Response: We thank the commenter for this information. In the proposed rule, we noted that each unit-dose nasal spray device contains a single dose of nalmefene, which is consistent with the information submitted by the commenter. Each carton contains two 2.7-mg unit-dose nasal spray devices of nalmefene, and we proposed to price the drug component of placeholder code GOTP1 based on a typical dosage, which we assumed is one carton containing two doses.

Comment: One commenter asked CMS to consider any interaction this proposal, to establish an add-on payment for take-home supplies of nalmefene, may have on treatments currently covered under Medicare Part D.

Response: We appreciate the commenter raising this important question. We recognize that nalmefene nasal spray may be available by prescription through Medicare Part D. CMS does not seek to influence whether a Medicare beneficiary receives access to this emergency medication through either Medicare Part B or D. However, section 1834(w)(1) of the Act, added by section 2005(c) of the SUPPORT Act, requires the Secretary to ensure, as determined appropriate by the Secretary, that no duplicative payments are made under Medicare Part B or Part D for items and services furnished by an OTP. Consistent with Medicare OTP regulations at § 410.67(d)(5), a medication (for example, nalmefene nasal spray) would be duplicative if separately paid under Medicare Part B or Part D for the same beneficiary on the same date of service. CMS expects that if the OTP provides reasonable and necessary medications for an OUD as part of an episode of care, the OTP will take measures to ensure that there is no claim for payment for these drugs other than as part of the OTP bundled payments. Thus, GOTP1 billed by an OTP as an add-on to the bundled payment for take-home supplies of nalmefene nasal spray should not be reported to or paid under a Medicare Part D plan.

After consideration of public comments, we are finalizing our proposal to create a new adjustment to the bundled payment for nalmefene nasal spray described by HCPCS code G0532 (previously placeholder code GOTP1) [*Take-home supply of nasal nalmefene hydrochloride; one carton of two, 2.7 mg per 0.1 mL nasal sprays (provision of the services by a Medicare-enrolled Opioid Treatment Program); (List separately in addition to each primary code)*], based on the payment methodology for determining the adjustment for take-home supplies of opioid antagonist medications at § 410.67(d)(4)(i)(E). The amount of the drug component will be determined using the methodology for pricing the drug component of an episode of care at § 410.67(d)(2)(i), which uses ASP data when available (with certain exceptions). We are also including payment for overdose education within the non-drug component, consistent with the methodology established in § 410.67(d)(4)(i)(E). The non-drug component will be annually updated based on the GAF and MEI. Lastly, we are limiting billing G0532 to once every 30 days and finalizing that CMS will recoup duplicative payments made to an OTP for nalmefene, such as if the medication is billed for the same Medicare beneficiary through Part B or Part D on the same date of service.

b. Coding and Payment for New Injectable Buprenorphine Product

Another medication for the treatment of OUD for which the Secretary may establish payment is buprenorphine, which is a partial opioid agonist that is FDA approved to treat OUD. Buprenorphine is a schedule III substance, meaning it has low to moderate potential for physical dependence.[488] When taken as prescribed, it can diminish the effects of opioid withdrawal symptoms and cravings.[489] In the CY 2020 PFS final rule (84 FR 62630 through 62677 and 84 FR 62919 through 62926), we established a weekly bundled payment under the Medicare OTP benefit for injectable buprenorphine (HCPCS G2069: *Medication assisted treatment, buprenorphine (injectable); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)*). CMS also established payment for other formulations of buprenorphine, including weekly bundles for oral buprenorphine (G0268), buprenorphine implants (G2070 through G2072), and take-home supplies of oral buprenorphine (G2079), as well as other medications like methadone and naltrexone. At § 410.67(d)(2), we codified that the bundled payment for episodes of care in which a medication is provided will consist of a payment for a drug component, reflecting payment for the applicable FDA-approved opioid agonist or antagonist medication in the patient's treatment plan, and a non-drug component, reflecting payment for all other OUD treatment services reflected in the patient's treatment plan (including dispensing/administration of the medication, if applicable). The payments for the drug component and non-drug component are added together to create the bundled payment amount. In the CY 2020 PFS final rule, we finalized a payment methodology for the drug component related to implantable and injectable medications at § 410.67(d)(2)(i)(A), which applied to the bundled payment for injectable buprenorphine (G2069).

For implantable and injectable medications paid under the OTP benefit, the payment is determined using the methodology set forth in section 1847A of the Act, except that the payment amount must be 100 percent of the ASP, if ASP is used; and the payment must be 100 percent of the WAC, if WAC is used. We also stated in the CY 2020 PFS final rule that the typical maintenance dose to calculate the drug component for payment under the OTP benefit, as dosing for some, but not all, of the drugs varies considerably (84 FR 62650). As part of determining a payment rate for the proposed bundles for OUD treatment services, a dosage of the applicable medication must be selected to calculate the costs of the drug component of the bundle. In the CY 2020 PFS final rule, we finalized using a 100 mg monthly dose for the extended-release buprenorphine injection to use as the typical or average maintenance dose to calculate the drug component of the bundle for injectable buprenorphine (G2069). At the time of ratesetting for the CY 2020 PFS rule, the only injectable extended-release buprenorphine drug available and approved by the FDA under section 505 of the FFDCA for the treatment of OUD was Sublocade®;[490] and, the drug component for the bundle was based on a crosswalk to its respective HCPCS codes Q9991 (Buprenorphine XR 100 mg or less) and Q9992 (Buprenorphine XR over 100 mg) using the methodology set forth in section 1874A of the Act, except that the payment amount was 100-percent of the ASP. In the CY 2020 PFS final rule, we noted that the HCPCS codes for extended-release buprenorphine injection had the same payment rate, thus we did not believe it was necessary to establish a second typical maintenance dose to calculate the payment rate for the drug. For the non-drug component of the weekly bundle for injectable buprenorphine (G2069), we finalized that in addition to services for substance use counseling, individual and group therapy, and toxicology testing, we would include the Medicare non-facility rate for administration of an injection in our determination of the payment rate based on CPT code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*).

In May of 2023, the FDA approved a new drug application (NDA) under section 505(b)(2) of the FFDCA for

[490] *https://www.accessdata.fda.gov/drugsatfda_docs/label/2018/209819s001lbl.pdf.*

another extended-release buprenorphine injection (Brixadi®) for subcutaneous use to treat moderate to severe OUD.[491] Clinical data suggest that Brixadi® likely contributes to high rates of treatment retention, reductions in opioid withdrawal and cravings, and fewer levels of illicit opioid use.[492] Brixadi® is available as a weekly injection (containing 50 mg of buprenorphine per mL) that can be used in patients who have started treatment with a single dose of a transmucosal buprenorphine product or who are already being treated with buprenorphine-containing products, and a monthly injection (containing 356 mg of buprenorphine per mL) for patients already being treated with buprenorphine. The weekly and monthly formulations of the drug are available at varying doses, including lower doses that may be appropriate for those who do not tolerate higher doses of extended-release buprenorphine that are currently available.[493] The weekly doses are 8 mg, 16 mg, 24 mg, and 32 mg, and should be administered in 7-day intervals; and the monthly doses are 64 mg, 96 mg, and 128 mg, and should be administered in 28-day intervals.[494]

Buprenorphine is associated with decreasing the risk for overdose, opioid-related mortality, and all-cause mortality.[495] Data also shows that buprenorphine helps retain individuals in treatment, lowers illicit opioid use, and reduces drug-related behaviors that increase the risk for HIV transmission.[496] In particular, long-acting (for example, extended-release) injectable forms of buprenorphine have been shown to promote adherence to treatment while reducing the need for daily dosing, and to enhance patient-reported outcomes through improvements in quality of life, accessibility, social relationships, participation in employment, more flexible personal and professional schedules, and other treatment satisfaction measures.[497] Finally, a large percentage of Medicare beneficiaries with an OUD continue to face challenges in accessing medication, especially enrollees who are older, female, and who identify as racial/ethnic minorities.[498] The most common reasons for not receiving SUD treatment include financial barriers in affordability and coverage.[499] Establishing coverage and payment for a new medication to treat OUD may provide more MOUD treatment options, reduce financial barriers to accessing medication, and aid health equity efforts among Medicare beneficiaries. Accordingly, for these reasons and because sections 1861(s)(2), 1861(jjj)(1)(A), and 1833(a)(1) of the Act provide that the Secretary is to provide coverage and payment for OUD treatment services including opioid agonist and antagonist medications that are FDA approved for use in the treatment of OUD, in the CY 2025 PFS proposed rule we proposed to establish payment for the weekly and monthly formulations for this new FDA-approved injectable buprenorphine product which we believe would further efforts to address the opioid crisis and expand access to evidence-based treatment for OUD.

We proposed to establish two different payments: one for weekly injectable buprenorphine weekly and one for monthly injectable buprenorphine. To establish payment for the weekly and monthly formulations, we proposed to use the existing payment methodology for implantable and injectable medications codified at § 410.67(d)(2)(i)(A). This regulation specifies that payment is determined using the methodology set forth in section 1847A of the Act, except that the payment amount must be 100 percent of the ASP, if ASP is used; and the payment must be 100 percent of the WAC, if WAC is used.

Payment limits [500] for most drugs and biologicals separately payable under Medicare Part B are determined using the methodology in section 1847A of the Act, and in many cases, payment is based on the ASP plus a statutorily mandated 6 percent add-on. Most drugs payable under Part B are paid under the ''incident to'' benefit under section 1861(s)(2) of the Act, which includes drugs and biologicals not usually self-administered by the patient. The ASP payment limit determined under section 1847A of the Act reflects a volume-weighted ASP for all national drug codes (NDCs) that are assigned to a HCPCS code. The ASP is calculated quarterly using manufacturer-submitted data on sales to all purchasers (with limited exceptions as articulated in section 1847A(c)(2) of the Act, such as for sales at nominal charge and sales exempt from best price) with manufacturers' rebates, discounts, and

[500] In general, CMS establishes a single, national payment limit to Medicare Administrative Contractors (MACs) for payment of some Part B-covered drugs and biologicals whose payment is determined based on the methodology described in section 1847A of the Act. CMS provides an ASP pricing file to MACs, which is updated quarterly. *https://www.cms.gov/medicare/payment/part-b-drugs/asp-pricing-files.*

price concessions reflected in the manufacturer's determination of ASP.

Paragraphs (4)(A) and (6) of sections 1847A(b) of the Act require that the Medicare Part B payment limit for a single-source drug or biological be determined using all of the NDCs assigned to it. Section 1847A(b)(5) of the Act further states that the payment limit shall be determined without regard to any special packaging, labeling, or identifiers on the dosage form or product or package. In 2007, CMS issued a program instruction,[501] as permitted under section 1847A(c)(5)(C) of the Act, stating that the payment limit for a single source drug or biological will be based on the pricing information for products produced or distributed under the applicable FDA approval (such as a New Drug Application (NDA) or Biologics License Application (BLA)). Therefore, all versions of a single source drug or biological product (or NDCs) marketed under the same FDA approval number (for example, NDA or BLA, including supplements) are considered the same drug or biological for purposes of payments made under section 1847A of the Act and are crosswalked to the same billing and payment code.

In the CY 2025 PFS proposed rule, we stated that we continue to believe that use of ASP provides a transparent and public benchmark for manufacturers' pricing as it reflects the manufacturers' actual sales prices to all purchasers (with limited exceptions) and is the only pricing methodology that includes off invoice rebates and discounts as described in section 1847A(c)(3) of the Act. Additionally, since many other injectable drugs are paid for under Medicare part B through the ASP payment methodology in 1847A, we presume that this methodology is appropriate for pricing Brixadi®. We also proposed to limit the payment amount to 100-percent of ASP without a 6-percent add-on percentage since, as we have previously noted, it is our understanding that many OTPs purchase directly from drug manufacturers, thereby limiting the markup from distribution channels.

As we stated in our discussion above, we use the typical or average maintenance dose of a drug to determine the drug costs for each of the bundles. In the CY 2020 PFS final rule, we noted that there are often variations in the dosage and frequency of administration of medications, but that ''payment based on the typical dose means that, across the Medicare beneficiaries served by the OTP, the payment amount should be reasonable and represent the average costs incurred in furnishing the drug component of the OUD treatment services.'' (84 FR 62650). Therefore, in the CY 2020 PFS final rule, we finalized using the typical maintenance dose to establish the drug costs for each of the bundles as our approach to addressing variable dosing of medications. (84 FR 62650).

In the CY 2020 PFS final rule, we finalized a 100 mg monthly dose for the extended-release buprenorphine injection as the typical maintenance dose, which we used to calculate the drug component of the weekly bundle for injectable buprenorphine (G2069). At the time, we did not establish a second typical maintenance dose because both HCPCS codes for the extended release buprenorphine injection, that is, Sublocade® [Q9991 *(Buprenorphine XR 100 mg or less*) and Q9992 (*Buprenorphine XR over 100 mg*)] had the same payment limit because, as explained above in this section, all NDCs marketed under the same FDA approval number are considered the same drug or biological for purposes of payments made under section 1847A of the Act and are crosswalked to the same billing and payment code. The weekly and monthly formulations of Brixadi® are described by HCPCS codes J0577 (*Injection, buprenorphine extended release (brixadi), less than or equal to 7 days of therapy*) and J0578 (*Injection, buprenorphine extended release (brixadi), greater than 7 days and up to 28 days of therapy*). In the same manner as Sublocade®, and as explained in the coding announcement for HCPCS codes J0577 and J0578,[502] because all versions of a single source drug or biological product (or NDCs) marketed under the same FDA approval number are considered the same drug or biological for purposes of payments made under section 1847A of the Act, the payment limits for both J0577 and J0578 are calculated using all the NDCs marketed under the applicable FDA approval. However, since the dose descriptions for these codes are based on days of therapy (and not a measurement of the amount of drug, like per 1 mg, as is the case with Sublocade®), the ASP+0 for the two codes are different; ASP+0 for J0577 is $381.213 and ASP+0 for J0578 is $1524.855, based on sales from the fourth calendar quarter of 2023. Therefore, we stated in the CY 2025 PFS proposed rule that we do not believe it is appropriate to bundle the weekly and monthly formulations into a single bundled payment since, unlike Sublocade®, Brixadi® formulations have different payment limits, and pricing them under the same bundle would not adequately represent the average costs incurred in furnishing these different formulations in an OTP setting. Additionally, creating a single bundled payment rate that does not reflect the type and cost of the drug used could result in access issues for beneficiaries, especially if the bundled payment amount for one drug significantly drops and unintentionally incentivizes treatment towards a drug with a higher bundled payment amount.

In establishing the two different payments for the weekly and monthly injectable buprenorphine formulations, first, we proposed to crosswalk the monthly formulation of Brixadi® (J0578: *Injection, buprenorphine extended release (brixadi), greater than 7 days and up to 28 days of therapy*) to the drug component of our existing bundled payment for injectable buprenorphine described by HCPCS code G2069 (*Medication assisted treatment, buprenorphine (injectable); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program*). We proposed to average the ASP+0 of Sublocade® and ASP+0 of monthly Brixadi® by adding their two ASP+0 payment amounts together and dividing the sum by two, to update the payment for the drug component of HCPCS code G2069. We believe including the average of the ASP+0 of Sublocade® and Brixadi® in the drug component of G2069 rather than the sum of their respective individual ASPs is appropriate because we do not expect that a beneficiary would receive two different types of buprenorphine monthly medication injections simultaneously from an OTP (for example, both Sublocade® and Brixadi® during the same episode of care and date of service). We believe that averaging the price of the two types of buprenorphine monthly medication injections would be appropriate because the individual payment limits for each of the drug codes (Q9991, Q9992, and J0578) would both be informed by ASP data and comparable as they would be priced by the same ASP payment methodology (ASP+0). We also noted that bundling the monthly formulation of Brixadi® into the existing HCPCS code (G2069) for injectable

[501] *https://www.cms.gov/Medicare/Coding/MedHCPCSGenInfo/Downloads/051807_coding_annoucement.pdf.*

[502] *https://www.cms.gov/files/document/2023-hcpcs-application-summary-quarter-4-2023-drugs-and-biologicals-updated-03/04/2024.pdf.*

buprenorphine will be appropriate and no more administratively complex for OTPs since G2069 is already billed on a monthly basis; Sublocade®, which is already reflected in the drug component of G2069 is administered on a monthly basis to beneficiaries as would be the monthly formulation of Brixadi®, so OTPs could continue to bill G2069 once each month when either monthly Brixadi® or Sublocade® is administered, as appropriate.[503]

Additionally, the average typical dose of G2069 is 100mg of buprenorphine administered monthly, as finalized in the CY 2020 PFS final rule (84 FR 62651). The monthly formulations of Brixadi® can range from 64 mg, to 96 mg, to 128 mg. The median of these different doses for the monthly formulation of Brixadi® (96 mg) would approximate the average typical dose of the current injectable buprenorphine bundle (100 mg). We note that the different monthly doses of Brixadi® are assigned to the same HCPCS code J0578 (*Injection, buprenorphine extended release (brixadi), greater than 7 days and up to 28 days of therapy*) and have the same payment limit regardless of the monthly dose (64 mg, 96 mg, or 128 mg), so selecting a typical dose of monthly Brixadi® to potentially adjust the drug component of G2069 would not meaningfully change the payment rate. Therefore, we did not propose to establish an average typical dose different than 100 mg for injectable buprenorphine administered on a monthly basis for purposes of calculating the drug component under the OTP benefit, though we solicited comment on whether this average typical dose (100 mg) is close to the dose for the monthly formulation of Brixadi® that patients receive on average.

In all, we believe that bundling the monthly formulation of Brixadi® into our current injectable buprenorphine coding under the OTP benefit will be appropriate for several reasons, including: the costs for furnishing these drugs, as shown by similar ASP+0 amounts for monthly Brixadi® (J0578) and the two HCPCS codes for Sublocade® (Q9991 and Q9992) ($1524.855 and $1768.775, respectively, are comparable based on sales from the fourth calendar quarter of 2023); the average maintenance dosage for Sublocade® (100 mg) is comparable to the median monthly dosage for Brixadi ® (96 mg) and; both drugs have similar frequencies and costs of administration (on a monthly basis) with a fee paid to the OTP for one administration of an injection once a month. We stated that we believe that our proposed payment methodology would be consistent with section 1834(w)(2) of the Act, which allows the Secretary to implement bundled payments for OUD treatment services with considerations to the type of medication provided and the frequency of the services, and thus permit multiple bundles that represent injectable buprenorphine (proposed GOTP2 and G2069) and the frequency with which injectable buprenorphine is administered (weekly versus monthly). We proposed to still calculate the non-drug component of HCPCS code G2069 consistent with the methodology we use to calculate the non-drug component, which is specified at § 410.67(d)(2)(ii). We proposed to change the code descriptor for HCPCS code G2069 to take out references to a ''weekly bundle'' to make it clear that the code is to be billed on a monthly basis. Specifically, we proposed to revise the code descriptor to state the following: HCPCS code G2069 (*Medication assisted treatment, buprenorphine (injectable) administered on a monthly basis; bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)*). Lastly, consistent with current guidance in Chapter 39 of the Medicare Claims Processing Manual, we will still expect that HCPCS code G2069 ''would be billed for the week during which the injection was administered and that HCPCS code G2074, which describes a bundle not including the drug, will billed during any subsequent weeks that at least one non-drug service is furnished until the injection is administered again, at which time HCPCS code G2069 would be billed again for that week.'' [504]

For the weekly injectable buprenorphine, we proposed to calculate a new bundled payment described by GOTP2 (*Medication assisted treatment, buprenorphine (injectable) administered on a weekly basis; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program*). For the drug component of HCPCS code GOTP2, we proposed to base the payment on a crosswalk to the weekly formulation described by HCPCS code J0577 *(Injection, buprenorphine extended release (brixadi), less than or equal to 7 days of therapy),* which would also be based on the payment methodology specified at § 410.67(d)(2)(i)(A) for implantable and injectable medications, consistent with the existing monthly injectable buprenorphine bundle. We believe that establishing a separate weekly bundled payment reflecting the weekly formulation of Brixadi® would more appropriately pay for the subset of beneficiaries who receive less than a monthly dosage of injectable buprenorphine on average, or who choose to discontinue treatment for the drug before the end of the month. Additionally, establishing a separate weekly bundled payment would contribute to stabilizing the payment of the drug component for the monthly bundle of injectable buprenorphine (G2069) since the ASP+0 for weekly Brixadi® costs less than the payment for the drug component of G2069 ($381.213 April 2024 ASP+0, based on sales from the fourth calendar quarter of 2023 versus $1,780.167 for the CY 2024 payment rate of the drug component of G2069) and may decrease payment after the weekly Brixadi is averaged into the drug component of G2069®. Establishing a separate weekly bundled payment is also more appropriate because weekly injectable buprenorphine requires more frequent administration costs than monthly injectable buprenorphine (weekly Brixadi® must be injected at least once every 7 days compared to once a month for Sublocade® and monthly Brixadi®). Thus, a different bundle for weekly injectable burpeorphine may more closely reflect the costs incurred by OTPs. Furthermore, as noted above in this section, different weekly doses are assigned to the same HCPCS code J0577 *(Injection, buprenorphine extended release (brixadi), less than or equal to 7 days of therapy)* and have the same payment limit regardless of the weekly dose. Therefore, we did not believe it was appropriate to propose an average typical dose for the weekly formulation of Brixadi® for purposes of calculating the drug component of GOTP2 under the OTP benefit.

Second, we proposed to also establish payment for the non-drug component of GOTP2 consistent with the methodology utilized for the monthly bundle of injectable buprenorphine (G2069). Specifically, we stated we will continue to pay for substance use counseling, individual and group therapy, and toxicology testing that are included in the non-drug components for each of the

[503] *https://www.accessdata.fda.gov/drugsatfda_docs/label/2018/209819s001lbl.pdf.*

[504] *https://www.cms.gov/files/document/chapter-39-opioid-treatment-programs-otps.pdf.*

bundled payments reflecting an episode of care, but will include the Medicare non-facility rate for administration of an injection in our determination of the non-drug component payment rate based on CPT code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*). Consistent with the payment amounts for the non-drug component of other bundled payments for an episode of care, we also proposed to continue to update the value of this non-drug component for GOTP2 by the GAF as described in § 410.67(d)(4)(ii), and by the MEI as described in § 410.67(d)(4)(iii).

We solicited comments on these proposals to establish payment for the weekly and monthly formulations of the new injectable buprenorphine drug. We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Multiple commenters supported CMS' efforts to expand access to a new, innovative injectable buprenorphine product for MOUD treatment and stated it would bolster efforts to combat the opioid epidemic. Multiple commenters also expressed support for CMS' proposed payment approach to create a new weekly bundled payment code to reflect the weekly formulation of Brixadi®, and to update the existing bundled payment for monthly injectable buprenorphine to account for the monthly formulation of Brixadi®.

Response: We appreciate commenters' support of this proposal.

Comment: One commenter recommended that CMS develop an expedited pathway separate from the annual rulemaking cycle to allow for more timely payment decisions of new drugs as they become available.

Response: We appreciate this commenter's feedback. CMS supports efforts to provide Medicare beneficiaries with timely access to important medications, including for the treatment of an OUD. We note that in the CY 2020 PFS final rule (84 FR 62643), we finalized coding to provide payment for new FDA-approved opioid agonist and antagonist treatment medications to treat OUD. Specifically, we created a medication not otherwise specified (NOS) code (HCPCS code G2075) in the scenario where an OTP furnishes MOUD treatment using a new FDA-approved opioid agonist or antagonist that is not specified by one of our existing codes. In Chapter 39, section 30.4, of the Medicare Claims Processing Manual, we describe the payment methodology for how the drug component may be priced for medications that are not otherwise specified. OTPs should consider billing HCPCS code G2075 for new FDA-approved opioid agonist or antagonist medications that are not specified by one of our existing codes, as long as they are medically reasonable and necessary, and all applicable requirements are met. However, we note that HCPCS code G2075 may not always apply to medications that are adjustments to the OTP bundle payment, such as unspecified, take-home doses of opioid overdose reversal medications that are not typically furnished on a weekly basis during an episode of care. We may consider this topic for future rulemaking.

Comment: One commenter asked CMS to consider any interaction this proposal, to establish payment for the weekly and monthly formulations of Brixadi®, may have on treatments currently covered under Medicare Part D.

Response: We appreciate the commenter raising this important question. We note that injectable buprenorphine can only be given if administered by an authorized healthcare provider.[505] Therefore, it is not available for self-administration and prescription through the Medicare Part D benefit.

Comment: One commenter advised CMS not to identify specific pharmaceutical brands when discussing the payment methodology in the final rule.

Response: We thank the commenter for this feedback. We note that the brand names of nalmefene hydrochloride (Opvee®) and injectable buprenorphine (Brixadi®) were specified to adequately estimate pricing of the drug component for proposed new codes GOTP1, GOTP2, and updating the existing bundled payment for monthly injectable buprenorphine (HCPCS code G2069). Brixadi® was also utilized in the payment methodology in order to distinguish this drug from another type of injectable buprenorphine: Sublocade®. The code descriptors for these aforementioned codes include the generic name instead of the brand name for these medications, so that they may be inclusive of comparable drugs in the future. Moreover, payment for these codes is made directly to the OTP for furnishing MOUD treatment instead of the drug manufacturer.

Comment: One commenter did not support our proposed monthly payment methodology for Brixadi® of adding the payment limits of Brixadi® and Sublocade® together under the same drug component in the existing monthly bundled payment (HCPCS code G2069) for injectable buprenorphine and averaging their two ASP+0 values. The commenter reasoned that separate bundled payments for each product are needed under the Medicare OTP benefit because Sublocade® and Brixadi® are clinically different due to several factors, including that the medications are not interchangeable, they have pharmacokinetic differences (for example, 2.46 ng/mL trough concentration for Sublocade® 100mg versus 2.0 ng/mL for Brixadi® 96mg), differences in minimum time between monthly dosing (26 days for Sublocade® versus 28 days for monthly Brixadi®), and differences in buprenorphine half-lives (19–26 days for Sublocade® versus 43–60 days for Brixadi®). The commenter added that section 1834(w)(2) of the Act allows the Secretary to make one or more bundles based on a variety of criteria, including by ''other factors as the Secretary determine appropriate,'' which may allow CMS the flexibility to create multiple bundled payments for injectable buprenorphine. The commenter noted that if the payment rate of the existing bundled payment for monthly injectable buprenorphine were to decrease, then it may incentivize OTPs to prescribe one type of medication over the other based on the medication with the higher financial return. The commenter expressed concern that such incentive could inadvertently influence an OTPs' ability to prescribe the most suitable medication for a patient's needs.

Response: We appreciate the commenter's concerns regarding the payment methodology for monthly injectable buprenorphine. We agree with the commenter that there are certain clinical differences in the drugs and that section 1834(w)(2) of the Act supports the Secretary in making multiple bundled payments under the OTP benefit based on a variety of factors. However, we do not believe that monthly Brixadi® and Sublocade® are significantly clinically different from each other to support creating a separate bundled payment for monthly Brixadi®. For example, while there are slight differences in the minimum days between maintenance doses and the half-lives of the two drugs, the FDA-approved labeling of both Brixadi® and Sublocade® specifies the same monthly interval for maintenance doses, and both can convert patients who require a

[505] *https://www.accessdata.fda.gov/drugsatfda_docs/label/2023/210136Orig1s000lbl.pdf.*

maximum transmucosal buprenorphine dose of 24mg.[506] Additionally, since both drugs at maintenance doses reach plasma concentrations within the 2–3 ng/mL range of buprenorphine—identified as effective for reducing illicit opioid use [507]—we disagree with the commenter's suggestion that a higher concentration closer to 3 ng/mL is required to achieve a positive clinical outcome, which is measured using tools such as the Clinical Opiate Withdrawal Scale and Visual Analog Scale for craving.[508] Furthermore, in the CY 2020 PFS final rule, we finalized five medication categories [methadone (oral), buprenorphine (oral), buprenorphine (injection), buprenorphine (implant), and naltrexone (injection)] ''to represent the distinct types of covered OTP medications currently on the market based on primary active ingredient, method of administration, and cost.'' (84 FR 62642) Accordingly, monthly Brixadi® and Sublocade® have the same primary active ingredients (buprenorphine), methods of administration (by monthly injection), and comparable costs (April 2024 ASP+0: $1524.855 and $1768.775, based on sales from the fourth calendar quarter of 2023, and payment for administration of one monthly injection that would be included in the non-drug component). In the CY 2020 PFS final rule, we also stated that we believe ''these categories of bundled payments strike a reasonable balance between recognizing the variable costs of these medications and the statutory requirement to make a bundled payment for OTP services.'' (84 FR 62642) Therefore, we don't believe the variable payment amounts for these two drugs would necessitate creating separate bundled payments. Although we proposed to create a separate weekly bundled payment for weekly injectable buprenorphine, we believed this is necessary due to the differences in the frequency of administration (weekly injections), and costs due to a lower ASP+0 ($381.214 April 2024 ASP+0, based on sales from the fourth calendar quarter of 2023) that would impact the drug component of the bundle, and the need for additional administration costs for multiple weekly injections that would also impact the non-drug component of the bundle.

Nevertheless, CMS agrees with the commenter that it is essential to promote access to MOUDs, and we believe that a payment for monthly buprenorphine injections that better reflects market conditions for these products would more accurately represent costs incurred by OTPs in providing this service. Therefore, instead of averaging each product's ASP+0 to calculate the drug component as proposed, we will calculate it using a volume-weighted ASP of all NDCs for both products using the calculation described in section 1847A(b)(6) of the Act. This approach better reflects the utilization of drugs in clinical practice since it accounts for the sales volume of each NDC for both products.

Based on the data used for the October 2024 ASP pricing file (that is, sales from the second calendar quarter of 2024), the drug component of the bundle for monthly injectable buprenorphine using the proposed calculation would be approximately $1,726.26. However, volume-weighting the ASP for all the NDCs crosswalked to HCPCS codes for monthly Brixadi® and Sublocade® would increase the payment of the drug component to approximately $1,797.29. Since calculating the drug component using the volume-weighted ASP of all NDCs crosswalked to both HCPCS codes better reflects actual utilization of the products, we are instead using this approach to price the drug component of the existing bundled payment for monthly injectable buprenorphine (HCPCS code G2069). We believe this revised payment approach will address the commenter's concerns due to the increased payment amount, which more closely reflects the market variables, including the volume of sales in each calendar quarter. We will continue to monitor utilization of each of the bundled payments for weekly and monthly injectable buprenorphine to ensure Medicare beneficiaries continue to have access to these medications, and propose additional refinements as needed through future rulemaking.

After consideration of public comments, we are finalizing our proposal to establish coding and payment for the weekly and monthly injectable buprenorphine. We will continue to use the payment methodology for implantable and injectable medications at § 410.67(d)(2)(i)(A) for the monthly and weekly injectable buprenorphine. We also are not finalizing a typical maintenance dose to establish the drug costs for these bundles since the doses under each formulation of Brixadi (weekly 8 mg, 16 mg, 24 mg, and 32mg; monthly: 64 mg, 96 mg, and 128 mg) have the same payment limit regardless of the dose. We are crosswalking the NDCs crosswalked to J0578 (*Injection, buprenorphine extended release (brixadi), greater than 7 days and up to 28 days of therapy*) to the drug component of our existing bundled payment for injectable buprenorphine described by HCPCS code G2069 and calculating the drug component using a volume-weighted ASP of all NDCs crosswalked to HCPCS codes J0578 and Q9991 (which are the same NDCs crosswalked to HCPCS code Q9992). OTPs could continue to bill HCPCS code G2069 (*Medication assisted treatment, buprenorphine (injectable) administered on a monthly basis; bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program*) once each month when either monthly Brixadi® or Sublocade® is administered, as appropriate. We are also establishing a separate weekly bundled payment to reflect the cost of furnishing weekly injectable buprenorphine described by HCPCS code G0533 (previously placeholder code GOTP2) (G0533: *Medication assisted treatment, buprenorphine (injectable) administered on a weekly basis; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).* Lastly, we will apply the GAF as described in § 410.67(d)(4)(ii), and MEI as described in § 410.67(d)(4)(iii), to the non-drug component for this code.

5. Clarification to Require an Opioid Use Disorder Diagnosis on Claims for OUD Treatment Services

Section 1861(s)(2)(HH) of the Act, as amended by section 2005 of the SUPPORT Act, implemented Medicare coverage for ''opioid use disorder treatment services.'' Section 1861(jjj)(1) of the Act describes opioid use disorder treatment services as items and services that are furnished by an opioid treatment program for the treatment of opioid use disorder. Section 1834 of the

[507] Jones AK, Ngaimisi E, Gopalakrishnan M, Young MA, Laffont CM. Population Pharmacokinetics of a Monthly Buprenorphine Depot Injection for the Treatment of Opioid Use Disorder: A Combined Analysis of Phase II and Phase III Trials. Clin Pharmacokinet. 2021 Apr;60(4):527–540.

[508] Wesson, D.R., & Ling, W. (2003). The Clinical Opiate Withdrawal Scale (COWS). J Psychoactive Drugs, 35(2), 253–9 *https://pubmed.ncbi.nlm.nih.gov/12924748/*; Hayes, M.H.S. and Patterson, D.G. (1921) Experimental development of the graphic rating method. Psychological Bulletin, 18, 98–99.

Act specifies payments to OTPs for providing opioid use disorder treatment services. We interpreted these statutory provisions to mean that services paid to OTPs under Medicare Part B must be for the treatment of opioid use disorder. Consequently, at § 410.67(a) we reflect that those statutory provisions provide for coverage and payment to OTPs for OUD treatment services, which we define at § 410.67(b).

In August of 2023, an Office of Inspector General (OIG) report (A–09–22–03005) found that Medicare made over $1.3 million in payments to 70 OTPs for OUD treatment services that were claimed without an OUD diagnosis.[509] Of the claims paid without an OUD diagnosis code, 39 percent were for alcohol dependence, uncomplicated (F1020), 7 percent were for cocaine dependence, uncomplicated (F1420), and 5 percent were for generalized anxiety disorder (F411). As a result of these findings, OIG recommended that CMS ''develop billing requirements for OTPs to include OUD diagnosis codes on claims for OUD treatment services to indicate that enrollees have OUD diagnoses and consider working with MACs to implement a system edit to ensure that OTP payments are made for enrollees only when OUD diagnosis codes are included on claims.'' OIG also stated that ''requiring OTPs to include OUD diagnosis codes on claims could be a way for CMS to monitor whether OTPs furnished OUD treatment services to enrollees who had an OUD.'' In our response to the OIG report, we raised that the lack of an OUD diagnosis code on a claim is not conclusive evidence of an improper claim because an OUD diagnosis code is not required for payment when an OTP submits a claim for OUD treatment services. However, we agreed to explore ways to educate providers about including an OUD diagnosis on claims.

We continue to monitor claims paid by Medicare to OTPs for furnishing OUD treatment services, including for potential fraud and abuse. In analyzing our claims data at the beginning of CY 2024, we found data indicating that the majority of claims paid to OTPs have an OUD diagnosis code appended, meaning that only a small number of OTPs do not append an OUD diagnosis code to claims. However, we do intend to ensure that payments made to OTPs are in alignment with statutory requirements, which is that payments made must be for services furnished for the treatment of an OUD.

Therefore, in the CY 2025 PFS proposed rule, we clarified that all claims submitted to Medicare, on Form CMS–1450 for institutional providers, and on Form CMS–1500 for professional providers, or the electronic equivalents, under the OTP benefit must include an OUD diagnosis. These diagnosis codes must apply to HCPCS G-codes representing both the bundled payments (G2067 through G2075) and add-on codes to the bundled payments (G2076–G2080, G2215–G2216, G1028, and G0137). Applicable diagnosis codes for an OUD that must be submitted on claims include ICD–10–CM codes in the F11 range for ''disorders related or resulting from abuse or misuse of opioids.'' [510] We plan to issue additional guidance on appending these diagnosis codes to claims. We believe clarifying these billing requirements is consistent with CMS's strategic pillars to be a responsible steward of public funds,[511] and that these requirements are consistent with statutory provisions under sections 1861(s)(2)(HH), 1861(jjj)(1), and 1834 of the Act.

We received a few public comments related to this OUD ICD–10–CM diagnosis code billing clarification. The following is a summary of the comments we received on this topic and our responses.

Comment: A few commenters were pleased that CMS clarified billing requirements for OTPs in accordance with statutory requirements. One commenter agreed with the clarification since OTP physicians must affirm an OUD diagnosis prior to initiating treatment or developing a care plan for the patient. Another commenter raised that permitting providers to deliver OUD treatment services without a sufficient OUD diagnosis could influence treatment and recovery outcomes.

Response: We appreciate commenters' support regarding this billing clarification on claims for OUD treatment services. CMS will continue to educate OTPs on appending an OUD diagnosis to claims and update sub-regulatory guidance accordingly to ensure proper submission of claims that are in alignment with statutory requirements.

Comment: One commenter requested that CMS consider the population of patients who may receive opioid antagonist and/or agonist medications for chronic pain management. The commenter explained that some patients may receive a high dose of opioids for chronic pain, and naloxone may be given to these individuals for safety reasons. Another commenter raised that some medications prescribed by OTPs are approved to treat other conditions, including an alcohol use disorder, and requested that CMS add an alcohol use disorder diagnosis code to the list of acceptable diagnosis codes for claims submitted under the OTP benefit.

Response: We appreciate the feedback from these commenters. We understand how OTPs may treat patients with multiple diagnoses and various treatment needs, and those diagnosis codes may also be reflected on claims as OTPs should be coding appropriately per ICD–10–CM diagnosis coding guidelines. However, as stated in the discussion above, services paid to OTPs under Medicare Part B must be for the treatment of OUD, consistent with statutory provisions under sections 1861(s)(2)(HH), 1861(jjj)(1), and 1834 of the Act.

Finally, we received comments on several topics that were outside the scope of the proposed rule, and we've included a summary of those comments.

Comment: Out-of-scope comments included the following: a request that CMS develop an add-on code for contingency management services in OTPs for individuals with a stimulant use disorder; expanding services under the OTP benefit to include pain management services treated by certified athletic trainers and MOUD treatment provided by pharmacists in various settings; revising the Medicare OTP bundled payment structure to allow for more flexibility as it relates to take-home doses and counseling services; establishing coding for remote therapeutic monitoring services, which may include remotely observed take-home methadone dosing, along with coding for FDA-approved medical devices that prevent overdoses and reduce opioid withdrawal symptoms; issuing a clarification so that OTPs can bill Medicare for primary care services; modifying the definition of toxicology testing in the non-drug component of the bundled payments under the OTP benefit to exclude definitive testing; revising the update factor for the non-drug component of the bundled payments under the OTP benefit to use the inpatient prospective payment system market basket rather than the MEI; instructing Medicare Advantage plans to cover OTP services without prior authorization, primary care referral requirements, or copayments/coinsurance; creating a rural add-on payment to be applied to the non-drug component of the bundled payments

[509] *https://oig.hhs.gov/oas/reports/region9/92203005.asp.*

[510] *https://www.icd10data.com/ICD10CM/Codes/F01-F99/F10-F19/F11-.*

under the OTP benefit to attend to low-population density areas that face health professional shortages; and, promulgating regulations to create protections for patients with an OUD who are seeking admission to skilled nursing facilities.

Response: While some of these comments are either outside of our statutory authority and/or out of scope for this final rule because they do not relate to the specific proposals included in the proposed rule, we appreciate the feedback and may consider these recommendations for future rulemaking.

G. Medicare Shared Savings Program

1. Executive Summary and Background

a. Purpose

Eligible groups of providers and suppliers, including physicians, hospitals, and other healthcare providers, may participate in the Medicare Shared Savings Program (Shared Savings Program) by forming or joining an accountable care organization (ACO) and in so doing agree to become accountable for the total cost and quality of care provided under Traditional Medicare to an assigned population of Medicare fee-for-service (FFS) beneficiaries. Under the Shared Savings Program, providers and suppliers that participate in an ACO continue to receive Traditional Medicare FFS payments under Parts A and B, and the ACO may be eligible to receive a shared savings payment if it meets specified quality and savings requirements, and in some instances may be required to share in losses if it increases health care spending.

As of January 1, 2024, the Shared Savings Program has 480 ACOs with over 634,000 health care providers and organizations providing care to over 10.8 million assigned beneficiaries, making it the largest value-based care program in the country.[512] [513] The policy changes to the Shared Savings Program finalized in the CY 2023 PFS final rule (87 FR 69777 through 69979) and CY 2024 PFS final rule (88 FR 79093 through 79232) are expected to grow participation in the program and increase the number of beneficiaries assigned to ACOs by up to four million in the next 10 years (that is, between 2024–2034).[514] These policies are expected to drive growth in participation, particularly in rural and underserved areas, promote equity, and advance alignment across accountable care initiatives, and are central to achieving CMS' goal of having 100 percent of people with Traditional Medicare in a care relationship with accountability for quality and total cost of care by 2030.[515] Of note, 19 newly formed ACOs in the Shared Savings Program are participating in a new, permanent payment option beginning in 2024 that is enabling these ACOs to receive more than $20 million in advance investment payments (AIPs) for caring for underserved communities.[516] ACOs are now delivering care to people with Traditional Medicare in 9,032 Federally Qualified Health Centers, Rural Health Clinics, and critical access hospitals, an increase of 27 percent from 2023.[517]

To further advance Medicare's value-based care strategy of growth, alignment, and equity, and to allow for timely improvements to program policies and operations, we proposed changes to the Shared Savings Program as described in section III.G. of the CY 2025 PFS proposed rule (89 FR 61837 through 61924). We sought public comments which we summarize and respond to in sections III.G.2. through III.G.8. of this final rule. We proposed changes to the quality performance standard, benchmarks and other quality reporting requirements that aim to align the quality measures that Shared Savings Program ACOs would be required to report as part of the proposed APM Performance Pathway (APP) Plus measure set with the quality measures under the Adult Universal Foundation measure set that would be incrementally incorporated into the APP Plus quality measure set beginning in performance years 2025, and to prioritize the eCQM collection type as the gold standard collection type that underlies CMS' Digital Quality Measurement Strategic Roadmap while using Medicare CQMs as the transition step on our building block approach for ACOs' progress to adopt digital quality measurement.

Further, we proposed to establish a new ''prepaid shared savings'' option for eligible ACOs with a history of earning shared savings, to assist these ACOs with cash flow and encourage investments that would aid beneficiaries, such as investments in direct beneficiary services, staffing, or healthcare infrastructure. We proposed refinements to advance investment payment policies to allow ACOs receiving advance investment payments to voluntarily terminate from the payment option while remaining in the Shared Savings Program, and to specify that if CMS terminates an ACO's participation agreement, the ACO must repay any outstanding advance investment payments it received.

We proposed modifications to the Shared Savings Program's financial methodology including to (1) ensure the benchmarking methodology includes sufficient incentive for ACOs serving underserved communities [518] to enter and remain in the program through the application of a proposed health equity benchmark adjustment, (2) specify a calculation methodology to account for the impact of improper payments in recalculating expenditures and payment amounts used in Shared Savings Program financial calculations, upon reopening a payment determination pursuant to § 425.315(a), (3) establish a methodology for excluding payment amounts for HCPCS and CPT codes exhibiting significant, anomalous, and highly suspect (SAHS) billing activity during CY 2024 or subsequent calendar years that warrant adjustment, and (4) make technical changes to provide clarity on the methodology for capping the ACO's risk score growth and

[517] Ibid.

[518] As described in the *CMS Framework for Health Equity* and consistent with Executive Order 13985 on Advancing Racial Equity and Support for Underserved Communities Through the Federal Government (86 FR 7009), the term ''underserved communities'' refers to populations sharing a particular characteristic, including geographic communities that have been systematically denied a full opportunity to participate in aspects of economic, social, and civic life, as exemplified in the definition of ''equity.'' See for example CMS Framework for Health Equity 2022–2032, available at *https://www.cms.gov/files/document/cms-framework-health-equity-2022.pdf*.

regional risk score growth. Additionally, we solicited comments on financial arrangements that could allow for higher risk and potential reward under a revised ENHANCED track within the Shared Savings Program, including the designs of and trade-offs between financial model features.

We proposed changes to other program areas. We proposed changes in connection with Shared Savings Program eligibility requirements and application procedures, to permit continued participation by ACOs whose number of assigned beneficiaries falls below 5,000 during their agreement period, and to update provisions of the Shared Savings Program regulations on application procedures to reflect the latest approach Antitrust Agencies (the Department of Justice and the Federal Trade Commission [519]) use to evaluate ACOs and enforce the antitrust laws. We proposed changes to the Shared Savings Program beneficiary assignment methodology, to revise the definition of primary care services to align with payment policy proposals described elsewhere in the CY 2025 PFS proposed rule, and to broaden the existing exception to the program's voluntary alignment policy to allow for beneficiaries to be claims-based assigned to entities participating in certain disease- or condition-specific CMS Innovation Center ACO models notwithstanding their voluntary alignment to a Shared Savings Program ACO. We also proposed modifications to the beneficiary information notification requirements.

b. Statutory and Regulatory Background on the Shared Savings Program

On March 23, 2010, the Patient Protection and Affordable Care Act (Pub. L. 111–148) was enacted, followed by enactment of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) on March 30, 2010, which amended certain provisions of the Patient Protection and Affordable Care Act (hereinafter collectively referred to as ''the Affordable Care Act''). Section 3022 of the Affordable Care Act amended Title XVIII of the Act (42 U.S.C. 1395 *et seq.*) by adding section 1899 of the Act to establish the Medicare Shared Savings Program to facilitate coordination and cooperation among healthcare providers to improve the quality of care for Medicare FFS beneficiaries and reduce the rate of growth in expenditures under Medicare Parts A and B. (See 42 U.S.C. 1395jjj.)

Section 1899 of the Act has been amended through subsequent legislation. The requirements for assignment of Medicare FFS beneficiaries to ACOs participating under the program were amended by the 21st Century Cures Act (the CURES Act) (Pub. L. 114–255). The Bipartisan Budget Act of 2018 (Pub. L. 115–123), further amended section 1899 of the Act to provide for the following: expanded use of telehealth services by physicians or practitioners participating in an applicable ACO to furnish services to prospectively assigned beneficiaries; greater flexibility in the assignment of Medicare FFS beneficiaries to ACOs by allowing ACOs in tracks under retrospective beneficiary assignment a choice of prospective assignment for the agreement period; permitting Medicare FFS beneficiaries to voluntarily identify an ACO professional as their primary care provider and requiring that such beneficiaries be notified of the ability to make and change such identification, and mandating that any such voluntary identification will supersede claims-based assignment; and allowing ACOs under certain two-sided models to establish CMS-approved beneficiary incentive programs.

The Shared Savings Program regulations are codified at 42 CFR part 425. The final rule establishing the Shared Savings Program appeared in the November 2, 2011 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (76 FR 67802) (hereinafter referred to as the ''November 2011 final rule'')). A subsequent update to the program rules appeared in the June 9, 2015 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (80 FR 32692) (hereinafter referred to as the ''June 2015 final rule'')). The final rule entitled ''Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebasing Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations,'' which addressed changes related to the program's financial benchmark methodology, appeared in the June 10, 2016 **Federal Register** (81 FR 37950) (hereinafter referred to as the ''June 2016 final rule''). A final rule, ''Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2019; Medicare Shared Savings Program Requirements; Quality Payment Program; Medicaid Promoting Interoperability Program; Quality Payment Program—Extreme and Uncontrollable Circumstance Policy for the 2019 MIPS Payment Year; Provisions From the Medicare Shared Savings Program—Accountable Care Organizations—Pathways to Success; and Expanding the Use of Telehealth Services for the Treatment of Opioid Use Disorder Under the Substance Use-Disorder Prevention That Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act,'' appeared in the November 23, 2018 **Federal Register** (83 FR 59452) (hereinafter referred to as the ''November 2018 final rule'' or the ''CY 2019 PFS final rule''). In the November 2018 final rule, we finalized a voluntary 6-month extension for existing ACOs whose participation agreements would otherwise expire on December 31, 2018; allowed beneficiaries greater flexibility in designating their primary care provider and in the use of that designation for purposes of assigning the beneficiary to an ACO if the clinician they align with is participating in an ACO; revised the definition of primary care services used in beneficiary assignment; provided relief for ACOs and their clinicians impacted by extreme and uncontrollable circumstances in performance year 2018 and subsequent years; established a new Certified Electronic Health Record Technology (CEHRT) use threshold requirement; and reduced the Shared Savings Program quality measure set from 31 to 23 measures (83 FR 59940 through 59990 and 59707 through 59715).

A final rule redesigning the Shared Savings Program appeared in the December 31, 2018 **Federal Register** (Medicare Program: Medicare Shared Savings Program; Accountable Care Organizations—Pathways to Success and Uncontrollable Circumstances Policies for Performance Year 2017; final rule (83 FR 67816) (hereinafter referred to as the ''December 2018 final rule'')). In the December 2018 final rule, we finalized a number of policies for the Shared Savings Program, including a redesign of the participation options available under the program to encourage ACOs to transition to two-sided models; new tools to support coordination of care across settings and strengthen beneficiary engagement; and

[519] Refer to Withdrawn Final Policy Statement, ''Statement of Antitrust Enforcement Policy Regarding Accountable Care Organizations Participating in the Medicare Shared Savings Program,'' available at *https://www.justice.gov/sites/default/files/atr/legacy/2011/10/20/276458.pdf*. See also, FTC Press Release, ''Federal Trade Commission Withdraws Health Care Enforcement Policy Statements'', July 14, 2023, available at *https://www.ftc.gov/news-events/news/press-releases/2023/07/federal-trade-commission-withdraws-health-care-enforcement-policy-statements*.

revisions to ensure rigorous benchmarking.

In the interim final rule with comment period (IFC) entitled ''Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency,'' which was effective on the March 31, 2020 date of display and appeared in the April 6, 2020 **Federal Register** (85 FR 19230), we removed the restriction that prevented the application of the Shared Savings Program extreme and uncontrollable circumstances policy for disasters that occur during the quality reporting period if the reporting period is extended to offer relief under the Shared Savings Program to all ACOs that may be unable to completely and accurately report quality data for 2019 due to the PHE for COVID–19 (85 FR 19267 and 19268).

In the IFC entitled ''Medicare and Medicaid Programs; Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program,'' which was effective on May 8, 2020, and appeared in the May 8, 2020 **Federal Register** (85 FR 27573 through 27587) (hereinafter referred to as the ''May 8, 2020 COVID–19 IFC''), we modified Shared Savings Program policies to: (1) allow ACOs whose agreement periods expired on December 31, 2020, the option to extend their existing agreement period by 1-year, and allow ACOs in the BASIC track's glide path the option to elect to maintain their current level of participation for performance year 2021; (2) adjust program calculations to remove payment amounts for episodes of care for treatment of COVID–19; and (3) expand the definition of primary care services for purposes of determining beneficiary assignment to include telehealth codes for virtual check-ins, e-visits, and telephonic communication. We also clarified the applicability of the program's extreme and uncontrollable circumstances policy to mitigate shared losses for the period of the PHE for COVID–19 starting in January 2020.

We have also made use of the annual CY PFS rules to address quality reporting for the Shared Savings Program and certain other issues. For summaries of certain policies finalized in prior PFS rules, refer to the CY 2020 PFS proposed rule (84 FR 40705), the CY 2021 PFS final rule (85 FR 84717), the CY 2022 PFS final rule (86 FR 65253 and 65254), the CY 2023 PFS final rule (87 FR 69779 and 69780), and the CY 2024 PFS final rule (88 FR 79094 and 79095). In the CY 2024 PFS final rule (88 FR 79093 through 79232), we finalized changes to Shared Savings Program policies, including to: continue to move ACOs toward digital measurement of quality by revising the quality performance standard and reporting requirements under the APP within the Quality Payment Program (QPP); add a third step to the step-wise beneficiary assignment methodology under which we use an expanded period of time to identify whether a beneficiary has met the requirement for having received a primary care service from a physician who is an ACO professional in the ACO to allow additional beneficiaries to be eligible for assignment, as well as related changes to how we identify assignable beneficiaries used in certain Shared Savings Program calculations; update the definition of primary care services used for purposes of beneficiary assignment to remain consistent with billing and coding guidelines; refine the financial benchmarking methodology for ACOs in agreement periods beginning on January 1, 2024, and in subsequent years to (1) cap the risk score growth in an ACO's regional service area when calculating regional trends used to update the historical benchmark at the time of financial reconciliation for symmetry with the cap on ACO risk score growth, (2) apply the same CMS–HCC risk adjustment methodology applicable to the calendar year corresponding to the performance year in calculating risk scores for Medicare FFS beneficiaries for each benchmark year, (3) further mitigate the impact of the negative regional adjustment on the benchmark to encourage participation by ACOs caring for medically complex, high-cost beneficiaries, and (4) specify the circumstances in which CMS would recalculate the prior savings adjustment for changes in values used in benchmark calculations due to compliance action taken to address avoidance of at-risk beneficiaries, or as a result of the issuance of a revised initial determination of financial performance for a previous performance year following a reopening of ACO shared savings and shared losses calculations; refine our policies for the newly established advance investment payments (AIP); make updates to other programmatic areas including the program's eligibility requirements; and make timely technical changes to the regulations for clarity and consistency. Further, we also summarized comments received in response to a comment solicitation on potential future developments to Shared Savings Program policies, including incorporating a track with higher risk and potential reward than the ENHANCED track.

In a proposed rule entitled ''Medicare Program: Mitigating the Impact of Significant, Anomalous, and Highly Suspect Billing Activity on Medicare Shared Savings Program Financial Calculations in Calendar Year 2023,'' which appeared in the July 3, 2024 **Federal Register** (89 FR 55168) (hereinafter referred to as the ''SAHS billing activity proposed rule''), we proposed an approach to address the SAHS billing activity CMS identified for CY 2023 to protect the accuracy, fairness, and integrity of Shared Savings Program financial calculations. We finalized our proposals in a final rule entitled ''Medicare Program: Mitigating the Impact of Significant, Anomalous, and Highly Suspect Billing Activity on Medicare Shared Savings Program Financial Calculations in Calendar Year 2023,'' which was effective on October 15, 2024, and appeared in the September 27, 2024 **Federal Register** (89 FR 79152) (hereinafter referred to as the ''SAHS billing activity final rule'').

Policies applicable to Shared Savings Program ACOs for purposes of quality reporting for other programs have also continued to evolve based on changes in the statute. For instance, the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10) established the Quality Payment Program. In the CY 2017 Quality Payment Program final rule with comment period (81 FR 77008), we established regulations for the MIPS and Advanced APMs and related policies applicable to eligible clinicians who participate in APMs, including the Shared Savings Program. We have also made updates to policies under the Quality Payment Program through the annual CY PFS rules.

c. Summary of Shared Savings Program Provisions

In sections III.G.2. through III.G.8. of this final rule, we summarize and respond to public comments received on the proposed modifications to the Shared Savings Program's policies discussed in section III.G. of the CY 2025 PFS proposed rule (89 FR 61837 through 61924). Some commenters' suggestions for modifications to Shared Savings Program policies went beyond the scope of the proposals discussed in section III.G. of the CY 2025 PFS proposed rule and will not be addressed in this section of this final rule. As a general summary, we are finalizing the

following changes to Shared Savings Program policies to:

• Update Shared Savings Program eligibility requirements and application procedures, including the following (section III.G.2 of this final rule):

++ Update compliance obligations for the requirement that ACOs maintain at least 5,000 assigned beneficiaries by the end of the performance year specified by CMS in its request for a CAP (section III.G.2.b of this final rule).

++ Revise the requirement that newly formed ACOs must agree to allow CMS to share a copy of their application with the Antitrust Agencies (section III.G.2.c of this final rule).

• Revise the policies for determining beneficiary assignment, including the following (section III.G.3 of this final rule):

++ Update the definition of primary care services used in beneficiary assignment at § 425.400(c) (section III.G.3.a of this final rule).

++ Revise the Shared Savings Program regulations to broaden a limited exception to the program's voluntary alignment policy and allow a voluntarily aligned Shared Savings Program beneficiary to be claims-based assigned to an entity participating in a disease- or condition-specific CMS Innovation Center model when that model uses claims-based assignment that is based on primary care and/or other services and the Secretary has determined that a waiver is necessary solely for purposes of testing the model, in order for beneficiaries with certain diseases or conditions to benefit from the focused attention and care coordination related to the disease or condition that an entity participating in such a model can offer (section III.G.3.b of this final rule).

• Revise the quality reporting and the quality performance standard requirements, including the following (section III.G.4. of this final rule):

++ Require Shared Savings Program ACOs to report the APP Plus quality measure set (section III.G.4.b.(2)(a) of this final rule).

++ Focus the collection types available to Shared Savings Program ACOs for reporting the APP Plus quality measure set to eCQMs and Medicare CQMs by performance year 2027 (section III.G.4.b.(2)(b) of this final rule). Specifically, we are finalizing that:

—For performance years 2025 and 2026, ACOs will be required to report the APP Plus quality measure set using the eCQM/MIPS CQM/Medicare CQM collection type or a combination of these collection types.

—For performance year 2027 and any subsequent performance years, ACOs will be required to report the APP Plus quality measure set using the eCQM/Medicare CQM collection type or a combination of these collection types.

++ Shared Savings Program ACOs that report the APP Plus quality measure set and MIPS eligible clinicians, groups, and APM Entities that choose to report the APP Plus quality measure set, will be required to report on all required measures in the APP Plus quality measure set, as applicable (section III.G.4.c.(2)(a) of this final rule).

++ Establish a Complex Organization Adjustment for Virtual Groups and APM Entities, including Shared Savings Program ACOs, when reporting eCQMs (section III.G.4.c.(2)(b) of this final rule).

++ Score Medicare CQMs using flat benchmarks in their first two performance periods in MIPS (section III.G.4.c.(2)(c) of this final rule).

++ Extend the eCQM/MIPS CQM reporting incentive for meeting the Shared Savings Program quality performance standard to performance years 2025 and 2026 and extend the eCQM reporting incentive for performance year 2027 and subsequent performance years (section III.G.4.d of this final rule).

• Allow eligible ACOs to receive prepaid shared savings (section III.G.5 of this final rule).

• Refine AIP policies, including the following (section III.G.6 of this final rule):

++ Allow ACOs receiving advance investment payments to voluntarily terminate from the payment option while remaining in the Shared Savings Program (section III.G.6.a of this final rule).

++ Codify a policy for recouping advance investment payments from ACOs whose participation agreements are terminated by CMS (section III.G.6.b of this final rule).

• Revise the policies on the Shared Savings Program's financial methodology, including the following (section III.G.7 of this final rule):

++ Apply a health equity benchmark adjustment (HEBA) which would adjust upward an ACO's historical benchmark, based on the number of beneficiaries they serve who are dually eligible or enrolled in the Medicare Part D and receive the Low-Income Subsidy (LIS).[520] This will encourage and sustain participation by ACOs serving underserved populations that do not benefit from existing benchmark adjustments for regional efficiency or from generating prior savings (section III.G.7.b of this final rule).

++ Establish a calculation methodology to account for the impact of improper payments in recalculating expenditures and payment amounts used in Shared Savings Program financial calculations upon reopening a payment determination pursuant to § 425.315(a) (section III.G.7.c of this final rule).

++ Establish an approach to identify SAHS billing activity occurring in CY 2024 or subsequent calendar years, and specify approaches to mitigating the impact of the SAHS billing activity on Shared Savings Program financial calculations in CY 2024 or subsequent calendar years. Under this approach we will exclude payment amounts from expenditure and revenue calculations for the relevant calendar year for which the SAHS billing activity is identified, as well as from historical benchmarks used to reconcile the ACO for a performance year corresponding to the calendar year for which the SAHS billing activity is identified (section III.G.7.d of this final rule).

++ Make technical changes in provisions of the Shared Savings Program regulations on financial calculations, to align and clarify the language used to describe weights applied to the growth in ACO and regional risk scores for each Medicare enrollment type, as part of the calculation for capping ACO and regional risk score growth, respectively. The weight for a given enrollment type will be equal to the product of the ACO's historical benchmark expenditures after the application of any adjustment applied under § 425.652(a)(8) of the regulations (that is, the regional adjustment, prior savings adjustment or HEBA, or no adjustment) for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type (section III.G.7.f of this final rule).

• Modify beneficiary notification requirements, including the following (section III.G.8 of this final rule):

++ ACOs must provide the follow-up beneficiary communication no later than 180 days after the date that the ACO provided the standardized written notice to the beneficiary (section III.G.8.a of this final rule).

++ For ACOs that select preliminary prospective assignment with

[520] The low-income subsidy helps people with Medicare pay for prescription drugs and lowers the costs of Medicare prescription drug coverage. For more information about the LIS, refer to *https://www.cms.gov/Medicare/Prescription-Drug-Coverage/LimitedIncomeandResources.* We note that we work with our partners to find and enroll people who may qualify for the LIS. For brevity, in section III.G. of this final rule, we sometimes refer to beneficiaries enrolled in the Medicare Part D LIS.

retrospective reconciliation, limit the distribution of the standardized written beneficiary information notification to beneficiaries who are more likely to be assigned to the ACO, when compared to the beneficiaries who must receive the written notification under current regulations (section III.G.8.b of this final rule).

In addition, in the CY 2025 PFS proposed rule, we solicited comments on establishing a higher risk and reward participation option than the current ENHANCED track, as discussed in section III.G.7.e of this final rule.

Taken together, the policies we are adopting for the Shared Savings Program in this final rule are anticipated to improve ACOs' incentives to join the program and continue participating in future years and earn shared savings. The provisions are projected to reduce program spending by $200 million in total over the 10-year period 2025 through 2034. These changes will support the goals outlined in the CY 2023 PFS final rule (87 FR 69777 through 69978) and CY 2024 PFS final rule (88 FR 79093 through 79232) for growing the program, with a particular focus on including underserved communities.

Certain policies, including both existing policies and new policies adopted in this final rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following policies require the use of our authority under section 1899(i) of the Act: allowing eligible ACOs to receive prepaid shared savings, as described in section III.G.5 of this final rule; using a calculation methodology to account for the impact of improper payments in recalculating expenditures and payment amounts for certain Shared Savings Program financial calculations, upon reopening an ACO's payment determination and issuing a revised initial determination pursuant to § 425.315(a), as described in section III.G.7.c of this final rule; using a methodology for certain Shared Savings Program financial calculations to mitigate the impact of SAHS billing activity occurring in CY 2024 or subsequent calendar years, as described in section III.G.7.d of this final rule; and making technical changes to the provision describing how we calculate the weights applied when capping growth in regional risk scores as part of the regional component of the three-way blended benchmark update factor, as described in section III.G.7.f of this final rule. As described in the Regulatory Impact Analysis in section VI. and elsewhere in this final rule, these changes to our payment methodology are expected to improve the quality and efficiency of care and are not expected to result in a situation in which the payment methodology under the Shared Savings Program, including all policies adopted under the authority of section 1899(i) of the Act, results in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act. We will continue to reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. In the event that we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

2. Eligibility Requirements and Application Procedures

a. Overview

In the CY 2025 PFS proposed rule (89 FR 61842 through 61843), we proposed two modifications to the Shared Savings Program eligibility and application procedures that will be implemented for performance years beginning on or after January 1, 2025. Specifically, we proposed the following, which are discussed in more detail in sections (b) and (c) below:

- Sunset the requirement after January 1, 2025, at § 425.110(b)(2) that CMS terminates the participation agreement and the ACO is not eligible to share in savings for that performance year if the ACO's assigned population is not at least 5,000 by the end of the performance year specified by CMS in its request for a Corrective Action Plan (CAP); and
- Revise the antitrust language in the application procedures at §§ 425.202(a)(3) and 425.224(a)(3) for the Shared Savings Program.

b. Monitoring Compliance With the Requirement That ACOs Maintain at Least 5,000 Assigned Beneficiaries

Section 1899(b)(2)(D) of the Act requires participating ACOs to include primary care ACO professionals that are sufficient for the number of Medicare FFS beneficiaries assigned to the ACO and that at a minimum, the ACO shall have at least 5,000 such beneficiaries assigned to it. In the November 2011 final rule (76 FR 67808), in alignment with the statutory requirement at section 1899(b)(2)(D) of the Act, CMS established that, at a minimum, an ACO shall have at least 5,000 such beneficiaries assigned to it to be eligible to participate in the Shared Savings Program under § 425.110. We described the importance of maintaining at least 5,000 assigned beneficiaries with respect to both eligibility of the ACO to participate in the program and the statistical stability for purposes of calculating per capita expenditures and assessing financial and quality performance. We noted, however, that we understood circumstances may change during the agreement period, and that an ACO's assigned population may vary accordingly.

To enforce program requirements under § 425.110, while still recognizing that variations may occur for an ACO's assigned population, CMS generally issues a warning notice and requests the ACO submit a CAP should the ACO's assigned population fall below 5,000 beneficiaries. Few ACOs have had a beneficiary population that fell below 5,000. Between calendar year 2020 and 2023, based on the program's compliance monitoring review, 24 ACOs have been below this assignment threshold at the start of one or more performance years within an agreement period, which led CMS to issue compliance actions. Approximately 55 percent of these ACOs opted to voluntarily terminate ahead of the CAP deadline imposed by CMS, while approximately 40 percent were able to increase their beneficiary assignment over the threshold and remain in the program. Given additional time, more ACOs likely would be able to increase their beneficiary assignment, keeping more beneficiaries in accountable care relationships, and maintain their participation in the Shared Savings Program.

Separately, we had established a policy in the December 2018 final rule (83 FR 67925) providing for an ACO to select the Minimum Savings Rate (MSR)/Minimum Loss Rate (MLR) that CMS would use when performing shared savings and shared losses calculations for the ACO. As we have previously discussed, the MSR/MLR protects against an ACO earning shared savings or being liable for shared losses when the change in expenditures represents normal, or random, variation

rather than an actual change in performance (see, for example, 83 FR 67923 through 67926).

In the December 2018 final rule (83 FR 67925 through 67929), we revised § 425.110(b) to provide for the use of a variable MSR/MLR when performing shared savings and shared losses calculations if an ACO's assigned beneficiary population fell below 5,000 for the performance year regardless of whether the ACO had previously selected a fixed or variable MSR/MLR. This policy protects the statistical stability of the program's expenditure calculations. As an ACO's assigned beneficiary population decreases, variability in the population's expenditures increases. We thus expressed concern that the reduction in the size of the ACO's assigned beneficiary population would cause shared savings payments made to the ACO to not reflect true cost savings, but normal expenditure fluctuations (83 FR 67926). The use of a variable MSR/MLR thus made it more difficult for an ACO under performance-based risk that falls below the 5,000-beneficiary threshold to earn shared savings or be responsible for shared losses to ensure that the savings or losses reflected the ACO's actual performance and not merely statistical noise. This policy provided additional protection to the Medicare Trust Funds and greater protection for ACOs against owing shared losses.

As described above, an ACO's failure to maintain at least 5,000 assigned beneficiaries may result in compliance actions, up to and including termination of the ACO from the Shared Savings Program. When originally developed, this program policy was intended in part to protect both CMS and the ACO from variability in the expenditure calculations caused by a small assigned beneficiary population. With the MSR and MLR adjustments finalized in the December 2018 final rule, we developed protections against issues with the benchmark calculation for ACOs with fewer assigned beneficiaries, which provide adequate protection against variability in the short term. The MSR and MLR sliding scale varies based on the number of beneficiaries assigned to the ACO from 1 up to 60,000. Currently, this adjustment to the MSR/MLR protects both CMS and the ACO from inappropriate over or underpayments, reducing the financial risk of allowing ACOs to continue to participate in the Shared Savings Program if they experience a reduction in assigned beneficiaries.

In light of the effectiveness of the variable MSR/MLR policy described above, we proposed to sunset the requirement at § 425.110(b)(2) that CMS will terminate an ACO's participation agreement and determine that an ACO is not eligible to share in savings for that performance year if an ACO's assigned population is not at least 5,000 by the end of the performance year specified by CMS in its request for a CAP. Specifically, we proposed to revise § 425.110(b)(2) to limit its application to performance years starting before January 1, 2025. Thus, for performance years beginning on or after January 1, 2025, if the ACO's assigned population is not at least 5,000 by the end of the performance year specified by CMS in its request for a CAP, CMS will not be required to terminate the participation agreement. (Refer to 89 FR 61842.)

This proposal will not modify the requirement at § 425.110(a), which implements the statutory requirement at section 1899(b)(2)(D) of the Act that ACOs have 5,000 beneficiaries at critical points in CMS's determination of the ACO's eligibility to participate in the Shared Savings Program, including: at the time of application in order to be eligible for the Shared Savings Program, and at any point when an ACO elects to renew its participation in the program. As discussed in the November 2011 final rule (76 RF 67808), CMS has found ''[a] minimum threshold is important with respect to both the eligibility of the ACO to participate in the program and to the statistical stability for purposes of calculating per capita expenditures and assessing quality performance.'' A 5,000 beneficiary minimum, paired with a variable MSR/MLR, enables ACOs to have their work of improving beneficiary care best reflected in their financial performance and shared savings results. Additionally, we will retain § 425.110(b), which states that an ACO may be subject to actions under §§ 425.216 and 425.218 if its assigned population falls below 5,000 at any time during the performance year. This proposed approach provides CMS with additional flexibility in the compliance actions that we take in working with ACOs to help them return to the 5,000 beneficiary threshold.

The proposed modification aligns with CMS's broader goals to expand the number of beneficiaries in accountable care relationships. We anticipated this flexibility would provide ACOs with additional time and opportunities to recruit additional providers and suppliers to increase their assigned beneficiary population rather than being required to exit the Shared Savings Program due to their beneficiary attribution. We solicited comment on this proposal. This proposed change would be effective beginning on January 1, 2025.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters expressed support in response to this proposal. These commenters appreciated the additional flexibility this change allows ACOs and agree that it will increase ACO, provider, and supplier retention in the program.

Response: We agree with commenters that this will provide additional flexibility for ACO participants.

Comment: Several commenters provided additional suggestions for CMS's consideration. These included a recommendation that CMS consider factors outside of an ACO's control when determining compliance actions, such as geographic location or serving an underserved population, which commenters suggested can lead to fluctuations in their assigned beneficiary population. Additional commenters suggested that CMS consider offering additional levels of flexibility beyond this modification, including grace periods, additional resources for ACOs with ''significant challenges,'' or gradual enforcement of this threshold requirement for new or small ACOs. One commenter suggests that low-revenue ACOs receive a 1-year extension on their agreement renewals to meet the 5,000 beneficiary threshold.

Response: We agree that it is appropriate to consider ACOs' individual circumstances when determining compliance actions. This proposed policy gives CMS more flexibility in determining appropriate compliance actions for individual ACOs and providing additional resources or flexibilities to ACOs in this area is not appropriate at this time. CMS is required to ensure that ACOs have at least 5,000 assigned beneficiaries to be eligible to participate in the Shared Savings Program by section 1899(b)(2)(D) of the Act, and therefore is unable to offer extensions to ACOs who are unable to meet that requirement at the start of any agreement period. Our policy provides ACOs and CMS with an appropriate amount of flexibility while complying with our statutory requirements. After consideration of public comments, we are finalizing our proposal, without modification, to amend § 425.110(b)(2) to sunset the requirement after January 1, 2025, that CMS must terminate the participation agreement and the ACO is not eligible to share in savings for that performance year if the ACO's assigned population is not at least 5,000 by the end of the

performance year specified by CMS in its request for a CAP. ACOs will still be required to meet the requirement of 5,000 assigned beneficiaries when they renew for a new agreement period.

c. Update Antitrust Language

Section 425.202(a)(3) requires that ACOs that are newly formed after March 23, 2010, agree to allow CMS to share a copy of their application with the Antitrust Agencies (the Federal Trade Commission (FTC) and the Department of Justice (DOJ), as defined in the Statement of Antitrust Enforcement Policy Regarding Accountable Care Organizations Participating in the Medicare Shared Savings Program). This policy has been in effect since the enactment of the November 2011 final rule (76 FR 67822). We stated at the time that this policy was in the public interest to harmonize the eligibility criteria for ACOs that wished to participate in the Shared Savings Program with similar antitrust criteria on clinical integration, because competition among ACOs was expected to have significant benefits for Medicare beneficiaries.

In 2023, both the DOJ and the FTC withdrew the outdated Antitrust Enforcement Policy Statement because the policy no longer served its intended purpose of providing useful guidance to market participants.[521] Instead, both Antitrust Agencies have stated that they will continue to vigorously enforce the antitrust laws in the health care markets by evaluating mergers and conduct that harm competition on a case-by-case basis.

As a result, in the CY 2025 PFS proposed rule (89 FR 61843) we proposed to modify the Shared Savings Program eligibility requirements that will be implemented on January 1, 2025, by removing the reference to the Antitrust Enforcement Policy Statement in § 425.202(a)(3), and also in § 425.224(a)(3). This proposal aligns the Shared Savings Program with the Antitrust Agencies' decisions to withdraw the Antitrust Enforcement Policy Statement. We proposed to edit § 425.202(a)(3) to state, ''An ACO that seeks to participate in the Shared Savings Program must agree that CMS can share a copy of their application with the Antitrust Agencies.'' Similarly, we proposed to edit § 425.224(a)(3) to state, ''An ACO that seeks to enter a new participation agreement under the Shared Savings Program must agree that CMS can share a copy of its application with the Antitrust Agencies.'' We also plan to remove guidance from the Shared Savings Program website detailing how an ACO could calculate their share of services in each applicable Primary Service Area (PSA), as described in the Antitrust Policy Statement, as this is no longer useful to ACOs.

In the CY 2025 PFS proposed rule (89 FR 61843) we explained that, as we stated in earlier rulemaking (76 FR 67842), we intend to coordinate closely with the Antitrust Agencies throughout the application process and the operation of the Shared Savings Program to ensure there are no detrimental impacts to competition. We will share application and participation information including aggregate claims data regarding allowed charges and fee-for-service payments for all ACOs accepted in the Shared Savings Program, with the Antitrust Agencies needed to further any investigations or support their enforcement of the antitrust laws.

We solicited comment on this proposal. This proposed change would be effective beginning on January 1, 2025.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters agreed with this proposal and noted it improved clarity following the withdrawal of the Antitrust Policy Statement.

Response: We agree with commenters. After consideration of public comments, we are finalizing without modification the proposed changes to § 425.202(a)(3) and § 425.224(a)(3), to remove the reference to the Antitrust Policy Statement from provisions on application procedures.

3. Beneficiary Assignment Methodology

a. Revisions to the Definition of Primary Care Services

(1) Background

Section 1899(c)(1) of the Act, as amended by the CURES Act and the Bipartisan Budget Act of 2018, provides that for performance years beginning on or after January 1, 2019, the Secretary shall assign beneficiaries to an ACO based on their utilization of primary care services provided by a physician who is an ACO professional and all services furnished by Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs). However, the statute does not specify a list of services considered to be primary care services for purposes of beneficiary assignment.

In the November 2011 final rule (76 FR 67853), we established the initial list of services, identified by Current Procedural Terminology (CPT) and Healthcare Common Procedure Coding System (HCPCS) codes, that we considered to be primary care services. In that final rule, we indicated that we intended to monitor CPT and HCPCS codes and would consider making changes to the definition of primary care services to add or delete codes used to identify primary care services if there were sufficient evidence that revisions were warranted. We have updated the list of primary care service codes in subsequent rulemaking (refer to 80 FR 32746 through 32748; 80 FR 71270 through 71273; 82 FR 53212 and 53213; 83 FR 59964 through 59968; 85 FR 27582 through 27586; 85 FR 84747 through 84756; 85 FR 84785 through 84793; 86 FR 65273 through 65279; 87 FR 69821 through 69825; 88 FR 79163 through 79174) to reflect additions or modifications to the codes that have been recognized for payment under the PFS and to incorporate other changes to the definition of primary care services for purposes of the Shared Savings Program. For the performance year beginning on January 1, 2024, and subsequent performance years, we defined primary care services for purposes of assigning beneficiaries to ACOs under § 425.402 in § 425.400(c)(1)(viii).

(2) Revisions

As described in the CY 2025 PFS proposed rule (89 FR 61844 through 61851), based on feedback from ACOs and our further review of the HCPCS and CPT codes that are currently recognized for payment under the PFS or that we proposed to recognize for payment starting in CY 2025, we stated that we believe it would be appropriate to amend the definition of primary care services used in the Shared Savings Program assignment methodology to include certain additional codes for the performance year starting on January 1, 2025, and subsequent performance years, in order to remain consistent with billing and coding under the PFS.

We proposed to specify a revised definition of primary care services used for assignment in a new provision of the Shared Savings Program regulations at § 425.400(c)(1)(ix) to include the list of HCPCS and CPT codes specified in § 425.400(c)(1)(viii), as well as the

[521] U.S. Department of Justice, Press Release, *Justice Department Withdraws Outdated Enforcement Policy Statements* (Feb. 3, 2023), available at *https://www.justice.gov/opa/pr/justice-department-withdraws-outdated-enforcement-policy-statements;* Federal Trade Commission, Press Release, *Federal Trade Commission Withdraws Health Care Enforcement Policy Statements* (July 14, 2023), available at *https://www.ftc.gov/news-events/news/press-releases/2023/07/federal-trade-commission-withdraws-health-care-enforcement-policy-statements.*

following additions: (1) Safety Planning Interventions (HCPCS code GSPI1) when the base code is also a primary care service code, if finalized under Medicare FFS payment policy; (2) Post-Discharge Telephonic Follow-up Contacts Intervention (HCPCS code GFCI1), if finalized under Medicare FFS payment policy; (3) Virtual Check-in Service (CPT code 9X091), if finalized under Medicare FFS payment policy; (4) Advanced Primary Care Management Services (HCPCS GPCM1, GPCM2, and GPCM3), if finalized under Medicare FFS payment policy; (5) Cardiovascular Risk Assessment and Risk Management Services (HCPCS codes GCDRA and GCDRM), if finalized under Medicare FFS payment policy; (6) Interprofessional Consultation Services (CPT codes 99446, 99447, 99448, 99449, 99451, 99452); (7) Direct Care Caregiver Training Services (HCPCS codes GCTD1, GCTD2 and GCTD3), if finalized under Medicare FFS payment policy; and (8) Individual Behavior Management/Modification Caregiver Training Services (HCPCS codes GCTB1 and GCTB2), if finalized under Medicare FFS payment policy.

We proposed that the new provision at § 425.400(c)(1)(ix) would be applicable for use in determining beneficiary assignment for the performance year starting on January 1, 2025, and subsequent performance years.

The following provides additional information about the CPT and HCPCS codes that we proposed to add to the definition of primary care services used for purposes of beneficiary assignment:

• *Safety Planning Interventions (SPI) (HCPCS code GSPI1 (Safety planning interventions, including assisting the patient in the identification of the following personalized elements of a safety plan: recognizing warning signs of an impending suicidal crisis; employing internal coping strategies; utilizing social contacts and social settings as a means of distraction from suicidal thoughts; utilizing family members, significant others, caregivers, and/or friends to help resolve the crisis; contacting mental health professionals or agencies; and making the environment safe; (List separately in addition to an E/M visit or psychotherapy)):* In the CY 2025 PFS proposed rule (89 FR 61741), we proposed under the PFS to create an add-on G-code that would be billed along with an E/M visit or psychotherapy visit when safety planning interventions are personally performed by the billing practitioner in a variety of settings. Safety planning interventions involve a person working with a clinician to develop a personalized list of coping strategies and sources of support that the person could use in the event of experiencing thoughts of harm to themselves or others. This is not a suicide risk assessment, but rather, an intervention provided to people determined to have elevated risk. Safety planning interventions have also been used to reduce the risk of suicide. The basic components of a safety plan include the following: (1) recognizing warning signs of an impending suicidal crisis or actions that increase the risk of overdose; (2) employing internal coping strategies; (3) utilizing social contacts and social settings as a means of distraction from suicidal thoughts and/or taking steps to reduce the risk of suicide; (4) utilizing family members or friends to help resolve the crisis; (5) contacting mental health professionals, crisis services, or agencies; and (6) making the environment safe, including restricting access to lethal means, if applicable.

Refer to section II.I of this final rule for detailed, technical discussion regarding the finalized description, payment, and utilization of this HCPCS code.

In the CY 2019 PFS final rule (83 FR 59965 through 59966), we finalized the addition of prolonged evaluation and management or psychotherapy service(s) beyond the typical service time of the primary procedure (CPT codes 99354 and 99355) to the definition of primary care services used for purposes of assignment because these two codes are ''add-on codes'' that describe additional resource components of a broader service furnished in the office or other outpatient setting that are not accounted for in the valuation of the base codes. For the same reason, in the proposed rule we stated that we believe it would be appropriate to also include HCPCS code GSPI1, if finalized under Medicare FFS policy since GSPI1 is being proposed as an add-on service to an E/M or psychotherapy visit. Evaluation and management visits are included in the definition of primary care services used for purposes of assignment and so we stated that we believe it would be appropriate to also include GSPI1, when billed with an E/M visit, in the definition of primary care services used for purposes of assignment to assign beneficiaries more accurately to ACOs participating in the Shared Savings Program. We further believe the services billed under this code reflect the types of services we expect primary care providers to provide in order to improve continuity of care. Including Safety Planning Intervention services in the definition of primary care services used for purposes of assignment would also align with the CMS Behavioral Health Strategy (*https://www.cms.gov/cms-behavioral-health-strategy*), the mission of which is to ensure that high-quality behavioral health services and supports are accessible to Medicare beneficiaries.

We note that, as proposed, HCPCS code GSPI1 could also be billed with psychotherapy services, which are not considered for purposes of beneficiary assignment under § 425.400(c). Therefore, we proposed to include the allowed charges for HCPCS code GSPI1, for purposes of assigning beneficiaries to ACOs, only when billed with a service which is also included in the definition of primary care services.

• *Post-Discharge Telephonic Follow-up Contacts Intervention (FCI) (HCPCS code GFCI1: Post discharge telephonic follow-up contacts performed in conjunction with a discharge from the emergency department for behavioral health or other crisis encounter, per calendar month).* In the CY 2025 PFS proposed rule (89 FR 61741 through 61742), we described FCI as a specific protocol of services for individuals with suicide risk involving a series of telephone contacts between a provider and person in the weeks and sometimes months following discharge from the emergency department and other relevant care settings, that occurs when the person is in the community and is designed to reduce the risk of subsequent adverse outcomes. FCI calls are typically 10–20 minutes in duration and aim to encourage use of the Safety Plan (as needed in a crisis) and updating it to optimize effectiveness, expressing psychosocial support, and helping to facilitate engagement in any indicated follow-up care and services. We proposed to create a monthly billing code to describe the specific protocols involved in furnishing post-discharge telephonic follow-up contacts that are performed in conjunction with a discharge from the emergency department for a crisis encounter, as a bundled service describing four calls in a month, each lasting between 10–20 minutes. We proposed to price this service based on a direct crosswalk to CPT code 99426 (*Principal care management; first 30 minutes of clinical staff time directed by a physician or other qualified healthcare professional*) because we stated that we believe the work would be similar in nature and intensity.

Refer to section II.I. of this final rule for detailed, technical discussion regarding the finalized description,

payment, and utilization of this HCPCS code.

These services are similar to TCM services (CPT codes 99495 and 99496), which are included in the definition of primary care services used for purposes of assignment under § 425.400(c), in that these services help eligible people transition back to a community setting after a stay at certain facility types like TCM. Similar to the rationale described December 2014 proposed rule (79 FR 72792) and later finalized in the June 2015 final rule (80 FR 32746 through 32748) where we finalized the inclusion of TCM services in the definition of primary care services used for purposes of assignment, providing separate payment for the work of community physicians and practitioners in treating a patient following discharge from a hospital or nursing facility would ensure better continuity of care for these patients and help reduce avoidable readmissions. Therefore, in the CY 2025 PFS proposed rule (89 FR 61845), we stated that FCI services should also be included in the definition of primary care services used for beneficiary assignment since FCI services are designed to assist in the transition from the emergency department into the community. We stated that we believe the services billed under this code reflect the types of services we expect primary care providers to provide in order to improve care coordination and care management. Thus, we stated that we believe that FCI services should also be included.

Further, in determining the recommended pricing for HCPCS code GFCI1, we recommended pricing this service based on a direct crosswalk to Principal Care Management (PCM) service (CPT code 99426) because we stated that we believe the work would be similar in nature, as well as time and intensity. In the CY 2021 PFS final rule (85 FR 84749), we finalized the inclusion of HCPCS codes G2064 and G2065 in the definition of primary care services used for purposes of assignment since we expect that most services billed under these codes will be billed by specialists who are focused on managing patients with a single complex chronic condition requiring substantial care management. These HCPCS codes were replaced by CPT codes 99424, 99425, 99426, and 99427 in the CY 2022 PFS final rule (86 FR 65275). PCM services (CPT codes 99424, 99425, 99426, and 99427 and HCPCS codes G2064 and G2065) are included in the definition of primary care services used for purposes of assignment and since FCI services are similar in nature, time, and intensity to PCM services, we stated that we believe it would be appropriate to include these services in the definition of primary care services used for purposes of assignment. Including FCI services in the definition of primary care services used for purposes of assignment would also align with the CMS Behavioral Health Strategy as the FCI services are designed to support beneficiaries with follow-up care related to suicide risk.

- *Virtual Check-in Service (CPT code 9X091):*

++ CPT code 9X091 (*Brief communication technology-based service (e.g., virtual check-in) by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5–10 minutes of medical discussion*).

The CPT Editorial Panel established a new CPT code 9X091 describing a brief virtual check-in encounter that is intended to evaluate the need for a more extensive visit. The code descriptor for CPT code 9X091 mirrors that of existing HCPCS code G2012 (*Brief communication technology-based service, for example, virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*) and, per the CPT Editorial Panel materials, is intended to replace that code. HCPCS code G2012 is included in the Shared Savings Program definition of primary care services used for purposes of assignment.

In the CY 2025 PFS proposed rule (89 FR 61651 through 61654), we proposed separate payment for CPT code 9X091. Because the code description for CPT code 9X091 mirrors HCPCS code G2012 and because, per CPT Editorial Panel materials, CPT code 9X091 is intended to replace HCPCS code G2012, we proposed to make CPT code 9X091 separately payable under Medicare. We note we proposed to delete HCPCS code G2012 for purposes of Medicare PFS payment policy, however, HCPCS code G2012 will continue to be included in the definition of primary care services used for purposes of assignment, consistent with how deleted CPT and HCPCS codes have been handled historically and to allow for consistency with calculating historical benchmarks.

We proposed that we would include CPT code 9X091 in the definition of primary care services used for purposes of assignment as the code description of brief communication technology-based service mirrors the description of HCPCS code G2012, which is included in the definition of primary care services used for purposes of assignment since these services are furnished to established patients by physicians or qualified health care professionals that can report E/M services in lieu of an in person primary care visit (85 FR 84753). Since CPT code 9X091 is a direct replacement of HCPCS code G2012, 9X091 would be included in the definition of primary care services used for purposes of assignment, under proposed § 425.400(c)(1)(ix)(C). In the CY 2022 PFS final rule (86 FR 65277 through 65279), we finalized a policy wherein we will incorporate into the definition of primary care services a permanent CPT code when it directly replaces another CPT code or a temporary HCPCS code (for example, a G-code) that is already included in the definition of primary care services for purposes of determining beneficiary assignment under the Shared Savings Program. Additionally, CPT code 9X091, per the CPT Editorial Panel materials, is intended to be reported instead of HCPCS code G2012, which is already included in the definition of primary care services used for purposes of assignment. We further believe the services billed under this code reflect the types of services we expect primary care providers to provide in order to improve care coordination and care management.

We explained that this approach would help to ensure the appropriate identification of primary care services used in the Shared Savings Program's assignment methodology by allowing for the immediate inclusion of replacement CPT codes in the determination of beneficiary assignment and lead to continuity in the assignment of beneficiaries receiving those services based on current coding (89 FR 61845). This continuity would improve predictability for ACOs, while also increasing the consistency of care coordination for their assigned beneficiaries. We further finalized that such replacement codes would be incorporated into the definition of the primary care services for purposes of determining beneficiary assignment for the performance year, when the assignment window for a benchmark or performance year (as defined in

§ 425.20) includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare. CPT code 9X091 has an effective date of January 1, 2025. Refer to section II.E of this final rule for detailed, technical discussion regarding the finalized description, payment, and utilization of this CPT code.

• *Advanced Primary Care Management (HCPCS codes GPCM1, GPCM2, and GPCM3);*

(1) HCPCS code GPCM1: (*Advanced primary care management services provided by clinical staff and directed by a physician or other qualified health care professional who is responsible for all primary care and serves as the continuing focal point for all needed health care services, per calendar month, with the following elements, as appropriate:*

• *Consent;*

++ *Inform the patient regarding availability of the service; that only one practitioner can furnish and be paid for the service during a calendar month; of the right to stop the services at any time (effective at the end of the calendar month); and that cost sharing may apply.*

++ *Document in patient's medical record that consent was obtained.*

• *Initiation during a qualifying visit for new patients or patients not seen within 3 years;*

• *Provide 24/7 access for urgent needs to care team/practitioners, including providing patients/caregivers with a way to contact health care professionals in the practice to discuss urgent needs regardless of the time of day or day of week;*

• *Continuity of care with a designated member of the care team with whom the patient is able to schedule successive routine appointments;*

• *Deliver care in alternative ways to traditional office visits to best meet the patient's needs, such as home visits, and/or expanded hours;*

• *Overall comprehensive care management;*

++ *Systematic needs assessment (medical and psychosocial).*

++ *System-based approaches to ensure receipt of preventive services.*

++ *Medication reconciliation, management and oversight of self-management.*

• *Development, implementation, revision, and maintenance of an electronic patient-centered comprehensive care plan;*

++ *Care plan is available timely within and outside the billing practice as appropriate to individuals involved in the beneficiary's care, can be routinely accessed and updated by care team/practitioner, and copy of care plan to patient/caregiver.*

• *Coordination of care transitions between and among health care providers and settings, including referrals to other clinicians and follow-up after an emergency department visit and discharges from hospitals, skilled nursing facilities or other health care facilities as applicable;*

++ *Ensure timely exchange of electronic health information with other practitioners and providers to support continuity of care.*

++ *Ensure timely follow-up communication (direct contact, telephone, electronic) with the patient and/or caregiver after an emergency department visit and discharges from hospitals, skilled nursing facilities, or other health care facilities, within 7 calendar days of discharge, as clinically indicated.*

• *Ongoing communication and coordinating receipt of needed services from practitioners, home- and community-based service providers, community-based social service providers, hospitals, and skilled nursing facilities (or other health care facilities), and document communication regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors, in the patient's medical record;*

• *Enhanced opportunities for the beneficiary and any caregiver to communicate with the care team/practitioner regarding the beneficiary's care through the use of asynchronous non-face-to-face consultation methods other than telephone, such as secure messaging, email, internet, or patient portal, and other communication-technology based services, including remote evaluation of pre-recorded patient information and interprofessional telephone/internet/EHR referral service(s), to maintain ongoing communication with patients, as appropriate;*

++ *Ensure access to patient-initiated digital communications that require a clinical decision, such as virtual check-ins and digital online assessment and management and E/M visits (or e-visits).*

• *Analyze patient population data to identify gaps in care and offer additional interventions, as appropriate;*

• *Risk stratify the practice population based on defined diagnoses, claims, or other electronic data to identify and target services to patients*;

• *Be assessed through performance measurement of primary care quality, total cost of care, and meaningful use of Certified EHR Technology.*

(2) HCPCS code GPCM2 (*Advanced primary care management services for a patient with multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, which place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, provided by clinical staff and directed by a physician or other qualified health care professional who is responsible for all primary care and serves as the continuing focal point for all needed health care services, per calendar month, with the elements included in GPCM1, as appropriate*), and

(3) HCPCS code GPCM3 (*Advanced primary care management services for a patient who is a Qualified Medicare Beneficiary with multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, which place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, provided by clinical staff and directed by a physician or other qualified health care professional who is responsible for all primary care and serves as the continuing focal point for all needed health care services, per calendar month, with the elements included in GPCM1, as appropriate*).

In the CY 2025 PFS proposed rule (89 FR 61698 through 61725), we proposed to establish coding and make payment under the PFS for a newly defined set of APCM services as described and defined by three HCPCS codes (GPCM1, GPCM2, and GPCM3) to recognize the resource costs associated with furnishing services using an ''advanced primary care approach'' supported by a team-based care structure under the PFS. Delivery of care using an advanced primary care model involves restructuring of the primary care team, which includes the billing practitioner and the auxiliary personnel under their general supervision, within practices. This restructuring creates several advantages for patients, and provides more broad accessibility and alternative methods for patients to communicate with their care team/practitioner about their care outside of in-person visits (for example, virtual, asynchronous interactions, such as online chat), which can lead to more timely and efficient identification of, and responses to, health care needs (for example, practitioners can route patients to the optimal clinician and setting—to a synchronous visit, an asynchronous chat, or a direct referral to the optimal site of care). Practitioners using an advanced primary care delivery model can more easily collaborate across

clinical disciplines through remote interprofessional consultations with specialists, as well as standardize condition management into evidence-based clinical workflows, which allow for closed-loop follow-up and more real-time management for patients with acute or evolving complex issues, partner on complex decisions, and personalize their patients' care plans.

Specifically, we proposed (89 FR 62011) to adopt specific coding and payment policies for APCM services for use by practitioners who are providing services under this specific model of advanced primary care, when the practitioner is the continuing focal point for all needed health care services and responsible for all primary care services.

Providing care using an advanced primary care delivery model involves resource costs associated with maintaining certain practice capabilities and continuous readiness and monitoring activities to support a team-based approach to care, where significant resources are used on virtual, asynchronous patient interactions, collaboration across clinical disciplines, and real-time management of patients with acute and complex concerns that are not fully recognized or paid for by the existing care management codes. As the delivery of primary care has evolved to embrace advanced primary care more fully, in the proposed rule we stated that we believe that it is prudent to now adopt specific coding and payment policies to better recognize the resources involved in care management under an advanced primary care delivery model.

We seek to ensure that the APCM codes would fully and appropriately capture the care management and CTBS services that are characteristic of the changes in medical practice toward advanced primary care, as demonstrated in select CMS Innovation Center models. As we do for CCM and PCM services, we proposed to require for APCM services that the practitioner provide an initiating visit and obtain beneficiary consent (see section II.G.2.c.(1) and II.G.2.c.(2) of the proposed rule). We proposed to incorporate as elements of APCM services ''Management of Care Transitions'' and ''Enhanced Communications Opportunities.'' For the ''Management of Care Transitions'' APCM service element, we proposed to specify timely follow-up during care transitions (see section II.G.2.c.(6) of the proposed rule). For the ''Enhanced Communications Opportunities'' APCM service element, we proposed to incorporate digital access through CTBS services, such as virtual check-ins and remote evaluation of images, to maintain ongoing communication with the patient (see section II.G.2.c.(8) of the proposed rule). We also proposed to specify for APCM services the practice-level characteristics and capabilities that we stated that we believe to be inherent to, and necessarily present when a practitioner is providing covered services using, the ''advanced primary care'' model. Included in the service descriptors for GPCM1, GPCM2, and GPCM3 are proposed practice-level capabilities that reflect care delivery using an advanced primary care model that focused around 24/7 access and continuity of care (see section II.G.2.c.(3) of the proposed rule), patient population-level management (see section II.G.2.c.(9) of the final rule), and performance measurement (see section II.G.2.c.(10) of the final rule). We stated that we believe these practice capabilities are indicative of, and necessary to, care delivery using the advanced primary care model.

Refer to section II.G. of this final for detailed, technical discussion regarding the proposed description, payment and utilization of these HCPCS codes as well as information about requirements for billing providers participating in ACOs.

As described in section II.G. of this final rule, HCPCS codes GPCM1 through GPCM3 would describe APCM services furnished per calendar month, following the initial qualifying visit (see section II.G.2.c.(1) of this final rule for more on the initiating visit). Physicians and NPPs, including nurse practitioners (NPs), physician assistants (PAs), certified nurse midwives (CNMs) and clinical nurse specialists (CNSs), could bill for APCM services. As we described in more detail in section II.G.2.c. of this final rule, within the code descriptors for GPCM1, GPCM2, and GPCM3, we included the elements of the scope of service for APCM as well as the capabilities and requirements that we stated that we believed to be inherent to care delivery by the practitioner using an advanced primary care model, and necessary to fully furnish and, therefore, bill for APCM services.

We proposed that the practitioner who bills for APCM services must intend to be responsible for the patient's primary care and serve as the continuing focal point for all needed health care services. We anticipated that most practitioners furnishing APCM services would be managing all the patient's health care services over the month and have either already been providing ongoing care for the patient or have the intention of being responsible for the patient's primary care and serving as the continuing focal point for all of the patient's health care services. As detailed in sections II.G.2.b. through II.G.2.d. of this final rule, this proposed coding and payment would incorporate elements of several specific, existing care management and communication technology-based services (CTBS) into a bundle of services that reflects the essential elements of the delivery of advanced primary care, for payment under the PFS starting in 2025.

These new codes are designed to bundle the individual utilization of codes that are already included in the definition of primary care services used for purposes of assignment, specifically CCM (CPT codes 99437, 99487, 99489, 99490, 99491, and 99439 and HCPCS codes G0506 and G2058), PCM (CPT codes 99424, 99425, 99426, and 99427 and HCPCS codes G2064 and G2065), TCM (CPT codes 99495 and 99496), remote evaluation of patient videos/images (HCPCS code G2010), and virtual check-in and e-visits (HCPCS codes G2012 and G2252). These new codes also bundle IPC (CPT Codes 99446, 99447, 99448, 99449, 99451, 99452), which we proposed to include in the definition of primary care services used for purposes of assignment. Further, as proposed, this new APCM bundle represents a broader application of advanced primary care and incorporates elements included in care management and CTBS services. We stated that we believe the services billed under these codes reflect the types of services we expect primary care providers to provide in order to improve care coordination and care management and so it would be appropriate to include HCPCS codes GPCM1, GPCM2, and GPCM3 in the definition of primary care services used for purposes of assignment since these HCPCS codes bundle services furnished under CPT and HCPCS codes already included in the definition of primary care services used for purposes of assignment.

As we explained in the proposed rule (89 FR 61703), we anticipated that these codes would mostly be used by primary care specialties, such as general medicine, geriatric medicine, family medicine, internal medicine, and pediatrics, or in some instances, certain specialists functioning as primary care practitioners—for example, an OB/GYN or a cardiologist. Since primary care specialties, such as general medicine, geriatric medicine, family medicine, internal medicine, and pediatrics are primary care physicians (as defined in § 425.20) and OB/GYN or a cardiologist are two of the specialty designations (as described in § 425.402(c)) used for purposes of assignment we stated that we believe it would be appropriate to include HCPCS codes GPCM1, GPCM2,

and GPCM3 in the definition of primary care services used for purposes of assignment. Inclusion of these APCM services in the definition of primary care services used for purposes of assignment would also strengthen and invest in primary care in alignment with the goals of the U.S. Department of Health and Human Services (HHS) Initiative to Strengthen Primary Care.[522] We also believe that updating the definition of primary care services used for purposes of assignment to include the APCM bundle would increase the accuracy of assignment based on the provision of primary care.

• *Cardiovascular Risk Assessment and Risk Management—*

++ *Cardiovascular Disease Risk Assessment HCPCS code GCDRA (Administration of a standardized, evidence-based Atherosclerotic Cardiovascular Disease (ASCVD) Risk Assessment for patients with ASCVD risk factors on the same date as an E/M visit, 5–15 minutes, not more often than every 12 months):* As described in the CY 2025 PFS proposed rule (89 FR 61727 through 61731), we proposed a new stand-alone HCPCS code, GCDRA, to identify and value the work involved in administering an *ASCVD risk* assessment when medically reasonable and necessary in relation to *an E/M visit.* Atherosclerotic Cardiovascular Disease (ASCVD) Risk Assessment refers to a review of the individual's demographic factors, modifiable risk factors for CVD, and risk enhancers for CVD.

We proposed that the ASCVD risk assessment must be furnished by the practitioner on the same date they furnish an E/M visit, as the ASCVD risk assessment would be reasonable and necessary when used to inform the patient's diagnosis, and treatment plan established during the visit. ASCVD risk assessment is reasonable and necessary for a patient who has at least one predisposing condition to cardiovascular disease that may put them at increased risk for future ASCVD diagnosis.

++ *Atherosclerotic Cardiovascular Disease Prevention Risk Management Services HCPCS code GCDRM (Atherosclerotic Cardiovascular Disease (ASCVD) risk management services with the following required elements: patient is without a current diagnosis of ASCVD, but is determined to be at medium or high risk for CVD (>15 percent in the next 10 years) as previously determined by the ASCVD risk assessment; ASCVD-Specific care plan established, implemented, revised, or monitored that addresses risk factors and risk enhancers and must incorporate shared decision-making between the practitioner and the patient; clinical staff time directed by physician or other qualified health care professional; per calendar month).* As described in section II.G of this final rule, over the past several years, we have worked to develop payment mechanisms under the PFS to improve the accuracy of valuation and payment for the services furnished by physicians and other healthcare professionals, especially in the context of evolving changes in medical practice using evidence-based models of care, such as the Million Hearts® model. We proposed to establish a G-code, GCDRM, for ASCVD risk management services which refers to the development, implementation, and monitoring of individualized care plans for reducing cardiovascular risk, including shared decision-making and the use of the ''ABCS'' of cardiovascular risk reduction, as well as counseling and monitoring to improve diet and exercise.

We stated that we believe that ASCVD risk management services include continuous care and coordination to reduce or eliminate further elevation of ASCVD risk over time, and potentially prevent the development of future cardiovascular disease diagnoses or first-time heart attacks or strokes. Physicians and Non-Physician Practitioners (NPPs) who can furnish E/M services could bill for ASCVD risk management services. In the proposed rule, we explained that we anticipated that ASCVD risk management services would ordinarily be provided by clinical staff incident to the professional services of the billing practitioner in accordance with § 410.26. We proposed that ASCVD risk management services would be considered a ''designated care management service'' under § 410.26(b)(5) and, as such, could be provided by auxiliary personnel under the general supervision of the billing practitioner.

Refer to section II.G of this final rule for detailed, technical discussion regarding the proposed description, payment and utilization of HCPCS codes GCDRA and GCDRM.

Because HCPCS codes GCDRA and GCDRM are proposed to be care management services similar to CCM (CPT codes 99437, 99439, 99487, 99489, 99490, and 99491) which are included in the Shared Savings Program definition of primary care services used for purposes of assignment, we explained in the proposed rule that we believed it would be consistent and appropriate to include GCDRA and GCDRM in the definition of primary care services used for purposes of assignment. In earlier rulemaking, we finalized the inclusion of CCM CPT codes 99487, 99489, 99490, and 99491 (codes for chronic care management) in the definition of primary care services for the Shared Savings Program. Refer to the June 2015 final rule (80 FR 32746 through 32748), CY 2018 PFS final rule (82 FR 53212 through 53213), and CY 2021 PFS final rule (85 FR 84749 through 84750 and 84754). ''Complex'' CCM services (CPT codes 99487 and 99489) and ''non-complex'' CCM services (CPT codes 99490 and 99491) share a common set of service elements, including the following: (1) Initiating visit, (2) structured recording of patient information using certified electronic health record technology (EHR), (3) 24/7 access to physicians or other qualified health care professionals or clinical staff and continuity of care, (4) comprehensive care management including systematic assessment of the patient's medical, functional, and psychosocial needs, (5) comprehensive care plan including a comprehensive care plan for all health issues with particular focus on the chronic conditions being managed, and (6) management of care transitions.

Elements of care management services include: (1) an initial visit, which can be an E/M service, Annual Wellness Visit (AWV) or initial preventive physical exam (IPPE or ''Welcome to Medicare''); (2) continuity of care with a designated practitioner; (3) comprehensive care management; (4) comprehensive care plan; (5) management of care transitions; and (6) care coordination. In the November 2011 final rule (76 FR 67852 through 67853), we finalized the inclusion of E/M services, the AWV, and the IPPE since those services align the definition of primary care services used in the Shared Savings Program with the definition of primary care services included in section 5501 of the Affordable Care Act. Because care management, E/M services, the AWV, and the IPPE are all included in the definition of primary care services used for purposes of assignment, in the proposed rule (89 FR 61848), we stated that we believe GCDRA and GCDRM reflect the types of services we expect primary care providers to provide in order to improve care coordination and care management. Additionally, GCDRA and GCDRM are care and risk management services that include

[522] Refer to U.S. Department of Health and Human Services, Issue Brief: HHS is Taking Action to Strengthen Primary Care (November 7, 2023), available at *https://www.hhs.gov/sites/default/files/primary-care-issue-brief.pdf.*

elements of continuous and coordinated care, which the Shared Savings Program is intended to promote.

• *Interprofessional Consultation (IPC) (CPT codes 99446, 99447, 99448, 99449, 99451, 99452):* In the CY 2019 PFS final rule (83 FR 59489), CMS finalized six codes:

++ 99446 (*Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 5–10 minutes of medical consultative discussion and review*);

++ 99447 (*Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 11–20 minutes of medical consultative discussion and review*);

++ 99448 (*Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 21–30 minutes of medical consultative discussion and review*);

++ 99449 (*Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 31 minutes or more of medical consultative discussion and review*);

++ 99451 (*Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 or more minutes of medical consultative time*); and

++ 99452 (*Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or qualified health care professional, 30 minutes*).

These CPT codes describe assessment and management services conducted through telephone, internet, or electronic health record consultations furnished when a patient's treating physician or other qualified healthcare professional requests the opinion and/or treatment advice of a consulting physician or qualified healthcare professional with specific specialty expertise to assist with the diagnosis and/or management of the patient's problem without the need for the patient's face-to-face, in-person contact with the consulting physician or qualified healthcare professional. In the CY 2025 PFS proposed rule (89 FR 61745), we stated that we believe that payment for these interprofessional consultations performed via communications technology such as telephone or internet is consistent with our ongoing efforts to recognize and reflect medical practice trends in primary care and patient-centered care management within the PFS. Accordingly, because these CPT codes 99446, 99447, 99448, 99449, 99451, and 99452 recognize and reflect medical practice trends in primary care and patient-centered care, we continue to believe they should be included in the definition of primary care services used for purposes of assignment.

Beginning in the CY 2012 PFS proposed rule (76 FR 42793), we recognized the changing focus in medical practice toward managing patients' chronic conditions, many of which particularly challenge the Medicare population, including heart disease, diabetes, respiratory disease, breast cancer, allergies, Alzheimer's disease, and factors associated with obesity. Current E/M coding does not adequately reflect the changes that have occurred in medical practice, and the activities and resource costs associated with the treatment of these complex patients in the primary care setting In the years since 2012, we have acknowledged the shift in medical practice away from an episodic treatment-based approach to one that involves comprehensive patient-centered care management, and have taken steps through rulemaking to better reflect that approach in payment under the PFS. In the CY 2013 PFS final rule (77 FR 68979), we established new codes to pay separately for TCM services. Next, in the CY 2015 PFS final rule (79 FR 67715), we finalized new coding and separate payment beginning in CY 2015 for CCM services provided by clinical staff. In the CY 2017 PFS final rule (81 FR 80225), we established separate payment for complex CCM services, an add-on code to the visit during which CCM is initiated to reflect the work of the billing practitioner in assessing the beneficiary and establishing the CCM care plan and established separate payment for Behavioral Health Integration (BHI) services (81 FR 80226 through 80227). As part of this shift in medical practice, and with the proliferation of team-based approaches to care that are often facilitated by electronic medical record technology, we stated that we believe that making separate payment for interprofessional consultations undertaken for the benefit of treating a patient would contribute to payment accuracy for primary care and care management services. Refer to the CY 2019 PFS final rule (83 FR 59489) for detailed, technical discussion regarding the description, payment and utilization of these CPT codes.

Since the services associated with CPT codes 99446, 99447, 99448, 99449, 99451, and 99452 include TCM, CCM, and BHI services, which are included in our definition of primary care services and are included in the proposed APCM bundle that we proposed to be included in the definition of primary care services used for purposes of assignment, we explained in the proposed rule that we believe that the services associated with CPT codes 99446, 99447, 99448, 99449, 99451, and 99452 should be included in the definition of primary care services for purposes of assignment. We additionally stated that we believe the services billed under this code reflect the types of services we expect primary care providers to provide in order to improve care coordination and care management. These IPC services were also designed to reimburse for comprehensive patient-centered care management and primary care, which the Shared Savings Program is intended to promote.

• *Direct Care Caregiver Training Services (HCPCS codes GCTD1, GCTD2, and* GCTD3*):* GCTD1 (*Caregiver training in direct care strategies and techniques to support care for patients with an ongoing condition or illness and to reduce complications (including, but not limited to, techniques to prevent decubitus ulcer formation, wound dressing changes, and infection control) (without the patient present), face-to-face; initial 30 minutes)*), GCTD2 (*Caregiver training in direct care strategies and techniques to support care for patients with an ongoing condition or illness and to reduce complications (including, but not limited to, techniques to prevent decubitus ulcer formation, wound dressing changes, and infection control) (without the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service) (Use GCTD2 in conjunction with GCTD1)*), and GCTD3 (*Group caregiver training in direct care strategies and techniques to support care for patients with an ongoing condition or illness and to reduce*

complications including, but not limited to, techniques to prevent decubitus ulcer formation, wound dressing changes, and infection control) (without the patient present), face-to-face with multiple sets of caregivers). In the CY 2025 PFS proposed rule (89 FR 61666 through 61667) we proposed to establish new coding and payment for caregiver training services (CTS) for direct care services and supports. The topics of training could include, but would not be limited to, techniques to prevent decubitus ulcer formation, wound dressing changes, and infection control. Refer to section II.E. of this final rule for detailed, technical discussion regarding the proposed description, payment, and utilization of this HCPCS code.

Unlike other caregiver training codes that are currently paid under the PFS, the caregiver training codes for direct care services and support focus on specific clinical skills aimed at the caregiver effectuating hands-on treatment, reducing complications, and monitoring the patient. Like other codes describing caregiver training services, these proposed new codes would reflect the training furnished to a caregiver, in tandem with the diagnostic and treatment services furnished directly to the patient, in strategies and specific activities to assist the patient to carry out the treatment plan. In the proposed rule (89 FR 61666), we explained that we believe that CTS may be reasonable and necessary when they are integral to a patient's overall treatment and furnished after the treatment plan is established. The CTS themselves need to be congruent with the treatment plan and designed to effectuate the desired patient outcomes. Direct care training for caregivers of Medicare beneficiaries should be directly relevant to the person-centered treatment plan for the patient in order for the services to be considered reasonable and necessary under the Medicare program. We stated that we believe that since CTS may be integral to a patient's overall treatment and furnished after the treatment plan is established, these services should be included in the definition of primary care services for purposes of beneficiary assignment in support of the Shared Savings Program's goal to promote coordinated, high-quality care to an ACO's assigned beneficiaries. In the CY 2024 PFS final rule (88 FR 79168 through 79169), we finalized the inclusion of other caregiver training services (CPT codes 96202, 96203, 97550, 97551, and 97552) in the definition of primary care services used for purposes of assignment in the Shared Savings Program. These new caregiver training services codes (HCPCS GCTD1, GCTD2, and GCTD3) are similar to the caregiver training services currently included in the Shared Savings Program definition of primary care services in that these codes allow treating practitioners to report the training furnished to a caregiver, in tandem with the diagnostic and treatment services furnished directly to the patient, in strategies and specific activities to assist the patient to carry out the treatment plan. In the proposed rule, we stated that we also believed the services billed under these codes reflect the types of services we expect primary care providers to provide in order to improve care coordination and care management.

- *Individual Behavior Management/Modification Caregiver Training Services (HCPCS codes GCTB1 and GCTB2):* GCTB1 (*Caregiver training in behavior management/modification for caregiver(s) of a patient with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face; initial 30 minutes*) and GCTB2 (*Caregiver training in behavior management/modification for caregiver(s) of a patient with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service) (Use GCTB2 in conjunction with GCTB1)*). In the CY 2025 PFS proposed rule (89 FR 61667 through 61668), we proposed to establish new coding and payment for caregiver behavior management and modification training that could be furnished to the caregiver(s) of an individual patient. Behavior management/modification training for caregivers of Medicare beneficiaries should be directly relevant to the person-centered treatment plan for the patient in order for the services to be considered reasonable and necessary under the Medicare program. Each training activity should be clearly identified and documented in the treatment plan. All other policies and procedures surrounding CPT 96202 and 96203 would also apply to these services (88 FR 78914 through 78920). Refer to section II.E. of this final rule for detailed, technical discussion regarding the proposed description, payment and utilization of this HCPCS code.

We explained in the proposed rule that we believe that, since CTS may be reasonable and necessary when they are integral to a patient's overall treatment and furnished after the treatment plan is established especially in the case of medical treatment scenarios where assistance by the caregiver receiving the CTS is necessary to ensure a successful treatment outcome for the patient (for example when the patient cannot follow through with the treatment plan for themselves), these services should be included in the definition of primary care services for purposes of beneficiary assignment in support of the Shared Savings Program's goal to promote coordinated, high quality care to an ACO's assigned beneficiaries. In the CY 2024 PFS final rule (88 FR 79168 through 79169), we finalized the inclusion of other caregiver training services (CPT codes 96202, 96203, 97550, 97551, and 97552) in the definition of primary care services used for purposes of assignment in the Shared Savings Program. These new caregiver training services codes (HCPCS codes GCTD1, GCTD2, GCTD3, GCTB1, and GCTB2) are similar to the caregiver training services currently included in the Shared Savings Program definition of primary care services in that these codes allow treating practitioners to report the training furnished to a caregiver, in tandem with the diagnostic and treatment services furnished directly to the patient, in strategies and specific activities to assist the patient to carry out the treatment plan, which is integral to care coordination. We also stated in the proposed rule that we believe the services billed under these codes reflect the types of services we expect primary care providers to provide in order to improve care coordination and care management.

As part of this revised definition of primary care services used for assigning beneficiaries under § 425.402, we proposed to incorporate a provision in § 425.400(c)(1)(ix)(C), specifying that the primary care service codes for purposes of assigning beneficiaries include a CPT code identified by CMS that directly replaces a CPT code specified in § 425.400(c)(1)(ix)(A) or a HCPCS code specified in § 425.400(c)(1)(ix)(B), when the assignment window or expanded assignment window (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

We solicited comments on these proposed changes to the definition of primary care services used for assigning beneficiaries under § 425.400(c)(1)(ix) to Shared Savings Program ACOs for the performance year starting on January 1, 2025, and subsequent performance

years. We solicited comments on any other existing HCPCS or CPT codes and new HCPCS or CPT codes proposed in the proposed rule that we should consider adding to the definition of primary care services for purposes of assignment in future rulemaking.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported CMS's proposed revisions to the definition of primary care services, noting that they would capture more of the services rendered by primary care physicians to Medicare beneficiaries and increase participation in the Shared Savings Program. Commenters stated that the additional service codes proposed by CMS in the proposed rule support the delivery of comprehensive, coordinated, whole-person care and are reflective of other primary care services CMS has used to assign beneficiaries to ACOs. One commenter supported the proposed additions to the definition of primary care services that are provided in conjunction with office/outpatient E/M services, other preventive services, and care management services currently included in the definition of primary care services used for purposes of assignment under (§ 425.400(c)).

Response: We agree with commenters who stated that the proposed revisions to the definition of primary care services will capture more of the services rendered by primary care providers and increase participation in the Shared Savings Program. We also agree that use of these additional services for purposes of assignment would support the delivery of comprehensive, coordinated, whole-person care.

Comment: A couple of commenters urged CMS to continue to monitor the impact of expanding the definition of primary care services to include the additional PFS codes on beneficiary assignment. They suggested that as part of this monitoring, CMS should identify any patterns in population types and characteristics that may be captured by the additional codes and evaluate the effect that the additions to the definition may have on beneficiary assignment. One commenter recommended that CMS use claims data on current codes used for beneficiary assignment to confirm those claims are truly primary care service claims. The same commenter contended that codes that are infrequently billed by primary care providers associated with ACOs should be removed from the definition of primary care services used for purposes of assignment.

Response: As a ''pre-step'' in the claims-based assignment process, CMS identifies all beneficiaries who had at least one primary care service with a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations specified in § 425.402(c). *See* § 425.402(b)(1), (b)(2), and (b)(3). Under claims-based assignment, CMS assigns beneficiaries to ACOs through either one of two steps. Under Step 1, CMS assigns a beneficiary to a Shared Savings Program ACO when the beneficiary receives more primary care services (measured by Medicare-allowed charges) furnished by primary care physicians, nurse practitioners, physician assistants, and clinical nurse specialists in the participating ACO than from the same type of providers at any other Shared Savings Program ACO, non-ACO CMS Certification Number (CCN), or non-ACO individual or group Taxpayer Identification Number (TIN). *See* § 425.402(b)(3). Step 2 only applies to assignable beneficiaries who have not had a primary care service rendered by any primary care physician, nurse practitioner, physician assistant, or clinical nurse specialist, either inside the ACO or outside the ACO, and were therefore not assigned as part of Step 1. *See* § 425.402(b)(4). CMS assigns a beneficiary to a Shared Savings Program ACO under step 2 when the beneficiary receives more primary care services (measured by Medicare-allowed charges) furnished by physicians who are ACO professionals with specialty designations as specified in § 425.402(c) in the participating ACO than from the same type of providers at any other Shared Savings Program ACO, non-ACO CCN, or non-ACO individual or group TIN. *See* § 425.402(b)(4).

Beginning with PY 2025, Step 3 will utilize the expanded window for assignment to identify additional beneficiaries for assignment among Medicare FFS beneficiaries who were not identified under the existing pre-step. (Refer to 88 FR 52444 through 52446.) Specifically, step 3 will identify all such beneficiaries not identified by the pre-step criterion specified in § 425.402(b)(1), who also meet the following criteria:

(1) Received at least one primary care service with a non-physician ACO professional (NP, PA, or CNS) in the ACO during the applicable 12-month assignment window.

(2) Received at least one primary care service with a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in § 425.402(c) during the applicable 24-month expanded window for assignment. *See* § 425.402(b)(5).

As we have previously explained in rulemaking (see, for example, 76 FR 67853 through 67855; see also 80 FR 32748 and 32754), the step-wise assignment methodology maintains the statutory requirement to conduct claims-based beneficiary assignment based on beneficiaries' utilization of physician primary care services, recognizing the necessary and appropriate role of certain specialists in providing primary care services, such as in areas with primary care physician shortages. Additionally, we noted in the June 2015 final rule (80 FR 32750), that we expect that specialist physicians often take the role of primary care physicians in the overall treatment of beneficiaries with certain chronic conditions, and such patterns are captured in step 2 in the current assignment methodology. Further, if services billed under these codes are provided by specialists not considered for purposes of beneficiary assignment, then the services will not be considered in beneficiary assignment.

We will monitor the billing and utilization of the current primary care service codes used for purposes of beneficiary assignment, and other codes, to ensure that the Shared Savings Program considers appropriate billing codes for purposes of beneficiary assignment. If monitoring shows that the inclusion of service codes in the definition of primary care services used for beneficiary assignment is not appropriate, we will address that issue in future notice and comment rulemaking.

Comment: One commenter expressed concern about using the direct caregiver training service code for purposes of assignment, because it can be used by a wide range of providers across various settings. Another commenter disagreed with adding the proposed GSPI1 (safety planning intervention services), the interprofessional consultation service codes (CPT codes 99446, 99447, 99448, 99449, 99451, 99452), and other codes that are not ''predominantly primary care services'' to the definition of primary care service codes used for purposes of assignment. This commenter stated that many of those service codes correspond almost exclusively to specialist, non-primary care services (''in some cases by design'') and thus does not believe the aforementioned codes reflect the provision of primary care. The commenter also stated that add-on codes should not be used for assignment

''because they are not distinct from the base code and would inappropriately weight the encounter.'' Another commenter stated that they did not support the inclusion of the interprofessional consultation codes, except for 99452, as they are usually performed by neurologists, cardiologists, internal medicine sub-specialties, and NPs/PAs (whose specialty affiliation is unknown).

Response: Regarding the inclusion of direct caregiver services, in section II.E of this final rule, we clarify for commenters that Caregiver Training Services (CTS) will be covered and paid under the physician fee schedule (PFS) when furnished personally by physicians and nonphysician practitioners who are authorized under an ''incident to'' provision under their statutory benefit category. Additionally, CTS are covered and paid to physicians and certain nonphysician practitioners under the PFS when provided by auxiliary personnel (as defined in program regulations at § 410.26(a)(1)) when all the ''incident to'' requirements are met. Since these services are covered and paid under the physician fee schedule (PFS) when furnished personally by physicians and nonphysician practitioners who are authorized under an ''incident to'' provision under their statutory benefit category, and since CTS may be integral to a patient's overall treatment and furnished after the treatment plan is established, we continue to believe it is appropriate to include them in the definition of primary care services used for purposes of assignment.

With regard to the comment opposed to the inclusion of these services in the definition of primary care services because they can be furnished in a variety of settings, although these services may be furnished in a variety of settings, we continue to believe it is appropriate to include them in the definition of primary care used for purposes of assignment when they are furnished by a physician or nonphysician practitioner who is an ACO professional given that both primary care providers and specialists provide care in a variety of settings. The safety planning intervention HCPCS code, GSPI1, is being finalized as HCPCS G0560 and as a standalone service in Section II.I of this final rule. Even though the payment policy for this HCPCS code is being finalized with modifications, we continue to believe the services billed under this code reflect the types of primary care services we expect primary care providers to provide related to continuity of care. This code reflects important enhancements to support improvement and integration of care provided for beneficiaries receiving behavioral health treatment from primary care providers. Including safety planning intervention services (HCPCS G0560) in the definition of primary care services used for purposes of assignment also aligns with the CMS Behavioral Health Strategy, the mission of which is to ensure that high-quality behavioral health services and supports are accessible to Medicare beneficiaries.

It is not clear which services the commenter referred to as ''other codes that are not predominantly primary care services'' and so we are not persuaded by this comment. Additionally, as part of the Shared Savings Program step-wise assignment methodology, according to § 425.400(a), CMS employs the step-wise assignment methodology described in § 425.402 and § 425.404 a Medicare FFS beneficiary is assigned to an ACO if the—(A) beneficiary meets the eligibility criteria under § 425.401(a); and (B) beneficiary's utilization of primary care services meets the criteria established under the assignment methodology described in § 425.402 and § 425.404, which includes specialist physicians that take the role of primary care physicians in the overall treatment of beneficiaries with certain chronic conditions (see 80 FR 32750). Although these services may be furnished in a variety of settings, we continue to believe it is appropriate to include them in the definition of primary care used for purposes of assignment when they are furnished by physician or nonphysician practitioner who is an ACO professional. As a result, and as explained in prior rulemaking (88 FR 79170), we believe the assignment methodology minimizes the potential for a beneficiary to be assigned based on specialty care.

Regarding the comment that add-on codes are not distinct from the base code and would inappropriately weight the encounter, we believe that including add on services in determining where a beneficiary has received the plurality of primary care services in step 1 of the assignment methodology helps ensure that a beneficiary is assigned to the ACO whose ACO participants are actually providing the plurality of primary care for that beneficiary, and thus, should be responsible for managing the patient's overall care, or is not assigned to any ACO if the plurality of the beneficiary's primary care is furnished by practitioners in a non-ACO entity (see, for example, 80 FR 32748).

We are persuaded by comments that oppose the addition of interprofessional consultation services to the definition of primary care services used for purposes of assignment, except for CPT code 99452. As part of the CY 2019 PFS final rule (83 FR 59489 through 59491), we finalized interprofessional consultation services codes that differentiate between primary care and consultative practitioners, which support payment both to the treating, requesting (primary care) practitioner (CPT code 99452) and the receiving, consultative specialist (CPT codes 99446–99449 and 99451), who engage in electronic consults. As a result, some practitioners have already become accustomed to providing and billing for these services. We agree with the commenter that, of the set of CPT codes included in the interprofessional consultation services category, only 99452 should be included in the definition of primary care services for purposes of assignment because the other services in this category are furnished by consultative providers, not the beneficiaries' primary care provider. While some of specialties performing these consultative services may be included in the list of specialties used in steps 2 and 3 of our claims-based assignment methodology, when these specialties furnish the services described by CPT codes 99456, 99457, 99448, 99449, and 99451, they are furnishing these services in a consultative role at the request of the patient's treating/requesting physician or other qualified health care professional, not in a primary care role. If CPT codes 99456, 99457, 99448, 99449, and 99451 were included in the definition of primary care services used for purposes of assignment, it could lead to inappropriate assignment based on the furnishing of consultative visits, not primary care. In reviewing utilization of CPT code 99452, we found that 43.6.percent of the services were furnished by physicians included in the step 1 of assignment and almost 43.3 percent were furnished by non-physician practitioners or specialists included in step 2. In the final policies described in section II.G of this final rule, we are finalizing interprofessional consultation code 99452 as part of the APCM service.

Comment: We also received feedback on our solicitation for additional modifications to the primary care service codes used for purposes of beneficiary assignment. One commenter supports the policy proposed but not finalized in the CY 2024 PFS final rule (88 FR 79164) to revise the definition of primary care services to include RPM CPT codes 99457 and 99458, which builds on support provided for digital health in (for example, adding HCPCS

codes G2012 and G2252 codes for virtual check-ins). Another commenter recommended that CMS utilize the nursing facility as a key site of primary care and account for it in our beneficiary assignment methodology to ''facilitate greater partnership between ACOs and nursing facility staff and mitigate issues in misalignment which occurs when new institutionalized beneficiaries are misaligned to their historic community based primary care providers.'' Another commenter opposed the inclusion of caregiver training service codes (97550–97552), which were finalized in the CY 2024 PFS final rule (88 FR 79168), as 2024 is the first year they were in the CPT book and there are no claims data available on these codes.

Response: We appreciate this feedback and will consider it in future rulemaking. Regarding the comment suggesting that CMS use the nursing facility as a key site of primary care and account for it in our beneficiary assignment methodology, the Shared Savings Program has several participating ACOs that have large institutional populations or high-need, high-cost beneficiaries that receive home based primary care assigned beneficiary populations and we do consider primary care services provided in the nursing facility for purposes of assignment in the Shared Savings Program. With regard to the opposition to the inclusion of caregiver training service codes 97550–97552, we continue to believe that their inclusion is appropriate for the reasons explained in the CY 2024 PFS final rule (88 FR 79168 through 79169).

After consideration of public comments, we are finalizing our proposal with modifications.

We are finalizing a revised definition of primary care services in a new provision of the Shared Savings Program regulations at § 425.400(c)(1)(ix) to include the list of HCPCS and CPT codes specified in § 425.400(c)(1)(viii) along with the following additions: CPT codes 99452 and 9X091 (which is being finalized as 98016); and HCPCS codes GFCI1 (which is being finalized as G0544), GSPI1 (which is being finalized as G0560), GPCM1, GPCM2, and GPCM3 (which are being finalized as G0556, G0557, and G0558, respectively), GCDRA and GCDRM (which are being finalized as G0537 and G0538, respectively), GCTD1, GCTD2 and GCTD3 (which are being finalized as G0541, G0542, and G0543, respectively), and GCTB1 and GCTB2 (which are being finalized as G0539 and G0540, respectively), as discussed in the preceding paragraphs.

We are not finalizing our proposal to include CPT codes 99446, 99447, 99448, 99449, and 99451. We are additionally not finalizing that GSPI1 will only be considered a primary care service when billed with a base code that is also a primary care service. This is because the payment policy finalized in section II.I of this final rule regards this HCPCS code as a standalone service. We are finalizing as proposed that the new provision at § 425.400(c)(1)(ix), which will be applicable for use in determining beneficiary assignment for the performance year starting on January 1, 2025, and subsequent performance years.

The code descriptions for HCPCS codes GPCM1, GPCM2, GPCM3 (G0556, G0557, and G0558, respectively), GCDRA, and GCDRM (G0537 and G0538, respectively) are being finalized with revisions in section II.G of this final rule.

Further, the text of the proposed regulations in the CY 2025 PFS proposed rule (89 FR 62221 through 62222) included a proposed technical modification (to the introductory text in § 425.400(c)(1)(viii), to limit the applicability of this provision to the performance year starting on January 1, 2024) that was not described in preamble. This change is necessary so that we can effectuate § 425.400(c)(1)(ix) as explained in the proposed rule and its regulatory text: to apply for the performance year starting on January 1, 2025, and subsequent performance years. We received no comments addressing the proposed technical modification to § 425.400(c)(1)(viii), and we are finalizing this change without modification.

b. Revisions to Criteria for ACO Models to Waive Shared Savings Program Statutory Requirements Giving Precedence for Assignment based on Beneficiary Voluntary Alignment

(1) Background

Section 50331 of the Bipartisan Budget Act of 2018 amended section 1899(c) of the Act to add a new paragraph (2)(B) that requires the Secretary, for performance year 2018 and each subsequent performance year, to permit a Medicare FFS beneficiary to voluntarily identify an ACO professional as the primary care provider of the beneficiary for purposes of assigning such beneficiary to an ACO. A voluntary identification by a Medicare FFS beneficiary under this provision supersedes any claims-based assignment. In earlier rulemaking (81 FR 80501 through 80510 and 83 FR 59959 through 59964), CMS finalized modifications to the Shared Savings Program regulations at § 425.402(e) to implement the statutory requirements governing voluntary alignment.

In the November 2018 final rule (83 FR 59959 through 59964), we finalized changes to the beneficiary voluntary alignment policies (refer to § 425.402(e)) to revise the requirements previously established for the voluntary alignment process. We explained that it could be appropriate, in limited circumstances, to align a beneficiary to an entity participating in certain specialty and disease-specific CMS Innovation Center models to test a new system of payment and service delivery that CMS believes will lead to better health outcomes for Medicare beneficiaries while lowering costs to Medicare Parts A and B. Additionally, we explained that it could be difficult for the CMS Innovation Center to conduct a viable test of a specialty or disease-specific model, if we were to require that beneficiaries who previously designated an ACO professional as their primary clinician remain assigned to the Shared Savings Program ACO under all circumstances. We applied this exception for the Comprehensive ESRD Care (CEC) model, which assigned beneficiaries to entities participating in the model through the beneficiaries' first treatment at a participating dialysis facility.

Currently, under § 425.402(e)(2)(ii)(D), we will not assign a beneficiary who has voluntarily identified a Shared Savings Program ACO professional to a Shared Savings Program ACO when the beneficiary is also eligible for claims-based assignment to an entity participating in a model tested or expanded under section 1115A of the Act under which claims-based assignment is based solely on claims for services other than primary care services and for which there has been a determination by the Secretary that a waiver under section 1115A(d)(1) of the Act of the requirement in section 1899(c)(2)(B) of the Act is necessary solely for purposes of testing the model.

(2) Revisions

As discussed in the CY 2025 PFS proposed rule (89 FR 61851 through 61853), since finalization of this limited exception to the Shared Savings Program's voluntary alignment policy, disease-specific CMS Innovation Center models have been developed that use claims for both primary care services and services other than primary care in determining claims-based assignment to entities participating in these models. In the proposed rule, we explained that we believed it would be appropriate to propose to broaden this limited exception and allow a voluntarily

aligned Shared Savings Program beneficiary to be claims-based assigned to an entity participating in a disease- or condition-specific CMS Innovation Center model when that model uses claims-based assignment that is based on primary care and/or other services. Disease- or condition-specific CMS Innovation Center models are designed to support condition management, coordination, and services for patients that have a specific disease or condition that often requires coordination of care across specialties and settings. For example, the CMS Innovation Center has tested disease- and condition-based episode payment models, such as those focused on oncology and kidney disease.[523] Doing so would help beneficiaries with certain diseases or conditions benefit from the focused attention and care coordination related to the disease or condition that an entity participating in such a model could provide. In the proposed rule, we stated we would identify models for which the exception would apply in our Shared Savings and Losses and Assignment Methodology and Quality Performance Specifications document, which is located on the Shared Savings Program website, *https://www.cms.gov/medicare/payment/fee-for-service-providers/shared-savings-program-ssp-acos*. We stated that this proposed expanded exception would be applicable to beneficiaries assigned to entities participating in CMS Innovation Center models under which assignment is based solely on (1) claims for primary care and/or other services related to treatment of one or more specific diseases or conditions targeted by the model, or (2) claims for services other than primary care services, when the Secretary has determined that a waiver is necessary solely for purposes of testing the model.

An example of a CMS Innovation Center model whose assigned beneficiaries may be impacted by the proposed expanded exception is the Kidney Care Choices (KCC) model,[524] which is designed to help health care providers reduce the cost and improve the quality of care for patients with late-stage chronic kidney disease and ESRD. The KCC model builds on the previous CEC model [525] by adding strong financial incentives for health care providers to manage the care for Medicare beneficiaries with chronic kidney disease (CKD) stage 4 and ESRD, to delay the onset of dialysis and to incentivize kidney transplantation. Under the CEC model, the CMS Innovation Center worked with groups of health care providers, dialysis facilities, and other suppliers involved in the care of ESRD beneficiaries to improve the coordination and quality of care that these individuals received. We determined that an ESRD beneficiary, who was otherwise eligible for assignment to an entity participating in the CEC model, could benefit from the focused attention on and increased care coordination for their ESRD available under the CEC model. As described above, we created a narrow exception to the general policy that a beneficiary who had voluntarily aligned to a Shared Savings Program ACO professional would supersede their alignment to a CMS Innovation Center model. Specifically, we did not assign a beneficiary to the ACO when the beneficiary was also eligible for alignment to an entity participating in the CEC model.

KCC is more complex than CEC and is designed to capture multiple care relationships and uses a mix of E/M codes for alignment of beneficiaries with CKD and managing clinician Monthly Capitation Payments for aligning ESRD beneficiaries. The existing exception is not applicable to KCC in part because claims for primary care and other services related to the treatment of one or more specific diseases or conditions targeted by the model (chronic kidney disease (CKD) stage 4 and ESRD) are considered as part of the model's beneficiary alignment methodology, which takes into consideration where a beneficiary receives the majority of their kidney care as well as the beneficiary's diagnosis of CKD stages 4 or ESRD receiving maintenance dialysis. KCC's alignment methodology could align beneficiaries receiving primary care services that are also considered for Shared Savings Program assignment if furnished and billed under one of the HCPCS/CPT codes included in § 425.400(c) by ACO professionals who are primary care physicians, physicians with one of the primary specialty designations in § 425.402(c), NPs, PAs, and/or CNSs. In the proposed rule, we noted that outpatient/office E/M services are included in § 425.400(c) and that nephrology is one of the primary specialty designations under § 425.402(c) so we anticipated that, if this proposal is finalized, most, if not all, beneficiaries who voluntarily align to a physician that participates in a Shared Savings Program ACO and meet the KCC alignment criteria would be claims-based align to the KCC model, assuming there is a determination by the Secretary that waiver of the requirement in section 1899(c)(2)(B) of the Act is necessary solely for purposes of testing the model.

As discussed in the CY 2025 PFS proposed rule (89 FR 61851 through 61853), we proposed expanding upon current Shared Savings Program regulations to broaden the existing exception to the program's voluntary alignment policy, which would allow the exception to apply to beneficiaries assigned to entities in a CMS Innovation Center model under which claims-based assignment is based solely on (1) claims for primary care and/or other services related to treatment of one or more specific diseases or conditions targeted by the model, or (2) claims for services other than primary care services, and for which there has been a determination by the Secretary that waiver of the requirement in section 1899(c)(2)(B) of the Act is necessary for purposes of testing the model.

Under the proposed revisions, if a beneficiary voluntarily aligns to a Shared Savings Program ACO under § 425.402(e), we would not assign the beneficiary to that Shared Savings Program ACO when the beneficiary is also eligible for claims-based assignment to an entity participating in a model tested or expanded under section 1115A of the Act under which claims-based assignment is based solely on (1) claims for primary care and/or other services related to treatment of one or more specific diseases or conditions targeted by the model or (2) claims for services other than primary care service, and for which there has been a determination by the Secretary that waiver of the requirement in section 1899(c)(2)(B) of the Act is necessary for purposes of testing the model. We would not supersede voluntary alignment for CMS Innovation Center models that are not designed to target a specific disease or condition, such as ACO REACH. While ACO REACH contains design features for organizations serving high needs beneficiaries, it is designed more broadly, and not for beneficiaries with a specific disease or condition. Such models do not target a specific disease or condition. Therefore, a beneficiary's claims-based assignment to an entity participating in such a model would not supersede their voluntary alignment to

[523] Refer to Innovation Models website: *https://www.cms.gov/priorities/innovation/models#views=models&cat=disease-specific%20&%20episode-based%20models.*

[524] Refer to *https://www.cms.gov/priorities/innovation/innovation-models/kidney-care-choices-kcc-model.*

[525] Refer to *https://www.cms.gov/priorities/innovation/innovation-models/comprehensive-esrd-care.*

a Shared Savings Program ACO under our proposal.

For example, under the KCC model, alignment is based on where a beneficiary receives the majority of their nephrology services and/or dialysis management services. Claims for those kidney care services could include claims for services that, under the Shared Savings Program's claims-based assignment policies, would lead a beneficiary to be assigned to a Shared Savings Program ACO. Since under the KCC model, claims-based assignment is based solely on claims for primary care and/or other services (kidney care services) related to the treatment of one or more specific diseases or conditions targeted by the model (chronic kidney disease (CKD) stage 4 and ESRD), our proposed exception would apply and a beneficiary who voluntarily aligned to a Shared Savings Program ACO and who received kidney care services from an entity participating in the KCC model would nonetheless be claims-based assigned to the KCC model, if there is a determination by the Secretary that waiver of the requirement in section 1899(c)(2)(B) of the Act is necessary solely for purposes of testing the KCC model. This proposed expansion of the voluntary alignment exception would support assignment of beneficiaries to entities participating in CMS Innovation Center models, which would reduce barriers for the CMS Innovation Center to conduct viable tests of disease-or condition-specific models and thereby improve access to high-quality, value-based specialty care, such as that provided by an entity participating in a model focused on diabetes care or care provided by specific specialists, such as cardiologists or gastroenterologists.

This proposal would also support CMS's goals of improving patient care, lowering costs, and better aligning payment systems to promote patient-centered practices through accountable and value-based care. We continue to believe that specific subpopulations of Medicare beneficiaries who are otherwise eligible for assignment to an entity participating in a disease or condition-specific CMS Innovation Center model, but who may not be captured by § 425.402(e)(2)(ii)(D) because their models consider primary care services for purposes of assignment, could benefit from the focused attention and increased care coordination offered by an entity participating in a disease or condition-specific model. Application of this exception would require a determination from the Secretary to waive the voluntary alignment provision.

Under this proposal, if a beneficiary designated an ACO professional participating in a Shared Savings Program ACO as the physician or practitioner they consider responsible for coordinating their overall care (that is, their primary clinician), but the beneficiary is also eligible for assignment to an entity participating in a model tested or expanded under section 1115A of the Act under which claims-based assignment is based solely on (1) claims for primary care and/or other services related to treatment of one or more specific diseases or conditions targeted by the model, or (2) claims for services other than primary care services, and for which there has been a determination that a waiver of the requirement in section 1899(c)(2)(B) of the Act is necessary solely for purposes of testing the model, the CMS Innovation Center or its designee would notify the beneficiary of their assignment to an entity participating in the model. Additionally, although such a beneficiary may still voluntarily identify an ACO professional participating in a Shared Savings Program ACO as their primary clinician and seek care from any clinician, the beneficiary would not be assigned to a Shared Savings Program ACO even if the designated primary clinician is an ACO professional in a Shared Savings Program ACO.

For PY 2024, there are approximately 152,000 beneficiaries with a primary clinician selection who is a Shared Savings Program ACO professional as defined at § 425.20, and approximately 83,000 are voluntarily aligned to a Shared Savings Program ACO after meeting all the assignment eligibility criteria as described at § 425.401(a). Overall, this represents an exceedingly small share of the overall Shared Savings Program assigned beneficiary population, currently 10.8 million [526] beneficiaries. Additionally, simulating our proposed § 425.402(e)(2)(ii)(D) using PY 2024 data, less than 1 percent (703) of beneficiaries who are voluntarily aligned to a Shared Savings Program ACO would instead be claims-based assigned to an entity participating in a CMS Innovation Center model.

The benefit of allowing beneficiaries who voluntarily align to a Shared Savings Program ACO to be claims-based assigned to an entity participating in a CMS Innovation Center tailored to the needs of their specific disease or condition far outweighs any cost to the Shared Savings Program. The impact of assigning these beneficiaries to an entity participating in a CMS Innovation Center model notwithstanding their voluntary designation would be minimal because so few beneficiaries would be impacted by this proposed expansion of the exception (for PY 2024, less than 1 percent of all beneficiaries who voluntarily align to a Shared Savings Program ACO). As explained in the proposed rule, this proposal would enable us to better test CMS Innovation Center models and ultimately improve health outcomes for Medicare beneficiaries with the specific diseases and conditions targeted by CMS Innovation Center models. We also recognize the importance of continuing to allow beneficiaries to voluntarily identify an ACO professional as their primary clinician for purposes of assignment to a Shared Savings Program ACO, and we reiterate that, based on PY 2024 data, this proposal would impact very few beneficiaries who voluntarily align to Shared Savings Program ACOs (less than 1 percent of all such beneficiaries). Beneficiaries who voluntarily align to a Shared Savings Program ACO but are, under our proposal, ultimately claims-based assigned to an entity participating in a CMS Innovation Center model would be notified of this in accordance with the CMS Innovation Center model's participation agreement. We proposed to apply these modifications to our policies under the Shared Savings Program regarding voluntary alignment beginning for performance year 2025, and subsequent performance years. We proposed to incorporate these new requirements into new regulations at § 425.402(e)(2)(iii). We solicited comments on this proposal.

Accordingly, since the new proposed provisions § 425.402(e)(2)(iii) would supersede the existing provisions at § 425.402(e)(2)(ii) for performance year 2025 and subsequent performance years, we proposed to revise the introductory text at § 425.402(e)(2)(ii) to designate that provision's applicability for performance years starting on January 1, 2019, through 2024.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commentors supported our proposal to expand the voluntary alignment waiver and indicated that the proposal would streamline model attribution and allow for those beneficiaries voluntarily aligned to a Shared Savings Program ACO to be more easily assigned to entities participating in other non-ACO value-based care models. Other commentors stated that if this proposal

[526] Refer to *https://www.cms.gov/files/document/2024-shared-savings-program-fast-facts.pdf.*

is finalized, CMS should provide additional clarification in this final rule around the limitations for when this proposal would be applied and propose any future expansions of the voluntary alignment waiver outside of the contexts of oncology and nephrology through rulemaking.

Response: CMS agrees that assigning beneficiaries to entities participating in disease- and condition-specific models, has great potential to improve outcomes for those beneficiaries, particularly for beneficiaries who may benefit from specialized ESRD and cancer care.

The use of this expanded voluntary alignment waiver will be limited: if a beneficiary designated an ACO professional participating in a Shared Savings Program ACO as the physician or practitioner they consider responsible for coordinating their overall care (that is, their primary clinician), but the beneficiary is also eligible for assignment to an entity participating in a model tested or expanded under section 1115A of the Act under which claims-based assignment is based solely on (1) claims for primary care and/or other services related to treatment of one or more specific diseases or conditions targeted by the model, or (2) claims for services other than primary care services, and for which there has been a determination that a waiver of the requirement in section 1899(c)(2)(B) of the Act is necessary solely for purposes of testing the model, the CMS Innovation Center or its designee will notify the beneficiary of their assignment to an entity participating in the model. Application of this waiver will be announced by the Innovation Center. As we explained in the proposed rule, this proposed policy is designed to be responsive to innovations in disease- and condition-specific models, will be applied narrowly, and will have a limited impact on beneficiaries that are voluntarily aligned to a Shared Savings Program ACO. We refer commenters to discussion in the CY 2025 PFS proposed rule (89 FR 61851 through 61853) and earlier in this section of this final rule for additional details on how this policy will be applied and its anticipated limited impact. CMS plans to issue guidance and communicate with ACOs and interested parties about these topics, including when the waiver will be applicable to a disease- or condition-specific model.

In the future, if we determined that it would be appropriate to further modify our voluntary alignment waiver policy, we would do so through notice-and-comment rulemaking.

Comment: Most commentors expressed opposition to the proposed changes to expand the voluntary alignment waiver. Commenters stated that the Shared Savings Program, ''a proven model that benefits all parties, patients foremost, and exists 'perpetually,' is more consistent and has demonstrated efficacy,'' whereas Innovation Center Models are temporary and such programs terminate or ''may fall out of favor''. Several commenters explained that pulling beneficiaries out of the Shared Savings Program and putting them into a time-limited model goes against the principles of accountable care by ''carving up accountability'' and works against CMS's longstanding efforts to grow the Shared Savings Program. Several other commentors cited voluntary alignment as the ''gold standard'' for beneficiary assignment, noting that if a beneficiary voluntarily aligns themselves to their primary clinician, that should take precedence over claims-based assignment, even if that beneficiary could benefit from the specialized care that an entity participating in a disease- or condition-specific model can offer. Numerous commentors expressed opposition to the policy on the grounds that it ''weakens voluntary alignment.'' Another commentor noted that ''prioritizing assignment for administrative reasons'' might disproportionately (negatively) affect beneficiaries from marginalized or underserved populations, who may have fewer options in selecting healthcare providers or face ''additional barriers in accessing preferred care settings.''

Response: CMS seeks to continuously improve beneficiary care and outcomes. Beneficiaries from marginalized and underserved populations face obstacles to receiving quality and efficient care and several policies finalized in this rule, including the prepaid shared savings option and Health Equity Benchmark Adjustment, are designed to support ACO efforts to provide quality and efficient care to these populations.

The success of the Shared Savings Program notwithstanding, we explained in the CY 2025 PFS proposed rule (89 FR 61852) that targeting a subset of beneficiaries with specific diseases or conditions who received care from entities participating in certain disease- or condition-specific models and allowing them to more easily align to those entities will lead to better care and outcomes. We refer readers to our discussion on this subject in the proposed rule (89 FR 61852). In addition, as explained in greater detail in the proposed rule (89 FR 61851 through 61853) and based on our simulation of the impact of proposed § 425.402(e)(2)(ii)(D) using PY 2024 data, while Innovation Center Models are, by their nature, time-limited, but the models themselves have informed, and continue to inform, permanent Medicare policies, including Shared Savings Program policies (for example, the SNF 3-day Rule Waiver, AIP, and HEBA).

We also do not believe that the proposed expansion of the voluntary alignment waiver is an ''administrative'' change, as it will result in CMS assigning beneficiaries to entities participating in the models that can most appropriately care for their specific disease or condition (refer to 89 FR 61853). We are not clear why this commenter believes this proposal would be considered administrative as opposed to programmatic.

We additionally do not believe that this expansion will result in a negative impact on beneficiaries. To the contrary, for the reasons stated in the proposed rule (89 FR 61853), we continue to believe that the specific subpopulations of Medicare beneficiaries who are otherwise eligible for assignment to an entity participating in a disease- or condition-specific CMS Innovation Center model, but who may not be captured by § 425.402(e)(2)(ii)(D) because their models consider primary care services for purposes of assignment, could benefit from the focused attention and increased care coordination offered by an entity participating in a disease- or condition-specific model. We also recognize the importance of continuing to allow beneficiaries to voluntarily identify an ACO professional as their primary clinician for purposes of assignment to a Shared Savings Program ACO, and we reiterate that, based on PY 2024 data, this policy will impact very few beneficiaries who voluntarily align to Shared Savings Program ACOs (less than 1 percent of all such beneficiaries). We also note that this policy does not undermine beneficiary choice in any way because beneficiaries may continue to receive care at providers of their choosing.

We reiterate that application of this broadened voluntary alignment waiver policy will be limited to beneficiaries assigned to entities in a CMS Innovation Center model under which claims-based assignment is based solely on (1) claims for primary care and/or other services related to treatment of one or more specific diseases or conditions targeted by the model, or (2) claims for services other than primary care services, and for which there has been a determination

by the Secretary that waiver of the requirement in section 1899(c)(2)(B) of the Act is necessary for purposes of testing the model. The application of this policy will not supersede voluntary alignment for CMS Innovation Center models that are not designed to target a specific disease or condition, such as the ACO REACH Model. While the ACO REACH Model contains design features for organizations serving high needs beneficiaries, it was designed more broadly, and not for beneficiaries with a specific disease or condition. It therefore does not target a specific disease or condition, and a beneficiary's claims-based assignment to an entity participating in such a model will not supersede their voluntary alignment to a Shared Savings Program ACO under this policy.

After consideration of public comments, we are finalizing our proposal to add new § 425.402(e)(2)(iii) as proposed, to allow the voluntary alignment exception to apply to beneficiaries assigned to entities in a CMS Innovation Center model under which claims-based assignment is based solely on (1) claims for primary care and/or other services related to treatment of one or more specific diseases or conditions targeted by the model, or (2) claims for services other than primary care services, and for which there has been a determination by the Secretary that waiver of the requirement in section 1899(c)(2)(B) of the Act is necessary for purposes of testing the model. However, we are finalizing technical modifications to the phrasing and the proposed structure § 425.402(e)(2)(iii)(D) for clarity and consistency with our intended meaning. Specifically, we are finalizing modifications to clarify that a condition of the applicability of the exception is the determination by the Secretary that waiver of the requirement in section 1899(c)(2)(B) of the Act is necessary solely for purposes of testing the model (as specified in § 425.402(e)(2)(iii)(D)(*2*)), in addition to claims-based assignment for the model being based on either (i) claims for primary care and/or other services related to treatment of one or more specific diseases or conditions targeted by the model, or (ii) claims for services other than primary care services (as specified in § 425.402(e)(2)(iii)(D)(*1*)). Absent these technical modifications, the provision on the waiver of the requirement in section 1899(c)(2)(B) of the Act could be read as applying only in the case of models with claim-based assignment based on claims for services other than primary care services. We are also finalizing our proposal to revise the introductory text at § 425.402(e)(2)(ii) to designate that provision's applicability for performance years starting on January 1, 2019, through 2024.

4. Quality Performance Standard & Other Reporting Requirements

a. Background

Section 1899(b)(3)(C) of the Act states that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both for purposes of assessing such quality of care. As we stated in the November 2011 final rule establishing the Shared Savings Program (76 FR 67872), our principal goal in selecting quality measures for ACOs has been to identify measures of success in the delivery of high-quality health care at the individual and population levels. In the November 2011 final rule, we established a quality measure set spanning four domains: patient experience of care and wherever practicable, caregiver experience of care, care coordination/patient safety, preventative health, and at-risk population (76 FR 67872 through 67891). We have subsequently updated the measures that comprise the quality performance measure set for the Shared Savings Program through rulemaking in the CY 2015, 2016, 2017, 2019, 2021, 2023, and 2024 PFS final rules (79 FR 67907 through 67921, 80 FR 71263 through 71268, 81 FR 80484 through 80489, 83 FR 59708 through 59715, 87 FR 69860 through 69863, and 88 FR 79112 through 79114, respectively).

b. Requiring Shared Savings Program ACOs To Report the Alternative Payment Model (APM) Performance Pathway (APP) Plus Quality Measure Set

(1) Background

In the CY 2021 PFS final rule, we finalized modifications to the Shared Savings Program quality reporting requirements and quality performance standard for performance year 2021 and subsequent performance years (85 FR 84720 through 84743). For performance year 2021 and subsequent years, ACOs are required to report quality data via the APP codified at § 414.1367. Pursuant to policies finalized under the CY 2022 and CY 2023 PFS (86 FR 65685; 87 FR 69858), to meet the quality performance standard under the Shared Savings Program through performance year 2024, ACOs must report the APP quality measure set, through which they: (1) must report either the ten CMS Web Interface measures or the three electronic clinical quality measures (eCQMs)/Merit-based Incentive Payment System (MIPS) clinical quality measures (CQMs); and (2) must administer the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS survey. In the CY 2024 PFS final rule, we established the Medicare Clinical Quality Measures for Accountable Care Organizations participating in the Medicare Shared Savings Program (Medicare CQMs) as a new collection type for Shared Savings Program ACOs reporting the APP quality measure set for performance year 2024 and subsequent performance years (88 FR 79107). In performance year 2024, Shared Savings Program ACOs have the option to report on Medicare CQMs, which are reported on an ACO's eligible Medicare fee-for-service beneficiaries, instead of an ACO's all payer/all patient population. Medicare CQMs are aligned with MIPS standards for data completeness as described at 414.1340, measure benchmarking as described at 414.1380(b)(1)(ii) and scoring as described at 414.1367 (88 FR 79099 and 88 FR 79108). In the CY 2024 PFS final rule, we stated that Medicare CQMs would serve as a transition collection type to help some ACOs build the infrastructure, skills, knowledge, and expertise necessary to report all payer/all patient eCQMs/MIPS CQMs and support ACOs in the transition to all payer/all patient quality measure reporting (88 FR 79097 through 79098). Since the CY 2021 PFS final rule was issued, ACOs and other interested parties have continued to express concerns about requiring ACOs to report all payer/all patient eCQMs/MIPS CQMs due to the cost of purchasing and implementing a system wide infrastructure to aggregate data from multiple ACO participant taxpayer identification numbers (TINs) and varying electronic health record (EHR) systems (86 FR 65257). In the CY 2022 PFS final rule, commenters supported our acknowledgement of the complexity of the transition to all payer/all patient eCQMs/MIPS CQMs (86 FR 65259). In public comments on the CY 2023 PFS proposed rule, some commenters expressed multiple concerns regarding the requirement to report all payer/all patient eCQMs/MIPS CQMs beginning in performance year 2025, such as issues related to meeting all payer data requirements, data completeness requirements, data aggregation and deduplication issues, and

interoperability issues among different EHRs (87 FR 69837).

Some ACOs face continued difficulties in aggregating data on the three all payer/all patient eCQMs/MIPS CQMs that are part of the existing APP quality measure set. The Shared Savings Program continues to receive feedback from ACOs and other stakeholders about the difficulties with reporting on the three all payer/all patient eCQMs/MIPS CQMs and meeting data management requirements given their muti-practice/multi EHR structure. Additionally, we continue to receive feedback on the challenges of aggregating data due to the health information technology (IT) infrastructure in use by ACOs and the current state of interoperability. Building on our goal to provide technical support to ACOs and help ACOs build the skills necessary to aggregate and match patient data to report all payer/all patient eCQMs/MIPS CQMs, in December 2022, we hosted a webinar to support ACOs in the transition to reporting all payer/all patient eCQMs/MIPS CQMs and released a guidance document on the topic. Resources from the ''Reporting MIPS CQMs and eCQMs in the APM Performance Pathway'' webinar are available at *https://youtu.be/LDrpoGnnRQs*. The guidance document, entitled ''Medicare Shared Savings Program: Reporting MIPS CQMs and eCQMs in the Alternative Payment Model Performance Pathway (APP)'' is available in the Quality Payment Program Resource Library at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2179/APP%20Guidance%20Document%20for%20ACOs.pdf*. Over the past two years, we have learned that there are complexities and hurdles concerning ACOs adopting the all payer/all patient collection types; as a result, the widespread adoption of the all payer/all patient collection types require further time and support. For example, our internal data indicate that in performance year 2021, 12 out of 475 ACOs reported eCQMs/MIPS CQMs under the APP, while 37 out of 482 ACOs reported eCQMs/MIPS CQMs in performance year 2022.[527] Submission data for performance year 2023 indicate that 72 out of 456 ACOs reported eCQMs/MIPS CQMs under the APP. Further, we have come to understand that additional maturation processes are needed to support large, complex organizations like ACOs that participate in the Shared Savings Program to fully and equitably participate in the all payer/all patient collection types.

CMS' goal, as stated in the CY 2024 PFS final rule, is to support ACOs in the adoption of all payer/all patient measures (88 FR 79098). In that rule, we described our intention to monitor the reporting of quality data utilizing the Medicare CQM collection type, which would include assessing if any Medicare CQMs qualify as topped out as described at § 414.1380(b)(1)(iv) (88 FR 79098). We also noted that, ''[s]eparately, we may specify higher standards, new measures, or both—up to and including proposing to sunset the Medicare CQM collection type in future rulemaking—to ensure that Medicare CQMs conform to the intent of section 1899(b)(3)(C) of the Act and the priorities established in the CMS National Quality Strategy'' (88 FR 79098).

Under the goals of the CMS National Quality Strategy to improve the quality and safety of healthcare for everyone, CMS is implementing a building-block approach and aligning the measures used to establish the Shared Savings Program quality performance standard with the Universal Foundation of quality measures and streamlining quality measures across CMS quality programs for measuring primary care clinician performance in the adult and pediatric populations.[528] In the CY 2024 PFS proposed rule, we stated that ''we intend to propose future policies aligning the APP [quality] measure set for Shared Savings Program ACOs with the quality measures under the 'Universal Foundation' beginning in performance year 2025'' (88 FR 52423). A few commenters were supportive of aligning the APP quality measure set with the Universal Foundation measures, while other commenters were opposed. Several commenters urged CMS to first test measures before making them required for the Shared Savings Program and scored for Shared Savings Program ACOs. Shared Savings Program ACOs were also concerned about balancing the alignment of the Universal Foundation measures with efforts to reduce administrative burden, potential growth in the number of measures Shared Savings Program ACOs would have to report, and implementing multiple substantive changes applicable to Shared Savings Program ACOs in performance year 2025. In the CY 2024 PFS final rule, we stated that we will take the comments under consideration in future rulemaking, as we evaluate the impact of aligning the APP quality measure set with the Universal Foundation measures (88 FR 79114).

(2) Revisions

(a) Requiring Shared Savings Program ACOs To Report the APP Plus Quality Measure Set

In section IV.A.4.c.(2) of the CY 2025 PFS proposed rule (89 FR 62023 through 62024), we proposed to create the APP Plus quality measure set to align with the Adult Universal Foundation measures. Out of the ten Adult Universal Foundation measures, five of the measures are already in the APP quality measure set for performance year 2025 under policies finalized in the CY 2024 PFS final rule (88 FR 79112 through 79113). There is one measure—Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Measure # 484)—in the APP quality measure set that is not an Adult Universal Foundation measure, resulting in a total of six measures that are in the APP quality measure set.

Under the approach we proposed in the CY 2025 PFS proposed rule, the APP Plus quality measure set would incrementally grow to comprise of eleven measures, consisting of the six measures in the existing APP quality measure set and five newly proposed measures from the Adult Universal Foundation measure set that would be incrementally incorporated into the APP Plus quality measure set over performance years 2025 through 2028. The proposed new measures and the timeline for incorporating the measures into the APP Plus quality measure set are described in section IV.A.4.c.(3) of the CY 2025 PFS proposed rule and below. In section IV.A.4.c.(2) of the CY 2025 PFS proposed rule, we discussed how the APP Plus quality measure set would be an optional measure set for APP reporters. For performance year 2025 and subsequent performance years, we proposed to require Shared Savings Program ACOs to report the APP Plus quality measure set as proposed in section III.G.4.b.(2)(a) of the CY 2025 PFS proposed rule (89 FR 61854 through 61855). Consequently, the APP quality measure set would no longer be available for reporting by Shared Savings Program ACOs beginning in performance year 2025. Our proposal would align the quality measures that Shared Savings Program ACOs would be required to report with the quality measures under the Adult Universal

[527] Counts based on internal analysis of ACOs' quality reporting in performance years 2021 and 2022.

[528] Centers for Medicare & Medicaid Services (2024). CMS National Quality Strategy. Accessed June 24, 2024. *https://www.cms.gov/medicare/quality/meaningful-measures-initiative/cms-quality-strategy*.

Foundation measure set incrementally beginning in performance year 2025.

Creating alignment with the Adult Universal Foundation measure set would better align the quality measures reported by Shared Savings Program ACOs with the Medicaid Core Sets and the Marketplace Quality Rating System, which have previously adopted the quality measures in the Universal Foundation.[529] As discussed in section IV.A.4.c.(2) of the CY 2025 PFS proposed rule, alignment of quality measures across CMS programs allows practitioners to better focus their quality efforts, reduce administrative burden, and drive digital transformation and stratification of a focused quality measure set to assess impact on disparities.[530] Our proposed alignment with the Adult Universal Foundation measure set would also better align the quality measures reported by Shared Savings Program ACOs with the Value in Primary Care MIPS Value Pathway (MVP), which contains the same Adult Universal Foundation measures. This may create a smoother transition for clinicians from MIPS to the Shared Savings Program. Alignment would allow clinicians moving into Shared Savings Program ACOs to leverage their familiarity and experience with the Adult Universal Foundation quality measures among primary care clinicians participating in this MVP as they transition to reporting the APP Plus quality measure set in the Shared Savings Program. Experience and familiarity with the same quality measures, redesigned care processes, and quality improvement activities that are commonplace in ACOs would streamline the pathway for clinicians to join ACOs in the future and is consistent with our goal to have all beneficiaries in an accountable care relationship by 2030.

Section 1899(b)(3)(C) of the Act requires CMS to seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both for purposes of assessing such quality of care. In the November 2011 final rule, we finalized 33 quality measures for use in establishing the quality performance standard measure set for ACOs: including 22 measures that were actively reported by ACOs via the Group Practice Reporting Option (GPRO) Web Interface (76 FR 67889). As we stated in the November 2011 final rule establishing the Shared Savings Program, our principal goal in selecting quality measures for ACOs has been to identify measures of success in the delivery of high-quality health care at the individual and population levels, with a focus on outcomes (76 FR 67872). As we sought to improve the quality of care furnished by ACOs over time, we have subsequently updated this measure set through rulemaking in the CY 2015, 2016, 2017, 2019, 2021, and 2023 PFS final rules (79 FR 67907 through 67921, 80 FR 71263 through 71268, 81 FR 80484 through 80489, 83 FR 59707 through 59715, 85 FR 84720 through 84734, and 87 FR 69860 through 69763, respectively). We have also sometimes increased the number of measures reported by ACOs through rulemaking. For example, in the CY 2016 PFS final rule, we increased the Shared Savings Program quality measure set from 33 total measures to 34 total measures (80 FR 71265). In the CY 2016 PFS final rule, we noted that since the November 2011 Shared Savings Program final rule, we have continued to review the quality measures used for the Shared Savings Program to ensure that they are up to date with current clinical practice and aligned with other CMS quality reporting programs (80 FR 71264). Also, through rulemaking, we sometimes reduced the number of measures reported by ACOs. For example, in the CY 2019 PFS final rule, we finalized policies which reduced the Shared Savings Program quality performance measure set to 23 measures in PY 2019 (83 FR 59715). In developing our proposals in the CY 2019 PFS final rule, we stated that we considered the agency's efforts to streamline quality measures, reduce regulatory burden, and promote innovation as part of broader CMS initiatives (83 FR 59711). In the CY 2021 PFS final rule, we again reduced the total number of measures that ACOs must report (85 FR 84733). Specifically, through the adoption of the APP quality measure set, we reduced the total number of measures from 23 to either 6 or 13 measures (depending on the ACO's chosen reporting option) for PY 2021 (85 FR 84723).

Our proposal to require Shared Savings Program ACOs to report the APP Plus quality measure set would increase the number of measures reported by ACOs that currently report the APP quality measure set using the eCQM/MIPS CQM collection types from three measures in performance year 2024 to five measures in performance year 2025. For Shared Savings Program ACOs that report quality through the CMS Web Interface collection type, our proposal to adopt the APP Plus quality measure set would decrease the number of measures reported from ten measures in performance year 2024 to eight measures in performance year 2025 after the CMS Web Interface sunsets. While we acknowledged in our proposal that the increased number of quality measures for ACOs that currently report the eCQM/MIPS CQM collection types may be an increased burden for those ACOs, we also stated that our proposal to phase-in the expansion of the APP Plus quality measure set between performance years 2025 and 2028 should help to minimize the impact of increased burden associated with reporting additional measures. The option for ACOs to report Medicare CQMs, which are MIPS CQMs that are reported on an ACO's fee-for-service population, may also alleviate the reporting burden for ACOs that report Medicare CQMs by focusing an ACO's patient matching and data aggregation efforts only on an ACO's eligible Medicare fee-for-service population. Additionally, we stated that we believe that the benefits of scoring an increased number of measures may offset the increased burden that some ACOs may face in adopting the additional measures. For example, as the number of measures in the measure set increases, the individual weight of each measure on the ACO's quality performance score decreases. Each measure in a six-measure set would account for roughly 16.67 percent of an ACO's MIPS Quality performance category score while each measure in an eight-measure set would account for 12.5 percent of an ACO's MIPS Quality performance category score. The scoring of more measures, in concert with the scoring policies proposed in sections IV.A.4.f.(1)(b)(iii) and IV.A.4.f.(1)(c)(i) of the CY 2025 PFS proposed rule (89 FR 62080 through 62083), may result in improved quality performance scores for the ACOs as each individual measure carries less weight.

The proposed APP Plus quality measure sets for Shared Savings Program ACOs for performance year 2025, performance years 2026 and 2027, and performance year 2028 and subsequent performance years are displayed in Tables 34, 35, and 36, respectively, of the CY 2025 PFS proposed rule (89 FR 61866 through 61868). Under our proposal, there would be eight quality measures (five

[529] Jacobs D, Schreiber M, Seshamani M, Tsai D, Fowler E, Fleisher L. Aligning Quality Measures across CMS—The Universal Foundation. New England Journal of Medicine, February 1, 2023, available at *https://www.nejm.org/doi/full/10.1056/NEJMp2215539.*

[530] Jacobs D, et al., Update On The Medicare Value-Based Care Strategy: Alignment, Growth, Equity. Health Affairs Forefront (March 14, 2024), available at *https://www.healthaffairs.org/content/forefront/update-medicare-value-based-care-strategy-alignment-growth-equity.*

eCQMs/Medicare CQMs, two administrative claims measures, and the CAHPS for MIPS Survey measure) in the APP Plus quality measure set for Shared Savings Program ACOs in performance year 2025 (Table 34), nine quality measures (six eCQMs/Medicare CQMs, two administrative claims measures, and the CAHPS for MIPS Survey measure) in performance years 2026 and 2027 (Table 35), and 11 quality measures (eight eCQMs/Medicare CQMs, two administrative claims measures, and the CAHPS for MIPS Survey measure) in performance year 2028 and subsequent performance years (Table 36). In our proposal, we noted our intent to update the APP Plus quality measure set as new measures are added to or removed from the Adult Universal Foundation measure set in the future.

We solicited comments on our proposal to require Shared Savings Program ACOs to report the APP Plus quality measure set for performance year 2025 and subsequent performance years to meet the Shared Savings Program's quality performance standard. The following is a summary of comments received in response to our proposal and our responses. For comments and our responses related to the proposal to establish the APP Plus quality measure set and the timeline for incorporating quality measures into it, please see section IV.A.4.c.(2) of this final rule. As described in section IV.A.4.c.(2), we are finalizing with modification the phase-in schedule for incorporating measures into the APP Plus quality measure set, which affects when Shared Savings Program ACOs will first be required to report certain measures.

Comment: Several commenters supported our proposal to require Shared Savings Program ACOs to report the APP Plus quality measure set beginning in performance year 2025. These commenters applauded CMS' efforts to align a standardized set of quality measures across APMs and other Medicare programs, promoting greater efficiency in quality measure reporting by reducing burden associated with monitoring, collecting, and reporting quality measure data for multiple quality programs and enabling more meaningful longitudinal and comparative analysis of measures. One commenter stated that the proposal supports the strategic missions of interoperability, population health promotion, and health equity. Another commenter stated that the proposal will help increase participation in ACOs and enable ACOs to focus more on underserved populations.

Other commenters, while opposing the required reporting by Shared Savings Program ACOs of the proposed APP Plus quality measure set, for reasons summarized elsewhere in this section of this final rule, nevertheless stated their support for the broader goal of optimizing quality reporting and moving in the direction of ''low-burden, high-value measurement'', or the idea of aligning measures across quality programs with the Universal Foundation.

Response: We thank commenters for their support. We agree with commenters about the importance of streamlining quality reporting across CMS programs through alignment with the Universal Foundation measure set, which identifies a set of key quality measures for use where relevant throughout CMS programs. We further agree with commenters that aligning a standardized set of quality measures across Medicare programs will advance population health promotion, health equity, and interoperability, yield more meaningful analysis of quality measures, and reduce burden to increase time spent on patient care and improvement activities.

We are finalizing our proposal to require Shared Savings Program ACOs to report the APP Plus quality measure set for performance year 2025 and subsequent performance years to meet the Shared Savings Program's quality performance standard. For a discussion of proposals and finalized policies, including any modifications, related to the establishment of the APP Plus quality measure set and the phase-in schedule for incorporating measures into the APP Plus quality measure set, see section IV.A.4.c.(2) of this final rule.

Comment: Many commenters expressed reservations about the requirement that Shared Savings Program ACOs report the APP Plus quality measure set to meet the Shared Savings Program's quality performance standard. Multiple commenters stated that reporting the APP Plus quality measure set would increase reporting burden for ACOs and could discourage providers from adopting accountable care models. One commenter noted that an important benefit to participating in the Shared Savings Program has been reporting the APP quality measure set, which is a more concise, prioritized set of quality measures as compared to the quality measures available in traditional MIPS. Several commenters suggested that the APP Plus quality measure set's expanded size as compared to the existing APP quality measure set would be ''untenable'' for ACOs to report, at this time. Some of the commenters expressing these reservations urged CMS not to finalize the proposal.

Response: We acknowledge the commenters' concerns about our proposal to require Shared Savings Program ACOs to report the APP Plus quality measure set. We recognize that ACOs may perceive this larger quality measure set as an increased burden, even with the phase-in schedule we proposed for incorporating measures into the APP Plus quality measure set. As discussed in section IV.A.4.c.(2) of this final rule, when fully expanded, the APP Plus quality measure set will comprise of 11 measures, ten of which are also Adult Universal Foundation quality measures, as compared to the existing APP quality measure set's six measures. However, when we proposed to establish the APP Plus quality measure set, we did so with the goal of leveraging the Adult Universal Foundation of quality measures to align quality measures used across CMS programs and initiatives. By requiring Shared Savings Program ACOs to report the APP Plus quality measure set, there will be greater alignment of quality measures reported by Shared Savings Program ACOs with the Medicaid Core Sets and the Marketplace Quality Rating System, which have previously adopted the quality measures in the Universal Foundation, and also better alignment between the quality measures reported by Shared Savings Program ACOs with the Value in Primary Care MIPS Value Pathway (MVP), which contains the same Universal Foundation measures (89 FR 61854 through 61855). Additionally, there will be greater alignment of quality measures reported by Shared Savings Program ACOs with the Medicare Advantage and Part D Star Ratings, which is moving towards the Universal Foundation. Because it remains our goal to align quality measures across CMS program and initiatives, we are finalizing our proposal to require Shared Savings Program ACOs to report the APP Plus quality measure set for performance year 2025 and subsequent performance years.

In this final rule, we are finalizing several policies that aim to address commenters' concerns about increased burden and that incentivize and support ACOs reporting the APP Plus quality measure set. Specifically, as discussed in section IV.A.4.c.(2) of this final rule, we are finalizing with modification the phase-in schedule for incorporating measures into the APP Plus quality measure set. We are also finalizing with modification our proposal to extend the eCQM reporting incentive to support ACOs in meeting the Shared Savings

Program quality performance standard as described in section III.G.4.d of this final rule. We are also finalizing to extend this reporting incentive to ACOs reporting MIPS CQMs in performance years 2025 and 2026. We are finalizing as proposed the Complex Organization Adjustment beginning in the CY 2025 performance period/2027 MIPS payment year to account for the organizational complexities faced by Virtual Groups and APM Entities, including Shared Savings Program ACOs, when reporting eCQMs as described in section IV.A.4.f.(1)(b)(iii) of this final rule in recognition of commenters' concerns regarding increased burden and to incentivize ACOs to report eCQMs and support their transition to digital quality measurement. Furthermore, as described in section IV.A.4.f.(1)(c)(i) of this final rule, we are finalizing our policy to score measures in the Medicare CQM collection type using flat benchmarks for their first two performance periods in MIPS beginning in the CY 2025 performance period/ 2027 MIPS payment year. The use of flat benchmarks may allow ACOs with high scores to earn maximum or near maximum measure achievement points while allowing room for quality improvement and rewarding that improvement in subsequent years. Use of flat benchmarks also helps to ensure that ACOs with high quality performance on a measure are not penalized as low performers.

Comment: Some commenters stated that small independent practices and specialty practices are often unable to participate or continue to participate in the Shared Savings Program due to the technical and financial burden associated with the adoption of new technologies required to meet reporting requirements. Several commenters requested that CMS consider adding exceptions or exclusions for small practices and certain specialties and/or altering data completeness requirements to address ongoing challenges and allow for ACOs to be successful in reporting eCQMs, MIPS CQMs, and Medicare CQMs. These commenters noted that exceptions and exclusions already apply in MIPS for other performance categories and could easily be applied to ACOs reporting eCQMs, MIPS CQMs, and Medicare CQMs, and that making these changes in the Shared Savings Program could allow ACOs to maintain participation among small and specialty practices that cannot comply with these changes without undue costs and burdens.

Response: We recognize that reporting eCQMs can be particularly challenging for ACOs with small practice participants, particularly those who need to obtain data from multiple practices with different EHR systems. We are committed to supporting Shared Savings Program ACOs with small practice participants in their transition to digital quality measure reporting, and in the CY 2024 PFS final rule, we finalized for performance year 2024 and subsequent performance years the Medicare CQM collection type as a transitional reporting option for Shared Savings Program ACOs (88 FR 79107) that we believe may provide a more supportive option with more flexibility in reporting given the data completeness. In the CY 2024 PFS proposed rule (88 FR 52420), we stated that we recognized that Medicare CQMs might not be the most suitable collection type for some ACOs, particularly ACOs with a single-EHR platform, a high proportion of primary care practices, and/or ACOs composed of participants with experience reporting all payer/all patient measures in traditional MIPS (88 FR 79098). To that end, we have also provided technical guidance (updated for each performance year), entitled Medicare Shared Savings Program: Reporting MIPS CQMs and eCQMs in the Alternative Payment Model Performance Pathway (APP) which is posted in the QPP Resource Library at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2179/APP%20Guidance%20Document%20for%20ACOs.pdf*, that recognizes the unique challenges facing ACOs and provides guidance on how to address patient matching across multiple EHR systems as a way to transition ACOs to all payer/patient quality measure reporting. We will continue to monitor challenges facing ACOs including those with small practices along with the ability of their electronic health record systems to collect and generate data necessary to successfully transition and report eCQMs and may make additional adjustments to address these challenges in future rulemaking.

Comment: A few commenters noted challenges with reporting that may cause some ACOs to narrow their Participant Lists, including removing specialists, which will result in fewer Medicare patients in an accountable care relationship, counter to CMS' goal to have 100 percent of Original Medicare beneficiaries in an accountable care relationship by 2030.

Response: We recognize the challenges associated with reporting the measures. We have provided support and incentives where appropriate that we believe address many of the challenges for broad inclusion of specialists. We believe that the broader quality strategy and expansion of Centers for Medicare and Medicaid Innovation models will continue to allow CMS to achieve our stated goals and that ACOs following the CMS dQM Strategic Roadmap will be able to expand and grow their capabilities over time.

Comment: Some commenters suggested that CMS introduce the new measures into the APP Plus quality measure set in a pay-for-reporting format for at least one year.

Response: The Shared Savings Program sunset its pay-for-reporting policy in performance year 2020 (85 FR 84724). As such, we will not apply pay for reporting to new measures in the APP Plus quality measure set. In addition, neither MIPS nor the APP provides for pay-for-reporting. Separately, we did not propose a pay-for-reporting policy when we proposed to require Shared Savings Program ACOs to report the APP Plus quality measure set and therefore consider these comments to be out of scope.

After consideration of public comments received, we are finalizing our proposal that, for performance year 2025 and subsequent performance years, Shared Savings Program ACOs will be required to report the APP Plus quality measure set, as specified in amendments to §§ 425.508 and 425.510 (as described in section III.G.4.b.(2)(a) of this final rule). Shared Savings Program ACOs will be required to report on and will be scored on all applicable quality measures in the APP Plus quality measure set according to modified phase-in schedule for incorporating measures into the APP Plus quality measure set as discussed in section IV.A.4.c.(2) of this final rule. The final APP Plus quality measure set for Shared Savings Program ACOs, for performance year 2025 and subsequent performance years, is specified in Tables 39 through Table 42 of this final rule. The existing APP quality measure set will no longer be available for reporting by Shared Savings Program ACOs beginning in performance year 2025.

(b) Collection Types Available for Shared Savings Program ACOs Reporting the APP Plus Quality Measure Set

Along with our proposal to require Shared Savings Program ACOs to report the APP Plus quality measure set, in the CY 2025 PFS proposed rule, we proposed to streamline the collection types available for Shared Savings Program ACOs reporting the APP Plus quality measure set to the eCQM and

Medicare CQM collection types for performance year 2025 and subsequent performance years (89 FR 61856 through 61857). We also stated that our proposal to establish the APP Plus quality measure set to align with the Adult Universal Foundation measure set should aim to prioritize the eCQM collection type—the gold standard collection type that underlies the Digital Quality Measurement (dQM) Strategic Roadmap (available at *https://ecqi.healthit.gov/sites/default/files/CMSdQMStrategicRoadmap_032822.pdf*)—and use Medicare CQMs as the transition step on our building-block approach for ACOs' progress to adopt digital quality measurement (89 FR 61838). We sought to reduce burden on ACOs as they adopt eCQMs for quality measure reporting by using a phased-in approach to expand the APP Plus quality measure set between performance years 2025 and 2028 (89 FR 61856). We noted that we would continue to provide the Medicare CQM reporting option as ACOs increase their experience and overcome their challenges with reporting all payer/all patient measures. As discussed more fully below, we proposed not including the MIPS CQM collection type for Shared Savings Program ACOs reporting the APP Plus quality measure set to focus ACOs' efforts on the implementation of the APP Plus quality measure set, while continuing to encourage the adoption of eCQMs. We stated that our proposed approach would recognize the investments ACOs have made to report eCQMs and their benefits (that is, more efficient data collection, real time provider feedback, and less burden through the use of digital data) and allow ACOs that have invested in eCQMs to continue on that track and align with long term goals of digital quality measurement.[531]

Since Medicare CQMs are MIPS CQMs that are reported on an ACO's eligible Medicare fee-for-service population, ACOs that have invested in the infrastructure to report MIPS CQMs would be able to report Medicare CQMs on a subset of their all payer/all patient population. Furthermore, as noted in the CY 2024 PFS final rule, Medicare CQMs address ACO concerns regarding the difficulty of matching and aggregating patient data across multiple EHR systems (88 FR 79106). Medicare CQMs also provide a transition path and alternative for ACOs that have difficulty reporting patient data by limiting the beneficiaries for which an ACO must match and aggregate data to only the ACO's eligible Medicare fee-for-service beneficiaries, instead of their all payer/all patient population (88 FR 79106). As a logical next step in the reporting of digital quality measures, this population is larger than the sample currently used in the CMS Web Interface, but not as large as the all payer/all patient population that must be reported for an eCQM or MIPS CQM (88 FR 79106).

As we stated in the CY 2025 PFS proposed rule, we aim to fully transition to digital quality measurement in CMS quality reporting and value-based purchasing programs, and we are working to convert current eCQMs to the Fast Healthcare Interoperability Resources (FHIR) standard (86 FR 65379). Including eCQMs as a collection type for Shared Savings Program ACOs reporting the APP Plus quality measure set aligns with our goal to transition to digital quality measurement including the alignment and development of FHIR standards and tools for eCQM reporting in the CMS dQM Strategic Roadmap. We noted numerous benefits to using eCQMs, including their use of electronic standards that reduce the burden of manual extraction and reporting for measured entities, their use of clinical data to assess the outcomes of treatment by measured entities, and their fostering of access to real-time data for point of care quality improvement and decision support.[532] Furthermore, eCQMs align with the Meaningful Measures Framework 2.0 goal of improving quality reporting efficiency by transitioning to digital quality measures.[533] In addition, a recent study highlighted the resource intensity of quality reporting, underscoring the high cost of claims-based measures relative to others and recommended that policy makers shift to electronic metrics to ''optimize resources spent in the overall pursuit of higher quality.'' [534] For these reasons, and to continue encouraging ACOs on their progress to adopt digital quality measurement, we are not modifying the availability of eCQMs as a collection type for ACOs that reported the APP quality measure set by including eCQMs as a collection type in the APP Plus quality measure set in performance year 2025 and subsequent performance years. In section III.G.7.e. of the CY 2025 PFS proposed rule, we solicited comment on a higher risk, higher reward track for Shared Savings Program ACOs participating in the ENHANCED track. In this request for information, we solicited comment on questions relevant to our long-term goals of supporting ACOs in their transition to reporting all payer/all patient quality measures: How should a revised ENHANCED track with higher risk and potential reward also require additional accountability for quality? Should ACOs in this revised track be required to report all payer/all patient quality measures?

In the CY 2024 PFS final rule, we stated that ''Medicare CQMs are intended to serve as a transition to all payer/all patient reporting and not as a permanent collection type. We acknowledge that ACOs are at different stages of readiness to adopt all payer/all patient measures, and we intend for Medicare CQMs to be available to ACOs during their transition to all payer/all patient reporting'' (88 FR 79106). We also stated that ''[w]e expect that the sunsetting of the Medicare CQM collection type may be paced with the uptake of FHIR Application Programming Interface (API) technology, but this will be assessed on industry readiness and CMS requirements'' (88 FR 79106). Specifically, we anticipated that the increased use of FHIR API technology for quality data exchange and aggregation would facilitate ACOs' reporting of eCQMs and thus increase their uptake of them. Future advancements in the use of FHIR API technology to share quality data and its uptake among Shared Savings Program ACOs may accelerate our future plans to sunset Medicare CQMs. As discussed earlier in this section of the final rule, we proposed to streamline the collection types available for Shared Savings Program ACOs reporting the APP Plus quality measure set to the eCQM and Medicare CQM collection types for performance year 2025 and subsequent performance years and use Medicare CQMs as the transition step on our building-block approach for ACOs' progress to adopt digital quality measurement (89 FR 61856 through 61857). As we continue to support ACOs in fully and equitably participating in all payer/all patient collection types with our proposed creation of the APP Plus quality measure set, our commitment to monitor ACOs' reporting of quality data using Medicare CQMs and to assess

their appropriateness as a collection type remains the same.

As we stated in the CY 2024 PFS final rule, ACOs that include or are composed solely of FQHCs or RHCs must report quality data on behalf of the FQHCs or RHCs that participate in the ACO. To clarify, while FQHCs and RHCs that provide services that are billed exclusively under FQHC or RHC payment methodologies are exempt from reporting traditional MIPS, FQHCs and RHCs that participate in APMs, such as the Shared Savings Program, are considered APM Entity groups as described at § 414.1370 (88 FR 79099). If our proposal is finalized, FQHCs and RHCs that participate in Shared Savings Program ACOs would have to report the APP Plus quality measure set through their ACO for performance year 2025 and subsequent performance years.

We solicited comments on our proposal to streamline collection types for Shared Savings Program ACOs to report the APP Plus quality measures through Medicare CQMs and/or eCQMs. The following is a summary of the public comments we received and our responses.

Comment: Many commenters expressed concern with the proposal to eliminate the MIPS CQM collection type for Shared Savings Program ACOs beginning in performance year 2025. These commenters stated that eliminating the MIPS CQM collection type would cause administrative burden, disparate electronic health records, and reporting challenges with the submission of the all payer/all patient eCQM collection type. Several commenters noted that their efforts and resources would need to focus on determining the best reporting approaches at the expense of innovations that support patients. Many commenters encouraged CMS to consider extending the availability of the MIPS CQM collection type for Shared Savings Program ACOs and requested that the collection type remain available for an additional one to three years. Some commenters stressed the challenges related to loss of prior investments made in preparing to report or actively reporting MIPS CQMs. Several of these commenters stated that having limited notice from CMS that the MIPS CQM collection type would not be available to Shared Savings Program ACOs reporting the APP Plus quality measure set provides ACOs with only a few months to pivot to another option if the proposal not to include MIPS CQMs in the APP Plus quality measure set is finalized.

A few commenters requested that the CMS Web Interface reporting option remain available until the Medicare CQM specification and patient reporting requirements are made clear, including benchmarks. Several commenters suggested making all reporting options available until CMS tests eCQM, MIPS CQM, Medicare CQM, and digital quality measure (dQM) reporting. One commenter objected to the exclusion of the MIPS CQM collection type from the APP Plus quality measure set and stated MIPS CQMs allow ACOs to leverage multiple data sources beyond just EMR data, including claims data, as an important component to ensuring the accuracy and completeness of data reported.

Response: We acknowledge commenters' feedback regarding the challenges associated with not having MIPS CQM available to ACOs as a collection type for reporting the APP Plus quality measure set. We agree with commenters that additional time is needed for ACOs who have invested in MIPS CQMs to transition to eCQMs. Having MIPS CQMs as a reporting option will allow ACOs to gain experience with all payer quality measure data collection and reporting before MIPS CQMs are phased out as a collection type for Shared Savings Program ACOs. We are aware that some Shared Savings ACOs have already contracted with vendors for the MIPS CQM collection type at their own expense and that for these ACOs additional time to transition to the eCQM collection type is desirable. We also understand that the MIPS CQM collection type allows ACOs to leverage multiple data sources beyond just EMR data, thereby allowing for improved accuracy and completeness of data submitted with this collection type.

For these reasons, we will provide Shared Savings Program ACOs with the option to use the MIPS CQM collection type for two additional performance years (*i.e.,* performance years 2025 and 2026) when reporting the APP Plus quality measure set, as finalized at IV.A.4.c.(2) of this final rule. We believe that making the MIPS CQM collection type available for ACOs for two additional performance years would fairly balance investments ACOs have already made with and CMS' long-term goals of digital quality measurement.

In response to suggestions that all collection types, including the CMS Web Interface, remain available to Shared Savings Program ACOs in the APP until CMS tests eCQM, MIPS CQM, and Medicare CQM reporting, we note that all these collection types are available in performance year 2024. The collection types available to ACOs reporting the APP Plus quality measure set for performance year 2025 and subsequent years that we are finalizing in this final rule recognize the need for some ACOs to build the infrastructure, skills, knowledge, and expertise necessary to report all payer/all patient measures while incentivizing ACOs to transition to eCQMs. However, we will continue to monitor the uptake of collection types by ACOs in the coming years. We note that we finalized the sunsetting of the CMS Web Interface in the CY 2021 PFS final rule (85 FR 84722), giving ACOs and other interested parties multiple performance years to prepare for the sunsetting of the CMS Web Interface.

Comment: Several commenters expressed concern that the Medicare CQM collection type is technologically and methodologically complex and distinct from the MIPS CQM collection type in several ways that pose additional challenges and burdens for Shared Savings Program ACOs.

Response: As stated in the CY 2024 PFS final rule, a Medicare CQM is essentially a MIPS CQM reported by an ACO under the APP on only the ACO's Medicare FFS beneficiaries, instead of its all payer/all patient population (88 FR 79098). ACOs with the infrastructure to report MIPS CQMs can readily transition to report Medicare CQMs. While we continue to believe that Medicare CQMs are a valuable transition step on our building-block approach for Shared Savings Program ACOs' progress to adopt digital quality measurement, under the policies we are finalizing in this section of this final rule, Shared Savings Program ACOs would continue to have the option to report the APP Plus quality measures using the MIPS CQM collection type for performance years 2025 and 2026. We believe this additional time will further allow ACOs to address challenges and burdens they may face when reporting Medicare CQMs. Therefore, for performance years 2025 and 2026, Shared Savings Program ACOs that report the APP Plus quality measure set will have the option to use any of the following collection types or a combination thereof, as applicable: Medicare CQM, MIPS CQM and eCQM.

Comment: We received numerous comments from interested parties expressing concern about the length of time the Medicare CQM collection type will remain available to Shared Savings Program ACOs reporting the APP Plus quality measure set. Some of those commenters recommended that CMS make the Medicare CQM reporting option permanent for the foreseeable future. Several of these commenters noted that, because of the uncertainty

surrounding the timeline for sunsetting the Medicare CQM collection type, Shared Savings Program ACOs and EHR vendors are reluctant to invest time and resources in an option that may be eliminated with little to no warning.

Response: In response to comments that ACOs and EHR vendors are reluctant to invest time and resources in a new reporting option, we want to reiterate our commitment to the CMS National Quality Strategy and the adoption of digital quality measurement. We anticipate that ACOs and their vendors will adopt Medicare CQMs to the extent that it is helpful within the timelines provided in this section of this final rule.

Regarding commenters who requested that we make Medicare CQMs a permanent collection type, we note that from the inception of the Medicare CQM collection type beginning in performance year 2024, we intend for the Medicare CQM collection type to serve as a transition collection type to help ACOs build the infrastructure, skills, knowledge, and expertise necessary to report all payer/all patient measures (88 FR 79097 through 79098). In addition, as we stated in the CY 2025 PFS proposed rule, we believe that our policy to establish the APP Plus quality measure set to align with the Adult Universal Foundation measure set should also aim to prioritize the eCQM collection type and the use of the Medicare CQM collection type is a transition step on our building-block approach for ACOs' progress to adopt digital quality measurement (89 FR 61838). We note in this final rule that the sunsetting of Medicare CQMs would take place no sooner than five years from now, when we anticipate there is widespread uptake of FHIR API technology. While FHIR technology is employed in other components of digital health information, we note that we would assess the uptake of FHIR API technology for quality reporting in alignment with the CMS Digital Quality Measurement Strategic Roadmap, specifically, Domain 3: Optimize Data Aggregation. In particular, CMS would assess whether ACOs broadly have developed capabilities to efficiently leverage FHIR API technology to aggregate quality reporting data and patient-centered measurement and are reporting eCQMs.[535]

Comment: Many commenters expressed concern with CMS' goal to require all Shared Savings Program ACOs to use the all payer/all patient eCQM collection type to report quality measures. For example, several commenters cited time and resource concerns, including cost, challenges specific to small and specialty practices, data and vendor-related challenges such as data aggregation and de-duplication, and a lack of standardization across electronic health record (EHR) vendor systems for the capture of and reporting on eCQM data elements. Commenters also stated that adoption of the eCQM collection type and reporting on all payer/all patient data requires ACOs to tailor data extracts and uploads across systems, which places considerable financial and administrative burden on ACOs and could require them to contract with additional vendors to be able to report eCQMs. For example, one commenter indicated their current vendor cannot support the de-duplication of data for all payers and stated they were concerned that resources and finances would go toward building and implementing eCQMs in the present while CMS may require reporting on other measures and artificial intelligence-enabled technology in the future. Few commenters noted further challenges with EHR certifications and vendors adopting new collection types and measures.

Response: In response to comments that were concerned with the transition to eCQMs, citing cost, time and resource concerns, challenges specific to small and specialty practices and similar comments related to the financial and administrative burden with adopting eCQMs, we note that we are finalizing a number of policies in this final rule to support ACOs in their transition to digital quality measurement. Specifically, we are finalizing the eCQM reporting incentive to performance year 2025 and subsequent performance years, and we are also extending the reporting incentive to MIPS CQMs for performance years 2025 and 2026, to support ACOs in meeting the Shared Savings Program quality performance standard as described in section III.G.4.d of this final rule. We are also finalizing the Complex Organization Adjustment beginning in the CY 2025 performance period/2027 MIPS payment year to account for the organizational complexities faced by Virtual Groups and APM Entities, including Shared Savings Program ACOs, when reporting eCQMs as described in section IV.A.4.f.(1)(b)(iii) of this final rule. In addition to policies finalized in this final rule, we also refer readers to our discussion in section III.G.4.b(2)(a) of this final rule of previously finalized policies that support ACOs during the transition to digital quality measurement.

In response to concerns about data and vendor-related challenges such as data aggregation and de-duplication, and a lack of standardization across EHR vendor systems for the capture of and reporting on eCQM data elements, we direct readers to our guidance on reporting eCQMs/MIPS CQMs discussed earlier in this section of this final rule that recognizes challenges with patient matching and data aggregation. Specifically, for concerns related to de-duplication, we encourage ACOs and their vendors to consider using our DedupliFHIR open-source data deduplication and record matching tool. The project includes a backend library and a front-end desktop application that can be downloaded from the DedupliFHIR GitHub repository at *https://github.com/DSACMS/dedupliFHIR.* We also encourage ACOs and their vendors to participate in our regular QCDR and Qualified Registry support calls and Learning System Webinars and to submit questions to the Quality Payment Program help desk, as needed. Additionally, for ACOs with significant EHR vendor concerns, when issues of potential noncompliance with certification requirements are unresolvable, we note that ONC has provided a complaint process for certified products available to the public at *https://www.healthit.gov/topic/certified-health-it-complaint-process.*

In response to the recommendation that CMS revisit EHR vendor certification requirements to establish technology support for APP Plus quality measures that allow for data aggregation across systems, we note that most clinical information is digitized, accessible, and shareable due to several technology and policy advances making interoperable, electronic health record systems widely available. The CURES Act applied the law to healthcare providers, health IT developers of certified health IT, and health information exchanges (HIEs)/health information networks (HINs).[536] We encourage ACOs to work with their vendors, as appropriate, to report the APP Plus quality measure set and invest in the technology and services necessary to prepare and successfully report. CMS also understands that despite the resources made available to ACOs, there continue to be challenges in reporting eCQMs, and CMS is committed to working with ACOs to address barriers over time. We also note that we anticipate that the transition to all-payer eCQMs would take place no sooner than 5 years from now, giving CMS and

[536] Assistant Secretary for Technology Policy/Office of the National Coordinator for Health IT (2024). *Information Blocking. https://www.healthit.gov/topic/information-blocking.*

ACOs additional time to work through these challenges.

Comment: One commenter stated that there are gaps in digital literacy within medical offices and, as a result, the extraction of meaningful data is a challenge. Commenters were also concerned that small practices and low-revenue ACOs, whose participants are drawn more heavily from small ambulatory, primary care practices and specialty practices will be the least likely to successfully adopt the eCQM collection type, and that adoption of the eCQM collection type contradicts the exception CMS granted to small practices and others with automatic reweighting of the Promoting Interoperability and CEHRT-use requirements in ACOs.

Another commenter explained that reporting MIPS CQMs serves as a ''temporary accommodation'' to mitigate concerns about reporting all patient data among community-based specialty practices participating in ACOs. The commenter explained that specialty practices that are participating in an ACO with a hospital system may experience competitive concerns when they are expected to share patient details with the ACO for purposes of quality reporting, such as the case where a community-based oncology clinic is in direct competition with hospital-based infusions.

Response: As detailed at § 425.116(a)(5), each ACO's Participant Agreement describes how the opportunity to receive shared savings or other financial arrangements will encourage the ACO participant to adhere to the quality assurance and improvement program and evidence-based medicine guidelines established by the ACO. Moreover, as detailed at § 425.308(b)(4)(ii), ACOs are required to publicly report the total proportion of shared savings invested in infrastructure, redesigned care processes and other resources required to support the three-part aim goals of better health for populations, better care for individuals and lower growth in expenditures, including the proportion distributed among ACO participants. As such, it is appropriate for ACOs to reinvest shared savings as a means to comply with Shared Savings Program requirements and required processes, including to support their ACO participants with tasks such as digital literacy within medical offices, the utilization of structured data fields, and the extraction of meaningful data.

We disagree with comments that small practices and low-revenue ACOs are the least likely to successfully adopt the eCQM collection type. To the contrary, we note that an internal analysis of the performance year 2023 quality data submissions indicates similar patterns of eCQM/MIPS CQM adoption across practices of varying sizes and ACOs with varying revenue types. Of the ACOs reporting eCQMs in performance year 2023, 54 percent were low-revenue.

In response to the comment that adoption of eCQMs contradicts the exception CMS granted to small practices and others with automatic reweighting of the Promoting Interoperability and CEHRT requirements in ACOs, we note that MIPS makes a distinction between performance categories, that is quality, Promoting Interoperability, improvement activities, and cost. Some exclusions are specific to the performance category and codified by statute. While there is an automatic reweighting of the MIPS Promoting Interoperability performance category for those with Special Status as defined at 42 CFR 414.1305, including for the small practice designation, there is no automatic reweighting of the MIPS Quality performance category or exception for small practices. It is also important to note that MIPS eligible clinicians are required to report MIPS unless otherwise excluded or exempt using eCQMs or MIPS CQMs. The Shared Savings Program is a voluntary program and providers, including small practices, are not required to participate in a Shared Savings Program ACO. A Shared Savings Program ACO must report quality data on behalf of the eligible clinicians who bill under the TIN of the ACO participant for purposes of the MIPS quality performance category. As described at 42 CFR 414.1390(b) MIPS eligible clinicians and groups must submit data that are true, accurate, and complete. 42 CFR 425.510(c) applies these requirements to the Shared Savings Program ACOs. As such, they are not permitted to omit or exclude ACO participants, ACO providers/suppliers, or ACO professionals from the ACO's quality data submissions.

In response to the comment about situations where sharing patient details through quality reporting may impact specialty clinics in terms of competition with a hospital, when both entities are participating together in an ACO, we note that while entities may be using the MIPS CQM collection type to limit disclosure of patient data that would otherwise be needed for eCQM reporting, we are not persuaded, based on the circumstances described, that this would be a reason to further extend use of the MIPS CQM collection type beyond the extension being finalized. We further note that ACOs are groups of doctors, hospitals, and other health care providers, that come together voluntarily to give coordinated high-quality care to the Medicare patients they serve. We reiterate the importance of ACO providers/suppliers and ACO participants working together, within an ACO, to meet the goals of the Shared Savings Program and comply with program requirements, including quality reporting requirements. However, we recognize that under certain circumstances, ACOs may raise competitive concerns. HHS and CMS will coordinate closely with the Antitrust Agencies throughout the application process and the operation of the Shared Savings Program ACOs to ensure there are no detrimental impacts to competition. Further, in the CY 2022 PFS final rule, we stated our belief that the disclosure of all-payer data to CMS as required by § 414.1340(a) would be permitted by the HIPAA Privacy Rule under the provision that permits disclosures of PHI as ''required by law'' (86 FR 65258). We refer readers to our discussion of the disclosure of all-payer data to CMS at 86 FR 65258.

Comment: A few commenters stated that the transition to eCQMs, which requires reporting on an ACO's entire payer mix, will put ACOs with higher proportions of underserved non-Medicare patients at a disadvantage. One of these commenters speculated that ACOs with higher underserved populations who report eCQMs will see lower performance on certain metrics for reasons beyond the control of the ACO and urged CMS to consider the financial and administrative burdens that these ACOs face to sustain Shared Savings Program participation.

Response: All payer/all patient measures are valuable measures because they reflect the quality of care provided across all of a provider's patients and are consistent with CMS' health equity goals. All payer measures are broadly used across Medicare quality payment and quality reporting programs, including in MIPS (§ 414.1305 (defining ''collection type'' to include eCQMs)). Nonetheless, we acknowledge that there may be instances when ACOs have lower performance reporting all payer/all patient eCQMs. In IV.A.4.f.(1)(b)(iii) of this final rule, we are finalizing the Complex Organization Adjustment beginning in the CY 2025 performance period/2027 MIPS payment year to account for the organizational complexities faced by Virtual Groups and APM Entities, including Shared Savings Program ACOs, when reporting eCQMs. Specifically, a Virtual Group

and an APM Entity will receive one measure achievement point for each submitted eCQM that meets the case minimum requirement at § 414.1380(b)(1)(iii) and the data completeness requirement at § 414.1340 as described in section IV.A.4.f.(1)(b)(iii) of this final rule. Adding one point for each reported eCQM would provide ACOs that serve higher proportions of underserved populations and report eCQMs with an upward adjustment of the MIPS Quality performance category score.

Further, in the CY 2023 PFS final rule, we discussed concerns that the quality performance standard and the quality performance measures did not adequately assess the quality of care provided by ACOs with clinicians who serve a high proportion of underserved individuals (87 FR 69839). As a result, we finalized the health equity adjustment beginning in performance year 2023 and subsequent performance years to upwardly adjust the MIPS Quality performance category score for ACOs that report quality measures using the eCQM/MIPS CQM collection types, are high performing on quality, and serve a higher proportion of underserved beneficiaries (87 FR 69838). In performance year 2023, out of all the ACOs that reported eCQMs/MIPS CQMs and met data completeness requirements, approximately 39 percent of ACOs earned health equity adjustment bonus points, and an average of 3.54 bonus points (out of 10) were added to eligible ACOs' quality scores. We will continue to evaluate whether ACOs serving higher underserved populations are being disproportionately disadvantaged through all-payer collection, which may inform future rulemaking.

Comment: Several commenters remarked on technical aspects of reporting Medicare CQMs as a collection type including patient identification and vendor support.

Response: While these comments are out of scope for this final rule, we acknowledge commenters' concerns identifying patients and operationalizing Medicare CQMs. We note that ACOs have the option to report the APP quality measure set using the Medicare CQM collection type in 2024, and as finalized in this section of the final rule, they will also have the option to report the APP Plus quality measure set using the Medicare CQM collection type in performance years 2025 and 2026. We will continue to support and provide guidance to ACOs reporting Medicare CQMs consistent with measure specifications.

We further direct readers to our guidance on the submission of Medicare CQMs. Specifically, the 2024 Medicare CQM Checklist for Shared Savings Program Accountable Care Organizations which is posted in the QPP Resource Library at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2679/2024SSPACOMedicareCQMChecklist.pdf* for resources and support in reporting eCQMs, MIPS CQMs, and Medicare CQMs. We also encourage ACOs and their vendors to participate in our monthly QCDR and Qualified Registry support calls, Learning System Webinars and to submit questions to the Shared Savings Program helpdesk via ACO–MS, as needed.

Comment: A few commenters shared feedback on technical aspects of QRDA files that are beyond the scope of this rule. Specifically, a commenter stated that CMS should allow for the use of mature QRDA–III files rather than requiring the use of less mature, resource intensive QRDA–I files. Another commenter noted that EHR system they work with has struggled to produce a QRDA–I file which makes eCQM and Medicare CQM reporting an enormous challenge and causes their organizations to divert already limited resources to constantly evolving digital quality reporting requirements.

Response: While these comments are out of scope for this rule, we acknowledge the commenters' feedback regarding the complexity of ACOs using QRDA files. We will continue to monitor ACO quality reporting and support ACOs through guidance as well as working to understand concerns and challenges by working with the CMS QRDA Work Group to reduce burden, better inform interested parties, and reduce complexity where possible. Technical comments and responses around QRDAs are also accessible to the public via the ONC Jira website at *https://oncprojectracking.healthit.gov/support/projects/QRDA/summary*.

Comment: Some commenters expressed concerns about issues that were not related to our proposals in the proposed rule. We received several comments related to the previously finalized requirement that Shared Savings Program ACOs report the MIPS Promoting Interoperability performance category in performance 2025 and subsequent performance years as described at § 425.507. One commenter agreed that digital quality measurement is the goal and that ACOs are uniquely qualified to assist practices with needed upgrades in technology, but added their perspective that these policies are too aggressive and ignore the upcoming changes on the horizon that will require additional investment. Another commenter expressed that the policies result in substantial burden for physician practices with no clear positive impact on information exchange. Commenters expressed the concern that the policies will force ACOs and other APM Entities to omit practices that they are not convinced can meet both requirements, which will hinder, not help, CEHRT adoption and APM participation.

Response: We did not propose any changes to these previously finalized policies in the CY 2025 PFS proposed rule, and therefore, these comments are considered to be out of scope. However, we recently released additional guidance for ACOs to address questions on Promoting Interoperability reporting requirements at *https://www.cms.gov/files/document/frequently-asked-questions-shared-savings-program-requirement-report-objectives-and-measures-mips.pdf*; we are continuing to monitor the impact of these policies, and we are exploring how to address concerns raised by ACOs and other interested parties. We may revisit the Shared Savings Program MIPS Promoting Interoperability reporting requirement in future rulemaking to provide a less burdensome pathway for Shared Savings Program ACOs to meet the APM certified electronic health record technology (CEHRT) requirements that is consistent with our goal to gain additional insight and transparency into CEHRT use by APMs and level the playing field between Advanced APMs and APMs.

For reasons we discussed above in this section, we agree more time is needed before sunsetting MIPS CQMs as a collection type for Shared Savings Program ACOs given ACOs may have already contracted with vendors for this collection type. Including MIPS CQMs as a collection type for an additional two years would allow ACOs time to build the necessary infrastructure to transition to eCQM and Medicare CQM reporting in performance year 2027. Therefore, we are finalizing that MIPS CQM will be an available collection type for Shared Savings Program ACOs reporting the APP Plus quality measure set in performance years 2025 and 2026. We also stated that Medicare CQMs are a valuable transition step on our building block approach, and the sunsetting of Medicare CQMs would take place no sooner than five years from now, when we anticipate there is widespread uptake of FHIR API technology. While FHIR technology is employed in other components of digital health information, we note that

we would assess the uptake of FHIR API technology for quality reporting in alignment with the CMS Digital Quality Measurement Strategic Roadmap, specifically, Domain 3: Optimize Data Aggregation. In particular, CMS would assess whether ACOs broadly have developed capabilities to efficiently leverage FHIR API technology to aggregate quality reporting data and successfully report eCQMs.

Because we are finalizing inclusion of MIPS CQM as a collection type available to Shared Savings Program ACOs reporting the APP Plus quality measure set in performance years 2025 and 2026, in section III.G.4.d of this final rule, we are also extending the reporting incentive to ACOs reporting MIPS CQMs in performance years 2025 and 2026 to support ACOs in meeting the Shared Savings Program quality performance standard for sharing in savings at the maximum rate under its track.

(3) Changes to Regulation Text

As discussed in section III.G.4.b.(2)(a) of the CY 2025 PFS proposed rule, for performance year 2025 and subsequent performance years, we proposed to require Shared Savings Program ACOs to report the APP Plus quality measure set as proposed in section IV.A.4.c.(3) of the CY 2025 PFS proposed rule. The APP Plus quality measure set would comprise of 11 measures, consisting of six measures from the existing APP quality measure set and five additional measures from the Adult Universal Foundation measure set not already included in the existing APP quality measure set that would be incrementally incorporated into the APP Plus quality measure set over performance years 2025 through 2028. We also proposed to focus the collection types available to Shared Savings Program ACOs for reporting the APP Plus quality measure set to eCQMs and Medicare CQMs (89 FR 61856 through 61857). We refer readers to sections IV.A.4.c, IV.A.4.e.(1)(b)(i), IV.A.4.f.(1)(b)(iii), and IV.A.4.f.(1)(c)(i). of the CY 2025 PFS proposed rule for changes to 42 CFR part 414. We proposed conforming changes to 42 CFR part 425 as described below (see also 89 FR 61857 through 618578):

- We proposed to sunset the requirement that ACOs must submit quality data via the APP to satisfactorily report on behalf of the eligible clinicians who bill under the TIN of an ACO participant for purposes of the MIPS Quality performance category of the Quality Payment Program, and to revise § 425.508(b) to indicate that the requirement will be applicable for performance years beginning in 2021—2024. We also proposed to replace the phrase ''Alternative Payment Model Performance Pathway (APP)'' with the phrase ''APM Performance Pathway (APP)'' to conform with the phrase used at § 414.1367.
- We proposed to add a new paragraph (c) at § 425.508 to establish that, for performance years beginning on or after January 1, 2025, ACOs must submit quality data via the APM Performance Pathway (APP) on the quality measures contained in the APP Plus quality measure set established under § 414.1367 to satisfactorily report on behalf of the eligible clinicians who bill under the TIN of an ACO participant for purposes of the MIPS Quality performance category of the Quality Payment Program.
- We proposed to revise the section heading at § 425.510 to ''Application of the APM Performance Pathway (APP) quality measure set or the APP Plus quality measure set (as applicable) to Shared Savings Program ACOs for performance years beginning on or after January 1, 2021.''
- We proposed to sunset the requirement that ACOs must report quality data on the APP quality measure set according to the method of submission established by CMS and to revise § 425.510(b). We proposed to add a new paragraph (b)(1) at § 425.510 to indicate that the requirement will be applicable for performance years beginning in 2021 through 2024.
- We proposed to add a new paragraph (b)(2) at § 425.510 to establish that, for performance years beginning on or after January 1, 2025, ACOs must report quality data on the APP Plus quality measure set established under § 414.1367, according to the submission method established by CMS.
- We proposed to revise § 425.512(a)(2)(iii) to establish that, for performance year 2025 and subsequent performance years, an ACO in the first performance year of the ACO's first agreement period under the Shared Savings Program will meet the quality performance standard if the ACO reports the APP Plus quality measure set and meets the data completeness requirement on all eCQMs/Medicare CQMs, and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)), and receives a MIPS Quality performance category score for the applicable performance year.
- We proposed to revise the introductory paragraph (a)(5)(i) to § 425.512 to read as follows: ''Except as specified in paragraphs (a)(2) and (7) of this section, CMS designates the quality performance standard as:''.
- We proposed to revise the introductory paragraph (a)(5)(i)(A) to read as follows: ''For performance year 2024, the ACO reporting quality data on the APP quality measure set established under § 414.1367 of this subchapter, according to the method of submission established by CMS and—''.
- We proposed to revise the introductory paragraph (a)(5)(i)(B) to read as follows: ''For performance year 2025 and subsequent performance years, the ACO reporting quality data on the APP Plus quality measure set established under § 414.1367 of this subchapter, according to the method of submission established by CMS and—''.
- We proposed to add a new paragraph (a)(5)(ii)(A) to § 425.512 to indicate that an ACO will meet the alternative quality performance standard for performance year 2024 if the ACO reports quality data on the APP quality measure set established under § 414.1367 according to the method of submission established by CMS and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP quality measure set.
- We proposed to add a new paragraph (a)(5)(ii)(B) to § 425.512 to establish that an ACO will meet the alternative quality performance standard for performance year 2025 and subsequent years if the ACO reports the quality data on the APP Plus quality measure set established under § 414.1367 according to the method of submission established by CMS and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP Plus quality measure set.
- We proposed to revise § 425.512(a)(5)(iii)(B) to indicate that for performance year 2025 and subsequent performance years, an ACO will not meet the quality performance standard or the alternative quality performance standard if the ACO does not report any of the eCQMs/Medicare CQMs in the APP Plus quality measure set and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)).
- We proposed to revise § 425.512(a)(7) introductory text and (a)(7)(i) and proposed to add new paragraphs (a)(7)(i)(A) and (B) to indicate for performance year 2024, we will use the higher of the ACO's health equity adjusted Quality performance

category score or the equivalent of the 40th percentile MIPS Quality performance category score when an ACO reports all of the required measures, meeting the data completeness requirement for each measure in the APP quality measure set and receiving a MIPS Quality performance category score and the ACO meets either of the following:

++ The ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score are reduced under § 414.1380(b)(1)(vii)(A).

++ At least one of the eCQMs/MIPS CQMs/Medicare CQMs does not have a benchmark as described at § 414.1380(b)(1)(i)(A).

• We proposed to revise § 425.512(a)(7)(ii) and proposed to add new paragraphs (a)(7)(ii)(A) and (B) to indicate for performance year 2025 and subsequent performance years, an ACO will receive the higher of the ACO's health equity adjusted quality performance category score or the equivalent of the 40th percentile MIPS Quality performance category score when an ACO reports all of the required measures in the APP Plus quality measure set, meeting the data completeness requirement for each measure in the APP Plus quality measure set, and receiving a MIPS Quality performance category score, and the ACO meets either of the following:

++ The ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score are reduced under § 414.1380(b)(1)(vii)(A).

++ At least one of the eCQMs/Medicare CQMs does not have a benchmark as described at § 414.1380(b)(1)(i)(A).

• We proposed to revise § 425.512(b)(1) and (2) and (b)(4)(i) by removing the phrase ''APP measure set'' and replacing with the phrase ''APP quality measure set'' to align naming conventions for the two quality measure sets within the APP: the APP quality measure set and the APP Plus quality measure set.

• We proposed to revise § 425.512(b)(1) to update a renumbered cross reference.

• We proposed to revise the heading for § 425.512(b)(2) by removing the phrase ''and subsequent performance years.''

• We proposed to renumber the current paragraph (b)(3) of § 425.512 to paragraph (b)(4) and revise the cross references therein to reflect this renumbering.

• We proposed to add a new paragraph (b)(3) to § 425.512 to establish for performance year 2025 and subsequent performance years that for an ACO that reports all of the eCQMs/Medicare CQMs in the APP Plus quality measure set, meeting the data completeness requirement for all of the eCQMs/Medicare CQMs, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)), CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP Plus quality measure set and the ACO's health equity adjustment bonus points. The sum of these values may not exceed 100 percent.

• We proposed to renumber the current paragraph (b)(4) of § 425.512 to paragraph (b)(5) and revise the cross references therein to reflect this renumbering.

• We proposed to revise renumbered § 415.512(b)(5)(iv) to add reference to new paragraph (c)(3)(iv).

• We proposed to revise § 425.512(c)(3) introductory text by removing the phrase ''via the APP'' and adding in its place the phrase ''on the APP quality measure set or APP Plus quality measure set (as applicable)''.

• We proposed to revise § 425.512(c)(3)(iii) by removing the phrase ''and subsequent performance years'' after ''For performance year 2024''.

• We proposed to add new paragraph (c)(3)(iv) to § 425.512 to establish for performance year 2025 and subsequent performance years, if CMS determines the ACO meets the requirements of the Extreme and Uncontrollable Circumstances policy and the ACO reports the APP Plus quality measure set, meets the data completeness requirement, and receives a MIPS Quality performance category score, CMS will calculate the ACO's quality score as the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

After consideration of public comments received and for reasons discussed elsewhere in this final rule, we are finalizing our proposed regulation text changes as follows:

• We are finalizing as proposed to sunset the requirement that ACOs must submit quality data via the APP to satisfactorily report on behalf of the eligible clinicians who bill under the TIN of an ACO participant for purposes of the MIPS Quality performance category of the Quality Payment Program, and to revise § 425.508(b) to indicate that the requirement will be applicable for performance years beginning in 2021–2024. We are also finalizing to replace the phrase ''Alternative Payment Model Performance Pathway (APP)'' with the phrase ''APM Performance Pathway (APP)'' to conform with the phrase used at § 414.1367.

• We are finalizing as proposed to add a new paragraph (c) at § 425.508 to establish that, for performance years beginning on or after January 1, 2025, ACOs must submit quality data via the APM Performance Pathway (APP) on the quality measures contained in the APP Plus quality measure set established under § 414.1367 to satisfactorily report on behalf of the eligible clinicians who bill under the TIN of an ACO participant for purposes of the MIPS Quality performance category of the Quality Payment Program.

• We are finalizing as proposed to revise the section heading at § 425.510 to ''Application of the APM Performance Pathway (APP) quality measure set or the APP Plus quality measure set (as applicable) to Shared Savings Program ACOs for performance years beginning on or after January 1, 2021.''

• We are finalizing as proposed to sunset the requirement that ACOs must report quality data on the APP quality measure set according to the method of submission established by CMS and to revise § 425.510(b). We added a new paragraph (b)(1) at § 425.510 to indicate that the requirement will be applicable for performance years beginning in 2021 through 2024.

• We are finalizing as proposed to add a new paragraph (b)(2) at § 425.510 to establish that, for performance years beginning on or after January 1, 2025, ACOs must report quality data on the APP Plus quality measure set established under § 414.1367, according to the submission method established by CMS.

• We are finalizing with modifications revisions to § 425.512(a)(2)(iii) to establish that, for performance years 2025 and 2026, an ACO in the first performance year of the ACO's first agreement period under the Shared Savings Program will meet the quality performance standard if the ACO reports the APP Plus quality measure set and meets the data completeness requirement on all eCQMs/MIPS CQMs/Medicare CQMs, and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)),

and receives a MIPS Quality performance category score for the applicable performance year.

• Due to the modifications to § 425.512(a)(2)(iii) above, we are also finalizing to add a new paragraph (iv) at § 425.512(a)(2) to establish that, for performance years 2027 and subsequent performance years, an ACO in the first performance year of the ACO's first agreement period under the Shared Savings Program will meet the quality performance standard if the ACO reports the APP Plus quality measure set and meets the data completeness requirement on all eCQMs/Medicare CQMs, and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)), and receives a MIPS Quality performance category score for the applicable performance year.

• We are finalizing as proposed to revise the introductory paragraph (a)(5)(i) to § 425.512 to read as follows: ''Except as specified in paragraphs (a)(2) and (7) of this section, CMS designates the quality performance standard as:''.

• We finalizing as proposed to revise the introductory paragraph (a)(5)(i)(A) to read as follows: ''For performance year 2024, the ACO reporting quality data on the APP quality measure set established under § 414.1367 of this subchapter, according to the method of submission established by CMS and—''.

• We are finalizing with modifications revisions to the introductory paragraph (a)(5)(i)(B) to read as follows: ''For performance years 2025 and 2026, the ACO reporting quality data on the APP Plus quality measure set established under § 414.1367 of this subchapter, according to the method of submission established by CMS and—''.

• Due to the modifications to § 425.512(a)(5)(i)(B) above, we are adding new paragraph (a)(5)(i)(C) to § 425.512 to read as follows: ''For performance year 2027 and subsequent performance years, the ACO reporting quality data on the APP Plus quality measure set established under § 414.1367 of this subchapter, according to the method of submission established by CMS and—''.

• We are also finalizing to add new paragraphs (a)(5)(i)(C)(*1*) and (a)(5)(i)(C)(*2*) to indicate that an ACO will meet quality performance standard for performance year 2027 and subsequent years if it (1) achieves a health equity adjusted quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring or (2) reports all of the eCQMs in the APP Plus quality measure set applicable for a performance year, meeting the data completeness requirement at § 414.1340 of this subchapter for all eCQMs, and achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP Plus quality measure set and a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining measures in the APP Plus quality measure set.

• We are finalizing as proposed to add a new paragraph (a)(5)(ii)(A) to § 425.512 to indicate that an ACO will meet the alternative quality performance standard for performance year 2024 if the ACO reports quality data on the APP quality measure set established under § 414.1367 according to the method of submission established by CMS and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP quality measure set.

• We are finalizing as proposed to add a new paragraph (a)(5)(ii)(B) to § 425.512 to establish that an ACO will meet the alternative quality performance standard for performance year 2025 and subsequent years if the ACO reports the quality data on the APP Plus quality measure set established under § 414.1367 according to the method of submission established by CMS and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the outcome measures in the APP Plus quality measure set.

• We are finalizing with modification revisions to § 425.512(a)(5)(iii)(B) to indicate that for performance years 2025 and 2026, an ACO will not meet the quality performance standard or the alternative quality performance standard if the ACO does not report any of the eCQMs/MIPS CQMs/Medicare CQMs in the APP Plus quality measure set and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)).

• Due to the modifications to § 425.512(a)(5)(iii)(B) above, we are also finalizing to add a new paragraph (a)(5)(iii)(C) to § 425.512 to indicate that for performance year 2027 and subsequent performance years, an ACO will not meet the quality performance standard or the alternative quality performance standard if the ACO does not report any of the eCQMs/Medicare CQMs in the APP Plus quality measure set and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter).

• We are finalizing to add a descriptive heading (''Facility-based scoring'') to § 425.512(a)(7) to more accurately describe the policy at paragraph (a)(7). This change was proposed in the revised and republished regulation text (see 89 FR 62223) but not noted in the preamble of the CY 2025 PFS proposed rule. We are finalizing the heading to read as follows: ''*Shared Savings Program Scoring Policy for Excluded APP Measures and APP Measures That Lack a Benchmark*.''

• We are finalizing with minor wording modifications revisions to § 425.512(a)(7) introductory text. We are also finalizing as proposed to revise (a)(7)(i) and to add new paragraphs (a)(7)(i)(A) and (B) to indicate for performance year 2024, we will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score when an ACO reports all of the required measures, meeting the data completeness requirement for each measure in the APP quality measure set and receiving a MIPS Quality performance category score and the ACO meets either of the following:

++ The ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score is reduced under § 414.1380(b)(1)(vii)(A).

++ At least one of the eCQMs/MIPS CQMs/Medicare CQMs does not have a benchmark as described at § 414.1380(b)(1)(i)(A).

• We are finalizing with minor wording modifications to revise § 425.512(a)(7)(ii) and add new paragraphs (a)(7)(ii)(A) and (B) to indicate for performance year 2025 and subsequent performance years, an ACO will receive the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score when an ACO reports all of the required measures in the APP Plus quality measure set, meeting the data completeness requirement for each measure in the APP Plus quality measure set, and receiving a MIPS Quality performance category score, and the ACO meets either of the following:

++ The ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score is reduced under § 414.1380(b)(1)(vii)(A).

++ At least one of the required measures in the APP Plus quality measure set does not have a benchmark as described at § 414.1380(b)(1)(i)(A).

• We are finalizing as proposed to revise § 425.512(b)(1) and (2) and (b)(4)(i) by removing the phrase ''APP measure set'' and replacing with the phrase ''APP quality measure set'' to align naming conventions for the two quality measure sets within the APP: the APP quality measure set and the APP Plus quality measure set.

• We are finalizing as proposed revisions to § 425.512(b)(1) to update a renumbered cross reference.

• We are finalizing as proposed to revise the heading for § 425.512(b)(2) by removing the phrase ''and subsequent performance years.''

• We are finalizing as proposed to renumber the current paragraph (b)(3) of § 425.512 to paragraph (b)(4) and to revise the cross references therein to reflect this renumbering.

• In the CY 2025 PFS proposed rule, we inadvertently omitted to propose a technical revision to § 425.512(b)(4)(i), which currently states, ''For each measure *in the APP quality measure set,* CMS groups an ACO's performance into the top, middle, or bottom third of ACO measure performers by reporting mechanism'' (emphasis added). The revision would align the text of this section with our adoption of the APP Plus quality measure set for performance year 2025 and subsequent performance years. We are finalizing a revision to paragraph (b)(4)(i) to indicate that for each measure that an ACO is required to report for the applicable performance year, CMS groups an ACO's performance into the top, middle, or bottom third of ACO measure performers by reporting mechanism.

• We are finalizing with modifications to add a new paragraph (b)(3) to § 425.512 to establish for performance year 2025 and subsequent performance years that for an ACO that reports all of the required measures in the APP Plus quality measure set, meeting the data completeness requirement for all of the required measures in the APP Plus quality measure set, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)), CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP Plus quality measure set and the ACO's health equity adjustment bonus points. The sum of these values may not exceed 100 percent.

• We are finalizing as proposed to renumber the current paragraph (b)(4) of § 425.512 to paragraph (b)(5) and to revise the cross references therein to reflect this renumbering.

• We are finalizing as proposed to revise the renumbered § 415.512(b)(5)(iv) to add reference to new paragraph (c)(3)(iv).

• We are finalizing to add descriptive headings to redesignated paragraphs § 425.512(b)(4) and (b)(5). These changes were proposed in the revised and republished regulation text (see 89 FR 62222 through 62224) but not noted in the preamble of the CY 2025 PFS proposed rule.

• We are finalizing as proposed to revise § 425.512(c)(3) introductory text by removing the phrase ''via the APP'' and adding in its place the phrase ''on the APP quality measure set or APP Plus quality measure set (as applicable)''.

• We are finalizing as proposed to revise § 425.512(c)(3)(iii) by removing the phrase ''and subsequent performance years'' after ''For performance year 2024''.

• We are finalizing as proposed to add new paragraph (c)(3)(iv) to § 425.512 to establish for performance year 2025 and subsequent performance years, if CMS determines the ACO meets the requirements of the Extreme and Uncontrollable Circumstances policy and the ACO reports the APP Plus quality measure set, meets the data completeness requirement, and receives a MIPS Quality performance category score, we will calculate the ACO's quality score as the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

c. Changes to the Methodology for Calculating the MIPS Quality Performance Category Score for Shared Savings Program ACOs Reporting the APP Plus Quality Measure Set

(1) Background

Consistent with the authority to establish the quality reporting and other reporting requirements for the Medicare Shared Savings Program set forth in section 1899(b)(3) of the Act and the statutory requirements for the Quality Payment Program set forth in section 1848(q) and (r) of the Act for MIPS and section 1833(z) of the Act for Advanced APMs, since the Shared Savings Program's alignment with the APP in performance year 2021, MIPS eligible clinicians identified on the Participation List or Affiliated Practitioner List of an APM Entity participating in a MIPS APM—including ACOs that participate in the Medicare Shared Savings Program—that report data via the APP have been scored according to the APP scoring methodology described at § 414.1367. The MIPS Quality performance category score is calculated according to the APP scoring methodology at § 414.1367(c)(1) (85 FR 84864). Under the waiver authority at section 1115A(d)(1) of the Act for CMS Innovation Center APMs and at section 1899(f) of the Act for the Medicare Shared Savings Program, the Cost performance category weight is zero percent as described at § 414.1367(c)(2) (85 FR 84864) for MIPS eligible clinicians that report via the APP. As noted in section 1848(q)(5)(C)(ii) of the Act, a MIPS eligible clinician in an APM for a performance period automatically earns a minimum score of one half of the highest potential score for the MIPS Improvement activities category for their participation in an APM for the performance period. These baseline scores are automatically applied to the MIPS Improvement activities performance category score for MIPS eligible clinician in an APM—including ACOs that participate in the Medicare Shared Savings Program—that report via the APP as described at § 414.1367(c)(3) (85 FR 84865). The Promoting Interoperability performance category under the APP is reported and calculated in the same manner described at § 414.1375 (85 FR 84865).

As described in the CY 2021 PFS final rule, we waived the requirement to weight each MIPS performance category as described in section 1848(q)(5)(E) of the Act using the waiver authority in section 1899(f) of the Act for Medicare Shared Savings Program for MIPS eligible clinicians that report via the APP—including ACOs that participate in the Medicare Shared Savings Program (85 FR 84865). The performance category weights used to calculate the final score for a MIPS eligible clinician who is scored through the APP at § 414.1367(d)(1) are:

- *Quality:* 50 percent.
- *Cost:* 0 percent.
- *Improvement Activities:* 20 percent.
- *Promoting Interoperability:* 30 percent.

Additionally, in the CY 2021 PFS final rule, we also stated that under the authority provided in section 1848(q)(5)(F) of the Act, it may become necessary to reweight one or more performance categories (85 FR 84866). As described at § 414.1367(d)(2), if CMS determines, in accordance with

§ 414.1380(c)(2), that a different scoring weight should be assigned to the Quality or Promoting Interoperability performance category, CMS will redistribute the performance category weights as follows:

- *If CMS reweights the Quality performance category to 0 percent:* Promoting Interoperability performance category is reweighted to 75 percent, and Improvement activities performance category is reweighted to 25 percent.
- *If CMS reweights the Promoting Interoperability performance category to 0 percent:* Quality performance category is reweighted to 75 percent, and Improvement activities performance category is reweighted to 25 percent.

Lastly, as codified at § 414.1367(e), final scoring for APM participants reporting to MIPS through the APP—including ACOs that participate in the Medicare Shared Savings Program—would follow the same methodology as established for MIPS generally at § 414.1380 (85 FR 84866).

In performance year 2024, ACOs are scored on either the three eCQMs/MIPS CQMs/Medicare CQMs or the ten CMS Web Interface measures, the CAHPS for MIPS survey, and two administrative claims-based measures. Under this methodology, an ACO's MIPS Quality performance category score is calculated according to MIPS scoring rules for the Quality performance category established at § 414.1380(b)(1) with exceptions for (1) measures that do not have a benchmark or do not meet the case minimum requirement and (2) measures that are identified as topped out. Specifically, each submitted measure that does not have a benchmark or does not meet the case minimum requirement is excluded from an ACO's total measure achievement points (numerator) and total available measure achievement points (denominator). Additionally, any measure that is identified as topped out is not subject to the scoring cap described at § 414.1380(b)(1)(iv). Under current APP scoring rules, each required measure of the APP quality measure set that is not submitted by an ACO via the APP receives zero measure achievement points.

(2) Revisions

(a) Establishing the Data Submission Criteria for the APP Plus Quality Measure Set

As discussed in section IV.A.4.e.(1)(b)(i) of the CY 2025 PFS proposed rule, for the APP Plus quality measure set, we proposed that Shared Savings Program ACOs that report the APP Plus quality measure set and MIPS eligible clinicians, groups, and APM Entities that choose to report the APP Plus quality measure set, will be required to report on all measures in the APP Plus quality measure set, as applicable (89 FR 61859). Specifically, in § 414.1335(b), we proposed to establish the data submission criteria for the APP Plus quality measure set, which would require the reporting of all measures within the APP Plus quality measure set, except for administrative claims-based quality measures.[537]

The MIPS Quality performance category score is calculated according to the APP scoring methodology at § 414.1367(c)(1) (85 FR 84864 through 85 FR 84865). As such, an ACO's MIPS Quality performance category score is calculated according to MIPS scoring rules for the Quality performance category established at § 414.1380(b)(1) with exceptions for (1) measures that do not have a benchmark or do not meet the case minimum requirement and (2) measures that are identified as topped out. Consistent with our proposal described above, under § 414.1380(b)(1), for performance year 2025 and subsequent performance years, ACOs would be scored on all required measures in the APP Plus quality measure set.

In the CY 2025 PFS proposed rule, we proposed that the policies related to MIPS performance category scoring in the APP at § 414.1367(c) would apply to Shared Savings Program ACOs that report the APP Plus quality measure set for the purpose of meeting the Shared Savings Program's quality performance standard (89 FR 61859).[538] Specifically, we proposed that the APP scoring policies at § 414.1367(c)(1) for the calculation of the ACO's MIPS Quality performance category, § 414.1367(c)(2) for the calculation of an ACO's MIPS Cost performance category, § 414.1367(c)(3) for the calculation of an ACO's MIPS Improvement activities performance category, and § 414.1367(c)(4) for the calculation of an ACO's MIPS Promoting Interoperability performance category would apply to ACOs that report the APP Plus quality measure set in performance year 2025 and subsequent performance years (89 FR 61859). Additionally, we proposed that the performance category weights described in § 414.1367(d) and methodology used to calculate the final score described in § 414.1367(e) would apply to Shared Savings Program ACOs that report the APP Plus quality measure set in performance year 2025 and subsequent performance years (89 FR 61859).

In the CY 2025 PFS proposed rule (89 FR 61859), we stated that if our proposals are finalized, then in performance year 2025, ACOs would be scored on the required eight measures in the APP Plus quality measure set: five eCQMs/Medicare CQMs, the CAHPS for MIPS survey, and two administrative claims-based measures. In performance years 2026 and 2027, ACOs would be scored on the required nine measures: six eCQMs/Medicare CQMs, the CAHPS for MIPS survey, and two administrative claims-based measures. In performance year 2028 and subsequent performance years, ACOs would be scored on the required eleven measures: eight eCQMs/Medicare CQMs, the CAHPS for MIPS survey, and two administrative claims-based measures. We referred readers to Tables 34, 35, and 36 in the CY 2025 PFS proposed rule for additional detail on the required measures in each performance year. We also referred readers to section IV.A.4.e.(1)(b)(i) of the CY 2025 PFS proposed rule for a discussion of our proposal to establish the data submission criteria for the APP Plus quality measure set, specifically the proposal to require the reporting of all measures within the APP Plus quality measure set.

We solicited comments on this proposal. The following is a summary of the public comments we received on this proposal and our responses. Many of the commenters expressing concern with our proposal shared those concerns in the context of our proposal to require Shared Savings Program ACOs to report the APP Plus measure set. To the extent that those comments overlap with regard to the burden associated with APP Plus quality measure set, those comments and our responses are captured in section III.G.4.b(2)(a) of this final rule.

Comment: We received one comment in support of our proposals related to MIPS performance category scoring in the APP that would apply to Shared Savings Program ACOs that report the APP Plus quality measure set for the purpose of meeting the Shared Savings Program's quality performance standard. However, this commenter and others expressed reservations about the

[537] As described at § 414.1325(a)(2)(i), there are no data submission requirements for administrative claims-based quality measures as performance on such measures is calculated by CMS using administrative claims data, which includes claims submitted with dates of service during the applicable performance period that are processed no later than 60 days following the close of the applicable performance period.

[538] This discussion describes standards under the APP, which are applicable to APM Entities. We refer throughout to ACOs in lieu of APM Entities as we are discussing the application of APP standards to ACOs participating in the Shared Savings Program, and thus ACOs are the sole relevant type of APM Entity.

proposal to require Shared Savings Program ACOs to report all measures in the APP Plus measure set for purposes of meeting the quality reporting standard.

Response: We thank the commenter for supporting our proposal. As discussed in section IV.A.4.e.(1)(b)(i) of this final rule, we are finalizing as proposed that, for the APP Plus quality measure set, Shared Savings Program ACOs that report the APP Plus quality measure set and MIPS eligible clinicians, groups, and APM Entities that choose to report the APP Plus quality measure set, will be required to report on all measures in the APP Plus quality measure set, as applicable. Specifically, in § 414.1335(b), we are finalizing to establish the data submission criteria for the APP Plus quality measure set, which would require the reporting of all measures within the APP Plus quality measure set, except for administrative claims-based quality measures. Under § 414.1380(b)(1), for performance year 2025 and subsequent performance years, ACOs would be scored on all required measures in the APP Plus quality measure set.

We refer readers to section IV.A.4.e.(1)(b)(i) of this final rule for a discussion of our final policy to establish the data submission criteria for the APP Plus quality measure set, specifically the proposal to require the reporting of all measures within the APP Plus quality measure set. We are finalizing as proposed that the policies related to MIPS performance category scoring in the APP at § 414.1367(c) will apply to Shared Savings Program ACOs that report the APP Plus quality measure set for the purpose of meeting the Shared Savings Program's quality performance standard. Specifically, we are finalizing that the APP scoring policies at § 414.1367(c)(1) for the calculation of the ACO's MIPS Quality performance category, § 414.1367(c)(2) for the calculation of an ACO's MIPS Cost performance category, § 414.1367(c)(3) for the calculation of an ACO's MIPS Improvement activities performance category, and § 414.1367(c)(4) for the calculation of an ACO's MIPS Promoting Interoperability performance category will apply to ACOs that report the APP Plus quality measure set in performance year 2025 and subsequent performance years. Additionally, we are finalizing that § 414.1367(d) for the performance category weights and § 414.1367(e) for the calculation of the final score will apply to Shared Savings Program ACOs that report the APP Plus quality measure set in performance year 2025 and subsequent performance years.

Based on the policies finalized in section III.G.4.b.(2)(b) of this final rule, in performance year 2025, ACOs will be scored on the required six measures in the APP Plus quality measure set: four eCQMs/MIPS CQMs/Medicare CQMs, the CAHPS for MIPS survey, and one administrative claims-based measure. In performance year 2026, ACOs will be scored on the required eight measures: five eCQMs/MIPS CQMs/Medicare CQMs, the CAHPS for MIPS survey, and two administrative claims-based measures. In performance year 2027, ACOs will be scored on the required nine measures: six eCQMs/Medicare CQMs, the CAHPS for MIPS survey, and two administrative claims-based measures. Beginning with performance year 2028 or the performance year that is one year after the eCQM specifications become available for Quality ID: 487 Screening for Social Drivers of Health and Quality ID: 493 Adult Immunization Status, whichever is later, ACOs will be scored on the required eleven measures: eight eCQMs/Medicare CQMs, the CAHPS for MIPS survey, and two administrative claims-based measures. For Quality ID: 487 Screening for Social Drivers of Health or Quality ID: 493 Adult Immunization Status to be incorporated into the APP Plus quality measure set in performance year 2028, the eCQM specification for the measure must be published on the eCQI resource center by May 2027, and the measure would be required to be reported by ACOs in early 2029. We refer readers to Tables 38, 39, 40, and 41 in section III.G.4.f of this final rule for additional detail on the required measures in each performance year.

(b) Establishing a Complex Organization Adjustment for Virtual Groups and APM Entities

To account for the organizational complexities faced by Virtual Groups and APM Entities, including Shared Savings Program ACOs, when reporting eCQMs, in section IV.A.4.f.(1)(b)(iii) of the CY 2025 PFS proposed rule, we proposed to establish a Complex Organization Adjustment beginning in the CY 2025 performance period/2027 MIPS payment year (89 FR 61859). A Virtual Group and an APM Entity would receive one measure achievement point for each submitted eCQM that meets the case minimum requirement at § 414.1380(b)(1)(iii) and the data completeness requirement at § 414.1340. Each reported eCQM may not score more than 10 measure achievement points and the total achievement points (numerator) may not exceed the total available measure achievement points (denominator) for the quality performance category. The Complex Organization Adjustment for a Virtual Group or APM Entity may not exceed 10 percent of the total available measure achievement points in the quality performance category. The adjustment would be added for each measure submitted at the individual measure level.

Since Shared Savings Program ACOs are APM Entities, this proposal would be applicable to Shared Savings Program ACOs reporting the APP Plus quality measure set beginning in performance year 2025. We refer readers to section IV.A.4.f.(1)(b)(iii) of the CY 2025 PFS proposed rule for discussion of our proposal to establish the Complex Organization Adjustment for Virtual Groups and APM Entities (89 FR 62080 through 62083). Under our proposal as described in section III.G.4.f of the CY 2025 PFS proposed rule, the APP Plus quality measure set for Shared Savings Program ACOs would include eight measures (five eCQMs/Medicare CQMs, two administrative claims measures, and the CAHPS for MIPS Survey measure) in performance year 2025 (Table 34); nine measures (six eCQMs/Medicare CQMs, two administrative claims measures, and the CAHPS for MIPS Survey measure) in performance years 2026 and 2027 (Table 35); and eleven measures (eight eCQMs/Medicare CQMs, two administrative claims measures, and the CAHPS for MIPS Survey measure) in performance years 2028 and subsequent performance years (Table 36).

We solicited public comment on the proposal to implement a Complex Organization Adjustment for Virtual Groups and APM Entities, including ACOs in the Shared Savings Program. We refer readers to section IV.A.4.f.(1)(b)(iii) of this final rule for summaries of the comments and our responses.

As discussed in section IV.A.4.f.(1)(b)(iii) of this final rule, we are finalizing as proposed our proposal to establish a Complex Organization Adjustment beginning in the CY 2025 performance period/2027 MIPS payment year to account for the organizational complexities faced by Virtual Groups and APM Entities, including Shared Savings Program ACOs, when reporting eCQMs. A Virtual Group and an APM Entity will receive one measure achievement point for each submitted eCQM that meets the case minimum requirement at § 414.1380(b)(1)(iii) and the data completeness requirement at § 414.1340. Each reported eCQM may not score

more than 10 measure achievement points and the total achievement points (numerator) may not exceed the total available measure achievement points (denominator) for the quality performance category. The Complex Organization Adjustment for a Virtual Group or APM Entity may not exceed 10 percent of the total available measure achievement points in the quality performance category. The adjustment will be added for each measure submitted at the individual measure level. Since Shared Savings Program ACOs are APM Entities, this policy will be applicable to Shared Savings Program ACOs reporting the APP Plus quality measure set beginning in performance year 2025. We refer readers to section IV.A.4.f.(1)(b)(iii) of this final rule for discussion of our policy to establish the Complex Organization Adjustment for Virtual Groups and APM Entities.

As the Adult Universal Foundation measures are phased into the APP Plus quality measure set, ACOs that participate in the Shared Savings Program will be required to report on a larger measure set relative to other eCQM reporters. Under our policy finalized in section III.G.4.f of this final rule, the APP Plus quality measure set for Shared Savings Program ACOs will include six measures (four eCQMs/MIPS CQMs/Medicare CQMs, one administrative claims-based measure, and the CAHPS for MIPS Survey measure) in performance year 2025 (Table 39); eight measures (five eCQMs/MIPS CQMs/Medicare CQMs, two administrative claims-based measures, and the CAHPS for MIPS Survey measure) in performance years 2026 (Table 40); nine measures (six eCQMs/Medicare CQMs, two administrative claims-based measures, and the CAHPS for MIPS Survey measure) in performance years 2027 (Table 41); and eleven measures (eight eCQMs/Medicare CQMs, two administrative claims-based measures, and the CAHPS for MIPS Survey measure) beginning with performance year 2028 or the performance year that is one year after the eCQM specifications become available for Quality ID: 487 Screening for Social Drivers of Health and Quality ID: 493 Adult Immunization Status, whichever is later (Table 42).

(c) Scoring Shared Savings Program ACOs Reporting Medicare CQMs Using Flat Benchmarks

In the CY 2024 PFS final rule, we finalized our proposal to establish new benchmarks for scoring ACOs on the Medicare CQMs under MIPS in alignment with MIPS benchmarking policies (88 FR 79110). As historical Medicare CQM data would not be available, we finalized that for performance years 2024 and 2025, we will score Medicare CQMs using performance period benchmarks. We also finalized that, for performance year 2026 and subsequent performance years, when baseline period data are available to establish historical benchmarks in a manner that is consistent with the MIPS benchmarking policies at § 414.1380(b)(1)(ii), we will score Medicare CQMs using historical benchmarks.

A few commenters noted in our proposal in the CY 2024 PFS proposed rule (88 FR 79109 through 79110) their concern about ACOs being compared only to other ACOs that report Medicare CQMs since the Medicare CQMs would be available only to Shared Savings Program ACOs. One commenter stated their preference to have their quality performance compared to all other participants on these measures, while another commenter stated that CMS should stop measuring ACOs against each other and instead measure ACOs on a national standard so that all ACOs can pass and do not lose out on savings due to arbitrary quality decile cut points. In our response to these comments, we stated that given that benchmarks are specific to each collection type and that we proposed to establish Medicare CQMs as a new collection type for only Shared Savings Program ACOs, only ACO data will be available to benchmark Medicare CQMs. Additionally, the health equity adjustment would be applicable to Medicare CQMs for purposes of determining shared savings payments/losses. The application of the health equity adjustment would help improve performance when ACOs deliver high quality care to underserved patient populations. For these reasons, we stated in the CY 2025 PFS proposed rule that it is appropriate to establish benchmarks for Medicare CQMs that are consistent with MIPS benchmarking policies (89 FR 61860). ACOs that prefer to be compared to clinicians at large may do so by reporting eCQMs or MIPS CQMs, for which CMS calculates a benchmark using data reported by MIPS eligible clinicians reporting under the chosen collection type.

In performance year 2022, ACOs had a higher average performance on quality measures they were required to report in order to share in savings compared to other similarly sized clinician groups not in the Shared Savings Program.[539] This includes statistically significant higher performance for quality measures related to diabetes and blood pressure control; breast cancer and colorectal cancer screening; tobacco screening and smoking cessation; and depression screening and follow-up.[540] In shifting to Medicare CQMs, ACO performance would be benchmarked against other ACOs only reporting Medicare CQMs. Since ACOs are high performers relative to comparably sized MIPS groups, benchmarking Medicare CQMs using only ACO data would lower some ACOs' MIPS measure achievement points on those measures. In other words, high-performing ACOs could earn lower measure achievement points relative to comparable MIPS groups because the Medicare CQM benchmarking pool is comprised of higher-than-average performance data–in effect, creating a ''tournament approach'' to scoring Medicare CQMs wherein ACOs must compete with other ACOs to earn measure achievement points. As we stated in the CY 2025 PFS proposed rule, this could be particularly disadvantageous for ACOs that serve a high proportion of underserved populations because, while ACOs that report eCQMs and/or Medicare CQMs and serve a high proportion of underserved populations are eligible for health equity adjustment points, ACOs must score in the top or middle thirds of ACO measure performers to earn health equity adjustment points (89 FR 61860).

As described in section III.G.4.b.(2)(b) of the CY 2025 PFS proposed rule, for performance year 2025 and subsequent performance years, we proposed to streamline the collection types available for Shared Savings Program ACOs reporting the APP Plus quality measure set to the eCQM and Medicare CQM collection types (89 FR 61860). Therefore, as discussed in section IV.A.4.f.(1)(c)(i) of the CY 2025 PFS proposed rule, we proposed to add § 414.1380(b)(1)(ii)(F) to state that beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQM collection type would be scored using flat benchmarks for their first two performance periods in MIPS (89 FR 61860). Our proposal in section IV.A.4.f.(1)(c)(i) of the CY 2025 PFS proposed rule would expand the use of flat benchmarks to Medicare CQMs in

[539] Centers for Medicare & Medicaid Services (2023). *Medicare Shared Savings Program Saves Medicare More Than $1.8 Billion in 2022 and Continues to Deliver High-quality Care. [Press release]. https://www.cms.gov/newsroom/press-releases/medicare-shared-savings-program-saves-medicare-more-18-billion-2022-and-continues-deliver-high.*

[540] *Id.*

their first two performance periods in MIPS (89 FR 61860). The use of flat benchmarks would allow ACOs with high scores to earn maximum or near maximum achievement points while allowing room for quality improvement and rewarding that improvement in subsequent years. Use of flat benchmarks also helps to ensure that ACOs with high quality performance on a measure are not penalized as low performers. As discussed in section IV.A.4.f.(1)(c)(i) of the CY 2025 PFS proposed rule, we proposed to add § 414.1380(b)(1)(ii)(F) to incorporate this proposal (89 FR 61860). The use of historical benchmarks, when data are available, is consistent with MIPS benchmarking policies at § 414.1380(b)(1)(ii), allow ACOs to know benchmarks prior to start of the performance year, and create opportunities for improvement.

Table 30 in the CY 2025 PFS proposed rule (89 FR 61861), which is the same as the following Table 33, lists the Medicare CQMs in the APP Plus quality measure set that would be eligible for flat benchmarks in performance year 2025 through performance year 2029 under our proposal.

TABLE 33: Proposed Medicare CQMs Eligible for Flat Benchmarks in Performance Year 2025 through 2029

Performance Year	Quality #
2025	001, 134, 236, 112, 113
2026	112, 113, 305
2027	305
2028	487, 493
2029	487, 493

As discussed in the CY 2025 PFS proposed rule, a quality performance benchmark is the performance rate an ACO must achieve to earn the corresponding quality points for each measure (89 FR 61861). Flat benchmarks assign a performance rate range to each decile. In flat benchmarks for non-inverse measures, any performance rate at or above 90 percent would be in the top decile; any performance rate between 80 percent and 89.99 percent would be in the second highest decile, and so on. For inverse measures, this would be reversed—any performance rate at or below 10 percent would be in the top decile; any performance rate between 10.01 percent and 20 percent would be in the second highest decile, and so on. The number of measure achievement points received for each measure is determined based on the applicable benchmark decile category and the percentile distribution.

For non-inverse measures, better quality performance is indicated by a higher performance rate. For example, Quality #: 001 Controlling High Blood Pressure is a non-inverse measure that measures the percentage of patients 18–85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (<140/90 mmHg) during the measurement period. Better quality performance on this measure is demonstrated by having a higher percentage of patients whose blood pressure was adequately controlled. Table 31 in the CY 2025 PFS proposed rule (89 FR 61861), which is the same as the following Table 34, lists the flat benchmarks for a non-inverse Medicare CQM under our proposal described in section IV.A.4.f.(1)(c)(i) of the CY 2025 PFS proposed rule.

TABLE 34: Flat Benchmarks for a Non-Inverse Medicare CQM in its First Two Performance Periods in MIPS in Performance Year 2025 and Subsequent Years

Decile	Performance Rate Range
1	< 10.00
2	10.00 – 19.99
3	20.00 – 29.99
4	30.00 – 39.99
5	40.00 – 49.99
6	50.00 – 59.99
7	60.00 – 69.99
8	70.00 – 79.99
9	80.00 – 89.99
10	>= 90.00

For example, if an ACO reports a non-inverse Medicare CQM in its first two performance periods in MIPS in performance year 2025 and earns a performance rate of 55.25 percent, then the ACO would score in the 6th decile on that measure.

For inverse measures, better quality performance is indicated by a lower performance rate. This is reflected in flat benchmark such that lower quality performance rates are found in higher deciles. For example, Quality #: 001

Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%) is an inverse quality measure that measures the percentage of patients 18–75 years of age with diabetes who had hemoglobin A1c >9.0 percent during the measurement period. Better quality performance on this measure is demonstrated by having a lower percentage of patients whose HbA1c was >9.0 percent. Table 32 in the CY 2025 PFS proposed rule (89 FR 61862), which is the same as the following Table 35, lists the flat benchmarks for an inverse Medicare CQM under our proposal described in section IV.A.4.f.(1)(c)(i) of the CY 2025 PFS proposed rule.

TABLE 35: Flat Benchmarks for an Inverse Medicare CQM in its First Two Performance Periods in MIPS in Performance Year 2025 and Subsequent Years

Decile	Performance Rate Range
1	99.00 – 90.01
2	90.00 – 80.01
3	80.00 – 70.01
4	70.00 – 60.01
5	60.00 – 50.01
6	50.00 – 40.01
7	40.00 – 30.01
8	30.00 – 20.01
9	20.00 – 10.01
10	<= 10.00

For example, if an ACO reports an inverse Medicare CQM in its first two performance periods in MIPS in performance year 2025 and earns a performance rate of 12.25 percent, then the ACO would score in the 9th decile on that measure. In performance year 2025, Quality #: 001 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%) is the only inverse Medicare CQM.

There are scoring scenarios in which ACOs would earn higher measure achievement points under flat benchmarks compared to those they would earn under performance period benchmarks. Most notable are scenarios in which ACOs have a tight distribution of performance rates on a measure. For example, a non-inverse measure for which a performance rate of 90.00 percent is in the 8th decile. In this example, an ACO that reported a performance rate of 90.00 percent would be scored in the 8th decile when the hypothetical performance period benchmark is applied. Using the flat benchmarks described in Table 34 of this final rule, an ACO that reported a performance rate of 90.00 percent would be scored in the 10th decile, resulting in greater measure achievement points than under the hypothetical performance period benchmarks described in this example. For more details on the calculation of measure achievement points, we refer readers to the ''APM Performance Pathway (APP) Toolkit'' which is updated for each performance year and posted in the QPP Resource Library.

We solicited comment on our proposal to score ACOs reporting Medicare CQMs using flat benchmarks in their first two performance periods in MIPS. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to score ACOs reporting Medicare CQMs using flat benchmarks. Commenters noted that flat benchmarks will make Medicare CQM scoring more predictable and is fair. One commenter noted that flat benchmarks would allow ACOs with high scores to earn maximum or near maximum achievement points while allowing room for quality improvement and rewarding that improvement in subsequent years. Another commenter stated that flat benchmarks would avoid ''tournament'' approach that is typically found in a group of high performers and allow the opportunity for improvements without penalizing high performers.

One commenter supported flat benchmarking for the first two performance years for Medicare CQMs and stated that it will be a difficult transition for ACOs to progress from the CMS Web Interface attestation method to CQM/eCQM reporting and sees that Medicare CQM flat benchmarking will remove uncertainty from ACO attestation to Medicare CQMs as they will no longer have to rely on benchmarking based upon the performance year.

Response: We thank commenters for their support of our proposal. As discussed in section IV.A.4.f.(1)(c)(i) of this final rule, we are finalizing our proposal with modification to add § 414.1380(b)(1)(ii)(F) to state that beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQM collection type would be scored using flat benchmarks for their first two performance periods in MIPS. As we stated in the CY 2025 PFS proposed rule (89 FR 61860), the use of flat benchmarks would allow ACOs with high scores to earn maximum or near maximum achievement points while allowing room for quality improvement and rewarding that improvement in subsequent years and would also help to ensure that ACOs with high quality performance on a measure are not penalized as low performers.

Comment: One commenter appreciated the proposal to refine Medicare CQMs away from the retrospective curve, but expressed concern that the proposed benchmarks are still too high. The commenter stated that the proposed percentiles would still result in many ACOs falling below the 40th percentile and losing savings when in the accurate sample methodology, they would have succeeded. The commenter recommended that CMS create an adjustment factor to the percentiles based on the experienced drop in eCQMs, MIPS CQMs, and Medicare CQMs reported in 2023 and

2024 compared to Web Interface reporting. The commenter also stated that their testing shows a drop in accuracy for Medicare CQMs that will cost ACOs millions of dollars in shared savings and noted that while they appreciate CMS' proposals in this area, CMS should adjust benchmarks to account for the observed drop in accuracy.

Response: We thank the commenter for their feedback. As described in our proposal, there are scoring scenarios in which ACOs would earn higher measure achievement points under flat benchmarks compared to those they would earn under performance period benchmarks (89 FR 61862). Most notable are scenarios in which ACOs have a tight distribution of performance rates on a measure. For example, a non-inverse measure for which a performance rate of 90.00 percent is in the 8th decile. In this example, an ACO that reported a performance rate of 90.00 percent would be scored in the 8th decile when the hypothetical performance period benchmark is applied. Using the flat benchmarks described in Table 34 of this final rule, an ACO that reported a performance rate of 90.00 percent would be scored in the 10th decile, resulting in greater measure achievement points than under the hypothetical performance period benchmarks described in this example, which would have resulted in a score in the 8th decile.

In response to the commenter's suggestion that CMS create an adjustment factor to the percentiles based on the experienced drop in eCQMs, MIPS CQMs, and Medicare CQMs reported in 2023 and 2024 compared to CMS Web Interface reporting, we note that section 1899(b)(3)(C) of the Act directs that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both for purposes of assessing such quality of care. Applying an adjustment factor to downwardly adjust benchmarks across collection types is not consistent with our intent to improve quality of care furnished by ACOs over time. Additionally, consistent with the goal of supporting ACOs in their transition to all payer/all patient eCQMs/MIPS CQMs, in the CY 2024 PFS final rule, we finalized that ACOs that report Medicare CQMs would be eligible for the health equity adjustment to their quality performance category score when calculating shared savings payments (88 FR 79110). The health equity adjustment upwardly adjusts the MIPS quality performance score for ACOs that report eCQMs/MIPS CQMs/Medicare CQMs, are high performing on quality, and serve a higher proportion of underserved beneficiaries.

Comment: Many commenters recommended that flat benchmarks for Medicare CQM be made permanent rather than for two years because ACOs are high performers compared to non-ACO MIPS clinicians and only comparing ACOs against each other will make benchmarks very high and more difficult to achieve. One commenter recommended that CMS consider extending the flat benchmark scoring policies for Medicare CQMs beyond each measure's first two performance periods.

Response: In response to comments that flat benchmarks be applied to Medicare CQMs permanently or beyond the first two performance periods, we believe that the baseline period data, which will be available to establish historical benchmarks is consistent with MIPS benchmarking policies at § 414.1380(b)(1)(ii). As we stated in the CY 2025 PFS proposed rule (89 FR 61860), the use of historical benchmarks, when data are available, allow ACOs to know benchmarks prior to start of the performance year and create opportunities for improvement. Also, as discussed in the CY 2024 PFS final rule, since Medicare CQMs would be subject to MIPS scoring policies, the application of MIPS benchmarking policies to Medicare CQMs is both logical and necessary for implementation of the new collection type (88 FR 79180).

Comment: Several commenters requested clarification on whether flat benchmarks will apply to Medicare CQMs retroactively for the 2024 performance year. Some commenters recommended that CMS retroactively apply this policy for the 2024 performance period. Another commenter recommended the use of flat benchmarks for performance years 2024 and 2025 since historical Medicare CQM data will not be available until 2026.

Response: We did not propose to retroactively apply flat benchmarks to Medicare CQMs in performance year 2024. Shared Savings Program ACOs will have the option to report quality data via the APP using the CMS Web Interface or eCQM/MIPS CQM/Medicare CQM collection types in performance year 2024. The option to report using one or more of four collection types in performance year 2024 will allow ACOs to select the submission method that is most appropriate and advantageous for their situation and technological capabilities. For performance year 2024, we will score Medicare CQMs using performance period benchmarks as finalized in the CY 2024 PFS final rule (88 FR 79110).

We note in section III.G.4.b.(2)(b) of this final rule that, after considering public comments, we are finalizing with modification our proposal to not include the MIPS CQM collection type for Shared Savings Program ACOs reporting the APP Plus quality measure set. Specifically, we are finalizing the inclusion of MIPS CQM collection type for ACOs reporting the APP Plus quality measure set for performance years 2025 and 2026. The MIPS collection type will not be available for ACOs reporting the APP Plus quality measure set beginning in performance year 2027. We recognize flat benchmarks may provide more assurance to ACOs than the extension of the MIPS CQMs and as such, after considering public comments, we are finalizing in section IV.A.4.f.(1)(c)(i) of this final rule that, beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQM collection type will be scored using flat benchmarks for their first two performance periods in MIPS.

Comment: Many commenters recommended that CMS release performance data on Medicare CQMs publicly for ACOs to better understand performance.

Response: The Shared Savings Program releases performance year ACO-level financial and quality performance data annually on *https://data.cms.gov.* We anticipate updating the public use files with Medicare CQM performance data when the data are available.

After consideration of public comments and as discussed in section IV.A.4.f.(1)(c)(i) of this final rule, we are finalizing as proposed to add § 414.1380(b)(1)(ii)(F) to state that beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQM collection type would be scored using flat benchmarks for their first two performance periods in MIPS.

Table 36 lists the Medicare CQMs in the APP Plus quality measure set that will be eligible for flat benchmarks beginning in performance year 2025 through performance year 2028, or the performance year that is one year after the eCQM specifications become available for Quality #: 487 Screening for Social Drivers of Health and Quality #: 493 Adult Immunization Status, whichever is later, under the policies being finalized in this final rule.

Medicare CQM versions of Quality #: 001 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%), Quality #: 134 Preventive Care and Screening: Screening for Depression and Follow-up Plan, and Quality #: 236 Controlling High Blood Pressure will be scored using a flat benchmark in performance years 2025. Medicare CQM version of Quality #: 112 Breast Cancer Screening will be scored using a flat benchmark in performance years 2025 and 2026. Medicare CQM version of Quality #: 113 Colorectal Cancer Screening will be scored using a flat benchmark in performance years 2026 and 2027. Medicare CQM version of Quality #: 305 Initiation and Engagement of Substance Use Disorder Treatment will be scored using a flat benchmark in performance years 2027 and 2028. Quality #: 487 Screening for Social Drivers of Health and Quality #: 493 Adult Immunization Status will be eligible for flat benchmarks for two years beginning with performance year 2028 or the performance year that is one year after the eCQM specifications become available for these measures, whichever is later.

TABLE 36: Medicare CQMs Eligible for Flat Benchmarks in Performance Years 2025 through 2028

Performance Year	Quality #
2025	001, 134, 236, 112
2026	112, 113
2027	113, 305
2028	305, 487*, 493*

*Quality #: 487 Screening for Social Drivers of Health and Quality #: 493 Adult Immunization Status will be eligible for flat benchmarks for 2 years beginning with performance year 2028 or the performance year that is 1 year after the eCQM specifications become available for these measures, whichever is later.

We are also finalizing as proposed (1) the flat benchmarks, as listed in Table 31 of the CY 2025 PFS proposed rule (89 FR 61861) and Table 34 of this final rule, for a non-inverse Medicare CQM, and (2) the flat benchmarks, as listed in Table 32 of the CY 2025 PFS proposed rule (89 FR 61862) and Table 35 of this final rule, for an inverse Medicare CQM under our final policy described in section IV.A.4.f.(1)(c)(i) of this final rule.

(3) Changes to Regulation Text

As discussed in sections III.G.4.c.(2)(a), III.G.4.c.(2)(b), and III.G.4.c.(2)(c) of the CY 2025 PFS proposed rule (89 FR 61858 through 61862), we proposed to establish scoring rules to calculate the MIPS Quality performance category score for ACOs reporting the APP Plus quality measure set for performance year 2025 and subsequent performance years. We stated that we believe that these proposed scoring rules would incentivize the reporting of eCQMs in the APP Plus quality measure set while continuing to support ACOs that report Medicare CQMs as they build the infrastructure, skills, knowledge, and expertise necessary to aggregate patient data to report digital quality measures. We are finalizing these policies as proposed. We refer readers to sections IV.A.4.e.(1)(b)(i), IV.A.4.f.(1)(b)(iii), and IV.A.4.f.(1)(c)(i) of this final rule for changes to the regulation text at 42 CFR part 414.

d. Extending the eCQM Reporting Incentive for Meeting the Shared Savings Program Quality Performance Standard

(1) Background

In the CY 2023 PFS final rule, we extended the incentive for reporting eCQMs/MIPS CQMs through performance year 2024 to align with the timeline for sunsetting of the CMS Web Interface reporting option and to allow ACOs an additional year to gauge their performance on the eCQMs/MIPS CQMs before full reporting of the measures are required beginning in performance year 2025 (87 FR 69836 through 69838). We originally adopted this incentive in the CY 2022 PFS final rule to encourage ACOs to begin the transition to eCQM/MIPS CQM reporting in performance years 2022 and 2023 (86 FR 65269). We finalized an update to the incentive for performance year 2024 such that:

- If an ACO reports the three eCQMs/MIPS CQMs, meets the data completeness requirement at § 414.1340 and the case minimum requirement at § 414.1380 for all three eCQMs/MIPS CQMs, and:
- Achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set and;
- Achieves a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining five measures in the APP measure set, the ACO will meet the quality performance standard used to determine eligibility for shared savings and to avoid maximum shared losses, if applicable.

We received a few comments on our proposal in the CY 2023 PFS proposed rule to extend the incentive for reporting eCQMs/MIPS CQMs through performance year 2024 suggesting that we extend the incentive beyond 2024 to facilitate the national shift towards eCQMs. In our response in the CY 2023 PFS final rule (87 FR 69836), we stated that ''We are not extending the incentive beyond performance year 2024 at this time because this policy is intended to align with the timeline for sunsetting of the CMS Web Interface reporting option at the end of performance year 2024. We will continue to monitor the impact of this policy as we gain more experience with ACOs reporting eCQMs/MIPS CQMs and may revisit the policy in future rulemaking.''

(2) Revisions

We are committed to continuing to support ACOs in the transition to the use of the all payer/all patient eCQM collection type for quality measure reporting and to digital quality measurement reporting. As described in section III.G.4.b.(2)(a) of the CY 2025 PFS proposed rule, for performance year 2025 and subsequent performance years, we proposed to require Shared Savings Program ACOs to report the APP Plus quality measure set as proposed in section IV.A.4.c.(3) of CY 2025 PFS proposed rule (89 FR 61862). We stated that the APP Plus quality measure set would incrementally grow to comprise

of 11 measures, consisting of six measures from the existing APP quality measure set and five additional measures from the Adult Universal Foundation measure set not already included in the existing APP quality measure set, and would be incrementally incorporated into the APP Plus quality measure between the CY 2025 performance period/2027 MIPS payment year and CY 2028 performance period/2030 MIPS payment year. We also proposed to focus the collection types available to Shared Savings Program ACOs for reporting the APP Plus quality measure set to all payer/all patient eCQMs and Medicare CQMs (while not making available the MIPS CQM as an available collection type for Shared Savings Program ACOs under the APP Plus quality measure set) (89 FR 61863).

As discussed in the CY 2025 PFS proposed rule, the Shared Savings Program continues to hear from ACOs and other interested parties about the challenges with reporting on all payer/all patient measures and meeting data management requirements given their muti-practice/multi EHR structure, the challenges to aggregate data with the health IT infrastructure in use by ACOs and current state of interoperability (89 FR 61863). Shared Savings Program quality reporting data over the past two performance years indicate that ACOs have been slow to report eCQMs. In performance year 2021, 5 of 475 ACOs reported eCQMs under the APP. In performance year 2022, among ACOs that reported quality data under the APP, 24 out of 482 reported eCQMs with 7 of these ACOs reporting a combination of eCQMs and MIPS CQMs.[541] We encourage ACOs, especially those ACOs serving large, underserved populations, to leverage interoperability and digital data more fully and to more quickly transition to eCQMs. As such, we proposed to extend the eCQM reporting incentive to performance year 2025 and subsequent performance years to support ACOs in meeting the Shared Savings Program quality performance standard for sharing in savings at the maximum rate under its track (89 FR 61863).

Specifically, we proposed that for performance year 2025 and subsequent performance years, an ACO will meet the quality performance standard used to determine eligibility for maximum shared savings and to avoid maximum shared losses, if applicable:

- If the ACO reports all of the eCQMs in the APP Plus quality measure set applicable for a performance year, meeting the data completeness requirement at § 414.1340 for all eCQMs, and;
- Achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP Plus quality measure set, and;
- Achieves a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining measures in the APP Plus quality measure set.

As proposed, the eCQM reporting incentive would apply only to those ACOs that report all quality measures in the APP Plus quality measure set that have eCQM collection type for an applicable performance year and meet the data completeness requirement for all such measures. Under the proposal, the reporting incentive would not apply to ACOs that report the APP Plus quality measure set using a combination of eCQMs/Medicare CQMs or report only Medicare CQMs. We stated that we would further assess the need for the eCQM reporting incentive in the future as ACOs continue the transition to adopting the eCQM collection type and may make refinements as needed in future rulemaking. We included the available collection types for each measure in the APP Plus quality measure set for performance year 2025, performance years 2026 and 2027, and performance year 2028 and subsequent performance years, which are displayed in Tables 34, 35, and 36 of the CY 2025 PFS proposed rule, respectively (89 FR 61866 through 61868). We included the measure type in these tables for each measure in the APP Plus quality measure set to provide ACOs with a list of the outcome measures for purposes of identifying outcome measures that qualify for the eCQM reporting incentive.

We solicited comments on our proposal to extend the eCQM reporting incentive to performance year 2025 and subsequent performance years. The following is a summary of the comments we received and our responses.

Comment: We received several comments in support of our proposal to extend the eCQM reporting incentive. These commenters agreed that extending the eCQM reporting incentive will encourage Shared Savings Program ACOs to transition to using all payer/all patient MIPS CQM and eCQM collection types for quality measure reporting and to digital quality measurement reporting. One commenter stated that extending the incentive would help to mitigate some challenges related to the adoption of the MIPS CQM and eCQM collection types. Another commenter noted that it allowed for a more gradual adoption of the eCQM framework.

Response: We thank commenters for their support.

Comment: Some commenters were concerned that the reporting incentive does not fully offset the costs and challenges faced by ACOs in adopting all payer/all patient collection types. One commenter suggested that Shared Savings Program ACOs would be unable to take advantage of the reporting incentive due to infrastructure problems encountered when reporting quality measures using the eCQM collection type. One commenter was concerned that ACOs comprised of independent, resource limited provider groups practicing in nontraditional settings would not be able to take advantage of the incentive and suggested that incremental incentives for the partial reporting of eCQMs over the course of three or more years is a more realistic motivator to change quality reporting behavior.

Response: We acknowledge the commenters' concerns regarding the challenges that ACOs face in building infrastructure to meet data management and eCQM reporting requirements. Our stated intent for the MIPS CQM and eCQM reporting incentive, which we first finalized in the CY 2022 PFS final rule (86 FR 65269), was to encourage ACOs to begin the transition to the use of eCQM and MIPS CQM collection types when reporting quality measures. We note that in performance year 2023, all ACOs that successfully reported eCQMs/MIPS CQMs met the criteria for the eCQM/MIPS CQM reporting incentive and thus met the Shared Savings Program's quality performance standard.

For performance year 2025 and subsequent performance years, we are finalizing that an ACO will meet the quality performance standard used to determine eligibility for maximum shared savings and to avoid maximum shared losses, if applicable: If the ACO reports all of the eCQMs/MIPS CQMs in the APP Plus quality measure set applicable for a performance year, meeting the MIPS data completeness requirement for all eCQMs/MIPS CQMs; achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the outcome measures in the APP Plus quality measure set; and achieves a quality performance score equivalent to

[541] Counts based on internal analysis of ACOs' quality reporting in performance year 2022 and 2021.

or higher than the 40th percentile of the performance benchmark on at least one of the remaining measures in the APP Plus quality measure set.

We believe that the increased number of quality measures that will be phased into the APP Plus quality measure set over time will afford ACOs expanded opportunities to satisfy the reporting incentive criteria. For instance, the number of eCQMs/MIPS CQMs in the APP Plus quality measure set will increase from four in performance year 2025 to five in performance year 2026. Once MIPS CQMs are removed from the APP Plus quality measure set in performance year 2027, the number of eCQMs in the APP Plus quality measure set will increase from five to six in performance year 2027. Once all of the eCQMs are incorporated into the APP Plus quality measure set, there will be 8 eCQMs. For these reasons, we believe that the eCQM/MIPS CQM reporting incentive incentives and supports ACOs to surmount commenters' eCQM challenges. We also believe that several of our other finalized policies address the concerns that interested parties mentioned regarding these challenges. In particular, we are finalizing in section III.G.4.b.(2)(b) of this final rule to make available the MIPS CQM collection type for Shared Savings Program ACOs reporting the APP Plus quality measure set for performance years 2025 and 2026. We disagree with the commenter's suggestion that incremental incentives over three or more years for the partial reporting of eCQMs are the best approach to incentivize eCQM reporting. We note that ACOs that are not yet ready to report eCQMs may report quality via other collection types. For instance, ACOs may report via the CMS Web Interface or the MIPS CQM/Medicare CQM collection types in performance year 2024, the MIPS CQM/Medicare CQM collection types in performance years 2025 and 2026, and the Medicare CQM collection types in performance year 2027 and subsequent performance years.

Comment: Several commenters suggested that the eCQM reporting incentive apply to Shared Savings Program ACOs that report quality measures using any collection type or a combination of the Medicare CQM, MIPS CQM and eCQM collection types.

Response: As discussed in section III.G.4.b.(2)(b) of this final rule, we are finalizing our original proposal with modification to make MIPS CQMs available as a collection type for ACOs reporting the APP Plus quality measure set for two additional years (that is, performance years 2025 and 2026). We originally adopted the reporting incentive in the CY 2022 PFS final rule to encourage ACOs to begin the transition to eCQM/MIPS CQM reporting in performance years 2022 and 2023 (86 FR 65269). In the CY 2023 PFS final rule, we extended the incentive for reporting eCQMs/MIPS CQMs through performance year 2024 to align with the timeline for sunsetting of the CMS Web Interface reporting option and to allow ACOs an additional year to gauge their performance on the eCQMs/MIPS CQMs before full reporting of the measures are required beginning in performance year 2025 (87 FR 69836 through 69838).

In order to continue to align the reporting incentive with the MIPS CQM collection type, we believe that it would be appropriate to extend the reporting incentive to ACOs reporting MIPS CQMs in performance years 2025 and 2026, similar to how the reporting incentive has applied to ACOs reporting MIPS CQMs between performance years 2022 and 2024. However, we are declining to modify our proposal to apply the reporting incentive to Shared Savings Program ACOs that use the Medicare CQM collection type to report quality measures. As we previously stated in the CY 2024 PFS final rule ''the incentive is for all payer/all patient eCQM/MIPS CQM reporting. Since Medicare CQMs would include only Medicare FFS beneficiaries, Medicare CQMs are not a form of all payer/all patient reporting. As such, they are not included in the eCQM/MIPS CQM reporting incentive'' (88 FR 79105).

Regarding the application of the reporting incentive to Medicare CQMs, we stated in the CY 2024 PFS final rule (88 FR 79105) that ''[a]s stated in the CY 2024 PFS proposed rule (88 FR 52423), we did not propose to add Medicare CQMs to the eCQM/MIPS CQM reporting incentive described at § 425.512(a)(5)(i)(A)(2) for performance year 2024. The incentive is for all payer/all patient eCQM/MIPS CQM reporting. Since Medicare CQMs would include only Medicare FFS beneficiaries, Medicare CQMs are not a form of all payer/all patient reporting. As such, they are not included in the eCQM/MIPS CQM reporting incentive.'' We note that the alternative quality performance standard and the health equity adjustment, both of which we finalized in the CY 2023 PFS final rule (87 FR 69831 and 69838, respectively), would be applicable to ACOs that report Medicare CQMs when those ACOs are otherwise eligible for scaled savings/losses.

Comment: One commenter suggested that the threshold for the incentive should require use of the eCQM collection type for reporting at least 3 of the 4 quality measures with this collection type in the proposed APP Plus quality measure set for the 2025 performance year.

Response: We previously heard from ACOs and other interested parties that the components of implementing an interoperable system are the same regardless of the number of quality measures reported using the MIPS CQM and/or eCQM collection types (86 FR 65260). As such, we are declining to modify the reporting incentive criteria to require the use of the eCQM collection type for reporting at least 3 of the 4 quality measures with this collection type in the proposed APP Plus quality measure set for the 2025 performance year.

After consideration of public comments, we are finalizing our proposal to extend the reporting incentive to ACOs reporting eCQMs in performance year 2025 and subsequent performance years. We are also finalizing to extend this reporting incentive to ACOs reporting MIPS CQMs in performance years 2025 and 2026 to further support ACOs in meeting the Shared Savings Program quality performance standard for sharing in savings at the maximum rate under its track.

(3) Changes to Regulation Text

In the CY 2025 PFS proposed rule, we proposed to extend the eCQM reporting incentive to performance year 2025 and subsequent performance years to support ACOs in meeting the Shared Savings Program quality performance standard for sharing in savings at the maximum rate under its track (89 FR 61863).

Specifically, we proposed that for performance year 2025 and subsequent performance years, an ACO will meet the quality performance standard used to determine eligibility for maximum shared savings and to avoid maximum shared losses, if applicable:

- If the ACO reports all of the eCQMs in the APP Plus quality measure set applicable for a performance year, meeting the data completeness requirement at § 414.1340 for all eCQMs, and;
- Achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP Plus quality measure set, and;
- Achieves a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the

remaining measures in the APP Plus quality measure set.

We proposed to add paragraphs (a)(5)(i)(B)(*1*) and (*2*) to § 425.512 to incorporate our proposal to extend the eCQM reporting incentive to performance year 2025 and subsequent performance years into the regulation text (89 FR 61863).

We are finalizing our proposal with modifications. Specifically, for performance years 2025 and 2026, an ACO will meet the quality performance standard used to determine eligibility for maximum shared savings and to avoid maximum shared losses, if applicable:

- If the ACO reports all of the eCQMs/MIPS CQMs in the APP Plus quality measure set applicable for a performance year, meeting the data completeness requirement at § 414.1340 for all eCQMs/MIPS CQMs, and;
- Achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the outcome measures in the APP Plus quality measure set, and;
- Achieves a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining measures in the APP Plus quality measure set.

Additionally, we are finalizing that, for performance year 2027 and subsequent performance years, an ACO will meet the quality performance standard used to determine eligibility for maximum shared savings and to avoid maximum shared losses, if applicable:

- If the ACO reports all of the eCQMs in the APP Plus quality measure set applicable for a performance year, meeting the data completeness requirement at § 414.1340 for all eCQMs, and;
- Achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP Plus quality measure set, and;
- Achieves a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining measures in the APP Plus quality measure set.

For performance years 2025 and 2026, the reporting incentive will apply only to those ACOs that report all of the eCQMs/MIPS CQMs in the APP Plus quality measure set applicable for a performance year and meet the data completeness requirement for all of the eCQMs/MIPS CQMs. The reporting incentive would not apply to ACOs that report a combination of eCQMs/MIPS CQMs/Medicare CQMs or report only Medicare CQMs. Similarly, for performance year 2027 and subsequent performance years, the reporting incentive will apply only to those ACOs that report all of the eCQMs in the APP Plus quality measure set applicable for a performance year and meet the data completeness requirement for all of the eCQMs. The reporting incentive would not apply to ACOs that report a combination of eCQMs/Medicare CQMs or report only Medicare CQMs.

In addition, we are finalizing to add paragraphs (a)(5)(i)(B)(*1*) and (*2*) to § 425.512 to incorporate the policy to extend the eCQM/MIPS CQM reporting incentive to performance years 2025 and 2026, and we are adding new paragraphs (a)(5)(i)(C), (a)(5)(i)(C)(*1*) and (*2*) to § 425.512 to extend the eCQM reporting incentive to performance year 2027 and subsequent performance years into the regulation text.

e. Summary of Final Policies

In Table 33 of the CY 2025 PFS proposed rule (89 FR 61864 through 61865), we summarized the proposed changes to § 425.512(a)(5) to reflect the changes we proposed to the quality reporting requirements and quality performance standard for performance year 2025 and subsequent performance years. In Tables 37 and 38 of this final rule, we summarize the policies we are finalizing related to the quality reporting requirements and quality performance standard for performance year 2025 and subsequent performance years.

BILLING CODE 4120–01–P

TABLE 37: Final APP Plus Quality Measure Set Reporting Requirements and Quality Performance Standard for Shared Savings ACOs for Performance Years 2025 and 2026

	Performance Year 2025	Performance Year 2026
Shared Savings Program ACO Quality Reporting Requirements	ACOs are required to report the **4** eCQMs/MIPS CQMs/Medicare CQMs in the APP Plus quality measure set and administer the CAHPS for MIPS survey. CMS will calculate 1 claims-based measure.	ACOs are required to report **5** eCQMs/MIPS CQMs/Medicare CQMs in the APP Plus quality measure set and administer the CAHPS for MIPS survey. CMS will calculate 2 claims-based measures.
Shared Savings Program ACO Quality Performance Standard and Alternative Quality Performance Standard	**Quality performance standard used to determine eligibility for maximum shared savings and to avoid maximum shared losses, if applicable:** 1. ACOs that achieve a health equity adjusted quality performance score that is equivalent to or higher than the **40th** percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, or 2. Reporting the 4 eCQMs/MIPS CQMs in the APP Plus quality measure set, meeting the data completeness requirement at § 414.1340 for all 4 eCQMs/MIPS CQMs, and achieving a quality performance score equivalent to or higher than the **10th** percentile of the performance benchmark on at least 1 of the 3 outcome measures in the APP Plus quality measure set and a quality performance score equivalent to or higher than the **40th** percentile of the performance benchmark on at least 1 of the remaining 5 measures in the APP Plus quality measure set. **Alternative quality performance**	**Quality performance standard used to determine eligibility for maximum shared savings and to avoid maximum shared losses, if applicable:** 1. ACOs that achieve a health equity adjusted quality performance score that is equivalent to or higher than the **40th** percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, or 2. Reporting the 5 eCQMs/MIPS CQMs in the APP Plus quality measure set, meeting the data completeness requirement at § 414.1340 for all 5 eCQMs/MIPS CQMs, and achieving a quality performance score equivalent to or higher than the **10th** percentile of the performance benchmark on at least 1 of the 4 outcome measures in the APP Plus quality measure set and a quality performance score equivalent to or higher than the **40th** percentile of the performance benchmark on at least 1 of the remaining 7 measures in the APP Plus quality measure set. **Alternative quality performance**

	Performance Year 2025	Performance Year 2026
	standard used to determine shared savings using the sliding scale methodology: An ACO that fails to meet the criteria above but meets the alternative quality performance standard by achieving a quality performance score equivalent to or higher than the **10th** percentile of the performance benchmark on at least 1of the 3 outcome measures in the APP Plus quality measure set will share in savings (if otherwise eligible) at a lower rate that is scaled by the ACO's health equity adjusted quality performance score. If an ACO (1) does not report any of the 4 eCQMs /MIPS CQMs/Medicare CQMs in the APP Plus quality measure set and (2) does not administer a CAHPS for MIPS survey, the ACO will not meet the quality performance standard or the alternative quality performance standard. This ACO will be ineligible to share savings and will owe maximum shared losses, if applicable.	**standard used to determine shared savings using the sliding scale methodology:** An ACO that fails to meet the criteria above but meets the alternative quality performance standard by achieving a quality performance score equivalent to or higher than the **10th** percentile of the performance benchmark on at least 1 of the 4 outcome measures in the APP Plus quality measure set will share in savings (if otherwise eligible) at a lower rate that is scaled by the ACO's health equity adjusted quality performance score. If an ACO (1) does not report any of the 5 eCQMs /MIPS CQMs/Medicare CQMs in the APP Plus quality measure set and (2) does not administer a CAHPS for MIPS survey, the ACO will not meet the quality performance standard or the alternative quality performance standard. This ACO will be ineligible to share savings and will owe maximum shared losses, if applicable.

This ACO will be ineligible to share savings and will owe maximum shared losses, if applicable.	2. Reporting the **8** eCQMs in the APP Plus quality measure set, meeting the data completeness requirement at § 414.1340 for all 8 eCQMs, and achieving a quality performance score equivalent to or higher than the **10th** percentile of the performance benchmark on at least 1 of the 4 outcome measures in the APP Plus quality measure set and a quality performance score equivalent to or higher than the **40th** percentile of the performance benchmark on at least 1 of the remaining **10** measures in the APP Plus quality measure set. **Alternative quality performance standard used to determine shared savings using the sliding scale methodology:** An ACO that fails to meet the criteria above but meets the alternative quality performance standard by achieving a quality performance score equivalent to or higher than the **10th** percentile of the performance benchmark on at least 1 of the 4 outcome measures in the APP Plus quality measure set will share in savings (if otherwise eligible) at a lower rate that is scaled by the ACO's health equity adjusted quality performance score. If an ACO (1) does not report any of the **8** eCQMs /Medicare CQMs in the APP Plus quality measure set and (2) does not administer a CAHPS for MIPS survey, the ACO will not meet the quality performance standard or the alternative quality performance standard. This ACO will be ineligible to share savings and will owe maximum shared losses, if applicable.

BILLING CODE 4120–01–C

f. APP Plus Quality Measure Set

(1) Background

The APP quality measure set for performance year 2024 and subsequent performance years was finalized in the CY 2024 PFS final rule (88 FR 79112 through 79114). In that final rule, for performance year 2024 and subsequent performance years, we also finalized the addition to the APP quality measure set of the Medicare CQM collection type for Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%) (Quality #: 001), Preventive Care and Screening: Screening for Depression and Follow-up Plan (Quality #: 134) and Controlling High Blood Pressure (Quality #: 236).

(2) Revisions

As described in section III.G.4.b.(2)(a) of the CY 2025 PFS proposed rule, for performance year 2025 and subsequent performance years, we proposed to require Shared Savings Program ACOs to report the APP Plus quality measure set as proposed in section IV.A.4.c.(3) of the CY 2025 PFS proposed rule (89 FR 61865). The proposed APP Plus quality measure set would comprise of eleven measures, consisting of six measures from the APP quality measure set and five newly proposed measures from the Adult Universal Foundation measure set that would be incrementally incorporated into the APP Plus quality measure set over performance years 2025 through 2028. We also proposed to focus the collection types available to Shared Savings Program ACOs for reporting the APP Plus quality measure set to all payer/all patient eCQMs and Medicare CQMs (89 FR 61865).

The proposed APP Plus quality measure set for Shared Savings Program ACOs for performance year 2025, performance years 2026 and 2027, and performance year 2028 and subsequent performance years are displayed in Tables 34, 35, and 36 of the CY 2025 PFS proposed rule, respectively (89 FR 61866 through 61868). In these tables, we also included the measure type for each measure in the APP Plus quality measure set to provide ACOs with a list of the outcome measures for purposes of qualifying for the eCQM reporting incentive, as described in section III.G.4.d. of the CY 2025 PFS final rule. As discussed in the CY 2025 PFS proposed rule, this information is also relevant to the alternative quality performance standard under which ACOs that fail to meet the quality performance standard to qualify for the maximum sharing rate, but that achieve a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP Plus quality measure set, may be eligible to share in savings on a sliding scale, as discussed in the current § 425.512(a)(4)(ii) (89 FR 61866).

We received public comments on the proposed APP Plus quality measure set and refer readers to section IV.A.4.c.(2) for a summary of the comments we received and our responses. The final APP Plus quality measure set for Shared Savings Program ACOs for performance year 2025 and subsequent performance years are displayed in Tables 39 through B–42 of this final rule.

BILLING CODE 4120–01–P

TABLE 39: Measures Included in the APP Plus Quality Measure Set for Shared Savings Program ACOs for Performance Year 2025

Quality #	Measure Title	Collection Type	Submitter Type	Meaningful Measures 2.0 Area	Measure Type
321	CAHPS for MIPS	CAHPS for MIPS Survey	Third Party Intermediary	Person-Centered Care	Patient Engagement/Experience
479	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups	Administrative Claims	N/A	Affordability and Efficiency	Outcome^
001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)	eCQM/MIPS CQM/Medicare CQM	APM Entity/Third Party Intermediary	Chronic Conditions	Intermediate Outcome^
134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	eCQM/MIPS CQM/Medicare CQM	APM Entity/Third Party Intermediary	Behavioral Health	Process
236	Controlling High Blood Pressure	eCQM/MIPS CQM/Medicare CQM	APM Entity/Third Party Intermediary	Chronic Conditions	Intermediate Outcome^
112	Breast Cancer Screening	eCQM/MIPS CQM/Medicare CQM	APM Entity/Third Party Intermediary	Wellness and Prevention	Process

^ Indicates this is an outcome measure for purposes of qualifying for the eCQM/MIPS CQM reporting incentive and the alternative quality performance standard.

BILLING CODE 4120–01–C

g. Survey Modes for the Administration of the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey Request for Information

We solicited public comment on the potential expansion of the survey modes of the CAHPS for MIPS Survey from a mail-phone protocol to a web-mail-phone protocol. During the 2023 CAHPS for MIPS Web Mode Field Test,[542] we found that adding the web-based survey mode to the current mail-phone protocol of CAHPS for MIPS survey administration resulted in an increased response rate. We thank commenters for their comments in response to this request for information. This Request for Information is also discussed at IV.A.4.e.(1)(e)(i) of this final rule.

5. Providing the Option of Prepaid Shared Savings

a. Background

In the CY 2023 PFS final rule (87 FR 69782 through 69805), CMS finalized a new payment option for eligible Shared Savings Program ACOs entering agreement periods beginning on or after January 1, 2024, to receive advance shared savings payments. This payment option is referred to as advance investment payment (AIP) and the payments themselves are referred to as advance investment payments.

These payments are intended to improve the quality and efficiency of items and services furnished to Medicare beneficiaries by reducing the barriers to participation in the Shared Savings Program by supporting investments in increased staffing, healthcare infrastructure, and the provision of accountable care for underserved beneficiaries. Accordingly, advance investment payments must be spent on one of the following categories: increased staffing, healthcare infrastructure, and the provision of accountable care for underserved beneficiaries, which may include addressing social determinants of health (§ 425.630(e)(1)).

Advance investment payments are only available to ACOs newly entering the Shared Savings Program in their first agreement period (§ 425.630(b)(1)). Many commenters on the CY 2023 PFS final rule (87 FR 69782 through 69805) suggested that CMS should expand access to advance investment payments by expanding the eligibility criteria to include currently participating ACOs as well as high revenue ACOs. While we do not believe that it is appropriate to expand the eligibility criteria for advance investment payments at this time, as CMS still needs time to assess the impact of the new payment option, there is persuasive evidence that investment in staffing, healthcare infrastructure, and accountable care for underserved beneficiaries could be valuable for all ACOs, not just those that are new to the program. Investment in care coordination for beneficiaries reduces costs and improves the quality of care received.[543] [544] [545] Investment in health information technology can be leveraged to empower individuals, address patients' full range of health needs, promote healthy behaviors, and facilitate better health outcomes for individuals, families, and communities.[546] Additionally, there is evidence that investment in services not currently covered by Medicare may improve beneficiary health and reduce avoidable health care utilization costs over time, including coverage of

dental,[547] [548] [549] hearing,[550] [551] and vision [552] care.

Furthermore, we have come to understand that, for beneficiaries, the benefits of receiving services from providers associated with ACOs—such as improvements in quality and coordinated care—may not be immediately apparent. By encouraging ACOs to invest in new services that beneficiaries otherwise would not receive, like hearing, vision and dental services, the benefits of receiving care from providers who are part of an ACO would become more tangible. This would encourage beneficiaries to receive care from providers participating in an ACO and may ultimately result in improved quality and efficiency of care for beneficiaries.

For ACOs that are currently participating in the Shared Savings Program and that reinvest their earned shared savings payments in activities that reduce costs and improve quality of care, it could be more valuable to gain access to those shared savings payments early in and/or throughout each performance year, instead of waiting months after the end of each performance year when any earned shared savings payments are distributed. Currently, CMS completes the financial reconciliation calculations for each ACO during the summer after the end of each performance year, which allows time for claims runout and other necessary data to become available. CMS compares the updated historical benchmark to an ACO's assigned beneficiaries' per capita expenditures during the performance year to determine whether the ACO may share in savings or losses, if owed. CMS then notifies the ACO in writing regarding whether the ACO qualifies for a shared savings payment, and if so, the amount of the payment due. These payments are generally distributed to ACOs in the early Fall following the end of each performance year. This is the sole payment CMS makes to an ACO in the Shared Savings Program and generally an ACO's sole source of revenue. Distributing prepaid shared savings during a performance year would allow ACOs to invest these payments in additional services for assigned beneficiaries, staffing, and healthcare infrastructure earlier and reap the benefits from that investment earlier.

The CMS Innovation Center tested a number of strategies for providing more experienced ACOs with advances of funding during each performance year. One of the innovations was the infrastructure payments available in the Next Generation ACO model, a CMS Innovation Center model that was intended for more experienced ACOs.[553] Most Next Generation ACOs (82 percent) that participated in the Next Generation ACO model in 2018 had prior experience as Medicare ACOs before starting in the model, and the majority (56 percent) previously participated in the Shared Savings Program.[554] ACOs selecting the infrastructure payment option received $6 per assigned beneficiary per month to support ACO Activities, which was later recouped during financial settlement following each performance year. The model defined ACO Activities as activities related to promoting accountability for the quality, cost, and overall care for the population of beneficiaries assigned to the Next Generation ACO, including managing and coordinating care; encouraging investment in healthcare infrastructure and redesigned care processes for high quality and efficient service delivery; or carrying out any other obligation or duty of the ACO under the terms of the Next Generation ACO model. Examples of these activities included, but were not limited to, providing direct patient care in a manner that reduces costs and improves quality; promoting evidence-based medicine and patient engagement; reporting on quality and cost measures; coordinating care, such as through the use of telehealth, remote patient monitoring, and other enabling technologies; establishing and improving clinical and administrative systems for the ACO; meeting the quality performance standards; evaluating health needs; communicating clinical knowledge and evidence-based medicine; and developing standards for beneficiary access and communication, including beneficiary access to medical records. In interviews performed as part of the CMS Innovation Center's evaluation of the model, Next Generation ACO leaders described using these funds to support upfront operating costs and healthcare infrastructure and clinical process enhancements such as new staff, health information technology, data analytic capacity, population health management, or care coordination.[555]

Despite these ACOs' prior experience as Medicare ACOs and the meaningful investments many had made in their own healthcare infrastructure and providers, they still found value in access to funding during the performance year. Almost all Next Generation ACOs used the funds to develop workflows informed by data analytics and clinical staff input. Most Next Generation ACOs also reported using the funds to support care management, such as acquiring tools and developing healthcare infrastructure to support care coordination. Leaders from many Next Generation ACOs described how the payments facilitated new processes for seamless patient care handoffs between health care providers, enabled the creation of better workflows for scheduling follow-up visits, and supported provision of screenings and assessments. Data from a clinician survey suggested that the payments were likely helpful in improving the delivery or coordination of care, with 63 percent of providers agreeing that additional resources to support practice changes made their day-to-day work

[555] NORC at the University of Chicago. Evaluation of the Next Generation Accountable Care Organization (NGACO) Model—Final Report. January 2024. Available at *https://www.cms.gov/priorities/innovation/data-and-reports/2024/nextgenaco-sixthevalrpt.*

easier.[556] Separately, the ACO Investment Model (AIM), a model run by the CMS Innovation Center which informed development of the advance investment payments, gave participating ACOs upfront and quarterly funding to spend on ACO start-up costs. These ACOs primarily invested in staffing and healthcare infrastructure including care management, ACO administration, health IT and data analysis,[557] and these ACOs generated an estimated net aggregate reduction in spending by Medicare of $381.5 million after accounting for Medicare's payment of AIM funds and participating ACOs' earned shared savings.[558]

Section 1899(i)(3) of the Act authorizes the Secretary to use other payment models instead of the one-sided model described in section 1899(d) of the Act so long as the Secretary determines that the other payment model will improve the quality and efficiency of items and services furnished to Medicare beneficiaries without additional program expenditures. We are interested in building on experience from the Next Generation ACO model, and we agree, in part, with comments on the CY 2023 PFS final rule that encouraged CMS to expand AIP to additional ACOs. While we do not believe it is appropriate to expand the eligibility criteria for AIPs at this time as explained earlier in this section, we agree with commenters that additional ACOs could benefit from expanded access to performance year funding that encourages investment in staffing, healthcare infrastructure, and additional services for beneficiaries. Prepaid shared savings would be required to be spent at least partially on direct beneficiary services, improving the quality of care beneficiaries receive.

Consequently, under the authority provided to the Secretary by section 1899(i)(3) of the Act, we proposed to provide prepaid shared savings to certain ACOs that meet the eligibility criteria described in section III.G.5.b of this final rule (§ 425.640(b)). Such payments would be made under the standards we proposed to establish in new § 425.640. This new payment option would provide prepaid shared savings to ACOs with a history of earning shared savings while participating in the Shared Savings Program. These payments would be distributed on a quarterly basis and would be recouped from shared savings CMS determines the ACO to have earned during the annual financial reconciliation cycle. Prepaid shared savings would be the advance payment of shared savings that are expected to be earned by the ACO and are covered under the Shared Savings Distribution Waiver (80 FR 66726). If the ACO does not earn sufficient shared savings to offset the advanced payment of shared savings during the applicable performance year, CMS may withhold or terminate the ACO's prepaid shared savings under proposed § 425.640(h)(1)(iii).

We have determined that the other payment model CMS has adopted under section 1899(i)(3) of the Act would continue to improve the quality and efficiency of care should this proposal be finalized. Section 1899(i)(3)(A) of the Act requires CMS determine that the other payment model will improve the quality and efficiency of items furnished under the Medicare program. Based on the evidence for direct beneficiary services noted above, our experience administering the Shared Savings Program, and the CMS Innovation Center's experience with AIM and infrastructure payments in the Next Generation ACO model, we have determined that allowing ACOs access to funding earlier than currently available, in the form of prepaid shared savings, would allow ACOs to more rapidly achieve the benefits of investing in staffing, healthcare infrastructure, and direct beneficiary services. Improvement in these areas would improve the quality and efficiency of beneficiary care, therefore meeting the standard of section 1899(i)(3)(A) of the Act. As we explained earlier in this section, ACOs have expenditures throughout the PY, particularly when implementing care coordination and beneficiary management strategies, and having access to their shared savings early can help ensure the ACO has adequate funding to perform these services throughout the year.

Section 1899(i)(3)(B) of the Act requires CMS to determine that prepaid shared savings, when implemented in combination with existing modifications made to the Shared Savings Program payment model specified in section 1899(d) of the Act, will not result in additional program expenditures. The addition of prepaid shared savings meets this standard in part because the eligibility criteria for prepaid shared savings have been selected to only permit ACOs that CMS estimates are most likely to earn shared savings to receive payments. Additionally, any payments the ACO would receive under this proposal must be repaid to CMS, and CMS would be protected by the ACOs' repayment mechanisms in the event that an ACO does not earn shared savings or cannot otherwise repay the amount owed to CMS. Based on this design, we estimate that there would be no additional program expenditures stemming from the implementation of prepaid shared savings under this proposal. Please review section VI of this final rule for a more complete discussion of the financial impact of the Shared Savings Program payment model, including the findings necessary to demonstrate compliance with section 1899(i)(3)(B) of the Act.

We intend to periodically reassess whether a payment model established under section 1899(i)(3) of the Act, including the payment of prepaid shared savings, continues to improve the quality and efficiency of items and services furnished to Medicare beneficiaries without resulting in additional program expenditures. If we determine that the payment model no longer satisfies the requirements of section 1899(i)(3) of the Act (for example if the payment model results in net program costs), we would undertake additional notice and comment rulemaking to adjust our payment methodology to assure continued compliance with the statutory requirements.

b. Eligibility

To ensure that prepaid shared savings are provided only to ACOs that are well-positioned to use prepaid shared savings to improve the quality and efficiency of care to their assigned beneficiaries while minimizing the risk of an ACO being unable to repay prepaid shared savings, we proposed to limit the availability of prepaid shared savings to those ACOs that have a track record of success in the Shared Savings Program (89 FR 61596, 61871). This approach is also consistent with our compliance with section 1899(i)(3)(B) of the Act as such ACOs are most likely to be able to repay the upfront funding through earned shared savings.

We proposed to establish the eligibility criteria for prepaid shared savings in § 425.640(b). CMS must determine that an ACO meets all of the following criteria for the ACO to be

[556] NORC at the University of Chicago. Next Generation Accountable Care Organization (NGACO) Model Evaluation Third Evaluation Report. 2020. Available at *https://www.cms.gov/priorities/innovation/data-and-reports/2020/nextgenaco-thirdevalrpt-fullreport.*

[558] Abt Associates, Evaluation of the Accountable Care Organization Investment Model, Final Report (September 2020), page 39. Available at *https://innovation.cms.gov/data-and-reports/2020/aim-final-annrpt.*

eligible to receive prepaid shared savings during an agreement period:

- The ACO is a renewing ACO as defined under § 425.20 entering an agreement period beginning on January 1, 2026, or in subsequent years.
- The ACO must have received a shared savings payment for the most recent performance year that:

(A) Occurred prior to the agreement period for which the ACO has applied to receive prepaid shared savings; and

(B) CMS has conducted financial reconciliation.

- The ACO must have a positive prior savings adjustment as calculated per § 425.658 at application disposition for the agreement period in which they would receive prepaid shared savings.
- The ACO does not have any outstanding shared losses or advance investment payments that have not yet been repaid to CMS after reconciliation for the most recent performance year for which CMS completed financial reconciliation.
- If the ACO received prepaid shared savings in the current agreement period or a prior agreement period, the ACO must have fully repaid the amount of prepaid shared savings received through the most recent performance year for which CMS has completed financial reconciliation.
- The ACO is participating in Levels C–E of the BASIC track or the ENHANCED track during the agreement period in which they would receive prepaid shared savings.
- The ACO has in place an adequate repayment mechanism in accordance with § 425.204(f) that can be used to recoup outstanding prepaid shared savings.
- During the agreement period immediately preceding the agreement period in which the ACO would receive prepaid shared savings, the ACO:

(A) Met the quality performance standard as specified under § 425.512; and

(B) Has not been determined by CMS to have avoided at-risk beneficiaries as specified under § 425.316(b)(2).

We proposed these eligibility criteria so that only ACOs with a record of meeting the quality performance standard, not avoiding at-risk beneficiaries, and recent success in earning shared savings would receive prepaid shared savings. This is for the protection of both CMS and the ACOs, as CMS does not want to overestimate an ACO's ability to earn future shared savings and burden an ACO with debt that the ACO would not be able to repay. As we explained in the proposed rule (89 FR 61596, 61871 and 61872), our experience administering the Shared Savings Program leads us to determine that ACOs with prior success in the program—that is, ACOs with a record of meeting the quality performance standard, not avoiding at-risk beneficiaries, and recent success in earning shared savings—are well positioned to identify beneficiary needs and invest prepaid shared savings to improve beneficiary care and are therefore most likely to benefit from prepaid shared savings. These ACOs would also be reasonably confident that they would be able to repay CMS through their earned shared savings and would therefore be comfortable spending the funding they receive. Accordingly, CMS would only permit ACOs that are currently participating in the Shared Savings Program, that have earned shared savings in the most recent performance year for which financial reconciliation has been completed, and that have a positive prior savings adjustment at application disposition to receive prepaid shared savings, as they would possess the history of success that would provide us with a more reasoned expectation that they would continue to earn shared savings in the future. New ACOs would not be eligible for prepaid shared savings, as they would not have a recent performance history that we could use to predict future performance.

Many new ACOs are eligible to receive advance investment payments, which are not available to ACOs currently participating in the Shared Savings Program. Advance investment payments are more tailored to the needs of a new ACO as there is more flexibility in the use of funding, and advance investment payments do not need to be repaid in the event that the ACO does not earn shared savings.

Additionally, ACOs that did not meet the quality performance standard as specified under § 425.512, or were subject to a pre-termination action from CMS after determining that the ACO had avoided at-risk beneficiaries, as specified under § 425.316(b)(2), in the agreement period preceding the agreement period in which the ACO would receive prepaid shared savings, would be prohibited from participating in the prepaid shared savings payment option, as these compliance issues could prevent an ACO from earning shared savings that would be used to repay the prepaid shared savings.

CMS also proposed to limit participation in the prepaid shared savings payment option to ACOs that have fully repaid all shared losses they may owe and any advance investment payments they may have received in a prior agreement period, and to ACOs that participate in a two-sided risk track (Levels C–E of the BASIC track or the ENHANCED track), as these tracks require a repayment mechanism in accordance with § 425.204(f), which could be used to recoup prepaid shared savings. CMS also proposed these criteria, in part, to limit participation to ACOs that were most likely to be able to repay any prepaid shared savings they received. Similarly, if the ACO had received prepaid shared savings in a current or previous agreement period, they must have fully repaid the amount of prepaid shared savings received through the most recent performance year for which CMS had completed financial reconciliation before they would be able to renew their participation in prepaid shared savings for another agreement period. For example, if an ACO were in the fifth year of its 5-year agreement period during which the ACO had been receiving prepaid shared savings, and is in the process of renewing for a new agreement period, CMS would ensure that the ACO had fully repaid the prepaid shared savings received from the first four performance years of the ACO's current agreement period through earned shared savings before the ACO would be approved to receive prepaid shared savings in a new agreement period. As CMS intends to provide prepaid shared savings to ACOs if they improve and maintain performance and continue to see success in the program on an annual basis, ACOs that are not initially eligible would have the option to participate in the prepaid shared savings payment option in future years if they demonstrate a more recent history of success in the program and meet the other eligibility criteria. These criteria would also provide an additional incentive for ACOs to improve their performance in the program. CMS would also continue to review the eligibility criteria over time and may expand eligibility in future years if we determine that doing so is in the interests of the Shared Savings Program, participating ACOs, and their beneficiaries, and that all requirements under section 1899(i)(3) of the Act are satisfied. Additionally, to standardize timelines for payment, spending, and recoupment of prepaid shared savings, ACOs would only be eligible for prepaid shared savings if they renew or early renew to begin a new agreement period. The proposed policies for the calculation, spending and recoupment of prepaid shared savings allow for up to 5 years for ACOs to receive, spend, and repay the funding through earned

shared savings. We proposed to create a new paragraph in § 425.100(e) to establish that an ACO may receive prepaid shared savings if it meets the criteria under § 425.640(b). We proposed in § 425.640(b) to specify the eligibility criteria for an ACO to receive prepaid shared savings.

We solicited comments on these proposals.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters generally expressed appreciation for CMS's efforts to offer experienced ACOs prepaid shared savings for the purpose of encouraging investment in staffing, healthcare infrastructure, and additional services for beneficiaries. Additionally, most commenters supported the eligibility criteria for prepaid shared savings, noting that the proposed criteria would help ensure that experienced ACOs receiving prepaid shared savings are in good standing in the Shared Savings Program and are likely to generate sufficient earned shared savings to repay CMS.

Response: We agree with commenters that the implementation of the new prepaid shared savings payment option will support experienced ACOs with upfront funding for the purpose of encouraging investment in staffing, healthcare infrastructure, and additional services for beneficiaries. We also agree that our proposed eligibility criteria for prepaid shared savings will help ensure that ACOs that receive prepaid shared savings have a track record of success that establishes confidence in the ACOs' ability to generate future shared savings, while also limiting risks of providing prepaid shared savings to ACOs that fail to comply with Shared Savings Program requirements or are unable to generate sufficient shared savings to repay CMS.

Comment: Another commenter encouraged CMS to distribute prepaid shared savings to eligible hospitals, noting that upfront investments are important for enabling essential, safety net hospitals to implement the transition to value-based payments.

Response: Pursuant to section 1899 of the Act, CMS is unable to distribute prepaid shared savings to entities other than ACOs participating in the Shared Savings Program. However, participation in the Shared Savings Program, and the prepaid shared savings payment option specifically, are beneficial tools for caring for underserved populations and helping close gaps in care. We note in particular that, as explained in greater detail below, prepaid shared savings are intended to support ACOs in providing direct beneficiary services, which should benefit underserved populations.

Comment: Several commenters disagreed with the requirement that ACOs begin a new agreement period to receive prepaid shared savings. Commenters shared concerns about being subject to benchmark rebasing if they early renew to begin a new agreement period to comply with this eligibility requirement and believe this may negatively impact ACO participation in the payment option. Commenters encouraged CMS to allow ACOs to opt in to prepaid shared savings mid-agreement period.

Response: We thank commenters for expressing their concerns related to the impact that recalculating an ACO's historical benchmark (benchmark rebasing) may have on ACOs that early renew so that they can participate in the payment option. However, generally requiring ACOs to begin a new agreement period is important for ensuring that ACOs are given adequate time to earn shared savings so that they can repay prepaid shared savings to CMS. CMS will demand repayment of any unspent prepaid shared savings, as well as any outstanding balance of prepaid shared savings, at the end of each agreement period in which an ACO receives prepaid shared savings, as noted in the new § 425.640(e)(3) and (g)(3). It is important for ACOs to have sufficient time to adjust to develop experience receiving, spending, and complying with program requirements related to prepaid shared savings, and repaying these funds through earned shared savings before they must be repaid directly to CMS. ACOs may not have sufficient time to develop this experience if they begin receiving prepaid shared savings mid-agreement period. As we explained in the CY 2025 PFS proposed rule (89 FR 61871), CMS aims to extend this payment option to the ACOs most likely to earn shared savings, to ensure that the addition of prepaid shared savings meets the standard set by section 1899(i)(3) of the Act, which requires CMS to determine that prepaid shared savings will improve the quality and efficiency of items and services furnished under the Medicare program and, when implemented in combination with existing modifications made to the Shared Savings Program payment model specified in section 1899(d) of the Act, not result in more program expenditures than would have resulted under the statutory payment methodology in section 1899(d) of the Act.

ACOs will be able to renew and apply to receive prepaid shared savings on an annual basis, so if an ACO does not wish to early renew to participate, the ACO will be able to wait until it is prepared to renew in order to begin participating in this payment option. However, there is a very large cohort of ACOs renewing for a new agreement period in 2025 that we expect will meet the eligibility requirements under § 425.640(b) and be interested in participating in this payment option. Allowing these ACOs to begin receiving prepaid shared savings in 2026, without renewing again, would encourage program participation and more rapid investment in staffing, healthcare infrastructure and direct beneficiary services. These ACOs will still have four out of five performance years available to develop experience receiving, spending, and complying with program requirements related to prepaid shared savings, and giving these ACOs a one-time exception to participate with a slightly shorter timeline would not negatively impact our obligation under section 1899(i)(3)(B) of the Act to ensure that this payment option does not negatively impact program expenditures. These ACOs were not able to consider the finalized prepaid shared savings policy when they renewed for the 2025 performance year, and as this payment option will be available on an annual basis moving forward this will not be an issue in future performance years.

Accordingly, CMS is making a one-time exception to allow these ACOs to elect to begin receiving prepaid shared savings in 2026, without renewing again. These ACOs will still be required to meet the other eligibility requirements under § 425.640(b), including having a positive prior savings adjustment when they renew for an agreement period beginning in PY 2025 and ensuring they have in place an adequate repayment mechanism to support the repayment of prepaid shared savings in accordance with § 425.204(f). These ACOs will only receive prepaid shared savings beginning in 2026; CMS will not distribute any payments of prepaid shared savings for performance year 2025. These ACOs will also be required to fully pay back the funding they receive by the end of their agreement period in 2029, giving them four years to receive, use, and repay prepaid shared savings.

Furthermore, we note that we have taken steps through prior rulemaking, such as through establishment of a prior savings adjustment and the inclusion of the Accountable Care Prospective Trend (''ACPT'') in a three-way blended update factor, to improve the accuracy

of ACO financial benchmarks for ACOs entering a second or subsequent agreement period. Currently participating ACOs that early renew for a new agreement period beginning on or after January 1, 2026, will be subject to these financial benchmarking policies in accordance with § 425.652.

Comment: Several commenters suggested that CMS expand eligibility to more ACOs, including ACOs that are new to the Shared Savings Program or do not have a history of earning shared savings, as they believe additional ACOs could benefit from prepaid shared savings and improve the care their beneficiaries receive.

Response: While we understand that some commenters believe additional ACOs may benefit from receiving prepaid shared savings, CMS is not expanding the prepaid shared savings eligibility criteria to new ACOs or those without a demonstrated history of earning shared savings. As we explained in the proposed rule (89 FR 61871–61872), we are obligated to protect the Medicare Trust Funds. To do so, we determine that we would not distribute prepaid shared savings to ACOs lacking a demonstrated track record of success generating shared savings, in order to avoid or mitigate the risk of providing ACOs with advances of shared savings they may not be able to repay.

Some ACOs that are new to the Shared Savings Program may be eligible to participate in the advance investment payment option, which provides similar upfront funding for new ACOs serving underserved beneficiaries.

After consideration of public comments, we are finalizing our proposal to establish a new section of the regulations at § 425.640 with provisions on the option to receive prepaid shared savings payments. We are also finalizing paragraph (a) of § 425.640, as proposed, to describe the purpose of the payment option: prepaid shared savings provide an additional cash flow option to ACOs with a history of earning shared savings that will encourage their investment in activities that reduce costs for the Medicare program and beneficiaries and improve the quality of care provided to their assigned beneficiaries.

We are finalizing the proposed prepaid shared savings eligibility criteria under § 425.640(b) with modifications to allow ACOs that renewed to enter an agreement period beginning on January 1, 2025, the option to elect to participate in prepaid shared savings starting with performance year 2026 without renewing again. Specifically, within § 425.640(b)(1), we specify the criterion that the ACO must meet either of the following conditions: (i) The ACO is a renewing ACO as defined under § 425.20 entering an agreement period beginning on January 1, 2026, or in subsequent years; or (ii) The ACO was a renewing ACO as defined under § 425.20 entering an agreement period beginning on January 1, 2025, and applied to receive prepaid shared savings in accordance with paragraph (c)(2) of this section starting with the performance year beginning on January 1, 2026. Otherwise, we are finalizing as proposed the remaining eligibility criteria listed in new § 425.640(b)(2) through (8). We are also finalizing our proposal, without modification, to specify in a new paragraph in § 425.100(e) that an ACO may receive prepaid shared savings if it meets the criteria under § 425.640(b).

c. Application Procedure & Contents

We proposed to establish the process for an ACO to apply for prepaid shared savings in § 425.640(c). Specifically, we proposed that an ACO must submit to CMS supplemental application information sufficient for CMS to determine whether the ACO is eligible to receive prepaid shared savings. The application cycle for prepaid shared savings would be conducted as part of, and in conjunction with, the Shared Savings Program application process under § 425.202, with instructions and timelines published on the Shared Savings Program website. We proposed the initial application cycle to apply for prepaid shared savings would be for a January 1, 2026, start date. In the CY 2025 PFS proposed rule (89 FR 61596, 61872), we explained that we intended to provide further information regarding the process, including the application contents and specific requirements such as the deadline for submitting applications and all supplemental application information that would be required, through guidance. The prepaid shared savings application procedure would also include a process by which CMS provides an applicant with feedback and an opportunity to clarify or revise their application.

We will provide preliminary information to the applicant ACO about its eligibility to receive prepaid shared savings during the Phase 1 application cycle requests for information, and a final determination about its eligibility to receive prepaid shared savings at the time of final application dispositions. For example, for ACOs applying in 2025 for an agreement period beginning in 2026, we will provide preliminary information identifying whether an ACO is likely to earn shared savings in the 2024 performance year and have a positive prior savings adjustment as calculated per § 425.658 at application disposition.

We proposed at § 425.640(d)(1) that an ACO would be required to submit a spend plan as part of its application for prepaid shared savings. We proposed that the plan must describe how the ACO would spend the prepaid shared savings during the first performance year of the agreement period during which the ACO would receive prepaid shared savings, including the breakdown of how the funding would be spent consistent with the allowable uses as described in section III.G.5.d of this final rule and information about: (1) direct beneficiary services that would be provided to ACO beneficiaries; and (2) investments that would be made in the ACO with prepaid shared savings. ACOs must also include their communication strategy for informing both CMS and any impacted beneficiaries if the ACO will no longer be providing any direct beneficiary services (as described in section III.G.5.d of this final rule) that had previously been provided by the ACO using prepaid shared savings. This communication strategy must include when and how the ACO intends to notify CMS and the impacted beneficiaries, as well as any available alternatives for impacted beneficiaries to access similar services. ACOs would be able to limit the distribution of direct beneficiary services to subgroups of assigned beneficiaries including those with specific medical conditions or specific socioeconomic needs. ACOs would be required to attest that they will not discriminate on the basis of race, color, religion, sex, national origin, disability, or age with respect to their use of prepaid shared savings. ACOs would have flexibility to alter their use of prepaid shared savings from their submitted spend plans during each performance year but would be required to ensure than any changes to proposed spending aligns with the restrictions on spending discussed in section III.G.5.d of this final rule. CMS will review mid-year changes of the use of prepaid shared savings at the end of each performance year. CMS would also be able to review an ACO's spend plan at any time and require the ACO to modify its spend plan to comply with the requirements of § 425.640(d) and (i).

As discussed in greater detail in section III.G.5.f of this final rule, we will reserve the right to withhold or terminate an ACO's ability to receive the prepaid shared savings if it is not in compliance with the requirements of the Shared Savings Program codified in part 425 of our regulations, under § 425.640(h)(1)(i). In addition, by

certifying the application under § 425.202(a)(2), the ACO certifies that the information contained in the application, including information related to the intended use of prepaid shared savings, is accurate, complete, and truthful.

We proposed at § 425.640(d) that we would review the information submitted in the ACO's prepaid shared savings application to determine whether an ACO meets the criteria for prepaid shared savings and would approve or deny the application accordingly. We will review the ACO's Shared Savings Program renewal application simultaneously with the prepaid shared savings application.

As discussed in section III.G.5.g of this final rule, we also proposed to update our public reporting requirements under § 425.308 by adding new paragraph (b)(10) to require an ACO to publicly report its spend plan. We proposed to require that the ACO post on its dedicated public reporting web page: (1) the total amount of prepaid shared savings received from CMS for each performance year; (2) the ACO's spend plan; and (3) an itemization of how the prepaid shared savings were actually spent during each performance year, including expenditure categories, the dollar amounts spent on the various categories, information about which groups of beneficiaries received direct beneficiary services that were purchased with prepaid shared savings and investments that were made in the ACO with prepaid shared savings, how these direct beneficiary services were provided to beneficiaries, and how the direct beneficiary services and investments supported the care of beneficiaries, any changes to the spend plan as submitted under § 425.640(d)(2) (if applicable), and such other information as may be specified by CMS. Additionally, we proposed that the ACO would report the same information as indicated in the ACO's publicly reported spend plan to CMS under § 425.640(i) to facilitate efficient monitoring. This would help ensure that CMS efficiently obtains information in a consistent manner from all ACOs receiving prepaid shared savings and thereby support CMS's monitoring and analysis of the use of prepaid shared savings. CMS will also make this data publicly available through a public use file. Further, we expect to use the submitted data as the template that ACOs can use to populate their public reporting web page early in each performance year to minimize administrative burden for ACOs. We also intend to use the information submitted to CMS to generate a public use file that can be used to quickly review the use of prepaid shared savings across all participating ACOs.

We proposed to add § 425.640(c) and (d) to establish standards for the contents of an application to be determined eligible for prepaid shared savings as well as the procedures for filing such an application.

We solicited comments on these proposals.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters supported the inclusion of the prepaid shared savings payment option in the Shared Savings Program annual application process, noting that ACOs would be required to submit supplemental application information, including a spend plan detailing how the ACO intends to use prepaid shared savings. A few commenters encouraged CMS to publish application guidance in advance of the 2026 Medicare Shared Savings Program application cycle to give ample time for interested ACOs to prepare.

Response: We appreciate the commenters' support of our proposal to include the prepaid shared savings application as part of the Shared Savings Program application process. CMS intends to provide ACOs with additional guidance on applying to receive prepaid shared savings in advance of the 2026 Medicare Shared Savings Program application cycle in order to give ACOs time to prepare their spend plans and additional application materials.

Comment: A few commenters requested that CMS reconsider the current application requirement of a written spend plan, as it generates additional burden for ACOs. Commenters also suggested that ACOs not be required to include a line item breakdown of the investment of prepaid shared savings in their spend plans, and only report on total spending within the categories of infrastructure, staffing and direct beneficiary services as a way to reduce burden on ACOs.

Response: We understand that submitting a detailed spend plan on the use of prepaid shared savings requires administrative work for participating ACOs. However, detailed spend plans which include information on (1) direct beneficiary services that would be provided to ACO beneficiaries; and (2) investments that would be made in the ACO with prepaid shared savings are important for monitoring that ACOs use prepaid shared savings consistent with the requirements for use and management of prepaid shared savings under § 425.640(e). It is particularly important for us to ensure ACOs use prepaid shared savings consistent with those use and management requirements because prepaid shared savings are advances of shared savings to ACOs prior to ACOs actually earning the shared savings, and should be focused on improving beneficiary outcomes and quality of care, reducing costs, improving ACO efficiency, and improving beneficiary engagement and willingness to receive care from a provider affiliated with an ACO. These requirements will also promote transparency in how ACOs are using prepaid shared savings. That transparency will improve the coordination and quality of care provided by participating ACOs by facilitating their efforts to share information with each other, CMS, and the public about how they effectively used prepaid shared savings to improve the quality and efficiency of the care they provided to their beneficiaries.

After consideration of public comments, we are finalizing the proposed prepaid shared savings application procedures under § 425.640(c) with modifications to allow ACOs that renewed to enter an agreement period beginning on January 1, 2025, the option to elect to participate in prepaid shared savings starting with performance year 2026 without renewing again (as described and for the reasons explained elsewhere in section III.G.5. of this final rule), among other changes. Specifically, within § 425.640(c)(1), we specify the application procedure for an ACO renewing to enter an agreement period beginning on January 1, 2026, or in subsequent years, in accordance with our proposal. That is, for an ACO renewing to enter an agreement period beginning on January 1, 2026, or in subsequent years to obtain a determination regarding whether the ACO may receive prepaid shared savings, the ACO must submit to CMS a complete supplemental application with its application to renew for a new agreement period in the Shared Savings Program in the form and manner and by a deadline specified by CMS. The provision we are finalizing in paragraph (c)(1) of § 425.640 includes a modification to correctly reference the application procedures for renewing ACOs at § 425.224 instead of referencing § 425.202 (as proposed). Within § 425.640(c)(2), we specify, for an ACO that renewed to enter an agreement period beginning on January 1, 2025, to obtain a determination regarding

whether the ACO may receive prepaid shared savings, the ACO must submit to CMS a complete supplemental application for prepaid shared savings prior to the start of the performance year beginning on January 1, 2026, in the form and manner and by a deadline specified by CMS. We are also finalizing, without modifications, our proposal to specify in § 425.640(d) provisions on the content of the supplemental application ACOs will use to apply to participate in prepaid shared savings, as well as provisions on CMS' review of the supplemental application information. We discuss certain provisions of § 425.640(d) elsewhere in section III.G.5. of this final rule.

d. Allowable and Prohibited Uses of Prepaid Shared Savings

We proposed in § 425.640(e) to specify how an ACO may use prepaid shared savings. Similar to advance investment payments, prepaid shared savings are intended to improve quality and efficiency of items and services furnished to Medicare beneficiaries. In the CY 2025 PFS proposed rule (89 FR 61596, 61873), we recognized that there are many ways to do this, and that the most effective ways would vary by ACO. Our proposal intended to provide ACOs with flexibility to use payments consistent with broad allowable uses. However, as prepaid shared savings would only be available to ACOs that are currently successfully participating in the Shared Savings Program, we stated that we intended to place restrictions on the amount of total annual prepaid shared savings that could be spent on each category of spending. Financially successful ACOs are likely to have already made significant investments in staffing and healthcare infrastructure, as they are necessary for the functioning of an ACO, and we stated that we intended to encourage ACOs receiving prepaid shared savings to invest in direct beneficiary services that are not already offered by the ACO. Direct beneficiary services like vision, hearing and dental, and other services that have a reasonable expectation of improving or maintaining the health or overall function of ACO beneficiaries have the potential to further improve beneficiary outcomes, reduce costs, and improve beneficiary engagement and willingness to receive care from a provider affiliated with an ACO. However, staffing and healthcare infrastructure are still important expenses that can have positive impacts on healthcare costs, ACO efficiency, and the quality of beneficiary care, regardless of an ACO's experience in the Shared Savings Program. Accordingly, we also explained that we intended to allow ACOs to use some of their prepaid shared savings to invest in these areas. For each performance year, ACOs would be permitted to use up to 50 percent of their estimated annual prepaid shared savings on staffing and healthcare infrastructure and up to 100 percent of their estimated annual prepaid shared savings on direct beneficiary services. ACOs would be required to use a minimum of 50 percent of their prepaid shared savings on direct beneficiary services.

We note that under our proposal, an ACO may use prepaid shared savings for staffing, healthcare infrastructure and direct beneficiary services in a manner that complies with the beneficiary incentives provision at § 425.304(a), (b), and newly proposed (d) as discussed in section III.G.5.i of this final rule, and all other applicable laws and regulations. Permitted uses for ''staffing and healthcare infrastructure'' include but are not limited to the following:

- *Staffing.* Examples could include, but are not limited to, hiring physicians, physicians' assistants, nurse practitioners, clinical nurse specialists, nutrition professionals, case managers, licensed clinical social workers, community health workers, patient navigators, health equity officers, psychiatrists, clinical psychologists, therapists, mental health counselors, licensed professional counselors, substance use counselors, peer support specialists, and other behavioral health clinicians, or staff education.
- *Healthcare Infrastructure:* Examples could include, but are not limited to, investments in or improvements to existing case or practice management systems, clinical data registries, electronic quality reporting, health information exchange participation, certified electronic health record technology (CEHRT), health IT to support behavioral health or dental services, IT-enabled screening tools, closed-loop referral tools, audiovisual interpreter technology, or practice physical accessibility improvements. Investments could be made for individual ACO providers/suppliers (as defined in § 425.20) or ACO wide.
- Direct beneficiary services include in-kind items or services provided to an ACO beneficiary that are not otherwise covered by Traditional Medicare but are evidence-based and medically appropriate for the beneficiary based on clinical and social risk factors. Direct beneficiary services can also include cost sharing support including the reduction of beneficiary copay or deductibles for Traditional Medicare beneficiaries. In advance of the application deadline for agreement periods beginning on January 1, 2026, we intend to release additional guidance with more specific information about permitted uses of funding for direct beneficiary services. Permitted uses for direct beneficiary services could include, but are not limited to the following: beneficiary meals, nutrition support, tenancy support and sustaining services, caregiver support services, services to address social isolation, home visits, transportation services, home or environmental modifications like air conditioners, bathroom safety devices, personal emergency response systems or medical alert systems, and vision, hearing or dental care directly provided by ACO providers/suppliers (as defined in § 425.20) or covered under a health insurance plan purchased by the ACO on behalf of the beneficiary. While some of these services are covered in some form by Traditional Medicare, prepaid shared savings funding reserved for direct beneficiary services would only be permitted to be used for those services if the version of the service offered by the ACO is not currently covered by Traditional Medicare and they are evidence-based and medically appropriate for the beneficiary based on clinical and social risk factors. For example, some types of home visits are covered by Traditional Medicare, but an ACO would be able to extend the number of home visits offered to beneficiaries beyond the number covered by Traditional Medicare with prepaid shared savings. Direct beneficiary services would also include cost-sharing support, including the reduction of beneficiary copay or deductibles for Traditional Medicare beneficiaries for Part B primary care services. ACOs would be able to provide cost-sharing support for primary care services (as defined in § 425.20) with respect to which coinsurance applies under Part B.

As discussed in section III.G.5.i of this final rule, we stated that we expect to make a determination that the Federal anti-kickback statute safe harbor for CMS-sponsored model patient incentives (§ 1001.952(ii)(2)) is available to protect direct beneficiary services that are made in compliance with this policy and the conditions for use of the anti-kickback statute safe harbor set out at § 1001.952(ii)(2). As noted earlier in this rule, ACOs that wish to provide direct beneficiary services to beneficiaries through prepaid shared savings will need to submit a spend plan with information including the

groups of beneficiaries they intend to provide direct beneficiary services, how the direct beneficiary services will be provided to beneficiaries and how such services support the care of beneficiaries, and attest that they will not discriminate on the basis of race, color, religion, sex, national origin, disability, or age with respect to how they propose to spend prepaid shared savings. As proposed, ACOs will also be required to report their actual use of prepaid shared savings after the end of each performance year, including which groups of beneficiaries received direct beneficiary services, how such services were provided to beneficiaries, and how these services supported the care of beneficiaries.

Many direct beneficiary services may be provided by staff working for an ACO or its participating providers or suppliers. If a staff member is hired or directed to provide these services, ACOs may use dollars designated for direct beneficiary services to cover the percentage of their salary that aligns with the percentage of time the staff member spends providing direct beneficiary services that are not otherwise covered by Traditional Medicare. This funding may also be used to contract with a community-based organization (CBO) or other external entity to pay their staff to provide direct beneficiary services. Additionally, ACOs should take care to ensure that a direct beneficiary service that is provided to a beneficiary does not impact other Federal, State, or local means-tested benefits a beneficiary is already receiving, and ACOs should provide beneficiaries with any necessary documentation regarding their receipt of the direct beneficiary service. CMS will include additional information in later guidance regarding the approved uses for direct beneficiary services and potential impacts on beneficiary eligibility for other Federal means-tested programs.

We proposed at § 425.640(e)(2) that an ACO may not use prepaid shared savings for any expense other than those allowed under paragraph (e)(1). Prohibited uses of prepaid shared savings would include management company or parent company profit, performance bonuses, provision of medical services covered by Traditional Medicare, cash or cash equivalent payments to beneficiaries, and items or activities unrelated to the management and operations of an ACO or care of beneficiaries. Similar to advance investment payments, prepaid shared savings are intended to help an ACO put care processes in place to directly care for the unique needs of the ACO's beneficiary population, not to solely increase profits or to be spent on items unrelated to the management and operations of the ACO or the beneficiaries it serves. Additionally, we proposed that an ACO participating in Levels C–E of the BASIC track or the ENHANCED track may not use any prepaid shared savings to pay back any shared losses that it would have incurred as specified in a written notice from CMS under § 425.605(e)(2) or § 425.610(h)(2), respectively.

To the extent that an ACO is addressing unmet social needs, including food insecurity and transportation problems, through direct beneficiary services, we encourage ACOs to coordinate with a community-based organization (''CBO'') to provide these services. As explained in the CY 2023 PFS proposed rule (87 FR 46102), where we refer to CBO, we mean public or private not-for-profit entities that provide specific services to the community or targeted populations in the community to address the health and social needs of those populations. They may include community-action agencies, housing agencies, area agencies on aging, or other non-profits that apply for grants to perform social services. They may receive grants from other agencies in the U.S. Department of Health and Human Services, including Federal grants administered by the Center for Disease Control and Prevention (CDC), Administration for Children and Families (ACF), Administration for Community Living (ACL), or other Federal or State funded grants to provide social services.

Generally, such organizations know the populations they serve and their communities and may have the infrastructure or systems in place to help coordinate supportive services that address social determinants of health (''SDOH'') or serve as a source from which ACOs can receive information regarding community needs. Because CBOs have developed such an expertise, it would be impactful for ACOs in the delivery of high-quality direct beneficiary services to contract with CBOs in the provision of these services. CMS further encourages ACOs to work with community care hubs, which are community-focused entities supporting a network of CBOs that provide services addressing health-related social needs and centralize administrative functions and operational infrastructure. Working directly with a community care hub can help connect the ACO with multiple smaller CBOs in the provision of direct beneficiary services. If an ACO works with a CBO to provide these types of services and this is reflected in its plan to address the needs of its population, we would consider them to be in compliance with the requirement at § 425.112(b)(2)(iii)(A), which requires an ACO to, in its plan to address the needs of its population, describe how it intends to partner with community stakeholders to improve the health of its population.

We also proposed in § 425.640(f)(6) to allow ACOs receiving prepaid shared savings to request a smaller quarterly payment amount from CMS. For example, if an ACO is eligible for a maximum quarterly prepaid shared savings amount of one million dollars, we would estimate their annual prepaid shared savings to be four million dollars. This allows the ACO to spend up to two million dollars on staffing and healthcare infrastructure and up to their full $4 million payment amount on direct beneficiary services. However, the ACO may request a lower quarterly payment of $500,000 that results in the ACO only receiving two million dollars over the full performance year. This would also reduce the amount the ACO can spend on staffing and healthcare infrastructure, as an ACO may not spend more than 50 percent of the prepaid shared savings received on staffing and healthcare infrastructure. In the event that CMS stops or reduces an ACO's quarterly payments during the performance year below the quarterly payment amount previously requested by the ACO, the reduction does not impact the total maximum amount the ACO is permitted to spend on each category of allowable uses identified at the start of each year, as it would not be appropriate to subject the ACO to mid-year spend plan changes when it may have entered into contracting or other arrangements with staff or suppliers which could impact continuity of care. We would monitor how ACOs are spending these funds and, as necessary, revisit these guidelines in future rulemaking if changes are required.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Most commenters agreed that earlier payment of shared savings would help fund ACO initiatives throughout the performance year. Commenters also appreciated CMS' definition of direct beneficiary services as ''in-kind items or services provided to an ACO beneficiary that are not otherwise covered by traditional Medicare but have a reasonable expectation of improving or maintaining the health or overall function of ACO beneficiaries,'' and believe that interpreting ''direct beneficiary

services'' in this manner will help improve beneficiary care. A few commenters specifically supported that the portion of our proposed permitted uses policy allowing ACOs to provide Part B cost sharing support and other services to improve access to quality care for beneficiaries.

Response: We agree with commenters and appreciate their support for the implementation of the prepaid shared savings payment option, including its permitted uses. We note that we have revised the definition of direct beneficiary services to include: in-kind items or services provided to an ACO beneficiary that are not otherwise covered by Traditional Medicare but are evidence-based and medically appropriate for the beneficiary based on clinical and social risk factors. We believe this definition will more appropriately direct funding towards improving beneficiary care and reduce potential impact on any other means-tested benefits a beneficiary may receive.

Comment: Many commenters asserted that the restrictions on the use of prepaid shared savings are unnecessary and likely to negatively impact ACO participation in prepaid shared savings, including by disproportionally discouraging ACOs with the least access to resources from participating. Commenters asked for more flexibility in using prepaid shared savings. Most disagreed with the requirement that ACOs spend at least 50 percent of prepaid shared savings on direct beneficiary services. Some urged CMS to not require a specified minimum amount that must be spent on direct beneficiary services. A few commenters opposed the requirement that ACOs calculate a percentage of staff time spent on ''providing direct beneficiary services that are not otherwise covered by Traditional Medicare'' as unnecessarily burdensome. Other commenters contended that this requirement would take away from the shared savings dollars that ACOs distribute directly to ACO participants, which is a major incentive for ACO participants to join or form ACOs. Some commenters noted they believe that ACOs are best positioned to determine the appropriate use of prepaid shared savings and the level of investment needed toward infrastructure, staffing, and direct beneficiary services.

Response: We understand that commenters would like additional flexibility with respect to the use of prepaid shared savings and that these restrictions may reduce the number of ACOs that ultimately decide to participate in prepaid shared savings. However, the prepaid shared savings policy was developed to improve the quality and efficiency of items and services furnished to Medicare beneficiaries and help close gaps in health equity. The requirement that ACOs spend at least 50 percent of their prepaid shared savings on direct beneficiary services is important for meeting those goals. Direct beneficiary services like vision, hearing and dental, and other services that are evidence-based and medically appropriate for the beneficiary based on clinical and social risk factors, have the potential to improve beneficiary health outcomes, reduce costs, and improve beneficiary engagement and willingness to receive care from a provider affiliated with an ACO. Financially successful ACOs are likely to have already made significant investments in staffing and healthcare infrastructure, as they are necessary for the functioning of an ACO. The restriction on using prepaid shared savings for provider bonuses, in particular, is important for ensuring that prepaid shared savings are used for expenses that directly improve beneficiary care.

We note that participation in prepaid shared savings is voluntary, and an ACO is able to request to receive less than the full amount of prepaid shared savings it is eligible to receive. The limits on the use of prepaid shared savings do not apply to shared savings paid by CMS at financial reconciliation. If an ACO believes it is important to distribute earned shared savings to ACO participants in order to encourage participation in the ACO, it may do so. Each ACO is well-positioned to make its own decisions about the use of its shared savings, both prepaid and earned, and we understand that the permitted uses of prepaid shared savings may not align with the current financial strategy of some ACOs.

Additionally, many direct beneficiary services may be provided by staff working for an ACO or its participating providers or suppliers. As we explained in the CY 2025 PFS proposed rule (89 FR 61596, 61874), if a staff member is hired or directed to provide these services, ACOs may, but are not required to, use dollars designated for direct beneficiary services to cover the percentage of their salary that aligns with the percentage of time the staff member spends ''providing direct beneficiary services that are not otherwise covered by Traditional Medicare,'' instead of fully including those staff expenses under the ''staffing'' category, where ACOs are limited in their ability to use prepaid savings. We understand that ACO staff may split time between multiple functions and proposed this aspect of our permitted uses criteria partly to make it easier for ACOs to categorize and account for the staff time necessary to provide direct beneficiary services not otherwise covered by Traditional Medicare while meeting the requirement that they spend at least 50 percent of their funding on direct beneficiary services.

Comment: Several commenters expressed concern with CMS' proposal to require at least 50 percent of prepaid shared savings be spent on direct beneficiary services not otherwise payable in Traditional Medicare, because they believe it puts doctors in the direct role of supplying insurance benefits to Medicare recipients, akin to serving as a Medicare Advantage plan. A commenter stated that money spent on provision of direct beneficiary services should not be subject to repayment to CMS if the ACO fails to earn sufficient shared savings, and ACOs and participating providers should work within their communities to connect beneficiaries with such services rather than be required to supply supplemental benefits via prepaid shared savings. A commenter also suggested that CMS find more direct ways to expand health insurance benefits available to beneficiaries, including working with Congress to develop Traditional Medicare benefits that better compete with options offered by Medicare Advantage plans.

Response: We disagree with commenters that using prepaid shared savings to pay for direct beneficiary services places providers in a role akin to a health insurer. Prepaid shared savings are an estimate of the shared savings an ACO may earn each performance year, and ACOs may use their earned shared savings to furnish additional services for their beneficiaries, including direct beneficiary services. The prepaid shared savings payment option merely changes the timing of CMS paying a portion of those savings to ACOs that elect this payment option. Participation in this payment option is voluntary, and ACOs control the amount of prepaid shared savings they request to receive, under the maximum amount calculated by CMS, and therefore how much of that funding must be invested into direct beneficiary services under § 425.640(e)(1)(ii). Additionally, as we explained in the proposed rule (89 FR 61870–61871), we are obligated to protect the Medicare Trust Funds, and this policy relies on the authority provided to the Secretary by section 1899(i)(3) of the Act. To protect the Medicare Trust Funds and maintain

compliance with section 1899(i)(3) of the Act, we determined that it would be appropriate for CMS to recoup all prepaid shared savings that ACOs receive, including those spent on direct beneficiary services.

We agree with the commenter that ACOs and providers should work within their communities to connect beneficiaries with currently available resources, including direct beneficiary services that those beneficiaries may need. As explained earlier in this section of this final rule, we also note that ACO staff time used to connect beneficiaries with direct beneficiary services resources in their communities could be paid for with prepaid shared savings under the direct beneficiary services spending category. Additionally, ACOs can contract with CBOs using prepaid shared savings to provide direct beneficiary services, which CMS would encourage because in many instances CBOs have the most experience providing these services that are not otherwise payable by Traditional Medicare. CMS remains interested in working with and hearing from interested parties on ways to improve the care and benefits that beneficiaries receive.

Comment: A few commenters noted concerns with the implementation of direct beneficiary services. One commenter expressed support for policies that increase access to direct beneficiary services for dually eligible beneficiaries (beneficiaries eligible for Medicare and Medicaid) but noted concern about the lack of coordination between the Shared Savings Program and other State and Federal programs, such as Medicaid, and identified possible unintended consequences of reducing the incentive for dually eligible beneficiaries to enroll or remain enrolled in an integrated dual eligible special needs plan (D–SNP). The commenter argued that poor coordination of economic and health related programs will cause significant confusion among beneficiaries and providers, which may result in healthcare access issues for beneficiaries. In addition, the commenter contended that because direct beneficiary services are not payable under Traditional Medicare Part A or B, direct beneficiary services would not be subject to the Medicare appeals process, which may cause additional confusion for beneficiaries if they only receive a direct beneficiary service from a provider associated with an ACO for a limited period of time and believe they should continue to receive the service. The commenter encouraged CMS to provide further clarification on the proposed policies and to provide guidance to providers and beneficiaries on the interaction of direct beneficiary services and services covered by other payers, such as Medicaid. Another commenter suggested that CMS monitor how ACOs use prepaid shared savings on direct beneficiary services.

Response: We appreciate commenters raising this concern. D–SNPs play an important role in serving the special needs of some dual eligible beneficiaries. We agree that beneficiaries, including dually eligible beneficiaries, may find direct beneficiary services attractive We designed the standards governing the use of prepaid shared savings to ensure that the funds are used to improve the quality and effectiveness of beneficiary care while providing ACOs with the flexibility to experiment and determine which direct beneficiary services are most appropriate to offer to their assigned beneficiaries. However, as discussed in the proposed rule (89 FR 61874), ACOs should ensure the direct beneficiary services distributed to beneficiaries do not impact other means-tested benefits received by a beneficiary under Federal, State, or local means-tested programs. This includes benefits received through State Medicaid programs. ACOs should familiarize themselves with the means-tested benefits that their beneficiaries receive under Federal, State, or local means-tested programs, including their eligibility requirements. CMS provides quarterly lists to ACOs with information about beneficiaries including their State of residence and enrollment in Medicaid, which can be used to support this effort. Additionally, under § 425.640(d)(2)(iv), ACOs would be responsible for notifying beneficiaries if a direct beneficiary service supplied by the ACO will no longer be available. ACOs must also share information with the impacted beneficiaries about any available alternatives for accessing similar services (89 FR 61873). ACOs should take care to avoid disrupting current care arrangements if they are not confident they will be able to provide direct beneficiary services to a beneficiary consistently. CMS intends to issue additional guidance to ACOs to support them in avoiding conflicts between their provision of direct beneficiary services and the means-tested benefits received by their beneficiaries under Federal, State, or local means-tested programs.

We have also revised the definition of direct beneficiary services and removed some examples of direct beneficiary services to reduce potential impact on other means-tested benefits a beneficiary may receive.

As both CMS and ACOs gain more experience with prepaid shared savings, we may reexamine these standards. To aid this process, ACOs are required to publicly report their use of prepaid shared savings under § 425.308(b)(10), and CMS will be publicly sharing files with all ACO usage of prepaid shared savings. We appreciate commenters' feedback on how to improve communication in these areas to reduce beneficiary and provider confusion and will consider it in future rulemaking.

Comment: A few commenters asked for clarification on the use of prepaid shared savings, specifically about ''fitness benefits'' that encourage physical activity for beneficiaries and whether prepaid shared savings could be used to support CBO efforts to build infrastructure that will allow them to collaborate with ACOs to effectively provide direct beneficiary services.

Response: CMS appreciates these requests for clarification. ''Fitness benefits'' for beneficiaries could be covered as a direct beneficiary service if the benefit is not otherwise covered by Traditional Medicare and are evidence-based and medically appropriate for the beneficiary based on clinical and social risk factors. Additionally, spending prepaid shared savings to support development of CBO infrastructure that will allow them to collaborate with ACOs could be covered under multiple prepaid shared savings permitted use categories, depending on the type of infrastructure assistance needed and the type of services provided by the CBO.

We intend to release additional guidance with more specific information about permitted uses of funding for direct beneficiary services before the application cycle for Performance Year 2026.

After consideration of public comments, we are finalizing the policy on the use and management prepaid shared savings as proposed, and as specified in new § 425.640(e). This includes the requirement that ACOs spend to up to 50 percent of their estimated annual prepaid shared savings on staffing and healthcare infrastructure and up to 100 percent, but not less than 50 percent, of their estimated annual prepaid shared savings on direct beneficiary services. We have also revised the definition of direct beneficiary services in the preamble text to reduce potential impact on any other means-tested benefits a beneficiary may receive.

e. Calculation of Prepaid Shared Savings

As noted in section III.G.5.a of this final rule, we have determined that prepaid shared savings would not result in additional program expenditures. While ACOs will be required to repay the prepaid shared savings they receive through earned shared savings, it is also important for CMS to avoid paying ACOs an amount of prepaid shared savings that they are unlikely to be able to repay through earned shared savings. While prepaid shared savings will be helpful in providing successful ACOs with additional cash flow that would encourage their investment in activities that could potentially reduce ACOs' costs and improve the quality of care that ACOs provide to their beneficiaries, overpaying ACOs might result in a level of outstanding debt for some ACOs that could disrupt their operations and potentially their participation in the Shared Savings Program as well as generate unnecessary financial risk for CMS. Our proposed policies on the calculation and distribution of prepaid shared savings payments are intended to balance the benefit for the ACOs of receiving funding earlier with the risk of overpayment both for CMS and the ACO, while helping to ensure that prepaid shared savings do not result in additional program expenditures.

We proposed a new § 425.640(f) to provide an ACO that CMS determines meets the eligibility criteria described in section III.G.5.b of this final rule with a prepaid shared savings payment for each quarter of an agreement period that they are determined to be eligible for prepaid shared savings equal to the maximum quarterly payment amount calculated pursuant to the methodology outlined in § 425.640(f)(2) (as further explained elsewhere in this section), unless the ACO elects to receive a lesser amount as described in § 425.640(f)(6) (as further explained in section III.G.5.d. of this final rule) or the payment is withheld or terminated under § 425.640(h). If an ACO's quarterly payment is withheld or terminated (as further explained in section III.G.5.f.(2) of this final rule), we will not provide ACOs with additional or catch-up payments if quarterly payments of prepaid shared savings are later resumed. We proposed that under new § 425.640(f), CMS will notify in writing each ACO of its determination of the amount of prepaid shared savings. The notice would inform the ACO of its right to request reconsideration review in accordance with the procedures specified in subpart I of our regulations. If CMS does not make any prepaid shared savings payments, the notice would specify the reason(s) why and inform the ACO of its right to request reconsideration review in accordance with the standards specified in subpart I of our regulations. Thus, prior to each quarterly payment, we propose to provide the ACO with the notice described above in the form of a report that shows our calculation of the ACO's quarterly prepaid shared savings amount. We proposed to coincide the timing of these notices with the timing of existing report packages sent to ACOs for informational purposes, in December (after initial assignment prior to a given performance year), May (after quarter 1 assignment for a given performance year), and August (after quarter 2 assignment for a given performance year). Accordingly, notice regarding the first and second quarterly payments that an eligible ACO would receive in a given performance year would be provided in December of the immediately preceding year. Subsequent notices regarding the third and fourth quarterly payments that an eligible ACO would receive in a given performance year would then be provided in May and August, respectively, of that performance year.

We also proposed a new § 425.640(f)(2) to specify the calculation of an ACO's maximum quarterly prepaid shared savings payment. To calculate this payment, we proposed calculating a prepaid shared savings multiplier, adjusting it by several factors explained later in this section, and then multiplying one-fourth of the adjusted multiplier by an ACO's assigned beneficiary person years. We proposed to calculate the prepaid shared savings multiplier as the simple average of per capita savings or losses generated by the ACO during the two most recent performance years that have been financially reconciled at the time of the ACO's renewal application disposition, which constitute benchmark year (BY) 1 and BY2 of the agreement period in which the ACO may receive prepaid shared savings (''current agreement period,'' hereafter). That is, we would exclude BY3 from the calculation of an ACO's average per capita savings or losses because the performance year that constitutes BY3 of the ACO's current agreement period would not have been financially reconciled at the time of the ACO's application disposition. Accordingly, the per capita savings for each performance year would be determined as the quotient of the ACO's total updated benchmark expenditures minus total performance year expenditures divided by performance year assigned beneficiary person years. For purposes of calculating the simple average of per capita savings or losses generated by the ACO during the two most recent performance years that have been financially reconciled, we would use all savings generated during each of the 2 performance years in the prepaid shared savings multiplier, not just savings that met or exceeded the ACO's minimum savings rate (MSR) for that prior performance year.

Under new § 425.640(f)(2)(iii), we proposed to apply a proration factor to the prepaid shared savings multiplier to account for situations where an ACO's assigned beneficiary population is larger in BY1 and BY2 when calculated using the ACO's certified ACO participant list and assignment methodology for a given performance year within the current agreement period, as compared to the ACO's assigned beneficiary population when the ACO was reconciled for the performance years that constitute BY1 and BY2 of the current agreement period. Mathematically, to apply this proration factor we would calculate the ratio between: (1) the ACO's average assigned beneficiary person years for the 2 performance years that constitute BY1 and BY2 for the ACO's current agreement period (regardless of whether these performance years occurred over one or multiple prior agreement periods, which would occur if the ACO early renews immediately before the current agreement period) and (2) the average assigned beneficiary person years in BY1 and BY2 for the ACO's current agreement period calculated using the ACO's certified ACO participant list and assignment methodology for a given performance year within the current agreement period. Increases in the size of the ACO's assigned beneficiary population during the current agreement period would therefore result in a ratio less than 1, while decreases in the assigned beneficiary population would result in a ratio greater than 1. This ratio would be capped at 1 to avoid increasing the adjusted prepaid shared savings multiplier if the average number of beneficiaries assigned to the ACO across the 2 benchmark years of its current agreement period is lower than the average number of beneficiaries assigned during the 2 performance years that constitute BY1 and BY2. Prorating for growth in assignment would ensure that the prepaid shared savings amount does not exceed the amount of cumulative savings generated by the ACO during the performance years that constitute BY1 and BY2 for its current agreement period.

It is necessary to calculate a proration factor at the start of the ACO's current agreement period to account for several

possible circumstances in which the ACO's assigned beneficiary population may be different in BY1 and BY2 when calculated using the ACO's certified ACO participant list and assignment methodology for a given performance year within the current agreement period, as compared to the ACO's assigned beneficiary population when the ACO was reconciled for the performance years that constitute BY1 and BY2 of the current agreement period. Specifically, changes in the size of the ACO's assigned beneficiary population at the start of the ACO's current agreement period could be due to the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), or changes to the beneficiary assignment methodology specified in 42 CFR part 425, subpart E.

Additionally, these circumstances could potentially arise after the start of the ACO's current agreement period. In turn, changes in the size of the ACO's assigned beneficiary population could potentially occur throughout the course of the current agreement period. Therefore, we proposed in new § 425.640(f)(3)(ii) that for the second and each subsequent performance year during the term of the current agreement period, we would redetermine this proration factor.

In addition to pro-rating the prepaid shared savings multiplier, we also proposed to adjust it in two ways. First, under new § 425.640(f)(2)(iv), we will apply a sharing rate scaling factor of ½ (or 50 percent). This sharing rate scaling factor would be similar to the scaling factor we apply under § 425.658(c)(1)(i) when calculating the prior savings adjustment, applicable to agreement periods beginning on or after January 1, 2024, as finalized in the CY 2023 final rule (refer to 87 FR 69899 through 69915). As with the prior savings adjustment calculation, it is important to consider a measure of the sharing rate used in determining the shared savings payment the ACO earned in the applicable performance years under the agreement period immediately before it would receive prepaid shared savings. Consistent with the prior savings adjustment scaling factor, 50 percent represents an appropriate multiplier in this context because it represents a middle ground between the maximum sharing rate of 75 percent under the ENHANCED track and the lower sharing rates available under the BASIC track.

Second, under new § 425.640(f)(2)(v)(A), we will apply a financial risk scaling factor equal to ⅔. The purpose of the financial risk scaling factor would be to mitigate financial risk to the Medicare Trust Funds and to ACOs by reducing the possibility that an ACO's prepaid shared savings payments exceed the ACO's actual earned shared savings. The rationale for a financial risk scaling factor of this magnitude is that it enables us to account for a scenario in which an ACO earned zero per capita savings in the performance year that constitutes BY3 of the current agreement period, which is necessarily excluded from the calculation of an ACO's average per capita savings or losses for purposes of the prepaid shared savings multiplier because, as mentioned previously, the performance year that constitutes BY3 of the ACO's current agreement period will not have been financially reconciled at the time of the ACO's application disposition. Thus, by multiplying an ACO's average per capita savings or losses across BY1 and BY2 by a financial risk scaling factor equal to ⅔, we would impose a downward reduction on the prepaid shared savings multiplier by assuming that it would have been possible, in principle, for an ACO to have not earned any per capita savings in the performance year that constitutes BY3 of the current agreement period. By doing so, we are reducing the probability of distributing excessive prepaid shared savings. As discussed previously, it is important to avoid distribution of excessive prepaid shared savings because doing so could result in several undesirable outcomes, such as ACOs accruing debt to CMS that they are unable to repay, which could disruption the ACOs' operations and participation in the Shared Savings Program.

Consistent with calculations of the prior savings adjustment (refer to § 425.658), the positive regional adjustment (refer to § 425.656), and the proposed health equity benchmark adjustment (refer to section III.G.7.b of this final rule), we proposed under new § 425.640(f)(2)(v)(B), to cap the pro-rated, adjusted prepaid shared savings multiplier at 5 percent of national per capita FFS expenditures for Parts A and B services in order to ensure that the amount of prepaid shared savings that an ACO receives does not exceed an amount that the ACO is able to repay through earned shared savings. Specifically, we proposed to calculate the cap as 5 percent of national per capita FFS expenditures for Parts A and B services in BY2 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY2. Consequently, under new § 425.640(f)(2)(v), the pro-rated, adjusted, and capped prepaid shared savings multiplier that would ultimately be used to calculate a given maximum quarterly prepaid shared savings payment would be equal to the lesser of (A) the pro-rated, adjusted prepaid shared savings multiplier or (B) 5 percent of national per capita FFS expenditures for Parts A and B services in BY2 for assignable beneficiaries.

To calculate a given maximum quarterly prepaid shared savings payment, we proposed under new § 425.640(f)(4), to multiply one-fourth of the pro-rated, adjusted, and capped prepaid shared savings multiplier (to account for four quarterly payments) by the ACO's assigned beneficiary person years for the latest available assignment list for a given performance year within the current agreement period. Varying the maximum quarterly payment to reflect the latest available assigned beneficiary person years is similar to how we calculate the AIP quarterly payment calculation (refer to § 425.630(f), CY 2023 PFS final rule (87 FR 69797)), for which we use the latest available assignment list to calculate the quarterly advance investment payment amount. We proposed to use the latest available beneficiary assigned person years for the maximum quarterly prepaid shared savings payment because an ACO's assigned beneficiary person years change over the course of a performance year and over the course of an agreement period. Because later assignment lists more closely reflect the final assignment list that will be used for calculating shared savings and losses for a given performance year within the current agreement period, later assignment lists are more likely than earlier assignment lists to facilitate calculation of quarterly prepaid shared savings payment amounts that closely align with the earned shared savings or losses that an ACO actually generates in the contemporaneous performance year. Using the latest available assigned beneficiary person years mitigates a financial risk that an ACO experiencing declining person years over the course of a performance year could receive excessive prepaid shared savings. As mentioned previously, overpaying prepaid shared savings could result in ACOs accruing a level of debt to CMS that they are unable to repay through earned shared savings which could, in turn, disrupt ACOs' operations and participation in the Shared Savings Program.

We proposed to use assigned beneficiary person year values that CMS provides to ACOs in annual and quarterly informational reports. For

ACOs under preliminary prospective assignment with retrospective reconciliation, Medicare assigns beneficiaries in a preliminary manner at the beginning of a performance year based on the most recent data available (§ 425.400(a)(2)(i)). Assignment is updated quarterly based on the most recent 12 or 24 months of data, as applicable, under the methodology described in §§ 425.402 and 425.404 (§ 425.400(a)(2)(ii)). ACOs under preliminary prospective assignment with retrospective reconciliation receive an assigned beneficiary person years value based on the most recent 12 or 24 months of data, as applicable, in annual and quarterly informational reports. For ACOs under prospective assignment, Medicare FFS beneficiaries are prospectively assigned to an ACO at the beginning of each benchmark or performance year based on the beneficiary's use of primary care services in the most recent 12 or 24 months, as applicable, for which data are available, using the assignment methodology described in §§ 425.402 and 425.404 (§ 425.400(a)(3)(i)). Each quarter, CMS excludes any prospectively assigned beneficiaries that meet the exclusion criteria under § 425.401(b). ACOs under prospective assignment receive a year-to-date assigned beneficiary person years value with each quarterly report package. For ACOs under prospective assignment, we would annualize the quarterly year-to-date assigned beneficiary person years values for use in the maximum quarterly prepaid shared savings payment calculation. For example, a year-to-date person years value of 1,500 with quarter 1 informational reports would be annualized by multiplying 1,500 by 4. A year-to-date person years value of 3,000 with quarter 2 information reports would be annualized by multiplying 3,000 by 2.

We further proposed to account for circumstances when an ACO was not reconciled for the performance year that constitutes BY1 in the calculation of average per capita prior savings and the proration factor. For instance, ACOs that renew their agreement periods early or are re-entering may not be reconciled for one or more of the years preceding the start of their current agreement period depending upon the timing of the expiration or termination of their prior agreement period and the start of their current agreement period. We proposed under new § 425.640(f)(2)(i), that if an ACO was not reconciled during one of the 2 performance years that constitute BY1 or BY2 of its current agreement period, the ACO would receive zero savings or losses for the BY corresponding to the performance year that was not financially reconciled in the calculation of the prepaid shared savings multiplier. CMS has no way to determine whether the ACO would have generated savings or losses during a performance year for which it was not reconciled. We believe this is appropriate because it enables us to obtain a more conservative prediction of the ACO's financial performance for a given performance year within the current agreement period than we will be able to obtain if we were to exclude the BY corresponding to the performance year that was not financially reconciled from the calculation of the prepaid shared savings multiplier. Excluding this year entirely from the calculation of average per capita prior savings would unduly increase the weight on the other year included in the prepaid shared savings multiplier calculation. This would be problematic in a case where the ACO's financial performance in the BY corresponding to the performance year that was financially reconciled is atypically high because it would upwardly bias the prediction of the ACO's financial performance for a given performance year within the current agreement period. Thus, by imputing zero savings or losses for a BY corresponding to a performance year that was not financially reconciled in the calculation of the prepaid shared savings multiplier, we are reducing the probability of overpredicting the financial performance of the ACO for a given performance year within the current agreement period and, in turn, the probability of distributing excessive prepaid shared savings. As mentioned previously, excessive distribution of prepaid shared savings could result in several undesirable outcomes, such as ACOs accruing debt to CMS that they are unable to repay, which could disrupt the ACOs' operations and participation in the Shared Savings Program.

In contrast, we determined that it would also be appropriate to exclude a year for which the ACO was not reconciled when calculating the proration factor. The purpose of the proration factor is to account for situations where an ACO's assigned beneficiary population calculated at financial reconciliation for the 2 performance years that constitute BY1 and BY2 of the ACO's current agreement period (numerator) is smaller than the ACO's assigned beneficiary population identified for those same years using the ACO's certified ACO participant list and assignment methodology for a given performance year within the current agreement period (denominator). If an ACO was not reconciled for one of the 2 performance years that constitute BY1 and BY2 of the current agreement period, it would naturally have zero assigned beneficiary person years determined at financial reconciliation for such year, which would factor into the numerator of the proration factor if such year was considered. However, the ACO would have positive beneficiary counts in the 2 performance years that constitute BY1 and BY2 of the current agreement period generated using the ACO's certified ACO participant list and assignment methodology for a given performance year within the current agreement period, which would factor into the denominator of the proration factor if such year was considered. Thus, if the numerator and the denominator were both calculated as averages over 2 years, incorporating a year for which the ACO was not reconciled in the calculation of the proration factor would artificially decrease the proration factor and lead to a smaller pro-rated average per capita prior savings for the ACO. Alternatively, if the numerator were calculated in a manner that excludes a performance year for which the ACO was not reconciled (that is, calculated in a manner that includes only the year for which the ACO was reconciled from among the 2 performance years that constitute BY1 and BY2 of the current agreement period) and the denominator was calculated as an average that included both of the 2 performance years that constitute BY1 and BY2 of the current agreement period, then the direction of the impact on the proration factor would depend on whether the number of assigned beneficiaries calculated using an ACO's current certified ACO participant list and assignment methodology in the benchmark year for which the ACO was not reconciled exceeds the number of assigned beneficiaries in the other benchmark year, and by how much. Therefore, we see no compelling reason to include a performance year immediately preceding the start of an ACO's current agreement period for which the ACO was not reconciled in the numerator or the denominator of the proration factor. Excluding such a year would ensure that the proration factor compares average person years determined for prior performance years at financial reconciliation (numerator) to average person years for those performance years determined using the ACO's current certified ACO participant

list and assignment methodology (denominator) across a consistent set of years preceding the start of the ACO's current agreement period.

We also proposed to account for certain circumstances where there could be changes to the values used in calculating the prepaid shared savings multiplier as a result of issuance of a revised initial determination of financial performance under § 425.315.

To account for these situations and for the need to recalculate the proration factor as described elsewhere in this section, we proposed to specify in new § 425.640(f)(3) when CMS would recalculate the prepaid shared savings multiplier during the current agreement period. For the first performance year in the current agreement period, the ACO's prepaid shared savings multiplier will be recalculated for changes in per capita shared savings or losses for the performance years that constitute BY1 or BY2 and that are used in the calculation of the prepaid shared savings multiplier as a result of issuance of a revised initial determination under § 425.315. For the second and each subsequent performance year during the term of the current agreement period, the ACO's prepaid shared savings multiplier will be recalculated due to redetermining the proration factor for the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), for a change to the beneficiary assignment methodology specified in subpart E of this part, and for changes in per capita shared savings or losses for the performance years that constitute BY1 or BY2 and that are used in the calculation of the prepaid shared savings multiplier as a result of issuance of a revised initial determination under § 425.315.

The specific computations involved in arriving at the maximum prepaid shared savings payment amount for a given ACO in a given quarter are described below.

- *Step 1:* Calculate a prepaid shared savings multiplier as the average per capita savings across the performance years that constitute BY1 and BY2 of the ACO's current agreement period. First, calculate the total per capita savings amount for each applicable performance year by subtracting assigned beneficiary expenditures from total benchmark expenditures and divide the difference by assigned beneficiary person years. Then, sum the resulting quotients and divide by 2. The per capita savings or losses would be set to zero for a performance year if the ACO was not reconciled for the performance year.
- *Step 2:* Apply a proration factor to the prepaid shared savings multiplier calculated in Step 1. The proration factor is equal to the ratio of the ACO's average assigned beneficiary person years for the 2 performance years that constitute BY1 and BY2 for the ACO's current agreement period (regardless of whether these performance years occurred over one or multiple prior agreement periods) and the ACO's average assigned beneficiary person years in BY1 and BY2 for the ACO's current agreement period calculated using the ACO's certified ACO participant list and assignment methodology for a given performance year within the current agreement period, capped at one. If the ACO was not reconciled for the performance year that constitutes BY1, the person years from that year (or years) will be excluded from the averages in the numerator and the denominator of this ratio. This ratio will be redetermined for each performance year during the agreement period in the event of any changes to the number of average person years in the benchmark years as a result of changes to the ACO's certified ACO participant list, a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), or changes to the beneficiary assignment methodology specified in 42 CFR part 425, subpart E.
- *Step 3:* Adjust the pro-rated prepaid shared savings multiplier calculated in Step 2. First, apply a shared savings scaling factor by multiplying the pro-rated prepaid shared savings multiplier by 0.50. Then, multiply the resulting value by ⅔ to apply a financial risk scaling factor.
- *Step 4:* Cap the pro-rated, adjusted prepaid shared savings multiplier at 5 percent of national per capita FFS expenditures for Parts A and B services in BY2 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY2.
- *Step 5:* Multiply one-fourth of the pro-rated, adjusted, and capped prepaid shared savings multiplier by the assigned beneficiary person years derived from the ACO's latest available assignment list. The resulting product will serve as the ACO's total maximum prepaid shared savings payment for the applicable quarter. As discussed previously, an ACO's latest available assignment list is updated quarterly. For ACOs under preliminary prospective assignment with retrospective reconciliation, assignment is updated quarterly based on the most recent 12 or 24 months of data, as applicable, under the methodology described at §§ 425.402 and 425.404 (§ 425.400(a)(2)(ii)). For ACOs under prospective assignment, assignment is updated quarterly to exclude any prospectively assigned beneficiaries that meet the exclusion criteria under § 425.401(b) (§ 425.401(b)). Thus, consistent with the methodology that we apply in the case of advance investment payments, quarterly variations in an ACO's assignment list will translate to variations in the maximum quarterly total prepaid shared savings payments that an ACO may receive in any given quarter, in order to help ensure that the payments accurately reflect the attributes of the ACO's assigned beneficiary population throughout the current agreement period.

Table 43 presents a hypothetical example to demonstrate how the prepaid shared savings calculation would work in practice.

BILLING CODE 4120–01–P

TABLE 43: Calculation of Maximum Quarterly Prepaid Shared Savings Payment

Step 1: Calculate prepaid shared savings multiplier	Per capita savings generated in the 2 performance years that constitute BY1 and BY2 for the ACO's current agreement period beginning January 1, 2022 PY 2019: $350 PY 2020: $400 Multiplier: Simple average of the per capita savings across BY1 and BY2 ($350 + $400) / 2 = $375
Step 2: Pro-rate the prepaid shared savings multiplier	Assigned person years from the performance years that constitute BY1 and BY2 for the ACO's current agreement period beginning January 1, 2022: PY 2019: 6,000 PY 2020: 7,000 Assigned person years for BY1 and BY2 of current agreement period (determined using certified ACO participant list for the current performance year of PY 2022): BY 2019: 8,000 BY 2020: 7,500 Proration factor: Ratio between the ACO's average person years in the performance years that constitute BY1 and BY2 and the average person years in BY1 and BY2, excluding years for which the ACO was not reconciled, capped at 1. Apply the proration factor to the prepaid shared savings multiplier: [(6,000 + 7,000)/2] / [(8,000 + 7,500)/2] x $375 = $314.52
Step 3: Adjust the pro-rated prepaid shared savings multiplier for financial risk and sharing rate	Shared savings scaling factor: (0.5) Financial risk scaling factor: (2/3) Apply the shared savings scaling factor and the financial risk scaling factor to the pro-rated prepaid shared savings multiplier: $314.52 x (0.5) x (2/3) = $104.84
Step 4: Cap the pro-rated, adjusted prepaid shared savings multiplier	National assignable per capita FFS expenditures for assignable beneficiaries in BY2: $10,000 Cap: 5 percent of national assignable per capita FFS expenditures for assignable beneficiaries in BY2 0.05 * $10,000 = $500
Step 5: Determine the maximum prepaid shared savings payments for the applicable quarter	Assigned beneficiary person years derived from the ACO's latest available assignment list: 8,500. Total prepaid shared savings payments for the applicable quarter: Product of one-fourth of the pro-rated, adjusted, capped prepaid shared savings multiplier and the assigned beneficiary person years derived from the ACO's latest available assignment list. ($104.84/4) x 8,500 = $222,785

BILLING CODE 4120–01–C

The ACO's maximum quarterly prepaid shared savings payments would set a ceiling on the amount of quarterly prepaid shared savings that an ACO could receive from CMS for each quarter. ACOs will be able to request to receive an amount of funding under this maximum amount. Prior to each performance year, ACOs would notify CMS of the amount of prepaid shared savings they want to receive in the first quarter under the maximum quarterly prepaid shared savings amount and the first quarterly payment will be used to determine the total amount of prepaid shared savings the ACO will use to budget for that performance year. We proposed in new § 425.640(f)(5) that for the purposes of determining the amount of prepaid shared savings permitted to be allocated to the uses specified in § 425.640(e), the estimated annual prepaid shared savings amount can be calculated by multiplying the first quarterly payment amount the ACO will receive in each performance year by four. This allows the ACO to calculate the total amount of funding they are permitted to spend on each allowable use at the start of each performance year. If an ACO's maximum quarterly payments decrease over the performance year and result in the ACO receiving less than the estimated annual prepaid shared savings amount, the

ACO would not be subject to compliance actions solely because it spent more than 50 percent of the actual annual amount of prepaid shared savings it received during that PY on staffing and healthcare infrastructure, as long as it did not spend more than 50 percent of the originally estimated annual prepaid shared savings amount on staffing and healthcare infrastructure. For example, if an ACO is eligible for a maximum quarterly prepaid shared savings payment of $300,000 for quarter 1 of a performance year, but only wishes to receive $250,000 for quarter 1 of a performance year, their estimated annual prepaid shared savings amount would be $1,000,000. This allows the ACO to spend up to $500,000 on staffing and healthcare infrastructure, or up to the full amount of $1,000,000 on direct beneficiary services. If an ACO has a reduction in assigned beneficiaries and is only eligible for a maximum quarterly prepaid shared savings payment of $200,000 for quarters 2, 3 and 4, this results in an actual total of $850,000 in received prepaid shared savings for the performance year. However, the ACO would still be permitted to spend up to $500,000 on staffing and healthcare infrastructure in that performance year, as that is 50 percent of the original estimated amount and we do not want to change budget maximums retroactively for an ACO.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Most commenters supported the proposed policy for the calculation of the quarterly payments and the use of an ACO's latest available assignment list to reflect changes to the ACO's assigned population during the agreement period. One commenter encouraged CMS to provide ACOs with preliminary estimated prepaid shared savings amounts during the annual Medicare Shared Savings Program application cycle to inform development of their spend plan.

Response: We appreciate the commenters' support. CMS does intend to share preliminary information about prepaid shared savings amounts with ACOs during the application cycle, which they can use to inform development of their spend plan.

Comment: One commenter suggested that an ACO receiving prepaid shared savings should have the option to elect to receive a smaller payment amount than the maximum quarterly payment calculated by CMS, or to elect to have prepaid shared payments withheld and later resumed.

Response: We agree with commenters that ACOs should have the flexibility to determine the amount of prepaid shared savings they receive below the maximum calculated quarterly payment, as well as the ability to elect to have these payments withheld and later resumed. Under § 425.640(f)(6), we proposed to offer ACOs flexibility to request a smaller quarterly payment amount from CMS. Under § 425.640(h)(1)(vii), CMS may withhold an ACO's prepaid shared savings during an agreement period upon request of the ACO. Under § 425.640(h)(3), if CMS withholds a quarterly payment, the ACO will not receive additional or catch-up payments if quarterly payments of prepaid shared savings are later resumed. The ACO may later request to resume quarterly payments if it meets all other requirements for receiving quarterly payments.

After consideration of public comments, we are finalizing the proposed prepaid shared savings payment and payment methodology provisions under § 425.640(f) with modifications to specify the application of the provisions to ACOs that renewed to enter an agreement period beginning on January 1, 2025, and applied and were approved to participate in prepaid shared savings starting with performance year 2026 without renewing again. Specifically, under § 425.640(f)(1)(i) we specify that an eligible ACO entering an agreement period beginning on January 1, 2026, or in subsequent years will receive quarterly prepaid shared savings payments for the entirety of the ACO's agreement period unless the payment is withheld or terminated pursuant to § 425.640(h). Under § 425.640(f)(1)(ii), we specify that an eligible ACO participating in an agreement period beginning on January 1, 2025, will receive quarterly prepaid shared savings payments starting with the performance year beginning on January 1, 2026, and for the remainder of its agreement period, unless the payment is withheld or terminated pursuant to § 425.640(h). The ACO will not receive additional or catch-up payments for performance year 2025. That is, these ACOs will only receive quarterly prepaid shared savings for the 4 years that would remain in their agreement period as of January 1, 2026. We specify in § 425.640(f)(1)(iii), in accordance with our proposal, that if an ACO's quarterly payment is withheld or terminated pursuant to paragraph § 425.640(h), the ACO will not receive additional or catch-up payments if quarterly prepaid shared savings payments are later resumed.

Regarding the steps involved in the calculation of prepaid shared savings payment amounts, ACOs that renewed to enter an agreement period beginning on January 1, 2025, and participate in prepaid shared savings starting with performance year 2026 without renewing again will be subject to the same methodology that applies to all other ACOs that participate in the payment option, consistent with proposed § 425.640(f)(2) through (f)(6). For example, for a given ACO that renewed in 2025 and participates in the payment option starting with performance year 2026 without renewing again, we will calculate both the prepaid shared savings multiplier and the proration factor by reference to the two performance years that constitute BY1 and BY2 of the agreement period during which the ACO receives prepaid shared savings: 2022 and 2023, respectively. Similarly, we will cap the pro-rated, adjusted prepaid shared savings multiplier for these ACOs at 5 percent of national per capita FFS expenditures for Parts A and B services for assignable beneficiaries identified for the 12-month calendar year corresponding to 2023, or BY2. We are finalizing without modification our proposed methodology described at new § 425.640(f)(2) through (f)(6).

f. Duration, Frequency and Withholding or Termination of Prepaid Shared Savings Payments

(1) Duration and Frequency

We anticipate that the vast majority of ACOs receiving prepaid shared savings will fully repay the amount they receive of prepaid shared savings from their earned shared savings on an annual basis. This will allow CMS to distribute prepaid shared savings to ACOs continually, throughout an agreement period in which the ACO is deemed eligible to participate, without withholding prepaid shared savings under § 425.640(h). We proposed at § 425.640(f)(1) that ACOs would receive quarterly prepaid shared savings payments for the entirety of the ACO's agreement period unless withheld or terminated under § 425.640(h). However, we also proposed at § 425.640(h)(3) that if CMS withholds or terminates a quarterly payment under paragraph (h), the ACO will not receive additional or catch-up payments if quarterly prepaid shared savings payments are later resumed. As discussed later in this section, prepaid shared savings payments will generally be withheld from ACOs when we have information that the ACO may not generate sufficient earned shared

savings to repay the prepaid shared savings in current or future performance years or has other Shared Savings Program compliance issues. Once prepaid shared savings payments are withheld, if an ACO earns shared savings in a future year, then prepaid shared savings can resume at the time of the next scheduled quarterly payment, but catch-up payments would not be provided. This protects CMS from distributing payments that the ACOs may not be able to repay and the ACOs from accumulating more debt than they can repay through earned shared savings. An ACO will be notified if CMS is willing to resume prepaid shared savings payments and will have the ability to elect to resume payments as well as select the payment amount they would like to receive under the maximum quarterly payment, if desired.

(2) Withholding and Termination

To ensure orderly administration of the Shared Savings Program, including protection of the Medicare Trust Funds, we intend to monitor the performance of ACOs receiving prepaid shared savings and proposed that we may withhold or terminate quarterly prepaid shared savings payments under a variety of specified circumstances. Many of the circumstances under which we proposed that CMS may withhold to terminate the payments directly relate to circumstances under which we will be concerned that the ACO has not or will not meet the standards for the use of prepaid shared savings, such as an ACO's failure to comply with the requirements of § 425.640. Other circumstances address situations where it becomes apparent that the ACO is likely to lack the ability to repay prepaid shared savings to CMS. For example, we proposed that CMS may withhold or terminate the payments if CMS predicts that the ACO will not generate sufficient earned shared savings to repay the prepaid shared savings in future performance years or has other Shared Savings Program compliance issues. These predictions will be based on a rolling 12-month window of beneficiary claims data or year-to-date beneficiary claims data, depending on whether an ACO selects prospective assignment or preliminary prospective assignment with retrospective reconciliation. We proposed that CMS may also withhold quarterly payments if an ACO fails to earn enough shared savings in a performance year to fully repay the prepaid shared savings the ACO received during that performance year, to avoid the ACO accruing debt they will be unable to repay. As noted earlier in this section, an ACO will be notified if CMS determines the ACO is sufficiently likely to earn additional shared savings such that CMS could resume prepaid shared savings payments, in which case the ACO will have the ability to elect to resume payments and select the payment amount it would like to receive. Additionally, while unspent funds received for a performance year must be reallocated in the spend plan for the ACO's next performance year as noted at § 425.640(e)(3), if an ACO fails to spend a majority of the prepaid shared savings received in a performance year, we may withhold future quarterly payments until the ACO spends the funding already received and reports this spending to CMS through an updated spend plan. An ACO may also request that CMS withhold future quarterly payments until the ACO is ready for payments to resume. ACOs that elect to have CMS withhold their prepaid shared savings payments will have the ability to later elect to resume payments as well as select the payment amount they would like to receive. If an ACO has unspent funding at the end of their agreement period, that funding must be repaid to CMS under § 425.640(e)(3).

Accordingly, we proposed at § 425.640(h)(1) that CMS may withhold or terminate prepaid shared savings during an agreement period if:

- The ACO fails to comply with any of the prepaid shared savings requirements of § 425.640;
- The ACO meets any of the grounds for ACO termination set forth at § 425.218(b); [559]
- The ACO fails to earn sufficient shared savings from a performance year to repay the prepaid shared savings they received during that performance year;
- CMS determines that the ACO is not expected to earn shared savings in a performance year during the agreement period in which the ACO received prepaid shared savings, based on a rolling 12-month window of beneficiary claims data or year-to-date beneficiary claims data;
- The ACO falls below 5,000 assigned beneficiaries;
- The ACO fails to spend the majority of prepaid shared savings they receive in a performance year; or
- The ACO requests that CMS withhold a future quarterly payment.

Additionally, we proposed at § 425.640(h)(2) that CMS must terminate an ACO's prepaid shared savings during an agreement period if:

- The ACO fails to maintain an adequate repayment mechanism in accordance with § 425.204(f); or
- The ACO fails to meet the quality performance standard as specified under § 425.512 or is subject to a pre-termination action after CMS determined the ACO avoided at-risk beneficiaries as specified under § 425.316(b)(2).

We further proposed under § 425.640(h)(4) that CMS may immediately terminate an ACO's prepaid shared savings under § 425.640(h)(1) and (2) without taking any of the pre-termination actions set forth in § 425.216.

In general, if an ACO is complying with the Shared Savings Program and prepaid shared savings requirements but is not achieving, or is not predicted to achieve, success in earning shared savings, CMS may withhold payments while the ACO works to improve its financial performance. For example, if an ACO is eligible to receive quarterly prepaid shared savings payments in an agreement period beginning in 2026 but does not earn shared savings during 2025 reconciliation that occurs in mid-2026, the ACO's quarterly payments will be withheld until the ACO earns shared savings in a future performance year reconciliation. Similar to our rationale for the eligibility requirement described at § 425.640(b)(2), we believe that recent past performance in earning shared savings provides information on the ACO's potential to earn future shared savings, and we will not distribute prepaid shared savings to ACOs that have not earned sufficient shared savings in their most recent reconciled performance year to repay the prepaid shared savings they received during that performance year.

Additionally, if CMS, through its financial monitoring of ACOs, predicts that an ACO would not earn shared savings in its current performance year, quarterly prepaid shared savings may be withheld until the ACO generates earned shared savings in the future. We expect that immediate termination of prepaid shared savings during an agreement period, without a possibility of resumption of payments during that agreement period, would be invoked only in cases of serious noncompliance with the requirements of § 425.640, including deliberately spending prepaid shared savings on a prohibited use, or when the ACO's actions or inaction poses a risk of harm to beneficiaries or negatively affects their access to care.

[559] Under §§ 425.216 and 425.218, CMS can terminate an ACO's participation agreement or take pre-termination actions (such as requesting a corrective action plan) if CMS determines that an ACO is not in compliance with the requirements of Part 425 of our regulations.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Two commenters appreciated that CMS would generally only immediately terminate prepaid shared savings in cases of serious noncompliance with the requirements of § 425.640 or when the ACO's actions or inaction poses a risk of harm to beneficiaries or negatively affects their access to care. Other commenters encouraged CMS to provide more clarity around what would trigger CMS's concern that an ACO may be unable to fully repay prepaid shared savings payments and offer more flexibility to work with ACOs before withholding or terminating prepaid shared payments.

Response: CMS will primarily review claims data based on a rolling 12-month window or year-to-date data, depending on whether an ACO selects prospective assignment or preliminary prospective assignment with retrospective reconciliation, to determine if an ACO is expected to earn adequate shared savings to repay CMS. For example, if CMS determines that it is likely that an ACO will not earn sufficient shared savings to repay CMS, CMS may withhold or terminate quarterly payments. CMS intends to release additional guidance on prepaid shared savings in advance of the PY 2026 annual application and change request cycle. ACOs will have access to the same financial indicators and quarterly reports reviewed by CMS in order to track their own financial performance. We refer commenters to additional discussion elsewhere in this section of this final rule explaining when CMS may withhold or terminate prepaid shared savings payments and the flexibilities that ACOs would have with respect to these issues.

Comment: One commenter requested additional clarity around situations where an ACO is not able to repay prepaid shared savings through earned shared savings, or if CMS determines that prepaid shared savings have been used inappropriately. They note that there is not a clear pathway to refute these determinations and warn against withholding or terminating quarterly prepaid shared savings payments too quickly. They requested a clearer pathway for an ACO to refute these determination and recoup payments which have been withheld or terminated.

Response: In response to the commenter who requested a pathway for ACOs to refute prepaid shared savings determinations and recoup payments which have been withheld or terminated, we note that Subpart I of 42 CFR part 425 details the reconsideration review process for the Shared Savings Program. For an ACO that is unable to repay prepaid shared savings through earned shared savings, the options for repayment would depend on where the ACO is in the agreement period. For ACOs not in the final performance year of their agreement period, they will be able to carry forward any unpaid balance of prepaid shared savings to a subsequent performance year and repay them through future earned shared savings during the agreement period, under § 425.640(g)(1). CMS will only immediately require an ACO to repay prepaid shared savings if the ACO is at the end of its agreement period, or if the ACO or CMS terminates its participation agreement mid-agreement period, under § 425.640(g)(3). Under § 425.640(g)(3), if an ACO has an outstanding balance of prepaid shared savings after the calculation of shared savings or losses for the final performance year of an agreement period in which an ACO receives prepaid shared savings, the ACO must repay any outstanding amount of prepaid shared savings it received in full upon request from CMS. CMS would provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of notification. If an ACO fails to repay any outstanding amount of prepaid shared savings within 90 days of the notification, CMS would recoup that amount from the ACO's repayment mechanism established under § 425.204(f).

Additionally, if an ACO fails to earn sufficient savings to repay prepaid shared savings in a performance year, CMS may withhold additional quarterly payments to an ACO during the agreement period until prepaid shared savings are repaid, under § 425.640(h)(1), in order to avoid burdening an ACO with more debt than it is able to repay. While the ACO would not receive quarterly payments until it earns sufficient shared savings to repay all prepaid shared savings it received, CMS would not recoup earned shared savings in excess of any outstanding prepaid shared savings. If prepaid shared savings are resumed during an agreement period, catch-up payments would not be provided.

In the event that CMS determines an ACO has used prepaid shared savings for a prohibited use under § 425.640(e)(2) or failed to spend the funding in accordance with § 425.640(e)(1)(i) and (ii), CMS may immediately terminate prepaid shared savings during an agreement period (§ 425.640(h)(4)).

After consideration of public comments, we are finalizing the proposed policies on the duration and frequency of prepaid shared savings under 425.640(f)(1) with modifications to specify that for ACOs that renewed to enter an agreement period beginning on January 1, 2025, and applied and were approved to participate in prepaid shared savings starting with performance year 2026 without renewing again, they will receive quarterly prepaid shared savings payments starting with the performance year beginning on January 1, 2026, and for the remainder of its agreement period, unless the payment is withheld or terminated pursuant to paragraph (h) of this section. The ACO will not receive additional or catch-up payments for performance year 2025. We are finalizing without modification our proposed policy on withholding or termination of prepaid shared savings payments at new § 425.640(h).

g. Monitoring ACO Eligibility for and use of Prepaid Shared Savings

To provide CMS with a clear indication of how ACOs intend to spend prepaid shared savings, help provide adequate protection to the Medicare Trust Funds, and prevent funds from being misdirected or appropriated for activities that do not fall within the parameters set forth within proposed § 425.640(e), we proposed at § 425.316(f)(1) to monitor ACOs receiving prepaid shared savings for compliance with § 425.640(e) and to determine whether it would be appropriate to withhold or terminate an ACO's prepaid shared savings under § 425.640(h)(1) and (h)(2). In the proposed rule, we explained that for the first performance year of the current agreement period, we would monitor the ACO's use of prepaid shared savings by comparing the anticipated spending as set forth in the spend plan submitted with an ACO's application against the actual spending as reported by the ACO, including any expenditures not identified in the spend plan. ACOs would be required to submit a revised spend plan with updated anticipated spending annually, as well as annually report their actual expenditures to CMS and on their public reporting web page as noted in §§ 425.308(b)(10) and 425.640(i), and we would similarly monitor the ACO's use of prepaid shared savings during the current agreement period using the updated spend plan and those reports. The reported annual spending must include any expenditures of prepaid shared

savings on items not identified in the spend plan. In the event that an ACO uses prepaid shared savings for uses not permitted by § 425.640(e), we would require them to reallocate the funding to a permitted use and may take compliance action as specified at §§ 425.216, 425.218 or withhold or terminate payments as specified at § 425.640(h)(1) and (2).

Similar to the policy for advance investment payments (§ 425.630), we additionally believe that transparency of information in the healthcare sector facilitates more informed patient choice and offers incentives and feedback that help improve the quality and lower the cost of care and improve oversight with respect to program integrity. As CMS has discussed in previous final rules, improved transparency supports a number of program requirements. In particular, increased transparency is consistent with and supports the requirement under section 1899(b)(2)(A) of the Act for an ACO to be willing to ''become accountable for the quality, cost, and overall care'' of the Medicare beneficiaries assigned to it. Therefore, we believe it is desirable and consistent with section 1899(b)(2)(A) of the Act for several aspects of an ACO's use of prepaid shared savings to be available to the public. Making this information available would provide both Medicare beneficiaries and the general public with insight into the use of prepaid shared savings by an ACO.

Accordingly, we proposed to modify § 425.308 to require that an ACO publicly report information annually regarding prepaid shared savings on its public reporting web page. Specifically, under new § 425.308(b)(10), we proposed that, for each performance year, an ACO would be required to report (in a standardized format specified by CMS) its spend plan, the total amount of prepaid shared savings received from CMS, and an itemization of how any prepaid shared savings were actually spent during each year, including expenditure categories, the dollar amounts spent on the various categories, information about which groups of beneficiaries received direct beneficiary services that were purchased with prepaid shared savings and investments that were made in the ACO with prepaid shared savings, how these direct beneficiary services were provided to beneficiaries and how the direct beneficiary services and investments supported the care of beneficiaries, any changes to the spend plan as submitted under § 425.640(d)(2), and such other information as may be specified by CMS.[560] We proposed that this itemization must include expenditures not identified or anticipated in the ACO's submitted spend plan, and any amounts remaining unspent. We also proposed at § 425.640(i) that ACOs also be required to report this information directly to CMS.

Under this proposal, if CMS determined that an ACO used prepaid shared savings for a prohibited use under § 425.640(e)(2), allocated over 50 percent of their annual maximum prepaid shared savings on staffing and healthcare infrastructure as at § 425.640(e)(1)(i), or failed to spend at least 50 percent of the annual maximum prepaid shared savings on direct beneficiary services, we would require the ACO to reallocate the funding in compliance with § 425.640(e) and submit an updated spend plan demonstrating the reallocation by a deadline specified by CMS and may withhold or terminate the ACO's receipt of prepaid shared savings at § 425.640(h)(1). CMS could also take compliance action as specified at §§ 425.216 and 425.218. If an ACO fails to reallocate prepaid shared savings it received by a deadline specified by CMS, the ACO must repay all prepaid shared savings it received and may be subject to compliance action as specified at §§ 425.216 and 425.218. CMS would provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

Additionally, we noted that under existing § 425.314, ACOs would be required to retain and provide CMS with access to adequate books, contracts, records, and other evidence to ensure that we have the information necessary to conduct appropriate monitoring and oversight of ACOs' use of prepaid shared savings (for example, invoices, receipts, and other supporting documentation of prepaid shared savings disbursements). To protect the Shared Savings Program and the Medicare Trust Funds, we explained that we would reserve the right under §§ 425.314 and 425.316(a) to audit and monitor ACO compliance with Shared Savings Program requirements, including with respect to prepaid shared savings. We explained that we would conduct audits as necessary to monitor and assess an ACO's use of prepaid shared savings and compliance with program requirements related to such payments.

We received public comments on these proposals. The following is a summary of the comments we received and our response.

Comment: We received a few general comments on the administrative burden associated with participating in the prepaid shared savings payment option including the reporting requirements. Commenters noted that these burdens might negatively impact participation in prepaid shared savings.

Response: We understand that the reporting requirements relating to the use of prepaid shared savings will produce some administrative burden for ACOs. However, these requirements are important for promoting transparency as to ACO's use of prepaid shared savings. These requirements are also important for allowing CMS to monitor that prepaid shared savings are spent consistent with program requirements and support the requirement under section 1899(b)(2)(A) of the Act for an ACO to be willing to ''become accountable for the quality, cost, and overall care'' of the Medicare beneficiaries assigned to it.

After consideration of public comments, we are finalizing without modification the proposed policies on monitoring ACO eligibility for and use of prepaid shared savings under new §§ 425.316(f)(1) and 425.308(b)(10).

h. Recoupment of Prepaid Shared Savings

We anticipate that the vast majority of ACOs receiving prepaid shared savings will fully repay the amount they receive prepaid shared savings from their earned shared savings on an annual basis. However, as prepaid shared savings are an advance of the shared savings payments an ACO is expected to earn, we proposed to recoup prepaid shared savings from ACOs that are unable to fully repay prepaid shared savings through their earned shared savings. This approach will also help ensure that prepaid shared savings will not result in additional expenditures for the Shared Savings Program, as required by section 1899(i)(3)(B) of the Act.

We proposed to add a new § 425.640(g)(1) to recoup prepaid shared savings from earned shared savings, as defined at § 425.20, in each performance year. If there are insufficient shared savings to recoup the prepaid shared savings made to an ACO for a performance year, we would hold paying future prepaid shared savings payments and carry forward the remaining balance owed to subsequent

[560] We note that in a corresponding description in the preamble of the CY 2025 PFS proposed rule (89 FR 61882) we inadvertently misstated some of the proposed regulations text under § 425.308(b)(10), which we have corrected within this description in this final rule.

performance year(s) in which the ACO achieves shared savings.

Under new § 425.640(g)(2), we proposed that in circumstances where the amount of shared savings earned by the ACO is revised upward by CMS for any reason, we would reduce the redetermined amount of shared savings by the amount of prepaid shared savings made to the ACO as of the date of the redetermination. If the amount of shared savings earned by the ACO is revised downward by CMS for any reason, we proposed that the ACO would not receive a refund of any portion of the prepaid shared savings previously recouped or otherwise repaid, and any prepaid shared savings that are now outstanding due to the revision in earned shared savings must be repaid to CMS upon request.

We proposed under § 425.640(g)(3) that if an ACO has an outstanding balance of prepaid shared savings after the calculation of shared savings or losses for the final performance year of an agreement period in which an ACO receives prepaid shared savings, the ACO must repay any outstanding amount of prepaid shared savings it received in full upon request from CMS. We will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of notification. If an ACO fails to repay any outstanding amount of prepaid shared savings within 90 days of the notification, we would recoup that amount from the ACO's repayment mechanism established at § 425.204(f).

For example, if an ACO received $300,000 in prepaid shared savings payments and earned shared savings of $500,000 for the first performance year, we would recoup $300,000 in prepaid shared savings payments and make $200,000 in reconciliation shared savings payments to the ACO. Alternatively, if an ACO received $300,000 in prepaid shared savings and earned shared savings of $200,000 for the first performance year, we would recoup only $200,000 in prepaid shared savings payment and not make a reconciliation shared savings payment to the ACO. The ACO would have future prepaid shared savings payments placed on hold, and the outstanding balance of $100,000 would be carried forward, to be recouped in a future performance year in which the ACO achieves shared savings. Under a third scenario, if the ACO does not earn sufficient shared savings in all 5 performance years of its agreement period, CMS would recoup the outstanding balance directly from the ACO under new § 425.640(g)(3). If the ACO fails to repay the funding to CMS, we would recoup the outstanding balance from the ACO's repayment mechanism.

Under the new § 425.640(g)(4), we proposed that if an ACO or CMS terminates its participation agreement during the agreement period in which it received prepaid shared savings, the ACO must repay all outstanding prepaid shared savings received in full. In such a case, we will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of notification. If an ACO fails to repay any outstanding amount of prepaid shared savings within 90 days of the notification, we would recoup that amount from the ACO's repayment mechanism established at § 425.204(f). We also proposed edits to § 425.204(f) to incorporate a reference to prepaid shared savings in existing provisions that reference only shared losses to clarify that we would be able to recoup outstanding prepaid shared savings from an ACO's repayment mechanism.[561] If the ACO terminates its participation agreement early in order to renew under a new participation agreement, CMS may also recover the amount owed by reducing the amount of any future shared savings the ACO may be eligible to receive.

In the event the ACO enters into proceedings relating to bankruptcy, whether voluntary or involuntary, we proposed at § 425.630(g)(5) that the ACO must provide written notice of the bankruptcy to CMS and to the U.S. Attorney's Office in the district where the bankruptcy was filed, unless final payment for the agreement period has been made by either CMS or the administrative or judicial review proceedings relating to any payments under the Shared Savings Program have been fully and finally resolved. The notice of bankruptcy must be sent by certified mail no later than 5 days after the petition has been filed and must contain a copy of the filed bankruptcy petition (including its docket number). The notice to CMS must be addressed to the CMS Office of Financial Management at 7500 Security Boulevard, Mailstop C3–01–24, Baltimore, MD 21244, or such other address as may be specified on the CMS website for purposes of receiving such notices.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters noted that to protect the fiscal sustainability of the Medicare program, it is imperative that CMS implement a robust recoupment process as planned to avoid unwarranted increases in program spending. Another commenter expressed concern for the financial risks tied to participation in prepaid shared savings option, as the requirement for ACOs to repay prepaid shared savings if they do not earn sufficient savings to repay all of the prepaid shared saving received by the ACO could pose significant challenges. This commenter is concerned that ACOs may be hesitant to elect to participate in the prepaid shared savings option if they are uncomfortable with the risk that they will be unable to repay CMS. This financial obligation could deter participation in the option or create financial instability, even among ACOs that are otherwise performing well. This commenter requested detailed guidelines from CMS on repayment terms, permissible investments of prepaid shared savings, and additional monitoring processes to ensure that the proposal is implemented effectively and transparently. A different commenter recommended that CMS work with ACOs to develop reasonable repayment parameters.

Response: We appreciate commenters' concerns about protecting the Medicare Trust Funds, and we have designed prepaid shared savings eligibility requirements to maximize the chance that participating ACOs should earn sufficient shared savings to repay all upfront funding they receive on an annual basis.

With respect to the other commenter's concern that requiring ACOs to repay prepaid shared savings may deter some ACOs from electing this option, we acknowledge that some ACOs that are eligible to receive prepaid shared savings may opt not to receive them. The policies we adopt to improve the quality and efficiency of care provided to beneficiaries must be consistent with our statutory obligation to not increase program expenditures, as discussed elsewhere in this rule. We have balanced these concerns by providing ACOs with numerous opportunities to repay prepaid shared savings through earned shared savings.

Under § 425.630(g)(1), if an ACO fails to earn sufficient prepaid shared savings, the balance will carry forward until all prepaid shared savings have been recouped by CMS. Under § 425.630(g)(3), if an ACO has an outstanding balance of prepaid shared

[561] In the CY 2025 PFS proposed rule, refer to the proposed amendments to the text of the regulations for § 425.204(f) at 89 FR 62220. We note that we inadvertently mischaracterized some of these proposed changes in the preamble description at 89 FR 61883.

savings after the calculation of shared savings or losses for the final performance year of an agreement period in which an ACO receives prepaid shared savings, then the ACO must repay any outstanding amount of prepaid shared savings it received in full upon request from CMS. CMS would provide written notification to the ACO of the amount due and the ACO would have 90 days after the receipt of notification to make repayment. Only if the ACO failed to repay any outstanding amount of prepaid shared savings within 90 days of that written notification, CMS would recoup against an ACO's repayment mechanism established under § 425.204(f). Also, under § 425.630(g)(3), CMS may recover any outstanding amount of prepaid shared savings owed by recouping from any future shared savings the ACO may be eligible to receive in a subsequent agreement period. If an ACO or CMS terminates the ACOs participation agreement during the agreement period in which it received prepaid shared savings, the ACO must repay all outstanding prepaid shared savings it received in full upon request from CMS (§ 425.640(g)(4)), unless the ACO terminates its current participation agreement under § 425.220 and immediately enters a new agreement period to continue its participation in the program, in which case CMS may recover the amount owed by recouping from any future shared savings the ACO may be eligible to receive in subsequent agreement periods (§ 425.640(g)(4)(ii)).

ACOs that do not earn sufficient shared savings during an agreement period where they are receiving prepaid shared savings may also have their quarterly prepaid shared savings withheld until they earn sufficient shared savings again, in order to avoid overburdening the ACO with repayment obligations. ACOs are also permitted to request lower quarterly payment amounts, in order to avoid incurring a debt they are uncomfortable repaying to CMS. Additionally, the eligibility requirement for an ACO to have established an adequate repayment mechanism helps protect ACOs from incurring a debt in prepaid shared savings that they may be unable to repay.

CMS intends to provide more detailed guidance for ACOs regarding participation in the prepaid shared savings option, including guidance on repayment processes and permissible uses of prepaid shared savings prior to the 2026 Medicare Shared Savings Program application cycle. However, we note that this is a voluntary payment option and no ACO must participate. CMS appreciates commenters' feedback on the prepaid shared savings recoupment processes and will consider this feedback in future rulemaking.

After consideration of public comments, we are finalizing as proposed our policies on recoupment of prepaid shared savings, as specified under new § 425.640(g). We are also finalizing without modification our proposed amendments to § 425.204(f) to support the requirement for ACOs to have in place an adequate repayment mechanism that CMS can use to recoup outstanding prepaid shared savings (as applicable).

i. OIG Safe Harbor Authority

In section II.G.5.i. of the CY 2025 PFS proposed rule (89 FR 61883 and 61884), we stated that should the proposed policies be finalized, CMS expects to make a determination, that the anti-kickback statute safe harbor for CMS-sponsored model patient incentives (§ 1001.952(ii)(2)) is available to protect patient incentives that may be permitted under the final rule, if issued. Specifically, we stated that we expect to determine that the CMS-sponsored models safe harbor would be available to protect direct beneficiary services provided to beneficiaries through the prepaid shared savings payment option.

We proposed to add a new paragraph (d) to § 425.304 that notes that we have determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model patient incentives (42 CFR 1001.952(ii)(2)) is available to protect remuneration furnished in the prepaid shared savings program option of the Shared Savings Program in the form of direct beneficiary services that meets all safe harbor requirements set forth at § 1001.952(ii)(2).

We received no comments on the OIG safe harbor authority in relation to prepaid shared savings and are therefore finalizing as proposed to specify in § 425.304(d) that CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model patient incentives (42 CFR 1001.952(ii)(2)) is available to protect remuneration furnished in the prepaid shared savings option of the Shared Savings Program in the form of direct beneficiary services that meets all safe harbor requirements set forth in § 1001.952(ii).

6. Advance Investment Payment Policies

a. Allow ACOs Receiving Advance Investment Payments to Voluntarily Terminate Payments While Continuing Participation in the Shared Savings Program

Beginning January 1, 2024, we implemented a new payment option in the Shared Savings Program, advance investment payments (AIP), and codified AIP requirements at § 425.630. In the CY 2023 PFS final rule (87 FR 69803 through 69805), we discussed policies for termination of advance investment payments from ACOs whose participation agreements are terminated for noncompliance with certain requirements and finalized a recoupment policy in which all advance investment payments must be repaid to CMS within 90 days from the date CMS provided the ACO whose participation agreement was terminated with written notice of the amount due. These regulations are codified at § 425.630(g) and (h).

Currently, there are no regulations that account for an ACO that seeks to voluntarily terminate receipt of advance investment payments from CMS, but that wishes to remain in the Shared Savings Program for the rest of their agreement period. While we expect advance investment payment terminations to be an uncommon occurrence, since advance investment payments are a voluntary payment option, ACOs should be able to decline further participation. To accommodate voluntary terminations of advance investment payments for ACOs that wish to continue participating in the Shared Savings Program, in the CY 2025 PFS proposed rule (89 FR 61884 through 61885), we proposed to modify program regulations at § 425.630(g) and (h). We proposed to allow ACOs who wish to voluntarily terminate receipt of advance investment payments to do so and remain in the Shared Savings Program.

We explained that an ACO may have justified business reasons for terminating receipt of advance investment payments (such as an ACO's desire to participate in a CMS Innovation Center model whose eligibility criteria exclude ACOs that receive AIP), and that CMS wishes to amend its termination policies to account for such a scenario. We also stated that it is the best interest of the Medicare Trust Funds and the Shared Savings Program to allow continued program participation by ACOs that terminate receipt of advance investment payments, especially among ACOs and

ACO participants in, or that serve, underserved communities. Therefore, we proposed new regulations effective January 1, 2025, to allow ACOs to voluntarily terminate receipt of advance investment payments while remaining in the Shared Savings Program. We explained that under this proposal, we would develop an advance investment payment voluntary termination notification process to allow ACOs to voluntarily terminate receipt of these payments, and we would issue guidance regarding this process to participating Shared Savings Program ACOs shortly after publication of the CY 2025 PFS final rule.

We proposed to update § 425.630(g) to state that if an ACO opts to voluntarily terminate from the advance investment payment option, they will be required to return any outstanding advance investment payments to CMS. Upon an ACO notifying CMS that it wants to terminate from the advance investment payment option, we would then provide a written notification to the ACO of the total amount of recoupment due. We would then require the ACO to repay the amount due no later than 90 days after the receipt of such notification. This aligns with how CMS recoups advance investment payments from ACOs whose advance investment payments are involuntarily terminated due to failure to comply with advance investment payment eligibility requirements at § 425.316(e)(3) and with the repayment requirements at § 425.630(g)(4), if an ACO chooses to terminate from the Shared Savings Program.

ACOs that terminate from the advance investment payment option would no longer be monitored for their appropriate use of advance investment payments once the payments are repaid to CMS. As such, ACOs that terminate would no longer be subject to annual reporting requirements for their spend plans once the payments are repaid to CMS. This proposal will allow an ACO additional flexibility to determine its best payment and participation options, making it easier for an ACO receiving advance investment payments to continue their participation in the Shared Savings Program long-term. As noted in the CY 2023 PFS final rule (87 FR 69784), advance investment payments were designed to assist ACOs that face difficulty funding the start-up costs for forming ACOs, caring for beneficiaries in underserved communities, and achieving long term success in the Shared Savings Program. Allowing these ACOs more flexibility would have the effect of supporting continued Shared Savings Program participation among these ACOs, including those serving rural and underserved populations.

We proposed to update § 425.630(g)(5) to state that if an ACO notifies CMS that it no longer wants to participate in the advance investment payment option but does want to continue its participation in the Shared Savings Program, the ACO must repay all outstanding advance investment payments it received. We would provide written notice to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

Additionally, we proposed conforming revisions to § 425.630(h) to clarify that ACOs can voluntarily terminate from the advance investment payment option. Specifically, we proposed to add a paragraph (h)(1)(iv) to read ''Voluntarily terminates payments of advance investment payments but continues its participation in the Shared Savings Program.'' CMS also proposed conforming revisions to § 425.630(h)(1)(ii) and (iii). The proposed changes would be effective beginning January 1, 2025.

b. Recoup Advance Investment Payments When CMS Terminates the Participation Agreement of an ACO

Under current advance investment payment recoupment regulations, there is no clear pathway for CMS to recoup outstanding advance investment payments if CMS terminates an ACO's participation agreement in accordance with § 425.218(b). To address this and reduce the risk to the Trust Funds, in the CY 2025 PFS proposed rule (89 FR 61884 through 61885), we proposed to add new § 425.630(g)(6) to require ACOs to repay any outstanding advance investment payments in the event that CMS terminates the ACO's Shared Savings Program participation agreement.

Upon the termination of their Shared Savings Program participation agreement, the ACO's advance investment payments will cease immediately under § 425.630(h)(1)(ii). We would provide the ACO with written notification of the total amount due for the full recoupment of advance investment payments, and the ACO must pay such amount within 90 days after the receipt of such notification. This approach aligns with how CMS recoups advance investment payments for ACOs under § 425.630(g)(4) if an ACO receiving advance investment payments chooses to voluntarily terminate from the Shared Savings Program. This proposal would protect CMS from not being able to recoup outstanding advance investment payments in the event CMS terminates an ACO's participation agreement in accordance with § 425.218(b).

Specifically, we proposed to add § 425.630(g)(6) to state that if CMS terminates the participation agreement of an ACO that has an outstanding balance of advance investment payments owed to CMS, the ACO must repay any outstanding advance investment payments it received. We would provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification. If an ACO fails to fully repay the advance investment payments they received, we would carry forward any remaining balance owed to subsequent performance year(s) in which the ACO achieves shared savings, including in any performance year(s) in a subsequent agreement period.

We also proposed conforming edits to § 425.630(g)(3) to remove the phrase ''paragraph (g)(4) of this section'' and add in its place the phrase ''paragraphs (g)(4) through (g)(6) of this section.'' If finalized, this proposal would allow CMS to recoup more than the amount of shared savings earned by an ACO in a particular performance year in the event that an ACO or CMS terminates an ACO from the advance investment payment option or the Shared Savings Program as a whole. This proposal would require CMS to renumber regulations at § 425.630(g). Therefore, we proposed a conforming change to redesignate § 425.630(g)(5) as § 425.630(g)(7). If finalized, these proposals would be effective beginning January 1, 2025.

We received public comments on both of these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters expressed support for the proposals and noted that they align with existing AIP and other Shared Savings Program policies. The commenters explained that the proposals would provide clarity for participating ACOs on AIP termination and recoupment policies. Commenters particularly supported the codification of regulations to allow ACOs to terminate their advance investment payments while continuing participation in the Shared Savings Program.

Response: We agree with commenters that these proposals should improve clarity for participating ACOs and align with current AIP and other Shared Savings Program policies.

After consideration of public comments, we are finalizing our proposal, without modification, to

amend § 425.630(g) to specify under § 425.630(g)(5) a policy to allow ACOs receiving advance investment payments to voluntarily terminate from the advance investment payment option while remaining in the Shared Savings Program. We are also finalizing related conforming changes to § 425.630(h) to clarify that ACOs can voluntarily terminate from the advance investment payment option, and that CMS may terminate an ACO's advance investment payments if the ACO does so. Further, we are finalizing our proposal, without modification, to add § 425.630(g)(6), to specify a policy for recouping advance investment payments from ACOs whose participation agreements are terminated by CMS. We are also finalizing as proposed conforming edits and changes to other provisions of § 425.630(g).

7. Financial Methodology

a. Overview

In section III.G.7 of the CY 2025 PFS proposed rule (89 FR 61885 through 61923), we proposed modifications to the financial methodologies used under the Shared Savings Program. We stated that the modifications we proposed would encourage participation in the program by removing barriers for ACOs serving underserved communities [562] as well as provide greater specificity and clarity on how CMS would perform certain financial calculations in the Shared Savings Program. Specifically, we proposed to create a health equity benchmark adjustment (section III.G.7.b of the proposed rule) to potentially provide an upward adjustment to an ACO's historical benchmark based on the proportion of beneficiaries they serve who are dually eligible or enrolled in the Medicare Part D low-income subsidy (LIS). We also proposed to establish a calculation methodology to account for the impact of improper payments in recalculating expenditures and payment amounts used in Shared Savings Program financial calculations, upon reopening a payment determination pursuant to § 425.315(a) (section III.G.7.c. of the proposed rule). We proposed to establish an approach to identify significant, anomalous, and highly suspect (''SAHS'') billing activity in CY 2024 or subsequent calendar years (section III.G.7.d of the proposed rule). We proposed to specify how we would exclude payment amounts from expenditure and revenue calculations for the relevant calendar year for which the SAHS billing activity is identified as well as from historical benchmarks used to reconcile the ACO for a performance year corresponding to the calendar year for which the SAHS billing activity was identified to mitigate the impact of SAHS billing activity. We sought comment on a financial model that would allow for higher risk and potential reward than currently available under the ENHANCED track while still meeting the requirements for use of our authority under section 1899(i)(3) of the Act, among other considerations for the financial model design (section III.G.7.e of the proposed rule). We also proposed certain modifications for clarity and consistency in provisions of the Shared Savings Program regulations on calculation of the ACO risk score growth cap in risk adjusting the benchmark each performance year and the regional risk score growth cap in calculating the regional component of the three-way blended benchmark update factor (section III.G.7.f of the proposed rule).

b. Health Equity Benchmark Adjustment

(1) Background

(a) Summary of Statutory and Regulatory Background on Adjusting the Historical Benchmark

Section 1899(d)(1)(B)(ii) of the Act addresses how ACO benchmarks are to be established, updated, and reset at the start of each agreement period under the Shared Savings Program. This provision specifies that the Secretary shall estimate a benchmark for each agreement period for each ACO using the most recent available 3 years of per beneficiary expenditures for Parts A and B services for Medicare FFS beneficiaries assigned to the ACO. The benchmark shall be reset at the start of each agreement period. Section 1899(d)(1)(B)(ii) of the Act also provides the Secretary with discretion to adjust the historical benchmark by ''such other factors as the Secretary determines appropriate.'' Pursuant to this authority, over time we have adopted a variety of methods to adjust the historical benchmark to meet certain policy goals.

Benchmarking policies applicable to all ACOs in agreement periods beginning on January 1, 2024, and in subsequent years, are specified at § 425.652. We refer readers to discussions of the benchmark calculations in earlier rulemaking for details on the development of the current policies (see November 2011 final rule, 76 FR 67909 through 67927; June 2015 final rule, 80 FR 32785 through 32796; June 2016 final rule, 81 FR 37953 through 37991; December 2018 final rule, 83 FR 68005 through 68030; CY 2023 PFS final rule, 87 FR 69875 through 69928; and CY 2024 PFS final rule, 88 FR 79174 through 79208).

In the CY 2023 PFS final rule, we adopted policies to modify the regional adjustment under § 425.656 (refer to 87 FR 69915 through 69923) and to reinstate a prior savings adjustment under § 425.658 (refer to 87 FR 69898 through 69915). The modifications to the regional adjustment are designed to limit the impact of negative regional adjustments on ACO historical benchmarks and further incentivize program participation among ACOs serving high-cost beneficiaries. In the CY 2024 PFS final rule (refer to 88 FR 79185 through 79196), we modified the regional adjustment policy further to prevent any ACO from receiving an adjustment that would cause its benchmark to be lower than it would have been in the absence of a regional adjustment. The prior savings adjustment policy was developed such that a renewing or re-entering ACO may be eligible to receive an adjustment to its benchmark to account for savings generated in performance years that correspond to the benchmark years of its new agreement period. In the CY 2024 PFS final rule (refer to 88 FR 79196 through 79200), we modified the prior savings adjustment policy further to account for the following: a change in savings earned by the ACO in a benchmark year due to compliance action taken to address avoidance of at-risk beneficiaries or a change in the amount of savings or losses for a benchmark year as a result of a reopening of a prior determination of ACO shared savings or shared losses and the issuance of a revised initial determination under § 425.315.

(b) Methodology for Determining the Applicability of a Regional Adjustment or Prior Savings Adjustment to the ACO's Historical Benchmark, for Agreement Periods Beginning on or After January 1, 2024

Under the benchmarking methodology for agreement periods beginning on January 1, 2024, and in subsequent years, CMS calculates two adjustments to the historical benchmark, a regional adjustment (refer to § 425.656) and a prior savings adjustment (refer to § 425.658). We determine which adjustment is applied

[562] As described in the *CMS Framework for Health Equity* and consistent with Executive Order 13985 on Advancing Racial Equity and Support for Underserved Communities Through the Federal Government (86 FR 7009), the term ''underserved communities'' refers to populations sharing a particular characteristic, including geographic communities that have been systematically denied a full opportunity to participate in aspects of economic, social, and civic life, as exemplified in the definition of ''equity.'' See for example CMS Framework for Health Equity 2022–2032, available at *https://www.cms.gov/files/document/cms-framework-health-equity-2022.pdf*.

to the benchmark, either the regional adjustment, prior savings adjustment, or no adjustment (refer to § 425.652(a)(8) and (c)).

Under the current methodology, the adjustment that will apply in the establishment of benchmarks for ACOs entering an agreement period beginning on January 1, 2024, and in subsequent years, is calculated as follows:

- *Step 1:* Calculate the capped regional adjustment expressed as a single dollar value as specified in § 425.656. CMS calculates the regional adjustment to the historical benchmark based on the ACO's regional service area expenditures, making separate calculations for the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

++ Under § 425.656(c)(3), CMS caps the per capita dollar amount for each Medicare enrollment type at a dollar amount equal to a percentage of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service (FFS) program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary.

—Under § 425.656(c)(3)(i), for positive adjustments, the per capita dollar amount for a Medicare enrollment type is capped at 5 percent of the national per capita expenditure amount for the enrollment type for BY3.

—Under § 425.656(c)(3)(ii), for negative adjustments, the per capita dollar amount for a Medicare enrollment type is capped at negative 1.5 percent of the national per capita expenditure amount for the enrollment type for BY3.

++ Under § 425.656(d)(1), CMS expresses the regional adjustment as a single value by taking a person year [563] weighted average of the Medicare enrollment type-specific regional adjustment values.

- *Step 2:* For eligible ACOs, calculate the capped prior savings adjustment as specified in § 425.658. Under § 425.658(c)(1), CMS calculates an adjustment to the historical benchmark to account for savings generated in the 3 years prior to the start of the ACO's current agreement period for renewing or re-entering ACOs that were reconciled for one or more performance years in the Shared Savings Program during this period.
- *Step 3:* Determine the final adjustment to the benchmark, as specified in § 425.652(a)(8). Compare the regional adjustment in accordance with § 425.656 and the prior savings adjustment in accordance with § 425.658.

++ Under § 425.652(a)(8)(ii), if an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i), and the regional adjustment, expressed as a single value as described in § 425.656(d), is positive, the ACO will receive an adjustment to its benchmark equal to the positive regional adjustment amount. The adjustment will be calculated as described in § 425.656(c) and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries. Under § 425.652(a)(8)(iii), if an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i), and the regional adjustment, expressed as a single value as described in § 425.656(d), is negative or zero, the ACO will not receive an adjustment to its benchmark.

++ Under § 425.652(a)(8)(iv), if an ACO is eligible to receive a prior savings adjustment and the regional adjustment, expressed as a single value as described in § 425.656(d), is positive, the ACO will receive an adjustment to its benchmark equal to the higher of the following:

—Under § 425.652(a)(8)(iv)(A), the positive regional adjustment amount. The adjustment will be calculated as described in § 425.656(c) and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

—Under § 425.652(a)(8)(iv)(B), the prior savings adjustment. The adjustment will be calculated as described in § 425.658(c) and applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

++ Under § 425.652(a)(8)(v), if an ACO is eligible to receive a prior savings adjustment and the regional adjustment, expressed as a single value as described in § 425.656(d), is negative or zero, the ACO will receive an adjustment to its benchmark equal to the prior savings adjustment. The adjustment will be calculated as described in § 425.658(c) and applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(c) Background on Incorporating Health Equity Data Within the Shared Savings Program

Development of a health equity benchmark adjustment builds upon Shared Savings Program policies finalized in the CY 2023 and CY 2024 PFS final rules to advance health equity, including the establishment of the health equity adjustment to an ACO's MIPS quality performance category score (applicable to all ACOs beginning with performance year 2023) (87 FR 69838 through 69857 and 88 FR 79114 through 79117); the availability of advance investment payments to eligible new, low revenue ACOs entering a new agreement period beginning on January 1, 2024, and in subsequent years (87 FR 69782 through 69805 and 88 FR 79208 through 79216); as well as changes to the benchmarking methodology aimed to facilitate participation by ACOs serving medically complex or underserved beneficiaries (87 FR 69915 through 69924 and 88 FR 79185 through 79195).

Further, in a Request for Information in the CY 2023 PFS final rule (87 FR 69977 through 69979), we discussed addressing health equity through benchmarking and summarized related comments. In the CY 2023 PFS final rule (87 FR 69978), we explained our interest in considering how direct modification of benchmarks to account for existing inequities in care can be used to advance health equity. The vast majority of commenters expressed support for exploring methodologies to address health equity via benchmarking changes. Specifically, many of these commenters noted that benchmark adjustments could be an effective tool to redirect resources to ACOs serving underserved communities. Multiple

[563] To calculate person years: We sum the number of Shared Savings Program-eligible months (beneficiaries are only assigned a monthly enrollment status for months in which they are alive on 1st of the month, enrolled in both Parts A and B, and not enrolled in a Medicare Group Health Plan for the month) for each assigned beneficiary for each Medicare enrollment type; we then divide this number by 12 (the number of months in a calendar year). Refer to the Medicare Shared Savings Program, Shared Savings and Losses and Assignment Methodology Specifications (version #11, January 2023), available at *https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2* (Section 3.1 Calculating ACO-Assigned Beneficiary Expenditures).

commenters commented specifically on the health equity benchmark adjustment approach utilized by the ACO Realizing Equity, Access, and Community Health (REACH) Model. Several of these commenters expressed support for using a similar methodology in implementing a health equity benchmark adjustment in the Shared Savings Program. In response, we stated that we will consider these comments in the development of policies for future rulemaking. Based on our experience with adjustments under the current benchmarking methodology, our experience establishing policies to advance health equity in the Shared Savings Program, and the support received for addressing health equity through benchmarking in response to the Request for Information, we explained in the CY 2025 PFS proposed rule that it would be timely to implement a health equity benchmark adjustment (HEBA) into the Shared Savings Program's benchmarking methodology. Implementing a HEBA would ensure benchmarks continue to serve as a reasonable baseline when ACOs serve high proportions of beneficiaries who are members of underserved communities and incentivize ACOs to provide coordinated care to beneficiaries who are members of underserved communities.

In the CY 2025 PFS proposed rule (89 FR 61887), we explained that a health equity benchmark adjustment is likely to encourage more participation in the Shared Savings Program by ACOs that serve beneficiaries who are members of rural and underserved communities by allowing them to participate with potentially higher benchmarks. That, in turn, would increase the likelihood that they could earn shared savings and increase the amount of those shared savings payments and reduce the financial barriers to forming ACOs that providers who serve underserved communities face. We explained that benchmarks based on historically observed spending could be set too low if they are based on the spending of a population of underserved communities. An ACO serving such communities could be harmed financially if they are successful at improving access to high-value care during the performance period. Additionally, the Congressional Budget Office (CBO) recently reported high start-up costs for providers in rural and underserved communities as a barrier to forming ACOs.[564] We stated in the CY 2025 PFS proposed rule that these providers may want to participate in ACOs but are disincentivized due to steep start-up costs.

We also explained in the CY 2025 PFS proposed rule that a health equity benchmark adjustment would encourage currently participating ACOs to attract more beneficiaries who are members of underserved communities and remain in the Shared Savings Program. Direct increases to benchmarks for ACOs serving higher proportions of beneficiaries who are members of underserved communities would grant additional financial resources to healthcare providers accountable for the care of these populations and may work to offset historical patterns of underspending that influence benchmark calculations.

The ACO REACH Model incorporates a HEBA to test a way to address historical health inequities within CMS ACO initiatives, with the intent of incentivizing ACOs to seek out and form relationships with beneficiaries who are members of underserved communities. The adjustment is intended to mitigate the disincentive for ACOs to serve underserved communities by accounting for historically suppressed spending levels for these populations. It is a critical step towards enabling ACOs to serve underserved communities in a manner that reflects their health needs.[565] Likewise, the Shared Savings Program aims to design a health equity benchmark adjustment that achieves those same goals while aligning the program's benchmarking policies and health equity initiatives. We explained in the CY 2025 PFS proposed rule (89 FR 61887) that the HEBA proposal was informed by CMS' initial experience with the ACO REACH Model, which includes a HEBA, that has been associated with increased participation in ACOs by safety net providers.[566] Increasing access to providers participating in ACOs in rural and other underserved areas remains a priority for CMS to help address inequities in ACO participation and grow accountable care.

(2) Revisions

As described in the CY 2025 PFS proposed rule (89 FR 61887 through 61892), relying on our authority under section 1899(d)(1)(B)(ii) of the Act, we proposed a HEBA applicable to ACOs in agreement periods beginning on January 1, 2025, and in subsequent years. The proposed HEBA would offer a third method of upwardly adjusting an ACO's historical benchmark, in addition to the existing regional adjustment and prior savings adjustment. This upward adjustment to the historical benchmark is designed to benefit ACOs serving larger proportions of beneficiaries from underserved communities and receiving lower regional adjustments (§ 425.656) or lower prior savings adjustments (§ 425.658), or receiving neither adjustment. Under proposed § 425.652(a)(8)(ii), an ACO would receive the highest of the positive adjustments for which it is eligible, either the regional adjustment, prior savings adjustment, or health equity benchmark adjustment. If an ACO is not eligible to receive a prior savings adjustment or a HEBA, and the regional adjustment, expressed as a single value, is negative or zero, then the ACO would not receive an adjustment to its benchmark.

By increasing the likelihood that an ACO would earn shared savings and by potentially increasing the amount of shared savings earned, the HEBA is meant to provide a greater financial incentive for ACOs to serve more beneficiaries from underserved communities and to encourage ACOs already serving higher proportions of beneficiaries from underserved communities to enter and remain in the Shared Savings Program. Practices that serve large proportions of beneficiaries who are members of underserved communities that may otherwise see financial risk in joining the program may be incentivized to form an ACO and join the program with a health equity benchmark adjustment policy in place. In addition, currently participating ACOs that may otherwise see risk in attracting additional beneficiaries from underserved communities to their ACOs may be incentivized to do so with a health equity benchmark adjustment policy in place. In the CY 2025 PFS proposed rule, we noted that, if finalized, the proposed prepaid shared savings option (described in section III.G.5 of the CY 2025 PFS proposed rule) would operate synergistically with the proposed HEBA, in that ACOs that have been

DOI: 10.1377/forefront.20240603.385559. Available at *https://www.healthaffairs.org/content/forefront/advancing-health-equity-through-value-based-care-cms-innovation-center-update.*

successful in earning shared savings while serving larger proportions of beneficiaries from underserved communities would in subsequent years have additional capabilities through prepaid shared savings to address the unmet health-related social needs of the beneficiaries they serve and may have higher benchmarks due to the HEBA.

We proposed to calculate the HEBA as the multiplicative product of the HEBA scaler and the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid. We proposed to calculate the HEBA scaler as a measure of the difference between the following two per-capita dollar values:

- 5 percent of national per capita expenditures for Parts A and B services under the original Medicare FFS program in BY3 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary, expressed as a single value by taking a person year weighted average of the Medicare enrollment type-specific values: ESRD, disabled, aged/dually eligible for Medicare and Medicaid, and aged/non-dually eligible for Medicare and Medicaid, and
- the higher of the regional adjustment expressed as a single value, the prior savings adjustment, or no adjustment, in the case where the regional adjustment is negative and the ACO is not eligible for the prior savings adjustment.

We explained that this approach would ensure that the value of the HEBA itself cannot exceed 5 percent of national assignable per capita expenditures expressed as a single value using the ACO's BY3 enrollment proportions, similar to the cap applied to the regional adjustment under § 425.656(c)(3) and the cap applied to the prior savings adjustment under § 425.658(c)(1)(ii).

For this proposed health equity benchmark adjustment, we proposed to identify beneficiaries from underserved communities as those who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid. Furthermore, we proposed to determine the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid using the ACO's performance year assigned population. We stated that because a higher proportion of assigned beneficiaries who are enrolled in Medicare Part D LIS or dually eligible would result in a higher HEBA, using the performance year assigned population is expected to incentivize ACOs to provide coordinated care to beneficiaries who are members of underserved communities while accounting for changes in the ACO's population over the agreement period.

We proposed to provide ACOs with a preliminary calculation of the HEBA near the start of their agreement period when final historical benchmarks are determined, using the ACO's BY3 assigned population in this preliminary calculation of the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid. Under the proposed approach, we would then update the calculation when the ACO's historical benchmark is updated at the time of financial reconciliation for the performance year to reflect the ACO's performance year-assigned population in the calculation of the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid.

In the CY 2025 PFS proposed rule, we proposed (89 FR 61888) that ACOs with a proportion of assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid of less than 20 percent would be ineligible for a HEBA.[567] We explained our belief that imposing this threshold of 20 percent would reinforce that the HEBA is intended for ACOs serving higher proportions of beneficiaries who are members of underserved communities. Based on data from PY 2023, the average proportion of ACO-assigned beneficiaries enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid was roughly 15 percent. Thus, ACOs meeting the threshold of 20 percent are serving a larger-than-average proportion of beneficiaries from underserved communities. We explained that absent such a threshold, an ACO with a lower-than-average regional adjustment or prior savings adjustment (and therefore a larger HEBA scaler) that is providing care for relatively few beneficiaries from underserved communities may receive a sizable HEBA, which would reward the ACO despite it not serving a significant proportion of beneficiaries from underserved communities. This would not support the purpose of the HEBA, which is to provide a greater financial incentive for ACOs to serve more beneficiaries from communities and encourage practices already serving higher proportions of beneficiaries from underserved communities to enter and/or remain in the Shared Savings Program.

We explained in the CY 2025 PFS proposed rule (89 FR 61889) that under this proposed approach, simulation analysis based on 456 ACOs using historical benchmark data from 2023 indicated that 20 ACOs would receive a HEBA greater than either the prior savings adjustment or regional adjustment. With the HEBA applied, the average increase to historical benchmarks among these 20 ACOs would be $230 per capita, which corresponds to an increase of 1.57 percent to their historical benchmarks on average.

Tables 44 through 46 present hypothetical examples to demonstrate how the HEBA would work in practice.

BILLING CODE 4120–01–P

[567] The health equity adjustment to an ACO's MIPS quality performance category score (87 FR 69838 through 69857 and 88 FR 79114 through 79117) has established a similar 20 percent threshold. ACOs with an underserved multiplier of less than 20 percent are not eligible to receive a health equity adjustment (§ 425.512(b)).

TABLE 44: ACO with a HEBA Greater Than the Regional Adjustment and Prior Savings Adjustment

Calculation Step	Description of Calculation and Example
Step 1: Calculate Proportion of Assigned Beneficiaries Who Are Enrolled in Medicare Part D LIS or Dually Eligible for Medicare and Medicaid	Proportion of PY-assigned beneficiaries enrolled in Medicare Part D LIS or dually eligible for Medicare and Medicaid: 0.60
Step 2: Calculate HEBA Scaler	5 percent of the national per capita expenditures for assignable beneficiaries in BY3 expressed as a single value: $600 Prior savings adjustment: $200 Regional adjustment expressed as single value: $100 Difference between 5 percent of the national per capita expenditures for assignable beneficiaries in BY3 expressed as a single value and the higher of prior savings adjustment and regional adjustment expressed as a single value: $600 – higher of $200 or $100 = $400
Step 3: Calculate HEBA	Product of the proportion of assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid and the HEBA Scaler: 0.60 x $400 = $240
Step 4: Determine Final Adjustment to Benchmark	Highest of regional adjustment expressed as a single value, prior savings adjustment, or HEBA: Highest of $200, $100, or $240 = $240 Per capita historical benchmark expenditures by enrollment type after adjustment: ESRD: $92,000 + $240 = $92,240 Disabled: $13,000 + $240 = $13,240 Aged/dual: $19,000 + $240 = $19,240 Aged/non-dual: $10,000 + $240 = $10,240

TABLE 45: ACO with a HEBA Less Than the Regional Adjustment and Prior Savings Adjustment

Calculation Step	Description of Calculation and Example
Step 1: Calculate Proportion of Assigned Beneficiaries Who Are Enrolled in Medicare Part D LIS or Dually Eligible for Medicare and Medicaid	Proportion of PY-assigned beneficiaries enrolled in Medicare Part D LIS or dually eligible for Medicare and Medicaid: 0.25
Step 2: Calculate HEBA Scaler	5 percent of the national per capita expenditures for assignable beneficiaries in BY3 expressed as a single value: $600 Prior savings adjustment: $200 Regional adjustment expressed as single value: $300 Difference between 5 percent of the national per capita expenditures for assignable beneficiaries in BY3 expressed as a single value and the higher of prior savings adjustment and regional adjustment expressed as a single value: $600 – higher of $200 or $300 = $300
Step 3: Calculate HEBA	Product of the proportion of assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid and the HEBA Scaler: 0.25 x $300 = $75
Step 4: Determine Final Adjustment to Benchmark	Highest of regional adjustment expressed as a single value, prior savings adjustment, or HEBA: Highest of $200, $300, or $75 = $300 Per capita historical benchmark expenditures by enrollment type after adjustment: ESRD: $92,000 + $300 = $92,300 Disabled: $13,000 + $300 = $13,300 Aged/dual: $19,000 + $300 = $19,300 Aged/non-dual: $10,000 + $300 = $10,300

TABLE 46: ACO Ineligible for the HEBA

Calculation Step	Description of Calculation and Example
Step 1: Calculate Proportion of Assigned Beneficiaries Who Are Enrolled in the Medicare Part D LIS or Dually Eligible for Medicare and Medicaid	Proportion of PY-assigned beneficiaries enrolled in Medicare Part D LIS or dually eligible for Medicare and Medicaid: 0.10
Step 2: Calculate HEBA Scaler	5 percent of the national per capita expenditures for assignable beneficiaries in BY3 expressed as a single value: $600 Prior savings adjustment: $200 Regional adjustment expressed as single value: $300 Difference between 5 percent of the national per capita expenditures for assignable beneficiaries in BY3 expressed as a single value and the higher of prior savings adjustment and regional adjustment expressed as a single value: $600 – higher of $200 or $300 = $300
Step 3: Calculate HEBA	Step not applicable as ACO has a proportion of assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid less than 0.20 and is ineligible for a HEBA as a result.
Step 4: Determine Final Adjustment to Benchmark	Higher of regional adjustment expressed as a single value or prior savings adjustment: Higher of $200 or $300 = $300 Per capita historical benchmark expenditures by enrollment type after adjustment: ESRD: $92,000 + $300 = $92,300 Disabled: $13,000 + $300 = $13,300 Aged/dual: $19,000 + $300 = $19,300 Aged/non-dual: $10,000 + $300 = $10,300

BILLING CODE 4120–01–C

We proposed to implement the changes described in this section through revisions to § 425.652 and the addition of § 425.662. Specifically, within § 425.652, which sets forth the methodology for establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years, we proposed revisions to § 425.652(a)(8). As proposed, this revised provision would describe how we would determine and apply the adjustment to an ACO's benchmark, if any, based on a comparison of the ACO's regional adjustment expressed as a single value, prior savings adjustment, and the proposed health equity benchmark adjustment. Furthermore, we proposed to amend § 425.652 by redesignating paragraphs (a)(9)(v) and (vi) as paragraphs (a)(9)(vi) and (vii), respectively, and to specify in a new paragraph (a)(9)(v) the adjustments made to the health equity benchmark adjustment for the first performance year during the term of the agreement period and in the second and each subsequent performance year during the term of the ACO's agreement period, if applicable. We also proposed conforming changes in newly redesignated § 425.652(a)(9)(vi), specifying that CMS redetermines the adjustment to benchmark in accordance with § 425.652(a)(8), to list the HEBA along with the regional adjustment and prior savings adjustment. In the proposed new section of the regulation at § 425.662, we describe the calculation of the HEBA. We also proposed to make conforming changes to § 425.658(d), which describes the applicability of the prior savings adjustment, to include consideration of the HEBA in addition to the regional adjustment, in determining the adjustment (if any) that would be applied to the ACO's benchmark. We sought comment on these proposals.

In combination with the proportion of ACO-assigned beneficiaries who are enrolled in the Medicare Part D LIS or are dually eligible for Medicare and Medicaid, we also solicited comment on the use of the Area Deprivation Index (ADI) to identify beneficiaries from underserved communities for purposes of determining eligibility for and the amount of any health equity benchmark adjustment. For example, similar to how the ADI is used in the underserved multiplier as part of the calculation of the health equity adjustment to an ACO's MIPS Quality performance category score (87 FR 69838 through 69857 and 88 FR 79114 through 79117), we stated that we were considering taking the higher of either the proportion of the ACO's assigned beneficiaries residing in a census block group with an ADI national percentile rank of at least 85 or the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS

or dually eligible for Medicare and Medicaid to determine eligibility for and the amount of any health equity benchmark adjustment. We stated that CMS would explore how best to incorporate geographic parameters into Shared Savings Program benchmark adjustments, informed by the current use of the ADI in other health equity provisions of the Shared Savings Program. We explained that CMS would also consider learnings from the Innovation Center's ACO REACH Model, which is testing the use of the ADI as a component of the model's HEBA. We stated that by considering the ADI in addition to the proportion of ACO-assigned beneficiaries who are enrolled in the Medicare Part D LIS or are dually eligible for Medicare and Medicaid, the HEBA would more closely align with existing Shared Savings Program policies to advance health equity, such as the health equity adjustment to an ACO's MIPS Quality performance category score (87 FR 69838 through 69857 and 88 FR 79114 through 79117) and the calculation of the amount of quarterly advance investment payments made available to eligible new, low revenue ACOs (87 FR 69782 through 69805 and 88 FR 79208 through 79216).

In the CY 2025 PFS proposed rule (89 FR 61892), we also explained that recent analyses have found that the ADI weights 2 variables (median home value and median income) higher relative to the weights associated with the other 15 variables in the index, which may have limited contributions in determining the ADI. In many indexes, variables are standardized to the same range for ease of comparison, prior to incorporation into the index. The ADI does not standardize its variables; median home value and median income are measured on their local area dollar-value scales, which are larger than the scales on which the other variables are measured. Some researchers have reported that, without standardization, the ADI overemphasizes the 2 variables (median home value and median income), a finding that may underscore the importance of using standardized values.[568] [569] [570] We solicited comment on considering the ADI for purposes of determining eligibility for and the amount of any health equity benchmark adjustment, and related factors including the calculation of the ADI.

The following is a summary of the public comments we received on the proposal to create a health equity benchmark adjustment, the comment solicitation on the use of ADI for purposes of determining eligibility for and the amount of any health equity benchmark adjustment, and conforming changes to the Shared Savings Program regulations, and our responses.

Comment: The proposed HEBA was generally supported by many commenters. One commenter stated they supported CMS's efforts to address the higher cost and resource utilization associated with dually eligible beneficiaries and those enrolled in Medicare Part D LIS. A few commenters acknowledged the proposed upward adjustment of the HEBA as a positive step towards enhancing health equity in the Shared Savings Program. One commenter appreciated CMS's efforts to implement a HEBA and acknowledged the challenge of developing a methodology to identify underserved beneficiaries for purposes of an ACO benchmark adjustment, noting that the proposed HEBA is a ''starting point'' and ''not necessarily the optimal approach.'' Another commenter supported the proposal to ''incentivize ACOs to treat rural and underserved beneficiaries through the establishment of the HEBA.'' Some of the supportive commenters encouraged CMS to find additional ways to ''support providers caring for underserved beneficiaries.''

The majority of supportive commenters believed that this adjustment will also improve beneficiary access to ACO providers in underserved areas, ''encourage equitable care for all beneficiaries,'' especially for ''dual-eligible beneficiaries who often face compounded health disparities,'' and improve participation in the Shared Savings Program by ACOs serving higher-risk beneficiaries. Commenters characterized the HEBA as a significant step forward in promoting health equity and addressing health disparities faced by dually eligible beneficiaries and those enrolled in Medicare Part D LIS.

Many commenters also supported the HEBA because it would modify current Shared Savings Program financial methodologies to better account for the needs of underserved beneficiaries. One commenter supported the HEBA, noting that ''remedying historical barriers to care among some populations might initially increase costs as these inequities are corrected.'' Other commenters stated that the HEBA would increase resources for ACOs serving underserved beneficiaries without penalizing other ACOs by reducing their benchmarks. Commenters generally characterized the HEBA as a positive step toward ensuring that all ACOs, regardless of size or location, have a fair opportunity to succeed in the Shared Savings Program while advancing equitable healthcare for all beneficiaries.

Response: We thank commenters for their support and agree that the HEBA will address the higher cost and resource utilization associated with dually eligible and LIS beneficiaries, increase beneficiary access to ACO providers in underserved areas, encourage equitable care (including by incentivizing ACOs to treat rural and underserved beneficiaries and better accounting for the needs of those beneficiaries), and improve participation in the Shared Savings Program by ACOs serving higher-risk beneficiaries. We appreciate commenters' support and acknowledge the challenge of developing a methodology to identify underserved beneficiaries for purposes of adjusting ACO benchmarks. We note that the HEBA is a starting point in this regard, and we will continue to refine the HEBA in accordance with learnings from ACO REACH and other CMMI models. We will also continue to evaluate additional ways to support Shared Savings Program ACOs and providers caring for underserved beneficiaries.

Comment: Several commenters, while supportive of CMS's goals to advance health equity, nonetheless expressed opposition to the proposal.

A few commenters expressed concerns that the proposed HEBA ''conflates risk adjustment with the goals of Shared Savings Program benchmarking policy'' and is thus ''unlikely to achieve its stated goals.'' These commenters encouraged CMS to develop policies that advance health equity without impacting benchmark adjustments. As an example, one commenter proposed that CMS implement a HEBA that more closely resembles the HEBA in ACO REACH, which uses a relatively small downward adjustment across many ACOs without a need for a health equity adjustment to

''subsidize'' upward adjustments for a smaller set of ACOs serving higher proportions of underserved beneficiaries. One commenter argued that because there is already a high rate of dually eligible beneficiaries in rural counties, the HEBA does not seem necessary to incentivize ACOs to serve dually eligible beneficiaries in all rural counties. Further, this same commenter suggested the HEBA would provide additional financial support to ACOs without commensurate support to dual eligible special needs plans (D–SNPs) and may make it more difficult for D–SNPs to compete with ACOs for providers in certain counties.

Response: We appreciate the commenters' concerns and recommendations. The Shared Savings Program has implemented policies that advance health equity without impacting benchmarking adjustments through advance investment payments and prepaid shared savings. We refer readers to our discussion of advance investment payments in the CY 2023 final rule at 87 FR 69782 through 69805, and in the CY 2024 final rule at 88 FR 79208 through 79216, as well as our discussion of prepaid shared savings in section III.G.5 of this final rule. Additionally, we explained in the CY 2025 PFS proposed rule (89 FR 61887) that the HEBA proposal was informed by CMS' initial experience with the ACO REACH Model, which includes a HEBA, that has been associated with increased participation in ACOs by safety net providers.[571] In contrast with the ACO REACH Model's HEBA, the Shared Savings Program's HEBA was proposed as an upward adjustment to the historical benchmark; and would not adjust historical benchmarks downward as a result of the proposed HEBA. The Shared Savings Program aims to design a health equity benchmark adjustment that incentivizes ACOs to form relationships with beneficiaries who are members of underserved communities while aligning the program's benchmarking policies and health equity initiatives. In this way, the HEBA would ensure that benchmarks continue to serve as a reasonable baseline when ACOs serve high proportions of beneficiaries who are members of underserved communities. Furthermore, the proposed HEBA is designed to benefit ACOs serving larger proportions of beneficiaries from underserved communities—including those residing in rural areas and in other underserved communities—and receiving lower regional adjustments (§ 425.656), lower prior savings adjustments (§ 425.658), or receiving neither adjustment. Increasing beneficiary access to providers participating in ACOs in both rural and other underserved areas remains a priority for CMS to help address inequities in ACO participation in the Shared Savings Program and grow accountable care.

We thank the commenter for their feedback on D–SNPs. We note that providers associated with Shared Savings Program ACOs are not prohibited from providing care in Medicare Advantage networks, and therefore we do not believe that the HEBA will necessarily make it more difficult for D–SNPs to compete with ACOs for providers in certain counties.

Comment: Several commenters suggested that CMS modify the policy to reduce or remove the requirement that at least 20 percent of ACOs' assigned beneficiaries must be enrolled in LIS or dually eligible in order for the ACO to be eligible for the HEBA. These commenters assert that the HEBA, as proposed, is expected to impact relatively few ACOs, and that removing or reducing the 20 percent threshold would significantly increase the number of ACOs eligible for the HEBA. A few commenters suggested eliminating the 20 percent threshold to maximize the HEBA's impact and ensure that value-based care models do not penalize providers caring for higher-risk beneficiaries. One commenter asserted that ''studies show that approximately 49 percent of safety net hospitals participate in a Shared Savings Program ACO, and a quarter of all participating Shared Savings Program ACOs include a Federally Qualified Health Center, thus demonstrating that the proposed methodology would not benefit the majority of ACOs serving dually eligible and LIS-enrolled beneficiaries.''

Several commenters stated that the HEBA as proposed would not go far enough—that the proposed approach considers too narrow of a population of beneficiaries for purposes of determining eligibility, is likely to benefit too few ACOs, would not adequately account for the expense associated with providing care for historically underserved populations, and is unlikely to drive increased or sustained participation in the Shared Savings Program.

Response: We are persuaded by commenters' concerns that the proposed policy considers too narrow of a population of beneficiaries for purposes of determining eligibility, is likely to benefit too few ACOs, and that removing or reducing the 20 percent threshold would increase the number of ACOs eligible for the HEBA while still furthering our policy goals with the HEBA explained in the proposed rule (89 FR 61887. In consideration of public comments, we are finalizing our proposal with modification. Specifically, we are modifying our policy (under § 425.662(b)(3)) to modify the requirement that ACOs must have at least 20 percent of their assigned beneficiaries enrolled in LIS or dually eligible in order to be eligible for the HEBA. We are instead finalizing § 425.662(b)(3) to require that ACOs have at least 15 percent of their assigned beneficiaries enrolled in LIS or dually eligible in order to be eligible for the HEBA.

Based on data for 456 ACOs that participated in the Shared Savings Program in PY 2023, decreasing the HEBA eligibility threshold to 15 percent will increase the number of ACOs estimated to receive a HEBA by 60 percent and, like our proposed 20 percent threshold, will continue to ensure that ACOs with an above-average percent of dually eligible or LIS enrolled beneficiaries are eligible for a HEBA.[572] Increasing the number of ACOs eligible for the HEBA by 60 percent supports the goals of the HEBA described in the CY 2025 PFS proposed rule (89 FR 61888) by increasing the likelihood that an ACO would earn shared savings and by potentially increasing the amount of shared savings earned, which in turn provides a greater financial incentive for ACOs to serve more beneficiaries from underserved communities and encourages ACOs already serving higher proportions of beneficiaries from underserved communities to remain in the Shared Savings Program and attracts new ACOs to join the Shared Savings Program. We will monitor the effect of using the 15 percent eligibility threshold for the HEBA and may revisit this threshold in future rulemaking.

This modification furthers the goals of the original proposal, including to provide greater financial incentives for ACOs to attract and retain underserved beneficiaries, particularly ACOs with smaller or no regional adjustments or prior savings adjustments, while also producing significant savings, as identified in the Regulatory Impact

[571] See Rawal P, Seyoum S, Fowler E. ''Advancing Health Equity Through Value-Based Care: CMS Innovation Center Update'', *Health Affairs Forefront,* June 4, 2024. DOI: 10.1377/forefront.20240603.385559. Available at *https://www.healthaffairs.org/content/forefront/advancing-health-equity-through-value-based-care-cms-innovation-center-update*.

[572] Based on PY 2023 data (for the 456 ACOs that participated in the Shared Savings Program in PY 2023), the average percent of ACO-assigned beneficiaries who are dually eligible or enrolled in LIS is approximately 15 percent.

Analysis Table D–B7, in section VI of this final rule. Removing the threshold entirely as some commenters recommended would result in ACOs that are not serving an above-average proportion of underserved beneficiaries receiving a HEBA, which is not in line with the intent of our HEBA proposal.

Further, we clarify for commenters who suggested that CMS ensure value-based care models do not inadvertently penalize providers caring for higher-risk beneficiaries that the HEBA is an upside-only adjustment to the benchmark, and it will not penalize providers with a downward adjustment. Regarding the commenter's statement that the HEBA, as proposed, would not benefit the majority of ACOs serving dually eligible and LIS-enrolled beneficiaries, we reaffirm that the HEBA as finalized with modifications will benefit ACOs serving an above-average proportion of LIS enrolled or dually eligible beneficiaries. The HEBA is designed to benefit ACOs serving larger proportions of beneficiaries from underserved communities and receiving lower regional adjustments or lower prior savings adjustments, or receiving neither adjustment. Regarding commenters' statements that the HEBA does not go far enough, we note that the HEBA as finalized with modifications will increase the number of ACOs estimated to receive a HEBA by 60 percent. We reiterate for commenters that we will monitor the HEBA's impact on ACOs participating in the Shared Savings Program and may consider modifications to the policy as appropriate in future notice-and-comment rulemaking.

Comment: Many commenters suggested that CMS make the HEBA additive, applicable in addition to the regional adjustment and prior savings adjustment to the benchmark, instead of applying only the highest positive adjustment for which the ACO is eligible. According to commenters, doing so would allow the HEBA to increase benchmarks for any ACO that has disproportionate number of assigned beneficiaries from underserved communities, thus allowing more ACOs to benefit from the HEBA and making the Shared Savings Program more appealing to ACOs whose assigned beneficiary population includes a disproportionate number of historically underserved beneficiaries. One commenter emphasized that this change would help to compensate for the lack of risk adjustment in the prior savings adjustment, which especially impacts renewing ACOs with high percentages of complex, high risk assigned beneficiaries.

Response: We thank commenters for their feedback. We disagree with commenters that we should make the HEBA additive, applicable in addition to the regional adjustment and prior savings adjustment to the benchmark. As noted in our proposal (89 FR 61887), our intent is to establish HEBA as a third method of upwardly adjusting an ACO's risk-adjusted historical benchmark, in addition to the existing regional adjustment and prior savings adjustment. This upward adjustment to the historical benchmark is designed to benefit ACOs serving larger proportions of beneficiaries from underserved communities and receiving lower regional adjustments (§ 425.656) or lower prior savings adjustments (§ 425.658), or receiving neither adjustment. We explain in the CY 2025 PFS proposed rule (89 FR 61887) that implementing a HEBA would ensure benchmarks continue to serve as a reasonable baseline when ACOs serve high proportions of beneficiaries who are members of underserved communities and incentivize ACOs to provide coordinated care to beneficiaries who are members of underserved communities. A HEBA is likely to encourage more participation in the Shared Savings Program by ACOs that serve beneficiaries who are members of rural and underserved communities by allowing them to participate with potentially higher benchmarks. That, in turn, would increase the likelihood that they could earn shared savings and increase the amount of those shared savings payments and reduce potential financial barriers to forming ACOs. Furthermore, a health equity benchmark adjustment would also encourage currently participating ACOs to attract more beneficiaries who are members of underserved communities and remain in the Shared Savings Program. However, a majority of existing ACOs already benefit from adjustments to their benchmarks based on the higher of the regional adjustment or prior savings adjustment. A further adjustment for ACOs already benefiting from the existing benchmark adjustment methodology would increase program spending without materially improving the incentive for these ACOs to continue participation. Therefore, we believe the proposal to include the HEBA as a third method of upwardly adjusting an ACO's risk-adjusted historical benchmark, is the appropriate approach to incentivizing ACOs to remain in or join the Shared Savings Program while balancing costs to the Trust Funds, and it would not be appropriate for the HEBA to be additive for ACOs already benefiting from prior savings adjustments or regional adjustments.

With respect to the commenter who stated that making HEBA additive would help ''compensate for the lack of risk adjustment in the prior savings adjustment, which especially impacts renewing ACOs with high percentages of complex, high risk assigned beneficiaries,'' we note that total per capita savings or losses for each performance year during the 3 years prior to the start of the ACO's current agreement (which are used to calculate the prior savings adjustment) are calculated using expenditures that are risk adjusted to reflect severity and case mix in the assigned beneficiary population in the performance year. Further, through recent prior rulemaking (see, for example, 88 FR 79185 and 79195) we have refined the financial methodology to support ACOs serving medically complex, high-costs populations, such as the policy to cap regional risk score growth in an ACO's regional service area when calculating regional trends used to update the historical benchmark at the time of financial reconciliation for symmetry with the cap on ACO risk score growth according to § 425.652(b)(2), and the policy to eliminate negative regional adjustments.

Further, we note for commenters that the prepaid shared savings option finalized in section III.G.5 of this final rule would operate synergistically with the proposed HEBA, in that ACOs that have been successful in earning shared savings while serving larger proportions of beneficiaries from underserved communities would in subsequent agreement periods have additional capabilities through prepaid shared savings to address the unmet health-related social needs of the beneficiaries they serve and may have higher benchmarks due to the HEBA.

Comment: A couple of commenters expressed concerns related to the proposed HEBA, including whether the HEBA's perceived complexity or the proposed cap on an ACO's HEBA equal to 5 percent of the United States Per Capita Costs (USPCC) may limit its impact or overall effectiveness. One commenter expressed concerns that introducing a third potential benchmark adjustment makes setting financial targets related to assigned beneficiary expenditures more difficult and may result in ''negative financial outcomes.'' Another commenter requested clarity related to whether CMS will modify the HCC risk adjustment process if the HEBA proposal is finalized.

Response: We acknowledge the complexity of the HEBA and refer readers to the discussion in the proposed rule (89 FR 61888) detailing how the HEBA is calculated and applied as well as to the Shared Savings Program's Program Guidance & Specifications web page,[573] where we anticipate publishing details on the HEBA calculation in a future version of the Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications. We also refer readers to the discussion elsewhere in this section of this final rule in which we describe the design of the HEBA, which does not feature a 5 percent cap of the USPCC or a downward adjustment that would introduce unpredictability when setting financial targets. Additionally, we explained that an ACO would receive the highest of the positive adjustments for which it is eligible, either the regional adjustment, prior savings adjustment, or health equity benchmark adjustment. The resulting historical benchmark can be used to set financial targets related to assigned beneficiary expenditures in the same way regardless of which—if any—adjustment was applied to the benchmark.

Additionally, in response to the commenter's request for clarity regarding whether we plan to implement any changes to the HCC risk adjustment process, we note that the HEBA is an upward adjustment to an ACO's historical benchmark that does not change or otherwise impact adjustments for changes in severity and case mix using prospective HCC risk scores when establishing or adjusting the benchmark as described in § 425.652(a)(3), (a)(9), and (a)(10). Accordingly, the finalization of the HEBA policy does not necessitate changes to our HCC risk adjustment methodologies.

Comment: Many commenters supported considering ADI to determine HEBA eligibility and amounts. These commenters stated that using ADI to determine HEBA eligibility and amounts could ''ensure more precise targeting of resources to areas most in need,'' and that, while person-level measures of social vulnerability are the ''gold standard, validated geographic indices such as the ADI are useful proxies.'' One commenter described the ADI as ''a crucial metric for identifying underserved communities.'' A few commenters recognized the shortcomings of currently available metrics, including ADI, for identifying beneficiaries from underserved communities but noted that using all available data on social risk for purposes of determining HEBA eligibility and amounts will ''expand the HEBA's ability to address issues [related to providing care for higher-risk beneficiaries].'' Many other commenters suggested considering metrics such as Medicare enrollment due to disability in combination with the ADI and the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid for the purposes of determining eligibility for and the amount of any HEBA. Another commenter suggested that it may be helpful to use ADI, which is a census block group level measure, to calculate HEBA amounts but noted that it ''may not be applicable to rural areas, for which most measures are available at the county level.''

Several commenters suggested alternatives to the ADI for the purpose of determining HEBA eligibility and amounts. One commenter suggested exploring whether the Social Vulnerability Index [574] or the new standardized area-level measure of socioeconomic deprivation under the ACO REACH Model [575] would be a better metric than ADI when used in combination with the proportion of ACO-assigned beneficiaries who are enrolled in the Medicare Part D LIS or are dually eligible for Medicare and Medicaid for determining HEBA eligibility and amounts in the Shared Savings Program. Additionally, one commenter noted that as CMS considers area-level composite indices of socioeconomic deprivation, such as the ADI, it is critical that those indices are comprised of a variety of unique measures of social vulnerability. One commenter encouraged CMS to consider ACO beneficiary engagement, Patient Reported Outcome Measures, and Patient Reported Experience Measures [576] when deciding an ACO's eligibility for HEBA and the amount of any adjustment. Another commenter emphasized the need for additional measures beyond ADI that are based on analyses of the root causes of historical inequality, such as hypersegregation and redlining, to more reliably design financial policies that promote health equity.

A few other commenters opposed the use of ADI for determining HEBA eligibility and amounts, arguing that ADI can ''underestimate the vulnerability of neighborhoods where housing prices do not reflect broader trends and other specific obstacles to health and healthcare.'' One of these commenters recommended using the Vizient Vulnerability Index,[577] which is more closely associated with average life expectancy than does the ADI. Two additional commenters opposed using the ADI and suggested that CMS continue to monitor and refine the use of ADI for calculating the ACO REACH Model's HEBA.

Response: We appreciate the commenter's feedback and will consider for future rulemaking.

After consideration of public comments, we are finalizing with modifications our proposed changes to the Shared Savings Program regulations to establish the HEBA that applies to ACOs with agreement periods beginning on January 1, 2025, and in subsequent years. We are finalizing our proposal to add a new section of the regulation at § 425.662 describing the calculation of the HEBA. We are finalizing as proposed the provisions of § 425.662, with the exception of § 425.662(b)(3). We are finalizing with modification the provision in § 425.662(b)(3), which specifies that CMS determines the ACO's eligibility for the HEBA based on the proportion of the ACO's assigned beneficiaries for the performance year who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid, to specify that: (1) an ACO is only eligible for the HEBA if this proportion is greater than or equal to 15 percent, and (2) an ACO with a proportion less than 15 percent is ineligible to receive a HEBA. This reflects a modification from the proposed eligibility threshold of 20 percent.

[574] The Centers for Disease Control and Prevention and Agency for Toxic Substances and Disease Registry Social Vulnerability Index is a place-based index, database, and mapping application designed to identify and quantify communities experiencing social vulnerability. See *https://www.atsdr.cdc.gov/placeandhealth/svi/index.html.*

[575] In PY 2025, CMS will remove the National/State blended ADI and replace it with an area-level socioeconomic deprivation measure that uses standardized variables. This will ensure the ADI accurately captures deprivation in areas with high housing values. See *https://www.cms.gov/aco-reach-model-performance-year-2025-model-update-quick-reference.*

[576] Patient-Reported Outcome Measures (PROM) and Patient Reported Experience Measures (PREM) are standardized questionnaires that can be used to capture patients' perspectives of their health and healthcare.

[577] See *https://www.vizientinc.com/what-we-do/health-equity/vizient-vulnerability-index-public-access.*

Further, within § 425.652, which sets forth the methodology for establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years, we are finalizing our proposal to revise § 425.652(a)(8) to describe how we would determine and apply the adjustment to an ACO's benchmark, if any, based on a comparison of the ACO's regional adjustment expressed as a single value, prior savings adjustment, and the health equity benchmark adjustment. Furthermore, we are finalizing our proposal to amend § 425.652 by redesignating paragraphs (a)(9)(v) and (vi) as paragraphs (a)(9)(vi) and (vii), respectively, and to specify in a new paragraph (a)(9)(v) the adjustments made to the health equity benchmark adjustment for the first performance year during the term of the agreement period and in the second and each subsequent performance year during the term of the ACO's agreement period, if applicable. We are also finalizing as proposed conforming changes in newly redesignated § 425.652(a)(9)(vi), specifying that CMS redetermines the adjustment to benchmark in accordance with § 425.652(a)(8), to list the HEBA along with the regional adjustment and prior savings adjustment. We are also finalizing as proposed to make conforming changes to § 425.658(d), which describes the applicability of the prior savings adjustment, to include consideration of the HEBA in addition to the regional adjustment, in determining the adjustment (if any) that would be applied to the ACO's benchmark.

Further, the text of the proposed regulations in the CY 2025 PFS proposed rule (89 FR 62228) included two technical changes to provisions of subpart G of part 425 that were not described in preamble. We proposed to amend § 425.650(a) by removing the reference to ''425.660'' and adding in its place the reference ''425.662.'' This change is necessary to ensure the range of sections specifying the benchmarking methodology for agreement periods beginning on or after January 1, 2024, referenced in § 425.650(a), appropriately includes the new section of the regulations at § 425.662, describing the calculation of the HEBA. As previously described in this section of this final rule, we are finalizing our proposal to add a new section of the regulation at § 425.662 describing the calculation of the HEBA. We received no comments addressing the proposed change in the regulations at § 425.650(a), and we are finalizing this technical change without modification.

Additionally, the text of the proposed regulations in the CY 2025 PFS proposed rule (89 FR 62230) included an amendatory instruction: ''Sections 425.664 through 425.669 are added and reserved.'' There was no corresponding discussion of this proposed change in the preamble. However, our proposed changes specified with the SAHS billing activity proposed rule (which appeared in the July 3, 2024 **Federal Register**, prior to the issuance of the CY 2025 PFS proposed rule, which appeared in the July 31, 2024 **Federal Register**) included the following amendatory instruction: ''Add reserved §§ 425.661 through 425.669 to subpart G'' (refer to 89 FR 55168, including the preamble discussion at 89 FR 55174, and text of the proposed regulations at 89 FR 55179). We finalized this proposed change, among our other proposals, in the SAHS billing activity final rule, which appeared in the September 27, 2024 **Federal Register** (refer to 89 FR 79152, including the preamble discussion at 89 FR 79165, and the text of the regulations at 89 FR 79171). We received no comments addressing this proposed change in the regulations. However, because we already added and reserved sections 425.664 through 425.669 in the SAHS billing activity final rule, we are not finalizing this proposal in this final rule.

c. Reopening ACO Payment Determinations

(1) Background

(a) Statutory Background on Shared Savings Program Financial Calculations

Section 1899(d)(1)(B)(ii) of the Act provides for the calculation and update of ACO benchmarks under the Shared Savings Program. This provision specifies that the Secretary shall estimate a benchmark for each agreement period for each ACO using the most recent available 3 years of per beneficiary expenditures for Parts A and B services for Medicare FFS beneficiaries assigned to the ACO. Such benchmark shall be adjusted for beneficiary characteristics and such other factors as the Secretary determines appropriate and updated by the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program, as estimated by the Secretary. Further, an ACO's benchmark must be reset at the start of each agreement period. Section 1899(d)(1)(B)(i) of the Act specifies that, in each year of the agreement period, an ACO is eligible to receive payment for shared savings only if the estimated average per capita Medicare expenditures under the ACO for Medicare FFS beneficiaries for Parts A and B services, adjusted for beneficiary characteristics, is at least the percent specified by the Secretary below the applicable benchmark under section 1899(d)(1)(B)(ii) of the Act.

Section 1899(i)(3) of the Act authorizes the Secretary to use other payment models, if the Secretary determines it is appropriate, and if the Secretary determines that doing so would improve the quality and efficiency of items and services furnished under Title XVIII and the alternative methodology would result in program expenditures equal to or lower than those that would result under the statutory payment model. As discussed in earlier rulemaking, we have used the authority under section 1899(i)(3) of the Act to adopt alternative policies to the provisions of section 1899(d)(1)(B) of the Act for updating the historical benchmark [578] and calculating performance year expenditures,[579] among other factors.[580] We have also used our authority under section 1899(i)(3) of the Act to establish the Shared Savings Program's two-sided payment models,[581] and to mitigate

[578] Such as using only assignable beneficiaries instead of all Medicare FFS beneficiaries in calculating the benchmark update based on national FFS expenditures (81 FR 37985 through 37989), calculating the benchmark update using factors based on regional FFS expenditures (81 FR 37977 through 37981), calculating the benchmark update using a blend of national and regional expenditure growth rates (83 FR 68027 through 68030), removing payment amounts for episodes of care for treatment of COVID–19 from expenditures used to calculate the benchmark update (85 FR 27577 through 27582), and calculating the benchmark update using an Accountable Care Prospective Trend/national-regional three-way blended update factor (87 FR 69881 through 69898).

[579] Such as excluding indirect medical education and disproportionate share hospital payments from ACO performance year expenditures (76 FR 67920 through 67922), determining shared savings and shared losses for the 6-month performance years (or performance period) in 2019 using expenditures for the entire CY 2019 and then pro-rating these amounts to reflect the shorter performance year or performance period (83 FR 59949 through 59951, 83 FR 67950 through 67956), removing payment amounts for episodes of care for treatment of COVID–19 from performance year expenditures (85 FR 27577 through 27582), and the exclusion of the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals from performance year expenditures (87 FR 69954 through 69956).

[580] Such as allowing for advance investment payments (87 FR 69782 through 69805), and expansion of the criteria for certain low revenue ACOs participating in the BASIC track to qualify for shared savings in the event the ACO does not meet the MSR as required under section 1899(d)(1)(B)(i) of the Act (87 FR 69946 through 69952).

[581] See earlier rulemaking establishing two-sided models: Track 2 (76 FR 67904 through 67909), Track 3 (subsequently renamed the ENHANCED track) (80 FR 32771 and 32772), and the BASIC

shared losses owed by ACOs affected by extreme and uncontrollable circumstances during PY 2017 and subsequent performance years.[582]

(b) Background on Shared Savings Program Reopening Policy and Financial Calculation Methodology

Under § 425.315(a)(1), if CMS determines that the amount of shared savings due to the ACO or the amount of shared losses owed by the ACO has been calculated in error CMS may reopen the initial determination or a final agency determination under subpart I and issue a revised initial determination: (i) at any time in the case of fraud or similar fault as defined in § 405.902; [583] or (ii) not later than 4 years after the date of the notification to the ACO of the initial determination of savings or losses for the relevant performance year, for good cause.

In accordance with § 425.315(a)(2), good cause may be established when (i) there is new and material evidence that was not available or known at the time of the payment determination and may result in a different conclusion, or (ii) the evidence that was considered in making the payment determination clearly shows on its face that an obvious error was made at the time of the payment determination. Section 425.315(a)(3) specifies that a change of legal interpretation or policy by CMS in a regulation, CMS ruling or CMS general instruction, whether made in response to judicial precedent or otherwise, is not a basis for reopening a payment determination under the Shared Savings Program regulations. CMS has sole discretion to determine whether good cause exists for reopening a payment determination (§ 425.315(a)(4)).

We first adopted a reopening policy in the November 2011 final rule, where we finalized at § 425.314(a)(4) a provision reserving the right for CMS to reopen the initial determination and issue a revised initial determination, if as a result of any inspection, evaluation, or audit, it is determined that the amount of shared savings due to the ACO or amount of shared losses owed by the ACO has been calculated in error (see 76 FR 67957 through 67958, and 67982). In the June 2016 final rule, we revised the Shared Savings Program regulations, including to remove the provision in § 425.314(a)(4), and further specify the reopening policy in a new section of the regulation at § 425.315 (81 FR 37997 through 38002, and 38013 through 38014). We subsequently revised § 425.315 to apply the policies on reopening determinations to payment determinations for a 6-month performance year or 6-month performance period during CY 2019 (refer to the November 2018 final rule, 83 FR 59958 and 60092, and the December 2018 final rule, 83 FR 67955 through 67967), and to ACOs participating in the BASIC track (refer to the December 2018 final rule, 83 FR 67842 and 68068). In the CY 2023 PFS final rule, we clarified the circumstances in which CMS would exercise discretion to reopen the initial determination of an ACO's financial performance for good cause to correct errors in the determination of MIPS Quality performance category scores that affect the determination of whether an ACO is eligible for shared savings, the amount of shared savings due to the ACO, or the amount of shared losses owed by the ACO (see 87 FR 69868 through 69869).

Most recently, in the CY 2024 PFS final rule, we finalized an approach to recalculating the prior savings adjustment for changes in values used in benchmark calculations due to compliance action taken to address avoidance of at-risk beneficiaries, or as a result of the issuance of a revised initial determination of financial performance for a previous performance year following a reopening of ACO shared savings and shared losses calculations (88 FR 79195 through 79200). In the CY 2024 PFS final rule, we also discussed a proposed timing cutoff such that changes to savings or losses for a benchmark year that were finalized after notification to the ACO of the initial determination of shared savings or shared losses for a given performance year would be reflected in the adjusted benchmark applied to any subsequent performance year during the relevant agreement period but would not be retroactively applied to completed performance years in the agreement period (88 FR 79198 through 79200). We stated that we believed it would be appropriate to consider new information that could impact the prior savings adjustment up to the point at which an ACO receives its initial determination. However, we also noted that we would continue to consider the complexities surrounding reopening initial determinations for multiple prior performance years throughout the program's benchmarking and financial reconciliation methodologies and may address this issue in future rulemaking (88 FR 79199). We refer readers to these discussions in past rulemaking for additional details.

In our earlier rulemaking, we did not discuss the specific methodology that would be employed for recalculating an ACO's shared savings or shared losses in the event of a reopening in order to issue a revised initial determination. As additional background, in the following discussion, we summarize the general approach to identification and use of payment amounts from Medicare FFS Parts A and B FFS claims and certain other payment amounts in Shared Savings Program calculations.

Under the Shared Savings Program, providers and suppliers continue to bill for services furnished to Medicare beneficiaries and receive FFS payments under traditional Medicare. CMS uses payment amounts for Parts A and B FFS claims for calculating benchmark and performance year expenditures and determining benchmark update factors as specified in the Shared Savings Program regulations in subpart G. These operations typically require the determination of expenditures for Parts A and B services under the original Medicare FFS program for a specified population of Medicare FFS beneficiaries or the Medicare Parts A and B FFS revenue of ACO participants. The Medicare FFS beneficiary population for which expenditures are determined may differ depending on the specific program operation being performed and may reflect expenditures for the ACO's assigned beneficiaries, assignable beneficiaries, or all Medicare FFS beneficiaries. The applicable Medicare FFS beneficiary population is specified in the regulations governing each program operation.

In calculating expenditures for Medicare FFS beneficiaries used in Shared Savings Program calculations, CMS uses payment amounts included on Parts A and B FFS claims with dates of service in the relevant benchmark or performance year, allowing for a 3-month claims run out, as follows: claim payment amounts identified for inpatient, Skilled Nursing Facility (SNF), outpatient, Home Health Agency (HHA), and hospice claims at any provider; and line item payment amounts identified for carrier (including

track (83 FR 67834 through 67841). We also used our authority under section 1899(i)(3) of the Act to remove payment amounts for episodes of care for treatment of COVID–19 from ACO participants' Medicare FFS revenue used to determine the loss sharing limit in the two-sided models of the BASIC track (85 FR 27577 through 27582).

[582] See earlier rulemaking establishing policies for mitigating shared losses owed by ACOs affected by extreme and uncontrollable circumstances (82 FR 60916 and 60917, 83 FR 59974 through 59977).

[583] As defined in § 405.902, ''similar fault'' means to obtain, retain, convert, seek, or receive Medicare funds to which a person knows or should reasonably be expected to know that he or she or another for whose benefit Medicare funds are obtained, retained, converted, sought, or received is not legally entitled. This includes, but is not limited to, a failure to demonstrate that he or she filed a proper claim as defined in 42 CFR part 411.

physician/supplier Part B) and Durable Medical Equipment, Prosthetics, Orthotics & Supplies (DMEPOS) claims. For both Parts A and B claims, CMS excludes payments on denied claims or line items from the calculation, for claims or line items with dates of service within the relevant benchmark year or performance year, processed before the end of the 3-month claims run out period. In calculating expenditure amounts for Medicare FFS beneficiaries under the Shared Savings Program, CMS makes certain adjustments,[584] which if applicable, exclude indirect medical education (IME) and disproportionate share hospital (DSH) payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals, and take into consideration individually beneficiary identifiable final payments made under a demonstration, pilot or time limited program. We also account for certain population-based payments or other similarly structured payments made under other Medicare shared savings initiatives, specifically the Pioneer ACO Model, Next Generation ACO Model, Vermont All-Payer ACO Model, and ACO REACH Model (as applicable). Population-based payments are a per-beneficiary per month payment amount intended to replace some or all of the FFS payments with prospective monthly payment.[585]

The Shared Savings Program's existing financial methodology does not fully account for actions taken to protect the integrity of the Medicare program, or address the impact of improper payments, including improper payments resulting from fraud or similar fault on program calculations. For instance, demanded overpayment determinations resulting in adjusted claim or line item payment amounts after the 3-month claims run out period, or aggregate amounts that are not linked to specific claims or line items, are not accounted for in Shared Savings Program expenditure calculations. Additionally, under the existing financial methodology for the Shared Savings Program, we lack a means to account for improper payment amounts identified in a settlement agreement between a provider or supplier and the Government or a court's judgment, including pursuant to conduct by individuals or entities performing functions or services related to an ACO's activities. Under the proposed approach described in section III.G.7.c.(2).(c) of the CY 2025 PFS proposed rule, the term ''improper payment'' for purposes of the Shared Savings Program would include an amount associated with a demanded overpayment determination and certain amounts identified in a settlement agreement or judgment that have the potential to impact program financial calculations. We explained in the CY 2025 PFS proposed rule that since January 2023, we have evaluated several cases where such improper payments may have impacted one or more reconciled performance years for an ACO under the Shared Savings Program, including cases where ACOs reported concerns about alleged fraud or similar fault to CMS. We stated it is thus timely and appropriate to undertake notice and comment rulemaking to establish a calculation methodology to account for the impact of improper payments in recalculating expenditures and payment amounts used in Shared Savings Program financial calculations, upon reopening a payment determination pursuant to § 425.315(a); to describe factors that we may consider in exercising our discretion to reopen an ACO's payment determination under which we apply the proposed methodology to recalculate the ACO's financial performance; and to propose to establish a process by which an ACO could request a reopening of an initial determination of shared savings or shared losses. Our experience reviewing several cases supported the development of our proposed revisions to Shared Savings Program policies.

(2) Revisions

Section III.G.7.c.(2) of the CY 2025 PFS proposed rule (89 FR 61894 through 61909) included a proposed change to the provision specifying CMS' discretion to reopen payment determinations under § 425.315(a)(4) (described in section III.G.7.c.(2).(a) of the proposed rule). We discussed and solicited comment on the circumstances in which we would exercise our discretion to reopen a payment determination and issue a revised initial determination to account for the impact of identified improper payments on Shared Savings Program calculations (described in section III.G.7.c.(2).(b) of the proposed rule). We proposed modifications to the Shared Savings Program regulations to specify a calculation methodology to account for the impact of identified improper payments in recalculating expenditures and payment amounts used in Shared Savings Program financial calculations, upon reopening a payment determination pursuant to § 425.315(a) (described in section III.G.7.c.(2).(c) of the proposed rule). We also proposed certain adjustments to Shared Savings Program benchmark calculations to account for the impact of identified improper payments, in the event a performance year for which we issue a revised initial determination becomes a benchmark year of an ACO's current agreement period, and when CMS has not yet issued an initial determination for a performance year of the ACO's current agreement period (described in section III.G.7.c.(2).(d) of the proposed rule).[586] Lastly, we proposed a process for ACOs to request that CMS reopen a payment determination (described in section III.G.7.c.(2).(e) of the proposed rule), and briefly discussed the role of ACOs in preventing and reporting Medicare fraud (described in section III.G.7.c.(2).(f) of the proposed rule). Our specific proposals are discussed in detail in the following sections.

We proposed that the policy changes discussed in section III.G.7.c. of the CY 2025 PFS proposed rule would be effective January 1, 2025, unless specified otherwise (89 FR 61894). We explained that should the proposed policies be finalized, the policies would apply to reopening requests made on or after January 1, 2025. We also explained that if the proposal to establish a process by which an ACO may request a reopening review was to be finalized, we anticipated continuing to evaluate previously received reopening requests for performance years for which initial determinations were issued prior to January 1, 2025, consistent with the timeframes specified under § 425.315(a)(1). If the proposed recalculation methodology to account for the impact of improper payments were to be finalized, we would consistently apply the methodology in recalculating expenditures and payment amounts used in Shared Savings Program financial calculations upon reopening a payment determination pursuant to § 425.315(a).

The following is a summary of general comments we received on our discussion and proposals regarding reopening ACO payment determinations

[584] The Shared Savings Program's financial models and benchmarking policies, among other program policies, have changed over time as described in earlier rulemaking (refer to section III.G.1.b. of this final rule), and as outlined in the provisions of subpart G.

[585] See for example, Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (Version 11, January 2023), available at *https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2* (refer to Section 3.1 Calculating ACO-Assigned Beneficiary Expenditures).

[586] We refer readers to section III.G.7.c.(2).(d) of this final rule, in which we clarify the applicability of the benchmark adjustment.

and the timing of applicability of the proposed modifications.

Comment: Most commenters addressing the reopening policy proposals and related considerations described in section III.G.7.c of the CY 2025 PFS proposed rule responded favorably to an approach under which CMS would recalculate ACO financial performance and adjust ACO historical benchmarks to account for the impact of improper payments on Shared Savings Program financial calculations, establish a process for ACOs to request reopening, and related considerations in connection with these proposals. Some commenters addressed the specific proposals or policy considerations, including to provide alternative suggestions, or to urge CMS to provide additional information on the approach and transparency into its processes. At least one commenter, which was a supportive commenter, attempted to summarize the proposals, but did so inaccurately.[587]

Some commenters addressing the proposals and related considerations tended to express general support for CMS' proposal to codify a process for reopening payment determinations in instances where improper payments have been identified. Only a few commenters provided detailed explanations of their support. More generally, one commenter explained the approach is responsive to ongoing concerns from ACOs around the negative impact of bad actors on both the Medicare Trust Funds as well as ACOs' ability to succeed in the Shared Savings Program. Another commenter supported proposals to facilitate the reopening of payment determinations to assist in mitigating the negative effects of improper payments. Some commenters stated their belief that the reopening policy could be an opportunity to remove instances of fraud or abuse from ACO performance calculations, and tended to underscore that criminal matters are not often resolved until months or years after a performance year's reconciliation. Some of these commenters further explained that ACOs typically hear about confirmed fraud in their markets years after the performance period ended yet have no recourse for action, and as a result, ACOs are held accountable for patients' total cost of care but have no ability to stop instances of improper payments. One commenter expressed their belief that accounting for the impact of certain improper payments in performance year and benchmark expenditures, among other proposed changes to Shared Savings Program policies described in the CY 2025 PFS proposed rule, will help increase participation in ACOs and enable ACOs to focus more on underserved populations, but did not offer a detailed explanation of how this could occur.

Response: We summarize and respond to commenters' specific concerns and suggestions throughout the rest of this section of this final rule. We appreciate the commenters' support for the proposals in connection with reopening ACO payment determinations. As described throughout this rest of this section of this final rule, we are finalizing our proposals, and note that in the case of the benchmark adjustment we are finalizing a clarification to our proposal, as specified in section III.G.7.c.(2).(d) of this final rule.

As we explained in the CY 2025 PFS proposed rule, the Shared Savings Program's existing financial methodology does not fully account for actions taken to protect the integrity of the Medicare program, or address the impact of improper payments, including improper payments resulting from fraud or similar fault on program calculations. We acknowledge commenters' concerns that ACOs' financial performance can be negatively impacted by confirmed fraud in their markets that is beyond their control yet are held accountable for the related costs, potentially impeding their ability to succeed in the Shared Savings Program. Addressing improper payments in the Medicare program, through the program's reopening authority, would help protect the accuracy, fairness, and integrity of Shared Savings Program financial calculations, and lead to greater beneficiary protections and protection of the Trust Funds.

While ACOs may learn of fraud or abuse in their region, or impacting their assigned beneficiaries, not all instances of such conduct may result in a decision by CMS to reopen the ACO's payment determination and to issue a revised initial determination. CMS retains discretion over whether to reopen payment determinations after identifying improper payments that have the potential to impact Shared Savings Program financial calculations, which may come to our attention through ACO reopening requests, as well as input from program integrity staff and law enforcement agencies. We also caution ACOs of the potential effects on their performance that could result from addressing the impact of improper payments on Shared Savings Program financial calculations. As described in section III.G.7.c.(2).(c). of this final rule, accounting for the impact of improper payments on expenditures could increase or decrease an ACO's amount of shared savings or shared losses. We also reiterate a key point from our discussion in section III.G.7.c.(2).(b) of this final rule, that we are continuing to consider applying an approach under which we differentiate between cases where improper payments originate inside the ACO versus outside the ACO, in deciding whether to reopen the payment determination, in order to strike a balance between improving the accuracy of the calculations and ACOs' and CMS' interest in administrative finality of payment determinations.

Codifying an approach to account for the impact of improper payments in Shared Savings Program financial calculations, and establishing a process for ACO reopening requests are critical initial steps towards more systemically identifying and addressing improper payments that impact Shared Savings Program calculations.

Comment: Many of the comments on the reopening policies in the CY 2025 PFS proposed rule addressed both the reopening policy proposals and SAHS billing activity proposals, and did not differentiate between these two approaches. For instance, a few commenters expressed support for the reopening policy proposals in conjunction with the proposal to mitigate the impact of SAHS billing activity on Shared Savings Program financial calculations in CY 2024 or subsequent calendar years. One such commenter encouraged CMS to ''streamline the process'' as much as possible (although the commenter did not make clear the process being referred to) and to work with ACOs to ''address SAHS situations as early as possible.''

Some commenters' descriptions generally indicated that the concept of SAHS billing activity was addressed through or included in the reopening policy. For instance, several commenters suggested that CMS hold ACOs ''harmless'' for SAHS billing activity by recalculating expenditures and payment amounts to account for improper payments upon reopening a payment determination and excluding SAHS billing activity from expenditure and revenue calculations for the relevant calendar year, as well as from historical benchmarks. Another commenter stated support for CMS' ''exclusion [of] SAHS billing including

[587] We refer commenters and other readers of this final rule to the summary of the proposals and policy considerations described elsewhere in this section of this final rule to aide their understanding of the proposals.

establishing a process to reopen payment determinations.''

Further, we have summarized and responded to comments addressing the SAHS billing activity policy within section III.G.7.d. of this final rule.

Response: These comments indicate that some commenters may have misunderstood the differences between the SAHS billing activity policy proposal and the reopening policy proposal. Together, the SAHS billing activity policy and the reopening policy provide a comprehensive basis for CMS to adjust payment amounts used in Shared Savings Program financial calculations. Each policy, however, addresses a different type of payment issue. Under the SAHS billing activity policy proposal (refer to section III.G.7.d of this final rule), CMS would proactively adjust Shared Savings Program calculations pursuant to a determination that SAHS billing activity occurred in CY 2024 or a subsequent calendar year. The SAHS policy would address and remove—prior to financial reconciliation for a performance year—large scale, unexplained billing anomalies for all ACOs. By contrast, the reopening process is the mechanism by which CMS would determine whether to reopen a previous initial determination and final agency determination for a performance year, for fraud or similar fault, or good cause, as specified under § 425.315(a), and issue a revised initial determination, which may include accounting for the impact of identified improper payments in recalculating savings or losses under the proposed calculation methodology (refer to section III.G.7.c.(2).(c) of this final rule). CMS may learn of potential inaccuracies in the ACO's previously completed financial reconciliation results through an ACO's submission of a reopening request, and we proposed to establish a related reopening request process (refer to section III.G.7.c.(2).(e) of this final rule).

Further, since the adjustment for SAHS billing activity would occur prior to the issuance of an initial determination, we would not reopen an initial determination to adjust for payment amounts excluded under the SAHS billing activity policy. Those amounts were already excluded in their entirety from all calculations due to the high probability of inaccurate and inequitable payments and repayment obligations in the Shared Savings Program if left in. However, we note that there could be other reasons why CMS would reopen an initial determination which used expenditures adjusted under the SAHS billing policy.

To the extent the commenters' remarks are suggesting that CMS use alternative approaches to address SAHS billing activity, to account for the impact of improper payments on Shared Savings Program financial calculations upon reopening a payment determination, or both, we decline these suggestions at this time. In light of the aforementioned considerations, the adjustment for SAHS billing activity described in section III.G.7.d of this final rule, and the policies for recalculating expenditures and payment amounts to account for improper payments upon reopening a payment determination, each support critical and different functions for improving the accuracy, fairness, and integrity of Shared Savings Program financial calculations. We believe it is timely to finalize proposals in each of these policy areas. As we gain experience with these policies, we may revisit potential interactions between the policies in future notice and comment rulemaking.

Comment: Some commenters addressed the discussion in the CY 2025 PFS proposed rule on the timing of applicability of the policy changes on reopening ACO payment determinations, and in particular the applicability of the policies to reopening requests made on or after January 1, 2025. These commenters requested that CMS apply the policy changes on reopening ACO payment determinations to reopening requests for performance years prior to 2025. Commenters making this suggestion tended to specify that CMS should apply the policy for reopening ACO payment determinations to address other billing activity that ACOs suspect to be SAHS, citing examples impacting CY 2023 that would not be addressed by the rulemaking to address SAHS billing activity for urinary catheters in CY 2023 (see SAHS billing activity proposed rule, 89 FR 55168), or CY 2024. (Related comments are summarized and responded to in section III.G.7.d. of this final rule.) One commenter specified that ACOs had identified ''improper payments'' impacting performance years prior to 2025, including billings for skin substitutes, ventilators, diabetic supplies, and collagen dressings, but did not specify additional details including how the determination was made or the year(s) impacted.

Response: Commenters' suggestions that the policy changes on reopening ACO payment determinations apply to reopening requests for performance years prior to 2025, may reflect confusion over the difference between the effective date for the policies being finalized in this final rule and the timeframes for reopening payment determinations in accordance with § 425.315(a) (as amended by this final rule), and the new process for ACOs to request reopening review under the provisions we are finalizing with this final rule in § 425.315(b) (as described in section III.G.7.c.(2).(e) of this final rule). Under the policies we are finalizing described in section III.G.7.c. of this final rule, ACOs may submit to CMS for consideration reopening requests for performance years prior to PY 2025. CMS will apply the policies established with this final rule beginning on the effective date of the final rule, January 1, 2025. As we specified in the CY 2025 PFS proposed rule, and reiterated in section III.G.7.c.(2).(e) of this final rule, the timing of an ACO's reopening request must be consistent with the timeframes specified in § 425.315(a)(1)(i) and (ii), respectively, either (i) at any time in the case of fraud or similar fault, or (ii) not later than 4 years after the date of the notification to the ACO of the initial determination of savings or losses for the relevant performance year for good cause. Consistent with our statement in the CY 2025 PFS proposed rule (89 FR 61894), with the finalization of the policies on reopening ACO payment determinations in this final rule, we will evaluate previously received reopening requests for performance years for which initial determinations were issued prior to January 1, 2025, consistent with the timeframes specified under § 425.315(a)(1). In recalculating expenditures and payment amounts used in Shared Savings Program financial calculations to account for the impact of improper payments, we will consistently apply the methodology finalized in this section of this final rule, upon reopening a payment determination pursuant to § 425.315(a).

In response to a commenter's assertion that ACOs have identified improper payments impacting performance years prior to 2025, we encourage ACOs, or anyone else suspecting healthcare fraud, waste or abuse to report it to CMS or the Department of Health and Human Services Office of Inspector General (HHS–OIG). Refer to section III.G.7.c.(2).(f) of this final rule entitled ''Preventing and Reporting Medicare Fraud'' for related information. As explained in section III.G.7.c.(2).(e) of this final rule, we anticipate providing additional information on the reopening request process for ACOs through guidance, including the form and manner in which CMS must receive a

reopening request. ACOs seeking to submit a reopening request prior to the issuance of the guidance material on the reopening request process are encouraged to submit detailed information in writing to CMS by email to *SharedSavingsProgram@cms.hhs.gov*. Further, as we described in the CY 2025 PFS proposed rule, and reiterated in section III.G.7.c.(2).(b) of this final rule, the Shared Savings Program will coordinate with program integrity staff and law enforcement agencies to identify and quantify improper payments potentially impacting expenditures used in program calculations that are not otherwise accounted for in Shared Savings Program expenditure calculations.

Although some commenters referred to billing activity that ACOs may suspect to be SAHS billing activity, we wish to reiterate that CMS will have the sole discretion to identify cases of SAHS billing activity for a particular calendar year that warrant adjustment of Shared Savings Program financial calculations, for CY 2024 or subsequent calendar years, in the approach we are finalizing in section III.G.7.d of this final rule. Further, as we describe elsewhere in this final rule, we anticipate this policy to adjust Shared Savings Program calculations to mitigate the impact of SAHS billing activity would be invoked in rare and extreme cases when CMS identifies a code that meets the high bar to be defined as SAHS billing activity. In section III.G.7.d. of this final rule, we summarize and respond to public comments received on the proposals to mitigate the impact of SAHS billing activity on Shared Savings Program financial calculations in CY 2024 or subsequent calendar years.

More generally, in the discussion that follows, we summarize and respond to public comments we received on the remaining proposals and considerations described in section III.G.7.c.(2) of the CY 2025 PFS proposed rule.

(a) Change to Provision Specifying CMS' Discretion To Reopen Payment Determinations

In earlier rulemaking we explained that CMS would have discretion to reopen a payment determination for fraud or similar fault, or good cause, as reflected in the provisions in § 425.315(a)(1) and (4). The latter provision expressly provides that CMS has sole discretion to determine whether good cause exists for reopening a payment determination. In the June 2016 final rule, in restating the discussion of the proposal from the February 2016 proposed rule, we explained that CMS would have discretion to reopen a payment determination at any time in the case of fraud or ''similar fault,'' as defined in § 405.902 (81 FR 37998).

We continue to believe that it is important to maintain CMS' sole discretion in determining whether to reopen a payment determination. We also believe it is important to preserve CMS' flexibility in determining whether reopening is warranted to address the impact of fraud or similar fault on Shared Savings Program calculations, in particular given the potential for various actions to be taken by CMS, law enforcement agencies and courts in response to fraud or similar fault. Thus, we proposed revisions to § 425.315(a)(4) to make clear that CMS has the sole discretion to determine whether to reopen a payment determination in the case of fraud or similar fault, as well as to determine whether good cause exists to reopen a payment determination.

We received no comments directly addressing the proposed revisions to § 425.315(a)(4), as described in this section of this final rule. We are finalizing without modification our proposal to revise § 425.315(a)(4) to make clear CMS' discretion applies to determining whether to reopen a payment determination in the case of fraud or similar fault, as well as to determining whether good cause exists to reopen a payment determination.

(b) Considerations for Reopening a Payment Determination To Account for Improper Payments

In section III.G.7.c.(2).(b) of the CY 2025 PFS proposed rule (89 FR 61895 through 61898), we described factors CMS may consider to inform our decision of whether to reopen an initial determination of an ACO's financial performance pursuant to § 425.315(a)(1)(i) or (ii) to account for the impact of improper payments that affect the determination of whether an ACO is eligible for shared savings or liable for shared losses, and the amount of shared savings due to the ACO or the amount of shared losses owed by the ACO. We solicited comments on these considerations. We also explained that we anticipate revisiting these considerations as we gain experience with processing ACO reopening requests as described in section III.G.7.c.(2).(e) of the proposed rule (89 FR 61907 through 61908), reopening payment determinations and applying the calculation methodology described in section III.G.7.c.(2).(c) of the proposed rule (89 FR 61898 through 61907), and applying the benchmark adjustment described in section III.G.7.c.(2).(d) of the proposed rule (89 FR 61907). We specified that, if appropriate, we may revisit these considerations for exercising our discretion to reopen payment determinations in future notice and comment rulemaking.

As an initial matter, the Shared Savings Program would need to identify improper payments that have the potential to impact program financial calculations. The Shared Savings Program depends on input from the CMS Center for Program Integrity (CPI) and law enforcement agencies (including the Department of Justice) to identify and quantify improper payments potentially impacting expenditures used in program calculations that are not otherwise accounted for in Shared Savings Program expenditure calculations as described in section III.G.7.c.(2).(b) of the CY 2025 PFS proposed rule. This could include: (1) certain demanded overpayment determinations, such as demanded overpayment amounts that result in adjusted claim or line item payment amounts associated with dates of service during a performance year or benchmark year, where the adjustment occurs after the 3-month claims run out period, and demanded extrapolated overpayment amounts which are aggregate amounts that are not linked to specific claims or line items and are not currently accounted for in Shared Savings Program expenditures; [588] and (2) improper payments resulting from conduct by individuals or entities performing functions or services related to an ACO's activities as identified in certain settlement agreements or judgments. In section III.G.7.c.(2).(c) of the CY 2025 PFS proposed rule we discussed considerations for identifying these amounts. Further, as discussed in greater detail in section III.G.7.c.(2).(e) of the CY 2025 PFS proposed rule, ACOs can play an important role in identifying for CMS improper payments that may impact Shared Savings Program calculations. ACO reopening requests submitted to CMS may be another means by which the Shared Savings Program becomes aware of improper payments impacting ACO financial calculations; however, CMS would retain discretion over whether to reopen payment determinations after

[588] For additional information on overpayment procedures and overpayment estimation, see, for example, Medicare Program Integrity Manual, Chapter 8—Administrative Actions and Sanctions and Statistical Sampling for Overpayment Estimation, available at *https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/pim83c08.pdf.*

reviewing information provided in such requests.

Second, we anticipated needing to perform an initial analysis of whether the improper payments would warrant reopening the ACO's payment determination. This analysis may include a number of factors, such as whether the improper payments meet the requirements for reopening for fraud or similar fault in accordance with § 425.315(a)(1)(i), or for good cause in accordance with § 425.315(a)(1)(ii) and (a)(2). A variety of circumstances could lead CMS, law enforcement agencies or courts to determine whether good cause exists or whether fraud or similar fault has occurred. The timelines associated with the related investigations, and the potential for various actions to be taken in response, can make it challenging to identify a one-size-fits-all approach to addressing the impact of improper payments on Shared Savings Program calculations. We noted that once we are notified of potential improper payments impacting Shared Savings Program calculations, it may take months or years to determine the actual amount of any improper payments impacting an ACO's payment determination, particularly if we are awaiting the conclusion of program integrity and law enforcement investigations, among other possible determinations about the related conduct of providers or suppliers. Additionally, administrative action and judicial action leading to the identification of improper payments may be subject to appeal, and ultimately the amount of the improper payments may be redetermined or otherwise amended.[589] It would further protract the timeline for considering use of improper payments in recalculating ACO financial performance results to await the outcome of any appeal of an improper payment.

We further explained that since there could be a variety of reasons for which CMS seeks to recoup an overpayment amount from a provider or supplier, there are many possible circumstances that could warrant reopening under § 425.315. As an example, we may consider a combination of factors in evaluating whether demanded overpayment determinations would be the basis for reopening for fraud or similar fault under § 425.315(a)(1)(i).[590] For instance, we may consider whether there is ''reliable evidence'' (as defined according to § 405.902, which means evidence that is relevant, credible, and material) of similar fault to warrant reopening a Shared Savings Program payment determination.[591] For purposes of the Shared Savings Program's reopening policy, we may find there is reliable evidence of similar fault when a demanded overpayment determination was issued to a provider or supplier for which CMS has revoked or deactivated their Medicare billing privileges, or for which there is a closed law enforcement investigation, among other possible factors. Although demanded overpayment determinations are subject to appeal, we stated our belief that using these amounts in reopening and recalculating an ACO's financial performance under the Shared Savings Program would allow us to more timely address the impact of improper payments on Shared Savings Program calculations, rather than waiting to consider the outcome of any possible appeal of the amounts (as discussed in section III.G.7.c.(2).(c) of the CY 2025 PFS proposed rule, 89 FR 61906).

We explained that as part of our initial analysis to evaluate whether to reopen an ACO's initial determination, we may also consider the significance of the improper payments to an ACO's financial calculations by estimating the financial impact of improper payments on an ACO's payment determination. We noted that if we estimate that the improper payments have impacted the dollar amount of earned shared savings, or the amount of shared losses that the ACO owes or has paid to CMS, we anticipate reopening an ACO's payment determination. We described that, when determining whether to reopen an ACO's payment determination, we anticipate considering a combination of factors including:

- The dollar value of improper payments and the number of claims or line items impacted (if applicable).
- How any related impact on performance year expenditures may compare to the impact on the ACO's updated historical benchmark (which could include considering the impact on benchmark year expenditures and factors used to establish, adjust and update the benchmark). In particular, we may consider whether comparing performance year expenditures to the updated benchmark expenditures used in financial reconciliation, once adjusted to account for the estimated impact of the improper payments, would result in a significant change in the amount of shared savings paid to or shared losses owed by the ACO. For purposes of this analysis we may consider the following (restated with a minor corrections for clarity):

++ The minimum savings rate (MSR)/minimum loss rate (MLR) applicable to the ACO for the relevant performance year.

++ Whether the ACO met or exceeded the applicable MSR/MLR with the initial determination.

++ Whether accounting for improper payments would cause a change in the ACO's financial performance compared to its performance under the initial determination, including:

—Causing an ACO to meet or exceed its MSR/MLR when it did not do so under its initial determination, or to no longer meet or exceed the relevant threshold when it did so under its initial determination.

—Causing an ACO that shared in savings or owed shared losses under the initial determination to share in either a higher or lower amount of savings or losses (respectively).

—Causing an ACO to continue to generate savings or losses less than the MSR/MLR threshold, as it did under its initial determination, and therefore the ACO would remain ineligible for shared savings, except in cases where certain low revenue ACOs participating in the BASIC track may qualify for a shared savings payment in accordance with § 425.605(h), and would not be held liable for shared losses.

We noted that the existing reopening authority at § 425.315 and the proposed financial methodology to address improper payments in such a reopening are not intended to address particular instances of low-value improper payments which, in an individual case may be to the benefit of either the ACO

[589] For instance, a provider receiving an initial demand letter for an overpayment may appeal the overpayment by requesting a redetermination, among other actions. See for example, CMS, MLN Fact Sheet, ''Medicare Overpayments'' (MLN006379 October 2023), available at *https://www.cms.gov/outreach-and-education/medicare-learning-network-mln/mlnproducts/downloads/overpaymentbrochure508-09.pdf*. The Medicare Parts A and B appeals process includes multiple levels of appeal. See for example, CMS, MLN Booklet, ''Medicare Parts A & B Appeals Process'' (MLN006562 November 2023), available at *https://www.cms.gov/files/document/mln006562-medicare-parts-b-appeals-process.pdf*.

[590] While this example presumes reopening for fraud or similar fault, there may be additional considerations and complexities around reopening for good cause.

[591] This approach may continue to maintain a degree of alignment between reopening policies under the Shared Savings Program and other Medicare policies. In the February 2016 proposed rule, in which we proposed amending the Shared Savings Program's reopening policy, we referred to the longstanding policy in the Medicare program that a determination may be reopened at any time if it was procured by fraud or similar fault, and as an example referred to 42 CFR 405.980(b)(3) (see 81 FR 5855). In accordance with § 405.980(b)(3), a contractor may reopen an initial determination or redetermination on its own motion at any time if there exists reliable evidence as defined in § 405.902 that the initial determination was procured by fraud or similar fault as defined in § 405.902.

or CMS and in the aggregate are likely have a de minimis net effect on program expenditures in the long run.[592] CMS would be highly unlikely to reopen in such cases under § 425.315. We stated our belief that considering the significance of the potential impact of the improper payments on the ACO's payment determination, in deciding whether to reopen the payment determination, is a key component of striking a balance between improving the accuracy of the calculations and ACOs' and CMS' interest in administrative finality of payment determinations. We discussed related concerns and considerations elsewhere in the CY 2025 PFS proposed rule. Therefore, we would seek to reopen an ACO's payment determination only in cases where the impact of improper payments warrants disrupting the initial determination.

We discussed, as an example, the case of an initial determination in which we found that an ACO generated savings below its MSR and, therefore, did not qualify for a shared savings payment according to the policies for determining the ACO's eligibility for shared savings applicable to its agreement period under the Shared Savings Program.[593] If, based on an initial analysis, we estimate that the ACO's savings, though higher once adjusted to remove improper payments from performance year expenditure calculations, would still fall below the MSR, it would not be necessary to reopen an ACO's payment determination because the ACO would still not qualify for a shared savings payment. Under such circumstances, we would not reopen the initial determination or proceed with the recalculations described in section III.G.7.c.(2).(c) of the CY 2025 PFS proposed rule. We anticipated that this particular type of situation could occur in cases where the improper payments at issue are relatively small and the differential between an ACO's generated shared savings and MSR as calculated in the initial determination is relatively large such that recalculating the amounts would not produce a different outcome to the payment determination.

It is also possible that improper payments would have no impact on Shared Savings Program financial calculations as they may consist of claims or payment amounts that were not used in reaching the initial determination of the ACO's financial performance. For instance, if a demanded overpayment determination was for a payment amount on a claim with a HCPCS or CPT code identified as having significant, anomalous, and highly suspect billing activity, and therefore the payment amount was excluded from certain financial calculations used in determining the ACO's financial performance under the proposed adjustment discussed in section III.G.7.d of the CY 2025 PFS proposed rule, we would not include this amount as part of a reopening for the same performance year. As another example, if the demanded overpayment determination was for a claim or line item that was initially paid after the end of the 3-month claims run out period, we would not take into account through the reopening process a payment amount that was not included in Shared Savings Program calculations to begin with. We anticipated improper payments identified in these circumstances would not merit reopening the ACO's initial determination.

We specified that a number of steps would follow after CMS has decided to reopen the initial determination. We would recalculate the ACO's financial performance for a performance year by applying the methodology as described in section III.G.7.c.(2).(c) of the CY 2025 PFS proposed rule. With this recalculation we would determine the amount of shared savings payment the ACO may be eligible to receive or the amount of shared losses the ACO may owe for the performance year after accounting for the impact of the improper payments. We would issue a revised initial determination to the ACO with the recalculated payment determination for the performance year. We would notify the ACO of savings and losses in accordance with § 425.604(f), § 425.605(e), § 425.606(h), § 425.609(e), or § 425.610(h) (as applicable). Depending on the outcome of the recalculation as specified in the revised initial determination, we would engage in payment activities and recoupment activities, as needed. As explained in earlier rulemaking, we anticipated considering ways to minimize program disruptions for ACOs that could result from one or more reopenings (see for example, 81 FR 38001 through 38002; see also, 87 FR 69868 through 69872). We noted that CMS may require considerable time after deciding to reopen an initial determination before it can complete the aforementioned process for a variety of reasons. For example, additional time may be necessary for CMS or other agencies to ascertain the precise amount of improper payments that affected the initial determination.

In reopening a payment determination, we noted that improper payments may impact either performance year expenditures, the ACO's updated historical benchmark used in determining the ACO's financial performance (including calculation of benchmark expenditures and factors used to establish, adjust and update the ACO's historical benchmark), or both. The recalculation of the ACO's financial performance may have varying effects on the ACO's payment determination for the performance year. In some scenarios, the recalculation may change the determination of whether the ACO earned shared savings or owes shared losses, or may change the amount of any shared savings earned or shared losses owed. It is also possible that we may observe there is no impact on the amount of shared savings earned or amount of shared losses owed by the ACO, once we have performed the recalculation of the ACO's financial performance.

Under the Shared Savings Program's benchmarking methodology, there are potential interactions between performance of an ACO under the program for a performance year during an agreement period and resetting the ACO's benchmark for a subsequent agreement period. Specifically, an ACO's performance year may correspond to a benchmark year of its subsequent agreement period, such that improper payments impacting expenditures for Medicare FFS beneficiaries used to determine performance year expenditures may similarly impact expenditures for the same period used to establish the ACO's historical benchmark. For instance, for ACOs that have participated in the Shared Savings Program over multiple agreement periods, improper payments may impact the amount of a prior savings adjustment to the historical benchmark (if applicable).[594] We noted

[592] *See, for example,* 81 FR 38000 and 38001.

[593] This example assumes a one-sided model ACO with an MSR based on the number of beneficiaries assigned to the ACO, or a two-sided model ACO with an MSR/MLR greater than zero.

[594] Refer to § 425.658 specifying calculation of the prior savings adjustment applicable to ACOs in agreement periods beginning on January 1, 2024, and in subsequent years. Refer to § 425.603(b)(2) specifying an additional adjustment is made to the historical benchmark to account for the average per capita amount of savings generated during the ACO's previous agreement period, implemented for renewing ACOs entering a second agreement period in 2016. See the discussion in the CY 2023 PFS final rule, in which we finalized the prior savings adjustment applicable for agreement periods beginning on January 1, 2024, and in subsequent years, and provided background on, and a description of, the prior savings adjustment that

Continued

the complexity around some related interactions in regard to recalculating the prior savings adjustment, as discussed in CY 2024 PFS rulemaking (see 88 FR 79198 through 79200), and as described in section III.G.7.c.(1).(b) of the CY 2025 PFS proposed rule. We noted that reopenings at any time for fraud or similar fault could extend to any prior performance year of the Shared Savings Program. Since Shared Savings Program policies have changed over time, in performing the recalculation we would apply the relevant financial model and benchmarking policy for the ACO for that performance year, in accordance with the applicable provisions of subpart G.

Third, we specified that we are considering limiting the instances in which we reopen an initial determination to account for improper payments, pursuant to § 425.315(a), to strike a balance between improving the accuracy of the calculations and ACOs' and CMS' interest in administrative finality of payment determinations. We explained that in rulemaking for the Shared Savings Program during 2016, we considered factors for balancing the need to reopen and correct Shared Savings Program payment determinations with the need for administrative finality, which has implications for both ACOs and CMS (81 FR 5853 through 5858, and 81 FR 37997 through 38002). Some of these factors were discussed more generally, in the February 2016 proposed rule, with respect to our consideration of options for further developing our reopening policy (see, for example, 81 FR 5854 and 5855). We explained that an approach of correcting even very minor errors might result in significant operational burdens for ACOs and CMS, including multiple financial reconciliation re-runs and off-cycle payment/recoupment activities that could have the potential for significant and unintended operational consequences, and could jeopardize the certainty of performance results for both ACOs and CMS. We explained our concern that a relatively broad scope and extended timeframe for reopening could introduce financial uncertainty that could limit an ACO's ability to invest in additional improvements to increase quality and efficiency of care. This uncertainty could also limit an ACO's ability to get a clean opinion from its financial auditors and/or to obtain funds from lenders or investors.

We noted our concern about the potential for financial uncertainty resulting from a broad scope and extended timeframe for reopening for ACOs and CMS, particularly if correcting minor errors resulting from improper payments. We stated our concern that reopening payment determinations for minor issues impacting calculations for one or several performance years of an ACO's earlier agreement period could in turn disrupt the administrative finality of calculations for multiple performances years, in one or more subsequent agreement period, if the impacted year(s) become benchmark year(s) used in resetting the ACO's historical benchmark. We also noted that since an ACO's performance can vary from year to year (in terms of whether the ACO generates savings or losses and is eligible for shared savings or owes shared losses), it is possible for there to be a mixed effect across reopening payment determinations for multiple performance years. If the recalculation of financial performance identifies relatively small changes in the amount of shared savings or shared losses, it could be possible for these changes to balance out over a span of multiple performance years. This raises further questions about the utility of reopening payment determinations versus maintaining administrative finality of initial determinations.

We noted that a relatively straightforward case would be to reopen a single performance year that we identify as having been impacted by improper payments. When a performance year for which we issue a revised initial determination becomes a benchmark year of an ACO's subsequent agreement period, whether we reopen an ACO's payment determination to account for the impact of improper payments in Shared Savings Program calculations would differ depending on whether or not we have issued an initial determination for a performance year of the ACO's subsequent agreement period. If the subsequent agreement period is the ACO's current agreement period, and CMS has not yet issued an initial determination for a performance year within the current agreement period, we would account for the impact of improper payments on future financial calculations pursuant to the proposed benchmark adjustment specified in modifications to §§ 425.601(a)(9) and 425.652(a)(9).[595] In section III.G.7.c.(2).(d) of the CY 2025 PFS proposed rule we discussed our proposals related to modifying these provisions.

We specified that CMS' decision to reopen an initial determination for a performance year is independent of a determination by CMS to reopen an initial determination for any other performance year, including in cases where multiple performance years are impacted by the same improper payments, whether within the ACO's current agreement period, or a past agreement period. In these circumstances, we would need to potentially consider reopening initial determinations for multiple performance years, which may span multiple agreement periods, in cases where an ACO has continued its participation in the Shared Savings Program over time. Therefore, we may use a combination of the following factors in determining whether to reopen an initial determination: (1) consideration of the timing of reopening and recalculating the payment determination for a performance year, and the timing of financial reconciliation for one or more performance year of a subsequent agreement period that includes the affected period as a benchmark year, and (2) consideration of whether the improper payments result from conduct of individuals or entities performing functions or services related to the ACO's activities.

Regarding the timing for reopening, we stated that we may consider whether a performance year that is being reopened corresponds to a benchmark year of an ACO's subsequent agreement period. We may consider whether we have completed financial reconciliation for a subsequent performance year, using a benchmark that is impacted by the same improper payments that were accounted for in reopening a payment determination for a performance year corresponding to a benchmark year.

We explained our expectation that ACOs continuing their participation over multiple agreement periods in the Shared Savings Program have a heightened interest in administrative finality of payment determinations, which would provide greater financial certainty to the continued operation of ACOs and progress towards meeting the program's goals. In such cases, our belief is that (1) reopening payment determinations for a performance year to account for the impact of improper

applied to certain ACOs in an earlier agreement period (87 FR 69898 through 69915).

[595] We note that the description in the CY 2025 PFS proposed rule is an illustration of the applicability of the benchmark adjustment, among other possible scenarios in which it could be applied. We refer readers to section III.G.7.c.(2).(d) of this final rule, in which we clarify the applicability of the benchmark adjustment.

payments remains important to improving the accuracy of the Shared Savings Program's calculations, and (2) maintaining the administrative finality of subsequent payment determinations, if the same improper payments impact a benchmark year of an ACO's subsequent agreement period, could provide ACOs greater financial certainty with respect to their participation which may outweigh the benefits of reopening the calculations. Maintaining administrative finality of the payment determinations for these subsequent performance years may be warranted in cases where the improper payments are not a result of the conduct of individuals or entities within the ACO. On the other hand, in cases where improper payments impacting Shared Savings Program calculations results from conduct by individuals or entities within the ACO, CMS' interest in addressing program integrity concerns would warrant reopening all affected payment determinations. In these cases, if left unaddressed, ACOs, ACO participants and ACO providers/suppliers, among others, may have incentives to continue to engage in conduct, which could include fraud or similar fault, in a way that could improve the ACO's performance under the Shared Savings Program.

We noted in the CY 2025 PFS proposed rule, although not expressly stated in § 425.315, improper payments that are the basis of a reopening may result from the conduct of individuals or entities including but not limited to: (1) conduct of an ACO, ACO participant, ACO provider/supplier, ACO professional, or other individuals or entities performing functions or services related to the ACO's activities; or (2) conduct of a provider or supplier, or other individuals or entities outside the ACO. For purposes of the discussion within section III.G.7.c of the CY 2025 PFS proposed rule, we referred to the former as improper payments originating ''inside the ACO,'' and the latter as improper payments originating ''outside the ACO.''

We provided a brief summary of an approach we may use for differentiating between cases where improper payments originate inside the ACO versus outside the ACO. If we identify a single performance year for which we have issued an initial determination that has been impacted by improper payments, we would seek to reopen the payment determination if the improper payments originated either inside the ACO or outside the ACO.

When a performance year for which we issue a revised initial determination becomes a benchmark year of an ACO's subsequent agreement period, we would consider whether to reopen each initial determination for a subsequent performance year that is impacted. We explained that we may take the following approach as one means to operate reopenings in an equitable and manageable manner:

- *In cases where improper payments originated outside the ACO:* Generally, we would not seek to reopen payment determinations for any performance year of the ACO's subsequent agreement period in order to mitigate the extent to which we disrupt the administrative finality of payment determinations for ACOs when the improper payments impacting Shared Savings Program calculations originate outside the ACO. However, we may consider reopening the initial determination for the performance year upon the ACO's request for a reopening if the improper payments are anticipated to result in significant adjustment to the ACO's initial determination upon recalculation.
- *In cases where improper payments originated inside the ACO:* As a means to address our program integrity concerns, we would reopen the payment determination for any performance year of the ACO's subsequent agreement period issued prior to the revised initial determination for the performance year corresponding to the benchmark year impacted by improper payments originating inside the ACO, if the improper payments are anticipated to result in significant adjustment to the ACO's initial determination upon recalculation. We believe this approach would guard against circumstances where an ACO may benefit from improper payments remaining in its benchmark calculations that result from conduct by individuals or entities performing functions or services related to the ACO's activities.

We solicited comment on the factors we described in section III.G.7.c.(2).(b) of the CY 2025 PFS proposed rule (89 FR 61895 through 61898), that may inform our decision of whether to reopen an initial determination of an ACO's financial performance to account for the impact of improper payments. In particular, we solicited comment on the approach we outlined for conducting initial analysis of whether the improper payments would warrant reopening the ACO's payment determination. We also solicited comment on approaches to, and considerations in connection with, balancing the need for accuracy in payment calculations with the need for administrative finality in payment determinations.

We received public comments on the considerations we described and sought comment on, for reopening payment determinations to account for the impact of improper payments. The following is a summary of the comments we received and our responses.

Comment: One commenter urged that CMS provide additional clarity around CMS' considerations for determining if an improper payment is of sufficient magnitude to reopen a determination. Another commenter, an ACO, explained that it was difficult to model the impact of improper payments outside the ACO on its ACO and on regional and national trends, and on providers and ACOs more generally. As a result, the commenter stated that they were unable to ascertain the meaningfulness of the approach, including consideration of whether there is resulting ''significant'' change to ACO financials.

Response: In response to commenters indicating it was unclear from the discussion in the proposed rule our considerations for determining if an improper payment is of sufficient magnitude to reopen a payment determination, for one, we note that in the CY 2025 PFS proposed rule (89 FR 61896) we specified that we would be highly unlikely to exercise our discretion to reopen a payment determination to address particular instances of low-value improper payments which, in an individual case may be to the benefit of either the ACO or CMS and in the aggregate are likely to have a de minimis net effect on program expenditures in the long run. In the case of a reopening to account for the impact of improper payments, we wish to clarify that this consideration about our concerns with reopening payment determinations to address low-value improper payments is also relevant at the level of individual ACO expenditures, in addition to more broadly with respect to program expenditures. We also explained that we may reopen an ACO's payment determination if accounting for the impact of improper payments would result in a significant change in the amount of shared savings paid to or shared losses owed by the ACO, including if we estimate that the improper payments have impacted the dollar amount of earned shared savings, or the amount of shared losses that the ACO owes or has paid to CMS. There could be a wide range of potential financial impacts as a result of reopening payment determinations that could be considered ''significant''.

As described in the CY 2025 PFS proposed rule (89 FR 61896), and reiterated in this section of this final

rule, we may consider a combination of factors to evaluate the significance of the improper payments to an ACO's financial calculations. This includes considerations for whether accounting for the improper payments would cause a change in the ACO's eligibility for shared savings or liability for shared losses, or the extent to which an ACO would share in either a higher or lower amount of savings or losses, compared to its performance under its initial determination. We decline at this time to further specify how we may determine whether improper payments have significant impact on an ACO's financial calculations, and what may constitute a significant impact, or sufficient magnitude of an impact, to warrant reopening an ACO's payment determination. As we gain experience with the application of the methodology for recalculating expenditures to account for the impact of improper payments on Shared Savings Program financial calculations being finalized with this final rule, we may address these factors and related considerations further in future notice and comment rulemaking.

We agree with the commenter that explained it is potentially difficult for an ACO to model the impact of improper payments outside the ACO on its ACO and on regional and national trends, as well as on providers and ACOs more generally, because they may lack insight into these larger impacts. The hypothetical example calculations described in section III.G.7.c.(2).(c) of the CY 2025 PFS proposed rule (89 FR 61901 through 61906) provide a basis for ACOs and other interested parties to understand how the recalculation methodology to account for improper payments would be applied, and considerations in connection with the potential impact of the recalculation on factors based on national and regional expenditures for the assignable population (under the scenarios illustrated in the examples). An ACO, for example, could follow the approach illustrated in the hypothetical examples using a range of assumptions on the impact to national and regional expenditures to estimate the potential range of impacts to the ACO's own savings/losses calculations. In section III.G.7.c.(2).(e) of this final rule, we described in another response to comments, additional considerations regarding ACOs' ability to estimate the financial impact of improper payments on their shared savings or shared losses calculations in reference to the types of information ACOs may submit to CMS with a reopening request, and refer the commenter and other interested parties to the cross-referenced discussion for additional considerations. In particular, we wish to underscore that with respect to the evidence or analysis of financial impact of improper payments that an ACO may provide with its reopening request, although an ACO may undertake this analysis and submit related information to CMS, this does not necessarily need to involve a complex analysis or include an analysis of the impact on national expenditures, regional expenditures, or both.

Comment: A few commenters expressed general support for the approach discussed in the CY 2025 PFS proposed rule under which CMS would limit the instances in which it reopens an initial determination, and thereby maintain administrative finality of initial determinations. One commenter explained that it is important to minimize the reopening of previous years to avoid a perception of instability for the program, and recommended CMS avoid reopening previous years' financial determinations without ''significant reasons.''

Response: We appreciate commenters' support for the approach we specified in the CY 2025 PFS proposed rule under which we would consider limiting the instances in which we reopen an initial determination to account for improper payments, pursuant to § 425.315(a), to strike a balance between improving the accuracy of the calculations and ACOs' and CMS' interest in administrative finality of payment determinations. ACOs continuing their participation over multiple agreement periods in the Shared Savings Program have a heightened interest in administrative finality of payment determinations, which would provide greater financial certainty to the continued operation of ACOs and progress towards meeting the program's goals.

In response to the commenter that underscored the importance of minimizing the reopening of previous years' initial determinations to avoid a perception of instability for the program, we agree that preserving administrative finality of ACO payment determinations, when possible, would provide greater certainty to ACOs currently participating in the Shared Savings Program, and also may impact participation decisions by ACOs considering entering the program or renewing to continue their participation in the program. An approach to reopening in which we differentiate between cases where improper payments originate inside the ACO versus outside the ACO when considering whether to reopen a payment determination or to maintain administrative finality strikes an important balance. The approach outlined elsewhere in this section of this final rule, balances mitigating disruption to the administrative finality of payment determinations for ACOs when the improper payments impacting Shared Savings Program calculations originate outside the ACO and guarding against circumstances where an ACO may benefit from improper payments remaining in its benchmark calculations that result from conduct by individuals or entities performing functions or services related to the ACO's activities.

Comment: One commenter, addressing the circumstance in which adjustment to ACO financial performance under the proposed approach results in a recoupment from ACOs, suggested that CMS delay recoupment until ''the next shared savings settlement,'' to enable ACOs to financially plan with confidence since many ACOs operate without significant cash reserves.

Response: We appreciate that ACOs operate under financial constraints, and we will take the commenter's suggestion under consideration as we adjudicate reopening requests. We will continue to consider ways to minimize program disruptions for ACOs that could result from one or more reopenings, to the extent feasible, and to reduce operational burdens for both ACOs and CMS that could result from making payment adjustments, as reflected in the discussion in the CY 2025 PFS proposed rule (89 FR 61896 through 61897), and earlier rulemaking (see for example, 81 FR 38001 through 38002; see also, 87 FR 69868 through 69872).

Comment: One commenter expressed support for an approach under which revised initial determinations should be subject to reconsideration review to allow for an ACO to ''appeal recalculations.''

Response: As we have explained in earlier rulemaking (see, for example, 81 FR 37998), the financial reconciliation calculation/methodology and the amount of shared savings an ACO might earn, including all underlying financial calculations, are not appealable. That is, the determination of whether an ACO is eligible for shared savings under section 1899(d) of the Act, and the amount of such shared savings, as well as the underlying financial calculations are precluded from administrative and judicial review under section 1899(g)(4) of the Act and § 425.800(a)(4). Section 425.800(a)(4) specifies there is no reconsideration, appeal, or other administrative or judicial review of the initial determination or revised initial

determination of whether an ACO is eligible for shared savings, and the amount of such shared savings, including the initial determination or revised initial determination of the estimated average per capita Medicare expenditures under the ACO for Medicare FFS beneficiaries assigned to the ACO and the average benchmark for the ACO in accordance with section 1899(d) of the Act, as implemented under §§ 425.601, 425.602, 425.603, 425.604, 425.605, 425.606, 425.610, and 425.652. For more information on reconsideration review under the Shared Savings Program, we would refer readers to Subpart I of our regulations, and the Shared Savings Program's guidance on Requesting Technical Assistance and Reconsideration Review, which is located on the Shared Savings Program website, For ACOs web page, at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/sharedsavingsprogram/application-information.*

Comment: One commenter suggested an alternative approach under which CMS should be able to recalculate shared savings or shared losses for instances other than fraud or similar fault, or good cause as currently specified in the regulations under § 425.315. In particular, the commenter requested that CMS reopen and adjust benchmark periods, trends, and performance year expenditures in situations when ACOs are without recourse from improper agency actions significantly impacting ACO reconciliation and for which there is no opportunity to otherwise mitigate reconciliation impact. Further, the commenter gave as an example that several ACOs experienced significant benchmark discrepancies as a result of the payment remedy for 340B-acquired drugs, referring to earlier rulemaking for the Hospital Outpatient Prospective Payment System,[596] among other details.

Response: We decline, at this time, the commenter's suggestion to expand the reopening authority to potentially address circumstances other than fraud or similar fault, or good cause as currently specified in the regulations under § 425.315. Changes to the basis for which CMS reopens a payment determination under the Shared Savings Program were not contemplated in the proposals and other policy considerations we specified in the CY 2025 PFS proposed rule. Further, the existing standard strikes a good balance between allowing for the correction of significant issues impacting payment determinations and providing finality to ACOs. We also refer to our response to comments in earlier rulemaking (see 88 FR 77184 through 77185) in which we explained that the Shared Savings Program's benchmarking methodology has the potential to mitigate the differences between the 340B-acquired drug payments included in historical benchmark year and performance year expenditure calculations, among other considerations with respect to how the payments amounts would be considered in Shared Savings Program calculations.

(c) Methodology for Recalculating Expenditures To Account for Improper Payments

In section III.G.7.c.(2).(c) of the CY 2025 PFS proposed rule (89 FR 61898 through 61907), we proposed to establish a financial calculation methodology that may be used to account for the impact of improper payments on Shared Savings Program financial calculations, upon reopening a payment determination pursuant to § 425.315(a). We proposed to add to subpart G a new section of the Shared Savings Program regulation at § 425.674 specifying provisions on accounting for the impact of improper payments on Shared Savings Program financial calculations.

As a general rule, we proposed to specify in paragraph (a) of § 425.674, that upon the reopening of an initial determination pursuant to § 425.315(a)(4), CMS will use the methodology set forth in § 425.674 to account for the impact of improper payments when: (1) determining savings or losses for the relevant performance year in accordance with § 425.315 in order to issue a revised initial determination, and (2) adjusting the benchmark by recalculating benchmark year expenditures in the event that we recalculate a payment determination and issue a revised initial determination for the corresponding performance year in a prior agreement period (discussed in section III.G.7.c.(2).(d) of the CY 2025 PFS proposed rule, 89 FR 61907).

We proposed to specify in paragraph (b) of § 425.674 that for the purpose of the Shared Savings Program, ''improper payment'' includes: (1) an amount associated with a demanded overpayment determination, and (2) an amount identified in a settlement agreement or judgment, pursuant to conduct of individuals or entities performing functions or services related to an ACO's activities, less any penalties or damages.

We proposed to establish a methodology under § 425.674 under which we would adjust Medicare Parts A and B FFS expenditure values used in certain Shared Savings Program financial calculations to account for a per capita amount of improper payments for an identified population used in calculating performance year or benchmark year expenditures, and in calculating county-level FFS expenditures used in factors based on regional expenditures.

We proposed to specify under § 425.674 a generalized approach to calculating the per capita amounts of improper payments that accounts for the fact that improper payments may be associated with specific claims or line items, or may be aggregate amounts. A number of factors informed our consideration of this approach. For one, we considered the need to establish a calculation methodology to account for demanded overpayment determinations that result in adjustments to payment amounts associated with claims and line items used in Shared Savings Program calculations, such as the denial of claims or line items that occur after the 3-month claims run out period, or in an aggregate amount, such as based on extrapolated overpayment demands that do not result in adjustments to claim or line item payment amounts. Medicare Parts A and B FFS claim adjustments for overpayments would be reflected in current Shared Savings Program expenditure calculations if processed before the end of the 3-month claims run out period but are not included in calculations if processed after the 3-month claims run out period. Regarding the latter, the amounts of the claims adjusted overpayments can be identified for Medicare FFS beneficiaries, and can be aggregated across a population of Medicare FFS beneficiaries that is the basis for certain Shared Savings Program calculations. Additionally, aggregate amounts of demanded overpayment determinations, such as extrapolated overpayment demands, may be used to identify the amount of improper payments for a large set of claims for a particular provider or supplier and a certain time period, since error rates are extrapolated and applied to a universe of claims rather than individual claims. In these cases, an aggregate amount of a demanded overpayment determination is attributable to a provider or supplier and would have to be further prorated to determine its relevance to a particular population of Medicare FFS

[596] Referring to a comment letter submitted in response to the proposed rule entitled ''Medicare Program; Hospital Outpatient Prospective Payment System: Remedy for the 340B-Acquired Drug Payment Policy for Calendar Years 2018–2022'' (file code CMS–1793–P) which appeared in the July 14, 2023 **Federal Register** (88 FR 44078).

beneficiaries that is the basis for certain Shared Savings Program calculations.

Second, we considered the need for the calculation methodology to account for improper payments resulting from conduct by an ACO, ACO participant, ACO provider/supplier, ACO professional, or other individuals or entities performing functions or services related to the ACO's activities identified in certain settlements, or judgments. With respect to the Shared Savings Program calculations, we noted that we anticipate that a key focus would be on improper payments pursuant to conduct of individuals or entities performing functions or services related to an ACO's activities as identified in certain False Claims Act (31 U.S.C. 3729 *et seq.*) settlement agreements, or judgments. In considering the amount of improper payments that are relevant to Shared Savings Program calculations, we would exclude the amount of any penalties or damages included in the settlement or judgment. In addition, we may seek to attribute an aggregate improper payment amount to a provider or supplier that is specified within a settlement agreement, or judgment, across a population of Medicare FFS beneficiaries that is the basis for the applicable Shared Savings Program calculation.

Further, we explained there may be circumstances that warrant adjustment to payment amounts used in Shared Savings Program calculations, at the claims level, instead of or in addition to accounting for the amount of demanded overpayment determinations or an aggregate amount in a settlement agreement or judgment. For instance, in analyzing improper payments impacting Shared Savings Program calculations, we may conclude that a provider's or supplier's billings for a particular HCPCS or CPT code for a population of Medicare FFS beneficiaries resulted in inaccuracies in payment amounts used in Shared Savings Program calculations. We proposed that we may address these circumstances by decreasing or entirely removing the value of HCPCS or CPT code payment amounts for certain claims or line items used in Shared Savings Program calculations, in reopening and recalculating the ACO's payment determination. We specified that we anticipated using all information available to us from an investigation, settlement agreement, or judgment to determine the correct payment amount or level of billing. This could include considering the nature of the remedy in the case and how any related amount would be applied in the proposed methodology to account for improper payments impacting Shared Savings Program financial calculations. In particular, we would consider if it would be a more precise adjustment to Shared Savings Program financial calculations to adjust the claim or line item payment amounts, instead of or in addition to accounting for the amount of demanded overpayment determinations or an aggregate amount in a settlement agreement or judgment (if applicable). For instance, in cases where an investigation, settlement agreement, or judgment has determined inaccurate use of a higher paying code [597] that is reflected in payment amounts used in Shared Savings Program calculations, we may identify use of a code with lower reimbursement within a HCPCS or CPT code category that would result in a more precise adjustment to the ACO's payment determination.

We proposed to specify in paragraphs (c) and (d) of § 425.674 the general approach for adjusting Medicare Parts A and B FFS expenditures for improper payments, according to the following steps:

- *Step 1*—Identify *calculation for adjustment:* Identify each Shared Savings Program expenditure calculation for a performance year or benchmark year, as calculated according to the standard methodology described in subpart G and expressed as a per capita dollar amount, that would be adjusted for the impact of improper payments (as proposed in § 425.674(c)(1)).
- *Step 2—Determine the relevant population for adjustment:* Determine each specific population of Medicare FFS beneficiaries used to calculate the expenditure amount identified in Step 1, expressed as person years (as proposed in § 425.674(c)(2)). The populations relevant for a specific expenditure calculation may include:

++ The population of beneficiaries assigned to the ACO for calculating the ACO's performance year or benchmark year expenditures.

++ The population of assignable beneficiaries in each county in the ACO's regional service area for calculating county-level expenditures.

++ The national population of assignable beneficiaries for calculating national assignable expenditures.

++ The national population of Medicare FFS beneficiaries for calculating national expenditures.

- *Step 3—Determine per capita amount of improper payments attributable to the relevant population:* Determine the per capita amount of improper payments for the performance year or benchmark year included in the per capita Medicare Parts A and B FFS expenditure amount for a population identified in Step 2 (as proposed in § 425.674(c)(3)). We may use one or more of the following approaches to determine the per capita amount of improper payments, for all providers or suppliers with improper payments, that would be used to adjust the expenditure calculations identified in Step 1 (as proposed in § 425.674(d)):

++ *Step 3(i):* Calculate aggregate improper payments attributable to a population identified in Step 2 for each provider or supplier that had improper payments.

—For improper payments associated with specific claims, we would do the following:

(A) For improper payments to a provider or supplier that correspond to payment amounts on claims or line items that were used in a Shared Savings Program calculation identified in Step 1, and subsequently adjusted after the 3-month claims run out period, we would sum the improper payment amounts across all such claims or line items with dates of service during the period used to calculate performance year or benchmark year expenditures, for a population identified in Step 2.

To allow for this approach, we proposed to adjust Shared Savings Program expenditure calculations to reflect adjustments occurring after the original 3-month claims run out period for claim or line item payment amounts associated with improper payments. We would not capture payments or payment adjustments occurring outside the original 3-month claims run out period for claims or line items unrelated to improper payments.

(B) In the event that CMS determines it is necessary to account for the impact of improper payments on Shared Savings Program financial calculations by adjusting the payment amounts for a specific HCPCS or CPT code billed by the provider or supplier for the population identified in Step 2, we would do the following: identify the applicable claims or line items with dates of service during the period used to calculate performance year or benchmark year expenditures processed before the end of the applicable 3-month claims run out period, and sum the

[597] See, for example, CMS, Medicare Claims Processing Manual Chapter 23—Fee Schedule Administration and Coding Requirements, section 20.9.5 ''Adjustments'', available at *https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c23.pdf* (explaining that if the wrong, higher paying code is paid on the first of multiple claims submitted, A/B MACs processing Medicare Part B claims pay the subsequent claim(s) and initiate recovery action on the previously paid claim(s)).

claim or line item payment amounts on the claims or line items identified; and if applicable, multiply the resulting sum by a scaling factor to compute the payment differential between the HCPCS or CPT code that was improperly billed and a CMS-identified alternate code. We would apply a scaling factor in cases where it is determined that the provider or supplier did not bill the correct code for a particular service. In cases where we determine it is appropriate to remove payments for the billed HCPCS or CPT code in their entirety, we would not apply a scaling factor.

—For aggregate improper payment amounts that are not linked to specific claims or line items, we would calculate the amount attributable to the population identified in Step 2 by applying a proration factor to the aggregate improper payment amount identified for that provider or supplier. We would calculate the proration factor as follows:

(A) The denominator of the proration factor would be total Medicare Parts A and B claim or line item payment amounts to the provider or supplier for all FFS beneficiaries on claims of specified claim types for the time period associated with the aggregate improper payment amount identified for the provider or supplier that were made before the end of the applicable 3-month claims run out period.

(B) The numerator of the proration factor would be the portion of the total from the denominator that CMS determines is attributable to the population identified in Step 2 with dates of service during the period used to calculate expenditures for the applicable performance year or benchmark year.

Under the proposed approach, if an aggregate amount of improper payment is associated with claims activity that spans multiple calendar years, we would account for this in the proration factor by expanding the time period used to compute payments for the denominator to include the relevant years. For example, if the aggregate amount of improper payments was associated with claims activity in 2021 and 2022, we would include in the denominator payments on claims or line items with dates of service in 2021 (made before the end of March 2022) and on claims or line items with dates of service in 2022 (made before the end of March 2023). If we were adjusting PY 2022 expenditures for an ACO's assigned population, the numerator of the proration factor would be the portion of the denominator that is attributable to the ACO's assigned population during CY 2022.

++ *Step 3(ii):* Sum the amounts calculated under Step 3(i) attributable to the population identified in Step 2 across providers or suppliers that had identified improper payments.

++ *Step 3(iii):* Take the lesser of the following two values:

—The sum from Step 3(ii); or

—Total Medicare Parts A and B claim or line item payment amounts to all providers or suppliers that had improper payments for the population identified in Step 2 on claims of specified claim types with dates of service within the performance year or benchmark year made before the end of the applicable 3-month claims run out period.

The purpose of taking the lesser of two values in this step is to ensure that the improper payment amount that we attribute to a given population cannot be greater than the total amount of payments for the providers or suppliers at issue that was included in the original expenditure calculation for that population.

++ *Step 3(iv):* Express the lesser-of-amount from Step 3(iii) as a per capita value by dividing by the total beneficiary person years in the population identified in Step 2 for the applicable performance year or the benchmark year.

• *Step 4—Subtract per capita improper payment amount from original expenditures:* From the expenditure calculation identified in Step 1 for the population identified in Step 2, subtract the per capita amount calculated in Step 3(iv) for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries (as proposed in § 425.674(c)(4)).

• *Step 5—Determine adjusted regional expenditures:* If applicable, we would do the following to adjust regional expenditures for improper payments (as proposed in § 425.674(c)(5)):

++ *Step 5(i):* Adjust county-level FFS expenditures determined in Step 4, for each county in the ACO's regional service area, for severity and case mix of assignable beneficiaries in the county using prospective HCC risk scores. This calculation would be for each of the following populations of beneficiaries based on Medicare enrollment type: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries. We note that under this approach CMS would not adjust the risk scores used to calculate risk adjusted county-level FFS expenditures.

++ *Step 5(ii):* Weight the risk-adjusted county-level FFS expenditures determined in Step 5(i) according to the ACO's proportion of assigned beneficiaries in the county, determined in accordance with § 425.601(d)(1), § 425.603(f)(1), or § 425.654(b)(1), as applicable, for each of the populations of beneficiaries by Medicare enrollment type.

++ *Step 5(iii):* Aggregate the values determined in Step 5(ii) for each of the populations of beneficiaries (by Medicare enrollment type) across all counties within the ACO's regional service area.

We illustrated how the proposed calculation methodology would be applied, considering the following hypothetical example in which CMS confirmed that two suppliers, NPI 1 and NPI 2, received improper payments from Medicare during calendar year 2022. Specifically, CMS identified $8 million in demanded overpayment determinations for NPI 1 which resulted in CMS adjusting payment amounts after the 3-month claims run out period for PY 2022 on claims or line items with dates of service during the performance year, and CMS identified an aggregate extrapolated overpayment demand amount of $30 million for NPI 2. This example assumes that CMS determines that reopening the ACO's PY 2022 initial determination is warranted, and CMS recalculates that ACO's financial performance using the proposed methodology to account for improper payments. To recalculate the ACO's financial performance for PY 2022, we would identify three separate expenditure calculations that need to be recalculated to determine the impact on an ACO's earned performance payment or owed shared losses: (1) PY 2022 expenditures for the ACO's assigned beneficiaries; (2) PY 2022 expenditures for assignable beneficiaries in the ACO's regional service area; and (3) PY 2022 expenditures for national assignable beneficiaries. For this example, in Table 47 we outlined the steps and calculations for recalculating expenditures for beneficiaries assigned to the ACO for PY 2022. In Table 48, we outlined how PY 2022 expenditures for assignable beneficiaries in the ACO's regional service area and PY 2022 expenditures for national assignable beneficiaries, recalculated to account for improper payments, would be incorporated into the blended national-regional benchmark update factor. In Table 49, we outlined how an ACO's

financial performance may be recalculated after accounting for improper payments in PY 2022 expenditures for the ACO's assigned beneficiaries, and using the recalculated blended national-regional benchmark update factor.

BILLING CODE 4120–01–P

TABLE 47: Hypothetical Example of Steps for Recalculating ACO Assigned Beneficiary Expenditures Using Proposed Methodology to Account for Improper Payments

	Amount
Steps 1 and 2: Identify calculation and relevant population for adjustment	
ACO PY assigned beneficiary expenditures by enrollment type (per capita) [A]	
ESRD	$80,000
Disabled	$11,000
Aged/dual	$15,000
Aged/non-dual	$12,000
ACO PY total assigned beneficiary person years [B]	20,000
Step 3: Determine per capita amount of improper payments attributable to the relevant population	
Aggregate improper payments attributable to the ACO's assigned beneficiaries for NPI 1 (identified at the claim or line item level)	
Total aggregate improper payments for NPI 1 [C]	$8,000,000
Aggregate improper payments for NPI 1 attributable to the ACO's assigned beneficiaries [D]	$200,000
Aggregate improper payments attributable to the ACO's assigned beneficiaries for NPI 2 (identified at the NPI level)	
Total aggregate improper payments for NPI 2 [E]	$30,000,000
Total Medicare Parts A and B claim or line item payment amounts to NPI 2 for the ACO's assigned beneficiaries for PY (a portion of row [G]) [F]	$4,800,000
Total Medicare Parts A and B claim or line item payment amounts to NPI 2 for all Medicare FFS beneficiaries, on claims of specified claim types for the time period associated with improper payment amount, made before the end of the 3-month claims run out period for PY [G]	$80,000,000
Proration factor [H] = [F] / [G]	0.06
Aggregate improper payments attributable to the ACO's assigned beneficiaries [I] = [E] x [H]	$1,800,000
Sum of improper payments attributable to the ACO's assigned beneficiaries for NPI 1 and NP1 2 [J] = [D] + [I]	$2,000,000
Total Medicare Parts A and B claim or line item payment amounts to NPI 1 and NPI 2 for the ACO's assigned beneficiaries made before the end of the 3-month claims run out period for PY [K]	$5,200,000
Total aggregate improper payments attributable to the ACO's assigned beneficiaries [L] = Lesser of [J] and [K]	$2,000,000
Per capita improper payments attributable to the ACO's assigned beneficiaries [M] = [L] / [B]	$100
Step 4: Subtract per capita improper payment amount from original expenditures	
Adjusted ACO PY assigned beneficiary expenditures by enrollment type (per capita) [N] = [A] – [M]	
ESRD	$79,900
Disabled	$10,900
Aged/dual	$14,900
Aged/non-dual	$11,900

BILLING CODE 4120–01–C

In Step 1, we identify expenditures for the ACO's assigned beneficiaries in PY 2022 as the calculation to be recalculated. In Step 2, we identify the ACO's assigned beneficiaries in PY 2022 as the population relevant for this expenditure calculation. In Step 3, we determine the per capita amount of improper payments that is attributable to the ACO's assigned beneficiaries. For NPI 1, we identify that $200,000 of the NPI's total aggregate improper payments were on claims for the ACO's assigned beneficiaries (row [D]). Because improper payments for NPI 2 were identified at the NPI level and thus are not tied to individual claims, we need

to apply a proration factor to calculate the share of the total aggregate improper payments, $30 million (row [E]), that is attributable to the ACO's assigned beneficiaries. We calculate this proration factor as the total Medicare Parts A and B claim or line item payment amounts made to NPI 2 for the ACO's assigned beneficiaries for PY 2022 ($4.8 million, row [F]), divided by the total Medicare Parts A and B claim or line item payment amounts made to NPI 2 for all Medicare FFS beneficiaries ($80 million, row [G]); this results in a proration factor of 0.06 (row [H]), which when applied to NPI 2's total aggregate improper payments results in $1.8 million in aggregate improper payments attributable to the ACO's assigned beneficiaries (row [I]). Summing across NPI 1 and NPI 2, we calculate $2 million in total aggregate improper payments attributable to the ACO's assigned beneficiaries for PY 2022 (row [J]). We then compare this sum (row [J]) with total Medicare Parts A and B claim or line item payment amounts to the two suppliers for the ACO's assigned beneficiaries for PY 2022 (row [K]) and take the lesser of the two values (row [L]). We then express this lesser-of value in per capita terms by dividing by the ACO's total assigned beneficiary person years for PY 2022, 20,000, arriving at a $100 per capita improper payment amount attributable to the ACO's assigned beneficiaries (row [M]). Finally, in Step 4, we subtract the $100 per capita improper payment amount from the original PY 2022 per capita expenditure amount for the ACO's assigned beneficiaries used to make the initial payment determination, conducting this adjustment by enrollment type (row [N]).

We noted that subtracting the same per capita improper payment amount ($100 in this example) from the expenditure calculation for each enrollment type population implicitly assumes that improper payments attributable to the overall population are distributed in proportion to the four enrollment types (ESRD, disabled, aged/dual eligible, aged/non-dual eligible). For example, if the aged/non-dual eligible population represents 82 percent of an ACO's overall assigned population for the performance year, we are assuming that 82 percent of improper payments attributable to the ACO's entire assigned population are associated with aged/non-dual eligible beneficiaries. We explained our belief that this is a reasonable assumption as we expect that, in most cases, improper payments are unlikely to be associated with a particular enrollment type as defined by the Shared Savings Program and used in program financial calculations.[598] This also allows for a standard approach across the potential variety of reopening scenarios, lending greater transparency and simplicity to the proposed methodology.

We would follow the same overall methodology to account for the impact of improper payments in recalculating PY 2022 expenditures for assignable beneficiaries in the ACO's regional service area and for national assignable beneficiaries. These amounts are calculated for the following populations of beneficiaries, by Medicare enrollment type: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries. We would then use these adjusted expenditure calculations as new inputs along with other original calculations that were not adjusted for the impact of improper payments (such as the ACO's historical benchmark for PY 2022) to recalculate the ACO's financial performance for PY 2022, following the standard financial methodology described in § 425.605 (for ACOs participating in the BASIC track) or § 425.610 (for ACOs participating in the ENHANCED track), as applicable.

[598] For criteria used to identify the four Medicare enrollment types, refer to the Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version #11, January 2023), available at *https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2* (Appendix E: Identifying Medicare Enrollment Type).

In Table 48, we expanded upon the hypothetical example described in Table 47 and summarized how we would calculate national and regional update factors following the methodology specified in § 425.652(b)(2) but using the adjusted regional and national expenditures for the performance year for each enrollment type in place of the original values. Because benchmark update factors are calculated by enrollment type under the standard financial methodology, they would also be recalculated by enrollment type when using the adjusted national and regional expenditures. However, for brevity, we described only the recalculation of the update factors for the aged/non-dual eligible population in Table 48.

In this continued hypothetical example, we used the proposed methodology to account for the impact of improper payments in recalculating national and regional per capita expenditures in the performance year, resulting in adjusted expenditures of $11,609 (row [A]) and $11,210 (row [C]), respectively. Dividing these PY values by the original BY3 national and regional per capita expenditures ($10,977, row [A], and $10,900, row [C], respectively), we recalculate the national update factor (1.058, row [B]) and regional update factor (1.028, row [D]). In this example, there is a $1 difference between the original and recalculated national per capita expenditure amount. The resulting value for the recalculated national update factor, shown rounded to the third decimal place, remains the same as the original value, but there would be a difference in the values if additional precision was shown. We then blend these adjusted update factors using the original national and regional weights (0.250, row [E], and 0.750, row [F], respectively). As shown in row [G], accounting for improper payments in PY 2022 causes the blended benchmark update factor to decrease from 1.042 to 1.036.

TABLE 48: Hypothetical Example of How the Blended National-Regional Benchmark Update Factor for the Aged/Non-Dual Eligible Enrollment Type May Be Recalculated After Accounting for Improper Payments

	BY3	PY (Original)	PY (Adjusted)
National per capita expenditures [A]	$10,977	$11,610	$11,609
National update factor [B] = $[A]_{PY}$ / $[A]_{BY3}$		1.058	1.058
Regional per capita expenditures [C]	$10,900	$11,300	$11,210
Regional update factor [D] = $[C]_{PY}$ / $[C]_{BY3}$		1.037	1.028
National weight [E]		0.250	0.250
Regional weight [F]		0.750	0.750
National-regional blended update factor [G] = [B] x [E] + [D] x [F]		1.042	1.036

Table 49 summarized how the recalculated blended update factor to account for improper payments, based on adjusted national and regional expenditures for PY 2022, would be used with other original calculations and adjusted PY expenditures for ACO assigned beneficiaries to recalculate the ACO's financial performance for PY 2022. Applying the blended update factor (row [B]) to the original historical benchmark values by enrollment type (row [A]), we recalculate the updated benchmark values by enrollment type (row [C]) that account for improper payments occurring in PY 2022. The adjusted updated benchmark values (row [C]) and adjusted PY expenditures for ACO assigned beneficiaries by enrollment type (row [D]), also described in Table 47, are multiplied by original PY assigned beneficiary proportions by enrollment type (row [E]), and summed across enrollment types to recalculate the per capita updated benchmark (row [F]) and per capita ACO PY assigned beneficiary expenditures (row [G]). We then express these per capita quantities as the total updated benchmark amount (row [I]) and the total ACO PY assigned beneficiary expenditures amount (row [J]) by multiplying the per capita dollar amount by the ACO's total assigned beneficiary person years for PY 2022 (row [H]). The recalculated total updated benchmark (row [I]) can then be used to recalculate the MSR/MLR dollar threshold (row [L]). We subtract the recalculated total ACO PY assigned beneficiary expenditures (row [J]) from the recalculated total updated benchmark (row [I]) to determine if the ACO has gross savings or gross losses. Under this example, the recalculation indicates the ACO has total gross savings (row [K]). Finally, because the recalculated total gross savings (row [K]) is greater than the recalculated MSR dollar threshold, we recalculate the ACO's shared savings (row [N]) by multiplying the total gross savings (row [K]) by the original sharing rate (row [M]).

The result of these calculations is an adjusted shared savings amount of $17,355,000 (before accounting for sequestration), compared to an original amount of $16,950,000. Thus, while adjustments for improper payments reduced the ACO's PY assigned beneficiary expenditures by $2 million, the impact on the ACO's recalculated shared savings is only $405,000 due to the impact of improper payments on the expenditures for assignable beneficiaries that factor into the ACO's recalculated updated benchmark for PY 2022.

BILLING CODE 4120–01–P

TABLE 49: Hypothetical Example of How an ACO's Financial Performance May Be Recalculated After Accounting for Improper Payments

	Original	Adjusted	Adjusted Minus Original
Historical benchmark by enrollment type (risk adjusted, per capita) [A]			
ESRD	$89,200		
Disabled	$12,700		
Aged/dual	$17,700		
Aged/non-dual	$12,200		
National-regional blended update factor by enrollment type [B]			
ESRD	1.007	1.006	-0.001
Disabled	1.028	1.022	-0.006
Aged/dual	1.043	1.039	-0.004
Aged/non-dual	1.042	1.036	-0.006
Updated benchmark by enrollment type (per capita) [C] = [A] x [B]			
ESRD	$89,824	$89,735	-$89
Disabled	$13,056	$12,979	-$77
Aged/dual	$18,461	$18,390	-$71
Aged/non-dual	$12,712	$12,639	-$73
ACO PY assigned beneficiary expenditures by enrollment type (per capita) [D]			
ESRD	$80,000	$79,900	-$100
Disabled	$11,000	$10,900	-$100
Aged/dual	$15,000	$14,900	-$100
Aged/non-dual	$12,000	$11,900	-$100
ACO PY assigned beneficiary proportions by enrollment type [E]			
ESRD	0.010		
Disabled	0.100		
Aged/dual	0.070		
Aged/non-dual	0.820		
Updated benchmark (per capita) [F] = Sum of [C] x [E]	$13,920	$13,847	-$73
ACO PY assigned beneficiary expenditures (per capita) [G] = Sum of [D] x [E]	$12,790	$12,690	-$100
ACO PY total assigned beneficiary person years [H]	20,000		
Total updated benchmark [I] = [F] x [H]	$278,400,000	$276,940,000	-$1,460,000
Total ACO PY assigned beneficiary expenditures [J] = [G] x [H]	$255,800,000	$253,800,000	-$2,000,000
Total updated benchmark expenditures minus Total ACO PY assigned beneficiary expenditures [K] = [I] – [J] (example showing gross savings)	$22,600,000	$23,140,000	$540,000
Minimum savings rate / Minimum loss rate in dollars [L] = 0.02 x [I]	$5,568,000	$5,538,800	-$29,200
Sharing rate [M]	75%		
Shared savings [N] = [K] x [M]	$16,950,000	$17,355,000	$405,000

BILLING CODE 4120–01–C

Under the proposed financial methodology, accounting for the impact of improper payments on expenditures could increase or decrease an ACO's amount of shared savings or shared losses. As demonstrated in the hypothetical example, the direction of changes to an ACO's shared savings or shared losses would depend on the differential impact of improper payments on the ACO's assigned beneficiary expenditures compared to

the impact on expenditures for assignable beneficiaries used to determine the national and regional updates to the ACO's benchmark. In this example, the reduction in ACO PY assigned beneficiary expenditures due to the adjustment for improper payments was larger than the reduction to the updated benchmark stemming from adjustments to PY national and regional expenditures, ultimately causing the ACO to see an increase in both gross savings and shared savings. Other ACOs for which the reduction in ACO PY assigned beneficiary expenditures is greater than the reduction to the updated benchmark, may switch from earning no shared savings to earning shared savings or may see a reduction in shared losses owed. However, if accounting for improper payments results in relatively larger reductions to the expenditures for assignable beneficiaries in the ACO's regional service area or in the national assignable population, and relatively smaller reductions to the ACO's PY assigned beneficiary expenditures, the ACO might observe a reduction in shared savings or increase in shared losses, or potentially cause the ACO to switch from earning shared savings to not earning any shared savings or to owing shared losses.

As we proposed in section III.G.7.c.(2).(d) of the CY 2025 PFS proposed rule (89 FR 61907), if the reopened PY becomes a BY for a subsequent agreement period, CMS would adjust the historical benchmark to be used for any PY in that subsequent agreement period that has not yet been reconciled. We explained that accounting for improper payments as it affects the ACO's benchmark could then result in changes to the ACO's shared savings or shared losses for a future performance year that differ in direction compared to the change in shared savings or shared losses observed with the initial reopening that affected PY expenditures. That is, following the example from Table 49, accounting for improper payments occurring in calendar year 2022 might result in the ACO earning greater shared savings (or smaller shared losses) for PY 2022 (because the reduction in ACO PY assigned beneficiary expenditures outweighs the reduction in national and regional expenditures used to update the benchmark), but may result in smaller shared savings (or greater shared losses) for future performance years for which CY 2022 becomes a benchmark year (because the adjustment for improper payments in BY 2022 causes a reduction in the overall benchmark with no corresponding reduction to ACO PY expenditures).

We explained that administrative action and judicial action leading to the identification of improper payments may be subject to appeal, and ultimately the amount of the improper payments may be redetermined or otherwise amended. We acknowledged the potential inaccuracy in using amounts of improper payments that may be reversed, in whole or in part, in recalculating an ACO's financial performance. However, waiting for each possible appeal to be raised and resolved with respect to improper payments could delay our ability to reach a determination of whether to reopen an ACO's payment determination, identify the amounts of improper payments to be used in the recalculation, or both. We explained that we considered whether to account for the possibility that the improper payment amounts would be appealed, and the amount redetermined, as part the proposed methodology, but did not propose a related approach. For instance, we considered whether to apply an adjustment factor as part of the methodology, that would reduce the amount of improper payments by a percentage, to account for the rate at which the amounts could change, and to base this rate on statistics gathered on the outcomes of Medicare Parts A and B administrative appeals processes. Given that the proposed approach, if finalized, would be the initial use of improper payment amounts in Shared Savings Program calculation, we noted our intent to monitor for the impact of appeals on the amounts of improper payments that may be used in reopenings under the Shared Savings Program. We stated that we may revisit our approach in future notice and comment rulemaking, after we gain additional experience with using improper payment amounts in Shared Savings Program calculations.

We proposed to use our authority under section 1899(d)(1)(B)(ii) of the Act to calculate benchmark year expenditures using the proposed methodology to account for the impact of improper payments. This provision authorizes the Secretary to adjust the benchmark for beneficiary characteristics and ''such other factors as the Secretary determines appropriate''. When reopening an initial determination for a performance year pursuant to § 425.315, we considered it appropriate to account for the impact of improper payments on expenditures used to establish the ACO's historical benchmark, consistent with our proposal.

We proposed to use our authority under section 1899(i)(3) of the Act to use the proposed methodology to account for the impact of improper payments in calculating performance year expenditures and calculating the historical benchmark update factors. CMS may only adopt an alternative payment methodology pursuant to section 1899(i)(3) of the Act if we determine that the alternative payment methodology will improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without resulting in additional program expenditures.

We explained that the proposed adjustments would remove improper payments from the performance year expenditures and factors used to calculate updated historical benchmarks, among other financial calculations, that resulted in inaccuracies in an ACO's payment determination, including the amount of shared savings CMS paid an ACO or the amount of shared losses owed to CMS by an ACO participating under a two-sided model. We stated that these policies improve the accuracy of financial calculations by which ACOs are held accountable for the cost and quality of care for their assigned beneficiary populations.

Further, addressing the impact of improper payments on ACO payment determinations could serve as a mechanism to bolster program integrity. ACO accountability for the total cost of care can deter fraud, waste, and abuse that is otherwise under the control of ACO participants. Additionally, ACOs have unique insight into Medicare Part A, B, and D claims data for their assigned beneficiary populations from monthly claim and claim line level data ACOs receive from CMS for care coordination and quality improvement. This vantage point makes ACOs uniquely situated to observe trends in expenditures and utilization patterns, including by providers and suppliers that are not participating in the ACO. Further establishing policies to specify the approach to excluding improper payments from Shared Savings Program calculations could encourage ACOs to report to CMS and the HHS–OIG potential fraud and abuse within the Medicare program. Addressing improper payments in the Medicare program would protect the accuracy, fairness, and integrity of Shared Savings Program financial calculations, and lead to greater beneficiary protections and protection of the Trust Funds.

Accounting for the impact of improper payments in financial calculations promotes continued

integrity and fairness of Shared Savings Program payment determinations and may in turn bolster ACO participation in the Shared Savings Program. Policies that improve the accuracy of the payment calculations could provide greater certainty to organizations considering entering or continuing their participation in the Shared Savings Program and thereby lead to more robust and sustained participation by ACOs in the Shared Savings Program. This, in turn, means that these organizations would continue working towards meeting the Shared Savings Program's goals of lowering growth in Medicare FFS expenditures and improving the quality of care furnished to Medicare beneficiaries.

As described in the Regulatory Impact Analysis of the CY 2025 PFS proposed rule (89 FR 62183), accounting for the impact of improper payments on performance year expenditures and factors used to calculate updated historical benchmarks would not result in an increase in spending beyond the expenditures that would otherwise occur under the statutory payment methodology in section 1899(d) of the Act. As we also discuss in the CY 2025 PFS proposed rule, across an ACO's reconciliations where improper payments impact performance year or BY expenditures, the overall net impact of using the proposed methodology on the ACO's aggregate shared savings or shared losses across those reconciliations could be positive or negative and would depend on the circumstances of a given reopening scenario.

We stated that we will continue to reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. In the event that we later determine that the payment model established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Some commenters expressed general support for CMS' proposal to recalculate expenditures and payment amounts to account for improper payments upon reopening a payment determination, and a few commenters specifically stated support for the proposed calculation methodology, in general. A few commenters specifically supported the approach to accounting for improper payments identified beyond the Shared Savings Program's 3-month claims run-out period.

Response: We appreciate commenters' support for our proposed calculation methodology, and we are finalizing the methodology as proposed.

After consideration of the public comments, we are finalizing our proposal to add to subpart G a new section of the Shared Savings Program regulation at § 425.674 specifying provisions on accounting for the impact of improper payments on Shared Savings Program financial calculations, as described in this section of this final rule. Specifically, as finalized, paragraph (a) of § 425.674 specifies that upon the reopening of an initial determination pursuant to § 425.315(a)(4), CMS will use the methodology set forth in § 425.674 to account for the impact of improper payments when: (1) determining savings or losses for the relevant performance year in accordance with § 425.315 in order to issue a revised initial determination, and (2) adjusting the benchmark by recalculating benchmark year expenditures in the event that we recalculate a payment determination and issue a revised initial determination for the corresponding performance year in a prior agreement period. Paragraph (b) of § 425.674 specifies that for the purpose of the Shared Savings Program, ''improper payment'' includes: (1) an amount associated with a demanded overpayment determination, and (2) an amount identified in a settlement agreement or judgment, pursuant to conduct of individuals or entities performing functions or services related to an ACO's activities, less any penalties or damages. Paragraphs (c) and (d) of § 425.674 specify the general approach for adjusting Medicare Parts A and B FFS expenditures values used in certain Shared Savings Program financial calculations to account for a per capita amount of improper payments for an identified population used in calculating performance year or benchmark year expenditures, and in calculating county-level FFS expenditures used in factors based on regional expenditures.

(d) Adjusting Historical Benchmarks To Account for the Impact of Improper Payments

In the CY 2025 PFS proposed rule (89 FR 61907), we explained that CMS adjusts an ACO's historical benchmark annually, during the term of the ACO's agreement period, to account for certain changes, as specified in the Shared Savings Program regulations. The related adjustment is specified under § 425.601(a)(9), for the benchmarking methodology applicable to agreement periods beginning on or after July 1, 2019, and before January 1, 2024, and under § 425.652(a)(9), for the benchmarking methodology applicable to agreement periods beginning on January 1, 2024, and in subsequent years. As finalized with the CY 2024 PFS final rule (88 FR 79195 through 79200), § 425.652(a)(9) introductory text was amended to specify, among other changes, that for each performance year during the term of the agreement period, the ACO's benchmark is adjusted for changes in values used in benchmark calculations as a result of issuance of a revised initial determination under § 425.315 (among other factors). Similar language is not currently included in § 425.601(a)(9) introductory text.

We proposed to use our authority under section 1899(d)(1)(B)(ii) of the Act to adjust the benchmark to account for the impact of improper payments, in the event CMS recalculates a payment determination and issues a revised initial determination for a performance year in a prior agreement period that corresponds to a benchmark year of the ACO's current agreement period. We proposed to adjust an ACO's historical benchmark for use in reaching an initial determination of financial performance for a performance year, in cases where an ACO has a benchmark year that corresponds to a performance year for which we issued a revised initial determination. In such a case, we would apply the same methodology to recalculate the ACO's BY expenditures as used in recalculating the expenditures for the corresponding performance year, as part of a reopening. Under the proposed approach, we would be able to improve the accuracy of the benchmark year calculations used in reaching an initial determination for a performance year, by addressing the impact of previously identified improper payments on the expenditure calculations. Such an adjustment to the benchmark expenditures would appropriately calculate the ACO's historical benchmark that might otherwise be under- or over-stated due to improper payments.

We expanded upon the example illustrated in Table 49, to explain that if we have issued a revised initial determination for PY 2022 in December 2025, for an ACO that renewed to continue its participation under a new agreement period beginning on January

1, 2025, our proposed policy would enable us to use the same methodology for calculating BY 2022 expenditures for PY 2025, in reaching the initial determination for PY 2025.

We proposed to amend §§ 425.601(a)(9) and 425.652(a)(9) to specify the proposed adjustment to the historical benchmark. We proposed to revise § 425.601(a)(9) introductory text to further specify that for the second and each subsequent performance year during the term of the agreement period, the ACO's benchmark would be adjusted for changes in values used in benchmark calculations as a result of issuance of a revised initial determination under § 425.315. We also proposed to add a new paragraph (a)(9)(iii) to § 425.601 and to add a new paragraph (a)(9)(viii) to § 425.652, each specifying that we would recalculate benchmark year expenditures to account for the impact of improper payments, for the benchmark year corresponding to a performance year for which CMS issued a revised initial determination under § 425.315. In recalculating expenditures for the benchmark year, CMS would apply the same calculation methodology applied in recalculating expenditures for the corresponding performance year, in accordance with the proposed new section of the regulation at § 425.674.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Some commenters expressed support for accounting for improper payments in ACO historical benchmarks, and a few commenters stated generalized support for the proposal to adjust the historical benchmark to account for the impact of improper payments. More specifically, one commenter stated support for CMS' proposal to adjust the historical benchmark to account for the impact of improper payments if CMS recalculates a payment determination in a prior agreement period that corresponds to a benchmark year of the ACO's current agreement period. One commenter stated that accounting for improper payments in benchmarks is a ''welcome change and significant improvement.''

Response: We appreciate commenters' support for our proposal to establish an adjustment to Shared Savings Program benchmark calculations to account for the impact of identified improper payments for use in reaching an initial determination of financial performance for a performance year, in certain cases. We have further considered the phrasing of our proposal, as specified in the preamble of the CY 2025 PFS proposed rule (89 FR 61907), and reflected in one commenter's statement, that the adjustment would be applied ''in the event CMS recalculates a payment determination and issues a revised initial determination for a performance year in a prior agreement period that corresponds to a benchmark year of the ACO's *current agreement period*'' (emphasis added).

In the CY 2025 PFS proposed rule, although we provided one example of a potential scenario in which this adjustment would apply (89 FR 61907), we did not discuss the potential for there to be various scenarios around the timing of when the revised initial determination is issued for a performance year relative to when the ACO enters a subsequent agreement period for which the performance year for which we issue a revised initial determination corresponds to a benchmark year (BY). These scenarios could include the following, with hypothetical examples included to further illustrate:

- *CMS issues a revised initial determination for a PY that corresponds to a BY of an ACO's agreement period while the current agreement period is underway, and before completing financial reconciliation for one or more performance years of the current agreement period.* This could have been one interpretation of the scenario we provided in the CY 2025 PFS proposed rule. To restate and expand upon this example: An ACO participates under and completes an agreement period beginning on January 1, 2020, and renews to continue its participation in a new agreement period beginning on January 1, 2025. We issue a revised initial determination for PY 2022 in Fall 2025. We would use the same methodology for calculating BY 2022 expenditures as we used to reach the revised initial determination for PY 2022, in calculating the benchmark used to reach the initial determination for all performance years of the ACO's agreement period beginning on January 1, 2025 (PYs 2025–2029).
- *CMS issues a revised initial determination for a PY that corresponds to a BY of an ACO's agreement period prior to the start of a future agreement period, while the ACO was participating in an earlier agreement period.* For example: An ACO participates under and completes an agreement period beginning on January 1, 2022, and renews to continue its participation in a new agreement period beginning on January 1, 2027. We issue a revised initial determination for PY 2024 in Fall 2026. We would use the same methodology for calculating BY 2024 expenditures as we used to reach the revised initial determination for PY 2024, in calculating the benchmark used to reach the initial determination for all performance years of the ACO's agreement period beginning on January 1, 2027 (PYs 2027–2031).
- *CMS issues a revised initial determination for a PY that corresponds to a BY of more than one agreement period, which could occur in cases where an ACO's participation agreement is terminated and the ACO quickly enters a new agreement period, such as under the option for an ACO to early renew.*[599] For example: An ACO participates under an agreement period beginning on January 1, 2020, and early renews to continue its participation in a new agreement period beginning on January 1, 2024. The ACO early renews again to enter a new agreement period beginning on January 1, 2025. We issue a revised initial determination for PY 2023 in Spring 2025. We would use the same methodology for calculating BY 2023 expenditures as we used to reach the revised initial determination for PY 2023, in calculating the benchmark for the agreement period beginning on January 1, 2024 used to reach the initial determination for PY 2024, and in calculating the benchmark used to reach the initial determination for all performance years of the ACO's new agreement period beginning on January 1, 2025 (PYs 2025–2029).

In light of the number and complexity of the scenarios in which a PY corresponds to a BY that is used in calculating the benchmark that is in turn used to determine financial performance for a performance year that has not yet been reconciled, we are concerned that the phrasing ''current agreement period'' in reference to the benchmark being adjusted could make unclear the applicability of the adjustment, and prove unduly limiting depending on how it could be interpreted. We clarify that we would apply the adjustment in calculating benchmark expenditures used in reaching an initial determination of financial performance for a performance year within an ACO's agreement period that has concluded, or its current agreement period which is underway, as well as a future agreement period, to account for improper payments in expenditures for a benchmark year that corresponds to a performance year for which we issued a revised initial determination.

[599] ACOs have the option to ''early renew'', meaning to terminate their current participation agreement under § 425.220 and immediately enter a new agreement period to continue participation in the Shared Savings Program.

Therefore, we are finalizing our proposal with the aforementioned clarification to generalize the description of benchmark adjustment to allow for the continued applicability of the adjustment over time. Under the finalized approach we will adjust the benchmark to account for the impact of improper payments, in the event CMS recalculates a payment determination and issues a revised initial determination for a performance year in a prior agreement period that corresponds to a benchmark year of the ACO's *agreement period* (emphasis added to reflect revised text) instead of referencing the ACO's *current agreement period* (emphasis added). This clarification only impacts our discussion of the proposal in preamble of the CY 2025 PFS proposed rule. The potentially problematic language was not included in the text of proposed regulations to establish the benchmark adjustment.

After consideration of the public comments, we are finalizing, with a clarification, our proposal to use our authority under section 1899(d)(1)(B)(ii) of the Act to adjust the benchmark to account for the impact of improper payments, in the event CMS recalculates a payment determination and issues a revised initial determination for a performance year in a prior agreement period that corresponds to a benchmark year of the ACO's *agreement period* (emphasis added). We are also finalizing without modification our proposed amendments to the regulations at §§ 425.601(a)(9) and 425.652(a)(9) to specify the adjustment to the historical benchmark. In recalculating expenditures for the benchmark year, CMS will apply the same calculation methodology applied in recalculating expenditures for the corresponding performance year, in accordance with the new section of the regulation at § 425.674.

(e) ACO Reopening Requests

In section III.G.7.c.(2).(e) of the CY 2025 PFS proposed rule (89 FR 61907 through 61908), we described our proposal to establish a process by which ACOs may request a reopening review, and related considerations. We stated that the discussion of requesting and conducting a reopening pertained to reopening a payment determination for good cause or for fraud or similar fault, unless specified otherwise.

We proposed to establish a process at § 425.315(b) by which an ACO may request a reopening of an initial determination, or a final agency determination under subpart I, of shared savings or shared losses. Although an ACO's submission of a reopening request is optional, we proposed to require that the ACO's request be in a form and manner specified by CMS. Further, we proposed that the timing of the ACO's reopening request must be consistent with the timeframes specified in § 425.315(a)(1)(i) and (ii), respectively, either (i) at any time in the case of fraud or similar fault, or (ii) not later than 4 years after the date of the notification to the ACO of the initial determination of savings or losses for the relevant performance year for good cause. We noted that we anticipate providing additional information on the reopening request process for ACOs through guidance, including the form and manner in which CMS must receive a reopening request.

We stated that CMS will need to receive sufficient, detailed information from ACOs to evaluate an ACO's reopening request. For instance, in the case of a reopening request in connection with improper payments, or fraud or similar fault potentially impacting the ACO's financial calculations, receiving detailed information about the issue, including the following information, would aid in our analysis of the ACO's request:

- ACO identifier(s) (also referred to as ''ACO ID'') and Legal Business Name(s).
- Identity of the provider or supplier for which there may be improper payment(s), or that may be suspected of fraud or similar fault, including name, NPI or Provider Transaction Access Number (PTAN), TIN, or other identifier.
- Time period during which potentially impacted claims were submitted or improper conduct occurred.
- Short description of the improper payment, alleged fraud or similar fault, and how it was identified, including information such as any specific claim type codes and HCPCS or CPT codes.
- Evidence of financial impact on the ACO's shared savings or shared losses calculation, such as any analysis supporting the calculation of financial impact to the ACO and a list of beneficiaries assigned to the ACO for whom claims were submitted by the provider or supplier suspected of fraud or similar fault, or for which expenditures may be impacted by improper payments.

We reiterated that a recalculation of shared savings and shared losses to account for improper payments could result in a variety of outcomes. We stated that an ACO should weigh these potential outcomes when considering whether to submit a reopening request.

We acknowledged that the proposed process for requesting a reopening, whether for good cause or for fraud or similar fault, would represent a new process. Therefore, we solicited comments and suggestions on the form and manner in which CMS should receive these requests. We also solicited comment on approaches to ensuring that ACOs submit reopening requests with sufficient information to allow CMS to identify and evaluate the impact of improper payments, or fraud or similar fault, on Shared Savings Program financial calculations.

We described the following steps to illustrate how the Shared Savings Program may conduct review of an ACO's request to reopen a payment determination to account for the impact of improper payments (restated with a minor correction for clarity):

- Upon receiving an ACO's reopening request, CMS would evaluate this request, and ask the requesting ACO to provide supplemental information if needed.
- We would work with program integrity staff and law enforcement agencies to identify, validate and quantify improper payments potentially impacting expenditures used in Shared Savings Program calculations. We noted that identification of improper payments may be contingent on the conclusion of an investigation that is underway.
- We may conduct initial analysis to consider the basis for reopening the ACO's payment determination under § 425.315(a), and the significance of the improper payments to an ACO's financial calculations under the Shared Savings Program (described in section III.G.7.c.(2).(b) of the CY 2025 PFS proposed rule, see 89 FR 61896):

++ If we find that the potential improper payment does not meet CMS' standards for reopening the payment determination, we noted we would notify the ACO of our decision.

++ If we reach a determination to reopen the ACO's payment determination for a performance year:

—We would recalculate expenditures to account for improper payments using the methodology proposed in section III.G.7.c.(2).(c) of the CY 2025 PFS proposed rule (89 FR 61898 through 61907), recalculate the ACO's shared savings or shared losses, issue a revised initial determination, and engage in payment activities and recoupment activities, as needed.

—During the recalculation period CMS would also identify whether the relevant performance year is also serving as a benchmark year for the

ACO's current agreement period and prepare to adjust the ACO's benchmark year expenditures to account for the revised initial determination (once issued), as discussed in section III.G.7.c.(2).(d) of the CY 2025 PFS proposed rule (89 FR 61907).

We noted that in the event that improper payments identified in analyzing an ACO's reopening request have the potential to impact the payment determinations of one or more other ACOs, we may only determine whether to reopen the payment determination for an ACO that submitted the reopening request. More generally, we may initiate analysis of the impact of improper payments on Shared Savings Program financial calculations, and potentially reopen the payment determination for one or more ACOs absent an ACO's request for reopening. For instance, in learning of improper payments that may potentially impact Shared Savings Program calculations for multiple ACOs, including through the reopening request process, we may seek to reopen payment determinations where improper payments are anticipated to result in significant adjustments to ACOs' initial determinations upon recalculation. We also noted that we anticipate initiating analysis of the impact of improper payments on an ACO's payment determination upon learning of improper payments originating inside the ACO that may potentially impact Shared Savings Program calculations, and may reopen the ACO's payment determination, as needed, to address program integrity concerns.

We stated that we anticipate that our review and analysis of reopening requests could occur over a protracted period of time during which we may be able to provide little additional information to the ACO until we have reached our decision. We would aim to conduct a reopening such that the timing of any issuance of a revised initial determination aligns with the timeframe for when CMS typically completes annual performance year financial reconciliation and payment and recoupment. However, because investigations into improper payments, including considering whether there is reliable evidence of fraud or similar fault, may involve varying degrees of complexity and scale, and because the application of our proposed methodology for calculating expenditures relies on information that may result from such investigations, among other sources of information, CMS may not always be able to conduct a reopening within a specific timeframe after an ACO submits a reopening request. We specified that the process for analyzing an ACO's reopening request, reaching a decision on whether to reopen the initial determination, recalculating the ACO's payment determination, and issuing a revised initial determination, may occur over a period of months or potentially years, and may have impacts on future agreement periods. In cases where CMS and law enforcement officials may have investigations underway, CMS must refrain from providing details to ACOs, and other individuals or entities, of pending actions to protect the integrity of those investigations. Therefore, we explained that we may be limited in the information we can communicate to an ACO about our consideration of the ACO's reopening request.

We solicited comment on the aforementioned considerations for how we could conduct review of an ACO's request to reopen a payment determination to account for the impact of improper payments. We specified that as we gain additional experience with ACOs' submission of reopening requests, including the volume of the requests, and nature of the requests, we may revisit the reopening request process, as needed, in future notice and comment rulemaking.

We received public comments on these proposals and related considerations. The following is a summary of the comments we received and our responses.

Comment: The commenters addressing the proposal to create a process by which ACOs can request CMS reopen a payment determination, expressed support for the concept. One commenter explained that codifying a process for reopening a payment determination provides clarity on the steps an ACO needs to take and will, subsequently, encourage institutions to pursue the process. This commenter further explained a formal reopening process is necessary for any and all value-based care models that involve two-sided risk, as it clarifies how the agency will address any issues regarding miscalculations or fraud.

Response: We appreciate commenters' support for our proposal to establish a process by which ACOs may request a reopening review by CMS of a Shared Savings Program payment determination. In response to the commenter's assertion that a formal reopening process is necessary for value-based care models that involve two-sided risk, we note that the Shared Savings Program's long-standing reopening policy, and the changes to our policies being finalized in this final rule, apply program-wide, to ACOs participating in the program's one-sided models and two-sided models. Further, we note that the proposals being finalized in this section of this final rule are specific to the Shared Savings Program.

Comment: Some commenters addressing the proposed reopening request process provided a variety of suggestions in connection with an ACO's initiation of a reopening request. A few commenters requested greater transparency around the reopening request process including on the type of information CMS will request, potential timelines, and steps ACOs should take to request reopening, and several of these commenters urged CMS to publish related information in subregulatory guidance.

Some commenters urged CMS to employ a reopening process that minimizes the burden to ACOs with respect to the types of information it must receive from ACOs. In particular, a few commenters explained that ACOs can perform in depth analysis of their data, but lack detailed information on national or regional billing to make comparisons and urged that CMS not request ACOs provide such information as part of the reopening request process.

Response: As we specified in the CY 2025 PFS proposed rule (89 FR 61907), we anticipate providing additional information on the reopening request process for ACOs through guidance, including the form and manner in which CMS must receive a reopening request. As we develop the guidance, we will carefully consider the commenters' suggestions for the types of information to include, such as the information from ACOs that will aid our analysis, timing considerations, and steps involved for an ACO to submit a reopening request.

We agree with commenters on the importance of developing the requirements for a reopening request process in a way that would minimize additional burden on ACOs, including with respect to ACOs' submissions of reopening requests, and compiling related information, among other possible actions. We anticipate considering approaches to minimizing the burden on ACOs in connection with the reopening request process, as we develop related requirements and operational procedures.

In the CY 2025 PFS proposed rule (89 FR 61907 through 61908), as restated elsewhere in this section of this final rule, we explained that CMS will need to receive sufficient, detailed

information from ACOs to evaluate an ACO's reopening request. We listed certain information that would aid in our analysis of the ACO's request in the case of a reopening request in connection with improper payments, or fraud or similar fault potentially impacting the ACO's financial calculations. In the initial discussion of these factors we did not specify a priority for the information listed. We believe clarifying this information addresses, in part, commenters' requests for CMS to provide transparency around the type of information CMS will request from ACOs as part of the reopening request process, and to address concerns over whether the information CMS may request would be readily available to ACOs.

To clarify, we would need to receive certain, basic details within the ACO's reopening request to allow us to effectively identify, validate and quantify the improper payments, or evaluate the alleged fraud or similar fault, potentially impacting expenditures used in Shared Savings Program calculations, in particular: (1) the identity of the provider or supplier for which there may be improper payment(s), or suspected of fraud or similar fault; (2) the time period during which potentially impacted claims were submitted or improper conduct occurred; (3) a description of the improper payment, alleged fraud or similar fault, and how it was identified, including any specific claim type codes and HCPCS or CPT codes; and (4) a list of beneficiaries assigned to the ACO for whom claims were submitted by the provider or supplier suspected of fraud or similar fault, or for which expenditures may be impacted by improper payments. While it may aid our review of the ACO's reopening request to receive evidence of financial impact on the ACO's shared savings or shared losses calculation, this could include a brief description with any available evidence, and does not necessarily need to involve a complex analysis. We recognize there may be limitations to the analyses ACOs can perform, particularly with respect to potential impacts on national or regional billing, as commenters point out. We note that in the CY 2025 PFS proposed rule, while we discussed the types of information we would find helpful to receive from ACOs (89 FR 61907 through 61908) and in a separate discussion provided detailed hypothetical examples illustrating how the proposed calculation methodology would be applied (89 FR 61901 through 61906), we did not specifically state that we were contemplating requesting or requiring ACOs to submit to CMS as part of their reopening request evidence or analysis of the financial impact of improper payments on national expenditures, regional expenditures, or both. If an ACO were to have available information or analysis of the estimated financial impact of improper payments on the ACO's shared savings or shared losses calculation, the ACO may submit these details with their reopening request. More generally, we will carefully consider the information provided by the ACO, and we will undertake our own internal analysis to inform our decision of whether to reopen an ACO's payment determination, and (if warranted) we will perform recalculations needed to issue a revised initial determination based on validated and quantified information.

Additionally, in response to the comment requesting that CMS provide greater transparency into the steps ACOs should take to submit a reopening request, we recognize that ACOs may be seeking specific additional information on how to prepare and submit a reopening request prior to the issuance of the guidance material on the reopening request process. In brief, as we specified elsewhere in this section of this final rule, ACOs seeking to submit a reopening request prior to the issuance of guidance material on the reopening request process, are encouraged to submit detailed information in writing to CMS by email to *SharedSavingsProgram@cms.hhs.gov*. For ACOs contemplating submitting a reopening request in connection with improper payments, or fraud or similar fault potentially impacting the ACO's financial calculations, we urge that they consider providing the types of information we specified would aid in our analysis of the ACO's request in preparing their submission, as outlined in the CY 2025 PFS proposed rule (89 FR 61907 through 61908), and about which we have provided additional explanations within this response.

Comment: Some commenters urged CMS to complete actions quickly or timely, and to provide detailed responses to ACO reopening requests outlining why an ACO's reopening request is granted or not granted, citing considerations about the need for ACOs to notify participants of the outcome and adjust any ''downstream'' payment or incentives. One of these commenters went on to explain transparency and timely action on CMS' behalf will enhance agency credibility, promote sustainable ACO financial planning and budgeting, and impact participants' willingness to participate in ACO models in the future, concepts echoed in other similar comments.

Response: We acknowledge the importance of completing reopening requests in a timely manner and communicating the findings as soon as possible to the ACO, including for the reasons outlined by commenters. We anticipate acknowledging receipt of each reopening request and providing a response as to the final outcome of the request.

Further, in response to commenters' suggestions that we complete actions quickly or timely and provide detailed responses to ACOs, we note that there are interactions between our investigation into the issues potentially impacting ACO financial calculations that may warrant reopening, and the extent to which we can provide additional information to ACOs to explain the status of our investigation and findings, and relatedly the timeline for communicating our decision or related information to the ACO that submitted the request. Until we reach a decision on whether or not to reopen the ACO's payment determination, we may be limited in the information that we can communicate to an ACO about the status of its reopening request. As explained in the CY 2025 PFS proposed rule (89 FR 61908), in cases where CMS, law enforcement officials, or both, may have investigations underway, CMS must refrain from providing details to ACOs and other entities, of pending actions to protect the integrity of those investigations. In addition, for a reopening request to account for improper payments, we must identify and quantify the improper payments, including certain demanded overpayment determinations, and improper payments resulting from conduct by individuals or entities performing functions or services related to an ACO's activities as identified in certain settlement agreements or judgments (as discussed in section III.G.7.c.(2).(b) of this final rule). We reiterate that it may take months or years to determine the actual amount of any improper payments impacting an ACO's payment determination, particularly if we are awaiting the conclusion of program integrity and law enforcement investigations, among other possible determinations about the related conduct of providers or suppliers.

With respect to commenters urging the need for CMS to provide ACOs with detailed responses to ACO reopening requests, including for the purposes of notifying its participants of the outcome, and for the ACO to adjust

payment or incentives participants may receive, we note that in the event we decide to reopen an ACO's payment determination and issue a revised initial determination, we anticipate specifying related information in a financial reconciliation report delivered to the ACO. As we explained in the CY 2025 PFS proposed rule (see 89 FR 61896 through 61897; and 61908), a number of steps would follow after we decide to reopen the initial determination and perform the recalculations needed to reach a revised initial determination, including issuing the revised initial determination to the ACO, and engaging in payment and recoupment activities, as needed. As we previously explained in rulemaking (81 FR 38001 through 38002, see also 87 FR 69872), and continue to believe, we would provide ACOs with sufficient details regarding any necessary adjustments in their shared savings or shared losses resulting from reopened financial calculations for each performance year affected such that they will be able to attribute the additional payment or recoupment arising from the reopening internally with their ACO participants.

Comment: One commenter urged transparency on how ACO reopening requests will be ''prioritized'' but did not provide details on what this meant.

Response: In response to the commenter's suggestion that CMS provide transparency into how ACO reopening requests are ''prioritized,'' we note that it is unclear what form of ''prioritization'' the commenter is referring to given the lack of details in the comment. As a general matter, we agree with the importance of transparency in our processes for implementing the Shared Savings Program. However, we decline at this time to specify a particular approach we may use to create a prioritization among multiple reopening requests from different ACOs. There are various factors that may affect the timing for our consideration of an ACO's reopening request, including with respect to the timeframe for conducting our initial analysis, and reaching a decision on whether to reopen the calculations as we have described elsewhere in section III.G.7.c of this final rule. Further, the timing of the reopening must be consistent with the timeframes specified in § 425.315(a)(1)(i) and (ii), respectively, either (i) at any time in the case of fraud or similar fault, or (ii) not later than 4 years after the date of the notification to the ACO of the initial determination of savings or losses for the relevant performance year for good cause. Depending on the timing of when the issue potentially impacting ACO financial calculations comes to our attention, we may need to more urgently decide whether to reopen the payment determination, for good cause, in order to be able to exercise our authority under § 425.315(a)(1)(ii). Once a decision is reached on whether to reopen the payment determination, additional time would be needed to complete recalculation of a payment determination (if warranted), and issue the revised initial determination to an ACO, or otherwise notify the ACO of our decision with respect to their reopening request. Additionally, we may also consider that the timing of issuing a revised initial determination could impact other program calculations, such as benchmark calculations used in determining financial performance for a performance year that has not yet been reconciled, specifically in connection with calculating or recalculating the prior savings adjustment for the ACO (if applicable), or the application of the benchmark adjustment described in section III.G.7.c.(2).(d) of this final rule. In light of the complexity of these circumstances, and our limited experience with ACO reopening requests as of the time of this final rule, we believe it would be prudent to gain additional experience with the application of these policies, and related processes, to inform any potential consideration for development of a policy for prioritizing ACO reopening requests.

After consideration of public comments, we are finalizing our proposal, without modification, to establish a process at § 425.315(b) by which an ACO may request a reopening of an initial determination, or a final agency determination under subpart I, of shared savings or shared losses. We anticipate providing additional information on the reopening request process for ACOs through guidance, including the form and manner in which CMS must receive a reopening request, among other possible information.

(f) Preventing and Reporting Medicare Fraud

As we explained in the CY 2025 PFS proposed rule (89 FR 61908 through 61909), ACOs can help prevent fraud and abuse within the Medicare program or in other Federal healthcare programs. Program integrity requirements for the Shared Savings Program include the requirement under § 425.300 that the ACO must have a compliance plan. Among other required elements, an ACO's compliance plan must include a method for employees or contractors of the ACO, ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities to anonymously report suspected problems related to the ACO to the compliance officer (§ 425.300(a)(3)). ACOs' compliance plans must also include a requirement for the ACO to report probable violations of law to an appropriate law enforcement agency (§ 425.300(a)(5)). (Refer to the November 2011 final rule, 76 FR 67951 and 67952.)

We reiterate that ACOs are encouraged to report potential fraud or abuse to the CMS Center for Program Integrity (CPI) and the HHS–OIG. ACOs may submit a complaint to the CMS CPI, Fraud Investigations Group (FIG), Division of Provider Investigations (DPI) at *dpi.intake@cms.hhs.gov.* ACOs can also report potential fraud or abuse by submitting a complaint to the HHS–OIG website, *https://oig.hhs.gov/fraud/report-fraud/*, HHS–OIG hotline at 1–800–HHS–TIPS (1–800–447–8477), TTY at 1–800–377–4950, by fax at 1–800–223–8164, or by mailing to: Office of Inspector General ATTN: OIG HOTLINE OPERATIONS, P.O. Box 23489, Washington, DC 20026. ACOs suspecting healthcare fraud, waste, or abuse are encouraged to visit the CMS CPI's website on Reporting Fraud at *https://www.cms.gov/medicare/medicaid-coordination/center-program-integrity/reporting-fraud* for more information. More generally, anyone suspecting healthcare fraud, waste or abuse is encouraged to report it to CMS or the HHS–OIG.

As we explained in the CY 2025 PFS proposed rule (89 FR 61909), in the absence of a reopening request submitted by an ACO in the form and manner specified by CMS (discussed in section III.G.7.c.(2).(e) of the proposed rule), the reporting of potential fraud or abuse to CMS CPI or the HHS–OIG does not itself constitute a reopening request under the Shared Savings Program.

We also solicited comments on considerations in connection with ACOs' potential role in preventing and reporting Medicare fraud, among other proposals and considerations described in section III.G.7.c of the CY 2025 PFS proposed rule.

We received public comments on considerations about ACOs' role in preventing and reporting Medicare fraud, in connection with the SAHS billing activity proposals. Therefore, we summarize and respond these public comments in section III.G.7.d of this final rule.

In summary, as described in section III.G.7.c of this final rule, we are

finalizing our proposals to modify the Shared Savings Program regulations to provide greater specificity on reopening ACO payment determinations. We are finalizing our proposal to revise § 425.315(a)(4) to make clear CMS' discretion to determine whether to reopen a payment determination applies in the case of fraud or similar fault, as well as to determining whether good cause exists to reopen a payment determination. We are finalizing our proposal to add to subpart G a new section of the Shared Savings Program regulation at § 425.674 specifying provisions on accounting for the impact of improper payments on Shared Savings Program financial calculations. We are finalizing with clarification our proposal to adjust the benchmark to account for the impact of improper payments, in the event CMS recalculates a payment determination and issues a revised initial determination for a performance year in a prior agreement period that corresponds to a benchmark year of the ACO's *agreement period* (emphasis added to reflect clarified text). Relatedly, we are finalizing without modification our proposed amendments to the regulations at §§ 425.601(a)(9) and 425.652(a)(9) to specify the adjustment to the historical benchmark. Lastly, we are finalizing our proposal to establish a process at § 425.315(b) by which an ACO may request a reopening of an initial determination, or a final agency determination under subpart I, of shared savings or shared losses.

d. Mitigating the Impact of Significant, Anomalous, and Highly Suspect Billing Activity on Shared Savings Program Financial Calculations in Calendar Year 2024 or Subsequent Calendar Years

(1) Background

(a) Statutory Background on Shared Savings Program Financial Calculations

Section 1899 of the Act (42 U.S.C. 1395jjj), as added by section 3022 of the Patient Protection and Affordable Care Act (Pub. L. 111–148, enacted March 23, 2010), establishes the general requirements for payments to participating ACOs in the Shared Savings Program. Specifically, section 1899(d)(1)(A) of the Act provides that providers of services and suppliers participating in an ACO will continue to receive payment under the original Medicare fee-for-service program under Medicare Parts A and B in the same manner as they would otherwise be made. However, section 1899(d)(1)(A) of the Act also provides for an ACO to receive payment for shared savings provided that the ACO meets both the quality performance standards established by the Secretary and demonstrates that it has achieved savings against a benchmark of expected average per capita Medicare FFS expenditures. Additionally, section 1899(i) of the Act authorizes the Secretary to use other payment models in place of the one-sided model described in section 1899(d) of the Act. This provision authorizes the Secretary to select a partial capitation model or any other payment model that the Secretary determines will improve the quality and efficiency of items and services furnished to Medicare beneficiaries without additional program expenditures. We have used our authority under section 1899(i)(3) of the Act to establish the Shared Savings Program's two-sided payment model (see for example, 80 FR 32771 and 32772, and 83 FR 67834 through 67841) and to mitigate shared losses owed by ACOs affected by extreme and uncontrollable circumstances during PY 2017 and subsequent performance years (82 FR 60916 and 60917, 83 FR 59974 through 59977), among other uses of this authority described elsewhere in this final rule.

Section 1899(d)(1)(B)(i) of the Act specifies that, in each year of the agreement period, an ACO is eligible to receive payment for shared savings only if the estimated average per capita Medicare expenditures under the ACO for Medicare FFS beneficiaries for Parts A and B services, adjusted for beneficiary characteristics, is at least the percent specified by the Secretary below the applicable benchmark under section 1899(d)(1)(B)(ii) of the Act. Section 1899(d)(1)(B)(ii) of the Act addresses how ACO benchmarks are to be established and updated under the Shared Savings Program. This provision specifies that the Secretary shall estimate a benchmark for each agreement period for each ACO using the most recent available 3 years of per beneficiary expenditures for Parts A and B services for Medicare FFS beneficiaries assigned to the ACO. This benchmark shall be adjusted for beneficiary characteristics and such other factors as the Secretary determines appropriate and updated by the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program, as estimated by the Secretary.

In past rulemaking, we have used our authority under sections 1899(d)(1)(B)(ii) and 1899(i)(3) of the Act to establish adjustments to the benchmark and program expenditure calculations, respectively, to exclude certain Medicare Parts A and B payments. In the November 2011 final rule (76 FR 67920 through 67922), we adopted an alternate payment methodology that excluded Indirect Medical Education (IME) and Disproportionate Share Hospital (DSH) payments from ACO benchmark and performance year expenditures due to concerns that the inclusion of these amounts would incentivize ACOs to avoid referring patients to the types of providers that receive these payments. In the CY 2023 PFS final rule (87 FR 69954 through 69956), we excluded new supplemental payments to Indian Health Service/Tribal hospitals and hospitals located in Puerto Rico consistent with our longstanding policy to exclude IME, DSH and uncompensated care payments from ACOs' assigned and assignable beneficiary expenditure calculations. In the May 8, 2020 COVID–19 IFC (85 FR 27577 through 27582), we established a methodology to adjust Shared Savings Program financial calculations to account for the PHE for COVID–19. Specifically, we established a methodology that would exclude all Medicare Parts A and B FFS payment amounts for a beneficiary's episode of care for treatment of COVID–19 to prevent distortion to, among other calculations, an ACO's benchmark and program expenditure calculations.

(b) Background on Significant, Anomalous, and Highly Suspect Billing Activity

Recently, ACOs and other interested parties have raised concerns about an increase in billing to Medicare for selected intermittent urinary catheter supplies on Durable Medical Equipment, Prosthetics, Orthotics & Supplies (DMEPOS) claims in CY 2023, alleging that the increase in payments represents fraudulent activity (the ''alleged conduct''). The observed DMEPOS billing volume for intermittent urinary catheters in CY 2023 represents significant, anomalous, and highly suspect (SAHS) billing activity.[600]

Generally, a level of billing for a given HCPCS or CPT code is considered SAHS billing activity when a given HCPCS or

[600] SAHS billing activity may appear in claims for items and services rendered to beneficiaries assigned to an ACO as well as for beneficiaries who are not assigned to an ACO. Such activity may be caused by providers and suppliers who participate in an ACO and who do not participate in an ACO. This discussion is primarily focused on SAHS billing activity performed by providers and suppliers that do not participate in ACOs billing items and services for beneficiaries who are assigned to ACOs or who are in the assignable population used in national and regional factors used in Shared Savings Program calculations.

CPT code exhibits a level of billing that represents a significant claims increase either in the volume or dollars (for example, dollar volume significantly above prior year, or claims volume beyond expectations) with national or regional impact (for example, not only impacting one or few ACOs) and represents a deviation from historical utilization trends that is unexpected and is not clearly attributable to reasonably explained changes in policy or the supply or demand for covered items or services. The billing level is significant and represents billing activity that would cause significantly inaccurate and inequitable payments and repayment obligations in the Shared Savings Program if not addressed.

In a separate proposed rule entitled ''Medicare Program: Mitigating the Impact of Significant, Anomalous, and Highly Suspect Billing Activity on Medicare Shared Savings Program Financial Calculations in Calendar Year 2023'' (89 FR 55168, July 3, 2024) (referred to herein as the ''SAHS billing activity proposed rule''), we proposed an approach to address the SAHS billing activity identified by CMS for CY 2023 to protect the accuracy, fairness, and integrity of Shared Savings Program financial calculations. Specifically, we proposed to exclude payment amounts for two HCPCS codes (A4352 (*Intermittent urinary catheter; Coude (curved) tip, with or without coating (Teflon, silicone, silicone elastomeric, or hydrophilic, etc.),* each) and A4353 (*Intermittent urinary catheter, with insertion supplies*)) on DMEPOS claims submitted by any supplier from expenditure and revenue calculations used for: assessing performance year (PY) 2023 financial performance of Shared Savings Program ACOs, establishing benchmarks for ACOs starting agreement periods in 2024, 2025, and 2026, and calculating factors used to determine revenue status and repayment mechanism amounts in the application and change request cycle for ACOs applying to enter a new agreement period beginning on January 1, 2025, or continue their participation in the program in PY 2025, respectively. After the comment period closed for the CY 2025 PFS proposed rule, we finalized the proposals without modification in the SAHS billing activity final rule (89 FR 79152, September 27, 2024).

Current Shared Savings Program regulations, codified at 42 CFR part 425, do not provide a basis for CMS to adjust program expenditure or revenue calculations to remove the impact of SAHS billing activity occurring in CY 2024 or in subsequent calendar years in advance of issuing an initial determination. As discussed in section III.G.7.c of this final rule, CMS may reopen an initial determination or a final agency determination and issue a revised initial determination at any time in the case of fraud or similar fault, and not later than 4 years after the date of the notification to the ACO of the initial determination of savings or losses for the relevant performance year for good cause (§ 425.315). This does not allow for CMS to address SAHS billing activity occurring in CY 2024 or in subsequent calendar years, which must be addressed prior to conducting financial reconciliation, which is an initial determination, to prevent significant inequity and inaccurate payment determinations.

In the CY 2025 PFS proposed rule (89 FR 61909 through 61916), we proposed a policy that would proactively make adjustments to Shared Savings Program calculations should new SAHS billing activity be identified in CY 2024 or in subsequent calendar years. We explained that we are concerned that such SAHS billing activity, should it occur in CY 2024 or later, would inflate Medicare Parts A and B payment amounts and affect Shared Savings Program calculations, including:

- Performance year reconciliation calculations, including expenditures for each ACO's assigned beneficiaries for the calendar year that has SAHS billing activity, the national-regional blended update factor used to update the benchmark for ACOs beginning an agreement period before January 1, 2024 (refer to § 425.601(b)), the three-way blended update factor used to update the benchmark for ACOs beginning an agreement period on January 1, 2024 and in subsequent years (refer to § 425.652(b)), and factors based on ACO participant revenue to determine the loss recoupment limits for ACOs participating under two-sided models of the BASIC track (Levels C, D, E) (refer to § 425.605(d)).
- Historical benchmark calculations for establishing the benchmark for ACOs beginning new agreement periods on January 1, 2025, or in subsequent years with a benchmark year that has SAHS billing activity (refer to § 425.652(a)).
- Factors used in the application cycle for ACOs applying to enter a new agreement period beginning 2 years after the SAHS billing activity occurred, and the change request cycle for ACOs continuing their participation in the program, including data used to determine an ACO's eligibility for Advance Investment Payments under § 425.630(b) or for the CMS Innovation Center's new ACO Primary Care Flex Model (ACO PC Flex Model) based on ACO revenue status (high revenue or low revenue), and to determine repayment mechanism amounts for ACOs entering, or continuing in, two-sided models (refer to § 425.204(f)).

The accuracy of the Shared Savings Program's determination of an ACO's financial performance (through a process referred to as financial reconciliation) in terms of the ACO's eligibility for and amount of a shared savings payment or liability for shared losses, depends on the accuracy of claims data. Absent CMS action, SAHS billing activity would affect performance year financial reconciliation program-wide rather than being limited to ACOs that have assigned beneficiaries directly impacted by the issue. For instance:

- An ACO with assigned beneficiaries impacted by the SAHS billing activity will see an increase in performance year expenditures, reducing the ACO's shared savings or increasing the amount of shared losses owed by the ACO. The impact on the ACO's performance may be partially mitigated if the SAHS billing activity also increases the ACO's regional service area expenditures and the national expenditures used to calculate the two-way national-regional blended benchmark update factor.
- An ACO with assigned beneficiary expenditures and regional service area expenditures with little or no impact from the SAHS billing activity will receive a relatively higher benchmark update under the national-regional blended update factors used in performance year reconciliation, and therefore, may appear to perform better as a result of the national impact of the SAHS billing activity, resulting in higher earned performance payments or lower or no losses for the ACO.

Unaddressed, SAHS billing activity in a given calendar year can distort the historical benchmarks for an ACO in an agreement period that have the calendar year as a benchmark year and the accuracy of any future financial reconciliation performed against those benchmarks. Similarly, inaccurate revenue and expenditure calculations based on data from a calendar year affected by SAHS billing activity may affect an ACO's revenue status and the amount of funds an ACO in a two-sided model must secure as a repayment mechanism, one of the program's important safeguards for protecting the Medicare Trust Funds. Absent CMS action, SAHS billing activity likely would significantly impact shared savings and losses calculations for the performance year affected by SAHS billing activity, and for future

performance years that have benchmark years affected by SAHS billing activity. Under these circumstances, some ACOs would likely experience adverse impacts (for example, lower or no shared savings or higher shared losses) while other ACOs would experience windfall gains (for example, higher shared savings or lower or no shared losses).

Failing to address SAHS billing activity will jeopardize the integrity of the Shared Savings Program. There are 480 ACOs in the Shared Savings Program with over 608,000 healthcare providers who care for 10.8 million assigned FFS beneficiaries.[601] In PY 2022, the most recent year for which data is available, savings achieved by ACOs relative to benchmarks amounted to $4.3 billion, of which ACOs received shared savings payments totaling $2.5 billion, and Medicare retained $1.8 billion in savings.[602] ACOs are held accountable for 100 percent of total Medicare Parts A and B expenditures for their assigned beneficiary populations (with limited exceptions). This incentivizes ACOs to generate savings for the Medicare program as they have the opportunity to share in those savings if certain requirements are met. It also discourages the ACO from generating unnecessary expenditures for Medicare as they may be required to repay those amounts to CMS. Accountable care arrangements such as this cannot function if the ACO may be held responsible for all SAHS billing activity that is outside of their control. Holding an ACO accountable for substantial losses due to SAHS billing activity is not only inequitable but will dramatically increase the level of risk associated with participation, making the Shared Savings Program unattractive.

The following is a summary of general comments we received on our discussion and proposals regarding mitigating the impact of SAHS billing activity on Shared Savings Program calculations should new SAHS billing activity be identified in CY 2024 or in subsequent calendar years.

Comment: Most commenters expressed broad support—or general support with additional recommendations—for the proposal to establish a policy that would allow CMS to proactively make adjustments to Shared Savings Program calculations should new SAHS billing activity be identified in CY 2024 or in subsequent calendar years. Many commenters characterized the combination of the SAHS billing activity proposed rule and the proposal for CY 2024 and subsequent years as an approach that holds ACOs ''harmless'' for fraudulent billing activity, as ''fair'' because the approach protects ACOs against SAHS billing activity outside of their control, or as a ''comprehensive approach''. One commenter agreed that it is appropriate and necessary for CMS to have the authority to mitigate the impact of SAHS billing activity on Shared Savings Program calculations. Many commenters commended CMS for taking action through the SAHS billing activity proposed rule and through this proposal to address concerns raised by ACOs and other interested parties about the impact of SAHS billing activity, and a few also characterized CMS's attention to the matter as prompt, responsive to concerns, or aligned with stakeholder recommendations. One commenter characterized the proposal as setting a standard policy for addressing SAHS billing activity.

Supportive commenters offered a variety of reasons why they supported the proposal. Many commenters agreed that the proposal will strengthen program or financial integrity, accuracy of calculations, sustainability of ACO business models, or effectiveness of the Shared Savings Program. Several commenters agreed that unaddressed, SAHS billing activity can impact ACOs' shared savings and losses and other financial calculations. A few commenters stated that the proposal would benefit ACOs, with a couple also stating that it will benefit beneficiaries or providers and suppliers. A couple commenters stated that their ACOs have been highly affected by SAHS billing activity in PY 2023 and PY 2024 and that keeping the codes in shared savings and losses calculations for those performance years would erase all the work they have done to generate savings.

Response: We thank commenters for their support for CMS's actions to undertake notice and comment rulemaking to establish a policy that would allow CMS to proactively make adjustments to Shared Savings Program calculations should SAHS billing activity be identified in CY 2024 or in subsequent calendar years. We agree with the commenters who stated that mitigating the impact of SAHS billing activity is important for promoting continued integrity and improving the accuracy of Shared Savings Program financial calculations.

Comment: Commenters addressed the role that ACOs play in the identification of SAHS billing activity or fraud, waste, and abuse in Medicare and the process by which ACOs report suspected fraud. A few commenters stated their belief that ACOs are well positioned to detect anomalous billing or uncover potential fraud, waste and abuse given their ongoing and in-depth analysis of claims and utilization data, with one noting that the HHS–OIG recommended that CMS prioritize referrals from ACOs. Some commenters urged CMS to work with ACOs to improve the process for reporting suspected fraud. A few commenters suggested that ACO referrals be given priority by CMS or be handled through an expedited process.

Several commenters requested that CMS and the HHS–OIG provide more transparency to ACOs into investigations of potential fraud and abuse. Several commenters requested CMS better educate ACOs on the processes that CMS and the HHS–OIG undertake to investigate fraud. Multiple commenters requested a ''feedback loop'' after the ACO notifies CMS and the HHS–OIG of suspected fraud, with several stating that ACOs need information to inform their patient communications and make decisions about future participation given fraud investigations can take years to resolve. These commenters requested that CMS explore additional ways to notify ACOs of actions being taken; for example, commenters suggested CMS could provide information in claim and claim line feeds to indicate when CMS is ''placing some claims into escrow''.

Response: We agree that ACOs are well positioned to support monitoring efforts that will improve the integrity of the Medicare program including value-based payment systems. ACOs have tools that may be used to detect unusual or suspect billing areas or activity among their assigned beneficiary population through data and reports provided by CMS and through their own data systems and care coordination and quality improvement activities. ACOs are encouraged to report potential fraud or abuse by submitting a complaint to the CMS Center for Program Integrity (CPI), Fraud Investigations Group (FIG), Division of Provider Investigations (DPI) at *dpi.intake@cms.hhs.gov.* ACOs can also report potential fraud or abuse by submitting a complaint to the HHS–OIG website, *https://oig.hhs.gov/fraud/report-fraud/*, HHS–OIG hotline at 1–800–HHS–TIPS (1–800–447–8477), TTY at 1–800–377–4950, by fax at 1–800–223–8164, or by mailing to: Office of

Inspector General ATTN: OIG HOTLINE OPERATIONS, P.O. Box 23489, Washington, DC 20026. ACOs suspecting healthcare fraud, waste, or abuse are encouraged to visit the CMS CPI website on Reporting Fraud at *https://www.cms.gov/medicare/medicaid-coordination/center-program-integrity/reporting-fraud* for more information. We will continue to work with our program integrity colleagues on ways to improve ACO reporting of potential fraud or abuse.

Further, in response to commenters suggesting that ACO referrals be given priority by CMS or be handled through an expedited process we note that, in investigating leads that are vetted and approved by CMS to be opened as an investigation, the Unified Program Integrity Contractors (UPICs) focus investigations in an effort to establish the facts and the magnitude of the alleged fraud, waste, or abuse and take any appropriate action to protect Medicare Trust Fund dollars, unless otherwise specified by CMS. The UPICs ensure that all investigations originating from an ACO referral or involving ACOs, ACO participants or ACO providers/suppliers are provided a heightened level of priority and are promptly reviewed and investigated to ensure the appropriate administrative or other action(s) are taken in an expeditious manner.[603]

Comment: Some commenters addressed fraud prevention and mitigation actions in the Medicare program more broadly. One commenter urged CMS to develop clear, objective standards for identifying and refunding suspect claims, opining that current rules allow for subjectivity and inconsistent application and create operational challenges for ACOs and undermines ACOs' ability to provide comprehensive care. Another commenter recommended that, rather than removing specific HCPCS codes, CMS should ''focus on removing the bad actors'' who, if not restricted from billing Medicare, could simply target a new code.

Response: CMS continues to adapt its monitoring, investigative targeting, and data analytics programs to prevent future fraud, waste, and abuse. CMS also continues to work closely with the HHS–OIG and Department of Justice, as well as our UPICs, to investigate healthcare fraud activities that exploit the Medicare program.

[603] For additional information on how CMS conducts investigations of potential fraud, waste, or abuse, see, for example, Medicare Program Integrity Manual, Chapter 4—Program Integrity, available at *https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/pim83c04.pdf.*

This provision establishes a policy to mitigate the impact of SAHS billing activity in CY 2024 or in subsequent calendar years on Shared Savings Program calculations. We clarify that neither this provision nor the reopening policy provision described in section III.G.7.c. of this final rule, changes rules or processes for CMS or the HHS–OIG to investigate and resolve potential fraud, waste and abuse within the broader Medicare program.

(2) Revisions

In the CY 2025 PFS proposed rule (89 FR 61911), we explained that it is important to establish a policy that would allow CMS to proactively make similar adjustments for future calendar years, should new SAHS billing activity be identified. In general, we anticipated that billing activity that meets the high bar to be considered significant, anomalous, and highly suspect billing activity will be a rare occurrence. This is evidenced by the program's history. The SAHS billing activity surrounding selected catheter codes in 2023 is the first occasion we have had in the program's 12-year history to consider this issue. We proposed that we would notify ACOs and ACO applicants of our determinations to remove any codes and the aggregate per capita dollar amount of the codes removed as part of the annual financial reconciliation process. While we anticipate future occurrences of the scope and magnitude observed for urinary catheters in CY 2023 to be rare, having a permanent policy in place would:

- Allow CMS to move quickly to make adjustments to financial calculations without having to engage in additional rulemaking, ensuring timely issuance of initial determinations of savings and losses and disbursement of earned performance payments;
- Provide ACOs with greater certainty that they will not be held accountable for SAHS billing activity that is out of their control, promote integrity and fairness and ensure accuracy of program calculations;
- Limit requests to reopen initial determinations, thus reducing burden for ACOs and CMS.

In this final rule, we are finalizing an approach by which we will adjust Shared Savings Program calculations to mitigate the impacts of SAHS billing activity occurring in CY 2024 or subsequent calendar years.

(a) Identifying Significant, Anomalous, and Highly Suspect Billing *Activity*

In section III.G.7.d.(2).(a) of the CY 2025 PFS proposed rule (89 FR 61911 through 61912) we proposed that CMS would have the sole discretion to identify cases of SAHS billing activity for a particular calendar year that would warrant the adjustment of Shared Savings Program financial calculations. We explained that we anticipate routinely examining billing trends identified by CMS and other relevant information that had been raised through complaints by ACOs or other interested parties to the HHS–OIG or to CMS. We would seek to identify and monitor any codes that would potentially trigger the adjustment policy by meeting the high bar for removal under the criteria used to determine SAHS billing activity. Shortly after the start of a calendar year CMS would make a final determination as to which codes, if any, warrant adjustments for the previous calendar year. For example, in early CY 2026 CMS would make a final determination of whether any codes met the high bar for removal under the criteria used to determine SAHS billing activity in CY 2025, allowing time for the adjustments to be incorporated in forthcoming calculations.

We explained that CMS must retain sole discretion to identify cases of SAHS billing activity because we cannot anticipate what SAHS billing activity we may encounter in the future that may warrant adjustments to the program's financial calculations. We also stated our concern about balancing adjustments for billing activity that rises to the level of SAHS versus removing payment amounts associated with billing activity due to inefficiencies that are within the ACO's control. We explained that depending on the frequency of the use of this authority and the occurrence of SAHS billing activity, and thus the experience we develop in this area, we would consider proposing to codify criteria to identify SAHS billing activity in the future through additional rulemaking. We stated that nonetheless, CMS should retain sole discretion to determine whether SAHS billing activity occurred on a case-by-case basis at this time.

We explained that we anticipate considering multiple criteria in determining whether SAHS billing activity warrants removal of the corresponding billing codes from Shared Savings Program financial calculations. These criteria include:

- The observed increase in claims for a HCPCS or CPT code year-to-year meets the definition of SAHS billing activity, as defined elsewhere in this section of this final rule;
- The observed billing activity has national or regional impact or significance, such as:

++ Involves a Medicare provider or supplier, a beneficiary population and/or States with claims activity that that significantly impacts national or regional expenditure values or trends;

++ Warrants adjustment (all or partial) to national Medicare expenditure trend calculations used in payment (for example, United States Per Capita Cost) and/or Federal budget forecast calculations;

++ Warrants removal from national and regional growth rates used to update ACO historical benchmarks;

• If no action is taken there would be an imbalance between ACO performance year and historical benchmark year expenditures;

• Use of payment amounts associated with the SAHS billing activity could result in payment inaccuracies that produce significantly inaccurate and inequitable payment determinations in the Shared Savings Program (including the amount of shared savings or shared losses), due to factors beyond the control of ACOs; and

• The claims in question may be disproportionately represented by Medicare providers or suppliers whose Medicare enrollment status has been revoked.

Further, we explained that we anticipate utilizing this authority only in rare and extreme cases where a number of the criteria are satisfied. We specified that we would consider the extent to which the billing activity meets each criterion when developing a holistic assessment of the billing activity's impact on the Shared Savings Program.

The extent of the geographic impact of the SAHS billing activity in question is relevant given that the proposed policy would entail adjustments program-wide. One consideration for determining whether the billing activity has national or regional significance would be if the pattern warrants an adjustment to or special assumption for calculating official Medicare expenditure trends (such as the United States Per Capita Cost (USPCC) or Federal budget forecasts) due to the activity's significant, anomalous, and highly suspect nature. For example, the 2024 Medicare Trustees Report noted a significant increase in suspected fraudulent spending on certain intermittent catheters in 2023.[604] The DME projections in the report include the assumption that this suspected fraud will be addressed during 2024.[605] Billing activity in the Medicare FFS program at a scale warranting a special assumption for calculating the USPCC or Federal budget forecasts has *per se* national or regional significance, and thus would likely rise to the high bar of warranting adjustment to Shared Savings Program expenditure and revenue calculations.

We would seek to assess whether the billing activity creates an imbalance between ACO performance year and historical benchmark year expenditures. This assessment could involve considering whether the increase in billing activity was at such scale that it causes the difference between performance year and benchmark year expenditures for an ACO's assigned beneficiary population for the claim type affected by the billing activity (for example, DMEPOS) to be substantially larger than differences for other claim types.

We stated that we would also consider whether the billing activity, and any inaccurate or inequitable payment determinations that could result from using the related payment amounts, was outside of Shared Savings Program ACOs' ability to reasonably control. Most commonly, this would entail examining whether the Medicare providers or suppliers billing the codes in question are ACO providers or suppliers. Generally, we explained that we would be more likely to apply the proposed policy if the SAHS billing activity were outside of the ACO's control as the program may otherwise lack a means to control the growth of such amounts.

Finally, we stated that we would consider whether billing activity was disproportionately represented by Medicare providers or suppliers whose Medicare enrollment status has been revoked. Such a circumstance would provide further evidence that the billing activity surrounding these codes was highly suspect. We solicited comment on the processes and criteria described.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters addressed the proposed approach for identifying cases of SAHS billing activity for a particular calendar year. One commenter supported the proposal to identify cases in time to make adjustments to forthcoming calculations prior to issuance of initial determinations of shared savings and losses. A couple commenters requested that CMS determine whether certain billing activity meets the definition of SAHS billing activity on an ad hoc basis. Similarly, other commenters urged CMS to maintain flexibility to notify ACOs more frequently than on the proposed annual basis after the end of a performance year if billing activity on any codes is determined to be SAHS billing activity. A few of these commenters stated that SAHS billing activity for intermittent urinary catheters persisted into the first quarter of 2024, and therefore, reasoned that if CMS is already planning to make adjustments for this billing during CY 2024 that CMS should notify ACOs sooner than spring 2025. Another commenter generally supported the concept of mitigating the impact of SAHS billing activity on Shared Savings Program calculations, but suggested that CMS remove payment amounts for suspect billing activity as soon as a provider submitting claims related to the billing activity is under indictment or investigation by the HHS–OIG. This commenter reasoned that while the reopening policy is a mechanism for removing fraud and abuse from shared savings and losses calculations, the extended periods of time ACOs must wait for resolution negatively impacts ACOs that rely on shared savings payments to operate.

Response: We decline to adopt an approach that would require CMS to make a SAHS billing activity determination and notify ACOs of the determination prior to the end of a performance year or to take action to remove payment amounts earlier than this timeframe. To meet the definition of SAHS billing activity we are establishing in this final rule, a given HCPCS or CPT code must exhibit a level of billing that represents a significant claims increase either in the volume or dollars (for example, dollar volume significantly above prior year, or claims volume beyond expectations) with national or regional impact (for example, not only impacting one or few ACOs) and represents a deviation from historical utilization trends that is unexpected and is not clearly attributable to reasonably explained changes in policy or the supply or demand for covered items or services. The billing level is significant and represents billing activity that would cause significantly inaccurate and inequitable payments and repayment obligations in the Shared Savings Program if not addressed. In making the determination that billing activity on a certain code during the calendar year

[604] The Boards of Trustees, Federal Hospital Insurance and Federal Supplementary Medical Insurance Trust Funds, ''2024 Annual Report of the Boards of Trustees of the Federal Hospital Insurance and Federal Supplementary Medical Insurance Trust Funds'', p. 136, available at *https://www.cms.gov/oact/tr/2024.*

[605] Ibid.

represents SAHS billing activity that warrants adjustment, we anticipate that it will be necessary to consider the total level of billing in a calendar year compared to the total level of billing from prior years and therefore and that we would make this determination once we know all of the spending that has occurred for that code during the calendar year.

The policy to make adjustments to Shared Savings Program calculations to mitigate the impact of SAHS billing activity in CY 2024 and in subsequent calendar years is intended as a policy to be invoked in rare and extreme cases when CMS identifies a code that meets the high bar to be defined as SAHS billing activity as finalized in this final rule. We narrowly crafted the definition of SAHS billing activity in fairness to ACOs and to balance the goals of the Shared Savings Program to better coordinate care and improve quality, while not holding ACOs accountable for activity that is beyond their control. These high standards are appropriate because the remedy we are using to correct for SAHS billing activity is the broad exclusion of the relevant CPT or HCPCS code from certain important financial calculations, and this could have mixed impact on Shared Savings Program ACOs. Both under this rule and in the SAHS billing activity standalone rule, we are mindful of equitable concerns that may arise from CMS making adjustments to calculations of the ACO's historical benchmark or to performance year expenditures after the conclusion of a performance year.

We agree with the commenter that noted that the reopening policy is an appropriate channel for removing improper payments from an ACO's shared savings and losses calculations; see section III.G.7.c. of this final rule for more details on this policy.

Comment: Some commenters recommended codes for consideration as SAHS billing activity in CY 2023. Specifically, commenters suggested that CMS consider whether codes for skin substitutes, collagen dressings, laboratory services, telemedicine, ventilators, and diabetic supplies warrant adjustment to Shared Savings Program calculations, echoing some related suggestions made in response to the SAHS billing activity proposed rule.

Response: With respect to billing activity on other codes in CY 2023, we note that this is outside the scope of this final rule. We refer readers to the SAHS billing activity final rule (89 FR 79157 through 79158) for our responses to public comments related to these other codes for CY 2023. We remain committed to evaluating cases when improper payments may have been made and assessing the impact on Shared Savings Program calculations. The reopening policy we are finalizing in this final rule can potentially provide relief to ACOs that are affected by specific instances of fraud or other improper payments that may not be SAHS billing activity or for which there is not enough information available at the close of the affected calendar year to make a determination of whether SAHS billing activity occurred. Under this policy, CMS may consider in its discretion whether to reopen the completed financial reconciliation results for fraud or similar fault or good cause, as specified under § 425.315(a). As discussed in section III.G.7.c of this final rule, we may conduct a reopening to account for the impact of improper payments, at the request of an ACO, after an initial determination has been issued.

Comment: A couple commenters recommended codes for consideration as SAHS billing activity in CY 2024. Specifically, commenters identified skin substitutes and the intermittent catheter codes as displaying SAHS billing activity in CY 2024.

Response: We appreciate commenters notifying us of their concerns over billing activity in CY 2024 for certain services. We will take this information into consideration when making a final determination of which codes, if any, displayed SAHS billing activity in CY 2024. We will make this determination shortly after the start of 2025.

Comment: Many commenters requested transparency into the process of CMS's determination whether codes meet the definition of SAHS billing activity, with most also requesting that ACOs receive written feedback on their requests that certain codes be considered SAHS billing activity including an explanation from CMS as to why the situation does or does not meet the SAHS criteria.

Response: As we explained elsewhere in this section, we will routinely examine billing trends identified by CMS and other relevant information that had been raised through complaints by ACOs or other interested parties to the HHS–OIG or to CMS. For instance, ACOs may alert the HHS–OIG or CMS when they suspect a code is displaying SAHS billing activity. Shortly after the start of a calendar year CMS will make a final determination as to which codes, if any, warrant adjustments for the previous calendar year. With respect to commenters urging the need for CMS to provide ACOs with written responses to ACO requests for certain codes to be considered SAHS billing activity, we note that in the rare case when CMS will determine that SAHS billing activity occurred in the previous calendar year, CMS will notify all program participants of this finding including the codes removed and the per capita expenditure amount for their assigned beneficiary population.

Comment: Commenters also addressed the criteria, described elsewhere in this final rule, to determine whether SAHS billing activity warrants removal of the corresponding billing codes from Shared Savings Program financial calculations. One commenter, while urging transparency into the determination process, stated that the requirements for initiating SAHS policies are reasonable and allow the agency to adjust to evolving and unpredictable requirements. A few commenters requested CMS provide more clarity on the criteria, with one requesting that CMS codify the criteria for identifying SAHS billing activity to ensure ACOs clearly understand when billing activity meets the ''threshold'' and another requesting CMS further define what is ''significant.'' Another commenter suggested CMS develop a threshold (such as two standard deviations from the mean) for individual billing codes such that any codes surpassing the threshold would automatically trigger adjustments.

A few commenters urged CMS to expand the criteria such that SAHS billing activity occurring on a more regional or local level can be considered SAHS billing activity that warrants adjustment. One of these commenters offered an expanded definition for SAHS billing activity specific to DMEPOS claims which would consider whether a DMEPOS code had a significant volume increase in billing for a particular ACO that was not supported by a referral from a treating provider or by a corresponding office visit. Additionally, the commenter requested that CMS remove from an ACO's own financial calculations any claims for which CMS payment is paid into escrow or a holding account while under investigation, any claims submitted by a provider under indictment or investigation by a Federal agency, and any claims for billing codes previously deemed SAHS in prior years. Another commenter suggested that CMS consider provider-level billing activity rather than code-level billing activity in identifying SAHS billing activity.

Response: We appreciate the support of the commenter who stated that the requirements for initiating SAHS policies are reasonable. We agree that the criteria allow the agency to adjust to

evolving and unpredictable requirements.

We decline to specify more specific and narrower criteria or a threshold that would automatically trigger the SAHS billing activity. The flexible definition of SAHS billing activity that we are adopting allows CMS to determine whether SAHS billing activity occurred on a case-by-case basis allowing us to develop experience in this area before further refining or codifying additional criteria. We also decline to codify a specific set of criteria for DMEPOS claims since the criteria we are establishing allow us to address SAHS billing activity related to DMEPOS.[606]

As we explain elsewhere in this section, we anticipate considering multiple criteria when making a determination of SAHS billing activity, including whether the observed billing activity has national or regional impact or significance. The extent of the geographic impact of the SAHS billing activity in question is relevant given that the policy we are finalizing in this final rule would entail program-wide adjustments. For this reason, we would not utilize this authority when billing activity did not have national or regional significance. The current set of criteria do not preclude CMS from determining a particular code for a particular year exhibits SAHS billing activity if the highly suspect billing activity is concentrated at one or a few providers. Indeed, the SAHS billing activity for intermittent urinary catheters was driven by a relatively small number of suppliers submitting a large majority of all claims for these devices.[607] [608]

After consideration of public comments, we are finalizing our proposal that CMS have the sole discretion to identify cases of SAHS billing activity for a particular calendar year that would warrant the adjustment of Shared Savings Program financial calculations. We anticipate that shortly after the start of a calendar year CMS would make a final determination as to which codes, if any, warrant adjustments for the previous calendar year. We will consider multiple criteria in determining whether SAHS billing activity warrants removal of the corresponding billing codes from Shared Savings Program financial calculations.

(b) Adjustments to Shared Savings Program Calculations

In section III.G.7.d.(2).(b) of the CY 2025 PFS proposed rule (89 FR 61912 through 61916), we indicated that in the event that CMS identifies one or more HCPCS or CPT codes with SAHS billing activity in CY 2024 or a subsequent calendar year that warrant adjustment, we proposed to exclude all Medicare Parts A and B payment amounts associated with the identified codes on specified claim types submitted by any provider or supplier from expenditure and revenue calculations for the relevant calendar year for which the SAHS billing activity is identified. For example, if CMS identifies one or more codes with SAHS billing activity in CY 2025 that warrant adjustment, we would exclude payments for those codes for both calculations where CY 2025 is the performance year and in calculations where CY 2025 is a benchmark year for ACOs in agreement periods beginning in 2026, 2027, and 2028.

We proposed that we would also adjust the 3 most recent years prior to the start of the ACO's agreement period used in establishing the historical benchmark that is used to reconcile the ACO for a performance year corresponding to the calendar year for which the SAHS billing activity was identified. In the example where CMS identified SAHS billing activity for 2025, we would adjust benchmark expenditures (ACO, national, and regional) for 2019, 2020, and 2021, for an ACO that began an agreement period in 2022 (for which PY 2025 is the fourth performance year in its agreement period) and would adjust benchmark expenditures (ACO, national, and regional) for 2022, 2023, and 2024 for an ACO that began its agreement period in 2025 (for which PY 2025 is the first performance year in its agreement period). We noted that in computing benchmark expenditures for 2023 for this second ACO, because 2023 is a benchmark year, we would also exclude payments for the catheter claims with SAHS billing activity in 2023, as proposed in the SAHS billing activity proposed rule, if finalized.

We explained that our proposal to adjust an ACO's historical benchmark to exclude Medicare Parts A and B FFS payment amounts associated with the HCPCS or CPT codes displaying SAHS billing activity during a performance year would achieve greater consistency between the benchmark period and the performance year, given that we are excluding all payments on specified claim types for the selected codes from performance year calculations, including payments that would have been made in the absence of any SAHS billing activity. This helps to ensure a balance between the benchmark and the performance year such that an ACO is not unfairly benefitting from a benchmark that includes certain expenditures that are excluded from the performance year. Under our proposal, we would identify any codes warranting adjustment at the start of the next calendar year and our operational schedule would accommodate the additional calculations required. Therefore, we stated that we anticipate being able to compute adjusted historical benchmarks for the affected reconciliation with minimal, if any, delays to the typical timeline for issuing initial determinations.

We proposed that we would provide the historical benchmark that has been adjusted to exclude payment amounts for HCPSC or CPT codes associated with SAHS billing activity occurring in the performance year being reconciled to ACOs as part of their financial reconciliation settlement package for the performance year, as opposed to providing a separate new historical benchmark report in advance of settlement. This approach is consistent with what we have done for rare past occasions where we computed revised benchmarks immediately prior to reconciliation to correct for late-breaking data issues. Consistent with existing operational practice, in calculating these adjusted benchmarks, we would recompute ACO expenditures using beneficiary assignment data that was generated during the performance year being reconciled for all ACOs. For example, if computing adjusted historical benchmarks for PY 2025 to exclude claim payments for codes with SAHS billing activity during the performance year, we would use beneficiary assignment data generated during CY 2025. Although the benchmark year assignment data generated during the performance year being reconciled would be based on the same ACO participant list, assignment methodology selection under § 425.226(a)(1), and assignment methodology under subpart E of Part 425 of the regulations as used in

[606] See, for example, the SAHS billing activity final rule, which removed payment amounts for HCPCS codes A4352 and A4353 on DMEPOS claims from Shared Savings Program financial calculations from CY 2023 with a determination made under substantially the same definition of SAHS billing activity we are now adopting.

[607] See the discussion in the SAHS billing activity final rule (89 FR 79156).

[608] As noted in the SAHS billing activity final rule (89 FR 79154), using our authority to suspend payments, CMS quickly stopped payment on almost all of these claims and began investigating the suppliers who were billing. Since then, the top 15 billers of suspicious catheter claims have had their Medicare enrollment revoked. We also described additional actions taken by CMS to prevent fraud, waste and abuse in the rule and in a case study, ''Urinary Catheter Case Study: CMS' Swift Action Saves Billions,'' available at *https://www.cms.gov/files/document/cpi-urinary-catheter-case-study.pdf.*

calculating the ACO's most recent prior benchmark, other factors, such as more recent Medicare beneficiary eligibility data along with the ACOs included in the claims-based assignment competition, could differ and impact an ACO's assigned population. We considered whether to provide ACOs with their adjusted benchmark at the time we announce our determination of SAHS billing activity for a given calendar year (anticipated to occur near the start of the next calendar year), however we concluded this would delay other important program milestones, such as the issuance of preliminary and adjusted historical benchmarks for the new performance year.

When the calendar year with SAHS billing activity becomes a benchmark year, we proposed adjustments to calculations for the calendar year itself, and not for other years in the benchmark period, or the performance years that will be reconciled against those benchmarks. Thus, in the example where we identified codes with SAHS billing activity in CY 2025, in establishing or resetting the benchmark for an ACO entering an agreement period in 2026, we would exclude payments for the relevant codes identified for CY 2025 from BY 2025 calculations and, if our proposed policy in the SAHS billing activity proposed rule is finalized, would remove payments for the specified catheter codes from BY 2023 calculations. We would not exclude the catheter codes identified as having SAHS billing activity in BY 2023 or the codes identified for CY 2025 from either BY 2024 calculations or calculations for PY 2026 or any subsequent performance years in the same agreement period.[609]

Specifically, we proposed to adjust the following Shared Savings Program calculations, as applicable, to exclude all Medicare Parts A and B payment amounts associated with a HCPCS or CPT code on claims for the specified claim types displaying SAHS billing activity:

- Calculation of Medicare Parts A and B FFS expenditures for an ACO's assigned beneficiaries for all purposes including the following: Establishing, adjusting, updating, and resetting the ACO's historical benchmark and determining performance year expenditures.
- Calculation of FFS expenditures for assignable beneficiaries as used in determining county-level FFS expenditures and national Medicare FFS expenditures, including the following calculations:

++ Determining average county FFS expenditures based on expenditures for the assignable population of beneficiaries in each county in the ACO's regional service area according to §§ 425.601(c) and 425.654(a) for purposes of calculating the ACO's regional FFS expenditures.

++ Determining the 99th percentile of national Medicare FFS expenditures for assignable beneficiaries for purposes of the following:

-- Truncating assigned beneficiary expenditures used in calculating benchmark expenditures under §§ 425.601(a)(4) and 425.652(a)(4), and performance year expenditures under §§ 425.605(a)(3) and 425.610(a)(4).

-- Truncating expenditures for assignable beneficiaries in each county for purposes of determining county FFS expenditures according to §§ 425.601(c)(3) and 425.654(a)(3).

-- Truncating expenditures for assignable beneficiaries for purposes of determining truncated national per capita FFS expenditures for purposes of calculating the Accountable Care Prospective Trend (ACPT) according to § 425.660(b)(3).

++ Determining truncated national per capita expenditures FFS per capita expenditures for assignable beneficiaries for purposes of calculating the ACPT according to § 425.660(b)(3).

++ Determining national per capita expenditures for Parts A and B services under the original Medicare FFS program for assignable beneficiaries for purposes of capping the regional adjustment to the ACO's historical benchmark according to §§ 425.601(a)(8)(ii)(C) and 425.656(c)(3), capping the prior savings adjustment according to § 425.658(c)(1)(ii), capping the prepaid shared savings multiplier according to § 425.640(f)(2)(v), and calculating the proposed HEBA scaler according to § 425.662(b)(2).

++ Determining national growth rates that are used as part of the blended growth rates used to trend forward BY1 and BY2 expenditures to BY3 according to §§ 425.601(a)(5)(ii) and 425.652(a)(5)(ii) and as part of the blended growth rates used to update the benchmark according to §§ 425.601(b)(2) and 425.652(b)(2)(i).

- Calculation of Medicare Parts A and B FFS revenue of ACO participants for purposes of calculating the ACO's loss recoupment limit under the BASIC track as specified at § 425.605(d).
- Calculation of total Medicare Parts A and B FFS revenue of ACO participants and total Medicare Parts A and B FFS expenditures for the ACO's assigned beneficiaries for purposes of identifying whether an ACO is a high revenue ACO or low revenue ACO, as defined at § 425.20, determining an ACO's eligibility to receive advance investment payments according to § 425.630, and determining whether an a ACO qualifies for a shared savings payment at § 425.605(h).
- Calculation or recalculation of the amount of the ACO's repayment mechanism arrangement according to § 425.204(f)(4).

We explained that this approach would recognize that SAHS billing activity has the potential to impact an ACO's savings and loss determination for both the performance year when the SAHS billing activity occurred and future performance years for which the affected year is a benchmark year. Making adjustments when the affected period represents a performance year or benchmark year is consistent with our approach for the exclusion of payment amounts for episodes of care for treatment of COVID–19 that we established in the May 8, 2020 COVID–19 IFC (85 FR 27577 through 27581).

The listed calculations reflect the same set of calculations that CMS adjusts for a beneficiary's episode of care for treatment of COVID–19, specified at § 425.611(c), as amended by the CY 2021 PFS final rule (85 FR 85044), the CY 2023 PFS final rule (87 FR 70241), and the CY 2024 PFS final rule (88 FR 79548), with a few exceptions. First, § 425.611(c) includes certain provisions that are not relevant for the proposed policy.[610] Second, the proposed policy includes calculations related to truncated national per capita expenditures used in determining the ACPT as described at § 425.660(b)(3) that are not included at § 425.611(c),[611] as well as references to other new or

[609] This assumes these same codes were not identified as having SAHS billing activity in CY 2024 or CY 2026 or later years.

[610] This includes provisions under §§ 425.600, 425.602, 425.603, 425.604, and 425.606 which are not relevant for the proposed policy because they are not applicable to PY 2024 or later performance years or for agreement periods where CY 2024 or later years are benchmark years. These provisions are relevant for the COVID–19 episode exclusion policy under § 425.611 because they are applicable to performance or benchmark years that overlap with the PHE for COVID–19.

[611] When establishing the ACPT in the CY 2023 PFS final rule, we noted that the first ACPT release would be published in 2024 for agreement periods beginning on January 1, 2024, and would provide a projected annualized growth rate (or rates) relative to the 2023 benchmark year (BY3). We noted further that to the extent that Medicare projections made at that time (2024) anticipated lingering effects from the COVID–19 pandemic then they would be reflected in the ACPT (see 87 FR 69894) and we opted not to amend § 425.611 to include adjustments of ACPT-related calculations. In the CY 2025 PFS proposed rule, we explained our belief that it is appropriate to propose making adjustments to ACPT-related calculations.

proposed calculations that do not rely on expenditures from a period of time overlapping the PHE for COVID–19 for the United States which was in effect from January 27, 2020, through May 11, 2023 (capping the proposed prepaid shared savings multiplier (§ 425.640(f)(2)(v)), calculating the proposed HEBA scaler (§ 425.662(b)(2)), and determining whether an ACO that does not meet its minimum savings requirement qualifies for a shared savings payment (§ 425.605(h)). We proposed to adjust calculations used for the ACPT to mitigate the impact of any SAHS billing activity identified for CY 2024 or subsequent calendar years. Specifically, in projecting growth rates at the start of an agreement period according to § 425.660, we would make an adjustment to the growth rates to mitigate the impact that any known SAHS billing activity have on spending growth projections.

We explained our belief that it is unlikely that fixed growth rates projected at the start of agreement periods beginning in earlier years may also need mitigation from a code displaying SAHS billing activity. For example, if CMS identifies a HCPCS or CPT code displaying SAHS billing activity in CY 2025, the projected growth rate from 2023 to 2025—which will be used to update the historical benchmark for PY 2025 financial reconciliation for ACOs that began an agreement period on January 1, 2024—would likely have assumed typical billing patterns for the code in CY 2025. Additionally, the projected growth rate from BY 2024 to PY 2025—which will be used to update the historical benchmark for PY 2025 financial reconciliation for ACOs that began an agreement period on January 1, 2025—would likely also have assumed typical billing patterns for the code in CY 2025 given the projections were finalized early in CY 2025.

However, we explained that if we determine a bias exists due to differences between adjustments to the projected growth rates for the ACPT and other Shared Savings Program calculations, we could rely on our current policy under § 425.652(b)(4)(ii) to reduce the weight of the ACPT in the three-way blend. We proposed that we would use our discretion to reduce the weight of the ACPT rather than recalculate the growth rates that had been projected at the start of agreement periods starting in earlier years, as we believe it is important to maintain the policy that the projected growth rates remain fixed for the ACO's agreement period. In the CY 2023 PFS final rule (refer to 87 FR 69886 through 69898) we finalized our proposal to establish the ACPT at the outset of an agreement period, based on one or more annualized growth rates. We explained that we will not adjust the ACPT due to external factors such as geographic price changes, efficiency discounts, or other retrospective updates occurring during the performance years throughout the agreement period. In response to commenters concern that CMS might adjust the ACPT downward during the agreement period, we stated that we will not adjust the ACPT projections over the course of the agreement period (87 FR 69897). However, we acknowledged that a variety of circumstances could cause actual expenditure trends to significantly deviate from projections. If unforeseen circumstances occur during an ACO's agreement period, we retained flexibility to reduce the impact of the prospectively determined ACPT portion of the three-way blend when necessary to mitigate unforeseen circumstances. We explained that we will determine, on an ad hoc basis, whether an unforeseen circumstance warrants adjustment of the weight placed on the ACPT component of the three-way blend by considering whether it has a material impact across the entire Shared Savings Program. If we determine that expenditure growth has differed significantly from projections made at the start of the agreement period due to unforeseen circumstances, such as an economic recession, pandemic, or other factors, a reduction in the weight placed on the ACPT may be considered.

To summarize, we proposed that when projecting growth rates used for the ACPT at the beginning of an agreement period, we would make an adjustment to mitigate the impact of any known SAHS billing activity on spending growth projections. Additionally, in accordance with § 425.660(a), CMS would not adjust the ACPT projections over the course of the agreement period to account for SAHS billing activity later identified. Rather, CMS may use its discretion to reduce the weight of the ACPT in the three-way blend in accordance with § 425.652(b)(4)(ii) if CMS determines that the SAHS billing activity represents an unforeseen circumstance that warrants a reduction to the weight.

The direction and magnitude of the impact of the proposed adjustments may vary by ACO. However, by making these adjustments, we would be helping to ensure that no ACOs are held accountable, and financially penalized for SAHS billing activity that was outside their direct control while also protecting the Trust Funds from other ACOs potentially receiving windfall gains.

For this proposal, we relied on our authority under section 1899(d)(1)(B)(ii) of the Act. Section 1899(d)(1)(B)(ii) of the Act authorizes the Secretary to adjust the benchmark for beneficiary characteristics and such other factors as the Secretary determines appropriate. Here, we proposed to adjust the benchmark in order to remove payments for HCPCS or CPT codes identified as exhibiting SAHS billing activity in CY 2024 or subsequent calendar years from the determination of benchmark expenditures when the calendar year serves as a benchmark year or from the determination of benchmark expenditures that will be used to reconcile the calendar year when it serves as a performance year.

We proposed to use our authority under section 1899(i)(3) of the Act to remove payment amounts for HCPCS or CPT codes identified as exhibiting SAHS billing activity in CY 2024 or subsequent calendar years from the following calculations: (1) performance year expenditures; (2) updates to the historical benchmark; and (3) ACO participants' Medicare FFS revenue used for multiple purposes across the Shared Savings Program, including determinations of loss sharing limits in the two-sided models of the BASIC track,[612] determinations of eligibility for advance investment payments,[613] and expanded criteria for certain low revenue ACOs participating in the BASIC track to qualify for shared savings in the event the ACO does not meet the MSR.[614] Section 1899(i)(3) of the Act requires that we determine that the alternative payment methodology adopted under that provision would improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without resulting in additional program expenditures. The adjustments we proposed therein, which would remove payment amounts for codes with identified SAHS billing activity from the specified Shared Savings Program calculations as proposed at § 425.672(c) and (e), would capture and remove from program calculations expenditures that are outside of an ACO's control, but that could significantly affect the ACO's performance under the program. In particular, failing to remove these payments would likely create highly variable savings and loss results for

[612] Refer to § 425.605(d)(1)(iii)(D), (d)(1)(iv)(D), and (d)(1)(v)(D) for BASIC track Levels C, D and E, respectively.

[613] Refer to § 425.630(b).

[614] Refer to § 425.605(h).

individual ACOs that happen to have over-representation or under-representation of SAHS billing activity for the selected codes among their assigned beneficiary populations.

As described in the Regulatory Impact Analysis of the CY 2025 PFS proposed rule (89 FR 62183 through 62184), excluding payment amounts for the selected codes from the specified calculations are not expected to result in an increase in spending beyond the expenditures that would otherwise occur under the statutory payment methodology in section 1899(d) of the Act. Further, these adjustments to our calculations to remove payment amounts for these codes would promote continued integrity and fairness and improve the accuracy of Shared Savings Program financial calculations. As a result, we expect these policies would support ACOs continued participation in the Shared Savings Program and the program's goals of lowering growth in Medicare FFS expenditures and improving the quality of care furnished to Medicare beneficiaries.

Based on these considerations, and as specified in the Regulatory Impact Analysis of the CY 2025 PFS proposed rule (89 FR 62183 through 62184), we determined that adjusting certain Shared Savings Program calculations to remove payment amounts for selected codes, in the event we determine SAHS billing activity occurs in CY 2024 or subsequent calendar years, from the calculation of performance year expenditures, updates to the historical benchmark, and ACO participants' Medicare FFS revenue used for multiple purposes across the Shared Savings Program, meets the requirements for use of our authority under section 1899(i)(3) of the Act when incorporated into the existing other payment model we have established pursuant to that section.

In the CY 2025 PFS proposed rule (89 FR 61915), we explained that the changes we proposed in section III.G.7.d of the proposed rule would apply to address the impact of SAHS billing activity identified in CY 2024 or subsequent calendar years, and thus would apply to ACOs currently participating in PY 2024. Therefore, these changes to policies applicable for PY 2024 constitute retroactive rulemaking. Section 1871(e)(1)(A)(ii) of the Act permits a substantive change in regulations, manual instructions, interpretive rules, statements of policy, or guidelines of general applicability under Title XVIII of the Act to be applied retroactively to items and services furnished before the effective date of the change if the failure to apply the change retroactively would be contrary to the public interest.

We found that failing to apply the proposed changes retroactively to PY 2024 would be contrary to the public interest because it would unfairly punish Shared Savings Program ACOs by forcing them to unexpectedly assume a substantial magnitude of financial risk for costs outside of their control and not previously contemplated in the Shared Savings Program, undermining both the sustainability of the Shared Savings Program and the public's faith in CMS as a fair partner, in the event we determine SAHS billing activity impacts CY 2024. We did not fully contemplate the potential for SAHS billing activity outside of an ACO's control when the Shared Savings Program was established.[615] For this reason, the Shared Savings Program financial methodology and the procedures we have utilized in the past did not provide a means to adequately account for instances of SAHS billing activity outside of an ACO's control, and thereby the related financial risk is assumed entirely by ACOs. We view this outcome as particularly inequitable to ACOs because they have no direct means of controlling such costs. Unlike Medicare Advantage organizations, ACOs are not responsible for processing claims for their assigned beneficiaries and otherwise have no means of causing the denial of such claims. CMS thus cannot reasonably have expected ACOs to have intended to assume responsibility for all instances of SAHS billing activity outside of an ACO's control when they joined the Shared Savings Program. For these reasons, it would be contrary to the public interest for CMS to fail to apply a policy mitigating this issue retroactively.

We explained that we did not foresee the acute need to address SAHS billing activity impacting CY 2023, and the need for the related policy proposal for addressing SAHS billing activity in CY 2024 or subsequent calendar years, with sufficient time in advance of the start of PY 2024 to undertake notice and comment rulemaking earlier, and to avoid retroactive rulemaking. More specifically, we were only able to determine that the increase in billing on HCPCS codes A4352 and A4353 in CY 2023 represented SAHS billing activity after the calendar year ended. To identify that the billing activity in CY 2023 was significant, anomalous, and highly suspect, CMS reviewed actual billing levels after the calendar year closed and services furnished in CY 2023 had occurred and the billing level could then be compared to billing levels observed in prior calendar years.

We solicited comment on our proposal to apply the policy retroactively to PY 2024, including whether failing to apply the policy retroactively would be contrary to the public interest and how it would affect ACOs and their ability to participate in the Shared Savings Program.

We proposed a new § 425.672 to describe adjustments CMS could make to Shared Savings Program calculations to mitigate the impact of SAHS billing activity for CY 2024 or subsequent calendar years. We proposed that § 425.672(b) specify that CMS, at its sole discretion, may determine that the billing of specified HCPCS or CPT codes represents SAHS billing activity in calendar year 2024 or subsequent calendar years that warrants adjustment to calculations made under this part. We proposed under § 425.672(c) to specify the Shared Savings Program calculations for which CMS would exclude all Medicare Parts A and B FFS payment amounts for the specified claim types associated with a HCPCS or CPT code identified at § 425.672(b) when an adjustment to the calculation is appropriate in light of the SAHS billing activity. The calculations specified at § 425.672(c) include all potentially relevant financial calculation provisions, including those covering the financial benchmarking methodologies (including the proposed HEBA scaler at § 425.662(b)(2)) and those covering calculation of shared savings and losses. We proposed at § 425.672(d) that for calendar year 2024 or subsequent calendar years,[616] we would adjust Shared Savings Program calculations for SAHS billing activity identified at § 425.672(b) for the calendar year when it is either a performance year or a benchmark year, as well as the 3 most recent years prior to the start of the ACO's agreement period used in establishing the historical benchmark, when such a benchmark is used to reconcile the ACO

[615] *See, for example,* 76 FR 67948 through 67950. Such approaches were more focused on policies to support monitoring of ACO performance and ensuring program integrity.

[616] We note that by anchoring this policy on the calendar year, this proposed provision differs from many other program regulations that are applicable for a given performance year or for agreement periods beginning on a given date or within a given range. However, we believe this approach is appropriate for this policy as (1) we would adjust expenditures for the affected calendar year both when it is a performance year and when it is a benchmark year and (2) it ties the policy to the period for which the SAHS billing activity was identified much in the way the policy for COVID–19 episodes of care specified in § 425.611 is tied to the related public health emergency.

for a performance year adjusted for SAHS billing activity. We proposed to specify at § 425.672(e) that we would also make adjustments for any calendar year corresponding to BY3 in projecting per capita growth in Medicare Parts A and B FFS expenditures according to § 425.660(b)(1) for purposes of calculating the ACPT for agreement periods beginning on January 1, 2024, and in subsequent years. Additionally, we proposed conforming revisions to §§ 425.601(a)(9) and 425.652(a)(9), as well as paragraphs at §§ 425.601(a)(9)(iv) and 425.652(a)(9)(ix) to include adjustments for SAHS billing activity as one of the reasons that CMS would adjust an ACO's benchmark during the term of its agreement period. We explained our belief that while we expect that the identification of SAHS billing activity that triggers these proposed policies will be rare, if finalized, these policies will allow us to proactively ensure the accuracy of program calculations and provide greater certainty for ACOs and the Trust Funds.

We solicited comments on these proposals.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Some commenters addressed the proposed adjustments to Shared Savings Program calculations. One commenter expressed support for CMS to adjust calculations prior to sending ACOs initial determinations of their shared savings and losses, stating that timely removal of SAHS billing activity is essential for ACOs that rely on shared savings revenue to operate or to make additional investments in patient care.

Response: We thank the commenter for their support of the proposal to adjust Shared Savings Program calculations for SAHS billing activity in advance of issuing initial determinations of shared savings and losses. We expect this policy will limit requests to reopen initial determinations, thus reducing burden for ACOs and CMS.

Comment: Some commenters addressed the proposal to exclude all Medicare Parts A and B payment amounts associated with the identified codes on specified claim types submitted by any provider or supplier from expenditure and revenue calculations for the relevant calendar year for which the SAHS billing activity is identified. A few commenters characterized the approach to exclude all payment amounts for the codes that displayed SAHS billing activity as comprehensive, and that it is the most straightforward approach and will help to minimize complications in the calculations for the impacted years. Another commenter recommended that CMS only remove payment amounts billed by certain providers or suppliers, as identified by NPIs, to avoid any unintended consequences for some ACOs.

Response: We thank commenters for their support of the proposal to exclude all Medicare Part A and B payment amounts associated with the identified codes on specified claim types submitted by any provider or supplier. We proposed to not limit the exclusion to payment amounts on claims submitted by certain suppliers that may have individually displayed SAHS billing activity so as to protect the integrity of any potential investigations which may be ongoing at the time CMS makes a determination of SAHS billing activity.

Comment: Some commenters addressed the proposal to exclude payment amounts associated with identified codes for the calendar year serving as a performance year as well as from the historical benchmark used to reconcile that performance year. A few commenters urged CMS to remove all payment amounts for a code from expenditure calculations for a performance year if payment amounts for that code are removed from expenditure calculations for an ACO's benchmark year.

A couple commenters appeared to address CMS's approach for intermittent urinary catheters. One commenter urged CMS to eliminate ''SAHS billing activity from future agreements,'' citing an example to remove ''2023 SAHS'' from both benchmark and performance years for agreements starting 2024, 2025 and 2026. Another commenter stated their support for an approach that would exclude SAHS billing activity from historical benchmarks for ACOs starting new agreement periods in 2024, 2025 and 2026, as well as from any calculation used to determine revenue status or the repayment mechanism.

Response: We proposed to exclude all Medicare Parts A and B payment amounts associated with the identified codes on specified claim types submitted by any provider or supplier from expenditure and revenue calculations for the relevant calendar year for which the SAHS billing activity is identified. We explained that we would also adjust the 3 most recent years prior to the start of the ACO's agreement period used in establishing the historical benchmark that is used to reconcile the ACO for a performance year corresponding to the calendar year for which the SAHS billing activity was identified. When the calendar year with SAHS billing activity is (or becomes) a benchmark year, we proposed adjustments to calculations for the calendar year itself, and not for other years in the benchmark period, or the performance years that will be reconciled against those benchmarks. This approach avoids adjusting calculations more than is necessary to reasonably mitigate the impact of SAHS billing activity on an ACO's financial performance. Given the potential for the adjustments to have mixed impact on ACOs' updated benchmarks, this approach is the most equitable. An ACO's historical benchmark is calculated using the per capita Parts A and B fee-for-service expenditures for beneficiaries that would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period. Thus, removing payment amounts for a HCPCS or CPT code from the benchmark year affected by SAHS billing activity from ACO expenditures and national and regional trend and update factors strikes a balance between mitigating the impact of SAHS billing activity and not introducing unnecessary bias into calculations.

As part of our final policy, we decline to remove payment amounts for the codes from future performance years that are reconciled using a historical benchmark that includes a benchmark year with codes excluded. For example, since we identified SAHS billing activity in CY 2023, then in the future when performing financial reconciliation for PY 2025 for an ACO with benchmark years 2022 through 2024, we will exclude payment amounts for the selected codes from BY 2023 expenditures and not from BY 2022, BY 2024, and PY 2025 expenditures.

Comment: One commenter supported the proposal but urged CMS to consider an approach that would ensure no ACOs are negatively impacted. Another commenter stated that CMS should calculate ACO shared savings and losses twice, both before and after adjusting calculations to remove the payment amounts.

Response: We interpret both comments as suggesting that CMS perform two versions of Shared Savings Program calculations—one that makes adjustments for SAHS billing activity and one that does not—and then issuing initial determinations based on the version of the calculations that would result in an ACO maximizing their shared savings or minimizing their shared losses for the performance year.

We decline to adopt such an approach. The inclusion of SAHS billing activity would cause significantly inaccurate and inequitable payments and potential repayment obligations if not addressed. It would be inequitable for ACOs to be held accountable for SAHS billing activity that occurred among their assigned population in the performance year. It would also be inequitable to allow other ACOs whose assigned populations were less affected by SAHS billing to benefit from the inclusion of these expenditures in benchmark update factors. Such ACOs would receive an inflated updated benchmark as a result of SAHS billing activity affecting national or regional expenditures. Allowing either source of inequity or imposing an artificial limit on the impacts of excluding the SAHS billing activity would undermine the integrity, fairness and accuracy of Shared Savings Program calculations.

Comment: One commenter urged CMS to provide ACOs with information about the impact of removing payment amounts for the codes displaying SAHS billing activity on ACO expenditures as well as regional and national expenditures. Additionally, the commenter suggested that CMS start providing ACOs with regional component-level data ''to help quantify these sorts of issues in the future.''

Response: Consistent with the SAHS billing activity final rule (89 FR 79164) in order to promote transparency in calculations and address commenter's concerns, within program reports provided with a given performance year's financial reconciliation results, we will identify the codes and provide ACOs with the per capita amount of any codes, determined to be SAHS billing activity, removed from their performance year assigned beneficiary expenditures consistent with other spending categories. Medicare claim payment amounts for any codes determined to be SAHS billing activity will continue to be included in the monthly Part A, B and D Medicare CCLF files sent to ACOs and ACOs may use that data and information to identify potentially impacted beneficiaries and healthcare providers.

Comment: Some commenters made recommendations for mitigating the impact of SAHS billing activity on Innovation Center models or the Quality Payment Program. Most of these commenters requested that the Center for Medicare and Medicaid Innovation (CMS Innovation Center) perform similar adjustments to mitigate SAHS billing activity for the catheter codes in the ACO Realizing Equity, Access, and Community Health (ACO REACH) Model. One commenter requested that the CMS Innovation Center exclude payment amounts for the catheter codes from the Bundled Payments for Care Improvement Advanced Model and the Comprehensive Care for Joint Replacement Model. Some commenters urged CMS to perform similar adjustments to expenditure calculations on Merit-Based Incentive Payment System cost measures.

Response: The commenters' suggestions are beyond the scope of this rulemaking, which addresses adjustments to Shared Savings Program calculations to mitigate the impact of SAHS billing activity in CY 2024 or subsequent year, however, we will share these comments with our colleagues in the Innovation Center and Quality Payment Program.

We received no public comments on the retroactive application of the proposed policy in the event we determine SAHS billing activity impacts CY 2024, and we are finalizing our proposal to apply the policy with retroactive effect for PY 2024.

After consideration of public comments, we are finalizing without modification our proposal with retroactive effect for PY 2024, to exclude all Medicare Parts A and B payment amounts associated with the identified codes on specified claim types submitted by any provider or supplier from expenditure and revenue calculations for the relevant calendar year for which the SAHS billing activity is identified, in the event that CMS identifies one or more HCPCS or CPT codes with SAHS billing activity in CY 2024 or a subsequent calendar year that warrant adjustment. Specifically, we are finalizing our proposal to add a new section of the regulation at § 425.672 to describe adjustments CMS will make to Shared Savings Program calculations to mitigate the impact of SAHS billing activity involving CY 2024 or subsequent calendar years. Section 425.672(b) describes that CMS, at its sole discretion, may determine that that the billing of one or more specified HCPCS or CPT codes represents SAHS billing activity for a calendar year that warrants adjustment to calculations. Section 425.672(c) specifies the Shared Savings Program calculations for which CMS will exclude all Medicare Parts A and B FFS payment amounts for the specified claim types associated with a HCPCS or CPT code and includes references to all relevant sections of the regulations in these provisions. In § 425.672(d), on the period of adjustment, we specify that CMS will adjust Shared Savings Program calculations for SAHS billing activity identified for CY 2024 or subsequent calendar years when the affected calendar year is either a performance year or a benchmark year, and from the 3 most recent years prior to the start of the ACO's agreement period used in establishing the historical benchmark when such a benchmark is used to reconcile the ACO for a performance year adjusted for SAHS billing activity. We specify under § 425.672(e) that we will make adjustments for payments associated with the identified HCPCS or CPT codes for BY3 in projecting per capita growth in Parts A and B FFS expenditures, according to § 425.660(b)(1), for purposes of calculating the ACPT for agreement periods beginning on January 1, 2024, and in subsequent years. Additionally, we are finalizing as proposed conforming revisions to §§425.601(a)(9) and 425.652(a)(9), as well as paragraphs at §§425.601(a)(9)(iv) and 425.652(a)(9)(ix), to include adjustments for SAHS billing activity as one of the reasons that CMS would adjust an ACO's benchmark during the term of its agreement period.

e. Solicited Comment on Establishing Higher Risk and Potential Reward under the ENHANCED Track

(1) Background

As described in the CY 2024 PFS final rule (88 FR 79223), we have considered a higher risk Shared Savings Program track under which the shared savings/loss rate would be somewhere between 80 percent and 100 percent (that is, a rate higher than that currently offered under the ENHANCED track) and that builds on the experience of the Next Generation ACO (NGACO) and ACO REACH Models. A higher risk track would offer ACOs increased incentives to generate savings, which would help improve care delivery by promoting innovations in the delivery of high-quality care that is more patient-centered. In other words, by increasing sharing rates for ACOs, ACOs will be better incentivized to develop innovations in the delivery of high-quality care and, therefore, improve the care they offer to their beneficiaries. A revised ENHANCED track could be implemented in accordance with section 1899(i)(3) of the Act, provided the Secretary determines that such other payment model enhances the quality and efficiency of items and services furnished under the Medicare program and does not result in program expenditures greater than those that would result under the statutory payment model.

In the CY 2024 PFS final rule (88 FR 79223), we summarized public comments received in response to our Request for Information (RFI) regarding a potential track within the Shared Savings Program with higher risk than the current ENHANCED track. For a full summary of the comments submitted in response to our comment solicitation, we refer readers to the relevant discussion in the CY 2024 PFS final rule (88 FR 79225 through 79227). Commenters were broadly supportive of such an approach and referenced existing policies under the ACO REACH Model, and the NGACO Model. Some commenters suggested features of such a track that would serve to encourage more participation in the Shared Savings Program and help ACOs deliver more person-centered care to beneficiaries in Traditional Medicare. These features included prospective payments, full sharing rates (a sharing rate of 100 percent, similar to the Global Risk Sharing Option in the ACO REACH Model) as well as a benchmark discount rate (a reduction of the benchmark by a predetermined percentage) to protect the Medicare Trust Funds.

A higher risk sharing arrangement could incentivize participating ACOs to improve performance in the program as they would receive a greater share of any gross savings. That improved performance may, in turn, result in reduced healthcare costs for Medicare and more effective, efficient care for beneficiaries. In addition, higher risk sharing could incentivize ACOs to develop new care delivery strategies to improve their financial performance, such as a focus on specialty care integration and reduced care fragmentation. Offering a higher risk sharing track may also help CMS reach our goal of having all beneficiaries in the traditional Medicare program in a care relationship with a healthcare provider who is accountable for the costs and quality of their care by 2030 by encouraging currently participating ACOs to continue participation in the Shared Savings Program, as well as encourage ACOs not participating in the Shared Savings Program to join as a result of increased potential reward.

A recent CBO report [617] proposed that higher sharing rates might incentivize providers to decrease spending as they would stand to gain a larger portion of the savings generated. While in the short term this might diminish CMS savings, the report postulates that this would increase participation in the Shared Savings Program and provide a means for CMS to manage long-term healthcare spending growth. The report also highlights the necessity of striking a delicate balance: devising financial incentives enticing enough for ACOs to participate actively in the Shared Savings Program, while ensuring that such participation leads to savings for the Medicare program.

In the CY 2025 PFS proposed rule (89 FR 61916 through 61921), we solicited comment on a participation option that would allow for higher risk and reward than currently available under the ENHANCED track. A participation option of this type would replace the existing ENHANCED track in order to avoid the self-selection issues that would occur if a higher risk track were to be included alongside the ENHANCED track. If both participation options were made available to ACOs, we have concerns that only the highest-performing ACOs would self-select into the higher of the two risk tracks. While we included an RFI on the topic in CY 2024 PFS rulemaking, we are concerned that ACOs did not have enough detailed information to appropriately weigh the tradeoffs associated with a higher risk/reward option than the current ENHANCED track, and that the additional information we have generated since then will allow ACOs and other interested parties to provide more forthright and helpful feedback. We sought public comments on the design of a higher risk option within the Shared Savings Program that could be enacted under our authority granted by section 1899(i)(3) of the Act and that would encourage ACOs to participate actively in the Shared Savings Program while ensuring that such participation leads to savings for the Medicare program.

(a) Current ENHANCED Track

Currently, under the Shared Savings Program, ACOs may enter participation agreements under the ENHANCED track. The ENHANCED track is a two-sided model that represents the highest level of risk and potential reward currently offered under the Shared Savings Program. The rules governing the participation options available to ACOs and the progression from lower to higher risk for ACOs entering the program are described in § 425.600 of the regulations. To qualify for a shared savings payment, an ACO must meet a MSR requirement, meet the quality performance standard or alternative quality performance standard established under § 425.512, and otherwise maintain its eligibility to participate in the Shared Savings Program under 42 CFR part 425, subpart B (§§ 425.100 through 425.118). For ACOs meeting the applicable quality performance standard established under § 425.512(a)(2) or (a)(5)(i) (for PY 2024 and subsequent performance years), the final shared savings rate is equal to the maximum sharing rate of 75 percent, or savings at a rate of 75 percent multiplied by the ACO's health equity adjusted quality performance score if the ACO meets the alternative quality performance standard at § 425.512(a)(5)(ii). CMS computes an ACO's shared savings payment by applying the final sharing rate to the ACO's savings on a first dollar basis (meaning the final sharing rate is applied to the ACO's full total savings amount), with the payment subject to a cap that is equal to 20 percent of the updated benchmark (§ 425.610(e)(2)).

ACOs that operate under a two-sided model and have losses that meet or exceed a MLR must share losses with the Medicare program (§ 425.100(c)). Once this MLR is met or exceeded, the ACO will share in losses at a rate determined according to the ACO's track/level of participation, up to a loss recoupment limit (also referred to as the loss sharing limit) (§ 425.605(d); § 425.610(f), (g)). In determining shared losses, ACOs participating in the ENHANCED track are subject to losses at a rate determined using a sliding scale based on ACO's health equity adjusted quality performance score, if the applicable quality performance standard established in § 425.512(a)(2) or (a)(5)(i) or the alternative quality performance standard at § 425.512(a)(5)(ii) is met; with minimum shared loss rate of 40 percent and maximum of 75 percent. If the ACO fails to meet the applicable quality performance standard established in § 425.512 or the alternative quality performance standard, the ACO is subject to 1st dollar losses at a rate of 75 percent (§ 425.610(f)(4)(ii)). Shared losses are subject to a cap that is equal to 15 percent of updated benchmark (§ 425.610(g)).

CMS adjusts historical benchmark expenditures by Medicare enrollment type by a percentage of the difference between the average per capita expenditure amount for the ACO's regional service area and the ACO's historical benchmark amount (referred to herein as the ''regional adjustment'') (§ 425.652(a)(8)). The weights used in the regional adjustment calculation are determined in accordance with§ 425.656(e) and are dependent on whether the ACO has lower or higher

[617] For more details, please refer to Congressional Budget Office (CBO), ''Medicare Accountable Care Organizations: Past Performance and Future Directions'', April 2024, available at *https://www.cbo.gov/system/files/2024-04/59879-Medicare-ACOs.pdf.*

spending compared to the ACO's regional service area and the agreement period for which the ACO is subject to the regional adjustment. The *first time* that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment using either 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have lower spending than the ACO's regional service area (§ 425.656(e)(1)(i)); or 15 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have higher spending than the ACO's regional service area (§ 425.656(e)(1)(ii)). The *second time* that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment using either the 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area (§ 425.656(e)(2)(i)); or 25 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area (§ 425.656(e)(2)(ii)). The *third time* that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment using the 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area (§ 425.656(e)(3)(i)); or the 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area (§ 425.656(e)(3)(ii)). The *fourth or subsequent time* that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment to the historical benchmark using 50 percent of the difference between the average per capita expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark (§ 425.656(e)(4)). Among the ACOs participating in PY 2024, 78 percent of BASIC track ACOs (176 of 227) received a positive regional adjustment, whereas 95 percent (155 of 163) of ACOs in the ENHANCED track received a positive regional adjustment. A positive regional adjustment indicates that their expenditures were less than that of their regional service area. For ACOs receiving a positive regional adjustment, the average regional adjustment amount was 2.21 percent ($237) of historical benchmark expenditures.

As of January 1, 2024, 43 percent (207 of 480) Shared Savings Program ACOs are participating under the ENHANCED track. Under Shared Savings Program policies, all ACOs participating in a two-sided model can select a symmetrical MSR and MLR which applies for the duration of its agreement period (§ 425.605(b)(2); § 425.610(b)(1)). Among ACOs participating in the ENHANCED track for PY 2024, 61 percent (126 of 207) have selected an MSR/MLR of 0.5 percent or greater while 39 percent (81 of 207) have selected an MSR/MLR of 0.0 percent. Among ACOs that participated in the ENHANCED track for PY 2022, 38 percent (55 of 146) generated gross savings between zero and 5 percent of their updated benchmark expenditures, and 12 percent (17 of 146) generated gross savings of 10 percent or more of their benchmark expenditures.

(b) Other CMS Innovation Center Models

In the NGACO Model, NGACOs were offered the choice between two risk arrangements, partial risk or full risk. Under both arrangements, the NGACO was responsible for 100 percent of performance year expenditures for services rendered to the NGACO's aligned beneficiaries. Under the partial risk arrangement, the NGACO could receive or owe up to 80 percent of savings/losses, whereas under the full risk arrangement, the NGACO could receive or owe up to 100 percent of savings/losses. To mitigate the ACO's risk of large shared losses, as well as to protect the Medicare Trust Funds against paying out excessive shared savings, NGACOs were required to choose a cap on gross savings/losses. The cap, expressed as a percentage of the benchmark, ranged from 5 percent to 15 percent. The risk arrangement chosen by the NGACO (80 or 100 percent) was applied to gross savings or losses after the application of the cap. In PYs 1–3, a discount was applied to the NGACO's benchmark that was set at a standard 3 percent, with various adjustments, that allowed the final discount to vary from 0.5 percent to 4.5 percent. In PYs 4–6, a discount of 0.5 percent was applied to the benchmark under the partial risk arrangement, and a discount of 1.25 was applied to the benchmark under the full risk arrangement. The purpose of the discount was to increase the likelihood that any savings achieved by the NGACOs participating in the model would also result in savings for the Medicare Program. The NGACO Model evaluation found that while NGACOs reduced gross Medicare Parts A and B expenditures relative to a comparison group of similar fee-for-service Medicare beneficiaries in their markets, they did not generate savings to the Medicare Trust Funds. ACOs that elected a risk cap greater than 5 percent and participated in model population-based payment mechanisms achieved greater declines in spending, suggesting that the combination of risk and payment flows is impactful. Spending reductions grew larger almost every year, reflecting a combination of NGACOs' improvements in infrastructure and clinical processes, exit by poorer-performing NGACOs, and the COVID–19 pandemic. While the NGACO Model reduced spending in Medicare Parts A and B, CMS paid back these reductions in the form of shared savings payments to ACOs. These results highlight the need to balance the tradeoff between incentivizing participation in higher levels of risk and reward, in alternative payment models such as the Shared Savings Program and ACO models tested by the Innovation Center, and reducing the risk of loss to the Medicare Trust Funds.

Under the ACO REACH Model, REACH ACOs are offered the choice of participating under the Global or the Professional Risk Sharing Options. As in the NGACO Model, under both risk sharing options, the REACH ACO is responsible for 100 percent of performance year expenditures for services rendered to aligned beneficiaries. Because ACOs electing the Global Risk Sharing Option retain up to 100 percent of the savings/losses on all savings up to 25 percent of their benchmark, with reduced sharing rates for savings exceeding 25 percent of their benchmark, a discount is applied to the benchmark to ensure savings are also generated for CMS. For ACOs in the Global Risk Sharing Option, the

benchmark is reduced by a fixed percentage based on the performance year.[618] The discount rate for PYs 2021 and 2022 was 2 percent, for PYs 2023 and 2024 is 3 percent, and for PYs 2025 and 2026 will be above 3.5 percent. The benchmark for ACOs participating in the Professional Risk Sharing Option does not include this discount, and these ACOs are only eligible to retain 50 percent of savings or owe 50 percent of any losses.

Preliminary evaluation results of the first 2 performance years of the Global and Professional Direct Contracting Model, before its transition to the ACO REACH Model, suggest that participating ACOs had mixed results in gross spending but consistent, significant increases in net spending relative to a comparison group of similar FFS Medicare beneficiaries in their markets, which included beneficiaries assigned to ACOs participating in the Shared Savings Program. Standard ACOs, comprised of organizations that generally have experience serving Medicare FFS beneficiaries, increased gross spending. Standard ACOs also reduced acute care spending and utilization but comparison providers had larger reductions in acute care spending and utilization. Increased spending among Standard ACOs was concentrated among the integrated delivery system/hospital system ACOs in the model. High Needs ACOs that serve Medicare FFS beneficiaries with complex needs, including dually eligible beneficiaries, decreased gross spending. High Needs ACOs comprised of organizations that have not traditionally provided services to Medicare FFS beneficiaries favorably reduced acute and post-acute care utilization and spending. New Entrant ACOs had declines in gross spending but these declines were similar to those of providers within their same markets. Standard and New Entrant ACOs showed statistically significant improvement on at least one quality measure. These interim evaluation results are mixed, and additional analyses and years of experience with the Model will inform which features of ACO REACH could drive continued growth and innovation in the Shared Savings Program and the focus of future Innovation Center ACO models.

[618] For more details, refer to CMS, ACO Realizing Equity, Access, and Community Health (REACH) Model, PY2023 Financial Settlement Overview, available at *https://innovation.cms.gov/media/document/aco-reach-py2023-fncl-settlement* (see Table 4: Schedule of Discounts by Risk Arrangement).

(2) Considerations for Incorporating Higher Risk and Potential Reward Under the ENHANCED Track

As we explained in the CY 2024 PFS final rule (88 FR 79223 through 79225), when considering a higher risk track, CMS would need to balance the incentives for ACOs to transition to higher levels of risk and potential reward and increase ACO participation in the Shared Savings Program and in two-sided risk tracks, all while ensuring sufficient financial safeguards to protect against inappropriately large shared losses for ACOs coordinating and improving quality of care for high-cost beneficiaries. Considerations must also be directed towards safeguarding the Medicare Trust Funds and ensuring that CMS satisfies any statutory requirements under section 1899(i)(3) of the Act.

In the CY 2025 PFS proposed rule (89 FR 61918 through 61919), we explained that a revised ENHANCED track could be implemented in accordance with section 1899(i)(3) of the Act, provided the Secretary determines that such other payment model enhances the quality and efficiency of items and services furnished under the Medicare program and does not result in program expenditures greater than those that would result under the statutory payment model. We also stated that increasing the sharing rate in the ENHANCED track may need to be accompanied by other modifications to prevent spending from increasing and possibly jeopardizing compliance with section 1899(i)(3) of the Act. One factor we stated we would consider is selective participation with regard to which ACOs would choose to participate in a higher risk track, if offered. For example, Shared Savings Program ACOs that have a history of high levels of earned shared savings or have received a favorable high regional adjustment to their benchmark may be more likely than other ACOs to switch to the higher risk track upon renewing or early renewing their participation in the program so they can receive additional benefit from the higher levels of potential reward offered in a higher risk track. This could result in increased spending on the part of CMS which may jeopardize compliance with section 1899(i)(3) of the Act. If a higher risk track were to be offered in the Shared Savings Program in the future, we stated CMS would consider replacing the existing ENHANCED track in order to prevent further selective participation and maintain the balance between increased participation and compliance with applicable statutory requirements.

In the CY 2025 PFS proposed rule (89 FR 61919), we solicited comment on the following potential features of a revised ENHANCED track:

(a) Benchmark Discount Rate

Both the NGACO Model and the Global Risk Sharing Option of the ACO REACH Model feature a discount rate that is applied to benchmarks. The discount rate serves to protect the Medicare Trust Funds by reducing benchmarks and thereby improves the likelihood of achieving savings for the Medicare program for risk tracks that can feature up to 100 percent shared savings rates, such as the Global Risk Sharing Option in the ACO REACH Model. A discount would be applied to an ACO's updated historical benchmark before gross savings/losses are calculated, which increases the likelihood of savings for CMS and the Medicare program. If an ACO were to participate in a potential higher risk track and potentially share in 100 percent of gross savings, this discount would serve as the primary means for CMS to capture savings from ACOs participating in this option, as in the absence of a discount any and all gross savings would go to ACOs in the form of a shared savings payment. For example, consider an ACO with an updated benchmark of $10,000 and mean per-capita performance year expenditures of $9,500. Applying a discount rate of 1 percent to the benchmark would reduce the ACO's benchmark to $9,900. Gross savings would then be calculated based on the discounted benchmark, and the ACO's shared saving rate would be applied to the savings, provided these savings met or exceeded the ACO's selected MSR.

A discount to the benchmark could also include a guardrail policy similar to the guardrail implemented in the three-way blended update factor that was finalized in the CY 2023 PFS final rule (87 FR 69881). Under such an approach, if an ACO were to be liable for shared losses after discounting the benchmark, then gross savings or losses would be recalculated using a benchmark without the discount. However, if the ACO were to generate gross savings in excess of their MSR under the benchmark without the discount, they would still not be considered eligible to share in savings. This approach would help ensure that CMS shares in any savings generated by ACOs participating in a potential revised ENHANCED track while also not increasing downside risk for ACOs that may be liable for shared losses.

In the CY 2025 PFS proposed rule (89 FR 61919), we solicited comment on what rate would be appropriate for a

discount to the benchmark that would protect the Medicare Trust Funds while providing an adequate incentive for ACOs to participate in a potential revised ENHANCED track. We also solicited comment on whether the model features described in following subsections might replace a discount to the benchmark while balancing financial incentives for ACOs and risk to CMS. Additionally, we also solicited comments from interested parties, including ACOs, on the discount to the benchmark and what level of discount would be acceptable to ACOs participating in the Shared Savings Program, as well as what would be considered too high of a discount.

(b) Tapered Sharing Arrangements

Currently in the ENHANCED track, ACOs can receive a shared savings payment of up to 20 percent of their updated benchmark (once the MSR is met or exceeded) (§ 425.610(e)(2)) or be liable for losses not to exceed 15 percent of their updated benchmark (once the MLR is met or exceeded) (§ 425.610(g)). Alternatively, CMS could set up marginal savings bands or risk corridors under which shared savings or losses rates would vary with the amount of gross savings or losses. As gross savings/losses increase, the ACO will retain a progressively smaller portion of the total savings or will be responsible for a progressively smaller portion of the total losses. For example, consider hypothetical marginal savings bands shown in Table 50. Under this arrangement, an ACO would share in all savings up to 10 percent of their updated benchmark at a rate of 100 percent. For savings between 10 to 15 percent, the ACO would share in 60 percent of savings and CMS would retain the remaining 40 percent. For savings between 15 to 20 percent, the ACO would share in 40 percent of savings and CMS would retain the remaining 60 percent. In case of losses, ACOs would be responsible for 50–100 percent of the losses, depending on the ACO's quality performance score.

TABLE 50: Hypothetical Marginal Shared Savings Bands

Gross savings as % of benchmark	*Shared Savings/Loss Rate*[1]
0-10%	100%
10-15%	60%
15-20%	40%
>20%	0%
Losses	50% - 100%[2]

[1] Percentage of savings or losses retained by the ACO.

[2] Shared Loss Rate would depend on an ACO's quality performance, similar to § 425.610(f)(4).

In the CY 2025 PFS proposed rule (89 FR 61919 and 61920), we solicited comment on whether the hypothetical marginal shared savings bands shown in Table 50 represent an appropriate tapering schedule that would provide sufficient incentive for an ACO to participate in a potential revised ENHANCED track, as well as whether the tapering schedule should begin with lower shared savings rates and feature increasing rates as an ACO generates greater amounts of savings. We also solicited comment on whether a potential tapering schedule should be symmetrical with respect to shared loss rates. Finally, we solicited comment on whether marginal shared savings bands provide the right incentives to ACOs relative to the fixed savings rate in the current ENHANCED track.

(c) MSR/MLR

As we explained in the CY 2025 PFS proposed rule (89 FR 61920), we are considering the option for all ACOs under a revised ENHANCED track to be subject to a symmetric MSR/MLR of 0 percent. This would increase many ACOs' exposure to both positive savings and negative risk. While this approach would guarantee that any ACO generating savings would share in those savings (provided they meet the quality performance standard established under § 425.512 and otherwise maintain their eligibility to participate in the Shared Savings Program), ACOs with performance year expenditures greater than their historical benchmark would be liable for those losses due to the 0 percent MLR. We solicited comment on whether a potential revised ENHANCED track should retain the existing symmetric MSR/MLR selection options that currently exist for ACOs in a two-sided risk model under § 425.610(b)(1).

(d) Cap On Regional Adjustment Weight

We solicited comment on adjusting the weights used to calculate the regional adjustment amounts under § 425.656(e) for ACOs in the revised ENHANCED track. This may take the form of applying a cap of 35 percent to all the weights used to calculate regional adjustment amounts. This would impact any ACOs in a second or subsequent agreement period subject to a regional adjustment if their historical benchmark spending is lower than their regional service area. If the cap were to apply to an ACO with lower spending than their regional service area, then this would result in a decreased regional adjustment to that ACO's historical benchmark. Overall, this feature would reduce the cost to CMS associated with high regional adjustments by reducing an ACO's historical benchmark in the event that an ACO in a second or subsequent agreement period receives a large positive regional adjustment, which may decrease the need for higher benchmark discount rates or lower tapered shared savings rates that are less favorable to ACOs and limit incentives for ACOs to transition from the BASIC track to the revised ENHANCED track. This feature may also increase the relative impact of the prior savings adjustment and the health equity benchmark adjustment proposed in section III.G.7.b. of the CY 2025 PFS proposed rule. We solicited comment on whether further reductions to or the removal of the regional adjustment to the historical benchmark would be appropriate as part of a potential revised ENHANCED track. We also solicited comment on whether maintaining the regional adjustment in its current State would warrant further changes to the revised ENHANCED track features described above, including, but not limited to, a discount to the benchmark or lower tapered shared savings rates.

(e) Payment Mechanisms

We solicited comments on alternative payment mechanisms the Innovation Center has tested and their ability to help transform care delivery and improve health outcomes for ACOs participating in the Shared Savings Program. These payment mechanisms test whether alternative payment flows (that is, those other than fee for service reimbursement) facilitate better investment in infrastructure and care coordination and encourage innovative downstream payment arrangements that can improve health outcomes for Medicare beneficiaries. The alternative payment mechanisms on which we solicited comments are described below:

- *Infrastructure Payments:* Under these arrangements, CMS makes a payment to the ACO, in addition to FFS reimbursement to the providers and suppliers participating in the ACO, that is unrelated to claims. Infrastructure payments have been distributed either as a lump sum or per beneficiary per month payments. Infrastructure payments are recouped during the payment reconciliation process.
- *Population-Based Payment, All-Inclusive Population-Based Payment, or Advance Payment Option:* In this arrangement, CMS provides a percentage of FFS reimbursement to the ACO in the form of a monthly payment to support ongoing ACO activities and provide the ACO flexibility in the types of arrangements it enters into with provider/suppliers. The ACO and providers with whom it has a written business arrangement determine percentage reductions to the base FFS payments to the providers interested in this payment arrangement. Providers participating in this option have their FFS payments reduced by the agreed upon percentage, which range from 1–100 percent. CMS pays the projected total annual amount taken out of the base FFS rates to the ACO in monthly payments. At the end of each performance year, the amount of payment paid to ACOs participating in this type of payment option is reconciled against the reductions actually made to claims payments to providers participating in these arrangements, linking the amount of these payments directly to utilization and FFS payment.
- *Capitation:* The ACO REACH Model [619] tests two capitation payment options—Primary Care Capitation and Total Care Capitation.

The Primary Care Capitation Payment is the payment for primary care services provided to aligned REACH beneficiaries by all Participant Providers and those Preferred Providers who have selected Primary Care Capitation Payment. In Primary Care Capitation, a per beneficiary, per month capitated payment is provided to an ACO for its aligned beneficiaries for the primary care services provided by the ACO's Participant Providers and its Preferred Providers who have opted to participate in Primary Care Capitation Payment. The Primary Care Capitation payment amount is generally equal to seven percent of the estimated total cost of care for the ACO's aligned population (that is, the risk adjusted, trended, and regionally blended benchmark).

The Primary Care Capitation payment includes two components, Base Primary Care Capitation and Enhanced Primary Care Capitation. The Base Primary Care Capitation amount is intended to cover primary care services furnished to aligned beneficiaries by Participant Providers and those Preferred Providers who have agreed to participate in Primary Care Capitation Payment that are thus subject to fee reductions under Primary Care Capitation Payment. The Enhanced Primary Care Capitation amount, which will be recouped by CMS in full during final financial settlement, is intended to enable ACOs to make upfront investments in infrastructure, technology, tools, and resources to support increased access to primary care, provision of care, and care coordination. The Primary Care Capitation Payment is expected to encourage greater flexibility in payment and innovative primary care service delivery as a means of improving the quality and cost effectiveness of care overall.

In Total Care Capitation, a per-beneficiary, per month capitated payment is provided to an ACO for all Medicare Part A and Part B services provided to aligned beneficiaries by the ACO's Participant Providers and its Preferred Providers who have opted to participate in Total Care Capitation payment. The Total Care Capitation payment amount reflects the estimated total cost of care for the ACO's aligned population (that is, the risk adjusted, trended, and regionally blended benchmark) and is only available to ACOs participating in the Global risk option. Participant Providers and those Preferred Providers that have elected to participate in the ACO's selected capitation payment mechanism continue to submit claims to CMS for services provided to aligned beneficiaries. The CMS FFS claims processing system reduces claims payment amounts according to the payment reduction arrangements with their providers. More details on ACO REACH Model's capitation payment mechanisms are available here: *https://www.cms.gov/files/document/aco-reach-py24-financial-ops-capitation-and-payment-mechanisms.pdf.*

Additionally, we solicited feedback on the following questions related to implementation of a revised ENHANCED track with higher risk and potential reward, as well as comments that could inform changes to the Shared Savings Program and future Innovation Center ACO models:

1. What would the option of a revised ENHANCED track allow an ACO to do that they are unable to do currently?
2. How would higher downside risk impact an ACO's care delivery strategies, including advanced primary care, behavioral health, specialty integration, and integration with community-based organizations to improve health outcomes or advance health equity?
3. How does higher downside risk impact an ACO's downstream provider arrangements to further advance incentives to reduce delivery of low value services and the total cost of care, and to increase savings performance?
4. What types of organizations, including but not limited to ACOs and providers, are interested in a higher risk and reward option in the Shared Savings Program?
5. What additional flexibilities or features (for example, benefit enhancements, advance payments, capitation payments, etc.) would ACOs in a revised ENHANCED track with higher risk and potential reward want CMS to offer to help them be successful in improving the quality of care and reducing costs?
6. How should a revised ENHANCED track with higher risk and potential reward also require additional accountability for quality? Should ACOs in this revised track be required to report all payer/all patient quality measures?
7. Should a revised ENHANCED track with higher risk and potential reward require ACOs with earned shared savings to share savings with beneficiaries or spend a flat dollar amount or a certain percentage on beneficiaries in the form of items or services not covered by original Medicare (for example, meals, dental,

[619] Refer to the ACO REACH Model Request for Applications, available at *https://www.cms.gov/priorities/innovation/media/document/aco-reach-rfa*, and the ACO REACH Model PY2024 Participant and Preferred Provider Management Guide (August 2023; v3), previously available at *https://www.cms.gov/files/document/aco-reach-py24-part-pref-provider-mgmt-guide.pdf*.

vision, hearing, or Part B cost-sharing reductions)?

8. How should CMS consider the discount, sharing rate, and risk corridors or marginal savings bands in the design of a higher risk option that can realize savings for Medicare? Are there special considerations that CMS should bear in mind when thinking through such features for different types of ACOs (for example, low revenue, high revenue, health system-based, safety net, etc.)?

9. How might we improve beneficiary assignment and are there different considerations for different types of ACOs (for example, low revenue, high revenue, health system-based, safety net, etc.)?

10. What other features should CMS consider in designing financial benchmarks that balance prospectivity and accuracy, and that can lead to savings for both ACOs and Medicare? How might administratively set benchmarks achieve these goals and what considerations should we bear in mind if we test administrative benchmarking?

11. We are interested in ways to increase participation by healthcare providers and suppliers in the Shared Savings Program and future Innovation Center ACO models, including how an ACO model requiring provider participation or stronger participation incentives might be designed.

The following is a summary of the comments we received in response to the comment solicitation on establishing higher risk and potential reward under the ENHANCED track and our response.

Comment: The majority of commenters supported a higher risk track option in the Shared Savings Program. Commenters offered a variety of reasons for their support of a higher risk track, including that it would help encourage and sustain ACO participation in the Shared Savings Program and provide increased financial incentives that would allow ACOs to ''maintain or increase their level of investment in patient care and providers'' and ''increase staffing to support care management or establish initiatives for high-risk patients,'' and could serve as a track for ACO REACH Model participants to transition into after the ACO REACH Model expires at the end of 2026. Multiple commenters suggested that CMS use the experience and design features of the ACO REACH Model and the NGACO Model when introducing a higher risk track in the Shared Savings Program. Specifically, commenters pointed to the Part B cost sharing support, Nurse Practitioner Services Benefit Enhancement, and other benefit enhancements as features they would like to see in a potential higher risk track. Commenters also requested that a higher risk track be optional, not mandatory, for ACOs participating in the Shared Savings Program.

Nearly all commenters were opposed to a higher risk track replacing the existing ENHANCED track. Commenters supported a higher risk track being offered alongside the current ENHANCED track and other existing participation options. Commenters stated their belief that the current ENHANCED track is a stable and popular participation option and if CMS were to replace it with a revised higher risk track, then this may be counterproductive to ACOs taking on more risk. Specifically, commenters stated that some ACOs may be unwilling or unable to take on the higher risk associated with a higher risk track and would either participate in Level E of the BASIC track or voluntarily terminate their participation in the Shared Savings Program.

Many commenters provided feedback on the specific model design features that we described in the CY 2025 PFS proposed rule. Several commenters suggested that ACOs should have the option of choosing between a 100 percent sharing rate with a discount to the benchmark or a sharing rate between 85–90 percent and no discount to the benchmark. Several commenters said that a reasonable benchmark discount rate of 1.5 percent to 2 percent would be acceptable and that a discount rate of 3 percent would be prohibitively large. Several commenters were opposed to a benchmark discount rate entirely. Some commenters preferred tapered sharing rates over the adoption of a discount to the benchmark. Several commenters suggested that a higher risk track should allow ACOs to continue enjoying the flexibility they currently have when selecting their symmetrical MSR/MLR. One commenter argued that requiring ACOs participating in a higher risk track to spend a portion of their earned shared savings payments on beneficiaries would cause them to incur prohibitively large costs in connection with complying with Shared Savings Program monitoring and reporting requirements.

Several commenters requested that ACOs be offered the option of capitated payments, infrastructure payments, advance payments, or population-based payments. Commenters argued that these payments would mitigate the delay that ACOs face in receiving earned shared savings payments for a PY, and that access to such alternative payment mechanisms would provide ACOs the flexibility they need to ''ease provider burden and provide more consistent cash flow''.

One commenter suggested that CMS provide ACOs with a participation option similar to ACO REACH's High Needs Track. They argued that such a track would provide a bridge for current ACO REACH participants to join the Shared Savings Program after the ACO REACH Model expires at the end of 2026 and better support current Shared Savings Program ACOs that serve high needs or other underserved beneficiary populations.

Commenters expressed concerns about various Shared Savings Program policies that were not specific to a potential higher risk track. Several commenters expressed concern about the negative impact of the ratchet effect on long-term participation in the Shared Savings Program. Several commenters suggested that CMS allow beneficiaries to voluntarily align to ACOs under § 425.402(e) in writing (rather than only electronically), as is done in the ACO REACH Model. Several commenters also suggested that CMS allow Shared Savings Program participation at the NPI level rather than exclusively at the TIN level. One commenter expressed their opposition to the regional adjustment to an ACO's historical benchmark and argued that it ''maintains undesirable participation incentives and distorts the calculation of the prior-savings adjustment''.

Response: We appreciate the feedback we received in response to this comment solicitation. We will consider this information to inform future rulemaking.

f. Technical Change for Consistency in Financial Calculations

(1) Background

For the benchmarking methodology applicable to agreement periods beginning on January 1, 2024, and in subsequent years, we cap ACO prospective hierarchical condition category (HCC) risk score growth between BY3 and the performance year (as finalized in the CY 2023 PFS final rule, refer to 87 FR 69932 through 69946), as well as prospective HCC risk score growth in an ACO's regional service area between BY3 and the performance year (as finalized in the CY 2024 PFS final rule, refer to 88 FR 79174 through 79185).The policy to cap ACO prospective HCC risk score growth between BY3 and the performance year relied on our authority granted by section 1899(d)(1)(B)(ii) of the Act to adjust the benchmark for beneficiary characteristics and such other factors as

the Secretary determines appropriate (see 87 FR 69934). The policy to cap prospective HCC risk score growth in an ACO's regional service area between BY3 and the performance year by applying an adjustment factor in calculating the regional component of the three-way blended benchmark update factor required use of our statutory authority under section 1899(i)(3) of the Act (see 88 FR 79182 and 79183).

The current regulations describe how we cap ACO prospective HCC risk score growth at §§ 425.605(a)(1) and 425.610(a)(2). As specified, positive adjustments in prospective HCC risk scores are subject to a cap equal to the ACO's aggregate growth in demographic risk scores between BY3 and the performance year (positive or negative) plus 3 percentage points. The cap applies to prospective HCC risk score growth for any Medicare enrollment type only if the ACO's aggregate growth in prospective HCC risk scores between BY3 and the performance year across all of the Medicare enrollment type exceeds this cap. Growth in an ACO's risk scores by enrollment type is expressed as the ratio of the ACO's performance year risk score for that enrollment type to the ACO's BY3 risk score for that enrollment type. The aggregate growth in demographic and prospective HCC risk scores risk scores is calculated by taking a weighted average of the risk ratio for demographic risk scores or prospective HCC risk scores, as applicable, for each Medicare enrollment type using specified weights.

The current regulations further describe how we cap prospective HCC risk score growth in the ACO's regional service area at § 425.655. As specified, CMS determines aggregate growth in regional prospective HCC and demographic risk scores by calculating growth in prospective HCC and demographic risk scores between BY3 and the performance year for each Medicare enrollment type, where growth in an ACO's regional risk score by enrollment type is expressed as the ratio of the performance year regional risk score for a Medicare enrollment type to the BY3 regional risk score for that enrollment type. We then calculate aggregate risk score growth by taking a weighted average of the regional prospective HCC or demographic risk ratios, as applicable, across the four Medicare enrollment types, using specified weights. We next determine the cap on regional risk score growth (refer to § 425.655(e)),[620] and then determine if the ACO's regional risk score growth is subject to a cap and apply a regional risk score growth cap adjustment factor for each Medicare enrollment type, as applicable (refer to § 425.655(f)).[621]

When describing how we will cap prospective HCC risk score growth in the ACO's regional service area in the CY 2024 PFS final rule, we included a footnote (see 88 FR 79178) that indicated that the weights to be used to compute aggregate risk score growth for this calculation are the same as the weights to be used when calculating weighted average ACO prospective HCC and demographic risk ratios under the risk adjustment methodology for capping ACO risk score growth adopted in the CY 2023 PFS final rule and codified in §§ 425.605(a)(1)(ii)(C) and 425.610(a)(2)(ii)(C). That is, it was our intention to use the same weights in both the regional risk score growth cap calculation and the ACO risk score growth cap calculation. However, in codifying the methodology for the regional risk score growth cap in the new section of the regulations, § 425.655, we inadvertently introduced a discrepancy.

In §§ 425.605(a)(1)(ii)(C) and 425.610(a)(2)(ii)(C), where we codified how we will calculate aggregate risk score growth used in determining the cap to apply to ACO prospective HCC risk score growth, we describe the weight applied to the growth in demographic or prospective HCC risk scores for each Medicare enrollment type as equal to the product of the *historical benchmark expenditures* for that enrollment type and the performance year person years for that enrollment type. In § 425.655(d)(2), where we codified how we will calculate aggregate risk score growth used in determining the cap to apply to regional prospective HCC risks score growth, we describe the weight applied to the growth in demographic or prospective HCC risk scores for each Medicare enrollment type as equal to product of the ACO's *regionally adjusted historical benchmark expenditures* (emphasis added) for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type.

The regulations at §§ 425.605(a)(1)(ii)(C) and 425.610(a)(2)(ii)(C) provide that we will use the ACO's historical benchmark expenditures in calculating the weights used to cap ACO risk score growth. By contrast, the regulations at § 425.655(d)(2) provide that we will use an ACO's regionally adjusted historical expenditures in calculating the weights used in the calculation of regional risk score growth cap. In the CY 2025 PFS proposed rule (89 FR 61922), we explained that, as written, the regulations at § 425.655(d)(2) is inconsistent with the language used at §§ 425.605(a)(1)(ii)(C) and 425.610(a)(2)(ii)(C) despite the fact that we indicated in the CY 2024 PFS final rule that we would use the same weights in both calculations. Additionally, it is unclear how we would apply the calculation described at § 425.655(d)(2) in practice. As we described in the CY 2025 PFS proposed rule, for agreement periods beginning on January 1, 2024, and in subsequent years, in computing an ACO's historical benchmark, CMS determines the per capita Parts A and B fee-for-service expenditures for beneficiaries that would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period using the ACO participant TINs identified before the start of the agreement period as required under § 425.118(a) and the beneficiary assignment methodology selected by the ACO for the first performance year of the agreement period as required under § 425.400(a)(4)(ii). An ACO's historical benchmark may then be subject to a regional adjustment (refer to § 425.656), a prior savings adjustment (refer to § 425.658), or no adjustment (refer to § 425.652(a)(8) and (c)). This methodology, based on policies finalized in the CY 2023 and CY 2024 PFS final rules, under which an ACO may receive a prior savings adjustment, a regional adjustment, and or no adjustment at all, differs from the methodology that was in effect for ACOs in an agreement period beginning on or after July 1, 2019, but before January 1, 2024, under which all ACO historical benchmarks incorporated a regional adjustment (see § 425.601). Furthermore, in section III.G.7.b. of the CY 2025 PFS proposed rule (89 FR 61885 through 61892), we proposed to add a third type of adjustment that

[620] To determine the cap on regional risk score growth, we calculate the non-market share adjusted cap on the ACO's regional risk score growth as the sum of the aggregate growth in regional demographic risk scores and 3 percentage points, then adjust the cap to reflect the ACO's aggregate market share.

[621] If the aggregate regional prospective HCC risk score growth does not exceed the cap on regional risk score growth, the ACO's regional risk score growth is not subject to the cap. For these ACOs we set the risk score growth cap adjustment factor equal to 1 for each Medicare enrollment type. If the aggregate regional prospective HCC risk score growth exceeds the market share adjusted cap, the ACO's regional risk score growth is subject to the cap. For these ACOs we next determine whether the cap on regional risk score growth applies for each Medicare enrollment type.

could be applied to an ACO's historical benchmark, the health equity benchmark adjustment. We explained that if the health equity benchmark adjustment was to be finalized as proposed, an ACO may receive a regional adjustment, a prior savings adjustment, a health equity benchmark adjustment, or no adjustment to its historical benchmark.

(2) Revisions

As discussed in the CY 2025 PFS proposed ruled (89 FR 61923), it was our intention at the time of the CY 2024 PFS rulemaking (see 88 FR 79178) to use the same weights to calculate the cap for prospective HCC risk score growth in an ACO's regional service area as the weights used to calculate the cap on prospective HCC risk score growth for the ACO. We explained our belief that the same weights should apply to both calculations. However, the regulation text language is not currently aligned among the relevant provisions or with the preamble discussion and may also create confusion with respect to how CMS will compute the weights used in setting the caps on ACO and regional prospective HCC risk score growth, given that some ACOs will receive a regional adjustment to their benchmarks, some will receive a prior savings or, if finalized, a health equity benchmark adjustment, and some will receive no adjustment at all.

To address these issues, we proposed technical changes to the regulation text at §§ 425.605(a)(1)(ii)(C), 425.610(a)(2)(ii)(C), and 425.655(d)(2) to align the language describing the calculation of the weights that will be used to compute aggregate risk score growth across the three provisions and to clarify that the weight applied to the growth in ACO and regional risk scores for each Medicare enrollment type, respectively, would be equal to the product of the ACO's historical benchmark expenditures, adjusted in accordance with § 425.652(a)(8), for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type. That is, we would use the ACO's historical benchmark expenditures that would have already been adjusted to reflect a prior savings adjustment, a regional adjustment, a health equity benchmark adjustment, if finalized, or no adjustment. Aligning the description of the weight calculation across the three provisions would address the discrepancy that exists between the current regulation text and the preamble discussion in the CY 2024 PFS final rule. Additionally, providing additional detail in the description of the weight calculation, namely by indicating that we will use an ACO's historical benchmark expenditures adjusted in accordance with § 425.652(a)(8), clarifies how we will operationalize the calculation which we believe is important, especially given the proposed health equity benchmark adjustment, which, if finalized, would add greater complexity to this historical benchmark calculation.

The technical changes that we proposed in section III.G.7.f. of the CY 2025 PFS proposed rule relate to benchmark calculations for ACOs in agreement periods beginning on or after January 1, 2024. We explained that although we will not implement the proposed methodologies for the first time until summer 2025 when we reconcile PY 2024, these policies, if finalized, would constitute retroactive rulemaking because they are the standards under which we will score ACOs that are currently participating in agreement periods that began on January 1, 2024, for PY 2024. Section 1871(e)(1)(A)(ii) of the Act permits a substantive change in regulations, manual instructions, interpretive rules, statements of policy, or guidelines of general applicability under Title XVIII of the Act to be applied retroactively to items and services furnished before the effective date of the change if the failure to apply the change retroactively would be contrary to the public interest. Here, we proposed a technical change that would align the regulation text with our stated intention as described in previous rulemaking. The current regulation text, in combination with related discussion in the CY 2024 PFS final rule, fails to provide sufficient clarity with regard to how CMS will calculate the weights used to calculate aggregate ACO or regional risk score growth. While the discussion in the CY 2024 PFS final rule indicates that the same weights should be use in both calculations, the related regulation text does not make this clear and, furthermore, could raise questions for how CMS will perform calculations given that not all ACO historical benchmarks will include a regional adjustment. Failure to apply the proposed changes to our regulations at §§ 425.605(a)(1)(ii)(C), 425.610(a)(2)(ii)(C), and 425.655(d)(2) retroactively would be contrary to the public interest because it creates unintended ambiguity in the standard CMS will use when calculating risk score growth. Such ambiguity may make it difficult for ACOs and other interested parties to understand how CMS will perform these calculations or be interpreted to suggest that CMS would calculate risk score growth in a different manner, which was not the agency's intention.

We solicited comments on these proposals.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters addressing the proposal were supportive of this change as it updates benchmarking calculations to reflect new policies, explaining their understanding that the proposal clarifies the use of an ACO's benchmark that has been adjusted for prior savings, the HEBA, and the regional adjustment to align the three percent cap on HCC risk score growth with that of the ACO's region. The commenters also noted that if finalized this change would be reflected in PY 2024 financial reconciliation calculations.

Response: We thank commenters for their support of the proposed technical change and the retroactive applicability of said change.

After consideration of public comments, we are finalizing as proposed technical changes to the regulation text at §§ 425.605(a)(1)(ii)(C), 425.610(a)(2)(ii)(C), and 425.655(d)(2) to align the language describing the calculation of the weights that will be used to compute aggregate risk score growth across the three provisions and to clarify that the weight applied to the growth in ACO and regional risk scores for each Medicare enrollment type, respectively, would be equal to the product of the ACO's historical benchmark expenditures, adjusted in accordance with § 425.652(a)(8), for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type.

8. Beneficiary Notification Requirements

a. Modifying the Requirements for When ACOs Must Provide the Beneficiary Information Follow-Up Communication

Under § 425.312(a), ACOs are required to notify beneficiaries about the ACO's participation in the Shared Savings Program, the beneficiary's ability to decline claims data sharing, and the beneficiary's ability to select a provider for the purposes of voluntary alignment. In the CY 2023 PFS final rule (87 FR 69961), we added the beneficiary information follow-up communication requirement under § 425.312(a)(2)(v), which requires an additional follow-up with a beneficiary who has received the beneficiary notification. In the CY 2023

PFS final rule (87 FR 69960 through 69963), CMS noted that the follow-up communication promotes transparency and empowers beneficiaries to make an informed decision in choosing a primary care physician and how they share their health data. The beneficiary information follow-up communication affords the opportunity for additional direct engagement between the beneficiary and the ACO, or ACO participant, and provides a chance for a meaningful dialog between the patient and provider about the coordination of their care, the benefits of receiving care from an ACO provider/supplier (as defined at § 425.20), the organizational operations of the ACO, and how data is used to improve care and report quality outcomes.

Currently, at § 425.312(a)(2)(v)(A), ''The follow-up communication must occur no later than the earlier of the beneficiary's next primary care service visit or 180 days from the date the standardized written notice was provided.'' Regulations at § 425.312(a)(2)(v)(B) require ACOs to document the beneficiary information follow-up communication. and to make the information available to CMS upon request.

Since CMS implemented the beneficiary information follow-up communication requirement, we have received feedback from ACOs that requiring the follow-up communication no later than the earlier of the beneficiary's next primary care service visit or 180 days from the date the standardized written notice was provided is difficult for ACOs to operationalize as they do not always know when the beneficiary's next primary care service will be and in some cases it can be very soon after the beneficiary receives the original beneficiary notification.

To address this issue and the burden it creates, in the CY 2025 PFS proposed rule (89 FR 61923), we proposed to remove the requirement that ACOs must provide this follow-up at the beneficiary's next primary care visit. Specifically, we proposed to modify § 425.312(a)(2)(v)(A) to read ''The follow-up communication must occur no later than 180 days from the date the standardized written notice was provided.'' This will provide ACOs with more flexibility to implement their strategy for following up with beneficiaries after they receive the beneficiary notice, while still providing the opportunity for a meaningful dialog between a beneficiary and their provider. We solicited comment on this proposal. This proposal will be effective beginning January 1, 2025.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Most commentors expressed support for CMS' proposal to modify the follow-up communication requirement to require ACOs to follow-up on the beneficiary notification within 180 days of when the ACO furnished the initial beneficiary notification, and believed it would be less burdensome for ACOs to operationalize.

Response: We agree with commenters that modifying requirements for furnishing the follow-up communication may reduce burden for ACOs.

Comment: A few commenters disagreed with the removal of this requirement and believe ACOs should have a follow-up communication requirement tied to the timing of a beneficiary's primary care visit, as they believe that will improve beneficiary understanding of these notices.

Response: We appreciate these commenters' point of view that tying beneficiary notices to primary care visits may improve beneficiary understanding. The current requirement for the initial beneficiary notice, which must be distributed to beneficiaries before or at the first primary care visit of the agreement period, allows beneficiaries an opportunity to ask questions at a primary care visit. Additionally, under the proposed policy, the follow-up communication may still occur at the beneficiary's follow-up primary care visit as long as it is provided no later than 180 days from the date the standardized written notice was provided.

Comment: Some commenters encouraged CMS to do more to minimize administrative burden for ACOs. Specifically, commenters noted operational challenges, unnecessary administrative burden, and continued lack of understanding from beneficiaries about ACO objectives and the impact of their providers participation, caused by mandated, standardized beneficiary notifications.

Response: We understand that some commenters find the beneficiary notification burdensome, however, all current components of the beneficiary notification requirements are important for appropriately informing beneficiaries about their provider's participation in an ACO. In the CY 2023 PFS final rule (87 FR 69960 through 69963), CMS noted that the follow-up communication promotes transparency and empowers beneficiaries to make an informed decision in choosing a primary care physician and how they share their health data. The beneficiary information follow-up communication affords the opportunity for additional direct engagement between the beneficiary and the ACO, or ACO participant, and provides a chance for a meaningful dialog between the patient and provider about the coordination of their care, the benefits of receiving care from an ACO provider/supplier (as defined at § 425.20), the organizational operations of the ACO, and how data is used to improve care and report quality outcomes. At this time, additional modifications to the beneficiary notification are not appropriate, but we will continue to consider feedback from interested parties in order to improve beneficiary comprehension of these notifications. In 2023, CMS conducted focus groups with beneficiaries and interested parties to improve the beneficiary notification template and improve beneficiary comprehension of the communicated materials. Our efforts to revise the notification templates, based on feedback from the focus groups, empowers beneficiaries and engages them in managing their health care and clearly communicates the benefits of value-based care.

After consideration of public comments, we are finalizing our policy to modify when ACOs must provide the beneficiary information follow-up communication as proposed, as specified in revisions to § 425.312(a)(2)(v)(A).

b. Limiting the Distribution of the Beneficiary Notification to Beneficiaries Likely To Be Assigned for ACOs Under Preliminary Prospective Assignment With Retrospective Reconciliation

ACOs that select preliminary prospective assignment with retrospective reconciliation are assigned beneficiaries in a preliminary manner and before the start of the performance year. Beneficiary assignment for these ACOs is then updated quarterly based on the most recent 12 or 24 months of data, as applicable. This assignment methodology is codified at § 425.400(a)(2). In the CY 2025 PFS proposed rule (89 FR 61924), we proposed to limit the distribution of the beneficiary notification at § 425.312(a)(2)(iii) to beneficiaries who are more likely be assigned to ACOs that select preliminary prospective assignment with retrospective reconciliation, when compared to the population of beneficiaries who must receive the beneficiary notification under current § 425.312(a)(2)(iii). Please note that this was not a proposal to

modify the Shared Savings Program's assignment methodology.

Currently, ACOs that select preliminary prospective assignment with retrospective reconciliation are required to send a beneficiary notice to ''each fee-for-service beneficiary'' under § 425.312(a)(2)(iii). At § 425.312(a)(2)(iii), the standardized written notice must be furnished to ''all fee-for-service beneficiaries prior to or at the first primary care service visit during the first performance year in which the beneficiary receives a primary care service from an ACO participant.'' This can result in ACOs sending notices each year to beneficiaries who may not ultimately be assigned to the ACO, as there are ''fee-for-service beneficiar[ies]'' to whom ACOs must send notices under § 425.312(a)(2)(iii) and who are not eligible to be assigned to those ACOs for a variety of reasons. This policy was intended to ensure that all beneficiaries who receive a primary care visit from a ACO provider/supplier receive the beneficiary notice. However, we have heard feedback from ACOs that this creates confusion for the beneficiary and unnecessary administrative work for the ACO.

To reduce burden on ACOs and confusion for beneficiaries, we proposed to update the beneficiary notice requirement for ACOs that select preliminary prospective assignment with retrospective reconciliation to focus on beneficiaries that are likely to be assigned to the ACO. These beneficiaries are those who received at least one primary care service during the assignment window or applicable expanded window for assignment (as defined at § 425.20) from a physician who is an ACO professional in the ACO and who is a primary care physician as defined at § 425.20 or who has one of the primary specialty designations included at § 425.402(c), a FQHC or RHC that is part of the ACO, or an ACO professional in the ACO whom the beneficiary designated as responsible for coordinating their overall care at § 425.402(e).

This proposed policy would reduce the burden of sending the beneficiary notice to all ''fee for service beneficiar[ies],'' including those who ultimately would not be eligible to be assigned to ACOs that select preliminary prospective assignment with retrospective reconciliation. Specifically, we proposed to modify § 425.312(a)(2)(iii) to state in the case of an ACO that has selected preliminary prospective assignment with retrospective reconciliation, the beneficiary notice must be provided by the ACO or ACO participant to each beneficiary who received at least one primary care service during the assignment window or applicable expanded window for assignment (as defined at § 425.20) from a physician who is an ACO professional in the ACO and who is a primary care physician as defined at § 425.20 or who has one of the primary specialty designations included at § 425.402(c), a FQHC or RHC that is part of the ACO, or an ACO professional in the ACO whom the beneficiary designated as responsible for coordinating their overall care at § 425.402(e). Each such beneficiary must receive a standardized written notice at least once during an agreement period in the form and manner specified by CMS. The standardized written notice must be furnished to all of these beneficiaries prior to or at the first primary care service visit during the first performance year in which the beneficiary receives a primary care service from an ACO participant.

For ACOs that select prospective assignment, beneficiaries are prospectively assigned to the ACO at the beginning of each benchmark or performance year based on the beneficiary's use of primary care services in the most recent 12 or 24 months, as applicable, for which data are available, using the assignment methodology described at §§ 425.402 and 425.404. *See* § 425.400(a)(3)(i). Beneficiaries that are prospectively assigned to an ACO at § 425.400(a)(3)(i) remain assigned to the ACO at the end of the benchmark or performance year unless they meet any of the exclusion criteria at § 425.401(b). *See* § 425.400(a)(3)(ii). We note that ACOs that select prospective assignment are subject to § 425.312(a)(2)(iv). Under this regulation, ACOs that select prospective assignment are required to furnish the beneficiary notice to all prospectively assigned beneficiaries once during an agreement period.

This proposed change will be effective beginning on January 1, 2025.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters were generally appreciative of CMS' proposal for better targeting beneficiaries to receive the beneficiary notice for ACOs that have selected preliminary prospective assignment with retrospective reconciliation, and they supported the proposal.

Response: We appreciate the commenters' support and agree that this proposal will better target the beneficiary notice to appropriate beneficiaries.

Comment: A few commenters expressed concern that this proposal does not fully resolve their issues with identifying beneficiaries that require the beneficiary notice at or before their first primary care visit of the agreement period and note that it requires frontline primary care practices to manage the administrative burden of providing these notices to beneficiaries. These commenters suggested that CMS remove the beneficiary notification requirement entirely, provide ACOs with additional information on potential beneficiary assignment overlaps between ACOs, or provide additional flexibility for when and how these notices are provided.

Response: We appreciate commenters' feedback on the operational challenges of distributing the beneficiary notices. For ACOs that select preliminary prospective assignment with retrospective reconciliation, the proposed policy reduces the selection of beneficiaries who must receive the beneficiary information notice from any FFS beneficiary to only those beneficiaries who are likely to be assigned to the ACO.

We note that these ACOs will receive a report that identifies the initial population of assignable beneficiaries who must receive the beneficiary information notice in December, prior to the start of each performance year, to support the ACO's ability to distribute beneficiary notices as soon as a new performance year begins. ACOs will also receive an updated report on a quarterly basis through the performance year, to facilitate the distribution of the beneficiary notice to any beneficiaries newly identified on the report.

We acknowledge that it is possible a beneficiary may receive the beneficiary information notice from more than one ACO, and we are considering potential options to update the files received by ACOs to reduce this potential confusion.

Additionally, as noted earlier, we understand that some commenters find the beneficiary notification burdensome, however, all current components of the beneficiary notification requirement are important for appropriately informing beneficiaries about their provider's participation in an ACO, beneficiary data sharing, and freedom to choose where they receive their care. At this time, we do not think additional modifications are appropriate, but we will continue to consider feedback from stakeholders.

After consideration of public comments, we are finalizing our policy limiting the distribution of the

beneficiary notification to beneficiaries likely to be assigned for ACOs under preliminary prospective assignment with retrospective reconciliation as proposed, as specified in revisions to § 425.312(a)(2)(iii).

H. Medicare Part B Payment for Preventive Services (§§ 410.10, 410.57, 410.64, 410.152)

1. Part B Preventive Vaccines and Their Administration

a. Statutory Background

Under section 1861(s)(10) of the Act, Medicare Part B covers both the vaccine and vaccine administration for the specified preventive vaccines—pneumococcal, influenza, hepatitis B and COVID–19 vaccines. Section 1861(s)(10)(B) of the Act specifies that the hepatitis B vaccine and its administration is only covered for those who are at high or intermediate risk of contracting hepatitis B, as defined at § 410.63. Under section 1833(a)(1)(B) of the Act (pneumococcal, influenza and COVID–19 vaccines) and section 1833(a)(1)(Y) of the Act (hepatitis B vaccines), there is no applicable beneficiary coinsurance for these vaccines or the services to administer them. Under section 1833(b)(1) of the Act, the annual Part B deductible does not apply to Part B preventive vaccines. Please see 75 FR 73415 for more information on the applicability of Part B coinsurance and deductible to preventive vaccines.

Per section 1842(o)(1)(A)(iv) of the Act, payment for these vaccines is based on 95 percent of the Average Wholesale Price (AWP) for the vaccine product, except when furnished in the settings for which payment is based on reasonable cost, such as a hospital outpatient department (HOPD), rural health clinic (RHC), or federally qualified health center (FQHC). Some other preventive vaccines, such as the zoster vaccine for the prevention of shingles, are not specified for Medicare Part B coverage under section 1861(s)(10) of the Act and are instead covered under Medicare Part D.

b. Pneumococcal, Influenza and Hepatitis B Vaccine Administration

In the CY 2022 PFS final rule (86 FR 65185), we finalized a uniform payment rate of $30 for the administration of a pneumococcal, influenza or hepatitis B vaccine covered under the Medicare Part B preventive vaccine benefit. We explained that since payment policies for the administration of the preventive vaccines described under section 1861(s)(10) of the Act are independent of the PFS, these payment rates will be updated as necessary, independent of the valuation of any specific codes under the PFS. (Please see COVID–19 vaccine administration payment information in the next section.) The CY 2022 PFS final rule (86 FR 65180 through 65182) provides a detailed discussion on the history of the valuation of the three Level II Healthcare Common Procedure Coding System (HCPCS) codes, G0008, G0009, and G0010, which describe the services to administer an influenza, pneumococcal, and hepatitis B vaccine, respectively.

In the CY 2023 PFS final rule (87 FR 69984), we finalized a policy to annually update the payment amount for the administration of Part B preventive vaccines based upon the percentage increase in the Medicare Economic Index (MEI). Additionally, we finalized the use of the PFS Geographical Adjustment Factor (GAF) to adjust the payment amount to reflect cost differences for the geographic locality based upon the fee schedule area where the preventive vaccine is administered. These adjustments and updates apply to HCPCS codes G0008, G0009, G0010.

These adjustments and updates also apply to Current Procedural Terminology (CPT) code 90480 (Immunization administration by intramuscular injection of coronavirus disease [COVID–19] vaccine, single dose) that describe the service to administer COVID–19 vaccines and HCPCS code M0201 (Administration of pneumococcal, influenza, hepatitis b, and/or covid-19 vaccine inside a patient's home; reported only once per individual home per date of service when such vaccine administration(s) are performed at the patient's home), discussed below in section III.H.1.c and III.H.1.d, respectively, of this final rule.

The current payment rates for G0008, G0009, and G0010, as finalized in the CY 2024 PFS final rule, can be found on the CMS Vaccine Pricing website under the ''Seasonal Flu Vaccines'' tab, and then under the heading ''Locality-Adjusted Payment Rates.'' [622] As we stated in the proposed rule (89 FR 61925), the final rates for CY 2025 will be based on the final CY 2025 MEI increase factor. The final CY 2025 MEI increase factor, based on the 2017-based MEI, reflecting historical data through the 2nd quarter of 2024, is 3.5 percent. Tables 51 and 52 in section III.H.1.f. of this final rule provide the CY 2025 payment rates for G0008, G0009, and G0010, with the 3.5 percent annual update applied for CY 2025.

We solicited comments on these proposed rates. The following is a summary of the comments we received and our responses.

Comment: Commenters supported our CY 2025 proposed payment rates for Part B vaccine administration of pneumococcal, influenza and hepatitis B vaccines. We received several comments thanking CMS for annually updating the Part B preventive vaccine administration payment rate with the MEI. Commenters stated that this helps ensure that Medicare beneficiaries continue to have access to essential vaccines, and it supports CMS' ongoing commitment to preventive care and public health.

Response: We thank commenters for their support of our proposals and for partnering with CMS in our efforts to improve access to vaccines and preventive care for Medicare enrollees and all Americans.

After consideration of public comments, we are finalizing these rates as proposed. Tables 51 and 52 in section III.H.1.f. of this final rule provide the CY 2025 payment rates for G0008, G0009, and G0010, with the 3.5 percent annual update applied for CY 2025.

c. COVID–19 Vaccine Administration

In the CY 2022 PFS final rule (86 FR 65181 and 65182), we provided a detailed history regarding the determinations of initial payment rates for the administration of COVID–19 vaccines, and an explanation of how the payment policy evolved to a rate of $40 per dose. For CY 2022, we maintained the payment policy for the administration of COVID–19 vaccines and stated that while we believe it is appropriate to establish a single, consistent payment rate for the administration of all four Part B preventive vaccines in the long term, we will pay a higher, $40 payment rate for administration of COVID–19 vaccines in the short term, while pandemic conditions persisted (86 FR 65185).

In the CY 2023 PFS final rule (87 FR 69988 through 69993), we stated that due to timing distinctions between a PHE declared under section 319 of the Public Health Service (PHS) Act and an Emergency Use Authorization (EUA) declaration under section 564 of the Federal Food, Drug, and Cosmetic Act (FD&C Act), we reconsidered the policies finalized in the CY 2022 PFS final rule in light of our goal to promote broad and timely access to COVID–19 vaccines. We explained that our goal would be better served if our policies

[622] *https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing*, under the tab ''Seasonal Flu Vaccines'', and then under the header ''Locality-Adjusted Payment Rates.''

with respect to payment for administration of these products, as addressed in the November 6, 2020 COVID–19 IFC (85 FR 71142) and CY 2022 PFS final rule (85 FR 18250), continue until the EUA declaration for drugs and biological products with respect to COVID–19 is terminated. Therefore, we finalized that we would maintain the current payment rate of $40 per dose for the administration of COVID–19 vaccines through the end of the calendar year in which the March 27, 2020 EUA declaration under section 564 of the FD&C Act (EUA declaration) for drugs and biological products ends. Effective January 1 of the year following the year in which the EUA declaration ends, the COVID–19 vaccine administration payment would be set at a rate to align with the payment rate for the administration of other Part B preventive vaccines, that is, approximately $30 per dose. As mentioned above, we also finalized that, beginning January 1, 2023, we would annually update the payment amount for the administration of all Part B preventive vaccines based upon the percentage increase in the MEI, and that we would use the PFS GAF to adjust the payment amount to reflect cost differences for the geographic locality based upon the fee schedule area where the vaccine is administered.

On September 11, 2023, the Food and Drug Administration (FDA) announced its recommendation to shift to a monovalent coronavirus disease 2019 [COVID–19] vaccine that targets the predominant XBB lineage virus strain for the 2023–2024 vaccine administration season.[623] In anticipation of this recommendation, in August 2023, the CPT Editorial Panel approved five new monovalent COVID–19 vaccine product codes for Pfizer and Moderna vaccines. In addition, they approved a new vaccine administration code (90480) for reporting the administration of any COVID–19 vaccine for any patient (pediatric or adult), replacing all previously approved specific vaccine administration codes. All previously approved COVID–19 vaccine product and vaccine administration codes were deleted from the CPT code set effective November 1, 2023, except for product code 91304, which represents the Novavax COVID–19 vaccine product and remains active.[624]

The current payment rate for CPT code 90480 is available on the CMS COVID–19 Vaccine Pricing website, under ''COVID–19 Vaccines & Monoclonal Antibodies''.[625] As we stated in the proposed rule (89 FR 61926), the final rates for CY 2025 will be based on the final CY 2025 MEI increase factor. As noted above, the final CY 2025 MEI increase factor, based on the 2017-based MEI, is based on historical data through the 2nd quarter of 2024 and is 3.5 percent. Tables 51 and 52 in section III.H.1.f. of this final rule provide the CY 2025 payment rates for 90480 with the 3.5 percent annual update applied for CY 2025. Due to the uncertainty surrounding the future of the EUA declaration for drugs and biological products for COVID–19, Tables 51 and 52, at the end of section III.H.1.f. of this final rule, reflect the potential alternative payment amounts for Part B preventive vaccine administration for CY 2025. Table 51 displays the CY 2025 Part B payment rates for preventive vaccine administration if the EUA declaration continues into CY 2025, and Table 52 displays the CY 2025 Part B payment rates for preventive vaccine administration if the EUA declaration ends on or before December 31, 2024.

We solicited comments on these proposed rates. The following is a summary of the comments we received and our responses.

Comment: Commenters supported our CY 2025 proposed payment rates for COVID–19 vaccine administration. We received several comments thanking CMS for annually updating the payment rate for the administration of preventive vaccines covered under Medicare Part B with the MEI. Commenters stated that this helps ensure that Medicare beneficiaries continue to have access to essential vaccines, and it supports CMS' ongoing commitment to preventive care and public health. Commenters also thanked CMS for providing a clear path forward on payment for both EUA declaration scenarios for 2025.

Response: We thank commenters for their support of our proposals and for partnering with CMS in our efforts to improve access to vaccines and preventive care for Medicare enrollees and all Americans.

Comment: Some commenters had feedback regarding our existing policy to maintain the current payment rate of $40 per dose for the administration of COVID–19 vaccines through the end of the calendar year in which the EUA declaration ends.

Several commenters supported this existing policy and thanked CMS for maintaining the higher payment rate relative to other Part B vaccine administration payments. One commenter requested that, when the EUA declaration is terminated, CMS communicate any changes in payment and allow for a transition time to adjust claims systems. Another commenter asked that CMS continue the $40 payment rate for COVID–19 vaccine administration beyond the end of CY 2024 and extend it to all Medicare preventive vaccines. Other commenters requested that CMS maintain the higher payment rate through the end of the 2024–2025 respiratory disease season, even if the EUA declaration ends before the end of the season. One commenter suggested that CMS finalize one payment rate for administration of the COVID–19 vaccine for CY 2025, regardless of the date that the EUA declaration is terminated.

Response: We thank commenters for their feedback. In last year's CY 2024 PFS final rule (88 FR 79233–34), we explained that the CY 2022 PFS final rule (87 FR 65184–86) contains an extensive discussion on our rationale for initially setting the $40 COVID–19 vaccine administration rate, and for eventually aligning the COVID–19 vaccine administration rate with the rate for administration of the other Part B preventive vaccines, that is, $30 per vaccine administered. In the CY 2023 final rule (87 FR 69988–93), we set this transition to occur on January 1 of the year following the year in which the Secretary ends the March 27, 2020, EUA declaration under section 564 of the FD&C Act (EUA declaration) for drugs and biological products, and we also gave a detailed explanation of this decision. We also stated that when the transition to a calendar year post-EUA declaration does arrive, we plan to provide both vaccine providers and Medicare enrollees with sufficient notice and thorough guidance regarding the transition (88 FR 79233–34). As of the publication of this final rule, the EUA declaration has not yet ended.

Additionally, CMS is dedicated to the goal of promoting vaccine access for Medicare enrollees. We appreciate that these commenters share CMS' priorities in this area.

Comment: We received several comments that were outside of the scope of our proposals for Part B preventive vaccines for CY 2025. Several commenters requested that CMS evaluate coverage and payment policies

[623] *https://www.fda.gov/news-events/press-announcements/fda-takes-action-updated-mrna-covid-19-vaccines-better-protect-against-currently-circulating.*

[624] CPT® Assistant Special Edition: August Update/Volume 33/2023. *https://www.ama-assn.org/system/files/cpt-assistant-guide-coronavirus-august-2023-updated.pdf.*

[625] *https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing,* under ''COVID–19 Vaccines & Monoclonal Antibodies''.

for potential combination vaccines under Medicare Part B, and to determine those policies. Other commenters requested that all ACIP-recommended vaccines transition to coverage under Medicare Part B, including vaccines for mpox and RSV. Some commenters asked CMS to continue working with Congress to achieve Medicare Part B provider status for pharmacists. Another commenter suggested policy changes that would encourage emergency departments to administer vaccines.

Response: We thank commenters for their feedback. These comments are outside of the scope of our proposals in the CY 2025 PFS proposed rule. We note that, in accordance with statute, Part B payment can be made only for the preventive vaccines specified at section 1861(s)(10) of the Act, as well as their administration (please see section III.H.1 of this final rule for more information). Therefore, we did not make any proposals regarding expanding the Part B preventive vaccine benefit to additional vaccines. We did not address vaccine administration in other health care settings, and we did not make any proposals regarding the scope of practice for those who would administer the vaccines.

However, as noted above, CMS is dedicated to the goal of promoting vaccine access for Medicare enrollees. We appreciate that these commenters share CMS' priorities in this area. We are actively taking these comments into consideration for future policymaking, as appropriate under our statutory authority.

After consideration of public comments, we are finalizing these rates as proposed. Tables 51 and 52 in section III.H.1.f. of this final rule provide the CY 2025 payment rates for CPT code 90480, with the 3.5 percent annual update applied for CY 2025.

d. In-Home Additional Payment for Administration of Preventive Vaccines

In the CY 2022 PFS final rule (86 FR 65187 and 65190), we provide a detailed discussion on the payment policy for COVID–19 vaccine administration in the home. In summary, providers and suppliers that administer a COVID–19 vaccine in the home, under certain circumstances, could bill Medicare for one of the existing COVID–19 vaccine administration CPT codes along with HCPCS code M0201 (*COVID–19 vaccine administration inside a patient's home; reported only once per individual home per date of service when only COVID–19 vaccine administration is performed at the patient's home*). For CY 2022, we continued to make an additional payment when a COVID–19 vaccine was administered in a beneficiary's home under certain circumstances and stated that we would make this payment until the end of the year in which the PHE expires.

In the CY 2023 PFS final rule (87 FR 69984 through 69986), we discussed that we had received many comments and requests from interested parties that the in-home add-on payment be applied more broadly to all preventive vaccines. Commenters also expressed concerns that discontinuation of the in-home additional payment would negatively impact access to the COVID–19 vaccine for underserved homebound beneficiaries. Therefore, we continued the policy of making an additional payment when a COVID–19 vaccine is administered in a beneficiary's home, under certain circumstances for the duration of CY 2023. We explained that we were continuing the policy of additional payment for at-home COVID–19 vaccinations for another year to provide us time to track utilization and trends associated with its use, in order to inform the Part B preventive vaccine policy on payments for in-home vaccine administration for CY 2024. In addition, for CY 2023 we updated the payment amount by the CY 2023 MEI percentage increase and adjusted for geographic cost differences as we do the payment for the preventive vaccine administration service, that is, based upon the fee schedule area where the COVID–19 vaccine is administered, by using the PFS GAF (87 FR 69986).

In the CY 2024 PFS final rule (88 FR 79235 through 79237), we discussed the policy for the in-home additional payment for COVID–19 vaccine administration under the Part B preventive vaccine benefit for CY 2024 and subsequent years. We maintained the payment policy for COVID–19 vaccine administration and extended the additional payment to the administration of the other three preventive vaccines included in the Part B preventive vaccine benefit—the pneumococcal, influenza, and hepatitis B vaccines. As described at § 410.152(h)(3), effective January 1, 2024, the payment amount for the in-home administration of all four vaccines is identical, that is, Medicare Part B pays the same additional payment amount to providers and suppliers that administer a pneumococcal, influenza, hepatitis B, or COVID–19 vaccine in the home. This additional payment amount is annually updated using the percentage increase in the MEI and is adjusted to reflect geographic cost variations with the PFS GAF.

We stated that the in-home additional payment is limited to one payment per home visit, even if multiple vaccines are administered during the same home visit. We noted that every vaccine dose that is furnished during a home visit still receives its own unique vaccine administration payment. The additional payment for in-home Part B vaccine administration is only made if certain circumstances are met, as outlined at § 410.152(h)(3)(iii). Providers and suppliers that administer one of the Part B preventive vaccines in the home, under those circumstances, can bill Medicare for one of the existing Part B vaccine administration CPT codes along with HCPCS code M0201 (Administration of pneumococcal, influenza, hepatitis b, and/or covid-19 vaccine inside a patient's home; reported only once per individual home per date of service when such vaccine administration(s) are performed at the patient's home) (88 FR 79235 through 79237).

The current *payment* rate *for* M0201 can be found on the CMS Vaccine Pricing website under ''COVID–19 Vaccines & Monoclonal Antibodies''.[626] As we stated in the proposed rule (89 FR 61926), the final rates for CY 2025 will be based on the final CY 2025 MEI increase factor. The final CY 2025 MEI increase factor, based on the 2017-based MEI, is based on historical data through the 2nd quarter of 2024 and is 3.5 percent. Tables 51 and 522 in section III.H.1.f. of this final rule provide the CY 2025 projected payment rate for M0201 with the 3.5 percent annual update applied for CY 2025.

We solicited comments on this proposed rate. The following is a summary of the comments we received and our responses.

Comment: Commenters supported our proposed rate for the in-home additional payment for Part B preventive vaccines. We received several comments thanking CMS for annually updating the payment rate for the in-home additional payment with the MEI. One commenter stated they believe that, despite the end of the COVID–19 public health emergency (PHE), there are still many Medicare enrollees who can benefit from in-home vaccinations who are challenged by mobility or geographic distance.

Response: We thank commenters for their support of our proposals and for partnering with CMS in our efforts to promote access to vaccines and preventive care for Medicare enrollees.

[626] *https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing*, under ''COVID–19 Vaccines & Monoclonal Antibodies''.

Comment: Some commenters requested that we expand the in-home additional payment to all vaccines recommended by the CDC's Advisory Committee on Immunization Practices (ACIP) (*https://www.cdc.gov/acip/index.html*).

Response: We thank commenters for their feedback. These comments are outside of the scope of our proposals in the CY 2025 PFS proposed rule. We note that, in accordance with statute, Part B payment can be made only for the preventive vaccines specified at section 1861(s)(10) of the Act, and their administration (please see section III.H.1 of this final rule for more information). Therefore, we did not make any proposals regarding expanding the Part B in-home additional payment to other vaccines.

After consideration of public comments, we are finalizing this rate as proposed. Tables 51 and 52 in section III.H.1.f. of this final rule provide the CY 2025 payment rate for M0201, with the 3.5 percent annual update applied for CY 2025.

e. COVID–19 Monoclonal Antibodies and Their Administration

In CY 2023 PFS final rule (87 FR 69987 through 69993), we discussed that all COVID–19 monoclonal antibody products and their administration are covered and paid for under the Part B preventive vaccine benefit through the end of year in which the Secretary terminates the EUA declaration for drugs and biological products with respect to COVID–19. In addition, we explained that, under the authority provided by section 3713 of the CARES Act, we have established specific coding and payment rates for the COVID–19 vaccine, as well COVID–19 monoclonal antibodies and their administration, through technical direction to Medicare Administrative Contractors (MACs) and information posted publicly on the CMS website (87 FR 69987).

In the CY 2023 PFS final rule, we also established a policy to continue coverage and payment for monoclonal antibodies that are used for pre-exposure prophylaxis (PrEP) of COVID–19 under the Part B preventive vaccine benefit if they meet applicable coverage requirements (87 FR 69992). We explained that we will continue to pay for these products and their administration even after the EUA declaration for drugs and biological products is terminated, so long as after the EUA declaration is terminated, such products have market authorization. Additionally, we established that payments for the administration of monoclonal antibodies that are used for PrEP of COVID–19 would be adjusted for geographic cost variations using the PFS GAF. In the CY 2024 PFS rule (88 FR 79239 through 79240), we codified these policies in regulations at §§ 410.10(l) and 410.57(c).

In CY 2024 PFS final rule (88 FR 79239 through 79240), we noted that we did not finalize any payment regulations regarding monoclonal antibodies for PrEP of COVID–19, since at the time of the publication of the CY 2024 PFS final rule, there were no COVID–19 monoclonal antibodies approved or authorized for use against the dominant strains of COVID–19 in the United States. We stated that if a new monoclonal antibody for PrEP of COVID–19 became authorized for use, we would use the authority provided by section 3713 of the CARES Act, as discussed in the CY 2023 PFS final rule (87 FR 69987), to establish specific coding and payment rates for the administration of that product through technical direction to MACs and information posted publicly on the CMS website. We explained that we would subsequently propose coding and payment rates for the administration of that product via rulemaking.

We also noted that, for the purposes of the in-home additional payment discussed above in section III.H.1.d. of this final rule, that additional payment is not applicable to the administration of monoclonal antibodies for PrEP of COVID–19. For monoclonal antibodies for PrEP of COVID–19, we set the coding and payment rates for the administration of COVID–19 monoclonal antibodies in the home (when applicable) to be higher than those in other health care settings, and therefore such amounts already account for the higher costs of administering the product in the home.

On March 22, 2024, the FDA issued an EUA for Pemgarda (pemivibart) injection, for intravenous use.[627] Pemgarda is a monoclonal antibody product authorized for emergency use for pre-exposure prophylaxis to help prevent COVID–19 in adults and children 12 years of age and older who weigh at least 88 pounds (40 kg) who:

- Are not currently infected with SARS-CoV–2 and who have not been known to be exposed to someone who is infected with SARS-CoV–2 and
- Have moderate-to-severe immune compromise because of a medical condition or because they receive medicines or treatments that suppress the immune system and they are unlikely to have an adequate response to COVID–19 vaccination.

Therefore, under the authority provided by section 3713 of the CARES Act, we established specific coding and payment rates for the administration of Pemgarda through technical direction to MACs and information posted publicly on the CMS website. Since Pemgarda is authorized for use in pre-exposure prophylaxis of COVID–19, and since CMS is continuing to cover and pay authorized or approved products used for pre-exposure prophylaxis of COVID–19 under the Part B preventive vaccine benefit, we plan to propose long-term coding and payment rates for the administration of this product in future rulemaking, so long as the product meets these requirements. The current payment rates for Pemgarda and its administration can be found on the CMS Vaccine Pricing website under ''COVID–19 Vaccines & Monoclonal Antibodies''.[628] These payment rates are also listed below in Tables 51 and 52.

More information on our coding and payment policies for COVID–19 monoclonal antibodies is available at *https://www.cms.gov/monoclonal*.

We solicited comments on these policies. The following is a summary of the comments we received and our responses.

Comment: Commenters supported our payment policies for COVID–19 monoclonal antibodies, and specifically our payment policies on monoclonal antibodies for PrEP for COVID–19. One commenter stated that they hope a code for therapeutic care can be implemented in the future.

Response: We thank commenters for their support of our policy and for partnering with CMS in our efforts to improve access to vaccines, monoclonal antibodies used for PrEP of COVID–19, and general preventive care for Medicare enrollees.

f. Summary of Payment Amounts for CY 2025

Due to the uncertainty surrounding the future of the EUA declaration for drugs and biological products for COVID–19, we are including Tables 51 and 52, which summarize the potential alternative preventive vaccine administration payment amounts under Medicare Part B at the time of the publication of this final rule. If the EUA declaration continues to be in effect on January 1, 2025, the payment rates in Table 51 will apply. If the EUA

[627] *https://www.fda.gov/media/177068/download?attachment.*

[628] *https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing*, under ''COVID–19 Vaccines & Monoclonal Antibodies''.

declaration is terminated before January 1, 2025, the payment rates in Table 52 will apply.

For CY 2025, the growth rate of the 2017-based MEI is 3.5 percent with historical data through second quarter 2024. We proposed that if more recent data are subsequently available (for example, a more recent estimate of the MEI percentage increase), we would use such data, if appropriate, to determine the CY 2025 MEI percentage increase in the CY 2025 PFS final rule; we would apply that updated MEI percentage increase to the rates found in the Tables 51 and 52 where applicable. Therefore, in this final rule, the rates in Tables 51 and 52 represent our CY 2024 rates for the listed items, multiplied by 1.035

BILLING CODE 4120–01–P

TABLE 51: CY 2025 Part B Payments for Preventive Vaccine Administration if the EUA Declaration for Drugs and Biologicals with Respect to COVID-19 Continues into CY 2025

Category of Part B Product Administration	Part B Payment Amount (Unadjusted)	Annual Update[6]	Geographic Adjustment
Influenza, Pneumococcal, Hepatitis B Vaccines[1,4]	$33.71	MEI	GAF
COVID-19 Vaccine[2,4]	$44.95	MEI	GAF
In-Home Additional Payment for Part B Vaccine Administration (M0201)[4]	$39.90	MEI	GAF
COVID-19 Monoclonal Antibodies (for Treatment or Post-Exposure Prophylaxis) [3,4,5]	N/A	N/A	N/A
COVID-19 Monoclonal Antibodies (for Pre-Exposure Prophylaxis)[3,4]	N/A	N/A	N/A
Intravenous Infusion: Health Care Setting	$450	N/A	GAF

[1] HCPCS Codes G0008, G0009, G0010.

[2] CPT code 90480.

[3] *https://www.cms.gov/monoclonal*.

[4] Beneficiary coinsurance and deductible are not applicable.

[5] As of the issuance of the CY 2025 PFS final rule, there are no monoclonal antibodies approved or authorized for the treatment or for post-exposure prophylaxis of COVID-19.

[6] The CY 2025 percentage increase of the 2017-based MEI is 3.5 percent, based on historical data through the 2nd quarter of 2024.

TABLE 52: Part B Payments for Preventive Vaccine Administration Beginning January 1, 2025, if the EUA Declaration for Drugs and Biologicals with Respect to COVID 19 is Terminated on or Before December 31, 2024

Category of Part B Product Administration	Part B Payment Amount (Unadjusted)	Annual Update[6]	Geographic Adjustment
Influenza, Pneumococcal, Hepatitis B Vaccines[1,4]	$33.71	MEI	GAF
COVID-19 Vaccine[2,4]	$33.71	MEI	GAF
In-Home Additional Payment for Part B Vaccine Administration (M0201)[4]	$39.90	MEI	GAF
COVID-19 Monoclonal Antibodies (for Treatment or Post-Exposure Prophylaxis)[3]	Medicare payment under the applicable payment system		
COVID-19 Monoclonal Antibodies (for Pre-Exposure Prophylaxis)[4,5]	TBD[5]	N/A	GAF

[1] HCPCS Codes G0008, G0009, G0010.
[2] CPT code 90480
[3] Payment is in accordance with the applicable payment system of the setting in which the product is administered. Beneficiary coinsurance and deductible are applicable.
[4] Beneficiary coinsurance and deductible are not applicable.
[5] Please see section III.H.1.e. of this proposed rule.
[6] The CY 2025 percentage increase of the 2017-based MEI is 3.5 percent, based on historical data through the 2nd quarter of 2024.

BILLING CODE 4120–01–C

2. Revised Payment Policies for Hepatitis B Vaccine Administration

In section III.M of this final rule, we are finalizing our proposal to expand the list of individuals who are determined to be at high or intermediate risk of contracting hepatitis B at § 410.63 in order to improve access and utilization of hepatitis B vaccines. Specifically, we proposed to expand coverage of hepatitis B vaccinations by revising § 410.63(a)(2), Intermediate Risk Groups, by adding a new paragraph (a)(2)(iv) to include individuals who have not previously received a completed hepatitis B vaccination series and individuals whose previous vaccination history is unknown. We believe that this final rule coverage change will help protect Medicare beneficiaries from acquiring hepatitis B infection, contribute to eliminating viral hepatitis as a public health threat in the United States, and is in the best interest of the Medicare program and its beneficiaries. Below, we discuss how the proposal to expand coverage may impact Part B payment policy for hepatitis B vaccines and administration.

a. Background

Section 2323 of the Deficit Reduction Act of 1984 (Pub. L. 98–369) amended section 1861(s)(10) of the Act by adding subparagraph (B) to provide Medicare Part B coverage for the hepatitis B vaccine and its administration for those individuals who are at high or intermediate risk of contracting hepatitis B. The statute required the Secretary to determine, by regulations, criteria for identifying individuals who are at high or intermediate risk of contracting hepatitis B. In addition, section 2323 of the Deficit Reduction Act of 1984 added section 1833(k) of the Act, which states that the Secretary may provide for payment of such an amount or amounts as reasonably reflects the general cost of efficiently providing such services, instead of the amount of payment otherwise provided under Part B for the hepatitis B vaccine and its administration.

In the June 4, 1990 **Federal Register**, we issued a final rule to implement section 2323 of the Deficit Reduction Act of 1984 and the coverage provisions were codified in regulation at § 410.63(a) (55 FR 22785). In the preamble to the1990 rule, we stated that, ''[f]or Medicare payment purposes, the hepatitis B vaccine may be administered—upon the order of a doctor of medicine or osteopathy—by qualified staff of home health agencies, skilled nursing facilities, ESRD facilities, hospital outpatient departments, HMOs, persons recognized under the 'incident to physician's services' provision of the law (section 1861(s)(2)(A) of the Act), as well as doctors of medicine and osteopathy.'' This policy is included in the Medicare Claims Processing Manual, Chapter 18, section 10.1.3.

In the CY 2013 PFS final rule (77 FR 69363), CMS amended the regulations at § 410.63(a) to include those diagnosed with diabetes mellitus in the list of groups at high risk of contracting hepatitis B. In the November 6, 2020 COVID–19 IFC (85 FR 71145), in preamble discussions surrounding the implementation of coverage and payment for the COVID–19 vaccine, we mentioned the unique coverage and payment requirements related the hepatitis B vaccine under Part B. We noted that, unlike pneumococcal, influenza and COVID–19 vaccines, hepatitis B vaccines require an assessment of a patient's risk of contracting hepatitis B. Because hepatitis B vaccinations claims needed a physician's order, they could not be

roster billed by mass immunizers. More information on the physician's order policy that is in effect for the administration of hepatitis B vaccines through CY 2024 can be found in the Medicare Benefit Policy Manual, Chapter 15, Section 50.4.4.2.

b. Revisions to Payment Policies for Hepatitis B Vaccinations

As discussed above, in section III.M of this final rule, we are finalizing a policy to provide coverage under Part B for hepatitis B vaccines and their administration for an expanded range of Medicare enrollees, as reflected in the revised § 410.63(a). We explain that Medicare coverage of hepatitis B vaccination is outdated in light of recent information about the risks of contracting hepatitis B, and that current research indicates that individuals who remain unvaccinated against hepatitis B are at intermediate risk of contracting hepatitis B virus. Under the new policy, an assessment of an individual's vaccination status can now be made without the clinical expertise of a physician. Thus, we will remove our policy in the manual that the administration of a Part B-covered hepatitis B vaccine be preceded by a doctor's order. A doctor's order will no longer be necessary for the administration of a hepatitis B vaccine under Part B, and we will also change our procedures to allow mass immunizers to use the roster billing process to submit Medicare Part B claims for hepatitis B vaccines and their administration.

Currently, instructions regarding hepatitis B vaccine administration under Part B are contained in CMS manual guidance. As there are changes to § 410.63(a) finalized in this rulemaking, we will make corresponding changes to guidance in the Medicare Benefit Policy Manual and Medicare Claims Processing Manual. Moreover, additional information on roster billing is available on the CMS web page at *https://www.cms.gov/roster-billing*.

We note that the current payment rates for HCPCS code G0010, ''*Administration of hepatitis b vaccine,*'' as finalized in the CY 2024 PFS final rule, can be found on the CMS Vaccine Pricing website under ''Seasonal Flu Vaccines''.[629] The payment rates for G0010, with the annual update applied for CY 2025, are available in Tables 51 and 52 in section III.H.1.f. of this final rule. More information on other policies related to the administration of G0010 can be found in the section preceding this one (section III.H.1. of this final rule), and revisions to payment policies for the administration of G0010 in RHCs and FQHCs can be found in the section immediately below (section III.H.2.c. of this final rule).

c. Revisions to Payment Policies for Hepatitis B Vaccinations in Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

When section 2323 of the Deficit Reduction Act of 1984 added section 1861(s)(10)(B) to the Act to add Medicare Part B coverage for the hepatitis B vaccine and its administration, it limited that coverage to certain settings. In RHCs and FQHCs, the law specified at section 1833(a)(3)(A) of the Act that the vaccines mentioned at section 1861(s)(10)(A) of the Act—namely, pneumococcal and influenza (and later, COVID–19) vaccines—are not included in the all-inclusive payment rate for an RHC or FQHC visit but are reimbursed as a separate payment. Pneumococcal, influenza and COVID–19 vaccines and their administration are paid at 100 percent of reasonable cost when administered in an RHC or FQHC, in accordance with section 1833(a)(1)(B) of the Act. By contrast, hepatitis B vaccines and the cost of administration have been included in the capitated payment for an RHC or FQHC visit. RHCs and FQHC visits are generally paid at 80 percent of reasonable costs, and thus, they are subject to coinsurance for Medicare Part B enrollees. The Deficit Reduction Act of 1984 also added section 1833(k) to the Act, which states that, for hepatitis B vaccines and their administration as described at section 1861(s)(10)(B), the Secretary may provide for payment that ''reasonably reflects the general cost of efficiently providing such services,'' instead of the amount of payment otherwise dictated in statute.

In CY 2011 PFS final rule (75 FR 73418), we addressed the issue of coinsurance for hepatitis B vaccines and their administration in FQHCs. The CY 2011 PFS final rule, which implemented the expansion of preventive services in Medicare as mandated by the ACA, stated that effective January 1, 2011, Part B coinsurance on hepatitis B vaccinations was waived, as the vaccine and its administration were deemed ''preventive services'' per section 1861(ddd)(3)(A) of the Act as cross-referenced to section 1861(ww)(2) of the Act. (More information on preventive services is provided immediately below at section III.H.3. of this final rule). The CY 2011 PFS final rule codified this FQHC policy in regulation at § 405.2449. In the CY 2014 FQHC PPS final rule (79 FR 25474), at § 405.2410(b), we codified regulations regarding coinsurance in RHCs and FQHCs which exempt from coinsurance ''preventive services for which Medicare pays 100 percent under § 410.152(l) of this chapter'', which explicitly includes the hepatitis B vaccine. In the CY 2016 PFS final rule (80 FR 71088), we clarified that these waivers of cost-sharing (both coinsurance and deductible) for preventive services applied to RHCs as well, and we subsequently clarified in sub-regulatory guidance that these waivers apply to the administration of hepatitis B vaccines in RHC and FQHCs.[630] We note that FQHC services are always exempt from the Part B deductible, per section 1833(b)(4) of the Act.

Even though hepatitis B vaccines and their administration are deemed preventive services for which coinsurance (and deductible in RHCs) is waived, hepatitis B vaccines are still currently paid differently than other Part B vaccines in RHCs and FQHCs. Due to the statutory differences explained above, pneumococcal, influenza and COVID–19 vaccines and their administration are paid at 100 of reasonable cost in RHCs and FQHCs—that is, they are paid separately from the FQHC PPS or the RHC All-Inclusive Rate (AIR) methodology—while hepatitis B vaccines and their administration are paid as part of the FQHCs PPS or the RHC AIR, which means that they are paid through changes to the facilities' capitated rate.

In light of the proposal to expand coverage for hepatitis B vaccination in section III.M. of this final rule, we proposed to use the aforementioned authority at section 1833(k) of the Act to align payment for hepatitis B vaccinations in RHCs and FQHCs with the payment for pneumococcal, influenza and COVID–19 vaccinations in those settings. That is, we proposed to pay for hepatitis B vaccines and their administration in RHCs and FQHCs at 100 percent of reasonable cost, separate

[629] *https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing*, under ''Seasonal Flu Vaccines;'' see links to the relevant year under ''Locality-Adjusted Payment Rates.''

[630] Updates were made to Chapter 13, section 220.1 of Medicare Benefit Policy Manual via Change Request 9864, R2186CP, December 9, 2016, ''Rural Health Clinic (RHC) and Federally Qualified Health Center (FQHC) Updates:'' *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/Downloads/R230BP.pdf.* Updates were also made to Chapter 9, section 60.3 of the Medicare Claims Processing Manual via Change Request 9397, R3434CP, December 31, 2015, ''Reorganization of Chapter 9:'' *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/Downloads/R3434CP.pdf.*

from the FQHCs PPS and the RHC AIR methodology, for all populations identified for coverage at § 410.63(a). As is the case for pneumococcal, influenza and COVID–19 vaccine administration, under this proposal, a hepatitis B vaccine administration would not be considered an RHC or FQHC visit. We proposed that effective January 1, 2025, RHCs and FQHCs would bill for Part B hepatitis B vaccines in the same manner as they currently bill for pneumococcal, influenza and COVID–19 vaccines, that is, on their cost report.

We note that we are finalizing a policy above, in section III.B.5 of this final rule, to allow for billing and payment of all Part B preventive vaccines and their administration at the time of service in RHCs and FQHCs, with annual reconciliation on the facilities' cost reports. As explained there, the policy will be effective for dates of service on or after July 1, 2025, in order to allow time for implementation and necessary systems changes. Both the policy in section III.B.5 and this policy together support our goal of streamlining payment for all Part B vaccines across Part B settings of care. We believe that streamlining Part B vaccine and vaccine administration payments among care settings aligns with the stated goals of section 1833(k) of the Act, since those payment policy changes will allow for increased efficiency in Part B claims processing on both the part of the RHCs and FQHCs and on the part of CMS. We also believe that the increased efficiency will promote vaccine access, and thus health equity in general, in RHCs and FQHCs that already serve vulnerable populations.

To implement this policy regarding payment for hepatitis B vaccines and their administration in RHCs and FQHCs, we are also amending the regulations at § 405.2466(b)(1)(iv), to add hepatitis B vaccines to the list of vaccines covered in RHCs and FQHCs at 100 percent of reasonable cost. We are finalizing that regulation text as proposed. We plan to make corresponding changes to guidance in the Medicare Benefit Policy Manual, Chapter 13 and Medicare Claims Processing Manual, Chapter 9 and facilitate the necessary operational systems updates needed to implement these changes.

d. Regulations Concerning Hepatitis B Vaccines and Their Administration

Listed below are several Medicare Part B regulations that mention the hepatitis B vaccine and refer to § 410.63(a) for a definition of hepatitis B vaccine coverage. Since we proposed to revise § 410.63(a) in section III.M. of this final rule, we do not believe additional regulation text changes are needed to conform to the coverage proposal, as the update to the definition at § 410.63(a) will apply to the use of the definition in these regulations:

- Section 410.10(p).
- Section 410.57(d).
- Section 411.15(e)(3) and (k)(5).
- Section 414.707(a)(2)(iii).
- Section 414.904(e)(1).

In addition, we noted that there are no conforming regulation text changes needed to the payment regulations at § 410.152, paragraphs (h) and (l)(1), to conform to the coverage proposal.

We received public comments on all of these proposals regarding Hepatitis B vaccines and their administration. The following is a summary of the comments we received and our responses.

Comment: Commenters overwhelmingly supported these proposals regarding payment for Hepatitis B vaccines and their administration. Commenters noted that removing the physician order requirement alleviates a long-standing barrier to hepatitis B vaccine coverage. One commenter noted that the payment change for hepatitis B vaccines in RHCs and FQHCs will provide easier access to those vaccines, and thus improve quality of life, for Medicare enrollees and those with disabilities who live in rural areas where accessing primary care is difficult.

Response: We thank commenters for their support of our proposals and for partnering with CMS in our efforts to improve equity and access to hepatitis B vaccines, especially for those vulnerable populations that are served by RHCs and FQHCs. We agree that finalizing these proposals will alleviate barriers to accessing hepatitis B vaccinations for Medicare enrollees.

Comment: Some commenters voiced concerns about our proposal to remove the physician's order requirement for Hepatitis B vaccine administration under Part B. One commenter believes that this change will cause retail pharmacies to face greater compliance challenges, and the commenter asked CMS to provide examples of the medical documentation that a retail pharmacy may rely upon before deciding to administer the Hepatitis B vaccine to a Medicare enrollee. Other commenters voiced concerns about possible consequences of the removal of the physician order requirement, including the concern that a patient's primary or regular physician may not be aware of the administration of the Hepatitis B vaccine to their patient.

Response: As explained in section II.M. of this final rule, an individual whose vaccination history is unknown may receive the hepatitis B vaccine under these changes in coverage, meaning that a vaccination record is not needed. Therefore, no documentation is needed for a retail pharmacy to provide a Hepatitis B vaccine to a Medicare enrollee. In fact, we explained above that mass immunizers will be able to roster bill for hepatitis B vaccines and their administration. We advise mass immunizers to check the CMS roster billing web page at *https://www.cms.gov/roster-billing* for updates regarding the timing and implementation of roster billing for Hepatitis B vaccines.

Regarding commenters' concern that a patient's physician may not be aware of the administration of a hepatitis B vaccine by a mass immunizer, we note that CMS continually encourages and aims to facilitate care coordination between providers and other practitioners, and we do so in this case as well. We also note that in section II.M. of this final rule, we reference the CDC's guidance that it is not harmful to vaccinate people who are immune to hepatitis B virus because of current or previous infection or vaccination, nor does it increase the risk for adverse events.[1] Therefore, individuals may receive a covered vaccination series when their medical history is not available.

Comment: Some commenters asked that CMS expand the mass immunizer program to include all future Part B preventive vaccines.

Response: We did not make any proposals regarding future expansions of the Part B preventive vaccine benefit. Legislation would be necessary to expand Part B coverage for additional preventive vaccines under section 1861(s)(10) of the Act. These comments are outside the scope of our proposals.

3. Payment for Drugs Covered as Additional Preventive Services (§ 410.152)

a. Statutory Background

Section 101 of the Medicare Improvements for Patients and Providers Act (MIPPA) of 2008 (Pub. L. 110–275) added section 1861(ddd)(1) and (2) of the Act to effectuate ''improvements to coverage of preventive services'' in the Medicare program. Under section 1861(ddd)(1) of the Act, Medicare Part B covers

[1] CDC. Viral hepatitis. FAQ for health professionals. Atlanta, GA: U.S. HHS, CDC; 2022. Retrieved from *https://www.cdc.gov/hepatitis/hbv/hbvfaq.htm.*

''additional preventive services'' that identify medical conditions or risk factors and that the Secretary determines are reasonable and necessary for: (A) the prevention or early detection of an illness or disability; (B) that are recommended with a grade of A or B by the United States Preventive Services Task Force (USPSTF); and (C) that are appropriate for individuals entitled to benefits under Part A or enrolled under Part B. Section 1861(ddd)(2) of the Act states that, in making determinations under section 1861(ddd)(1) of the Act, the Secretary shall use the process for making National Coverage Determinations (NCD) in the Medicare program.

Section 101 of MIPPA also added section 1833(a)(1)(W) of the Act, which provides requirements for payment of additional preventive services. Section 1833(a)(1)(W)(i) establishes requirements for payment of additional preventive services that are clinical diagnostic laboratory tests, and section 1833(a)(1)(W)(ii) establishes requirements for payment of all other services. Section 1833(a)(1)(W)(ii) (as amended by section 4104 of the Affordable Care Act (Pub. L. 111–148) requires that the amount paid for the provision of all other additional preventive services is 100 percent of the lesser of the actual charge for the service, or the amount determined under a fee schedule established by the Secretary for purposes of this subparagraph.

We noted that ''additional preventive services'' are a subset of ''preventive services'' under Medicare Part B, per section 1861(ddd)(3) and 1861(ww)(2)(O) of the Act, respectively. Section 1833(b)(1) of the Act states that the annual Part B deductible does not apply to preventive services that are recommended with a grade of A or B by the USPSTF for any indication or population, and section 1833(a)(1)(Y) of the Act waives coinsurance for preventive services that are recommended with a grade of A or B by the USPSTF for any indication or population. Based on all the above statutory authorities, there is no cost-sharing under Part B for additional preventive services for Medicare enrollees, that is, there is no applicable beneficiary coinsurance or deductible for these services.

The term ''preventive services'' is defined at § 410.2, and coverage for ''additional preventive services'' is delineated at § 410.64. At § 410.152(l), we list the Part B preventive services that are paid at 100 percent of the Medicare payment amount, that is, for which zero coinsurance is charged. There, at § 410.152(l)(11), we include ''additional preventive services identified for coverage through the national coverage determination (NCD) process''. At § 410.160(b), we list the Part B services that are not subject to the Part B annual deductible and do not count toward meeting that deductible, and ''additional preventive services identified for coverage through the national coverage determination (NCD) process'' is included there at § 410.160(b)(13).

The payment authority under section 1833(a)(1)(W)(ii) of the Act has not been utilized to date because CMS has not yet covered any additional preventive service that would require use of that payment authority. While CMS currently covers certain screenings and therapies as additional preventive services under the section 1861(ddd) of the Act, those screenings and therapies are currently paid under the existing PFS fee schedule for physician services. Furthermore, the Medicare Diabetes Prevention Program, described at section III.E of this final rule, uses section 1833(a)(1)(W)(ii) of the Act authority to waive the coinsurance and deductible as described above, but its payment policy is based on separate authorities under the model.

Specifically, we noted that CMS has not yet covered or paid for any drugs or biologicals (hereinafter, referred to as drugs) under the benefit category of additional preventive services. This was highlighted when CMS released a Proposed NCD for Pre-Exposure Prophylaxis (PrEP) for Human Immunodeficiency Virus (HIV) Infection Prevention on July 12, 2023. This proposed NCD announced CMS' intention to cover and pay for those drugs under section 1861(ddd) of the Act's additional preventive services authority, and the final NCD was released on September 30, 2024. For more information on the final NCD for PrEP for HIV drugs, please see *https://www.cms.gov/medicare/coverage/prep*.

We also noted that CMS covers and pays for Part B vaccines, which are also considered preventive services under sections 1861(ddd)(3) and 1861(ww)(2)(A) of the Act, but they have unique payment rates specified in statute at section 1842(o)(1)(A)(iv) of the Act (for more information, see above at section III.H.1.a. of this final rule).

b. Fee Schedule for Drugs Covered as Additional Preventive Services (DCAPS)

As discussed above, the authority at section 1833(a)(1)(W)(ii) of the Act provides for payment for additional preventive services, including drugs. This authority differs from the authority used to pay for drugs that are separately paid as drugs and biologicals under other Part B payment authorities. Specifically, payment for most drugs separately payable under Part B is authorized at section 1833(a)(1)(S) of the Act and outlined at section 1842(o)(1)(C) of the Act, and those payments are generally made according to the methodology described at section 1847A of the Act, which typically reflects a payment limit based on the Average Sales Price (ASP). In addition, because drugs covered as additional preventive services (hereinafter, DCAPS; we will use the term ''DCAPS drugs'' for the ease of the reader) are not described in section 1842(o)(1)(C) of the Act, provisions under section 1847A of the Act would not apply, including requirements for manufacturers to report ASP data to CMS on a quarterly basis (see sections 1847A(f) and 1927(b)(3)(A)(iii) of the Act). When manufacturers are not required to report the manufacturer's ASP for a drug, they may do so voluntarily, but the availability of voluntarily reported ASP data cannot be guaranteed, and the data may not reflect all available NDCs for the drug. However, we emphasize that DCAPS drugs that are also covered under Part B for non-preventive indications (that is, are also used for diagnosis or treatment) would be subject to ASP reporting requirements.

Above, we mentioned that section 1833(a)(1)(W)(ii) of the Act requires that the amount paid for the provision of additional preventive services is 100 percent of the lesser of the actual charge for the service, or the amount determined under a fee schedule established by the Secretary for purposes of this subparagraph. For purposes of this policy, we refer to the amount determined under the fee schedule as the payment limit, which we discuss in detail below.

In the CY 2025 PFS proposed rule (89 FR 61931), we proposed a fee schedule for DCAPS drugs that uses existing Part B drug pricing mechanisms, because we believe that it is preferable to set all drug payment limits under Part B, including those for DCAPS, as consistently as possible. Accordingly, we proposed that the payment limit for a DCAPS drug be determined using the methodology described in section 1847A of the Act, or, if ASP data is not available for a particular drug, to use an alternative pricing mechanism, as described below. We proposed to update the fee schedule quarterly, on the same schedule as the ASP pricing file, which is updated each calendar quarter.

(1) Payment Limit Based on Section 1847A of the Act

To determine the payment limit for the applicable billing and payment code for a DCAPS drug under the fee schedule, we proposed to apply ASP methodology described in section 1847A of the Act when ASP data is available for the drug. We believe the use of ASP data would be preferable for determining the payment limit for DCAPS drug billing and payment codes for two reasons. First, this approach would determine the payment limit for these drugs in the same way as the payment limit is usually determined for other drugs that are separately payable under Part B, when possible. This would include the application of payment limit calculations for multiple source drugs, single source drugs and biologicals, and biosimilar biological products, as is done for products under section 1847A of the Act, for each applicable billing and payment code. Second, because section 1847A(c)(3) of the Act requires that calculation of the manufacturer's ASP for an NDC must include volume discounts, prompt pay discounts, cash discounts, free goods that are contingent on any purchase requirement, chargebacks, and rebates (other than rebates under the Medicaid drug rebate program, discounts under the 340B Program, and rebates under the Part B and Part D Medicare inflation rebate program), this would set a payment limit that would likely better reflect acquisition cost of the drug than list prices in available compendia (such as Wholesale Acquisition Cost (WAC)).

We proposed that CMS would determine the payment limit for DCAPS drugs as the amount that would result from application of ASP methodology in section 1847A of the Act only if ASP data for the drug is available for a given quarter (that is, positive manufacturer's ASP data is reported by the drug manufacturer, as explained in section III.A.2 of this final rule). We proposed that if ASP data is available for a DCAPS drug, the payment limit would be the amount described in section 1847A(b) of the Act, which is usually 106 percent of ASP.

(2) Payment Limit Based on National Average Drug Acquisition Cost (NADAC) Pricing

If ASP data for a DCAPS drug (as described in the previous section) is not available (as defined in the prior paragraph), we proposed to determine the payment limit for the applicable billing and payment code using the most recently published amount for the drug in Medicaid's NADAC survey (OMB control number 0938–1041).[631] When using NADAC data, we proposed to determine the payment limit per billing unit, which would be an average of NADAC prices for all NDCs for the drug. If a drug is available in generic and brand formulations, we proposed all NDCs will be averaged together to determine the payment limit.

Since the timing of ASP reporting and publishing has a two-quarter lag (for example, payment limits calculated using data reported from the first quarter of sales become effective two quarters later), we proposed that ''most recently published'' for purposes of this policy means the most recently updated NADAC survey available 30 days after the close of the quarter for which ASP data would have been reported if it were available.[632] For example, in the calculation of the payment limit for dates of service in the third calendar quarter, if NADAC is used to determine the payment limit, we will use the most recent NADAC survey update available on the 30th day after the close of the first calendar quarter to determine the payment limit for the third quarter.

The NADAC survey provides a national drug pricing benchmark for certain drugs that is adequately comprehensive to serve as the first alternative pricing source in the case that ASP data is not available. CMS conducts surveys of retail community pharmacy prices to develop the NADAC pricing benchmark in the annual NADAC pricing file. The pricing benchmark is reflective of the prices paid by retail community pharmacies to acquire prescription and over-the-counter covered outpatient drugs. NADAC data is publicly available, and it can be accessed at *https://data.medicaid.gov/nadac*.

In the CY 2020 PFS final rule (84 FR 62655), we similarly finalized the use of NADAC pricing as a pricing alternative for oral drugs under the Part B Opioid Treatment Program (OTP) benefit when ASP data is not available. There, we stated that ''[s]urvey data on invoice prices provide the closest pricing metric to ASP that we are aware of.'' Because the previous statement continues to be true, it is an appropriate alternative in the pricing framework for DCAPS drugs when ASP data is not available.

(3) Payment Limit Based on the Federal Supply Schedule (FSS)

Since NADAC pricing is only available for drugs typically dispensed through retail community pharmacies, there could be circumstances in which ASP and NADAC data are not available for DCAPS drugs. Therefore, if both ASP and NADAC pricing data are not available for a DCAPS drug, we propose to use the most recently published and listed prices for pharmaceutical products in the FSS to calculate the payment limit for the applicable billing and payment code. In the same manner as discussed in the previous section, we propose that ''most recently published'' for purposes of this policy means the most recently updated FSS survey available 30 days after the close of the quarter for which ASP data would have been reported if it were available.[633] For example, in the calculation of the payment limit for dates of service in the third calendar quarter, if FSS is used to determine the payment limit, we will use the most recent FSS update available on the 30th day after the close of the first calendar quarter to determine the payment limit for the third quarter. When using the FSS, we will calculate the average price per billing unit (as described in the billing and payment code for the drug) for all NDCs listed for a drug.

Drug pricing information from the Veterans Affairs' (VA's) FSS pharmaceutical pricing database is publicly available at the NDC level and published at *https://www.va.gov/opal/nac/fss/pharmPrices.asp*. We proposed to use FSS data when ASP and NADAC data are not available because FSS data is one of the few existing options for drug pricing that includes a wide variety of drug formulations, including both self-administered drugs typically dispensed through retail community pharmacies and drugs administered incident to a physician's service. We believe that using FSS data to calculate the payment limit for DCAPS drugs is preferable to instructing MACs to determine DCAPS drug payment limits according to invoice (as discussed below), because invoice-based pricing requires MACs to manually process claims and is therefore burdensome to the MACs.

(4) Invoice Pricing

Finally, if ASP, NADAC, and FSS pricing are not available for a particular drug covered as an additional preventive service, then MACs will determine the payment for that drug according to invoice. Since one of the three above pricing mechanisms should be available in nearly all cases, we expect that invoice pricing would be necessary only in rare situations. Specifically, we believe that invoice

[631] *https://www.medicaid.gov/medicaid/prescription-drugs/retail-price-survey/index.html.*

[632] 42 CFR 414.804(a)(5).

[633] 42 CFR 414.804(a)(5).

pricing would likely only be necessary for new drugs before pricing data is available.

To summarize, we proposed to establish a fee schedule using the following pricing mechanisms to determine the payment limit for DCAPS drugs under Part B, which would be updated quarterly:

(1) If ASP data is available for the DCAPS drug, the payment limit would be determined based on the methodology under section 1847A(b) of the Act (usually 106 percent of ASP);

(2) If ASP data is not available, the payment limit would be calculated using NADAC prices for the drug;

(3) If ASP data and NADAC prices are not available, the payment limit would be calculated using the FSS prices for the drug; and

(4) If ASP data, NADAC prices, and FSS prices are not available, payment limit would be the invoice price determined by the MAC.

We proposed to amend § 410.152 by adding paragraph (o) to establish the fee schedule and the pricing methodologies used to determine the payment limit for DCAPS drugs under Part B. In addition, to highlight that coinsurance does not apply to DCAPS drugs, we proposed to publish the payment limits for DCAPS drugs along with other separately payable Part B drugs on the ASP pricing file.

We solicited public comment on the proposed fee schedule for drugs paid as additional preventive services.

The following is a summary of the comments we received and our responses.

Comment: Commenters were supportive of the general approach represented by our payment proposals for DCAPS drugs. Commenters supported potential expansions of coverage and payment for preventive services under Medicare Part B. Some commenters specifically noted and appreciated the waiver of cost-sharing for certain preventive services. Other commenters noted that they believe strengthening access to preventive services helps to ameliorate medical crises later downstream, especially for Medicare enrollees living with mental health and substance use conditions. Another commenter appreciated that once a DCAPS fee schedule is finalized, CMS can cover and pay for drugs without delay if CMS determines that a drug meets the criteria under section 1861(ddd)(1) of the Act.

Commenters also specifically supported our proposed fee schedule. Commenters noted that they appreciated our alignment of the fee schedule with payment policies for other Part B drugs. Many commenters supported our proposal to pay for DCAPS drugs based on section 1847A of the Act, if ASP data is available for the DCAPS drug. Commenters also supported our proposal to direct MACs to use invoice pricing as a last alternative for payment of DCAPS drugs.

Response: We thank commenters for their support of our proposals and for partnering with CMS in our efforts to promote access to preventive health care for Medicare enrollees.

Comment: Several commenters requested that we reconsider our proposals regarding alternative payment mechanisms for DCAPS drugs if ASP data is not available for the drug. These commenters stated that they believe payment calculated according to NADAC or FSS pricing would likely result in underpayments that would not reflect the costs incurred by providers to acquire DCAPS drugs. Instead, these commenters recommended that we use pricing based on WAC as an alternative to payment according to ASP methodology. They stated that WAC is a publicly available benchmark, and that they believe WAC plus 3 percent provides a more predictable payment amount compared to other pricing metrics CMS proposed, including NADAC, FSS, and invoice pricing. Commenters noted that setting a price using WAC plus 3 percent is consistent with CMS payment policy for Part B drugs during the initial sales period when ASP data is not yet available, and thus they believe it is most sensible alternative for DCAPS drug payment.

Some commenters argued that the predictability of WAC would help providers manage their finances better, which they state is especially important for smaller practices or those in underserved areas. Other commenters claimed that WAC is a more accurate representation of the price paid by a pharmacy relative to NADAC pricing, since NADAC prices are based on pricing data that CMS receives from pharmacies, and thus they believe that the pricing data is somewhat lagged and inconsistent. These commenters also stated that, since FSS pricing is a negotiated price specifically for certain government programs, they believe that it does not reflect broader market prices and may be significantly lower than market prices. These commenters also believe that using WAC-based pricing will more effectively meet our stated goal of setting drug payment limits for DCAPS as consistently as possible with other payment mechanisms used in Part B.

One commenter specifically recommended that, if we do finalize the use of FSS pricing as an alternative pricing mechanism for DCAPS drugs, that we use the ''other government agencies'' (OGA) price, as opposed to other pricing used in the FSS.

Some commenters recommended that, in cases where a HCPCS code and/or ASP data is not available for a new DCAPS drug, CMS pay for the drug in the physician office setting at WAC plus 3 percent, in the same manner as separately payable Part B drugs as described above. Commenters explained that this would also ensure consistency for all drugs paid under Medicare Part B.

Other commenters generally called for CMS to ensure that the DCAPS fee schedule provides adequate payment to cover pharmacy acquisition and dispensing costs, and asked CMS to promote increased access to preventive drugs.

Response: We thank commenters for their feedback. We agree with commenters that an ASP-based payment limit is preferrable for DCAPS drugs, and the proposed DCAPS fee schedule is designed with that goal in mind. As mentioned above, section 1847A(c)(3) of the Act requires that calculation of the manufacturer's ASP for an NDC must include volume discounts, prompt pay discounts, cash discounts, free goods that are contingent on any purchase requirement, chargebacks, and rebates (other than rebates under the Medicaid drug rebate program, discounts under the 340B Program, and rebates under the Part B and Part D Medicare inflation rebate program). Therefore, an ASP-based payment limit likely better reflects acquisition cost of the drug than list prices in available compendia, such as WAC.

Above, we mentioned that we stated in the CY 2020 PFS final rule (84 FR 62655) that we believe NADAC survey data on invoice prices provides the closest pricing metric to ASP-based payment limits that is available. We also mentioned above that FSS data is one of the few existing options for drug pricing that includes a wide variety of drug formulations, which is why we chose it as an additional alternative for DCAPS drug fee schedule pricing. Thus, our proposal explained that ASP, NADAC and FSS are all drug pricing options that aim to estimate the accurate acquisition cost of a drug, rather than WAC, which is a list price often higher than acquisition cost.

With regard to the comment that asked for clarification regarding FSS pricing, we clarify that the FSS price is the indeed the ''other government agencies'' (OGA) price. We also reiterate that both NADAC and FSS OGA pricing

are publicly available, and we provide website information earlier in this section of the final rule.

In addition, we reiterate that NADAC pricing is used as a payment alternative to ASP-based payment for drugs used in the Part B OTP benefit, and thus, our use of NADAC pricing aligns with payment policies under Part B. Section 1847A of the Act specifies that payment should be made for drugs under Medicare Part B using WAC in limited circumstances such as (1) during an initial period of when the first quarter of sales is unavailable for a drug or (2) for single-source drugs or biologicals whose ASP exceeds WAC. WAC is generally not used when ASP is unavailable beyond those circumstances.

However, we encourage drug manufacturers to submit ASP data to CMS (that is, positive manufacturer's ASP data is reported by the drug manufacturer, as explained in section III.A.2 of this final rule). We continue to believe that ASP-based payment limits are the most accurate drug pricing methodology that is available to CMS. Drug manufacturers can report manufacturer's ASP data to CMS on a quarterly basis in order ensure that payment limits are set based on ASP. More information on ASP reporting is available at *https://www.cms.gov/medicare/payment/part-b-drugs/asp-reporting.*

Comment: One commenter requested that CMS make pricing publicly available.

Response: We direct the commenter to section III.H.3.c. below, regarding DCAPS drug supply and administration fees. There, we state that CMS intends to make the DCAPS fee schedule publicly available by publishing the DCAPS fee schedule quarterly on the CMS website.

Comment: One commenter mentioned that our proposed payment calculations for DCAPS drugs included averaging across brand and generic drugs, where applicable. This commenter stated that they generally support CMS bundling items and services to the extent possible, but they requested that CMS monitor conditions to ensure that this does not have any unintended consequence on patient access to DCAPS drugs.

Response: We thank the commenter for raising this concern. In Chapter 17, section 20.1.3 and 20.4 of the Medicare Claims Processing Manual, we discuss calculations for pricing multiple-source drugs in Part B, as defined at section 1847A(c)(6)(C) of the Act, when the payment limits are not included in the ASP Medicare Part B Drug Pricing File or Not Otherwise Classified (NOC) Pricing File. In those sections of the Medicare Claims Processing Manual, the pricing calculation for WAC and AWP respectively, is described as the lesser price of:

- The median of all generic forms of the drug or biological; or
- The lowest brand name product.

Based on the commenter's remarks and our historical Part B drug policies, we are persuaded to amend our proposed policy as to DCAPS pricing calculations. We proposed to average together all NDCs of a drug if a drug is available in generic and brand formulations to determine the payment limit. However, in light of commenters' feedback, we are finalizing a DCAPS drug pricing policy to treat brand and generic drugs in a similar manner to the description in the Medicare Claims Processing Manual, Chapter 17, sections 20.1.3 and 20.4, as described above. We believe this will avoid the unintended consequences referenced by the commenter, and thus not create a differential pricing barrier for patients between brand and generic DCAPS drugs, and that pricing for those drugs is not unintentionally inflated. We believe that this longstanding payment approach will appropriately use NADAC and FSS pricing to determine payment limits for DCAPS drugs for which brands and generics are marketed.

Therefore, when calculating the price for multiple-source DCAPS drugs using NADAC or FSS OGA pricing, we will use the lesser price of:

- The median of all generic forms of the drug; or
- The lowest brand name product.

Comment: Many commenters provided suggestions, feedback, and comments on the Proposed NCD for Pre-Exposure Prophylaxis (PrEP) for Human Immunodeficiency Virus (HIV) Infection Prevention, published on July 12, 2023, as the NCD was not yet finalized as of the end of the comment period for the CY 2025 PFS proposed rule on September 9, 2024. Comments included requests to ease the transition of PrEP for HIV drugs from Part D to Part B, the role of pharmacies and pharmacists in supplying PrEP for HIV drugs under Part B, and concerns regarding access to, adequate coverage for, and beneficiary protections for PrEP for HIV drugs. One commenter expressed concern regarding payment for PrEP for HIV drugs under Part B in the interim period between the commencement of coverage and the DCAPS payment policy taking effect on January 1, 2025. Another commenter requested that CMS clarify 340B reporting requirements for PrEP for HIV drugs covered and paid under Part B. Some commenters also requested that CMS simplify coding and billing for PrEP for HIV drugs and supply fees. One commenter requested that CMS extend these DCAPS coverage and payment policies to all provider-administered HIV treatments. Another commenter asked that CMS align coverage policies with the USPSTF's 2023 recommendation for the Prevention of Acquisition of HIV: Preexposure Prophylaxis, and asked CMS to create a safe harbor for PrEP products in the first year following transition from Part D to Part B.

Response: This DCAPS fee schedule has been established to apply to any current and future drugs covered as additional preventive services under 1861(ddd)(1) of the Act, effective January 1, 2025. These proposals did not address specifics regarding the NCD for PrEP for HIV drugs, and therefore, the additional comments on the proposed NCD are out of the scope of these proposals. The public comment period on the proposed NCD for PrEP for HIV drugs was from January 12, 2023–February 11, 2023. The final NCD was released on September 30, 2024, and is available at *https://www.cms.gov/medicare/coverage/prep.*

We thank commenters for their feedback regarding Medicare Part B payment for PrEP for HIV drugs. We direct interested parties to *https://www.cms.gov/medicare/coverage/prep* for more information on the final NCD and the transition of PrEP for HIV coverage and payment from Part D to Part B. This CMS PrEP web page contains and/or will contain additional guidance on implementation of PrEP for HIV coverage under Part B, including coding and billing information, payments for PrEP for HIV for the period of September 30–December 31, 2024, and the implementation of the DCAPS fee schedule for PrEP for HIV drugs, which will be effective January 1, 2025, upon this final rule's publication. Payment information for the period of September 30–December 31, 2024, is out of scope of this final rule because this final rule is effective January 1, 2025. However, we will continue to update the CMS PrEP web page as we prepare to implement the DCAPS fee schedule beginning January 1, 2025. We share commenters' priority of ensuring patient access to DCAPS drugs, and as we continue to implement the final NCD, we will continue to communicate updates regarding payment for PrEP for HIV drugs under Part B.

We note that comments regarding USPSTF recommendations for coverage of PrEP for HIV drugs, ''safe harbor''

regulations, the role of pharmacists in supplying PrEP for HIV drugs, and 340B reporting requirements, are out of the scope of these payment policy proposals.

Comment: Commenters had additional suggestions regarding the ''additional preventive services'' benefit category. One commenter suggested that CMS should consult with interested parties to determine what other services should be considered ''preventive.'' Some commenters had questions regarding coverage and payment for DCAPS drugs under Medicare Advantage and Medicare Prescription Drug Plans.

Response: We did not make any proposals regarding expanding preventive coverage under Medicare Part B, and we did not make any proposals regarding DCAPS drug coverage in Medicare Parts C and D. These comments are outside of the scope of our proposals.

After consideration of public comments, we are finalizing these DCAPS drugs policies mostly as proposed, with the modification to our policy regarding brand and generic drugs, as described in the responses above, and summarized below. We are establishing a fee schedule using the following pricing mechanisms to determine the payment limit for DCAPS drugs under Part B, which will be updated and published on the CMS website quarterly:

(1) If ASP data is available for the DCAPS drug, the payment limit would be determined based on the methodology under section 1847A(b) of the Act (usually 106 percent of ASP);

(2) If ASP data is not available, the payment limit would be calculated using NADAC prices for the drug;

(3) If ASP data and NADAC prices are not available, the payment limit would be calculated using the FSS prices for the drug; and

(4) If ASP data, NADAC prices, and FSS prices are not available, payment limit would be the invoice price determined by the MAC.

In this final rule, we are clarifying that the FSS price is the ''other government agencies'' price. We are also finalizing the policy we described above, that for purposes of NADAC and FSS price calculations for DCAPS drugs pricing, we will treat brand and generic drugs in a similar manner to the description in the Medicare Claims Processing Manual, Chapter 17, sections 20.1.3 and 20.4. Thus, when calculating the price for multiple-source DCAPS drugs using NADAC or FSS OGA pricing, we will use the lesser price of:

- The median of all generic forms of the drug; or
- The lowest brand name product.

We are amending § 410.152 by adding paragraph (o) to establish this fee schedule and the pricing methodologies used to determine the payment limits for DCAPS drugs under Part B. In addition, to highlight that coinsurance does not apply to DCAPS drugs, we will publish the payment limits for DCAPS drugs along with other separately payable Part B drugs on the ASP pricing file.

c. Payment for Supplying and Administration of Drugs Under the Additional Preventive Services Benefit

As explained above, DCAPS drugs are subject to payment under section 1833(a)(1)(W)(ii) of the Act. Because the fee schedule authorized under such section has not yet been established, and since DCAPS drugs are not covered by Part B under the same authority as other separately payable Part B drugs that would provide for administration or supplying fees, there is no existing policy regarding payment for the administration of DCAPS drugs or the supplying of DCAPS drugs by suppliers and providers. In a similar manner to the DCAPS drug pricing mechanisms described above, we proposed administration and supplying fees for DCAPS drugs that mirror existing policies under the PFS and Part B drug payment. We anticipate that an NCD that adds drugs to the additional preventive services benefit would include coverage for the supplying or administration of the drug, as appropriate, and those fees would therefore be considered payment for additional preventive services as well. (For example, supply and administration fees are included as part of the final NCD for PrEP for HIV drugs, found at *https://www.cms.gov/medicare/coverage/prep*.) Therefore, we proposed payment limits for the supply and administration of DCAPS drugs to be included on the DCAPS fee schedule. As stated above, section 1833(a)(1)(W)(ii) of the Act requires that the amount paid for the provision of additional preventive services is 100 percent of the lesser of the actual charge for the service, or the amount determined under a fee schedule established by the Secretary for purposes of this subparagraph. That is, the amount paid for the administration or supplying of the DCAPS drug will be the lesser of either the actual charge for the service or the payment limit.

For drugs that are supplied by a pharmacy, we proposed that the fee schedule include a payment limit for a supplying fee that is similar to the supplying fee for other Part B-covered drugs dispensed from a pharmacy, to allow for consistency among similar payments in Part B. These other groups of drugs covered under Part B include immunosuppressives, oral anti-cancer, and oral anti-emetic drugs, and supplying fees for these drugs are described at 42 CFR part 414, subpart L (§§ 414.1000 and 414.1001). Generally, Medicare pays $24 for the first prescription of one of these drugs supplied by a pharmacy in a 30-day period, and pays $16 for each subsequent prescription, after the first one, supplied in that 30-day period.[634] We proposed similar payment limits for supplying fees for DCAPS drugs. Specifically, we proposed that CMS will establish payment limit of $24 to a pharmacy for the first DCAPS prescription that the pharmacy supplies to a beneficiary in a 30-day period, and a payment limit of $16 to a pharmacy for all subsequent DCAPS prescriptions that the pharmacy supplies to a beneficiary in that 30-day period. We proposed that the same fees would apply regardless of the number of days' supply that is dispensed.

As discussed in section III.A.4.c of this final rule, further study regarding the supplying fees for certain drugs paid under Part B (for example, immunosuppressive drugs) is needed and we did not propose to make any changes to the supplying fee amounts at this time (meaning the current 30-day supplying fees would apply to any amount of days' supply). The dispensing and supplying fees under Part B (§ 414.1001) have been shown to be higher than dispensing fees paid in the commercial market.[635] So, until additional study is done regarding input costs for dispensing drugs billed to Medicare Part B and subsequent notice-and-comment rulemaking can be done, if appropriate, in response to such information, we aim to continue the current fee schedule for such Part B drugs regardless of the days' supply dispensed. Therefore, we proposed to use the same approach for payment limits that are paid to pharmacies that supply DCAPS prescriptions.

For drugs that are administered by a physician or a non-physician practitioner, we proposed that the fee schedule include a payment limit for

[634] *https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c17.pdf*.

[635] *https://www.pcmanet.org/rx-research-corner/mandating-pharmacy-reimbursement-increase-spending/08/31/2021/#:#:text=The%20average%20dispensing%20fee%20in,the%20state's%20Medicaid%20FFS%20rate.*.

such administration that aligns with the administration fee for other drugs provided as incident to physician services, as paid according to the PFS. To operationalize this, we proposed that CMS determine the payment limit for administration of a DCAPS drug provided incident to a physician service via a crosswalk to an existing, corresponding drug administration code under the PFS. Exact details on coding and corresponding crosswalks would be included on the published DCAPS fee schedule once DCAPS drugs are finalized for coverage via the NCD process. The fee schedule will be published quarterly on the CMS website and implemented in the Medicare claims processing systems.

No cost sharing would apply for the administration or supplying of DCAPS drugs, because we proposed that such administration or supplying will be considered an additional preventive service, and as explained above, there is no cost-sharing for any additional preventive services under section 1833(a)(1)(W) of the Act. We proposed to codify these policies at the newly added § 410.152(o).

We noted that with regard to the July 12, 2023 Proposed NCD for Pre-Exposure Prophylaxis (PrEP) for Human Immunodeficiency Virus (HIV) Infection Prevention, in section II.E.4.b. of this final rule, in item 37, we proposed national rates for HCPCS code G0012 (*Injection of pre-exposure prophylaxis (PrEP) drug for HIV prevention, under skin or into muscle*) that are crosswalked from CPT code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*). Please see that section of the final rule for more information on finalized coding for PrEP for HIV administration. For more information on the final NCD for PrEP for HIV drugs, please see *https://www.cms.gov/medicare/coverage/prep*.

We solicited comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters were supportive of our proposals to set payment limits for DCAPS drug supplying fees that are similar to the supplying fees for other Part B-covered drugs dispensed from a pharmacy. Commenters appreciated our efforts to align payments across health care settings and to allow for consistency among similar payments in Part B.

Response: We thank commenters for their support of our proposals and for partnering with CMS in our efforts to improve access to preventive health care for Medicare enrollees.

Comment: One commenter noted the Medicare Payment Advisory Commission's (MedPAC) 2016 Report to the Congress, in which MedPAC recommended that CMS reduce Part B drug supply fees to match those of other payers, as Medicare supply fees have been found to be substantially higher than those paid by other payers.[636] This commenter recommended that CMS revisit its Part B drug supplying and dispensing fee rates and reduce them to levels similar to other payers.

Response: In section III.A.4.c of this final rule, further study the supplying fees for certain drugs paid under Part B in needed. We take this comment into consideration for future policymaking. Any future changes to supply fees will be proposed via notice-and-comment rulemaking.

Comment: One commenter, commenting specifically on the NCD for PrEP for HIV drugs, asked CMS to consider a higher supplying fee to help cover pharmacy costs inflicted by the coverage transition. The commenter recommended that CMS consider the existing supply fees for immunosuppressive therapy during the first 30-day period following a transplant. This commenter also recommended that supply fees be regularly updated and that CMS ensure that the fees reasonably and accurately reflect the additional effort necessary for pharmacies to acquire and dispense DCAPS drugs.

Response: Further study the supplying fees for certain drugs paid under Part B is needed. We will take this comment into consideration as part of that further study. Any future changes to supply fees will be proposed via notice-and-comment rulemaking.

For more information on supply fees for PrEP for HIV drugs, please see *https://www.cms.gov/medicare/coverage/prep*. This CMS PrEP for HIV web page contains information on the final NCD, the transition of PrEP for HIV coverage and payment from Part D to Part B, and additional guidance on implementation of PrEP for HIV coverage under Part B, including supply fees.

d. Payment for Drugs Covered as Additional Preventive Services in RHCs and FQHCs

Above, we mentioned that section 4104 of the ACA amended payment for additional preventive services, to increase payment to the lesser of 100 percent of charges, or the amount determined under a fee schedule established by the Secretary, per section 1833(a)(1)(W)(ii) of the Act. This change waived coinsurance for additional preventive services. Section 4104 of the ACA also removed several other barriers to access to preventive services in Medicare. Specifically, section 4104 of the ACA amended section 1833 of the Act to waive the deductible for preventive services at section 1833(b)(1) of the Act, and to waive coinsurance for preventive services that are recommended with a grade of A or B by the USPSTF for any indication or population by adding section 1833(a)(1)(Y) of the Act. We also mentioned above that ''additional preventive services'' are a subset of ''preventive services'' under Medicare Part B, per section 1861(ddd)(3) and 1861(ww)(2)(O) of the Act, respectively.

In the CY 2011 PFS final rule, we interpreted the above waivers of cost-sharing for preventive services to apply to FQHCs (75 FR 73417); we note that FQHC services were already exempt from the Part B deductible, per section 1833(b)(4) of the Act. The CY 2011 PFS final rule codified this FQHC policy in regulation at § 405.2449 (75 FR 73613), and in sub-regulatory guidance, we clarified that these waivers of cost-sharing for preventive services applied to RHCs as well.[637] In the CY 2014 FQHC PPS final rule (79 FR 25474), at § 405.2410(b), we codified regulations regarding coinsurance in RHCs and FQHCs, ''[E]xcept for preventive services for which Medicare pays 100 percent under § 410.152(l) of this chapter.'' In the CY 2016 PFS final rule (80 FR 71088), we clarified explicitly that these waivers of cost-sharing (that is, both coinsurance and deductible) for preventive services applied to RHCs.

In the previous sections of III.H.3. of this final rule, we discussed drugs covered as additional preventive services (henceforth ''DCAPS drugs,'' for the ease of the reader). In this section, we clarify that drugs covered as additional preventive services, and any accompanying administration and

[637] Change Request 7208, R2186CP, 03/28/2011 Waiver of Coinsurance and Deductible for Preventive Services in Rural Health Clinics (RHCs), Section 4104 of Affordable Care Act (ACA): *https://www.cms.gov/regulations-and-guidance/guidance/transmittals/downloads/r2186cp.pdf*.

supplying fees, are not subject to cost-sharing in RHCs and FQHCs. Since DCAPS drugs and the services to administer and supply them are all considered additional preventive services, as explained in the previous section, they are paid at 100 percent of the Medicare payment amount in RHCs and FQHCs per §§ 405.2410 and 410.152(l) and they are paid on a claim-by-claim basis.

In addition, we proposed that DCAPS drugs, when administered and supplied in an RHC or FQHC, as well as any administration and supply fee for those drugs, will be paid according to the fee schedule payment limits described above at section III.H.3.b. of this final rule. Since regulations at § 405.2460 allow the payment limitations set out in Part 410 to apply to payment for services provided by RHCs and FQHCs, we believe it is consistent with our current RHC and FQHC payment policies to apply the proposed DCAPS fee schedule payment limits, as discussed above, to those same DCAPS drugs when furnished in an RHC or FQHC. Those payment limits are described earlier in section III.H.3.b. and will be codified at § 410.152(o)(1). We proposed to codify this RHC/FQHC DCAPS policy in regulation as well, at a new § 405.2464(h).

The following is a summary of the comments we received and our responses.

Comment: Commenters supported this DCAPS policy for RHCs and FQHCs. Some commenters specifically noted and appreciated the waiver of cost-sharing for additional preventive services in RHCs and FQHCs. One commenter stated that the proposed DCAPS fee schedule would ensure that RHCs and FQHCs are adequately reimbursed for providing PrEP for HIV drugs to their clients, and this could reduce disparities, since RHCs and FQHCs serve clients from communities with disproportionately low rates of PrEP for HIV drug access. Another commenter noted that RHCs and FQHCs did not receive separate payment for other physician-administered drugs in the past, and this DCAPS payment policy supports RHCs and FQHCs and ensures their financial sustainability.

Response: We thank commenters for partnering with CMS in our efforts to improve access to preventive health care for Medicare enrollees, especially for those vulnerable populations that are served by RHCs and FQHCs. We look forward to continuing our work with all our partners to continue facilitating increased access to preventive health care for both Medicare enrollees and all Americans.

Comment: Some commenters aligned their comments with those on the DCAPS fee schedule in general, as described above in section III.H.3.b. These commenters agreed with our proposal to apply the proposed DCAPS fee schedule payment limits to DCAPS drugs when furnished in the RHC or FQHC setting, though they support WAC-based payment as an alternative to ASP methodology when ASP data is not available for a DCAPS drug.

Response: Please see our response to similar comments mentioned in section III.H.3.b. There, we mentioned that we stated in the CY 2020 PFS final rule (84 FR 62655) that we believe NADAC survey data on invoice prices provides the closest pricing metric to ASP methodology that is available. We also mentioned above that FSS data is one of the few existing options for drug pricing that includes a wide variety of drug formulations, which is why we chose it as an additional alternative for DCAPS drug fee schedule pricing. Thus, our proposal explained that ASP, NADAC and FSS are all drug pricing options that aim to estimate the accurate acquisition cost of a drug, rather than WAC, which is a list price.

At the outset, we encourage drug manufacturers to submit ASP data to CMS (that is, positive manufacturer's ASP data is reported by the drug manufacturer, as explained in section III.A.2 of this final rule). We continue to believe that ASP is the most accurate drug pricing source available to CMS because it reflects the sale price net of discounts as described in section 1847A(c)(3) of the Act. Since other pricing sources (that is, NADAC, FSS, and invoice pricing) are only used in the absence of ASP data, commenters' concerns about these other sources can be mitigated by reporting manufacturer's ASP data to CMS on a quarterly basis. More information on ASP reporting at *https://www.cms.gov/medicare/payment/part-b-drugs/asp-reporting*.

Comment: Several commenters requested that CMS clarify certain operational aspects of the provision of DCAPs drugs in RHCs and FQHCs. These commenters asked if there are a specific ways health centers will be able to access DCAPS drugs. These commenters also asked if any other drugs are being considered for coverage as DCAPS drugs, and if there are other drugs, will CMS publish a list. One commenter asked if there are other DCAPS policies that community health centers and other safety net providers should be aware of. Another commenter asked if RHC and FQHC DCAPS claims should be submitted on a UB–04 or a 1500, and they also asked CMS to clarify if DCAPS would generate additional reimbursement if performed on the same day as another qualifying RHC encounter. Other commenters asked CMS to ensure that RHCs and FQHCs are paid for DCAPS drugs and any administration and supplying fee at 100% of the Medicare payment amount.

Response: As described above in section III.H.3.a. of this final rule, section 1861(ddd)(2) of the Act states that, in making determinations under section 1861(ddd)(1) of the Act, the Secretary should use the process for making National Coverage Determinations (NCD) in the Medicare program. Therefore, any drugs that are being considered for DCAPS coverage will be announced via a proposed NCD and posted for public comment in the Medicare Coverage Database, found at *https://www.cms.gov/medicare-coverage-database/search.aspx*.

All other guidance for RHCs and FQHCs regarding DCAPS drugs will be provided in sub-regulatory guidance and posted on the CMS RHC (*https://www.cms.gov/center/provider-type/rural-health-clinics-center*) and FQHC (*https://www.cms.gov/medicare/payment/prospective-payment-systems/federally-qualified-health-centers-fqhc-center*) websites. For example, current guidance for RHC and FQHC coverage and payment for PrEP for HIV drugs, which are currently the only DCAPS drugs, can be found at the top of each of those websites as of the publication of this final rule.

We also note that we state above in section III.H.3.c., regarding DCAPS drug supply and administration fees, that CMS intends to make the DCAPS fee schedule publicly available by publishing the DCAPS fee schedule quarterly on the CMS website.

Above, we explain that since DCAPS drugs and the services to administer and supply them are all considered additional preventive services, as explained in the previous section, they are paid at 100 percent of the Medicare payment amount in RHCs and FQHCs per §§ 405.2410 and 410.152(l) and they are paid on a claim-by-claim basis. Therefore, we have finalized a policy that payment to RHCs and FQHCs for DCAPS drugs and their supplying and administration, and fees is separate from, that is, paid in addition to the RHC AIR and FQHC PPS. Finally, we note that DCAPS drugs and their supplying and administration fees, when provided by RHCs and FQHCs, would be reported on the UB 04.

Comment: Similar to the general comments on the proposed DCAPS fee schedule, as described above in section

III.H.3.b, several commenters provided feedback on the Proposed NCD for Pre-Exposure Prophylaxis (PrEP) for Human Immunodeficiency Virus (HIV) Infection Prevention, published on July 12, 2023, as the NCD was not yet finalized as of the end of the comment period for the CY 2025 PFS proposed rule on September 9, 2024. These comments included concerns regarding the transition of PrEP for HIV drugs from Part D to Part B, and concerns regarding access to, adequate coverage for, and beneficiary protections for PrEP for HIV drugs.

Response: This DCAPS fee schedule has been established to apply to any current and future drugs covered as additional preventive services under section 1861(ddd)(1) of the Act. These proposals do not address specifics regarding the NCD for PrEP for HIV drugs, and therefore, additional comments on the proposed NCD are out of the scope of these proposals. The public comment period on the proposed NCD for PrEP for HIV coverage under Medicare Part B was from January 12, 2023–February 11, 2023. Additional comments on the proposed NCD are out of the scope of this proposal. The final NCD was released on September 30, 2024, and is available at *https://www.cms.gov/medicare/coverage/prep*. We direct interested parties to *https://www.cms.gov/medicare/coverage/prep* for more information on the final NCD and the transition of PrEP for HIV coverage and payment from Part D to Part B.

After consideration of public comments, we are finalizing these policies as proposed. Finalized DCAPS fee schedule information can be found in section III.H.3.b. of this final rule. DCAPS drugs and the services to administer and supply them are paid at 100 percent of the Medicare payment amount, that is, the amounts on the DCAPS fee schedule, in RHCs and FQHCs, and they are paid on a claim-by-claim basis. We are codifying this RHC/FQHC DCAPS policy in regulation at a new § 405.2464(h).

I. Medicare Prescription Drug Inflation Rebate Program

1. Background

a. Overview of the Medicare Prescription Drug Inflation Rebate Program

The Inflation Reduction Act of 2022 (IRA) (Pub. L. 117–169, enacted August 16, 2022) established new requirements under which drug manufacturers must pay inflation rebates if they raise their prices for certain drugs covered under Part B and Part D faster than the rate of inflation. Drug manufacturers are required to pay rebates to Medicare if prices for certain drugs covered under Part B increase faster than the rate of inflation for a calendar quarter beginning with the first quarter of 2023; drug manufacturers are required to pay rebates to Medicare if prices for certain drugs covered under Part D increase faster than the rate of inflation over a 12-month period, starting with the 12-month period that began October 1, 2022.

Section 11101 of the IRA amended section 1847A of the Act by adding a new subsection (i), which establishes a requirement for drug manufacturers to pay rebates into the Federal Supplementary Medical Insurance Trust Fund for Part B rebatable drugs if the specified amount exceeds the inflation-adjusted payment amount, which is calculated as set forth in section 1847A(i)(3)(C) of the Act. The IRA also provides for an adjustment to the beneficiary coinsurance amount in cases where the price of a Part B rebatable drug increases faster than the rate of inflation such that the beneficiary coinsurance is calculated based on the lower inflation-adjusted payment amount instead of the applicable payment amount. Section 1847A(i)(2) of the Act defines a ''Part B rebatable drug,'' in part, as a single source drug or biological product (as defined in section 1847A(c)(6)(D) of the Act), including a biosimilar biological product (as defined in section 1847A(c)(6)(H) of the Act), but excluding a qualifying biosimilar biological product (as defined in section 1847A(b)(8)(B)(iii) of the Act) for which payment is made under Part B.

Section 11102 of the IRA added section 1860D–14B of the Act, which requires drug manufacturers to pay rebates into the Medicare Prescription Drug Account in the Federal Supplementary Medical Insurance Trust Fund for each 12-month applicable period, starting with the applicable period that began on October 1, 2022, for Part D rebatable drugs if the annual manufacturer price (AnMP) of such drug exceeds the inflation-adjusted payment amount, which is calculated as set forth in section 1860D–14B(b)(3) of the Act. Section 1860D–14B(g)(1)(A) of the Act defines a ''Part D rebatable drug,'' in part, as a drug or biological described at section 1860D–14B(g)(1)(C) of the Act that is a ''covered Part D drug'' as that term is defined in section 1860D–2(e) of the Act. The definition of a Part D rebatable drug includes drugs approved under a new drug application under section 505(c) of the Federal Food, Drug, and Cosmetic (FD&C) Act (that is, brand name drugs), generic drugs approved under section 505(j) of the FD&C Act that meet certain statutory criteria (that is, sole source generic drugs), and biologicals licensed under section 351 of the Public Health Service Act (PHS), including biosimilars.

Under the IRA, certain statutory requirements vary for implementation of the Medicare Part B Drug Inflation Rebate Program and the Medicare Part D Drug Inflation Rebate Program. For example, section 1847A(i) of the Act requires CMS to calculate Part B drug inflation rebates for a calendar quarter, whereas section 1860D–14B of the Act requires CMS to calculate Part D drug inflation rebates for a 12-month applicable period. With respect to invoicing manufacturers for the rebate amount owed, under section 1847A(i)(1) of the Act, CMS must report rebate amounts to each manufacturer of a Part B rebatable drug no later than 6 months after the end of each calendar quarter, except that for calendar quarters beginning in 2023 and 2024, CMS has until September 30, 2025, to invoice manufacturer for rebates. In contrast, under section 1860D–14B(a) of the Act, CMS must report rebate amounts to each manufacturer of a Part D rebatable drug no later than 9 months after the end of each applicable period, except that for the first two applicable periods (that is, October 1, 2022, to September 30, 2023, and October 1, 2023, to September 30, 2024), CMS has until December 31, 2025, to invoice manufacturers for Part D inflation rebates. Additionally, there are statutory differences in the inputs used to calculate the rebate amounts for Part B and Part D. As a result, CMS proposed to use different methodologies to calculate inflation rebates for Part B rebatable drugs and Part D rebatable drugs. However, CMS has attempted to align policies across the Medicare Part B Drug Inflation Rebate Program and Medicare Part D Drug Inflation Rebate Program to the extent possible.

b. Summary of Proposed Policies for the Medicare Prescription Drug Inflation Rebate Program

In the CY 2025 Physician Fee Schedule (PFS) proposed rule (89 FR 61934), we proposed to codify policies established in the revised guidance for the Medicare Part B Drug Inflation Rebate Program and the Medicare Part D Drug Inflation Rebate Program [638]

[638] Medicare Part B Drug Inflation Rebate Revised Guidance: *https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-revised-guidance.pdf*; Medicare Part D Drug Inflation Rebate Revised Guidance: *https://www.cms.gov/files/document/medicare-part-d-inflation-rebate-program-revised-guidance.pdf* (collectively referred

(collectively referred to as the ''Medicare Prescription Drug Inflation Rebate Program'') in regulatory text. Specifically, we proposed to codify with limited modification policies set forth in guidance for the Medicare Prescription Drug Inflation Rebate Program by adding new parts 427 and 428 to title 42, chapter IV of the Code of Federal Regulations for Part B and Part D, respectively, and welcomed comments on these proposed provisions.

In addition, we proposed new policies for the Medicare Part B Drug Inflation Rebate Program as follows:

- Proposed § 427.201(b) provided that CMS will compare the payment amount in the quarterly pricing files published by CMS to the inflation-adjusted payment amount for a given quarter when determining whether the criteria for a coinsurance adjustment are met.
- Proposed § 427.302(c)(3) provided that for a Part B rebatable drug first approved or licensed by the FDA on or before December 1, 2020 but with a first marketed date after December 1, 2020, the payment amount benchmark quarter for such drug is the third full calendar quarter after the drug's first marketed date. Proposed § 427.302(c)(4) further provided that for a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug's first marketed date, whichever is later, the payment amount benchmark quarter is the third full calendar quarter after the drug is assigned a billing and payment code other than a NOC code.
- Proposed § 427.303(b)(1)(i) provided that CMS will remove 340B units for professional claims with dates of service during 2024 (in addition to 2023) submitted by Medicare suppliers that are covered entities listed by the Health Resources and Services Administration (HRSA) 340B Office of Pharmacy Affairs Information System as participating in the 340B Program, by using National Provider Identifiers and/or Medicare Provider numbers to identify these suppliers and the claims submitted with such identifiers.
- Proposed § 427.303(b)(5) provided that CMS will remove units of refundable single-dose container or single-use package drugs subject to discarded drug refunds, from the calculation of rebate amounts, generally in the reconciliation process.
- Proposed § 427.501 described CMS' method and process for reconciliation of a rebate amount for a Part B rebatable drug, including the circumstances that may trigger such a reconciliation.
- Proposed § 427.600 established a civil money penalty process in accordance with section 1847A(i)(7) of the Act to address when a manufacturer of a Part B rebatable drug fails to pay the rebate amount in full by the payment deadline for such drug for such applicable calendar quarter.
- Proposed § 427.10 provided that, were any provision of part 427 to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions will be severable from part 427 and the invalidity or unenforceability will not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances.

We also proposed new policies for the Medicare Part D Drug Inflation Rebate Program as follows:

- Proposed § 428.202(c)(3) provided that if a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, does not have AMP data reported under section 1927(b)(3) of the Act for any quarters during the period beginning on January 1, 2021 and ending on September 30, 2021, CMS will identify the payment amount benchmark period as the first calendar year, which would be no earlier than calendar year 2021, in which such drug has at least 1 quarter of AMP reported. Proposed § 428.202(c)(4) further provided that for a Part D rebatable drug first approved or licensed after October 1, 2021 (that is, a subsequently approved drug), for which there are no quarters during the first calendar year beginning after the drug's first marketed date for which AMP has been reported under section 1927(b)(3), the payment amount benchmark period will be the first calendar year in which such drug has at least 1 quarter of AMP reported. We also solicited comments on alternative policies to address certain instances in which AMP are not reported for certain NDC–9s of a Part D rebatable drug.
- Proposed § 428.203(b)(2) provided that, for claims with dates of service on or after January 1, 2026, and with respect to an applicable period, CMS will exclude from the total number of units used to calculate the total rebate amount for a Part D rebatable drug those units of the Part D rebatable drug for which a manufacturer provided a discount under the 340B Program. To determine the total number of such units for which a manufacturer provided a discount under the 340B Program, we proposed that CMS will use data reflecting the total number of units of a Part D rebatable drug for which a discount was provided under the 340B Program and that were dispensed during the applicable period. We proposed that CMS may apply adjustment(s) to these data as needed. We also solicited comments on alternative policies for collecting and using 340B data to calculate rebate amounts for Part D rebatable drugs.
- Proposed § 428.401 described CMS' method and process for reconciliation of a rebate amount for a Part D rebatable drug, including the circumstances that may trigger such a reconciliation.
- Proposed § 428.500 established a civil money penalty process in accordance with section 1860D–14B(e) of the Act to address when a manufacturer of a Part D rebatable drug fails to pay the rebate amount in full by the payment deadline for such drug for such applicable period.
- Proposed § 428.10 provided that, were any provision of part 428 to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions will be severable from this part and the invalidity or unenforceability will not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances.

In the CY 2025 PFS proposed rule (89 FR 61936), we proposed that unless otherwise specified, the provisions herein will apply, with respect to Part B rebatable drugs, for all calendar quarters beginning with January 1, 2023, and with respect to Part D rebatable drugs, for all applicable periods beginning with October 1, 2022. We stated that the IRA directs the Secretary to calculate rebate amounts for Part B rebatable drugs beginning on January 1, 2023, and Part D rebatable drugs beginning on October 1, 2022, using pricing data from past periods of time, including benchmark data from periods prior to the statute's enactment. In some cases, the time periods during which prices are subject to rebates began as early as several weeks after the IRA was enacted. In recognition of this timing, section 1860D–14B(h) of the Act specifically requires CMS to use program instruction to implement the Medicare Part D Drug Inflation Rebate Program for 2022, 2023, and 2024. Similarly, the existing provision at

to as the ''revised guidance''). These revised guidance documents, published December 14, 2023, implemented policies relating to the Medicare Prescription Drug Inflation Rebate Program for 2022, 2023, and 2024. CMS also published guidance on the use of the 340B modifier to report separately payable Part B drugs and biologicals acquired under the 340B program (Revised Part B Inflation Rebate Guidance: Use of the 340B Modifier, *https://www.cms.gov/files/document/revised-part-b-inflation-rebate-340b-modifier-guidance*.pdf).

section 1847A(c)(5)(C) of the Act, provides authority for CMS to implement the Medicare Part B Drug Inflation Rebate Program using program instruction or other guidance. In addition, sections 1847A(i)(1)(C) and 1860D–14B(a)(3) of the Act, as added by the IRA, permit the Secretary to delay the issuance of Rebate Reports for certain initial calendar quarters and applicable periods until 2025.

We further stated in the CY 2025 PFS proposed rule (89 FR 61936) that section 1871(e)(1)(A) of the Act provides that a substantive change in regulations, manual instructions, interpretative rules, statements of policy, or guidelines of general applicability under Title XVIII of the Act may not apply retroactively unless the Secretary has determined that such retroactive application is necessary to comply with statutory requirements or that failure to apply such policies retroactively would be contrary to the public interest. To the extent any proposed provisions in this section III.I. of this rule are considered to apply retroactively, we stated in the CY 2025 PFS proposed rule that CMS has determined that such retroactive application would be both necessary to establish policies to implement the statutory requirements that CMS perform various calculations that involve pricing activities from prior periods and also consistent with the statutory provisions expressly allowing the agency to delay the issuance of rebate reports for initial applicable periods until 2025. In addition, such retroactive application will be in the public interest because it would ensure that the proposed regulations address the same time periods and manufacturer pricing conduct addressed in the IRA and will promote consistency and continuity in program implementation.

We received public comments on the proposed provisions, as well as general comments on the CY 2025 PFS proposed rule. The following is a summary of the general comments we received and our responses; comments and responses on specific provisions are discussed in the subsections below.

Comment: A couple of commenters offered general support for CMS' proposed policies for the Medicare Part B Drug Inflation Rebate Program. One commenter supported CMS' proposed policies—and the IRA more broadly—to help address the prices of prescription drugs furnished to Medicare beneficiaries. One commenter expressed concern about potential unintentional effects of the IRA on certain specialties. However, this commenter did not expand on this statement.

Response: We thank the commenters who expressed support for CMS' proposed policies for the Medicare Part B Drug Inflation Rebate Program. We refer the commenter that expressed concern about the IRA's potential unintentional effects to the CMS IRA mailbox (*IRARebateandNegotiation@cms.hhs.gov*), which CMS established to receive queries related to the implementation of the Medicare Part B and Part D Drug Inflation Rebate Programs and the Medicare Drug Price Negotiation Program.

Comment: One commenter urged CMS to continue to evaluate the full impact of the IRA on access to medicine, including the Medicare Prescription Drug Inflation Rebate Program and the Medicare Drug Price Negotiation Program, noting specifically that the Medicare Drug Price Negotiation Program may have unintended consequences on the economic incentives to develop medicines.

Response: We appreciate this commenter's concern. As discussed in later sections of this final rule, we will monitor certain provisions of the Medicare Part B and Part D Drug Inflation Rebate Programs, including the status of Part B and Part D rebatable drugs on the FDA's shortage list. The commenter's suggestion to monitor the full impact of the IRA, including the impact of the Medicare Drug Price Negotiation Program, on access to medicine is beyond the scope of this final rule.

Comment: One commenter wrote that CMS did not provide sufficient detail for interested parties to meaningfully comment on various proposed policies, including but not limited to the definition of ''misreporting'' at § 427.501(d)(2)(ii) and alternative methodologies for calculating the benchmark period in cases where AMP is not reported. This commenter recommended CMS publish a second proposed rule containing concrete policy proposals that would allow interested parties to meaningfully comment.

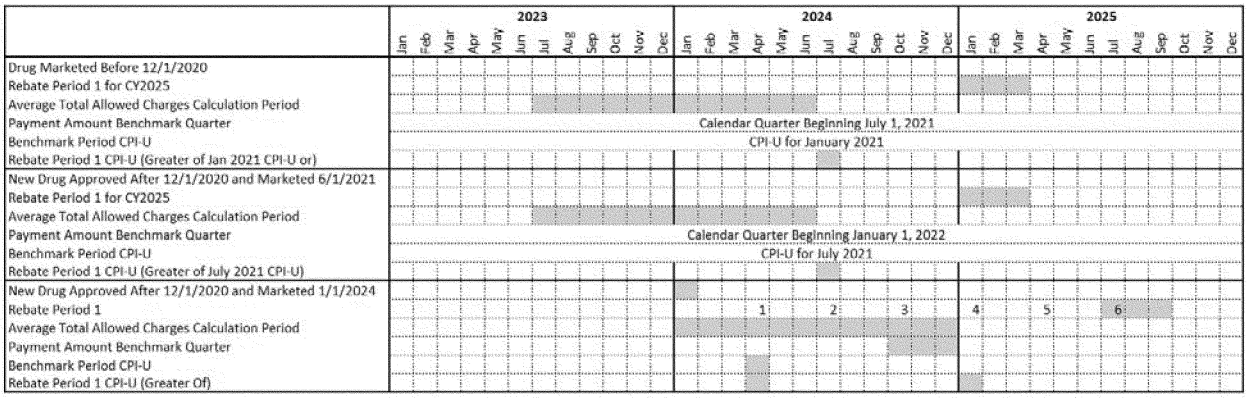
Response: We disagree with the commenter's assertion that the proposed rule did not include sufficient detail to allow interested parties to meaningfully comment on our proposed Medicare Prescription Drug Inflation Rebate Program policies, and, where applicable, the alternative approaches considered. Under the Administrative Procedure Act (APA), in proposed rulemaking, agencies are required to include either the terms or substance of the proposal or a description of the subjects and issues involved. The CY 2025 PFS proposed rule contained sufficient information on our policy proposals to implement the rebate provisions set forth in statute and the alternatives considered to put interested parties on notice of the policies that might be adopted in this final rule and afford them a meaningful opportunity to comment. As evidenced by the comments received in response to the CY 2025 PFS proposed rule, interested parties had a full opportunity to share their views on our proposals and the alternatives considered. We have considered these public comments in developing our policies for this final rule.

After consideration of the public comments received, we are finalizing, with modifications, the proposed policies for the Medicare Prescription Drug Inflation Rebate Program.

c. Timeline of Key Dates for the Medicare Prescription Drug Inflation Rebate Program

As sections 1847A(i)(2)(C) and 1860D–14B(a)(3) of the Act allow for delayed reporting and invoicing of rebates amounts for applicable calendar quarters in 2023 and 2024 for Part B rebatable drugs and the first two applicable periods for Part D rebatable drugs, as proposed, Figures B–I 1 and B–I 2 provide example timelines for how rebates will be calculated for applicable calendar quarters and one applicable period in calendar year 2025. Figures B–I1 and B–I2 also depict how the rebate period and components of the rebate calculation may shift based on the marketing and approval dates for a Part B or Part D rebatable drug.

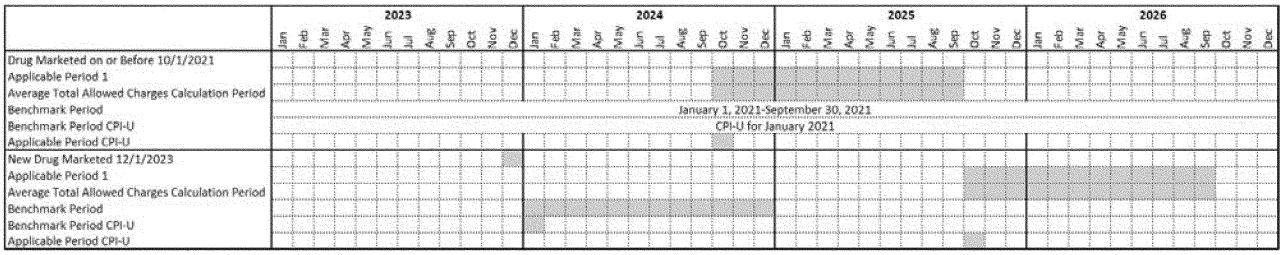
FIGURE B-I1: Summary of Proposed Data Timelines for Part B Drug Inflation Rebate Provisions for Calendar Year 2025[a]



[a] This graphic is an illustrative example of how rebates for quarters in calendar year 2025 will be calculated.

Note: In the case of subsequently approved drugs, a Part B rebatable drug's first applicable calendar quarter will begin the sixth full calendar quarter (denoted with the numbers in the figure) after the day the drug was first marketed or the first quarter of 2023, whichever is later. The Rebate Period CPI-U is the greater of the benchmark period CPI-U or the CPI-U of the first month of the quarter two quarters prior to the rebate period.

FIGURE B-I2: Summary of Proposed Data Timelines for Part D Drug Inflation Rebate Provisions for Calendar Year 2025[a]



[a] *This graphic is an illustrative example of how rebates for one applicable period including months in calendar year 2025 will be calculated.*

As proposed, Table 53 describes a summary timeline for inflation rebate amount reports and deadlines for applicable calendar quarters in calendar year 2025 and thereafter for Part B rebates and for the Part D rebate applicable period beginning on October 1, 2024, and applicable periods thereafter.

TABLE 53: Summary of Proposed Part B and D Drug Inflation Rebate Amount Reports and Deadlines[a]

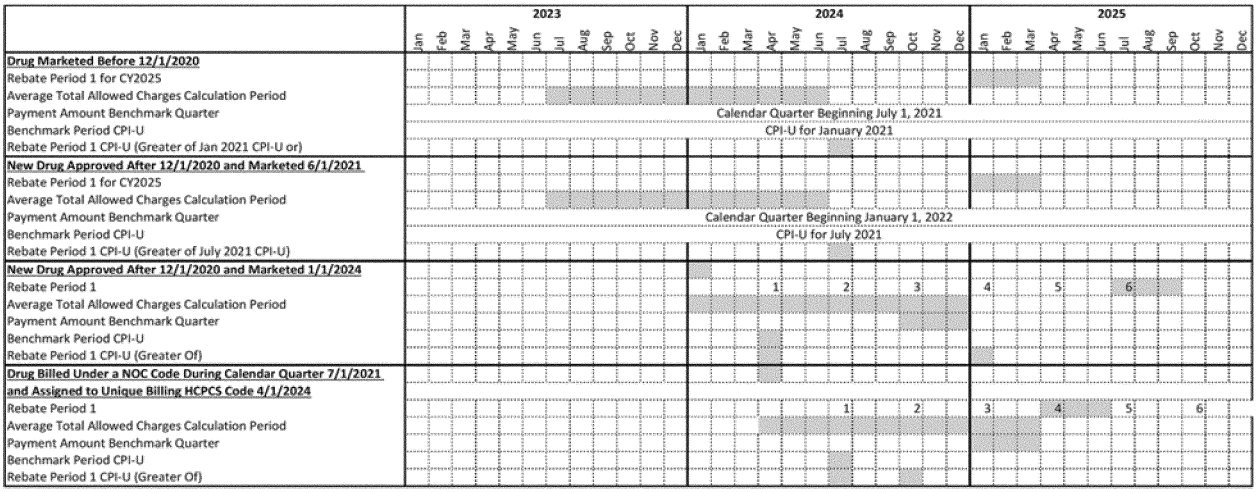
Milestone	Timing/Deadline
Part B Rebate – CMS must invoice manufacturers not later than 6 months after the end of each calendar quarter	
Preliminary Rebate Report sent to Manufacturers	Not later than 5 months after the end of the calendar quarter
Manufacturer Reviews	Manufacturer Suggestion of Error must be submitted to CMS not later than 10 calendar days following receipt of the Preliminary Rebate Report
Rebate Report sent to Manufacturers	Not later than 6 months after the end of the calendar quarter
Manufacturer Rebate Amount Due (if applicable)	Not later than 30 calendar days after receipt of the Rebate Report
Preliminary Reconciliation Rebate Report sent to Manufacturers	Not later than 11 months after receipt of the Rebate Report
Manufacturer Reviews	Manufacturer Suggestion of Error must be submitted to CMS not later than 10 calendar days following receipt of the Preliminary Reconciliation Rebate Report
Reconciliation Rebate Report sent to Manufacturers	Not later than 12 months after receipt of the Rebate Report
Manufacturer Reconciled Rebate Amount Due (if any)	Not later than 30 calendar days after receipt of the Reconciliation Rebate Report
Part D Rebate – CMS must invoice manufacturers not later than 9 months after the end of each applicable period	
Preliminary Rebate Report sent to Manufacturers	Not later than 8 months after the end of the applicable period
Manufacturer Reviews	Manufacturer Suggestion of Error must be submitted to CMS not later than 10 calendar days following receipt of the Preliminary Rebate Report
Rebate Report sent to Manufacturers	Not later than 9 months after the end of the applicable period
Manufacturer Rebate Amount Due (if applicable)	Not later than 30 calendar days after receipt of the Rebate Report
First Reconciliation Preliminary Rebate Report sent to Manufacturers	Not later than 11 months after the receipt of the Rebate Report
Manufacturer Reviews	Manufacturer Suggestion of Error must be submitted to CMS not later than 10 calendar days following receipt of the First Reconciliation Preliminary Rebate Report
First Reconciliation Rebate Report sent to Manufacturers	Not later than 12 months after the receipt of the Rebate Report
Manufacturer Reconciled Rebate Amount Due (if any)	Not later than 30 calendar days after receipt of the First Reconciliation Rebate Report
Second Reconciliation Preliminary Rebate Report sent to Manufacturers	Not later than 35 months after the receipt of the Rebate Report
Manufacturer Reviews	Manufacturer Suggestion of Error should be submitted to CMS not later than 10 calendar days following receipt of the Second Reconciliation Preliminary Rebate Report
Second Reconciliation Rebate Report sent to Manufacturers	Not later than 36 months after the receipt of the Rebate Report
Manufacturer Reconciled Rebate Amount Due (if any)	Not later than 30 calendar days after receipt of the Second Reconciliation Rebate Report

[a] *The months referred to in these timelines represent calendar months. This means, for example, that if a Preliminary Rebate Report is issued on August 15, 2027, the Rebate Report could be issued up until September 30, 2027.*

We did not receive public comments on the summary timelines. We are adding an amendment to section II.I.1.c. of this final rule to update Figure B–I3: Summary of Proposed Data Timelines for Part B Drug Inflation Rebate Provisions for Calendar Year 2025 as follows. We are adding an example to Figure B–I3 to illustrate how rebates for quarters in calendar year 2025 will be calculated for drugs billed under a NOC code during calendar quarter July 1,

2021 and assigned to a unique billing and payment code on April 1, 2024.

FIGURE B-I3: Provisions for Calendar Year 2025[a]



[a] This graphic is an illustrative example of how rebates for quarters in calendar year 2025 will be calculated.

Note: In the case of subsequently approved drugs, a Part B rebatable drug's first applicable calendar quarter will begin the sixth full calendar quarter (denoted with the numbers in the figure) after the day the drug was first marketed or the first quarter of 2023, whichever is later. For a drug billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after the effective date of the drug's assigned billing and payment code other than a NOC code, whichever is later, the drug will be included on the first applicable calendar quarter the earliest applicable calendar quarter that follows the payment amount benchmark quarter. The Rebate Period CPI-U is the greater of the benchmark period CPI-U or the CPI-U of the first month of the quarter 2 quarters prior to the rebate period.

2. Medicare Part B Drug Rebates for Single Source Drugs and Biological Products With Prices That Increase Faster Than the Rate of Inflation

a. Definitions (§ 427.20)

At § 427.20, we proposed to codify the definitions of terms consistent with the meanings given in section 1847A(i) of the Act or established in the revised Medicare Part B Drug Inflation Rebate Guidance, as applicable, as well as new definitions based on policies detailed in the proposed rule.

We proposed definitions for the following terms found in section 1847A of the Act:

- ''Benchmark period CPI–U''.
- ''Biosimilar biological product''.
- ''Inflation-adjusted payment amount''.
- ''Manufacturer''.
- ''Part B rebatable drug''.
- ''Payment amount benchmark quarter''.
- ''Payment amount in the payment amount benchmark quarter''.
- ''Rebate period CPI–U''.
- ''Single source drug or biological product''.
- ''Specified amount''.
- ''Subsequently approved drug''.
- ''Unit''.

Further, we proposed to codify at § 427.20 definitions established in the revised Medicare Part B Drug Inflation Rebate Guidance and new definitions based on policies detailed in the proposed rule for the following terms:

- ''Allowed charges''.
- ''Applicable calendar quarter''.
- ''Applicable threshold''.
- ''Average sales price (ASP)''.
- ''Billing and payment code''.
- ''Billing unit''.
- ''CPI–U''.[639]
- ''FDA application''.
- ''Final action claim''.
- ''First marketed date''.
- ''Grouped billing and payment code''.
- ''National Drug Code'' (NDC).
- ''Not Otherwise Classified (NOC) code''.

We have added definitions for the following terms to make a technical clarification as described in section III.I.2.d.iii. of this final rule and based on public comments received and summarized under section III.I.2.d.ii. of this final rule.

- ''Billing and payment code FDA approval or licensure date''.
- ''Sold or marketed''.

After consideration of public comments, we are finalizing, with modifications, the definitions proposed at § 427.20.

b. Determination of Part B Rebatable Drugs (§§ 427.100 Through 427.101)

i. Definitions

In proposed § 427.100, we proposed to define the following terms applicable to subpart B (§§ 427.100 through 427.101):

- ''EUA Declaration''.
- ''Individual who uses such a drug or biological''.

We did not receive comments on these proposed definitions. We are finalizing these definitions as proposed at § 427.100.

[639] These data are referenced to 1982–84=100—that is, the average of pricing data for the 36 months from 1982 through 1984 serve as the basis for the index and are assigned a value of 100. These data are not seasonally adjusted.

ii. Identification of Part B Rebatable Drugs

Section 1847A(i)(2) of the Act defines a ''Part B rebatable drug,'' in part, as a single source drug or biological product (as defined in section 1847A(c)(6)(D) of the Act), including a biosimilar biological product (as defined in section 1847A(c)(6)(H) of the Act), but excluding a qualifying biosimilar biological product (as defined in section 1847A(b)(8)(B)(iii) of the Act), for which payment is made under Part B. The definitions for a biosimilar biological product and a qualifying biosimilar biological product are codified at § 414.902.

At § 427.101(a), we proposed to codify the policies established in section 30.1 of the revised Medicare Part B Drug Inflation Rebate Guidance to identify Part B rebatable drugs by (1) identifying the applicable billing and payment code for each single source drug or biological product, including biosimilar biological products, for which payment is made under Part B and (2) excluding any billing and payment code corresponding to a drug or biological product in excluded product categories or that have average total allowed charges below an applicable threshold, to be codified at § 427.101(b) and (c), respectively.[640]

We did not receive public comments on this proposed provision, and we are finalizing as proposed at § 427.101(a).

iii. Excluded Product Categories

Section 1847A(i)(2)(A) of the Act excludes qualifying biosimilar biological products (as defined in section 1847A(b)(8)(B)(iii) of the Act) from the definition of a Part B rebatable drug. As such, at § 427.101(b)(1) we proposed to codify the policy established in section 30.2 of the revised Medicare Part B Drug Inflation Rebate Guidance to exclude such products from the definition of a Part B rebatable drug and not subject them to Part B inflation rebates.

Section 1847A(i)(2)(A) of the Act defines a Part B rebatable drug as a ''single source drug or biological (as defined in [section 1847A(c)(6)(D) of the Act]),'' which requires that a single source drug not be a multiple source drug. We have interpreted section 1847A(c)(6)(C)(ii) of the Act to mean that single source drugs or biological products are treated as multiple source drugs if they were within the same billing and payment code as of October 1, 2003. Accordingly, at § 427.101(b)(2), we proposed to codify the existing policy established in section 30.1 of the revised Medicare Part B Drug Inflation Rebate Guidance to exclude drugs and biological products set forth in section 1847A(c)(6)(C)(ii) of the Act from the definition of a Part B rebatable drug and not subject them to Part B inflation rebates.

For drugs and biological products that are billed using a HCPCS code that represents a Not Otherwise Classified (NOC) code, we have a process to determine the allowed payment amount for such billing and payment codes; however, current Medicare claims data do not allow CMS to determine the average total allowed charges for such drug or biological product for a year per individual that uses such a drug or biological product or to identify units billed. CMS must perform these steps to determine if a drug or biological product is a Part B rebatable drug. Therefore, at § 427.101(b)(3), we proposed to codify the policy in section 30.1 of the revised Medicare Part B Drug Inflation Rebate Guidance to exclude drugs and biological products that are billed using a billing and payment code that represents a NOC code or claims for such drugs and biological products when no other billing and payment code is applicable. We noted that few Part B drugs and biological products are billed with such codes and the quarterly process for updating billing and payment codes, including establishing new billing and payment codes, provides an existing mechanism for CMS to minimize the number of Part B rebatable drugs that are billed with such codes. As discussed at §§ 90.2 and 90.3 in Chapter 17 of the Medicare Claims Processing Manual, NOC codes are generally used to bill Medicare for new-to-market, FDA-approved drug products until a specific billing and payment code is assigned; and so, CMS expects that the impact of this exclusion will be limited.[641]

Consistent with section 303(h) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003, radiopharmaceutical drugs and biologicals are not paid under section 1847A of the Act. Manufacturers of radiopharmaceutical drugs and biologicals are therefore not required to report ASP under section 1927(b)(3) of the Act and are not otherwise required to report ASP data to CMS for separately payable radiopharmaceutical drugs and biologicals. In addition, different payment methodologies across the outpatient setting result in data variations that could inappropriately trigger an inflation rebate amount due to methodological differences in reimbursement. Therefore, at § 427.101(b)(4) we proposed to codify the revised Medicare Part B Drug Inflation Rebate Guidance policy (as set forth in section 30.1) that excludes separately payable radiopharmaceutical drugs and biologicals for the purposes of identifying Part B rebatable drugs. Additionally, we proposed to codify the existing policy not to subject these units to the inflation-adjusted beneficiary coinsurance at § 427.201(c) as described further in the following section of this rule.[642]

We aim to create a consistent coding and payment approach for the suite of products currently referred to as skin substitutes as stated in section 30.1 of revised Medicare Part B Drug Inflation Rebate Guidance. In the CY 2024 PFS proposed rule, CMS solicited comments on potential changes to payment for skin substitutes. In the CY 2024 PFS final rule, we acknowledged the comments received in response to this solicitation and stated that CMS would take these comments into consideration for future rulemaking.[643] At § 427.101(b)(5) we proposed to codify existing policy to exclude cellular- and tissue-based products that aid wound healing, currently referred to as skin substitutes, for the purposes of identifying Part B rebatable drugs. In addition, we proposed not to subject these products to the beneficiary coinsurance adjustment at § 427.201(c).

Section 1847A(i)(2)(A) of the Act excludes from the definition of a Part B rebatable drug a drug or biological if, as determined by the Secretary, the average total allowed charges for such drug or biological product under Part B for a year per individual who uses such a drug or biological product are less than $100. Section 1847A(i)(2)(B) of the Act

[640] The billing and payment codes used to identify drugs covered under Part B are Healthcare Common Procedure Coding System (HCPCS) codes. For more information on HCPCS codes and how they are applied, see ''HEALTHCARE COMMON PROCEDURE CODING SYSTEM (HCPCS) LEVEL II CODING PROCEDURESHCPCS'' at *https://www.cms.gov/medicare/coding/medhcpcsgeninfo/downloads/2018-11-30-hcpcs-level2-coding-procedure.pdf.*

[641] *See: https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c17.pdf.*

[642] In the CY 2025 PFS proposed rule, we also proposed to clarify how radiopharmaceuticals are paid for in the physician's office and to codify these policies in regulation. Specifically, we proposed to clarify that for radiopharmaceuticals furnished in a setting other than the hospital outpatient department, MACs can determine payment limits for radiopharmaceuticals based on any methodology in place on or prior to November 2003.

[643] See 88 FR 78818, November 16, 2023 (*https://www.federalregister.gov/public-inspection/2023-24184/medicare-and-medicaid-programs-calendar-year-2024-payment-policies-under-the-physician-fee-schedule*).

provides that the $100 amount for 2023 will be increased for 2024 and subsequent years by the percentage change in the CPI–U for the 12-month period ending with June of the previous year, rounded to the nearest multiple of $10. Therefore, at § 427.101(b)(6) we proposed to codify the policy established in revised Medicare Part B Drug Inflation Rebate Guidance to exclude from the definition of a Part B rebatable drug those drugs and biologicals for which the Part B average total allowed charges for a year per individual who uses such drug or biological is below the applicable threshold.

Section 1847A(i)(2)(A)(ii) of the Act excludes vaccines set forth in subparagraph (A) or (B) of section 1861(s)(10) of the Act from the definition of a Part B rebatable drug. Such vaccines include the pneumococcal vaccine, the influenza vaccine, the COVID–19 vaccine; and the hepatitis B vaccine when furnished to an individual who is at high or intermediate risk of contracting hepatitis B (as determined by the Secretary under regulations). As such, at § 427.101(b)(7), we proposed to codify the existing policy established in section 30.3 of the revised Medicare Part B Drug Inflation Rebate Guidance to exclude vaccines set forth in subparagraph (A) or (B) of section 1861(s)(10) of the Act from the definition of a Part B rebatable drug and not subject them to Part B inflation rebates. In addition, with respect to monoclonal antibodies used for treatment or post-exposure prophylaxis of COVID–19, which are covered and paid for under section 1861(s)(10) of the Act, we proposed to exclude these products from the definition of Part B rebatable drugs for applicable quarters through the end of the calendar year in which the EUA declaration under section 564 of the FD&C Act for drugs and biological products is terminated. For monoclonal antibodies that are used for pre-exposure prophylaxis of COVID–19 that are covered and paid for under section 1861(s)(10) of the Act, we proposed to exclude these products from the definition of Part B rebatable drug for applicable calendar quarters even after the year in which the EUA Declaration ends, as long as these products have an FDA-approved application or license after the EUA Declaration is terminated.

Finally, Part B drugs approved under an Abbreviated New Drug Application (ANDA) submitted under 505(j) of the FD&C Act do not meet the definition of ''single source drug or biological product,'' as defined under section 1847A(c)(6)(D) of the Act, and thus, are not Part B rebatable drugs. We proposed to codify this exclusion at § 427.101(b)(8).

We received public comments on these proposed provisions to exclude skin substitutes and separately payable radiopharmaceutical drugs and biologicals from the identification of a Part B rebatable drug. The following is a summary of the comments we received and our responses.

Comment: One commenter appreciated CMS' proposal regarding the suite of products referred to as skin substitutes for the purposes of identifying Part B rebatable drugs. This commenter recommended CMS finalize this proposal to not consider skin substitutes Part B rebatable drugs. Additionally, this commenter recommended CMS clarify that because skin substitutes are not single source drugs, biological products, or biosimilar biological products they cannot be considered Part B rebatable drugs.

Response: We thank this commenter for their input and are finalizing as proposed. At this time, skin substitutes are excluded from the regulatory definition of a Part B rebatable drug.

Comment: One commenter supported CMS' proposal to codify existing policy that separately payable radiopharmaceutical products are excluded from the definition of a Part B rebatable drug and, as such, are not subject to the inflation-adjusted beneficiary coinsurance, and recommended CMS finalize this proposal.

Response: We thank this commenter for their feedback. As described in the CY 2025 PFS proposed rule, we will exclude separately payable radiopharmaceutical drugs and biologicals for the purposes of identifying Part B rebatable drugs and not subject these products to the inflation-adjusted beneficiary coinsurance.

After consideration of public comments, we are finalizing as proposed our proposal at § 427.101(b) to exclude certain product categories from the definition of a Part B rebatable drug.

iv. Drugs and Biological Products With Average Total Allowed Charges Below the Applicable Threshold

Under section 1847A(i)(2) of the Act, drugs and biological products, for which the average total allowed charges for such drug or biological under Part B for a year per individual who uses such drug or biological are below the applicable threshold, as determined by the Secretary, are excluded from the definition of Part B rebatable drugs. As explained in section 30.2 of the revised Medicare Part B Drug Inflation Rebate Guidance, CMS uses the term ''applicable threshold'' to mean $100 for all 4 calendar quarters in 2023. For all 4 calendar quarters in 2024, the applicable threshold will be $100 as increased in accordance with section 1847A(i)(2)(B) of the Act. For calendar quarters in 2025 and beyond, the applicable threshold will be equal to the unrounded applicable threshold calculated for the prior calendar year, increased by the percentage increase in the CPI–U for the 12-month period ending with June of the previous year.

At § 427.101(c), we proposed to codify policies from the revised Medicare Part B Drug Inflation Rebate Guidance to exclude these drugs from the definition of a Part B rebatable drug. To do so, in accordance with the statute, for each applicable calendar quarter, we proposed to identify drugs and biological products with Part B average total allowed charges for a year per individual that uses such a drug or biological product below the applicable threshold.

At § 427.101(c)(1), we proposed that to identify the average total allowed charges for a year per individual, for each Part B rebatable drug, CMS will:

- For single source drugs and biological products assigned to only one billing and payment code, sum the allowed charges from final action claims greater than $0 and divide the summed amount by the number of individuals who use such a drug or biological.
- For single source drugs and biological products assigned to more than one billing and payment code, sum the allowed charges from final action claims greater than $0 for all billing and payment codes and divide the summed amount by the number of individuals who use such a drug or biological.

CMS may move a drug or biological product from a grouped billing and payment code to a unique billing and payment code in instances where the drug is either approved through the pathway established under section 505(b)(2) of the FD&C Act (hereinafter ''section 505(b)(2) drug products'') that CMS initially assigned to the same billing and payment code as its reference drug for a period of time, or the drug was previously a multiple source drug but is now a single source drug that was moved to its own billing and payment code. There may be instances where a single source drug or biological product was previously crosswalked to a grouped billing and payment code (other than a NOC code) during the *full* year. In such instances, we proposed to calculate the average

total allowed charges per individual per year for the drug using allowed charges and the number of individuals who used the drug or biological product based on claims for the previously grouped billing and payment code during the year. Such instances will apply to section 505(b)(2) drug products, drugs that were previously multiple source drugs where all other drugs under the same billing and payment code were discontinued (applicable only if the sole remaining product was not approved under an ANDA), and to any other situations where a drug was previously in a grouped billing and payment code (other than a NOC code).

Finally, there may be instances where a single source drug or biological product was initially billed under a grouped billing and payment code (other than a NOC code) and was later billed under a unique billing and payment code for *some* of the year. In such instances, we proposed to calculate the average total allowed charges per individual for a year by: summing the total allowed charges billed under the unique billing and payment code for the drug with dates of service on or after the Medicare effective date for this unique billing and payment code and identifying the individuals on those claims; summing the total allowed charges on claims billed under the previously grouped billing and payment code and identifying the individuals with claims prior to the unique billing and payment code's effective date; and then summing the total allowed charges under both billing and payment codes across the full year and dividing by the total number of individuals (de-duplicated for those individuals identified under both the previously grouped billing and payment code and the unique billing and payment code). If the average total allowed charges for a year per individual who uses such drug or biological product are less than the applicable threshold, we proposed to exclude the billing and payment code for that calendar quarter. We solicited comment on this proposed implementation of the exclusion for drugs and biologicals with average total allowed charges below the applicable threshold.

We proposed at § 427.101(c)(2) to calculate the applicable threshold as follows:

- For applicable calendar quarters in 2023, the applicable threshold is equal to $100.
- For applicable calendar quarters in 2024, the applicable threshold is equal to $100 increased by the percentage increase in the CPI–U for the 12-month period ending with June of 2023.
- For applicable calendar quarters in each subsequent calendar year, the applicable threshold is equal to the unrounded applicable threshold calculated for the prior calendar year increased by the percentage increase in the CPI–U for the 12-month period ending with June of the previous year.
- If the resulting amount from these calculations is not a multiple of $10, CMS will round that amount to the nearest multiple of $10.[644]

Accordingly, the formula to determine the applicable threshold for calendar quarters in 2024 is $100 *multiplied by* (CPI–U for June 2023 *divided by* CPI–U for June 2022) (apply rounding to the nearest multiple of $10). To illustrate, the 2024 threshold is: $100 \times (305.109/296.311) = 102.969178$ (which rounds down to $100 after applying CMS rounding) so the threshold for calendar quarters in 2024 = $100.

For the purposes of this calculation, we proposed that ''a year'' means the 4 consecutive calendar quarters beginning 6 calendar quarters before the applicable calendar quarter. We also proposed using final action claims from the Medicare fee-for-service claims repository to identify claims where separate payment was allowed for the applicable HCPCS code for dates of service within a year. Drugs and biological products that do not meet the applicable threshold are not considered Part B rebatable drugs. For example, for the calendar quarter beginning July 1, 2025, CMS will use available final action Medicare Part B claims with dates of service beginning January 1, 2024, and ending December 31, 2024, because January 1, 2024, is the beginning of the calendar quarter that is 6 quarters before the applicable calendar quarter beginning on July 1, 2025.

At § 427.101(c)(3), we proposed to codify the policies and methodological steps as described in section 30.2 of the revised Medicare Part B Drug Inflation Rebate Guidance for excluding drugs and biological products with average total allowed charges below the applicable threshold at the billing and payment code level. For each applicable calendar quarter, we will identify the applicable billing and payment codes for drugs and biological products with average total allowed charges for a year per individual less than the applicable threshold and exclude such drugs and biological products from the definition of Part B rebatable drug in accordance with proposed § 427.101(b)(6). When a single source drug or biological product with average total allowed charges below the applicable threshold is assigned to a unique billing and payment code, we will exclude the assigned billing and payment code for the applicable calendar quarter. There also may be instances where a single source drug or biological product is assigned to more than one billing and payment code during a year and the average total allowed charges for a year per individual that uses such drug or biological product are less than the applicable threshold. In such instances, we proposed to exclude all assigned billing and payment codes for such single source drug or biological product for that applicable calendar quarter.

We did not receive public comments on this proposed provision, and we are finalizing as proposed at § 427.101(c).

c. Inflation-Adjusted Beneficiary Coinsurance Adjustment and Adjusted Medicare Payment for Part B Rebatable Drugs With Price Increases Faster Than Inflation (§§ 427.200 Through 427.201)

Section 1847A(i)(5) of the Act requires that for Part B rebatable drugs, as defined in section 1847A(i)(2)(A) of the Act, furnished on or after April 1, 2023, in quarters in which the payment amount described in section 1847A(i)(3)(A)(ii)(I) of the Act (or, in the case of selected drugs described under section 1192(c) of the Act, the payment amount described in section 1847A(b)(1)(B) of the Act), exceeds the inflation-adjusted payment amount determined in accordance with section 1847A(i)(3)(C) of the Act, the coinsurance will be 20 percent of the inflation-adjusted payment amount for such quarter (hereafter, the inflation-adjusted coinsurance amount). This inflation-adjusted coinsurance amount is applied as a percent, as determined by the Secretary, to the payment amount that would otherwise apply for such calendar quarter in accordance with section 1847A(b)(1)(B) or (C) of the Act, as applicable, including in the case of a selected drug. In the CY 2024 Hospital Outpatient Prospective Payment System (OPPS) final rule and the CY 2024 PFS final rule, CMS codified this inflation-adjusted coinsurance amount at §§ 419.41(e), 410.152(m), and 489.30(b)(6), respectively.

Beginning with the April 2023 quarterly pricing files, the applicable beneficiary coinsurance percentage is shown for each HCPCS code in the pricing files that are posted on the CMS website. For example, the ASP Pricing files are posted at *https://www.cms.gov/*

[644] CMS will round down any amount less than $5 over a multiple of $10 to that multiple of $10, and round up any amount $5 or more over a multiple of $10 to the next multiple of $10.

medicare/payment/part-b-drugs/asp-pricing-files. The applicable beneficiary coinsurance percentage for certain drugs and biologicals used predominantly in the hospital outpatient setting are listed in the Hospital Outpatient Prospective Payment System (OPPS) Addenda A and B, which can be found at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates*. The applicable beneficiary coinsurance percentage for certain drugs and biologicals used predominantly in the ambulatory surgical center setting are listed in the ASC Addendum, which can be found at *https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/asc-payment-rates-addenda*. The percentage is expressed as two digits with three decimal places, for example, 18.760. If an adjusted beneficiary coinsurance does not apply, the percentage would show as 20.000.

Section 11101(b) of the IRA amended section 1833(a)(1) of the Act by adding a new subparagraph (EE), which requires that if the payment amount under section 1847A(i)(3)(A)(ii)(I) of the Act or, in the case of a selected drug, the payment amount described in section 1847A(b)(1)(B) of the Act, for that drug exceeds the inflation-adjusted payment amount for a Part B rebatable drug, the Part B payment amount would, subject to the Part B deductible and sequestration, equal the difference between the payment limit and the inflation-adjusted coinsurance amount. Consistent with the clarification in section 40 of the revised Medicare Part B Drug Inflation Rebate Guidance and with the application of sequestration in the context of Medicare payment and beneficiary coinsurance in general, we note that the calculation to determine the applicable beneficiary coinsurance amount would not be adjusted for sequestration. CMS codified the Medicare payment for Part B rebatable drugs in the CY 2024 PFS final rule by adding new paragraph (m) to § 410.152.

In the CY 2025 PFS proposed rule (89 FR 61942), we proposed to adopt new provisions at §§ 427.200 and 427.201 to codify the policies regarding the computation of the inflation-adjusted beneficiary coinsurance, defined at § 427.200, for Part B rebatable drugs as required by section 1847A(i)(5) of the Act. This new provision includes references to the existing provisions at §§ 410.152(m), 419.41(e), and 489.30(b)(6). We further proposed at § 427.201(c) that any category of products that is excluded from the identification of Part B rebatable drugs at § 427.101(b) is not subject to the inflation-adjusted beneficiary coinsurance. Examples of these excluded products include separately payable radiopharmaceuticals, skin substitute products, and qualifying biosimilar biological products.

Additionally, we proposed at § 427.201(b) that CMS will use the published payment amount in quarterly pricing files [645] [646] [647] to determine if a Part B rebatable drug should have an adjusted beneficiary coinsurance equal to 20 percent of the inflation-adjusted payment amount as described in section 1847A(i)(3)(C) of the Act for a calendar quarter. This proposed approach deviates from the rebate calculation approach proposed at § 427.302, which relies on the specified amount defined at § 427.20 even when the specified amount and the published payment amount in quarterly pricing files differ. The approach proposed at § 427.201(b) will be used only to determine whether there should be a coinsurance adjustment and will not impact the applicability or calculation of inflation rebates. We believe this approach is consistent with the statutory language and appropriately reflects the differences in the statutory text of section 1847A(i)(5) of the Act, which sets forth the payment amount that is used to determine whether coinsurance should be adjusted, and section 1847A(i)(3)(A) of the Act, which sets forth the ''specified amount'' used to determine rebate amounts.

As stated in the CY 2025 PFS proposed rule (89 FR 61942), our intent with this proposed policy is to hold beneficiaries harmless in situations where the payment amount is calculated differently from the specified amount. Though the payment amount is generally based on the same provisions as the specified amount, there may be situations where the payment amount is updated or adjusted under other provisions of 1847A of the Act, such as when ASP data are not available under section 1847A(c)(5)(B). For example, if the specified amount is very low due to negative ASP data and the payment amount is updated using other available data resulting in a payment amount that exceeds the inflation-adjusted payment amount, beneficiaries will not receive the benefit of adjusted coinsurance. There may also be situations where the payment amount is lower than the inflation-adjusted payment amount, but the specified amount is higher than the inflation-adjusted payment amount. In such a situation, if the ''specified amount'' was used as the comparator to determine whether coinsurance should be adjusted, beneficiaries will pay a coinsurance *higher* than 20 percent, because 20 percent of the inflation-adjusted payment amount will be higher than 20 percent of the payment amount. As such, we proposed to codify at § 427.201(b) that we will compare the published payment amount in the quarterly pricing files published by CMS to determine whether a coinsurance adjustment applies. This policy will provide an adjusted beneficiary coinsurance amount only when the payment amount for a Part B rebatable drug exceeds the inflation-adjusted payment amount in a given quarter.

We believe this approach is valid and gives effect to the differing statutory language in sections 1847A(i)(3)(A), 1847A(i)(5), and 1833(a)(1)(EE) of the Act, which sets forth the coinsurance adjustment for Part B rebatable drugs. Unlike the ''specified amount'' in section 1847A(i)(3)(A) of the Act, sections 1847A(i)(5) and 1833(a)(1)(EE) of the Act both refer to a ''payment amount.'' Fundamentally, a payment amount cannot be a negative number; if the specified amount and payment amount were the same amount, it would result in situations where the payment amount at section 1833(a)(1)(EE) of the Act was a negative number. Rather, we believe that the term ''payment amount'' in both sections 1847A(i)(5) and 1833(a)(1)(EE) of the Act is most naturally read to include the amount, as updated and adjusted for the purposes of providing payment to providers, that CMS publishes as the payment amount in quarterly pricing files; and that section 1833(a)(1)(EE) of the Act operates to adjust the *percentage* of such payment amount. Furthermore, section 1847A(i)(5)(B) of the Act provides the Secretary with discretion to apply the adjusted coinsurance percentage to the payment amount that would otherwise apply under section 1847A(b)(1)(B) or (C) of the Act. Lastly, sections 1847A(i)(8)(D) and (E) of the Act preclude administrative and judicial review of the computation of the adjusted coinsurance and amounts paid to the provider under section 1833(a)(1)(EE) of the Act.

In summary, we proposed CMS will use the payment amount in quarterly pricing files to determine if a Part B rebatable drug should have an adjusted beneficiary coinsurance, the calculation to determine the adjusted Medicare

[645] See: *https://www.cms.gov/medicare/payment/part-b-drugs/asp-pricing-files*.

[646] See: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates*.

[647] See: *https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/asc-payment-rates-addenda*.

payment (if applicable) will not be adjusted for sequestration, and drugs excluded from the identification of Part B rebatable drugs will not be subject to the inflation-adjusted beneficiary coinsurance.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported CMS' proposal to adjust beneficiary coinsurance when applicable. Additionally, one of these commenters noted that CMS' intent to hold beneficiaries harmless in situations where the payment amount is calculated differently from the specified amount could be particularly important in situations where the ASP is very low or negative and CMS must use other data to calculate the payment amount.

Response: We thank commenters for their support.

Comment: One commenter recommended that CMS use the manufacturer-calculated specified amount for inflation rebate amounts and when calculating payment amounts for coinsurance adjustment, noting that using consistent sources across these calculations would avoid triggering inflation rebates in scenarios when there was no price increase.

Response: We believe our proposed methodology for calculating the inflation-adjusted beneficiary coinsurance, which deviates from the rebate calculation approach proposed at § 427.302, is consistent with the statutory language and appropriately reflects the differences in the statutory text of section 1847A(i)(5) of the Act, which sets forth the payment amount that is used to determine whether coinsurance should be adjusted, and section 1847A(i)(3)(A) of the Act, which sets forth the ''specified amount'' used to determine rebate amounts. As previously described, there may be situations where the payment amount is updated or adjusted under other provisions of 1847A of the Act, such as when ASP data are not available under section 1847A(c)(5)(B) of the Act. Such a situation could occur if the payment amount is lower than the inflation-adjusted payment amount, but the specified amount is higher than the inflation-adjusted payment amount, which could cause beneficiaries to pay a coinsurance greater than 20 percent.

Comment: One commenter expressed concern that the proposed change to the methodology for determining whether coinsurance should be adjusted focuses too heavily on the volume of Part B drugs dispensed instead of on the impact of inflation on a person enrolled in Medicare. This commenter encouraged CMS to consider a similar strategy used in the Medicare Part D Drug Inflation Rebate Program that uses the CPI–U during a specific period to calculate an inflation-based rebate.

Response: We thank the commenter for this feedback. We did not propose to determine whether to adjust the beneficiary coinsurance based on the volume of Part B drugs administered. As noted, CMS proposed to compare the published payment amount in CMS quarterly pricing files to the inflation-adjusted payment amount to determine which is higher. We believe our proposed methodology is consistent with sections 1847A(i)(5) of the Act, which sets forth the payment amount that is used to determine whether coinsurance should be adjusted, and section 1847A(i)(3)(A) of the Act, which sets forth the ''specified amount'' used to determine rebate amounts. We also note that similar to the Medicare Part D Drug Inflation Rebate Program, CMS uses CPI-Us for specific periods to calculate the inflation rebate for the Medicare Part B Drug Inflation Rebate Program.

Comment: One commenter recommended that CMS provide additional guidance to Medicare Advantage (MA) plans on how Part B rebatable drugs will be reimbursed. The same commenter stated that CMS should increase payments to MA plans for the reduced coinsurance collected from beneficiaries under the adjusted beneficiary coinsurance policy described in section 1847A(i)(5) of the Act. The commenter asked CMS to establish a mechanism to reimburse MA plans for these losses.

Response: As part of MA rate development, CMS assumes prices for drugs covered under Part B will not materially exceed the inflation-adjusted payment amounts under section 1847A(i) of the Act. Therefore, no adjustments to projected Part B FFS expenditures to account for inflation rebates are necessary. Any potential losses from inflation rebates should be accounted for in the bids MA organizations submit to CMS.

Comment: One commenter requested CMS provide additional guidance to MA plans on how to operationalize the coinsurance adjustment as the rebatable drug price changes quarterly. The commenter did not specify any particular clarification that CMS should provide. The commenter also stated it would be helpful to understand how CMS will account for the reduction in cost sharing in MA plan reimbursements.

Response: MA plans should consult the HPMS memoranda, ''Inflation Reduction Act Changes to Cost Sharing for Part B Drugs for Contract Year 2023 Medicare Advantage and Section 1876 Cost Plans,'' dated November 7, 2022,[648] and ''Frequently Asked Questions: Inflation Reduction Act Changes to Cost Sharing for Part B Drugs for Medicare Advantage and Section 1876 Cost Plans,'' dated July 13, 2023,[649] for information. MA organizations must account for Part B rebatable drug coinsurance adjustments under section 1847A(i) of the Act in the bids MA organizations submit to CMS. Section 1853 of the Act sets forth how the MA capitation rates and benchmarks are set based on FFS per capita costs.

After consideration of public comments, we are finalizing our proposal as proposed at §§ 427.200 and 427.201.

d. Determination of the Rebate Amount for Part B Rebatable Drugs (§§ 427.300 Through 427.304)

i. Definitions

In proposed § 427.300, we proposed to define the following terms applicable to subpart D (§§ 427.300 through 427.304):

- ''340B Program''.
- ''Refundable single-use dose container or single-use package drug''.

We did not receive comments on these proposed definitions. We are finalizing these definitions as proposed at § 427.100.

ii. Calculation of the Total Part B Rebate Amount To Be Paid by Manufacturers

Section 1847A(i)(3) of the Act specifies the calculation of the rebate amount for a Part B rebatable drug assigned to a billing and payment code for an applicable calendar quarter for which a manufacturer must pay a rebate. We proposed to codify the rebate calculation, as established in revised Medicare Part B Drug Inflation Rebate Guidance,[650] as the estimated amount is equal to the product of the total number of billing units determined in accordance with section 1847A(i)(3)(B) of the Act (proposed at § 427.303) and the amount (if any) by which the specified amount (proposed at § 427.302(b)) exceeds the inflation-adjusted payment amount determined

[648] *https://mabenefitsmailbox.lmi.org/MABenefitsMailbox/S3Browser/GetFile?path=CY2023%20Part%20C%20IRA%20Memorandum%2011-7-2022.pdf.*

[649] *https://www.cms.gov/files/document/ira-part-b-rebatable-drugs-and-insulin-faq.pdf.*

[650] See: *https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-revised-guidance.pdf.*

in accordance with section 1847A(i)(3)(C) of the Act (proposed at § 427.302(g)) for the drug or biological product for an applicable calendar quarter. The Part B drug inflation rebate amount calculated in accordance with this subpart is subject to adjustment based on any reductions in accordance with subpart E of this part or any reconciliations in accordance with subpart F of this part.

Because Part B rebatable drugs are single source drugs or biologicals, they typically will have one manufacturer. However, a Part B rebatable drug could have more than one manufacturer. For example, a Part B rebatable drug could be produced by one or more manufacturer(s) that is a repackager or relabeler. Multiple manufacturers of a rebatable drug also could occur in the case of one or more authorized generic products that are marketed under the same FDA-approval as the original FDA applicant. In such instances, all the NDCs for the drug typically are assigned to the same billing and payment code(s), and each manufacturer is responsible for reporting ASP data to CMS. When calculating the rebate owed by manufacturers for a rebatable drug that has more than one manufacturer, we proposed to codify the policy from section 50.13 of the revised Medicare Part B Drug Inflation Rebate Guidance to multiply the total rebate amount calculated for the billing and payment code by the following quotient:

(Sum of the individual manufacturer's billing units sold during the applicable calendar quarter for all NDCs of the manufacturer assigned to the billing and payment code, as reported in the ASP data submissions) *divided by* (Sum of all manufacturers' total billing units sold during the applicable calendar quarter for all NDCs of the Part B rebatable drug assigned to the billing and payment code, as reported in the ASP data submissions)

We received public comments on this calculation approach. The following is a summary of the comments we received and our responses.

Comment: Some commenters expressed concern that CMS' proposal to allocate Part B inflation rebates when there are multiple manufacturers in a billing and payment code does not appropriately assign rebate liability. One commenter noted that the proposed methodology assumes that each NDC is equally responsible for driving the amount of an increase in the payment amount for the benchmark period and that the policy has the potential to assign rebate liability to a manufacturer whose individual pricing for its respective NDC(s) increased at or below the rate of inflation. One commenter recommended CMS revise its methodology to assess rebate liability against each manufacturer only in proportion to its actual responsibility for triggering the inflation rebate. A few commenters opposed the proposed methodology, which they noted could result in a manufacturer owing a rebate even when ASP growth for the manufacturer's own NDC has been lower than inflation.

Some commenters offered more specific recommendations, stating CMS should calculate inflation rebate liability at the NDC–11 level for billing and payment codes comprised of NDCs from multiple manufacturers. Additionally, these commenters recommended CMS require providers to report associated product NDC–11s on Part B claim forms and to reject claims without NDC–11s. These commenters maintained that requiring NDC–11s on Part B claim forms would mitigate situations in which one manufacturer would be subject to an inflation rebate due to the ASP growth of another manufacturer.

Response: We appreciate commenters sharing their concerns and recommendations. As we stated in the revised Medicare Part B Drug Inflation Rebate Guidance [651] on page 37, CMS maintains that it will apportion the Part B rebate amount among manufacturers by dividing the sum of each manufacturer's reported ASP units sold during the rebate quarter by the sum of all manufacturer-reported ASP units sold during the rebate quarter for all NDCs of the rebatable drug assigned to the billing and payment code. We believe this approach appropriately apportions rebate liability for NDCs assigned to a grouped billing and payment code using data available to CMS. We also believe that calculating Part B inflation rebates at the billing and payment code level, rather than at the NDC–11 level as some commenters recommended, is consistent with section 1847A(i)(3)(A) of the Act, which specifies how the rebate amount is calculated. Additionally, single source drugs are typically assigned unique HCPCS codes.

Additionally, calculating Part B inflation rebates at the NDC–11 level would require imposing new requirements on the claims submission process to require reporting of the NDC–11 on Part B claims, which would increase the administrative burden associated with the claims submission process. At this time, we will not require NDC–11s on Part B claims and we will continue to calculate Part B rebates at the HCPCS level per our proposed approach. We will continue to evaluate the potential for NDC–11 reporting in connection with our ongoing assessment of potential changes to Part B claims and billing. The comment regarding the use of NDC–11s in situations in which a provider inadvertently submits a claim for payment under Part B for a self-administered formulation rather than the physician-administered formulation is outside the scope of this final rule.

Comment: One commenter reported that it identified at least one circumstance where the majority of ASP units for an NDC in a billing and payment code are packaged into a payment amount that includes another item or service and are not separately payable (such as those paid under the End-Stage Renal Disease (ESRD) Prospective Payment System (PPS)), and noted that units attributed to that NDC should not be used to apportion rebate liability. The commenter recommended CMS clarify its methodology to exclude NDCs for which the number of ASP-reported units are subject to bundled payment.

Response: We thank the commenter for sharing this information. We are aware of the circumstance the commenter raised. Under such a circumstance, we will apportion the Part B rebate amount as described at § 427.301(b) and section 50.13 of the revised Medicare Part B Drug Inflation Rebate Guidance. In this particular circumstance, the NDCs in the bundled code are also in the non-bundled code, thus the ASP reporting for the NDCs will be applied to only the non-bundled code, since the bundled code is not separately payable. CMS will use this information to apportion liability since CMS cannot determine how many units by NDC are being administered in the bundled vs. non-bundled code. Further, at this time, we will not require NDC–11s on Part B claims because CMS has not fully assessed the breadth of changes to Part B claims and billing. CMS also notes that as proposed at § 427.303(b)(3) and as stated in the revised Medicare Part B Drug Inflation Rebate Guidance on page 38, in accordance with section 1847A(i)(3)(B)(ii)(II) of the Act, CMS will exclude units of drugs ''that are packaged into the payment amount for an item or service and are not separately payable.'' We also note that claim lines

[651] See: *https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-revised-guidance.pdf.*

for drugs for which payment is bundled under the ESRD PPS would not have a Medicare allowed amount that is greater than zero, and so such units will be excluded.

After consideration of public comments, for the reasons stated above, we believe that calculating Part B inflation rebates at the billing and payment code level is consistent with section 1847A(i)(3)(A) of the Act. Therefore, we are finalizing our proposals as proposed at § 427.301(b).

As discussed in the CY 2025 PFS proposed rule (89 FR 61943), based on further review, we have observed that there are several instances where there are multiple manufacturers in a billing and payment code and the ASP data, including the number of units sold, for all or some manufacturers' NDCs within a billing and payment code may be negative, zero, or missing. To enable CMS to calculate the respective rebate amounts attributable to each manufacturer when the ASP units are negative, zero, or missing, we solicited comments on the new proposed policies outlined below and any other alternative options.

(1) Scenarios in Which All NDCs Within a Billing and Payment Code Have Missing, Negative, or Equal to Zero ASP Units

If there are NDCs of multiple manufacturers in a billing and payment code, to determine the respective rebate amount when the manufacturer-reported ASP units for all NDCs are either missing, negative, or equal to zero but there is a positive rebate amount calculated for the Part B rebatable drug, we proposed to: (1) apportion a $0 rebate amount when the manufacturer-reported units for all NDCs are missing for NDCs not sold or marketed during the applicable calendar quarter, NDCs with negative manufacturer-reported ASP units during the applicable calendar quarter, and/or NDCs with manufacturer-reported ASP units equal to zero during the applicable calendar quarter; and (2) equally apportion a positive rebate amount to each NDC that was sold or marketed during the applicable calendar quarter and that lack manufacturer-reported ASP units for the applicable calendar quarter. If the NDCs within a billing and payment code have a mix of missing ASP units, negative ASP units, and/or zero ASP units, CMS will apportion a $0 rebate amount to each NDC with missing units that are not sold or marketed during the applicable calendar quarter, each NDC with negative units, and each NDC with units equal to zero, and CMS will equally apportion a positive rebate amount to NDCs with missing units that were sold or marketed during the applicable quarter by dividing the total rebate amount for the grouped billing and payment code by the total number of such NDCs within the billing and payment code. We understand that this approach would treat missing units for NDCs not sold or marketed during the applicable calendar quarter, negative units, and units equal to zero as representing zero sales, and we solicited comments on the extent to which this approach could potentially exclude from rebate liability a manufacturer of a drug that did have sales in that quarter (for example, if negative units represent price concessions). In addition, we solicited comments on the extent to which, in a scenario with a billing and payment code with multiple manufacturers, a single manufacturer that lacks reported ASP units could assume full rebate liability for the entire billing and payment code if the manufacturer's NDCs lack reported ASP units and were sold or marketed during the applicable calendar quarter.

We also considered several alternative policies for attributing rebate amounts to each respective manufacturer in this scenario, including: (1) using the reported ASP units from the calendar quarter prior to the applicable calendar quarter; (2) using an average of units sold based on sales data for several calendar quarters prior to the applicable calendar quarter (for example, an average of the previous 4 calendar quarters); and (3) validation of ASP data based on review of AMP data in combination with one of the aforementioned alternative proposed policies to determine inflation rebate amounts. However, we have observed that ASP units are often missing, negative, or equal to zero for several quarters in a four-quarter lookback, so including additional quarters may not necessarily yield additional data that could be used to apportion inflation rebate amounts (and could complicate the calculation of an average by introducing a mix of missing units, negative units, or units equal to zero within a single NDC). In addition, the AMP validation of ASP sales could add another layer of complexity and potential bias as AMP data represent only sales to retail community pharmacies, and ASP data represent all sales of a drug. We solicited comments on these alternatives.

(2) Scenarios in Which Some (But Not All) NDCs Have Missing, Negative, or Equal to Zero ASP Units

When some NDCs within a grouped billing and payment code lack manufacturer-reported ASP units, have negative manufacturer-reported units, or have manufacturer-reported ASP units equal to zero, we proposed to: (1) apportion a $0 rebate amount to each NDC that was not sold or marketed during the applicable calendar quarter that lacks manufacturer-reported ASP units during the applicable calendar quarter, each NDC with negative manufacturer-reported ASP unit for the applicable calendar quarter, and each NDC with manufacturer-reported ASP units equal to zero for the applicable calendar quarter; (2) assign ASP units equal to the lowest positive number of manufacturer-reported ASP units for any NDC in the grouped billing and payment code to each NDC that was sold or marketed during the applicable calendar quarter and for which the respective NDC lacks manufacturer-reported ASP units; and (3) apportion rebate amounts across NDCs that were sold or marketed during the applicable calendar quarter and for which each respective NDC lacks manufacturer-reported ASP units during the applicable calendar quarter and NDCs that were sold or marketed during the applicable calendar quarter and for which respective NDCs have positive manufacturer-reported units in accordance with the policy outlined in section 50.13 of the revised Medicare Part B Drug Inflation Rebate Guidance. We solicited comments on the extent to which, in a scenario where NDCs of multiple manufacturers are assigned to the same billing and payment code, a single manufacturer that accounts for all positive ASP units could potentially be responsible for the full rebate amount for the entire billing and payment code.

We also considered proposing other alternative policies for attributing rebate amounts to each respective manufacturer in this scenario, including: (1) review of historical ASP data to identify the most recent calendar quarter with positive ASP units for any of the NDCs with missing units, negative units, or units equal to zero in the applicable calendar quarter and allocation of financial responsibility across NDCs with positive ASP units in that quarter (excluding NDCs without positive units in that quarter); (2) using an average of units sold based on sales data for several calendar quarters prior to the applicable quarter (for example, an average of the previous four calendar quarters); (3) apportionment of rebates based on units at the NDC–9 level rather than the NDC–11 level; and (4) apportionment of rebates to only those manufacturers within a HCPCS code

that reported positive ASP units for the applicable calendar quarter.

We elected not to propose use of a historical lookback approach (under options 1 and 2) because ASP units are often missing, negative, or equal to zero for the most recent calendar quarter and/or over several quarters in a four-quarter lookback period, and so including additional quarters may not necessarily yield additional data that could be used to apportion inflation rebate amounts (and could complicate the calculation of an average by introducing a mix of missing units, negative units, or units equal to zero, and positive units within a single NDC). We also understand that a historical lookback approach could create outliers that could affect the resulting allocation. When evaluating option 3, CMS observed that ASP units are often missing, negative, or equal to zero for several calendar quarters when aggregating units sold at the NDC–9 level. Consequently, this approach may not necessarily yield additional data that could be used to apportion inflation rebate amounts and doing so would differ from our general policy on using NDC–11s as set forth in the revised guidance. Finally, we decided not to propose apportioning the full rebate amount to only those manufacturers that reported positive ASP units within a billing and payment code under option 4, as we questioned whether that policy could inadvertently disfavor manufacturers that reported units while benefiting manufacturers that did not report ASP data. We stated that we would continue to evaluate these alternative policy approaches for apportioning rebate liability and may adopt changes to this proposed policy in the final rule.

CMS reminded manufacturers of their reporting obligations under sections 1847A(f)(2) and 1927(b) of the Act and that failure to provide timely information may result in penalties as detailed in sections 1847A(d)(4)(B) and (C) and 1927(b)(3)(C)(i) of the Act.

We solicited comments on these proposals as well as alternative policy options on how CMS could apportion rebate amounts among multiple manufacturers' NDCs that lacked ASP units, reported negative units, and/or reported units equal to zero for NDCs.

We received public comments on these proposals and alternatives considered. The following is a summary of the comments we received and our responses.

Comment: A few commenters noted that their recommendation to require NDC–11s on Part B claim forms would allow CMS to validate ASP units for NDCs in a billing and payment code comprised of drugs from multiple manufacturers, particularly for drugs with negative or zero reported ASP but with sales during the applicable quarter. One of these commenters added that collecting NDC–11s would negate the need for CMS to develop an approach to allocate rebate amounts across multiple manufacturers in a billing and payment code with all or some negative, zero, or missing ASP units because CMS would have the actual number of units dispensed in Part B during applicable quarter for each manufacturer.

Response: CMS thanks the commenters for sharing this information. As we previously responded, calculating Part B inflation rebates at the NDC–11 level would require imposing new requirements on the claims submission process to require reporting of the NDC–11 and corresponding quantities on Part B claims, which would increase the administrative burden associated with the claims submission process. Additionally, modifications to Medicare systems would be needed to capture this information. At this time, we will not require NDC–11s on Part B claims and we will continue to calculate Part B rebates at the HCPCS level per our proposed approach that we are finalizing in this rule.

Comment: A couple of commenters recommended CMS provide greater clarity on how it plans to apportion the rebate amount in situations in which all or some NDCs within a billing and payment code have missing ASP units, negative ASP units, or ASP units equal to zero. In particular, these commenters requested that CMS define the terms sold or marketed, noting that CMS' proposal depends on whether NDCs are sold or marketed during the applicable quarter, however, CMS did not define when a drug is considered sold or marketed during the applicable calendar quarter in the proposed rule.

Response: We appreciate this feedback. We agree with the commenter's suggestion to define when a drug is considered sold or marketed during the applicable calendar quarter and are modifying the list of definitions at § 427.20. In this final rule, we have defined ''sold or marketed'' at § 427.20 as follows: means, with respect to an NDC, that the NDC has either a date of first sale identified using ASP data reported by NDC–11 to CMS by a manufacturer required under sections 1927(b)(3)(A)(iii)(I) and 1847A(f)(2) of the Act, or an NDC Directory start marketing date prior to or during the applicable calendar quarter and meets any of the following criteria: (1) the NDC has units reported for the rebate quarter; (2) the end marketing date is during the rebate quarter; (3) the end marketing date is after the rebate quarter; or (4) the end marketing date is missing.

After consideration of public comments, in this final rule, we are finalizing a methodology to calculate the respective rebate amounts attributable to each manufacturer when the ASP units are missing, negative, or equal to zero for the applicable calendar quarter. For this final rule, we are adding § 427.301(c) to describe how CMS will apportion the Part B rebate amount when there are multiple NDCs in a grouped billing and payment code and when manufacturer-reported ASP units for such NDCs lack manufacturer-reported ASP units during the applicable calendar quarter, have negative manufacturer-reported ASP units during the applicable calendar quarter, or have manufacturer-reported ASP units equal to zero during the applicable calendar quarter.

iii. Calculation of the Per Unit Part B Drug Rebate Amount

(1) Identification of the Specified Amount for the Applicable Calendar Quarter

In the calculation of the rebate amount for a Part B rebatable drug, we are statutorily required to compare the inflation-adjusted payment amount to the specified amount, which is the amount set forth in section 1847A(i)(3)(A)(ii)(I) of the Act. The statute requires CMS to impose an inflation rebate if the specified amount exceeds the inflation-adjusted payment amount. We proposed to codify at § 427.302(a) the policy established in revised Medicare Part B Drug Inflation Rebate Guidance to calculate the Part B per unit rebate amount for the applicable calendar quarter by determining the amount by which the specified amount exceeds the inflation-adjusted payment amount, after accounting for exclusions under § 427.303(b). We proposed to codify the current operational steps for calculating Part B inflation rebates as described in section 50 of the revised Medicare Part B Drug Inflation Rebate Guidance.

At § 427.302(b), we proposed to codify the policy established in section 50.2 of the revised Medicare Part B Drug Inflation Rebate Guidance on how to calculate the specified amount for the applicable calendar quarter. The ''specified amount'' refers to the amount specified in section 1847A(i)(3)(A)(ii)(I)(aa) or (bb) of the Act, as applicable. In general, section

1847A(i)(3)(A)(ii)(I)(aa) and (bb) of the Act cross-reference provisions governing quarterly payment limits for single source drugs and biological products that are typically, but not always, reflected in the quarterly pricing files. Specifically, the specified amount for single source drugs and biological products is 106 percent of the amount determined under section 1847A(b)(4) of the Act—that is, the lesser of ASP or WAC—for the applicable calendar quarter. For biosimilar biological products, the specified amount is the payment amount under section 1847A(b)(1)(C) of the Act, which is based on 100 percent of the ASP for the biosimilar biological product plus 6 percent of the lesser of ASP or WAC for the reference biological product.

At § 427.302(b)(1), we proposed that the first applicable calendar quarter for a Part B rebatable drug will be the earliest applicable calendar quarter that follows the payment amount benchmark quarter identified at § 427.302(c)(1) through (5).

Additionally, for the purposes of determining the rebate amount for a Part B rebatable drug, based on further consideration of data availability in specific circumstances, we proposed to clarify the policy established in section 50 of the revised Medicare Part B Drug Inflation Rebate Guidance and use the most updated price information reported by manufacturers, determined in accordance with section 1847A(i)(3)(A)(ii)(I)(aa) or (bb) of the Act as applicable, as the specified amount for the applicable calendar quarter for each HCPCS code identified in accordance with § 427.101. That is, we will use the most updated price information reported by manufacturers to compare whether 106 percent of WAC or 106 percent of ASP is less, and will use the lower value for the specified amount. In circumstances in which all NDCs in the HCPCS code have neither manufacturer-reported ASP nor WAC price data available for the applicable calendar quarter, we proposed to use WAC price data from other public sources, if available, to calculate 106 percent of WAC, which will serve as the specified amount. We proposed to adopt this approach regardless of whether there is a price substitution for Medicare's payment during the quarter or whether other policies cause the published payment limit to differ from the specified amount. In circumstances in which negative or zero manufacturer ASP data is reported for all NDCs for a given quarter, that negative or zero ASP amount will be used to compare 106 percent of WAC to 106 percent of ASP to determine the lower value for use as the specified amount. CMS believes these proposals on treatment of missing pricing data and treatment of pricing differences between reported prices and the published payment limit for a billing and payment code will further clarify the application of the specified amount in the calendar quarter and are consistent with the requirements set forth in section 1847A(i)(3)(A)(ii)(I) of the Act. CMS solicited comments on this policy.

We received public comment on these proposals. The following is a summary of the comment we received and our response.

Comment: One commenter expressed support for CMS' proposal to determine the specified amount by comparing whether 106 percent of ASP or 106 percent of WAC is lower. However, this commenter disagreed with CMS using WAC when determining a product's specified amount when reported ASP is zero or negative because the specified amount refers to the payment amount determined in accordance with section 1847A(i)(3)(A)(ii)(I) of the Act, which directs CMS to use the lesser of the product's ASP or WAC plus 6 percent. The commenter noted that using WAC in the context of inflation rebates is inappropriate because inflation rebates are intended to address rising drug prices.

Response: We believe this commenter misunderstood our proposal. In the CY 2025 PFS proposed rule (89 FR 61945), we proposed to compare whether 106 percent of WAC or 106 percent of ASP is less using the most updated price information reported by manufacturers, and then to use the lower value for the specified amount. We also proposed that, in circumstances in which negative or zero manufacturer ASP data is reported for all NDCs for a given quarter, the negative or zero ASP amount will be used when comparing 106 percent of WAC to 106 percent of ASP to determine the lower value for use as the specified amount. That is, the specified amount in such circumstances will be the lower of 106 percent of the negative or zero ASP or 106 percent of WAC. We believe the proposals on the treatment of missing or negative pricing data for a billing and payment code clarify the application of the specified amount in the calendar quarter and are consistent with the requirements set forth in section 1847A(i)(3)(A)(ii)(I) of the Act.

After consideration of public comments, we are finalizing our proposal as proposed with modifications at § 427.302(b). We are making a technical correction to § 427.302(b)(1) to clarify that the first applicable calendar quarter for a Part B rebatable drug will be the later of the third full calendar quarter after the payment amount benchmark quarter identified in § 427.302(c)(1) through (5) or the calendar quarter beginning January 1, 2023. We also are making a technical correction by adding § 427.302(b)(2) to state that for a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after the effective date of the drug's assigned billing and payment code other than a NOC code, whichever is later, the first applicable calendar quarter will be the first full calendar quarter that follows the payment amount benchmark quarter identified in § 427.302(c)(1) through (5). Finally, with the addition of § 427.302(b)(2) as previously described, we are revising a paragraph reference to be § 427.302(b)(3).

(2) Identification of the Payment Amount Benchmark Quarter

At § 427.302(c), we proposed to codify policies from section 50.3 of the revised Medicare Part B Drug Inflation Rebate Guidance to identify the applicable payment amount benchmark quarter. Specifically, for drugs first approved or licensed by the FDA on or before December 1, 2020, and with a first marketed date on or before December 1, 2020, the payment amount benchmark quarter would be the calendar quarter beginning July 1, 2021. For subsequently approved drugs—that is, drugs approved or licensed by the FDA after December 1, 2020—the payment amount benchmark quarter would be the third full calendar quarter after a drug's first marketed date. Additionally, there may be cases where a drug was first approved or licensed on or before December 1, 2020, but with a first marketed date after December 1, 2020, and the drug lacks ASP or WAC data to calculate the payment amount for the applicable calendar quarter beginning July 1, 2021. Under the policy applicable to drugs approved or licensed and with a first marketed date before December 1, 2020, such drugs would not have data to calculate the payment amount in the payment amount benchmark quarter. In these cases, we proposed to treat such drugs in the same manner as we would treat subsequently approved drugs and identify the payment amount benchmark quarter as the third full calendar quarter after a drug's first marketed date. We solicited comments on this policy proposal and specifically on our proposal to treat drugs approved

or licensed on or before December 1, 2020, but with a first marketed date after December 1, 2020 as subsequently approved drugs.

For Part B rebatable drugs that were billed under a NOC code during the payment amount benchmark quarter, CMS stated in the revised Medicare Part B Drug Inflation Rebate Guidance that it would use the third full quarter after a drug was assigned a unique HCPCS code as the payment amount benchmark quarter. In this rulemaking, we proposed to determine the payment amount benchmark quarter as follows: for a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug's first marketed date, whichever is later, we proposed that the payment amount benchmark quarter be the third full calendar quarter after the Part B rebatable drug is assigned a billing and payment code other than a NOC code. We solicited comments on these proposals.

We noted in the CY 2025 PFS proposed rule (89 FR 61945) that we continue to consider whether there is a need to identify additional or modified methodologies to appropriately determine the payment amount benchmark quarter for products with insufficient pricing data in the payment amount benchmark quarter or that otherwise do not fall squarely into the categories otherwise described at § 427.302(c) and in a manner that enables the calculation of rebate amounts consistent with section 1847A(i)(3) of the Act.

In the CY 2025 PFS proposed rule (89 FR 61945), we noted that we have determined that ASP data are the most appropriate for identifying (1) the day on which the drug was first marketed and (2) which calendar quarter is the third full calendar quarter thereafter as the payment amount benchmark quarter for drugs first approved or licensed by the FDA after December 1, 2020, or licensed on or before December 1, 2020, but with a first marketed date after December 1, 2020. We also noted that we have determined that it is most appropriate and administratively feasible to identify the first marketed date as the date of first sale of any NDC–11 within a billing and payment code among all products and package sizes under the same FDA application.

Additionally, we noted in the CY 2025 PFS proposed rule (89 FR 61945) that we believe ASP data are accurate and reliable because manufacturers attest to the accuracy of their submitted data and have the ability to update these data quarterly. Therefore, at § 427.302(c), we proposed to codify existing policy from the revised Medicare Part B Drug Inflation Rebate Guidance on the identification of the payment amount benchmark quarter for each Part B rebatable drug. CMS will use the earliest first marketed date of any NDC ever marketed under any FDA application under which any NDCs that have ever been assigned to the billing and payment code for that Part B rebatable drug as of the applicable calendar quarter have ever been marketed. The earliest first marketed date will apply to all NDCs within a billing and payment code and to all products and package sizes marketed under the same FDA-approved application. If the original NDC on which the first marketed date is based is terminated, the first marketed date for the associated billing and payment code would remain the same. By defining the first marketed date for the Part B rebatable drug at the level of the product's FDA approval, CMS will retain the same first marketed date for the billing and payment code even if the NDCs and/or billing and payment codes used to bill for the Part B rebatable drug change over time. In addition, when the date of first sale is missing from ASP data, we proposed to identify the first marketed date from alternative public sources, such as the National Institutes of Health's DailyMed.

Table 54 in this section provides an example, for illustration purposes only, of the application of first marketed date based on the earliest date of first sale of any NDC ever marketed under any NDA or BLA under which any NDCs that have ever been assigned to the billing and payment code as of the applicable calendar quarter have ever been marketed. In the example, NDC1 (marketed under NDA 000000) is first sold on January 15, 2022, and NDC2 (also marketed under NDA 000000) is first sold on October 15, 2023. Both NDCs are assigned to HCPCS code X0000, and no other NDCs are or have been assigned to HCPCS code X0000. NDC1 and NDC2 are the only NDCs marketed under NDA 000000. The first marketed date for HCPCS code X0000 would be January 15, 2022, because that date is the earliest date of first sale for any NDC marketed under any NDA or BLA under which any NDC ever assigned to that HCPCS code was marketed as of the calendar quarter. If NDC2 was subsequently assigned to a new HCPCS code Y0000, the first marketed date for HCPCS Y0000 would similarly be January 15, 2022, because that is the earliest date of first sale for any NDC (NDC1) marketed under any NDA (NDA 000000) under which any NDC ever assigned to HCPCS code Y0000 (NDC2) was marketed. In cases when NDCs that are marketed under different NDA/BLAs are assigned to the same HCPCS code, using the example in the table in this section, NDC3 (the only NDC marketed under NDA 111111) was first sold on November 1, 2024, and first billed under HCPCS Y0000. The first marketed date for HCPCS Y0000 would remain January 15, 2022, as noted, given that HCPCS Y0000 includes NDC2, marketed under NDA 000000, for which the earliest date of first sale for any NDC marketed thereunder is NDC1's date of first sale (January 15, 2022). NDC3 was later assigned to a new HCPCS code Z0000. The first marketed date for HCPCS code Z0000 would be November 1, 2024, because that is the earliest date of first sale for any NDC ever marketed under NDA 111111, which is the only NDA ever associated with Z0000 as of the calendar quarter.

TABLE 54: Example of Application of First Marketed Date at the FDA Approval Level

Calendar Quarter	HCPCS Code	NDC	FDA Application Number	Date of First Sale for NDC	HCPCS Code Effective Date	Date of First Sale for Any NDC in NDA/BLA	First Marketed Date
2023 Q2	X0000	NDC1	000000	1/15/2022	4/1/2023	1/15/2022	1/15/2022
2023 Q3	X0000	NDC1	000000	1/15/2022	4/1/2023	1/15/2022	1/15/2022
		NDC2	000000	10/15/2023	4/1/2023	1/15/2022	
2023 Q4	X0000	NDC1	000000	1/15/2022	4/1/2023	1/15/2022	1/15/2022
		NDC2	000000	10/15/2023	4/1/2023	1/15/2022	
2024 Q1	X0000	NDC2	000000	10/15/2023	4/1/2023	1/15/2022	1/15/2022
2024 Q2	X0000	NDC2	000000	10/15/2023	4/1/2023	1/15/2022	1/15/2022
2024 Q3	Y0000	NDC2	000000	10/15/2023	7/1/2024	1/15/2022	1/15/2022
2024 Q4	Y0000	NDC2	000000	10/15/2023	7/1/2024	1/15/2022	1/15/2022
		NDC3	111111	11/1/2024	7/1/2024	11/1/2024	
2025 Q1	Y0000	NDC2	000000	10/15/2023	7/1/2024	1/15/2022	1/15/2022
	Z0000	NDC3	111111	11/1/2024	1/1/2025	11/1/2024	11/1/2024

We did not receive public comments on this provision to identify the payment amount benchmark quarter for each Part B rebatable drug.

After further consideration of the provision, we are finalizing, with modification, an amendment to § 427.302(c) to specify that to identify the applicable payment amount benchmark quarter, we also will use the earliest approval or licensure date for any FDA application associated with any NDC ever assigned to the billing and payment code. We are making this modification because we identified an example scenario in which an NDC previously assigned to a billing and payment code had a first marketed date in June 1992 (that is, before December 1, 2020), but the FDA applications with NDCs currently in the billing and payment code were approved after December 1, 2020. Prior to CMS adding the modification, this billing and payment code would have met the definition of a subsequently approved drug under § 427.20 and been subject to the payment amount benchmark quarter identification method at § 427.302(c)(2), which would have meant the payment amount benchmark quarter would be the third full calendar quarter after the first marketed date—that is, a payment amount benchmark quarter in 1993. This outcome would have been inconsistent with the policy described in the proposed rule. By defining and referencing the billing and payment code FDA approval or licensure date using the same FDA applications used to identify the first marketed date for associated NDCs, the regulatory text better reflects our original intent to avoid incongruous results and retain the same approval or licensure date for the billing and payment code even if an NDC is removed from the billing and payment code. As finalized with such modification, the billing and payment code in the above scenario will have a first marketed date in 1992 and a first approval date *before* December 1, 2020, and thus will have a payment amount benchmark quarter of July 1–September 30, 2021 under § 427.302(c)(1).

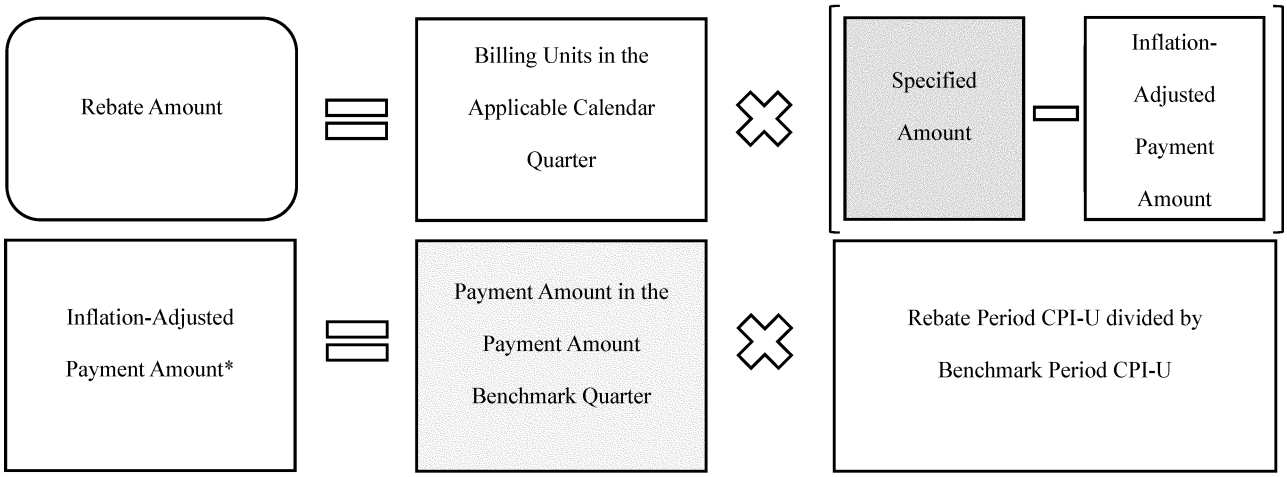
(3) Identification of Payment Amount in the Payment Amount Benchmark Quarter

Section 1847A(i)(3)(C) of the Act specifies use of the ''payment amount for the billing and payment code for such drug in the payment amount benchmark quarter'' (''payment amount in the payment amount benchmark quarter'') in the determination of the inflation-adjusted payment amount. While the specified amount and the payment amount in the payment amount benchmark quarter are similar, the statutory requirements for determining these two amounts differ. The specified amount for a Part B rebatable drug, as set forth in section 1847A(i)(3)(A)(ii)(I) of the Act, is based on item (aa) (that is, lesser of ASP+6 percent or WAC+6 percent) or (bb) (that is, 100 percent of the ASP for the biosimilar biological product plus 6 percent of the lesser of ASP or WAC for the reference biological product). The payment amount in the payment amount benchmark quarter under section 1847A(i)(3)(C)(i) of the Act is based on various provisions within section 1847A of the Act (for example, the lesser of 106 percent ASP or WAC, WAC+3 percent, and price substitutions). To identify the payment amount in the payment amount benchmark quarter for the Part B rebatable drug by billing and payment code, at § 427.302(d), we proposed to codify the policies established in section 50.4 of the revised Medicare Part B Drug Inflation Rebate Guidance. CMS will use the published payment limit (as available) for the billing and payment code for the applicable payment amount benchmark quarter determined in accordance with section 1847A of the Act. If a published payment limit is not available for the applicable payment amount benchmark quarters, CMS will use the lower of 106 percent of manufacturer-reported ASP or 106 percent of manufacturer-reported WAC. If neither a published payment limit nor manufacturer-reported ASP or WAC data are available, CMS will use WAC data from other public sources to calculate 106 percent of WAC, which, solely for the purposes of identifying the payment amount in the payment amount benchmark quarter, CMS will consider to be the payment amount for the payment amount benchmark quarter. Table 55 and Figure B–I4 illustrate the specified amount and payment amount in the payment amount benchmark quarter.

TABLE 55: Comparison of Specified Amount and Payment Amount in the Payment Amount Benchmark Quarter

Specified Amount		Payment Amount in the Payment Amount Benchmark Quarter	
Purpose in Rebate Calculation	**Pricing Methodology Under 1847A(i)(3)(A)(ii)(I)**	**Purpose in Rebate Calculation**	**Pricing Methodology Under 1847A(i)(3)(C)(i)**
Part B amount described under 1847A(i)(3)(A)(ii)(I) for the calendar quarter in which a rebate may be assessed	• Lesser of ASP+6% or WAC+6% • In the case of a biosimilar biological product, 100% of ASP for the biosimilar biological product + 6% of the lesser of ASP or WAC for the reference biological product	Part B published payment limit for the payment amount benchmark quarter, which is generally the quarter beginning July 1, 2021	• Various Part B pricing provisions consistent with section 1847A of the Act

FIGURE B-I4: Use of the Specified Amount and the Payment Amount in the Benchmark Quarter in Rebate Calculations



* See the section Determination of the Inflation Adjusted Payment Amount for information about identification and calculation of the inflation-adjusted payment amount.

We note that there may be situations when a Part B rebatable drug was previously billed under a grouped billing and payment code during the benchmark quarter and later billed under a unique billing and payment code, such as certain section 505(b)(2) drug products and single source drugs that were previously multiple source drugs. For example, a multiple source drug approved under an NDA may become a single source drug if all other therapeutically equivalent drugs are no longer marketed and the now-single source NDA is later shifted into a separately payable code. To identify the payment amount in the payment amount benchmark quarter for such drugs, we proposed to codify policy established in section 50.4 of the Medicare Part B Drug Inflation Rebate Guidance and identify the grouped billing and payment code payment limit used by CMS for the payment amount in the payment amount benchmark quarter and use that payment limit for the benchmark quarter.

Finally, consistent with the policy established in section 50.4 of the revised Medicare Part B Drug Inflation Rebate Guidance, we will not apply a sequestration reduction to the payment amount in the payment amount benchmark quarter as part of the methodology to calculate a Part B inflation rebate amount.

Comment: A couple of commenters expressed concern about the metric CMS is using to determine the payment amount in the payment amount benchmark quarter. One commenter expressed concern about Part B rebatable drugs that were not in a grouped billing and payment code as of October 1, 2003, but were in a grouped billing and payment code as of July 1, 2021 and were later assigned to a unique billing and payment code. For these drugs, the commenter wrote that the benchmark payment amount reflects the grouped billing and payment code; however, the drug's price in any given quarter reflects the drug's unique billing and payment code payment amount. The implications of this, according to the commenter, are that the payment amount in the payment amount

benchmark quarter may be low because it accounts for all drugs in a grouped billing and payment code, making it seem like the drug's price has increased more than it actually has. Further, this commenter wrote that CMS is measuring the drug's current payment amount (based on unique billing and payment code) against the past, lower grouped billing and payment code. To address this concern, the commenter recommended CMS apply a drug-specific benchmark measurement for Part B rebatable drugs that moved from a grouped billing and payment code to a unique code and then calculate the payment amount in the payment amount benchmark quarter based on how the calculation would have been made if the drug had been assigned to a unique code before the payment amount benchmark quarter. The commenter added that this approach would more accurately reflect real price increases for drugs previously in grouped billing and payment codes. Additionally, another commenter recommended that CMS use the manufacturer calculated specified amount instead of the ''published payment limit'' for grouped billing and payment codes.

Response: We appreciate these commenters raising these concerns. We believe that in situations when a Part B rebatable drug was previously billed under a grouped billing and payment code during the benchmark quarter and later billed under a unique billing and payment code, using the payment limit for the grouped billing and payment code payment is in accordance with section 1847A(i)(3)(C)(i) of the Act. This provision sets forth the payment amount in the payment amount benchmark quarter and is based on various provisions within section 1847A of the Act (for example, the lesser of 106 percent ASP or WAC, WAC+3 percent, and price substitutions). We also note that single source drugs or biological products that were within the same billing and payment code as of October 1, 2003 are treated as multiple-source drugs, per section 1847A(c)(6)(C)(ii) of the Act, and will be excluded from the definition of a Part B rebatable drug as proposed at § 427.101(b)(2).

After consideration of public comments on this proposed provision, we are finalizing our proposal as proposed at § 427.302(d).

(4) Identification of the Benchmark Period CPI–U

For each Part B rebatable drug by HCPCS code, the statute requires CMS to identify the applicable benchmark period CPI–U. In accordance with section 1847A(i)(3)(E) of the Act, the benchmark period CPI–U for drugs first approved or licensed by the FDA on or before December 1, 2020, and with a first marketed date on or before December 1, 2020, is the CPI–U for January 2021, which is 261.582.[652] We proposed to codify at § 427.302(e) policies established in section 50.5 of the revised Medicare Part B Drug Inflation Rebate Guidance. Specifically, the benchmark period CPI–U for drugs first approved or licensed on or before December 1, 2020, with a first marketed date after December 1, 2020, will be the CPI–U for the first month of the third full calendar quarter after a drug's first marketed date. Additionally, we proposed to codify policies in revised guidance that the benchmark period CPI–U for subsequently approved drugs will be the first month of the first full calendar quarter after a drug's first marketed date in accordance with section 1847A(i)(4)(A) of the Act. Furthermore, we proposed to determine the benchmark period CPI–U for certain drugs previously billed under NOC codes as follows: For a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug's first marketed date, whichever is later, we proposed that the benchmark period CPI–U will be first month of the third full calendar quarter after the drug is assigned a billing and payment code other than a NOC code.

We received public comments on these proposed provisions. The following is a summary of the comments we received and our responses.

Comment: A couple of commenters recommended that CMS align the payment amount benchmark quarter and the benchmark quarter CPI–U for drugs approved on or before December 1, 2020, but with a first marketed date after December 1, 2020. CMS proposed that for a Part B rebatable drug first approved or licensed by the FDA on or before December 1, 2020, but with a first marketed date after December 1, 2020, the payment amount benchmark quarter is the third full calendar quarter after a drug's first marketed date. Specifically, these commenters recommended CMS treat the benchmark quarter CPI–U in the same manner as CMS' approach for subsequently approved drugs. For subsequently approved drugs, CMS proposed that the benchmark period CPI–U is the CPI–U for the first month of the first full calendar quarter after a drug's first marketed date in accordance with section 1847A(i)(4)(A) of the Act. One commenter noted that revising the policy to align the benchmark quarter CPI–Us for such drugs would provide consistency for manufacturers.

One of these commenters also made a similar recommendation for Part B rebatable drugs previous billed under a NOC code—that CMS should take a consistent approach for such drugs and identify the benchmark period CPI–U as the first full calendar quarter after the day on which the drug was first marketed as it does for subsequently approved drugs.

Response: We thank these commenters for their feedback. We agree with these commenters' recommendations. We have revised this policy to align the payment amount benchmark period CPI–U and to maintain a consistent approach for all Part B rebatable drugs. For example, both for drugs first approved or licensed by the FDA on or before December 1, 2020, and with a first marketed date on or before December 1, 2020 (§ 427.302(e)(1)) and for subsequently approved drugs (§ 427.302(e)(2)), there are two quarters between the payment amount benchmark quarter and the benchmark period CPI–U identified under statute. To align the approaches, we are revising the CPI–U date at § 427.302(e)(3) and (e)(4) to reflect the same two-quarter difference. We consider this revision a correction rather than a material policy change. At § 427.302(e)(3), CMS is finalizing the policy that for a Part B rebatable drug first approved or licensed by FDA on or before December 1, 2020, and with a first marketed date after December 1, 2020, the benchmark period CPI–U is the CPI–U for the first month of the first full calendar quarter after a drug's first marketed date. Also, at § 427.302(e)(4), for a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug's first marketed date, whichever is later, the benchmark period CPI–U is the CPI–U for the first month of the first full calendar quarter after the Part B rebatable drug is assigned a billing and payment code other than a NOC code.

Comment: One commenter recommended that CMS clarify that it will provide timely notification to manufacturers when CMS assigns a drug to a new billing and payment code to allow manufacturers to prepare for any impact to inflation rebate calculation for that drug.

Response: We appreciate this suggestion. We refer manufacturers to CMS' HCPCS Quarterly Update website,

[652] CMS retrieved the January 2021 CPI–U from bls.gov on March 22, 2024.

where we post all HCPCS Level II updates.[653] These files are fully searchable and sortable. We also note that additional information about HCPCS coding procedures[654] also is available on the CMS' HCPCS Quarterly Update website.

After consideration of public comments, we are finalizing the provision at § 427.302(d) as proposed and are finalizing, with modifications, an amendment to § 427.302(e)(3), to use the first month of the first full calendar quarter after a drug's first marketed date as the benchmark period CPI–U for drugs first approved or licensed on or before December 1, 2020, and with a first marketed date after December 1, 2020. Additionally, we are finalizing, with modifications, an amendment to § 427.302(e)(4), to use the first month of the first full calendar quarter after the drug is assigned a billing and payment code other than a NOC code as the benchmark period CPI–U for a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full quarter after such drug's first marketed date, whichever is later.

(5) Identification of the Rebate Period CPI–U

As specified in section 1847A(i)(3)(F) of the Act, at § 427.302(f), we proposed to codify the policy described in section 50.6 of the revised Medicare Part B Drug Inflation Rebate Guidance, that the rebate period CPI–U means the greater of the benchmark period CPI–U index level and the CPI–U index level for the first month of the calendar quarter that is 2 calendar quarters prior to the applicable calendar quarter in which the Part B rebatable drug is furnished. CMS will retrieve the CPI–U index level information from *bls.gov*.

We did not receive public comments on this proposed provision, and we are finalizing as proposed at § 427.302(f).

(6) Determination of the Inflation-Adjusted Payment Amount

Section 1847A(i)(3)(C) of the Act specifies the determination of the inflation-adjusted payment amount. At § 427.302(g), we proposed to codify the policy established in section 50.7 of revised Medicare Part B Drug Inflation Rebate Guidance for determining the inflation-adjusted payment amount in accordance with this section of the Act. For each applicable calendar quarter and for each Part B rebatable drug by billing and payment code, we proposed to use the payment amount in the payment amount benchmark quarter (per § 427.302(d)), benchmark period CPI–U (per § 427.302(e)), and rebate period CPI–U (per § 427.302(f)) to identify the inflation-adjusted payment amount. Specifically, we will calculate the inflation-adjusted payment amount by dividing the rebate period CPI–U by the benchmark period CPI–U and then multiplying the quotient by the payment amount in the payment amount benchmark quarter.

We did not receive public comments on this proposed provision, and we are finalizing as proposed at § 427.302(g).

iv. Determination of Total Number of Billing Units

For calendar quarters starting on or after January 1, 2023, we proposed at § 427.303 to codify policies established in section 50.8 of the revised Medicare Part B Drug Inflation Rebate Guidance to determine the number of billing units for each Part B rebatable drug by HCPCS code. Section 1847A(i)(3)(B) of the Act describes the total number of billing units of Part B rebatable drugs that should be included in the rebate calculation. These billing units include the number of billing units for the HCPCS code of the Part B rebatable drug furnished during the relevant calendar quarter minus billing units of drugs with respect to which the manufacturer provides a discount under the 340B Program, billing units with respect to which the manufacturer could have paid a Medicaid rebate, and billing units that are packaged into the payment amount for an item or service and are not separately payable. We further proposed codifying policy set forth in revised Medicare Part B Drug Inflation Rebate Guidance at § 427.303 to exclude billing units when a drug is no longer a Part B rebatable drug.

After identifying Part B rebatable drugs by HCPCS code (in accordance with policy proposed at §§ 427.10, 427.20, and 427.100 through 427.101) using final action claims in the CMS Medicare fee-for-service claims repository, we proposed to codify existing policy in the revised Medicare Part B Drug Inflation Rebate Guidance at § 427.303 to determine the total number of billing units for each HCPCS code as follows. We proposed to identify claim lines for such HCPCS code for dates of service in the calendar quarter, exclude billing units in claim specified in section 1847A(i)(3)(B)(ii) of the Act, as applicable, and sum the number of billing units in the remaining claim lines for which Medicare payment was allowed and greater than zero. Including billing units where Medicare payment was allowed would ensure that billing units for which Medicare and some beneficiaries have financial liability would be counted in the total number of billing units.

We proposed to codify the policy in the revised Medicare Part B Drug Inflation Rebate Guidance at § 427.303 and will perform this process at least 3 months after the end of a calendar quarter to allow time for claims to be submitted, processed, and finalized. Subpart F described the proposed rebate process, including reports of rebate amounts, suggestion of error, and restatements. We solicited comment on the following proposed policies, including whether any additional units should be excluded from the rebate amount calculation.

We received public comments on these proposed provisions. The following is a summary of the comments we received and our responses.

Comment: One commenter recommended CMS also exclude units from other federal programs such as units purchased under the Federal Supply Schedule, as these units already have statutory discounts.

Response: In response to the request that CMS also exclude units from other Federal programs, section 1847A(i)(3)(B) of the Act prescribes that the total number of units is based on the number of units furnished in a calendar quarter, excluding units of drugs with respect to which the manufacturer provides a discount under the 340B Program, units with respect to which the manufacturer pays a Medicaid rebate, or units that are packaged into the payment amount for an item or service and are not separately payable. In addition, CMS will exclude units when a drug is no longer a Part B rebatable drug. CMS declines to adopt the commenter's recommendation to exclude units from other federal programs, such as units purchased under the Federal Supply Schedule.

After consideration of public comments, we are finalizing our proposal as proposed at § 427.303 to exclude specified units from Part B inflation rebate calculations. We note that, in the Medicare Part D Drug Inflation Rebate Program provisions, we finalized at § 428.203(b)(3) that CMS will exclude units from the total number of units dispensed of a Part D rebatable drug when those units are associated with a Part D rebatable drug that has been billed as compounded. We have not made equivalent modifications in

[653] See: *https://www.cms.gov/medicare/coding-billing/healthcare-common-procedure-system/quarterly-update.*

[654] CMS, HEALTHCARE COMMON PROCEDURE CODING SYSTEM (HCPCS) LEVEL II CODING PROCEDURES, December 2022, *https://www.cms.gov/medicare/coding/medhcpcsgeninfo/downloads/2018-11-30-hcpcs-level2-coding-procedure.pdf.*

the Medicare Part B Drug Inflation Rebate Program provisions because drugs covered under Part B that are billed as compounds should be reported with HCPCS code J7999, which is a NOC code.[655] Because products billed under a NOC code are not considered Part B rebatable drugs, as finalized at § 427.101(b)(3), drugs covered under Part B that are billed as compounds are by default already excluded from Part B inflation rebate calculations. For the same reason, it is unnecessary to modify § 427.101(c) to explicitly exclude drugs covered under Part B that are billed as compounds from the calculation of the average total allowed charges used to exclude drugs and biological products with average total allowed charges below the applicable threshold.

(1) Units of Drugs Acquired Through the 340B Program

Section 1847A(i)(3)(B)(ii)(I) of the Act specifically excludes billing units of drugs for which the manufacturer provides a discount under the 340B Program from the billing units of drugs for which a manufacturer may otherwise have a Part B inflation rebate liability. We proposed codifying the policy described in section 50.8.1 of the revised Medicare Part B Drug Inflation Rebate Guidance at § 427.303 to remove separately payable billing units in claim lines that are billed with the ''JG'' or ''TB'' modifiers from identified final action claim lines.

In the CY 2025 PFS proposed rule, CMS sought to codify the removal of units of drugs for which the manufacturer provides a discount under the 340B Program from Part B inflation rebate calculations based on certain prior CMS policies set forth in this paragraph related to the identification of claims for such drugs. On December 20, 2022, CMS issued program guidance that requires all 340B covered entities to include the ''JG'' or ''TB'' modifier, as applicable, on separately payable claim lines for drugs acquired through the 340B Program with dates of service beginning no later than January 1, 2024.[656] Furthermore, in the CY 2024 OPPS final rule (88 FR 81791 through 81792), CMS finalized a policy to utilize a single 340B modifier (''TB''), requiring hospitals that currently report the ''JG'' modifier to use the ''TB'' modifier beginning January 1, 2025. As described in the final rule, in CY 2024, these hospitals can choose to continue to use the ''JG'' modifier or choose to transition to the use of ''TB'' modifier during that year. On December 14, 2023, CMS updated the December 20, 2022 guidance titled ''Part B Inflation Rebate Guidance: Use of the 340B Modifiers'' to align with the updated single modifier requirement.[657]

We proposed at § 427.303(b)(1)(i) to exclude separately payable billing units in claim lines for professional claims with dates of service during 2023 from suppliers that are covered entities listed by the HRSA 340B Office of Pharmacy Affairs Information System (OPAIS) as participating in the 340B Program. CMS will use National Provider Identifier (NPI) numbers and/or Medicare Provider Numbers (MPN) to identify these suppliers and the claims submitted with such identifiers. We proposed to continue this approach for professional claims with dates of service during 2024. For institutional claims through 2024, we proposed to remove units in all institutional claim lines that were billed with the ''JG'' or ''TB'' modifiers. Consistent with the CMS updated 340B modifier guidance, we proposed at § 427.303(b)(1)(iii) to exclude separately payable billing units in claim lines for institutional providers with the ''JG'' and ''TB'' modifiers from identified final action claims with dates of service through December 31, 2024. We proposed to codify policies established in section 50.8.1 of the revised Medicare Part B Drug Inflation Rebate Guidance at § 427.303(b)(1)(iii) by excluding separately payable billing units in claim lines with the ''TB'' modifier from identified final action claims with dates of service on or after January 1, 2025. We proposed to use these modifiers to identify and exclude billing units for which a discount was acquired under the 340B Program because the ''TB'' modifier is an existing mechanism used to identify drugs acquired through the 340B Program and familiar to most 340B covered entities paid under the OPPS.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: One commenter recommended CMS provide manufacturers with claim-level data so that manufacturers may verify rebate reports and validate that 340B units are not included in inflation rebate calculations. Another commenter asked CMS to share claim-level data to prevent duplicate discounts and noted that the commenter found modifiers did not consistently identify duplicate claims.

Response: CMS declines to provide claim-level data to manufacturers regarding the 340B Program or other statutory exclusions of units from rebate counts as CMS does not believe this is necessary to operate the program at this time. Providing manufacturers with extracts of claim-level data regarding the 340B Program or other statutory exclusions of units from rebate counts at a cadence that aligns with timing for Rebate Reports such that a manufacturer could use the data to validate their Reports would be a complex undertaking for the agency. Additionally, providing claim-level data raises considerations on potential impact to other interested parties such as pharmacies and plans or Pharmacy Benefit Managers (PBMs). Based on CMS' engagement with interested parties, there is no consensus on what they consider to be essential data fields to verify rebate reports and validate removal of 340B units without risk of disclosure of protected health information or other sensitive or confidential information. Finally, while the statute requires manufacturers to pay a Part B inflation rebate on drugs with prices that exceed inflation for an applicable calendar quarter, there are no statutory requirements for the provision of claim-level data or 340B data to manufacturers to fulfill their obligation to pay a Part B inflation rebate. The Rebate Reports and reconciliation policy described at § 427.502 of this final rule will allow manufacturers to review results of rebate calculations and raise a mathematical error during the Suggestion of Error period described at § 427.503, thereby not requiring validation of 340B data.

Comment: A couple of commenters requested CMS specify that accurate use of the ''JG'' or ''TB'' modifier is required for a Part B claim to be complete and reimbursable. Some commenters suggested that CMS require Medicare Administrative Contractors (MACs) to reject claims as incomplete if they do not include a 340B or non-340B modifier (that is, to identify that a drug was not purchased under the 340B Program).

Some commenters recommended that CMS conduct audits to ensure covered entities' adherence to program requirements and to comprehensively exclude the appropriate units from inflation rebate calculations. A few commenters suggested the audit process include penalties for non-compliant covered entities and recalculations of inflation rebate obligations when needed. One commenter asked CMS to

publish specific penalties for non-compliance with program requirements, instead of providing a statement that covered entities are subject to the False Claims Act.

Response: We thank commenters for their feedback. The December 20, 2022 Part B Inflation Rebate Guidance: 340B Modifier [658] program guidance requires all 340B covered entities to include the ''JG'' or ''TB'' modifier, as applicable, on separately payable claim lines for drugs acquired through the 340B Program with dates of service beginning no later than January 1, 2024. This guidance was revised in the December 14, 2023 Revised Part B Inflation Rebate Guidance: 340B Modifier [659] program guidance, which maintains the modifier requirement but aligns it to policy in the CY 2024 OPPS final rule (88 FR 81791 through 81792).

Providers and suppliers are required to maintain current knowledge of Medicare billing policies and to submit accurate claims. Providers and suppliers are also required to maintain all documentation to support the validity of the services reported on the claim and ensure this information is available upon request. CMS expects providers and suppliers to submit accurate claims, to utilize the correct modifiers, and to correct any claim that omits a required modifier. CMS believes existing penalties are sufficient to promote provider and supplier compliance with these requirements. CMS intends for all rebate calculations to be as accurate and is providing a process for manufacturers to review rebate calculations, as described at § 427.501. Section 1847A(i)(8) of the Act precludes administrative or judicial review of the determination of units under this program, the determination of whether a drug is a Part B rebatable drug, and the calculation of the rebate amount.

Comment: Some commenters recommended that CMS adopt use of a non-340B modifier to identify Part B drugs not acquired through the 340B Program. Commenters stated that a non-340B modifier paired with the existing ''JG'' [660] and ''TB'' modifiers will allow for program integrity and comprehensive identification and removal of 340B units from Part B inflation rebate calculations. Commenters stated this approach would align with CMS' approach for the Part B discarded drug modifier JZ, where providers and suppliers submit a claim with the JZ modifier if there are no discarded amounts from single-dose container or single-use package drugs. One commenter stated that in the absence of a claims clearinghouse to identify and verify 340B claims, CMS should continue investigating methods to improve identification of 340B claims at the point of sale and to require modifiers for non-340B claims.

Response: At this time, CMS does not believe a modifier is needed to report drugs or biological products that were not purchased under the 340B Program. Based on available data at the time of this rulemaking, CMS does not have evidence that providers and suppliers are frequently omitting the ''JG'' and ''TB'' modifiers on a claim for a Part B drug purchased under the 340B Program. CMS continues to believe the requirement under the updated 340B modifier guidance and CY 2024 OPPS/ASC final rule for providers and suppliers to use a 340B modifier will provide the data required to identify and exclude 340B units from Part B inflation rebates.[661] [662]

Comment: A few commenters asked CMS to establish a clearinghouse model to identify 340B units and exclude these units from inflation rebate calculations. One commenter stated their ideal approach would be an independent entity serving as a clearinghouse for claims data. Commenters stated a clearinghouse would facilitate the identification of 340B claims, prevent duplicate discounts, and provide transparency. One commenter requested that CMS take an active role in ensuring the validity of data submitted to the clearinghouse and not rely only on attestations from covered entities. The same commenter recommended CMS provide covered entities with a set of data fields they must submit to the clearinghouse.

Response: We believe that requiring a claims modifier, as described in the December 20, 2022 Part B Inflation Rebate Guidance: 340B Modifier [663] program guidance and revised in the December 14, 2023 Revised Part B Inflation Rebate Guidance: 340B Modifier [664] program guidance, will provide the necessary data to exclude 340B units from Part B inflation rebates for institutional claims with dates of service starting in calendar year 2024. For professional claims with dates of service during 2023 and 2024, CMS will also remove all units in claims from suppliers that are covered entities listed by the HRSA 340B OPAIS as participating in the 340B Program. CMS will use NPIs and/or MPNs to identify these suppliers and the claims submitted with such identifiers. In this final rule, CMS clarified that we will use other fields in the OPAIS (such as name and address) to identify covered entities submitting professional claims with separately payable 340B units if NPI or MPN is not available. For institutional claims with dates of service during 2023, CMS will remove units in all institutional claim lines that were billed with the ''JG'' or ''TB'' modifiers and all other units in institutional claims submitted by 340B covered entities not paid under OPPS billing separately payable claim lines for drugs acquired under the 340B Program.

We decline to adopt the commenters' suggestion to adopt a clearinghouse model for identification and removal of 340B units from Part B claims on the basis that covered entities are knowledgeable of the 340B modifier requirements and current billing patterns reveal these modifiers are being reported on professional and institutional claims in CY 2023 and CY 2024. At this time, we do not have evidence to suggest a change in approach is necessary.

Comment: One commenter noted that CMS' proposed policy for excluding 340B units on professional claims with dates of service in 2023 and 2024 relies on NPIs and asked CMS to clarify that claims submitted without NPIs would be excluded from the calculation of inflation rebates.

Response: All providers and suppliers are required to report an NPI on a Medicare claim as required under § 424.506(c). For professional claims with dates of service in CY 2023 and CY 2024, CMS will use NPIs and/or MPNs to identify covered entities submitting professional claims with separately payable 340B units so that these units

[659] See: *https://www.cms.gov/files/document/revised-part-b-inflation-rebate-340b-modifier-guidance.pdf.*

[660] The ''JG'' modifier will be discontinued on December 31, 2024. All covered entities must transition to use the ''TB'' modifier for dates of service on or after January 1, 2025.

[661] See: *https://www.federalregister.gov/public-inspection/2023-24293/medicare-program-hospital-outpatientprospective-payment-and-ambulatory-surgical-center-payment.* See: *https://www.federalregister.gov/public-inspection/2023-24293/medicare-program-hospital-outpatientprospective-payment-and-ambulatory-surgical-center-payment.*

[662] See: *https://www.cms.gov/files/document/revised-part-b-inflation-rebate-340b-modifier-guidance.pdf.* See: *https://www.cms.gov/files/document/revised-part-b-inflation-rebate-340b-modifier-guidance.pdf.*

[664] See: *https://www.cms.gov/files/document/revised-part-b-inflation-rebate-340b-modifier-guidance.pdf.*

can be excluded from rebate calculations. In this final rule, CMS is clarifying that we will use other fields in the OPAIS (such as name and address) to identify covered entities submitting professional claims with separately payable 340B units if NPI or MPN is not available.

Comment: A few commenters requested CMS coordinate with HRSA to prevent the duplication of 340B discounts and possibly overstated inflation rebate obligations due to 340B units not being wholly excluded.

Response: CMS intends to continue to consult with HRSA for technical assistance with the 340B pricing databases and to ensure that the inflation rebate policies remove 340B units as required by statute.

Comment: A few commenters asked that CMS clarify that the 340B claims modifier requirement applies to all drugs covered under Medicare Part B, including Human Immunodeficiency Virus (HIV) pre-exposure prophylaxis (PrEP) drugs if an NCD is finalized for these drugs.

Response: On September 30, 2024 CMS determined that PrEP using antiretroviral drugs to prevent HIV is reasonable and necessary for the prevention of an illness or disability and will cover these drugs as an additional preventive service under Medicare Part B.[665] We clarify that the 340B modifier requirement applies to such antiretroviral drugs when covered under Part B for non-preventive purposes (that is, when used for diagnosis or treatment). Given the timing of the NCD in connection with the timing for development of this rulemaking, CMS intends to address whether Drugs Covered as Additional Preventive Services (DCAPS) would be Part B rebatable drugs in future policymaking.

Comment: One commenter expressed concern that the removal of 340B units from calculations could lead to higher costs for drugs commonly used by HIV patients.

Response: We appreciate the commenter's concern about drug costs for HIV patients. Section 1847A(i)(3)(B)(ii)(I) of the Act establishes that 340B units are removed from the Part B inflation rebate calculation.

After consideration of public comments, we are finalizing this provision with a few modifications.

We proposed at § 427.303(b)(1)(i) to exclude separately payable billing units in claim lines for professional claims with dates of service during 2023 from suppliers that are covered entities listed by the HRSA 340B OPAIS as participating in the 340B Program. CMS will use NPIs and/or MPNs to identify these suppliers and the claims submitted with such identifiers. In this final rule, CMS is noting that if NPIs and MPNs are not available from these suppliers and claims, it will use other fields available in OPAIS, such as name and address. As some covered entities in the OPAIS do not provide an NPI or MPN, using other fields in OPAIS will allow CMS to identify those covered entities and exclude their claims for separately payable drugs acquired under the 340B Program. CMS is further clarifying in this final rule that we will also remove units in all professional claim lines for dates of service during 2023 that were billed with the ''JG'' or ''TB'' modifiers. As use of the JG or TB modifier was not required for some covered entities until January 1, 2024, this approach will allow CMS to comprehensively exclude units of separately payable drugs acquired under the 340B Program from professional claims. In our proposal to codify policies described in the revised guidance, we inadvertently omitted a reference to our exclusion policy for all professional claims; the clarification herein is intended to ensure consistency with the policy described in the revised guidance. As we proposed in the CY 2025 PFS proposed rule, we will continue this approach for professional claims with dates of service during 2024.

We are adding language specifying that for institutional claims with dates of service during 2023, in addition to removing units in all institutional claim lines that were billed with the ''JG'' or ''TB'' modifiers, we will remove units in institutional claims from covered entities that are critical access hospitals and Maryland waiver hospitals. As critical access hospitals and Maryland waiver hospitals were not required to use the JG or TB modifier before January 1, 2024, CMS cannot use these modifiers to accurately remove units in institutional claims with dates of service during 2023 for these hospital types. In our proposal to codify prior policies described in the Part B revised guidance, we inadvertently omitted a reference to the exclusion of units in institutional claims submitted by covered entity critical access hospitals, Maryland waiver hospitals, and non-excepted off-campus provider-based departments (PBDs) billing separately payable claim lines for drugs acquired under the 340B Program for claims with dates of service from January 1, 2023 through December 31, 2023. Because critical access hospitals and Maryland waiver hospitals were not required to report ''JG'' or ''TB'' modifiers during 2023, the omission of such reference in the proposed regulatory text at § 427.303(b)(1)(ii) would not capture 340B units by such covered entities. Beginning January 1, 2024, all covered entities were required to report the ''JG'' or ''TB'' modifier. We do not specifically reference non-excepted off-campus provider-based departments (PBDs) in § 427.303(b)(1)(ii) and in this final rule because these entities were required to use a modifier for separately payable drugs before the December 20, 2022 program guidance requiring use of the ''JG'' or ''TB'' modifier for all 340B covered entities beginning on January 1, 2024. Therefore, separately payable drugs acquired under the 340B Program billed by non-excepted off-campus PBDs in 2023 can be identified with the ''JG'' or ''TB'' modifier and would be excluded from rebate calculations.

We are also finalizing an amendment to § 427.303(b)(1)(iii) to state that we will exclude from rebate calculations separately payable billing units in claim lines for institutional claims that are billed with the ''JG'' or ''TB'' modifiers for claims with dates of service from January 1, 2024 through December 31, 2024. We are also finalizing an amendment to § 427.303(b)(1)(iv) to state that we will exclude from rebate calculations separately payable billing units in claim lines for institutional claims that are billed with the ''TB'' modifier for claims with dates of service on or after January 1, 2025.

CMS views these amendments as merely technical changes to improve operations in fulfillment of our statutory obligation to exclude 340B units under the Medicare Part B Drug Inflation Rebate Program; therefore, CMS believes that the revised regulatory text of § 427.303(b)(1) more accurately reflects our policies described in the Medicare Part B Drug Inflation Rebate Revised Guidance.

(2) Units With a Rebate Under Section 1927 of the Social Security Act

To receive payment under Medicaid for covered outpatient drugs, manufacturers must participate in the Medicaid Drug Rebate Program (MDRP) (that is, have a drug rebate agreement in effect with the Secretary of HHS) and are required to report certain pricing and drug product information and pay Medicaid drug rebates for covered outpatient drugs furnished and paid for under the Medicaid State plan. States

[665] See: *https://www.cms.gov/medicare-coverage-database/view/ncacal-decision-memo.aspx?proposed=N&ncaid=310&fromTracking=Y&doctype=all&timeframe=30&sortBy=updated&bc=20.*

invoice manufacturers no later than 60 days after the end of each calendar quarter on the number of units of each dosage form and strength of each covered outpatient drug furnished and paid for under the State plan. This invoice includes units of covered outpatient drugs that are furnished to dually eligible beneficiaries when the claim for the drug is paid for by Medicare Part B and the beneficiary's cost sharing is covered by Medicaid. To determine unit counts for rebate calculations, at this time, at § 427.303(b)(2), we proposed codifying our policy described in revised Medicare Part B Drug Inflation Rebate Guidance in section 50.8.2 to exclude billing units from claims with dates of service during a month within a calendar quarter when the Medicare beneficiary has Medicaid coverage that may provide cost-sharing assistance. These are Qualified Medicare Beneficiary (QMB) Plus, Specified Low-Income Medicare Beneficiary (SLMB) Plus, QMB-only beneficiaries, and other full dually eligible beneficiaries. We further proposed codifying the policy in revised guidance that billing units for Part B rebatable drugs furnished to Medicare beneficiaries with Medicaid coverage that does not include cost-sharing assistance (that is, SLMB Only, Qualified Disabled and Working Individuals (QDWI), and Qualifying Individuals (QI) beneficiaries) be included in rebate calculations. CMS will identify the months for which a beneficiary has Medicaid coverage with cost-sharing assistance using available information (for example the State MMA File of dually eligible beneficiaries) at the time the rebate amount is being calculated for a calendar quarter. We proposed codifying this policy as manufacturers pay rebates through the Medicaid Drug Rebate Program on units of covered outpatient drugs that are furnished to dually eligible beneficiaries when the claim for the drug is paid for by Medicare Part B and the beneficiary's cost sharing is covered by Medicaid.

We also considered excluding all units furnished to dually eligible individuals but did not propose this alternative because it would result in the over exclusion of units.

Comment: One commenter supported the proposal to exclude units subject to rebates under the MDRP that are furnished to dually eligible beneficiaries when the claim is paid by Medicare Part B and the beneficiary's cost sharing is covered by Medicaid.

Response: We appreciate this commenter's support.

After consideration of public comments, we are finalizing as proposed at § 427.303(b)(2).

(3) Units That Are Packaged Into the Payment Amount for an Item or Service and Are Not Separately Payable

As described earlier in this section, we proposed codifying our policy in section 50.8.3 of revised Medicare Part B Drug Inflation Rebate Guidance and only include claim lines with a Medicare allowed amount greater than zero. Because we proposed at § 427.303(b)(3) identifying billing units for separately payable claim lines for Part B rebatable drugs only, no further action would be necessary to exclude billing units that are packaged into the payment amount for an item or service and are not separately payable, such as drugs for which payment is packaged under the OPPS, or the Ambulatory Surgical Center (ASC) payment system, or those furnished in the Federally qualified health centers (FQHC) or rural health clinics (RHC) setting. CMS notes that claim lines for drugs for which payment is bundled under the ESRD PPS would not have a Medicare allowed amount that is greater than zero and such units would therefore be excluded.

We also noted in the CY 2025 PFS proposed rule (89 FR 61949) that in accordance with policies established in the CY 2024 OPPS/ASC final rule and codified in regulatory text at 88 FR 81540, CMS will except biosimilar biological products from the OPPS threshold packaging policy when their reference biological products are separately paid. This means that CMS will pay separately for these biosimilar biological products even if their per-day cost is below the threshold packaging policy. Because units of these biosimilar biological products are not packaged into the payment amount for an item or service and are separately payable, they will be included in the Part B inflation rebate calculation if they are not qualifying biosimilar biological products.

Comment: One commenter supported CMS' proposal to exclude bundled units from the calculation of the Medicare Part B inflation rebate.

Response: We appreciate this commenter's support.

After consideration of public comments, we are finalizing as proposed at § 427.303(b)(3).

(4) Units When a Drug Is No Longer a Part B Rebatable Drug

As described in section 1847A(i)(2) of the Act, multiple source drugs are not Part B rebatable drugs. A single source drug that is a Part B rebatable drug could become a multiple source drug at the start of or during a calendar quarter. In such cases, at § 427.303(b)(4), we proposed codifying policy in section 50.8.4 of the revised Medicare Part B Drug Inflation Rebate Guidance to identify the first marketed date, as described at § 427.20, of a drug product that is rated as therapeutically equivalent to such a drug under FDA's most recent publication of Approved Drug Products with Therapeutic Equivalence Evaluations (commonly known as the FDA Orange Book [666]) and determine whether the drug is no longer a Part B rebatable drug. At § 427.303(b)(4), we proposed to exclude billing units of such drug furnished on and after the first day of the calendar month in which the therapeutically equivalent drug was first sold or marketed during the applicable calendar quarter. We further proposed codifying policy that CMS may consult with the FDA for technical assistance in instances where there is ambiguity as to whether a new product is therapeutically equivalent. Units furnished on or after the calendar month of the first marketed date will be excluded from the units identified in accordance with § 427.303(b)(4)(iii).

We did not receive public comments on this proposed provision, and we are finalizing as proposed at § 427.303(b)(4).

(5) Operational Considerations Related to the Inclusion of Units Furnished to Beneficiaries Who Are Enrolled in Medicare Advantage (MA) Plans

Section 1847A(i) of the Act requires the manufacturer of a Part B rebatable drug to pay a rebate that, generally, is calculated based on the total number of billing units of that drug that were furnished in a calendar quarter, multiplied by the excess specified amount for the drug over a statutorily defined inflation-adjusted payment amount. The inclusion in this calculation of billing units of drugs that are furnished to Medicare beneficiaries who are enrolled in MA plans poses significant operational complexities. We did not propose to establish a policy on treatment of MA units in the calculation of Part B inflation rebates due to operational considerations, but we stated that we may establish policy on this issue in future rulemaking. We solicited comments on this approach.

We did not make any proposals associated with the treatment of MA units for Part B rebate calculations;

[666] Accessible via *https://www.fda.gov/drugs/drug-approvals-and-databases/approved-drug-products-therapeutic-equivalence-evaluations-orange-book.*

however, we received public comments on this topic from interested parties. The following is a summary of the comments we received and our responses.

Comment: Some commenters recommended CMS clarify in final rulemaking that MA units cannot be included in Part B inflation rebates and that CMS does not intend to issue rulemaking in the future to the contrary.

Response: At this time, CMS will not include MA units in Part B inflation rebates. CMS may revisit the inclusion of billing units of drugs that are furnished to Medicare beneficiaries who are enrolled in MA plans under Medicare Part C in future rulemaking.

Comment: Some commenters interpreted section 1847(i)(2)(A) of the Act to expressly define a Part B rebatable drug as a drug for which payment is made under Medicare Part B and, therefore, in the view of the commenters, to exclude units of drugs furnished under MA. Some commenters also asserted that CMS has set precedent through other Agency policy that interprets the scope of section 1847A to cover only Part B, not Part C. As an example, one commenter notes that section 1847A(a)(1) of the Act says that the ASP-based methodology in this section of the statute applies to drugs described in section 1842(o)(1)(C) of the Act. This reference applies to certain types of drugs furnished after 2004 ''for which payment has been made under this part.'' The commenter says that CMS interpreted this language to apply to only drugs paid for under Part B and did not interpret it to mean requiring MA plans use the ASP-based methodology to pay for drugs furnished to plan enrollees. One commenter stated that CMS does not explain the basis for its belief that the statute could extend to Part C.

Response: Because CMS believes that operational changes would likely be necessary to include MA units, at this time, CMS will not include MA units in the calculation of Part B rebates. CMS may address the issue of whether to include MA units in the calculation of Part B rebates in future policymaking and would solicit and consider public comments on this issue at that time.

Comment: Some commenters stated that units of rebatable drugs furnished under MA should be excluded from Part B rebatable drugs because they are not separately payable. These commenters noted that under section 1847A(i)(1)(B) of the Act, units that are packaged into the payment amount for an item or service and are not separately payable are excluded from the calculation of the total number of units to apply Part B rebates. Commenters stated that Part B drugs are not separately payable within MA, as CMS makes capitated payments to plans.

Response: As noted in the response above, CMS will not include MA units in the calculation of Part B rebates at this time due to operational considerations. CMS may address this issue in future policymaking and would solicit and consider public comments on this issue at that time.

(6) Units Subject to Discarded Drug Refunds

At § 427.303(b)(5), we proposed a policy addressing the interaction between Part B inflation rebates and billing units of discarded drugs. Under the Infrastructure Investment and Jobs Act of 2021, section 90004, manufacturers are required to provide a refund to CMS for certain discarded amounts from separately payable single-dose container or single-use package drugs beginning January 1, 2023. To implement the discarded drugs refund provision of the Infrastructure Investment and Jobs Act of 2021, in the CY 2023 PFS final rule (87 FR 69711 through 69719), CMS finalized the requirement that providers and suppliers use the ''JW'' claim modifier for all separately payable drugs with discarded amounts of drugs from a single-dose container or from a single-use package for Part B claims that bill for drugs and biological products to report discarded amounts. CMS also finalized a requirement for providers and suppliers to use the ''JZ'' modifier on claims that bill for drugs from single-dose containers that are separately payable under Medicare Part B when there are no discarded amounts to attest that no amount of drug was discarded and eligible for payment.[667] As of October 1, 2023, claims for drugs from single-dose containers that do not use the modifiers as appropriate may be returned until claims are properly resubmitted.

Although section 1847A(i)(3)(B)(ii) of the Act does not require that billing units of discarded drugs be excluded from Part B inflation rebates, we proposed to exclude billing units of discarded drugs that are subject to discarded drug refunds from Part B inflation rebates. CMS believes not applying Part B inflation rebates to billing units of discarded drugs for which a refund is owed would balance fairness for manufacturers that owe refunds for billing units of discarded drugs with the need to fulfill the requirements of section 11101 of the IRA.

As new policy not established in section 50.8.6 of the revised Medicare Part B Drug Inflation Rebate Guidance, we proposed to exclude billing units of a refundable single-dose container or single-use package drug as defined at § 414.902 (hereinafter referred to as ''refundable drug'') subject to discarded drug refunds, from the calculation of rebate amounts during the reconciliation process except for calendar quarters in calendar year 2023. In the CY 2024 PFS final rule (codified at § 414.940), CMS finalized a policy to send annual refund reports for discarded drug refunds for the 4 quarters of a calendar year at or around the time it sends Part B Inflation Rebate Reports for the first quarter of the following calendar year. Therefore, CMS invoices manufacturers for discarded drug refunds on an annual basis but CMS is required to invoice manufacturers for Part B inflation rebates on a quarterly basis.

Under the timeline for processing discarded drug refunds, data to determine which billing units of discarded drugs are subject to discarded drug refunds generally will not be available until after CMS issues the Rebate Report to the manufacturer. Due to these data limitations, we proposed to include all discarded billing units, including units of a refundable drug subject to the discarded drug refund (as defined at § 414.940), in the calculation of billing units for the Preliminary Rebate Report and the Rebate Report. We proposed to use data available during the reconciliation process to exclude billing units of discarded drugs that are subject to discarded drug refunds from the calculation of the rebate amount.

For calendar quarters in calendar year 2023, we proposed to exclude billing units of a refundable drug subject to discarded drug refunds from the calculation of the rebate amount before CMS issues the Rebate Report to the manufacturer. As permitted by section 1847A(i)(1)(C) of the Act, CMS is delaying reporting of rebate information required by section 1847A(i)(1)(A) of the Act for calendar quarters in calendar years 2023 and 2024 until no later than September 30, 2025. Under this timeline for calendar quarters in calendar year 2023, CMS will have data available regarding which billing units are subject to discarded drug refunds when CMS sends the Preliminary Rebate Report and Rebate Report in 2025 for calendar quarters in calendar year 2023 and can exclude these billing units from the

[667] See 87 FR 2512, November 18, 2022 (*https://www.federalregister.gov/d/2022-23873/p-2512*).

calculation of the rebate amount in these reports.

We solicited comments on the proposed approach to excluding billing units of a refundable drug subject to discarded drug refunds from the calculation of Part B inflation rebate amounts during the reconciliation process, except for calendar quarters in calendar year 2023.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported or recommended CMS finalize its proposal to exclude billing units of a refundable drug subject to a discarded drug refunds from the calculation of Part B inflation rebate amounts during the reconciliation process, except for calendar quarters in calendar year 2023.

Response: We thank these commenters for their input and support for the proposed policy.

Comment: A few commenters noted that under section 1847A(i)(2)(A) of the Act, a Part B rebatable drug is defined as ''a single-source drug or biological . . . for which payment is made under this part.'' These commenters claimed that, since manufacturers provide refunds to CMS for Part B payment on these units through the discarded drug refund under section 1847A(h) of the Act, these units should not be eligible for inclusion in Part B rebates. A couple of commenters noted that the calculation of total units subject to Part B rebates is based on units ''furnished'' to Medicare beneficiaries during an applicable calendar quarter. Commenters contended that, since the units of discarded drugs subject to refunds are not furnished to Medicare beneficiaries, these units should be excluded from the calculation of units subject to Part B rebates.

Response: We thank these commenters for the input. However, as we stated in revised Medicare Part B Drug Inflation Rebate Guidance on page 31, we disagree with the commenters' interpretation of the statute that because manufacturers refund CMS for some of the allowed payment for discarded drugs, these units of drugs are not eligible for inclusion in Part B inflation rebates. Section 1847A(i)(3)(B) of the Act prescribes that the total number of units of a rebatable drug is determined by the number of units furnished in an applicable calendar quarter, excluding units of drugs with respect to which the manufacturer provides a discount under the 340B Program, units with respect to which the manufacturer pays a Medicaid rebate, or units that are packaged into the payment amount for an item or service and are not separately payable. Discarded units of Part B rebatable drugs are not detailed in the exclusions from the total number of units under section 1847A(i)(3)(B)(ii) of the Act. Moreover, Medicare payment is made to providers for discarded units of drugs. As CMS stated in section III.I.2.d.iv. of this final rule, including units where Medicare payment was allowed would ensure that billing units for which Medicare and some beneficiaries have financial liability would be counted in the total number of units.

Comment: A couple of commenters noted that excluding billing units subject to discarded drug refunds during the Part B annual reconciliation process will not capture the discarded units ''updated refund quarters'' for which reports are sent after the Part B inflation rebate reconciliation process. A couple of commenters recommended that CMS establish a second reconciliation process for the Medicare Part B Drug Inflation Rebate Program to account for updated refund reports under Discarded Drug Refund Program.

Response: We thank these commenters for the input. However, while the provisions in section 1847A(i) of the Act do not expressly provide for reconciliation in the Medicare Part B Drug Inflation Rebate Program, we have determined that a process for reconciling the rebate amount for updated information is necessary and appropriate to promote the accuracy of the rebate amount for each drug for each applicable calendar quarter.

While we considered a longer period until a revision is completed, such as the 36-month period provided by the MDRP for AMP restatements at § 447.510(d)(3), we believe that a 12-month reconciliation period is appropriate for the Part B rebate program because of requirements to submit timely and accurate ASP data (specified at § 414.806(b)), and it provides sufficient time to capture the majority of updates to the data specified at § 427.301 while closing out (except for the proposed circumstances at § 427.501(d)(2) regarding CMS' identification of mathematical errors or manufacturer misreporting) the calculation of the rebate amount for a Part B rebatable drug for an applicable calendar quarter within a reasonable time period after the Rebate Report is issued. While we proposed a 12- and 36-month reconciliation period in the Medicare Part D Drug Inflation Rebate Program, due largely to the 36-month restatement period provided for MDRP AMP restatements (specified at § 447.510(d)(3)), we do not believe a second or longer restatement process is needed for Part B rebatable drugs because, as described previously, the ASP and claims run out periods correspond with sufficient claims run out and ASP restatement timing for Part B (particularly when considering penalties associated with failure to submit timely and accurate ASP data (specified at § 414.806(b)).

Under the timeline for processing discarded drug refunds, annual reports to determine which billing units of discarded drugs are subject to discarded drug refunds generally will not be available until after CMS issues the Rebate Report to the manufacturer. Due to these data limitations, we proposed to use data available during the reconciliation process to exclude billing units of discarded drugs that are subject to discarded drug refunds from the calculation of the rebate amount.

The Discarded Drug Refund Program includes lagged claims data in annual reports, subsequent to initial reports. Although this lagged data will generally not be available when we conduct reconciliation in the Medicare Part B Drug Inflation Rebate Program, in the CY 2024 PFS final rule (88 FR 79047 through 79049) we stated that CMS estimates that over 99 percent of claims will be final when a given quarter is first included in a discarded drug refund report. Therefore, CMS anticipates that there will not be significant revisions to the calculation of the rebate amount based on the determination of which billing units of discarded drugs are subject to discarded drug refunds after we conduct reconciliation in the Medicare Part B Drug Inflation Rebate Program. We intend to monitor the lagged claims data included in updated refund quarters on the annual discarded drug refund reports and to consider potential changes to the timing of reconciliation in the Medicare Part B Drug Inflation Rebate Program in the future if necessary.

Comment: A couple of commenters recommended CMS consider excluding a quarterly estimated amount of billing units subject to discarded drug refunds from the calculation of rebate amounts for the Preliminary Rebate Report and Rebate Report. One commenter noted that applying an estimated amount would help streamline manufacturer refund payment obligations and reduce manufacturer refund overpayments. One commenter recommended that CMS then reconcile, if needed, the quarterly estimated amount of billing units subject to discarded drug refunds with the actual amount of billing units subject to discarded drug refunds during

the reconciliation process. One commenter recommended CMS provide details to manufacturers on exclusion determinations on claims for billing units subject to discarded drug refunds.

Response: We thank these commenters for the input and recommendations. Data to determine which billing units of discarded drugs are subject to discarded drug refunds generally will not be available until after CMS issues the Rebate Report to the manufacturer and none of the data available at the time of this report offer a reliable basis to estimate the amount of billing units that will be subject to discarded drug refunds. Due to this data limitation, CMS will include all discarded billing units, including units of a refundable drug subject to the discarded drug refund (as defined at § 414.940), in the calculation of billing units for the Preliminary Rebate Report and the Rebate Report. CMS will use data available during the reconciliation process to exclude billing units of discarded drugs that are subject to discarded drug refunds from the calculation of the rebate amount. CMS will use information from discarded drug refund reports to determine the billing units of discarded drugs that are subject to discarded drug refunds and should be excluded from Part B inflation rebates. Information on how discarded drug refunds will be calculated is specified in regulation at § 414.940 (87 FR 69731).

After consideration of public comments, we are finalizing the policy proposed at § 427.303(b)(5) with a modification to align the policy described at § 427.303(b)(5) with the policy as described in the CY 2025 PFS proposed rule (89 FR 61950). CMS will exclude billing units of a refundable drug for which a refund is owed, rather than for which a refund has been paid, from the calculation of Part B inflation rebate amounts during the reconciliation process, except for calendar quarters in calendar year 2023.

v. Adjustments for Changes to Billing and Payment Codes

Changes to billing and payment codes, including new code assignments and dose description changes, may occur. When a new billing and payment code is assigned for a Part B rebatable drug and the code dose description, which determines that amount of drug in each billing unit, remains the same, we proposed to codify at § 427.304(b) the existing policy set forth in revised Medicare Part B Drug Inflation Rebate Guidance to use the benchmark quarter's payment amount, the payment amount benchmark quarter, and the benchmark quarter CPI–U of the prior billing and payment code to calculate the per unit Part B rebate amount. For example, a single source drug or biological product may be assigned a new billing and payment code if it was initially assigned to a billing and payment code with other products and then later assigned a unique billing and payment code. In this situation, a multiple source drug marketed under an NDA may become a single source drug if all its other therapeutically equivalent drugs are discontinued and the now-single source drug marketed under an NDA is later shifted into a separately payable code.

When a Part B rebatable drug's code dose description changes, we proposed to codify at § 427.304(a) policies established in section 50.9 of the revised Medicare Part B Drug Inflation Rebate Guidance and apply a conversion factor within the rebate calculation, when applicable. For example, a billing and payment code dose description that determines the amount of drug in each billing unit could be changed from 10mg to 5mg. If a billing and payment code dose description changes from 10mg to 5mg, the payment amount in the payment amount benchmark quarter for such drug was $200 based on 10mg, and the rebate period payment amount is based on 5mg, then CMS would apply a conversion factor of 0.5 to the payment amount in the payment amount benchmark quarter (yielding $100). In this example, the conversion factor would be based on the ratio of the current billing unit description to the prior billing unit description (5mg/10mg = 0.5). In addition, to ensure consistency in how CMS is calculating a rebate when a billing and payment code's dose description changes, we proposed to apply a conversion factor before applying the percentage by which the rebate period CPI–U for the calendar quarter exceeds the benchmark period CPI–U to determine the inflation-adjusted payment amount.

In situations where a new billing and payment code is assigned for a Part B rebatable drug and the code dose description changes, we will apply a conversion factor, as appropriate, and use the benchmark quarter's payment amount, the payment amount benchmark quarter, and the benchmark quarter CPI–U of the prior billing and payment code to calculate the per unit Part B rebate amount—consistent with the policy in revised guidance that we proposed to codify at § 427.304(a) and (b).

To apply the provisions in section 1847A(i) of the Act appropriately, we also proposed at § 427.304(c) to codify existing policy to maintain a crosswalk between such changes or codes.

We solicited comments on these proposals.

We did not receive public comments on this proposed provision, and we are finalizing as proposed at § 427.304.

e. Reducing the Rebate Amount for Part B Rebatable Drugs in Shortage and When There Is a Severe Supply Chain Disruption (§§ 427.400 Through 427.402)

Section 1847A(i)(3)(G) of the Act requires the Secretary to reduce or waive the rebate amount owed by a manufacturer for a Part B rebatable drug with respect to a calendar quarter in two cases: (1) when a Part B rebatable drug is described as currently in shortage on a shortage list in effect under section 506E of the FD&C Act at any point during the applicable period; and (2) when CMS determines there is a severe supply chain disruption during the applicable quarter for a Part B rebatable biosimilar biological product, such as a disruption caused by a natural disaster or other unique or unexpected event. The statute does not describe how CMS should reduce or waive inflation rebates in each of these cases.

To implement the statutory requirement under section 1847A(i)(3)(G) of the Act, we proposed to codify in subpart E of part 427 existing policies described in sections 50.10, 50.11, and 50.12 of the revised Medicare Part B Drug Inflation Rebate Guidance to reduce the total rebate amount owed by a manufacturer in each of these cases, as summarized in Table 56 and discussed later in this section.

TABLE 56: Determination of Rebate Reduction Amount for Part B Rebatable Drugs

	Drug Shortage		Severe Supply Chain Disruption
Duration of Reduction	Indefinite for as long as drug is "currently in shortage"		Four calendar quarters; manufacturer may request an extension for four additional quarters for up to eight calendar quarters total
Percent Reduction	Part B rebatable drug other than a plasma-derived product	Part B rebatable plasma-derived product	Part B rebatable biosimilar biological product
First four consecutive calendar quarters	25%	75%	75%
Second four consecutive calendar quarters	10%	50%	75%
Subsequent calendar quarters	2%	25%	Not applicable

In the CY 2025 PFS proposed rule (89 FR 61951), we described that the rebate amount owed will not be fully waived in either of the cases previously described. We stated in the proposed rule that we believe the proposed rebate reduction policies balance providing appropriate financial relief for manufacturers in certain circumstances, including when there is a severe supply chain disruption resulting from exogenous circumstances outside of a manufacturer's control, while not incentivizing manufacturers to delay taking appropriate steps to resolve a drug shortage or severe supply chain disruption to avoid an obligation to pay rebates. Additionally, we stated in the CY 2025 PFS proposed rule (89 FR 61951) that we will continue to evaluate these policies and may update them in future years. We noted that most shortages involve multiple source generic drugs,[668] which are not Part B rebatable drugs and thus are not subject to Part B drug inflation rebates.

We solicited comments on these proposals. The following is a summary of the comments we received and our responses. We note that the comments and responses below generally apply to both the Medicare Part B and Part D Drug Inflation Rebate Programs, as commenters made their recommendations with respect to both programs.

Comment: Some commenters recommended CMS fully waive the inflation rebate for drugs currently in shortage and generic drugs and biosimilar biological products experiencing severe supply chain disruptions. One commenter recommended CMS implement a waiver process for a subset of drugs in currently in shortage, such as out-of-stock drugs entirely unavailable to the market. A couple of commenters stated that shortages and severe supply chain disruptions can cause swings in the ASP of a Part B rebatable drug or the AMP of a Part D rebatable drug that are beyond a manufacturer's control, and manufacturers should not be penalized by an inflation rebate in such a situation. A few commenters noted that by failing to waive the rebate amount, CMS risks jeopardizing patient access by taking away manufacturer resources that could be otherwise used to address the cause of a shortage or severe supply chain disruption. One commenter supported CMS' policy to reduce rather than waive rebate amounts but recommended that CMS consider providing a waiver in situations where shortages are caused by factors outside of a manufacturer's control.

Response: We thank these commenters for their input. Consistent with our response on page 35 of the revised Medicare Part B Drug Inflation Rebate Guidance and page 23 of the revised Medicare Part D Drug Inflation Rebate Guidance,[669] CMS will not provide a full waiver of the rebate amount for any Part B or Part D rebatable drugs that are described as ''currently in shortage'' or when CMS determines there is a severe supply chain disruption, as providing a full waiver of the rebate amount could incentivize manufacturers to delay taking appropriate steps to resolve a shortage or severe supply chain disruption to avoid an obligation to pay rebates for an extended period. As set forth in §§ 427.401 and 428.301, CMS will provide a variable reduction in the rebate amount based on the length of time a Part B or Part D rebatable drug is ''currently in shortage,'' with the reduction decreasing over time. As set forth in §§ 427.402 and 428.302, when CMS determines there is a severe supply chain disruption during the applicable calendar quarter or applicable period, such as that caused by a natural disaster or other unique or unexpected event, CMS will provide a time-limited standard reduction in the rebate amount of 75 percent. As set forth in § 428.303, when CMS determines a generic Part D rebatable drug is likely to be in shortage, CMS will provide a time-limited standard reduction in the rebate amount of 75 percent.

As described later in this final rule, CMS will provide the same reduction in the rebate amount for Part B and Part D rebatable drugs that are currently in shortage regardless of the cause of the shortage. CMS understands that some drugs may face supply chain disruptions due to exogenous factors such as a natural disaster or other unique or unexpected event, and manufacturers of such drugs may temporarily increase the price of such drugs to account for increased costs associated with resolving a severe supply chain disruption. To provide financial relief to manufacturers in such situations, CMS will provide a standard time-limited reduction of 75 percent in the rebate amount for a Part B rebatable biosimilar biological product or generic Part D rebatable drug or biosimilar when CMS determines there is a severe supply

[668] See: *https://www.iqvia.com/insights/the-iqvia-institute/reports-and-publications/reports/drug-shortages-in-the-us2023.*

[669] See: *https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-revised-guidance.pdf* and *https://www.cms.gov/files/document/medicare-part-d-inflation-rebate-program-revised-guidance.pdf.*

chain disruption during an applicable calendar quarter or applicable period, such as that caused by a natural disaster or other unique or unexpected event.

We understand commenters' concerns regarding the effect of supply chain disruptions on ASP and AMP and consistent with the statute, will provide a reduction of the rebate amount (if any) when a Part B or Part D rebatable drug is ''currently in shortage'' or when CMS determines there is a severe supply chain disruption during an applicable calendar quarter or applicable period.

i. Definitions

We proposed at § 427.400 to define the following terms applicable to proposed subpart E (§§ 427.400 through 427.402)—

- ''Drug shortage'' or ''shortage''.
- ''Plasma-derived product''.

We also proposed at § 427.400 to codify definitions established in the revised Medicare Part B Drug Inflation Rebate Guidance for the following terms:

- ''Currently in shortage''.
- ''Natural disaster''.
- ''Other unique or unexpected event''.
- ''Severe supply chain disruption''.

The following is a summary of the comments we received on the definitions and our responses.

Comment: One commenter stated CMS does not define what constitutes a severe supply chain disruption, natural disaster, or unique or unexpected event, leaving these terms open to interpretation. This commenter recommended CMS define these terms, such as through illustrative examples.

Response: We disagree with the commenter that CMS has not defined these terms. We refer the reader to section 50.12 of the revised Medicare Part B Drug Inflation Rebate guidance and section 40.5.2 of the revised Medicare Part D Drug Inflation Rebate guidance where we defined the terms ''severe supply chain disruption,'' ''natural disaster,'' and ''other unique or unexpected events.'' We also refer the commenter to the CY 2025 PFS proposed rule (89 FR 62237, 62245) in which CMS proposed to codify these definitions and included examples of events that would meet the definition of a natural disaster or unique or unexpected event.

After consideration of the comments received, we are finalizing these definitions as proposed at §§ 427.400 and 428.300.

ii. Reducing the Rebate Amount for Part B Rebatable Drugs Currently in Shortage

At § 427.401, we proposed to codify the policy established in section 50.11 of the revised Medicare Part B Drug Inflation Rebate Guidance whereby CMS will reduce the total rebate amount for a Part B rebatable drug that is currently in shortage based on the length of time the drug is in shortage during a calendar quarter and decrease the amount of the reduction over time. We stated in the CY 2025 PFS proposed rule (89 FR 61952) that CMS will use the shortage lists maintained by the FDA Center for Biologics Evaluation and Research (CBER) and Center for Drug Evaluation and Research (CDER) to determine whether a Part B rebatable drug is currently in shortage [670] during a calendar quarter. We also stated that CMS will not consider an NDC–10 in the status of ''to be discontinued,'' ''discontinued,'' or ''resolved'' to be ''currently in shortage'' and that CMS would provide the same reduction in the rebate amount for Part B rebatable drugs currently in shortage regardless of the cause of the shortage.

We proposed that CMS will not provide a full waiver of the rebate amount for drugs currently in shortage, as providing a full waiver of the rebate amount could further incentivize manufacturers to delay taking appropriate steps that may resolve a shortage more expeditiously simply to maintain having the drug listed on FDA's drug shortage list to avoid an obligation to pay rebates for an extended period. Further, as explained in the CY 2025 PFS proposed rule (89 FR 61952), in a report analyzing the root causes of drug shortages between 2013 and 2017, FDA found that more than 60 percent of drug shortages were the result of manufacturing or product quality issues, and providing a full waiver of the rebate amount in situations that may be within a manufacturer's control could be perceived as rewarding manufacturers for poor quality management.[671]

We stated in the CY 2025 PFS proposed rule (89 FR 61952) that CMS will be responsible for monitoring the status of a Part B rebatable drug on an FDA shortage list, and manufacturers would not need to submit any information to CMS to be eligible for a reduction of the rebate amount for a Part B rebatable drug that is currently in shortage.

To calculate the reduced total rebate amount for a Part B rebatable drug, at § 427.401(b), we proposed the following formula:

Reduced *Total* Rebate Amount = total rebate amount *multiplied by* (1 *minus* applicable percent reduction) *multiplied by* (percentage of time drug was currently in shortage during the calendar quarter) *added to* the total rebate amount *multiplied by* (1 *minus* percentage of time drug was currently in shortage during the calendar quarter)

For the purpose of this formula, for a Part B rebatable drug that is a plasma-derived product, at § 427.401(b)(2)(i), we proposed an applicable percent reduction of 75 percent for the first 4 consecutive calendar quarters such Part B rebatable drug is currently in shortage, 50 percent for the second 4 consecutive calendar quarters, and 25 percent for each subsequent calendar quarter. For a Part B rebatable drug (including a biosimilar biological product) that is not a plasma-derived product, at § 427.401(b)(2)(ii), we proposed an applicable percent reduction of 25 percent for the first 4 consecutive calendar quarters such Part B rebatable drug is currently in shortage, 10 percent for the second 4 consecutive calendar quarters, and 2 percent for each subsequent calendar quarter.

Because drugs and biologicals on the FDA shortage lists are maintained at the NDC–10 level, and Part B drug inflation rebates are calculated at the HCPCS level, we proposed at § 427.401(c) that if any NDC–10 assigned to the HCPCS code(s) is currently in shortage, we will apply the rebate reduction to all of the NDCs under the relevant HCPCS code(s). CMS will closely monitor market data for the Part B rebatable drugs for which the rebate is reduced to ensure the integrity of the application of the rebate reduction policy.

We proposed to provide a reduction in the rebate amount for as long as a Part B rebatable drug is currently in shortage. We stated in the CY 2025 PFS proposed rule (89 FR 61952) that we believe the rebate reduction should be proportional to the time the drug is currently in shortage and decrease over time to balance providing financial relief to manufacturers experiencing a drug shortage while not incentivizing manufacturers to delay taking appropriate steps to resolve a shortage simply to maintain having the drug listed on an FDA shortage list to avoid an obligation to pay rebates for an extended period.

To determine the percentage of time a Part B rebatable drug was currently in shortage during the calendar quarter, as

[670] For the purposes of this final rule, we use the term ''currently in shortage'' to refer to Part B rebatable drugs that are in the status of ''currently in shortage'' on the CDER shortage list, as well as biological products listed on CBER's current shortages list.

[671] See: *https://www.fda.gov/media/131130/download?attachment#page=33.*

proposed at § 427.401(b)(3), we proposed to determine the number of days such drug is currently in shortage in a calendar quarter and divide by the total number of days in that calendar quarter.

At § 427.401(b)(2), we proposed to codify the policy set forth in section 50.11 of the revised Medicare Part B Drug Inflation Rebate Guidance to apply a greater applicable percent reduction for plasma-derived products than non-plasma derived products because the former rely on a variable supply of donated blood plasma that can impact downstream production and therefore hamper the ability to promptly resolve a shortage.

When the status of a Part B rebatable drug changes from currently in shortage to resolved during a calendar quarter and then changes to currently in shortage during one or more of the subsequent 3 calendar quarters, we stated in the CY 2025 PFS proposed rule (89 FR 61952) that CMS would apply the shortage reduction as if there was a continuous shortage beginning with the quarter in which the drug has re-entered a shortage and move to the percent reduction applicable for the second 4 consecutive quarters. (In this scenario, once this drug enters its fifth quarter of shortage from the first quarter in which it was listed as currently in shortage, the applicable percent reduction would be 50 percent for the fifth through eighth calendar quarters for a Part B rebatable drug that is a plasma-derived product and 10 percent for a Part B rebatable drug that is not a plasma-derived product.) When the status of a Part B rebatable drug changes from currently in shortage to resolved and either remains in the status of resolved or is removed from the list for at least 4 full consecutive calendar quarters and then subsequently reemerges on a shortage list, we proposed to treat the subsequent shortage as a new shortage and would apply the applicable percent reduction for the first 4 consecutive calendar quarters.

We received public comments on our proposal to not provide a waiver of the rebate amount for drugs currently in shortage. We refer readers to section III.I.2.e. of this final rule for a summary of these comments and our responses.

After consideration of the comments received, we are finalizing this policy as proposed with an additional provision at § 427.401(b)(2)(iii) to clarify the starting point for application of the rebate reduction. CMS adopted this provision to clarify CMS' intended policy, as highlighted by examples in the CY 2025 PFS proposed rule, that while CMS will generally apply the shortage reduction starting with the first applicable calendar quarter that a Part B drug or biological product is described as currently in shortage, CMS acknowledges that for a Part B drug or biological that has been granted a rebate reduction for a severe supply chain disruption, it would be appropriate to delay the start of the applicable percent reduction for being in shortage until after the conclusion of the severe supply chain disruption reduction if the shortage continues. The section below discusses this clarification in detail. Specifically, and as shown in Table 58, we are clarifying in this final rule that CMS will apply the greatest rebate reduction to the first applicable calendar quarter that a drug or biological product is described as currently in shortage regardless of whether the drug meets the definition of a Part B rebatable drug or whether a rebate amount is owed for that applicable period, starting with the calendar quarter that begins January 1, 2023. For example, if a plasma-derived product was currently in shortage from October 15, 2022 through December 15, 2024, CMS would apply an applicable percent reduction of 75 percent for the applicable calendar quarters beginning January 1, 2023, April 1, 2023, July 1, 2023, and October 1, 2023, followed by a 50 percent reduction for the applicable calendar quarters beginning January 1, 2024, April 1, 2024, July 1, 2024, and October 1, 2024, even if such drug did not meet the definition of a Part B rebatable drug or there was no rebate amount owed to which to apply the reduction for those applicable calendar quarters. Similarly, for a drug that is not a plasma-derived product, in this example, CMS would apply an applicable percent reduction of 25 percent for the applicable calendar quarters beginning January 1, 2023, April 1, 2023, July 1, 2023, and October 1, 2023, followed by a 10 percent reduction for the applicable calendar quarters beginning January 1, 2024, April 1, 2024, July 1, 2024, and October 1, 2024, even if such drug did not meet the definition of a Part B rebatable drug or there was no rebate amount owed to which to apply the reduction.

TABLE 57: Application of Shortage Reduction

	4Q2022	1Q2023	2Q2023	3Q2023	4Q2023	1Q2024	2Q2024	3Q2024	4Q2024
In shortage on FDA shortage list	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Meets definition of Part B rebatable drug	No	No	Yes	Yes	Yes	Yes	No	Yes	Yes
Owes a >$0 rebate	No	No	No	Yes	Yes	No	No	Yes	Yes
Applicable percent reduction applied for a Part B rebatable drug other than a plasma-derived product	0%	25%	25%	25%	25%	10%	10%	10%	10%
Applicable percent reduction for a Part B rebatable plasma-derived product	0%	75%	75%	75%	75%	50%	50%	50%	50%

Note: CMS would "start the clock" for rebate reductions with 1Q2023. The highest percent reduction would thus apply beginning with 1Q2023, regardless of how many days the Part B rebatable drug is in shortage during the calendar quarter. In this example, the 25 percent reduction (for a non-plasma derived product) or 75 percent reduction (for a plasma-derived product) would apply to 1Q2023-4Q2023, even though there would be no rebate amount in 1Q2023 and 2Q2023 to which it applies.

We believe this clarification helps ensure clarity on CMS' policy in applying rebate reductions, which is intended to provide appropriate financial relief for drugs currently in shortage while limiting opportunities for manufacturers to manipulate a shortage start date to align with future price increases that coincide with the application of the reduction, as well as to decrease the amount of the rebate reduction the longer a drug is in shortage as set forth in the CY 2025 PFS proposed rule (89 FR 61974).

iii. Reducing the Rebate Amount for Part B Rebatable Biosimilar Biological Products When There Is a Severe Supply Chain Disruption

At § 427.402, we proposed to codify the policy established in section 50.12 of the revised Medicare Part B Drug Inflation Rebate Guidance for rebate reductions when CMS determines there is a severe supply chain disruption during a calendar quarter. We proposed at § 427.402(b)(1) to provide a time-limited standard reduction of 75 percent in the total rebate amount for a Part B rebatable biosimilar biological product when CMS determines there is a severe supply chain disruption during the calendar quarter, such as that caused by a natural disaster or other unique or unexpected event. We proposed that to receive a rebate reduction in accordance with § 427.402(b)(1), the manufacturer will have to submit to CMS a rebate reduction request that meets the eligibility requirements at § 427.402(c). A rebate reduction request should specify each NDC–11 and HCPCS code to which the request applies and if CMS grants a manufacturer's request for an NDC–11, we proposed at § 427.402(b)(3) that the rebate reduction will apply to all the NDC–11s under the relevant HCPCS code(s). We refer manufacturers to the approved collection of information approved under OMB control number 0938–1474, for further instructions for submitting rebate reduction requests.

We proposed at § 427.402(c)(4) to grant a reduction in the rebate amount owed if a manufacturer of an eligible drug submits to CMS a request in writing demonstrating that (1) a severe supply chain disruption has occurred during the calendar quarter, (2) the severe supply chain disruption directly affects the manufacturer itself, a supplier of an ingredient or packaging, a contract manufacturer,[672] or a method of shipping or distribution that the manufacturer uses in a significant capacity to make or distribute the Part B rebatable biosimilar biological product, and (3) the severe supply chain disruption was caused by a natural disaster or other unique or unexpected event.[673] We proposed at § 427.402(c)(2), for a natural disaster or other unique or unexpected event occurring on or after August 2, 2024, that the manufacturer believes caused a severe supply chain disruption, the manufacturer must submit the rebate reduction request within 60 calendar days from the first day that the natural disaster or other unique or unexpected event occurred or began in order for CMS to consider a rebate reduction.

In the CY 2025 PFS proposed rule (89 FR 61953), we stated that severe supply chain disruptions generally take time to resolve and proposed at § 427.402(a) to codify the policy established in section 50.12 of the revised Medicare Part B Drug Inflation Rebate Guidance whereby a determination that a severe supply chain disruption has occurred would be deemed to disrupt the supply chain for the quarter in which the event occurred and the 3 subsequent calendar quarters. We proposed that if a manufacturer makes a timely request that includes all the supporting documentation and CMS

[672] A contract manufacturer is a party that performs one or more manufacturing operations on behalf of a manufacturer(s) of active pharmaceutical ingredients (APIs), drug substances, in-process materials, finished drug products, including biological products, and combination products. See ''Contract Manufacturing Arrangements for Drugs: Quality Agreements Guidance for Industry,'' November 2016: *https://www.fda.gov/media/86193/download*.

[673] Consistent with the collection of information approved under OMB control number 0938–1474, for a natural disaster or other unique or unexpected event that occurred or began on or after January 1, 2023 but before August 2, 2024 that the manufacturer believes caused a severe supply chain disruption, the manufacturer must have submitted the rebate reduction request no later than 11:59 p.m. PT on October 1, 2024 for CMS to consider a rebate reduction for the Part B rebatable biosimilar biological product.

determines, based on its review of the reduction request and supporting documentation, that a reduction should be granted, CMS will reduce the total rebate amount owed by a manufacturer by 75 percent for the calendar quarter in which the event that caused the severe supply chain disruption occurred or began, or the following calendar quarter if the request is submitted less than 60 calendar days before the end of a calendar quarter, and the three calendar quarters thereafter.

We proposed at § 427.402(c)(5) that if the manufacturer believes a severe supply chain disruption continues into a fifth consecutive calendar quarter after the start of the natural disaster or other unique or unexpected event, the manufacturer may request a reduction of the rebate amount for the fifth through eighth calendar quarters by submitting a rebate reduction extension request to CMS along with any new supporting documentation. We refer manufacturers to the approved collection of information approved under OMB control number 0938–1474, for further instructions for submitting rebate reduction extension requests. At § 427.402(c)(5)(ii), we proposed that a rebate reduction extension request and any new supporting documentation must be submitted at least 60 calendar days before the start of the fifth calendar quarter in order for CMS to consider a rebate reduction extension.

We further proposed that if a manufacturer submits a complete and timely extension request, and CMS determines that the information submitted warrants an extension of the rebate reduction, the total rebate amount would be reduced by 75 percent for the fifth through eighth calendar quarters for that manufacturer's Part B rebatable biosimilar biological product, in accordance with § 427.402(b)(2).

Consistent with the policy established in section 50.12 of the revised Medicare Part B Drug Inflation Rebate Guidance, we proposed at § 427.402(c)(5) that a manufacturer may receive only one extension of the rebate reduction per Part B rebatable biosimilar biological product per CMS determination of a severe supply chain disruption. Said differently, the severe supply chain disruption rebate reduction would be limited to 8 consecutive calendar quarters total per Part B rebatable biosimilar biological product per CMS determination of a severe supply chain disruption.

At § 427.402(b)(4)(i), we proposed that if the manufacturer believes there are multiple events causing severe supply chain disruptions during the same 4 calendar quarters for the same Part B rebatable biosimilar biological product and submits multiple rebate reduction requests for the same product, CMS will grant no more than one rebate reduction for that Part B rebatable biosimilar biological product for those 4 consecutive calendar quarters. For example, if the manufacturer of a Part B rebatable biosimilar biological product is granted a severe supply chain disruption rebate reduction request for its product due to a natural disaster that occurred in January 2025 and then experiences a second severe supply chain disruption caused by a second, distinct natural disaster in July 2025, CMS will not grant the second rebate reduction request. That is, the manufacturer will receive the 75 percent reduction for 4 calendar quarters for the severe supply chain disruption caused by the first natural disaster but will not receive a reduction for the second natural disaster. However, if the second natural disaster exacerbated the severe supply chain disruption caused by the first natural disaster, the manufacturer may reflect such circumstances in its request for an extension of the rebate reduction for the fifth through eighth calendar quarters.

At § 427.402(b)(4)(ii), we proposed that if CMS grants a severe supply chain disruption rebate reduction request for a Part B rebatable biosimilar biological product, and the product appears as currently in shortage during one of the same 4 calendar quarter(s) as for which the severe supply chain disruption reduction was granted, CMS will apply the 75 percent reduction to the four calendar quarters for which the severe supply chain disruption request was granted and would not grant any additional reduction for the shortage status during those quarters. For any subsequent calendar quarters that the Part B rebatable biosimilar biological product appears as currently in shortage, CMS will reduce the rebate amount in accordance with the drug shortage reduction proposed at § 427.401, starting with the highest reduction (that is, 75 percent for a plasma-derived product and 25 percent for a Part B rebatable drug that is not a plasma-derived product). We provided as an example in the CY 2025 PFS proposed rule (89 FR 61953) the following: if CMS grants a severe supply chain disruption request for a Part B rebatable biosimilar biological product that was submitted on February 15, 2024, and that product is currently in shortage from December 15, 2024 until May 15, 2025, CMS would apply a 75 percent reduction in the total rebate amount to all 4 calendar quarters in 2024,[674] and then would apply the shortage reduction as proposed in § 427.401, beginning with a reduction of 25 percent for a Part B rebatable biosimilar biological product or 75 percent in the case of a plasma-derived product that is a Part B rebatable biosimilar biological product for the first 2 calendar quarters of 2025.At § 427.402(b)(4)(iii), we proposed that if a Part B rebatable biosimilar biological product that is currently in shortage experiences a severe supply chain disruption, the manufacturer may submit a request for a severe supply chain disruption rebate reduction. If CMS grants the rebate reduction request, the rebate amount will be reduced by 75 percent for the duration of 4 consecutive calendar quarters (that is, the calendar quarter in which the event that caused the severe supply chain disruption occurred and the 3 calendar quarters thereafter), and CMS will not grant any additional reduction under § 427.401 for the currently in shortage status during those 4 calendar quarters. If CMS receives the request and all supporting documentation describing the natural disaster or other unique or unexpected event causing the severe supply chain disruption less than 60 days before the end of a calendar quarter, CMS will apply the 75 percent rebate reduction to the next calendar quarter and to the three subsequent calendar quarters thereafter. We refer readers to the CY 2025 PFS proposed rule (89 FR 61953) for an example of how CMS would apply the rebate reduction in this scenario.

At § 427.402(c)(6), we proposed to review rebate reduction requests and rebate reduction extension requests within 60 calendar days of receipt of all documentation, if feasible, beginning with the calendar quarter that begins on October 1, 2024. If a manufacturer's rebate reduction request does not meet the criteria in proposed § 427.402(c)(4) or if the rebate reduction request is incomplete or untimely based on the requirements at § 427.402(c), we proposed that CMS will deny the request. We also proposed that if a manufacturer's rebate reduction extension request does not meet the criteria at § 427.402(c)(5), is incomplete

[674] We have provided a correction to this example later in this final rule. Specifically, because in this example the rebate reduction request was submitted less than 60 days before the end of the calendar quarter, the severe supply chain disruption rebate reduction would apply to the next calendar quarter (that is, the calendar quarter beginning April 1, 2024) and the 3 subsequent calendar quarters rather than the calendar quarter in which the event occurred (that is, the calendar quarter beginning January 1, 2024) and the 3 subsequent calendar quarters.

or untimely based on the requirements at § 427.402(c)(5), or if a reduction under proposed § 427.402(b)(1) was not provided for such Part B rebatable biosimilar biological product, CMS will deny the rebate reduction extension request. At § 427.402(c)(6)(iii), we proposed that CMS' decision to deny a request will be final and not be subject to an appeals process.

As proposed at § 427.402(c)(7), we will keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. We proposed that information provided as part of a severe supply chain disruption rebate reduction request that the submitter indicates is a trade secret or confidential commercial or financial information would be protected from disclosure if CMS determines the information meets the requirements set forth under Exemptions 3 and/or 4 of the Freedom of Information Act (FOIA). In addition to the protections under the FOIA for trade secrets and commercial or financial information obtained from a person that is privileged or confidential, the Trade Secrets Act at 18 U.S.C. 1905 requires executive branch employees to protect such information. We will protect confidential and proprietary information as required by applicable law.

The following is a summary of the comments we received on rebate reduction requests and our responses. Some of the comments received were not specific to rebate reduction requests for Part B rebatable drugs or Part D rebatable drugs. Other comments received addressed both Part B rebatable drugs and Part D rebatable drugs. We addressed these comments in the following summary of comments and do not repeat this summary of comments and our responses further below in the discussion of Part D drug inflation rebate policies.

Comment: One commenter stated that requiring manufacturers to submit a request to CMS to receive consideration for a rebate reduction is duplicative of the FDA's existing processes for addressing drug shortages and increases administrative burden on manufacturers. This commenter recommended CMS leverage existing tools such as the FDA shortage database rather than establishing new reporting requirements. One commenter recommended CMS coordinate with the FDA to ensure accuracy of the drug shortages lists.

Response: We appreciate commenters sharing their concerns about the reporting requirements and recommendations regarding existing resources that CMS may use for determining rebate reductions.

Consistent with our response in the information collection request approved under OMB control number 0938–1474, the FDA Center for Biologics Evaluation and Research (CBER) and the Center for Drug Evaluation and Research (CDER) each maintain publicly available drug shortages lists via web pages for drugs and biological products within their respective jurisdictions. We believe these FDA shortage lists can readily be used to determine whether a drug is currently in shortage. In accordance with sections 1847A(i)(3)(G)(i) and 1860D–14B(b)(1)(C) of the Act, CMS will use the FDA drug shortage lists to determine whether to grant a rebate reduction for a Part B or Part D rebatable drug described as ''currently in shortage.'' As described elsewhere in this final rule, CMS will monitor the status of Part B and Part D rebatable drugs on an FDA shortage list, and manufacturers do not need to submit any information to CMS to be eligible for a reduction of the rebate amount for a Part B or Part D rebatable drug described as ''currently in shortage.''

However, the IRA also instructs CMS to grant a rebate reduction or waiver when CMS determines there is a severe supply chain disruption for a Part B rebatable biosimilar biological product or generic Part D rebatable drug or biosimilar. The statute does not instruct CMS to use FDA's drug shortages lists in making determinations regarding severe supply chain disruptions. As such, we consider severe supply chain disruptions to be generally distinct from current drug shortages identified on FDA's drug shortage lists for purposes of providing a rebate reduction for an eligible biosimilar biological product.

We understand that manufacturers must report to FDA certain information related to drug and biological product discontinuances and manufacturing interruptions under section 506C of the FD&C Act (''506C notification''). We understand that manufacturers are also encouraged to voluntarily notify FDA of other circumstances that are likely to lead to a meaningful disruption in supply of certain finished drugs or biological products, although such notifications are not expressly required by section 506C of the FD&C Act. However, the criteria for determining whether a request qualifies for a rebate reduction differ from the requirements for submission of a 506C notification to FDA, and manufacturers requesting a rebate reduction may not have submitted a voluntary notification to FDA. We believe that the information required in a 506C notification submitted to FDA would not be sufficient to make a rebate reduction determination because while 506C notifications must include information related to permanent discontinuances or manufacturing interruptions of a drug, they are not required to include information about other changes in production or distribution that may be relevant for CMS' determination of whether a severe supply chain disruption has occurred. In addition, 506C notifications and voluntary shortage notifications submitted to FDA by manufacturers are not made public, so even if such notifications included sufficient information for CMS to determine whether a severe supply chain disruption occurred, CMS would not have access in the ordinary course to the information in such notifications. For these reasons, we are requiring that a manufacturer submit a request to CMS to receive consideration for a rebate reduction when the manufacturer believes there is a severe supply chain disruption.

We appreciate commenters' feedback that it should partner with FDA to obtain the information CMS needs to review rebate reductions requests. As indicated in the revised Medicare Part B Drug Inflation Rebate Guidance, the revised Medicare Part D Drug Inflation Rebate Guidance, and this final rule, CMS may consult with FDA for technical assistance in implementing the severe supply chain disruption and likely shortages provisions, as needed. However, for the reasons stated above, we maintain that there is a distinct informational need associated with severe supply chain disruptions and that manufacturers are well positioned to provide CMS with the information needed to review rebate reduction requests associated with severe supply chain disruptions.

Comment: One commenter stated CMS does not specify the evaluation criteria it will use to determine rebate reductions, how CMS will ensure requests are timely, complete, and accurate, or whether CMS will conduct any audits or investigations to verify the information. This same commenter recommended that CMS require manufacturers to demonstrate efforts taken to resolve or mitigate a drug shortage and establish consequences for manufacturers submitting false or misleading statements or documentation.

Response: We disagree with the commenter that CMS has not specified evaluation criteria for rebate reduction requests. In the CY 2025 PFS proposed rule (89 FR 62238, 62247, and 62248) and this final rule, we have described

the criteria that must be satisfied for CMS to grant a rebate reduction request. For example, as set forth in §§ 427.402(c)(4) and 428.302(c)(4), CMS will grant a severe supply chain disruption rebate reduction request if a manufacturer submits to CMS a request in writing for an eligible drug demonstrating that: (1) a severe supply chain disruption has occurred during the applicable calendar quarter or applicable period; (2) the severe supply chain disruption directly affects the manufacturer itself, a contract manufacturer, a supplier of an ingredient or packaging, or a method of shipping or distribution that the manufacturer uses in a significant capacity to make or distribute the Part B rebatable biosimilar biological product or generic Part D rebatable drug or biosimilar; and (3) the severe supply chain disruption was caused by a natural disaster or other unique or unexpected event. CMS further describes the required elements of a rebate reduction request at §§ 427.402(c)(3) and 428.302(c)(3), and specifies the timing for submission of a rebate reduction request at §§ 427.402(c)(2) and 428.302(c)(2). Similarly, for likely to be in shortage rebate reduction requests, CMS specifies the evaluation criteria at § 428.303(c)(4), including a demonstration that the manufacturer is taking actions to avoid the potential drug shortage, as well as the elements of a rebate reduction § 428.303(c)(3), including information and supporting documentation regarding actions the manufacturer is taking to avoid the potential drug shortage. CMS also specifies the timing for submission for likely to be in shortage rebate reduction requests at § 428.303(c)(2).

As specified in the approved collection of information approved under OMB control number 0938–1474, a manufacturer submitting a rebate reduction request form must describe and provide any relevant supporting documentation regarding actions the manufacturer has taken to resolve or mitigate a severe supply chain disruption or to avoid the potential shortage and explain why those actions may not be sufficient. If CMS determines that the rebate reduction request does not meet the criteria stated above or is incomplete or untimely, CMS will deny the request. CMS reiterates that decisions to deny a request are final and will not be subject to an appeals process. CMS expects manufacturers to ensure the information they submit to the government is complete and accurate. Submitting false information may result in liability, including without limitation under the False Claims Act.

Comment: One commenter recommended CMS provide greater transparency by detailing what information CMS will share with stakeholders pertaining to rebate reduction requests and potential severe supply chain disruptions.

Response: We thank this commenter for their recommendation. As described in the CY 2025 PFS proposed rule (89 FR 62238, 62247) and as we are finalizing at § 427.402(c)(7) and § 428.302(c)(7), CMS will keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. Information provided as part of a severe supply chain disruption rebate reduction request that the submitter indicates is a trade secret or confidential commercial or financial information will be protected from disclosure if CMS determines the information meets the requirements set forth under Exemptions 3 and/or 4 of the Freedom of Information Act (FOIA). In addition to the protections under the FOIA for trade secrets and commercial or financial information obtained from a person that is privileged or confidential, the Trade Secrets Act at 18 U.S.C. 1905 requires executive branch employees to protect such information. We will protect confidential and proprietary information as required by applicable law.

After consideration of comments received, we are finalizing this provision as proposed, with a modification. For alignment with language in the preamble of the CY 2025 PFS proposed rule (89 FR 61954), we clarified at § 427.402(b)(1) that CMS will apply a severe supply chain disruption rebate reduction to the applicable calendar quarter in which the event occurred or began, or the following applicable calendar quarter if the request is submitted less than 60 calendar days before the end of an applicable calendar quarter, and the 3 subsequent applicable calendar quarters. This application of a rebate reduction (initial or extension) applies regardless of whether a biosimilar biological product meets the definition of a Part B rebatable drug during that applicable calendar quarter or whether a rebate amount is owed for such biosimilar biological product for that applicable calendar quarter. That is, regardless of whether the biosimilar biological product meets the definition of a Part B rebatable drug or whether a rebate amount is owed for such biosimilar biological product for that applicable calendar quarter, CMS will apply the 75 percent reduction in the total rebate amount as set forth in § 427.402(b)(1), even if there is no rebate amount owed to reduce. For example, as shown in Table 59, if CMS grants a severe supply chain disruption rebate reduction request for a Part B biosimilar biological product for 4 calendar quarters, CMS will apply the rebate reduction beginning with the first applicable calendar quarter for which the reduction request was granted, regardless of whether the biosimilar biological product meets the definition of a Part B rebatable drug or is subject to a rebate amount in that calendar quarter.

TABLE 58: Application of Severe Supply Chain Disruption Reduction

	Applicable calendar quarter 1	Applicable calendar quarter 2	Applicable calendar quarter 3	Applicable calendar quarter 4	Applicable calendar quarter 5
Meets definition of Part B rebatable drug	No	Yes	Yes	Yes	Yes
Owes a > $0 rebate	No	No	Yes	Yes	Yes
Applicable percent reduction applied	75%	75%	75%	75%	0%

Note: CMS would "start the clock" with applicable calendar quarter 1 if the request was granted for applicable calendar quarters1 through 4. In this example, the 75 percent reduction would apply to applicable calendar quarters 1-4, even though there would be no rebate amount in applicable calendar quarters 1 and 2 to which the reduction applies.

We believe this clarification helps ensure clarity on CMS' policy in applying rebate reductions, which is intended to provide appropriate financial relief to a manufacturer experiencing a severe supply chain disruption while limiting opportunities for manufacturers to plan future price increases to coincide with the application of the reduction. If the reduction is applied to 4 applicable calendar quarters in which there is no rebate amount to reduce, the manufacturer could still apply for an extension of the reduction, which would apply to the fifth through eighth applicable calendar quarters.

In this final rule, we are also providing further clarification to the policy in the CY 2025 PFS proposed rule intended to address situations in which CMS grants a severe supply chain disruption rebate reduction request for a Part B rebatable biosimilar biological product, and the product appears as currently in shortage during one of the same 4 calendar quarters as the period the severe supply chain disruption rebate reduction was granted. In the CY 2025 PFS proposed rule (89 FR 61953), we included an example in which CMS receives a severe supply chain disruption rebate reduction request for a Part B rebatable biosimilar biological product on February 15, 2024, and that product is currently in shortage from December 15, 2024 until May 15, 2025. We stated that in this example, CMS would apply a 75 percent reduction in the total rebate amount to all 4 calendar quarters in 2024, and then would apply the shortage reduction at § 427.401, beginning with a reduction of 25 percent for a non-plasma-derived Part B rebatable biosimilar biological product or 75 percent in the case of a plasma-derived product that is a Part B rebatable biosimilar biological product for the first two calendar quarters of 2025. First, we are correcting this example to clarify that the severe supply chain disruption rebate reduction would apply for the calendar quarter beginning April 1, 2024 and the 3 subsequent calendar quarters (rather than all 4 calendar quarters of 2024), followed by the shortage reduction set forth in § 427.401, illustrated as ''Example 1'' in Table 60. For purposes of applying the shortage reduction, the highest reduction (25 percent for a non-plasma-derived Part B rebatable biosimilar biological product or 75 percent in the case of a plasma-derived product that is a Part B rebatable biosimilar biological product) would apply to the second calendar quarter in 2025. We made this correction because, in the example given, the severe supply chain disruption rebate reduction 60 calendar days before the end of the calendar quarter, and thus the reduction would apply to the next calendar quarter (and the 3 subsequent calendar quarters) rather than the calendar quarter in which the severe supply chain disruption-causing event occurred (and the 3 subsequent calendar quarters). The shortage reduction would begin to apply once the severe supply chain disruption rebate reduction ends and for as long as the Part B rebatable biosimilar biological product is currently in shortage (that is, until May 15, 2025 in this example), gradually decreasing over time. We believe this gradually decreasing rebate reduction would provide appropriate financial relief to manufacturers to mitigate the severity of a shortage or recover from a shortage following a severe supply chain disruption, while not incentivizing manufacturers to delay taking appropriate steps to resolve a drug shortage or severe supply chain disruption to avoid an obligation to pay rebates.

Second, we are also providing a second, modified version of this example to reflect a situation in which the severe supply chain disruption rebate reduction is granted for the same calendar quarter as the Part B rebatable biosimilar biological product is currently in shortage, and the application of the shortage reduction precedes application of the severe supply chain disruption reduction due to the timing of the shortage and submission of the rebate reduction request, illustrated as ''Example 2'' in the table. For example, if CMS receives a severe supply chain disruption rebate reduction request for a Part B rebatable biosimilar biological product on February 15, 2024, and the product is currently in shortage beginning March 15, 2024 instead of December 15, 2024, through May 15, 2025 (as in the first example), CMS would apply a 25 percent reduction for the first calendar quarter in 2024 for a non-plasma-derived Part B rebatable biosimilar biological product or 75 percent for a plasma-derived product, which would be prorated based on the numbers of the days the drugs is currently in shortage in that calendar quarter. CMS would then apply the severe supply chain disruption rebate reduction of 75 percent for the calendar quarter beginning April 1, 2024 and the 3 subsequent calendar quarters, followed by a shortage reduction of 10 percent for the second calendar quarter in 2025 for a non-plasma-derived Part B rebatable biosimilar biological product or 50 percent for a plasma-derived product.

Finally, we are providing a third example, which, similar to the second example above, reflects a situation in which the severe supply chain disruption rebate reduction is granted for the same calendar quarter as the Part B rebatable biosimilar biological product is currently in shortage, but the application of the severe supply chain disruption reduction precedes the application of the shortage reduction due to the timing of the submission of the rebate reduction request, illustrated as ''Example 3'' in the table. For example, if CMS receives a severe supply chain disruption rebate reduction request for a Part B rebatable biosimilar biological product on January 15, 2024 instead of February 15, 2024 such that the reduction applies to the calendar quarter that begins on January 1, 2024 and the 3 subsequent calendar quarters, and the product is currently in shortage beginning March 15, 2024 until May 15, 2025 (consistent with the second example above), CMS would apply the reduction of 75 percent under the severe supply chain disruption policy for all 4 calendar quarters in 2024, followed by a 25 percent shortage reduction for the first calendar quarter in 2025 for a non-plasma-derived Part B rebatable biosimilar biological product or a 75 percent shortage reduction for a plasma-derived product.

In all of these examples, regardless of whether the timing of the shortage and submission of the rebate reduction request results in the severe supply chain disruption rebate reduction preceding or following the shortage reduction, CMS intends to continue the shortage reduction clock once it starts for as long as a drug is currently in shortage. In each of these examples, the shortage reduction clock would start (that is, the calendar quarter would be the first of the four *consecutive* applicable calendar quarters as set forth in paragraph (b)(2)(i)(A) or (b)(2)(ii)(A) of § 427.401) with the applicable calendar quarter to which the shortage reduction first applies, as set forth in § 427.401(b)(4)(iii), unless the shortage reduction clock would start in a calendar quarter subject to a severe supply chain disruption reduction, in which case the shortage reduction clock will instead start with the applicable calendar quarter subsequent to the fourth quarter (or eighth quarter, if extended) of the severe supply chain disruption reduction. We have revised the regulation text to reflect this clarification by adding paragraph (b)(4)(iv) at § 427.401.

TABLE 59: Application of Severe Supply Chain Disruption Reduction for a Part B Rebatable Biosimilar Biological Product other than a Plasma-Derived Product that is Currently in Shortage on an FDA Shortage List

	Example 1	Example 2	Example 3
1Q2024	Not applicable	25% (shortage reduction)	75% (severe supply chain disruption reduction)
2Q2024	75% (severe supply chain disruption reduction)	75% (severe supply chain disruption reduction)	75% (severe supply chain disruption reduction)
3Q2024	75% (severe supply chain disruption reduction)	75% (severe supply chain disruption reduction)	75% (severe supply chain disruption reduction)
4Q2024	75% (severe supply chain disruption reduction)	75% (severe supply chain disruption reduction)	75% (severe supply chain disruption reduction)
1Q2025	75% (severe supply chain disruption reduction)	75% (severe supply chain disruption reduction)	25% (shortage reduction)
2Q2025	25% (shortage reduction)	10% (shortage reduction)	25% (shortage reduction)

Note: This table illustrates the application of the initial severe supply chain disruption reduction. A manufacturer may still apply for a rebate reduction extension request. Example 1 illustrates the application of the rebate reduction when a severe supply chain disruption precedes a shortage, and the severe supply chain disruption rebate reduction request is submitted less than 60 days before the end of a calendar quarter. Example 2 illustrates the application of the rebate reduction when a severe supply chain disruption rebate reduction request is submitted less than 60 days before the end of a calendar quarter for a non-plasma-derived Part B rebatable biosimilar biological product that is currently in shortage during the same calendar quarter. Example 3 illustrates the application of the rebate reduction when a severe supply chain disruption rebate reduction request is submitted at least 60 days before the end of a calendar quarter for a non-plasma-derived Part B rebatable biosimilar biological product that is currently in shortage during the same calendar quarter.

We believe this clarification is consistent with the policy set forth in §§ 427.402(b)(4) whereby CMS will not apply multiple rebate reductions for the same Part B rebatable drug and applicable calendar quarter. We believe this clarification is also consistent with the policy articulated in the CY 2025 PFS proposed rule and throughout this final rule to continue the shortage reduction clock once it begins in other scenarios such as for drugs that fluctuate on and off the shortage list within a timespan less than four full calendar quarters. Further, we believe this clarification is consistent with CMS' policy goals of providing a time-limited standard reduction of 75 percent in the rebate amount when there is a severe supply chain disruption, which supersedes the reduction under the shortage policy to mitigate the likelihood or severity of a shortage, and providing gradually decreasing financial relief to manufacturers of a drug currently in shortage. We believe transitioning the manufacturer from the severe supply chain disruption reduction to the shortage reduction, by beginning the shortage reduction clock as set forth in § 427.401(b)(2)(i)(A) or (b)(2)(ii)(A) after the severe supply chain disruption reduction no longer applies, and gradually declining the rebate reduction over time could help prevent exacerbation of the shortage. Because the timing of the application of a severe supply chain disruption rebate reduction depends on the timing of

submission of the rebate reduction request, the highest reduction under the shortages policy may be applied for an applicable calendar quarter that precedes or follows the severe supply chain disruption reduction. As stated above, CMS will not start the shortage reduction clock during a quarter subject to a severe supply chain disruption reduction as set forth in § 427.401(b)(2)(iv), but intends to continue the shortage reduction clock once it starts for as long as a drug is currently in shortage, regardless of whether a severe supply chain disruption follows or precedes a shortage.

f. Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments (§§ 427.500 Through 427.505)

Section 1847A(i)(1)(A) of the Act requires the Secretary to provide a report to each manufacturer of a Part B rebatable drug with the following information not later than 6 months after the end of an applicable calendar quarter: (1) the total number of billing units for each Part B rebatable drug; (2) the amount, if any, of the excess average sales price increase (the amount by which the specified amount exceeds the inflation-adjusted payment amount as calculated at § 427.301(g)) for an applicable calendar quarter; and (3) the rebate amount for the Part B rebatable drug. In compliance with section 1847A(i)(1)(B) of the Act, manufacturers of a Part B rebatable drug must provide a rebate for each Part B rebatable drug no later than 30 calendar days after the receipt of the information provided by the Secretary in section 1847A(i)(1)(A) of the Act.

To fulfill this statutory requirement, we proposed to provide a Preliminary Rebate Report followed by a Rebate Report, as set forth in § 427.501(b) and (c), to all manufacturers of a Part B rebatable drug, even if the amount due is $0; all rebate amounts will be subject to reconciliation as determined under § 427.501(d). As proposed at § 427.501(d)(4), we will not perform a reconciliation for manufacturers of drugs that are not considered rebatable as set forth in § 427.20.

Additionally, to address the completeness and accuracy of the rebate amount, we proposed to conduct one regular reconciliation to determine whether the rebate amount will be adjusted due to updated claims and payment data used in the calculation of such rebate amount (determined under § 427.501(c)(1)) to occur 12 months after the issuance of the Rebate Report. The reporting process for reconciliation will be the same process described for the original Rebate Report, with payment due for any outstanding rebate amount 30 days after receipt of a report with a reconciled rebate amount. In addition to regular reconciliation, we proposed a process to conduct reconciliation of the rebate amount as needed to correct agency error and when CMS determines that the information used by CMS to calculate a rebate amount was inaccurate due to manufacturer misreporting.

We believe conducting a reconciliation for the Part B Rebate Program is important to ensure the accuracy of the rebate amount and for programmatic alignment with the Part D Rebate Program.

We solicited comments on these proposed policies. Some of the comments received addressed both the Medicare Part B and Part D Drug Inflation Rebate Programs. We addressed these comments in the relevant sections and do not repeat these summaries of comments and our responses in the discussion of Part D drug inflation rebate policies.

i. Definitions

At § 427.500, we proposed the following term applicable to proposed subpart F (§§ 427.500 through 427.505):

- ''Date of receipt'' is the calendar day following the day on which a report of a rebate amount (as set forth in §§ 427.501(b) through (d) and 427.502 (b) and (c)) is made available to the manufacturer of a Part B rebatable drug by CMS.

For example, if CMS issues a Rebate Report through the method and process set forth in § 427.504 on June 30, 2026, then July 1, 2026, will be the date of receipt and day one of the 30-calendar-day payment period.

We did not receive comment on this proposed provision and, we are finalizing as proposed as set forth in § 427.500.

ii. Reports of Rebate Amounts and Suggestion of Error

Consistent with the process specified in section 60 of the revised Medicare Part B Drug Inflation Rebate Guidance involving preliminary and final reports, we proposed to codify a multi-step process to provide a manufacturer as set forth in § 427.20 with the rebate information specified in section 1847A(i)(1)(A) of the Act. As stated in the CY 2025 PFS proposed rule (89 FR 61955), we considered the following factors in determining a method and process for providing the rebate information: meeting statutorily provided deadlines in section 1847A(i) of the Act (for example, dates by which to provide the rebate amount to the manufacturer); the operational time to acquire the relevant information specified in part 427; the operational time to calculate the rebate amount specified in subpart D of part 427; clarity of the information provided as well as potential burden on manufacturers; and how to ensure accuracy of the rebate amount.

We proposed at § 427.501 the use of an initial Preliminary Rebate Report and a subsequent Rebate Report, with an opportunity for manufacturers to identify certain mathematical errors (see § 427.503 and discussed in further detail later in this section) and one regular reconciliation of the rebate amount to account for data revisions 12 months after the Rebate Report is provided. We proposed at § 427.501(d)(1), to conduct a reconciliation 12 months after issuance of the subsequent Rebate Report as set forth in § 427.501(c) to include restatements that have occurred in the drug pricing data and claims billing data reported to CMS and used in the rebate calculation specified in subpart D of the part.

We proposed at § 427.501 that the multi-step reporting process for providing rebate information to a manufacturer would include: (1) an initial report, which we proposed to entitle the ''Preliminary Rebate Report'' as set forth in § 427.501(b) and (2) a second report, which we proposed to entitle the ''Rebate Report'' as set forth in § 427.501(c). The Rebate Report serves as the invoice for the rebate amount due, if any, for each NDC that has been assigned to a billing and payment code for a product determined to be a Part B rebatable drug for the applicable calendar quarter, as set forth in § 427.101. We stated in the CY 2025 PFS proposed rule (89 FR 61955) that manufacturers of Part B rebatable drugs will receive a Rebate Report for their rebatable drugs even if the amount due is $0. We proposed at § 427.501(d)(1) a regular reconciliation of the rebate amount to occur 12 months after issuance of the subsequent Rebate Report as set forth in § 427.501(c).

As the first step in the reporting process, as set forth in § 427.501(b) and consistent with section 60 of the revised Medicare Part B Drug Inflation Rebate Guidance, we will provide the manufacturer of a Part B rebatable drug with the preliminary rebate amount through a Preliminary Rebate Report that is provided to each manufacturer of a Part B rebatable drug at least 1 month prior to the issuance of the Rebate Report as set forth in § 427.501(c) for an applicable calendar quarter (that is, not more than 5 months after the end of the

applicable calendar quarter). To facilitate manufacturer understanding of the Preliminary Rebate Report, we proposed at § 427.501(b)(1) that the Preliminary Rebate Report will include the following information: the NDC(s) and billing and payment code for the Part B rebatable drug as set forth in § 427.20, the total number of billing units as determined under § 427.303; the payment amount in the payment amount benchmark quarter as set forth in § 427.302(d); the applicable calendar quarter specified amount as set forth in § 427.302(b); the applicable benchmark period and rebate period CPI-Us as set forth in § 427.302(e) and (f); the inflation-adjusted payment amount as determined under § 427.302(g); the amount, if any, by which the specified amount as set forth in § 427.302(b) exceeds the inflation-adjusted payment amount as determined under § 427.302(g) for the Part B rebatable drug for the applicable calendar quarter as determined under § 427.302; any applied reduction as determined under §§ 427.401 and 427.402; and the rebate amount due as set forth in § 427.301(a).

In the CY 2025 PFS proposed rule (89 FR 61955), we stated that when determining what information should be included on rebate reports, we considered the statutory requirements outlined in section 1847A(i)(1)(A) of the Act to determine which data elements are necessary to review the Preliminary Rebate Report for error (described later in this section) and to protect proprietary information. In response to comments on the initial Medicare Part B Drug Inflation Rebate Guidance, we proposed to disclose data elements as suggested by interested parties that are not enumerated in the statute, such as the applicable benchmark period and rebate period CPI–Us. We acknowledged requests from interested parties to provide additional data elements such as claim-level data at the NDC–11 level, that are not included in this proposal. We considered these requests in development of the CY 2025 PFS proposed rule, but we do not believe it necessary to provide further information to fulfill CMS' statutory obligation and believe that the potential benefit to manufacturers of additional data is outweighed by the administrative burdens additional reporting will impose to the agency. We also stated that the elements listed previously provide sufficient information for a manufacturer to review the Preliminary Rebate Report for mathematical error, while protecting proprietary information, and these elements are operationally feasible for CMS to provide. We believe the elements as set forth in § 427.501(b)(1) satisfy these considerations.

As explained in the CY 2025 PFS proposed rule (89 FR 61955), by structuring the Rebate Report process to include a Preliminary Rebate Report before the Rebate Report, CMS is able to provide manufacturers with an opportunity to review the Preliminary Rebate Report before the rebate amount is invoiced via the Rebate Report. While CMS is not required to provide a preliminary report, we stated in the CY 2025 PFS proposed rule that we seek to facilitate manufacturer understanding of the report and believe it would be beneficial for manufacturers to review the report for mathematical errors that can be corrected before invoicing via the Rebate Report. Further, a Preliminary Rebate Report would provide additional notice to manufacturers regarding whether they may owe a rebate amount.

As set forth in § 427.503, we proposed a process in which a manufacturer may suggest to CMS that the manufacturer believes the Preliminary Rebate Report includes a mathematical error within 10 calendar days after the date of receipt of the Preliminary Rebate Report. For example, if the Preliminary Rebate Report is provided on May 31, 2026, then June 1, 2026, will be the date of receipt and, therefore, day one of the 10-calendar-day period to submit a Suggestion of Error. In this example, Suggestions of Error would be due by 11:59 p.m. PT on June 10, 2026. We reviewed comments on the 10-day Suggestion of Error period submitted in response to the initial Medicare Part B Drug Inflation Rebate Guidance, many of which suggested that manufacturers receive at least 30 days to review the Preliminary Rebate Report. We considered a 10-day, 15-day, and 30-day Suggestion of Error period and we believe the 10-calendar-day period as set forth in § 427.503(c) is sufficient after considering the volume of the data to be provided to manufacturers, the narrow scope of items that may be identified as a Suggestion of Error, and the operational time necessary for CMS to provide a Rebate Report within 6 months of the end of the applicable calendar quarter as required under section 1847A(i)(1)(A) of the Act. However, we proposed at § 427.502(c)(1)(ii) to expand the Suggestion of Error period to 30 calendar days for the Preliminary Rebate Report for CY 2023 and CY 2024. As explained in the CY 2025 PFS proposed rule (89 FR 61955), this extended Suggestion of Error period will provide additional time and flexibility during the first invoicing cycle of the Part B Rebate Program.

Section 1847A(i)(8) of the Act precludes administrative or judicial review on the determination of units, whether a drug is a Part B rebatable drug, and the calculation of the rebate amount as determined under § 427.503(a)(1). Therefore, we stated in the CY 2025 PFS proposed rule at 89 FR 61955 that the Suggestion of Error process will be limited to mathematical steps involved in determining the rebate amount and the elements precluded from administrative or judicial review will not be considered in-scope for the Suggestion of Error process. Additionally, we stated in the CY 2025 PFS proposed rule that we will not provide an administrative dispute resolution process. We intend to consider all in-scope submissions under the Suggestion of Error process as set forth in § 427.503(a) (for example, suggestions regarding a mathematical error). We do not intend to review suggestions of error that are out-of-scope or submissions for a rebatable drug with an amount due of $0.

As the second step in the reporting process, we proposed at § 427.501(c) to provide the rebate amount to the manufacturer through the Rebate Report no later than 6 months after the end of the applicable calendar quarter. As proposed at § 427.501(c)(1), the Rebate Report will include the same data elements as the Preliminary Rebate Report (as set forth in § 427.501(b)(1)) and include any recalculations based on CMS acceptance of a manufacturer's Suggestion of Error as determined under § 427.503, or any CMS-determined recalculations as determined under § 427.501(d)(2), if applicable. Manufacturers must pay the rebate amount within 30 calendar days from the date of receipt of the Rebate Report (as set forth in § 427.505(a)). For example, if the Rebate Report is provided on June 30, 2026, then July 1, 2026, would be the date of receipt and therefore day one of the 30-calendar-day payment period; payment would be due no later than 11:59 p.m. PT on July 30, 2026.

As set forth in §§ 427.504 and 427.505, we proposed to establish a standard method and process to issue Rebate Reports and accept manufacturer rebate payments. This method and process may include an online portal administered by a CMS contractor which will provide manufacturers with access to their Rebate Reports, submit Suggestions of Error, and pay a rebate amount due. We intend to provide technical instructions separate from this rulemaking to manufacturers of Part B

rebatable drugs regarding how to access Rebate Reports and how to receive notifications alerting the manufacturer when information is available. We stated in the CY 2025 PFS proposed rule (89 FR 61956) that CMS also intends to issue reminder notices to manufacturers regarding the due date of rebate payments. As set forth in § 427.504(a), the manufacturer that may access Rebate Reports and make applicable rebate amount payments is the manufacturer responsible for paying a rebate, and as stated above, we proposed to identify the manufacturer that is responsible for paying a rebate using the same approach used for reporting ASP and Medicaid Drug Rebate Program data.

We solicited comments on these proposals.

We received public comments on these proposals. The following is a summary of the comments we received and our responses. We note that the comments and responses below generally apply to both the Medicare Part B and Part D Drug Inflation Rebate Programs, as commenters made their recommendations with respect to both programs.

Comment: A couple of commenters requested that we provide a predictable date during each rebate cycle for when the preliminary report will be provided to help manufacturers ensure timely review of Preliminary Rebate Reports.

Response: We appreciate commenters' request for specific dates for the release of Preliminary Rebate Reports and how this may assist manufacturers in preparing for report review. We intend to publish a regular release schedule or calendar of release dates in future years of the rebate program, as we indicated on page 78 of the revised Medicare Part B Drug Inflation Rebate Guidance and page 66 of the revised Medicare Part D Drug Inflation Rebate Guidance. We also note that for the first two Part B Rebate Reports, which will include calendar quarters in calendar years 2023 and 2024, and the first two Part D Rebate Reports, which will include Rebate Reports for the applicable periods beginning October 1, 2022, and October 1, 2023, we are finalizing the proposal to extend the Suggestion of Error review period to 30 days as set forth in § 427.503 for the Medicare Part B Inflation Rebate Program and § 428.403 for the Medicare Part D Inflation Rebate Program. Our aim in extending this review period for the first reports issued is to provide additional time for manufacturers to become familiar with the rebate process and develop internal review procedures.

Comment: A few commenters suggested that claim-level data be provided for each period for review. Specifically, one commenter stated that data should include the percent increase in inflation calculated by CMS and a detailed description of the types of data included in each Preliminary Rebate Report. Another commenter urged CMS to include in the preliminary reports all information, calculations, and supporting documentation necessary for a manufacturer to be able to make an informed determination as to whether the intended invoicing is correct or incorrect.

Response: We appreciate the comments to provide claim-level data for review. As stated in the revised guidance, we considered the statutory requirements outlined in section 1847(i)(1)(A) of the Act for Part B rebatable drugs and section 1860D–14B(a)(1) of the Act for Part D rebatable drugs to determine what data elements are necessary to review the Preliminary Rebate Report for a Suggestion of Error. Upon consideration of these comments and review of proposed §§ 427.501 and 428.401, we believe that the data listed to be provided in the Part B and Part D Preliminary Rebate Reports are sufficient for manufacturers to review the Preliminary Rebate Report for a Suggestion of Error. In addition to being sufficient for manufacturer review, we believe including additional data elements would not be feasible from an operational perspective given statutory timelines and the need for sufficient claims run-out.

Comment: A couple of commenters asked that CMS consider more than just mathematical errors in the suggestion of error process. A couple of commenters requested that CMS accept feedback from the manufacturer and supporting documentation regarding the data. A couple of commenters also asked CMS to establish an administrative dispute resolution process to consider feedback and errors in the data elements provided to manufacturers. These commenters stated that the statutory preclusions to administrative review at section 1847A(i)(8) of the Act do not prevent CMS from establishing an informal review process.

Response: Section 1847A(i)(8) of the Act precludes administrative or judicial review on the determination of units, whether a drug is a Part B rebatable drug, and the calculation of the rebate amount (as determined under § 427.503(a)(1)). Section 1860D–14B(f) of the Act precludes administrative or judicial review on the determination of units, whether a drug is a Part D rebatable drug, and the calculation of the rebate amount (see subparts B and C of part 428). We do not believe additional review is necessary and therefore, we are finalizing our proposal as set forth in §§ 427.503 and 428.403 for Part B and Part D, respectively, to provide an opportunity for manufacturers to informally review and provide feedback to CMS of manufacturer-identified mathematical errors.

Comment: Some commenters requested that we extend the Suggestion of Error period because commenters do not believe 10 calendar days is a sufficient amount of time for manufacturers to review the Preliminary Rebate Report and the preliminary report of the revised rebate amount. Among these commenters, a few suggested we provide at least 30 days for manufacturers to review and submit a Suggestion of Error; a couple of commenters suggested extending the review period to 45 days. One commenter requested a 45-day period for manufacturers to submit a Suggestion of Error rather than the proposed 10 calendar days.

Response: We appreciate commenters' feedback on the Suggestion of Error process. As we discussed on page 41 of the revised Medicare Part B Inflation Rebate Guidance and page 29 of the revised Medicare Part D Drug Inflation Rebate Guidance, in setting the review period of 10 calendar days we considered the volume of the data to be provided to manufacturers, the narrow set of items that may be identified as a Suggestion of Error, and the operational time period necessary for CMS to complete the process to publish a Rebate Report and the revised rebate amount, if applicable. Given these factors, we believe that a review period of 10 calendar days is sufficient.

Comment: One commenter requested that CMS clarify that manufacturers are not required to submit payment on disputed claims until the disputes are resolved.

Response: As set forth in proposed § 427.501 for Part B and § 428.401 for Part D, manufacturers will receive a Preliminary Rebate Report to include a preliminary rebate amount. Manufacturers will have 10 days to review the Preliminary Rebate Report and submit a Suggestion of Error, if applicable, as set forth in in proposed §§ 427.503 and 428.403. The Suggestion of Error process will be completed prior to issuance of the Rebate Report or a reconciled Rebate Report and therefore will include any revisions resulting from CMS' review of a Suggestion of Error in the rebate amount. Subsequently, payment is required within 30 days after the date of receipt of the Rebate Report as set forth in

§ 427.501(c) (and a reconciled Rebate Report as set forth in § 427.501(d)(1) and (2)) for a Part B rebate amount and within 30 days after the date of receipt of the Rebate Report set forth in § 428.401(c) (and a reconciliation of the Rebate Report as determined under § 428.401(d)(1) and (2)) for a Part D rebate amount.

Comment: One commenter requested that CMS provide an electronic payment system.

Response: We thank the commenters for the suggestions. CMS will establish a standard method and process for the payment of rebate amount owed (as set forth in §§ 427.505 and 428.405 which provide the deadline and process for payment of a rebate amount), and CMS is planning to provide an electronic payment mechanism similar to other existing systems used in the Medicare program.

After consideration of public comments, we are finalizing §§ 427.500 through 427.505 regarding Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments as proposed.

iii. Reconciliation of a Rebate Amount

As discussed in section 60 of the revised Medicare Part B Drug Inflation Rebate Guidance, we considered options for establishing a standardized method and process at regular intervals to determinate any appropriate adjustments to the rebate amount for a Part B rebatable drug for an applicable calendar quarter to account for revised information as well as options for recalculation based on CMS identifying an agency error or determining manufacturer data was misreported. While the provisions in section 1847A(i) of the Act do not expressly provide for reconciliation in the Medicare Part B Drug Inflation Rebate Program, as explained in the CY 2025 PFS proposed rule (89 FR 61956), we have determined that a process for reconciling the rebate amount for updated information is necessary and appropriate to promote the accuracy of the rebate amount for each drug for each applicable calendar quarter. We proposed policies for reconciliation, including with respect to enforcement of payment of any reconciled rebate amount, consistent with both the statutory framework for the Medicare Part B Drug Inflation Rebate Program and the express authority in sections 1102 and 1871 of the Act to adopt regulations for the proper administration of the Medicare Prescription Drug Inflation Rebate Program.

As we proposed at § 427.501(d) and noted in the CY 2025 PFS proposed rule (89 FR 61956), we believe it is necessary and appropriate for CMS to recalculate the rebate amount for an applicable calendar quarter at a regular interval to include updated information about key data elements included in the calculation of the rebate amount. These data elements as set forth in § 427.501(d)(1)(i) include: total units; the payment amount in the payment amount quarter; and any applied reductions as determined under §§ 427.401 and 427.402. Updating these calculation inputs at a regular reconciliation interval will result in a rebate amount that more fully reflects the majority of shifts in the underlying data following additional time for claims run-out, which refers to the maturation of claims in the claims processing system. Because the information accessed represents the claims' status in the claims processing system at that moment in time, additional claims run-out may yield different information, either because more claims with dates of service during the applicable calendar quarter were finalized and added to the claims processing system or because the status of the existing claims changed. CMS refers to ''X months of run-out'' as the period between the end of the applicable calendar quarter and the date when CMS accesses information about the claims; for example, ''3 months of run-out'' means that claims data are accessed for claims with service dates during an applicable calendar quarter 3 months after the end of such applicable calendar quarter. Conducting a reconciliation of the rebate amount with additional claims run-out will improve the accuracy of the rebate amount. Additionally, reconciliation of payment amounts is consistent with the approach to the calculation of payment amounts in other CMS programs (such as the Coverage Gap Discount Program) that provide for a reconciliation period.

As noted in the CY 2025 PFS proposed rule (89 FR 61956), the reconciliation of a rebate amount, whether the regular reconciliation as set forth in § 427.501(d)(1) or a discretionary reconciliation as set forth in § 427.501(d)(2) discussed further below, will not create a separately payable and distinct rebate amount. Rather, reconciliation updates the prior rebate amount owed to CMS, if any, by a manufacturer of a Part B rebatable drug so that the rebate amount ultimately reflects a more precise calculation of the rebate amount, as required by section 1847A(i) of the Act, to account for shifts in the underlying data following additional time for claims run-out after the Rebate Report is issued as well as subsequently identified data integrity issues. Moreover, because the reconciled rebate amount is an adjustment to the prior rebate amount, we proposed at § 427.501(d)(1)(i)(F) for the report of a reconciled rebate amount to also identify the difference between the rebate amount due as specified on the Rebate Report set forth in § 427.501(c) and the reconciled rebate amount. We noted in the CY 2025 PFS proposed rule (89 FR 61957) that we will only collect the net rebate amount due, if any, upon reconciliation, to prevent any duplicate payments. We also proposed to refund any overpayment made by a manufacturer, as determined during reconciliation, as set forth in § 427.505(c).

Additionally, as suggested in section 60 of the revised Medicare Part B Drug Inflation Rebate Guidance, we considered multiple options for establishing a standardized method and process to occur at regular intervals to determine any appropriate adjustment to the rebate amount for a Part B rebatable drug for an applicable calendar quarter to account for revised information prior to proposing the policy described here for a 12-month reconciliation of the Part B inflation rebate amount. We considered the length of time needed to capture relevant changes to data inputs for recalculation, whether the timing should align with the reconciliation of Part D rebate amounts, and manufacturer burden. Specifically, we considered the average time span needed to ensure submission of the majority of revisions from claims run-out periods for Part B,[675] and how such unit revisions compare to the Part D plan unit revisions specified in section 1860D–14B(b)(6) of the Act. We also considered the average time span needed to ensure the majority of Part B claims submitted would already be adjudicated and determined to be final action claims, CMS' policies related to the frequency of ASP restatements, the reporting timeline for refunds on discarded drug units, and reporting timelines for 340B claims and claims for beneficiaries dually eligible for Medicare and Medicaid. Without a reconciliation process, the Part B rebate amount will include units of discarded drugs on which manufacturers potentially owe a refund, thereby potentially requiring manufacturers to pay both a discarded drug refund and a

[675] See the CCW White Paper: Medicare Claims Maturity, *https://www2.ccwdata.org/documents/10280/19002256/medicare-claims-maturity.pdf.*

rebate amount on certain units of a Part B rebatable drug due to the timing of revisions to discarded drug units discussed in further detail in section II.I.2.d.iv. of this final rule.

We noted in the CY 2025 PFS proposed rule (89 FR 61957) that we believe a longer period of claims run-out (at least 12 months of run-out time in the proposed approach) will ensure that CMS more fully accounts for capturing of revised units. We considered that penalties associated with failure to submit timely and accurate ASP data (specified at § 414.806(b)) encourage timely submission of ASP data with the submission timeline in accordance with § 414.804(a)(5) when considering the completeness of 12 months of claims run-out. While we considered a longer period until a revision is completed, such as the 36-month period provided by the MDRP for AMP restatements as set forth in § 447.510(d)(3), we believe that a 12-month reconciliation period is appropriate for the Part B rebate program because of requirements to submit timely and accurate ASP data (specified at § 414.806(b)), and it provides sufficient time to capture the majority of updates to the data as set forth in § 427.301 while closing out (except for the proposed circumstances as set forth in § 427.501(d)(2) regarding CMS' identification of mathematical errors or manufacturer misreporting) the calculation of the rebate amount for a Part B rebatable drug for an applicable calendar quarter within a reasonable time period after the Rebate Report is issued. While we proposed a 12- and 36-month reconciliation period in the Medicare Part D Drug Inflation Rebate Program, due largely to the 36-month restatement period provided for MDRP AMP restatements (specified at § 447.510(d)(3)), we explained in the CY 2025 PFS proposed rule that we do not believe a second or longer restatement process is needed for Part B rebatable drugs because, as described previously, the ASP and claims run-out periods correspond with sufficient claims run-out and ASP restatement timing for Part B (particularly when considering penalties associated with failure to submit timely and accurate ASP data (specified at § 414.806(b)).

Further, as discussed in the CY 2025 PFS proposed rule (89 FR 61957), in considering whether consistency across CMS programs is critical, we believe that consideration for the completeness of data, as discussed above, should be prioritized over consistency across program timelines. That is, when examining timelines from other CMS programs that collect data contributing to calculation of the rebate amount, we prioritized, to the extent feasible, completeness and accuracy of the data elements contributing to the calculation of the rebate amount rather than prioritizing consistency among the data collection and reconciliation timelines themselves. Finally, we noted in the CY 2025 PFS proposed rule (89 CFR 61981) that we believe that a restatement of each data element set forth in § 427.501(d) to reconcile the rebate amount provided in the Rebate Report as set forth in § 427.501(c) and drugs acquired through the 340B Program as set forth in § 427.303(b)(1)(i) is appropriate to capture an updated rebate amount and is in line with other CMS programs that provide for a reconciliation period, including ASP restatements (see § 414.806). While some data points may not change, we proposed to review the data to determine if there are any updates in the data and use the updated data in the reconciliation to provide a reconciled rebate amount to the manufacturer.

Based on these considerations, similar to the multi-step process for the Rebate Report as set forth in § 427.501(b) and (c), in summary, we proposed a multi-step process to provide each manufacturer of a Part B rebatable drug with a reconciled rebate amount on a regular basis. At the 12-month reconciliation, we proposed a reconciliation process will include: (1) a preliminary reconciliation of the rebate amount, which we will provide to manufacturers of Part B rebatable drugs as set forth in proposed § 427.501(d)(1) and (2) a reconciled rebate amount, which we will provide to manufacturers of a Part B rebatable drug as determined under proposed § 427.501(d)(1)(ii). We also proposed to apply the Suggestion of Error process as set forth in § 427.503 to the preliminary reconciliation.

In detail, first, as set forth in § 427.501(d)(1) and similar to the Preliminary Rebate Report process as set forth in proposed § 427.501(b), we proposed to provide the manufacturer with information about the preliminary reconciliation of the rebate amount at least 1 month prior to the issuance of the reconciled rebate amount (as set forth in § 427.501(d)(1)) to each manufacturer of a Part B rebatable drug for an applicable calendar quarter. We proposed at § 427.501(d)(1) that the preliminary reconciliation will include, at a minimum, the same information outlined for the Rebate Report and the following updated information, if applicable: updated total number of rebatable units as specified at § 427.303; the payment amount in the payment amount benchmark quarter, if any inputs are restated within the reconciliation run-out period, as set forth in § 427.302(d); applicable calendar quarter specified amount (as set forth in § 427.302(b)), if any inputs are restated within the reconciliation run-out period; the excess amount by which the specified amount exceeds the inflation-adjusted payment amount, if any inputs are restated within the reconciliation run-out period, as determined under § 427.302; the reconciled total rebate amount calculated as set forth in § 427.301; and the difference between the total rebate amount due as specified on the Rebate Report set forth in § 427.501(d)(1)(i)).

As set forth in § 427.503(a), similar to the Suggestion of Error process proposed for the Preliminary Rebate Report at § 427.501(a), within 10 calendar days after date of receipt of the information about the preliminary reconciliation of the rebate amount, we proposed that a manufacturer may suggest to CMS that the manufacturer believes the preliminary reconciled rebate amount contains a mathematical error. As stated in the CY 2025 PFS proposed rule (89 FR 61958), we believe a 10-calendar-day period is sufficient due to the same considerations of data volume, the narrow set of reviewable items, and the operational time period necessary for CMS to complete the process to publish the reconciled rebate amount. The preclusions in section 1847A(i)(8) of the Act on administrative and judicial review apply to the reconciliation process.

Second, in detail, we proposed at § 427.501(d) to provide the reconciled rebate amount to the manufacturer 12 months after the Rebate Report was issued for an applicable calendar quarter. As set forth in § 427.501(d)(1)(i), the information in the report for the reconciled rebate amount would include the same data elements as provided in the information provided to the manufacturer of a Part B rebatable drug regarding the preliminary reconciliation of a rebate amount (set forth in § 427.501(d)(1)) and include any recalculations based on CMS acceptance of a manufacturer's Suggestion of Error from § 427.503. A reconciliation of the rebate amount may result in an increase, decrease, or no change to the rebate amount, compared to the Rebate Report for an applicable calendar quarter (as determined under § 427.501(d)(3)) or amount described in a previous reconciliation (as determined under § 427.501(d)(2)).

Additionally, as we suggested in section 60 of the revised Medicare Part B Drug Inflation Rebate Guidance, CMS considered options for establishing circumstances where a recalculation of

the rebate amount may be appropriate for an applicable calendar quarter after issuing the Rebate Report and/or a reconciled rebate amount based on CMS identifying an error or CMS determining that the information used to calculate a rebate amount was inaccurate due to false reporting or similar fault by the manufacturer (for example, manufacturer pricing or product data under section 1927(b)(3) of the Act). We also considered potential time limits for revisions and whether certain circumstances, such as instances of false reporting, should be exempt from such time limits.

As explained in the CY 2025 PFS proposed rule (89 FR 61958), based on these considerations, we believe that, to capture an accurate rebate amount and consistent with reconciliations of pricing data otherwise submitted to CMS that provide for revisions when necessary due to errors, including mathematical errors, and manufacturer misreporting, certain circumstances may merit a recalculation of the rebate amount separate from the 12-month reconciliation set forth in § 427.501(d)(1). Specifically, we proposed at § 427.501(d)(2) that CMS may recalculate a rebate amount, when CMS identifies either: (1) an agency error such as a mathematical error or an error in the information specified in a Rebate Report set forth in § 427.501(c) or report of a reconciled rebate amount set forth in § 427.501(d)(1) including reporting system or coding errors, or (2) CMS determining that information used to calculate the rebate amount was inaccurate due to manufacturer misreporting. Examples of agency errors could include CMS incorrectly assigning a billing or payment code or incorrectly calculating the billing units per package, or the mechanism that provides a Rebate Report to the manufacturer or the Rebate Report incorrectly displays a rebate amount. Examples of manufacturer misreporting could include instances in which the manufacturer has made a correction to previously submitted data as well as instances in which the individual or entity reporting data or information to CMS on behalf of the manufacturer knows or should know is inaccurate or misleading (for example, inaccurate ASP data as specified at § 414.806). This does not include standard restatements to ASP or other data outside of the standard process of issuing the reconciled rebate amount. In addition to manufacturer-initiated corrections, CMS may become aware of manufacturer misreporting based on fact finding and conclusions of enforcement authorities, for example, the HHS Office of Inspector General, the CMS Center for Program Integrity, or the Department of Justice. In a situation where an error or manufacturer misreporting is identified prior to the 12-month reconciliation of the rebate amount as set forth in proposed § 427.501(d)(1), CMS may choose to include a correction based on the circumstances proposed at § 427.501(d)(2) concurrently with the 12-month reconciliation. When CMS reconciles data due to an instance of agency error or manufacturer misreporting, we proposed that the agency would limit the scope of the reconciliation to the specific information that is the basis for the reconciliation and not update or otherwise revise any other data elements in the Rebate Report (as set forth in § 427.501(c)) or the report of the reconciled rebate amount (as set forth in § 427.501(d)(1)) unless the correction directly impacts additional data fields. For example, we believe corrections to an ASP quarterly file may not change the specified amount for the applicable calendar quarter.

In addition, as noted in the CY 2025 PFS proposed rule (89 FR 61958), because reconciling a rebate amount imposes substantial administrative burden on CMS to reprocess the rebate amount, retest the reporting system, and reissue a rebate report, we proposed at § 427.501(d)(2) that CMS may exercise discretion not to initiate a recalculation of the rebate amount in these situations which are outside of the regular reconciliation process set forth in § 427.501(d)(1).

We proposed that for a recalculation due to agency error, the error must be identified within 3 years of the date of receipt of the reconciled rebate amount for the applicable calendar quarter (set forth in § 427.501(d)(2)(i)). Identification means that CMS has knowledge of the error; CMS does not need to have completed its revision of the impacted data or determined if the revision impacts the rebate amount within the 3-year period. CMS will timely complete these steps and determine, when the reconciliation does impact the rebate amount, whether the reconciliation must be included in a discretionary revision or within an upcoming reconciled rebate amount for an applicable calendar quarter. We stated in the CY 2025 PFS proposed rule that we believe a 3-year period dating from the issuance of a reconciliation aligns broadly with the timeframe in which most manufacturers provide Part B ASP restatements.

We proposed at § 427.501(d)(2)(ii) that for a circumstance in which a manufacturer misreports data, we will not be bound by the 3-year time limit for revision of the rebate amount. For example, if a determination is made that a manufacturer misreported ASP data, then CMS may recalculate the rebate amount owed for a Part B rebatable drug. We solicited comments on the proposals related to manufacturer misreporting.

We proposed at § 427.505(a)(1) that upon receipt of the reconciled rebate amount manufacturers must pay the rebate within 30 calendar days from the date of receipt of the reconciled rebate amount. A 30-day payment deadline aligns with the payment period set forth in statute at section 1847A(i)(1)(B) of the Act. As set forth in § 427.504, we will use the same method and process for issuing Rebate Reports and submission of payments for reports with a reconciled rebate amount. We stated that we will provide notice to manufacturers when a report with a reconciled rebate amount, which will include the information set forth at § 427.501(d), is available for the manufacturer's Part B rebatable drugs. We proposed at § 427.505(c) that if a refund is owed to a manufacturer based on a reconciled rebate amount, we will initiate the process to issue such a refund within 60 days from the date of receipt of the reconciled rebate amount (set forth at § 427.501(d)). CMS will issue additional information on this method and process through additional program communications.

We received public comment on these proposals. The following is a summary of the comment we received and our response.

Comment: One commenter asked CMS to establish a minimum threshold amount it will use in determining if a reconciled rebate amount is owed, and to clarify that amount to manufacturers in the final rule. The commenter provided an example wherein a manufacturer could owe a rebate amount of 1 cent but did not suggest a specific minimum threshold.

Response: We thank the commenter for their suggestion. Section 1847A(i)(1)(A) of the Act requires the Secretary to provide a report to each manufacturer of a Part B rebatable drug with the following information not later than 6 months after the end of an applicable calendar quarter: (1) the total number of billing units for each Part B rebatable drug; (2) the amount, if any, of the excess average sales price increase (the amount by which the specified amount exceeds the inflation-adjusted payment amount as determined under § 427.301(g)) for an applicable calendar quarter; and (3) the rebate amount for

the Part B rebatable drug. The goal of the reconciliation process is to ensure the rebate amount is complete and accurate. The statute does not direct CMS to only collect rebate amounts above a specific threshold. As such, we decline to provide a minimum threshold for a rebate amount owed for a reconciled rebate amount in the report as set forth in § 427.501(d)(1).

Comment: One commenter expressed support for the proposed 12-month reconciliation process. One commenter suggested that CMS finalize the reconciliation period of one year in order to appropriately capture restatements of ASP. Another commenter urged CMS to provide reconciliation for up to 3 years as ASP restatements can occur after the 1-year mark. The commenter also suggested that CMS establish a clear and consistent process for manufacturers to notify the agency of ASP restatements that occur after initial rebate invoices are issued, and for those ASP restatements to be fully accounted for in the Part B inflation rebate reconciliation.

Response: We thank these commenters for their feedback. As part of the 12-month reconciliation, we will incorporate updates to the data as set forth in §§ 427.501(b)(1) and 427.501(d)(1). This will include updates to ASP data that have been processed by CMS prior to the 12-month reconciliation. Section 414.806(b) requires timely and accurate reporting of ASP data,[676] including a requirement that manufacturers submit corrections to ASP data by the correction deadline, which is the 10th day of the month preceding the effective date of the payment limits. Further, CMS may issue restatements for up to four previous quarters; manufacturers have until the 30th day of the month after the end of the previous quarter to submit corrected data. In the Medicare Part B Inflation Rebate Program, the Rebate Report will be issued no later than 6 months after the end of each calendar quarter, followed by reconciliation which will occur 12 months after the Rebate Report is issued. This is after the timeframe in which ASP is restated.

We also noted previously that the Discarded Drug Refund Program includes lagged claims data in annual reports, subsequent to the initial report. Although this lagged data will generally not be available when we conduct reconciliation in the Medicare Part B Drug Inflation Rebate Program, CMS has estimated that over 99 percent of claims will be final when a given quarter is first included in a discarded drug refund report.[677] Therefore, CMS anticipates that there will not be significant revisions to the number of units of discarded drugs subject to refunds for rebatable drugs after we conduct reconciliation in the Medicare Part B Drug Inflation Rebate Program. As such, we believe that as a general matter the reconciliation 12 months after the Report is issued, as set forth in § 427.501(d)(1), also enables CMS to majority of updates to the data specified set forth in § 427.301. Reconciliation 12 months after the Rebate Report is issued, after the Rebate Report as set forth in § 427.501(d)(1), also enables CMS to close out the calculation of the rebate amount for a Part B rebatable drug for an applicable calendar quarter within a reasonable time period after the Rebate Report is issued. We believe the reconciliation set forth in § 427.501(d)(2) regarding manufacturer misreporting is sufficient to account for ASP restatements that occur after 12 months. We do not believe a second or longer restatement process is needed for Part B rebatable drugs to account for ASP restatements in the ordinary course, because, as described previously, the reconciliation timing as set forth at § 427.501(d)(1) would allow sufficient time for ASP restatement and claims run-out before the reconciliation as set forth in § 427.501(d)(1) would occur. We will monitor the data specified at § 427.301 and consider changing the timing of reconciliation in the Medicare Part B Drug Inflation Rebate Program in the future if necessary.

Comment: A couple of commenters requested that CMS clarify the definition of ''manufacturer misreporting.'' These commenters suggested that CMS limit the application to situations of manufacturer fraud or similar fault.

Response: We thank the commenters for their feedback. We provided examples of manufacturer misreporting within the CY 2025 PFS proposed rule to illustrate the scope of the proposal. These examples are instances in which the manufacturer has made a correction to previously submitted data, as well as instances in which the individual or entity reporting data or information to CMS on behalf of the manufacturer knows or should know is inaccurate or misleading (for example, inaccurate ASP data as specified at § 414.806). We decline to apply these instances of reconciliation only to circumstances where fraud has been identified as this approach would remove reconciliation when manufacturer misreporting due to a manufacturer correction occurred. Additionally, we decline to further define manufacturer misreporting. We believe that a prescriptive definition may not fully capture the range of circumstances within the Medicare Part B or Medicare Part D Drug Inflation Rebate Programs in which we may conclude the information a manufacturer reported was inaccurate or misleading.

Comment: A couple of commenters suggested that CMS provide limited time parameters to a reconciliation due to manufacturer misreporting, as set forth in proposed § 427.501(d)(2). Specifically, these commenters suggested that CMS use an end date of 3 or 4 years and mirror the standards provided at 42 CFR 405.980(b) regarding revisions to Medicare contractor determinations of Part A and Part B benefit eligibility.

Response: We thank commenters for their feedback. We have considered other Medicare and Medicaid program parameters regarding reconciliation of program data, and we are finalizing our proposal as proposed because we believe it consistent with other CMS programs that do not include time parameters on certain revisions (for example, the Medicaid Drug Rebate Program obligations for reporting revised quarterly AMP, best price, customary prompt pay discounts, or nominal prices are not limited to 12 quarters in instances in which the change is to address an internal, Office of Inspector General, or Department of Justice investigation as specified at § 447.510(b)(1)(v)). We believe this approach appropriately accounts for the significant periods of time that may be necessary to accomplish fact finding and investigations that may be present in some instances of manufacturer misreporting. Additionally, we recognize that other authorities may include statutory timing limitations that overlay § 427.501(d)(2), as applicable.

In response to some commenters that suggested a 3- or 4-year end date for reconciliation in order to align our policy with the claim reopening rules at 42 CFR 405.980(b), we note our polices for reconciliation are more consistent with the reopening rules than the commenters' recommendation. Our policy for recalculation in the context of manufacturer misreporting is consistent with 42 CFR 405.980(b) which allows for exceptions to the otherwise applicable end date for recalculation in

[676] The CMS ''Average Sales Price (ASP) Restatement Policy Overview'' is available at: *https://www.cms.gov/files/document/average-sales-price-asp-restatement-policy-overview.pdf.*

[677] *https://www.federalregister.gov/d/2023-24184/p-2172.*

certain instances that could include misreporting (see 42 CFR 405.980(b)(3)). Additionally, we note that the Medicare Part B Drug Inflation Rebate Program does provide end dates for reconciliation of restated data for any reason, within the reconciliation set forth at § 427.501(c), and for reconciliation related to CMS technical errors, within the reconciliation specified at § 427.501(d)(1), which are substantially similar to the reopening policies stated in 42 CFR 405.980(b)(1) and (2).

Comment: One commenter suggested that we employ a preliminary report process for reconciled rebate amounts, aligned with the process proposed for Rebate Reports. The commenter recommended preliminary reconciled reports include data that manufacturers will need for a meaningful review of the report.

Response: It is unclear from the comment whether the commenter was referring to the reconciliation as set forth at § 427.501(d)(1) and/or at § 457.501(d)(2). We proposed to provide a preliminary report for a reconciled rebate amount set forth at § 427.501(d)(1). We decline to provide a preliminary report for a reconciled amount due to CMS identification of error or manufacturer misreporting set forth at § 427.501(d)(2) because the circumstances captured for these ad hoc reconciliations will likely be specific to a manufacturer and communication will reflect the facts and circumstances of the data revision.

After consideration of public comments, we are finalizing our proposal as proposed at § 427.501, with modification. In this final rule, we are revising § 427.501(b)(iii) and § 427.501(d)(i)(B) to reflect that the Rebate Report will include the payment amount benchmark quarter, in addition to the payment amount in the payment amount benchmark quarter, the corresponding cross-reference at § 427.302(c) to identify both the benchmark period and the price in the benchmark period within the report information. Additionally, we are including technical edits to § 427.501(d)(1) to clarify that a reconciliation will include any changes incorporated in the Rebate Report specified at § 427.501(c)(1).

iv. Rebate Report for Applicable Calendar Quarters in CY 2023 and CY 2024

Section 1847A(i)(1)(C) of the Act provides CMS with the option to delay sending the information required by section 1847A(i)(1)(A) of the Act for applicable calendar quarters in calendar years 2023 and 2024 until not later than September 30, 2025. At § 427.502, consistent with section 60.2 of the revised Medicare Part B Drug Inflation Rebate Guidance, we proposed consolidating the Preliminary Rebate Reports and Rebate Reports for CYs 2023 and 2024 into two reports: one report for the 4 applicable calendar quarters in CY 2023 and one report for the 4 applicable calendar quarters in CY 2024. This approach allows for at least 12 months of claims run-out for each applicable calendar quarter in CY 2023 and at least 3 months of claims run-out for each applicable calendar quarter in CY 2024. For these combined reports, we proposed at § 427.502 to provide an extended 30 calendar day Suggestion of Error period for the Preliminary Rebate Report.

In the CY 2025 PFS proposed rule (89 FR 61959), we proposed to send a reconciled rebate amount for the four applicable calendar quarters in CY 2024 9 months after the Rebate Report, to allow for 12 months of claims run-out for each applicable calendar quarter; in proposed § 427.502(b) we noted that we do not intend to conduct reconciliation for the 4 applicable calendar quarters in CY 2023 since the Rebate Report would already reflect 12 months of claims run-out. We stated in the CY 2025 PFS proposed rule that this approach aligns claims and payment data run-out with the run-out used during a regular reconciliation cycle. The Suggestion of Error period for the report containing the reconciled rebate amount for applicable calendar quarters in CY 2024 will be 10 calendar days.

As noted in the CY 2025 PFS proposed rule (89 FR 61959), this approach also minimizes the number of reports issued to manufacturers as a result of the delay in reporting and simplifies payment procedures, thereby minimizing manufacturer burden. Starting with the first applicable calendar quarter of CY 2025, reporting will begin a standard cadence and follow the procedures otherwise proposed in subpart F of this part 427.

We received public comment on this proposal. The following is a summary of the comment we received and our response.

Comment: One commenter suggested that CMS provide a 45-day suggestion of error review period in CY 2023 and CY 2024 instead of a 30-day review period, given that these are the first two periods that review will be effective.

Response: We appreciate this commenter's feedback. Similar to our response in suggestion of error review period for the Preliminary Rebate Report, in setting the review period of 30 calendar days, we considered the volume of the data to be provided to manufacturers, the narrow set of items that may be identified as a Suggestion of Error, and the operational time period necessary for CMS to complete the process to publish the CY 2023 and CY 2024 Rebate Reports. Given these factors, we believe that a review period of 30 calendar days is sufficient.

After consideration of public comment on this proposed provision, we are finalizing as proposed at § 427.502(c).

We proposed that manufacturers that do not pay the Medicare Part B inflation rebate amount owed for a Part B rebatable drug within 30 calendar days of receiving a Rebate Report, including reports containing a reconciled rebate amount, may be subject to a civil money penalty of 125 percent of the rebate amount, as applicable, for such drug for the applicable calendar quarter. We noted that the civil money penalty is in addition to the rebate amount.

g. Enforcement of Manufacturer Payment of Rebate Amounts (§ 427.600)

Section 1847A(i)(7) of the Act gives CMS the authority to impose a civil money penalty equal to at least 125 percent of the rebate amount for each drug for each applicable calendar quarter on a manufacturer that fails to pay the rebate amount for each rebatable Part B drug. In the CY 2025 PFS proposed rule (89 FR 61959) we stated that subpart G would implement this section of the Act and establish the procedures for determining and collecting a civil money penalty.

In accordance with section 1847A(i)(1)(B) of the Act and as set forth in § 427.505(a), manufacturers must provide to CMS a rebate amount owed within 30 calendar days of receipt of the Rebate Report containing the rebate amount due. As set forth in § 427.600(a), we proposed that CMS may impose a civil money penalty when a manufacturer fails to pay the rebate amount in full by the payment deadlines proposed at § 427.505(a). This means a manufacturer may be subject to a civil money penalty if the manufacturer fails to pay the full rebate amount as invoiced in the Rebate Report or any reconciled rebate amount that is greater than the amount invoiced in the Rebate Report. More specifically, as described in the CY 2025 PFS proposed rule (89 FR 61959), a manufacturer could be subject to a civil money penalty when a manufacturer fails to pay a rebate amount due by any payment deadline proposed at § 427.505(a)(1) and (2) for: (1) a Rebate Report as set forth at § 427.501(c); (2) a

reconciled rebate amount greater than the rebate amount reflected in the Rebate Report as set forth at § 427.501(d); or (3) a Rebate Report and a reconciled rebate amount greater than the amount reflected in the Rebate Report, if applicable, for the applicable calendar quarters in calendar years 2023 and 2024 as set forth at § 427.502. We noted that the reconciled rebate amount is not a separately payable and distinct rebate amount. Rather, the reconciled rebate amount is an update to the rebate amount owed to CMS by a manufacturer of a Part B rebatable drug.

As stated in the CY 2025 PFS proposed rule (89 FR 61959), we explained that civil money penalties are a point-in-time penalty tied to the rebate amount due at the applicable payment deadline, which occurs 30 days after the date of receipt of a Rebate Report. At § 427.600(b), we proposed to establish the methodology for determining the amount of the civil money penalty as equal to 125 percent of the rebate amount for such drug for such applicable calendar quarter, and that this penalty would be due in addition to the rebate amount due. That is, a manufacturer will be responsible for paying the full rebate amount due in addition to any civil money penalty imposed because of late payment. While CMS has the statutory authority to impose a civil money penalty greater than 125 percent of the rebate amount in the Medicare Part B Drug Inflation Rebate Program under section 1847(A)(i)(7) of the Act, we proposed a penalty amount of 125 percent of the rebate amount to align with the penalty amount in the Medicare Part D Drug Inflation Rebate Program. We proposed this approach to civil money penalties based on section 1847A(i)(1)(B) of the Act, which establishes a requirement by the manufacturer to provide CMS with a rebate not later than 30 days after receipt from CMS of the report on the amount of the excess average sales price increase. As noted in the proposed rule, we believe that the ability to assess civil money penalties is necessary in all circumstances where a payment is due for a rebate amount to CMS to ensure compliance with the rebate program's requirements. The civil money penalty would be calculated based on the outstanding rebate amount due at the payment deadline, which is defined at § 427.505(a) as 30 calendar days after the date of receipt of a Rebate Report containing any rebate amount due; once a civil money penalty is assessed due to a late payment, the penalty would remain in effect even if the manufacturer pays the outstanding amount as the penalty is initiated due to a missed payment deadline. Because the payment deadline is clearly defined in section 1847A(i)(1)(B) of the Act, any late payments of a rebate amount due, including late payment of any reconciled rebate amounts greater than the amount reflected in the Rebate Report, would be considered a violation potentially subject to a civil money penalty. Any civil money penalty will be assessed before the next reconciliation process.

We proposed at § 427.600(b) that civil money penalties may be calculated at several points in time associated with missing a payment deadline for the rebate amount due reflected in the Rebate Report or missing a payment deadline associated with any rebate amount determined after a reconciliation to be greater than the amount invoiced in the Rebate Report. As these separate events can result in distinct assessments of civil money penalties, this means that CMS will not modify a civil money penalty from a prior missed payment deadline based on changes to the rebate amount due following reconciliation, including scenarios where the rebate amount is reduced following reconciliation. However, in the event that the rebate amount due on a Rebate Report was not paid and a civil money penalty was issued for violation of the payment deadline, CMS will not issue a second civil money penalty on a reconciled rebate amount if reconciliation decreased the rebate amount stated on the Rebate Report. As stated in the CY 2025 PFS proposed rule (89 FR 61959), we believe that enforcing this requirement after each payment deadline, regardless of what rebate amount a manufacturer may or may not owe at a future payment deadline, is necessary to maintain the integrity of the program and consistency of the implementation of the program. Further, we proposed this approach to ensure an enforcement approach that is operationally feasible and applied consistently in all cases.

As an example of this approach in practice, in the CY 2025 PFS proposed rule (89 FR 61960), we presented a scenario where the rebate amount due on the Rebate Report is $100. Following reconciliation 12 months after the Rebate Report was issued, CMS calculates a reconciled rebate amount for the applicable calendar quarter of $120 (an increase of $20 from the rebate amount identified in the Rebate Report due to updated claims run-out and payment data). Under this scenario, in the event the manufacturer does not pay the $100 rebate amount owed within the 30-day deadline following receipt of the Rebate Report, a civil money penalty for $125 ($100 × 1.25) could be assessed against the manufacturer due to their failure to meet the payment deadline. If the manufacturer pays the $100 before the reconciliation is completed, and then timely pays the $20 due within the 30-day payment deadline following the reconciliation 12 months after the Rebate Report or does not pay the $100 before the reconciliation is completed but timely pays the $120 due within the 30-day payment deadline following reconciliation 12 months after the Rebate Report, no further civil money penalty would be assessed.

Alternatively, in the event the manufacturer pays the $100 rebate amount due within the 30-day deadline following receipt of the Rebate Report but fails to meet the payment deadline for the net $20 rebate amount due following reconciliation, a civil money penalty of $25 ($20 × 1.25) could be assessed against the manufacturer due to their failure to meet the payment deadline for the updated rebate amount due following reconciliation. Finally, under this scenario in the event the manufacturer fails to meet any payment deadline throughout the full reconciliation cycle of this rebate amount; that is, the deadline is missed for the $100 amount due stated in the Rebate Report, and the $20 net rebate amount due following reconciliation, we may assess a separate civil money penalty on the rebate amount due at each of these missed deadlines. In this example, violations of each of these payment deadlines would result in a penalty of $125 ($100 × 1.25), followed by a penalty of $25 ($20 × 1.25), each of which would be assessed following the manufacturer's failure to meet the related payment deadline for the outstanding rebate amount due.

In an alternative possible scenario, consider the following. The rebate amount due on the Rebate Report is $100. Following reconciliation 12 months after the Rebate Report was issued, CMS calculates a reconciled rebate amount owed for the applicable period of $80 (a decrease of $20 from the rebate amount identified in the Rebate Report). In this scenario, if a manufacturer does not pay the $100 by the payment deadline for the rebate amount due in the Rebate Report, a civil money penalty for $125 ($100 × 1.25) may be assessed against the manufacturer due to its failure to meet the payment deadline for the rebate amount due identified in the Rebate Report. This civil money penalty is not affected if the manufacturer pays the rebate amount once it is past the

deadline, nor is it impacted by the reconciled rebate amount, because at the payment deadline missed by the manufacturer, the manufacturer owed a rebate of $100 to CMS and that rebate amount was not paid timely. As noted previously, under this scenario, given that there is no additional rebate amount due upon reconciliation compared to the rebate amount stated on the Rebate Report, there would not be a civil money penalty assessed on the reconciled rebate amount.

Further, we noted in the CY 2025 PFS proposed rule that payment of any civil money penalty does not obviate the requirement for the manufacturer to pay any outstanding rebate amount due, including any rebate amount due following a reconciliation. Therefore, paying a civil money penalty does not satisfy the obligation to pay the underlying rebate amount on which the civil money penalty is calculated. In addition, CMS will evaluate all available options to ensure manufacturers' timely compliance with their rebate payment obligations, including, without limitation, potential recovery approaches and enforcement actions. For example, CMS may refer manufacturers to the Department of Justice, Department of the Treasury, and/or the Department of Health and Human Services Office of Inspector General for further review and investigation.

At § 427.600(c), we proposed that if CMS makes a determination to impose a civil money penalty on a manufacturer for violation of a payment deadline, we will send a written notice of the decision to impose a civil money penalty that includes a description of the basis for the determination, the basis for the penalty, the amount of the penalty, the date the penalty is due, the manufacturer's right to a hearing, and information about where to file the request for a hearing. To ensure a consistent approach to civil money penalties, we proposed applying existing appeal procedures for civil money penalties in 42 CFR 423, subpart T of this title to manufacturers appealing a civil money penalty imposed under the Medicare Part B Drug Inflation Rebate Program. We have utilized this appeals process for many years for civil money penalty determinations affecting MA organizations and Part D sponsors. Therefore, we proposed to use this well-established process for civil money penalty appeals from manufacturers that do not make inflation rebate payments by the payment deadline. We also proposed at § 427.600(e)(1) that the scope of appeals is limited to: (1) CMS determinations relating to whether the rebate payment was made by the payment deadline; and (2) the calculation of the penalty amount. Section 1847A(i)(8) of the Act precludes judicial review of specific data inputs or calculations related to the underlying Rebate Report and reconciliation; therefore, such data and calculations are not appealable through this process.

Section 1847A(i)(7) of the Act states that the provisions of section 1128A of the Act (except subsections (a) and (b)) apply to civil money penalties under this subpart to the same extent that they apply to a civil money penalty or procedure under section 1128A(a) of the Act. We proposed to codify this requirement at § 427.600(f). In alignment with the procedure outlined in section 1128A of the Act, we proposed at § 427.600(d) that collection of the civil money penalty will follow expiration of the timeframe for requesting an appeal, which is 60 calendar days from the civil money penalty determination in cases where the manufacturer did not request an appeal. In cases where a manufacturer requests a hearing and the decision to impose the civil money penalty is upheld, we will initiate collection of the civil money penalty once the administrative decision is final. We solicited comment on proposals related to the violations of payment deadlines and issuance of a civil money penalty.

We proposed at § 427.600(g) that in the event that a manufacturer declares bankruptcy, as described in title 11 of the United States Code, and as a result of the bankruptcy, fails to pay either the full rebate amount owed or the total sum of civil money penalties imposed, the government reserves the right to file a proof of claim with the bankruptcy court to recover the unpaid rebate amount and/or civil monetary penalties owed by the manufacturer.

We received public comment on these proposals. The following is a summary of the comment we received and our response. Some of the comments received addressed both Part B rebatable drugs and Part D rebatable drugs. We addressed these comments below and do not repeat these summaries of comments and our responses in the discussion of Part D drug inflation rebate policies.

Comment: A few commenters stated that CMS does not have the statutory authority to issue CMPs for reconciled amounts in the Medicare Part B Drug Inflation Rebate Program and the Medicare Part D Drug Inflation Rebate Program. One of these commenters stated that sections 1847A(i)(7) and 1860D–14B(e) of the Act only mention CMPs related to late payments of the rebate amount and no language in the IRA provides CMS with the authority to issue a CMP for reconciled amounts.

Response: We thank the commenters for their input but disagree with their assessment of the agency's CMP authority under the Medicare Part B Drug Inflation Rebate Program and the Medicare Part D Drug Inflation Rebate Program.

In the Part B Inflation Rebate Program, section 1847A(i)(7) of the Act provides that ''[i]f a manufacturer of a part B rebatable drug has failed to comply with the requirements under paragraph (1)(B) for such drug for a calendar quarter, the manufacturer shall be subject to . . . a civil money penalty equal to at least 125 percent of the amount specified in paragraph (3) for such drug for such calendar quarter. Section 1847A(i)(1)(B) of the Act establishes that the manufacturer of a Part B rebatable drug is required to provide to CMS a rebate for such drug for the calendar quarter ''not later than 30 days after the date of receipt from the Secretary of the information described in [section 1847A(i)(1)(A)].'' Section 1847A(i)(1)(A) of the Act in turn establishes the information CMS must report to the manufacturer of the Part B rebatable drug to trigger the payment obligation, including the rebate amount and other data specified in section 1847A(i)(3) of the Act. Section 1847A(i)(1)(A) of the Act also reflects a date by which CMS shall provide information to the manufacturer for each calendar quarter.

Consistent with the strong support from commenters, CMS is implementing section 1847A(i)(1)(A) of the Act with a reporting process that complies with this date and also incorporates a reconciliation process to ensure the agency's provision of information to each manufacturer of a Part B rebatable drug and the manufacturers' requirements to provide rebates are in accordance with section 1847A(i)(3) of the Act. Specifically, as set forth in §§ 427.500 through 427.505, CMS will provide the information described in section 1847A(i)(1)(A) of the Act through a Rebate Report as well as through subsequent reports in a reconciliation process to ensure this information, including the rebate amount, are in accordance with section 1847A(i)(3) of the Act. The reconciled rebate amount provided to the manufacturer in the report of reconciliation is not a separately payable and distinct rebate amount. Rather, the reconciled rebate amount is an update to the rebate amount owed to CMS by a manufacturer of a Part B rebatable drug. However, the report with

the reconciled rebate amount is a separate provision of the information described in section 1847A(i)(1)(A) of the Act and the provision of the information described in section 1847A(i)(1)(A) of the Act triggers the timely payment requirements in section 1847A(i)(1)(B) of the Act. Section 1847A(i)(7) of the Act gives CMS the authority to impose a civil money penalty on a manufacturer of a part B rebatable drug that fails to comply with the requirements under section 1847A(i)(1)(B) of the Act. In this rulemaking, CMS is simply affirming that § 427.600(a), which restates the express authority to impose CMPs if a manufacturer of a Part B rebatable drug fails to comply with the requirement to timely pay rebates, applies with an appropriate CMP amount when the requirements under section 1847A(i)(1)(B) of the Act are triggered by the receipt of reconciled information.

Similarly, in the Part D Inflation Rebate Program, section 1860D–14A(e) of the Act provides that ''[i]f a manufacturer of a part D rebatable drug has failed to comply with the requirements under paragraph (a)(2) with respect to such drug for an applicable period, the manufacturer shall be subject to a civil money penalty in an amount equal to 125 percent of the amount specified in subsection (b) for such drug for such period.'' Section 1860D–14B(a)(2) of the Act establishes the manufacturer requirement to provide a rebate within 30 calendar days of receipt from CMS of ''the information described in [section 1860D–14B(a)(1)]'' for the Part D rebatable drug for the applicable period. Section 1860D–14B(a)(1) of the Act establishes the information CMS must report to the manufacturer of the Part D rebatable drug to trigger the payment obligation, including the rebate amount and other data specified in section 1860D–14B(b) of the Act. Section 1860D–14B(a)(1) of the Act also reflects a date by which CMS shall provide information to the manufacturer for each applicable period. In this rulemaking, §§ 428.400 through 428.405 implements section 1860D–14B(a)(1) of the Act with a reconciliation process that reflects the reconciliation described in section 1860D–14B(b)(6) of the Act and otherwise ensures that the agency's provision of information to each manufacturer of a Part D rebatable drug and the manufacturers' requirements to provide rebates are in accordance with section 1860D–14B(b) of the Act. Section 1860D–14B(e) of the Act gives CMS the authority to impose a civil money penalty on a manufacturer of a Part D rebatable drug that fails to comply with the requirements under section1860D–14B(a)(2) of the Act. In this rulemaking, CMS is simply affirming that § 428.500(a), which restates the express authority to impose CMPs if a manufacturer of a Part D rebatable drug fails to comply with the requirement to timely pay rebates, applies with an appropriate CMP amount when the requirements under section 1860D–14B(a)(2) of the Act are triggered by the receipt of reconciled information.

In sum, the regulations describing the agency's CMP authority in §§ 427.600 and 428.500 are fully consistent with the express authority granted to CMS by statute to impose a civil money penalty when a manufacturer fails to meet statutory requirements to timely pay the rebate owed following the receipt from CMS of information from the agency regarding the rebate amount, including requirements triggered by the receipt of reconciled information.

The regulations are also fully consistent with the purpose of granting the agency CMP authority. If CMS did not have the ability to impose CMPs when a manufacturer does not meet requirements triggered based on the receipt of reconciled information, the CMPs would not accurately reflect extent to which a manufacturer had failed to timely pay the rebate amount owed. Congress directed CMS to reconcile inflation rebate amounts to account for revised information. See, for example, section 1860D–14B(b)(6) of the Act. It would frustrate the purpose of the statute if CMS did not have the ability to hold manufacturers accountable for providing a rebate in instances in which the reconciliation identifies a manufacturer underpayment. The imposition of CMPs on manufacturers that do not pay reconciled rebate amounts appropriately incentivizes manufacturers to comply with CMS requirements.

Comment: One commenter supports the CMP structure and recommended that CMS establish an ''escalating'' CMP structure for failing to timely pay the rebate amount.

Response: We appreciate this comment. We assume the commenter means that an ''escalating'' CMP structure would provide for increasing CMP amounts due as more time passes CMS is retaining its policy as proposed to assess CMPs for a late rebate payment in a fixed amount equal to 125 percent of the rebate amount for both the Medicare Part B and Part D Drug Inflation Rebate Programs. CMS believes this approach is best to create consistency across the two programs; and that a fixed CMP amount resulting from a simple, clear calculation is more effective than escalating CMPs to put manufacturers on notice of the potential penalty that will be assessed if a rebate payment is not made by the payment deadline. CMS will monitor the effectiveness of this CMP approach on manufacturer compliance as the program is implemented, and reconsider the CMP structure if necessary in the future.

Comment: One commenter stated that there is not enough time allowed to review and contest the rebate amount before payment is due. The commenter suggested that CMS establish a grace period wherein, if a manufacturer timely submits a Suggestion of Error and does not pay the rebate amount then CMS would not assess a CMP on that rebate amount until after the reconciliation process, at which time CMS would make a final determination on the Suggestion of Error. The commenter suggested that after reconciliation, if CMS determines that the manufacturer is liable for all or part of the rebate amount, the manufacturer would then be liable for the rebate amount plus interest; the commenter recommended that interest be ''a reasonable rate, such as the yield rates of 13-Week Treasury bills.''

Response: We reiterate that sections 1847A(i)(1)(B) and 1860D–14B(a)(2) of the Act dictate the payment due date for the rebate amount is 30 days after the date of receipt of the information included in a Rebate Report, as described in proposed §§ 427.505(a) and 428.405(a)(1). CMS notes that the Suggestion of Error process established in these regulations allows for enough time for manufacturers to review the preliminary rebate amount and voice concerns about the calculation before the rebate amount is due. We also note that, should a CMP be assessed for failure to meet an applicable payment deadline, the Primary Manufacturer has 60 days to appeal the CMP as described in proposed § 427.600(e) for Part B Drug Inflation Rebates and § 428.500(e) for Part D Drug Inflation Rebates. CMS further notes that at this time, we do not plan to assess interest on either overdue rebate amounts or CMP payments.

Comment: One commenter stated that CMS should establish a policy for manufacturers to contest a rebate amount. Under the commenter's proposal, during the time of the dispute the CMP will not be imposed but if the manufacturer is found liable, they will have a late payment interest at a reasonable rate.

Response: We appreciate this comment. CMS believes the Suggestion

of Error process established in these regulations provides manufacturers a means to voice concerns about the calculation of the rebate amount before it is finalized. We reiterate that sections 1847A(i)(8) and 1860D–14B(f) of the Act preclude administrative and judicial review of CMS determination of the rebate amount. CMS further notes that at this time, we do not plan to assess interest on either overdue rebate amounts or CMP payments.

After consideration of public comments, we are finalizing this policy as proposed at §§ 427.600 and 428.500.

h. Severability (§ 427.10)

At § 427.10, we proposed that were any provision of part 427 to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions would be severable from the other provisions in part 427, and the invalidity or unenforceability would not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances. As stated in the CY 2025 PFS proposed rule (89 FR 61961), while the provisions in part 427 are intended to present a comprehensive approach to implementing the Medicare Part B Drug Inflation Rebate Program, we intend that each of them is a distinct, severable provision. We also stated our intent that a finding that a provision of part 427 is invalid or unenforceable would not affect similar provisions in the Medicare Part D Drug Inflation Rebate Program.

As discussed in the CY 2025 PFS proposed rule, the Part B drug inflation rebate proposals are intended to operate independently of each other, even if each serves the same general purpose or policy goal. For example, we stated that we intended the proposed policies related to reducing the rebate amount for Part B rebatable drugs currently in shortage and when there is a severe supply chain disruption (§§ 427.401 and 427.402) to be distinct and severable from the proposals related to the determination of Part B rebatable drugs subject to rebates (§ 427.101). As another example, we stated our intent that the proposed policy for using the payment limit for purposes of calculating the beneficiary coinsurance adjustment (§ 427.201(b)) would be distinct and severable from the proposals to use the specified amount for purposes of the Part B rebate calculation (§ 427.301). Even where one provision refers to a second provision, the preamble and the regulatory text clarify the intent of the agency that the two provisions would be severable if one provision were to be invalidated in whole or in part. For example, we would still be able to calculate drugs and biological products with average total allowed charges below the applicable threshold as described at § 427.101(c)(1), for exclusion from inflation rebate calculations, even if the provision to apply the applicable threshold at the billing and payment code level were deemed invalid (§ 427.101(c)(3)).

We received public comments on our proposed severability policy. The following is a summary of the comments we received and our responses.

Comment: A couple of commenters disagreed with CMS' proposal that each regulatory provisions in part 427 is severable and distinct. One of these commenters stated that the preamble seeks to dictate to the courts how each regulatory provision should be evaluated for the purposes of severability. This commenter recommended CMS indicate an intent for severability but delete preamble or regulatory language related to the courts' evaluation of the issue. One of these commenters wrote that courts have rejected similar severability clauses, particularly in instances where a regulation's provisions were too intertwined to sever. This commenter also noted that CMS does not provide a legal or policy rationale for how it believes the Part B inflation rebates regulations can operate independently from one another. As a result, the commenter writes, a court would likely find the Part B inflation rebate regulations should be treated as a ''single, integrated proposal.''

Response: We appreciate these commenters sharing their feedback. We disagree with the commenters' contention that the policies in this final rule are not individual and severable. Under the Administrative Procedure Act (APA), an ''agency action'' may be either ''the whole or a part of an agency rule.'' 5 U.S.C. § 551(13). Thus, the APA permits a court to sever a rule by setting aside only the portion of the rule found invalid.[678] Courts have stated that in determining if an agency action is severable, they look at the agency intent,[679] and if parts of the action are ''intertwined'' or if ''they operate entirely independently of one another.'' [680] Even if a court were to strike down some provision of this final rule, CMS' intent is that other portions of this rule would remain in effect. CMS' intent is evidenced by § 427.10, which states that were any provision of part 427 to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions would be severable from part 427 and the invalidity or unenforceability would not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances. CMS believes severability applies to each provision of the Part B drug inflation rebate regulation, because deeming any particular provision to be invalid or illegal would not result in a material change to the Medicare Part B Drug Inflation Rebate Program so as to cause all of the requirements that compose the program to be invalid.

Contrary to the commenter's assertion, CMS did explain how the Part B inflation rebate regulations can operate independently from one another. As noted above, CMS provided two examples that are illustrative of how the provisions of part 427 will operate independently from one another: (1) the proposed policies related to reducing the rebate amount for Part B rebatable drugs currently in shortage and when there is a severe supply chain disruption (§§ 427.401 and 427.402) are distinct and severable from the proposals related to the determination of Part B rebatable drugs subject to rebates (§ 427.101), and (2) the proposed policy for using the payment limit for purposes of calculating the beneficiary coinsurance adjustment (§ 427.201(b)) is distinct and severable from the proposals to use the specified amount for purposes of the Part B rebate calculation.

After consideration of public comments, CMS is finalizing this policy as proposed at § 427.10.

3. Medicare Part D Drug Rebates for Drugs, Biologicals, and Sole Source Generic Drugs with Prices that Increase Faster than the Rate of Inflation

a. Definitions (§ 428.20)

At § 428.20, we proposed to codify definitions of terms with meanings given in section 1860D–14B of the Act and established in the revised Medicare Part D Drug Inflation Rebate Guidance, as well as new definitions based on policies detailed in the CY 2025 PFS proposed rule.

We proposed that the following terms in section 1860D–14B of the Act be defined:

[678] *Carlson* v. *Postal Regulatory Comm'n,* 938 F.3d 337 (D.C. Cir. 2019).

[679] *Davis Cnty. Solid Waste Mgmt.* v. *U.S. E.P.A.,* 108 F.3d 1454, 1459 (D.C. Cir. 1997).

[680] *Wilmina Shipping AS* v. *United States Dep't of Homeland Sec.,* 75 F. Supp. 3d 163, 171 (D.D.C. 2014).

- ''Annual manufacturer price (AnMP)''.
- ''Applicable period''.
- ''Applicable period Consumer Price Index for All Urban Consumers (CPI–U)''.
- ''Benchmark period CPI–U''.
- ''Part D rebatable drug''.
- ''Payment amount benchmark period''.
- ''Unit''.

Further, we proposed to codify at § 428.20 definitions established in the revised Medicare Part D Drug Inflation Rebate Guidance and new definitions based on policies detailed in this final rule for the following terms:

- ''Applicable threshold''.
- ''Average manufacturer price (AMP)''.
- ''Benchmark period manufacturer price''.
- ''Covered Part D drug''.
- ''CPI–U''.[681]
- ''First marketed date''.
- ''Inflation-adjusted payment amount''.
- ''Manufacturer''. We proposed that manufacturer identification in the Medicare Prescription Drug Inflation Rebate Program, inclusive of communications and rebate liability, will be consistent with the policies and practices adopted at § 447.502 for purposes of manufacturer obligations under the Medicaid Drug Rebate Program. We stated we believe this approach will provide clarity and allow for consistency in the agency's treatment of financial transactions, including in the contexts of debt collection, bankruptcy, and changes in ownership. We solicited feedback on this proposed approach and whether there are alternative approaches that may better achieve the agency's goals for application of rebate liability and collection of rebate amount, including whether additional policies and/or a Medicare Prescription Drug Inflation Rebate Program agreement are needed to clarify financial accountability for rebate amounts in situations where there are changes in ownership of a manufacturer or of a rebatable drug.
- ''National Drug Code (NDC)''.
- ''Subsequently approved drug''.

We solicited comments on these definitions. The following is a summary of the comments we received and our responses.

Comment: A couple of commenters recommended CMS provide greater clarity on the proposed definition of manufacturer. Specifically, these commenters noted that CMS did not indicate in the CY 2025 PFS proposed rule whether it would adopt potential revisions to the Medicaid definition of manufacturer for purposes of the Medicare Part D Drug Inflation Rebate Program. If CMS is considering incorporating Medicaid proposals into the Medicare Part D Drug Inflation Rebate Program, these commenters suggested CMS should clearly forecast this possibility to commenters.

Response: We appreciate the commenters sharing this feedback. Because CMS operationalizes the Medicare Part D Drug Inflation Rebate Program based on data reported under the MDRP, certain policies adopted under the MDRP may affect manufacturer obligations under the Medicare Part D Drug Inflation Rebate Program. We note that in the final Medicaid Program; Misclassification of Drugs, Program Administration and Program Integrity Updates Under the Medicaid Drug Rebate Program rule released on September 20, 2024, CMS did not finalize the agency's proposed revisions to the Medicaid Drug Rebate Program definition of manufacturer.[682] As such, the commenter's suggestion is moot.

Comment: One commenter asserted that CMS' request for comments on a potential agreement for purposes of the Medicare Part B and Part D Drug Inflation Rebate Programs is inconsistent with the statute. This commenter stated that the Act is silent on agreements between manufacturers and CMS for the Medicare Part B and Part D Drug Inflation Rebate Programs, in contrast to other sections of the Act that establish agreements for other CMS programs, and thus does not authorize CMS to require manufacturer agreements for these programs.

Response: We appreciate the commenter sharing these concerns. CMS has determined not to require manufacturers to enter into agreements with CMS for purposes of the Medicare Part B or Part D Drug Inflation Rebate Programs at this time.

After consideration of public comments, we are finalizing these definitions as proposed at § 428.20, with modification to the definition of National Drug Code (NDC). Because the provisions of the Medicare Part D Drug Inflation Rebate program apply at the NDC–9 level unless otherwise specified, CMS omitted reference to the package size and type in the definition of NDC for purposes of the Medicare Part D Drug Inflation Rebate Program.

b. Determination of Part D Rebatable Drugs (§§ 428.100 through 428.101)

i. Definitions

At § 428.100, we proposed to define the following terms applicable to subpart B (§§ 428.100 through 428.101):

- ''Individual who uses such a drug or biological''.
- ''Gross covered prescription drug costs''.

We did not receive public comments on these proposed definitions, and we are finalizing as proposed at § 428.100.

ii. Identification of Part D Rebatable Drugs

Section 1860D–14B(g)(1)(A) of the Act defines a ''Part D rebatable drug,'' in part, as a drug or biological described at section 1860D–14B(g)(1)(C) of the Act that is a ''covered Part D drug'' as that term is defined in section 1860D–2(e) of the Act. A drug or biological set forth in section 1860D–14B(g)(1)(C) of the Act means a drug or biological that, as of the first day of the applicable period involved, is: (1) a drug approved under an NDA under section 505(c) of the FD&C Act (that is, a brand name drug); (2) a drug approved under an ANDA under section 505(j) of the FD&C Act that meets the criteria in section 1860D–14B(g)(1)(C)(ii) (that is, a generic drug that meets certain sole source criteria); or (3) a biological licensed under section 351 of the PHS Act (that is, a biological product, including a biosimilar).

At § 428.101(a), we proposed to identify a Part D rebatable drug[683] for each applicable period by determining which covered Part D drugs, as defined in section 1860D–2(e) of the Act, meet the requirements in section 1860D–14B(g)(1)(C) of the Act (that is, are brand name drugs approved under an NDA, biologicals licensed under a biologics license application (BLA), or generic drugs approved under an ANDA). As noted, a Part D rebatable drug must meet the requirements in section 1860D–14B(g)(1)(C) of the Act as of the first day of the applicable period.

To evaluate whether a generic drug approved under an ANDA meets all the criteria in section 1860D–14B(g)(1)(C)(ii) of the Act, we proposed at § 428.101(a)(3) to codify the policy established in section 30 of the revised Medicare Part D Drug Inflation Rebate Guidance whereby CMS would use

[681] These data are referenced to 1982–84 = 100—that is, the average of pricing data for the 36 months from 1982 through 1984 serve as the basis for the index and are assigned a value of 100. These data are not seasonally adjusted.

[682] See *https://www.federalregister.gov/documents/2024/09/26/2024-21254/medicaid-program-misclassification-of-drugs-program-administration-and-program-integrity-updates.*

[683] For purposes of this final rule, we use the term ''Part D rebatable drug'' to refer to the dosage form and strength with respect to such drug for which Part D drug inflation rebates are calculated.

specified FDA resources such as the ''Approved Drug Products with Therapeutic Equivalence Evaluations'' (commonly known as the Orange Book) [684] and NDC Directory [685] to determine whether a generic drug meets the definition of a Part D rebatable drug. At § 428.101(a)(3)(i) and (ii), we proposed to clarify the policy established in revised Medicare Part D Drug Inflation Rebate Guidance by adding that, for purposes of § 428.101, we consider historical information from NDC Directory files, such as discontinued, delisted, and expired listings, provided by FDA to CMS or published by FDA on its website to be included in the NDC Directory. As proposed at § 428.101(a)(3)(iii), to determine whether the manufacturer of the generic drug is a first applicant during the 180-day exclusivity period, or whether the manufacturer of the generic drug is a first approved applicant for a competitive generic drug therapy, CMS would refer to FDA website resources such as the Orange Book and may consult with FDA for technical assistance as needed. We proposed that CMS will determine whether a generic drug that is a covered Part D drug meets the definition of a Part D rebatable drug based on the status of the drug on the first day of the applicable period.

While generic drugs that do not meet the sole source criteria in section 1860D–14B(g)(1)(C)(ii) of the Act (that is, multiple source generic drugs) are excluded from the definition of a Part D rebatable drug, we understand that a generic drug may meet the definition of a Part D rebatable drug on the first day of an applicable period and then cease to meet such definition later in the applicable period if, for example, the FDA approves another therapeutically equivalent generic drug under a 505(j) ANDA and that drug is marketed during such applicable period. As described later in this final rule, CMS proposed at § 428.203(b)(1) to exclude from the rebate calculation any units of a generic drug dispensed on or after the date that such generic drug no longer meets the definition of a Part D rebatable drug.

We did not receive public comments on these proposed provisions, and we are finalizing as proposed at § 428.101(a).

iii. Drugs and Biologicals with Average Annual Total Cost Under Part D Below the Applicable Threshold

Under section 1860D–14B(g)(1)(B) of the Act, a drug or biological is excluded from the definition of a Part D rebatable drug if the ''average annual total cost'' under Part D for such period per individual who uses such a drug or biological product is less than $100 per year, as determined by the Secretary using the most recent data available, or, if data are not available, as estimated by the Secretary. The statute provides that the $100 annual amount for the applicable period beginning October 1, 2022, is to be increased by percentage changes in the CPI–U for subsequent applicable periods. At § 428.101(b), we proposed to codify the policy established in section 30.2 of the revised Medicare Part D Drug Inflation Rebate Guidance for determining the applicable threshold and excluding from the definition of a Part D rebatable drug, and thus Part D drug inflation rebates, drugs and biologicals for which the average annual total cost under Part D for such applicable period per individual who uses such drug or biological product is below that applicable threshold.

Consistent with the approach described in the revised Medicare Part D Drug Inflation Rebate Guidance, we proposed to calculate the average annual total cost based on gross covered drug costs for the Part D rebatable drug at the NDC–9 level. We proposed CMS would divide the gross covered drug costs for the drug by the number of unique Part D beneficiaries that were dispensed the drug in that applicable period. For this calculation, CMS proposed to use Prescription Drug Event (PDE) data with gross covered drug costs greater than zero that are available for the drug with dates of service during that applicable period. Drugs that are determined to have average annual total costs under Part D of less than $100 per individual using such drug per year, adjusted by changes in the CPI–U, will be excluded from Part D drug inflation rebate calculations for the applicable period in question.

Comment: One commenter expressed concern that implementation of the Medicare Part D Drug Inflation Rebate Program could impose new administrative or financial burdens on community pharmacies. This commenter requested that CMS clarify that any provisions related to the reporting of PDE data would not require additional reporting by community pharmacies for tracking and calculating drugs or biologicals below the applicable threshold, or any additional reporting or change to existing claim submission by community pharmacies for tracking and calculating Part D rebatable drugs.

Response: We thank the commenter for sharing these concerns. Consistent with CMS' response on page 10 of the revised Medicare Part D Drug Inflation Rebate Guidance, we affirm that § 428.101(b) does not impose additional reporting requirements on pharmacies related to the exclusion of drugs where the average annual total cost under Part D is less than $100 per individual per year. CMS will calculate and determine which Part D rebatable drugs fall below, meet, or exceed the $100 per individual per year threshold based on PDE data. We also affirm that this final rule does not impose additional reporting requirements on pharmacies related to tracking Part D rebatable drugs and calculating Part D drug inflation rebates.

After consideration of comments received, we are finalizing as proposed at § 428.101(b) with a modification at § 428.101(b)(1). Specifically, we note below that, for operational reasons at this time, we are finalizing at § 428.203(b)(3) that CMS will exclude from the total number of units dispensed of a Part D rebatable drug when those units are associated with a Part D rebatable drug that has been billed as compounded. For alignment, we are finalizing at § 428.101(b)(1) that, when calculating the gross covered prescription drug costs for the drug or biological, CMS will exclude PDE records indicating the drug or biological was billed as a compound.

c. Determination of the Rebate Amount for Part D Rebatable Drugs (§§ 428.200 through 428.204)

i. Definitions

At § 428.200, we proposed to define the following terms applicable to subpart C (§§ 428.200 through 428.204):

- ''340B Program''.
- ''Line extension''.
- ''New formulation''.
- ''Oral solid dosage form''.

We received public comment on these proposed definitions. The following is a summary of the comment we received and our response.

Comment: One commenter argued that the MDRP regulatory definitions of ''line extension'' and ''new formulation'' are inconsistent with the Medicaid rebate statute, exceed CMS' authority, and would cause significant harm to pharmaceutical innovation by undermining the incentives to produce innovative new drugs. For these reasons, the commenter argued that

CMS should not extend the MDRP ''line extension'' and ''new formulation'' regulatory definitions to the Medicare Part D Drug Inflation Rebate Program regulations.

Response: CMS appreciates the commenter's perspective. As we stated below and in revised Medicare Part D Drug Inflation Rebate Guidance on page 20, section 1860D–14B(b)(5)(B)(ii) of the Act defines the term ''line extension'' as ''a new formulation of the drug, such as extended-release formulation, but does not include abuse-deterrent formulations of the drug (as determined by the Secretary), regardless of whether such abuse-deterrent formulation is an extended-release formulation.'' Because section 1927(c)(2)(C) of the Act uses identical language to define the term ''line extension'' for purposes of the MDRP, CMS believes that, for the purposes of identifying new formulations of Part D rebatable drugs in the Medicare Part D Drug Inflation Rebate Program, it is appropriate to use the regulatory definitions of ''line extension'' and ''new formulation'' that were adopted through rulemaking [686] for the MDRP, which can be found at § 447.502.

After consideration of public comments, we are finalizing these definitions as proposed at § 428.200.

ii. Calculation of the Total Rebate Amount To Be Paid by Manufacturers

Under section 1860D–14B(b)(1) of the Act, the Part D drug inflation rebate for each Part D rebatable drug and applicable period, subject to certain considerations, is the estimated amount that is equal to the product of: (1) the amount, if any, by which the annual manufacturer price (AnMP) for such Part D rebatable drug for the applicable period exceeds the inflation-adjusted payment amount for the Part D rebatable drug for the applicable period, and (2) the total number of units of the Part D rebatable drug dispensed under Part D and covered and paid by Part D plan sponsors during the applicable period. To calculate the Part D drug inflation rebate consistent with section 1860D–14B(b)(1) of the Act, we proposed at § 428.201(a)(1) to codify the calculation methodology described in section 40 of the revised Medicare Part D Drug Inflation Rebate Guidance, which provides that the total Part D drug inflation rebate amount is equal to the per unit Part D drug inflation rebate amount, as determined under § 428.202(a), multiplied by the total number of units of a Part D rebatable drug dispensed under Part D and covered by Part D plan sponsors, as determined in accordance with § 428.203. We proposed at § 428.201(a)(2) that the total Part D drug inflation rebate amount for a Part D rebatable drug that is a line extension of a Part D rebatable drug that is an oral solid dosage form is equal to the amount specified at § 428.204. We further proposed the Part D drug inflation rebate amount calculated in accordance with this subpart is subject to adjustment based on any reductions in accordance with subpart D of this part or any reconciliations in accordance with subpart E of this part.

At § 428.201(b), we proposed to exclude from the calculation performed under subpart C drugs and biologicals that meet the definition of a Part D rebatable drug, but which are missing AMP data for the entire duration of the applicable period because, for the reasons specified below, there were no quarters during that period in which their manufacturers were required to report AMP data under section 1927(b)(3) of the Act. We noted in the CY 2025 PFS proposed rule (89 FR 61963) that the calculations for the rebate amount set forth in section 1860D–14B(b) of the Act contemplate use of AMP and unit data reported by manufacturers under section 1927 of the Act. Similarly, section 1860D–14B(d) of the Act indicates CMS should use, for purposes of carrying out the Medicare Part D Drug Inflation Rebate Program, information submitted by manufacturers under section 1927(b)(3) of the Act. Section 1927 requires manufacturers that participate in the Medicaid Drug Rebate Program (MDRP) to enter into agreements with the HHS Secretary and submit price and drug product information to CMS for each covered outpatient drug (COD), as defined in sections 1927(k)(2)–(4) of the Act and at § 447.502 of this title. Not every drug that satisfies the definition of a Part D rebatable drug may be marketed by a manufacturer that has an MDRP agreement in effect with the Secretary during the applicable period. Similarly, there may be limited instances in which a drug or biological satisfies the definition of a Part D rebatable drug but is not a COD under the MDRP. As a result, information may not be reported under section 1927(b)(3) of the Act for all Part D rebatable drugs, and thus may not be available to CMS for purposes of calculating Part D drug inflation rebates under section 1860D–14B of the Act. Said differently, in limited cases where a Part D rebatable drug is marketed by a manufacturer that does not have an obligation to report pricing and drug product data under section 1927(b)(3) of the Act for the reasons noted, the manufacturer does not currently report information needed for CMS to be able to calculate Part D drug inflation rebates.

Due to this operational issue, we proposed at § 428.201(b) to codify the policy established in section 30.1 of the revised Medicare Part D Drug Inflation Rebate Guidance whereby CMS would exclude from Part D drug inflation rebate calculations drugs and biologicals that meet the definition of a Part D rebatable drug but for which the manufacturer does not have an MDRP agreement in effect with the HHS Secretary under section 1927 of the Act at any point during the applicable period, or the Part D rebatable drug is one that does not meet the definition of a COD. We noted this would effectively exclude from rebate calculations Part D rebatable drugs for which there is missing AMP data for the entire duration of the applicable period for the sole reason that there were no quarters during that period in which the manufacturer was required to report AMP data for the drug or biological under section 1927(b)(3) of the Act. In either of these situations, we noted a manufacturer does not have an obligation to report pricing and drug product data under section 1927(b)(3) of the Act and thus the information required to calculate Part D drug inflation rebates for these drugs is not available to CMS. If there were no quarters for which the manufacturer was required to report AMP under section 1927(b)(3) of the Act in the applicable period for a drug or biological that meets the definition of a Part D rebatable drug, we proposed CMS would exclude such drug or biological from Part D drug inflation rebate calculations. We also clarified that the proposed exclusion at § 428.201(b) relates only to the calculation of the rebate amount and does not affect the determination of whether a drug or biological meets the definition of a Part D rebatable drug. When performing the reconciliation described at § 428.401(d), we proposed that CMS would reexamine whether the manufacturer was required to report AMP for any part of the applicable period for the Part D rebatable drug; if at reconciliation the manufacturer was required to report AMP for any part of the applicable period, CMS would calculate a Part D rebate amount for this Part D rebatable drug. We stated in the CY 2025 PFS

[686] Medicaid Program Final Rule (0938–AU96), 85 FR 87,000, 87,039 (Dec. 31, 2020): *https://www.govinfo.gov/content/pkg/FR-2020-12-31/pdf/2020-28567.pdf.*

proposed rule (89 FR 61963) that CMS intends to monitor how these exclusions from the Part D drug inflation rebate calculation may impact manufacturer behavior and may revisit this exclusion in the future.

In the initial Medicare Part D Drug Inflation Rebate Guidance, we solicited comments on the proposed approach and alternative approaches. We stated in the proposed rule that we continued to be interested in comments on this topic and thus welcomed additional comments on this approach and alternative approaches—specifically, how CMS should address the situations in which the manufacturer of a Part D rebatable drug does not have an MDRP agreement in effect for any part of the applicable period or when a Part D rebatable drug may be excluded from the definition of a COD and manufacturers may not be required to report pricing and drug product information under section 1927(b)(3) of the Act.

We received public comments on these proposed provisions. The following is a summary of the comments we received and our responses.

Comment: One commenter expressed support for the exclusion of drugs for which the manufacturer does not have an MDRP agreement in effect, including vaccines.

Response: We thank the commenter for their support.

Comment: One commenter recommended CMS consider a waiver process to exclude from Part D inflation rebate calculations a drug or biological that is essential to public health or that would cause economic hardship to the manufacturer, similar to the provisions included in the Prescription Drug User Fee Act.

Response: We thank the commenter for this recommendation and refer the commenter to the policies set forth in §§ 428.301, 428.302, and 428.303 and discussed later in this final rule regarding rebate reductions for certain Part D rebatable drugs currently in shortage, likely to be in shortage, or experiencing a severe supply chain disruption, as authorized under section 1860D–14B of the Act. In contrast to the Prescription Drug User Fee Act, which instructs FDA to waive or reduce certain user fees if, for example, such waiver or reduction is necessary to protect the public health or if the assessment of the fee would present a significant barrier to innovation because of limited resources available to such person or other circumstances,[687] section 1860D–14B of the Act does not expressly authorize CMS to waive or reduce inflation rebates in such circumstances.

After consideration of public comments, CMS is finalizing this policy as proposed at § 428.201(b).

iii. Calculation of the Per Unit Part D Drug Rebate Amount

To calculate the total rebate amount in accordance with § 428.201(a), we stated in the CY 2025 PFS proposed rule that CMS will first calculate the per unit Part D drug rebate amount as described at § 428.202. Consistent with the revised Medicare Part D Drug Inflation Rebate Guidance, we proposed at § 428.202(a) that CMS will calculate the per unit Part D drug inflation rebate amount by determining the amount by which the AnMP for a Part D rebatable drug exceeds the inflation-adjusted payment amount for such drug for the applicable period. We stated that to determine the per unit Part D inflation rebate amount for a Part D rebatable drug, CMS must calculate the AnMP for the drug, identify the payment amount benchmark period and calculate the benchmark period manufacturer price for the drug, identify the benchmark period CPI–U, and calculate the inflation-adjusted payment amount for the drug.

(1) Calculation of the AnMP for the Applicable Period

To determine the AnMP for a Part D rebatable drug and applicable period, we proposed at § 428.202(b) to codify the policy described in the revised Medicare Part D Drug Inflation Rebate Guidance whereby CMS would use the AMP reported by a manufacturer to the Medicaid Drug Programs system under sections 1927(b)(3)(A)(i) and (ii) of the Act for each calendar quarter of the applicable period, as well as the units reported by a manufacturer under section 1927(b)(3)(A)(iv) of the Act for each month of the applicable period. The manufacturer-reported AMP units represent the total units of a drug sold by the manufacturer each month to retail community pharmacy and wholesaler purchasers as described under section 1927(k)(1)(A) of the Act. Manufacturers may include under certain circumstances non-retail community pharmacy sales units in the calculation of their AMPs for 5i drugs.[688]

As specified in section 1860D–14B(b)(2) of the Act, the AnMP for a Part D rebatable drug for an applicable period is equal to the sum of the products for each calendar quarter of the applicable period of: (1) the AMP for the Part D rebatable drug reported for the calendar quarter and (2) the total units of the Part D rebatable drug reported for the corresponding calendar quarter divided by the total units of the Part D rebatable drug reported for the 4 calendar quarters in the applicable period. We proposed the following formula to illustrate how CMS would calculate the AnMP for a Part D rebatable drug as at § 428.202(b):

(AMP for calendar quarter beginning October) *multiplied by* (sum of monthly units for October calendar quarter *divided by* total units for 12-month applicable period) +
(AMP for calendar quarter beginning January) *multiplied by* (sum of monthly units for January calendar quarter *divided by* total units for 12-month applicable period) +
(AMP for calendar quarter beginning April) *multiplied by* (sum of monthly units for April calendar quarter *divided by* total units for 12-month applicable period) +
(AMP for calendar quarter beginning July) *multiplied by* (sum of monthly units for July calendar quarter *divided by* total units for 12-month applicable period)

At § 428.202(b)(2), we proposed that the first applicable period for a Part D rebatable drug will be the earliest applicable period that follows the payment amount benchmark period identified at § 428.202(c)(1) through (4). For a Part D rebatable drug first approved or licensed on or before October 1, 2021, with a payment amount benchmark period identified at § 428.202(c)(1), we proposed that the first applicable period will begin on October 1, 2022 and end on September 30, 2023. For a Part D rebatable drug first approved or licensed on or before October 1, 2021 with a payment amount benchmark period identified at § 428.202(c)(3), or a subsequently approved drug with a payment amount benchmark period identified at § 428.202(c)(2) or (4), we proposed that the first applicable period will begin on October 1 of the year following the payment amount benchmark period identified at § 428.202(c)(2) through (4). In the case of a Part D rebatable drug that was previously a selected drug as described at § 428.202(c)(5) for which the payment amount benchmark period is reset as the last calendar year of the price applicability period for such drug,

[687] FD&C Act Section 736(d).

[688] 5i drugs are CODs that are inhaled, infused, instilled, implanted, or injected. Manufacturers are instructed to calculate the AMP for 5i drugs that are not generally dispensed through a retail community pharmacy using the methodology described at § 447.504(d) and (e). Section 447.507(b)(1) provides that a 5i drug is not generally dispensed through a retail community pharmacy if 70 percent or more of the sales (based on units at the NDC–9 level) of the 5i drug, were to entities other than retail community pharmacies or wholesalers for drugs distributed to retail community pharmacies.

we proposed that the earliest applicable period that follows the reset payment amount benchmark period will begin on October 1 of the year following the payment amount benchmark period identified at § 428.202(c)(5). We stated in the CY 2025 PFS proposed rule that the date that CMS will use to determine when a drug is first approved or licensed is the FDA approval date that the manufacturer reports to the Medicaid Drug Programs system under section 1927(b)(3)(A)(v) of the Act.

We received public comments on these proposed provisions. The following is a summary of the comments we received and our responses:

Comment: One commenter agreed with CMS' proposal to define the first applicable period for subsequently approved drugs as ''the earliest applicable period that follows the payment amount benchmark period identified in proposed § 428.202(c)(1) through (4).'' This commenter stated this proposal aligns with the statute and recommended CMS finalize this policy as proposed.

Response: We thank this commenter for their support.

Comment: Two commenters opposed CMS calculating inflation rebates using AMP, noting that AMP may fluctuate even when list prices do not increase. One commenter stated that rebate calculations should be based on WAC rather than AMP. Another commenter suggested CMS should consider comparing changes in WAC with corresponding AMP changes to confirm the list prices did not increase prior to calculating a Part D drug rebate amount to help more accurately determine when a rebate should be assessed.

Response: We thank the commenters for expressing their concerns. Consistent with CMS' response on page 15 of the revised Medicare Part D Drug Inflation Rebate Guidance, CMS recognizes that there are certain circumstances in which AMP can fluctuate for reasons that that may be, at least to some degree, outside of the control of a manufacturer. Sections 1860D–14B(b)(2) and (4) of the Act specify that CMS shall use AMP data and units reported under section 1927 of the Act for the purpose of calculating the AnMP and benchmark period manufacturer price, respectively. Section 1860D–14B(d)(1) of the Act also requires that CMS use information submitted by manufacturers under section 1927(b)(3) of the Act. CMS is implementing these statutory criteria.

After consideration of comments received, we are finalizing this policy as proposed at § 428.202(b).

(2) Identification of the Payment Amount Benchmark Period

Consistent with section 1860D–14B(g)(3) of the Act and as described in sections 40.2.2 and 40.3 of the revised Medicare Part D Drug Inflation Rebate Guidance, we proposed at § 428.202(c)(1) that for a drug first approved or licensed by the FDA on or before October 1, 2021, the payment amount benchmark period is the period beginning on January 1, 2021 and ending on September 30, 2021. For a subsequently approved drug, we proposed at § 428.202(c)(2) that the payment amount benchmark period would be the first calendar year beginning after the drug's first marketed date, as specified under section 1860D–14B(b)(5)(A) of the Act. To identify the payment amount benchmark period for a Part D rebatable drug, we proposed that CMS will use the FDA approval date or the first marketed date reported under section 1927(b)(3)(A)(v) of the Act, as applicable. As described below, we solicited comments on proposed and alternative policies for determining the payment amount benchmark period in certain instances where an NDC is missing reported AMP.

(a) Establish a Payment Amount Benchmark Period in Certain Instances of Missing AMP

As discussed in the CY 2025 PFS proposed rule, section 1860D–14B of the Act does not expressly address how CMS should calculate the benchmark period manufacturer price for a Part D rebatable drug when a manufacturer has not reported AMP during the payment amount benchmark period identified by statute. For example, as described in the revised Medicare Part D Drug Inflation Rebate Guidance, while section 1860D–14B(g)(3) of the Act contemplates that drugs first approved or licensed by the FDA on or before October 1, 2021, would have a payment amount benchmark period of January 1, 2021, through September 30, 2021, the statute does not address circumstances in which such drugs are not marketed until after October 1, 2021, and thus lack reported AMP from January 1, 2021, through September 30, 2021, to calculate the benchmark period manufacturer price. In response to comments, we stated in section 40.1.2 of the revised Medicare Part D Drug Inflation Rebate Guidance that Part D rebatable drugs first approved or licensed on or before October 1, 2021, that were not marketed until after that date and thus did not have AMP in the statutorily defined payment amount benchmark period (that is, January 1, 2021, through September 30, 2021) would be treated in the same manner as subsequently approved drugs for purposes of establishing the payment amount benchmark period, benchmark period CPI–U, first applicable period, and first applicable period CPI–U. In the revised guidance, we also stated that we intended to address this policy in future rulemaking and would solicit comments on this policy at that time.

As stated in the CY 2025 PFS proposed rule (89 FR 61964), based on further review, we observed that a number of NDC–9s of Part D rebatable drugs approved on or before October 1, 2021, do not have AMP reported in the period of January 1, 2021, through September 30, 2021, and a number of NDC–9s of subsequently approved drugs do not have AMP reported in the first calendar year beginning after the drug's first marketed date. To enable CMS to calculate the benchmark period manufacturer price and inflation rebate amounts for these NDC–9s, we proposed at § 428.202(c)(3) that for a Part D rebatable drug first approved or licensed on or before October 1, 2021, for which there are no quarters during the period beginning on January 1, 2021, and ending on September 30, 2021, for which AMP has been reported under section 1927(b)(3) of the Act, we would identify the payment amount benchmark period as the first calendar year, which would be no earlier than calendar year 2021, in which such drug has at least 1 quarter of AMP reported. Said differently, to identify the payment amount benchmark period for the purpose of calculating the benchmark period manufacturer price for a Part D rebatable drug first approved or licensed on or before October 1, 2021, CMS would first look to the period from January 1, 2021, to September 30, 2021 and if no AMP was reported under the MDRP for that 3-quarter period, CMS would then identify the payment amount benchmark period as the first calendar year no earlier than calendar year 2021 in which such drug has at least 1 quarter of AMP reported. Similarly, at § 428.202(c)(4), we proposed that for a subsequently approved drug for which there are no quarters during the first calendar year beginning after the drug's first marketed date for which AMP has been reported under section 1927(b)(3) of the Act, the payment amount benchmark period would be the first calendar year in which such drug has at least 1 quarter of AMP reported. To identify the payment amount benchmark period for the purpose of calculating the benchmark period manufacturer price

for a subsequently approved drug, we would look to the first calendar year beginning after the drug's first marketed date and if no AMP was reported under the MDRP for such NDC–9 for that 4-quarter period, we would then identify the payment amount benchmark period as the first calendar year in which such drug has at least 1 quarter of AMP reported. We stated in the CY 2025 PFS proposed rule (89 FR 61965) that this approach (or the alternative approaches described below), if finalized, would replace the policy in the revised Medicare Part D Drug Inflation Rebate Guidance to treat Part D rebatable drugs first approved or licensed on or before October 1, 2021, that were not marketed until after that date in the same manner as subsequently approved drugs. At § 428.202(b)(2), we proposed the first applicable period for such drug would begin on October 1 of the year following the payment amount benchmark period identified under § 428.202(c)(3) or (4). We stated in the CY 2025 PFS proposed rule (89 FR 61965) that this policy would apply to Part D rebatable drugs first approved or licensed on or before October 1, 2021, drugs first approved or licensed on or before October 1, 2021, but not marketed until after that date, as well as subsequently approved drugs.

As an example of how CMS proposed to identify the payment amount benchmark period at § 428.202(c)(3), if a Part D rebatable drug that was first approved or licensed by the FDA on July 7, 2021 and has a first marketed date of September 15, 2021 does not have AMP reported in the period beginning January 1, 2021 and ending September 30, 2021, but does have AMP reported for the second calendar quarter of 2022, CMS would identify the payment amount benchmark period for such drug as calendar year 2022 (that is, January 1, 2022, through December 31, 2022). In this example, the benchmark period CPI–U would be the CPI–U for January 2022, the first applicable period would be the applicable period beginning October 1, 2023, and ending September 30, 2024, and the applicable period CPI–U would be the CPI–U for October 2023. Similarly, as an example of how CMS would identify the payment amount benchmark period as proposed at § 428.202(c)(4), if a subsequently approved drug with a first marketed date of December 15, 2021 does not have AMP reported for any quarters in calendar year 2022 (that is, the first calendar year after the drug's first marketed date) but does have AMP reported for the first calendar quarter of 2023, CMS would identify the payment amount benchmark period as calendar year 2023 (that is, January 1, 2023, through December 31, 2023). In this example, the benchmark period CPI–U would be the CPI–U for January 2023, the first applicable period for this drug would be the applicable period beginning October 1, 2024, and ending September 30, 2025, and the applicable period CPI–U would be the CPI–U for October 2024.

We solicited comments on this approach, as well as alternative approaches, as described below.

(b) Comment Solicitation on Alternatives Considered for Calculating the Benchmark Period Manufacturer Price When AMP Is Missing

As stated in the CY 2025 PFS proposed rule (89 FR 61965), CMS is aware that one reason why a manufacturer may not report AMP for any quarters of a payment amount benchmark period described at § 428.202(c)(1) or (2), as applicable, is that a manufacturer may acquire a Part D rebatable drug from another manufacturer and, due to that acquisition and the use of a new labeler code, obtain a new NDC–9 for that Part D rebatable drug. In this instance, the NDC–9 of the selling manufacturer and the NDC–9 of the buying manufacturer belong to the same dosage form and strength and therefore the same Part D rebatable drug. Although the buying manufacturer may not have AMP for the new NDC–9 to report to the Medicaid Drug Programs system for the Part D rebatable drug's payment amount benchmark period described at § 428.202(c)(1) or (2), the buying manufacturer is required under the MDRP to report for the new NDC–9 the base date AMP associated with the dosage form and strength to which the new NDC–9 belongs. This base date AMP is equal to the quarterly AMP that a manufacturer reports as described at § 447.509(a)(7)(ii)(B). There also may be instances outside of the acquisition context in which a new NDC–9 for an existing dosage form and strength is reported under the MDRP. To prevent a manufacturer from resetting the payment amount benchmark period and therefore the benchmark period manufacturer price by obtaining a new NDC–9 for the Part D rebatable drug, CMS stated in section 40.2.2 of the revised Medicare Part D Drug Inflation Rebate Guidance that it will use the benchmark period manufacturer price of the earliest NDC–9 of the Part D rebatable drug.

As explained in the CY 2025 PFS proposed rule (89 FR 61965), after further consideration of this policy and the data that are available to CMS in the Medicaid Drug Programs system, we do not believe that calculating the benchmark period manufacturer price using the 3 or 4 quarters, as applicable, of AMP reported in the payment amount benchmark period described at § 428.202(c)(1) or (2) of the earliest NDC–9 of the Part D rebatable drug is operationally feasible at this time. Although the buying manufacturer is required under the MDRP to report for the new NDC–9 the base date AMP associated with the earliest NDC–9 of the dosage form and strength, and to report the first marketed date associated with the earliest NDC–9 of the dosage form and strength as the first marketed date for the new NDC–9, the buying manufacturer is not required to report which NDC–9 was used to determine the base date AMP and first marketed date. We may therefore lack the information necessary to identify the earliest NDC–9 of the Part D rebatable drug for purposes of determining the benchmark period manufacturer price to be used in calculating the inflation rebate amount.

We stated in the CY 2025 PFS proposed rule (89 FR 61965) that we understand that statutory provisions at section 1860D–14B of the Act require that CMS establish the payment amount benchmark period at the dosage form and strength level, and that allowing manufacturers to reset the payment amount benchmark period for a new NDC–9 of an existing Part D rebatable drug may not fully align with this directive. Simultaneously, and as described in the CY 2025 PFS proposed rule (89 FR 61965–61967), we understand there may be a gap in the AMP data available to calculate the benchmark period manufacturer price at the dosage form and strength level for certain drugs. To enable CMS to calculate the benchmark period manufacturer price when a new NDC–9 of an existing Part D rebatable drug is reported under the MDRP and that NDC–9 lacks AMP data for the time period described at § 428.202(c)(1) or (2), we solicited comments on alternative policy options that are described in more detail below.

First, we solicited comments on a modified version of the policy described in section 40.1.2 of the revised Medicare Part D Drug Inflation Rebate Guidance. Under this modified policy, we proposed that if a new NDC–9 of an existing Part D rebatable drug is reported under the MDRP, CMS would calculate the benchmark period manufacturer price for such NDC–9 using the base date AMP reported by a manufacturer under section 1927(b)(3) of the Act for such Part D rebatable

drug, if such base date AMP was reported for a calendar quarter that overlaps with the time period described at § 428.202(c)(1) or (2), as applicable for that Part D rebatable drug. We believed this modified policy would be operationally feasible because CMS could calculate the benchmark period manufacturer price using the base date AMP that is reported with the new NDC–9; therefore, CMS would not need to identify the earliest NDC–9 of the Part D rebatable drug. Under this proposed policy, we stated CMS could only use the base date AMP to calculate the benchmark period manufacturer price if the base date AMP was associated with a calendar quarter that overlapped with the time period described at § 428.202(c)(1) or (2), as applicable for that Part D rebatable drug. We stated in the CY 2025 PFS proposed rule (89 FR 61966) that if we were to adopt this alternative approach, we would expect to operationalize it through conforming changes to proposed § 428.202(c) and other applicable proposed regulatory text. We also noted that if we were to finalize this alternative approach, CMS would be unable to use this approach to calculate the benchmark period manufacturer price in the case of a new NDC–9 of an existing Part D rebatable drug with base date AMP that does not overlap with the time period described at § 428.202(c)(1) or (2). In such instances, CMS would have to either establish a future payment amount benchmark period using an approach similar to that described at § 428.202(c)(3) and (4) or apply one of the other proposed alternative policies.

The second alternative we considered was to require manufacturers of Part D rebatable drugs to submit to CMS AMP data for the time period identified at § 428.202(c)(1) or (2) in cases where the manufacturer did not report AMP under section 1927(b)(3) of the Act for such period but AMP data are available either for the NDC–9 or for another NDC–9 within the same dosage form and strength. For example, if the quarter for which a manufacturer reports base date AMP for a new NDC–9 of an existing dosage form and strength does not overlap with the time period identified at § 428.202(c)(1) or (2), but the earliest NDC–9 of the dosage form and strength that served as the basis for the base date AMP has AMP data available during any quarter of that time period, we would require manufacturers to report such AMP data. For a Part D rebatable drug with a payment amount benchmark period identified at § 428.202(c)(1), a manufacturer would be required to submit to CMS AMP data for the calendar quarters in the period beginning January 1, 2021, and ending on September 30, 2021, to the extent such drug was first marketed before September 30, 2021. For a subsequently approved drug with a payment amount benchmark period identified under § 428.202(c)(2), a manufacturer would be required to submit to CMS AMP data for the first calendar year beginning after the drug's first marketed date. In the CY 2025 PFS proposed rule (89 FR 61966), we acknowledged the intersection between a potential reporting requirement under the Medicare Part D Drug Inflation Rebate Program for manufacturers to provide AMP data and existing AMP data reporting requirements for manufacturers under the MDRP.

We stated in the CY 2025 PFS proposed rule (89 FR 61966) that should we pursue this option, we would explore using existing AMP reporting processes for the MDRP to operationalize any new AMP reporting requirement. This approach of requiring manufacturers to report such information would be consistent with CMS' understanding of the provisions of section 1860D–14B of the Act requiring CMS to establish the payment amount benchmark period at the dosage form and strength level, and with CMS' authority under sections 1102(a) and 1871(a)(1) of the Act to make rules and regulations as necessary for the efficient administration of programs, including the Medicare Part D Drug Inflation Rebate Program. We welcomed comments on the method by which CMS could collect such information, the timing of the potential collection and deadlines, and whether information reported by manufacturers should be taken into account for purposes of compiling the Rebate Reports for a Part D rebatable drug or instead only be included in the reconciliation processes specified in at § 428.401(d) and described later in this final rule.

We also considered a third alternative policy whereby CMS would calculate the benchmark period manufacturer price for a new NDC–9 of an existing Part D rebatable drug that lacks AMP data for the time period described at § 428.202(c)(1) or (2) using a reasonable proxy metric. We asked for comments on potential proxy metrics CMS could use to calculate the benchmark period manufacturer price for a new NDC–9 of an existing dosage form and strength for which no AMP data are reported for such periods.

As stated in the CY 2025 PFS proposed rule (89 FR 61966), these alternative policy options would be intended to achieve the same goal as the policy described in section 40.2.2 of the revised Medicare Part D Drug Inflation Rebate Guidance (that is, to disincentivize a manufacturer from resetting its payment amount benchmark period by obtaining a new NDC–9 for an existing Part D rebatable drug). Finally, we solicited comments on the policy described in the revised Medicare Part D Drug Inflation Rebate Guidance whereby CMS would treat drugs first approved or licensed on or before October 1, 2021, that were not marketed until after that date in the same manner as subsequently approved drugs for purposes of establishing the payment amount benchmark period, benchmark period CPI–U, first applicable period, and first applicable period CPI–U. We solicited comments on these alternatives and stated in the CY 2025 PFS proposed rule that we may adopt one or more of such alternatives in the final rule based on comments received. Additionally, we solicited comments on other policies that CMS should consider to prevent manufacturers from inappropriately resetting the payment amount benchmark period by obtaining a new NDC–9 for an existing Part D rebatable drug.

As stated in the CY 2025 PFS proposed rule (89 FR 61966), under CMS' proposed policy at §§ 428.202(c)(3) and (4) to identify a payment amount benchmark period in certain instances of missing AMP and each alternative considered, CMS would consider any restatements to the AMP data used to calculate the benchmark period manufacturer price during reconciliation, as specified at § 428.401(d) and described later in this final rule. Furthermore, we stated CMS would monitor the extent to which manufacturers obtain a new NDC–9 for the same Part D rebatable drug in a manner that could result in inappropriately resetting the payment amount benchmark period or otherwise affect the calculation of the benchmark period manufacturer price. We reminded manufacturers of their reporting obligations under section 1927(b) of the Act and § 447.510 of this title and that failure to provide timely information may result in penalties as detailed in section 1927(b)(3)(C)(i) of the Act.

We proposed that CMS would apply the policies described in the CY 2025 PFS proposed rule to rebate calculations beginning with the applicable period that began on October 1, 2022. As explained in the CY 2025 PFS proposed rule (89 FR 61967), CMS determined that, consistent with the policy described in section III.I.1. of this final

rule, in order to calculate inflation rebates for Part D rebatable drugs that do not have AMP or other pricing data available under section 1927(b)(3) of the Act on which to base the benchmark period manufacturer price, CMS' policy must apply for applicable periods beginning with the applicable period that began on October 1, 2022.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: One commenter expressed support for CMS' proposal to establish a new payment amount benchmark period for drugs approved on or before October 1, 2021 when no AMP is reported for the period that begins on January 1, 2021 and ends on September 30, 2021. One commenter did not express support or opposition to CMS' proposal for establishing a payment amount benchmark period in certain instances of missing AMP but stated that to the extent CMS finalizes its proposed policy, the policy should apply prospectively only. This commenter asserted that the statute does not expressly permit retroactive regulations, nor does it permit CMS to revoke final guidance after the relevant applicable periods have concluded and that revoking established policies creates uncertainty in the Medicare Prescription Drug Inflation Rebate Program. This commenter also recommended CMS clarify whether it would consider a Part D rebatable drug to have ''at least 1 quarter of AMP reported'' if AMP was not reported for each month of a quarter (for example, if AMP is reported for November and December, but not October of a quarter).

Response: In this final rule, we are finalizing our proposal to apply the policies described at §§ 428.202(c)(3) and (4) to rebate calculations beginning with the applicable period that began on October 1, 2022. We are also finalizing at § 428.202(d)(3), with modifications to §§ 428.202(c)(3) and (4), the alternative for CMS to identify the payment amount benchmark period and calculate the benchmark period manufacturer price of a new NDC–9 of a Part D rebatable drug by using other information reported by a manufacturer under section 1927(b)(3) of the Act for the Part D rebatable drug, as available, such as the base date AMP if such base date AMP is reported for a calendar quarter that overlaps with the period described in §§ 428.202(c)(1) or (2). We will also apply this alternative policy to rebate calculations beginning with the applicable period that began on October 1, 2022. If these policies were not applied to rebate calculations beginning with the applicable period that began on October 1, 2022, CMS would be unable to calculate a benchmark period manufacturer price for certain new NDC–9s of Part D rebatable drugs using the policy described in the revised Medicare Part D Drug Inflation Rebate Guidance since, as explained in the CY 2025 PFS proposed rule (89 FR 61768), the policy described in the revised guidance is not operationally feasible at this time. CMS also would not be able to calculate a benchmark period manufacturer price for other NDC–9s missing AMP data in the period described at §§ 428.202(c)(1) and (2). Without a benchmark period manufacturer price, CMS could not calculate Part D drug inflation rebates for these NDC–9s. We disagree with the commenter that the statute does not permit the application of this policy to rebate calculations beginning with the applicable period that began on October 1, 2022. As of this rulemaking, CMS has not yet performed rebate calculations or determined rebate liabilities for Part D rebatable drugs for any applicable period, including the applicable periods starting October 1, 2022 and October 1, 2023. The policy described herein will be used in the agency's future rebate calculations for those applicable periods and for subsequent applicable periods. To the extent the policy described herein is considered to apply retroactively for an applicable period, consistent with CMS's authority under section 1871(e)(1)(A) of the Act, CMS has determined that such retroactive application would be both necessary to implement the requirements of the IRA and in the public interest because it ensures that the regulations address the time periods and manufacturer pricing conduct addressed in the IRA. The statute directs CMS to perform various calculations involving pricing activities from prior periods for applicable periods ''beginning with October 1, 2022'' (per the definition in section 1860D–14B(g)(7) of the Act). With respect to Part D rebatable drugs, the time periods during which prices are subject to rebates began as early as several weeks after the statute's enactment. At the same time, the IRA specifically requires CMS to use program instruction to implement the Part D inflation rebate program for 2022, 2023, and 2024, contemplating that CMS would establish policies for prior periods in time. Further, the statutory provision expressly allowing the agency to delay the issuance of rebate reports for the applicable periods beginning October 1, 2022 and October 1, 2023 until 2025 contemplates CMS performing calculations for these prior periods.

With respect to the commenter's request for clarification regarding whether CMS would consider a Part D rebatable drug to have at least 1 quarter of AMP reported if AMP was not reported for each month of a quarter, we note that under section 1927(b)(3) of the Act, AMP is reported to the Medicaid Drug Programs system as a quarterly value while AMP units are reported as a monthly value. As such, we do not believe the scenario proposed by the commenter is applicable.

Comment: A few commenters expressed support for the first alternative proposed in the CY 2025 PFS proposed rule to calculate the payment amount benchmark period for an NDC–9 using base date AMP reported for the earliest NDC–9 of the Part D rebatable drug. One commenter stated that of the three alternative options proposed, the first alternative would be most preferred and suitable for CMS to accurately calculate the benchmark period manufacturer price in cases of missing AMP data. Another commenter stated that the first alternative is a reasonable approach but noted that it would not apply to cases where a base date AMP quarter does not happen to fall within the payment amount benchmark period. One commenter opposed this proposal, asserting this approach is inconsistent with the Part D drug inflation rebate statute, which does not permit CMS to base the payment amount benchmark period off the AMP reported by a different manufacturer for a different NDC–9.

Response: We thank the commenters for their feedback. We disagree with the commenter's assertion that our proposal to calculate the benchmark period manufacturer price of a new NDC–9 using the base date AMP reported for the earliest NDC–9 of the Part D rebatable drug is inconsistent with the Part D drug inflation rebate statute. The calculations for the rebate amount set forth in section 1860D–14B(b) of the Act contemplate use of AMP and unit data reported by manufacturers under section 1927(b)(3) of the Act. Similarly, section 1860D–14B(d) of the Act indicates CMS should use, for purposes of carrying out the Medicare Part D Drug Inflation Rebate Program, information submitted by manufacturers under section 1927(b)(3) of the Act, which includes base date AMP. As described in the CY 2025 PFS proposed rule (89 FR 61965), under the MDRP, if a manufacturer acquires a drug from another manufacturer and, due to that acquisition and the use of a new labeler code, obtains a new NDC–9 for the drug,

the NDC–9 of the selling manufacturer and the NDC–9 of the buying manufacturer belong to the same dosage form and strength and therefore the same Part D rebatable drug. The buying manufacturer is required by the MDRP under section 1927(b)(3) of the Act to report for the new NDC–9 the base date AMP associated with the dosage form and strength to which the new NDC–9 belongs. Consistent with CMS' statements in the CY 2025 PFS proposed rule regarding the potential alternative of requiring manufacturers to report AMP, the use of base date AMP described herein is consistent with CMS' understanding of the provisions of section 1860D–14B of the Act requiring CMS to establish the payment amount benchmark period at the dosage form and strength level and with CMS' authority under sections 1102(a) and 1871(a)(1) of the Act to make rules and regulations as necessary for the efficient administration of programs, including the Medicare Part D Drug Inflation Rebate Program.

In this final rule, we are finalizing at § 428.202(d)(3), with modifications to §§ 428.202(c)(3) and (4), the alternative proposed in the CY 2025 PFS proposed rule (89 FR 61966) for CMS to calculate the benchmark period manufacturer price of a new NDC–9 of an existing Part D rebatable drug by using other information reported by a manufacturer under the MDRP for such Part D rebatable drug as available, such as base date AMP, if such base date AMP was reported for a calendar quarter that overlaps with the time period described at § 428.202(c)(1) or (2). We agree with the commenter that this approach would not apply to cases where a base date AMP quarter does not overlap with the payment amount benchmark period described at § 428.202(c)(1) or (2) and as such, we are also finalizing at §§ 428.202(c)(3) and (4) our proposal to identify the payment amount benchmark period as the first calendar year, which would be no earlier than calendar year 2021, in which such drug has at least 1 quarter of AMP data reported. As indicated in the CY 2025 PFS proposed rule, CMS will consider any restatements to the information used to identify the payment amount benchmark period and calculate the benchmark period manufacturer price during reconciliation, as set forth in § 428.401(d) and described later in this rule.

CMS also will monitor the extent to which manufacturers obtain a new NDC–9 for the same Part D rebatable drug in a manner that could result in inappropriately resetting the payment amount benchmark period or otherwise affect the calculation of the benchmark period manufacturer price. Consistent with the alternative considered and not finalized in this rulemaking, CMS continues to explore the potential for a new AMP reporting requirement in the future. We note that if CMS were to implement new AMP reporting requirements in future policymaking, CMS would likely explore an approach that would allow the agency to recalculate the benchmark period manufacturer price if a manufacturer reported AMP data for the period described at §§ 428.202(c)(1) or (2). That is, if CMS establishes the payment amount benchmark period for a drug as described at § 428.202(c)(3) or (4), as applicable, and CMS later obtains AMP data for the period described at § 428.202(c)(1) or (2) based on new AMP reporting requirements, CMS would likely explore recalculating the benchmark period manufacturer price based on the AMP data reported for the period described at § 428.202(c)(1) or (2). We believe such an approach could prevent manufacturers from inappropriately resetting the payment amount benchmark period by obtaining a new NDC–9 for an existing Part D rebatable drug.

Comment: One commenter stated that CMS does not address how it will determine the threshold issue of whether an NDC–9 represents a new NDC–9 of a Part D rebatable drug. This commenter noted that manufacturers participating in the MDRP already determine whether their products represent the same dosage form and strength of the same drug and where this is the case for a new NDC–9, the Medicaid ''Market Date'' in the Medicaid Drug Programs system will precede the ''Package Size Intro Date.'' This commenter recommended CMS rely on these existing manufacturer-provided fields and where such MDRP data are not available, CMS should develop a process by which manufacturers that do not participate in the MDRP can voluntarily self-identify that an NDC–9 is a new NDC–9 of an existing drug for purposes of calculating the benchmark period manufacturer price.

Response: We appreciate this commenter's feedback and recommendation. CMS agrees with the commenter that manufacturers participating in the MDRP determine whether their products represent the same dosage form and strength of the same drug, and CMS will use existing information reported by manufacturers under the MDRP to determine whether an NDC–9 represents a new NDC–9 of a Part D rebatable drug, where such data are available, consistent with § 428.202(d)(3). If a manufacturer does not participate in the MDRP and does not have an obligation to report pricing and drug product data under section 1927(b)(3) of the Act, the information required to calculate Part D drug inflation rebates for these drugs is not available to CMS, and CMS will not calculate Part D drug inflation rebates for these drugs at this time, as described at § 428.201(b). If the existing information reported by manufacturers participating in the MDRP indicates that an NDC–9 does represent a new NDC–9 of a Part D rebatable drug, but there are no quarters during the period set forth in § 428.202(c)(1) or (c)(2) for which AMP has been reported under section 1927(b)(3) of the Act for the NDC–9, including information as set forth in § 428.202(d)(3), CMS will apply the payment amount benchmark period identification policies finalized at § 428.202(c)(3) or (4), as applicable, at this time. As noted above, CMS is exploring the potential for a new AMP reporting requirement in the future.

Comment: A few commenters opposed the second alternative policy considered by CMS, which would require manufacturers of Part D rebatable drugs to submit to CMS AMP data for the payment amount benchmark period in cases where the manufacturer did not report AMP under the MDRP for such period, but AMP data are available either for the NDC–9 or for another NDC–9 within the same dosage form and strength. These commenters asserted CMS does not have authority to require reporting of AMP in the manner proposed. One commenter stated that this proposal raises confidentiality concerns and that if CMS were to move forward with this proposal, CMS should confirm that the same confidentiality provisions of the Medicaid rebate statute would apply to reporting of AMP data for the Part D rebate program.

Response: We thank these commenters for sharing their concerns regarding a new AMP reporting requirement. We are not finalizing this alternative at this time. Instead, we are finalizing our proposal to apply the policies described at §§ 428.202(c)(3) and (4) to rebate calculations beginning with the applicable period that began on October 1, 2022. We are also finalizing at § 428.202(d)(3), with modifications to §§ 428.202(c)(3) and (4), the alternative proposed in the CY 2025 PFS proposed rule for CMS to calculate the benchmark period manufacturer price of a new NDC–9 of an existing Part D rebatable drug by using the base date AMP reported under the MDRP for such Part D rebatable drug and will apply this

policy to rebate calculations beginning with the applicable period that began on October 1, 2022. As indicated in the CY 2025 PFS proposed rule, and as discussed above, CMS will monitor the extent to which manufacturers obtain a new NDC–9 for the same Part D rebatable drug in a manner that could result in inappropriately resetting the payment amount benchmark period or otherwise affect the calculation of the benchmark period manufacturer price. CMS also is exploring the potential for a new AMP reporting requirement in the future, consistent with the alternative considered and not finalized in this rulemaking. We note that if CMS were to implement new AMP reporting requirements in future policymaking, CMS would likely explore an approach that would allow the agency to recalculate the benchmark period manufacturer price if a manufacturer reported AMP data for the period described at § 428.202(c)(1) or (2), as discussed above. CMS will also consider any restatements to the information used to identify the payment amount benchmark period and calculate the benchmark period manufacturer price during reconciliation, as set forth in § 428.401(d) and described later in this rule.

Comment: A few commenters stated CMS did not provide sufficient detail regarding the third alternative considered to use a reasonable proxy metric for interested parties to meaningfully comment. These commenters recommended CMS not move forward with the third alternative until CMS has put forth a specific proxy metric in rulemaking and sought public comment on a specific proposal. In response to CMS' request for potential proxy metrics that could be used for purposes of calculating the benchmark period manufacturer price, a couple of commenters recommended WAC since it is a publicly available metric. One commenter recommended that in the acquisition context, CMS use as a reasonable proxy metric the AnMP for the first full calendar year after a buyer acquires and first markets the drug under the NDC–9.

Response: We appreciate the commenters sharing this feedback. At this time, we are not moving forward with the alternative proposal to use a reasonable proxy metric for purposes of calculating the benchmark period manufacturer price.

After consideration of public comments, we are finalizing at §§ 428.202(c)(3) and (4) the proposal to identify the payment amount benchmark period for NDC–9s of Part D rebatable drugs missing reported AMP as the first calendar year, which would be no earlier than calendar year 2021, in which such NDC–9 has at least 1 quarter of AMP reported. We are also finalizing at § 428.202(d)(3), with modifications to §§ 428.202(c)(3) and (4), the first alternative policy described in the CY 2025 PFS proposed rule (89 FR 61966) to calculate the benchmark period manufacturer price for a new NDC–9 of a Part D rebatable drug using information reported by a manufacturer under section 1927(b)(3) of the Act for the Part D rebatable drug, as available, including base date AMP if such base date AMP is reported for a calendar quarter that overlaps with the period described at § 428.202(c)(1) or (2). In such circumstances, the new NDC–9 would not be subject to payment amount benchmark period identification as described in § 428.202(c)(3) or (4). These policies will apply to rebate calculations beginning with the applicable period that began on October 1, 2022.

(c) Identification of the Payment Amount Benchmark Period for a Part D Rebatable Drug No Longer Considered To Be a Selected Drug

At § 428.202(c)(5), we proposed to codify policies described in section 40.2.2 of the revised Medicare Part D Drug Inflation Rebate Guidance relating to the identification of the payment amount benchmark period for a selected drug (as defined in section 1192(c) of the Act) with respect to a price applicability period (as defined in section 1191(b)(2) of the Act) in the case such Part D rebatable drug is no longer considered to be a selected drug. As stated in the CY 2025 PFS proposed rule (89 FR 61968), the Medicare Part D Drug Inflation Rebate Program applies to selected drugs notwithstanding the status of the drug as a selected drug. However, the calculation of certain components of the rebate amount formula for selected drugs depends upon whether the selected drug has reached the end of its price applicability period and is no longer considered to be a selected drug under section 1192(c) of the Act. Specifically, section 1860D–14B(b)(5)(C) of the Act specifies a different payment amount benchmark period and benchmark period CPI–U for a Part D rebatable drug in the case such drug is no longer considered to be a selected drug under section 1192(c) of the Act, for each applicable period beginning after the price applicability period with respect to such drug. Accordingly, in such a case where a Part D rebatable drug is no longer a selected drug, we proposed at § 428.202(c)(5) that the payment amount benchmark period will be reset as the last calendar year of such price applicability period for such selected drug.

We did not receive any comments on this proposed provision, and we are finalizing as proposed at § 428.202(c)(5).

(3) Calculation of the Benchmark Period Manufacturer Price

We proposed at § 428.202(d) that, subject to § 428.202(g), to determine the benchmark period manufacturer price for a Part D rebatable drug, CMS will use the AMP reported by a manufacturer to the Medicaid Drug Programs system under sections 1927(b)(3)(A)(i) and (ii) of the Act for each calendar quarter of the payment amount benchmark period, as identified in accordance with § 428.202(c), as well as the units reported by a manufacturer under section 1927(b)(3)(A)(iv) of the Act for each month of such payment amount benchmark period. For a Part D rebatable drug first approved or licensed on or before October 1, 2021, section 1860D–14B(b)(4) of the Act specifies that the benchmark period manufacturer price is the sum of the products for each calendar quarter of the payment amount benchmark period (that is, January 1, 2021, through September 30, 2021) of (1) the AMP for the Part D rebatable drug reported for the calendar quarter), and (2) the total units reported for the corresponding calendar quarters divided by the total units of the Part D rebatable drug reported for the 3 calendar quarters in the payment amount benchmark period. We proposed at § 428.202(d)(1) the following formula to illustrate how CMS will calculate the benchmark period manufacturer price for a Part D rebatable drug with a payment amount benchmark period identified at § 428.202(c)(1):

(AMP for calendar quarter beginning January 2021) *multiplied by* (sum of monthly AMP units for January 2021 calendar quarter *divided by* sum of the units reported for the 3 quarters of the payment amount benchmark period) +
(AMP for calendar quarter beginning April 2021) *multiplied by* (sum of monthly AMP units for April 2021 calendar quarter *divided by* sum of the units reported for the 3 quarters of the payment amount benchmark period) +
(AMP for calendar quarter beginning July 2021) *multiplied by* (sum of monthly AMP units for July 2021 calendar quarter *divided by* sum of the units reported for the 3 quarters of the payment amount benchmark period)

For a Part D rebatable drug with a payment amount benchmark period identified at § 428.202(c)(2) through (5), we proposed the following formula at § 428.202(d)(2) to illustrate how CMS will calculate the benchmark period

manufacturer price for a Part D rebatable drug:

(AMP for calendar quarter beginning January) *multiplied by* (sum of monthly AMP units for January calendar quarter *divided by* sum of the monthly units reported for the 4 quarters of the payment amount benchmark period) +
(AMP for calendar quarter beginning April) *multiplied by* (sum of monthly AMP units for April calendar quarter *divided by* sum of the monthly units reported for the 4 quarters of the payment amount benchmark period) +
(AMP for calendar quarter beginning July) *multiplied by* (sum of monthly AMP units for July calendar quarter *divided by* sum of the monthly units reported for the 4 quarters of the payment amount benchmark period) +
(AMP for calendar quarter beginning October) *multiplied by* (sum of monthly AMP units for October calendar quarter *divided by* sum of the monthly units reported for the 4 quarters of the payment amount benchmark period)

CMS received public comments in response to the comment solicitation in the CY 2025 PFS proposed rule on alternatives considered for calculating the benchmark period manufacturer price when AMP is missing (89 FR 61965–61967). As described earlier in this final rule, after consideration of comments received, we revised § 428.202(d) to add a paragraph (3), which provides that to the extent that a new NDC–9 of a Part D rebatable drug is reported under section 1927 of the Act and AMP has not been reported for such NDC–9 under section 1927(b)(3)(A)(i)(I) or (ii) of the Act during the period described § 428.202(c)(1) or (2), as applicable, CMS will identify the payment amount benchmark period and calculate the benchmark period manufacturer price for such NDC–9 using other information reported by a manufacturer under section 1927(b)(3) of the Act for the Part D rebatable drug, as available, such as the base date AMP if such base date AMP is reported for a calendar quarter that overlaps with the period described at § 428.202(c)(1) or (2), as applicable. Base date AMP has the meaning set forth at § 447.509(a)(7)(ii)(B) of this title.

(4) Identification of the Benchmark Period CPI–U

To calculate the inflation-adjusted payment amount in accordance with section 1860D–14B(b)(3) of the Act, CMS must identify the benchmark period CPI–U. As described in the revised Medicare Part D Drug Inflation Rebate Guidance and in accordance with section 1860D–14B(g)(4) of the Act, we proposed at § 428.202(e)(1) that the benchmark period CPI–U for a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, would be the CPI–U for January 2021. For a subsequently approved drug, we proposed at § 428.202(e)(2) that the benchmark period CPI–U will be the CPI–U for January of the first calendar year beginning after the drug's first marketed date, as required under section 1860D–14B(b)(5)(A) of the Act.

As stated in the CY 2025 PFS proposed rule (89 FR 61964), we have observed that a number of NDC–9s of Part D rebatable drugs approved or licensed on or before October 1, 2021, do not have AMP reported in the period beginning January 1, 2021, and ending September 30, 2021, and a number of NDC–9s of subsequently approved drugs do not have AMP reported in the first calendar year following the drug's first marketed date. To enable CMS to calculate the benchmark period manufacturer price and inflation rebate amounts for these NDC–9s, we proposed at § 428.202(c)(3) and (4) to identify the payment amount benchmark period for such NDC–9s as the first calendar year, which would be no earlier than calendar year 2021, in which such drug has at least 1 quarter of AMP data reported. As previously discussed, we solicited comments on alternative methodologies to identify the payment amount benchmark period and calculate the benchmark period manufacturer price to address certain instances in which AMP has not been reported. To identify the benchmark period CPI–U for an NDC–9 described at § 428.202(c)(3), we further proposed at § 428.202(e)(3) that for a Part D rebatable drug first approved on or before October 1, 2021, for which there are no quarters during the period beginning on January 1, 2021, and ending on September 30, 2021, for which AMP has been reported under the MDRP, the benchmark period CPI–U will be the CPI–U for January of the calendar year in which such drug has at least 1 quarter of AMP reported. We proposed at § 428.202(e)(4) that for a subsequently approved drug for which there are no quarters during the first calendar year beginning after the drug's first marketed date for which AMP has been reported under the MDRP, the benchmark period CPI–U is the CPI–U for January of the calendar year in which such drug has at least 1 quarter of AMP reported.

As discussed previously, the Medicare Part D Drug Inflation Rebate Program applies to selected drugs notwithstanding the status of the drug as a selected drug. However, the calculation of certain components of the applicable rebate amount formula for selected drugs depends upon whether the selected drug has reached the end of its price applicability period and is no longer considered to be a selected drug under section 1192(c) of the Act. In accordance with section 1860D–14B(b)(5)(C) of the Act, in such a case where a Part D rebatable drug is no longer a selected drug, we proposed at § 428.202(e)(5) that the benchmark period CPI–U will be the CPI–U for January of the last calendar year of such price applicability period.

While we received public comments on CMS' proposed and alternative policies, as discussed above, we did not receive comments on CMS' further proposals specific to the benchmark period CPI–U. Nevertheless, as described in more detail in section III.I.3.c.iii.2. of this final rule, we have revised § 428.202(d) to add a paragraph (3), which provides that to the extent that a new NDC–9 of a Part D rebatable drug is reported under section 1927 of the Act and AMP has not been reported for such NDC–9 under section 1927(b)(3)(A)(i)(I) or (ii) of the Act during the period described at § 428.202(c)(1) or (2), as applicable, CMS will identify the payment amount benchmark period and calculate the benchmark period manufacturer price for such NDC–9 using other information reported by a manufacturer under section 1927(b)(3) of the Act for the Part D rebatable drug, as available, such as the base date AMP if such base date AMP is reported for a calendar quarter that overlaps with the period described at § 428.202(c)(1) or (2), as applicable. Therefore, in this final rule, we have modified proposed § 428.202(e)(3) and (4) to specify that a Part D rebatable drug for which no AMP has been reported under section 1927(b)(3) of the Act includes a Part D rebatable drug for which no information as described at § 428.202(d)(3) has been reported.

(5) Calculation of the Inflation-Adjusted Payment Amount

As specified in section 1860D–14B(b)(3) of the Act and described in section 40.2.3 of the revised Medicare Part D Drug Inflation Rebate Guidance, the inflation-adjusted payment amount with respect to a Part D rebatable drug and applicable period is the benchmark period manufacturer price increased by the percentage by which the applicable period CPI–U exceeds the benchmark period CPI–U. We proposed at § 428.202(f) to calculate the inflation-adjusted payment amount for a Part D rebatable drug by dividing the applicable period CPI–U by the benchmark period CPI–U and then multiplying the quotient by the benchmark period manufacturer price.

We proposed the following formula at § 428.202(f) to illustrate how CMS will calculate the inflation-adjusted payment amount for a Part D rebatable drug:

(Benchmark period manufacturer price) *multiplied by* (applicable period CPI–U *divided by* benchmark period CPI–U).

We proposed at § 428.202(a) that CMS will use the inflation-adjusted payment amount to calculate the per unit Part D drug inflation rebate amount by determining the amount by which the AnMP for a Part D rebatable drug exceeds the inflation-adjusted payment amount for a Part D rebatable drug for an applicable period.

We did not receive comments on this proposed provision, and we are finalizing as proposed at § 428.202(f).

(6) Situations in Which Manufacturers Do Not Report Units Under Section 1927(b)(3)(A)(iv) of the Act

Section 1860D–14B of the Act generally requires CMS to determine the per unit Part D drug inflation rebate amount using the monthly units reported by manufacturers to the Medicaid Drug Programs system under section 1927(b)(3)(A)(iv) of the Act. We understand it is possible that a manufacturer may not have sales or monthly units of a COD to report to the Medicaid Drug Programs system for a calendar quarter because, for example, there may be a temporary interruption in sales of the COD, or there may be no sales immediately after the drug is first approved or licensed by the FDA. We proposed at § 428.202(g)(1) to codify the policy described in section 40.1.2 of the revised Medicare Part D Drug Inflation Rebate Guidance, whereby in cases where there are 1 or more quarter(s) in the payment amount benchmark period or applicable period for which a manufacturer has not reported units under section 1927(b)(3)(A)(iv) of the Act but has reported AMP under sections 1927(b)(3)(A)(i) and (ii) of the Act, CMS would calculate the benchmark period manufacturer price or AnMP, as applicable, using data only from quarter(s) with units. That is, quarter(s) in the payment amount benchmark period or applicable period for which a manufacturer has not reported units under section 1927(b)(3)(A)(iv) of the Act would be excluded from the calculation. We proposed at § 428.202(g)(2) to codify the policy described in section 40.1.2 of the revised guidance whereby if there are no quarters of the payment amount benchmark period or applicable period for which a manufacturer has reported units under section 1927(b)(3)(A)(iv) of the Act, but the manufacturer has reported AMP under sections 1927(b)(3)(A)(i) and (ii) of the Act for at least 1 quarter of such period, CMS would use the average of the AMP over the calendar quarters of the payment amount benchmark period or applicable period for which AMP is reported to calculate the benchmark period manufacturer price or AnMP, respectively.

We did not receive any comments on this proposed provision, and we are finalizing as proposed at § 428.202(g). Nevertheless, as described in more detail in section III.I.3.c.iii.2. of this final rule, we have revised § 428.202(d) to add a paragraph (3), which provides that to the extent that a new NDC–9 of a Part D rebatable drug is reported under section 1927 of the Act and AMP has not been reported for such NDC–9 under section 1927(b)(3)(A)(i)(I) or (ii) of the Act during the period described at § 428.202(c)(1) or (2), as applicable, CMS will identify the payment amount benchmark period and calculate the benchmark period manufacturer price for such NDC–9 using other information reported by a manufacturer under section 1927(b)(3) of the Act for the Part D rebatable drug, such as the base date AMP if such base date AMP is reported for a calendar quarter that overlaps with the period described at § 428.202(c)(1) or (2), as available. Therefore, in this final rule, we have modified proposed § 428.202(g)(2) to specify that if there are no quarters of the payment amount benchmark period for which a manufacturer has reported units under section 1927(b)(3)(A)(iv) of the Act, and § 428.202(d)(3) applies, CMS will use the information determined under § 428.202(d)(3) to calculate the benchmark period manufacturer price.

iv. Determination of the Total Number of Units Dispensed Under Part D

At § 428.203(a), we proposed to codify the existing policy established in the revised Medicare Part D Drug Inflation Rebate Guidance whereby CMS would determine the total number of units of each Part D rebatable drug dispensed under Part D and covered by Part D sponsors based on information reported to CMS by Part D plan sponsors on the Part D PDE records for the 12-month applicable period. More specifically, we proposed CMS would determine the total number of units from the Quantity Dispensed field on the PDE record for each Part D rebatable drug with gross covered prescription drug costs greater than zero. Because the PDE record does not provide the unit type used to determine Quantity Dispensed, we proposed at § 428.203(a)(2) that CMS would crosswalk the information from the PDE record to a drug database that provides the unit type for an NDC, such as Medi-Span or the FDA's Comprehensive NDC Structured Product Labeling (SPL) Data Element (NSDE) file, matching on the NDC of the Part D rebatable drug. We understand that in limited instances, the unit type obtained from such drug databases may not match the AMP unit type reported by manufacturers to the Medicaid Drug Programs system, and in these cases, CMS would convert the total units reported on the PDE record to the AMP units reported to the Medicaid Drug Program system.

As explained in the CY 2025 PFS proposed rule (89 FR 61968–61969), CMS conducts a thorough review of PDE records, which includes the identification of outliers in the quantity dispensed field of PDE records, as part of the Part D payment reconciliation process that occurs between CMS and plan sponsors each year.[689] We stated in the CY 2025 PFS proposed rule that CMS intends to rely on this payment reconciliation process, through which Part D plan sponsors have an opportunity to correct PDE records flagged by CMS as containing potential outliers, to resolve outliers that would otherwise impact the Part D drug inflation rebate amount calculated under § 428.201(a). Because PDE records are not updated to reflect the resolution of outliers identified through the Part D payment reconciliation process for a given calendar year until after CMS plans to send Rebate Reports for the applicable period (capturing data that include the first three quarters of that calendar year), the Rebate Report will not reflect the resolution of unit outliers identified through the Part D payment reconciliation process. However, because CMS intends to conduct a reconciliation of the rebate amount with additional PDE run-out (as set forth in § 428.401(d) and described later in this final rule), the reconciled rebate amounts will reflect the resolution of any unit outliers corrected by Part D plan sponsors through the Part D payment reconciliation process. As stated in the CY 2025 PFS proposed rule (89 FR 61969), we do not intend to conduct separate outlier analysis of PDE for the purposes of the Medicare Part D Drug Inflation Rebate Program, but we did consider several adjustments to reduce the effect of outliers not resolved through the Part D payment reconciliation process, including

[689] See *https://www.hhs.gov/guidance/document/pde-analysis-process-withheld-and-invoiced-outlier-pdes.*

removal of PDE records that were identified by CMS as having potential outlier quantity dispensed fields but were neither corrected nor verified by Part D plan sponsors, removal of the quantity dispensed field for certain records at or above a certain statistically derived threshold, and imputing quantity dispensed values for such records. We solicited comments on this proposed approach to rely on CMS' existing review of PDE records, as well as on the adjustments considered to reduce the effect of outliers not resolved through the Part D payment reconciliation process.

As we proposed at § 428.203(b), CMS will remove from the total number of units any units of a generic drug dispensed on or after the date that such generic drug no longer meets the definition of a Part D rebatable drug, as well as units acquired through the 340B Program, as described in section III.I.3.c.iv.2. of this final rule.

We received public comments on this proposed provision. We also solicited comments on any additional units that should be excluded from the rebate amount calculation. The following is a summary of the comments we received on these proposals and this comment solicitation and our responses.

Comment: One commenter stated that CMS has not provided sufficient detail to meaningfully comment on CMS' process for eliminating outliers in PDE data not resolved through the Part D reconciliation process. This commenter suggested CMS publish a second proposed rule containing concrete policy proposals for comment.

Response: We appreciate the comment. To meet the invoicing timelines of the Medicare Part D Drug Inflation Rebate Program, we are finalizing the approach described in the CY 2025 PFS proposed rule (89 FR 61968–61969) whereby CMS will rely on the Part D payment reconciliation process that occurs between CMS and plan sponsors each year to resolve outliers that would otherwise impact the Part D drug inflation rebate amount calculated at § 428.201(a). At this time, CMS will not perform additional adjustments to reduce the effect of outliers not resolved through the Part D payment reconciliation process. We believe relying on the Part D payment reconciliation process that occurs between CMS and plan sponsors each year is sufficient to resolve unit outliers for purposes of the Medicare Part D Drug Inflation Rebate Program and results in consistency across the Part D program. If in the future CMS determines that outliers not resolved through the Part D payment reconciliation process should be addressed for purposes of the Medicare Part D Drug Inflation Rebate Program, CMS may consider adjustments to reduce the effect of these outliers and would solicit comments on such adjustments at that time.

Comment: One commenter recommended CMS also exclude from the rebate amount calculation units from other federal programs such as units purchased under the Federal Supply Schedule, as these units already have statutory discounts.

Response: We appreciate the comment. In response to the request that CMS exclude from the rebate calculation units from other federal programs, section 1860D–14B(b) of the Act prescribes that the total number of units is based on the number of units for each Part D rebatable drug dispensed under Part D during the applicable period, excluding units of Part D rebatable drugs with respect to which the manufacturer provides a discount under the 340B Program. In addition, CMS will exclude units when a drug is no longer a Part D rebatable drug. CMS declines to adopt the commenter's recommendation to exclude units from other federal programs, such as units purchased under the Federal Supply Schedule.

Additionally, CMS is aware that a PDE record for a Part D rebatable drug that was billed as a compound would reflect the quantity dispensed of the compounded drug product as a whole and not the Part D rebatable drug individually. To ensure that the total number of units is determined only using PDE records that accurately reflect the actual quantity dispensed of the Part D rebatable drug, we are finalizing at § 428.203(b)(3) that, for operational reasons at this time, CMS will exclude PDE records for Part D rebatable drugs that were billed as compounds when determining the total number of units of each Part D rebatable drug dispensed under Part D and covered by Part D sponsors. Specifically, to determine the total number of units of a Part D rebatable drug, CMS will only use PDE records with a compound code indicating that the PDE record is not a compound (that is, PDE records with a compound code field equal to ''1=Not a Compound''). For alignment, CMS has also finalized at § 428.101(b)(1) that, when calculating the gross covered prescription drug costs for a drug or biological for the purpose of calculating the average annual total cost for that drug or biological, CMS will exclude PDE records indicating the drug or biological was billed as a compound.

CMS is exploring operational changes to the PDE record layout that would provide CMS with visibility into data on the quantity dispensed for a Part D rebatable drug when that Part D rebatable drug is billed as part of a compound, at which point such PDE records may be used to allow for inclusion in calculating the total number of units dispensed under Part D. These operational changes may also facilitate the inclusion of PDE records for drugs or biologicals that are billed as compounds in CMS' calculation of the gross covered prescription drug costs for a drug or biological for the purpose of calculating the average annual total cost for that drug or biological.

After consideration of comments received, CMS is finalizing § 428.203(b) as proposed, with an additional provision at § 428.203(b)(3) to specify that CMS will exclude units from the total number of units dispensed of a Part D rebatable drug when those units are associated with a Part D rebatable drug that has been billed as compounded.

(1) Removal of Units When a Generic Drug Is No Longer a Part D Rebatable Drug

At § 428.203(b)(1), we proposed to codify the policy established in section 40.2.8 of the revised Medicare Part D Drug Inflation Rebate Guidance to exclude from the rebate calculation any units of a generic drug dispensed on or after the date that such generic drug no longer meets the definition of a Part D rebatable drug. To determine whether a generic drug that meets the definition of a Part D rebatable drug on the first day of an applicable period ceases to meet such definition later in the applicable period, we proposed that CMS will use the most recent version of the downloadable FDA Orange Book to identify whether FDA has approved a 505(j) ANDA for a drug that is rated as therapeutically equivalent to such generic drug. If CMS determines that FDA has approved such a therapeutically equivalent drug under a 505(j) ANDA, CMS will then use the NDC Directory, including historical information from NDC Directory files such as discontinued, delisted, and expired listings provided by FDA or published on the FDA website to determine the marketing status of such therapeutically equivalent drug and to determine whether, during the applicable period, the therapeutically equivalent drug was marketed. Similarly, we proposed CMS will use the NDC Directory to identify whether the reference listed drug, or an authorized generic of the reference listed drug was marketed during the

applicable period. CMS will exclude from the rebate calculation any units dispensed on or after the first day of the calendar month that a generic drug no longer meets the definition of a Part D rebatable drug. CMS proposed to apply this unit exclusion at the month level and would exclude all units of a generic drug that ceases to meet the definition of a Part D rebatable drug beginning with the first day of the first month when a therapeutically equivalent drug approved under a 505(j) ANDA is marketed based on the marketing start date in the NDC Directory or when the reference listed drug, or an authorized generic of the reference listed drug is marketed based on the marketing start date in the NDC Directory. We proposed to apply this exclusion each calendar month because the Orange Book downloadable data files are updated monthly.

We did not receive public comments on this proposed provision, and we are finalizing as proposed at § 428.203(b)(1).

(2) Exclusion of 340B Acquired Units From Part D Rebatable Drug Requirements

Section 1860D–14B(b)(1)(B) of the Act requires that beginning with plan year 2026, CMS shall exclude from the total number of units for a Part D rebatable drug, with respect to an applicable period, those units for which a manufacturer provides a discount under the 340B Program. Because this requirement starts after the first quarter of the applicable period that begins on October 1, 2025, the exclusion of 340B units would only apply for the last three quarters of this applicable period. That is, CMS will exclude 340B units starting on January 1, 2026.

As we stated in the CY 2025 PFS proposed rule (89 FR 61969), data on which units dispensed under Part D and covered by Part D plan sponsors were purchased under the 340B Program is unavailable under the data sources specified at section 1860D–14B(d) of the Act (that is, information submitted by manufacturers, States, and Part D plan sponsors), and CMS does not currently have access to this data through other means. CMS understands that the 340B status of a Part D drug is usually not known by the dispenser at the point-of-sale, and that 340B covered entities (hereinafter ''covered entities'') typically identify the 340B status of a Part D drug retrospectively. Because the covered entity and CMS do not exchange dispensed Part D drug information confirming the 340B status of a Part D rebatable drug, CMS is unable to identify 340B units at the claim-level at this time. For these reasons, CMS proposed to establish an estimation methodology to remove 340B units from the total number of units for a Part D rebatable drug, as described in this section. CMS also solicited comments on alternative approaches.

(a) Estimation Methodology To Remove 340B Units From Rebate Calculations

To fulfill the statutory requirement to remove 340B units from rebate calculations beginning on January 1, 2026, we proposed at § 428.203(b)(2) a new policy to remove units from the total number of units dispensed of a Part D rebatable drug for each applicable period based on a calculated percentage that reflects the portion of 340B purchasing relative to total sales. We proposed the percentage (hereinafter, ''estimation percentage'') to equal the total number of units purchased by covered entities under the 340B Program for an NDC–9, divided by the total units sold of that NDC–9. We proposed the following example calculation for a Part D rebatable drug for a given applicable period for illustrative purposes:

Total number of units dispensed under Part D determined at § 428.203(a), minus the units determined at § 428.203(b)(1): 1,000.

Estimation percentage:

Total number of units purchased by covered entities under the 340B Program: 5,000.

Total units sold: 50,000.

5,000 *divided by* 50,000 = 10 percent.

340B units excluded at § 428.203(b)(2): 10 percent *multiplied by* 1,000 = 100.

The proposed estimation policy is consistent with CMS' authority under sections 1860D–14B(b)(1)(B), 1102(a), and 1871(a)(1) of the Act, the latter of which provide the authority to make rules and regulations as necessary for the efficient administration of programs, including the Medicare Part D Drug Inflation Rebate Program. Because the statutory requirement to remove 340B units from rebate calculations does not begin until January 1, 2026, for the applicable year that begins on October 1, 2025, we proposed to apply the estimation percentage only to those units associated with claims with dates of service in the last 3 quarters of the applicable period (that is, January 1, 2026, through September 30, 2026).

To identify the numerator of the estimation percentage (that is, the total number of units purchased under the 340B Program for an NDC–9), we proposed to use data from HRSA's 340B Prime Vendor Program (PVP). Certain supply chain entities report 340B unit data to the PVP at the NDC–11 level, and based on the data received, we proposed to aggregate these data at the NDC–9 level [690] to identify the total number of 340B units of a Part D rebatable drug that covered entities purchased in a given time period. We proposed that CMS would work with HRSA to obtain the necessary data from the PVP. We described in the CY 2025 PFS proposed rule (89 FR 61970) that we understand that there are limitations of using the PVP data, including that some covered entities may choose not to participate in the PVP, and CMS will not have access to 340B purchases reported by supply chain entities for this share of covered entities. Further, certain 340B purchases may not be reported to the PVP if those purchases were made through alternative distribution models such as a covered entity purchasing directly from a manufacturer, certain specialty distribution channel purchases, or drugs that receive a 340B rebate under the Ryan White HIV/AIDS Program's AIDS Drug Assistance Program. We solicited comments on what other data sources may be available to calculate the numerator of the estimation percentage. We also solicited comments on how it could account for potential underreporting of 340B units if data are not available on certain 340B purchases, such as those described above, that may not be reported to the PVP.

To identify the denominator of the estimation percentage (that is, the total units sold of an NDC–9), we proposed to use existing manufacturer reporting under the Medicaid Drug Rebate Program (MDRP) of unit sales. Specifically, we proposed to use the total number of units that are used to calculate the monthly AMP and which manufacturers are required to report to CMS for each covered outpatient drug (COD) in accordance with section 1927(b)(3)(A)(iv) of the Act. We believed that using these unit data to calculate an estimation percentage would be consistent with the use of these same data to calculate the AnMP at § 428.202(b) and the benchmark period manufacturer price at § 428.202(d).

In the CY 2025 PFS proposed rule (89 FR 61970), we stated that we recognize the importance of ensuring that the numerator and denominator of the proposed estimation percentage reflect the same time period of sales for units dispensed in the same settings. We also acknowledged in the proposed rule that

[690] NDC–9 and NDC–11 numbers are identical except for two numbers in NDC–11s that indicate package size. Because of this, NDC–11 is more granular than NDC–9, and multiple NDC–11 numbers can aggregate under a single NDC–9 number.

the proposed data source for the numerator (PVP data) reflects purchases by covered entities that dispense or administer 340B-eligible drugs in retail community pharmacies and in outpatient settings. The proposed data source for the denominator (unit sales used to calculate AMP) represents, in accordance with the definition of AMP at section 1927(k)(1) of the Act, (1) manufacturer sales to wholesalers for drugs distributed to retail community pharmacies, and (2) manufacturer sales to retail community pharmacies that purchase drugs directly from the manufacturer. Therefore, the numerator of the proposed estimation percentage represents 340B units dispensed in multiple settings, whereas the denominator represents units typically dispensed only in the retail community pharmacy setting. We welcomed evidence demonstrating how 340B dispensing rates differ between the retail community pharmacy setting versus multiple settings and may consider adjusting the estimation percentage to reflect variation between the percentage of 340B units dispensed in multiple settings (that is, retail community pharmacies and outpatient settings) and the percentage of 340B units dispensed in only the retail community pharmacy setting. We stated that the proposed regulatory text at § 428.203(b)(2) would be subject to any such adjustment factor that may be adopted.

We also recognized that the proposed estimation percentage represents the total number of 340B units dispensed as a proportion of total units dispensed, irrespective of insurance/payor type. We solicited comments on whether the agency should further adjust the percentage of 340B units dispensed to the general population to estimate the percentage of 340B units dispensed to Part D beneficiaries for claims with dates of service on or after January 1, 2026, including comments on how the percentage of 340B units dispensed to the general population compares with the percentage of 340B units dispensed to Part D beneficiaries. We welcomed evidence that demonstrates how these percentages differ. We noted that CMS would consider this information in developing its final policies and may consider adjusting the estimation percentage to reflect variation between the percentage of 340B units dispensed to Part D beneficiaries and the percentage of 340B units dispensed to the general population. We stated that the proposed regulatory text at § 428.203(b)(2) would be subject to any such adjustment factor that may be adopted. We solicited comments on whether there are other circumstances for which CMS should apply an adjustment factor to the estimation percentage.

We considered using alternative data sources to calculate the estimation percentage. To identify the total number of units purchased under the 340B Program to use in the numerator of the estimation percentage, CMS considered requiring other entities throughout the pharmaceutical supply chain, including manufacturers, to report these data to CMS. We noted that an advantage of this approach is that manufacturers could provide data directly on total 340B units sold; in other words, this data would capture the limited 340B sales that the PVP data does not capture. A disadvantage of this approach is that not all manufacturers of Part D rebatable drugs may have existing mechanisms for tracking 340B sales for Medicare Part D, which could necessitate that new tracking and reporting mechanisms be created. We did not propose this alternative because we preferred to rely on data that are already reported to the PVP, as using these data would help to minimize reporting burdens and may result in cleaner and more accurate data due to the quality checks performed on the PVP data for purposes of compliance with the 340B Program. For example, audit and price integrity checks are performed on the PVP data to ensure the distributors submit and code the data correctly.

To identify the total units sold to use in the denominator of the estimation percentage, we similarly considered establishing a new requirement for other entities throughout the pharmaceutical supply chain, including manufacturers, to report these data to CMS. We noted that an advantage of this approach is that the denominator would represent sales that are ultimately dispensed in retail community pharmacy settings and in outpatient settings (whereas, as mentioned previously, unit reporting under the MDRP represents units typically dispensed only in the retail community pharmacy setting). A disadvantage of this approach is that it could necessitate that new tracking and reporting mechanisms be created. We did not propose this alternative as we believed that relying upon existing manufacturer reporting of unit sales reported with AMP under the MDRP would be preferable to a new reporting option and would help minimize reporting burden. Further, the use of unit sales reported with AMP may provide cleaner and more accurate data than establishing a new manufacturer reporting requirement since manufacturers must certify their AMP reporting, in accordance with § 447.510(e), and are subject to civil money penalties for false or inaccurate reporting, in accordance with section 1927(b)(3)(B) of the Act. We also considered using data on unit sales available in a nationally representative and commercially available database, but one disadvantage of this option would be that CMS would be unable to audit the quality of data available through such a database.

We solicited comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters strongly objected to the proposed estimation methodology and urged CMS to not finalize this approach. Many of these commenters stated that the estimation methodology conflicts with section 1860D–14B(b)(1)(B) of the Act, which states that the Secretary ''shall exclude'' 340B units from the total number of units used to calculate the Part D drug inflation rebate amount. The commenters asserted that estimating the number of 340B units would not comply with this provision because it would be ''highly doubtful'' that the 340B units excluded via the estimation percentage would be reasonably correct and would likely underestimate the number of 340B units; the commenters stated that, in contrast, the Act requires CMS to exclude all 340B units. The commenters objected to CMS proposing to use data with known limitations when, according to the commenters, there is case law that supports the notion that the agency must use the ''most reliable'' data available. A couple of commenters asserted that the estimation methodology would offend principles of due process and basic fairness.

Conversely, many commenters agreed with CMS' approach of developing an estimation percentage because this approach would not place unreasonable burden on covered entities and would be preferable to any methodology that requires point-of-sale or retrospective identification by covered entities or pharmacies through the use of a claims-based indicator. One commenter stated that the estimation methodology would be preferable to requiring the use of a Medicare Part D claims data repository (a topic discussed later in this section).

Response: CMS thanks the commenters for their feedback. After further consideration and taking into account the comments received on the proposed estimation methodology, CMS is not finalizing the estimation methodology for the applicable period that begins on October 1, 2025. Instead,

as discussed later in this section, CMS will explore avenues to implement section 1860D–14B(b)(1)(B) of the Act, which requires the exclusion from the total number of units for a Part D rebatable drug those units for which a manufacturer provides a discount under the 340B Program starting January 1, 2026, through the establishment of a Medicare Part D claims data repository.

Comment: CMS received many comments on the proposed data sources for the estimation percentage. Many commenters stated that the PVP data is sufficient to help CMS calculate the estimated total number of units purchased under the 340B Program but raised concerns about using a broad data set from the PVP that would include hospitals and other covered entity outpatient purchases such as clinician-administered drugs. These commenters recommended that CMS only include retail pharmacy data from the PVP data to avoid any overestimates of the estimation percentage. Another commenter also supported the use of PVP data but cautioned that this data does not include certain purchases and could therefore deflate the true number of units purchased under the 340B Program. Many commenters objected to any use of the PVP data, stating that it would undercount a Part D rebatable drug's total 340B sales because some covered entities do not participate in the PVP and alternate distribution channels are not captured in the data. Some of these commenters claimed that the PVP is opaque and not validated, and interested parties would therefore be unable to fully verify the accuracy of the data. A few commenters raised concerns that potential undercounting of 340B units will be more pronounced for HIV therapies since a significant portion of 340B utilization for HIV therapies comes from AIDS Drug Assistance Programs (ADAPs).

Some commenters also raised concerns with the use of AMP data to capture the total number of units sold. These commenters were concerned that AMP excludes 340B sales to covered entities and excludes most units not purchased by retail community pharmacies. One commenter stated that this latter exclusion could have a not insignificant impact on therapeutic classes frequently administered by clinicians, such as oncology products. A couple of commenters also asked how CMS would treat drugs with no reported AMP units but for which there is reported AMP when determining the number of units to exclude from Part D inflation rebate amounts.

Response: CMS thanks the commenters for providing their feedback. As previously stated, after further consideration and taking into account the comments received on the proposed estimation methodology, CMS is not finalizing the estimation methodology for the applicable period that begins on October 1, 2025.

Comment: Many commenters agreed with the limitations of the estimation percentage that CMS described in the CY 2025 PFS proposed rule (89 FR 61969–61971) but did not offer recommendations on how CMS could adjust the estimation percentage. In response to CMS' comment solicitation on how the 340B dispensing rate may differ in the general population versus in the Part D population, a couple of commenters stated that estimating the percentage of Part D 340B units based on the percentage of overall 340B sales may underestimate 340B Part D units because many drug units dispensed to Medicaid beneficiaries are carved out of the 340B program, whereas Medicare Part D does not have an equivalent carve-out; therefore, the percentage of Part D units that are 340B would be greater than the percentage of overall sales that includes Medicaid units in its calculation.

Although no commenters offered specific recommendations on how CMS could adjust the estimation percentage, many commenters recommended changes that CMS should make to the estimation approach. One commenter recommended that CMS should at minimum permit manufacturers to submit data on the 340B utilization of their products to inform the numerator of the estimation percentage, whereas a few commenters strongly opposed any approach that would shift the responsibility of identifying 340B units to manufacturers. A couple of commenters stated that the estimation methodology does not account for the complexity of the structure of 340B organizations and their purchasing processes. A few commenters advised that CMS validate its calculations carefully and periodically audit the estimation percentage with covered entities, as overestimating the number of 340B units could have negative downstream impacts by artificially decreasing the inflation rebate amount for a Part D rebatable drug.

Response: CMS thanks the commenters for providing their feedback. As previously stated, after further consideration and taking into account the comments received on the proposed estimation methodology, CMS is not finalizing the estimation methodology for the applicable period that begins on October 1, 2025.

After consideration of public comments, CMS is not finalizing the estimation methodology for the applicable period that begins on October 1, 2025. Instead, as discussed later in this section, CMS will explore avenues to implement section 1860D–14B(b)(1)(B) of the Act, which requires the exclusion from the total number of units for a Part D rebatable drug those units for which a manufacturer provides a discount under the 340B Program starting January 1, 2026, through the establishment of a Medicare Part D claims data repository.

(b) Comment Solicitation on a Medicare Part D Claims Data Repository

In the initial Medicare Part D Drug Inflation Rebate Guidance, CMS solicited comments on the best mechanism to identify 340B units dispensed under Part D.[691] CMS discussed requiring the dispensing entity to include a 340B claims indicator on the Part D drug claim to be included in PDE records. Many commenters disagreed that the PDE record was the most accurate way to identify 340B discounts for Part D drugs. A few commenters highlighted the operational challenges, administrative burden, and potential for increased dispensing fees and reimbursement issues with both point-of-sale modifiers and retrospective 340B identifiers. In addition, a wide array of interested parties recommended that CMS create a mechanism through which covered entities would retrospectively submit data to CMS identifying 340B claims dispensed under Part D. Interested parties urged that this mechanism allow covered entities to submit these data directly to CMS, rather than through claims that dispensers submit via Part D plan sponsors.

In response to this feedback from interested parties, in the CY 2025 PFS proposed rule (89 FR 61971–61972) we solicited comments on establishing a Medicare Part D claims data repository (hereinafter, ''repository'') in a future year of the Medicare Part D Drug Inflation Rebate Program to comply with the requirement under section 1860D–14B(1)(B) of the Act that CMS shall exclude from the total number of units for a Part D rebatable drug those units for which a manufacturer provides a discount under the 340B Program. This approach would require that covered entities submit certain data elements from 340B-identified Part D claims to

[691] See: *https://www.cms.gov/files/document/medicare-part-d-inflation-rebate-program-initial-guidance.pdf.*

the repository. CMS solicited comments on such a requirement later in this section.

As described in the CY 2025 PFS proposed rule (89 FR 61971) and later in this section, CMS stated that a repository could receive data elements submitted by covered entities from 340B-identified claims for all drugs covered under Medicare Part D billed to Medicare. As requested by interested parties in comments on the initial Medicare Part D Drug Inflation Rebate Guidance, the repository could allow covered entities to submit these data directly to CMS (or a contractor), rather than through claims that dispensers submit to Part D plan sponsors. CMS could consider all data elements received by the repository to be associated with 340B-identified claims; that is, the repository would not further verify the 340B status of a claim but rather would serve solely to store these data. Under this process, CMS could require an attestation from covered entities that the data elements from all claims submitted to the repository are from verified 340B claims. CMS stated that it is exploring approaches to confirming completeness and accuracy of the submission, and we solicited comments on methods to review and ensure the accuracy of reported data. CMS could then match the stored data elements to PDE records for each Part D rebatable drug dispensed during the applicable period. Units associated with PDE records that match to data elements stored in the repository could be considered those for which the manufacturer provides a discount under the 340B Program and therefore removed from the total number of units used to calculate the total rebate amount.

We received public comments in response to this comment solicitation. The following is a summary of the comments we received and our responses.

Comment: Many commenters stated support for CMS to implement the Part D claims repository as soon as possible or prior to January 1, 2026. A couple of commenters recommended that CMS allow manufacturers to submit data on 340B utilization for their products if CMS is not able to implement a repository or modifier process for identifying and excluding 340B units before 2026. A few commenters recommended that CMS temporarily pause invoicing for Part D inflation rebates until a 340B claims repository is operational, unless it adopts a 340B claims indicator policy. These commenters recommended that CMS account for repository data in the reconciliation process for past applicable periods beginning with 2026 if it does not pause invoicing until the repository is operational.

A couple of commenters recommended that CMS ensure that the repository is an independent entity, free from conflicts of interest related to relationships with parties involved with the 340B Program, including manufacturers and covered entities. One commenter recommended that the vendor selected for the repository be an entity currently active in the market that has extensive experience with data storage, exchange, and facilitation that is used to working with covered entities. A couple of commenters recommended that CMS ensure the protection of 340B-related claims information, as well as other sensitive or proprietary information that covered entities submit to the repository, including protection from potential cybersecurity threats. One commenter recommended CMS limit the scope of the repository to the collection of 340B-identified Part D claims to remove 340B units from the calculation of Part D inflation rebates. One commenter stated that if CMS considers additional uses for the repository beyond the Part D inflation rebate program, it should engage in notice-and-comment rulemaking.

Response: We appreciate the comments and recommendations. We will explore the establishment of a Medicare Part D claims data repository for removal of 340B units starting January 1, 2026 and may consider these comments for use in future rulemaking.

Comment: A couple of commenters opposed the repository because it relies on data submitted by covered entities without including a process to verify 340B data reported by covered entities or guaranteeing the exclusion of all 340B units from inflation rebate calculations.

Response: We appreciate the feedback in response to our comment solicitation and may consider these comments for use in future rulemaking.

Comment: Some commenters recommended CMS work with an independent, neutral entity that would serve as a clearinghouse for not only Part D claims data, but other payer claims data as well, and create full transparency to facilitate the exchange of information to identify 340B claims, prevent duplicate discounts across Medicaid and Medicare and other programs, and resolve disputes or other issues. Many commenters recommended that the repository would or should be like the model used in Oregon to identify 340B claims to avoid duplicate discounts between the 340B price and Medicaid rebates. One commenter provided detailed recommendations for a clearinghouse approach related to the registration process, account management, and data submission, resubmission, and validation requirements. The commenter noted that such service models are currently available on the market and could meet the January 1, 2026 timeline.

Response: We appreciate the comments and recommendations. We will explore the establishment of a Medicare Part D claims data repository for removal of 340B units starting January 1, 2026 and may consider these comments for use in future rulemaking.

After consideration of public comments, we plan to explore the establishment of a Medicare Part D claims data repository to use for removal of 340B units from the calculation of Part D inflation rebates starting January 1, 2026 to implement section 1860D–14B(b)(1)(B) of the Act. We plan to continue exploring the development of detailed policies and requirements related to any such repository for future rulemaking related to this topic and the exclusion of 340B units. We will also continue to explore requiring that covered entities and their contracted 340B third-party administrators (340B TPAs) report retrospectively at a minimum the 4 elements we described and solicited comment on in the CY 2025 PFS proposed rule (89 FR 61971). We welcome engagement with interested parties as we further review the comments on data submission requirements and timing. If CMS were to establish a Medicare Part D claims data repository in the future, we believe an important consideration would be consulting with HRSA as applicable about the need for guidance and education for covered entities regarding the final selected data elements for reporting and compliance measures.

(c) Comment Solicitation on Requiring Covered Entities To Submit 340B Claims Data to the Repository

We solicited comments on using our authority under section 1860D–14B(b)(1)(B) of the Act, as well as our authorities under sections 1102(a) and 1871(a)(1) of the Act, to require covered entities to enroll in a repository and submit certain data elements from 340B-identified claims for all covered Part D drugs billed to Medicare to this repository. CMS understands covered entities typically contract with 340B TPAs to determine 340B eligibility of claims using data submitted by covered entities and their contract

pharmacies.[692] CMS solicited comments on whether or how, to the extent a covered entity uses a 340B TPA, CMS could require or encourage TPAs to submit certain data elements to the repository on behalf of that covered entity.

Requiring covered entities to submit data elements from 340B-identified Part D claims to the repository could allow CMS to receive data directly from the entities that participate in the 340B Program to identify 340B units to exclude from Part D drug inflation rebate calculations without intermediary entities needing to develop processes to capture these data and relay it to CMS. We described in the CY 2025 PFS proposed rule (89 FR 61971) that we are considering requiring covered entities to submit the following data elements from Part D claims for covered Part D drugs that are purchased under the 340B Program and dispensed to Medicare Part D beneficiaries: (1) Date of Service (that is, the date the prescription was filled by the pharmacy); (2) Prescription or Service Reference Number; (3) Fill Number (that is, the code indicating whether the prescription is an original or a refill; if a refill, the code indicates the refill number); and (4) Dispensing Pharmacy NPI. CMS believes that these would be the minimum data elements required to match claims and remove 340B units from Part D drug inflation rebate calculations. We solicited comments from interested parties on this list of data elements and whether these data elements would be accessible to covered entities to submit to CMS.

We received public comments in response to this comment solicitation. The following is a summary of the comments we received and our responses.

Comment: A few commenters recommended CMS minimize the data elements it requires covered entities to report to the repository and only require data elements that are necessary for identification and matching of 340B information with Part D claims. Many commenters recommended CMS require covered entities to submit the National Drug Code (NDC) or other product information to the repository in addition to the data elements CMS included in the comment solicitation in the proposed rule. Many commenters noted that the NDC would help CMS better crosswalk between the data submitted by the covered entity and the PDE records for Part D rebatable drugs dispensed during the applicable period. A few commenters recommended CMS collect other data elements from covered entities, including quantity dispensed, covered entity 340B ID, Part D Contract ID, and Part D Plan Benefit Package ID to help identify if two covered entities claimed a 340B discount for the same dispensed prescription and to verify that a 340B claim was dispensed to a Part D beneficiary. One commenter recommended that CMS require covered entities to submit the unit type data element to accurately identify 340B units to exclude them from Part D drug inflation rebate calculations. One commenter recommended that CMS require covered entities to submit the NCPDP Processor ID Number/Processor Control Number data element to the repository.

Response: We plan to explore the establishment of a Medicare Part D claims data repository to use for removal of 340B units from the calculation of Part D inflation rebates starting January 1, 2026. We appreciate the comments and recommendations and may consider them for use in any future rulemaking regarding policies and requirements related to the repository, including a potential requirement that covered entities and their contracted 340B TPAs retrospectively report, at a minimum, the 4 elements we described and solicited comment on in the CY 2025 PFS proposed rule (89 FR 61971). We welcome engagement with interested parties as we further review the comments on data submission requirements and timing.

Comment: A few commenters supported the repository leveraging existing data sources and allowing 340B TPAs to submit data in addition to covered entities and recommended CMS minimize burdens related to data sharing on covered entities. One commenter stated that the repository is similar to the existing process under which covered entities submit limited data elements to a commercially available 340B technology platform to continue receiving 340B discounts through contract pharmacy arrangements. One commenter noted concerns with the repository, arguing it would be an administrative burden for covered entities to provide data to CMS when many states already require data submission from covered entities.

One commenter recommended that, if data is needed from Part D plan sponsors, CMS should leverage existing data submitted by Part D plan sponsors, such as PDE data, and not impose additional reporting requirements on Part D plan sponsors for data submission to the repository. One commenter recommended CMS clarify how a retrospective claims repository model would function. One commenter thanked CMS for soliciting comments on a repository model rather than imposing a 340B indicator submission requirement on Part D participating pharmacies.

Response: We appreciate the comments and recommendation and may consider them for use in future rulemaking.

Comment: A few commenters supported CMS using the authority outlined in the CY 2025 PFS proposed rule (89 FR 61971–61972) to require covered entities to submit certain data elements from 340B-identified claims to a repository. A few commenters stated that CMS' statutory mandate to exclude 340B units from Part D drug inflation rebate calculations provides it with the authority to enact such a requirement. One commenter recommended that CMS explore authorities to ensure covered entity compliance with submission to a repository and remind covered entities of obligations to comply with statutes, regulations, and program instructions.

Response: We appreciate the comments and recommendations and will consider them for use in future rulemaking.

After consideration of public comments, we will explore avenues to implement section 1860D–14B(b)(1)(B) of the Act, which requires the exclusion from the total number of units for a Part D rebatable drug those units for which a manufacturer provides a discount under the 340B Program, through the establishment of a Medicare Part D claims data repository for removal of 340B units starting January 1, 2026 and may consider these comments for use in future rulemaking. We plan to continue exploring the development of detailed policies and requirements related to any such repository for future rulemaking related to this topic and the exclusion of 340B units. We will also continue to explore requiring that covered entities and their contracted 340B third-party administrators (340B TPAs) report retrospectively at a minimum the 4 elements we described and solicited comment on in the CY 2025 PFS proposed rule (89 FR 61971). We welcome engagement with interested parties as we further review the comments on data submission requirements and timing. If CMS were to establish a Medicare Part D claims data repository in the future, we believe an important consideration would be consulting with HRSA as applicable

[692] Covered entities may elect to dispense 340B drugs to patients through contract pharmacy services, an arrangement in which the covered entity enters a contract with the pharmacy to provide pharmacy services.

about the need for guidance and education for covered entities regarding the final selected data elements for reporting and compliance measures.

(d) Comment Solicitation on Timing Requirements for Potential Submissions to a Medicare Part D Claims Data Repository

We solicited comments on requiring covered entities to submit the fields specified by CMS to the repository within 3 months of the end of a given calendar quarter. For example, for claims with dates of service between October 1, 2027, through December 31, 2027, covered entities would be required to submit data elements from 340B-identified claims to CMS no later than March 31, 2028. The 340B units identified from these quarterly submissions could be removed from the total number of units and total rebate amount specified in the Preliminary Rebate Report and Rebate Report detailed at §§ 428.401(b) and (c), respectively.

In accordance with the proposed § 428.401(d) to reconcile the rebate amount in the case of revised information, including a reconciliation of the total number of units detailed at § 428.401, we solicited comments on providing covered entities with additional time to submit data to reflect a revision to the 340B determination of claims with dates of service throughout an applicable period. A revision could come in one of two forms: (1) resubmission of data for a claim that the covered entity previously submitted to a repository in error or with errors in the requested data fields, or (2) new submission of data for a claim that the covered entity had previously determined was not purchased under the 340B Program, but later identified was purchased under such program. For the first type of revision, we solicited comments on requiring that the covered entity resubmit the data from such claim using a field to indicate that such data should be removed from the repository's dataset of 340B-identified claims; if applicable, the covered entity could resubmit the claim with the correct information. We solicited comments on the process and timing for covered entities to submit this revised data to the repository after the end of the applicable period. Updates to the total number of units and total rebate amount based on this revised information from covered entities would be reflected in the reconciliation process detailed at § 428.401(d).

We solicited comments from interested parties on the feasibility of the proposed quarterly reporting timeline for covered entities to submit data elements from Part D 340B claims, as well as the additional time to submit data to reflect a revision to the 340B determination of claims.

We received public comments in response to this comment solicitation. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the data submission timing CMS detailed in its comment solicitation on the repository, stating that providing 3 months after the end of a given calendar quarter would provide sufficient time to compile required data. A couple of commenters recommended CMS provide ample time for covered entities to submit data to a repository. Many commenters supported CMS allowing covered entities to revise data previously submitted to the repository or submit new data for claims that are newly identified as 340B-eligible. A couple of commenters recommended that CMS verify that any data submitted to the repository retroactively be final adjudicated claim information to ensure that information sent to the repository is final. One commenter recommended that covered entities share 340B claims data on a real-time basis or as close to real-time as possible with the repository.

Response: We appreciate the comments and recommendation and will consider them for use in future rulemaking.

After consideration of public comments, we will explore avenues to implement section 1860D–14B(b)(1)(B) of the Act, which requires the exclusion from the total number of units for a Part D rebatable drug those units for which a manufacturer provides a discount under the 340B Program, through the establishment of a Medicare Part D claims data repository for removal of 340B units starting January 1, 2026 and may consider these for use in future rulemaking. We will also continue to explore requiring that covered entities and their contracted 340B third-party administrators (340B TPAs) report retrospectively at a minimum the 4 elements we described and solicited comment on in the CY 2025 PFS proposed rule (89 FR 61971). We welcome engagement with interested parties as we further review the comments on data submission requirements and timing. If CMS were to establish a Medicare Part D claims data repository in the future, we believe an important consideration would be consulting with HRSA as applicable about the need for guidance and education for covered entities regarding the final selected data elements for reporting and compliance measures.

(e) Alternative Policy Considered: 340B Claims Identifier

As described in section 40.2.7 of the initial Medicare Part D Drug Inflation Rebate Guidance, CMS considered requiring that a 340B indicator be included on the PDE record at the time of dispense to identify drugs purchased under the 340B Program that were dispensed under Medicare Part D. As described in the ''Summary of Public Comments on the Initial Medicare Part D Drug Inflation Rebates Memorandum and CMS' Responses'' in the revised Medicare Part D Drug Inflation Rebate Guidance, many commenters—including covered entities, pharmacies, Part D plan sponsors, and pharmacy benefit managers—disagreed that the PDE record would be the most accurate way to identify 340B discounts for Part D drugs. A few commenters highlighted the operational challenges, administrative burden, and potential for increased dispensing fees and reimbursement issues with 340B claim identifiers. After further consideration of comments received in response to the initial guidance and of the process through which a claim is determined to have 340B status, we noted in the CY 2025 PFS proposed rule (89 FR 61972) that CMS is no longer pursuing this policy at this time but may consider it in future rulemaking.

We received public comments on this alternative considered. The following is a summary of the comments we received and our responses.

Comment: Many commenters expressed support for CMS' decision to not pursue a 340B claims indicator at this time and urged that CMS should not revisit the idea. These commenters explained that 340B-eligibility determinations are made after the point of sale and that 340B claims indicators are incompatible with the retrospective replenishment model [693] and would be unworkable for most 340B pharmacies.

Response: CMS thanks these commenters for their support. In this final rule, CMS maintains that we are not pursuing a 340B claims indicator policy at this time but may consider it in future rulemaking.

Comment: Many commenters supported use of a 340B claims

[693] Covered entities and their contract pharmacies can use a replenishment model in which they do not need to maintain a separate physical inventory for 340B-eligible drugs. Rather than maintain a physical inventory, they maintain a virtual inventory and a contract pharmacy can receive a replacement product, paid by the covered entity, after a full package size of the product has been dispensed to 340B-eligible patients.

indicator to identify 340B units and stated that the use of such an indicator would be operationally feasible, accurate, and consistent with the statutory requirement to remove 340B units from Part D drug inflation rebate calculations. Some commenters recommended that CMS require use of 340B and non-340B indicators (that is, to identify that a drug was not purchased under the 340B Program) on claims and that Part D plans reject claims if they do not include one of the two indicators. A couple of commenters stated that CMS' statutory mandate to exclude 340B units from Part D drug inflation rebate calculations provides it with the authority to enact such a requirement. A few commenters noted that CMS stated in the initial Medicare Part D Drug Inflation Rebate Guidance that requiring a 340B indicator be included on the PDE record is the most reliable way to identify drugs that are subject to a 340B discount that were dispensed under Medicare Part D; these commenters were concerned that CMS has moved away from an approach it previously stated was the most reliable.[694] A few commenters noted that a 340B modifier is utilized in the Part B program and argued that this indicates that employing a similar process in Part D is feasible. One commenter acknowledged the difficulty for some dispensing entities of identifying 340B eligibility at the point of sale and noted the discriminatory practices of payers when a 340B indicator is used, but urged CMS to continue to explore ways to improve identification of 340B claims at the point of sale in the absence of a comprehensive claims ''clearinghouse.'' Another commenter acknowledged the difficulties of implementing a 340B claims indicator but stated that the statute does not include any provision suggesting that minimizing disruptions for covered entities should take precedence.

Response: CMS appreciates the feedback. As stated in the CY 2025 PFS proposed rule (89 FR 61972), CMS understands that the 340B status of a Part D drug may not be known by the dispensing entity at the point of sale, and that covered entities may identify the 340B status of a Part D drug retrospectively. Although the current NCPDP Telecommunications Standard Version D.0 for pharmacy claims does include a field where a 340B indicator could be provided in a ''B1'' transaction,[695] it is optional for pharmacies to use, based on agreements with trading partners (for example, health plans, manufacturers, state Medicaid agencies). In addition, the standard specifies that the indicator in the ''B1'' transaction can only be used prospectively, so a pharmacy that makes the retrospective determination that the drug was purchased at or below the 340B ceiling price cannot apply this modifier retrospectively to the claim. The NCPDP does allow use of an ''N1'' transaction[696] to retrospectively identify drugs purchased under the 340B program, but CMS understands that requiring use of the N1 transaction would not be feasible as it has not been adopted by pharmacy information systems. CMS therefore believes there may be more reliable ways to identify drugs that are subject to a 340B discount that were dispensed under Medicare Part D than requiring a 340B indicator be included on the PDE record. In contrast, CMS requires 340B modifiers under Part B because dispensing entities are generally able to identify the 340B status of a Part B claim at or soon after the point of dispense.

Comment: Many commenters recommended that CMS use data submitted to a Part D 340B repository for purposes of implementing nonduplication between the Maximum Fair Price and the 340B ceiling price in the Medicare Drug Price Negotiation Program. One commenter stated that drug pricing changes under the Inflation Reduction Act could have mixed effects on people with HIV, including the removal of 340B units from certain calculations. The commenter noted that any affordability challenges to people with HIV are concerning. One commenter stated support for transparency for health plans when a drug is 340B-eligible and for legislation related to creating a 340B claims clearinghouse. One commenter recommended that CMS work with HRSA to issue guidance requiring identification of 340B units to facilitate a 36-month reconciliation timeline for excluding 340B units from Part D inflation rebates.

Response: While these comments are out of scope for this final rule because they address other programs and topics beyond the scope of the Medicare Part D Drug Inflation Rebate Program, we appreciate the feedback and may consider these recommendations for the Medicare Drug Negotiation Program.

After consideration of public comments, CMS maintains that we are not pursuing a 340B claims indicator requirement at this time but may consider it in future rulemaking.

v. Treatment of New Formulations of Part D Rebatable Drugs

Section 1860D–14B(b)(5)(B)(i) of the Act requires CMS to determine a formula for the rebate amount and the inflation-adjusted payment amount for a Part D rebatable drug that is a line extension of a Part D rebatable drug that is an oral solid dosage form for an applicable period that is consistent with the formula applied under section 1927(c)(2)(C) of the Act for determining a rebate obligation for a rebate period under such section. Section 1927(c)(2)(C) of the Act provides for an alternative rebate calculation for line extension drugs under the MDRP, and CMS issued guidance on how this calculation is performed for these purposes.[697]

Section 1860D–14B(b)(5)(B)(ii) of the Act further states that for a Part D rebatable drug, the term line extension means, ''a new formulation of the drug, such as extended release formulation, but does not include an abuse-deterrent formulation of the drug (as determined by the Secretary), regardless of whether such abuse-deterrent formulation is an extended release formulation.'' This language is identical to the definition of ''line extension'' in section 1927(c)(2)(C) of the Act. Regulatory definitions of ''line extension'' and ''new formulation'' for the MDRP were adopted through rulemaking[698] and can be found at § 447.502. In alignment with CMS' policy in section 40.4 of the revised Medicare Part D Drug Inflation Rebate Guidance, we proposed at § 428.200 to adopt the definitions of ''line extension'' and ''new formulation'' at § 447.502 of this title for the purposes of identifying new formulations of Part D rebatable drugs.

At § 428.204, we proposed CMS will determine the total rebate amount to be paid by manufacturers by taking the greater of (1) the total rebate amount

[694] See: *https://www.cms.gov/files/document/medicare-part-d-inflation-rebate-program-initial-guidance.pdf.*

[695] A pharmacy would use the value of ''20'' in the Submission Clarification Code (420–DK) field to indicate use of a 340B drug at the time of the adjudication or dispensing of the claim. See: National Council on Prescription Drug Program (NCPDP) 340B Information Exchange Reference Guide Version 2.0, June 2019, *https://www.ncpdp.org/NCPDP/media/pdf/340B_Information_Exchange_Reference_Guide.pdf.*

[696] If it is determined that a 340B drug was dispensed after the claim has been adjudicated, then an N1 transaction can be submitted with the 420–DK submission.

[697] See: *https://www.medicaid.gov/medicaid/prescription-drugs/medicaid-drug-rebate-program/unit-rebate-calculation/unit-rebate-amount-calculation-for-line-extension-drugs-with-example/index.html.*

[698] See: 85 FR 87000, 87101 (December 31, 2020).

calculated at § 428.201(a) for the applicable period for the Part D rebatable drug that is a line extension, or (2) the alternative total rebate amount. This proposal is a modification to policy established in revised Medicare Part D Drug Inflation Rebate Guidance. While the revised guidance stated that CMS will compare the *per unit* rebate amount to the alternative *per unit* rebate amount, as described at § 428.204, we proposed that CMS will compare the *total* rebate amount calculated in at § 428.201(a) to the alternative *total* rebate amount, which we believe is consistent with the existing regulations for new formulations at § 447.509(a)(4), as explained in the CY 2025 PFS proposed rule (89 FR 61972). We further proposed at § 428.204 to codify the policy described in section 40.4 of the revised guidance to calculate the alternative inflation rebate amount for a Part D rebatable drug that is a line extension consistent with the formula applied under section 1927(c)(2)(C) of the Act. That is, CMS will determine an inflation rebate amount ratio for the initial drug identified by the manufacturer in accordance with § 447.509(a)(4)(i)(B) by dividing the inflation rebate amount for that initial drug for the applicable period by the AnMP for that initial drug for the applicable period, as calculated under § 428.202(b).

We stated in the CY 2025 PFS proposed rule (89 FR 61972–61973) that to identify the initial drug for the line extension, CMS will use information from the Medicaid Drug Program system and identify line extensions based on manufacturer reporting of drugs as line extensions and related pricing and product data in that system. We noted that Medicaid rebates are calculated quarterly, and a different initial drug may be identified in different quarters by the manufacturer for a particular line extension drug. Part D drug inflation rebates are calculated based on a 12-month applicable period, meaning there may be instances where a Part D rebatable line extension drug has multiple potential initial drugs during the applicable period that could be used for the alternative inflation rebate amount calculation. In such situations, for consistency, CMS will use the initial drug identified by the manufacturer in the last quarter of the Part D inflation rebate applicable period to identify the initial drug for the line extension drug alternative inflation rebate calculation. If an initial drug was not identified in the last quarter for a drug that is a line extension, we stated CMS will use the initial drug identified for a quarter most recently in that applicable period to identify the initial drug for the line extension drug alternative inflation rebate calculation.

We received public comments specific to the proposed definitions of ''line extension'' and ''new formulation'' at § 428.200 and responded to these comments above. We did not receive comments specific to the proposed provision at § 428.204, and we are finalizing as proposed at § 428.204.

d. Reducing the Rebate Amount for Part D Rebatable Drugs in Shortage and When There Is a Severe Supply Chain Disruption or Likely Shortage (§§ 428.300 Through 428.303)

Section 1860D–14B(b)(1)(C) of the Act requires the Secretary to reduce or waive the rebate amount owed by a manufacturer for a Part D rebatable drug with respect to an applicable period in three distinct cases: (1) when a Part D rebatable drug is described as currently in shortage on a shortage list in effect under section 506E of the FD&C Act at any point during the applicable period; (2) when CMS determines there is a severe supply chain disruption during the applicable period for a generic Part D rebatable drug or biosimilar, such as a disruption caused by a natural disaster or other unique or unexpected event; and (3) when CMS determines that without such a reduction or waiver, a generic Part D rebatable drug is likely to be described as in shortage on such shortage list during a subsequent applicable period. The statute does not describe how CMS should reduce or waive inflation rebates.

To implement the statutory requirement under section 1860D–14B(b)(1)(C) of the Act, we proposed to codify in subpart D of part 428 existing policies described in sections 40.5, 40.5.1, 40.5.2, and 40.5.3 of the revised Medicare Part D Drug Inflation Rebate Guidance to reduce the total rebate amount owed by a manufacturer in each of these three cases, as summarized in Table 60 and discussed later in this section.

TABLE 60: Determination of Rebate Reduction Amount for Part D Rebatable Drugs

	Drug Shortage		Severe Supply Chain Disruption	Likely to be in Shortage
Duration of Reduction	Indefinite for as long as drug is "currently in shortage"		One applicable period; manufacturer may request an extension for an additional applicable period for up to two applicable periods total	
Percent Reduction	Part D rebatable drug other than a plasma-derived product or generic Part D rebatable drug	Part D rebatable plasma-derived product or generic Part D rebatable drug	Part D rebatable biosimilar or generic Part D rebatable drug	Generic Part D rebatable drug
First applicable period	25%	75%	75%	75%
Second applicable period	10%	50%	75%	75%
Subsequent applicable periods	2%	25%	Not applicable	Not applicable

In the CY 2025 PFS proposed rule (89 FR 61973), we described that CMS would not fully waive the rebate amount owed in any case. We stated that we believe the proposed rebate reduction policies balance providing appropriate financial relief for manufacturers in certain circumstances, including when there is a severe supply chain disruption resulting from exogenous circumstances outside of a manufacturer's control, while not incentivizing manufacturers to delay taking appropriate steps to resolve a drug shortage or severe supply chain disruption, or maintain a situation in which a generic would be at risk of shortage to avoid an obligation to pay rebates. Additionally, we stated in the CY 2025 PFS proposed rule that we will continue to evaluate these policies and may update them in future years. We noted that most shortages involve multiple source generic drugs,[699] which are not Part D rebatable drugs and thus are not subject to Part D drug inflation rebates.

We solicited comments on these proposals. Comments regarding rebate reductions for drugs currently in shortage and drugs experiencing a severe supply chain disruption that are applicable to both Part B rebatable drugs and Part D rebatable drugs (for example, comments recommending a full waiver of the rebate amount and comments on the definitions) are summarized in the Part B drug inflation rebate section of this final rule. Rebate reduction comments specific to the Medicare Part D Drug Inflation Rebate Program (for example, comments on the likely to be in shortage policy) are summarized later in this section.

i. Definitions

We proposed at § 428.300 to define the following terms applicable to subpart D (§§ 428.300 through 428.303):

- ''Biosimilar''.
- ''Drug shortage'' or ''shortage''.
- ''Generic Part D rebatable drug''.
- ''Likely to be in shortage''.
- ''Plasma-derived product''.

We also proposed at § 428.300 to codify definitions established in the revised Medicare Part D Drug Inflation Rebate Guidance for the following terms:

- ''Currently in shortage''.
- ''Natural disaster''.
- ''Other unique or unexpected event''.
- ''Severe supply chain disruption'' .

We received public comments on these proposed definitions, which are applicable to both Part B rebatable drugs and Part D rebatable drugs and are summarized in the Part B drug inflation rebate section of this final rule. After consideration of comments received, we are finalizing the definitions as proposed at §§ 428.300 and 427.400.

ii. Reducing the Rebate Amount for Part D Rebatable Drugs Currently in Shortage

At § 428.301, we proposed to codify the policy established in section 40.5.1 of the revised Medicare Part D Drug Inflation Rebate Guidance whereby CMS would reduce the total rebate amount for a Part D rebatable drug that is currently in shortage based on the length of time the drug is in shortage during an applicable period and decrease the amount of the reduction over time. We stated in the CY 2025 PFS proposed rule (89 FR 61974) that CMS intends to use the shortage lists maintained by the FDA Center for Biologics Evaluation and Research (CBER) and Center for Drug Evaluation and Research (CDER) to determine whether a Part D rebatable drug is currently in shortage [700] during an applicable period. We also stated that CMS will not consider an NDC–10 in the status of ''to be discontinued,'' ''discontinued,'' or ''resolved'' to be ''currently in shortage'' and that CMS would provide the same reduction in the rebate amount for Part D rebatable drugs currently in shortage regardless of the cause of the shortage.

We proposed that CMS will not provide a full waiver of the rebate amount for drugs currently in shortage, as providing a full waiver of the rebate amount could further incentivize manufacturers to delay taking appropriate steps that may resolve a shortage more expeditiously simply to maintain having the drug listed on FDA's drug shortage list to avoid an obligation to pay rebates for an extended period. Further, as explained in the CY 2025 PFS proposed rule (89 FR 61974), in a report analyzing the root causes of drug shortages between 2013 and 2017, FDA found that more than 60 percent of drug shortages were the result of manufacturing or product quality issues, and providing a full waiver of the rebate amount in situations that may be within a manufacturer's control could be perceived as rewarding manufacturers for poor quality management.[701]

We stated in the CY 2025 PFS proposed rule (89 FR 61974) that CMS will be responsible for monitoring the status of a Part D rebatable drug on an FDA shortage list, and manufacturers would not need to submit any information to CMS to be eligible for a reduction of the rebate amount for a Part D rebatable drug that is currently in shortage.

To calculate the reduced total rebate amount for a Part D rebatable drug, at § 428.301(b)(1), we proposed the following formula:

Reduced *Total* Rebate Amount = the total rebate amount *multiplied by* (1 *minus* applicable percent reduction) *multiplied by* (percentage of time drug was currently in shortage during the applicable period) *added to* the total rebate amount *multiplied by* (1 *minus* percentage of time drug was currently in shortage during the applicable period)

For the purpose of this formula, for a Part D rebatable drug that is a generic drug or a plasma-derived product, at § 428.301(b)(2)(i), we proposed an applicable percent reduction of 75 percent for the first applicable period such Part D rebatable drug is currently in shortage, 50 percent for the second applicable period, and 25 percent for each subsequent applicable period. For a Part D rebatable drug (including a biosimilar) that is not a generic drug or a plasma-derived product, at § 428.301(b)(2)(ii), we proposed an applicable percent reduction of 25 percent for the first applicable period such Part D rebatable drug is currently in shortage, 10 percent for the second applicable period, and 2 percent for each subsequent applicable period.

Because drugs and biologicals on the FDA shortage lists are maintained at the NDC–10 level, and Part D drug inflation rebates are calculated at the NDC–9 level, we proposed at § 428.301(c) that if any NDC–10 for a Part D rebatable drug is currently in shortage, CMS will apply the rebate reduction to the entire Part D rebatable drug at the NDC–9 level. CMS will closely monitor market data for the Part D rebatable drugs for which the rebate is reduced to ensure the integrity of the application of the rebate reduction policy.

We proposed to provide a reduction in the rebate amount for as long as a Part D rebatable drug is currently in shortage. We stated in the CY 2025 PFS proposed rule (89 FR 61974) that we believe the rebate reduction should be proportional to the time the drug is currently in shortage and decrease over time to balance providing financial

[699] See: *https://www.iqvia.com/insights/the-iqvia-institute/reports-and-publications/reports/drug-shortages-in-the-us2023.*

[700] For the purposes of this final rule, CMS uses the term ''currently in shortage'' to refer to Part D rebatable drugs that are in the status of ''currently in shortage'' on the CDER shortage list, as well as biological products listed on CBER's current shortages list.

[701] See: *https://www.fda.gov/media/131130/download?attachment#page=33.*

relief to manufacturers experiencing a drug shortage while not incentivizing manufacturers to delay taking appropriate steps to resolve a shortage simply to maintain having the drug listed on an FDA shortage list to avoid an obligation to pay rebates for an extended period.

To determine the percentage of time a Part D rebatable drug was currently in shortage during the applicable period, at § 428.301(b)(3), we proposed to determine the number of days such drug is currently in shortage in an applicable period and divide by the total number of days in that applicable period.

At § 428.301(b)(2), we proposed to codify the policy set forth in section 40.5.1 of the revised Medicare Part D Drug Inflation Rebate Guidance to apply a greater applicable percent reduction for generic Part D rebatable drugs, which, by definition, are sole source generic drugs, compared to brand-name drugs and biologicals, including biosimilars. CMS understands that generic drugs are often low-margin products whose prices are tied to the marginal cost of production and thus are vulnerable to potential market exit and shortage when input costs increase. CMS notes that the Medicare Part D Drug Inflation Rebate Program does not apply to multiple source generic drugs, which are the generic drugs most likely to be in shortage.[702] We also proposed applying a greater applicable percent reduction for plasma-derived products than non-plasma derived products because the former rely on a variable supply of donated blood plasma that can impact downstream production and therefore hamper the ability to promptly resolve a shortage.

When the status of a Part D rebatable drug changes from currently in shortage to ''resolved'' and either remains in the status of ''resolved'' or is removed from the list, and then reemerges on the list in the status of currently in shortage in the next applicable period, we proposed to apply the shortage reduction as if there was a continuous shortage and move to the applicable percent reduction for the second applicable period. (In this scenario, the applicable percent reduction would be 50 percent for the second applicable period for a generic Part D rebatable drug or plasma-derived product and 10 percent for a Part D rebatable drug that is not a generic drug or plasma-derived product.) When the status of a Part D rebatable drug changes from currently in shortage to ''resolved'' and either remains in the status of ''resolved'' or is removed from the list for at least one applicable period, and then subsequently reemerges on a shortage list, the subsequent shortage will be treated as a new shortage. In such case, the applicable percent reduction for the first applicable period in which the drug reemerges on the shortage list would be 75 percent for a generic Part D rebatable drug or plasma-derived product and 25 percent for a Part D rebatable drug that is not a generic or plasma-derived product.

We received public comments on these proposed provisions, which are applicable to rebate reductions for Part B rebatable drugs and Part D rebatable drugs and are summarized in the Part B drug inflation rebate section of this final rule.

Consistent with the policy described for rebate reductions for Part B rebatable drugs currently in shortage, after consideration of the comments received, we are finalizing this policy as proposed at § 428.301 with an additional provision at § 428.301(b)(2)(iii) to clarify the starting point for application of the rebate reduction. CMS adopted this provision to clarify CMS' intended policy, as highlighted by examples in the CY 2025 PFS proposed rule, that while CMS will generally apply the shortage reduction starting with the first applicable period that a drug or biological covered under Part D is described as currently in shortage, CMS acknowledges that for such drug or biological that has been granted a rebate reduction for a severe supply chain disruption or for such generic drug that has been granted a rebate reduction for a likely shortage, it would be appropriate to delay the start of the applicable percent reduction for being in shortage until after the conclusion of the severe supply chain disruption reduction or likely to be in shortage reduction if the shortage continues. The section below discusses this clarification in detail. Specifically, and as shown in Table 60, we are clarifying in this final rule that CMS will apply the greatest rebate reduction to the first applicable period that a drug or biological is described as currently in shortage regardless of whether the drug or biological meets the definition of a Part D rebatable drug or owes a rebate amount, starting with the applicable period that begins October 1, 2022. For example, if a generic drug or plasma-derived product was currently in shortage from October 1, 2021 through December 15, 2023, CMS would apply an applicable percent reduction of 75 percent for the applicable period beginning October 1, 2022 and ending September 30, 2023, followed by a 50 percent reduction for the applicable period beginning October 1, 2023 and ending September 30, 2024, even if such drug did not meet the definition of a Part D rebatable drug or there was no rebate amount owed to which to apply the reduction. Similarly, for a drug that is not a generic drug or plasma-derived product, in this example, CMS would apply an applicable percent reduction of 25 percent for the applicable period beginning October 1, 2022 and ending September 30, 2023, followed by a 10 percent reduction for the applicable period beginning October 1, 2023 and ending September 30, 2024, even if such drug did not meet the definition of a Part D rebatable drug or there was no rebate amount owed to which to apply the reduction.

[702] See: *https://www.iqvia.com/insights/the-iqvia-institute/reports-and-publications/reports/drug-shortages-in-the-us2023.*

TABLE 61: Application of Shortage Reduction

	Applicable period 1	Applicable period 2	Applicable period 3
In shortage on FDA shortage list	Yes	Yes	Yes
Meets definition of Part D rebatable drug	No	Yes	Yes
Owes a >$0 rebate	No	No	Yes
Applicable percent reduction applied for a Part D rebatable drug other than a plasma-derived product or generic	25%	10%	2%
Applicable percent reduction for a Part D rebatable plasma-derived product or generic Part D rebatable drug	75%	50%	25%

Note: CMS would "start the clock" for rebate reductions with applicable period 1. The highest percent reduction would thus apply to applicable period 1, regardless of how many days the Part D rebatable drug is in shortage during this applicable period. In this example, the 25 percent reduction (for a drug other than a generic or plasma derived product) or 75 percent reduction (for a generic drug or plasma-derived product) would apply to applicable period 1, even though there would be no rebate amount to which it applies.

We believe this clarification helps ensure clarity on CMS' policy in applying rebate reductions, which is intended to provide appropriate financial relief for drugs currently in shortage while limiting opportunities for manufacturers to manipulate a shortage start date to align with future price increases that coincide with the application of the reduction, as well as to decrease the amount of the rebate reduction the longer a drug is in shortage as described in the CY 2025 PFS proposed rule (89 FR 61974).

iii. Reducing the Rebate Amount for Generic Part D Rebatable Drugs and Biosimilars When There Is a Severe Supply Chain Disruption

At § 428.302, we proposed to codify the policy established in section 40.5.2 of the revised Medicare Part D Drug Inflation Rebate Guidance for rebate reductions when CMS determines there is a severe supply chain disruption during an applicable period. We proposed at § 428.302(b)(1) to provide a time-limited standard reduction of 75 percent in the total rebate amount for a generic Part D rebatable drug or biosimilar when CMS determines there is a severe supply chain disruption during the applicable period, such as that caused by a natural disaster or other unique or unexpected event. We proposed that to receive a rebate reduction in accordance with § 428.302(b)(1), the manufacturer would have to submit to CMS a rebate reduction request that meets the eligibility requirements at § 428.302(c). A rebate reduction request should specify each NDC–11 to which the request applies, and if CMS grants a manufacturer's severe supply chain disruption rebate reduction request for an NDC–11, we proposed at § 428.302(b)(3) that the rebate reduction will apply to the entire generic Part D rebatable drug or biosimilar at the NDC–9 level. We refer manufacturers to the collection of information approved under OMB control number 0938–1474, for further instructions for submitting rebate reduction requests.

We proposed at § 428.302(c)(4) to grant a reduction in the rebate amount owed if a manufacturer of an eligible drug submits to CMS a request in writing demonstrating that (1) a severe supply chain disruption has occurred during the applicable period, (2) the severe supply chain disruption directly affects the manufacturer itself, a supplier of an ingredient or packaging, a contract manufacturer,[703] or a method of shipping or distribution that the manufacturer uses in a significant capacity to make or distribute the generic Part D rebatable drug or biosimilar, and (3) the severe supply chain disruption was caused by a natural disaster or other unique or unexpected event. CMS began accepting rebate reduction requests and rebate reduction extension requests upon completion of the Paperwork Reduction Act (PRA) process, including for severe supply chain disruptions caused by a natural disaster or other unique or unexpected event that occurred on or after October 1, 2022, but before completion of the PRA process.[704] We proposed at § 428.302(c)(2) that for a natural disaster or other unique or unexpected event occurring or beginning on or after August 2, 2024, that the manufacturer believes caused a severe supply chain disruption, the manufacturer must submit the rebate reduction request within 60 calendar days from the first day that the natural disaster or other unique or unexpected event occurred or began in order for CMS to consider a rebate reduction.

We proposed that if a manufacturer makes a timely request that includes all the supporting documentation, and CMS determines, based on its review of the reduction request and supporting documentation, that a reduction should be granted, CMS will reduce the total rebate amount owed by a manufacturer by 75 percent for the manufacturer's generic Part D rebatable drug or biosimilar for the applicable period in which the event that caused the severe supply chain disruption occurred or began or, the following applicable period if the request is submitted less than 60 calendar days before the end of an applicable period. CMS acknowledged that the 60-day advance submission requirement may pose a challenge to timing of the rebate reduction when the severe supply chain

[703] A contract manufacturer is a party that performs one or more manufacturing operations on behalf of a manufacturer(s) of active pharmaceutical ingredients (APIs), drug substances, in-process materials, finished drug products, including biological products, and combination products. See ''Contract Manufacturing Arrangements for Drugs: Quality Agreements Guidance for Industry,'' November 2016: *https://www.fda.gov/media/86193/download*.

[704] Consistent with the published collection of information approved under OMB control number 0938–1474, for a natural disaster or other unique or unexpected event that occurred or began on or after October 1, 2022 but before August 2, 2024 that the manufacturer believes caused a severe supply chain disruption, the manufacturer must have submitted the rebate reduction request no later than 11:59 p.m. PT on October 1, 2024 for CMS to consider a rebate reduction for the generic Part D rebatable drug or biosimilar.

disruption-causing event occurs late in one applicable period, and the request is not submitted until the next applicable period. In such circumstances, CMS will apply a rebate reduction to an applicable period based on the timing of the natural disaster or other unique or unexpected event causing a severe supply chain disruption and the timing of the submission of the request and may adjust the timing of the application of the rebate reduction as appropriate to meet the invoicing deadlines specified in statute and subpart E of proposed part 428.

We proposed at § 428.302(c)(5) that if a manufacturer believes severe supply chain disruption continues into a second, consecutive applicable period after the start of the natural disaster or other unique or unexpected event, the manufacturer may request a reduction of the total rebate amount for that second applicable period by submitting a rebate reduction extension request to CMS, along with any new supporting documentation. We refer manufacturers to the collection of information approved under OMB control number 0938–1474, for further instructions for submitting rebate reduction requests. At § 428.302(c)(5)(ii), we proposed that a rebate reduction extension request and any new supporting documentation must be submitted at least 60 calendar days before the start of that second applicable period in order for CMS to consider a rebate reduction extension, except for when the initial request is made less than 60 calendar days before the end of an applicable period such that the initial rebate reduction applied to the next applicable period rather than the applicable period in which the event that caused the severe supply chain disruption occurred or began. In these cases, the rebate reduction extension request must be submitted at least 60 calendar days prior to the end of the applicable period in which the initial reduction applied.

We further proposed that if a manufacturer submits a complete and timely extension request, and CMS determines that the information submitted warrants an extension of the rebate reduction, the total rebate amount will be reduced by 75 percent for a second consecutive applicable period for that manufacturer's generic Part D rebatable drug or biosimilar in accordance with § 428.302(b)(2).

Consistent with the policy established in section 40.5.2 of the revised Medicare Part D Drug Inflation Rebate Guidance, we proposed at § 428.302(c)(5) that a manufacturer may receive only one extension of the rebate reduction per generic Part D rebatable drug or biosimilar per CMS determination of a severe supply chain disruption. Said differently, CMS will limit the severe supply chain disruption rebate reduction to two consecutive applicable periods total per generic Part D rebatable drug or biosimilar per CMS determination of a severe supply chain disruption.

At § 428.302(b)(4)(i), we proposed that if the manufacturer believes there are multiple events causing severe supply chain disruptions during the same applicable period for the same generic Part D rebatable drug or biosimilar and submits multiple rebate reduction requests for the same generic drug or biosimilar, CMS will grant no more than one rebate reduction for that generic drug or biosimilar for the applicable period. For example, if the manufacturer of a generic Part D rebatable drug or biosimilar is granted a severe supply chain disruption rebate reduction request for its product due to a natural disaster that occurred in January 2025 and then experiences a second severe supply chain disruption caused by a second, distinct natural disaster in July 2025, CMS will not grant the second rebate reduction request. That is, the manufacturer would receive the 75 percent reduction for one applicable period for the severe supply chain disruption caused by the first natural disaster but would not receive a rebate reduction for the second natural disaster. However, if the second natural disaster exacerbated the severe supply chain disruption caused by the first natural disaster, the manufacturer may reflect such circumstances in its request for an extension of the rebate reduction for a second applicable period.

At § 428.302(b)(4)(ii), we proposed that if CMS grants a severe supply chain disruption rebate reduction request for a generic Part D rebatable drug or biosimilar, and the drug or biosimilar appears as currently in shortage during the same applicable period as the one for which the severe supply chain disruption reduction request was granted, CMS will apply the 75 percent reduction to the entire applicable period for which the severe supply chain disruption request was granted and would not grant any additional reduction for the shortage status during that applicable period. For any subsequent applicable periods that the generic Part D rebatable drug or biosimilar appears as currently in shortage, CMS will reduce the total rebate amount in accordance with the drug shortage reduction at § 428.301, starting with the highest reduction (that is, 75 percent for a generic Part D rebatable drug or plasma-derived product and 25 percent for a Part D rebatable drug that is not a generic drug or plasma-derived product). As explained in the example in the CY 2025 PFS proposed rule (89 FR 61976), if CMS grants a severe supply chain disruption rebate reduction request for a generic Part D rebatable drug or biosimilar that was submitted on November 15, 2024, and that generic Part D rebatable drug or biosimilar is currently in shortage from September 15, 2025, until May 15, 2026, CMS would apply a 75 percent reduction in the total rebate amount for the duration of the applicable period for which the severe supply chain disruption rebate reduction request was granted (that is, October 1, 2024, to September 30, 2025), and then would apply the shortage reduction as proposed in § 428.301, beginning with a reduction of 25 percent for a biosimilar or 75 percent for a generic Part D rebatable drug or plasma-derived product that is a biosimilar for the applicable period beginning October 1, 2025.

At § 428.302(b)(4)(iii), we proposed that if a generic Part D rebatable drug or biosimilar that is currently in shortage experiences a severe supply chain disruption, the manufacturer may submit a severe supply chain disruption rebate reduction request. If CMS grants the rebate reduction request, the rebate amount would be reduced by 75 percent for the applicable period, and we will not grant any additional reduction under § 428.301 for the currently in shortage status during that applicable period. As described in the example in the CY 2025 PFS proposed rule (89 FR 61976), if a generic Part D rebatable drug or biosimilar that is currently in shortage in the applicable period beginning October 1, 2024 is granted a severe supply chain disruption rebate reduction request as a result of a natural disaster that occurs on April 5, 2025, CMS would apply a 75 percent reduction in the rebate amount for the duration of the applicable period in which the natural disaster occurred (that is, October 1, 2024, to September 30, 2025). In this same example, if the natural disaster instead occurs on September 5, 2025, CMS would apply the shortage reduction proposed in § 428.301 for the duration of the applicable period beginning October 1, 2024 (that is, October 1, 2024, to September 30, 2025), and then a 75 percent reduction under the severe supply chain disruption policy to the next applicable period beginning October 1, 2025 (that is, October 1, 2025, to September 30, 2026).

At § 428.302(c)(6), we proposed to review rebate reduction requests and rebate reduction extension requests within 60 calendar days of receipt of all documentation, if feasible, beginning with the applicable period that begins on October 1, 2024. If a manufacturer's rebate reduction request does not meet the criteria at § 428.302(c)(4) or if the rebate reduction request is incomplete or untimely based on the requirements at § 428.302(c), we proposed that CMS will deny the request. We also proposed that if a manufacturer's rebate reduction extension request does not meet the criteria at § 428.302(c)(5), is incomplete or untimely based on the requirements at § 428.302(c)(5), or if a reduction under § 428.302(b)(1) was not provided for such generic Part D rebatable drug or biosimilar, CMS will deny the rebate reduction extension request. At § 428.302(c)(6)(iii), we proposed that CMS' decisions to deny a request will be final and not be subject to an appeals process.

At § 428.302(c)(7), we proposed CMS will keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. We proposed that information provided as part of a severe supply chain disruption rebate reduction request that the submitter indicates is a trade secret or confidential commercial or financial information would be protected from disclosure if CMS determines the information meets the requirements set forth under Exemptions 3 or 4 of the Freedom of Information Act (FOIA). In addition to the protections under the FOIA for trade secrets and commercial or financial information obtained from a person that is privileged or confidential, the Trade Secrets Act at 18 U.S.C. 1905 requires executive branch employees to protect such information. CMS will protect confidential and proprietary information as required by applicable law.

We received public comments on these proposed provisions, which are applicable to both Part B rebatable drugs and Part D rebatable drugs and are summarized in the Part B drug inflation rebate section of this final rule.

After consideration of comments received, we are finalizing this policy as proposed at § 428.302, with a modification. For alignment with language in the preamble of the CY 2025 PFS proposed rule (89 FR 61975) and § 427.402(b)(1), we clarified at § 428.302(b)(1) that CMS will apply a severe supply chain disruption rebate reduction to the applicable period in which the event occurred or began or the following applicable period if the request is submitted less than 60 calendar days before the end of an applicable period. This application of a rebate reduction (initial or extension) applies regardless of whether a generic drug or biosimilar meets the definition of a Part D rebatable drug during that applicable period or whether a rebate amount is owed for such generic Part D drug or biosimilar for that applicable period. That is, regardless of whether the generic drug or biosimilar meets the definition of a Part D rebatable drug or whether a rebate amount is owed for such generic Part D drug or biosimilar for that applicable period, CMS will apply the 75 percent reduction in the total rebate amount as determined under § 428.302(b)(1), even if there is no rebate amount owed to reduce. For example, as shown in Table 61, if CMS grants a severe supply chain disruption rebate reduction request for a generic Part D drug or biosimilar for an applicable period, CMS will apply the rebate reduction beginning with the applicable period for which the reduction request was granted, regardless of whether the drug meets the definition of a Part D rebatable drug or is subject to a rebate amount.

TABLE 62: Application of Severe Supply Chain Disruption Reduction

	Applicable period 1	Applicable period 2	Applicable period 3
Meets definition of Part D rebatable drug	No	Yes	Yes
Owes a > $0 rebate	No	No	Yes
Applicable percent reduction applied	75%	0%	0%

Note: CMS would "start the clock" with applicable period 1 if the request was granted for applicable period 1. In this example, the 75% reduction would apply to applicable period 1, even though there would be no rebate amount in the applicable period to which the reduction applies.

We believe this clarification helps ensure clarity on CMS' policy in applying rebate reductions, which is intended to provide appropriate financial relief to a manufacturer experiencing a severe supply chain disruption while limiting opportunities for manufacturers to plan future price increases to coincide with the application of the reduction. If the reduction is applied to an applicable period in which there is no rebate amount to reduce, the manufacturer could still apply for an extension of the reduction, which would apply to the following applicable period.

In this final rule, we are also providing further clarification to the policy in the CY 2025 PFS proposed rule intended to address situations in which CMS grants a severe supply chain disruption rebate reduction request for a generic Part D rebatable drug or biosimilar, and the generic drug or biosimilar appears as currently in shortage during the same applicable period as for which the severe supply chain disruption rebate reduction was granted. This clarification is described in the next section in response to a comment regarding application of likely to be in shortage reductions.

iv. Reducing the Rebate Amount for Generic Part D Rebatable Drugs Likely To Be in Shortage

At § 428.303, we proposed to codify the policy established in section 40.5.3 of the revised Medicare Part D Drug Inflation Rebate Guidance for rebate reductions when a generic Part D rebatable drug is likely to be in shortage, as defined at § 428.300. We proposed at § 428.303(b)(1), to provide a time-limited standard reduction of 75 percent in the total rebate amount for a generic Part D rebatable drug when CMS determines that the generic Part D rebatable drug is likely to be in shortage. We proposed that to receive a rebate

reduction in accordance with § 428.303(b)(1), the manufacturer will have to submit to CMS a rebate reduction request that meets the eligibility requirements at § 428.303(c). A rebate reduction request should specify each NDC–11 to which the request applies and if CMS grants a manufacturer's likely to be in shortage rebate reduction request for an NDC–11, we proposed at § 428.303(b)(3) that the rebate reduction will apply to the entire generic Part D rebatable drug at the NDC–9 level. We refer manufacturers to the collection of information approved under OMB control number 0938–1474, for further instructions for submitting rebate reduction requests.

We proposed at § 428.303(c)(4) to grant a reduction in the rebate amount owed if a manufacturer of an eligible drug submits to CMS a request in writing demonstrating that (1) the generic Part D rebatable drug is likely to be in shortage, (2) the manufacturer is taking actions to avoid the potential drug shortage, and (3) the reduction of the rebate amount would reduce the likelihood of the drug appearing on an FDA shortage list. We proposed at § 428.303(c)(2) that a manufacturer must submit the rebate reduction request before the start of the next applicable period in which the manufacturer believes the generic Part D rebatable drug is likely to be in shortage in order for CMS to consider a rebate reduction.

We proposed that if the manufacturer makes a timely request that includes all the supporting documentation, and CMS determines, based on its review of the reduction request and supporting documentation, that a reduction should be granted, CMS will reduce the total rebate amount owed by a manufacturer by 75 percent for the manufacturer's generic Part D rebatable drug for the applicable period in which the request was submitted or the following applicable period, depending on the timing of the submission of the request.

We proposed at § 428.303(c)(5) that if a manufacturer believes the potential drug shortage continues for a second, consecutive applicable period, the manufacturer may request a reduction of the total rebate amount for that second applicable period by submitting a rebate reduction extension request to CMS, along with any new supporting documentation. We refer manufacturers to the collection of information approved under OMB control number 0938–1474, for further instructions for submitting rebate reduction extension requests. As proposed at § 428.303(c)(5)(ii), a rebate reduction extension request and any new supporting documentation must be submitted at least 60 calendar days before the start of the second applicable period in which the manufacturer believes the generic Part D rebatable drug is likely to be in shortage in order for CMS to consider a rebate reduction extension.

We further proposed that if a manufacturer submits a complete and timely extension request, and CMS determines that the information submitted warrants an extension of the rebate reduction, the total rebate amount would be reduced by 75 percent for a second consecutive applicable period for that manufacturer's generic Part D rebatable drug in accordance with § 428.303(b)(2).

Consistent with the policies established in section 40.5.3 of the revised Medicare Part D Drug Inflation Rebate Guidance, we proposed at § 428.303(c)(5) that a manufacturer may receive only one extension of the rebate reduction per generic Part D rebatable drug per CMS determination of likelihood of shortage. Said differently, CMS will limit the likely to be in shortage rebate reduction to two consecutive applicable periods total per generic Part D rebatable drug per CMS determination of likelihood of shortage.

At § 428.303(b)(4), we proposed that if CMS grants a rebate reduction request for a generic Part D rebatable drug that is likely to be in shortage, and the drug appears as currently in shortage during the same applicable period as the one for which the likely to be in shortage reduction request was granted, CMS will apply the 75 percent reduction to the entire applicable period for which the likely to be in shortage request was granted and would not grant any additional reduction for the shortage status during that applicable period. For any subsequent applicable periods that the generic Part D rebatable drug appears as currently in shortage, CMS will reduce the total rebate amount in accordance with the drug shortage reduction proposed at § 428.301, starting with the highest reduction (that is, 75 percent for a generic Part D rebatable drug). For example, as stated in the CY 2025 PFS proposed rule (89 FR 61977), if CMS grants a likely to be in shortage rebate reduction request for a generic Part D rebatable drug that was submitted on August 15, 2024, and that generic Part D rebatable drug is currently in shortage from September 15, 2025, until May 15, 2026, CMS would apply a 75 percent reduction in the total rebate amount for the duration of the applicable period for which the likely to be in shortage rebate reduction request was granted (that is, October 1, 2024, to September 30, 2025), and then would apply the shortage reduction at § 428.301, beginning with a reduction of 75 percent for a generic Part D rebatable drug for the applicable period beginning October 1, 2025.

We proposed that if the manufacturer of a generic Part D rebatable drug that is currently in shortage believes such generic drug is likely to continue to be in shortage in the next applicable period, the manufacturer may submit a likely to be in shortage rebate reduction request to CMS. If the request meets the criteria described at § 428.303(c)(4), CMS will reduce the total rebate amount owed by a manufacturer by 75 percent for the manufacturer's generic Part D rebatable drug. Consistent with the evaluation criteria at § 428.303(c)(4), we do not intend to consider a generic Part D rebatable drug as likely to be in shortage based solely upon the drug being currently in shortage. However, if the manufacturer believes there are circumstances that may exacerbate the current shortage such that without the reduction the generic Part D rebatable drug is likely to be in shortage in the next applicable period, the manufacturer may reflect such circumstances in its rebate reduction request. As described in the example in the CY 2025 PFS proposed rule (89 FR 61977), if a generic Part D rebatable drug is currently in shortage during the applicable period beginning October 1, 2023 because the manufacturer had trouble meeting demand for the drug and then in August 2024, the manufacturer faces difficulties securing the API for such drug and believes this may worsen the shortage situation and result in the generic Part D rebatable drug being currently in shortage in the next applicable period, the manufacturer may submit a likely to be in shortage rebate reduction request to CMS providing information on the severity of the likely shortage.

At § 428.303(c)(6), we proposed to review rebate reduction requests and rebate reduction extension requests within 60 calendar days of receipt of all documentation, if feasible, beginning with the applicable period that begins on October 1, 2024. If a manufacturer's rebate reduction request does not meet the criteria at § 428.303(c)(4) or if the rebate reduction request is incomplete or untimely based on the requirements at § 428.303(c), we proposed that CMS will deny the request. We also proposed that if a manufacturer's rebate reduction extension request does not meet the criteria at § 428.303(c)(5), is incomplete or untimely based on the requirements at § 428.303(c)(5), or if a reduction under § 428.303(b)(1) was not provided for such generic Part D rebatable drug,

CMS will deny the rebate reduction extension request. At § 428.303(c)(6)(iii), we proposed that CMS' decisions to deny a request will be final and not be subject to an appeals process.

At § 428.303(c)(7), we proposed CMS will keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. We proposed that information provided as part of a likely to be in shortage rebate reduction request that the submitter indicates is a trade secret or confidential commercial or financial information would be protected from disclosure if CMS determines the information meets the requirements set forth under Exemptions 3 or 4 of FOIA. In addition to the protections under the FOIA for trade secrets and commercial or financial information obtained from a person that is privileged or confidential, the Trade Secrets Act at 18 U.S.C. 1905 requires executive branch employees to protect such information. CMS will protect confidential and proprietary information as required by applicable law.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: One commenter requested CMS clarify how it will determine if a drug is likely to be in shortage during a subsequent applicable period. This commenter stated that one predictor of a drug vulnerable to shortage is a previous shortage and recommended CMS treat generic drugs exiting a shortage as being at risk of shortage and that CMS provide a transitional period of a gradually declining rebate reduction (that is, 75 percent in the first quarter, 50 percent in the second quarter, etc.).

Response: We thank the commenter for their recommendation. Consistent with the policy described in the CY 2025 PFS proposed rule (89 FR 61977), CMS does not intend to consider a generic drug as likely to be in shortage based solely upon the drug being currently in shortage. However, if a manufacturer believes there are circumstances that may exacerbate a current shortage such that without the rebate reduction the generic drug is likely to be in shortage in the next applicable period, the manufacturer may reflect such circumstances in its rebate reduction request.

If a generic drug is granted a likely to be in shortage reduction for an applicable period and such drug is currently in shortage in the following applicable period, CMS will apply the gradually declining reduction in the rebate amount under the shortage policy set forth in § 428.301 for the subsequent applicable periods in which such drug is currently in shortage. As described in the example in the CY 2025 PFS proposed rule (89 FR 61977), if CMS receives a likely to be in shortage rebate reduction request for a generic Part D rebatable drug that was submitted on August 15, 2024, and that generic Part D rebatable drug is currently in shortage from September 15, 2025, until May 15, 2028, CMS will apply a 75 percent reduction in the total rebate amount for the duration of the applicable period for which the likely to be in shortage rebate reduction request was granted (that is, October 1, 2024, to September 30, 2025), and then would apply the shortage reduction as set forth in § 428.301, beginning with a reduction of 75 percent for a generic Part D rebatable drug for the applicable period beginning October 1, 2025, followed by a reduction of 50 percent for the applicable period beginning October 1, 2026, and a 25 percent reduction for the applicable period beginning October 1, 2027.

In response to this comment, we are also providing further clarification to the policy in the proposed rule intended to address situations in which CMS grants a likely to be in shortage rebate reduction request for a generic Part D rebatable drug, and the drug appears as currently in shortage during the same applicable period as for which the likely to be in shortage rebate reduction was granted. First, we are providing a second, modified version of the example above to reflect a situation in which the likely to be in shortage rebate reduction is granted for the same applicable period as the generic Part D rebatable drug is currently in shortage, and the application of the shortage reduction precedes application of the likely to be in shortage reduction. For example, if CMS receives a likely to be in shortage rebate reduction request for a generic drug on August 15, 2024, and the generic drug is currently in shortage beginning September 15, 2024 instead of September 15, 2025 and until May 15, 2028, CMS would apply a 75 percent reduction under the shortage policy for the applicable period that begins October 1, 2023. CMS would then apply the likely to be in shortage rebate reduction of 75 percent for the applicable that begins on October 1, 2024, followed by a shortage reduction of 25 percent for the applicable periods that begin October 1, 2025, October 1, 2026, and October 1, 2027. In this example, if the generic Part D rebatable drug was currently in shortage prior to receiving the likely to be in shortage reduction and was granted a reduction under the shortages policy set forth in § 428.301 for that applicable period prior to receiving the likely to be in shortage reduction, the declining reduction in the rebate amount will continue for any subsequent applicable periods in which the drug is currently in shortage, as summarized in Table 63. For consistency, CMS is adopting the same approach for situations in which a generic Part D rebatable drug or biosimilar is currently in shortage prior to and following a severe supply chain disruption. That is, if a generic Part D rebatable drug that is currently in shortage from September 15, 2025, until May 15, 2028 receives a 75 percent reduction under the shortages policy for the applicable period that begins October 1, 2024, receives a 75 percent reduction under the severe supply chain disruption policy for the applicable period beginning October 1, 2025, then CMS would apply a shortage reduction percentage of 25 percent to the applicable periods beginning October 1, 2026 and October 1, 2027. For alignment with the Medicare Part D Drug Inflation Rebate Program, we have included parallel clarifications in the Part B rebate section of this final rule.

TABLE 63: Shortage Reductions Continuing after a Likely to be in Shortage or Severe Supply Chain Disruption Reduction for a Generic Part D Rebatable Drug

	Example 1	Example 2
Applicable period beginning October 1, 2023	Not applicable	75% (shortage reduction)
Applicable period beginning October 1, 2024	75% (likely to be in shortage or severe supply chain disruption reduction)	75% (likely to be in shortage or **severe supply chain disruption** reduction)
Applicable period beginning October 1, 2025	75% (shortage reduction)	25% (shortage reduction)
Applicable period beginning October 1, 2026	50% (shortage reduction)	25% (shortage reduction)
Applicable period beginning October 1, 2027	25% (shortage reduction)	25% (shortage reduction)

Note: This table illustrates the application of the initial likely to be in shortage and severe supply chain disruption rebate reductions. A manufacturer may still apply for a rebate reduction extension request. Example 1 illustrates the application of the rebate reduction for a generic drug when a likely shortage or severe supply chain disruption precedes a shortage, and the likely to be in shortage or severe supply chain disruption rebate reduction request is submitted less than 60 days before the end of an applicable period. Example 2 illustrates the application of the rebate reduction for a generic drug when the likely to be in shortage or severe supply chain disruption rebate reduction request is submitted less than 60 days before the end of an applicable period for a generic drug that is currently in shortage during the same applicable period as in which the request is submitted.

We believe this clarification is consistent with the policy set forth in §§ 428.302(b)(4) and 428.303(b)(4) whereby CMS will not apply multiple rebate reductions for the same Part D rebatable drug and applicable period. If CMS instead applied the shortage reduction beginning with the first applicable period in which a drug is in shortage (that is, applying the shortage reduction for the days beginning September 15, 2025 through September 30, 2025 for the first applicable period the drug is in shortage in the example above), this would result in CMS applying both the shortage reduction at § 428.301 and the likely to be in shortage reduction at § 428.303 or the severe supply chain disruption reduction at § 428.302 for the same drug for the same applicable period (that is, the applicable period beginning October 1, 2024 through September 30, 2025). We believe this clarification is also consistent with the policy articulated in the proposed rule and throughout this final rule to continue the shortage reduction clock once it begins in other scenarios such as for drugs that fluctuate on and off the shortage list within a timespan less than a full applicable period. Further, we believe this approach is consistent with CMS' policy goals of providing a time-limited standard reduction of 75 percent in the rebate amount when there is a severe supply chain disruption or likely shortage, which supersede the reduction under the shortage policy to mitigate the likelihood or severity of a shortage, and providing gradually decreasing financial relief to manufacturers for a drug currently in shortage. We believe transitioning the manufacturer from the severe supply chain disruption reduction or the likely to be in shortage reduction to the shortage reduction, by beginning the shortage reduction clock as set forth in § 428.301(b)(2)(i)(A) or (b)(2)(ii)(A) after the severe supply chain disruption reduction or likely to be in shortage reduction no longer applies, and gradually declining the rebate reduction over time could help prevent exacerbation of the shortage. Because the timing of the application of a severe supply chain disruption or likely to be in shortage rebate reduction depends on the timing of submission of the rebate reduction request, the highest reduction under the shortages policy may be applied for an applicable period that precedes or follows the severe supply chain disruption or likely to be in shortage reduction. CMS will not start the shortage reduction clock during an applicable period subject to a severe supply chain disruption reduction or a likely to be in shortage reduction as set forth in § 428.301(b)(2)(iv), but intends to continue the shortage reduction clock once it starts for as long as a drug is currently in shortage.

After consideration of comments received, we are finalizing this policy as proposed § 428.303, with a modification. For alignment with language in the preamble of the CY 2025 PFS proposed rule (89 FR 61977) and the clarification made to § 428.302(b)(1) as described above, we have clarified in this final rule at § 428.303(b)(1) that CMS will apply a likely to be in shortage rebate reduction to the applicable period in which the request was submitted or the following applicable period, depending on the timing of the submission of the request. CMS will not delay the application of the reduction until the generic drug meets the definition of a Part D rebatable drug or until a rebate amount is owed for such drug. For example, as shown in Table 64, if CMS grants a likely to be in shortage rebate reduction request for a generic Part D drug for an applicable period, CMS will apply the rebate reduction beginning with the applicable period for which the reduction request was granted, regardless of whether the drug meets the definition of a Part D rebatable drug or is subject to a rebate amount.

TABLE 64: Application of Likely to be in Shortage Reduction

	Applicable period 1	Applicable period 2	Applicable period 3
Meets definition of Part D rebatable drug	No	Yes	Yes
Owes a > $0 rebate	No	No	Yes
Applicable percent reduction applied	75%	0%	0%

Note: CMS would "start the clock" with applicable period 1 if the request was granted for applicable period 1. In this example, the 75 percent reduction would apply to applicable period 1, even though there would be no rebate amount in applicable period 1 to which it applies.

We believe this clarification helps ensure clarity on CMS' policy in applying rebate reductions, which is intended to provide appropriate financial relief to a manufacturer experiencing a potential shortage while limiting opportunities for manufacturers to plan future price increases to coincide with the application of the reduction. If the reduction is applied to an applicable period in which there is no rebate amount to reduce, the manufacturer could still apply for an extension of the reduction, which would apply to the following applicable period.

e. Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments (§§ 428.400 Through 428.405)

Section 1860D–14B(a)(1) of the Act requires the Secretary to report to each manufacturer of a Part D rebatable drug the following information not later than 9 months after the end of the applicable period: (1) the amount, if any, of the excess AnMP increase described in section 1860D–14B(b)(1)(A)(ii) of the Act for each Part D rebatable drug and (2) the rebate amount for each Part D rebatable drug. In compliance with section 1860D–14B(a)(2) of the Act, the manufacturer of a Part D rebatable drug must provide a rebate for each Part D rebatable drug no later than 30 calendar days after the receipt of the information provided by the Secretary in section 1860D–14B(a)(1) of the Act.

To fulfill this statutory requirement, we proposed to send a Preliminary Rebate Report followed by a Rebate Report, as set forth in § 428.401(b) and (c), to all manufacturers of a Part D rebatable drug, even if the amount due is $0; all rebate amounts would be subject to reconciliation as set forth in § 428.401(d). As proposed at § 428.401(b), CMS will not send notice to manufacturers for drugs that are not considered rebatable under proposed § 428.20.

Additionally, section 1860D–14B(b)(6) of the Act states that CMS shall provide a method and process under which CMS adjusts the calculation of the rebate amount for a Part D rebatable drug for an applicable period if CMS determines such an adjustment is necessary based on revisions to the number of units of a rebatable covered Part D drug dispensed submitted by a PDP sponsor of a prescription drug plan or an MA organization offering an MA–PD plan. The statute also specifies that CMS must reconcile any underpayments in the rebate amount paid by the manufacturer of the applicable Part D rebatable drug due to such an adjustment and underpayments must be paid no later than 30 days from the date of receipt of information from CMS about the adjustment. To fulfill this statutory obligation and to address the completeness and accuracy of the rebate amount, we proposed to conduct regular reconciliations at two points in time to determine whether the rebate amount must be adjusted due to updated claims and payment data used in the calculation of such rebate amount (specified at § 428.401(d)(1)): (1) 12 months after the issuance of the Rebate Report, and (2) 36 months after the issuance of the Rebate Report. As discussed in the CY 2025 PFS proposed rule (89 FR 61980–61981), the reporting process for each reconciliation will be the same process described for the original Rebate Report, with payment due for any outstanding rebate amount 30 days after receipt of a report with a reconciled rebate amount. In addition to regular reconciliations, we proposed a process to conduct reconciliations of the rebate amount as needed to correct agency error and when CMS determines that the information used by CMS to calculate a rebate amount was inaccurate due to manufacturer misreporting.

Comments regarding Reports of Rebate Amounts, Suggestion of Error, Reconciliation of a Rebate Amount, and Enforcement of Manufacturer Payment of Rebate Amounts that are applicable to both Part B rebatable drugs and Part D rebatable drugs (for example, comments recommending that the Suggestion of Error period be extended) are summarized in the Part B drug inflation rebate section of this final rule. Comments specific to the Medicare Part D Drug Inflation Rebate Program on the aforementioned topics are summarized later in this section.

i. Definitions

As set forth in § 428.400, we proposed to define the following term applicable to subpart E (§§ 428.400 through 428.405):

- ''Date of receipt'' is the calendar day following the day in which a report of a rebate amount (as set forth in §§ 428.401(b), (c), and (d) and 428.402(b) and (c)) is made available to the manufacturer of a Part D rebatable drug by CMS.

For example, if CMS issues a Rebate Report through the method and process described in proposed § 428.404 on June 30, 2026, then July 1, 2026, will be the date of receipt and day one of the 30-calendar-day payment period.

We did not receive public comments on this proposed definition, and we are finalizing as proposed in § 428.400.

ii. Reports of Rebate Amounts and Suggestion of Error

Consistent with the process specified in section 50 of the revised Medicare Part D Drug Inflation Rebate Guidance involving preliminary and final reports, we proposed to codify a multi-step process to provide a manufacturer as set forth in § 428.20 with the rebate information specified under section 1860D–14B(a) of the Act. As stated in the CY 2025 PFS proposed rule (89 FR 61981), we considered the following factors in determining a method and process for providing the rebate information: meeting statutorily provided deadlines in section 1860D–14B(a) of the Act (for example, dates by which to provide the rebate amount owed to the manufacturer); the operational time to acquire the relevant information specified in part 428; the operational time to calculate the rebate amount specified in subparts B and C of part 428; clarity of the information provided as well as potential burden on manufacturers; and how to ensure the accuracy of the rebate amount.

We proposed at § 428.401 the use of an initial Preliminary Rebate Report and a subsequent Rebate Report, with an

opportunity for manufacturers to identify certain mathematical errors (see § 428.403 and discussed in further detail later in this section) and two regular reconciliations of the rebate amount to account for updates to claims and payment data at 12 months and 36 months after the Rebate Report is issued as set forth in § 428.401(d).

We proposed at § 428.401 that the multi-step reporting process for providing rebate information to a manufacturer would include: (1) an initial report, which we proposed to entitle the ''Preliminary Rebate Report'' as set forth in § 428.401(b) and (2) a second report, which we proposed to entitle the ''Rebate Report'' as set forth in § 428.401(c). The Rebate Report would serve as the invoice for the rebate amount due, if any, for each product determined to be a Part D rebatable drug for the applicable period, as set forth in § 428.101. We stated in the CY 2025 PFS proposed rule (89 FR 61981) that manufacturers of Part D rebatable drugs would receive a Rebate Report for their rebatable drugs even if the amount due is $0. We proposed at § 428.401(d)(1) two regular reconciliations of the rebate amount to occur 12 months and 36 months after issuance of the subsequent Rebate Report as set forth in § 428.401(c), which will include restatements that have occurred in the drug pricing data and claims billing data reported to CMS and used in the rebate calculation specified in subpart C of this part.

As we described in the CY 2025 PFS proposed rule (89 FR 61981), as the first step in the reporting process, as proposed at § 428.401(b) and consistent with section 50 of the revised Medicare Part D Drug Inflation Rebate Guidance, CMS will provide each manufacturer of a Part D rebatable drug with the preliminary rebate amount through a Preliminary Rebate Report at least 1 month prior to the issuance of the Rebate Report as set forth in § 428.401(c) for an applicable period (that is, approximately 8 months after the end of the applicable period unless otherwise specified). To facilitate manufacturer understanding of the Preliminary Rebate Report, we proposed at § 428.401(b)(1) that the Preliminary Rebate Report will include the following information: the NDC(s) for the Part D rebatable drug as determined under § 428.20; the total number of units for the Part D rebatable drug for the applicable period as determined under § 428.203 (which will remove units when a generic drug is no longer a Part D rebatable drug as determined under § 428.203(b)(1) and will exclude units acquired through the 340B Program as determined under § 428.203(b)(2)); the benchmark period manufacturer price as determined under § 428.202(d); the AnMP for the Part D rebatable drug for the applicable period as determined under § 428.202(b); the applicable benchmark period and applicable period CPI–Us as determined under §§ 428.202(e) and 428.20; the inflation-adjusted payment amount as determined under § 428.202(f); the amount, if any, of the excess AnMP for the Part D rebatable drug for the applicable period as determined under § 428.202(a); any applied reductions as determined under §§ 428.301, 428.302, and 428.303; and the rebate amount due as determined under § 428.201(a). As proposed under § 428.204, in cases where a Part D rebatable drug is a line extension, we proposed to include the same elements described above in the Preliminary Rebate Report as well as: the NDC for the initial drug; the inflation rebate amount ratio for the initial drug; and the alternative rebate amount (see § 428.401(b)(2)).

In the CY 2025 PFS proposed rule (89 FR 61979), we stated that when determining what information should be included on rebate reports, we considered the statutory requirements outlined in section 1860D–14B(a)(1) of the Act to determine which data elements are necessary to review the Preliminary Rebate Report for error (described later in this section) and to protect proprietary information. In response to comments on the initial Medicare Part D Drug Inflation Rebate Guidance, we proposed to disclose data elements as suggested by interested parties that are not enumerated in the statute, such as NDCs for Part D rebatable drugs and the applicable period CPI–U. We acknowledged requests from interested parties to provide additional data elements including claim-level data such as days' supply, fill number, and prescription ID number on rebate reports that are not included in this proposal. We considered these requests in development of the proposed rule but do not believe it necessary to provide this further information to fulfill CMS' statutory obligation and believe that the potential benefit to manufacturers of additional data are outweighed by the administrative burdens additional reporting would impose to the agency. We also stated that the elements listed previously provide sufficient information for a manufacturer to review the Preliminary Rebate Report for mathematical error, while protecting proprietary information, and these elements are operationally feasible for CMS to provide. At § 428.203(b)(2)(i)(A) and (B), we proposed CMS will exclude 340B units beginning with January 1, 2026, which is the second calendar quarter in the applicable period starting October 1, 2025, and beyond (as discussed in further detail in section III.I.3.c.iv.2. of this final rule). We proposed this exclusion applies to all Preliminary Rebate Reports, Rebate Reports, and reconciliations of a rebate amount that include the applicable period starting with October 1, 2025, and beyond with claims for service dates on or after January 1, 2026. As such, 340B units would not be excluded from the Rebate Reports for the applicable periods beginning October 1, 2022, October 1, 2023, and October 1, 2024, as determined under § 428.402.

As stated in the CY 2025 PFS proposed rule (89 FR 61979), by structuring the Rebate Report process to include a Preliminary Rebate Report before the Rebate Report, CMS is able to provide manufacturers with an opportunity to review the Preliminary Rebate Report before the rebate amount is invoiced via the Rebate Report. While CMS is not required to provide a preliminary report, we stated in the proposed rule that we seek to facilitate manufacturer understanding of the Rebate Report and believes it would be beneficial for manufacturers to review the report for mathematical errors that could be corrected before invoicing via the Rebate Report. Further, a Preliminary Rebate Report would provide additional notice to manufacturers regarding whether they may owe a rebate amount.

At § 428.403, we proposed a process in which a manufacturer may suggest to CMS that the manufacturer believes the Preliminary Rebate Report includes a mathematical error within 10 calendar days after the date of receipt of the Preliminary Rebate Report. For example, if the Preliminary Rebate Report is provided on May 31, 2026, then June 1, 2026, will be the date of receipt and, therefore, day one of the 10-calendar-day period to submit a Suggestion of Error; the Suggestion of Error would be due at 11:59 p.m. PT on June 10, 2026, in this example. We reviewed comments on the 10-day Suggestion of Error period submitted in response to the initial Medicare Part D Drug Inflation Rebate Guidance, many of which suggested that manufacturers receive at least 30 days to review the Preliminary Rebate Report. We considered a 10-day, 15-day, and 30-day Suggestion of Error period and believes a 10-calendar-day period as (see § 428.403(c)) is sufficient after considering the volume of the data to be provided to manufacturers, the narrow scope of items that may be identified as

a Suggestion of Error, and the operational time necessary for CMS to provide a Rebate Report within 9 months of the end of the applicable period as required under section 1860D–14B(a)(1) of the Act. However, we proposed at § 428.402(c)(1)(i) to expand the Suggestion of Error period to 30 calendar days for the Preliminary Rebate Reports for the first two applicable periods (beginning October 1, 2022, and October 1, 2023). As explained in the CY 2025 PFS proposed rule (89 FR 61979), this extended Suggestion of Error period will provide additional time and flexibility during the first invoicing cycle of the Medicare Part D Drug Inflation Rebate Program.

Section 1860D–14B(f) of the Act precludes administrative or judicial review on the determination of units, whether a drug is a Part D rebatable drug, and the calculation of the rebate amount (see § 428.403(a)(1)). Therefore, we stated in the CY 2025 PFS proposed rule (89 FR 61980) that the Suggestion of Error process will be limited to mathematical steps involved in determining the rebate amount and the elements precluded from administrative or judicial review will not be considered in-scope for the Suggestion of Error process. Additionally, we stated in the proposed rule that we will not provide an administrative dispute resolution process. We intend to consider all in-scope submissions under the Suggestion of Error process (for example, suggestions regarding a mathematical error) as set forth in § 428.403(a). We do not intend to review suggestions of error that are out-of-scope or submissions for a rebatable drug with an amount due of $0.

As the second step in the reporting process, we proposed at § 428.401(c) to provide the rebate amount to the manufacturer through the Rebate Report no later than 9 months after the end of the applicable period. As proposed at § 428.401(c)(1), the Rebate Report would include the same data elements as the Preliminary Rebate Report (as set forth in § 428.401(b)(1)) and include any recalculations based on CMS acceptance of a manufacturer's Suggestion of Error as set forth in § 428.403, or any CMS-determined recalculations as set forth in § 428.401(d)(2), if applicable. Manufacturers must pay the rebate amount within 30 calendar days from the date of receipt of the Rebate Report (see § 428.405(a)). For example, if the Rebate Report is provided on June 30, 2026, then July 1, 2026, would be the date of receipt and therefore day one of the 30-calendar-day payment period; payment would be due no later than 11:59 p.m. PT on July 30, 2026.

At §§ 428.404 and 428.405, we proposed to establish a standard method and process to issue Rebate Reports and accept manufacturer rebate payments. This method and process may include an online portal administered by a CMS contractor which would provide manufacturers with access to their Rebate Report, the ability to submit a Suggestions of Error, and pay a rebate amount due. We intend to provide technical instructions separate from this rulemaking to manufacturers of Part D rebatable drugs regarding how to access Rebate Reports and how to receive notifications alerting the manufacturer when information is available. We stated in the CY 2025 PFS proposed rule (89 FR 61980) that CMS also intends to issue reminder notices to manufacturers regarding the due date of rebate payments. At § 428.404(a), we noted that the manufacturer that may access Rebate Reports and make applicable rebate amount payments is the manufacturer responsible for paying a rebate, and as stated above, we proposed to identify the manufacturer that is responsible for paying a rebate using the same approach used for reporting AMP data.

We received public comments on these proposals. Because the comments received are applicable to both the Medicare Part B and Part D Drug Inflation Rebate Programs, please refer to the corresponding section in Part B for a summary of comments and our responses on this topic.

After consideration of public comments, we are finalizing § 428.401 as proposed, with modification. In this final rule, we are revising § 428.401(b)(iii) and § 428.401(d)(i)(B) to reflect that the Rebate Reports shall include the payment amount benchmark period, in addition to the benchmark period manufacturer price, and the corresponding cross-reference at § 428.202(c) to identify both the payment amount benchmark period and the price in the benchmark period within the report information.

iii. Reconciliation of a Rebate Amount

As discussed in section 50 of the revised Medicare Part D Drug Inflation Rebate Guidance, we considered options consistent with section 1860D–14B(b)(6) of the Act to establish a method and process to determine adjustment to the rebate amount in the case of a Part D plan sponsor submitting revisions to the number of units of a Part D rebatable drug. As is also discussed in section 50 of the revised Medicare Part D Drug Inflation Rebate Guidance, we considered options for establishing a standardized method and process at regular intervals to determinate any appropriate adjustments to the rebate amount for a Part D rebatable drug for an applicable period to account for additional revised information as well as options for recalculation based on CMS identifying an agency error or determining manufacturer data was misreported. We proposed policies for reconciliation, including with respect to enforcement of payment of any reconciled rebate amount, consistent with both the statutory framework for the Medicare Part D Drug Inflation Rebate Program and the express authority in sections 1102 and 1871 of the Act to adopt regulations for the proper administration of the Medicare Prescription Drug Inflation Rebate Program.

As proposed at § 428.401(d), we noted in the CY 2025 PFS proposed rule (89 FR 61980) that we believe that it is necessary and appropriate for CMS to recalculate the rebate amount for an applicable period at regular intervals to include updated information about key data elements included in the calculation of the rebate amount, not limited to those data described in section 1860D–14B(b)(6) of the Act. These data elements as set forth in § 428.401(d)(1)(i) include: total units; the benchmark period manufacturer price; the payment amount in the payment amount benchmark period; the AnMP; and updated data on line extension calculations. Updating these calculation inputs at regular reconciliation intervals will result in a rebate amount that more fully reflects the majority of shifts in the underlying data following additional time for claims run-out, which refers to the maturation of PDE records in CMS' internal PDE database. Because the information extracted represents the PDE records' status in CMS' internal PDE database at that moment in time, additional run-out may yield different information, either because more PDE records with dispensing dates during the applicable period were finalized and added to the database or because the status of the existing PDE records changed. CMS refers to ''X months of run-out'' as the period between the end of the applicable period and the date when CMS accesses information about the PDE records; for example, ''3 months of run-out'' means that PDE records are accessed for PDE records with dispensing dates during an applicable period 3 months after the end of such applicable period. Conducting a reconciliation of the rebate amount with additional claims run-out will improve the accuracy of the rebate amount.

Additionally, reconciliation of payment amounts is consistent with the approach to the calculation of the payment amounts in other CMS programs (such as the Coverage Gap Discount Program) that provide for a reconciliation period.

As noted in the CY 2025 PFS proposed rule (89 FR 61980), the reconciliation of a rebate amount, whether during a reconciliation as set forth in § 428.401(d)(1) or a discretionary reconciliation as set forth in § 428.401(d)(2) discussed further below, will not create a separately payable and distinct rebate amount. Rather, reconciliation updates the prior rebate amount owed to CMS, if any, by a manufacturer of a Part D rebatable drug so that the rebate amount ultimately reflects a more precise calculation of the rebate amount, as required by section 1860D–14B(a)(1) of the Act, to account for shifts in the underlying data following additional time for claims run-out after the Rebate Report is issued as well as subsequently identified data integrity issues. Moreover, because the reconciled rebate amount is an adjustment of the prior rebate amount, we proposed at § 428.405(a)(1) for a report of a reconciled rebate amount to also identify the difference between the rebate amount due as specified on the Rebate Report set forth in § 428.401(c) and the reconciled rebate amount. We noted in the proposed rule that CMS will only collect the net rebate amount due, if any, upon reconciliation, so as to prevent any duplicate payments. We also proposed to refund any overpayment made by a manufacturer, as determined during reconciliation, as set forth in § 428.405(b).

Additionally, as suggested in section 50 of the revised Medicare Part D Drug Inflation Rebate Guidance, we considered multiple options for establishing a standardized method and process to occur at regular intervals to determine an appropriate adjustment to the rebate amount for a Part D rebatable drug for an applicable period to account for revised information prior to proposing the policy described here for two proposed regular reconciliations of the Part D inflation rebate amount. We considered the length of time needed to capture relevant changes to data inputs for recalculation, whether the timing should align with the reconciliation of Part B rebate amounts, and manufacturer burden. Specifically, we considered the average time span needed to ensure submission of the majority of Part D plan unit revisions specified in section 1860D–14B(b)(6) of the Act, and the average time span needed for the submission of the majority of manufacturer restatements of AMP data. We also considered the 36-month period provided by MDRP for AMP restatements as determined under § 447.510(d)(3) of this title and whether consistency among program reconciliation timelines is beneficial.

As stated in the proposed rule, we believe a longer period of claims run-out (at least 12 and 36 months of run-out time in the proposed approach) would ensure that CMS more fully accounts for capturing of revised units. Further, the first reconciliation would be performed to include at least 13 months of claims run-out for the applicable period and would be issued 12 months after the Rebate Report for the same applicable period. The second reconciliation would include 37 months of claims run-out for the applicable period and would be issued 36 months after the Rebate Report for the same applicable period. The first reconciliation, issued 12 months after the Rebate Report, would provide sufficient time to capture the majority of updates to the data determined under § 428.401(b)(1). The second reconciliation, to be issued 36 months after the Rebate Report, is sufficient to capture the remainder of the run-out for MDRP AMP restatements (that do not require CMS review as set forth in § 447.510) while also closing out the calculation of the rebate amount for a Part D rebatable drug for an applicable period within a reasonable time period after the Rebate Report is issued (except for the circumstances set forth in § 428.401(d)(2) regarding CMS' identification of mathematical errors or manufacturer misreporting).

Further, as discussed in the CY 2025 PFS proposed rule (89 FR 61981), in considering whether consistency across CMS programs is critical, we believe that consideration for the completeness of data, as discussed above, should be prioritized over consistency across program timelines. That is, when examining timelines from other CMS programs that collect data contributing to calculation of the rebate amount, we prioritized that, to the extent feasible, completeness and accuracy of the data elements contributing to the calculation of the rebate amount rather than prioritizing consistency among the data collection and reconciliation timelines themselves. Finally, we noted in the proposed rule that we believe that solely updating total units without updating other elements of the rebate calculation would lead to an inaccurate rebate amount, and therefore proposed to update additional calculation inputs as determined under § 428.401(d)(1)(i)(A) through (F). We believe that a restatement of each data element determined under § 428.401(d)(1) to reconcile the rebate amount provided in the Rebate Report set forth in § 428.401(c) is appropriate to capture an updated rebate amount and is in line with other CMS programs that provide for a reconciliation period. While some data points may not change, we proposed to review the data to determine if there are any updates in the data and use the updated data in the reconciliation to provide a reconciled rebate amount to the manufacturer.

Based on these considerations, similar to the multi-step process for the Rebate Report set forth in § 428.401(b) and (c), we proposed a multi-step process to provide each manufacturer of a Part D rebatable drug with a reconciled rebate amount on a regular basis. At both the 12-month reconciliation point and the 36-month reconciliation point, we proposed a reconciliation process that will include: (1) a preliminary reconciliation of the rebate amount, which CMS will provide to manufacturers of Part D rebatable drugs as set forth in § 428.401(d)(1)(i) and (d)(2) a reconciled rebate amount, which CMS will provide to manufacturers of a Part D rebatable drug as set forth in § 428.401(d)(1)(ii). We also proposed to apply the Suggestion of Error process as set forth in § 428.403 to each preliminary reconciliation.

In detail, first, as set forth in § 428.401(d) and similar to the Preliminary Rebate Report process set forth in § 428.401(b), for each reconciliation we proposed to provide the manufacturer with information about the preliminary reconciliation of the rebate amount at least 1 month prior to the issuance of the reconciled rebate amount (see § 428.401(d)) to each manufacturer of a Part D rebatable drug for an applicable period. We proposed at § 428.401(d)(1) that the preliminary reconciliation will include, at a minimum, the same information outlined for the Rebate Report and the following updated information, if applicable: updated total number of rebatable units, including updates submitted by a PDP or MA–PD plan sponsor and updates to 340B units (as applicable to the dates of service and applicable periods determined under § 428.203(b)(2)(i)(A) and (B)), or units otherwise excluded as determined under § 428.203(b); the benchmark period manufacturer price if any inputs are restated within the reconciliation run-out period as determined under § 428.202(d); the AnMP if any inputs are restated within the reconciliation run-out period as determined under § 428.202(b); the excess amount by which the AnMP exceeds the inflation-

adjusted payment amount for the applicable period as determined under § 428.202(a), using the most recent AMP (if any inputs are restated within the reconciliation run-out period); updated data on line extension calculations, including the initial drug identified in accordance with § 447.509(a)(4)(iii)(B), the inflation rebate amount ratio, and the alternative total rebate amount as set forth at § 428.204 if any inputs are restated within the reconciliation run-out period; the reconciled rebate amount as set forth at § 428.201(a); and the difference between the total rebate amount due as specified on the Rebate Report set forth at § 428.201(a) and the reconciled rebate amount as set forth at § 428.201(a). We also noted that changes to status of 5i drugs (defined at § 447.507) are captured through AMP restatements.

As set forth in § 428.403(a), similar to the Suggestion of Error process proposed for the Preliminary Rebate Report set forth in § 428.401(b), within 10 calendar days after date of receipt of the information about the preliminary reconciliation of the rebate amount, we proposed that a manufacturer may suggest to CMS that the manufacturer believes the preliminary reconciliation of the rebate amount contains a mathematical error. As stated in the CY 2025 PFS proposed rule (89 FR 61981), we believe a 10-calendar-day period is sufficient due to the same considerations of data volume, the narrow set of in-scope items for review, and the operational time necessary for CMS to publish the reconciled rebate amount. The preclusions in section 1860D–14B(f) of the Act on administrative and judicial review apply to the reconciliation process.

Second, in detail, we proposed at § 428.401(d)(1)(ii) to provide a reconciled rebate amount to the manufacturer within 12 months and 36 months after the Rebate Report was issued for each applicable period. As set forth in § 428.401(d)(1)(ii), the information in the report for a reconciled rebate amount would include the same data elements as provided in the information provided to the manufacturer of a Part D rebatable drug regarding the preliminary reconciliation of a rebate amount (set forth in § 428.401(d)(1)(i)) and will include any recalculations based on CMS acceptance of a manufacturer's Suggestion of Error set forth in § 428.403. A reconciliation of the rebate amount may result in an increase, decrease, or no change to the rebate amount, compared to the Rebate Report for an applicable period or a previous reconciliation in the case of reconciliation conducted 36 months after issuance of the Rebate Report (see § 428.401(d)(3)).

Additionally, as suggested in section 50 the revised Medicare Part D Drug Inflation Rebate Guidance, we considered options for establishing circumstances where a recalculation of the rebate amount may be appropriate for an applicable period after issuing the Rebate Report and/or a reconciled rebate amount based on CMS identifying an error or CMS determining that the information used by CMS to calculate a rebate amount was inaccurate due to false reporting or similar fault by the manufacturer. We also considered potential time limits for revisions and whether certain circumstances, such as instances of false reporting, should be exempt from such time limits.

As stated in the CY 2025 PFS proposed rule (89 FR 61982), based on these considerations, we believe that, to capture an accurate rebate amount and consistent with reconciliations of pricing data submitted to CMS that provide for revisions when necessary due to errors, including mathematical errors, and manufacturer misreporting, certain circumstances merit reconciliation of the rebate amount separate from the 12- and 36-month reconciliations proposed at § 428.401(d)(1). Specifically, we proposed at § 428.401(d)(2) that CMS may reconcile a rebate amount of an issued Rebate Report when CMS identifies either: (1) an agency error such as a mathematical error or an error in the information specified in a Rebate Report as determined under § 428.401(c) or report of a reconciled rebate amount as determined under § 428.401(d), including reporting system or coding errors; or (2) CMS determines that information used to calculate the rebate amount was inaccurate due to manufacturer misreporting. Examples of agency errors could include CMS incorrectly calculating the billing units per Part D rebatable drug or the mechanism that provides a Rebate Report to the manufacturer or the Rebate Report incorrectly displays a rebate amount. Examples of manufacturer misreporting could include instances in which the manufacturer has made a correction to previously submitted data as well as instances in which the reporting individual or entity reporting data or information to CMS on behalf of the manufacturer knows or should know is inaccurate or misleading (for example, inaccurate manufacturer pricing or product data under section 1927(b)(3) of the Act). This does not include standard restatements to AMP or other data outside of the standard process of issuing the reconciled rebate amount. In addition to manufacturer-initiated corrections, CMS may become aware of manufacturer misreporting based on fact finding and conclusions of enforcement authorities, for example, the HHS Office of Inspector General, the CMS Center for Program Integrity, or the Department of Justice. In a situation where an error or manufacturer misreporting is identified prior to the 12- or 36-month reconciliation of the rebate amount set forth in § 428.401(d)(1), CMS may choose to include a correction based on the circumstances set forth in § 428.401(d)(2) concurrently with the 12- or 36-month reconciliation. When CMS reconciles data due to an instance of agency error or manufacturer misreporting, we proposed that the agency will limit the scope of the reconciliation to the specific information that is the basis for the reconciliation and not update or otherwise revise any other data elements in the Rebate Report (set forth in § 428.401(c)) or the report of the reconciled rebate amount (set forth in § 428.401(d)) unless the correction directly impacts additional data fields. For example, corrections to an AMP file may not change the AnMP for the applicable period.

In addition, as noted in the CY 2025 PFS proposed rule (89 FR 61982), because reconciling a rebate amount imposes substantial administrative burden on CMS to reprocess the rebate amount, retest the reporting system, and reissue a Rebate Report, we proposed at § 428.401(d)(2) that CMS may exercise discretion not to initiate recalculation of the rebate amount in these situations which are outside of the regular reconciliation process proposed at § 428.401(d)(1).

We proposed that for a recalculation due to an agency error, the error must be identified within 5 years of the date of receipt of the Rebate Report for the applicable period (see § 428.401(d)(2)(i)). Identification means that CMS has knowledge the error; CMS does not need to have completed its revision of the impacted data or determined if the revision impacts the rebate amount within the 5-year period. CMS will timely complete these steps and determine, when reconciliation does impact the rebate amount, whether the reconciliation must be included in a discretionary revision or within an upcoming reconciled rebate amount for the applicable period. We proposed 5 years for Part D (as opposed to the 3-year limit proposed for Part B) to account for the additional time of the second reconciliation for Part D rebatable drugs to be conducted at 36-

months as set forth in § 428.401(d)(1). We stated in the proposed rule that we believe a 5-year period dating from the issuance of the Rebate Report allows for sufficient time to include AMP restatements in the MDRP while also placing a reasonable time limit on potential discretionary reconciliations, after which a manufacturer of a Part D rebatable drug will not receive additional Rebate Reports for the applicable period.

We proposed at § 428.401(d)(2)(ii) that for a circumstance in which a manufacturer misreports data, CMS will not bound by the 5-year time limit for revision of the rebate amount. For example, if a determination is made that a manufacturer misreported AMP data, which affected the calculation of the AnMP, then CMS may recalculate the rebate amount owed for a Part D rebatable drug. We requested comments on the proposals related to manufacturer misreporting.

We proposed at § 428.405(a)(1) that upon receipt of a reconciled rebate amount, manufacturers must pay that reconciled rebate amount within 30 calendar days from the date of receipt of the reconciled rebate amount. A 30-day payment deadline aligns with the payment period set forth in statute at section 1860D–14B(b)(6) of the Act. As set forth in § 428.404, we will use the same method and process for issuing Rebate Reports and submission of payments for reports with a reconciled rebate amount. We state that we will provide notice to manufacturers for reports with a reconciled rebate amount. We proposed at § 428.405(b) that if a refund is owed to a manufacturer based on a reconciled rebate amount, we will initiate the process to issue such refund within 60 days from the date of receipt of the reconciled rebate amount (proposed at § 428.401(d)). CMS will issue additional information on this method and process through additional program communications.

We received public comments on these proposals. Please refer to the corresponding section in Part B for a summary of comments and our responses where the comments received are applicable to both the Medicare Part B and Medicare Part D Drug Inflation Rebate Programs. The following is a summary of the comments we received and our responses specific to this topic for the Medicare Part D Drug Inflation Rebate Program.

Comment: A few commenters expressed support for the proposed 12-month and 36-month reconciliation process. One commenter appreciated CMS having a reconciliation adjustment for underpayments and overpayments.

Response: We thank the commenters for their feedback. As part of the 12-month reconciliation, CMS will incorporate updates to the data as set forth in § 428.401(b)(1), and as set forth in § 428.401(d)(1). This will include any updates to AMP data that have been processed by CMS prior to the 12-month reconciliation and the 36-month reconciliation. We believe that having these reconciliation periods will capture the remainder of the run-out for MDRP AMP restatements and provide a more accurate rebate amount.

After consideration of public comments, we are finalizing § 428.401 as proposed, with modification. In this final rule, we are revising § 428.401(d)(1)(i)(C) to specify that the reconciliation will include updated payment amount benchmark period, in addition to the benchmark period manufacturer price, and the corresponding cross-reference as determined under § 428.202(c), to identify both the payment amount benchmark period and the price in the benchmark period within the report information. In this final rule, we also are revising § 428.401(b)(iii) and § 428.401(d)(1)(i)(B) to specify that the reconciliation will include any updated payment amount benchmark period, in addition to the benchmark period manufacturer price, and to clarify in §§ 428.401(d)(1)(i)(B), (D), and (E) that updates to inputs included in the reconciliation calculations will include newly reported information, in addition to restated AMP. We believe that these revisions provide further clarity regarding how CMS will conduct the reconciliation process, including in the event that AMP data are missing when CMS issues the Rebate Report for a Part D rebatable drug, and further implement CMS' proposals described in the proposed rule. For example, with respect to missing AMP policies, we proposed to consider any restatements to the AMP data used to calculate the benchmark period manufacturer price during reconciliation, including where the benchmark period manufacturer price is identified under §§ 428.202(c)(3) and (4). The revisions at § 428.401(b)(iii) and § 428.401(d)(1)(i)(B) make clear that in the event a manufacturer has not reported AMP for any quarters during the payment amount benchmark period determined under §§ 428.202(c)(1) and (2) at the time CMS issues the Rebate Report, including information such as base date AMP overlapping with such period, but the manufacturer later reports such information, CMS would use such later reported information to identify the payment amount benchmark period as determined under §§ 428.202(c)(1) and (2) and (d)(3), as well as calculate the benchmark period manufacturer price.

Similarly, with respect to Part D rebatable drugs excluded from Part D rebate calculations, we proposed to reexamine whether the manufacturer was required to report AMP for any part of the applicable period for the Part D rebatable drug when performing the reconciliation set forth in § 428.401(d). The revisions set forth in §§ 428.401(d)(1)(i)(B), (D), and (E) clarify that in the event CMS identifies a Part D rebatable drug as subject to exclusion from the Part D rebate calculations under § 428.201(b) at the time CMS issues the Rebate Report, but the manufacturer later reports information under the MDRP, CMS may use that later reported information such as AMP and base date AMP to calculate the inflation-adjusted payment amount and the excess amount by which the AnMP exceeds the inflation-adjusted payment amount for the applicable period, as well as any line extension calculations that may be affected by such newly reported information.

iv. Rebate Reports for the Applicable Periods Beginning October 1, 2022, and October 1, 2023

Section 1860D–14B(a)(3) of the Act provides CMS with the option to delay sending the information required by section 1860D–14B(a)(1) of the Act for the applicable periods beginning October 1, 2022, and October 1, 2023, until not later than December 31, 2025. As set forth in § 428.402, consistent with section 50.2 of the revised Medicare Part D Drug Inflation Rebate Guidance, we proposed to issue a Preliminary Rebate Report for each applicable period followed by issuance of the Rebate Report for each applicable period no later than December 31, 2025. For these reports, we proposed at § 428.402 to provide an extended 30 calendar day Suggestion of Error period for these Preliminary Rebate Reports.

As stated in the CY 2025 PFS proposed rule (89 FR 61982), because this approach provides for 13 months of claims run-out for the Rebate Report for the applicable period beginning October 1, 2022, we intend to conduct a single reconciliation 21 months after issuance of the Rebate Report for this applicable period (see § 428.402(c)(1)(ii)). As set forth in § 428.402(c)(2)(ii), for the applicable period beginning October 1, 2023, the rebate amount would be reconciled twice, in alignment with the reconciliation process discussed previously. The first reconciliation

would occur 9 months after issuance of the Rebate Report to include 13 months of claims run-out and payment data; the second reconciliation will occur 24 months after the first reconciliation and will include 37 months of claims run-out and payment data. We stated in the proposed rule that this approach aligns claims and payment data run-out with the run-out used during a regular invoicing cycle. The Suggestion of Error period would be 10 calendar days for the reconciliations of the rebate amount for the applicable periods beginning October 1, 2022, and the applicable period beginning October 1, 2023.

As noted in the proposed rule, this approach also minimizes the number of reports issued to manufacturers as a result of the delay in reporting and simplifies payment procedures, thereby minimizing manufacturer burden. Starting with the applicable period beginning October 1, 2024, reporting will begin a standard cadence and follow the procedures otherwise proposed in subpart E of this part 428.

We did not receive public comments on this proposed provision, and we are finalizing § 428.402 as proposed.

f. Enforcement of Manufacturer Payment of Rebate Amounts (§ 428.500)

Section 1860D–14B(e) of the Act gives CMS the authority to impose a civil money penalty equal to 125 percent of the rebate amount for each drug for each applicable period on a manufacturer that fails to pay the rebate amount, for each dosage form and strength for each rebatable drug. Subpart F will implement this section of the Act and establish the procedures for determining and collecting a civil money penalty.

In accordance with sections 1860D–14B(a)(2) and 1860D–14B(b) of the Act and § 428.405(a), manufacturers must provide to CMS a rebate amount owed within 30 calendar days of receipt of the rebate amount due. As set forth in § 428.500(a), we proposed CMS may impose a civil money penalty when a manufacturer fails to pay the rebate amount in full by the payment deadlines set forth in § 428.405(a). This means a manufacturer may be subject to a civil money penalty if the manufacturer fails to pay the full rebate amount as invoiced in the Rebate Report or any reconciled rebate amount that is greater than the amount invoiced in the Rebate Report. More specifically, as described in the CY 2025 PFS proposed rule (89 FR 61983), a manufacturer could be subject to a civil money penalty when a manufacturer fails to pay a rebate amount due by any payment deadline set forth in § 428.405(a)(1), for: (1) a Rebate Report set forth in § 428.401(c); (2) a reconciled rebate amount greater than the amount reflected in the Rebate Report set forth in at § 428.401(d); or (3) a Rebate Report and a reconciled rebate amount greater than the amount reflected in the Rebate Report, if applicable, for the applicable periods beginning October 1, 2022, and October 1, 2023 set forth in § 428.402. As discussed earlier in section III.I.3.e. of this final rule, we noted that the reconciled or corrected rebate amount is not a separately payable and distinct rebate amount. Rather, the reconciled rebate amount is an update to the rebate amount owed to CMS by a manufacturer of a Part D rebatable drug.

As stated in the CY 2025 PFS proposed rule (89 FR 61983), civil money penalties are a point-in-time penalty tied to the rebate amount due at the applicable payment deadline, which occurs 30 days after the date of receipt of a Rebate Report. At § 428.500(b), we proposed to establish the methodology for determining the amount of the civil money penalty as equal to 125 percent of the rebate amount for such drug for such applicable period, and that this penalty will be due in addition to the rebate amount due. That is, we proposed a manufacturer will be responsible for paying the full rebate amount due in addition to any civil money penalty imposed because of late payment. We proposed this approach to civil money penalties based on section 1860D–14B(a)(2) of the Act, which establishes a requirement by the manufacturer to provide CMS with a rebate not later than 30 days after receipt from CMS of the report on the amount of the excess annual manufacturer price increase. As noted in the proposed rule, we believe that the ability to assess civil money penalties is necessary in all circumstances where a payment is due for a rebate amount to CMS to ensure compliance with the rebate program's requirements. The civil money penalty would be calculated based on the outstanding rebate amount due at the payment deadline, which is defined at § 428.405(a)(1) as 30 calendar days after the date of receipt of a Rebate Report containing any rebate amount due; once a civil money penalty is assessed due to a late payment, the penalty will remain in effect even if the manufacturer pays the outstanding rebate amount as the penalty is initiated due to a missed payment deadline. Because the payment deadline is clearly defined in section 1860D–14B(a)(2) of the Act, any late payments of a rebate amount due, including late payment of any reconciled rebate amounts greater than the amount reflected in the Rebate Report, would be considered a violation potentially subject to a civil money penalty. Any civil money penalty would be assessed before the next 12- or 36-month reconciliation.

We proposed at § 428.500(b) that civil money penalties may be calculated at several points in time associated with missing a payment deadline for the rebate amount due reflected in the Rebate Report or missing a payment deadline associated with any rebate amount determined after a reconciliation to be greater than the amount invoiced in the Rebate Report. As these separate events can result in distinct assessments of civil money penalties, this means that CMS will not modify a civil money penalty from a prior missed payment deadline based on changes to the rebate amount due following reconciliation, including scenarios where the rebate amount is reduced following reconciliation. However, in the event that the rebate amount due on a Rebate Report was not paid and a civil money penalty was issued for violation of the payment deadline, CMS will not issue a second civil money penalty on a reconciled rebate amount if reconciliation decreased the rebate amount stated on the Rebate Report. As stated in the CY 2025 PFS proposed rule (89 FR 61983), we believe that enforcing this requirement after each payment deadline, regardless of what rebate amount a manufacturer may or may not owe at a future payment deadline, is necessary to maintain the integrity of the program and consistency of the implementation of the program. Further, we proposed this approach to ensure an enforcement approach that is operationally feasible and applied consistently in all cases.

For examples of how this approach to civil money penalties will work in practice, see section III.I.2.g. of this final rule. We proposed that civil money penalties will function in the same way for both the Part B and Part D rebate programs. Given that the Part D rebate program has two proposed regular reconciliations, payment will be due no later than 30 days after issuance of a report of a reconciled rebate amount for each reconciliation under Part D.

Further, we noted in the proposed rule that payment of any civil money penalty does not obviate the requirement for the manufacturer to pay any outstanding rebate amount due, including any rebate amount due following a reconciliation. Therefore, paying a civil money penalty does not satisfy the obligation to pay the underlying rebate amount on which the civil money penalty is calculated. In

addition, we are evaluating all available options to ensure manufacturers' timely compliance with their rebate payment obligations, including, without limitation, potential recovery approaches and enforcement actions. For example, CMS may refer manufacturers to the Department of Justice, Department of the Treasury, and/or the Department of Health and Human Services Office of Inspector General for further review and investigation.

At § 428.500(c), we proposed that if CMS makes a determination to impose a civil money penalty on a manufacturer for violation of a payment deadline, we will send a written notice of the decision to impose a civil money penalty that includes a description of the basis for the determination, the basis for the penalty, the amount of the penalty, the date the penalty is due, the manufacturer's right to a hearing, and information about where to file the request for a hearing. To ensure a consistent approach to civil money penalties, we proposed applying existing appeal procedures for civil money penalties in 42 CFR 423, subpart T of this title to manufacturers appealing a civil money penalty imposed under the Medicare Part D Drug Inflation Rebate Program. CMS has utilized this appeals process for many years for civil money penalty determinations affecting MA organizations and Part D sponsors. Therefore, we proposed to use this well-established process for civil money penalty appeals from manufacturers that do not make inflation rebate payments by the payment deadline. We also proposed at § 428.500(e)(1) that the scope of appeals is limited to: (1) CMS determinations relating to whether the rebate payment was made by the payment deadline; and (2) the calculation of the penalty amount. Section 1860D–14B(f) of the Act precludes judicial review of specific data inputs or calculations related to the underlying Rebate Report and reconciliation; therefore, such data and calculations are not appealable through this process.

Section 1860D–14B(e) of the Act states that the provisions of section 1128A of the Act (except subsections (a) and (b)) apply to civil money penalties under this subpart to the same extent that they apply to a civil money penalty or procedure under section 1128A(a) of the Act. We proposed to codify this requirement at § 428.500(f). In alignment with the procedure outlined in section 1128A of the Act, we proposed at § 428.500(d) that collection of the civil money penalty will follow expiration of the timeframe for requesting an appeal, which is 60 calendar days from the civil money penalty determination in cases where the manufacturer did not request an appeal. In cases where a manufacturer requests a hearing and the decision to impose the civil money penalty is upheld, CMS will initiate collection of the civil money penalty once the administrative decision is final. We solicited comment on proposals related to the violations of payment deadlines and issuance of a civil money penalty.

We proposed at § 428.500(g) that in the event that a manufacturer declares bankruptcy, as described in title 11 of the United States Code, and as a result of the bankruptcy, fails to pay either the full rebate amount owed or the total sum of civil monetary penalties imposed, the government reserves the right to file a proof of claim with the bankruptcy court to recover the unpaid rebate amount and/or civil monetary penalties owed by the manufacturer.

We received public comments on these proposals. Because the comments received are applicable to both the Medicare Part B and Part D Drug Inflation Rebate Programs, please refer to the corresponding section in Part B for a summary of comments and our responses on this topic.

After consideration of public comments, we are finalizing § 428.500 as proposed.

g. Severability (§ 428.10)

At § 428.10, we proposed that were any provision of part 428 to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions will be severable from this part and the invalidity or unenforceability would not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances. As stated in the CY 2025 PFS proposed rule (89 FR 61984), while the provisions in part 428 are intended to present a comprehensive approach to implementing the Medicare Part D Drug Inflation Rebate Program, we intend that each of them is a distinct, severable provision. We also stated our intent that a finding that a provision of part 428 is invalid or unenforceable would not affect similar provisions in the Medicare Part B Drug Inflation Rebate Program. As discussed in the proposed rule, the Part D drug inflation rebate proposals are intended to operate independently of each other, even if each serves the same general purpose or policy goal. For example, we stated that we intended the policies we proposed related to exclusion of units acquired through the 340B Program (§ 428.203(b)(2)) to be distinct and severable from the proposals related to determination of Part D Rebatable drugs (§§ 428.100 and 428.101). As stated in the proposed rule, even where one provision refers to a second provision, the preamble and the regulatory text clarify the intent of the agency that the two provisions will be severable if one provision were to be invalidated in whole or in part. For example, CMS would still be able to calculate a Part D drug inflation rebate even if the provision identifying the payment amount benchmark period for a Part D rebatable drug as the first calendar year in which such drug has at least 1 quarter of AMP in certain instances of missing AMP is deemed invalid (§§ 428.202(c)(3) and (c)(4)).

We solicited public comments on our proposed severability policy. The following is a summary of the comments we received and our responses.

Comment: A couple of commenters disagreed with CMS' proposal that each regulatory provisions in part 428 are severable and distinct. One of these commenters stated that the preamble seeks to dictate to the courts how each regulatory provision should be evaluated for the purposes of severability. This commenter recommended CMS indicate an intent for severability but delete preamble or regulatory language related to the courts' evaluation of the issue. One of these commenters wrote that courts have rejected similar severability clauses, particularly in instances where a regulation's provisions were too intertwined to sever. This commenter also noted that CMS does not provide a legal or policy rationale for how it believes the Part D inflation rebates regulations can operate independently from one another. As a result, the commenter writes, a court would likely find the Part D inflation rebate regulations should be treated as a ''single, integrated proposal.''

Response: We appreciate these commenters sharing their feedback. We disagree with the commenters' contention that the policies in this final rule are not individual and severable. Under the Administrative Procedure Act (APA), an ''agency action'' may be either ''the whole or a part of an agency rule.'' 5 U.S.C. 551(13). Thus, the APA permits a court to sever a rule by setting aside only the portion of the rule found invalid. Courts have stated that in determining if an agency action is severable, they look at the agency

intent,[705] and if parts of the action are ''intertwined'' or if ''they operate entirely independently of one another.'' [706] Even if a court were to strike down some provision of this final rule, CMS' intent is that other portions of this rule would remain in effect. CMS' intent is evidence by § 428.10, which states that were any provision of part 428 to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions would be severable from part 428 and the invalidity or unenforceability would not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances. We believe severability applies to each provision of the Part D inflation drug rebate regulation, because deeming any particular provision to be invalid or illegal would not result in a material change to the Medicare Part D Inflation Rebate Program so as to cause all of the requirements that compose the program to be invalid.

Contrary to the commenter's assertion, CMS did explain how the Part D inflation rebate regulations can operate independently from one another. As noted above, CMS provided examples that are illustrative of how the provisions of part 428 would operate independently from one another; for instance, CMS would still be able to calculate a Part D drug inflation rebate even if the proposed provision identifying the payment amount benchmark period for a Part D rebatable drug as the first calendar year in which such drug has at least 1 quarter of AMP in certain instances of missing AMP is deemed invalid (§§ 428.202(c)(3) and (c)(4)).

After consideration of public comments, CMS is finalizing this policy as proposed at § 428.10.

J. Request for Information: Building Upon the MIPS Value Pathways (MVPs) Framework To Improve Ambulatory Specialty Care

In the CY 2025 PFS proposed rule (89 FR 61984 through 61991), we solicited comment on a Request for Information (RFI), Building upon the MIPS Value Pathways (MVPs) Framework to Improve Ambulatory Specialty Care. We refer readers to the CY 2025 PFS proposed rule to review this RFI.

We received public comments in response to this RFI, and we appreciate the thoughtful input. We will consider the comments received for future rulemaking, technical assistance, and work related to the design of a future ambulatory specialty model.

K. Modifications to Coverage of Colorectal Cancer Screening

Medicare coverage provisions for colorectal cancer (CRC) screening tests under Part B are described in statutes (sections 1861(s)(2)(R), 1861(pp), 1862(a)(1)(H) and 1834(d) of the Social Security Act (the Act)), regulation (42 CFR 410.37), and a National Coverage Determination (NCD) (Section 210.3 of the Medicare National Coverage Determinations Manual). The statute and regulations expressly authorize the Secretary to add other tests and procedures (and make modifications to tests and procedures) for colorectal cancer screening with such frequency and payment limits as the Secretary finds appropriate based on consultation with appropriate organizations. (Section 1861(pp)(1)(D) of the Act; § 410.37(a)(1)(v)). We proposed to exercise our authority at section 1861(pp)(1)(D) of the Act to update and expand coverage for CRC screening by:

- Removing coverage for the barium enema procedure in regulations at § 410.37,
- Adding coverage for the computed tomography colonography (CTC) procedure in regulations at § 410.37, and
- Expanding a ''complete colorectal cancer screening'' in § 410.37(k) to include a follow-on screening colonoscopy after a Medicare covered blood-based biomarker CRC screening test (described and authorized in NCD 210.3).

1. Background

The Center for Disease Control and Prevention (CDC) describes CRC as ''a disease in which cells in the colon or rectum grow out of control. . . Sometimes abnormal growths, called polyps, form in the colon or rectum. Over time, some polyps may turn into cancer. Screening tests can find polyps so they can be removed before turning into cancer. Screening also helps find colorectal cancer at an early stage, when treatment works best.'' [707] The National Cancer Institute reports that CRC is the fourth most common type of cancer and estimates that the United States experienced 153,020 new cases and 52,550 new deaths from CRC in 2023. In addition, the rate of new cases and new deaths from CRC is more common in men than women and significantly greater for those of African American and Non-Hispanic American Indian/Alaska Native descent compared to all races.[708]

At § 410.37(a)(4), we define the barium enema procedure as a screening double contrast barium enema of the entire colorectum (including a physician's interpretation of the results of the procedure); or in the case of an individual whose attending physician decides that he or she cannot tolerate a screening double contrast barium enema, a screening single contrast barium enema of the entire colorectum (including a physician's interpretation of the results of the procedure). The CDC describes CTC, (also called a virtual colonoscopy), as ''a screening test that uses X-rays and computers to produce images of the entire colon, which are displayed on a computer screen for the doctor to analyze.'' [709]

The U.S. Preventive Services Task Force (USPSTF) first included CTC as a CRC screening method in their June 2016 revised Final Recommendation Statement.[710] With respect to CTC, the USPSTF cautioned in the 2016 recommendation that ''[t]here is insufficient evidence about the potential harms of associated extracolonic findings, which are common.'' The USPSTF further wrote, ''[t]here are numerous screening tests to detect early-stage colorectal cancer, including stool-based tests (gFOBT, FIT, and FIT–DNA), direct visualization tests (flexible sigmoidoscopy, alone or combined with FIT; colonoscopy; and CT colonography), and serology tests (SEPT9 DNA test). The USPSTF found no head-to-head studies demonstrating that any of these screening strategies are more effective than others, although they have varying levels of evidence supporting their effectiveness, as well as different strengths and limitations.'' [711] The USPSTF again included CTC as a CRC screening method in the most recent May 2021 revised Final Recommendation Statement, which

included the topline recommendations ''[t]he USPSTF recommends screening for colorectal cancer in all adults aged 50 to 75 years (Grade A)'' and ''[t]he USPSTF recommends screening for colorectal cancer in adults aged 45 to 49 years (Grade B)''.[712] We described our consultations with additional organizations and our review of clinical guidelines later in our proposal.

2. Statutory Authority

Section 4104 of the Balanced Budget Act of 1997 (Pub. L. 105–33) authorized the benefit colorectal cancer screening tests under Medicare Part B. Section 1861(s)(2)(R) of the Act includes CRC screening tests in the definition of medical and other health services that fall within the scope of Medicare Part B benefits described in section 1832(a)(1) of the Act. Section 1861(pp) of the Act defines colorectal cancer screening tests and specifically names the following tests:

- Screening fecal-occult blood test;
- Screening flexible sigmoidoscopy; and
- Screening colonoscopy.

Section 1861(pp)(1)(D) of the Act also authorizes the Secretary to include in the definition of CRC screening tests ''other tests or procedures, and modifications to the tests and procedures described under this subsection, with such frequency and payment limits, as the Secretary determines appropriate, in consultation with appropriate organizations.''

3. Regulatory and NCD Authority

In the CY 1998 PFS final rule (62 FR 59048), after consulting with appropriate organizations, we finalized regulations to cover barium enema procedures for CRC screening in § 410.37. Barium enema screening examinations have to be ordered by the beneficiary's attending physician (§ 410.37(h)). Currently, the regulations cover barium enemas as a CRC screening test subject to frequency limitations and whether or not the individual was at high risk for colorectal cancer. As described in the CY 1998 PFS final rule (62 FR 59048), we consulted with a number of appropriate organizations such as the American Cancer Society, American College of Physicians, American Gastroenterological Association and USPSTF, and the decision to cover the barium enema procedure was based on the prevailing clinical guidelines and recommendations at the time. In the CY 2023 PFS final rule (87 FR 69404), we lowered the age limit for barium enema procedures for CRC screening to age 45 at § 410.37(i)(1).

In May 2009, we established a non-coverage policy for CTC in NCD 210.3 CTC Screening Tests. We noted in the Final Decision Memorandum, ''there is insufficient evidence on the test characteristics and performance of screening CTC in Medicare aged individuals and that the evidence is not sufficient to conclude that screening CTC improves health benefits for asymptomatic, average risk Medicare beneficiaries.'' [713] At that time, the October 2008 USPSTF revised Final Recommendation Statement read, ''[t]he USPSTF concludes that the evidence is insufficient to assess the benefits and harms of computed tomographic colonography and fecal DNA testing as screening modalities for colorectal cancer. (Grade I)'' [714] As described in the Final Decision Memorandum, guidelines from Professional Societies were mixed. A joint guideline from the American Cancer Society, the U.S. Multi-Society Task Force on Colorectal Cancer, and the American College of Radiology concluded ''[i]n terms of detection of colon cancer and advanced neoplasia, which is the primary goal of screening for CRC and adenomatous polyps, recent data suggest CTC is comparable to Optical Colonoscopy for the detection of cancer and polyps of significant size when state-of-the-art techniques are applied.'' [715] The American Gastroenterological Association issued the following recommendation statement in 2008, ''[t]he AGA does not endorse CTC as a first-line colon cancer screening test. While AGA supports CTC as a screening option, colonoscopy is the definitive test for colorectal cancer screening and prevention. Colonoscopy is the only test that can both detect cancer at an early curable stage and prevent cancer by removing pre-cancerous polyps. At this time, while CTC may be another technology for colorectal cancer screening, many questions about CTC remain to be answered.'' [716] The American Society for Gastrointestinal Endoscopy published guidelines in 2006 that concluded ''virtual colonoscopy is an evolving technique and is not currently recommended as the primary method of screening for CRC.'' [717]

In the 2023 PFS final rule (87 FR 69404) we expanded the regulatory definition of CRC Screening to include a complete colorectal cancer screening, which includes a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based colorectal cancer screening test returns a positive result (§ 410.37(k)). Although we have previously viewed a colonoscopy after a positive non-invasive stool-based CRC screening test to be a diagnostic colonoscopy, the clinical recommendations and guidance of medical professional societies and screening experts have since evolved for stool-based colorectal cancer screening due to the relative number of false positive results, low follow-up colonoscopy rates and patient access barriers. Published evidence highlighted that individuals who did not get a follow-up colonoscopy were about twice as likely to die of colorectal cancer compared to individuals who had one. Since the overall goal of programmatic cancer screening using any CRC screening test is to prevent cancer, allowing for early detection and treatment and reducing cancer mortality, the follow-up colonoscopy was found to be integral with non-invasive stool-based CRC screening, since improvements in health outcomes would not be possible without the follow-up colonoscopy. Our goal was that the patient and their healthcare professional make the most appropriate choice in CRC screening, which included considerations of the risks, burdens and barriers presented with an invasive screening colonoscopy in a clinical setting as their first step. In that

final rule, we also described that CRC screening presents a unique scenario where there are significant differences between screening stool-based tests and screening colonoscopy tests in terms of invasiveness and burdens to the patient and healthcare system. We recognized there are several advantages to choosing a non-invasive stool-based CRC screening test as a first step compared to a screening colonoscopy, including relative ease of administering the test and potentially reducing the experience of unnecessary burdensome preparation and invasive procedures.

We noted in preamble of the CY 2023 PFS final rule (87 FR 69404) that many commenters requested that CMS further expand our approach of a complete colorectal cancer screening. Many requested that we remove the text ''stool-based'' from our proposed regulations at § 410.37(k), resulting in a complete CRC screening including a follow-on screening colonoscopy after a Medicare covered non-invasive screening test. Many commenters requested that a complete CRC screening include a screening colonoscopy after a positive result from a blood-based biomarker test, as well as a stool-based test. We responded to these public comments by writing that ''we disagree with the commenters that requested a further expansion of a complete colorectal cancer screening that would include additional first step tests beyond a non-invasive stool-based test. We believe the stool-based tests are unique to other CRC screening tests in terms of their non-invasiveness, the fact that stool-based tests can be implemented by the patient at home and mailed into the lab, the absence of bowel preparation and anesthesia and the comparatively lighter burden and mitigated potential for over servicing of the patient and the healthcare system.'' We further wrote, ''[w]e agree that blood-based biomarker CRC screening tests have significant potential and we expanded coverage to include them in the reconsidered NCD 210.3, effective January 2021.'' We also recognized that blood-based biomarker CRC screening tests continue to be an emerging and quickly evolving technology. However, we also noted that, as of September 2022, no blood-based biomarker tests for CRC screening had achieved the coverage requirements of NCD 210.3 and that the May 2021 USPSTF revised Final Recommendation Statement did not include serum tests.

In the CY 2023 PFS final rule (87 FR 69404) we also established regulations at § 410.37(k) that the frequency limitations described for screening colonoscopy shall not apply in the instance of a follow-on screening colonoscopy test. We wrote that we aimed to avoid disruption to the existing conditions of coverage and payment for CRC screening for this unique scenario and continuum of screening.

4. Proposed Revisions

We proposed to exercise our authority in section 1861(pp)(1)(D) of the Act to remove coverage for the barium enema procedure from CRC screening in regulations at § 410.37. We have consulted with appropriate organizations and heard that, while the barium enema procedure was reasonable and necessary for CRC screening when it was initially covered in the CY 1998 PFS final rule (62 FR 59048), circumstances have since changed. The organizations have expressed that barium enema procedures no longer meet modern clinical standards, are no longer recommended in clinical guidelines, and would not be an appropriate CRC screening test given the advancement of alternatives such as stool-based tests, colonoscopies, and CT colonography. In developing our proposal, we also considered that the June 2016 and the May 2021 USPSTF revised Final Recommendation Statements did not include the barium enema procedure as a CRC screening method in their revised Final Recommendation Statements.[718] [719] We also considered the 2017 U.S. Multi-Society Task Force of Colorectal Cancer (MSTF) recommendation statement, which reads, ''CT colonography has replaced double-contrast barium enema as the test of choice for colorectal imaging for nearly all indications. CT colonography is more effective than barium enema and better tolerated.'' [720] The 2018 American Cancer Society (ACS) Colorectal Cancer Screening for Average-Risk Adults Guideline Update also reads, ''double-contrast barium enema is no longer included as an acceptable screening option.'' [721]

During the CY 2023 PFS, we received a joint public comment from the American College of Gastroenterology (ACG), American Gastroenterological Association (AGA) and the American Society for Gastrointestinal Endoscopy (ASGE) [722] that brought to our attention that barium enema is not a recommended CRC screening modality in guidance from the USPSTF or the U.S. Multi-Society Task Force on Colorectal Cancer. The public comment also noted that while the barium enema procedure once was considered a CRC screening modality and has been included in guidelines in the past, barium enema is no longer included in any recent CRC guidelines and is rarely performed today as it is considered inadequate for the exclusion of CRC. They urged CMS to remove barium enema as a covered CRC screening test for all individuals. An internal claims analysis indicates that Medicare only paid claims for barium enema for CRC screening for 72 beneficiaries in CY 2022.

A 2016 study titled ''[n]ew era of colorectal cancer screening,'' states, ''double-contrast barium enema (DCBE) is a non-invasive radiological test, which provides a complete evaluation of the large intestine. The sensitivity and specificity of barium enema for polyps of any size is 38 percent and 86 percent, respectively. One study comparing barium enema to CTC and colonoscopy showed that DCBE has the lowest sensitivity and specificity with sensitivity of 41 percent for lesions ≥ 6 mm and sensitivity and specificity of 48 and 90 percent respectively for lesions ≥ 10 mm. These results are consistent with a meta-analysis comparing the performance of barium enema to that of CTC showing CTC is more sensitive and more specific than barium enema for large polyps (≥ 10 mm) and small polyps (6–9 mm) in average-risk and high-risk populations. In the United States, CTC has largely replaced DCBE as a radiographic option for CRC screening.'' [723]

In light of the new evidence and our consultations with appropriate organizations, we proposed to remove barium enema as a colorectal screening test under § 410.37(a)(1)(iv). We solicited comments from the public and appropriate organizations. We also solicited public comment on the proposal to remove all references to barium enemas in § 410.37.

We also proposed to exercise our authority in section 1861(pp)(1)(D) of the Act to add coverage for the CTC procedure for CRC screening in regulations at § 410.37. We stated that if finalized, we will address and revise the current non-coverage policy for CTC in NCD 210.3. In developing our proposal to expand coverage for the CTC procedure, we consulted with appropriate organizations and considered a number of potential benefits, risks, and tradeoffs described in guidelines and recommendations by professional societies and government bodies.

In developing the proposed rule, we considered that the USPSTF included the CTC procedure as a CRC screening method in their June 2016 and May 2021 revised Final Recommendation Statements.[724] [725] In terms of benefits, the USPSTF wrote in their May 2021 revised Final Recommendation Statement, that CTC usually allows for greater colon visualization compared to flexible sigmoidoscopy. In terms of risks and tradeoffs, USPSTF noted that CTC, like colonoscopy and flexible sigmoidoscopy, requires the burden of bowel preparation. The USPSTF wrote ''[u]nlike Colonoscopy and Flexible Sigmoidoscopy, CTC may reveal extracolonic findings that require additional workup, which could lead to other potential benefits or harms.'' The USPSTF went on to state, ''[h]arms from CT colonography are uncommon (19 studies; n = 90 133), and the reported radiation dose for CT colonography ranges from 0.8 to 5.3 mSv (compared with an average annual background radiation dose of 3.0 mSv per person in the U.S.). Accurate estimates of rates of serious harms from colonoscopy following abnormal CTC results are not available.'' Regarding extracolonic findings, the USPSTF wrote, ''[e]xtracolonic findings on CTC are common. Based on 27 studies that included 48,235 participants, 1.3 percent to 11.4 percent of examinations identified extracolonic findings that required workup. Three percent or less of individuals with extracolonic findings required definitive medical or surgical treatment for an incidental finding. A few studies suggest that extracolonic findings may be more common in older age groups. Long-term clinical follow-up of extracolonic findings was reported in few studies, making it difficult to know whether it represents a benefit or harm of CT colonography.'' The USPSTF recommends screening CTC frequency every 5 years.[726]

In a study titled ''Incidental Extracolonic Findings on CT Colonography: The Impending Deluge and Its Implications,'' Lincoln L. Berland, MD, describes extracolonic findings as findings on CTC that have potential deleterious health effects and are asymptomatic, unsuspected, and unrelated to the colon. The study goes on to state, ''as CT image quality has improved, there has been an increase in the frequency of detecting ''incidental findings,'' defined as findings that are unrelated to the clinical indication for the imaging examination performed. These 'incidentalomas,' as they are also called, often confound physicians and patients with how to manage them. Although it is known that most incidental findings are likely benign and often have little or no clinical significance, the inclination to evaluate them is often driven by physician and patient unwillingness to accept uncertainty, even given the rare possibility of an important diagnosis.'' [727] The potential for extracolonic findings, both clinically significant and insignificant, is an important tradeoff to be considered by the patient and clinician when considering CTC as a CRC screening option.

We also considered the 2018 ACS Colorectal Cancer Screening for Average-Risk Adults Guideline Update, which includes the CTC procedure with their recommended tests and procedures for CRC Screening.[728] In terms of benefits, the ACS guideline describes CTC sensitivity and specificity for cancer and advanced adenomas comparable to colonoscopy, longer recommended screening intervals compared to stool-based tests, and no need for sedation (compared to colonoscopy). In terms of risks and tradeoffs, the ACS guideline notes incidental extracolonic findings may require workup (with unclear benefit-burden balance), exposure to low-dose radiation and requires full bowel cleansing. The ACS guidelines recommended screening CTC frequency of every 5 years.

We also considered the United States Multi-Society Task Force (MSTF) of Colorectal Cancer, which represents the American College of Gastroenterology, the American Gastroenterological Association, and the American Society for Gastrointestinal Endoscopy, 2017 Colorectal Cancer Screening recommendations [729], which include CTC as a ''Tier 2'' procedure alongside FIT-fecal DNA and Flexible Sigmoidoscopy. The recommendation states that ''CRC screening tests are ranked in 3 tiers based on performance features, costs, and practical considerations. The first-tier tests are colonoscopy every 10 years and annual fecal immunochemical test (FIT). Colonoscopy and FIT are recommended as the cornerstones of screening regardless of how screening is offered. Thus, in a sequential approach based on colonoscopy offered first, FIT should be offered to patients who decline colonoscopy. Colonoscopy and FIT are recommended as tests of choice when multiple options are presented as alternatives. A risk-stratified approach is also appropriate, with FIT screening in populations with an estimated low prevalence of advanced neoplasia and colonoscopy screening in high prevalence populations. The second-tier tests include CTC every 5 years, the FIT-fecal DNA test every 3 years, and flexible sigmoidoscopy every 5 to 10 years. These tests are appropriate screening tests, but each has disadvantages relative to the tier 1 tests.'' In terms of benefits of CTC, the MSTF describes lower risk of perforation compared with colonoscopy and write, ''CTC appeals to a niche of patients who are willing to undergo bowel preparation and are concerned about the risks of colonoscopy.'' In terms of risks and tradeoffs, the MSTF describe the requirement for bowel preparation, extracolonic findings, and inferior sensitivity compared to other screening tests and radiation exposure. The MSTF writes, ''[e]vidence that CT colonography reduces CRC incidence or mortality is lacking.''

We also considered the online resource RadiologyInfo™,[730] which is an online public information resource

[730] RadiologyInfo website: *https://www.radiologyinfo.org/*.

developed by health care professionals in collaboration with patients. RadiologyInfo is sponsored by the Radiological Society of North America (RSNA) and the American College of Radiology (ACR). In terms of benefits of CTC, RadiologyInfo described CTC as less invasive than a colonoscopy, though for CTC a small tube is inserted into the rectum to allow for inflation with carbon dioxide or air. In addition, CTC does not require sedation (and transportation accommodations) and carries less risk of bowel perforation compared to colonoscopy. In addition, CTC can identify precancerous polyps that may not be detected by stool-based and blood-based tests. CTC may be a less burdensome first option for patients who are medically fragile or have complex or unusual anatomy. In terms of risks and tradeoffs, RadiologyInfo describes a very small risk of perforated bowel (during inflation), a small risk of secondary cancer due to radiation exposure and it being not recommended for individuals who are pregnant. RadiologyInfo reports that CTC applies a patient radiation exposure similar to barium enema at 6 millisieverts (mSv), which is greater than other preventive screenings, such as CT lung cancer screening at 1.5mSv and screening digital mammography at 0.21 mSv.[731]

After considering the above recommendations and guidelines from appropriate organizations, we stated that we believe CTC to be reasonable and necessary as CRC screening test, especially for patients and clinicians who seek a direct visualization procedure as a first step in CRC screening that is less invasive and less burdensome on the patient and healthcare system compared to screening colonoscopy. Our goal is that the patient and their clinician make the most appropriate choice in CRC screening, which includes considerations of the risks, burdens and tradeoffs for each covered test or procedure. We expect that clinicians who order CTC for CRC screening will educate their patients on risks and context of radiation exposure and potential extracolonic findings. A shared decision-making tool is not mandated but may be helpful for clinicians and patients to weigh their options for CRC screening.

We proposed to add CTC as a covered CRC screening test at § 410.37. We proposed to describe in regulatory text that CTC means a test that uses X-rays and computers to produce images of the entire colon (including image processing and a physician's interpretation of the results of the procedure). We also proposed to codify in regulatory text that Medicare Part B pays for a screening computed tomography colonography if it is ordered in writing by the beneficiary's attending physician, physician assistant, nurse practitioner, or clinical nurse specialist. We also proposed the following limitations of coverage for CTC:

- In the case of an individual age 45 or over who is not at high risk of colorectal cancer, payment may be made for a screening computed tomography colonography performed after at least 59 months have passed following the month in which the last screening computed tomography colonography or 47 months have passed following the month in which the last screening flexible sigmoidoscopy or screening colonoscopy was performed.
- In the case of an individual who is at high risk for colorectal cancer, payment may be made for a screening computed tomography colonography performed after at least 23 months have passed following the month in which the last screening computed tomography colonography or the last screening colonoscopy was performed.

Congress has eliminated Part B coinsurance (section 1833(a)(1)(Y) of the Act, § 410.152(l)(5)) and deductibles (section1833(b)(1) of the Act) for covered prevention services recommended with a grade of A or B by the USPSTF. As described earlier in our proposal, the USPSTF included CTC as a screening method in their May 2021 revised Final Recommendation Statement on CRC screening (Grade A). Thus, if finalized, CTC will require no Part B coinsurance nor deductible when furnished as a CRC screening procedure. We clarify that CTC will continue to require Part B coinsurance and deductible when furnished as a diagnostic or other non-preventive/screening procedure.

We also proposed to exercise our authority in section 1861(pp)(1)(D) of the Act to expand our approach to a ''complete CRC screening'' finalized in § 410.37(k). We proposed to add a Medicare covered blood-based biomarker CRC screening test (as described and authorized in NCD 210.3) alongside the Medicare covered non-invasive stool-based CRC screening test within our approach of a ''complete CRC screening.''

Our goal is for the patient and their healthcare professional to make the most appropriate choice in CRC screening, which include considerations of the risks, burdens and barriers presented with an invasive screening colonoscopy in a clinical setting as their first step. CRC screening presents a unique scenario where there are significant differences between screening stool-based tests and direct visualization procedures such as colonoscopy, flexible sigmoidoscopy and CTC tests in terms of invasiveness and burdens to the patient and healthcare system. We recognize there are several advantages to choosing a non-invasive CRC screening test as a first step compared to a screening colonoscopy, including relative ease of administering the test and potentially reducing the experience of burdensome preparation and invasive procedures. Since the CY 2023 PFS final rule we have heard from many interested parties, including a number of professional societies, that Medicare covered blood-based biomarker tests would be appropriately placed alongside covered non-invasive stool-based tests within a complete colorectal cancer screening context. We have reconsidered our position that Medicare covered blood-based biomarker tests would not belong alongside covered non-invasive stool-based tests within our approach to a complete CRC screening. We consider that some patients may consider a blood test less uncomfortable than administering a stool-based test, especially if the blood draw is concurrent to a routine blood draw for other covered routine bloodwork. We have also heard that some patients may prefer a non-invasive test as their first step but view the stool sample collection process for stool-based tests as a meaningful barrier.[732] We also consider that a blood test may be more accessible to many patients in rural and underserved communities than facilities that furnish screening colonoscopies, flexible sigmoidoscopies and CTC.

NCD 210.3 requires that blood-based biomarker tests for CRC screening must have Food and Drug Administration (FDA) market authorization with an indication for colorectal cancer screening; and proven test performance characteristics for a blood-based screening test with both sensitivity greater than or equal to 74 percent and specificity greater than or equal to 90 percent in the detection of colorectal cancer compared to the recognized standard (accepted as colonoscopy at this time), as minimal threshold levels, based on the pivotal studies included in

[731] *https://www.radiologyinfo.org/en/info/safety-xray.*

[732] Kolata, Gina. ''A Blood Test Shows Promise for Early Colon Cancer Detection'' The New York Times, March 13, 2024. *https://www.nytimes.com/2024/03/13/health/colon-cancer-blood-test.html.*

the FDA labeling. We have heard from interested parties that blood-based biomarker tests for CRC screening may achieve the coverage requirements described in NCD 210.3 within the near term and thereafter quickly become adopted as a non-invasive option within the healthcare system and patient community. Given our existing coverage policy for blood-based biomarker tests for CRC screening (NCD 210.3), we believe our proposal is appropriately proactive, provides for consistent regulatory treatment between blood and stool-based tests, and will ready our regulatory policies for the quickly evolving state of medical technology in methods for CRC screening. We note that while blood-based biomarker tests were not included as a screening method within the May 2021 USPSTF revised Final Recommendation Statement on CRC Screening, they do not require beneficiary cost sharing (coinsurance and deductible) because blood-based biomarker tests will be paid under the Clinical Laboratory Fee Schedule (CLFS). For additional information, see the CMS website at *https://www.cms.gov/medicare/payment/fee-schedules/clinical-laboratory-fee-schedule-clfs*.

We proposed to revise the regulatory text describing a complete CRC screening at § 410.37(k) to state that colorectal cancer screening tests include a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based colorectal cancer screening test or a Medicare covered blood-based biomarker CRC screening test returns a positive result. We also proposed to revise the regulatory text at § 410.37(k) to state the instance of the follow-on colonoscopy in the context of a complete colorectal cancer screening shall not apply to the frequency limitations for colorectal cancer screenings. We believe this statement in regulatory text is clearer and recognizes, outside the context of a complete colorectal cancer screening, the instance of a screening colonoscopy is factored into the calculation of frequency limitations of other covered CRC screening tests and procedures in addition to a subsequent screening colonoscopy.

5. Proposal Summary

In summary, we proposed to exercise our authority at section 1861(pp)(1)(D) of the Act update and expand coverage for CRC screening by (1) removing coverage for the barium enema procedure for CRC screening; (2) adding coverage of the CTC procedure for CRC screening; and (3) expanding our approach to a ''Complete CRC Screening'' to include a covered blood-based biomarker test alongside a covered non-invasive stool-based test.

Our proposal to update and expand CRC screening aligns with the administration's strategic pillar to advance health equity by addressing the health disparities that underlie our health system. In addition, our proposal supports Executive Order 13985 by advancing racial equity and support for underserved communities in the Medicare program. We believe our proposal will directly advance health equity by promoting access and removing barriers for much needed cancer prevention and early detection within rural communities and communities of color that are especially impacted by the incidence of CRC. Our proposal to expand colorectal cancer screening directly supports the Administration's Cancer Moonshot Goal of reducing the deadly impact of cancer and improving patient experiences in the diagnosis, treatment, and survival of cancer.[733]

Our proposal is also supportive of the Administration's Proclamation of March as National Colorectal Cancer Awareness Month in 2024, which includes the statement, ''As a country, we have made impressive progress in the struggle to end cancer over the past several decades due to advancements in prevention, early-detection measures, and new medicines and therapies. Despite remarkable breakthroughs, every year, more Americans are diagnosed with cancer under the age of 50. Earlier detection and improved treatment of colorectal cancer continue to be critical goals of medical research. Further progress is also needed to improve outcomes for those who are disproportionately impacted by this disease—including Americans over the age of 45, Native Americans, Black Americans, and people with a family history of colorectal cancer. There is still more work to be done to ensure more Americans can prevent, detect, treat, and survive colorectal cancer.'' [734]

We solicited comments with the public and appropriate organizations these several proposals.

7. Discussion of Comments and Final Policy

We received public comments on each of the proposals discussed above. The following is a summary of the comments we received and our responses.

Comment: Commenters supported our proposal to exercise our authority in section 1861(pp)(1)(D) of the Act to remove coverage for the barium enema procedure from the CRC screening regulations at § 410.37. They agreed that barium enema procedures no longer meet modern clinical standards, are no longer recommended in clinical guidelines, and would not be an appropriate CRC screening test given the advancement of alternatives. One commenter agreed that barium enema is an infrequently used screening method but also stated that it can be an important option for some patients.

Response: We thank the majority of commenters for supporting our proposal to exercise our authority in section 1861(pp)(1)(D) of the Act to remove coverage for the barium enema procedure from CRC screening in the regulations at § 410.37. While the barium enema procedure was once a CRC screening modality, it is no longer included in any recent CRC guidelines, including the USPSTF and the U.S. Multi-Society Task Force on Colorectal Cancer, and is rarely performed today as it is considered inadequate. Therefore, we will finalize removal of coverage for barium enema, as proposed. We are not adopting the policy recommended by a single commenter to retain coverage of screening barium enemas just in case it might provide another option for some patients.

Comment: The majority of commenters supported our proposal to exercise our authority in section 1861(pp)(1)(D) of the Act to add coverage for the CTC procedure for CRC screening in regulations at § 410.37. The commenters acknowledged that adding CTC is a significant advancement in preventive care and ensures equity in prevention and early detection of colon cancer.

Response: We appreciate the majority of comments supporting the proposal to expand coverage to include CTC as a colorectal cancer screening test in the regulation at § 410.37. We agree that CTC is included in current recommendations and guidelines as a recommended screening modality for detecting and preventing colorectal cancer and polyps. CTC provides an option for patients and clinicians who seek a direct visualization procedure as a first step in CRC screening that is less invasive and less burdensome on the patient. We strive to offer a variety of appropriate CRC screening options to ensure greater access. Patients and their clinician can choose from the appropriate CRC screening test for the individual. Therefore, we are finalizing the addition of CTC, as proposed.

[733] *https://www.whitehouse.gov/cancermoonshot/*.

[734] *https://www.whitehouse.gov/briefing-room/presidential-actions/2024/02/29/proclamation-on-national-colorectal-cancer-awareness-month-2024/*.

Comment: Three commenters did not support adding coverage for the CTC procedure for CRC screening. These commenters stated there is a lack of evidence supporting clinical benefit in the Medicare population and the impact of potential harms have not been adequately studied.

Response: We disagree with the commenters that there is insufficient evidence to support expanding coverage of the CTC procedure as an appropriate CRC screening test. As noted in the proposed rule, we have consulted with appropriate organizations that have supported this expansion. While we acknowledge that the available data on CTC predominantly includes individuals under 65 years old, the studies on the general population evaluating CTC have shown that the CRC detection rates have been high. In addition, current guidelines, including those of the USPSTF and the American Cancer Society, largely rest on the consistent findings of high sensitivity and specificity of CTC for clinically significant mucosal lesions in the general population. After considering all of the public comments, we are finalizing our proposal to expand coverage to include CTC as a colorectal cancer screening test in the regulation at § 410.37.

Comment: The majority of commenters supported our proposal to codify in regulatory text that Medicare Part B pays for a screening CTC if it is ordered in writing by the beneficiary's attending physician, physician assistant, nurse practitioner, or clinical nurse specialist. One commenter suggested that Medicare beneficiaries should be able to refer themselves directly for a CTC without the requirement for an order from a clinician. The commenter noted that CTC should follow screening mammography for breast cancer detection and not require an order for the examination.

Response: We appreciate the comment about patient-directed screenings. Unlike mammography, there are multiple options for CRC screening. We expect that the patient and their clinician will make the appropriate choice in CRC screening for the individual, which includes considerations of the risks, burdens and tradeoffs for each covered test or procedure. Therefore, we are finalizing our proposal that a screening CTC must be ordered in writing by the beneficiary's attending physician, physician assistant, nurse practitioner, or clinical nurse specialists, as proposed.

Comment: The majority of commenters supported our proposed frequency limitations of coverage for CTC. One commenter, while supporting expanding screening to include CTC, requested CMS reconsider the limitations on time between screenings. The other commenter did not believe the coverage of a CTC 47 months after a screening colonoscopy was performed was necessary. They suggested the coverage of CTC for individuals with average risk should be 10 years following the last screening colonoscopy.

Response: The frequency limitations of coverage for CTC average risk and high risk individuals described in our provision are in alignment with clinical evidence-based recommendations by the USPSTF; American Cancer Society; and the United States Multi-Society Task Force (MSTF) of Colorectal Cancer, which represents the American College of Gastroenterology, the American Gastroenterological Association, and the American Society for Gastrointestinal Endoscopy. Therefore, we are finalizing the frequency limitations to coverage, as proposed, with one minor editorial modification for grammatical clarity in paragraph § 410.37(i)(1) adding the words ''was performed'' after the word colonography in the phrase ''59 months have passed following the month in which the last screening computed tomography colonography . . .''.

Comment: Most commenters supported our proposal to add CTC to the definition of CRC screening methods, acknowledging that in accordance with sections 1833(a)(1)(Y) and 1833(b)(1) of the Act, and § 410.152(l)(5)) of the CFR, because CTC has been given Grade A by the USPSTF, Part B coinsurance and deductibles will be eliminated for the preventive screening procedure. The commenters stated that by reducing or eliminating financial barriers, it enhances patient access to these cancer screening tools without the burden of out-of-pocket costs.

Response: We thank commenters for supporting our proposal to add CTC to the regulatory definition of colorectal cancer screening tests. As we noted in the proposal, CTC will continue to require Part B coinsurance and deductible when furnished as a diagnostic or other non-preventive/screening procedure.

Comment: One commenter stated that Medicare should cover CTC provided by outpatient imaging centers, hospitals, and independent diagnostic testing facilities (IDTFs).

Response: We appreciate the comment and support access to CRC screening. This regulation is not placing limitations on appropriate places of service beyond the existing Medicare rules.

Comment: Many commenters supported our proposal to exercise our authority in section 1861(pp)(1)(D) of the Act to expand our approach to a ''complete CRC screening'' at § 410.37(k) to add a Medicare covered blood-based biomarker CRC screening test (described and authorized in NCD 210.3) alongside the Medicare covered non-invasive stool-based CRC screening test within the definition of a ''complete CRC screening.'' Commenters appreciated CMS' recognition that CRC screening would not be complete with a positive blood-based biomarker test alone and noted that a positive test requires a follow-up colonoscopy to confirm the presence of polyps and/or cancer. Commenters stated it is critical that patients complete the full continuum of screening without cost being a barrier.

Response: We thank the commenters for supporting this change.

Comment: All commenters supported our proposal to revise the regulatory text at § 410.37(k) to state the instance of the follow-on colonoscopy in the context of a complete colorectal cancer screening shall not apply to the frequency limitations for colorectal cancer screenings. Commenters supported that this statement in regulatory text is clearer and recognizes, outside the context of a complete colorectal cancer screening, the instance of a screening colonoscopy is factored into the calculation of frequency limitations of other covered CRC screening tests and procedures in addition to a subsequent screening colonoscopy.

Response: We thank commenters for their support. We are finalizing § 410.37(k) with editorial modification of the regulatory text at § 410.37(k) for additional clarity, removing the sentence, ''The instance of the follow-on screening colonoscopy in the context of a complete colorectal cancer screening must not apply to the frequency limitations for colorectal cancer screening.'' We are replacing that sentence with, ''A follow-on screening colonoscopy in the context of a complete colorectal cancer screening is not subject to the frequency limitations for colorectal cancer screening in § 410.37(g)(2) or (3)''.

Comment: Several commenters requested that CMS exercise our authority in section 1861(pp)(1)(D) of the Act to expand our approach to a ''complete CRC screening'' to also add CTC along with the Medicare covered blood-based biomarker CRC screening test and the Medicare covered non-invasive stool-based CRC screening test

within the definition of a ''complete CRC screening''.

Response: We disagree with commenters that requested a further expansion of a complete colorectal cancer screening to include CTC. CTC is a visualization procedure along with colonoscopy and flexible sigmoidoscopy whereas stool-based and blood-based CRC screening tests are non-visualization tests. CTC provides visualization of the contours of the whole colon and demonstrates mucosal surface abnormalities consistent with polyps and tumors. These tests are unlike noninvasive modalities such as stool-based and blood-based CRC screening, which present a binary positive/negative result with variable specificity and may result (in the case of a positive test) in the need for a visualization study to confirm the derived suspicion of adenoma or cancer. The follow-on colonoscopy represents an extension of screening in a patient who has converted from average risk to increased risk as a result of the positive test. In the case of CTC, visualization of the colonic mucosal contour, as well as the remainder of the colonic wall and surrounding structures, has already been achieved and the determination of a suspicious finding has been made. Polyps over the size threshold prompt a referral for diagnostic/therapeutic colonoscopy for the purpose of polypectomy. Therefore, the follow-up screening colonoscopy after a positive non-visualization test is necessary to confirm the presence of polyps and/or cancer. A follow-up colonoscopy after an abnormal finding from a CTC would be considered a diagnostic colonoscopy to biopsy or remove visualized polyps and/or cancer.

Comment: A few commenters requested CMS, when necessary, take the same approach with future screening tests for ''a complete CRC screening.''

Response: We appreciate the feedback and will consider future tests as necessary.

Comment: Two commenters requested that CMS exercise the same authority in section 1861(pp)(1)(D) of the Act to add coverage for the newly FDA-approved CRC screening test using multi-target mRNA stool for in regulations at § 410.37.

Response: The first multi-target mRNA stool CRC screening test received FDA approval in May 2024. Medicare currently covers multi-target stool DNA CRC screening tests in regulations at § 410.37, but not multi-target mRNA tests as a CRC screening test. CMS has accepted a formal NCD reconsideration request and added it to the public facing NCD Dashboard available on our website at *https://www.cms.gov/files/document/ncd-dashboard.pdf*. We look forward to opening the NCD tracking sheet in the future and we will also consult with appropriate organizations as required by section 1861(pp)(1)(D) of the SSA. We note that we did not propose to add mRNA stool CRC screening tests in this proposed rule, as there should be an opportunity for the public to review and provide comment about this relatively new test. The NCD process will provide an opportunity for public participation and for CMS to consider additional relevant scientific and medical information. However, if an mRNA stool test is covered through a reconsideration of the NCD, such a test would qualify as an additional non-invasive stool-based colorectal cancer screening test.

Comment: Another commenter noted that two new colorectal cancer screening tests have recently been FDA-approved; one being a multi-target mRNA stool test and the other being a blood-based biomarker test. The commenter requested that CMS review these tests to determine Medicare coverage.

Response: We appreciate the comment about the newly FDA-approved CRC screening tests. As described above, the multi-target mRNA stool test received FDA approval in May 2024 and CMS accepted a formal NCD reconsideration request in June 2024. The blood-based biomarker test just received FDA approval in July 2024 and met the coverage criteria set forth in NCD 210.3 and therefore, became coverable on the same day of FDA approval.

Comment: One commenter encouraged CMS to consider opportunities to enhance patient outreach and education on these CRC screening services.

Response: We thank the commenters for the feedback and agree on the importance of outreach and educating beneficiaries and stakeholders. We plan to provide implementation instructions for our contractors that will include coding and payment instructions, through the CMS Transmittals online platform. In addition, CMS may provide additional educational articles through the Medicare Learning Network online platform or through the Medicare.gov preventive services website at *https://www.cms.gov/medicare/prevention/prevntiongeninfo/medicare-preventive-services/mps-quickreferencechart-1.html*.

After consideration of public comments, we are finalizing the proposals made in the CY 2025 PFS proposed rule to update and expand colorectal cancer screening and reduce barriers to access to CRC cancer prevention, early detections and improved health outcomes. We are removing coverage for the barium enema procedure from CRC screening in regulations at § 410.37 and adding coverage for the CTC procedure to the definition of CRC screening in the regulations at § 410.37. We are finalizing the associated regulatory language as proposed, with one minor modification for grammatical clarity regarding frequency limitations in paragraph § 410.37(i)(1) adding the words ''was performed'' after the word colonography in the phrase ''59 months have passed following the month in which the last screening computed tomography colonography . . .''.

We are exercising our authority in section 1861(pp)(1)(D) of the Act to finalize expansion of our approach to a ''complete CRC screening'' at § 410.37(k), by adding a Medicare covered blood-based biomarker CRC screening test (described and authorized in NCD 210.3) alongside the Medicare covered non-invasive stool-based CRC screening test within our definition of a ''complete CRC screening''. Additionally, we are finalizing revisions of the regulatory text at § 410.37(k), with modification, to state that the normal frequency time limits established by regulation are not applicable with respect to a follow-on colonoscopy in the context of a complete colorectal cancer screening.

L. Requirements for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan

1. Previous Regulatory Action

Section 2003 of the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities (SUPPORT) Act (Pub. L. 115–271, October 24, 2018) generally mandates that the prescribing of a Schedule II, III, IV, or V controlled substance under Medicare Part D be done electronically in accordance with an electronic prescription drug program beginning January 1, 2021, subject to any exceptions, which HHS may specify. In the CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules, we finalized policies for the CMS Electronic Prescribing for Controlled Substances (EPCS) Program requirements specified in section 2003 of the SUPPORT Act. We refer readers to 85 FR 84802 through 84807, 86 FR 65361 through 65370, 87 FR 70008 through 70014, and 88 FR

79285 through 79292 for the details of those finalized policies. Specifically, in the CY 2021 PFS final rule, we established a requirement that all prescribers conduct electronic prescribing of Schedule II, III, IV, and V controlled substances covered under the Medicare prescription drug program, subject to any exceptions, which HHS may specify, using the NCPDP SCRIPT standard version 2017071 with an effective date of January 1, 2021, and a compliance date of January 1, 2022 (85 FR 84807). In the CY 2022 PFS final rule, we finalized a policy to require prescribers to electronically prescribe at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs, except in cases where an exception or waiver applies (86 FR 65366); and finalized multiple proposals related to the classes of exceptions specified by section 2003 of the SUPPORT Act (86 FR 65366 through 65369). We also extended the earliest date of compliance actions to no earlier than January 1, 2023 (86 FR 65364). For prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a long-term care (LTC) facility, we extended the earliest date of compliance actions to no earlier than January 1, 2025 (86 FR 65364 and 65365). We also finalized our proposal to limit compliance actions, with respect to compliance through December 31, 2023, to a non-compliance notice (86 FR 65370).

In the CY 2023 PFS final rule (87 FR 70012 through 70013), we extended the non-compliance action of sending notices to non-compliant prescribers, which we had finalized for the CY 2023 CMS EPCS Program implementation year (January 1, 2023, through December 31, 2023), to the CY 2024 Program implementation year (January 1, 2024, through December 31, 2024). We also finalized a change to the data sources used to identify the geographic location of prescribers for purposes of the recognized emergency exception at § 423.160(a)(5)(iii) (87 FR 70011 through 70012) and finalized our proposal to use the Prescription Drug Event (PDE) data from the current evaluated year instead of the preceding year when CMS determines whether a prescriber qualifies for an exception based on issuing 100 or fewer Part D controlled substance prescriptions per calendar year (87 FR 70009 through 70011).

In the CY 2024 PFS final rule (88 FR 79285 through 79287), we identified certain terms for use in the CMS EPCS Program and clarified that, by virtue of the cross reference in § 423.160(a)(5) to ''the applicable standards in paragraph (b) of this section,'' which refers to the standards in § 423.160(b), the CMS EPCS Program will automatically adopt the electronic prescribing standards at § 423.160(b) as they are updated. Additionally, we finalized our proposals to remove the same entity exception from the CMS EPCS Program and to add ''subject to the exemption in paragraph (a)(3)(iii) of this section'' to § 423.160(a)(5) (88 FR 79287 through 79288). As a result, prescriptions that are prescribed and dispensed within the same legal entity are included in CMS EPCS Program compliance calculations as part of the 70 percent compliance threshold at § 423.160(a)(5), and prescribers are not exempt from the requirement to prescribe electronically at least 70 percent of their Schedule II through V controlled substances that are Part D drugs—but such prescriptions have to meet the applicable standards in § 423.160(b) subject to the exemption in § 423.160(a)(3)(iii). We also finalized a policy to count only the unique prescriptions in the measurement year for the purposes of CMS EPCS Program compliance threshold calculations (88 FR 79288). Furthermore, for the exceptions that we moved to § 423.160(a)(5)(ii) and (iii), we modified the exceptions to permit prescribers to apply for waivers in times of an emergency and disaster and to limit the emergencies or disasters that will trigger the recognized emergency exception. We also modified the duration of both exceptions and established timing requirements for submitting a waiver application (88 FR 79288 through 79291). Lastly, we stated that we will send notices of non-compliance for each measurement year a prescriber is non-compliant and will provide educational opportunities to support prescribers in becoming compliant (88 FR 79291 through 79292).

2. Timeline for Including Prescriptions Written for Beneficiaries in Long-Term Care (LTC) Facilities in CMS EPCS Program Compliance Calculation

a. Background

In the CY 2021 PFS final rule (85 FR 84807), we adopted the requirement for all Schedule II, III, IV, and V controlled substances for covered Part D drugs prescribed electronically to be prescribed using the applicable standards in § 423.160(b), including the NCPDP SCRIPT standard version 2017071. In the CY 2022 PFS final rule (86 FR 65364), we finalized a policy to extend the date on or after which we will pursue compliance actions against prescribers based on Part D controlled substance prescriptions those prescribers write for beneficiaries in long-term care (LTC) facilities to January 1, 2025. We acknowledged that prescribers who work in LTC facilities or who provide care to residents in LTC facilities faced technological barriers that other prescribers did not face. One such barrier was that the NCPDP SCRIPT standard version 2017071 lacked appropriate guidance for EPCS in LTC facilities. We also noted that NCPDP was in the process of creating a new version of the SCRIPT standard that would be better suited for use by prescribers serving LTC facilities, which would allow willing partners to enable three-way communication between the prescriber, LTC facility, and pharmacy to bridge any outstanding gaps that impede use of the NCPDP SCRIPT standard version 2017071 for EPCS in the LTC setting (86 FR 65364).

We received public comments on the CY 2022 PFS proposed rule requesting that we exempt prescribers writing Part D controlled substance prescriptions for beneficiaries in LTC facilities from having to conduct EPCS until after NCPDP SCRIPT standard version 2022011 was adopted. In response to those comments, in the CY 2022 PFS final rule, we noted that our intent when extending the date on or after which we will pursue compliance actions against prescribers based on Part D controlled substance prescriptions those prescribers write for beneficiaries in LTC facilities was to strike a balance between being responsive to stakeholder concerns surrounding the increased implementation barriers faced by LTC facilities, while at the same time helping to ensure that these facilities eventually implement, and receive the benefits of EPCS (86 FR 65364). Furthermore, we noted that we were not persuaded to further delay commencing compliance actions to await publication of the NCPDP SCRIPT standard version 2022011. We acknowledged that three-way communication is not as seamless in the NCPDP SCRIPT standard version 2017071 as it may be in upcoming versions. We also stated that three-way communication is still possible with some modifications to EPCS, and therefore, we did not believe it would be appropriate to adopt a further delay on this basis alone (86 FR 65364).

In the 2024 PFS final rule (88 FR 79286 through 79287), we clarified that based on the existing regulatory text at § 423.160(a)(5), the CMS EPCS Program will automatically adopt the electronic prescribing standards at § 423.160(b) as they are updated. We noted that in the ''Medicare Program; Contract Year 2024 Policy and Technical Changes to the

Medicare Advantage Program, Medicare Prescription Drug Benefit Program, Medicare Cost Plan Program, Medicare Parts A, B, C, and D Overpayment Provisions of the Affordable Care Act and Programs of All-Inclusive Care for the Elderly; Health Information Technology Standards and Implementation Specifications'' proposed rule (CY 2024 Medicare Advantage and Part D Policy and Technical Changes proposed rule) (87 FR 79550), we proposed to update provisions related to e-prescribing standards at § 423.160(b), including, after a transition period, requiring the NCPDP SCRIPT standard version 2022011 proposed for adoption at 45 CFR 170.205(b) and retiring NCPDP SCRIPT standard version 2017071 by January 1, 2025.

Although we did not propose any policy changes regarding the NCPDP SCRIPT standard version in the CY 2024 PFS proposed rule (88 FR 52532), we received public comments requesting clarification on when the new NCPDP SCRIPT standard version would be adopted and the implications for measuring EPCS compliance in LTC. In response to those comments, in the CY 2024 PFS final rule (88 FR 79286), we acknowledged that we had not finalized our proposal regarding the NCPDP SCRIPT standard version 2022011 that was proposed in the CY 2024 Medicare Advantage and Part D Policy and Technical Changes proposed rule. We also acknowledged that some prescribers prescribing for beneficiaries in LTC facilities have adopted EPCS, but that others have waited for the standard to be updated (88 FR 79286 through 79287). We noted that if the requirement to use an updated version of the NCPDP SCRIPT standard is finalized for a date after January 1, 2025, we may explore whether a waiver is appropriate for prescribers who are not compliant solely as a result of prescriptions they have written for beneficiaries in LTC facilities or we may revisit the compliance start date, if needed, through future rulemaking (88 FR 79287).

In the ''Medicare Program; Medicare Prescription Drug Benefit Program; Health Information Technology Standards and Implementation Specifications'' final rule (89 FR 51242 through 51247), which appeared in the June 17, 2024 **Federal Register** (hereinafter referred to as the June 2024 Part D and Health IT Standards final rule), we finalized at § 423.160(b)(1) the requirement that Part D sponsors, prescribers and dispensers, when electronically transmitting prescriptions and prescription-related information for covered Part D drugs for Part D eligible individuals, must comply with a standard in 45 CFR 170.205(b). Taken in conjunction with the standards and expiration date adopted by the Office of the National Coordinator for Health Information Technology (hereinafter ONC) [735], as described in the June 2024 Part D and Health IT Standards final rule (89 FR 51258 through 51259), § 423.160(b)(1) will require use of NCPDP SCRIPT standard version 2023011, which ONC adopted at 45 CFR 170.205(b)(2), beginning January 1, 2028, and retire use of NCPDP SCRIPT standard version 2017071, which ONC previously adopted at 45 CFR 170.205(b)(1) and to which it is applying an expiration date of January 1, 2028. ONC finalized January 1, 2028, as the expiration date for NCPDP SCRIPT standard version 2017071 instead of January 1, 2027, in consideration of public comments requesting that the date be delayed. As a result of these policies being finalized, the NCPDP SCRIPT standard version 2023011 will be required for the CMS EPCS Program by January 1, 2028. As both NCPDP SCRIPT standard version 2017071 and NCPDP SCRIPT standard version 2023011 will be adopted at 45 CFR 170.205(b) and unexpired as of the effective date of the June 2024 Part D and Health IT Standards final rule, entities subject to the requirement at § 423.160(b)(1) may use either version of the NCPDP SCRIPT standard during the transition period beginning July 17, 2024, the effective date of the June 2024 Part D and Health IT Standards final rule, and ending December 31, 2027, which is the last day before NCPDP SCRIPT standard version 2017071 will expire for the purposes of HHS use.

b. Barriers to Electronic Prescribing of Controlled Substances for Beneficiaries in LTC and the Role of Three-Way Communication in the NCPDP SCRIPT Standard

We understand the challenges of conducting EPCS in the LTC setting to be multifactorial. The specific challenges include prescribers being responsible for covering multiple LTC facilities, each with different electronic health record (EHR) systems; reliance on LTC nursing staff to communicate prescriptions to the pharmacy on behalf of the prescriber; and with respect to NCPDP SCRIPT standard version 2017071, lack of three-way (or multi-party) communication between the prescriber, the LTC facility, and the pharmacy.

When conducting EPCS using the NCPDP SCRIPT standard version 2017071, prescribers can submit prescriptions electronically to the pharmacy, but the prescriber must subsequently contact the LTC facility separately to give an order for the medication so the LTC facility can administer the medication to the patient as prescribed. In cases where EPCS is being conducted and the prescriber has not communicated a separate order to the LTC facility, the pharmacy may deliver a prescription to the LTC facility and if the facility staff has no record of the order, then the LTC facility staff must contact the prescriber for an order to be able to administer the drug to the patient.

To conduct EPCS without having to separately communicate an order to the LTC facility, prescribers can use a web portal to enter an order in the LTC facility's EHR and then, if the EHR supports the necessary EPCS capability,[736] the prescription can be transferred to the pharmacy. However, not all LTC facilities have EHRs with this functionality. Additionally, each LTC facility may have its own web portal, making the number of portals and credentials overly burdensome for prescribers who treat patients who reside in multiple different LTC facilities. After providing an order to the LTC facility, prescribers often rely on LTC facility nursing staff to relay verbal prescription orders to pharmacies as permitted under 21 CFR 1306.03(b) and 1306.21(a).

NCPDP SCRIPT standard version 2023011 permits three-way communication that would better facilitate LTC workflows in a way that NCPDP SCRIPT standard version 2017071 does not. In comments NCPDP submitted in response to the CY 2025 Medicare Advantage and Part D Policy and Technical Changes proposed rule, NCPDP confirmed that it attempted to create guidance on three-way communication using the NCPDP SCRIPT standard version 2017071, but it was not realistic in that version of the

[735] On July 29, 2024, notice was posted in the **Federal Register** that ONC would be dually titled to the Assistant Secretary for Technology Policy and Office of the National Coordinator for Health Information Technology (89 FR 60903).

[736] According to the Drug Enforcement Administration (DEA), for an electronic prescribing system to be used to transmit controlled substance prescriptions, a third party must audit the electronic prescribing application for compliance with the requirements of 21 CFR part 1311, or a certifying organization whose certification process has been approved by DEA must verify and certify that the application meets the requirements of 21 CFR part 1311. See *https://www.deadiversion.usdoj.gov/ecomm/thirdparty.html*.

standard.[737] In NCPDP SCRIPT standard version 2023011, through use of a MessageIndicatorFlag, an RxFill transaction may be sent as a copy to inform or synchronize systems.[738] Through use of this functionality, a prescriber can electronically send a controlled substance prescription (including for a covered Part D drug) to a pharmacy, and the pharmacy can use the MessageIndicatorFlag in an RxFill transaction when dispensing the prescription to inform the LTC facility of the medication order. This functionality streamlines prescribers' workflows and ensures that the LTC facility responsible for providing the controlled substance to the patient is aware of the order.

c. Timeframe for Including Prescriptions Written for Beneficiaries in LTC in the CMS EPCS Program Compliance Calculation

We received multiple public comments in response to the proposal in section III.B.4. of the CY 2025 Medicare Advantage and Part D Policy and Technical Changes proposed rule (88 FR 78489) to require NCPDP SCRIPT standard version 2023011 and retire NCPDP SCRIPT standard version 2017071, requesting that we reconsider the current January 1, 2025 compliance date for when we will include prescriptions written for covered Part D drugs for Part D eligible individuals in a LTC facility in the CMS EPCS Program compliance calculation. Commenters requested that we align the CMS EPCS Program compliance date for prescriptions written for beneficiaries in LTC with the date that NCPDP SCRIPT standard 2023011 will be required. In the June 2024 Part D and Health IT Standards final rule, we indicated that we would consider a change to the CMS EPCS Program compliance date for LTC through the annual Medicare PFS rulemaking process (89 FR 51247).

In the CY 2025 PFS proposed (89 FR 61999) rule, we proposed to revise § 423.160(a)(5) to state that prescriptions written for a beneficiary in a LTC facility would not be included in determining compliance until January 1, 2028, and that compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a LTC facility would commence on or after January 1, 2028. We did not otherwise propose to revise § 423.160(a)(5).

As of the effective date of the June 2024 Part D and Health IT Standards final rule, which was July 17, 2024, Part D sponsors, prescribers, and dispensers, when electronically transmitting prescriptions and prescription-related information for covered Part D drugs for Part D eligible individuals, may use NCPDP SCRIPT standard version 2023011. However, there will be a transition period where both NCPDP SCRIPT standard version 2023011 and NCPDP SCRIPT standard version 2017071 can be used. ONC finalized an expiration date for NCPDP SCRIPT standard version 2017071 of January 1, 2028 (rather than January 1, 2027, as proposed), in part due to commenters' concern about implementing the new standard in LTC facilities (89 FR 51247).

In the CY 2025 PFS proposed (89 FR 61999) rule, we recognized the administrative burden prescribers could potentially face when implementing EPCS for prescriptions written for covered Part D drugs for Part D eligible individuals in LTC facilities using NCPDP SCRIPT standard version 2017071, particularly with the lack of guidance. We also stated that we believe even though prescribers can use NCPDP SCRIPT standard version 2023011 as of July 17, 2024, it may not be feasible to have electronic prescribing systems configured to NCPDP SCRIPT standard version 2023011 by January 1, 2025, the current date by which prescriptions written for covered Part D drugs for Part D eligible individuals in LTC facilities would be included in the CMS EPCS Program compliance threshold calculation. By delaying the inclusion of prescriptions written for covered Part D drugs for Part D eligible individuals in LTC facilities in the CMS EPCS Program compliance threshold calculation to January 1, 2028, we would be aligning CMS EPCS Program compliance calculations to the date by which the NCPDP SCRIPT standard version 2017071 is retired and the new NCPDP SCRIPT standard version 2023011 is required for prescribers when electronically transmitting prescriptions and prescription-related information for covered Part D drugs for Part D eligible individuals. We stated that we believe doing so would provide sufficient time for prescribers and pharmacies to adopt the new standard. Moreover, we acknowledged that LTC facilities will need to configure their EHR systems to be able to receive the MessageIndicatorFlag from the pharmacy, indicating that the prescription has been filled, and establish the necessary policies or operations to convert such a message into an order for the patient in the LTC facility.

We discussed that we considered an alternative where we would permit prescribers to apply for a waiver for circumstances beyond their control rather than modify the date to include prescriptions for beneficiaries in LTC in the compliance threshold calculation. In 2022, approximately 4.7 percent (4.5 million) of Part D Schedule II, III, IV, and V controlled substance prescriptions were written for beneficiaries in LTC facilities, with roughly 52 percent (2.4 million) of them not meeting the CMS EPCS Program standards for e-prescribing. If we kept the existing start date of January 1, 2025, as in the current regulatory text at § 423.160(a)(5) for the CMS EPCS Program, we estimate at least 6,800 additional prescribers would become non-compliant. These estimates are prior to considering emergency and disaster exceptions and waivers, which could reduce these numbers. If we do not extend the current date by which prescriptions written for covered Part D drugs for Part D eligible individuals in LTC facilities would be included in the CMS EPCS Program compliance threshold calculation, then starting with the CY 2025 measurement year, thousands of prescribers may become non-compliant, and those prescribers would potentially apply for a waiver. We explained (89 FR 62000) that we would expect that by the CY 2028 measurement year, many of these prescribers would be compliant and would not need to apply for a waiver because beginning January 1, 2028, NCPDP SCRIPT standard version 2023011 will be the required standard for prescribing and dispensing Part D drugs to Part D eligible individuals and commenters have indicated that this version of the standard will facilitate EPCS in LTC. We reminded prescribers that the CMS EPCS Program compliance rate is calculated using the Prescription Origin Code data element in the PDE record (88 FR 79287), and the PDE is a record of the prescription dispensing event.[739] We noted that we believe that the three-way communication in the NCPDP SCRIPT standard version 2023011 improves communication of

[739] CMS Memorandum. ''Updated Instructions: Requirements for Submitting Prescription Drug Event Data (PDE).'' April 27, 2006. Available from: *https://www.csscoperations.com/internet/csscw3_files.nsf/F/CSSCPDEGuidance.pdf/$FILE/PDEGuidance.pdf.*

the controlled substance prescription as a medication order to the LTC facility's EHR when the pharmacy fills the prescription, but we solicited comment on how the NCPDP SCRIPT standard version 2023011 will improve prescribers' ability to conduct EPCS to the pharmacy dispensing the prescription for individuals in LTC facilities.

We noted in the CY 2025 PFS proposed rule (89 FR 62000) that should we finalize our proposal, we would encourage prescribers who write Schedule II, III, IV, or V controlled substance prescriptions for covered Part D drugs for Part D eligible individuals in LTC facilities to use the additional time to prepare for when such prescriptions for beneficiaries in LTC facilities would be included in the CMS EPCS Program compliance threshold calculation by working to adopt the new standard or investing in technology necessary to conduct EPCS.

We solicited public comment on our proposals to extend the date after which prescriptions for covered Part D drugs for Part D eligible individuals in LTC facilities would be included in our CMS EPCS Program compliance threshold calculation from January 1, 2025, to January 1, 2028, and that related non-compliance actions would commence on or after January 1, 2028. We additionally solicited public comment on how NCPDP SCRIPT standard version 2023011 is expected to improve prescribers' ability to conduct EPCS to pharmacies dispensing covered Part D drugs to Part D eligible individuals in LTC facilities (89 FR 62000).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposals to extend the date after which prescriptions for covered Part D drugs for Part D eligible individuals in LTC facilities would be included in the CMS EPCS Program compliance threshold calculation from January 1, 2025, to January 1, 2028, and for related non-compliance actions to commence on or after January 1, 2028. The commenters supported the alignment between the CMS EPCS Program timeline and the NCPDP SCRIPT standard version 2023011 requirement, noting their belief that this will simplify compliance timelines. A few commenters expressed their belief that the extra time will allow prescribers and LTC facilities to address technical and administrative issues and minimize burden related to adopting multiple standards and configuring EHRs. One commenter agreed that it may not be feasible to have electronic prescribing systems configured to NCPDP SCRIPT standard version 2023011 by January 1, 2025. One commenter noted that while most LTC-based prescribers already prescribe electronically and most LTC pharmacies already process electronic prescriptions from outside prescribers, this proposal will provide sufficient time for others to come into full compliance. One commenter noted that this proposal would prevent a large number of waiver applications.

Response: We thank the commenters for their support and agree with their feedback. The proposal to extend the compliance date for the CMS EPCS Program for covered Part D drugs prescribed for Part D eligible individuals in LTC facilities will simplify timelines for adopting NCPDP SCRIPT standard version 2023011 and will provide additional time for prescribers working in LTCs to adopt the electronic prescribing technology. We also agree this policy will prevent many prescribers who prescribe covered Part D drugs for Part D eligible individuals in LTC facilities from potentially having to apply for a waiver. We remind prescribers that delaying inclusion of Schedule II, III, IV, and V controlled substance prescriptions written for covered Part D drugs for beneficiaries in LTC facilities in the CMS EPCS Program compliance calculation does not exempt prescribers from CMS EPCS Program compliance for Schedule II, III, IV, and V controlled substance prescriptions written for covered Part D drugs for beneficiaries who do not reside in LTC facilities. That is, prescribers who work in both LTC and non-LTC settings may still be subject to compliance actions on the basis of Schedule II, III, IV, and V controlled substance prescriptions written for covered Part D drugs for beneficiaries in non-LTC settings if such prescribers do not otherwise qualify for an exception or waiver.

Comment: A few commenters expressed their concerns about conducting EPCS in LTC facilities. Commenters noted the difficulty prescribers experience working with multiple EHRs in different LTCs and the necessary workarounds when the technology has not been adopted uniformly. Some commenters stated their belief that not all LTCs have EHRs because LTC facilities were excluded from funding in the Health Information Technology for Economic and Clinical Health Act (HITECH Act), enacted as part of the American Recovery and Reinvestment Act of 2009 (Pub. L. 111–5, Feb. 17, 2009). To close this gap, a few commenters requested cost-effective approaches or incentives for LTC facilities, like skilled nursing facility providers, to accept e-prescriptions by January 1, 2028. One commenter stated that unless there is more focus on providing incentives for LTC facilities to upgrade their systems, independent adoption of the NCPDP SCRIPT standard version 2023011 may not be sufficient to overcome these unique e-prescribing challenges among LTC settings.

Response: We appreciate commenters' concerns about difficulties they face working with multiple EHRs in different facilities. We note that the CMS EPCS Program measures prescriber compliance with requirements for electronic prescribing of the applicable controlled substances using information from the PDE data and does not measure electronic communication within LTC facilities. In cases where a prescriber is prescribing from their own health IT systems, the prescriber does not need the LTC facility to have EPCS functionality to be compliant with the CMS EPCS Program, because compliance is measured based on the prescriber sending the applicable prescriptions to the pharmacy electronically using the appropriate standards. We did not propose to establish an incentives program as part of the CMS EPCS Program to incentivize LTC facilities to adopt this technology, and we are not finalizing such a program in this rule. We do believe, however, that LTC facilities having EPCS capabilities with NCPDP SCRIPT standard version 2023011 could simplify the communication between prescribers and LTC facilities, and we encourage LTC facilities to adopt this technology as soon as possible. Finally, if a prescriber is unable to conduct electronic prescribing of controlled substances due to circumstances beyond the prescriber's control, the prescriber may apply for a waiver as permitted under § 423.160(a)(5)(iii).

Comment: A few commenters noted that technical challenges of electronic prescribing of controlled substances in LTC facilities would exist even after the NCPDP SCRIPT standard version 2023011 was adopted. Some prescribers may lack access to EPCS technology or find it disruptive to their workflow to use multiple facility EHR systems. Commenters elaborated and advised that prescribers would continue to use their own systems to issue prescriptions to the pharmacy and communicate to the facility via phone, fax, or non-NCPDP electronic interoperability methods. One commenter noted that in addition to not having compatible health IT across different settings, the

current resolution by means of accessing a portal adds significant burden to prescribers and pharmacies that serve multiple LTC facilities. The commenter stated that this situation creates a risk for delays in LTC short- and long-stay residents receiving necessary medications in a timely manner, resulting in unnecessary pain and other negative clinical outcomes. One commenter noted that NCPDP SCRIPT standard version 2017071 enables pharmacy-to-facility notification, but it occurs too late in the workflow, causing delays and compliance challenges for facilities and that NCPDP SCRIPT standard version 2023011 will not address this challenge. The commenter recommended that prescribers explore methods for directly transmitting copies of prescriptions: prescriber-to-the-facility, in addition to prescriber-to-the-pharmacy as required by the Drug Enforcement Agency (DEA). One commenter noted the potential compliance and operational challenges where prescribers send prescriptions directly to pharmacies, which are then responsible for notifying the facility of the order. The commenter noted LTC facilities must have signed prescriber orders on file to comply with medication management regulations, and the pharmacy's copy typically does not include the prescriber's signature, creating a potential gap in compliance with LTC facility requirements. LTC facilities have direct communication of all orders from prescribers to facility staff. The staff then transcribes and relays these orders, along with any necessary supplementary information, to pharmacies, laboratories, and other relevant parties. The commenter noted that NCPDP SCRIPT standard version 2023011 has limited potential as EPCS adoption increases, since the communication of orders from the pharmacy to the facility is already feasible today.

Response: We appreciate that prescribers who prescribe covered Part D drugs for beneficiaries in LTC facilities may still have challenges even after NCPDP SCRIPT standard version 2023011 is required. While we recognize the functionality the 3-way communication in NCPDP SCRIPT standard version 202311 offers, it is outside the scope of our proposal to address whether such communication meets other, separate requirements for medication orders in LTC facilities. The CMS EPCS Program does not impose requirements for internal communication of medication orders for controlled substances within LTC facilities and does not include such orders in CMS EPCS Program compliance calculations. Rather, CMS EPCS Program requirements at § 423.160(a)(5) specify that *prescribers* must electronically prescribe at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs using applicable standards.

As described in the CY 2022 PFS proposed rule (86 FR 65364), we must balance being responsive to stakeholder concerns surrounding the increased implementation barriers faced by prescribers who prescribe applicable prescriptions for beneficiaries in LTC facilities with encouraging the adoption of EPCS due to the benefits of electronic prescribing. We believe that delaying the date for when applicable prescriptions for beneficiaries in LTC facilities are included in the CMS EPCS Program compliance threshold to align with the January 1, 2028 date on which use of NCPDP SCRIPT standard version 2023011 will be required will provide additional time for prescribers, pharmacies, and LTC facilities to adopt EPCS. We do not believe that we should indefinitely exclude Schedule II, III, IV, and V controlled substance prescriptions written for covered Part D drugs for beneficiaries in LTC facilities from the CMS EPCS Program compliance threshold. As discussed in the CY 2021 and CY 2022 PFS final rules (85 FR 84805 and 86 FR 65363), we believe there are many benefits to EPCS, including fraud deterrence, improved patient safety and workflow efficiencies, adherence management, and reduced burdens. Given these benefits, we continue to encourage prescribers to adopt the technology necessary for EPCS, irrespective of whether LTC facilities have adopted other or related technology, because the CMS EPCS Program measures compliance based on prescriptions sent by the prescriber to the pharmacy. We expect that with the delay, both prescribers and LTC facilities have an opportunity to focus their resources to adopt the NCPDP SCRIPT standard version 2023011, as use of that standard should reduce potential inconsistencies and duplication of communicating the prescription to the pharmacy and the medical order to the LTC facility.

Comment: A few commenters noted the benefits of NCPDP SCRIPT standard version 2023011. A few commenters explained that under NCPDP SCRIPT version 2017071, prescribers can transmit electronic prescriptions for controlled substances to the pharmacy but additionally need to contact the LTC facility to give a separate order for the facility staff to administer the medication to the patient. NCPDP SCRIPT standard version 2023011 is expected to resolve these issues. One commenter acknowledged that CMS recognized the administrative burden prescribers could potentially face when implementing EPCS for prescriptions using NCPDP SCRIPT standard version 2017071, particularly with the lack of guidance. The commenter further elaborated that LTC facilities will need to configure their EHR systems to receive the MessageIndicatorFlag from the pharmacy, indicating that the prescription has been filled, and establish the necessary policies or operations to convert the message into an order for the patient in the LTC facility.

Response: We thank the commenters for their comments regarding limitations of the NCPDP SCRIPT standard version 2017017 and their recognition of the improved 3-way communication benefits of NCPDP SCRIPT standard version 2023011. We acknowledge that LTC facilities may need to configure their EHR systems to support NCPDP SCRIPT standard version 2023011 and are mindful that these updates may result in changes in workflow and may require training for staff. We reiterate that the CMS EPCS Program measures compliance based on the prescriber's use of electronic prescribing for the applicable prescriptions the prescriber transmits to the pharmacy. By delaying the date for which we include prescriptions for beneficiaries in LTC facilities, we are allowing additional time for prescribers to adapt to changes associated with the implementation of the new version of the NCPDP SCRIPT standard.

Comment: One commenter recommended facilitating EPCS adoption earlier than January 1, 2028, for prescriptions for covered Part D drugs for Part D eligible individuals in LTC facilities. The commenter stated that EHR technology companies and senior care providers made significant investments to stay compliant with the CMS EPCS Program timeline of January 1, 2025, and EPCS adoption will provide practical insight on any remaining challenges. The commenter also expressed their belief that the delay will continue to pose operational challenges for both LTC facilities and pharmacies associated with non-electronic communication, such as risk of diversion, paper prescription management, and storage of paper for audits.

Response: We appreciate that LTC facilities have made investments in EPCS and are mindful that NCPDP SCRIPT standard version 2023011 may not resolve all the workflow issues

related to EPCS in LTC facilities. However, we believe that delaying the date for including the applicable prescriptions for beneficiaries in LTC facilities in the CMS EPCS Program compliance calculation is warranted to minimize confusion as prescribers, pharmacies, and LTC facilities move to NCPDP SCRIPT standard version 2023011. We remind commenters that prescribers of Schedule II, III, IV, and V controlled substance prescriptions for covered Part D drugs for beneficiaries in LTC facilities may currently use EPCS and may continue to do so prior to and after January 1, 2028. We encourage prescribers, pharmacies, and LTC facilities to adopt this technology as soon as feasible regardless of whether such prescriptions are included in CMS EPCS Program compliance calculations.

Comment: A few commenters provided additional considerations related to the CMS EPCS Program timeline for LTC. One commenter urged CMS to work with the LTC pharmacy community to evaluate if additional barriers to implementation exist and to consider additional delays in enforcing compliance as needed. Another commenter requested CMS consider a waiver for rural locations utilizing small or homegrown software systems needing additional time to implement electronic prescribing technology. One commenter noted that many LTC facilities have pharmacies that already accept commercial prescriptions and asked CMS to ensure that the extension does not inadvertently place additional burden on providers who may need to employ a different method of prescribing when treating patients in LTC facilities.

Response: We acknowledge the potential challenges of EPCS within LTC settings. By delaying the date by which we will include Schedule II, III, IV, and V controlled substance prescriptions for covered Part D drugs for beneficiaries in LTC facilities in the CMS EPCS Program compliance calculation, we are acknowledging that LTC facilities and their pharmacies may need additional time to implement EPCS technology, which may ultimately impact prescribers' ability to send prescriptions electronically to such LTC pharmacies. We believe that the proposed extension, to January 1, 2028, provides adequate additional time. We did not propose to extend the compliance deadline beyond January 1, 2028, when NCPDP SCRIPT standard version 2023011 will be the required standard for transmitting prescriptions and prescription-related information for Part D drugs for Part D eligible individuals, because public comments discussed in the June 2024 Part D and Health IT Standards final rule generally indicated that this version of the standard would facilitate prescriber use of EPCS for beneficiaries in LTC facilities (89 FR 51246 through 51247). However, we remind prescribers that they may apply for a waiver under § 423.160(a)(5)(iii) if they are unable to conduct electronic prescribing due to circumstances beyond their control. Additionally, the CMS EPCS compliance threshold at § 423.160(a)(5) is 70 percent of applicable prescriptions, which allows the prescriber to be compliant as long as no more than 30 percent of applicable prescriptions are not prescribed electronically. We do not believe our proposal will impact prescribers who already submit their prescriptions electronically to LTC pharmacies, and we encourage all pharmacies and prescribers to adopt EPCS as soon as possible.

After consideration of public comments, we are finalizing our proposals to revise § 423.160(a)(5) to state that prescriptions written for a beneficiary in a LTC facility would not be included in determining compliance until January 1, 2028, and that compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a LTC facility would commence on or after January 1, 2028.

M. Expand Hepatitis B Vaccine Coverage

Hepatitis B vaccines are currently covered as a Medicare Part B benefit under section 1861(s)(10)(B) of the Act. Medicare beneficiaries who are at high or intermediate risk of contracting hepatitis B can receive hepatitis B vaccines, with no cost to the beneficiary. The statute expressly authorizes the Secretary to determine who is at high or intermediate risk of contracting hepatitis B by issuing regulations. The Secretary, through past rulemaking, defined high and intermediate risk groups for hepatitis B vaccine at 42 CFR 410.63. This definition was last updated in the CY 2013 PFS final rule (77 FR 69363, November 16, 2012). Beneficiaries with coverage under Medicare Part D whose level of risk falls outside high or intermediate may have their vaccine covered under the Part D benefit.[740]

Medicare coverage of hepatitis B vaccination is outdated in light of more recent information about the risks of contracting hepatitis B. As explained in more detail in this section, we proposed to improve access and utilization of hepatitis B vaccines by expanding the list of individuals who are at high or intermediate risk of contracting hepatitis B in § 410.63(a).

1. Background

Hepatitis B is a vaccine-preventable liver disease caused by the hepatitis B virus.[741] The vaccine consists of a series of typically 2–3 doses depending on the formulation delivered at various intervals.[742] Hepatitis B virus is transmitted when body fluid (blood, semen, or other) from a person infected with the virus enters the body of someone who is uninfected.[743] This can happen through sexual contact; sharing needles, syringes, or other drug-injection equipment; transmission from the gestational parent to baby during pregnancy or at birth; direct contact with blood or open sores; or sharing contaminated items such as toothbrushes, razors, or medical equipment (such as a glucose monitor) of a person who has hepatitis B.[744] Hepatitis B can be an acute, short-term illness and it can develop into a long-term, chronic infection. Chronic hepatitis B can lead to serious health problems, including cirrhosis, liver cancer, and death. Treatments for hepatitis B are available but no cure exists. There are currently an estimated 2.4 million individuals in the U.S. living with hepatitis B virus and an estimated 20,000 new infections every year.[745] Acute hepatitis B infections among adults leads to chronic hepatitis B disease in an estimated 2–6 percent of

cases.[746] Rates of reported cases of acute hepatitis B have steadily increased among persons aged 40–49, 50–59 years, and 60 years and older from 2015–2019.[747] In 2020, rates declined in all adult age groups. In 2021, rates among all age groups remain stable or declined compared to 2020. The highest rates were among persons 40–49 years (1.6 cases per 100,000 population) and 50–59 years (1.0 case per 100,000 population). The rates for people aged 60 years and older were 0.5 cases per 100,000 population.

Hepatitis B vaccines are safe and effective in preventing hepatitis B virus.[748] The number of reported hepatitis B cases has declined substantially since the vaccine was introduced in 1982, which was achieved through incremental expansion of groups for whom the vaccine was recommended. However, vaccination coverage among adults has been deficient and further reduction in hepatitis B infections in the U.S. has stalled. Approximately 34 percent of adults aged ≥19 years have been vaccinated against hepatitis B.[749] Furthermore, an estimated 20 percent of adults aged ≥60 years have been vaccinated against hepatitis B.

Since 2011, rates of reported cases of acute hepatitis B decreased among children and adolescents aged 0–19 years and persons aged 20–29 years.[750] The Centers for Disease Control and Prevention (CDC) states that this is due, in part, because of the childhood hepatitis B vaccine recommendations that were first implemented in 1991. The Advisory Group for Immunization Practices (ACIP) is a group of medical and public health experts that develops recommendations on how to use vaccines to control diseases in the U.S. and the CDC updates the U.S. adult and childhood immunization schedules consistent with ACIP recommendations.[751] As the cohort of persons vaccinated as children have grown older, rates of acute hepatitis B among persons aged 30–39 years began to consistently decrease beginning in 2015.[752] Conversely, rates of reported cases of acute hepatitis B have steadily increased among persons aged 40–49, 50–59 years, and 60 years and older from 2015–2019 (see Table 65). Overall, the rate of acute hepatitis B cases increased 11 percent from 2014 (0.9 per 100,000) to 2018 (1.0 per 100,000).[753] Injection drug use and sexual transmission are known risk factors associated with rising acute hepatitis B cases. For example, acute hepatitis B infections increased 114 percent from 2006 to 2013 in three states particularly affected by the opioid epidemic (Kentucky, Tennessee, and West Virginia).[754]

TABLE 65: Rates of Reported Acute Hepatitis B Virus Infection, by Age Group – United States

Age (years)	2015	2016	2017	2018	2019
0–19	0.0	0.0	0.0	0.0	0.0
20–29	0.8	0.6	0.6	0.6	0.5
30–39	2.6	2.4	2.3	2.0	1.8
40–49	2.4	2.2	2.5	2.6	2.7
50–59	1.4	1.5	1.6	1.6	1.6
≥60	0.5	0.5	0.6	0.6	0.6

2. Statutory Authority

Section 1861(s)(10)(B) of the Act provides a benefit category under Part B for hepatitis B vaccine and its administration, furnished to an individual who is at high or intermediate risk of contracting hepatitis. The statute expressly authorizes the Secretary to determine who is at high or intermediate risk of contracting hepatitis B for coverage of the hepatitis B vaccine.

3. Regulation

Medicare Part B pays for the hepatitis B vaccine as defined in § 410.63(a), which describes individuals who are at high or intermediate risk of contracting hepatitis and eligible for coverage of

hepatitis B vaccinations under Part B. In the CY 2013 PFS final rule (77 FR 69363), we expanded the definition of individuals at risk of contracting hepatitis B, citing updated ACIP recommendations about increased risk for diabetes patients to support the change. The ACIP stated that the hepatitis B outbreaks were associated with adults with diabetes receiving assisted blood glucose monitoring.[755] Today, the regulations are outdated as these risk categories have been shown to be ineffective and are no longer the focus of how the medical community discusses hepatitis B infection and prevention. In 2019, risk behavior and exposure data were missing for 37 percent of case reports (1,183 of 3,192) of acute hepatitis B infections received by CDC.[756] ACIP also cited a large national survey of family medicine and internal medicine physicians assessing barriers to adult hepatitis B vaccination and found that 68% cited patients' non-disclosure of risk factors.[757]

4. Proposed Regulatory Revisions

Since 1991, hepatitis B vaccination has been recommended by ACIP and the CDC for infants at birth, completing the vaccination series by 16 months of age.[758] This is important because in the U.S., the age cohorts who have received the completed series have low to no risk of contracting the hepatitis B virus, as evidenced by the rate of zero acute hepatitis B virus infections for the 0–19 age group.[759] The infant and childhood recommendations were not in place for most of today's adults which is evidenced by no other age group reaching a rate of zero acute hepatitis B virus infections. Given this information, we consider the population of people who have completed the vaccination series to be at low risk of contracting the hepatitis B virus. Individuals who remain unvaccinated against hepatitis B are at intermediate risk, at minimum, of contracting hepatitis B virus.

We conclude that anyone who is not fully vaccinated to be at intermediate risk of contracting the hepatitis B virus as their risk would be above zero. Additionally, rates of reported cases of acute hepatitis B steadily increased among age groups 40 and over between 2015 and 2019, with stabilizing or declining rates between 2020 and 2021, which may be due to the COVID–19 pandemic.[760] While it is encouraging to see declining rates, these populations remain at intermediate risk given their reported cases remained above zero. Therefore, we proposed to revise § 410.63(a)(2), Intermediate Risk Groups, by adding a new paragraph (a)(2)(iv) to include individuals who have not previously received a completed hepatitis B vaccination series or whose vaccination history is unknown. We included the latter group in this proposal because the CDC has stated that it is not harmful to receive either extra doses or a repeat vaccination series.[761] This will allow these individuals to receive a covered vaccination series when medical history may not be available. Also, the CDC states that screening for hepatitis B virus is not a requirement for vaccination, and in settings where screening is not feasible, vaccination of persons recommended to receive the vaccine should continue.

We noted that § 410.63(a)(3) provides an exception to individuals considered intermediate or high risk of contracting hepatitis B for individuals who have undergone a prevaccination screening and have been found to be currently positive for antibodies to hepatitis B. We noted that, as proposed, § 410.63(a)(2)(iv) would remain subject to this exception because individuals with previous infection would not benefit from the vaccine. However, we note that the CDC states it is not harmful to vaccinate people who are immune to hepatitis B virus because of current or previous infection or vaccination, nor does it increase the risk for adverse events.[762]

5. Proposal Summary

As noted previously, we proposed to revise § 410.63(a)(2), *Intermediate Risk Groups,* by adding paragraph (a)(2)(iv) to include individuals who have not previously received a completed hepatitis B vaccination series or whose vaccination history is unknown. We stated that the proposal is in the best interest of the Medicare program and its beneficiaries because it would help protect Medicare beneficiaries from acquiring hepatitis B infection and contribute to eliminating viral hepatitis as a public health threat in the United States. We solicited comments on the proposal.

6. Comments/Responses and Summary of the Final Policy

We received public comments on the proposed revisions to the hepatitis B vaccine coverage. The following is a summary of the comments we received and our responses.

Comment: All the commenters supported the proposals to expand access to the hepatitis B vaccine in order to increase utilization. The commenters stated that our proposals address concerns about disparities in access to the vaccine for people with Medicare. Some commenters suggested that the proposals would provide greater consistency with other preventive Medicare Part B covered vaccines, including the influenza, pneumococcal, and COVID vaccines.

Response: We appreciate the commenters' support of CMS's efforts to improve access and utilization of the hepatitis B vaccine.

Comment: One commenter asked CMS to exercise enforcement discretion as providers and pharmacies navigate the migration of this vaccine from Part D to Part B coverage and asked that CMS clarify documentation requirements needed and whether an incomplete vaccination record would be sufficient to administer the vaccine.

Response: We are not adopting the commenter's suggestion to exercise enforcement discretion. Hepatitis B vaccines are currently covered as a Medicare Part B benefit under section 1861(s)(10)(B) of the Act. The finalized proposals, which expand coverage under Part B for beneficiaries, will be effective for services furnished on or after January 1, 2025. We believe only a small number of beneficiaries may be receiving the vaccine under Part D. In response to the public comment, we are clarifying that when the rule is effective, an individual whose vaccination history is unknown may receive the hepatitis B vaccine, meaning that a vaccination

record is not needed. The roster bill claim form contains minimal data and does not require a vaccination record. Such a roster bill claim would be similar to other roster billed vaccines, which include the influenza, pneumococcal, and COVID vaccines.

Comment: Some commenters stated that they look forward to working with CMS to expand the mass immunizer program to include all future preventive Part B vaccines. Some commenters noted that only four preventive vaccines are covered under Medicare Part B which creates barriers to offering in-office administration of newer vaccines, such as shingles and respiratory syncytial virus (RSV) vaccines, to Medicare beneficiaries during an office visit. They also recognized that CMS does not have the authority to add new ACIP-recommended vaccines to Part B coverage, but urged CMS to work with Congress to close this known gap that creates access barriers for patients to much needed vaccines.

Response: We appreciate the suggestions for expanding Medicare coverage under part B for additional vaccines in the future. As some commenters have noted, however, additional legislation would be necessary to expand the scope of coverage under Part B for these additional vaccines. Because those suggestions are outside the scope of our proposed rule, no further response is required.

After considering the public comments, we are finalizing our proposed revisions to § 410.63(a)(2). Specifically, we are adding individuals who have not previously received a completed hepatitis B vaccination series or whose vaccination history is unknown to the list of intermediate risk groups. Expanding the definition of intermediate risk groups will help protect Medicare beneficiaries from acquiring hepatitis B infection, contribute to eliminating viral hepatitis as a public health threat in the United States and is in the best interest of the Medicare program and its beneficiaries.

N. Low Titer O+ Whole Blood Transfusion Therapy During Ground Ambulance Transport

1. Ambulance Fee Schedule Background

Section 1861(s)(7) of the Act establishes an ambulance service as a Medicare Part B service where the use of other methods of transportation is contraindicated by the individual's condition, but only to the extent provided in regulations. Our regulations relating to coverage for ambulance services are set forth at 42 CFR part 410, subpart B. Since April 1, 2002, payment for ambulance services has been made under the ambulance fee schedule (AFS), which the Secretary established, as required by section 1834(l) of the Act, in 42 CFR part 414, subpart H. Payment for an ambulance service is made at the lesser of the actual billed amount or the AFS amount, which consists of a base rate for the level of service, a separate payment for mileage to the nearest appropriate facility, a geographic adjustment factor (GAF), and other applicable adjustment factors as set forth at section 1834(l) of the Act and § 414.610 of the regulations. In accordance with section 1834(l)(3) of the Act and § 414.610(f), the AFS rates are adjusted annually based on an inflation factor. The AFS also incorporates two permanent add-on payments in § 414.610(c)(5)(i) and three temporary add-on payments in § 414.610(c)(1)(ii) and (c)(5)(ii) to the base rate and/or mileage rate.

2. Low Titer O+ Whole Blood Transfusion Therapy During Ground Ambulance Transport

Under the AFS, Medicare Part B covers seven levels of service for ground (including water) ambulance transports and two levels of service for air ambulance transports. The levels of service for ground ambulance transports include basic life support (emergency); basic life support (non-emergency); advanced life support, level 1 (ALS1) (emergency); ALS1 (non-emergency); advanced life support, level 2 (ALS2); paramedic intercept; and specialty care transport (§ 410.40(c)). Definitions for the levels of service can be found at § 414.605 and in the Medicare Benefit Policy Manual, Chapter 10, Ambulance Services, section 30.1.1, Definition of Ground Ambulance Services.

At § 414.605, ALS2 is defined as either transportation by ground ambulance vehicle, medically necessary supplies and services, and the administration of at least three medications by intravenous push/bolus or by continuous infusion, excluding crystalloid, hypotonic, isotonic, and hypertonic solutions (Dextrose, Normal Saline, Ringer's Lactate); or transportation, medically necessary supplies and services, and the provision of at least one of the following ALS procedures: (1) Manual defibrillation/cardioversion; (2) Endotracheal intubation; (3) Central venous line; (4) Cardiac pacing; (5) Chest decompression; (6) Surgical airway; (7) Intraosseous line. These procedures must be performed by ALS personnel trained to the level of the emergency medical technician-intermediate (EMT-Intermediate) or paramedic (§ 414.605).

According to the 2020 National Association of State Emergency Medical Services Organizations Assessment (NASEMSO), there are approximately 11,450 ground EMS agencies that provide 9–1–1 response with transport to an acute care hospital.[763] The administration of low titer O+ whole blood transfusions, otherwise referred to as whole blood transfusion therapy (WBT), began in 2017 when two Emergency Medical Services (EMS) systems in Texas began providing WBT to patients in hemorrhagic shock during ambulance transports. Prior to this, use of blood products in the treatment of hemorrhagic shock in the form of blood component therapy was available only in the hospital setting and by one EMS system. Low titer O+ whole blood contains low levels of antibodies that patients of any blood type can receive, and is provided in EMS settings to significantly increase these patients' chances of survival.

By September 2023, more than 121 EMS systems in the United States were using blood products in the form of either WBT, packed red blood cells (PRBCs), plasma, or a combination of PRBCs and plasma.[764] Seventy percent of these systems were using WBT.[765] As of March 2024, 147 EMS systems (1.2 percent of the EMS systems in the United States) carry whole blood products, with 200 or more systems anticipated to provide some form of blood product transfusion by the end of 2024.[766] Today, nearly 60 percent of those 147 EMS systems carry low titer O+ whole blood, with the remainder utilizing other blood products.[767]

EMS systems that administer WBT and other blood products (PRBCs and plasma) generally utilize it for patients suffering hemorrhagic shock stemming from traumatic injury, though it may also be indicated in certain non-

[767] Ibid.

traumatic medical conditions such as hemorrhagic shock from a gastrointestinal bleed.[768] Traditional EMS resuscitation protocol for massive hemorrhage from trauma and other medical conditions such as gastrointestinal bleeding consists of crystalloid fluids and blood component transfusions, which consist of a balanced portion of PBRCs, platelets, and fresh frozen plasma.[769]

During the conflicts in Iraq and Afghanistan, use of this traditional protocol was difficult due to the austere combat environment and limited availability of blood components, which often necessitated the use of fresh whole blood (FWB) in traumatic resuscitation.[770] Data collected related to these conflicts demonstrated improvements in survival rate and reductions in transfusion requirements for military casualties in hemorrhagic shock who received FWB versus those receiving traditional blood component transfusion, and spurred research and interest in the use of WBT in civilian trauma.[771] Additional data demonstrating an improvement in 24-hour and 30-day survival rate among medically evacuated combat casualties in Afghanistan who received prehospital transfusion encouraged research and interest in these techniques for possible deployment by EMS services.[772]

In the treatment of civilian patients with hemorrhagic shock from trauma, studies have demonstrated that WBT provides a substantial survival benefit versus traditional component therapy,[773] especially when provided early in the prehospital and hospital settings.[774] One study found WBT increased the survival of such patients by as much 60 percent and reduced the need for additional blood products in the 24-hour period following the initial transfusion by 7 percent.[775] Another study noted that there was a significant increase in the 24-hour and 30-day survival rate in patients suffering from severe hemorrhage requiring a large transfusion volume.[776]

Patients suffering from hemorrhagic shock require stabilization in the field and rapid transport to an acute care hospital to treat the source of hemorrhage.[777] Individuals who are experiencing hemorrhagic shock primarily due to blood loss may require WBT as their only resuscitative treatment. Each unit of whole blood takes 5–8 minutes to transfuse.[778] Depending on the time needed to transport and clinical need, patients generally receive 1–2 units of WBT during ground transport.[779]

While there may be variance between jurisdictions, the protocols for many EMS systems currently providing WBT are designed for patients who require complex management at the advanced life support level, demonstrating suspicion of blood loss along with evidence of physiologic shock as indicated by parameters such as low blood pressure, an elevated pulse rate, or slow capillary refill.[780] Other relevant factors may include an elevated lactate level, an End-tidal carbon dioxide (EtCO2) waveform capnography reading <25 as surrogate for elevated lactate, a shock index (heart rate/systolic blood pressure) >1, and, where appropriate and consistent with protocol, authorization by online or other medical authority.[781]

We believe that many ground ambulance transports providing WBT already qualify for ALS2 payment, since patients requiring such transfusions are generally critically injured or ill and often suffering from cardio-respiratory failure and/or shock, and therefore are likely to receive one or more procedures currently listed as ALS procedures in the definition of ALS2, with endotracheal intubation, chest decompression, and/or placement of a central venous line or an intraosseous line the most probable to be seen in these circumstances. Patients requiring WBT are typically suffering from hemorrhagic shock, for which the usual course of treatment includes airway stabilization, control of the hemorrhagic source, and stabilization of blood pressure using crystalloid infusion and the provision of WBT or other blood product treatments when available, but not necessarily the administration of advanced cardiac life support medications.[782] Consequently, we do not believe it is likely that most patients who may require WBT would trigger the other pathway to qualify as ALS2, that is, the administration of at least three medications by intravenous push/bolus or by continuous infusion, excluding crystalloid, hypotonic, isotonic, and hypertonic solutions (Dextrose, Normal Saline, Ringer's Lactate).

However, not all ground ambulance transports providing WBT may currently qualify for ALS2 payment. An ambulance transport would not qualify for ALS2 payment where a patient received only WBT during a ground ambulance transport, and not one or more other services that, either by themselves or in combination, presently

qualify as ALS2. We believe WBT should independently qualify as an ALS2 procedure because the administration of WBT and handling of low titer O+ whole blood requires a complex level of care beyond ALS1 for which EMS providers and suppliers at the EMT-Intermediate or paramedic level require additional training. In addition, WBT requires specialized equipment such as a blood warmer and rapid infuser.[783] While there is no established national training protocol, many systems follow the guidelines of the Association for the Advancement of Blood and Biotherapies (AABB), which require additional training that is 4 hours in length for paramedics and 6 hours in length for EMS supervisory staff.[784] Medicare's requirements for ambulance staffing at § 410.41(b) include compliance with state and local laws; those laws would establish appropriate training requirements with respect to WBT administration.

Therefore, we believe it is appropriate to modify the definition of ALS2 to account for the instances where patients are administered WBT but do not otherwise qualify for ALS2 payment. Of note, we do not have the authority to provide an additional payment, such as an add-on payment for the administration of WBT under the AFS.

We proposed in the CY 2025 PFS proposed rule (89 FR 62002 through 62004) to modify the definition of ALS2 at § 414.605 by adding the administration of low titer O+ whole blood transfusion to the current list of seven ALS2 procedures as a new number 8. We would also reflect this change in the Medicare Benefit Policy Manual, Chapter 10, Ambulance Services, section 30.1.1, Definition of Ground Ambulance Services. Under this proposal, a ground ambulance transport that provides WBT would itself constitute an ALS2-level transport.

We are aware that some established EMS systems may already provide WBT to treat patients in hemorrhagic shock, while other jurisdictions, particularly including those in rural areas, often will rely on alternative blood product treatments such as PRBCs and plasma. The availability of WBT in rural areas is a complex and multifactorial issue. Fluctuating stock of the ''raw product'' (blood donations) along with local healthcare demands for blood products (PRBCs, platelets, plasma, etc.) affect the availability of WBT. Other issues in rural areas include the logistical challenges and the costs involved in acquiring fresh units of WBT and returning any unused units to a supplier.[785]

The training, administration, and monitoring is the same for these alternative blood product treatments as it is for WBT. While we did not include alternative blood product treatments in our proposal, we solicited comment on whether we should add them to the list of ALS2 procedures. We invited comments on this proposal to add the administration of low titer O+ whole blood transfusion as an ALS2 procedure and on whether we should add alternative blood product treatments such as the administration of PRBCs or plasma.

We received public comments on our proposal and solicitation of comments. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that whole blood is not the current standard of care in pre-hospital transfusions, is very expensive, and is more difficult to source than individual blood components.

Response: As previously discussed, many ground ambulance transports providing WBT already qualify for ALS2 payment. WBT is a therapy that is currently being used and is considered to be medically appropriate in certain circumstances by the medical community. Our proposal aimed to ensure that payments for ground ambulance transports better reflect the complexity of the services provided. We are aware that WBT can be difficult to source, and access can be based on factors such as: donor availability, local manufacturing capabilities, demand and usage. We are also aware that geographic locale may be a factor as well.

Comment: Some commenters supported our proposal to add low titer O+ whole blood transfusion to the list of ALS2 procedures. Some commenters stated that the administration of low titer O– whole blood transfusion should also be added to the list of ALS2 procedures.

Response: We appreciate the commenters' support for our proposal and for bringing to our attention that the administration of O– whole blood transfusions, like the administration of O+ whole blood transfusions, should independently qualify as an ALS2 procedure. Low-titer O– blood has the same hemostatic composition and resuscitative benefits as low titer O+ blood but can only be obtained from 3 percent of blood donations because of the rarity of this blood type. Because of its rarity, hospitals and blood banks tend to hold this product in reserve for use in certain patient populations (pediatric, women of childbearing age, sickle cell patients) or clinical conditions such as obstetric hemorrhage.[786]

For that reason—its rarity and general unavailability to ground ambulance providers and suppliers—we had refrained from adding low titer O– whole blood transfusion to our original proposal. After further discussion with EMS officials, we were made aware that some agencies may occasionally receive and use a unit of low titer O– whole blood as part of their transfusion program. Transfusion of low titer O– whole blood requires the same handling and level of training as low titer O+ whole blood. We are therefore adding low titer O– whole blood transfusion to the list of ALS2 procedures at § 414.605.

Comment: Several commenters provided feedback on whether we should add alternative blood product treatments in addition to low titer O+ WBT to the list of ALS2 procedures. Several commenters stated that, given the complexity involved in administering alternative blood products and their expense, the administration of all FDA-approved blood and blood components products (whole blood, plasma, PRBCs, platelets, and clotting fractions such as cryoprecipitate) should be included in the list of ALS2 procedures.

A commenter stated that HHS' Agency for Healthcare Research and Quality (AHRQ) is currently conducting a systematic review on the feasibility, effectiveness, and safety of blood and blood product transfusions in the prehospital setting and will be comparing the benefits and harms of

low-titer O+ and O– whole blood transfusion, component blood therapy transfusion, and fluid resuscitation. The commenter stated that AHRQ indicates that the results of the systematic review will inform future prehospital care evidence-based guidelines, protocols, and state and local EMS agency decision-making.

In addition to the ongoing studies and systematic review, the commenter stated that more research and comprehensive data are needed to evaluate these critical interventions, including the risks and benefits of the therapy options to different patient populations and to the continued availability of the blood supply. The commenter stated that a comprehensive gap analysis is also needed to: (1) identify research questions; (2) assess EMS capabilities and operational limitations; (3) define the scope of training needed for EMS personnel to safely administer blood in pre-hospital settings; (4) understand blood collectors' operational limitations that may impact the availability of different interventions; (5) evaluate the potential impact of pre-hospital transfusion programs on the hospitals' inventories, which are essential to patient care; and (6) study blood wastage and methods to limit it.

Response: We appreciate the commenter bringing to our attention the ongoing studies and systematic reviews. CMS looks forward to the results of the study, but we note that current research, guidelines, and EMS protocols indicate that the administration of these services is sufficiently complex that, upon our review, they each should independently qualify as an ALS2 procedure. Many ground ambulance transports already provide blood and blood product transfusions. Based on our review and feedback received from interested parties, we are not aware of any evidence indicating issues with safety or efficacy that may lead CMS to consider not paying for these services furnished as part of a ground ambulance transport.

Upon further review and feedback from interested parties, we have determined that all prehospital blood transfusions (PHBTs), which refer to the administration of low titer O+ and O– WBT, packed red blood cells (PRBCs), plasma, or a combination of PRBCs and plasma, should independently qualify as an ALS2 procedures; the administration of low titer O+ whole blood transfusion should not be the only PHBT that independently qualifies as an ALS2 procedure, as we had proposed in the CY 2025 PFS proposed rule (89 FR 62004). The administration, handling, training, specialized equipment, and medical criteria of low titer O– whole blood, PRBCs, and plasma are the same as previously described with respect to low titer O+ whole blood; they require a complex level of care beyond ALS1 for which EMS providers and suppliers at the EMT-Intermediate or paramedic level require additional training.

Use of PHBT is currently considered to be the best practice recommendation by the Trauma, Hemostasis and Oxygenation Research Network and the American Association of Blood Banks Working Party.[787] An early study found that using PRBCs during transport improved the prehospital mortality rate for patients in hemorrhagic shock.[788] A recent study of penetrating injuries in an urban setting found an in-hospital mortality benefit of 22 percent if a PHBT was performed within 15 minutes of the initial patient-EMS encounter.[789] The study also found that the mortality rate increased by 11% for every minute a blood transfusion was delayed after that initial 15 minute period.[790] Another recent study in which the use of two units of PRBCs were central to its initial resuscitation of massively hemorrhaging patients found that this PHBT reduced both prehospital and overall mortality.[791]

The American College of Surgeons Committee on Trauma, the American College of Emergency Physicians, the National Association of EMS Physicians and the U.S. Military's Tactical Combat Casualty Care (TCCC) guidelines recommend WBT as the first line of resuscitative therapy for trauma patients in hemorrhagic shock, followed by PRBCs, and plasma in lieu of crystalloids. To clarify our earlier TCCC statement, traditional resuscitation protocols for massive hemorrhage from trauma and other medical conditions such as gastrointestinal bleeding consisted of crystalloids alone in the field and followed in the hospital with blood component transfusions, which consists of a balanced portion of PRBCs, platelets and fresh frozen plasma. Studies cited previously and noted below have demonstrated a mortality benefit in the use of these products for patients in hemorrhagic over traditional crystalloid therapy especially when provided earlier in the resuscitative process. One early study evaluated patients receiving four different prehospital resuscitation methods: crystalloid only; PRBCs; plasma; and PRBCs and plasma.[792] Data showed that any blood product resuscitation was associated with a lower mortality than crystalloid alone. PRBCs and plasma have similar reductions in mortality; however, PRBCs and plasma had a much greater reduction in mortality than either PRBCs or plasma alone. When used alone, crystalloid fluids in this study demonstrated the greatest mortality.[793]

Other blood products such as platelets and cryoprecipitate are used as part of the resuscitative process after the patient arrives in the hospital. At this time there is little data of their use in the field by EMS providers for patients in hemorrhagic shock. Furthermore, at this time, the use of these products in the field is limited by factors such as their expiration dates and storage requirements. Platelets have a 5 day expiration date and require continuous agitation while in storage at room temperature. Cryoprecipitate requires storage at negative 18 degrees Celsius and thawing before delivery.

Comment: Several commenters stated that the WBT proposal will not have any positive effect on actual reimbursement of the cost associated with keeping and administering blood products because patients sick enough for blood administration already meet the ALS2 criteria. Several commenters stated that the current rate for ALS2 is far too low to accommodate the cost of providing pre-hospital blood transfusions. One commenter stated that they do not support including whole blood or blood products within the AFS unless there are appropriate increases in payment.

Some of these commenters recommended that CMS create a new level of service, ALS3. One commenter recommended a new ALS3 level for critical care that would include, but would not be limited to, the following procedures: blood transfusions, ventilator administration, rapid sequence intubation, chest tube

[793] Ibid.

placement, surgical airway placement, heparinization of patients suffering from an acute myocardial infarction, and placement of umbilical vein catheters in newborns. Other commenters suggested a new level of service for prehospital blood programs.

Several commenters recommended additional funding to fully support adding the administration of low titer O+ WBT as an ALS2 procedure. One commenter recommended a CMMI payment and service delivery model that would incorporate pre-hospital blood transfusions into EMS, where the model should include a pre-hospital blood product add-on payment that incorporates the costs associated with procuring, storing, and administering blood transfusions. The commenter offered that model activities may include, but should not be limited to, procuring blood products from entities such as blood collection establishments and hospitals, storing blood products in accordance with safety standards, and transfusing the blood safely and effectively.

Response: We noted in the CY 2025 PFS proposed rule (89 FR 62004) that we do not have the authority to provide an additional payment, such as an add-on payment for the administration of WBT under the AFS. We may consider the other commenter suggestions for future rulemaking.

Comment: One commenter was concerned about budget neutrality with this proposal, expressing concern that it ought not potentially reduce reimbursement for other appropriate ambulance services.

Response: AFS payment for the other levels of ground ambulance services will not be reduced by virtue of the policies we finalize here.

Comment: Several commenters recommended that payment for WBT and alternative blood product treatments should also be included in air ambulance transport payment.

Response: We appreciate the commenters' input, but comments relating to air ambulance transport are out of scope for this rule.

Comment: One commenter requested clarification that the administration of WBT also meets the requirements for specialty care transport (SCT) if all other requirements are met. The commenter noted that the phrase ''critically injured or ill'' appears in the definition of SCT and in the rationale for including the administration of low titer O+ WBT as an ALS2 procedure.

Response: At § 414.605, SCT means interfacility transportation of a critically injured or ill beneficiary by a ground ambulance vehicle, including medically necessary supplies and services, at a level of service beyond the scope of the EMT-Paramedic. SCT is necessary when a beneficiary's condition requires ongoing care that must be furnished by one or more health professionals in an appropriate specialty area, for example, nursing, emergency medicine, respiratory care, cardiovascular care, or a paramedic with additional training. We define interfacility transport in the Medicare Benefit Policy Manual, Chapter 10, Ambulance Services, Chapter 30.1.1, Definition of Ground Ambulance Services, as: for purposes of SCT payment, an interfacility transportation is one in which the origin and destination are one of the following: a hospital or skilled nursing facility that participates in the Medicare program or a hospital-based facility that meets Medicare's requirements for provider-based status.

An interfacility transport of a critically injured or ill beneficiary by a ground ambulance vehicle does not meet the definition of SCT if the only service provided to the patient during the transport is the administration of low titer O+ whole blood transfusion. The administration of low titer O+ whole blood transfusion requires an individual trained to the level of the emergency medical technician-intermediate (EMT-Intermediate) or paramedic. It does not require a level of service beyond the scope of the EMT-Paramedic, as required under § 414.605 although CMS notes that requirements may vary by state. We also note that it may be possible, during a transport that otherwise meets the definition of SCT, that the administration of low titer O+ whole blood transfusion may be provided as a medically necessary service, and that the service would therefore be payable as part of a SCT.

Comment: A commenter requested clarification as to whether the medical monitoring of WBT qualifies for ALS2 as it does for endotracheal intubation. The commenter stated that in certain situations, primarily interfacility transports, another healthcare provider may initiate WBT, which an ALS provider or supplier will monitor and maintain during transport. The commenter believes that the transport should qualify as an ALS2 based on the monitoring and maintenance of WBT.

Response: In the Medicare Benefit Policy Manual, Chapter 10, Section 30.1.1, under Application for ALS 2, we state: Endotracheal (ET) intubation (which includes intubating and/or monitoring/maintaining an ET tube inserted prior to transport) is a service that qualifies for the ALS2 level of payment. Medical monitoring of WBT by an EMT-Intermediate or paramedic with additional training to administer WBT during a ground ambulance transport would qualify for ALS2 payment.

After consideration of public comments and upon further review, we are modifying our proposed policy to add the administration of low titer O+ whole blood to the list of procedures that independently qualify as an ALS2 procedure and finalizing a policy to change the definition of ALS2 at § 414.605 by including all PHBTs in the list of procedures that independently qualify as an ALS2 procedure. Specifically, we are modifying the definition of ALS2 at § 414.605 so that the list of ALS2 procedures now includes, as a new number 8, prehospital blood transfusion, which includes the administration of low titer O+ and O– whole blood; the administration of packed red blood cells; the administration of plasma; or the administration of a combination of packed red blood cells and plasma.

O. Medicare Parts A and B Overpayment Provisions of the Affordable Care Act (§ 401.305(a)(2), 401.305(b)(1), (2), and (3))

1. Executive Summary

In the proposed rule titled ''Medicare Program; Contract Year 2024 Policy and Technical Changes to the Medicare Advantage Program, Medicare Prescription Drug Benefit Program, Medicare Cost Plan Program, Medicare Parts A, B, C, and D Overpayment Provisions of the Affordable Care Act and Programs of All-Inclusive Care for the Elderly; Health Information Technology Standards and Implementation Specifications,'' which appeared in the December 27, 2022 **Federal Register**, we proposed to amend our regulations regarding the standard for an ''identified overpayment'' under Medicare Parts A, B, C, and D to align the regulations with the statutory language in section 1128J(d)(4)(A) of the Act, which provides that the terms ''knowing'' and ''knowingly'' have the meaning given those terms in the Federal False Claims Act (the False Claims Act) at 31 U.S.C. 3729(b)(1)(A) (87 FR 79452). We refer to that rule as the ''December 2022 Overpayment Proposed Rule.'' In the December 2022 Overpayment Proposed Rule, we proposed to remove the existing ''reasonable diligence'' standard and adopt by reference the False Claims Act definition of ''knowing'' and ''knowingly'' as set forth at 31 U.S.C. 3729(b)(1)(A).

After considering the public comments we received in connection with the December 2022 Overpayments Proposed Rule, we issued a statement in the proposed rule, titled ''Medicare and Medicaid Programs; CY 2025 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Prescription Drug Inflation Rebate Program; and Medicare Overpayments'' (CY 2025 PFS), stating that we would retain the Parts A and B proposals published in the December 2022 Overpayment Proposed Rule. In the CY 2025 PFS, we also made additional proposals to revise existing regulations at § 401.305(b) regarding the deadline for reporting and returning overpayments. We are finalizing both the December 2022 Overpayment Proposed Rule proposals and the CY 2025 PFS proposals in this final rule.

2. Provisions of the Regulation (Preamble)

Section 6402(a) of the Patient Protection and Affordable Care Act (Pub. L. 111–148), as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) (collectively known as the Affordable Care Act), established section 1128J(d) of the Act. Section 1128J(d)(1) of the Act requires a person who has received an overpayment to report and return the overpayment to the Secretary, the State, an intermediary, a carrier, or a contractor, as appropriate, and to notify the Secretary, State, intermediary, carrier or contractor to which the overpayment was returned in writing of the reason for the overpayment. Section 1128J(d)(4)(B) of the Act defines the term ''overpayment'' as any funds that a person receives or retains under title XVIII or XIX to which the person, after applicable reconciliation, is not entitled under such title. For purposes of Medicare Parts A and B, section 1128J(d)(4)(C) of the Act defines the term ''person'' to include providers and suppliers as those terms are defined in the Act.

Section 1128J(d)(2) of the Act requires that an overpayment be reported and returned by the later of: (1) the date which is 60 days after the date on which the overpayment was identified; or (2) the date any corresponding cost report is due, if applicable. Section 1128J(d)(3) of the Act specifies that any overpayment retained by a person after the deadline for reporting and returning an overpayment is an obligation (as defined in 31 U.S.C. 3729(b)(3)) for purposes of the False Claims Act, 31 U.S.C. 3729.

Section 1128J(d)(4)(A) of the Act provides that the terms ''knowing'' and ''knowingly'' have the meaning given those terms in the False Claims Act at 31 U.S.C. 3729(b)(1)(A). The False Claims Act (31 U.S.C. 3729(b)(1)(A)) defines the terms ''knowing'' and ''knowingly'' to include information about which a person ''has actual knowledge,'' ''acts in deliberate ignorance of the truth or falsity of the information,'' or ''acts in reckless disregard of the truth or falsity of the information.''

a. Regulations Issued Under Section 1128J(d) of the Act

On May 23, 2014, we published a final rule titled ''Medicare Program; Contract Year 2015 Policy and Technical Changes to the Medicare Advantage and the Medicare Prescription Drug Benefit Programs'' (79 FR 29844) (hereinafter referred to as the ''Parts C and D Overpayment Final Rule''), which provided, among other things, that an MAO or PDP sponsor has identified an overpayment when the MAO or PDP sponsor has determined, or should have determined through the exercise of reasonable diligence, that the MAO or PDP sponsor has received an overpayment.

On February 12, 2016, we published a final rule titled ''Medicare Program; Reporting and Returning of Overpayments'' (81 FR 7654) (hereinafter referred to as the ''Parts A and B Overpayment Final Rule''), which provided, among other things, that a provider or supplier has identified an overpayment when the provider or supplier has determined, or should have determined through the exercise of reasonable diligence, that the provider or supplier has received an overpayment and quantified the amount of the overpayment.

In the December 2022 Overpayment Proposed Rule, we proposed to amend the existing regulations for Medicare Parts A and B, as well as Parts C and D, regarding the standard for an ''identified overpayment'' to align the regulations with the statutory language in section 1128J(d)(4)(A) of the Act. These proposed regulations would assign the meaning of the terms ''knowing'' and ''knowingly'' in the False Claims Act at 31 U.S.C. 3729(b)(1)(A) to our regulations for purposes of Medicare overpayments. Specifically, in the December 2022 Overpayment Proposed Rule, we proposed to remove the existing ''reasonable diligence'' standard and adopt by reference the False Claims Act definition of ''knowing'' and ''knowingly'' as set forth at 31 U.S.C. 3729(b)(1)(A). We reviewed the comments on the December 2022 Overpayment Proposed Rule and will respond to them in this final rule. We elected not to finalize those provisions in the earlier-published corresponding final rule because we believed that regulatory revisions to address certain issues commenters raised regarding Parts A and B necessitated additional notice-and-comment rulemaking. The additional proposals were published in the CY 2025 PFS proposed rule.

Specifically, in the CY 2025 PFS, we proposed new regulations that specify circumstances under which the deadline for reporting and returning overpayments in Parts A and B would be suspended to allow time for providers and suppliers to investigate and calculate overpayments.

b. Relevant Litigation

In *UnitedHealthcare Insurance Co.* v. *Azar,* a group of MAOs challenged the 2014 Parts C and D Overpayment Final Rule, and the District Court held, in relevant part, that by requiring MAOs to use ''reasonable diligence'' in searching for and identifying overpayments, the final rule impermissibly established False Claims Act liability for mere negligence. *UnitedHealthcare Ins. Co.* v. *Azar,* 330 F. Supp. 3d 173, 191 (D.D.C. 2018), rev'd in part on other grounds sub nom. *UnitedHealthcare Ins. Co.* v. *Becerra,* 16 F.4th 867 (D.C. Cir. 2021), cert. denied, 142 S. Ct. 2851 (2022). The District Court noted that ''(t)he False Claims Act—which the ACA refers to for enforcement, *see* 42 U.S.C. 1320a-7k(d)(3)—imposes liability for erroneous ('false') claims for payment submitted to the government that are submitted 'knowingly' . . . a term of art defined in the FCA to include false information about which a person 'has actual knowledge,' 'acts in deliberate ignorance of the truth or falsity of the information,' or 'acts in reckless disregard of the truth or falsity of the information.' '' *Id.* at 190.

Although the court's ruling applied only to Medicare Part C, to provide for consistency in Medicare regulations related to reporting and returning overpayments, in the December 2022 Overpayment Proposed Rule, we proposed to amend the regulations at current § 401.305(a)(2) to remove the reference to ''reasonable diligence'' and replace it with language incorporating the terminology of section 1128J(d)(4)(A) of the Act by ascribing the terms ''knowing'' and ''knowingly'' the same meaning given those terms in the False Claims Act at 31 U.S.C.

3729(b)(1)(A). *See UnitedHealthcare,* 330 F. Supp. 3d at 191 (finding that CMS adopting the False Claims Act standard would be consistent with a 2000 agency rule, the False Claims Act, and the Affordable Care Act's reference to the False Claims Act).

c. Provisions of Regulations

(1) Medicare Part A and Part B—Amending the Standard for When an Overpayment Is Identified (§ 401.305(a)(2))

Proposals from the December 2022 proposed rule sought to amend § 401.305(a)(2) by changing the standard for an ''identified overpayment.'' We are finalizing the knowledge standard derived from the False Claims Act standard, as proposed. This finalized provision states that a provider or supplier has identified an overpayment if it has actual knowledge of the existence of the overpayment or acts in reckless disregard or deliberate ignorance of the overpayment.

We solicited comments on these proposals and received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: One commenter requested clarification on the regulatory text, pointing to language contained in the February 16, 2012 proposed rule (77 FR 9179) that preceded the Parts A and B Overpayment Final Rule, that a person identified an overpayment if the person has actual knowledge of the existence of the overpayment or acts in reckless disregard or deliberate ignorance of the existence of the overpayment. The commenter stated that it is not clear if CMS means something different by using the terms ''received or retained'' rather than ''existence'' as used in the 2012 proposed rule.

Response: The referenced language from the 2012 proposed rule was not finalized in the 2016 overpayment rule, and comments on its proposals are outside the scope of this regulation. However, we note that the section 1128J(d)(4)(B) of the Act defines an overpayment as funds that a person ''receives or retains,'' and the finalized regulatory language mirrors the statutory construction. We recognize the language in the 2012 proposed rule and the language in this final rule differ; however, we believe the language in this final rule is more consistent with the statutory text, which uses the phrase ''receives or retains.''

Comment: One commenter opposed the proposed changes stating that it increases the risk on well-meaning hospice providers of unwarranted False Claims Act liability based on allegations that they knowingly failed to identify, report and refund an overpayment within some unclear timeframe based on a ''reckless disregard or deliberate indifference'' standard that is prone to a high degree of subjectivity. The commenter submits that deleting the practical standards of ''reasonable diligence'' and quantification to align with an unclear, constantly evolving False Claims Act definition and interpretation of ''knowingly'' is unwise.

Response: We thank the commenter for the perspective but disagree with the conclusions drawn by the commenter. We note that ''deliberate indifference'' is not a term included in the definition of ''knowing'' or ''knowingly,'' as defined in section 3729(b)(1)(A) of the Act. The language in this final rule is consistent with the statutory language. We have provided clarification on timeframes in our responses to other comments and hope this addresses the commenter's concerns.

Comment: Some commenters stated that the proposal to define when a person has identified an overpayment is ambiguous and will result in confusion and inconsistent interpretations, and the proposal is silent about what it actually means to be in ''reckless disregard or deliberate ignorance'' of an overpayment. The commenters stated that if CMS adopts the ''knowing'' standard, it must also adopt clear and practical guidance and examples concerning what it means to act in reckless disregard or deliberate ignorance regarding a potential overpayment and when such a state of mind is attributed to a provider. Another commenter requested that CMS clarify the threshold for ''reckless disregard or deliberate ignorance'' that the provider or supplier received or retained an overpayment.

Response: We appreciate the commenters' concerns. We note that the False Claims Act (FCA), from which the language of the ''knowledge'' standard adopted by CMS with this rule originates, is supported by an existing body of False Claims Act caselaw and examples. Importantly, we further note that FCA case law may be broadly illustrative and remind stakeholders that inquiries into whether a person has the requisite knowledge to have identified an overpayment for purposes of § 401.305(a)(2) is a fact-specific inquiry.

Comment: We received numerous comments from providers and suppliers objecting to the change in knowledge standard from ''reasonable diligence'' to ''knowing'' out of concern that the 6-month investigatory timeframe mentioned in a response to comments in the Parts A and B Overpayment Final Rule would be removed. One commenter stated that CMS should reinstate and extend the guidance that (at least) an 8-month diligence period is reasonable and expected, absent particularly complicated or challenging overpayment assessments, which standard was established in the preamble to the Parts A and B Overpayment Final Rule, and that CMS should consider acknowledging that a longer period of time may be necessary in some cases. Other commenters sought clarification on the timeframes for investigation. One commenter stated that CMS does not address the inherent ambiguities and practical problems presented by the proposed definition. For example, the proposed rule does not explain how a provider or supplier would return an overpayment within 60 days if the existence of the overpayment is known but the amount of the overpayment remains unknown.

Response: We understand that providers and suppliers need time to investigate, calculate, and report and return certain overpayments. To address this concern, we are finalizing § 401.305(b)(3), a suspension of the applicable requirements for 180 days, to conduct a timely, good faith investigation to determine the existence of related overpayments that may arise from the same or similar cause or reason as the initially identified overpayment.

Comment: Some commenters questioned if the knowledge standard derived from the False Claims Act requires proactive compliance activities and also requested a more definitive and useful guideline to the knowledge standard. Other commenters inquired if CMS still expects suppliers and providers to undertake reasonable and professional efforts to identify an overpayment before disclosing refunds.

Response: Using the False Claims Act knowledge standard provides an illustrative body of case law with examples that can be used for case-specific queries and analogous fact-patterns about compliance efforts and the required efforts to identify an overpayment. We note also that providers and suppliers may also have proactive compliance obligations under other laws and regulations.

Comment: Many commenters were supportive of the rule.

Response: We appreciate the commenters' support.

Comment: One commenter recommended that CMS expressly include certain concepts in the final rule, such as clarifying that a provider

or supplier that incurs a duty and diligently conducts an investigation, and either (1) reasonably concludes that an overpayment does not exist (even if that conclusion is in error) or (2) reports and returns any resulting overpayments within 60-days after concluding an investigation, will have satisfied its obligation under the proposed rule. The commenter suggested that if the provider then fails to make any reasonable inquiry into the credible information, the provider may be found to have acted in reckless disregard or deliberate ignorance of an overpayment.

Response: We believe the rule is sufficiently clear as written and additional examples or instructions are not necessary. Identified overpayments must be reported and returned in accordance with the statutory and regulatory requirements. We appreciate the commenter's suggestion; however, the scenarios for investigations are varied and fact-specific. While we are not able to address each and every scenario in which a provider conducts an investigation, we refer the commenter to the body of False Claims Act case law and examples that can be used for case-specific queries and analogous fact-patterns.

Comment: One commenter suggested that CMS should explicitly state that the 60-day period to report and return cannot be triggered unless and until a provider or supplier has engaged in reasonable and professional efforts to determine whether an overpayment occurred and has quantified any such overpayment and to which payors it is owed. The commenter also believes that CMS should expressly clarify that providers and suppliers who identify an overpayment should not report in a piecemeal fashion. Rather, they should refrain from reporting, including through an HHS–OIG self-disclosure protocol, until the entire overpayment is identified.

Response: We understand that providers and suppliers need time to investigate, calculate, and report and return certain overpayments. To address this concern, we are finalizing § 401.305(b)(3), which allows a person who has identified an overpayment up to 180 days to conduct a timely, good faith investigation to determine the existence of related overpayments that may arise from the same or similar cause or reason as the initially identified overpayment.

Comment: One commenter stated that ''receive'' and ''retain'' should be defined in a manner that contemplates a provider or supplier must quantify an overpayment to determine whether an overpayment, in fact, exists.

Response: Providers and suppliers should follow the plain meaning of the terms ''receive'' and ''retain.'' The need to quantify overpayments is discussed in the § 401.305(b) discussion later in response to comments.

Comment: One commenter suggested that CMS adopt a definition of ''identified'' that does not impose impractical deadlines on hospitals and health systems before exposing them to False Claims Act liability.

Response: The suspension of the deadline for reporting and returning of overpayments in newly-established § 401.305(a)(3), in addition to the 60 days required by section 1128J of the Act, provides sufficient time providers and suppliers to comply with these requirements before being exposed to False Claims Act liability. However, providers and suppliers that fail to timely report and return overpayments expose themselves to False Claims Act liability.

Comment: One commenter suggested that CMS create safe-harbor provisions such as adding regulatory language to allow for a 6-month investigatory period and a provision that providers should not be considered to have received or retained an overpayment if it is identical or similar to an overpayment that is subject to an administrative appeal.

Response: We appreciate the commenter's suggestion and believe that new § 401.305(b)(3) addresses some of the commenter's concerns with regard to providing additional time to investigate and calculate overpayments. With regard to the suggestion for overpayments subject to an administrative appeal, we refer the commenter to the now-finalized standards for knowingly receiving or retaining an overpayment: when a person has actual knowledge of the information; acts in deliberate ignorance of the truth or falsity of the information; or acts in reckless disregard of the truth or falsity of the information. We encourage the commenter to evaluate their obligation to report and return based upon this standard and the body of False Claims Act case law.

Comment: One commenter stated that the proposed rule language would inadvertently create confusion as to when the 60-day period to report and return an overpayment begins. Another commenter explained that the proposed language could put providers and suppliers in a position of being accused of having reverse False Claims Act liability for retaining overpayments that cannot be quantified within 60 days. According to the commenter, providers and suppliers may also risk being accused of having constructive knowledge that an overpayment was received or retained without any guidance as to what that means. The commenter recommends that CMS either expressly add quantification to the regulatory text or at least clarify that quantification remains part of the definition of ''identified'' in that a person would not be considered to have actual or constructive knowledge of an overpayment prior to quantifying the amount of the overpayment.

Other commenters were also concerned about our expectations with regard to quantifying overpayments and the amount of time needed to calculate overpayments. One commenter urged CMS to finalize amended regulatory text that includes the ''knowledge'' standard, just as CMS has proposed, but that also adds clarification that identification must include the amount of excess funds received. Another commenter suggested that CMS consider revising proposed § 401.305(a)(2) to read as follows: ''A person has identified an overpayment when the person knowingly receives or retains a quantified overpayment. The term 'knowingly' has the meaning set forth in 31 U.S.C. 3729(b)(1)(A).'' Alternatively, the commenter adds, this sentence could be revised to specify that a person ''has identified an overpayment when the person knowingly receives or retains an overpayment and quantifies the amount of the overpayment.

Response: In response to comments, we are clarifying that, for purposes of section 1128J of the Act, a person has identified an overpayment, as the term is defined at section 1128J(d)(4)(B) of the Act, when the person: (1) has actual knowledge of an overpayment; (2) acts in deliberate ignorance of the truth or falsity of information regarding the overpayment; or (3) acts in reckless disregard of the truth or falsity of information regarding the overpayment. In cases where a provider or supplier is actively investigating a potential overpayment, the 60-day period for reporting and returning the overpayment begins when the provider or supplier has actual knowledge of the overpayment. (As explained in greater detail below, the 60-day deadline may be suspended for up to 180 days under § 401.305(b)(3)). On the other hand, in cases where a provider or supplier acts in deliberate ignorance or reckless disregard of the existence of the overpayment, the 60-day period begins on the date that the provider or supplier acted in deliberate ignorance or reckless disregard of the truth or falsity of information regarding the overpayment.

With respect to quantification of the overpayment, once a person has identified an overpayment, as the term is defined at § 401.305(a)(2), the person has 60 days to report and return the overpayment under § 401.305(b)(1)(i), even if the person has not yet calculated the precise amount of the overpayment at the time of identification. Because a person cannot return an indefinite sum, as a practical matter the overpayment amount must be calculated within 60 days of identification to meet the 60-day deadline. However, if the person believes that there may be other related overpayments, the 60-day deadline for reporting and returning the initially identified overpayment may be suspended under § 401.305(b)(3) for up to 180 days, to allow a person to conduct a timely, good faith investigation to determine the existence of related overpayments, if any, that may arise from the same or similar cause or reason as the initially identified overpayment. As noted at § 401.305(b)(3)(ii)(A), the investigatory timeframe under § 401.305(b)(3) includes time to calculate the aggregate amount of *both* the initially identified overpayment and related overpayments, if any, uncovered by the investigation.

Comment: One commenter inquired about a situation where a provider or supplier has found a single overpaid claim, but suspects that the underlying issue may impact additional claims. The commenter questioned whether it would be appropriate to inquire further before reporting and returning the single claim previously determined to be overpaid. The commenter interprets the 60-day period to report and return that overpayment to start on the date that total overpayment was first quantified.

Response: We agree with the commenter that where a single overpayment is found and other related overpayments are suspected, the provider or supplier should investigate and calculate the aggregate overpayment prior to its return. We are finalizing § 401.305(b)(3), which suspends the 60-day report and return obligation for up to 180 days, to allow persons time to complete a good-faith investigation to determine the existence of related overpayments that may arise from the same or similar cause or reason as the initially identified overpayment. As explained in greater detail below, the 60-day clock begins when the initial overpayment is identified, but may be suspended under § 401.305(b)(3) for up to 180 days to conduct a timely, good faith investigation into the existence of other related overpayments.

After consideration of the comments received, we are finalizing the provisions, as proposed.

(2) Medicare Parts A and B Overpayment Provisions of the Affordable Care Act (§§ 401.305(b)(1), (b)(2), (b)(3))

As noted above, after considering the public comments we received in connection with the December 2022 Overpayments Proposed Rule, we published additional proposals in the CY 2025 PFS. We proposed to revise existing regulations at § 401.305(b) regarding the deadline for reporting and returning overpayments.

Existing § 401.305(b)(1) specifies when a person who has received an overpayment must report and return an overpayment. We proposed to amend this paragraph to reference revised § 401.305(b)(2), as well as to reference newly-proposed § 401.305(b)(3).

Existing § 401.305(b)(2) specifies the circumstances under which the deadline for returning overpayments will be suspended. Overpayments must be reported no later than the date which is 60 days after the date on which the overpayment was identified or the date any corresponding cost report is due, if applicable. However, the deadline for returning a reported overpayment will be suspended under specified circumstances, including the acknowledgement of receipt of a submission to the OIG Self-Disclosure Protocol or the CMS Voluntary Self-Referral Disclosure Protocol, or under specified conditions if a person requests an extended repayment schedule as defined in § 401.603. We proposed a technical modification to the introductory language in § 401.305(b)(2) to acknowledge that this section may be applicable after the suspension described in new § 401.305(b)(3) is complete.

Proposed § 401.305(b)(3) specifies the circumstances under which the deadline for reporting and returning overpayments may be suspended to allow time for providers and suppliers to investigate and calculate overpayments. Proposed § 401.305(b)(3)(i) provides that the deadline to report and return an overpayment is suspended if: (1) a person has identified an overpayment but has not yet completed a good-faith investigation to determine the existence of related overpayments that may arise from the same or similar cause or reason as the initially identified overpayment; and (2) the person conducts a timely, good-faith investigation to determine whether related overpayments exist. Proposed § 401.305(b)(3)(ii) provides that, if the conditions for proposed § 401.305(b)(3)(i) are met, the deadline for reporting and returning the initially identified overpayment and related overpayments that arise from the same or similar cause or reason as the initially identified overpayment will remain suspended until the earlier of the date that the investigation of related overpayments has concluded and the aggregate amount of the initially identified overpayments and related overpayments is calculated, *or* the date that is 180 days after the date on which the initial identified overpayment was identified.

In the proposed rule, we provided an example elucidating a hypothetical circumstance. We are repeating the example here, with certain modifications to further clarify when the 60-day report and return obligation begins. Assume that, on day 1, a person identifies an overpayment (as the term is defined at § 401.305(a)(2)) arising from a physician's failure to properly document the medical record to support the coding of a specific claim, and the person has reason to believe that this may be a common practice of the physician, so there could be more affected claims. Once the overpayment has been identified on day 1, the report and return obligation at § 401.305(b)(1) applies, and the person has 60 days to report and return the overpayment. However, the 60-day deadline may be suspended for up to 180 days to conduct and conclude a good faith investigation to determine whether related overpayments that arise from the same or similar cause or reason as the initially identified overpayment exist. If the person does NOT conduct an investigation, or the investigation is not timely or not conducted in good faith, the identified overpayment must be reported and returned by day 60. If the person does conduct a timely, good faith investigation, suspension of the report and return obligation under § 401.305(b)(3) begins when the person begins the investigation. The suspension of the 60-day deadline ends when the investigation is concluded and the initially identified overpayment and related overpayments, if any, are calculated, or by day 180, whichever is earlier. Once the suspension of the 60-day deadline ends, the person has the remainder of the 60-day period to report and return the overpayment. For example, assuming the investigation to determine the existence of related overpayments was begun on day 10 (that is, the tenth day after the initial overpayment was identified), the overpayment must be reported and

returned within 50 days after either (1) completion of the investigation or (2) day 180, whichever is earlier. However, the suspension described in § 401.305(b)(2) may also be applicable. For example, if the person is reporting the overpayment to the OIG Self-Disclosure Protocol, as provided for in § 401.305(b)(2) the overpayment return requirement may be further suspended in accordance with that provision.

We received many comments on the December 2022 Overpayment Proposed Rule expressing concern that we proposed to remove the term ''quantified'' from the original regulatory text. We believe § 401.305(b)(3)(ii)(A) addresses these concerns. Other commenters expressed concern that the December 2022 Overpayment Proposed Rule proposals removed a perceived 6-month time period to investigate all overpayments that was referenced in an example in the preamble to the original 2016 Parts A and B Overpayment Rule. The December 2022 Overpayment Proposed Rule was silent on this point. We understand the importance of allowing time to investigate and calculate overpayments. We believe § 401.305(b)(3)(ii) addresses these concerns.

We solicited and received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters requested that CMS provide additional guidance to assist interested parties in complying with these requirements. Some stated there may be confusion on timeframes. Other commenters stated that these requirements lack clear definitions for terms such as ''timely'' or ''good faith.'' Without more precise definitions, commenters stated these terms remain open to interpretation, which could lead to inconsistencies in enforcement and confusion among providers and suppliers. Some commenters stated that education materials would be helpful to assist providers in understanding how they may need to adapt their overpayment policies to remain in compliance.

Response: We appreciate the commenters' concerns; however, we maintain the commenters can rely upon the plain meaning of the terms ''timely'' and ''good faith.'' Further, we also refer the commenters to the body of False Claims Act case law for information about the term knowingly.

Comment: A commenter requested confirmation that the beginning of the 60-day deadline does not commence until after a provider has conducted their investigation. Another commenter stated that since 180-day period is described as an investigation period, it may lead a provider to inaccurately believe that the 60-day period report and repay only begins after the 180-day period has concluded.

Response: The 60-day deadline at § 401.305(b)(1) for reporting and returning an overpayment begins once an overpayment is identified, as the term is defined at § 401.305(a)(2), even if the person has not yet calculated the precise amount of the overpayment at the time of identification. Under § 401.305(b)(3), the 60-day deadline at § 401.305(b)(1) may be *suspended* for up to 180 days to allow a person time to conduct a timely, good faith investigation to determine whether related overpayments exist. If a person does not conduct such an investigation, or the investigation is not timely or not conducted in good faith, the 60-day deadline is not suspended, and the initially identified overpayment must be reported and returned within 60 days of its identification. If the person does conduct a timely, good faith investigation, the 60-day deadline is suspended until the investigation is concluded and the initially identified overpayment and related overpayments, if any, are calculated, or by day 180, whichever is earlier. Once the suspension of the 60-day deadline ends, the person has the remainder of the 60-day period to report and return the overpayment. For example, if a person began a timely, good faith investigation of related overpayments 20 days after identifying the initial overpayment, the suspension of the deadline would apply on day 20, and there would be 40 days remaining in the 60-day period to report and return the overpayment after the suspension at § 401.305(b)(3)(ii) ends.

Comment: Some commenters requested specificity for terms such as ''good-faith investigations'' and for us to provide additional information on CMS' expectations for a reasonable timeline for conducting such an investigation.

Response: We appreciate the commenters' concerns; however, we maintain the commenters can rely upon the plain meaning of those terms.

Comment: Some commenters opposed what they called a strict, bright-line, or arbitrary timeframe for investigating and reporting overpayments, stating that the current standard allows an indefinite period of time for providers to identify, investigate, and, if an overpayment exists, report to Medicare for corrective action. These commenters recommended that CMS consider one modification to the policy—to create a process to request an extension beyond 180 days for complex investigations. Some commenters stated that 8 months is a more appropriate period of time for providers to investigate, report, and return overpayments under normal circumstances.

Response: We heard from many interested parties that advocated for us to codify a specific period of time to investigate, calculate, report and return overpayments, which is the policy we are finalizing in this rule. Most commenters were supportive of our proposal; however, we appreciate that investigations are often complex and require the devotion of resources. We believe we have appropriately balanced the needs of providers and suppliers with the required statutory mandates.

Comment: One commenter requested that the time required for advisors or for governmental agencies to clarify applicable rules would not count for the 180 days because the overpayment identification is not possible without the conclusions from these deliberations. Another commenter requested that we delay requirements to allow for time for compliance office, legal services, clinical providers, and other governmental authorities to provide input.

Response: We heard from many commenters on the issue of time needed for investigations and calculations of overpayments. We believe that the newly-established 180-day suspension for providers and suppliers that have situations that qualify, in addition to the 60 days to report and return overpayments, provides enough time. We, therefore, decline to delay implementation or provide additional time to comply with these requirements.

Comment: One commenter, submitting a comment more than 60 days after the December 2022 Overpayments Proposed Rule was displayed, emphasized that this proposal, which would remove the ''reasonable diligence'' standard and replace it with a ''knowing/knowingly'' standard is ill-advised, in that, it would accelerate the 60- day clock and place unnecessary stress on those conducting important compliance activities.

Response: While we appreciate the commenters' concerns and we disagree with this conclusion, comments on the December 2022 Overpayments Proposed Rule proposal were due within the 60 days comment period after that proposal was displayed. It is, therefore, outside of the scope of this proposal.

Comment: One commenter requested that CMS revise proposed § 401.305(b)(3)(ii) to provide that the deadline is suspended for the entirety of a timely, good-faith investigation to

minimize the piecemeal report and return of overpayments.

Response: We understand the commenter's concern; however, we heard from many interested parties that advocated for us to codify a specific period of time to investigate, calculate, report and return overpayments, which is the policy we are finalizing in this rule. We believe we have appropriately balanced providers' and suppliers' needs with the required statutory mandates. These requirements provide additional time so that providers and suppliers do not need to piecemeal report and return overpayments.

Comment: Many commenters supported our proposals and thanked CMS for providing defined timeframes for providers making a good-faith effort in complex situations. Some commenters requested that CMS formalize this policy as soon as possible.

Response: We appreciate the commenters' support.

Comment: One commenter encouraged CMS to describe the criteria it would apply to determine whether an investigation has been undertaken in ''good faith'' and therefore the deadline may be suspended.

Response: We encourage the commenter to use the plain meaning of the term ''good faith''.

Comment: A commenter disagreed with CMS' reliance on UnitedHealthcare Insurance Co. v. Azar to remove the ''reasonable diligence'' standard because the commenter does not believe the case requires CMS to alter its policy for Medicare Parts A and B. Another commenter stated similarly that UnitedHealthcare Insurance Co. v. Azar does not dictate a wholesale redefinition of the legal standard for identifying overpayments in Parts A and B.

Response: While we agree that Medicare Parts A and B were not directly at issue in UnitedHealthcare Insurance Co. v. Azar, the underlying statutory provision (section 1128J(d) of the Act) is applicable to Medicare Parts A, B, C, and D. The agency, therefore, proposed to align its knowledge standard for the policies that are subject to that shared statutory provision.

Comment: One commenter urged CMS to clarify that physician practices will have adequate time to organize funds and make payment once an aggregate repayment amount is determined.

Response: The governing statutory provisions, in section 1128J(d)(4)(A) of the Act, provide clear requirements and allows 60 days for providers to report and return overpayments.

Comment: One commenter expressed concern that CMS is proposing changes on top of other proposed changes that are not final, leaving providers in a difficult position of having to interpret different requirements that may not align.

Response: In the CY 2025 PFS proposal we stated that we were retaining the Parts A and B proposals published in the December 2022 Overpayment Proposed Rule and we did not alter them in that proposed rule. We did supplement that language in response to the comments we received on the December 2022 Overpayment Proposed Rule. We are not aware of any misalignment in the two proposals and thus do not agree that there is any need to clarify them in this final rule.

Comment: A commenter requested that CMS confirm that the proposed amendments to § 401.305 would not impose any 6-month or other regulatory clock on the first investigation that results in the identification of an initial overpayment.

Response: With respect to the initial identification of an overpayment, the general 60-day rule at § 401.305(b)(1), coupled with the definition of ''identified'' at § 401.305(a)(2), determines the deadline for reporting and returning the overpayment. In cases where a provider or supplier is actively investigating a potential overpayment, the 60-day period for reporting and returning the overpayment begins when the provider or supplier has actual knowledge of the overpayment. The suspension under § 401.305(b)(3) is available *after* a person has identified an overpayment, as the term is defined at § 401.305(a)(2). As explained in final § 401.305(b)(3)(i)(A), the suspension for reporting and returning overpayments under § 401.305(b)(3) applies when a person *has* identified an overpayment but has *not yet* completed a good-faith investigation to determine the existence of related overpayments that may arise from the same or similar cause or reason as the initially identified overpayment. If, after identifying the overpayment, the person conducts a timely, good faith investigation to determine the existence of related overpayments in accordance with § 401.305(b)(3), the 60-day deadline for reporting and returning the initially identified overpayment will be suspended for up to 180 days, as provided for under § 401.305(b)(3)(ii). On the other hand, in cases where a provider or supplier acts in deliberate ignorance or reckless disregard, the 60-day period begins on the date that the provider or supplier acts in deliberate ignorance or reckless disregard of the truth or falsity of information regarding the overpayment.

Comment: Commenters had several comments and questions regarding related overpayments. One commenter stated that the proposed text would appear to consider a related overpayment to be unlawfully retained—therefore exposing the organization to False Claims Act liability—even before the organization actually identifies the related overpayment. Some were concerned that this introduces ambiguity and believe that the timeframe does not take into the account the true complexity of these overpayment investigations. Another commenter stated the 6 month benchmark did not encompass such a duty to investigate ''related'' overpayments and the proposed change effectively shortens the timeline for providers and suppliers to carry out their investigations. Another commenter stated that the proposal also appears to create obligations that are contrary to the governing statute and CMS lacks authority to effectively require investigation of ''related'' overpayments. One commenter stated that CMS should revise its proposal to make clear that there is no requirement to report and return related overpayments. Finally, another commenter requested that CMS adopt language to allow providers up to 180 days to identify and quantify an overpayment, regardless of whether an investigation into related overpayments is required.

Response: We disagree with the suggestion that we are requiring providers and suppliers to report and return overpayments that have not been identified or that we are creating new requirements not authorized by the statute. Our proposal in the CY 2025 PFS only addressed circumstances when the 60-day deadline to report and return identified overpayments will be suspended for up to 180 days.

Final § 401.305(b)(3) does not impose an independent obligation to investigate related overpayments when a person has actual knowledge of an overpayment. However, other laws, such as the federal False Claims Act, may impact whether a person must investigate overpayments. If a person believes related overpayments may exist, § 401.305(b)(3) permits the person up to 180 days to conduct an investigation into the existence of related overpayments, provided that the person conducts a timely, good-faith investigation. Without this provision, persons conducting such investigations might face a rolling series of relatively short-term deadlines as the investigation advances and uncovers additional

overpayments, each with its own 60-day deadline. On the other hand, if a person has actual knowledge of an overpayment and has no reason to believe that there are other related overpayments (that is, the person is not acting in deliberate ignorance or reckless disregard to the truth or falsity of information about other related overpayments), then there is no obligation to investigate, calculate, and report and return such other overpayments. In such cases, the person would have 60 days after identifying the isolated overpayment to report and return it, as specified at § 401.305(b)(1).

Comment: One commenter stated that we should not deviate from the current practice and impose an a two-tiered timeframe and unnecessary disclosure requirements on hospitals and health systems to identify, investigate, disclose to agencies, and return overpayments.

Response: We appreciate the commenter's opinion; however, we believe this change better aligns with the statutory language.

Comment: Some commenters opined that we should not deviate from this current practice by imposing the False Claims Act definition of ''identified'' overpayments rather than the current ''reasonable diligence'' standard.

Response: We appreciate the commenters' opinion; however, we believe this change better aligns with the statutory language.

Comment: One commenter stated that Medicare hospice claims have been improperly denied or quality providers without outlier data have been repeatedly subjected to pervasive and costly audits. To this end, they urged CMS to perform an evaluation of hospice denials overturned on appeal and conduct training with audit contractors to ensure the appropriate review of medical claims.

Response: This comment is outside the scope of this proposal.

Comment: One commenter requested that CMS consider requiring Medicare Advantage companies to issue overpayment notices in a specified timeframe. This would allow providers to address potential overpayments in a timely manner.

Response: This proposal was specific to Medicare Parts A and B; therefore, this comment is outside of the scope of this rule.

After consideration of the public comments received, we are finalizing the provisions at § 401.305(a)(2) and (b)(1), (2), and (3) as proposed.

P. Medicare Parts C and D Overpayment Provisions of the Affordable Care Act (§§ 422.326(c), 423.360(c))

Section 6402(a) of the Patient Protection and Affordable Care Act (Pub. L. 111–148) as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) (collectively known as the Affordable Care Act) established section 1128J(d) of the Act. Section 1128J(d)(1) of the Act requires a person who has received an overpayment to report and return the overpayment to the Secretary, the State, an intermediary, a carrier, or a contractor, as appropriate, and to notify the Secretary, State, intermediary, carrier or contractor to whom the overpayment was returned in writing of the reason for the overpayment. Section 1128J(d)(4)(B) of the Act defines the term ''overpayment'' as any funds that a person receives or retains under title XVIII or XIX to which the person, after applicable reconciliation, is not entitled under such title. Section 1128J(d)(4)(C) of the Act defines the term ''person'' for purposes of Medicare Part C and Part D to include a Medicare Advantage organization (''MAO'') (as defined in section 1859(a)(1) of the Act) and a Part D sponsor (as defined in section 1860D–41(a)(13) of the Act).

Section 1128J(d)(2) of the Act requires that an overpayment be reported and returned by the later of: (1) the date which is 60 days after the date on which the overpayment was identified; or (2) the date any corresponding cost report is due, if applicable. Section 1128J(d)(3) of the Act specifies that any overpayment retained by a person after the deadline for reporting and returning an overpayment is an obligation (as defined in 31 U.S.C. 3729(b)(3)) for purposes of the False Claims Act, 31 U.S.C. 3729.

Section 1128J(d)(4)(A) of the Act provides that the terms ''knowing'' and ''knowingly'' have the meaning given those terms in the False Claims Act at 31 U.S.C. 3729(b)(1)(A). The False Claims Act (31 U.S.C. 3729(b)(1)(A)) defines the terms ''knowing'' and ''knowingly'' to include information about which a person ''has actual knowledge,'' ''acts in deliberate ignorance of the truth or falsity of the information,'' or ''acts in reckless disregard of the truth or falsity of the information.''

1. Parts C & D Regulation Promulgated Under Section 1128J(d) of the Act

On May 23, 2014, CMS published a final rule titled ''Medicare Program; Contract Year 2015 Policy and Technical Changes to the Medicare Advantage and the Medicare Prescription Drug Benefit Programs'' (79 FR 29844) (hereinafter referred to as the ''Parts C & D Final Overpayment Rule''), which provided, among other things, that an MAO or Part D sponsor has identified an overpayment when the MAO or Part D sponsor has determined, or should have determined through the exercise of reasonable diligence, that the MAO or Part D sponsor has received an overpayment.

2. Relevant Litigation

In *UnitedHealthcare Insurance Co.* v. *Azar,* a group of MAOs challenged the final Parts C & D Overpayment Rule, and the District Court held, in relevant part, that by requiring MAOs to use ''reasonable diligence'' in searching for and identifying overpayments, the final rule impermissibly created False Claims Act liability for mere negligence.[794] The District Court noted that ''(t)he False Claims Act—which the ACA refers to for enforcement, *see* 42 U.S.C. 1320a–7k(d)(3)—imposes liability for erroneous ('false') claims for payment submitted to the government that are submitted 'knowingly' . . . a term of art defined in the FCA to include false information about which a person 'has actual knowledge,' 'acts in deliberate ignorance of the truth or falsity of the information,' or 'acts in reckless disregard of the truth or falsity of the information.' ''.[795] On December 27, 2022, CMS published in the **Federal Register** the proposed rule titled ''Medicare Program; Contract Year 2024 Policy and Technical Changes to the Medicare Advantage Program, Medicare Prescription Drug Benefit Program, Medicare Cost Plan Program, Medicare Parts A, B, C, and D Overpayment Provisions of the Affordable Care Act and Programs of All-Inclusive Care for the Elderly; Health Information Technology Standards and Implementation Specifications'' (the December 2022 proposed rule).[796] CMS proposed to amend the final Parts C & D Overpayment Rule at §§ 422.326(c) and 423.360(c) to remove the reference to ''reasonable diligence'' and replace it with language at section 1128J(d)(4)(A) that gives the terms ''knowing'' and ''knowingly'' the same meaning given those terms in the False Claims Act at 31 U.S.C. 3729(b)(1)(A).[797]

[794] *UnitedHealthcare Ins. Co.* v. *Azar,* 330 F. Supp. 3d 173, 191 (D.D.C. 2018), *rev'd in part on other grounds sub nom. UnitedHealthcare Ins. Co.* v. *Becerra,* 16 F.4th 867 (D.C. Cir. 2021), *cert. denied,* 142 S. Ct. 2851 (2022).

[796] (87 FR 79452).

[797] *See UnitedHealthcare,* 330 F. Supp. 3d at 191 (finding that CMS adopting the False Claims Act

3. Provisions of Final Regulations: Medicare Advantage Program and Part D—Amending the Standard for When an Overpayment Is Identified (§§ 422.326(c) and 423.360(c))

In the December 2022 proposed rule, CMS proposed to remove the existing standard for when an overpayment is identified in the Medicare Advantage and Part D programs and adopt, by reference, the False Claims Act definition of ''knowing'' and ''knowingly.'' This section of the final rule amends §§ 422.326(c) and 423.360(c) to change the standard for an ''identified overpayment'' in the Medicare Advantage and Part D programs to align with the statutory obligation provided by Congress in section 1128J(d)(4)(A) of the Act, which provides that the terms ''knowing'' and ''knowingly'' have the meaning given those terms in the False Claims Act at 31 U.S.C. 3729(b)(1)(A). Under the proposed rule, an MAO or Part D sponsor has identified an overpayment if it has actual knowledge of the existence of the overpayment or acts in reckless disregard or deliberate ignorance of the overpayment.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported our proposal to amend the standard for identification of an overpayment.

Response: We appreciate the support.

Comment: A commenter recommended that CMS follow the plain language of the statute and adopt an actual knowledge standard. The commenter suggested the following language: ''an MA plan or Part D sponsor has 'identified' an overpayment once it has determined that the overpayment exists.'' They stated that reckless disregard and deliberate ignorance go beyond the plain language reading intended by Congress and cited to opinions from the U.S. Court of Appeals for the District of Columbia and the U.S. District Court for the District of Columbia, as well as to legislative history.

Response: We respectfully disagree with the commenter. Our proposal to adopt, by reference, the False Claims Act definition of ''knowing'' and ''knowingly,'' that an MAO or Part D sponsor has identified an overpayment if it has actual knowledge of the existence of the overpayment or acts in reckless disregard or deliberate ignorance of the overpayment, comes directly from the statute. Section 1128J(d)(4)(A) of the Act provides that the terms ''knowing'' and ''knowingly'' have the meaning given to those terms in the False Claims Act. We acknowledge that commenters have stated that the defined terms are not used in the statute, but we see nothing in the statute indicating that this provision is mere surplusage or that Congress intended to create a lower knowledge standard for Medicare overpayments than otherwise exists under the False Claims Act. Such an interpretation would effectively allow MAOs and Part D sponsors to ''bury their heads in the sand'' and deliberately ignore or recklessly disregard overpayments. As the District Court in *UnitedHealthcare* noted, ''(t)he False Claims Act—which the ACA refers to for enforcement, *see* 42 U.S.C. 1320a–7k(d)(3)—imposes liability for erroneous ('false') claims for payment submitted to the government that are submitted 'knowingly' . . . a term of art defined in the FCA to include false information about which a person 'has actual knowledge,' 'acts in deliberate ignorance of the truth or falsity of the information,' or 'acts in reckless disregard of the truth or falsity of the information.' '' [798]

Comment: Some commenters noted concerns that the new knowledge standard for the identification of an overpayment would eliminate the 6-month investigatory period discussed in the 2016 Parts A & B Overpayment Final Rule (81 FR 7654) and that, by failing to comply with what they see as a reduced timeframe, they could violate the False Claims Act. Some commenters noted that they provide services under Medicare Parts A, B, C, and D, and that maintaining a broad array of payment rules is complex and requires more than 60-days to ensure payment accuracy across various payors. A commenter asked if there is an acceptable period of investigation, such as six months, allowed for MAOs to quantify the overpayment before they have actually identified it.

Response: We note that unlike the 2016 Parts A and B Overpayment Final Rule, the 2014 Parts C & D Overpayment Final Rule did not mention an allowance of 180 days for investigation.

The Parts C & D Final Overpayment Rule applies to MAOs and Part D sponsors and provides that the 60-day period is the time period for MAOs and Part D sponsors to report and return an identified overpayment, after the organization has conducted the activities needed to identify that it has received an overpayment. The 60-day requirement to report and return overpayments is statutorily required in section 1128J(d)(2) of the Act.

Additionally, risk adjusted payment for Medicare Parts C and D differs from Fee-For-Service payment in traditional Medicare. Risk adjustment payment is based on diagnoses data that MAOs submit to CMS. Diagnoses eligible for risk adjustment are those that have been documented in the beneficiaries' medical record as the result of a face-to-face visit from an acceptable provider type and source, and coded using ICD coding guidelines. MAOs submit and delete diagnoses from CMS systems (Risk Adjustment Processing System (RAPS) and/or Encounter Data Processing System (EDPS)) on an ongoing basis based on individual encounters (see § 422.310(d)). Pursuant to § 422.310(g), under this longstanding process MAOss have from the beginning of the data collection period through the final risk adjustment data submission deadline, which is a minimum of 13 months, to investigate any issues with their data submissions and submit corrections.

CMS recalculates risk scores and adjusts payments through the final reconciliation payment process in accordance with § 422.310(g)(2). CMS also periodically reruns risk score calculations and adjusts payments after it makes final reconciliation payments to MAOs to account for instances in which MAOs delete diagnosis data or otherwise report overpayments as prescribed by CMS from a period for which the deadline for final reconciliation payments has closed (for example, when they make ''closed-period deletes'' in RAPS and EDPS).

Likewise, Part D sponsors report and return Part D overpayments related to prescription drug event (PDE) and direct and indirect remuneration (DIR) data through the submission of corrected data.[799] PDE/DIR-related overpayments for a given contract year can occur after data is due for the annual Part D payment reconciliation for that year. Section 423.360(a), Data for the annual Part D payment reconciliation, is due within 6 months of the end of the contract year.[800] CMS recoups PDE/DIR-

standard would be consistent with a 2000 agency rule, the FCA, and the Affordable Care Act's reference to the False Claims Act).

[798] *UnitedHealthcare,* 330 F. Supp. 3d at 190; *see also id.* at 191 (finding that CMS adopting the False Claims Act standard would be consistent with a 2000 agency rule, the FCA, and the Affordable Care Act's reference to the False Claims Act).

[799] See HPMS memorandum, Reopening Process and Updates to the PDE/DIR-related Overpayment Reporting, April 6, 2028 (available at *https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/hpms%2520memo_reopen%2520and%2520overpay_04-06-2018_90.pdf*).

[800] *See* §§ 423.336(c)(1), 423.434(c)(1) and (d)(1).

related overpayments through the global reopening process described at § 423.346(a)(2), which is consistent with the 6-year overpayment look-back period described at § 423.360(f).[801] As a result of this process, it is not necessary for a Part D sponsor to calculate the amount of the overpayment, as entities are required to do under the Medicare Parts A and B overpayment regulation at § 401.305. The PDE/DIR-related overpayment reporting and returning process is operationally less complex, and therefore, an extensive investigation period prior to submitting corrected data is not necessary.

Comment: A commenter asked if an MAO receives a recoupment payment from a provider, does that equate to ''knowing'' under the new standard, and would the MAO then need to report and return this to CMS since they ''know'' of an overpayment.

Response: We appreciate the concern for the appropriate repayment of overpayments. The payment system for MAOs is distinct from that for Part A and Part B. Rather than payments being based on services provided, payments to MAOs are based on a capitated rate that is risk-adjusted to reflect each enrolled beneficiary's demographic and health characteristics. Due to the nature of how MAOs are paid, recouped payments an MAO receives from a provider do not necessarily equate to that MAO having been overpaid by CMS. However, as a condition of payment, MAOs are obligated to submit risk adjustment data that is accurate, complete, and truthful based on their best knowledge, information, and belief as part of the annual risk adjustment data certification (§ 422.504(l)). MAOs are thereby required to delete any risk adjustment data submitted to CMS that they know to be incorrect.

We received a number of comments to the proposal made in the Parts C & D Overpayment provision in the December 2022 proposed rule that were out of scope. While these comments are out of scope for this final rule because they are not about the specific proposal that the standard for identification of an overpayment be amended, we appreciate the feedback.

After consideration of the public comments received, we are finalizing the provisions at §§ 422.326(c), 423.360(c), as proposed. We do not expect the proposed change to result in additional costs or savings and are not scoring this provision in the Regulatory Impact Analysis section of this rule. Further, as we are not imposing any new reporting requirements, we do not believe that our proposal will result in additional paperwork burden and have not incorporated a burden increase in the Collection of Information section.

IV. Updates to the Quality Payment Program

A. CY 2025 Modifications to the Quality Payment Program

1. Executive Summary

a. Overview

This section of this final rule outlines changes to the Quality Payment Program starting January 1, 2025, except as otherwise noted for specific provisions. We continue to move the Quality Payment Program forward, including focusing more on alignment and new options for clinicians to participate in a more meaningful way, to achieve continuous improvement in the quality of health care services provided to Medicare beneficiaries and other patients through the Quality Payment Program's Merit-based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs) for the CY 2025 performance period/2027 MIPS payment year.

Authorized by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015), the Quality Payment Program is a value-based payment program, by which the Medicare program rewards clinicians who provide high-value, high-quality care to their patients in a cost-efficient manner. There are two ways for clinicians who provide services under the Medicare program to participate in the Quality Payment Program: MIPS and Advanced APMs. The statutory requirements for the Quality Payment Program are set forth in section 1848(q) and (r) of the Act for MIPS and section 1833(z) of the Act for Advanced APMs.

For the MIPS participation track, MIPS eligible clinicians (defined at § 414.1305) [802] are subject to a MIPS payment adjustment (positive, negative, or neutral) based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. We assess each MIPS eligible clinician's total performance according to established performance standards with respect to the applicable measures and activities specified in each of these four performance categories during a performance period to compute a final composite performance score (a ''final score'' as defined at § 414.1305). In calculating the final score, we must apply different weights for the four performance categories, subject to certain exceptions, as set forth in section 1848(q)(5) of the Act and at § 414.1380. Unless we assign a different scoring weight under these exceptions, for CY 2025 performance period/2027 MIPS payment year, the scoring weights are as follows: 30 percent for the quality performance category; 30 percent for the cost performance category; 15 percent for the improvement activities performance category; and 25 percent for the Promoting Interoperability performance category.

Once calculated, each MIPS eligible clinician's final score is compared to the performance threshold established in prior rulemaking for that performance period to calculate the MIPS payment adjustment factor as specified in section 1848(q)(6) of the Act, such that the MIPS eligible clinician will receive in the applicable MIPS payment year: (1) a positive adjustment, if their final score exceeds the performance threshold; (2) a neutral adjustment, if their final score meets the performance threshold; or (3) a negative adjustment, if their final score is below the performance threshold. In calculating the MIPS payment adjustment factor for a MIPS eligible clinician, CMS accounts for scaling factor and budget neutrality requirements, as further specified in section 1848(q)(6) of the Act. CMS then applies the MIPS payment adjustment factor to amounts otherwise paid under Part B with respect to covered professional services for the MIPS eligible clinician for the applicable MIPS payment year such that their payments for such covered professional services are increased, decreased, or not adjusted based on the MIPS eligible clinician's final score relative to the performance threshold.

Section 1848(q) of the Act sets forth other requirements applicable to MIPS, including opportunities for feedback and targeted review and public reporting of MIPS eligible clinicians' performance. Section 1848(r) of the Act sets forth more specific requirements for development of measures for the cost performance category under MIPS.

[801] For additional information on reopenings and the recoupment of PDE/DIR-related overpayments see *Medicare Program; Changes to the Medicare Advantage and the Medicare Prescription Drug Benefit Program for Contract Year 2024-Remaining Provisions and Contract Year 2025 Policy and Technical Changes to the Medicare Advantage Program, Medicare Prescription Drug Benefit Program, Medicare Cost Plan Program, and Programs of All-Inclusive Care for the Elderly (PACE),* 89 FR 30448 (April 23, 2024).

[802] We note that the term MIPS eligible clinician is defined at § 414.1305 as including a group of at least one MIPS eligible clinician billing under a single tax identification number. We refer readers to our policies governing group reporting and scoring under MIPS as set forth at § 414.1310(e).

For the Advanced APM track, if an eligible clinician participates in an Advanced APM and achieves Qualifying APM Participant (QP) or Partial QP status, they are excluded from the MIPS reporting requirements and payment adjustment (though eligible clinicians who are Partial QPs may elect to be subject to the MIPS reporting requirements and payment adjustment). Eligible clinicians who are QPs for the CY 2024 performance year receive a 1.88 percent APM Incentive Payment in the 2026 payment year. Beginning with the CY 2024 performance year (payment year 2026), QPs will also receive a higher PFS payment rate (calculated using the differentially higher ''qualifying APM conversion factor'') than non-QPs. QPs will continue to be excluded from MIPS reporting and payment adjustments for the applicable year.

Participation in the Quality Payment Program's MIPS track (defined as MIPS eligible clinicians with a final score greater than 0, including both those who submitted data and those who did not submit data) increased slightly to 98.98 percent in the seventh year (CY 2023 performance period/2025 MIPS payment year) with 679,634 MIPS eligible clinicians receiving a final score other than zero out of 686,645 MIPS total eligible clinicians. In the CY 2022 performance period/2024 MIPS payment year, 97.59 percent of the 624,209 MIPS eligible clinicians received a final score other than zero. Therefore, participation rates in MIPS increased slightly between the CY 2022 and CY 2023 performance periods.

In addition, 76.81 percent of MIPS eligible clinicians received a positive payment adjustment for the 2025 MIPS payment year based on their performance in the CY 2023 performance period. Please note that results for the CY 2023 performance period/2025 MIPS payment year described herein are subject to change as a result of the targeted review process, which began on August 12, 2024, and concluded on October 11, 2024. For more information on the targeted review process for the CY 2023 performance period/2025 MIPS payment year, please see our targeted review guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2961/2023-Targeted-Review-Guide.pdf.*

Regarding performance in Advanced APMs, for the CY 2023 QP Performance Period, 508,876 eligible clinicians (TIN–NPIs) earned Qualifying APM Participant (QP) status while another 1,521 eligible clinicians earned partial QP status.

We plan to continue developing policies for the Quality Payment Program that more effectively reward high-quality of care for patients and increase opportunities for Advanced APM participation. We are moving forward with implementing MIPS Value Pathways (MVPs) to allow for a more cohesive participation experience by connecting activities and measures from the four MIPS performance categories that are relevant to a specialty, medical condition, or a particular population.

We plan to continue developing policies for the Quality Payment Program that more effectively reward high-quality of care for patients and increase opportunities for Advanced APM participation. We are continuing to develop new MIPS Value Pathways (MVPs) to allow for a more cohesive participation experience by connecting activities and measures from the four MIPS performance categories that are relevant to a specialty, medical condition, or a particular population.

As we move into the eighth year of the Quality Payment Program, we will be implementing the updates set forth in this section of this final rule, encouraging continued improvement in clinicians' performance with each performance year and driving improved quality of health care through payment policy.

b. Summary of Major Proposals

(1) Transforming the Quality Payment Program

Our National Quality Strategy (*https://www.cms.gov/medicare/quality/meaningful-measures-initiative/cms-quality-strategy*) addresses the urgent need to advance towards a more equitable, safe, and outcomes-based health care system for all individuals. We have a corresponding cohesive value-based care strategy for Medicare along three main pillars: Alignment, Growth, and Equity.[803] We continue to focus on transforming health care delivery [804] and our 2030 goal to have all traditional Medicare beneficiaries in an accountable care relationship with their health care provider. In pursuit of this vision, we are driving higher value care, supporting Advanced APM participation, increasing alignment to reduce burden, and promoting health equity. We are exploring new care delivery and payment models; for example, we are considering an ambulatory care model that would connect payment to performance for specialists in the ambulatory setting to increase the number of specialists who deliver longitudinal care in an accountable manner and to support greater integration between specialty and primary care. This potential model would utilize MVPs as a foundation for assessing specialist performance (refer to section III.J of this final rule). We are finalizing as proposed in section II.G.2 of this final rule to make payment for advanced primary care management (APCM) services furnished by a physician or other qualified health care professional who is responsible for all primary care (for example, physicians and non-physician practitioners, including nurse practitioners, physician assistants, certified nurse-midwives and clinical nurse specialists), and serve as the continuing focal point for all needed health care services during a calendar month. This proposed payment would incorporate several specific, existing care management and communication technology-based services into a bundle and include a performance measurements requirement that could be met by reporting the Value in Primary Care MVP by clinicians billing for APCM services. We are finalizing as proposed that billing practitioners who are not MIPS eligible clinicians (as defined at § 414.1305) will not have to report the MVP in order to furnish and bill for APCM services.

Separately, we continue to implement MVPs and subgroup reporting option to allow clinicians to report on a cohesive set of measures and activities that more directly reflect their clinical practice. MVPs allow for more clinically relevant performance measurement, engage more specialists in performance measurement, and help reduce barriers to APM participation. While traditional MIPS continues to be a reporting option, we intend to move to full MVP adoption and to sunset traditional MIPS in the future. That future date has not been determined and will be established through the official notice and comment rulemaking process.

(a) MIPS Value Pathways Development and Maintenance

In an effort to promote high-quality, safe, and equitable care and to implement the vision outlined in the CMS National Quality Strategy, we are finalizing as proposed six new MVPs around the following topics: Complete Ophthalmologic Care, Dermatological Care, Gastroenterology Care, Optimal

[803] Update On The Medicare Value-Based Care Strategy: Alignment, Growth, Equity, Health Affairs Forefront, March 14, 2024. *https://www.healthaffairs.org/content/forefront/update-medicare-value-based-care-strategy-alignment-growth-equity.*

[804] Quality in Motion, Acting on the CMS National Quality Strategy, April 2024. *https://www.cms.gov/files/document/quality-motion-cms-national-quality-strategy.pdf.*

Care for Patients with Urologic Conditions, Pulmonology Care and Surgical Care. Complete Ophthalmologic Care, Dermatological Care, Gastroenterology Care, Optimal Care for Patients with Urologic Conditions, Pulmonology Care, and Surgical Care.

We are also finalizing our proposal to modify the MVP maintenance webinar process as proposed, to provide more flexibility on how we communicate submitted maintenance recommendations prior to proposing them formally in rulemaking (refer to section IV.A.4.a of this final rule).

Lastly, we are finalizing as proposed MVP maintenance updates to our MVP inventory that are in alignment with the MVP development criteria, and in consideration of the feedback from interested parties we have received through the maintenance process.

(b) MVP Requirements and Scoring

We are finalizing our proposal to update the scoring of population health measures in MVPs by using the highest score of all available population health measures, and we are finalizing our proposal to remove the requirement for MVP Participants to select a population health measure at the time of MVP registration. We are also finalizing our proposal to modify the MVP scoring policies at § 414.1365(d)(3)(ii) with respect to the cost performance category to refer to, and therefore align with, our methodology for scoring cost measures at § 414.1380(b)(2) under our traditional MIPS policies. Additionally, we are finalizing our proposal to align MVP scoring with traditional MIPS policies by removing references to high- and medium-weighted improvement activities in MVPs. We are finalizing our proposal to update MVP scoring to assign 40 points for each improvement activity to provide full credit for the improvement activities performance category for MVP Participants who report one improvement activity. For the MVP Promoting Interoperability performance category, we are finalizing our proposal to modify our policy at § 414.1365(c)(4)(i)(A), requiring a subgroup to submit the affiliated group's data for this performance category, by removing references to specific performance periods/MIPS payment years, thereby permitting subgroups to report data for this category in this manner for the CY 2025 performance period/2027 MIPS payment year and beyond.

(c) APM Performance Pathway

We are finalizing our proposal to create within the APM Performance Pathway (APP) the APP Plus quality measure set beginning with the CY 2025 performance period/2027 MIPS payment year to align with the Universal Foundation measures under the CMS National Quality Strategy. We are not modifying the existing APP quality measure set, which already includes five of the ten Universal Foundation measures. Instead, we are establishing the APP Plus quality measure set as a second measure set distinct from the existing APP quality measure set. The APP Plus quality measure set will be an optional measure set that will incrementally add the six measures from the existing APP quality measure set and the remaining five Universal Foundation measures not already included in the APP quality measure set beginning with the CY 2025 performance period/2027 MIPS payment year. Under this proposal, a MIPS eligible clinician, group, or APM Entity that reports the APP may choose to report either the APP quality measure set or the APP Plus quality measure set.

(d) Data Submission for the Performance Categories

We are finalizing our proposal to adopt minimum criteria for a qualifying data submission for a MIPS performance period for the quality, improvement activities, and Promoting Interoperability performance categories, which we proposed to codify at § 414.1325(a)(1)(i) through (iii). Specifically, we are finalizing our proposals that a qualifying data submission must include numerator and denominator data for at least one MIPS quality measure from the final list of MIPS quality measures for the quality performance category and include a response of ''yes'' for at least one activity in the MIPS improvement activities Inventory for the improvement activities performance category. For the Promoting Interoperability performance category, we are finalizing our proposal that a qualifying data submission must include: (1) performance data, including any claim of an applicable exclusion, for the measures in each objective, as specified by CMS; (2) required attestation statements, as specified by CMS; (3) CMS EHR Certification ID (CEHRT ID) from the Certified Health IT Product List (CHPL); and (4) the start date and end date for the applicable performance period as set forth at § 414.1320.

We are also finalizing our proposal to codify our existing policies governing our treatment of multiple data submissions received for the quality and improvement activities performance categories at § 414.1325(f)(1). We are also finalizing our proposal to modify our policy governing our treatment of multiple data submissions received for the Promoting Interoperability performance category, which we proposed to codify at § 414.1325(f)(2). Specifically, for the quality and improvement activities performance categories, we are finalizing our proposal that for multiple data submissions received from submitters in multiple organizations, we will calculate a score for each submission received and assign the highest of the scores. For multiple data submissions received from a submitter in the same organization, we will score the most recent submission. For the Promoting Interoperability performance category, we are finalizing our proposal to modify our policy so that, for multiple data submissions received, we will calculate a score for each data submission received and assign the highest of the scores.

(e) MIPS Performance Category Measures and Activities

(i) Quality Performance Category

We are finalizing, the proposal to establish the data submission criteria for the Alternative Payment Model (APM) Performance Pathway (APP) quality measure set; finalizing, as proposed, our proposal to maintain the data completeness criteria threshold to at least 75 percent for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years; finalizing, with modification, our proposal to establish a measure set inventory of 195 (instead of 196 as proposed) MIPS quality measures, of which 192 (instead of 193 as proposed) are available in traditional MIPS and 3 are available only for utilization in MVPs; and codifying previously established criteria pertaining to the removal of MIPS quality measures.

(ii) Cost Performance Category

We are finalizing our proposal to add 6 new episode-based measures to the cost performance category beginning with the CY 2025 performance period/2027 MIPS payment year, as proposed: Chronic Kidney Disease, End-Stage Renal Disease, Kidney Transplant Management, Prostate Cancer, Rheumatoid Arthritis, and Respiratory Infection Hospitalization. We are also finalizing as proposed modifications to 2 existing episode-based cost measures so that their specifications reflect re-evaluated versions: Cataract Removal with Intraocular Lens (IOL) Implantation (currently titled Routine Cataract Removal with IOL

Implantation) and Inpatient (IP) Percutaneous Coronary Intervention (PCI) (currently titled ST-Elevation Myocardial Infarction (STEMI) PCI). We are finalizing our proposal to adopt a 20-episode case minimum for each of the six new episode-based cost measures, as proposed. We are also finalizing our proposal to maintain the case minima for the 2 existing measures as proposed, which are a 20-episode case minimum for the IP PCI measure and a 10-episode case minimum for the Cataract Removal with IOL Implantation measure. Additionally, we are finalizing our proposal to update the operational list of care episode and patient condition groups and codes to reflect these new and modified measures that we proposed. Lastly, we are finalizing our proposal to adopt criteria to specify objective bases for the removal of any cost measures from the MIPS cost performance category, which we are also codifying at § 414.1350(e), as proposed.

(iii) Improvement Activities Performance Category

As part of our regular maintenance of the improvement activities Inventory, we are finalizing our proposals to add two new, modify two existing, and remove four existing improvement activities for the CY 2025 performance period/2027 MIPS payment year. We are finalizing a delayed implementation of the modification of one existing improvement activity and the removal of four existing improvement activities until the CY 2026 performance period/2028 MIPS payment year. The new activities help fill gaps we have identified in the Inventory while the modified and removed activities will ensure that it includes only the most meaningful activities that have a clear path to clinical practice improvement. In addition, we are finalizing our proposals for two changes to the traditional MIPS improvement activities reporting and scoring policies for the CY 2025 performance period/2027 MIPS payment year: to eliminate the weighting of activities and to reduce the number of activities to which clinicians are required to attest to achieve a score in the improvement activities performance category. Lastly, we are finalizing our proposal to codify seven improvement activity removal factors to establish criteria used to identify activities for potential removal or modification.

(iv) Promoting Interoperability Performance Category

We do not have any proposals for the Promoting Interoperability performance category.

(f) MIPS Final Scoring Methodology

(i) Scoring the Quality Performance Category

We are finalizing with modifications our proposal to implement defined topped out benchmarks for topped out measures in specialty sets affected by limited measure choice and the list of measures that would use the defined topped out measure benchmark for CY 2025 performance period/2027 MIPS payment year. We are updating the defined topped out measure benchmark to include all deciles from 1 to 10 measure achievement points. We are finalizing our proposal to apply a Complex Organization Adjustment for virtual groups and APM Entities (including SSP ACOs) reporting eCQMs. We are finalizing our proposal to score Medicare CQMs using flat benchmarks for their first 2 years in the program consistent with the Shared Saving Program's policies.

(ii) Scoring the Cost Performance Category

We are finalizing our proposal to modify our methodology for scoring measures for the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year. Additionally, we are finalizing our proposal to adopt a new cost measure exclusion policy beginning with the CY 2024 performance period/2026 MIPS payment year.

(g) MIPS Payment Adjustments

We are finalizing our proposal to establish the mean as the methodology for determining the performance threshold for the CY 2025 performance period/2027 MIPS payment year through the CY 2027 performance period/2029 MIPS payment year. To determine the performance threshold for the CY 2025 performance period/2027 MIPS payment year, we are finalizing our proposal that we will use the mean of the final scores from the CY 2017 performance period/2019 MIPS payment year. Based on the mean final score from that prior period, we are finalizing our proposal to establish a performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year.

(h) Calculating the Final Score

We are finalizing our proposal to adopt a new reweighting policy at § 414.1380(c)(2)(i)(A)(*10*) and (c)(2)(i)(C)(*12*), as proposed. Specifically, we are finalizing that, beginning with the CY 2024 performance period/2026 MIPS payment year, we may reweight one or more of the performance categories (specifically, quality, improvement activities, or Promoting Interoperability) where we determine, based on information submitted to us on or before November 1st of the year preceding the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third party intermediary, and the third party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines. We note that, to determine whether to apply reweighting to the affected performance category(ies), we will consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third party intermediary's submission of the clinician's data for the performance category(ies); whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines.

(i) Third Party Intermediaries

We are finalizing our proposal to add a requirement that CMS-approved survey vendors must provide information on the cost of their services beginning with the CY 2026 performance period/2028 MIPS payment year. This requirement will only be applicable to the cost of services for the CAHPS for MIPS Survey measure. The CAHPS for MIPS Survey Vendor Participation Form and the CAHPS for MIPS Survey Minimum Business Requirements in the QPP Resource Library will be updated to detail the required survey vendor cost information.

(2) Advanced APM Proposals

(a) Overview of the APM Incentive

An eligible clinician who meet or exceed threshold levels of participation in one or more Advanced APMs to become a Qualifying APM Participant

(QP) (or partial QP) is excluded from MIPS reporting requirements and payment adjustments. We assess an eligible clinician's level of participation in Advanced APMs based on whether either the payment amount or patient count Threshold Score as provided at § 414.1425 meets or exceeds the threshold percentages specified at § 414.1430. Threshold scores are calculated using the ratio of attributed beneficiaries to attribution-eligible beneficiaries. A beneficiary is considered attribution-eligible and included in the calculation of threshold scores if they meet the six criteria specified in the definition of ''attribution-eligible beneficiary'' at § 414.1305. We proposed to modify the sixth criterion under the definition of ''attribution-eligible beneficiary.'' Specifically, we proposed to include as attribution-eligible any beneficiary who has a minimum of one claim for covered professional service furnished by an eligible clinician for purposes of making QP determinations. We also proposed to amend § 414.1430 to reflect the statutory QP and Partial QP threshold percentages for both the payment amount and patient count methods under the Medicare Option and the All-Payer Option with respect to payment year 2026 (performance year 2024) in accordance with amendments made by the CAA, 2024. Relatedly, we also proposed to amend § 414.1450 to reflect the statutory APM Incentive Payment amount for the 2026 payment year (performance year 2024) of 1.88 percent of the eligible clinician's estimated aggregate payments for covered professional services in accordance with amendments made by the CAA, 2024.

2. Definitions

At § 414.1305, we are not finalizing our proposal to revise the definition of the following term:

- Attribution-eligible beneficiary

This term and definition are discussed in detail in section IV.A.4.k. of this final rule.

We solicited comments on this proposal. Our response to comments can be found in detail in the section IV.A.4.k.(2) of this final rule.

We are finalizing the proposed changes to the APM Incentive Payment as proposed.

3. Transforming the Quality Payment Program

Medicare plays a lead role in transitioning the health care system away from fee-for-service payment, which incentivizes the quantity of care, toward value-based payment, which incentivizes higher-quality care and smarter spending. We continue to focus on transforming health care delivery and our 2030 goal to have all traditional Medicare beneficiaries in an accountable care relationship with their health care provider. We also continue to pursue driving higher value care, supporting Advanced APM participation, increasing alignment to reduce burden, and promoting health equity.

We intend to continue our efforts to align the Quality Payment Program with the value-based strategy Alignment, Growth and Equity pillars,[805] the National Quality Strategy,[806] [807] [808] and broader CMS initiatives. We also intend to transform MIPS and obtain more meaningful comparable performance data, drive higher value care through MVPs and to provide as much transparency as possible about the timing for sunsetting traditional MIPS (86 FR 39356). As stated previously (86 FR 65394 through 65396), we envision a full transition to MVP reporting to support movement towards value-based payment.

In the CY 2025 PFS proposed rule (89 FR 62010 through 62016), we addressed how we can achieve full MVP adoption and subgroup participation as we move toward the sunsetting of traditional MIPS and advancing the three pillars and the National Quality Strategy. Specifically, in a request for information (RFI), we solicited feedback on MIPS eligible clinicians' readiness to report MVPs, how we should ensure there are applicable MVPs for all MIPS eligible clinicians, and what guidance/parameters are needed for multispecialty groups to place MIPS eligible clinicians into subgroups for reporting an MVP relevant to the scope of care provided (89 FR 62016). Please note, this was an RFI only.

We received many comments on this RFI and we thank commenters for their responses. Although we will not be addressing in this final rule the comments received in response to this RFI, we value the input received and will take the comments into consideration to help us consider potential future policies for MVPs for MIPS. We will consider the feedback received for future rulemaking.

4. QPP Reporting and Data Submission

a. CY 2025 MVP Development and Maintenance

(1) Development of New MVPs

In the CY 2023 PFS final rule (87 FR 70035 through 70037), we finalized modifications to the MVP development process to broaden opportunities for the general public to provide feedback on new candidate MVPs prior to the notice and comment rulemaking process. We refer readers to the Quality Payment Program website to review the public feedback we received for each 2025 MVP candidate (*https://qpp.cms.gov/mips/candidate-feedback*).

Through our development processes for new MVPs (85 FR 84849 through 84856, 87 FR 70035 through 70037), we aim to gradually develop new MVPs that are relevant and meaningful for MIPS eligible clinicians. We proposed the inclusion of six new MVPs (89 FR 62582 through 62606):

- Complete Ophthalmologic Care;
- Dermatological Care;
- Gastroenterology Care;
- Optimal Care for Patients with Urologic Conditions;
- Pulmonology Care; and
- Surgical Care.

With the proposed addition of the 6 new MVPs, we estimated approximately 80 percent of MIPS eligible clinicians will have applicable MVPs available for reporting. We are finalizing all six new MVPs, three as proposed and three with modifications. We refer readers to Appendix 3: MVP Inventory, of this final rule for discussion of the proposed new MVPs, the public comments received, and our responses.

Although our intended goal has been to offer MVPs for all specialties and subspecialties during the transition from traditional MIPS to full MVP implementation (84 FR 40732 through 40740), we acknowledge our existing portfolio of quality and cost measures may not be applicable to all specialties and subspecialties. For quality measures, while most specialties and subspecialties can report on broadly applicable quality measures to meet the reporting requirements for the quality performance category within an MVP, some specialties and subspecialties do not have sufficient robust quality measures that are specific to their scope

[805] Update On The Medicare Value-Based Care Strategy: Alignment, Growth, Equity, Health Affairs Forefront, March 14, 2024. *https://www.healthaffairs.org/content/forefront/update-medicare-value-based-care-strategy-alignment-growth-equity.*

[807] The CMS National Quality Strategy: A Person-Centered Approach to Improving Quality. Centers for Medicare & Medicaid Services, June 2022). The CMS National Quality Strategy: A Person-Centered Approach to Improving Quality | CMS (*https://www.cms.gov/blog/cms-national-quality-strategy-person-centered-approach-improving-quality#_ftn4*).

[808] Quality in Motion, Acting on the CMS National Quality Strategy, April 2024. *https://www.cms.gov/files/document/quality-motion-cms-national-quality-strategy.pdf.*

of care. Thus, we continue to explore options for overcoming challenges to develop MVPs for those specialties and subspecialties with limited quality measures.

For cost measures, while most specialties have at least one applicable episode-based cost measure or population-based cost measure, these measures may not encompass the full array of care that could be covered by a given specialty and, in some instances, some specialties and subspecialties may not have an applicable cost measure. For example, the following specialties have limited cost measures available and applicable based on the current MIPS cost measure inventory:

- Diagnostic Radiology;
- Interventional Radiology;
- Optometry;
- Pathology;
- Radiation Oncology; and
- Speech Language Pathology.

Additionally, some specialties have one or more applicable cost measures, but subspecialists may not be captured under these measures. In the case of the Melanoma Resection measure, it applies to individual MIPS eligible clinicians, groups, and subgroups that perform a sufficient number of melanoma excision procedures to meet the measure's case minimum. Although this measure is applicable to many dermatologists, whether a dermatologist is scored on this measure depends on multiple factors, including whether they submit claims on, and are attributed a sufficient number of qualifying melanoma excision procedures (minimum of 10 cases as specified under § 414.1350(c)(4)) to receive a score on this cost measure as set forth in § 414.1380(b)(2). While there are existing policies to reweight the cost performance category for individual, groups, and subgroups of MIPS eligible clinicians that cannot be scored on cost measures in accordance with § 414.1380(b)(2), an MVP cannot be developed for a specialty or subspecialty if there is not at least one applicable cost measure, as finalized in the CY 2021 PFS final rule (85 FR 84472). The intent of MVPs is to assess MIPS eligible clinicians, groups, and subgroups across all performance categories, and additional cost measures would support this intent.

We use prioritization criteria that we established in the CY 2022 PFS final rule (86 FR 65456) to determine which cost measures to develop:

- Clinical coherence of measure concept (to ensure valid comparisons across clinicians).
- Impact and importance to MIPS (including cost coverage, clinician coverage, and patient coverage).
- Opportunity for performance improvement.
- Alignment with quality measures and improvement activities to ensure meaningful assessments of value.

In the CY 2022 PFS final rule (86 FR 65457), we also established the following standards for cost measure construction:

- Measures must assign services that accurately capture the role of attributed clinicians.
- Measures must have clear, ex ante attribution to clinicians.
- Measures must be based on episode definitions that have clinical face validity and are consistent with practice standards.
- Measures' construction methodology must be readily understandable to clinicians.
- Measures must hold clinicians accountable for only the costs they can reasonably influence.
- Measures must convey clear information on how clinicians can alter their practice to improve measured performance.
- Measures must demonstrate variation to help distinguish quality of care across individual clinicians.
- Measure specifications must allow for consistent calculation and reproducibility using Medicare claims data.

As of the CY 2024 performance period/2026 MIPS payment year, we have developed and implemented 29 MIPS cost measures, which reflect the prioritization criteria and input from interested parties about potential clinical topics, measure scope, clinically related services, and potential challenges or barriers to measurement. This is a substantial achievement in building out the cost measure portfolio since MIPS began with only two population-based cost measures, the Total Per Capita Cost (TPCC) measure and the Medicare Spending Per Beneficiary (MSPB) measure.

However, there are still MIPS eligible clinicians who do not have cost measures that apply to the major aspects of their care practice. For example, there are specialties or clinical topics where clinically coherent measure concepts have not yet been identified, plus there are impacts of cost, clinician, or patient coverage being lower than other measure concepts that were prioritized for development. Therefore, we continue to encourage interested parties to utilize our established pre-rulemaking processes, such as the Call for Measures (*https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/overview*), to develop and submit candidate quality and cost measures relevant to their specialty. Furthermore, we continue to develop MVPs based on needs and priorities, as described in the MVP Needs and Priorities document (*https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20(MVPs)%20Development%20Resources.zip*).

We refer readers to section IV.A.3. of this final rule for a discussion of our request for information on Transforming the Quality Payment Program, challenges to adopting MVPs, and a potential path forward for developing MVPs for MIPS eligible clinicians with limited measures.

(2) MVP Maintenance Process

In the CY 2023 PFS final rule (87 FR 70037), we finalized a modification to the annual maintenance process for MVPs previously finalized in the CY 2022 PFS final rule (86 FR 65410). We communicated that if we identified any potentially feasible and appropriate submitted maintenance recommendations, we would host a public facing webinar open to interested parties and the general public through which they could offer their feedback on the potential maintenance updates we have identified.

Because we have had a low volume of submitted maintenance recommendations in past years, we proposed to modify the MVP maintenance webinar process to provide us more flexibility in how we communicate submitted maintenance recommendations prior to proposing them formally in rulemaking. Allowing flexibility in communicating recommendations through alternative webinar formats or other public communication channels would offer similar opportunities for public review and feedback as a live public webinar. For example, in lieu of a live webinar, we could choose to communicate submitted maintenance recommendations via a pre-recorded webinar, which will encourage interested parties to submit their feedback on the submitted recommendations in writing by email before maintenance updates are formally proposed in rulemaking. It is important to reiterate this public webinar process supports our commitment to consider interested parties' feedback when determining which maintenance updates are appropriate for inclusion in formal notice and comment rulemaking.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal to replace the live webinar with alternative approaches for the MVP maintenance process. The commenters shared their belief that alternative approaches could provide additional opportunities for interested parties to offer feedback on potential MVPs. One commenter recommended that we retain the current length of the public comment period to provide feedback on MVP candidates.

Response: We thank the commenters for their support. We intend to retain the 45-day public comment period to provide feedback on MVP candidates.

Comment: One commenter did not support the proposed modification to the MVP maintenance webinar process and recommended we continue offering the live webinar as it allows interested parties to engage directly with us.

Response: Interested parties will continue to have the opportunity to directly engage with us on MVP development. For example, they may submit suggestions to our mailbox at *PIMMSMVPSupport@gdit.com*. These suggestions are accepted on a rolling basis throughout the year. Recommendations we identify as potentially feasible and appropriate are communicated to interested parties and the general public as an additional opportunity to provide feedback on potential MVP maintenance updates prior to formal notice and comment rulemaking. We will also consider providing a live webinar if the feedback warrants discussion or dialogue with interested parties.

After consideration of public comments, we are finalizing our proposal as proposed to publicize any potentially feasible and appropriate submitted maintenance recommendations through various platforms, including but not limited to a live webinar, alternative webinar formats, and other public communication channels as we deem appropriate. Interested parties may offer their feedback on the potential maintenance updates we have identified directly, when the selected communication channel permits and otherwise through the mailbox noted.

(3) MVP Maintenance Updates to Previously Finalized MVPs

Between the CY 2022 PFS final rule (86 FR 65998 through 66031) and the CY 2023 PFS final rule (87 FR 70037), we finalized 12 MVPs available for reporting beginning with the CY 2023 performance period/2025 MIPS payment year:

- Adopting Best Practices and Promoting Patient Safety within Emergency Medicine;
- Advancing Cancer Care;
- Advancing Care for Heart Disease;
- Advancing Rheumatology Patient Care;
- Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes;
- Improving Care for Lower Extremity Joint Repair;
- Optimizing Chronic Disease Management;
- Optimal Care for Kidney Health;
- Optimal Care for Neurological Conditions;
- Patient Safety and Support of Positive Experiences with Anesthesia;
- Promoting Wellness; and
- Supportive Care for Cognitive-Based Neurological Conditions.

In the CY 2024 PFS final rule (88 FR 79978 through 80047), we consolidated Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single primary care MVP titled ''Value in Primary Care MVP'' as well as finalized five additional MVPs available for reporting beginning with the CY 2024 performance period/2026 MIPS payment year:

- Focusing on Women's Health;
- Prevention and Treatment of Infectious Disorders Including Hepatitis C and Human Immunodeficiency Virus (HIV);
- Quality Care for the Treatment of Ear, Nose, and Throat Disorders;
- Quality Care in Mental Health and Substance Use Disorder; and
- Rehabilitative Support for Musculoskeletal Care.

In the CY 2025 PFS proposed rule (89 FR 62607 through 62648), we proposed modifications to all 16 MVPs with the addition and removal of measures and improvement activities based on the MVP development criteria (85 FR 84849 through 84854). Through these modifications, we can expand upon the clinical concepts, advance health equity, address maintenance requests from the public, and remove measures and activities that would either be finalized for removal from their respective MIPS Inventory or replaced by more robust measures. In addition, through the MVP maintenance process, we proposed to consolidate the previously finalized Optimal Care for Patients with Episodic Neurological Conditions MVP and the Supportive Care for Neurodegenerative Conditions MVP into a single consolidated neurological MVP titled Quality Care for Patients with Neurological Conditions MVP.

Comment: One commenter expressed opposition to organizing MVPs at the broad specialty level and urged us to propose MVPs that are more clinically relevant by focusing on a discrete condition or clinical episode, even if they are only provided by a subset of the specialty's members or by a particular subspecialty. Alternatively, the commenter requested we consider updates to the proposed framework, which would continue to allow for broad specialty MVPs, but broken out by sub-clinical conditions.

Response: We will address refinements to the general MVP framework in future rulemaking, and we will take these suggestions into consideration.

In addition, we received public comments on the proposed maintenance updates to previously finalized MVPs. We refer readers to Appendix 3: MVP Inventory of this final rule for the proposed modifications to the previously finalized MVPs, the public comments received, and our responses.

b. MVP Requirements and Scoring

In the CY 2022 PFS final rule (86 FR 65411 through 65415), we finalized policies for MVP reporting requirements, including subgroup requirements, which took effect beginning in the CY 2023 performance period/2025 MIPS payment year, at § 414.1365(c)(1) through (4). We noted that MVP reporting requirements are based on the reporting requirements of traditional MIPS but have some differences, such as reporting fewer measures, to reduce MVP reporting burden and allow for measurement that is more meaningful by requiring clinicians to report on measures and activities that comprehensively reflect an episode of care or clinical condition (86 FR 65411).

In the CY 2022 PFS final rule, we finalized policies for MVP scoring that took effect beginning in the CY 2023 performance period/2025 MIPS payment year. We refer readers to 86 FR 65419 through 65427 for the details of those finalized policies. We previously finalized at § 414.1365(d)(2) that, unless otherwise indicated in § 414.1365(d), the performance standards described at § 414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP (86 FR 65419 through 65421). We noted that in general, we have adopted the scoring policies from traditional MIPS for MVP Participants unless there is a compelling reason to adopt a different policy to further the goals of the MVP framework (86 FR 65419). In the CY 2025 PFS proposed rule (89 FR 62018 through 62021), we

proposed to update the registration process and scoring policies for population health measures in the quality performance category, clarify the alignment between scoring cost measures in MVPs and traditional MIPS, update requirements and scoring policies for improvement activities in the improvement activities performance category, and update the requirements for subgroup reporting in the Promoting Interoperability performance category.

We refer readers to section IV.A.4.d. of this final rule for policies on data submission requirements; section IV.A.4.e.(1)(c)(i) of this final rule for policies on the data completeness threshold; section IV.A.4.f.(1)(b) of this final rule for policies on scoring of topped out measures, and scoring virtual groups and APM Entities (including SSP ACOs) in the quality performance category; section IV.A.4.f.(1)(d)(ii)(B) of this final rule for benchmarking policies for scoring the cost performance category; section IV.A.4.e.(3)(b)(iv) of this final rule for policies for requirements and scoring that remove medium- and high-weighting from improvement activities in the improvement activities performance category; and section IV.A.4.e.(4) of this final rule for current requirements and the Request for Information (RFI) for the Promoting Interoperability performance category.

(1) Quality Performance Category in MVPs

(a) Background on Population Health Administrative Claims-Based Measures

In the CY 2021 PFS final rule, we discussed the inclusion of population health measures as a part of the foundational layer of MVPs, to improve patient outcomes, reduce reporting burden and costs, and better align with clinician quality improvement efforts (85 FR 84856 and 84857). In the CY 2022 PFS final rule we defined a population health measure as a quality measure that indicates the quality of a population or cohort's overall health and well-being, such as, access to care, clinical outcomes, coordination of care and community services, health behaviors, preventive care and screening, health equity, or utilization of health services (86 FR 65408 and 65409). We also discussed in the CY 2022 PFS final rule the importance of currently adopted population health measures, noting that they capture outcomes important to patients and thus provide meaningful information to clinicians so they can improve their practice, and discussed the use of population health measures as the foundational layer in MVPs to ensure that important areas of measurement are reflected within all MVPs (86 FR 65408).

We finalized in the CY 2022 PFS final rule (86 FR 65414) at § 414.1365(c)(4)(ii) that an MVP Participant is scored on one population health measure in accordance with § 414.1365(d)(1). Since the MVP population health measures are administrative claims-based, they do not require data submission from clinicians and do not contribute to reporting burden. To track which population health measure an MVP Participant intends to report, we finalized in the CY 2022 PFS final rule (86 FR 65417) at § 414.1365(b)(2)(i) that MVP Participants are required to select one population health measure at the time of MVP registration.

(b) Proposal To Use the Highest Score of All Available Population Health Measures

In the CY 2022 PFS final rule (86 FR 65421 and 65422) we finalized scoring rules for population health measures in MVPs. We finalized at § 414.1365(d)(3)(i)(A) that, except as provided in paragraph (d)(3)(i)(A)(*1*), each selected population health measure that does not have a benchmark or meet the case minimum requirement is excluded from the MVP Participant's total measure achievement points and total available measure achievement points. In cases where an MVP Participant selects a population health measure that cannot be scored because it does not have a benchmark or meet the case minimum requirement, we do not score any other population health measures that may be applicable and available.

Population health measures are included in the MVP foundational layer because they capture outcomes important to patients and thus provide meaningful information to clinicians so they can improve their practice (86 FR 65408). Under the current policy, we cannot score an MVP Participant on a population health measure if the MVP Participant selects a measure at registration that lacks a benchmark or if their case volume does not meet the case minimum requirement for the selected measure, even if another measure is applicable and available. In the CY 2022 PFS final rule (86 FR 65414) we discussed calculating each population health measure and applying the higher score to the quality score; however, we ultimately proposed and finalized the current policy to score only one selected population health measure to mitigate concerns from interested parties that not all population health measures are applicable to all specialties (86 FR 65414). We now realize that at the time of registration, an MVP Participant will not be able to determine if they will have enough cases to meet the case minimum required for scoring the selected population health measure and may not be able to reliably predict how the measure will score compared to a benchmark, given that benchmarks for administrative claims measures are set using data from the same performance year. Requiring an MVP participant to select the population health measure to be scored at the time of registration may unfairly penalize an MVP Participant.

To increase the likelihood that a population health measure can be scored, we had considered several options, including calculating the population health measure score by using an average score of all population health measures that have a benchmark and meet the case minimum requirement and using the score of the population health measure with the highest number of cases in order to score the population health measure that represents the most care provided by an MVP Participant. However, we determined these approaches could result in a lower score for an MVP Participant that did not correlate to the MVP Participant's performance. We also considered whether an MVP Participant could select a population health measure at the time of data submission when all other measures are reported. However, population health measures are calculated by CMS using administrative claims-based data and therefore do not require data submission from clinicians, and administrative claims-based data is not available for CMS calculation until at least 60 days after the end of the reporting period. Therefore, the MVP Participant would not know whether they would meet the case minimum requirement for the selected population health measure at the time of data submission.

Because population health measures in the MVP capture outcomes important to patients (that is, for example, hospitalizations for acute illness) and thus, provide meaningful information to clinicians so they can improve their practice, we want to avoid scenarios where MVP Participants may inadvertently select a measure that cannot be scored. As described for traditional MIPS at § 414.1380(b)(1)(i), we calculate all administrative claims-based quality measures and score the clinician on each measure for which there is a benchmark and the clinician meets the case minimum requirement. Calculating all population health

measures in MVPs would more closely align with the policy to calculate all administrative claims-based quality measures. Additionally, we have developed MVPs with a smaller, more cohesive set of measures and streamlined reporting requirements. A policy to take the highest population health score would increase the likelihood that an MVP Participant is scored on a population health measure and would ensure that MVP Participants receive the highest possible population health score that correlates to their performance.

We proposed in the CY 2025 PFS proposed rule (89 FR 62018 through 62020) to revise § 414.1365(d)(3)(i)(A) to state that for the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, MVP Participants would be scored on the selected population health measure and beginning in the CY 2025 performance period/2027 MIPS payment year, we would use the highest score of all available population health measures. If no population health measure has a benchmark or meets the case minimum requirement, then the population health measure is excluded from the MVP Participant's total measure achievement points and total available measure achievement points. To apply this policy to subgroups reporting an MVP, we also proposed in the CY 2025 PFS proposed rule (89 FR 62019) to update § 414.1365(d)(3)(i)(A)(*1*) to provide that for the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, subgroups will be scored on the selected population health measure based on its affiliated group score, if available, and beginning in the CY 2025 performance period/2027 MIPS payment year, a subgroup is scored on the highest scoring of all available population health measures based on its affiliated group score, if available. If the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points.

We also proposed in the CY 2025 PFS proposed rule (89 FR 62019 and 62020) to remove the requirement for an MVP Participant to select a population health measure at the time of MVP registration. By implementing our proposal to calculate each population health measure for an MVP Participant and use the participant's highest score for population health measures in MVPs, there would be no need for the MVP Participant to select a measure during registration. We proposed in the CY 2025 PFS proposed rule (89 FR 62019 and 62020) to revise § 414.1365(b)(2)(i) to provide that for the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, each MVP Participant must select an MVP, one population health measure included in the MVP, and any outcomes-based administrative claims-based measure on which the MVP Participant intends to be scored. Beginning in the CY 2025 performance period/2027 MIPS payment year, each MVP Participant must select an MVP and any outcomes-based administrative claims-based measure on which the MVP Participant intends to be scored. We sought comment on these proposals.

We received public comments on these proposals. The following is a summary of the comments we received on the proposed revisions to (1) score MVP Participants on their highest scoring of all population health measures; (2) score subgroups on the highest scoring of all available population health measures based on its affiliated group score, if available; and (3) remove the requirement for an MVP Participant to select a population health measure at the time of MVP registration and our responses.

Comment: Many commenters supported the proposal to use the highest score of all available population health measures. A few commenters expressed their belief that this proposal will reduce clinician burden, reduce the likelihood that a clinician selects a measure that cannot be scored, and will more accurately reflect the quality of care provided in the population health measure score.

Response: We thank the commenters for their support.

Comment: A few commenters supported the proposal to use the highest score of all available population health measures and recommended that we apply the proposal retroactively for the CY 2024 performance period/2026 MIPS payment year.

Response: We clarify that the proposal, with respect to years prior to the CY 2025 performance period/2027 MIPS payment year was not a proposal to retroactively modify current policy. Instead, it principally specified that the CY 2024 performance period would be the last performance period to operate under existing policy and the newly proposed policy would begin with the CY 2025 performance period. While the agency may adopt rules retroactively under certain circumstances, it declines to do so here.

Comment: A few commenters, who appear to be MIPS eligible clinicians, requested that we provide data on their performance for all population health measures, including those not scored.

Response: We agree that it would be beneficial to provide feedback on all population health measures in an MVP. We will explore whether it is technically feasible to provide each MIPS eligible clinician with patient-level reports to MVP Participants for any population health measure that meets case minimum, and not just the one that contributes to the final score.

After consideration of public comments, we are finalizing, as proposed, to revise § 414.1365(d)(3)(i)(A) to state that, except as provided in paragraph (d)(3)(i)(A)(*1*) of this section, for the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, each selected population health measure that does not have a benchmark or meet the case minimum requirement is excluded from the MVP Participant's total measure achievement points and total available measure achievement points. Beginning in the CY 2025 performance period/2027 MIPS payment year, except as provided in paragraph (d)(3)(i)(A)(*1*), the highest score of all applicable and available population health measures will be used. If no population health measure has a benchmark or meets the case minimum requirement, each such measure is excluded from the MVP Participant's total measure achievement points and total available measure achievement points. We are also finalizing as proposed to revise § 414.1365(d)(3)(i)(A)(*1*) to state for the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, a subgroup is scored on the selected population health measure based on its affiliated group score, if available, and beginning in the CY 2025 performance period/2027 MIPS payment year, a subgroup is scored on the highest scoring of all available population health measures based on its affiliated group score, if available. If the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points. We are also finalizing as proposed to revise § 414.1365(b)(2)(i) to provide that for the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, each MVP Participant must select an MVP, one population health measure included in the MVP, and any outcomes-based administrative claims-based measure on which the MVP Participant intends to be scored. Beginning in the CY 2025 performance period/2027 MIPS payment year, each MVP Participant

must select an MVP and any outcomes-based administrative claims-based measure on which the MVP Participant intends to be scored.

(2) Cost Performance Category in MVPs

In the CY 2022 PFS final rule, we finalized at § 414.1365(d)(3)(ii) to use the methodology established at § 414.1380(b)(2)(i) through (v) to score the cost performance category for MVPs using the cost measures included in the MVP that MVP Participants select and report. The finalized policies at § 414.1380(b)(2) score cost measures based on achievement and improvement when the case minimum specified under § 414.1350(c) is met or exceeded and CMS has determined a benchmark (86 FR 65422 and 65423). We discussed in the CY 2022 PFS final rule that aligning MVP scoring policies with existing traditional MIPS scoring policies balances the statutory requirements and goals of the program with ease of use, stability, and meaningfulness to MIPS eligible clinicians (86 FR 65419). We refer readers to section IV.A.4.f.(1)(d)(ii)(B) of this final rule for discussion of our proposals to modify the cost performance category's scoring methodology at § 414.1380(b)(2), which we are finalizing.

To ensure alignment between MVP and traditional MIPS scoring policies, it is important that MVP cost performance category scoring policies refer to the traditional MIPS policy on how cost measures are scored. We remind readers that cost measures are scored based on the MIPS eligible clinician's performance on the measure during the performance period compared to the measure's benchmark, as set forth in § 414.1380(b)(2). Currently, § 414.1365(d)(3)(ii) provides that the cost performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(2)(i) through (v) and the cost measures included in the MVP that they select and report. To ensure continued alignment, we proposed in the CY 2025 PFS proposed rule (89 FR 62020) to modify § 414.1365(d)(3)(ii) to replace the reference to § 414.1380(b)(2)(i) through (v) with a broader reference to the cost performance category scoring policies at § 414.1380(b)(2).

We also proposed in the CY 2025 PFS proposed rule (89 FR 62020) to similarly revise § 414.1365(d)(3)(ii)(A). This regulation currently provides that a subgroup is scored on each cost measure included in the MVP that it selects and reports based on its affiliated group score for each such measure, if available. In addition, § 414.1365(d)(3)(ii)(A) provides that, if the subgroup's affiliated group score is not available for a measure, the measure is excluded from the subgroup's total measure achievement points and total available measure achievement points, as described under § 414.1380(b)(2)(i) through (v). We proposed in the CY 2025 PFS proposed rule (89 FR 62020) to modify § 414.1365(d)(3)(ii)(A) to replace the reference to § 414.1380(b)(2)(i) through (v) with a broader reference to the cost performance category scoring policies at § 414.1380(b)(2).

We received public comments on these proposals. The following is a summary of the comments we received on the proposed revision to the MVP cost performance category scoring policy regulation text to reference the traditional MIPS policy on how cost measures are scored and our responses.

Comment: A few commenters supported the proposal to modify the regulation text governing MVP cost performance category scoring to more broadly reference the traditional MIPS cost performance category scoring methodology. One commenter requested clarification as to whether the proposed modification to the cost performance category's scoring methodology in section IV.A.4.f.(1)(d)(ii)(B) of the CY 2025 PFS proposed rule (89 FR 62083 through 62087) will apply to cost measures in MVPs.

Response: We thank commenters for their support. We clarify that the proposed modifications to the cost performance category's scoring methodology, as described in the CY 2025 PFS proposed rule (89 FR 62083 through 62087) and finalized in section IV.A.4.f.(1)(d)(ii)(B) of this final rule, will apply to our scoring of cost measures in MVPs.

After consideration of public comments, we are finalizing as proposed modifications to the MVP cost performance category scoring policies at § 414.1365(d)(3)(ii) and § 414.1365(d)(3)(ii)(A). Specifically, we are finalizing replacing references to § 414.1380(b)(2)(i) through (v) in each provision with a broader reference to the cost performance category's scoring policies at § 414.1380(b)(2). We are finalizing our proposed modification at § 414.1365(d)(3)(ii) to state the cost performance category is calculated for an MVP Participant using the methodology at § 414.1380(b)(2). We also are finalizing our proposed modification to § 414.1365(d)(3)(ii)(A) to state that, if the subgroup's affiliated group score is not available for a measure, the measure is excluded from the subgroup's total measure achievement points and total available measure achievement points, as described under § 414.1380(b)(2).

(3) Improvement Activities Performance Category in MVPs

The improvement activities performance category should provide clinicians with an opportunity to select from a subset of improvement activities within an MVP that are relevant to the clinical topic. In the CY 2022 PFS final rule (86 FR 65412 and 64513) we finalized at § 414.1365(c)(3), that an MVP Participant who reports an MVP must report one of the following: two medium-weighted improvement activities; one high-weighted improvement activity; or participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice as described at § 414.1380(b)(3)(ii). We established in the CY 2022 PFS final rule (86 FR 65412 and 64514) that MVP Participants submitting MVPs would report fewer improvement activities than eligible clinicians reporting traditional MIPS to support MVP adoption.

Additionally, in the CY 2022 final PFS rule (86 FR 65423 and 65424) we finalized at § 414.1365(d)(3)(iii) that the improvement activities performance category score for MVP Participants is calculated based on the submission of high- and medium-weighted improvement activities. We finalized that MVP Participants will receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized PCMH or comparable specialty practice, as described at § 414.1380(b)(3)(ii). Therefore, MVP Participants who do not participate in a certified or recognized PCMH or comparable specialty practice must submit one high-weighted improvement activity or two medium-weighted improvement activities included in the MVP to receive a full credit score of 40 points. We stated that these requirements will provide an incentive for reporting MVPs, since fewer improvement activities are required to receive a full score for the improvement activities category in an MVP compared to traditional MIPS (86 FR 65423).

We refer readers to section IV.A.4.e.(3)(b)(iv) of this final rule for finalized policies that remove the medium- and high-weighting for improvement activities in traditional MIPS starting in the CY 2025

performance period/2027 MIPS payment year. In the CY 2025 PFS proposed rule (89 FR 62020 and 62021), we proposed to align MVP policies with the traditional MIPS proposal regarding the weighting of improvement activities and to reduce the number of improvement activities an MVP Participant must submit for an MVP. In the CY 2022 PFS final rule, we discuss that maintaining a lower reporting burden will encourage MVP participation (86 FR 65412). We discussed in the CY 2022 PFS final rule that incentives for reporting MVPs, including reduced reporting requirements, allow MVP Participants to report on a smaller, more cohesive subset of measures and activities that are relevant to a given clinical topic, condition, or episode of care (86 FR 65419 and 65420). Therefore, we proposed in the CY 2025 PFS proposed rule (89 FR 62020 and 62021) that starting in the CY 2025 performance period/2027 MIPS payment year, MVP Participants would be required to submit one improvement activity to achieve 40 points, or full credit, whereas in traditional MIPS clinicians will be required to submit two improvement activities to achieve full credit for the improvement activities performance category. We also proposed in the CY 2025 PFS proposed rule (89 FR 62020 and 62021) to update reporting requirements and scoring rules related to the improvement activities performance category for MVPs accordingly.

We proposed in the CY 2025 PFS proposed rule (89 FR 62020 and 62021) to revise § 414.1365(c)(3) to reflect reporting requirements for the CY 2023 and 2024 performance periods/2025 and 2026 MIPS payment years and the reporting requirements beginning in the CY 2025 performance period/2027 MIPS payment year. The revisions proposed in the CY 2025 PFS proposed rule (89 FR 62020 through 62021) at § 414.1365(c)(3)(i) introductory text and additions proposed at paragraphs (c)(3)(i)(A) through (C) would require that an MVP Participant who reports an MVP, in the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, report one of the following: two medium-weighted improvement activities; one high-weighted improvement activity; or participation in a certified or recognized PCMH or comparable specialty practice as described at § 414.1380(b)(3)(ii). Additionally, we proposed in the CY 2025 PFS proposed rule (89 FR 62020 and 62021) at § 414.1365(c)(3)(ii) introductory text and (c)(3)(ii)(A) and (B), beginning in the CY 2025 performance period/2027 MIPS payment year an MVP Participant who reports an MVP must report either one improvement activity or participation in a certified or recognized PCMH, or comparable specialty practice as described at § 414.1380(b)(3)(ii). We sought comment on the proposals.

We received public comments on these proposals. The following is a summary of the comments we received on the proposed revisions to MVP reporting requirements for the improvement activities performance category and our responses.

Comment: Many commenters supported the proposal to reduce the MVP reporting requirement for improvement activities.

Response: We thank commenters for their support.

Comment: One commenter expressed a concern that the policy will reduce requirements of the improvement activities performance category and may inadvertently lower the bar for improving quality. The commenter recommended increasing the number of improvement activities required for MVPs.

Response: We aim for MVPs to promote high value care by connecting the MIPS performance categories, standardizing performance measurement of a specialty, medical condition, or episode of care, and providing patients and clinicians with robust and meaningful healthcare data (86 FR 65391).

We are finalizing our policy that an MVP Participant who reports an MVP must report either one improvement activity or participation in a certified or recognized PCMH or comparable specialty practice in order to better focus on the highest impact improvement activities and to encourage quality improvement. MVP scoring policies are intended to reduce reporting requirements in MVPs to incentivize MVP participation and allow MVP Participants to report on a smaller, more cohesive subset of measures and activities that are relevant to a given clinical topic, condition, or episode of care, while still driving quality (86 FR 65419 and 65420). The new policy supports our goal of encouraging improvement while lowering the reporting burden.

After consideration of public comments, we are finalizing as proposed to update § 414.1365(c)(3)(i) introductory text and additions at paragraphs (c)(3)(i)(A) through (C) to require that an MVP Participant who reports an MVP in the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years report one of the following: two medium-weighted improvement activities; one high-weighted improvement activity; or participation in a certified or recognized PCMH or comparable specialty practice as described at § 414.1380(b)(3)(ii). We are also finalizing as proposed to update § 414.1365(c)(3)(ii) introductory text and (c)(3)(ii)(A) and (B), that beginning in the CY 2025 performance period/2027 MIPS payment year an MVP Participant who reports an MVP must report either one improvement activity or participation in a certified or recognized PCMH, or comparable specialty practice as described at § 414.1380(b)(3)(ii).

We also proposed in the CY 2025 PFS proposed rule (89 FR 62020 and 62021) to align MVP scoring with proposed modifications to traditional MIPS scoring that will remove the reference to high- and medium-weighted improvement activities for scoring and assign 40 points for each improvement activity submitted by MVP Participants. We proposed in the CY 2025 PFS proposed rule (89 FR 62020 and 62021) at § 414.1365(d)(3)(iii) that in the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, the improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. MVP Participants submitting MVPs in the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years would receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized PCMH or comparable specialty practice, as described at § 414.1380(b)(3)(ii). Beginning in the CY 2025 performance period/2027 MIPS payment year, MVP Participants would receive 40 points for each improvement activity that is submitted or participation in a certified or recognized PCMH or comparable specialty practice. We sought comment on this proposal.

We received public comments on these proposals. The following is a summary of the comments we received on the proposal to update MVP scoring policies for the improvement activities performance category and our responses.

Comment: Many commenters supported the improvement activities scoring policy in MVPs, stating that this scoring policy will simplify scoring,

reduce complications, and support efficient participation in MVPs.

Response: We thank commenters for their support.

After consideration of public comments, we are finalizing as proposed to update at § 414.1365(d)(3)(iii) that in the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, the improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. MVP Participants submitting MVPs in the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years will receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized PCMH or comparable specialty practice, as described at § 414.1380(b)(3)(ii). Beginning in the CY 2025 performance period/2027 MIPS payment year, MVP Participants will receive 40 points for each improvement activity that is submitted or participation in a certified or recognized PCMH or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

(4) Promoting Interoperability Performance Category in MVPs

In the CY 2022 PFS final rule, we finalized at § 414.1365(c)(4)(i) that an MVP Participant is required to meet the Promoting Interoperability performance category's reporting requirements. We also finalized at § 414.1365(c)(4)(i)(A) the Promoting Interoperability performance category's requirements for a subgroup participating in MVP reporting (86 FR 65413 and 65414). Specifically, at § 414.1365(c)(4)(i)(A), we stated that, for the CY 2023 and 2024 MIPS performance periods/2025 and 2026 MIPS payment years, an MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category. Under this policy, the submission of the affiliated group's data will be on the subgroup's behalf. If the affiliated group chooses to report as a group for the Promoting Interoperability performance category, the group will still be required to submit its own data separately and in accordance with the reporting rules for groups. We refer readers to the CY 2022 PFS final rule for additional details (86 FR 65413 and 65414).

We acknowledge the existing language under § 414.1365(c)(4)(i)(A) establishes the requirement for a subgroup to submit its affiliated group's data for the Promoting Interoperability performance category in the foundational layer of an MVP for only the CY 2023 performance period/2025 MIPS payment year and CY 2024 performance period/2026 MIPS payment year.[809] In the CY 2022 PFS final rule, we stated our intent to assess the performance of clinicians participating in subgroups in the Promoting Interoperability performance category using subgroup level data to the extent that it is operationally feasible (86 FR 39371 and 39372). However, as discussed in the CY 2022 PFS final rule (86 FR 39371), we heard from interested parties through the MVP Town Hall (85 FR 84846), that some clinicians will need additional time to resolve operational challenges, including challenges related to configuration of EHR systems for reporting Promoting Interoperability data at the subgroup level. We recognize that clinicians and interested parties may need additional time to resolve the technical challenges related to configuration of EHR systems for capturing and submitting data at the subgroup level.

We proposed in the CY 2025 PFS proposed rule (89 FR 62021) that this subgroup reporting policy to use the affiliate group's data for the Promoting Interoperability performance category in the MVP they select apply beyond the CY 2023 performance period/2025 MIPS payment year and CY 2024 performance period/2026 MIPS payment year currently specified at § 414.1365(c)(4)(i)(A). Specifically, we proposed in the CY 2025 PFS proposed rule (89 FR 62021) to modify § 414.1365(c)(4)(i)(A) by removing the references to the specific performance periods/MIPS payment years and provide instead that an MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category. This change would allow a subgroup to continue to submit the affiliated group's data for the MVP Promoting Interoperability performance category for the CY 2025 performance period/2027 MIPS payment year and subsequent years. We note that we will continue to monitor the operational challenges with the EHR systems and reassess whether subgroups should be required to submit performance data at the subgroup level for the Promoting Interoperability performance category.

We received public comments on this proposal. The following is a summary of the comments we received on the proposal to allow subgroups to continue to submit affiliated group's data for the Promoting Interoperability performance category and our responses.

Comment: A few commenters supported the proposal for subgroups to continue to use the affiliate group's data for the Promoting Interoperability performance category for the CY 2025 performance period/2027 MIPS payment year and subsequent years.

Response: We thank commenters for their support for continuing the policy beyond the CY 2025 performance period/2027 MIPS payment year.

Comment: One commenter supported the proposal and recommended that we evaluate if subgroups are disincentivized to submit MVPs because of the policy.

Response: We thank the commenter for their support and believe the policy enables MVP participation for subgroups without the infrastructure to report data for the Promoting Interoperability performance category measures at the subgroup level. We will monitor subgroup participation in future years.

After consideration of public comments, we are finalizing as proposed modification to § 414.1365(c)(4)(i)(A) to allow subgroups to continue to submit affiliated group's data for the Promoting Interoperability performance category. As finalized, § 414.1365(c)(4)(i)(A) will state that an MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category.

c. APM Performance Pathway

(1) Overview

In the CY 2021 PFS final rule (85 FR 84859 through 84866), we finalized the APM Performance Pathway (APP) at § 414.1367 beginning in CY 2021 performance period/2023 MIPS payment year. The APP was designed as a reporting and scoring pathway available only to MIPS APM participants in order to provide a predictable and consistent MIPS reporting option to reduce reporting burden for, and encourage continued APM participation by, these clinicians. We also established in the APM Performance Pathway for Shared Savings Program ACOs section of that same rule that, beginning with the Shared Savings Program performance year 2021 (CY 2021 performance period/

[809] In the CY 2025 PFS proposed rule (89 FR 62021), we inadvertently stated in error that the existing language under § 414.1365(c)(4)(i)(A) applied the requirement to the 2027 MIPS payment year. We have corrected this typographical error here in this final rule.

2023 MIPS payment year), ACOs were required to report quality data for purposes of the Shared Savings Program via the APP (42 CFR 425.512(a)(3); 85 FR 84722).

In that same rule, we finalized a quality measure set (85 FR 84860 and 84861) for purposes of quality performance category scoring for the APP. For those MIPS eligible clinicians, groups, or APM Entities for whom a given measure is unavailable due to the size of the available patient population or who are otherwise unable to meet the minimum case threshold for a measure, we established that such measure would be removed from the quality performance category score for such MIPS eligible clinician, group, or APM Entity (85 FR 84861). The complete existing APP quality measure set is shown in Table 66. As indicated in Table 66, the current APP quality measure set includes six quality measures, of which five also are Universal Foundation measures. Further, for MIPS eligible clinicians, groups, and APM Entities reporting through the APP, we established that we would not apply the quality measure scoring cap at § 414.1380(b)(1)(iv) in the event that a measure in the APP quality measure set is determined to be topped out. Because the APP quality measure set is fixed, we noted that it would not be appropriate to limit the maximum quality performance category score available to APP reporters. Should an APP quality measure be determined to be topped out, we would at that time consider amending the APP quality measure set through future rulemaking, if appropriate.

BILLING CODE 4120–01–P

TABLE 66: Existing APM Performance Pathway Quality Measure Set

Quality ID #	Measure Title	Collection Type	Submitter Type	Meaningful Measures 2.0 Area	Measure Type	Universal Foundation Measure
001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control	eCQM/MIPS CQM (all APP reporters) Web Interface/ Medicare CQM (SSP ACOs only)	APM Entity/ Third Party Intermediary	Chronic Conditions	Intermediate Outcome	Yes
134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	eCQM/MIPS CQM (all APP reporters) Web Interface/ Medicare CQM (SSP ACOs only)	APM Entity/ Third Party Intermediary	Behavioral Health	Process	Yes
236	Controlling High Blood Pressure	eCQM/MIPS CQM (all APP reporters) Web Interface/ Medicare CQM (SSP ACOs only)	APM Entity/ Third Party Intermediary	Chronic Conditions	Intermediate Outcome	Yes
321	CAHPS for MIPS	CAHPS for MIPS Survey	Third Party Intermediary	Person-Centered Care	Patient Engagement/ Experience	Yes
479	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Clinician Groups	Administrative Claims	N/A	Affordability and Efficiency	Outcome	Yes
484	Clinician and Clinician Group Risk-Standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions	Administrative Claims	N/A	Affordability and Efficiency	Outcome	No

BILLING CODE 4120–01–C

We stated when finalizing the APP that the goal of the APP quality measure set is not necessarily to reflect the specific quality goals of clinicians within their respective APMs, but rather to reduce the burden of reporting on quality measures twice: once to MIPS and once to their APMs. We believed that by using this broadly applicable population-health-based measure set, we would enable MIPS APM participants to focus more of their energy and attention on the quality measures being reported through their APMs, while relying on a consistent measure set within the APP from one year to the next (85 FR 84862).

We also finalized the Web Interface measure set for the CY 2021 MIPS performance period within the APP for Shared Savings Program ACOs only (85 FR 84720 through 84723), and in the CY 2022 PFS final rule, extended this collection type through CY 2024 (86 FR 65429). In the CY 2024 PFS final rule, we established the Medicare Clinical Quality Measure for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM) collection type in the APP quality measure set and finalized that the Medicare CQM collection type would be available to only ACOs participating in the Shared Savings Program. Beginning with the 2024 performance year, ACOs in the Shared Savings Program have the option to report the Medicare CQM under the APP on only ''beneficiaries eligible for Medicare CQMs as defined at § 425.20, instead of their all payer/all patient population'' (88 FR 79329).

(2) Establishment of the APP Plus Quality Measure Set To Align With the Universal Foundation

We explained in the CY 2025 PFS proposed rule that under the goals of the CMS National Quality Strategy to improve the quality and safety of healthcare for everyone,[810] CMS is implementing a building-block approach to streamline quality measures across CMS quality programs for measuring primary care clinician performance in the adult and pediatric populations by leveraging the Universal Foundation of quality measures (89 FR 61854). The Universal Foundation of quality measures focuses clinicians' attention on measures that are meaningful for the health of broad segments of the population; reduces provider burden by streamlining and aligning measures; advances equity with the use of measures that will help CMS recognize and track disparities in care among and within populations; aids the transition from manual reporting of quality measures to seamless, automatic digital reporting; and permits comparisons among various quality and value-based care programs to help the Agency better understand what drives quality improvement and what does not.[811] The Universal Foundation, which identifies a set of key quality measures for use where relevant throughout CMS programs, is already reflected in the Medicaid Core Sets and the Marketplace Quality Rating System.[812] In addition, in the CY 2024 PFS final rule (88 FR 79321 and 80043), CMS consolidated the previously finalized Promoting Wellness and Optimizing Chronic Disease Management MIPS Value Pathways (MVPs) into a single consolidated primary care MVP (Value in Primary Care MVP) that aligns with the adult Universal Foundation quality measures. In the Announcement of CY 2024 Medicare Advantage (MA) Capitation Rates and Part C and D Payment Policies, we also solicited comment on adding the Universal Foundation measures to Medicare Advantage and the Part D Star Ratings Program. We noted that we would take these comments into consideration in the future, and that any additional measures added to the Star Ratings Program would need to be added through rulemaking.[813] Alignment of quality measures across CMS programs allows practitioners to better focus their quality efforts, reduces administrative burden, and drives digital transformation and stratification of a focused quality measure set to assess impact on disparities.[814]

To further advance Medicare's overall value-based care strategy, which emphasizes preventive care and primary care and to promote greater alignment within and across CMS' quality programs, we proposed in the CY 2025 PFS proposed rule (89 FR 62023) to create the APP Plus quality measure set within the APP specifically to incorporate all of the Adult Universal Foundation measures. Five of the ten adult Universal Foundation measures already are represented in the existing APP quality measure set for the CY 2025 performance period/2027 MIPS payment year under policies finalized in the CY 2024 PFS final rule (88 FR 79113). The Universal Foundation measures included in the APP quality measure set are listed in Table 66. The inclusion of half of the measures in the Universal Foundation in the existing APP quality measure set and the recognition that a significant number of current and potential users of the APP—those clinicians participating in MIPS APMs—practice in primary and preventive care areas that are relevant to the Universal Foundation make the APP a meaningful addition to CMS' efforts at quality alignment by bringing in MIPS reporting by MIPS APM participants and in turn by providing feedback in the form of their MIPS quality score to those participants as they also continue to work towards advancing the care they provide within the context of their respective MIPS APMs.

We noted that we did not propose to modify the existing APP quality measure set or the overall framework for the APP as a reporting and scoring pathway (89 FR 62023). For example, under this proposal, the APP would continue to be available to MIPS eligible clinicians, groups, and APM Entities participating in MIPS APMs, meaning that only these clinician types would be able to report and be scored on the APP Plus quality measure set. We proposed that, within the APP, the APP Plus quality measure set will be a second measure set distinct from the existing APP quality measure set that MIPS eligible clinicians identified on the Participation List or Affiliated Practitioner List of an APM Entity participating in a MIPS APM may optionally choose to report. Under the proposal, when an applicable MIPS eligible clinician, group, or APM Entity chooses to report the APP beginning in the CY 2025 performance period/2027 MIPS payment year, they will also choose whether to report the APP quality measure set or the APP Plus quality measure set. We proposed for the CY 2025 performance period/2027 MIPS payment year, the APP Plus quality measure set would include the current APP quality measures and two

additional quality measures from the Adult Universal Foundation measure set. The measure set would incrementally add the remaining three Adult Universal Foundation measures by the CY 2028 performance period/2030 MIPS payment year. Specifically, we proposed to adopt one new quality measure beginning with the CY 2026 performance period/2028 MIPS payment year, and two new quality measures beginning with the CY 2028 performance period/2030 MIPS payment year.

We requested public comment on this proposal.

The following is a summary of the public comments we received on this proposal and our responses. Because the Shared Savings Program proposed to require reporting of the APP Plus quality measure set to meet its quality performance standard (89 FR 61853 through 61858), many of the comments we received on the establishment of the APP Plus quality measure set were submitted by Shared Savings Program ACOs. While we have included those comments in this section, we refer readers to section III.G.4.b.(2)(a) of this final rule for comments related to the APP Plus quality measure set that are specific to the Shared Savings Program's proposal to require that ACOs report and be scored on the APP Plus quality measure set for purposes of meeting the Shared Savings Program's quality performance standard.

Comment: Several commenters expressed support for the incorporation of specific measures into the APP Plus quality measure set, including the Breast Cancer Screening (Quality ID #112) measure, Colorectal Cancer Screening measure (Quality ID #113), Substance Use Disorder Treatment measure (Quality ID #305), Screening for Social Drivers of Health (Quality ID #487) measure, and the Adult Immunization Status (Quality ID #493) measure.

Response: We thank commenters for their support.

Comment: Many commenters requested a delay in incorporation of the new quality measures into the APP Plus quality measure set. Some commenters suggested that CMS delay incorporation of the APP Plus quality measure set from one to three years. Other commenters suggested a one or two-year delay to the measure phase-in schedule as it relates to each measure due to the complexity and administrative burden associated with reporting these new measures.

A few commenters stated that the proposed timeline for incorporating measures with eCQM collection types into the APP Plus quality measure set is appropriate provided that the measure specification for each measure is available at least 12 to 24 months prior to the respective measure incorporation date. These commenters stated this lead time is necessary for vendors and clinicians to prepare to report new measures. Other commenters encouraged CMS to consider an alternative timeline for incorporating measures with eCQM collection type into the APP plus quality measure set.

Response: We have heard from APM Entities, including Shared Savings Program ACOs, and other interested parties about the need for additional time to report the APP Plus quality measure set due to administrative burdens and/or technical complexities associated with reporting quality measures using the eCQM collection type. We appreciate that it takes time to integrate new quality measures into workflows and eCQMs into EHR systems. This is especially so for APM Entities whose constituent groups and eligible clinicians are spread across different practice locations and may use different EHR systems from each other, necessitating the additional steps of data aggregation, deduplication, and validation.

After consideration of public comment, we are finalizing our proposal to establish the APP Plus quality measure set with modification. We are revising the timeline for incorporating various measures into this measure set. Because CMS identified no other programs or MIPS APMs outside of the Shared Savings Program that will explicitly require participants to report the APP Plus quality measure set in the 2025 PFS proposed rule, our plan to modify the timeline for incorporating various measures into APP Plus quality measure set is predominantly to allow Shared Savings Program ACOs additional time to become familiar with new quality measures and their specifications, and to implement workflows necessary to support the reporting of new measures, as discussed in the comments above. For more information about Shared Savings Program proposals and finalized policies to require ACOs to report and be scored on the APP Plus quality measure set for purposes of meeting the Shared Savings Program's quality performance standard and the measure collection types available to Shared Savings Program ACOs, please see the discussion at sections III.G.4.b.(2)(a) and III.G.4.b.(2)(b) of this final rule, respectively.

As modified, the APP Plus quality measure set will now add one new measure per year from the Adult Universal Foundation measure set for the first three years and will delay the incorporation of the Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality ID #484) measure by one year.

Specifically, for the CY 2025 performance period/2027 MIPS payment year, the APP Plus quality measure set will now include the measures in the existing APP quality measure set that are also Universal Foundation measures as described in Table 68 and the following quality measure from the Universal Foundation of measures: The Breast Cancer Screening (Quality ID #112) measure. It will no longer include the Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality ID #484) measure nor the Colorectal Cancer Screening (Quality ID #113) measure as originally proposed in the CY 2025 PFS proposed rule. As a result of these modifications, there will be a total of six measures in the APP Plus quality measure set for the CY 2025 performance period/2027 MIPS payment year.

Beginning with the CY 2026 performance period/2028 MIPS payment year, and as described in Table 69 the APP Plus quality measure set will incorporate the Colorectal Cancer Screening (Quality ID #113) measure and add back the Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality ID #484) measure for a total of eight measures. The Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality ID #484) measure will be added to the APP Plus quality measure set in the CY 2026 performance period/2028 MIPS payment year instead of the CY 2025 performance period/2027 MIPS payment year to, as further discussed below, allow CMS time to assess whether and how the measure can be respecified to allow more ACOs to be scored on the measure.

Beginning with the CY 2027 performance period/2029 MIPS payment year, and as described in Table 70, the APP Plus quality measure set will incorporate the Initiation and Engagement of Substance Use Disorder Treatment (Quality ID #305) measure for a total of nine measures. As further discussed below, this measure will be added to the APP Plus quality measure set in the CY 2027 performance period/2029 MIPS payment year instead of the

CY 2026 performance period/2028 MIPS payment year to allow APM Entities time to create new workflows and processes to help track referrals and follow-ups related to SUD treatment.

The APP Plus quality measure set will add the final two measures from the Adult Universal Foundation measure set, the Screening for Social Drivers of Health (Quality ID #487) and Adult Immunization Status (Quality ID #493) measures, for a total of 11 measures, beginning with the CY 2028 performance period/2030 MIPS payment year, or the performance period that is one year after the eCQM specification becomes available for each respective measure, whichever is later, as described in Table 71. As discussed below, each of these two measures may be added after the CY 2028 performance period/2030 MIPS payment year as originally proposed to ensure that the eCQM specification for a measure is made available in advance of its incorporation into the APP Plus quality measure set so that APM Entities, including ACOs, can establish the necessary cross-practice workflows to implement the measures.

Expanding the APP Plus quality measure set on this modified schedule will allow APM Entities, groups, and clinicians the necessary time to become familiar with new measure specifications and incorporate each new measure into electronic health records so that they can successfully report the APP Plus quality measure set.

We also proposed in the CY 2025 PFS proposed rule to revise § 414.1367(c)(1) such that each MIPS eligible clinician, group, or APM Entity APM that elects to report the APP would choose to report either the APP quality measure set or the APP Plus quality measure set. We proposed that a MIPS eligible clinician, group, or APM Entity that chooses to report the APP Plus quality measure set for a performance period would be required to report all available measures in the APP Plus quality measure set for that performance period and will be scored on all such measures. For example, with respect to the CY 2027 performance period/2029 MIPS payment year, a MIPS eligible clinician, group, or APM Entity that chooses to report the APP Plus quality measure set would be required to report nine MIPS quality measures (to the extent applicable and available): the nine measures are the six measures incorporated from the existing APP quality measure set and the three additional Universal Foundation measures we proposed to incrementally adopt in the APP Plus quality measure set in the CY 2025, 2026, and 2027 performance periods/2027, 2028, and 2029 MIPS payment years. The clinician would also be scored on all nine of these measures.

The proposal would incrementally incorporate into the APP Plus quality measure set the Universal Foundation measures that are not already included in the existing APP quality measure set beginning in the CY 2025 performance period/2027 MIPS payment year. The Universal Foundation measure set aligns quality measures used across CMS programs and initiatives and is relevant to a significant subset of the clinicians who are eligible to report the APP. The APP Plus quality measure set will allow MIPS eligible clinicians, groups, and APM Entities eligible to report the APP to report Universal Foundation quality measures, which are used across CMS programs and initiatives.

We described the APP Plus quality measure set as separate from the APP quality measure set and optional for a MIPS eligible clinician, group, or APM Entity to report (89 FR 62024).[815] Although we want to promote greater familiarity with the Universal Foundation measures and to encourage clinicians to use the Universal Foundation measures through their MIPS participation, it is important to continue to allow the APP to serve its original purpose of offering a streamlined, stable reporting and scoring pathway for MIPS APM participants, who are already performing practice transformation and are reporting and being scored on quality measures within their APMs. Further, we recognize that while the Adult Universal Foundation quality measures are relevant to a significant portion of clinicians who are eligible to report the APP, they are not relevant for all such clinicians. For example, there are specialists for whom few, if any, of these measures may be relevant, and we do not wish to effectively exclude these clinicians from accessing the benefits of the APP when they otherwise are eligible. Moreover, we recognize that as CMS continues to evolve APM offerings for specialists, there may be more clinicians in the future who are participating in MIPS APMs and will therefore be eligible for the APP, which could shift the proportion of clinicians for whom the Universal Foundation measures are relevant as compared to today. For these reasons, we believe it is important to maintain the existing APP quality measure set and to continue to offer it as an option alongside the APP Plus quality measure set. We also are continuing to explore ways in which we may be able to offer specialists participating in MIPS APMs opportunities to report more relevant measures within the APP.

For the reasons specified previously, we proposed to amend § 414.1367(c)(1) to establish the APP Plus quality measure set and provide MIPS eligible clinicians, groups, and APM Entities the option to report the APP quality measure set or the APP Plus quality measure set beginning with the CY 2025 performance period/2027 MIPS payment year. We requested comment on this proposal.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to create the APP Plus quality measure set as an optional measure set within the APP at § 414.1367(c)(1). These commenters noted that the proposal offers several potential benefits. Numerous commenters appreciated that the APP Plus quality measure set will incrementally incorporate all of the existing Adult Universal Foundation measures, thereby promoting alignment and streamlining quality measure reporting across CMS quality programs and, as one commenter stated, with the private sector. Many commenters stated that our proposal to incrementally incorporate the Adult Universal Foundation measures and eCQM collection type into the APP Plus quality measure set is appropriate. Several commenters suggested that alignment of quality measures may drive improvements in care quality and outcomes. A few commenters noted the APP Plus quality measure set can help to encourage APM participation.

Response: We thank the commenters for their support.

Comment: One commenter questioned the necessity of creating the APP Plus quality measure set, instead of expanding the existing APP quality measure set. Several commenters expressed concern that reporting the APP Plus quality measure set will increase complexity and reporting burden for APM Entities that report the APP, particularly for Shared Savings Program Accountable Care Organizations (ACOs).

Response: We established the APP Plus quality measure set as a second measure set distinct from the existing APP quality measure set because we recognize that reporting the APP Plus

[815] That said, we note that the Shared Savings Program proposed to require that ACOs report the APP Plus quality measure set starting with PY 2025 (89 FR 61853).

quality measure set with its additional quality measures may require additional investments in infrastructure, skill development, and knowledge. However, because the APP Plus quality measure set is optional, a MIPS eligible clinician, group, or APM Entity that chooses to report the APP can assess the feasibility and benefits of reporting the APP Plus quality measure set as compared to the existing APP quality measure set and decide which measure set to report. We refer readers to section III.G.4.b.(2)(a) of this final rule for discussion regarding the separate but related proposal to require Shared Savings Program ACOs to report and be scored on the APP Plus quality measure set for purposes of meeting the Shared Savings Program's quality performance standard.

Comment: Many commenters provided feedback on specific measures proposed for inclusion in the APP Plus quality measure set. Specifically, we received comment on Quality ID #112 Breast Cancer Screening; Quality ID #113 Colorectal Cancer Screening; Quality ID #305 Initiation and Engagement of Substance Use Disorder Treatment; Quality ID #479 Hospital-Wide, 30-day All-Cause Unplanned Readmission (HWR) Rate for MIPS Clinician Groups; Quality ID #484 Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions; Quality ID #487 Screening for Social Drivers of Health; and Quality ID #493 Adult Immunization Status. Commenters expressed support for some measures and concern for other measures. Many commenters also commented on our proposed schedule for incorporating various measures into the APP Plus quality measure set. While some commenters suggested our incorporation schedule is appropriate, numerous other commenters had concerns with the timeline for incorporating the five additional Universal Foundation measures with the eCQM collection type into the APP Plus quality measure set and requested that we delay incorporation of each measure by one year or more to allow more time to prepare to report these measures.

Response: We appreciate the commenters' careful consideration of our proposal to establish the APP Plus quality measure set, inclusive of the individual measures that will comprise it and our proposed schedule for incorporation of quality measures into the APP Plus quality measure set. The incremental incorporation of the five Universal Foundation measures not already included in the APP quality measure set into the APP Plus quality measure set will give eligible clinicians, groups and APM Entities that report the APP Plus quality measure set time to become familiar with new measure specifications and implement workflows necessary to support reporting of each additional measure. This phase-in approach will permit vendors to adequately prepare for eCQM implementation. However, we recognize that there may be increased burden with increased reporting requirements, and while the APP Plus quality measure set is optional for MIPS APM participants, we acknowledge that the reporting of all measures within the set is a requirement that follows on to the choice to use it, and further we recognize that the use of the APP Plus quality measure set will be required for Shared Savings Program ACOs. Therefore, to allow APM Entities, including Shared Savings Program ACOs, more time to build capacity to report the complete set of measures, we are finalizing our proposal with modification to incorporate the Universal Foundation measures more gradually than the schedule that we proposed for incorporation into the APP Plus quality measure set.

For a few measures, we received comments on neither the incorporation of the measure into the APP Plus quality measure set nor on the proposed timeline for doing so, and therefore are finalizing the incorporation and phase-in schedule as proposed. Specifically, we are finalizing as proposed the incorporation of the following quality measures into the APP Plus quality measure set in the CY 2025 performance period/2027 MIPS payment year: Quality ID #001 Diabetes: Hemoglobin A1c (HbA1c) Poor Control; Quality ID #134 Preventive Care and Screening: Screening for Depression and Follow-up Plan; Quality ID #236 Controlling High Blood Pressure; and Quality ID #321 CAHPS for MIPS.

We address comments we received on specific quality measures in the responses below.

Comment: Several commenters expressed support for incorporating Quality ID #112 Breast Cancer Screening and Quality ID #113 Colorectal Cancer Screening into the APP Plus quality measure set for the CY 2025 performance period/2027 MIPS payment year.

Response: We thank the commenters for their support.

Comment: One commenter stated that Quality ID #112 Breast Cancer Screening and Quality ID #113 Colorectal Cancer Screening were retired from MIPS in 2024, while another commenter stated they believed vendors are no longer supporting these measures; these commenters suggested that incorporation of the measures into the APP Plus quality measure set should be delayed. Another commenter stated that adding these measures to the APP Plus quality measure set would increase administrative burden specifically for Shared Savings Program ACOs beginning in 2025 since they would be required to report all measures in the APP Plus quality measure set.

Response: We want to correct an apparent misunderstanding regarding the Status of Quality ID #112 Breast Cancer Screening and Quality ID #113 Colorectal Cancer Screening in MIPS. Beginning with the CY 2024 performance period/2026 payment year, these measures (in addition to one other) were removed from the traditional MIPS reporting option but otherwise retained for MVP development (88 FR 79897 through 79900). The clinical concepts represented by these quality measures support some specialties in a more targeted approach rather than the broader clinical concept of preventive screenings represented within the Quality #497: Preventive Care and Wellness (composite) measure. We also note that the measures are also being maintained for the CMS Web Interface collection type for Shared Savings Program ACOs reporting under the APP through the 2024 performance period, after which time the Web Interface will sunset. Nevertheless, we understand that reporting new quality measures may require an APM Entity, group, and/or clinician to update their workflows and processes. At the same time, we believe that it may take more effort to prepare to report quality measures with greater complexity and that there is a marked difference in complexity between the two cancer screening measures. Specifically, we believe the Colorectal Cancer Screening measure to be a more complex measure because five different screening tests can be used to build the numerator with look-back periods ranging from the current performance period to nine years prior as compared to the Breast Cancer Screening measure that has only one way to build the numerator (mammography) and a shorter look-back period of 27-months. In recognition of the difference in complexity between these two measures, we are finalizing without modification our proposal to incorporate Quality ID #112 Breast Cancer Screening into the APP Plus quality measure set for the CY 2025 performance period/2027 MIPS payment year but are finalizing with modification our proposal to

incorporate Quality ID #113 Colorectal Cancer Screening into the APP Plus quality measure set with a one-year delay from the CY 2025 performance period/2027 MIPS payment year to the CY 2026 performance period/2028 MIPS payment year. The incorporation dates of these measures are reflected in Table 67. We refer readers to section III.G.4.b.(2)(a) of this final rule for discussion regarding the separate but related proposal to require Shared Savings Program ACOs to report and be scored on the APP Plus quality measure set beginning in the CY 2025 performance period.

Comment: With respect to Quality ID #305 Initiation and Engagement of Substance Use Disorder Treatment, several commenters expressed support for the inclusion of a behavioral health measure in the APP Plus quality measure set. These commenters believe the measure promotes whole person care. One commenter stated: ''given that overdose rates continue to be unacceptably high, it is critical to get upstream and employ preventive measures that help initiate and engage with substance use treatment.''

Response: We thank the commenters for their support.

Comment: A few commenters expressed concern with incorporating Quality ID #305 Initiation and Engagement of Substance Use Disorder Treatment into the APP Plus quality measure set. Two commenters stated that the measure is not endorsed at the clinician level. One commenter stated ''clinicians cannot force a patient to accept treatment for SUD'' and that the measure is ''difficult, if not impossible, for clinicians to track in the current health care landscape with a lack of interoperability across care settings and providers.'' A few commenters noted that some communities lack the resources necessary to assist patients with SUD. For the above reasons, commenters stated that reporting the measure would be complex and requested that the measure either not be incorporated into the APP Plus quality measure set or its incorporation be delayed.

Response: We acknowledge that clinicians cannot force patients to initiate SUD treatment. However, we note that alcohol use disorder and SUD are prevalent, undertreated, and sources of significant morbidity and mortality with the majority of patients affected not receiving evidence-based care. For these reasons, we believe that initiation of treatment is important to measure. While our proposal to incorporate Quality ID #305 Initiation and Engagement of Substance Use Disorder Treatment into the APP Plus quality measure set did not provide distinct factors for commenters to address with respect to timing of incorporation into the APP Plus quality measure set, we are receptive to commenters' concerns about the behavioral health landscape and the challenges that lack of interoperability in health care present to accurately capturing and reporting the measure's numerator. We understand that reporting the Initiation and Engagement of Substance Use Disorder Treatment measure may be complex for APM Entities, groups, and clinicians, especially because not all APM Entities, groups and clinicians have the capability to furnish SUD treatment and must therefore refer patients out for such treatment. We recognize that outside referrals might be difficult for some clinicians to track for a variety of reasons, such as when a patient cannot be reached or otherwise declines to schedule an appointment. Therefore, to allow APM Entities time to create new workflows and processes that potentially rely on more than one source of data for documenting and tracking referrals and follow-up, we are finalizing with modification our proposal to incorporate Quality ID #305 Initiation and Engagement of Substance Use Disorder Treatment with a one-year delay from the CY 2026 performance period/2028 MIPS payment year to the CY 2027 performance period/2029 MIPS payment year. The incorporation date of this measure is reflected in Table 67.

Comment: With respect to Quality ID #479 Hospital-Wide, 30-Day, All Cause Unplanned Readmission (HWR) Rate, one commenter questioned whether hospital readmissions rates accurately reflect the quality of care for all patient populations and asked whether incentivizing lower readmissions could exacerbate disparities in care. This commenter opposed incorporation of the HWR measure into the APP Plus quality measure set.

Response: We acknowledge the commenter's concerns. However, Quality ID #479 HWR Rate is not a new measure and we expect that APP reporters are familiar with it. The HWR Rate measure is a Universal Foundation measure and already included in the existing APP quality measure set. As we indicated throughout the proposed rule, our principal aim in the establishment of the APP Plus quality measure set is aligning with the Universal Foundation, which would not be fully accomplished if we permanently left out one of its included measures. Further, like all measures in the existing APP quality measure set, we believe inclusion of this measure in the APP Plus quality measure set meaningfully contributes to our stated goal to align quality measures across CMS programs. We also note that the measure uses administrative claims data to evaluate readmission rates and requires no additional data submission from APM Entities, groups, or eligible clinicians, which means there is no reporting burden associated with this measure. Therefore, we are finalizing as proposed our proposal to incorporate Quality ID #479 HWR Rate into the APP Plus quality measure set for the CY 2025 performance period/2027 MIPS payment year.

Comment: A few commenters noted that the measure specification for Quality ID #484 Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (MIPS MCC) as used in the APP quality measure set excludes patients assigned to a clinician who achieves qualifying APM participant (QP) status from the denominator. These commenters pointed out that in the 2023 performance period, the denominator exclusion caused Shared Savings Program ACOs whose eligible clinicians were determined to be QPs to not be scored on the measure, resulting in greater weight being placed on the remaining measures within the APP quality measure set for such ACOs. These commenters are opposed to incorporating the MIPS MCC measure into the new APP Plus quality measure set out of concern that weight redistribution will continue to occur with potentially negative effects on ACOs' performance category scores.

Response: We thank the commenters for bringing this to our attention. CMS understands that the exclusion of patients of QPs from the denominator of the MIPS MCC measure disparately impacts certain Shared Savings Program ACOs. This is so because of our QP determination rule for participation in an Advanced APM as specified at 42 CFR 414.1425(b)(1) provides that eligible clinicians are assessed at the APM Entity level when a Participation List is used to identify eligible clinicians that participate with the APM Entity, as is the case with the Shared Savings Program and because the Shared Savings Program requires all participating ACOs to report and be scored on the quality measures in the APP quality measure set at the APM Entity level to evaluate quality performance, regardless of whether an ACO's eligible clinicians otherwise achieve QP status for a year through a track that qualifies as an Advanced APM.

When a Shared Savings Program ACO's eligible clinicians achieve QP status together at the APM Entity level and the ACO reports the MCC measure, the denominator will be reduced to zero because the measure specification excludes patients of QPs. As the commenters noted, for the 2023 performance year, this resulted in some Shared Savings Program ACOs effectively not being scored on the MCC measure and having greater weight placed on the remaining measures in the APP quality measure set because when the denominator for a quality measure is reduced to zero, the measure is removed from the performance category score. Non-Shared Savings Program APM Entities that participated in an Advanced APM in 2023, and whose clinicians achieved QP status for the year, did not experience the same weight redistribution with the APP quality measure set since QPs are ordinarily excluded from MIPS reporting and scoring. However, we note that these effects are seen when the measure is being used for purposes of the quality program of the Shared Savings Program, which requires its participant ACOs to report the APP. The APP is designed as a reporting and scoring pathway within MIPS for participants of MIPS APMs, and regulations governing the APP sit with other MIPS regulations. We recognize that at times, the interrelationship between the APP as a MIPS pathway and the Shared Savings Program may lead to intended consequences in one program and unintended consequences in the other. In this case, the exclusion of QPs from the measure is appropriate in the context of MIPS, from which QPs are statutorily excluded from participating, whereas for purposes of the Shared Savings Program, the exclusion of QPs leads to the aforementioned scoring quirk.

It is concerning to us that the MIPS MCC measure specification may result in disparate impacts on the quality performance category scores between Shared Savings Program ACOs that participate in an advanced track of the program and APM Entities that participate in other APMs. However, as we stated in the CY 2025 proposed rule, we continue to believe that hospital admission rates are an effective marker of ambulatory care quality (89 FR 62026). We also believe that a MCC measure can help incentivize clinicians to develop and implement efficient and coordinated chronic disease management strategies to limit unplanned hospital admissions. This is consistent with the rationale we provided when we first proposed an MCC measure for inclusion in MIPS, at which time we stated that such measure ''promotes improved MCC management and coordinated care by assessing the unplanned hospital admissions for this high-risk population.'' (84 FR 40939). Therefore, we are finalizing with modification our proposal to incorporate Quality ID #484 Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions into the APP Plus quality measure set. We are delaying the incorporation of the measure by one year from the CY 2025 performance period/2027 MIPS payment year to the CY 2026 performance period/2028 MIPS payment year to allow CMS time to assess whether and how the measure can be respecified to allow more ACOs to be scored on the measure. The new incorporation date of this measure is reflected in Table 67. We will examine the use of this measure within MIPS for MIPS APM participants via the APP and by the Shared Savings Program as specified to exclude QPs from the calculation of the measure.

Notwithstanding the incorporation delay of the MIPS MCC measure into the APP Plus quality measure set, the MIPS MCC measure will remain a part of the original APP quality measure set for the CY 2025 performance period/2027 MIPS payment year such that MIPS APM participants who choose to report the APP quality measure set will be scored on the measure as it is currently specified.

Comment: Several commenters expressed support for incorporating Quality ID #487 Screening for Social Drivers of Health (SDOH) into the APP Plus quality measure set. These commenters believe that assessing social needs can improve mental and physical health outcomes and advance health equity.

Response: We thank the commenters for their support.

Comment: Several commenters opposed to the incorporation of Quality ID #487 Screening for Social Drivers of Health (SDOH) measure into the APP Plus quality measure set. A few commenters noted that CMS requires collection of Health-Related Social Need (HRSN) data across multiple setting-specific programs and stated that repeated screenings could result in duplicative efforts and be counter-productive to building trust with patients. A few commenters highlighted research that suggests screening and referral for SDOH does not improve health outcomes. One commenter stated that reporting the measure would increase burden for clinicians because it requires evaluation of patient needs across many domains. Another commenter stated EHR may not reliably capture required data elements in available data fields. A few commenters noted that the eCQM specification is not currently available for the Screening for SDOH measure. Several commenters requested that CMS make available the eCQM specification for this measure in advance of its incorporation into the APP Plus quality measure set while one commenter specifically suggested that the Screening for SDOH measure be incorporated into the APP Plus quality measure set prior to the CY 2028 performance period.

Response: CMS has recognized the importance of screening for SDOH in prior rulemaking. Most recently, in the CY 2024 PFS final rule, we provided an illustrative example of how clinicians that identify unmet HRSNs through screening for SDOH can better understand and help address problem(s) addressed in a medical visit and associated risk factor. In this example, a clinician discovers a patient's living situation does not permit reliable access to electricity by screening the patient for HRSNs and, as a result, considers whether to prescribe an inhaler rather than a power-operated nebulizer to treat asthma (88 FR 78921). Absent SDOH screening, the clinician in this example might inadvertently prescribe a treatment (power-operated nebulizer) that the patient could not consistently self-administer as prescribed, leading to poor symptom control or frequent exacerbation of symptoms. This scenario makes clear that information regarding housing instability and utility difficulties gathered from screening for SDOH has the potential to improve health outcomes. We believe that information collected about HRSNs from other domains when screening for SDOH can be just as valuable when incorporated into clinical decision making. In addition, because HRSNs may change rapidly and identification of unmet needs may be used to improve patient care plans, it is appropriate to require collection of HRSN data across multiple setting-specific programs.

CMS acknowledges that the Screening for SDOH measure requires assessment across multiple domains—specifically, food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. However, we note that measure burden is minimized because screening is accomplished through the use of a single, standardized tool and multiple assessments are not required within the same performance period. Further, clinicians have the

flexibility to choose which standardized tool to use to build the measure's numerator. The measure specification does not prescribe a tool that must be used but rather provides examples of standardized screening tools that may be used. These tools include: Accountable Health Communities Health-Related Social Needs Screening Tool (2017);[816] Accountable Health Communities Health-Related Social Needs Screening Tool (2021);[817] The Protocol for Responding to and Assessing Patients' Risks and Experiences (PRAPARE) Tool (2016);[818] WellRx Questionnaire (2014);[819] and American Academy of Family Physicians (AAFP) Screening Tool (2018).[820] This flexibility allows APM Entities, groups, and eligible clinicians to choose the tool that can best be integrated into clinical workflows and practice-specific EHR. MIPS eligible clinicians, groups, and APM Entities are encouraged to work with their EHR vendors to ensure that screening for HRSNs across domains can be captured in practice-specific EHR.

In response to comments received that noted an eCQM is not presently available for the Screening for SDOH measure, we are finalizing with modification our proposal to incorporate Quality ID #487 Screening for Social Drivers of Health (SDOH) into the APP Plus quality measure set with a delay until the CY 2028 performance period, or the performance period that is one year after the eCQM specification becomes available for this measure, whichever is later. The incorporation date of this measure is reflected in Table 67. This delay is necessary due to variables related to the development and testing of new measures. In addition, we understand that it can take a substantial amount of time for a new measure specification to be supported by vendors and incorporated into electronic health records. We also believe a delay will allow APM Entities time to create new workflows and processes to screen for HRSNs. For these reasons, we are declining to incorporate the Screening for SDOH measure into the APP Plus quality measure set prior to the CY 2028 performance period.

As stated above, we recognize that there are factors in the process of developing quality measure specifications beyond CMS' control, which may in turn delay the publication of the Screening for SDOH eCQM specification on the eCQI resource center and, ultimately, availability of the collection type for MIPS quality measures. We want to clarify that for the Adult Immunization Status measure to be incorporated into the APP Plus quality measure set in the CY 2028 performance period, the eCQM specification must be published on the eCQI resource center by May 2027. If, however, the eCQM specification is published later, for example in May 2028, then the Screening for SDOH measure will be incorporated into the APP Plus quality measure set in the CY 2029 performance period. Similarly, if the eCQM specification is published in May 2029, then the Screening for SDOH measure will be incorporated into the APP Plus quality measure set in the CY 2030 performance period, and so on.

Comment: Several commenters expressed support for incorporating Quality ID #493 Adult Immunization Status into the APP Plus quality measure set. A few commenters stated that vaccinations can improve health equity given the disparate impact of infectious diseases on marginalized populations. One commenter stated that ''measure is perhaps one of the strongest tools to increase rates of adult immunizations.''

Response: We thank the commenters for their support.

Comment: Several commenters expressed concern about incorporation of Quality ID #493 Adult Immunization Status into the APP Plus quality measure set. These commenters stated that the measure would be technically complex to report and noted that the measure requires reporting on four different vaccines. One commenter stated that the vaccines with which the measure is concerned are not routinely administered in office-based settings because they are covered by Medicare Part D. Another commenter pointed out that patients may receive vaccines outside of office-based settings such as at retail pharmacies, local health departments, and in the workplace, creating difficulties tracking patient vaccinations. This commenter also stated that immunization registry challenges create administrative burden for clinicians that report vaccine measures. As with the SDOH measure, a few commenters noted that an eCQM specification is not currently available for the Adult Immunization Status measure and requested that CMS make available the eCQM specification for this measure in advance of its incorporation into the APP Plus quality measure set.

Response: We acknowledge that clinicians may face challenges administering vaccines in office-based settings, including the four vaccines with which the Adult Immunization Status measure is concerned: influenza, Td/Tdap, herpes zoster, and pneumococcal conjugate. However, Medicare Part B covers a limited set of vaccines including both the influenza vaccine and pneumococcal conjugate, two of the four vaccines assessed by the Adult Immunization Status measure. Medicare Part D covers all commercially available vaccines, except those covered by Medicare Part B. With respect to the vaccines measured by the Adult Immunization Status measure, Medicare Part D covers the vaccines not covered by Medicare Part B; namely, Td/Tdap and herpes zoster. Clinicians can bill Medicare Part D for vaccines administered in office if enrolled in Medicare. We also note that under the current MIPS CQM specification, patient reported vaccination, when recorded in the medical record, is acceptable for meeting the numerator of the measure.[821]

Nevertheless, in response to comments received that noted an eCQM specification is not presently available for the Adult Immunization Status measure, we are finalizing with modification our proposal to incorporate Quality ID #493 Adult Immunization Status into the APP Plus quality measure set until the CY 2028 performance period, or the performance period that is one year after the eCQM specification becomes available for this measure, whichever is later. The incorporation date of this measure is reflected in Table 67. This delay is necessary due to variables related to the development and testing of new measures. In addition, we understand that it can take a substantial amount of time for a new measure specification to be supported by vendors and incorporated into electronic health records. We also believe a delay will allow APM Entities time to create new
