the EVS™ on December 27, 2023, indicated for use such that when affixed to an endoscope, is intended to provide ultrasonic visualization of, and ultrasound guided therapeutic access to the upper GI tract including but not restricted to the organs, tissues, and subsystems: esophagus, stomach, duodenum, and underlying areas. The EVS™, mounted on an endoscope, is introduced orally when indications consistent with the requirement for a GI procedure are met. The EVS™ is a prescription-only device to be used by a qualified physician. The clinical environments where the system can be used include clinics, hospitals, and ambulatory surgery centers. We noted that while the indication for the FDA Breakthrough Device designation and the indication for the FDA 510(k) clearance vary slightly, we stated we believe that the FDA 510(k) clearance indication is the one covered by the Breakthrough Device designation. We received the application for a new device category for transitional pass-through payment status for the EVS™ on February 28, 2024, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comment on whether the EVS™, inclusive of the UDK–T component, meets the newness criterion at § 419.66(b)(1).

Comment: With respect to the newness criterion at § 419.66(b)(1), the applicant clarified that the EVS™ received FDA market authorization for 510(k) clearance. The applicant asserted that, according to FDA guidance,[34] 510(k) clearance is permissible for pre-determined Breakthrough Device designation and stated there were no changes specific to device components, mechanism of use, or indications of use for either the Breakthrough Device designation or the 510(k) clearance. The applicant stated the 510(k) clearance occurred within 3 years of the submission of the pass-through application such that the EVS™ meets the newness criterion at 42 CFR 419.66(b)(1).

Response: We appreciate the commenter's input. The EVS™ received Breakthrough Device designation effective July 29, 2021. We received the application for a new device category for transitional pass-through payment status for the EVS™ on February 28, 2024, which is within 3 years of December 27, 2023, the date of FDA 510(k) clearance. Based on our review of the application, we have determined that the EVS™ meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criterion at § 419.66(b)(3), the device must be an integral part of the service furnished, used for one patient only, come in

[34] See Breakthrough Devices Program, Guidance for Industry and Food and Drug Administration Staff Document issued on September 15, 2023. *https://www.fda.gov/media/162413/download.*

contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. The applicant did not indicate whether the UDK–T component of the EVS™ is integral to the service furnished; however, the applicant did indicate that the UDK–T is single-use, comes in contact with human tissue, and is inserted as part of an endoscopy procedure. We preliminarily approved the EVS™ HCPCS code C1606 (Adapter, single-use (*i.e.,* disposable), for attaching ultrasound system to upper gastrointestinal endoscope) upon quarterly review under the alternative pathway with an effective date of July 1, 2024. We noted that C1606 was established for an adapter for attaching an ultrasound system to an upper GI endoscope that can only be used for a single procedure and cannot be reprocessed. As such, C1606 only describes devices that cannot be reprocessed.

We invited public comment on whether the UDK–T component of the EVS™ meets the eligibility criterion at § 419.66(b)(3).

Comment: The applicant submitted a comment reiterating that the EVS™ is used for one patient, comes into contact with human tissue, and is surgically implanted or inserted. The applicant clarified that the C1606 device component (*i.e.,* the UDK–T component) of the EVS™ meets the § 419.66(b)(3) criteria and is integral to the function and operation of the EVS™. The applicant further commented that C1606 was established for an adapter for attaching an ultrasound system to an upper GI endoscope that can only be used for a single procedure and cannot be reprocessed. The applicant asserted that the C1606 device component of the EVS™ meets the eligibility criterion at 42 CFR 419.66(b)(3).

Response: We appreciate the applicant's clarification. We agree with the applicant that the UDK–T component of the EVS™ is integral to the function and operation of the EVS™ and that the device is used for one patient only, comes into contact with human tissue, and is surgically implanted or inserted. After consideration of the applicant's comments and our review of the application we have determined that the UDK–T component of the EVS™ meets the eligibility requirement at § 419.66(b)(3).

With respect to the exclusion criterion at § 419.66(b)(4), a device is not eligible to be considered for device pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). The applicant claimed that the UDK–T meets the device eligibility requirements because it is not equipment or an item for which depreciation and financing expenses are recovered. In addition, the applicant asserted that the UDK–T is not a supply or material.

We invited public comment on whether the UDK–T component of the EVS™ meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant submitted a comment reiterating that the UDK–T component of the EVS™ is not equipment or an item for which depreciation and financing expenses are recovered and is not a supply or material.

Response: We appreciate the applicant's input. We agree with the applicant that the UDK–T component of the EVS™ is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets, or a material or supply furnished incident to a service. After consideration of the applicant comments we received and our review of the application, we have determined that the UDK–T component of the EVS™ meets the eligibility criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. According to the applicant, the EVS™ is an ultrasound system designed to externally attach to an upper GI endoscope (gastroscope/upper (EGD) endoscope). According to the applicant, no previous or existing device categories for pass-through payment appropriately describe the UDK–T. Per the applicant, device category C1748 (Endoscope, single-use (*i.e.,* disposable), Upper GI, imaging/illumination device (insertable)) does not appropriately describe the EVS™, inclusive of the UDK–T, because: (1) the EVS™, inclusive of the UDK–T, enables an endoscope that a hospital has to have added functionalities such as the ability to perform an EUS procedure, but is not an endoscope like the devices in C1748; (2) the EVS™, inclusive of the UDK–T, when used with an endoscope allows EUS procedures to be done without an elevator, unlike the other devices described in C1748; and (3) the EVS™, inclusive of the UDK–T, and the devices described in C1748 are used in different procedures. The applicant explained that CMS indicated that C1748 should always be billed with a HCPCS code in the ranges of 43260–43265 and 43274–43278, but there is no overlap between those HCPCS codes billed with C1748 and the HCPCS codes the applicant stated that the EVS™ would be reported with as shown in Table 48 of the CY 2025 OPPS/ASC proposed rule.

We did not identify an existing pass-through payment category that describes the UDK–T component of the EVS™.

We invited public comment on whether the UDK–T component of the EVS™ meets the device category criterion at § 419.66(c)(1).

Comment: The applicant agreed with CMS' assessment that there are no existing pass-through payment categories that describe the UDK–T component of the EVS™. The applicant further asserted that there is no other product similar in how the EVS™ assembles, operates, and functions and that, therefore, the device meets the criteria in 42 CFR 419.66(c)(1).

Response: We appreciate the applicant's input. After consideration of the comment and our review of the application, we continue to believe that there is no existing category or category previously in effect that appropriately describes the UDK–T component of the EVS™. Therefore, we have determined that the UDK–T component of the EVS™ meets the device category eligibility criterion at § 419.66(c)(1).

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (i) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough

Device designation. The EVS™, inclusive of the UDK–T, has a Breakthrough Device designation and marketing authorization from FDA for the indication covered by the Breakthrough Device designation (as explained in more detail in the discussion of the newness criterion) and therefore is not evaluated for substantial clinical improvement.

We invited public comment on whether the EVS™, inclusive of the UDK–T component, meets the device category criterion at § 419.66(c)(2)(ii).

Comment: The applicant reiterated that the EVS™ and its components were granted Breakthrough Device designation and received FDA marketing authorization for the indication covered by the Breakthrough Device designation, and therefore, meets the criteria at 42 CFR 419.66(c)(2)(ii).

Response: We appreciate the applicant's comment. The EVS™ and its components have a Breakthrough Device designation effective July 29, 2021, and marketing authorization from FDA effective December 27, 2023, for the indication covered by the Breakthrough designation. Therefore, the EVS™ meets the criterion at § 419.66(c)(2)(ii) and is not evaluated for substantial clinical improvement at § 419.66(c)(2)(i). Based on our review of the application and the applicant's comments, we have determined that the EVS™ meets the device category criterion at § 419.66(c)(2).

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated that the EVS™ would be reported with HCPCS codes as shown in Table 117.

TABLE 117: HCPCS CODES REPORTED WITH THE EVS™

HCPCS Code	Long Descriptor	SI	APC
43231	Esophagoscopy, flexible, transoral; with endoscopic ultrasound examination	J1	5302
43232	Esophagoscopy, flexible, transoral; with transendoscopic ultrasound-guided intramural or transmural fine needle aspiration/biopsy(s)	J1	5302
43237	Esophagogastroduodenoscopy, flexible, transoral; with endoscopic ultrasound examination limited to the esophagus, stomach or duodenum, and adjacent structures	J1	5302
43238	Esophagogastroduodenoscopy, flexible, transoral; with transendoscopic ultrasound-guided intramural or transmural fine needle aspiration/biopsy(s), (includes endoscopic ultrasound examination limited to the esophagus, stomach or duodenum, and adjacent structures)	J1	5302
43242	Esophagogastroduodenoscopy, flexible, transoral; with transendoscopic ultrasound-guided intramural or transmural fine needle aspiration/biopsy(s), (includes endoscopic ultrasound examination limited to the esophagus, stomach and either the duodenum or a surgically altered stomach where the jejunum is examined distal to the anastamosis)	J1	5302
43259	Esophagogastroduodenoscopy, flexible, transoral; with endoscopic ultrasound examination, including the esophagus, stomach, and either the duodenum or a surgically altered stomach where the jejunum is examined distal to the anastomosis	J1	5302
43240	Esophagogastroduodenoscopy, flexible, transoral; with transmural drainage of pseudocyst (includes placement of transmural drainage catheter[s]/stent[s], when performed, and endoscopic ultrasound, when performed)	J1	5331
43253	Esophagogastroduodenoscopy, flexible, transoral; with transendoscopic ultrasound-guided transmural injection of diagnostic or therapeutic substance(s) (eg, anesthetic, neurolytic agent) or fiducial marker(s) (includes endoscopic ultrasound examination of the esophagus, stomach, and either the duodenum or a surgically altered stomach where the jejunum is examined distal to the anastomosis)	J1	5302

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). We noted that the applicant used the CY 2024 payment rates for the three tests of the cost criterion. For our calculations,

we used APC 5302, which had a CY 2024 payment rate of $1,812.99 at the time the application was received. HCPCS code 43232 in APC 5302 had a CY 2024 device offset amount of $14.50 at the time the application was received.[35] According to the applicant, the cost of the disposable, single-use UDK–T component of the EVS™ is $500.00.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The average reasonable cost of $500.00 for the UDK–T is 27.59 percent of the applicable APC payment amount for the service related to the category of devices of $1,812.99 (($500.00/$1,812.99) × 100 = 27.59 percent). Therefore, we stated that we believe the UDK–T component of the EVS™ meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of $500.00 for the UDK–T is 3,448.28 percent of the cost of the device-related portion of the APC payment amount for the related service of $14.50 (($500.00/$14.50) × 100 = 3,448.28 percent). Therefore, we stated that we believe the UDK–T component of the EVS™ meets the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of $500.00 for the UDK–T and the portion of the APC payment amount for the device of $14.50 is 26.78 percent of the APC payment amount for the related service of $1,812.99 (((($500.00 − $14.50)/$1,812.99) × 100 = 26.78 percent). Therefore, we stated that we believe the UDK–T component of the EVS™ meets the third cost significance requirement.

We invited public comment on whether the UDK–T component of the EVS™ meets the device pass-through payment criteria discussed in this section, including the cost criterion for device pass-through payment status.

Comment: With respect to the cost criterion, the applicant agreed that the UDK–T component of the EVS™ meets all three of the cost criterion outlined in 42 CFR 419.66(c)(3) and (d)(1) through (3).

Response: We appreciate the applicant's input. After consideration of the comment we received and our findings from the first, second, and third cost significance tests, we agree that the UDK–T component of the EVS™ meets the cost significance criteria specified at § 419.66(d).

As discussed, the UDK–T component of the EVS™ pass-through application was preliminarily approved for transitional pass-through payment under the alternative pathway effective July 1, 2024. After considering the applicant comment received and our review of the device pass-through application, we have determined that the UDK–T component of EVS™ meets the requirements for device pass-through status described at § 419.66. We are finalizing approval for device pass-through payment status for the UDK–T component of the EVS™ under the alternative pathway for devices that have an FDA Breakthrough Device designation and have received FDA marketing authorization for the indication covered by the Breakthrough Device designation.

Comment: The applicant commented that HCPCS codes 43240 and 43253 should be added to the list of procedures that can be reported with C1606. The applicant stated that in Table 48 of the CY 2025 OPPS/ASC proposed rule, there are 6 primary HCPCS procedures codes reported with the nominated device, including HCPCS codes 43231, 43232, 43237, 43238, 43242, and 43259. The applicant stated that in the July 2024 ASC code pairs file,[36] dated June 14, 2024, 8 primary HCPCS procedures codes were listed with HCPCS code C1606, which included the HCPCS codes listed included those listed in proposed rule, with the addition of HCPCS codes 43240 and 43253. The applicant agreed with the preliminary approval of pass-through status for the nominated device and requested that it should be made clear that the 8 procedures codes on the July 2024 ASC code pairs file for C1606 are the procedures that can be reported with C1606.

Response: We thank the applicant for the comment. We will evaluate this request and add HCPCS codes 43240 and 43253 to the list of procedures that can be reported with C1606 if appropriate.

(e) iFuse Bedrock Granite™ Implant System

SI–BONE submitted an application for a new device category for transitional pass-through payment status for the iFuse Bedrock Granite™ Implant System for CY 2025. According to the applicant, the iFuse Bedrock Granite™ Implant System consists of iFuse Granite™ implants of various lengths and diameters and associated instruments sets. The titanium (Ti-6Al-4V ELI) iFuse Granite™ implant consists of a porous fusion sleeve with threaded length attached to a solid post that has connection and implant placement features of a typical pedicle fixation screw. The iFuse Granite™ implant is intended to provide sacropelvic fusion of the sacroiliac joint (when placed in the sacral-alar-iliac (SAI) trajectory) and fixation to the pelvis when used in conjunction with commercially available pedicle screw fixation systems as a foundational element for segmental spinal fusion only when performing both a lumbar and a sacroiliac joint (SIJ) fusion procedure in the same operative session. The applicant asserted that joint fusion occurs as a result of the device's porous surface and interstices and fixation occurs through the device's helical threaded design and traditional posterior fixation rod connection.

Per the applicant, the device can be placed into the pelvis in two trajectories: the SAI trajectory (*i.e.,* into the sacrum, across the SIJ and into the ilium), or directly into the ilium. The applicant explained that the iFuse Granite™ implant is typically placed in the SAI trajectory, bilaterally, and

[35] We noted that the applicant selected the APC payment rate of $1,814.88 and the APC level device offset amount of $178.95 for APC 5302. However, the values selected are inconsistent with the APC payment rate and the APC level device offset amount found in CY 2024 OPPS APC Offset File, which were corrected as described in the CY 2024 OPPS/ASC final rule with comment period correction (89 FR 9002). The HCPCS/CPT code level device offset amounts for the HCPCS/CPT codes provided by the applicant are available in the corrected Addendum P to the CY 2024 OPPS/ASC final rule with comment period. For our calculation, we selected the APC payment rate of $1,812.99 and the HCPCS/CPT code level device offset amount of $14.50 related to HCPCS 43232 in APC 5302 found in the corrected Addendum P, which are the accurate values for these codes. Based on our initial assessment in the proposed rule, using the APC payment rate of $1,812.99 and the device offset amount of $14.50 would result in the EVS™ meeting the cost significance requirement.

[36] July 2024 ASC code pairs file: *https://www.cms.gov/license/ama?file=/files/zip/july-2024-asc-codepairs.zip.*

oftentimes stacked to achieve two points of fusion and fixation/stabilization across each SIJ. According to the applicant, the iFuse Granite™ implant may also be used in a single, but bilateral, configuration, where only two implants may be required when replacing traditional pedicle screws in either a SAI trajectory or iliac trajectory. The applicant asserted that the iFuse Bedrock Granite™ Implant System is always used in addition to lumbar fusion instrumentation when used to perform lumbar and SIJ fusion at the same time.

Please refer to the online application posting for the iFuse Bedrock Granite™ Implant System, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP240220LPFNM,* for additional detail describing the device and the disease treated by the device.

Comment: One commenter strongly encouraged CMS to consider the iFuse Bedrock Granite™ Implant System as having met all requirements for transitional pass-through payment status for CY 2025 and noting that that the device has Breakthrough Device designation for lumbar spinal deformity indications and was granted with New Technology Add-on Payment status effective in FY 2023 (87 FR 48780).

Response: We appreciate the commenters' input and support for the iFuse Bedrock Granite™ Implant System application for transitional pass-through payment. We have taken these comments into consideration in our final determination for pass-through status for the iFuse Bedrock Granite™ Implant System.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), the iFuse Bedrock Granite™ Implant System received FDA Breakthrough Device designation effective November 23, 2021, as a treatment of the acute and chronic instabilities or deformities of the thoracic, lumbar, and sacral spine, including: (1) degenerative disc disease (DDD), as defined by back pain of discogenic origin with degeneration of the disc confirmed by patient history and radiographic studies; (2) severe spondylolisthesis (Grades 3 and 4) of the L5–S1 vertebra; (3) skeletally mature patients receiving fusions by autogenous bone graft having implants attached to the lumbar and sacral spine (L3 to sacrum) with removal of the implants after the attainment of a solid fusion; (4) spondylolisthesis; (5) trauma (*i.e.,* fracture or dislocation); (6) spinal stenosis; (7) deformities or curvatures (*i.e.,* scoliosis, kyphosis, and/or lordosis); (8) spinal tumor; and (9) pseudarthrosis, and/or failed previous fusion. Subsequently, FDA also granted the applicant 510(k) clearance for the iFuse Bedrock Granite™ Implant System on May 26, 2022, and December 22, 2022, for the indication covered by the Breakthrough Device designation with one additional indication for use: SIJ dysfunction that is a direct result of SIJ disruption and degenerative sacroiliitis, including conditions whose symptoms began during pregnancy or in the peripartum period and have persisted postpartum for more than 6 months. We noted that the 510(k) clearance dated December 22, 2022, expanded the previously cleared indication of the iFuse Bedrock Granite™ Implant System to include general compatibility with certain compatible pedicle screw systems, whereas the indications under the May 26, 2022, 510(k) clearance only addressed compatibility of the iFuse Bedrock Granite™ Implant System with the SeaSpine Mariner Pedicle Screw System. Each 510(k) clearance, the May 26, 2022, and the December 22, 2022, are covered by the November 23, 2021, Breakthrough Device designation for the iFuse Bedrock Granite™ Implant System. We received the application for a new device category for transitional pass-through payment status for the iFuse Bedrock Granite™ Implant System on February 20, 2024, which is within 3 years of the dates of the May 26, 2022, and December 22, 2022, FDA marketing authorizations for the iFuse Bedrock Granite™ Implant System.

We invited public comment on whether the iFuse Bedrock Granite™ Implant System meets the newness criterion at § 419.66(b)(1).

Comment: With respect to the newness criterion at § 419.66(b)(1), the applicant reiterated that the iFuse Bedrock Granite™ Implant System received FDA marketing authorization on May 26, 2022. The applicant requested that CMS begin the newness period for the iFuse Bedrock Granite™ Implant System using the FDA Breakthrough Device designation of November 23, 2021, and the earlier market availability date of May 26, 2022, for the 510(k) marketing authorization.

Response: We appreciate the applicant's input. We agree with the applicant that the market availability date for the iFuse Bedrock Granite™ Implant System should be May 26, 2022, rather than December 22, 2022, because that is when the device became commercially available. We received the application for a new device category for transitional pass-through payment status for the iFuse Bedrock Granite™ Implant System on February 20, 2024, which is within 3 years of May 26, 2022, the date of 510(k) clearance. After consideration of the public comments received and our review of the application, we have determined that the iFuse Bedrock Granite™ Implant System meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criterion at § 419.66(b)(3), the device must be an integral part of the service furnished, used for one patient only, come in contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. The applicant did not indicate if the iFuse Bedrock Granite™ Implant System is integral to the service furnished. The applicant provided that the iFuse Bedrock Granite™ Implant System is single-use, permanently implanted, and surgically inserted into the patient. However, we noted that we do not have sufficient information to determine if the associated instruments sets included in the iFuse Bedrock Granite™ Implant System meet the eligibility criterion at § 419.66(b)(3).

We invited public comment on whether the iFuse Bedrock Granite™ Implant System meets the eligibility criterion at § 419.66(b)(3).

Comment: The applicant submitted a comment clarifying that the iFuse Bedrock Granite™ Implant System, including the associated instrument sets included in the iFuse Bedrock Granite™ Implant System, meet the eligibility criterion at § 419.66(b)(3). Specifically, the applicant stated that the iFuse Bedrock Granite™ Implant System technology, including the associated instrument sets is integral to the service furnished, is single-use, permanently implanted, and surgically inserted into the patient, aligning fully with § 419.66(b)(3).

Response: We thank the applicant for the additional information. We agree with the applicant that the iFuse Bedrock Granite™ Implant System, including the associated instrument sets, is an integral part of the service furnished, used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted, or applied in or on a wound or other skin lesion. After consideration of the public comments received and our review of the application, we have determined that the iFuse Bedrock Granite™ Implant System meets the criterion at § 419.66(b)(3).

With respect to the exclusion criterion at § 419.66(b)(4), a device is not eligible to be considered for device pass-through

payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). The applicant did not indicate whether the iFuse Bedrock Granite™ Implant System is equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered, or if the iFuse Bedrock Granite™ Implant System is a supply or material furnished incident to a service.

We invited public comment on whether the iFuse Bedrock Granite™ Implant System meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant submitted a comment clarifying that the iFuse Bedrock Granite™ Implant System is not a material or supply furnished incident to a service and meets the eligibility criterion at § 419.66(b)(4) because neither the implant nor its associated instrument sets are a material or supply furnished incident to a service, and that the iFuse Bedrock Granite™ Implant System operates like a vast majority of spine and orthopedic hardware typically used in surgery of this type. The applicant also confirmed that the iFuse Bedrock Granite™ Implant System is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets.

Response: We appreciate the applicant's input. We agree with the applicant that the iFuse Bedrock Granite™ Implant System, including the associated instruments, is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets, or a material or supply such as a suture or clip furnished incident to a service. After consideration of the public comments received and our review of the application, we have determined that the iFuse Bedrock Granite™ Implant System meets the eligibility criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. According to the applicant, no previous or existing device categories for pass-through payment appropriately describe the iFuse Bedrock Granite™ Implant System. Per the applicant, the device category C1821 (Interspinous process distraction device) does not appropriately describe the iFuse Bedrock Granite™ Implant System because the iFuse Bedrock Granite™ Implant System is used to fixate and fuse, while the devices described in C1821 are interspinous spacers which, after implantation, are opened or expanded to distract the neural foramina and decompress the nerves. The applicant asserted that device category C1713 (Anchor/screw for opposing bone-to-bone or soft tissue-to-bone (implantable)) also does not appropriately describe the iFuse Bedrock Granite™ Implant System because the iFuse Bedrock Granite™ Implant System allows for simultaneous fusion of the SIJ and fixation of the pelvis by connecting via the Tulip Connector to the base of the stabilizing rods within the lumbosacral spinal construct, while C1713 includes implantable pins and/or screws that are used to oppose soft tissue-to-bone, tendon-to-bone, or bone-to-bone. Per the applicant, the device category C1889 (Implantable/insertable device, not otherwise classified) also does not appropriately describe the iFuse Bedrock Granite™ Implant System because it does not describe any specific device category, and therefore does not uniquely describe the device category proposed for the iFuse Bedrock Granite™ Implant System.

We noted that, according to the applicant, the iFuse Bedrock Granite™ Implant System is intended to provide sacropelvic fusion of the sacroiliac joint (when placed in the SAI trajectory) and fixation to the pelvis when used in conjunction with commercially available pedicle screw fixation systems as a foundational element for segmental spinal fusion only when performing both a lumbar and SIJ fusion procedure in the same operative session. The applicant asserted that joint fusion occurs as a result of the device's porous surface and interstices and fixation occurs through the device's helical threaded design and traditional posterior fixation rod connection. We stated that we believe that the device category C1713 may appropriately describe the iFuse Bedrock Granite™ Implant System and questioned whether a transfixing device utilizing the Tulip Connector is sufficiently distinguishable from traditional implantable pins or screws that it is meant to replace. In this context, based on the description the applicant provided, we stated that we believe the iFuse Bedrock Granite™ Implant System may be similar to the devices described by C1713, and therefore, the iFuse Bedrock Granite™ Implant System may also be appropriately described by C1713.

In addition, we stated that we believe the device category C1889 may appropriately describe the iFuse Bedrock Granite™ Implant System because C1889 may be used to describe any implantable/insertable device that is not otherwise described by a more specific device category and is, therefore, sufficiently broad to include implantable devices that allow for simultaneous fusion of the SIJ and fixation of the pelvis. We noted that in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79562), CMS created C1889 with the specific intent to recognize devices furnished during a device intensive procedure that are not described by a specific Level II HCPCS Category C-code. In this context, we stated that we believe the iFuse Bedrock Granite™ Implant System may be appropriately described by either C1713 or C1889.

We invited public comment on whether the iFuse Bedrock Granite™ Implant System meets the device category criterion at § 419.66(c)(1).

Comment: In response to our concerns that the iFuse Bedrock Granite™ Implant System may be appropriately described by the device pass-through category C1713, the applicant and a few other commenters asserted that the iFuse Bedrock Granite™ Implant System is not described by C1713. Specifically, the applicant relied upon the C1713 descriptor and supporting guidance: C1713: Anchor for opposing bone-to-bone or soft tissue-to-bone—Implantable pins and/or screws that are used to oppose soft tissue-to-bone, tendon-to-bone, or bone-to-bone. Screws oppose tissues via drilling as follows: soft tissue-to-bone, tendon-to-bone, or bone to-bone fixation. Pins are inserted or drilled into bone, principally with the intent to facilitate stabilization or oppose bone-to-bone. This may include orthopedic plates with accompanying washers and nuts. This category also applies to synthetic bone substitutes that may be used to fill bony void or gaps (*i.e.,* bone substitute implanted into a bony defect created from trauma or surgery). The applicant and commenters clarified that, unlike

devices described by C1713, the iFuse Bedrock Granite™ Implant System's intended use is not to anchor bone to bone, or soft tissue, tendons, or ligaments to bone, but to promote simultaneous pelvic stabilization and fusion across the SI joint space, via a unique and proprietary Tulip Connector that attaches to the spinal fusion construct. The applicant and another commenter further provided that the typical use scenarios for reporting C1713 include orthopedic procedures involving bone sutures, anchors, small plastic polyether ether ketone (PEEK) screws for bone-to-bone or bone-to-tendon/tissue connections, often in anatomic areas outside of the spine (including the extremities, shoulders, knees and small bones). Furthermore, the applicant and commenter noted that C1713 is used to report procedures that are mostly non-fusion applications with the intent to restore motion or function to anatomy(ies) and that C1713 can also include bone void filler or bone substitute materials (*e.g.,* demineralized bone matrix, Subchondroplasty, etc.).

The applicant and commenters specified that other implanted devices in this category restore motion while the iFuse Bedrock Granite™ Implant System immobilizes; and that the iFuse Bedrock Granite™ Implant System is intended to traverse an articulating joint space and fuse two bones via bridging the joint to immobilize it so bony fusion may occur.

Response: We appreciate the applicant and commenters' clarifications and the additional information. We agree that the ability to simultaneously fuse the SIJ and fixate the pelvis to the spinal fusion construct distinguishes the iFuse Bedrock Granite™ Implant System from other implant devices described by C1713 that anchor bone-to-bone, or soft tissue-to-bone, tendons-to-bone, or ligaments-to-bone. We also agree that the iFuse Bedrock Granite™ Implant System is distinguishable from other implant devices described by C1713 because it secures bone to a metal rod via the Tulip Connector, and that typical C1713 implants do not include joint fusion technologies, and are not specific to anatomic areas, nor do they function similarly to the iFuse Bedrock Granite™.

After consideration of the public comments we received and our review of the application, we agree that existing device category C1713 does not appropriately describe the iFuse Bedrock Granite™.

Comment: In response to our concerns that the iFuse Bedrock Granite™ Implant System may be appropriately described by C1889, the applicant and a few commenters noted that C1889 is not, and has not been, a device pass-through category code, and that it is not included in the complete list of device pass-through category codes.

Response: We appreciate the commenters' input. We agree that C1889 is not a device pass-through category code, and therefore, agree that it is not relevant to our determination at § 419.66(c)(1).

After consideration of the public comments received and our review of the application, we agree there is no existing category or category previously in effect that appropriately describes the iFuse Bedrock Granite™ Implant System. Based on this information, we have determined that the iFuse Bedrock Granite™ Implant System meets the eligibility criterion at § 419.66(c)(1).

The second criterion for establishing a device category at § 419.66(c)(2) provides that CMS determines either of the following: (i) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. The iFuse Bedrock Granite™ Implant System has a Breakthrough Device designation and marketing authorization from FDA for the indication covered by the Breakthrough Device designation (as explained in the discussion of the newness criterion) and therefore is not evaluated for substantial clinical improvement.

We invited public comment on whether the iFuse Bedrock Granite™ Implant System meets the device category criterion at § 419.66(c)(2)(ii).

We did not receive any public comment regarding whether the iFuse Bedrock Granite™ Implant System meets the device category criterion at § 419.66(c)(2)(ii). The iFuse Bedrock Granite™ Implant System has a Breakthrough Device designation effective November 23, 2021, and marketing authorization from FDA effective May 26, 2022, for the indication covered by the Breakthrough Device designation. Based on our review of the application, we have determined that the iFuse Bedrock Granite™ Implant System meets the device category criterion at § 419.66(c)(2)(ii) and is not evaluated for substantial clinical improvement at § 419.636(c)(2)(i).

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated that the iFuse Bedrock Granite™ Implant System would be reported with HCPCS codes shown in Table 118.

TABLE 118: HCPCS CODES REPORTED WITH THE IFUSE BEDROCKGRANITE™ IMPLANT SYSTEM

HCPCS Code	Long Descriptor	SI	APC
27279	Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixing device	J1	5116
22612	Arthrodesis, posterior or posterolateral technique, single interspace; lumbar (with lateral transverse technique, when performed)	J1	5116
22630	Arthrodesis, posterior interbody technique, including laminectomy and/or discectomy to prepare interspace (other than for decompression), single interspace, lumbar	J1	5116
22633	Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace, lumbar	J1	5116

According to the applicant, the iFuse Bedrock Granite™ Implant System is only used when both a SIJ fusion procedure and a lumbar fusion procedure are performed in the same operative session. The applicant stated that the iFuse Bedrock Granite™ Implant System is not utilized when only a SIJ fusion procedure is performed (HCPCS code 27279) or when only a lumbar fusion procedure is performed (HCPCS code 22612, 22630, or 22633). Rather, per the applicant, the appropriate coding of the procedure where the iFuse Bedrock Granite™ Implant System is used should include the HCPCS code for SIJ fusion (HCPCS code 27279) *and* a HCPCS code for lumbar fusion (HCPCS code 22612, 22630, or 22633). Per the applicant, the selection of the primary lumbar fusion HCPCS code (HCPCS code 22612, 22630, or 22633) is dependent on the procedure performed.

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). We noted that the applicant utilized the CY 2024 payment rates for the three tests of the cost criterion. For our calculations, we used APC 5116, which had a CY 2024 payment rate of $17,756.28 at the time the application was received. The applicant stated the iFuse Bedrock Granite™ Implant System device should be reported with the SIJ fusion procedure HCPCS code 27279 along with one of the three lumbar fusion procedures (HCPCS code 22612, 22630 or 22633). While the applicant utilized HCPCS code 22612 for the device offset amount for test two of the cost criterion, we stated that we believe that HCPCS code 27279 is the appropriate HCPCS code for the offset and subsequent calculation. Specifically, we understood that code 27279 is always reported when the iFuse Bedrock Granite™ Implant System is used along with only one of the three specified lumbar fusion codes and that the SIJ fusion procedure described by code 27279 is always performed when the iFuse Bedrock Granite™ is used along with just one of three possible lumbar procedures, depending on the specific surgical approach used. Therefore, we stated that we believe that neither HCPCS codes 22612, 22630, nor 22633 is appropriate to use for the cost criterion calculation. As such, we used HCPCS code 27279, the code that should always be reported with the iFuse Bedrock Granite™ Implant System, for our calculations. HCPCS code 27279 in APC 5116 had a CY 2024 device offset amount of $12,264.26 at the time the application was received. According to the applicant, the cost of the iFuse Bedrock Granite™ Implant System is $11,689.00.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The average reasonable cost of $11,689.00 for the iFuse Bedrock Granite™ Implant System is 65.83 percent of the applicable APC payment amount for the service related to the category of devices of $17,756.28 (($11,689.00/$17,756.28) × 100 = 65.83 percent). Therefore, we stated that we believe the iFuse Bedrock Granite™ Implant System meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of $11,689.00 for the iFuse Bedrock Granite™ Implant System is 95.31 percent of the cost of the device-related portion of the APC payment amount for the related service of $12,264.26 (($11,689.00/$12,264.26) × 100 = 95.31 percent). Therefore, we stated that we believe the iFuse Bedrock Granite™ Implant System does not meet the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of $11,689.00 for the iFuse Bedrock Granite™ Implant System and the portion of the APC payment amount for the device of $12,264.26 is negative 3.24 percent of the APC payment amount for the related service of $17,756.28 ((($11,689.00 − $12,264.26)/$17,756.28) × 100 = − 3.24 percent). Therefore, we stated that we believe the iFuse Bedrock

Granite™ Implant System does not meet the third cost significance requirement.

We invited public comment on whether the iFuse Bedrock Granite™ Implant System meets the device pass-through payment criteria discussed in this section, including the cost criterion for device pass-through payment status.

Comment: In response to our proposal to utilize HCPCS code 27279 for evaluation of cost criteria for the iFuse Bedrock Granite™ Implant System, the applicant and another commenter asserted that the most appropriate HCPCS code to evaluate the criterion for the iFuse Bedrock Granite™ Implant System is HCPCS code 22612. The applicant and another commenter provided several reasons: (1) The intended indication and use of the nominated device in the hospital outpatient and ASC setting will be in support of the lumbar spinal construct for lumbar fusion cases; (2) The typical patient for the nominated device has severe lumbar spinal pathology, such as scoliosis or kyphosis of the lumbar spine, as the primary diagnosis, whereas sacroiliac joint disease or dysfunction is not the primary diagnosis or procedure indication for these patients; and (3) As evidence of the consensus on this type of pelvic fixation to support lumbar patients, numerous commercial payers across the U.S. agree and have published medical coverage policies stating that SI joint fusion at the bottom of a long construct is covered for treatment of lumbar disease or dysfunction.[37] The applicant claimed that in the outpatient setting, the iFuse Bedrock Granite™ Implant System would always be used in conjunction with one of three spinal fusion procedures and would always be considered as a secondary procedure. The applicant stated that of the four relevant HCPCS codes in its application (HCPCS codes 22612, 22630, 22633, and 27279), the threshold for HCPCS code 22612 is the most appropriate for evaluating the cost criterion for the iFuse Bedrock Granite™ Implant System. The applicant provided the following reasons: (1) HCPCS code 22612 is the only lumbar spinal fusion procedure payable by Medicare in both hospital outpatient and ASC settings; (2) HCPCS code 22612 has a lower device offset, consistent with CMS' policies; and (3) HCPCS code 22612 is the primary code in spinal fusion procedures in which the iFuse Bedrock Granite™ will always be used as an adjunctive technology, when connected to compatible posterior spinal rods, to improve the potential outcome of the lumbar fusion case. Finally, the applicant argued that HCPCS code 22612 would also be appropriate from a primary assignment rank perspective, stating that since the nominated device will have multiple J1 HCPCS codes, it would be appropriate to determine which HCPCS code has the highest primary assignment ranking. The applicant referenced Addendum J of the CY 2024 final rule and the CY 2025 proposed rule stating that HCPCS code 22612 has a higher ranking for primary assignment purposes than HCPCS code 27279. The applicant claimed that it would be consistent with CMS' policy on assignment of primary procedures to select the cost threshold for HCPCS code 22612, as opposed to HCPCS code 27279, to assess the cost criterion for the iFuse Bedrock Granite™ Implant System.

Response: We thank the commenters for the additional information. Based on the updated information provided in the comments, we agree HCPCS code 22612 is an appropriate procedure code for the evaluation of the cost criterion for the iFuse Bedrock Granite™ Implant System. As such, we have updated our calculations accordingly for the second and third cost significance requirements, at § 419.66(d)(2) and (3), respectively as below.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The average reasonable cost of $11,689 for the iFuse Bedrock Granite™ Implant System is 136.75 percent of the cost of the device-related portion of the APC payment amount for the related service of $8,547.88 (($11,689.00/$8,547.88) × 100 = 136.75 percent). Therefore, we agree that the iFuse Bedrock Granite™ Implant System meets the second cost significant requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of $11,689.00 for the iFuse Bedrock Granite™ Implant System and the portion of the APC payment amount for the device of $8,547.88 is 17.70 percent of the APC payment amount for the related service of $17,756.28 ((($11,689.00 − $8,547.88)/$17,756.28) × 100 = 17.70 percent). Therefore, we agree that the iFuse Bedrock Granite™ Implant System meets the third cost significance requirement.

Comment: The applicant and another commenter stated that they believe it is appropriate for CMS to use the lowest APC payment rate applicable for use with the nominated device regarding the iFuse Bedrock Granite™ Implant System, stating that this is consistent with increasing probability that the device will pass the cost significance test. The applicant and another commenter asserted that CMS should likewise use the offset amount that gives the nominated device the best opportunity to pass the test, arguing that HCPCS code 22612 is the most appropriate code for assessing the cost threshold in this context.

Response: We thank the commenters for their input. As we explained in the CY 2005 OPPS/ASC final rule with comment period (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion. We note that in both the original evaluation of cost in the proposed rule as well as in the re-evaluation in this final rule, we followed this procedure by selecting the lowest, and in this case only, APC payment rate applicable for APC 5116 of $17,756. While we note that since 2017, we calculate the device offset amount at the HCPCS/CPT® code level instead of the APC level (89 FR 79657), we disagree that we are bound by the same policy to select the HCPCS code with the lowest offset amount. We believe that doing so would potentially conflict with our stated policy of selecting the lowest APC payment rate, which is intended to increase the probability the device will pass the cost significance test. We do, however, agree to use HCPCS code 22612 and its device offset amount for the evaluation of the cost criterion for the iFuse Bedrock Granite™ Implant System, based on the updated information we received in the comments.

Comment: The applicant requested that the iFuse Bedrock Granite™ Implant System be approved for the transitional pass-through status and the

[37] Anthem CG–SURG–111: ''Open sacroiliac joint fusion procedures are considered medically necessar y. . . *during multisegment spinal constructs (for example, correction of deformity in scoliosis or kyphosis surgery) extending to the ilium.*'' Ref: *https://www.anthem.com/dam/medpolicies/abcbs/active/guidelines/gl_pw_e001136.html* (accessed August 24, 2024).

device offset amount should be set to $0. The applicant asserted that the costs of the iFuse Bedrock Granite™ Implant System are not included as part of the device-related portion of the APC 5116 payment supporting hospitals performing a primary lumbar fusion procedure. The applicant stated that hospital outpatient departments and ASCs do not typically support combination lumbar fusion with SI joint fusion procedures performed in the same operative session, and claims data reveals an extremely low volume of these codes being reported together each year in the HOPD setting relative to other code pairings. In addition, the applicant stated that the iFuse Bedrock Granite™ Implant System cannot be used as a stand-alone device; rather, it will only be used in conjunction with one of three lumbar spinal fusion procedures. The applicant referred to the CY 2024 and CY 2025 Addendum J files and stated that all three HCPCS codes describing lumbar fusion which are eligible for payment in the hospital outpatient setting (HCPCS 22612, 22630, and 22633) are all ranked higher for primary assignment purposes than HCPCS code 27279. The applicant therefore argued that the device costs of the iFuse Bedrock Granite™ Implant System have not been appropriately included in the device offset of any of the fusion procedures. The applicant further stated that, since the costs of the iFuse Bedrock Granite™ Implant System are purely additive for hospitals currently performing lumbar spinal fusion procedures (HCPCS codes 22612, 22630, or 22633) mapping to Comprehensive APC 5116, the applicant requested that CMS set the device offset to $0 when granting transitional pass-through status for the iFuse Bedrock Granite™ Implant System for CY 2025.

Response: After further review, we are persuaded by commenters that the iFuse Bedrock Granite™ Implant System cannot be used as a stand-alone device and that it is only used in conjunction with the existing device costs for the lumbar spinal fusion procedures. Therefore, we agree that the device is not included in the existing APC payment amount for these procedures and a device offset amount under 42 CFR 419.66(h) would not be appropriate at this time. For CY 2025, for the procedures we described that are performed with this new transitional pass-through device category, we are accepting the commenter's recommendation to apply a $0 offset for the iFuse Bedrock Granite™ Implant System. We refer the reader to Addendum B of this CY 2025 OPPS/ASC final rule with comment period for APC payment rates.

After consideration of the public comments we received and our findings from the first, second, and third cost significance tests, we agree that the iFuse Bedrock Granite™ meets the cost significance criteria specified at § 419.66(d).

After consideration of the public comments we received and our review of the device pass-through application, we have determined that the iFuse Bedrock Granite™ Implant System meets the criteria for device pass-through status described at § 419.66. We are finalizing approval for device pass-through payment status for the iFuse Bedrock Granite™ Implant System effective January 1, 2025, under the alternative pathway for devices that have an FDA Breakthrough Device Designation and have received FDA marketing authorization for the indication covered by the Breakthrough Device designation.

(f) Paradise® Ultrasound Renal Denervation (RDN) System

ReCor Medical, Inc. submitted an application for a new device category for transitional pass-through payment status for the Paradise® Ultrasound RDN System for CY 2025. Per the applicant, the Paradise® Ultrasound RDN System is a catheter-based system that delivers ultrasound energy in the location of sympathetic nerves surrounding the renal arteries. The applicant explained that the Paradise® Ultrasound RDN System is indicated to reduce blood pressure as an adjunctive treatment in patients with hypertension in whom lifestyle modifications and antihypertensive medications do not adequately control blood pressure. According to the applicant, the Paradise® Catheter, when used with the other Paradise® Ultrasound RDN System components, provides complete 360-degree energy delivery and targeted ablation depth with each energy emission with the goal of disrupting the nerves and consequently achieving a reduction in systemic arterial blood pressure. The applicant asserted that the Paradise® Catheter protects the artery walls using a cooling system during periods of ultrasound energy emission (also called sonications).

Per the applicant's instructions for use, the Paradise® Ultrasound RDN System includes the following components: (1) Paradise® Generator, which circulates coolant fluid and electrical energy to the Paradise® Catheter via the Paradise® Cable and Paradise® Cartridge; (2) Paradise® Catheter, which connects with the Paradise® Generator and has a distal balloon (available in six different diameters that correspond to varying artery diameter ranges) that is pressurized using coolant fluid; (3) Paradise® Cartridge, which controls the fluid flow into and out of the Paradise® Catheter when used in conjunction with the Paradise® Generator; (4) Paradise® Connection Cable, which transfers electrical energy from the Paradise® Generator to the Paradise® Catheter; (5) Paradise® Remote, included with the Paradise® Generator for optional use; and (6) Paradise® Cart, an optional wheeled cart to which the Paradise® Generator can be mounted to stabilize the Paradise® Generator during a procedure and to transport the Paradise® Generator from one location to another. Per the applicant, additional items required for the procedure include: (1) a bag of coolant fluid for inflation and cooling of balloon; (2) a 0.014 inch guidewire to track the Paradise® Catheter into position for delivery of ultrasound energy; (3) a push/pull style hemostasis valve; (4) a 6 French (Fr) or larger guide sheath; and (5) a 7 Fr or larger guide catheter. According to the applicant, the Paradise® Catheter, Paradise® Cartridge, and Paradise® Connection Cable are single-patient, one-time use components of the system. According to the applicant, key steps for operating the Paradise® Ultrasound RDN System include: (1) gaining access to the femoral artery using standard interventional techniques and placing a 7 Fr (or larger) guide catheter; (2) advancing the 7 Fr guide catheter into the left or right renal artery under fluoroscopic guidance; (3) performing an angiogram to verify the patency of the left or right renal artery; (4) measuring the distal, mid, and proximal artery diameters and selecting the appropriate Paradise® Catheter balloon size; (5) preparing and attaching the Paradise® Cartridge, Paradise® Connection Cable, and sterile water supply, and connecting the Paradise® Cartridge extension tubing to the Paradise® Catheter; (6) preparing and flushing the Paradise® Catheter; removing access devices from the lumen of the guide catheter and inserting a 0.014 inch guidewire; (7) verifying the balloon on the Paradise® Catheter is deflated; (8) tracking the Paradise® Catheter over the guidewire and gently inserting the Paradise® Catheter into the push/pull style hemostasis valve and guide catheter; (9) advancing and positioning the Paradise® Catheter in desired locations within the renal arteries; (10) inflating the balloon via

the Paradise® Generator; (11) verifying the position of the balloon and catheter transducer via fluoroscopy and contrast injection; (12) performing denervation of the left and/or right renal artery by delivery of ultrasound energy; (13) verifying balloon deflation via fluoroscopy before moving to the next location; (14) withdrawing the Paradise® Catheter back into the guide catheter prior to moving the device into an alternate artery or accessory vessel, continuing to another position and exchanging the balloon catheter, as needed; (15) removing the Paradise® Catheter, ensuring that Paradise® Catheter balloon is in a deflated state prior to removal, by slowly withdrawing the Paradise® Catheter through the guide catheter, until completely withdrawn, and removing the guidewire and guide catheter; and (16) closing the wound per standard of practice.

Please refer to the online application posting for the Paradise® RDN System, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP231128137E1,* for additional detail describing the device and the disease treated by the device.

Comment: Many commenters expressed their support for the approval of the Paradise® Ultrasound RDN System for transitional pass-through payment. In addition, many commenters shared their positive experiences with the Paradise® Ultrasound RDN System.

Response: We appreciate the commenters' input and support for the Paradise® Ultrasound RDN System application for transitional pass-through payment. We have taken these comments into consideration in our final determination for pass-through status for the Paradise® Ultrasound RDN System.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), the Paradise® Ultrasound RDN System received FDA Breakthrough Device designation effective December 4, 2020, as a device with the indicated use to reduce blood pressure in adult (≥22 years of age) patients with uncontrolled hypertension, who may be inadequately responsive to, or who are intolerant to anti-hypertensive medications. FDA approved the premarket approval application (PMA) for the Paradise® Ultrasound RDN System on November 7, 2023, for the indicated use to reduce blood pressure as an adjunctive treatment in hypertension patients in whom lifestyle modifications and antihypertensive medications do not adequately control blood pressure. We noted that while the indication for the FDA Breakthrough Device designation and the indication for the FDA premarket approval vary slightly, we believed that FDA premarket approval indication is the one covered by the Breakthrough Device designation. We received the application for a new device category for transitional pass-through payment status for the Paradise® Ultrasound RDN System on November 28, 2023, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comment on whether the Paradise® Ultrasound RDN System meets the newness criterion at § 419.66(b)(1).

Comment: With respect to the newness criterion at § 419.66(b)(1), the applicant reiterated that the Paradise® Ultrasound RDN System received Breakthrough Device designation and later FDA approval on November 7, 2023, and CMS received the application for a new device category for transitional pass-through payment status on November 28, 2023, which is within 3 years of FDA approval. A few commenters stated the Paradise® Ultrasound RDN System meets the newness criterion, with one commenter specifically noting that the Paradise® Ultrasound RDN System meets the newness criterion based on its FDA Breakthrough Device designation.

Response: We appreciate the commenters' input. We agree with the applicant and commenters that the Paradise® Ultrasound RDN System meets the device eligibility requirements of § 419.66(b)(1); however, while we agree that the Paradise® Ultrasound RDN System meets the eligibility criterion specified at § 419.66(b)(1), we note that a device's uniqueness or FDA designation does not alone qualify a device for transitional pass-through payment. Specifically, when we adopted the alternative pathway for device pass-through payments under the OPPS, we stated that applications for devices that have received FDA marketing authorization and are part of the FDA Breakthrough Devices Program would not be evaluated in terms of the current substantial clinical improvement criterion at § 419.66(c)(2) for purposes of determining device pass-through payment status, but would continue to need to meet the other requirements for pass-through payment status in our regulations at § 419.66(c)(1) (84 FR 61295).

The Paradise® Ultrasound RDN System received Breakthrough Device designation on December 4, 2020. We received the application for a new device category for transitional pass-through payment status for the Paradise® Ultrasound RDN System on November 28, 2023, which is within 3 years of November 7, 2023, the date of FDA PMA. Based on our review of the application, we have determined that the Paradise® Ultrasound RDN System meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criteria at § 419.66(b)(3), the device must be an integral part of the service furnished, be used for one patient only, come in contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. The applicant did not explicitly state whether the Paradise® Ultrasound RDN System is integral to the service furnished. With respect to whether the Paradise® Ultrasound RDN System is used for one patient only, the applicant asserted that the Paradise® Catheter, Paradise® Cartridge, and Paradise® Connection Cable are single-patient use. However, the Paradise® Generator, Paradise® Remote, and Paradise® Cart are reusable and are capital equipment. While the applicant did not explicitly state whether the Paradise® Ultrasound RDN System comes into contact with human tissue, the applicant provided that the Paradise® Catheter is placed within the renal artery. According to the applicant, the Paradise® Ultrasound RDN System is an implantable device. We noted that the Paradise® Generator, Paradise® Remote, and Paradise® Cart are reusable, do not come in contact with the patient's tissue, are not surgically implanted or inserted, or applied in or on a wound or other skin lesion, as required by § 419.66(b)(3).

We invited public comment on whether the Paradise® Ultrasound RDN System meets the eligibility criterion at § 419.66(b)(3).

Comment: The applicant submitted a comment clarifying that the Paradise® Ultrasound RDN System is an integral part of the service furnished and meets the eligibility criterion at § 419.66(b)(3) because the Paradise® Ultrasound RDN System performs the ablations via ultrasound which produce the therapeutic effect to reduce blood pressure. The applicant also clarified that the Paradise® Ultrasound RDN System comes into contact with human tissue and meets the eligibility criterion at § 419.66(b)(3) because the Paradise® Ultrasound RDN System's ablation catheter comes in contact with human tissue and is surgically inserted into the body and removed at the end of the procedure. Finally, the applicant reiterated that the Paradise® Connector

Cable, Paradise® Cartridge, and Paradise® Catheter components of the Paradise® Ultrasound RDN System are single-use only and the Paradise® Catheter is surgically inserted into the body and removed at the end of the procedure.

Response: We appreciate the applicant's input. We agree with the applicant that the Paradise® Ultrasound RDN System is an integral part of the service furnished, and is surgically implanted or inserted, or applied in or on a wound or other skin lesion. In addition, we agree that the Paradise® Connector Cable, Paradise® Cartridge, and Paradise® Catheter components of the Paradise® Ultrasound RDN System are used for one patient only and come in contact with human tissue. We continue our discussion and final determination of the criterion at § 419.66(b)(3) in our response below.

With respect to the exclusion criterion at § 419.66(b)(4), a device is not eligible to be considered for device pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). While the applicant did not explicitly state whether the Paradise® Ultrasound RDN System, or select components, is equipment, an instrument, apparatus, implement, or item for which depreciation and financing expenses are recovered, per the applicant, the Paradise® Catheter, Paradise® Cartridge, and Paradise® Connection Cable are single-use only. The applicant further explained that the Paradise® Generator, Paradise® Cart, and Paradise® Remote are capital equipment; as such, they are excluded from device pass-through payment eligibility under § 419.66(b)(4). The applicant did not explicitly state whether the Paradise® Ultrasound RDN System is a supply or material furnished incident to a service.

The applicant requested pass-through payment for the Paradise® Ultrasound RDN System, but we questioned whether only the Paradise® Catheter component of the Paradise® Ultrasound RDN System, as opposed to the whole system, is eligible for pass-through payments under § 419.66(b)(3) or at § 419.66(b)(4). We stated that we do not believe the Paradise® Generator, Paradise® Cable, Paradise® Cartridge, Paradise® Connection Cable, Paradise® Remote, or Paradise® Cart meet the eligibility requirements under § 419.66(b)(3) or at § 419.66(b)(4), and, as such, are not eligible for pass-through payments.

We invited public comment on whether the Paradise® Ultrasound RDN System meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant submitted a comment clarifying that the Paradise® Cartridge and Paradise® Connector Cable meet the eligibility criterion at § 419.66(b)(4) because they are critical parts of a single piece of equipment, they are not sold without the Paradise® Catheter, and because these two components are not separable from the Paradise® Catheter component. With regard to our question as to whether only the Paradise® Catheter component of the Paradise® Ultrasound RDN System is eligible for pass-through payments under § 419.66(b)(3) or at § 419.66(b)(4), the applicant stated that the Paradise® Cartridge and Paradise® Connector Cable are eligible for pass-through payment because the procedure cannot be performed without all three components, *i.e.,* the Paradise® Catheter, the Paradise® Cartridge, and the Paradise® Connector Cable. The applicant further stated that while the Paradise® Connector Cable and Paradise® Cartridge are not inserted into the body, the Paradise® Catheter that is inserted into the body will not function without them. Therefore, the applicant asserted that the Paradise® Connector Cable and Paradise® Cartridge should also be eligible for transitional pass-through status along with the Paradise® Catheter. The applicant also confirmed that the Paradise® Generator, Paradise® Remote, and Paradise® Cart components of the Paradise® Ultrasound RDN System are capital equipment and are not eligible for pass-through payment. With regard to our question about whether the Paradise® Ultrasound RDN System is a supply or material furnished incident to a service, the applicant submitted a comment clarifying that the Paradise® Ultrasound RDN System is not a supply or material furnished incident to a service because the purpose of the procedure is to use the Paradise® Ultrasound RDN System to treat the patient with renal denervation; therefore, it is integral and essential and it is not a supply that is used incident to or for the purpose of doing another procedure.

Response: We thank the applicant for the clarification and agree with the applicant that the Paradise® Catheter, Paradise® Cartridge, and Paradise® Connection Cable components of the Paradise® Ultrasound RDN System meet the eligibility requirements under § 419.66(b)(3) and (4) because the Paradise® Connector Cable and Paradise® Cartridge are required parts of a single piece of equipment, they are not sold without the Paradise® Catheter, they are single-use and they are not separable. We also agree with the applicant that the Paradise® Generator, Paradise® Remote, or Paradise® Cart are capital equipment and do not meet the eligibility requirements under § 419.66(b)(3) or (4). Finally, we agree with the applicant that the Paradise® Ultrasound RDN System is not a material or supply furnished incident to a service. After consideration of the public comments we received and our review of the application, we have determined that the applicable components of the Paradise® Ultrasound RDN System meet the eligibility criteria at § 419.66(b)(3) and (4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. Per the applicant, the Paradise® Ultrasound RDN System is a catheter-based system that delivers ultrasound energy in the location of sympathetic nerves surrounding the renal arteries. According to the applicant, no previous or existing device categories for pass-through payment have encompassed the Paradise® Ultrasound RDN System. Per the applicant, device categories C1753 (Catheter, intravascular ultrasound) and C1888 (Catheter, ablation, noncardiac, endovascular (implantable)) do not appropriately describe the Paradise® Ultrasound RDN System. The applicant asserted that C1753 does not appropriately describe the Paradise® Ultrasound RDN System because the Paradise® Ultrasound RDN System is used to treat a disease and denervates renal nerves, whereas C1753 was created to describe ultrasound catheter devices that are not used to treat a disease and are used for imaging of the vessel. According to the applicant, C1888 does not appropriately describe the Paradise® Ultrasound RDN System because the Paradise® Ultrasound RDN System is intended to denervate renal nerves by using ultrasound energy that does not otherwise affect the blood vessel tissue, whereas C1888 was

created to describe devices that use radiofrequency or laser technologies to occlude or obliterate blood vessels.[38]

We did not identify an existing pass-through payment category that describes the Paradise® Ultrasound RDN System. We invited public comment on whether the Paradise® Ultrasound RDN System meets the device category criterion at § 419.66(c)(1).

Comment: The applicant and a few other commenters agreed with CMS' assessment that there are no existing pass-through payment categories that describe the Paradise® Ultrasound RDN System.

Response: We appreciate the commenters' input. After consideration of the public comments we received and our review of the application, we continue to believe that there is no existing category or category previously in effect that appropriately describes the Paradise® Ultrasound RDN System. Therefore, we have determined that the Paradise® Ultrasound RDN System meets the device category eligibility criterion at § 419.66(c)(1).

We noted that the applicant indicated the Paradise® Ultrasound RDN System is the only device authorized by FDA with an indication for renal denervation using ultrasound energy to achieve reductions in blood pressure. However, we noted that the Symplicity Spyral™ Catheter (Symplicity Spyral™ RDN System) device, for which we also received an application for transitional pass-through payments for CY 2025 as discussed in the proposed rule (89 FR 59312 through 59315) and this final rule with comment, is also authorized by FDA with an indication for renal denervation using a radiofrequency modality to achieve reductions in blood pressure. Accordingly, we noted that while the Paradise® Ultrasound RDN System device may have a different modality (*i.e.,* ultrasound compared to radiofrequency) than that of the Symplicity Spyral™ Catheter device, the Paradise® Ultrasound RDN System device may have a similar mechanism of action to that of the Symplicity Spyral™ Catheter device. We questioned whether the device descriptions provided in the respective applications support establishing two modality specific pass-through payment device categories or a single device category that would encompass both RDN device modalities. We address this question in section (i) in detail immediately following the full discussion of all other applicable eligibility criteria for both the Paradise® Ultrasound RDN System and the Symplicity Spyral™ RDN System applications.

For the summary of public comments received and our final decision on the question of whether the device descriptions provided in the respective applications support establishing two modality-specific pass-through payment device categories or a single device category that would encompass both RDN device modalities, please see section (i) immediately following the Symplicity Spyral™ RDN System application determination.

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (i) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. As previously stated, the Paradise® Ultrasound RDN System has Breakthrough Device designation and marketing authorization from FDA for the indication covered by the Breakthrough Device designation (as explained in more detail in the discussion of the newness criterion) and therefore is not evaluated for substantial clinical improvement.

We invited public comment on whether the Paradise® Ultrasound RDN System meets the device category criterion at § 419.66(c)(2)(ii).

Comment: A few commenters stated that the Paradise® Ultrasound RDN System meets the eligibility criterion at § 419.66(c)(2)(ii), with one commenter asserting that the Paradise® Ultrasound RDN System meets the clinical improvement criterion based on its FDA Breakthrough Device designation.

Response: We appreciate the commenter's input. We agree with the commenters that the Paradise® Ultrasound RDN System has a Breakthrough Device designation effective December 4, 2020, and marketing authorization from FDA effective November 7, 2023, for the indication covered by the Breakthrough Device designation and therefore, meets the criterion at § 419.66(c)(2)(ii) and is not evaluated for substantial clinical improvement at § 419.66(c)(2)(i). Based on our review of the application and consideration of the public comments we received, we have determined that the Paradise® Ultrasound RDN System meets the device category criterion at § 419.66(c)(2).

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated that the Paradise® Ultrasound RDN System would be reported with HCPCS codes shown in Table 119.

[38] The applicant referenced the Medicare Claims Processing Manual, Chapter 4 to support these assertions.

TABLE 119: HCPCS CODES REPORTED WITH THE PARADISE® ULTRASOUND RDN SYSTEM

HCPCS Code	Long Descriptor	SI	APC
0338T**	Transcatheter renal sympathetic denervation, percutaneous approach including arterial puncture, selective catheter placement(s) renal artery(ies), fluoroscopy, contrast injection(s), intraprocedural roadmapping and radiological supervision and interpretation, including pressure gradient measurements, flush aortogram and diagnostic renal angiography when performed; unilateral	J1	5192
0339T**	Transcatheter renal sympathetic denervation, percutaneous approach including arterial puncture, selective catheter placement(s) renal artery(ies), fluoroscopy, contrast injection(s), intraprocedural roadmapping and radiological supervision and interpretation, including pressure gradient measurements, flush aortogram and diagnostic renal angiography when performed; bilateral	J1	5192

**Denotes a HCPCS code that was not included in Addendum P to the CY 2023 OPPS/ASC final rule with comment period, with no CY 2023 HCPCS/CPT code level device offset amount available. We noted the applicant used the CY 2023 payment rates for the three tests of the cost criterion. Since neither of the HCPCS/CPT codes provided by the applicant had a CY 2023 HCPCS/CPT code level device offset amount available at the time the application was received, we used the CY 2023 APC level device offset amount to assess whether the device meets the cost significance criterion.

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). We noted that the applicant used the CY 2023 payment rates for the three tests of the cost criterion. For our calculations, we used APC 5192, which had a CY 2023 payment rate of $5,215.40 at the time the application was received. We used the CY 2023 APC level device offset amount of $1,491.08 for APC 5192, since HCPCS codes 0338T and 0339T were not included in Addendum P to the CY 2023 OPPS/ASC final rule with comment period and no CY 2023 HCPCS/CPT code level device offset amount was available at the time the application was received.[39] According to the applicant, the operating cost[40] of the Paradise® Ultrasound RDN System is $23,000.00.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The average reasonable cost of $23,000.00 for the Paradise® Ultrasound RDN System is 441.00 percent of the applicable APC payment amount for the service related to the category of devices of $5,215.40 (($23,000.00/$5,215.40) × 100 = 441.00 percent). Therefore, we stated that we believe the Paradise® Ultrasound RDN System meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of $23,000.00 for the Paradise® Ultrasound RDN System is 1,542.51 percent of the cost of the device-related portion of the APC payment amount for the related service of $1,491.08 (($23,000.00/$1,491.08) × 100 = 1,542.51 percent). Therefore, we stated that we believe the Paradise® Ultrasound RDN System meets the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of $23,000.00 for the Paradise® Ultrasound

[39] The applicant stated as neither HCPCS code 0338T nor 0339T had a device offset amount listed in Addendum P to the CY 2023 OPPS/ASC final rule with comment period, it selected a device offset amount of $0.00. However, for our calculation, we selected the CY 2023 APC level device offset amount of $1,491.08 for APC 5192 found in CY 2023 NFRM OPPS APC Offset File, as no CY 2023 HCPCS/CPT code level device offset amount was available at the time the application was received. Based on our initial assessment for the proposed rule, using the device offset amount of $1,491.08 would result in the Paradise® Ultrasound RDN System meeting the cost significance requirement.

[40] According to the applicant, the current total cost of the Paradise® Ultrasound RDN System device is $23,235.00. For the cost criteria estimates, the applicant submitted an operating cost of $23,000.00 for the Paradise® Ultrasound RDN System device. Per the applicant, the individual component costs are as follows: Paradise® Remote (capital equipment) is $5.00; Paradise® Cart (capital equipment) is $5.00; Paradise® Generator (capital equipment) is $225.00; Paradise® RDN Catheter Kit (one time use) is $22,000.00; Paradise RDN Cable (one time use) is $250.00; and the Paradise® RDN Cartridge (one time use) is $750.00.

RDN System and the portion of the APC payment amount for the device of $1,491.08 is 412.41 percent of the APC payment amount for the related service of $5,215.40 ((($23,000.00 − $1,491.08)/$5,215.40) × 100 = 412.41 percent). Therefore, we stated that we believe the Paradise® Ultrasound RDN System meets the third cost significance requirement.

We invited public comment on whether the Paradise® Ultrasound RDN System meets the device pass-through payment criteria discussed in this section, including the cost criterion for device pass-through payment status.

Comment: With respect to cost significance criteria, the applicant and a few other commenters reiterated that the Paradise® Ultrasound RDN System meets all three of the cost significance criteria. The applicant further clarified that the Paradise® Ultrasound RDN System meets the cost criteria regardless of whether the Paradise® Cartridge and Paradise® Connection Cable are deemed eligible for pass-through or excluded from the calculation. The applicant stated that the Paradise® Cartridge and Paradise® Connection Cable should be included when evaluating the cost criteria because they are both single-use items that are required for the Paradise® Ultrasound RDN System to function as intended and are essential to complete each patient treatment.

Response: We appreciate the applicant's and commenters' input. We agree with the applicant that the Paradise® Catheter, Paradise® Cartridge, and Paradise® Connection Cable are single-use components that are required for the Paradise® Ultrasound RDN System to function as intended and are essential to complete each patient treatment and should be included when evaluating the cost criteria. After consideration of the public comments we received and our findings from the first, second, and third cost significance tests, we agree that the Paradise® Catheter, Paradise® Cartridge, and Paradise® Connection Cable components of the Paradise® Ultrasound RDN System meet the cost significance criteria specified at § 419.66(d).

After consideration of the public comments we received and our review of the device pass-through application, we have determined that the Paradise® Catheter, Paradise® Cartridge, and Paradise® Connection Cable components of the Paradise® Ultrasound RDN System meet the requirements for device pass-through status described at § 419.66. Therefore, effective beginning January 1, 2025, we are finalizing approval for device pass-through payment status for the applicable components of the Paradise® Ultrasound RDN System under the alternative pathway for devices that have an FDA Breakthrough Device designation and have received FDA marketing authorization for the indication covered by the Breakthrough Device designation.

(g) Precision GI

Limaca Medical submitted an application for a new device category for transitional pass-through payment status for Precision GI for CY 2025. According to the applicant, Precision GI is a motorized, battery operated, single-use, fully disposable endoscopic ultrasound-guided (EUS) fine needle biopsy device used to obtain biopsies of tissue for definitive diagnosis of pancreatic cancer and other life-threatening gastrointestinal (GI) abnormalities. Per the applicant, Precision GI is untethered and battery operated with an internally powered and controlled motor, featuring a long flexible shaft transferring the proximal force of the motor through the inserted endoscope to the needle circumferential cutting tip. The device is controlled by a physician, who inserts the device into the patient's GI tract via the ultrasound endoscope. Upon reaching the designated biopsy site, the physician operates the device's motorized mechanism that automatically rotates the needle (which is included in the device's package) to cut and extract tissue. The biopsy site is accessed through the instrument channel of an ultrasound imaging endoscope that detects the device's echogenic needle tip.

Please refer to the online application posting for Precision GI, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP23113023REE,* for additional detail describing the device and the disease treated by the device.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), Precision GI received FDA Breakthrough Device designation effective March 24, 2022, as a device used with an ultrasound endoscope for fine needle biopsy of submucosal lesions, mediastinal masses, lymph nodes, and intraperitoneal masses within or adjacent to the GI tract. FDA granted the applicant 510(k) clearance for Precision GI on August 28, 2023, for the indication covered by the Breakthrough Device designation. We received the application for a new device category for transitional pass-through payment status for Precision GI on November 30, 2023, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comment on whether Precision GI meets the newness criterion at § 419.66(b)(1).

Comment: With respect to the newness criterion at § 419.66(b)(1), the applicant and one commenter agreed with CMS' assessment and the applicant noted that CMS raised no concerns about Precision-GI meeting the criterion at § 419.66(b)(1).

Response: We appreciate the applicant's and the commenter's input. We received the application for a new device category for transitional pass-through payment status for Precision GI on November 30, 2023, which is within 3 years of August 28, 2023, the date of FDA 510(k) clearance. Based on our review of the application and public comments received, we have determined that Precision GI meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criteria at § 419.66(b)(3), the device must be an integral part of the service furnished, used for one patient only, come in contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. The applicant did not indicate whether Precision GI is an integral part of the service furnished. The applicant stated that the device is intended for single use. While the applicant did not explicitly state whether Precision GI comes in contact with human tissue and is surgically inserted or implanted, the applicant noted that Precision GI is used to sample targeted submucosal lesions, mediastinal masses, lymph nodes, and intraperitoneal masses within or adjacent to the GI tract and this is achieved by a physician who inserts Precision GI into the patient's GI tract using an ultrasound endoscope. However, we noted that, while the needle (which is a component of the device and is included in the device's package) does come into contact with human tissue and is surgically inserted, the motorized mechanism of the Precision GI device itself may not come in contact with human tissue and may not be surgically implanted or inserted (either permanently or temporarily), or applied in or on a wound or other skin lesion, as required at § 419.66(b)(3).

We invited public comment on whether Precision GI meets the eligibility criterion at § 419.66(b)(3).

Comment: In response to our concern about whether Precision GI is integral to the service furnished and meets the eligibility criterion at § 419.66(b)(3), the

applicant clarified that Precision GI is an integral part of the service furnished because the Precision GI device is an endoscopic ultrasound-guided fine needle biopsy (EUS–FNB) medical device and is the essential device that physicians must use to enable the procedures for the services the applicant identified. The applicant clarified that physicians use Precision GI for procedures that are reported using the following HCPCS codes: 43238 (Esophagogastroduodenoscopy, flexible, transoral; with transendoscopic ultrasound-guided intramural or transmural fine needle aspiration/biopsy(s), (includes endoscopic ultrasound examination limited to the esophagus, stomach or duodenum, and adjacent structures), and 43242 (Esophagogastroduodenoscopy, flexible, transoral with transendoscopic ultrasound-guided intramural or transmural fine needle aspiration/biopsy(s), (includes endoscopic ultrasound examination limited to the esophagus stomach and either the duodenum or a surgically altered stomach where the jejunum is examined distal to the anastomosis)) and Precision GI is clearly integral to performing both of these services, given that these procedures are intended to extract suspected cancerous tissue and that Precision GI is the essential device used to obtain and remove the tissue. A commenter stated that based on the Precision GI application, they believe Precision GI would be integral to the procedures with which it is associated. The applicant reiterated that Precision GI is a single-use device and clarified that it is used for one patient only.

Response: We appreciate the applicant's and the commenter's input. Based on the information provided in the comments we agree with the applicant and commenter that Precision GI is an essential device that physicians must use to enable the procedures for the services the applicant identified and, as such, Precision GI is an integral part of the service furnished. After consideration of the public comments received and our review of the application, we have determined that Precision GI is integral to the service furnished and is used for one patient only. We have taken this information into consideration in making our final determination of whether Precision GI meets the requirements of § 419.66(b)(3).

Comment: In response to our concerns about whether Precision GI comes in contact with human tissue and meets the eligibility criterion at § 419.66(b)(3), the applicant and a commenter submitted comments clarifying that Precision GI comes in contact with human tissue when the device enters the patient and extracts suspected tumor tissue from the body. The applicant and commenter explained that after the Precision GI device is advanced through the mouth via the working channel of the upper GI endoscope to the section of the gastric wall located closest to the mass or tumor as identified by endoscopic ultrasound, the rotating needle component of Precision GI goes through the gastric wall to acquire tissue from the tumor. The applicant clarified that Precision GI operates as a single unit, which includes the needle and emphasized that Precision GI is not provided in separate components, does not require assembly, and does not require any additional supplies or materials to operate. As such, the applicant and the commenter asserted that Precision GI comes into contact with human tissue as required.

In response to our concerns about whether Precision GI is surgically inserted or implanted the applicant and another commenter clarified that Precision GI is surgically inserted when Precision GI is inserted through a natural orifice (the mouth) to access the biopsy site, and therefore it meets the eligibility criterion at § 419.66(b)(3). Specifically, the applicant clarified that the surgical path to the tumor is created by the endoscope which is passed through the mouth (natural orifice) where Precision GI is then used to access the site and to extract tissue in or adjacent to the GI tract, meeting the requirements of § 419.66(b)(3).

Response: We appreciate the applicant's and the commenter's input. Based on the clarifying information provided in the comments, we agree with the applicant that Precision GI comes in contact with human tissue and is surgically implanted or inserted as required by § 419.66(b)(3). Specifically, we relied upon the clarification that Precision GI functions collectively as a single unit with no separate components and the device enters the patient via an endoscope to extract human tissue from the body, and as such, we believe that Precision GI comes into contact with human tissue. In addition, we agree with the applicant and commenter that Precision GI is surgically inserted when it is advanced through a natural orifice (*i.e.,* the mouth) via an endoscope to create a surgical path to the tumor. After consideration of the public comments received and our review of the application, we have determined that Precision GI comes in contact with human tissue and is surgically inserted in accordance with the eligibility criterion at § 419.66(b)(3).

We agree with the applicant and commenter that Precision GI is an integral part of the service furnished, used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted, or applied in or on a wound or other skin lesion. After consideration of the public comments received and our review of the application, we have determined that Precision GI meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criterion at § 419.66(b)(4), a device is not eligible to be considered for device pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). The applicant indicated that Precision GI is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets; the applicant noted that Precision GI is a motorized, single-use, fully disposable EUS fine needle biopsy device that functions with no related capital component. The applicant stated that Precision GI is not a material or supply furnished incident to a service. However, based on the applicant's description of Precision GI as a biopsy device, we questioned whether Precision GI may be considered a supply or material furnished incident to a service and excluded from device pass-through payment eligibility under § 419.66(b)(4).

Specifically, in the CY 2001 OPPS interim final rule with comment period (65 FR 67804 through 67805), we explained how we interpreted § 419.43(e)(4)(iv). We stated that we consider a device to be surgically implanted or inserted if it is introduced into the human body through a surgically created incision. We also stated that we do not consider an item used to cut or otherwise create a surgical opening to be a device that is surgically implanted or inserted. We consider items used to create incisions, such as scalpels, electrocautery units, biopsy apparatuses, or other commonly used operating room instruments, to be supplies or capital equipment not eligible for transitional pass-through payments. We stated that we believe the function of these items is different and distinct from that of devices that are

used for surgical implantation or insertion. Finally, we stated that, generally, we would expect that surgical implantation or insertion of a device occurs after the surgeon uses certain primary tools, supplies, or instruments to create the surgical path or site for implanting the device. Further, in the CY 2006 OPPS final rule with comment period (70 FR 68629 through 68630), we adopted as final our interpretation that the surgical insertion or implantation criterion can be met by devices that are surgically inserted or implanted via a natural or surgically created orifice, as well as those devices that are inserted or implanted via a surgically created incision. We reiterated that we maintain all of the other criteria in § 419.66 of the regulations, namely, that we do not consider an item used to cut or otherwise create a surgical opening to be a device that is surgically implanted or inserted. We reiterated this interpretation in the CY 2024 OPPS final rule (88 FR 81543, 81743).

We noted that Precision GI, is inserted into the patient's GI tract via the ultrasound endoscope to reach the designated biopsy site where the device's motorized mechanism is then used for cutting and extraction of tissue endoscopically from within or adjacent to the patient's GI tract. However, we questioned whether Precision GI, which is described as a biopsy device, may be considered a supply or material furnished incident to a service consistent with our previous interpretation of § 419.43(e)(4)(iv) and therefore excluded from device pass-through payment eligibility under § 419.66(b)(4).

We welcomed additional evidence regarding whether Precision GI should be considered a material or supply incident to a service based on our previous interpretation of § 419.43(e)(4)(iv) as it has been applied to biopsy devices and we invited public comments on whether Precision GI meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant submitted a comment stating that there is agreement that Precision GI is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets.

Response: We appreciate the applicant's input. We agree with the applicant that Precision GI is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets. We have taken this information into consideration in making our final determination of whether Precision GI meets the requirements of § 419.66(b)(4).

Comment: The applicant submitted a comment clarifying that Precision GI is not a material or supply incident to a service and meets the eligibility criterion at § 419.66(b)(4) because Precision GI does not create incisions and is not used to create a surgical opening, rather Precision GI is used to capture and extract a diagnostically relevant portion of the tumor. The applicant stated that Precision GI's cutting function does not make the device a commodity supply and that Precision GI should not be placed in the same category as simple cutting or basic commodity tools (*e.g.,* such as scalpel, biopsy forceps, simple exchangeable needles, etc.).

Additionally, the applicant stated that Precision GI is not a generic biopsy device as defined by CMS for pass-through devices, referencing section 60.4.3, Chapter 4 of the Medicare Claims Processing Manual. In support, the applicant compared Precision GI to devices described by C1782 (Morcellator), which like Precision GI are also used for tissue removal. The applicant explained that because C1782 devices are used for laparoscopic tissue removal, per the CMS guidance in the Medicare Claims Processing Manual, they are not considered generic biopsy devices.[41] Thus, the applicant asserted its belief that, similar to C1782 devices, Precision GI is not a generic biopsy device because it is used for tissue removal. Furthermore, the applicant noted that C1782 would not appropriately describe Precision GI because C1782 is specific to laparoscopic removal of tissue, whereas Precision GI is endoscopically inserted to remove tissue within or adjacent to the GI tract.

The applicant asserted that CMS previously created a pass-through device category C1830 (Powered bone marrow biopsy needle), effective October 1, 2011, and that the device in this category functions similarly to Precision GI in complexity of operation and is not a biopsy needle as the applicant stated CMS defines this term. The applicant further commented that suggesting that Precision GI is a supply ignores the complexity of the device compared to commonly used endoscopic biopsy forceps and interchangeable commodity operating instruments.

One commenter stated that, per the application, Precision GI is a single, disposable, mechanized unit that would be integral to the procedures with which it is associated and for this reason, it should not be categorized with scalpels, needles, and other commonly used operating room instruments as a supply furnished incident to a service and should not be excluded from device pass-through eligibility under § 419.66(b)(4).

The applicant asserted that the FDA Breakthrough Designation implicitly recognizes the innovative nature of Precision GI and that it would be unlikely to have received this designation if it were deemed a supply. The applicant also asserted that Precision GI obtains tumor tissue in a superior method compared to today's non-motorized EUS–FNB devices, providing consistently higher quality core tumor tissue for the anatomic pathologist to more confidently diagnose.

Response: We appreciate the applicant's and commenter's input and the additional information. We agree with the applicant that Precision GI is not a supply or material furnished incident to a service because the device does not appear to be an item used to cut or otherwise create a surgical opening, rather it is inserted through a natural orifice (*i.e.,* the mouth) via an endoscope to create a surgical path to reach the designated biopsy site where the device's motorized mechanism is used for cutting and extraction of tissue endoscopically from within or adjacent to the patient's GI tract.

We also agree with the applicant that similar to devices described by C1782 and C1830, Precision GI appears to be distinct from biopsy devices as defined by section 60.4.3, Chapter 4 of the Medicare Claims Processing Manual.

In response to the applicant's comment that FDA Breakthrough Designation implicitly recognizes the innovative nature of Precision GI and that it would be unlikely to have received this designation if it were deemed a supply, we note that a device's FDA designation does not alone qualify a device for transitional device pass-through payment; the criteria FDA utilizes to grant medical device approvals differ from the criteria CMS has established to evaluate device eligibility for OPPS device pass-through payments. As such, CMS must evaluate all information submitted for each device pass-through application for each applicable criterion as it applies to the nominated device. In response to the

[41] According to the Medicare Claims Processing Manual (60.4.3), the device pass-through category C1782 (Morcellator) is specific to devices used for cutting, coring, and extracting tissue in laparoscopic procedures. These are distinct from biopsy devices because morcellators are used for the laparoscopic removal of tissue.

applicant's comment that Precision GI obtains tumor tissue in a superior method compared to today's non-motorized EUS–FNB devices, providing consistently higher quality core tumor tissue for the anatomic pathologist to more confidently diagnose, we note that § 419.66(b)(4) does not require that a device is superior to other available devices.

Based on the additional information provided in the comments, we agree with the applicant and commenter that Precision GI is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets, or a material or supply furnished incident to a service. After consideration of the public comments received and our review of the application, we have determined that Precision GI meets the eligibility criterion at § 419.66(b)(4).

Comment: With respect to our concerns about the eligibility criterion at § 419.66(b)(3), the applicant sought to distinguish Precision GI from the CytoCore device, which was denied pass-through status in CY 2024 (88 FR 81744). The applicant stated that Precision GI differs from CytoCore in two ways: unlike the CytoCore device, Precision GI does not have a separate needle component and Precision GI comes into contact with human tissue. Specifically, the applicant commented that the needle attached to the CytoCore is a separate needle, and not part of the CytoCore device and the needle is the only portion of the device that comes in contact with human tissue, whereas Precision GI's needle is an integral part of the Precision GI device that works in conjunction with Precision GI's long flexible shaft fully driven by its control system and motor, to transfer the proximal driving force of the motor to the highly specialized circumferential cutting and capturing tip to access the tumor tissue and perform the biopsy. The applicant further clarified that the Precision GI's needle is not only an integrated part of the device, but it is also a specifically and uniquely designed cannula with circumferential internal sharpening to enable superior tumor tissue capture when driven by Precision GI as a motor and microchip control program. The applicant stated that Precision GI enables the physician to accomplish motorized, automated, and synchronized axial advancement and rotational cutting and extraction of tissue at the target tissue site. Finally, the applicant noted that the needle used with Precision GI cannot be swapped out for other generic needles.

Response: We appreciate the applicant's input and agree that because Precision GI does not have separate components, functions collectively as a single device, and is surgically inserted when it is advanced through a natural orifice (*i.e.,* the mouth) via an endoscope, creating a surgical path to the tumor, the device comes into contact with human tissue and is surgically inserted as required by § 419.66(b)(3).

Comment: With regard to our discussion about the eligibility criterion specified at § 419.66(b)(4), a commenter stated that the Precision GI transitional pass-through payment application raises an important policy question about the definition of a biopsy apparatus. According to the commenter, items used to create incisions, such as biopsy apparatuses, or other commonly used operating room instruments, that CMS classified as supplies in in the CY 2006 OPPS final rule (70 FR, 68629 through 68630) [42] are substantially different from the targeted mechanical core biopsies of today. The commenter explained that technological advances in incision devices began in the late 2010s with various alterations to needle shapes and have continued to improve and progress to the current, mechanical, EUS-guided devices, which do not merely create incisions and should not be classified along with biopsy forceps or even aspiration needles. Therefore, the commenter requested that CMS consider the definition of a supply and consider re-classification of mechanical tissue extraction apparatuses such as Precision GI into a new category of devices outside of the existing definition. The commenter stated their belief that this would enable CMS to determine the benefits and costs of single-use devices and future innovations in this space and determine their role in therapeutic decision-making and associated improvements in patient outcomes.

Response: We thank the commenter for their feedback. We will continue to consider issues related to the definition of a biopsy apparatus as it relates to the criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. The applicant asserted that Precision GI is authorized by FDA with an indication to sample targeted submucosal lesions, mediastinal masses, lymph nodes, and intraperitoneal masses within or adjacent to the GI tract. Per the applicant, the device category C1830 (Powered bone marrow biopsy needle) does not appropriately describe Precision GI because Precision GI is not targeting bone marrow and instead is targeting sub-mucosal and extramural GI lesions. According to the applicant, the device category C1782 (Morcellator) also does not appropriately describe Precision GI because that device category, per Medicare Claims Processing Manual, Ch. 4, section 60.4.3, is only for laparoscopic procedures. The applicant added that Precision GI cuts and extracts tissue endoscopically, not laparoscopically.

We did not identify an existing pass-through payment category that describes Precision GI. We invited public comment on whether Precision GI meets the device category criterion at § 419.66(c)(1).

Comment: With respect to the device category criterion at § 419.66(c)(1), the applicant agreed with our assessment that there are no existing pass-through payment categories that describe Precision GI.

Response: We appreciate the applicant's input. After consideration of the public comments received and our review of the application, we continue to believe there is no existing category or category previously in effect that appropriately describes Precision GI. Therefore, we have determined that Precision GI meets the device category eligibility criterion at § 419.66(c)(1).

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (i) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. Precision GI has a Breakthrough Device designation and marketing authorization from FDA for

[42] Medicare Program; Changes to the Hospital Outpatient Prospective Payment System and Calendar Year 2006 Payment Rates, 70 FR 68516 (November 10, 2005).

the indication covered by the Breakthrough Device designation (as explained in more detail in the discussion of the newness criterion) and therefore is not evaluated for substantial clinical improvement.

We invited public comment on whether Precision GI meets the device category criterion at § 419.66(c)(2)(ii).

Comment: With respect to the device category criterion at § 410.66(c)(2)(ii), the applicant reiterated that Precision GI received FDA Breakthrough Device designation and marketing authorization for the same indication. The applicant agreed with CMS that Precision GI meets the device category criterion at § 410.66(c)(2)(ii), and therefore, is not evaluated for substantial clinical improvement.

Response: We appreciate the applicant's input. FDA granted Precision GI Breakthrough Device designation effective March 24, 2022, and a marketing authorization effective August 28, 2023, for the indication covered by the Breakthrough Device designation. Therefore, Precision GI meets the criterion at § 419.66(c)(2)(ii) and is not evaluated for substantial clinical improvement at § 419.66(c)(2)(i). After consideration of public comments received and our review of the application, we have determined that Precision GI meets the device category criterion at § 419.66(c)(2).

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated that Precision GI would be reported with HCPCS codes as shown in Table 120.

TABLE 120: HCPCS CODES REPORTED WITH PRECISION GI

HCPCS Code	Long Descriptor	SI	APC
43238	Esophagogastroduodenoscopy, flexible, transoral; with transendoscopic ultrasound-guided intramural or transmural fine needle aspiration/biopsy(s), (includes endoscopic ultrasound examination limited to the esophagus, stomach or duodenum, and adjacent structures)	J1	5302
43242	Esophagogastroduodenoscopy, flexible, transoral; with transendoscopic ultrasound-guided intramural or transmural fine needle aspiration/biopsy(s), (includes endoscopic ultrasound examination limited to the esophagus, stomach and either the duodenum or a surgically altered stomach where the jejunum is examined distal to the anastamosis)	J1	5302

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). We noted that the applicant utilized the CY 2024 payment rates for the three tests of the cost criterion. For our calculations, we used APC 5302, which had a CY 2024 payment rate of $1,812.99 at the time the application was received. HCPCS code 43242 in APC 5302 had a CY 2024 device offset amount of $23.75 at the time the application was received.[43] According to the applicant, the cost of Precision GI is $1,400.00.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The average reasonable cost of $1,400.00 for Precision GI is 77.22 percent of the applicable APC payment amount for the service related to the category of devices of $1,812.99 (($1,400.00/$1,812.99) × 100 = 77.22 percent). Therefore, we stated that we believe Precision GI meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount. The estimated average reasonable cost of $1,400.00 for Precision GI is 5894.74 percent of the cost of the device-related portion of the APC payment amount for the related service of $23.75 (($1,400.00/$23.75) × 100 = 5894.74 percent). Therefore, we stated that we believe Precision GI meets the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of

[43] We noted that the applicant selected the APC payment rate of $1,814.88 and the APC level device offset amount of $178.95 for APC 5302. However, the values selected are inconsistent with the APC payment rate and the APC level device offset amount found in CY 2024 OPPS APC Offset File, which were corrected as described in the CY 2024 OPPS/ASC final rule with comment period correction (89 FR 9002). The HCPCS/CPT code level device offset amounts for the HCPCS/CPT codes provided by the applicant are available in the corrected Addendum P to the CY 2024 OPPS/ASC final rule with comment period. For our calculation, we selected the APC payment rate of $1,812.99 and the HCPCS/CPT code level device offset amount of $23.75 related to HCPCS 43242 in APC 5302 found in the corrected Addendum P, which are the accurate values for these codes. Based on our initial assessment for the proposed rule, using the APC payment rate of $1,812.99 and the device offset amount of $23.75 would result in Precision GI meeting the cost significance requirement.

$1,400.00 for Precision GI and the portion of the APC payment amount for the device of $23.75 is 75.91 percent of the APC payment amount for the related service of $1,812.99 ((($1,400 − $23.75)/$1,812.99) × 100 = 75.91 percent). Therefore, we stated that we believe Precision GI meets the third cost significance requirement.

We invited public comment on whether Precision GI meets the device pass-through payment criteria discussed in this section, including the cost criterion for device pass-through payment status.

Comment: With respect to cost significance criteria, the applicant stated that they agree with CMS that Precision GI satisfies the cost criteria.

Response: We appreciate the applicant's input. After consideration of the public comment received and our findings from the first, second, and third cost significance tests, we have determined that Precision GI meets the cost significance criteria specified at § 419.66(d).

After consideration of the public comments received, and our review of the device pass-through application, we have determined that Precision GI meets the requirements for device pass-through status described at § 419.66, and we are finalizing approval for device pass-through payment status for Precision GI effective January 1, 2025, under the alternative pathway for devices that have an FDA Breakthrough Device designation and have received FDA marketing authorization for the indication covered by the Breakthrough Device designation.

(h) Symplicity Spyral™ Renal Denervation (RDN) System

Medtronic submitted an application for a new device category for transitional pass-through payment status for the Symplicity Spyral™ RDN System for CY 2025. The applicant is seeking a new device category for transitional pass-through payment status only for the Symplicity Spyral™ Multi-Electrode RDN Catheter (hereinafter Symplicity Spyral™ Catheter) component of the Symplicity Spyral™ RDN System. According to the applicant, the Symplicity Spyral™ RDN System consists of the Symplicity Spyral™ Catheter and the Symplicity G3™ generator; however, the applicant requested device pass-through status for the catheter component of the system only. The applicant further explained that the Symplicity Spyral™ RDN System is indicated to reduce blood pressure as an adjunctive treatment in hypertension patients in whom lifestyle modifications and antihypertensive medications do not adequately control blood pressure. Per the applicant, the Symplicity Spyral™ Catheter, when used with the Symplicity G3™ generator, delivers radiofrequency (RF) energy through the wall of the renal artery to disrupt the surrounding renal nerves with the aim of modulating or suppressing sympathetic nerve hyperactivity. According to the applicant, the Symplicity Spyral™ Catheter is a single-use catheter used to deliver multiple ablations in both kidneys, in the renal main, accessory, and branch arteries, based on a patient's artery anatomy and size.

Per the applicant, the Symplicity Spyral™ Catheter is designed to be used with the Symplicity G3™ generator and includes the following components: (1) four gold radiopaque electrodes at the spiral (helical) distal end that are deployed into a spiral (helical) shape by partially retracting the guidewire proximal to the spiral section of the catheter; (2) self-expanding electrode array assembly which radially spaces the four gold electrodes for quadratic ablation; (3) rapid exchange port; (4) straightening tool intended to facilitate safe insertion of the guidewire into the catheter; (5) cable connector attached to the catheter handle that connects the catheter to the generator; (6) catheter handle; and (7) femoral marker. Per the applicant, additional components of the Symplicity Spyral™ RDN System include the: (1) Symplicity G3™ generator, which is only compatible with the Symplicity Spyral™ Catheter, which includes a remote control, power cable, and output for the Symplicity Spyral™ Catheter; (2) Symplicity G3™ generator cart, an optional mobile cart; and (3) foot switch, an optional component. Per the applicant, additional items required for the procedure include: (1) a 0.36 mm (0.014 in) guidewire, preferably without hydrophilic coating; (2) a dispersive electrode; (3) a sterile bag to cover the remote control if used in the sterile field; (4) a 6 French (Fr) guide-catheter; (5) an introducer sheath; (6) a stopcock sidearm; (7) a Tuohy-Borst adapter; and (8) other standard items used to aid percutaneous transluminal catheterization in renal arteries.

According to information submitted by the applicant, key steps for operating the Symplicity Spyral™ Catheter include: (1) connecting the Symplicity Spyral™ Catheter to the Symplicity G3™ generator; (2) inserting the Symplicity Spyral™ Catheter through a small femoral incision and guiding it to the renal artery via the abdominal aorta; (3) advancing the Symplicity Spyral™ Catheter until the distal electrode is located in the desired position within the renal artery; (4) retracting the guidewire, allowing the self-expanding catheter to expand and fit the renal arterial vessel walls; (5) delivering the treatment of RF energy to ablate the renal nerves through the activation of the catheter electrodes, which is controlled using the generator; (6) if treating another vessel, repositioning the guide catheter within the next vessel and repeating the procedure for positioning the catheter and delivering treatments; (7) upon completion of all treatments, straightening the distal end by advancing the guidewire and withdrawing both the guidewire and the straightened catheter from the guide catheter; (8) retracting the guide catheter from the sheath and removing the introducer sheath from the artery; (9) using standard of care procedures to achieve hemostasis at the puncture site; and (10) disposing of the devices.

Please refer to the online application posting for the Symplicity Spyral™ RDN System, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP231130WPU4J,* for additional detail describing the device and the disease treated by the device.

Comment: Many commenters expressed their support for the approval of the Symplicity Spyral™ RDN System for transitional pass-through payment.

Response: We appreciate the commenters' input and support for the Symplicity Spyral™ RDN System application for transitional pass-through payment. We have taken these comments into consideration in our final determination for pass-through status for the Symplicity Spyral™ RDN System.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), the Symplicity Spyral™ RDN System received FDA Breakthrough Device designation effective March 27, 2020, as a device with the following indicated use: the Symplicity Spyral™ multi-electrode renal denervation catheter and the Symplicity G3™ RF Generator are indicated for the reduction of blood pressure in patients with uncontrolled hypertension despite the use of anti-hypertensive medications or in patients who may have documented intolerance to anti-hypertensive medications. FDA approved the premarket approval application (PMA) for the Symplicity Spyral™ RDN System on November 17, 2023, for the indicated use to reduce blood pressure as an adjunctive treatment in patients with hypertension

in whom lifestyle modifications and antihypertensive medications do not adequately control blood pressure. We received the application for a new device category for transitional pass-through payment status for the Symplicity Spyral™ Catheter on November 30, 2023, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comment on whether the Symplicity Spyral™ Catheter meets the newness criterion at § 419.66(b)(1).

Comment: With respect to the newness criterion at § 419.66(b)(1), the applicant reiterated that the Symplicity Spyral™ Catheter received FDA marketing authorization on November 17, 2023, and the Symplicity Spyral™ RDN System was granted Breakthrough Device designation effective March 27, 2020. A few other commenters also stated that they believed the Symplicity Spyral™ RDN System meets the newness criterion.

Response: We appreciate the applicant's and commenters' input. The Symplicity Spyral™ RDN System received FDA Breakthrough Device designation on March 27, 2020. We received the application for a new device category for transitional pass-through payment status for the Symplicity Spyral™ Catheter on November 30, 2023, which is within 3 years of November 17, 2023, the date of FDA PMA. After consideration of the public comments received and our review of the application, we have determined that the Symplicity Spyral™ Catheter meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criteria at § 419.66(b)(3), the device must be an integral part of the service furnished, used for one patient only, come in contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. The applicant did not indicate whether the Symplicity Spyral™ Catheter is integral to the service furnished. Per the applicant, the Symplicity Spyral™ Catheter is intended for single-patient use only. While the applicant did not explicitly state whether the Symplicity Spyral™ Catheter comes into contact with human tissue, the applicant asserted that the Symplicity™ Catheter ablates renal nerve tissue by positioning the catheter within the renal artery, which expands and fits the renal arterial vessel walls. While the applicant did not explicitly state if the Symplicity Spyral™ Catheter is surgically inserted or implanted, per the device description, the Symplicity Spyral™ Catheter is inserted through a small femoral incision, after which it is inserted into the renal arterial vessel.

We invited public comment on whether the Symplicity Spyral™ Catheter meets the eligibility criterion at § 419.66(b)(3).

Comment: The applicant submitted a comment stating that the Symplicity Spyral™ catheter meets all eligibility criteria as laid out at § 419.66(b)(3). The applicant clarified that the Symplicity Spyral™ Catheter is required to ablate the renal sympathetic nerves in this procedure, is integral to the service furnished, and meets the eligibility criterion at § 419.66(b)(3). The applicant further clarified that the Symplicity Spyral™ Catheter comes into contact with human tissue because it is inserted through the skin and into the arterial system, and is then introduced into the renal artery.

Response: We appreciate the applicant's input. We agree with the applicant that the Symplicity Spyral™ Catheter is an integral part of the service furnished, used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted, or applied in or on a wound or other skin lesion because the Symplicity Spyral™ Catheter is a single-use catheter and is inserted through a small femoral incision, after which it is inserted into the renal arterial vessel. After consideration of the public comments we received and our review of the application, we have determined that the Symplicity Spyral™ Catheter meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criterion at § 419.66(b)(4), a device is not eligible to be considered for device pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). The applicant did not state whether the Symplicity Spyral™ Catheter is equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered, or whether the Symplicity Spyral™ Catheter is a supply or material furnished incident to a service.

We invited public comment on whether the Symplicity Spyral™ Catheter meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant submitted a comment confirming that the Symplicity Spyral™ Catheter meets the eligibility criterion at § 419.66(b)(4) because it is not equipment, an instrument, apparatus, implement, or item for which depreciation and financing expenses are recovered as defined in Chapter 1 of the Medicare Provider Reimbursement Manual. The applicant clarified that the Symplicity Spyral™ Catheter is not a supply or material furnished incident to a service. The applicant commented that the Symplicity Spyral™ Catheter is used with the Symplicity G3™ generator, which may be considered depreciating equipment as defined at § 419.66(b)(4); however, the applicant noted that it is only seeking pass-through status for the single-use Symplicity Spyral™ Catheter.

Response: We thank the applicant for the clarification and agree with the applicant that the Symplicity Spyral™ Catheter is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets, or a material or supply furnished incident to a service. After consideration of the public comments we received and our review of the application, we have determined that the Symplicity Spyral™ Catheter meets the eligibility criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. According to the applicant, the Symplicity Spyral™ Catheter is a single-use catheter used to deliver multiple ablations in both kidneys, in the renal main, accessory, and branch arteries, based on a patient's artery anatomy and size. According to the applicant, no previous or existing device categories for pass-through payment appropriately describe the Symplicity Spyral™ Catheter. The applicant asserted that two categories, C1886 (Catheter, extravascular tissue ablation, any modality (insertable)) and C1888 (Catheter, ablation, noncardiac, endovascular (implantable)), do not appropriately describe the Symplicity Spyral™ Catheter. Per the applicant, C1886 does not appropriately describe the Symplicity Spyral™ Catheter because the Symplicity Spyral™

Catheter ablates renal nerve tissue via an endovascular approach by positioning the catheter within the renal artery and C1886 was created to describe devices that ablate extravascular tissue (via an extravascular approach).[44] According to the applicant, C1888 does not appropriately describe the Symplicity Spyral™ Catheter because the Symplicity Spyral™ Catheter does not ablate or otherwise affect the blood vessel tissue and C1888 was created to describe devices designed to occlude or obliterate blood vessels.[45]

We did not identify an existing pass-through payment category that describes the Symplicity Spyral™ Catheter. We invited public comment on whether the Symplicity Spyral™ Catheter meets the device category criterion at § 419.66(c)(1).

Comment: The applicant and a few other commenters agreed with CMS' assessment that there are no existing pass-through payment categories that describe the Symplicity Spyral™ Catheter.

Response: We appreciate the commenters' input. After consideration of the public comments we received and our review of the application, we continue to believe that there is no existing category or category previously in effect that appropriately describes the Symplicity Spyral™ Catheter. Therefore, we have determined that the Symplicity Spyral™ Catheter meets the device category eligibility criterion at § 419.66(c)(1).

We noted that the applicant indicated the Symplicity Spyral™ Catheter is not the only device authorized by FDA with an indication for renal denervation to achieve reductions in blood pressure. Paradise® Ultrasound RDN System, for which we also received an application for transitional pass-through payments for CY 2025 as discussed in more detail in the proposed rule (89 FR 59304 through 59307) and this final rule with comment, is also authorized by FDA with an indication for renal denervation using ultrasound energy to achieve reductions in blood pressure. Per the applicant, the Paradise® Ultrasound RDN System would also be described by the applicant's proposed pass-through payment category: Ablation catheter, renal nerve, via endovascular approach, any modality. Accordingly, we noted that while the Symplicity Spyral™ Catheter device may have a different modality (*i.e.,* radiofrequency compared to ultrasound), the Symplicity Spyral™ Catheter device may have a similar mechanism of action to that of the Paradise® Ultrasound RDN System device. We questioned whether the device descriptions provided in the respective applications support establishing two modality specific pass-through payment device categories or a single device category that would encompass both RDN device modalities. We address this question in section (i) in detail immediately following the full discussion of all other applicable eligibility criteria for the Symplicity Spyral™ RDN System application.

For the summary of public comments received and our final decision on the question of whether the device descriptions provided in the respective applications support establishing two modality-specific pass-through payment device categories or a single device category that would encompass both RDN device modalities, please see section (i) immediately following the Symplicity Spyral™ RDN System application determination.

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (i) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. As previously stated, the Symplicity Spyral™ Catheter has Breakthrough Device designation and marketing authorization from FDA for the indication covered by the Breakthrough Device designation (as explained in more detail in the discussion of the newness criterion) and therefore is not evaluated for substantial clinical improvement.
